To this end the Society needs the cooperation of hundreds of volunteers who in their particular localities will provide the material by sending the proverbial sayings to the State Chairmen. The State Chairmen, when they have collected what seems to be a complete or interesting set of sayings for a given area, or people, or occupation, such as might be published separately, will then send the collection to the Chairman of the Committee on Proverbial Sayings of the American Dialect Society.

The collecting and the filing of proverbial sayings from the various states and provinces is now being done in preparation for the projected *Dictionary of American and Canadian Proverbs*.

MARGARET M. BRYANT

Chairman, Committee on Proverbial Sayings

prudery If obscenities are acts or words which are thought to be degrading, prudery is the state of mind which is capable of degradation. The very wide distribution of prudery and the variety of topics which it seizes upon are sobering evidence that humanity has an infinite capacity for being degraded. As the acts or words which different cultures regard as degrading show an amazing variety so too do the acts or words which shock the prude. Some naked savages are not at all disturbed by their absolute nudity, but are shocked by the suggestion that they should eat in public. Whereas the occidental male prefers to defecate in private, the Chinese peasants not only defecate by the side of the road but squat facing the traffic so that they can watch the

world go by. On a hot summer day, a Japanese gentleman pulled down his trousers so that he could fan the middle of his body. Men in France use the public latrines which hide only the middle parts of their bodies and carry on conversation with women who pause to wait for them. Americans have been shocked by a sign on a French cathedral using a French word which in English is considered unspeakably vulgar to prohibit urination: *Défense de pisser*. In China, where women's feet are objects of erotic interest, women have been seen pulling their loose trouser legs high up about their middles but keeping their bound feet carefully hidden. Some British and American pruders have limbs but no legs; wear trousers, never pants. The we-groups always find the prudisms of the they-groups ridiculous or absurd, but forget that "they" feel no less strongly about their prudisms than "we" do about ours. [RØJ]

Ptah In ancient Egyptian religion, the chief god and the creator in the Memphite pantheon. Two traditions exist concerning his act of creation: he made the universe from mud, or he created by speaking, by saying the words that named what he willed to create. Ptah was the molder, the artificer, and was thus identified by the Greeks with Hephæstus. He is depicted as a primitive idol, with the legs unseparated, and carrying a scepter composed of the ankh (symbol of life), the tet (symbol of stability), and the uas (the divine scepter). Ptah was identified with Khnum, who also was a divine creator. He was incarnate in the Apis-bull of Memphis. His identification with Osiris and Seker, gods of the dead, led to the compound deity, Ptah-Seker-Osiris, a dwarf god who resembles none of the three gods he is named for.

P'ti' Albert Title of a medieval European book of magic that has been taken over together with its counterpart, *Albert le Grand* (Albertus Magnus), by Negroes of various regions of the New World as a part of the complex of magic and cabalism that has been syncretized with aboriginal African practices. In Haiti, importation of the *P'ti' Albert* into the country is forbidden by law. [MJH]

puberty dances The dances connected with puberty rites are always group enactments by society members or simply by older men and women. All adult men join in the Australian *waiung-arree*. On the other hand, the Sierra Leone *Bundu* dances are exclusive. Usually members of the initiate's own sex dance around her, as in the *káusima* of the Chaco Chorotí, Ashluslay, and Mataco. But among the Karok (California) Indians, men surround the girl and dance with her in turn. In California—though not everywhere—she generally participates in the ceremony activity herself. She dances twice a day in the Yuki *hamnam-wok*, with her face covered and she joins in the Maidu *wulu*. The Achomawi girl not only dances all night by the fire, but enacts her future occupations. Similarly, the Apache girl anticipates all of the actions of her future life.

As a rule these dances are in circular formation, in fact, double circles, as the *wallang-arree*, *wulu*, and Karok *ih-uk*. But double line formations occur among the Karok, Wiyot, Yuki, Shasta, and Miwok Indians, and in the Papago *wakita*. Frequently the dancing is grotesque and frenzied. Supernaturals, such as the *mduari*, *hulk'ilal*, and Apache *gahé* leap about with weird ges-

tures. The initiation of certain central Australia tribes inspires all participants to frenzied abandonment.

Demon-impersonators always wear some form of disguise—paint in the *kina* rite, facial distortion in the *hulk'ilal-wok*, masks in the *klóketen*, *káusima*, *yanmena*, *máuari*, and *gahe*. The most fantastic masks belong to Melanesian societies: the *Qat* of the New Hebrides, the *Duk-duk* of New Britain, the *Nanga* of Fiji.

These last represent ancestral spirits. Elsewhere the puberty rite may also be associated with the dead, as among the Bororo of eastern Brazil, who synchronize boys' puberty rites with funeral ceremonies. The Bapende of the Belgian Congo enact a symbolic death and rebirth to a new life. The Apache *gahe* and *tibahi* exert curative powers in the course of the ceremony. The Hopi *powamu* is at the same time a bean-sprouting rite. Association with the deer is common in the Chaco and California, by means of hoof rattles. These are manipulated in the Chaco by the women, among the Karok, Tolowa, Shasta, Achomawi, and Maidu Indians by the girl. The deer is commonly a symbol of cure and vegetation. It is comprehensible that puberty rites should have associations of regeneration. There is little phallic symbolism or erotic dancing, but on the contrary usually a segregation of sexes. However, sexual license follows the *hamnam-wok* in the darkened house, as also the *wulu*.

These rites acquire less importance in higher cultures, and in occidental civilization the coming of age is completely secular. The knighting of the Middle Ages and its concluding dance rounds still retained a flavor of ceremonialism. Among the mestizos of Yucatán, *jarañas* are danced to phonographs in the private homes. In the United States debutantes vie with each other in lavish entertainments and social dances. [GPK]

puberty rites Ceremonies, either individual or group, usually marked the passage of a boy or a girl from childhood to adulthood in all North American Indian groups. For girls, if group ceremonies were held, such usually coincided with her first menstrual period; among many western groups and in the Southwest among such groups as the Apache, these public ceremonies took the form of elaborate 3 to 10 day dances. In other western tribes pubescent girls were "baked" in heated trenches or pits for several days while songs and dances were performed for them. Over the rest of the continent, except in the Southwestern Pueblos and part of the Plains, girls generally retired, alone or with an old woman, to a small menstrual hut during their first menses, and puberty rites were private, involving fasting, non-bathing, and listening to advice and admonitions from old women. All over the continent one tabu prevailed at menstruation, especially at puberty: a girl might not scratch her head with her fingers, but had to use a scratching stick which was either elaborate or simple, as the case might be.

Boys' puberty rites were of two sorts: 1) vision-questing, which was either done alone or in small groups of two, three, or four boys, and 2) formal initiation into adult status in the tribe. For vision-questing youths were sent out by their parents in winter usually, scantily clad, with no fire or fire-making apparatus, and with no food, but with their bow and arrows. The boy(s) was told to stay out until a supernatural had communicated with

him; if unsuccessful on the first quest, the youth was later encouraged or commanded by his parents to repeat it. Some were blessed with visions; others never were.

Group initiations, or boys' puberty rites, took several different forms over the continent, very often being connected with initiation into religious cults or societies, as the Kuksu initiation rites in central California, the Wüwüchim ceremony of the Hopi Indians, or the jimsonweed drinking rite of the tribes of southern California. Group puberty rites for boys often imply death and rebirth of the novice, and include tests of physical endurance—the youths are whipped, scratched, made to dance until exhausted, or taken on long walks. See Lucile Hoerr Charles, "Growing up through Drama" (*JAF* 59: 247–62, 1946). See ADOLESCENCE CEREMONIES; INITIATION; JIMSONWEED; KUKSU; MENSTRUATION; WÜWÜCHIM.

[EWV]

púca or pooka A harmless but very mischievous supernatural being of Irish folklore, often appearing in animal or half-animal form. He is a rapid transformer, and when seen in half-animal form, it is thought perhaps he has been caught in the act of transformation. If so inclined he can give a man the gift of understanding animal speech. He is often thought of as black: *com dub leis an bpúca* (black as the púca) is a common simile. The púca is apt to punish and annoy grave-robbers and ungrateful people, but he is quick to help those whom he favors or to whom he feels indebted. He has been known to save poor farmers' cattle from drowning and to protect those in danger from evil spirits. He resembles the numerous European household spirits in that he will tidy up a kitchen in the night or do a turn at some yard chore. In fact, Keightley (*Fairy Mythology*, p. 418) says "the Irish pooka is plainly the English puck." Likenesses and variations are both manifest. The snail is associated with the púca: Irish children chant "Púca, púca, put out your horns!" At Halloween he steps on or dirties the last blackberries of the season.

puck A household spirit of English folklore: compare BROWNIE; GOBLIN; NISSE. The medieval English *pouke* was of more malicious nature and often identified with the Christian Devil. Shakespeare's Puck is the same as ROBIN GOODFELLOW. See BOGEY; BUCCA.

puk A household spirit; the dragon of treasure, who brings stolen goods to his master: called by the Latvians *pūkis*, by the Lithuanians *pūks*, and by the Estonians *puuk*. Obviously he is of German origin and comes to the Baltic countries from northern Germany: compare *püks* in Mecklenburg and Schleswig-Holstein, *pück* in Friesland, *puk* in Low German. The name and all the traditions are the same in Germany as in the Baltic countries. Sometimes also native names were given to him: *aitvaras* and *kaukas* in Lithuania, *tulihänd* and *pisuhänd* in Estonia. Probably the tradition came with the German tradesmen and colonists, first to Riga, an important trade center, whence it was taken north by the Estonians and south by the Lithuanians. Lithuanian legends often recount that a farmer who had brought his crops or flax to Riga, after selling his goods, bought a dragon from a German tradesman.

One question, of course, is whether the tradition is of German origin or whether the Germans themselves got it from Scandinavia and the British Islands. Compare the Irish *púca*, Norwegian *pukje*, Old Icelandic *púki*,

Old Danish *puge*, Swedish dialect *puke*, English *puck*. The English hobgoblin or Robin Goodfellow is also called *puck* (*pwcca* in Wales), *pooka* or *púca* in Ireland, *poake* in Worcestershire, and *pixy* in the west of England. But he is a spirit of another kind: chiefly a malicious spirit, taking all sorts of shapes and leading travelers astray into the bogs.

R. Auning, *Über den lettischen Drachenmythus (Puhkis)*, Mitau, 1891. L. v. Schroeder, *Germanische Elfen und Götter beim Estenvolke*, Wien, 1906. Pp. 14–61. F. Delattre, *English Fairy Poetry*, London, 1912, p. 19. [JB]

Pulau Bah Behrang Sakai (Malay peninsula) abode of the dead; the Island of Fruit, located to the west where the souls live in perfect bliss and eat from the ever-fruiting trees. Compare BELET.

Pulekukwerek "Downstream sharp": Yurok Indian benefactor and monster-slayer who burned blind cannibal women and killed those beings who crushed people while pretending to split logs, or who speared them while playing games, or gave people overstrong tobacco. He stole the boy Night, found the man who could weave the sky, and who placed the stars upon it. Pulekukwerek, whose name derives from the horns on which he sat, was born far north at the end of the world; when he left the earth he went to a far-away land of dentalium and everlasting dances. He is the most admired character in Yurok mythology. [ewv]

pulling the heather green, pulling the nut, pulling the red rose Terms used in a number of the English and Scottish traditional ballads of the Child collection to mean: 1) trespassing; 2) seeking abortifacient herbs; 3) seeking magic herbs to facilitate and ease childbirth. In regard to trespass, the trespasser is usually a maiden; she is caught by the owner or guardian of the property or wood; the penalty is that she must give up either her virginity or her life. In *Tam Lin* (Child #39) and *Mary Hamilton* (Child #173), the heroine is illegitimately pregnant and seeks some magic plant or "graveyard herb" that will cause abortion. In other ballads some craving for a fruit, typical of pregnancy, is expressed, as in the *Cherry Tree Carol* (Child #54), or belief in the power of certain herbs to ease childbirth is reflected. The reverence for trees and groves, the challenge to the deity or guardian of the grove, and the penalty for trespassing or breaking a bough, and also the association of the gathering of certain herbs with pregnancy and childbirth is discussed by S. Elliot, "Pulling the Heather Green" (*JAFL* 48:352 ff.).

pulse Physicians of folktale make a complete diagnosis by feeling the pulse (F956.1). In oriental story, love was often discovered by feeling the pulse (J1142.2). Antiochus, in the Greek romance of Antiochus and Stratonice, fell ill for no accountable reason and no one could discover the cause until a clever physician of Ceos recognized his ailment as love-sickness. In order to diagnose the case, the physician ordered all the beauties of the court, Stratonice among them, to pass through the sick-room. At the appearance of Stratonice, the pulse of Antiochus quickened, though she was his stepmother. In one of the variants of the master thief story, the king discovers who has just been in bed with the queen by listening to the heartbeats of the different men in the

palace; the culprit, awake and aware of what the king is doing, is given away by his rapid heartbeat. The incident of marking the culprit (who marks everyone else) follows. Several physicians of ancient days are said to have used the pulse as an indicator, and later medical history presents examples of this practice introduced into Europe. The whole matter is discussed by Rohde (*Griechische Roman und seine Vorläufer*, Leipzig, 1914, pp. 57 ff.). The pulse as indicator of love is also to be noted in the *Decameron* (Day 2, nov. 8). [GRS]

Puluga The name for Biliku used by the Akar-Bale and Aka Beza tribes of the Andaman Islands.

pumpkin The round, edible, yellow fruit of a large trailing vine (genus *Cucurbita*). In China the pumpkin is Emperor of the Garden, symbol of fruitfulness, health, and gain. According to Kachin (Burma) mythology, after the pumpkin had been created, each of the nats added something to it until, in the end, they had created man. Pumpkin-seed tea is a general American diuretic and is also used to kill tapeworms. The *Fête du Potiron* (Festival of King Pumpkin) was celebrated at the *Halles Centrales*, the great produce market of Paris, in September. The largest available pumpkin was decked in a tinsel and paper crown and carried about the market while all made obeisance. Afterwards it was cut into pieces which were auctioned off for soup.

There is a famous numskull story (J1772.1) known all over Europe, in Asia, and repeated with fresh humor and flavor among southern United States mountain whites. The numskull thinks the pumpkin is an ass's egg. He throws it into the bushes; it breaks; the frightened rabbit that runs out of the bushes he thinks is the ass's colt. See BREATHMAKER; CHINÜN WAY SHUN; SHINGRAWA.

Punch and Judy Hero and heroine of the traditional English puppet play. Punch, with his hooked nose and sleeping cap, is a fiery tempered humorist who is continually quarreling with everyone. He beats Judy to death with a club. He wallops the arresting policeman unmercifully. He conquers dogs or wild animals. Finally, he even hangs the hangman with his own noose. The slapstick transferred rapidly from hand to hand as the puppet-master manipulates his hand puppets in the box theater and the squeaking humming voices of the Punch and Judy characters are the unforgettable memories of the viewers of the puppet show. Punch is a contraction of Punchinello, for the Punch and Judy story originated in Italy. (Some say that the name comes from Pontius Pilate.) The original story, still sometimes seen, has Punch throwing his squalling brat out of the window, killing his wife in the subsequent battle, escaping from the policeman, being imprisoned but escaping, defeating a dog and a doctor, killing Death, and outsmarting the Devil.

Pundjel Southeastern Australian creator who made all things, including the ceremonies, and who figures prominently in the boys' initiation rites. [KL]

Purāṇa One of a class of Sanskrit books which deal with ancient and medieval Indian theology, astronomy, cosmogony, genealogy, accounts of kings and rishis, and miscellaneous materials, all illustrated by fables, songs, legends, and tales: literally, old or ancient lore. The oldest of the *Purāṇas* dates from 600 A.D. and some of

them may be as late as the 13th or 16th century. All of them have undergone revisions and each in its present form enumerates the whole group. They are 18 in number (actually 19, but the *Vāyu* and *Brahmānda* were originally one and are thus classed as such), written in verse in the form of a dialog between two persons into which are woven stories and discourses uttered by other persons. They are attributed to a *rishi* or to the gods. The five subjects which are proper to the *Purāṇas* are *sarga* (creation), *pratisarga* (dissolution and recreation), *manvantara* (periods of the Manus), *vamśa* (genealogies), and *vamśyānucharita* (history of the Solar and Lunar races mentioned in the *vamśa*). The *Purāṇas* are based upon the same body of tradition as is *Mahābhārata*, but the stories are not always narrated in the same way. They also expound the four phases of human endeavor—*kāma* (love), *artha* (wealth), *dharma* (righteousness), and *mokṣa* (final emancipation from rebirths).

In the *Purāṇas* Indra is the chief of the subordinate gods and Śūrya holds an important position. The chief gods are Brahṁā, the creator, Viṣṇu, the preserver, and Śiva, the destroyer, and the relative positions of Viṣṇu and Śiva are explained. Viṣṇu takes no part in terrestrial affairs except when incarnated, while Śiva dwells among men and practices human asceticism. The two (with Brahṁā) are aspects of one and the same god.

Purgine-Pas or Pirgene The Thunderer in Erza-Mordvin folklore: a word derived from the Lithuanian *Perkūnas*, thunder god. [JB]

purification The sources of ceremonial uncleanness or ritual pollution in primitive cultures are, mainly, blood (menstrual, parturitional, placental, accidental, or shed in murder or battle), death, and birth, and, secondarily and in limited areas and times, certain foods and drinks, colors, places, seasons, trees, rocks, and even persons. The method of getting rid of the ritual impurity or condition of uncleanness was, and still is in many societies and religions, the performance of some ceremony which variously includes sacrifice, washing, anointing, sprinkling, burning, or cutting. A typical purification ceremony after childbirth is prescribed and described in *Leviticus* xii, 2-8:

"If a woman have conceived seed, and born a man child: then she shall be unclean seven days; according to the days of the separation for her infirmity shall she be unclean. And in the eighth day the flesh of his foreskin shall be circumcised. And she shall then continue in the blood of her purifying three and thirty days; she shall touch no hallowed thing, nor come into the sanctuary, until the days of her purifying be fulfilled. But if she bear a maid child, then she shall be unclean two weeks, as in her separation: and she shall continue in the blood of her purifying three score and six days. And when the days of her purifying are fulfilled, for a son, or for a daughter, she shall bring a lamb of the first year for a burnt offering, and a young pigeon, or a turtledove, for a sin offering, unto the door of the tabernacle of the congregation, unto the priest: Who shall offer it before the Lord, and make an atonement for her; and she shall be cleansed from the issue of her blood. This is the law for her that hath born a male or a female. And if she be not able to bring a lamb, then she shall bring two turtles, or two young pigeons; the one for the burnt offering, and the other

for the sin offering; and the priest shall make an atonement for her, and she shall be clean."

In this purification process of the ancient Hebrews may be observed several characteristic tabus and their ritual removal. Note that the cleansing is not for childbirth itself but for "the issue of her blood" shed at parturition, that the thirty-three days is calculated to cover the menstrual period, that the period of uncleanness is a week longer for a female child, that the piacular sacrifice must be burned as well as killed, and that it must be a priest who pronounces her clean. Furthermore, she is barred from the sanctuary and may not even touch any sacred object; otherwise she would render them unclean; and when she brings her offerings, she may come only as far as the door until she has been completely purified.

It is one of the anomalies of the primitive mind that while blood is one of the main sources of ceremonial uncleanness, the piacular sacrifice with bloodshed is the often prescribed method of purification. It was not only from the ancient Hebrew culture but from old Greek, Roman, and other religions as well that the unknown author of the book derived his traditional assurance that "Without the shedding of blood there is no remission of sins" (*Hebrews* ix, 22).

Elaborate ceremonial preparation of the "water of separation" is described in *Numbers* xix. It must contain several cleansing ingredients, such as hyssop, but particularly the ashes of a red heifer without spot or blemish and "upon which never came yoke." The water of separation "is a purification for sin." It is to purify anyone who has touched a dead body, the tent in which anyone has died, all who have come into the tent, and all open vessels in the tent. It must also be used to cleanse anyone who has become unclean by touching a grave.

Fumigation is another ceremonial process for ritual cleansing, sometimes by the smoke of incense used at sacrifices, but the incense itself must be made from gums gathered from holy trees by magical ritual process. Different ingredients for use in fumigation are held potent by various peoples—grains and mustard by Hindus, tobacco by some American Indian tribes. Many peoples are purified by jumping over fire and through smoke. See BELTANE. Other methods used are anointing with holy oil, washing with *gomez* (the urine of the sacred cow—Hindu), smearing with the blood of an animal, or baptism with bull blood as in the Mithraic Taurobolium, rubbing with sulfur, lye, or using hyssop, hellebore, or other purifying drugs or medicines, shaving the head, cutting the nails, spitting, blowing the nose, wearing a sacred fleece, circumcision, knocking out teeth, branding, tattooing, using salt liberally, sprinkling with water in which the Christian cross has been washed, by vowing celibacy, virginity, or chastity. Some believe that unclean houses may be purified by sweeping out the bad spirits with a broom. Emetics are held to be efficacious; some prescribe whitewash. Moslems use earth and sand. Sweatbaths and all sorts of baptisms are used in man's efforts to rid himself of spiritual pollution.

The beginning of the new year is reckoned as an especially good time for ceremonial cleansing, so we note purification ceremonies at that time in Peru, Mexico, China, Indochina (see THINGYĀN PWE), Indonesia, Africa, among the ancient Babylonians and the North

American Indians. It is also the favorite time for revivals and protracted meetings among American Protestant churches.

One interesting variation of these cathartic rituals is the cleansing of someone else or something else as a substitute for the sinner. The guilt of an individual or a whole tribe may be transferred to a scapegoat who is driven off a precipice or across the border into the next country, carrying with him the sins and ills of many. Or a person, either a spotless virgin or the king himself, may offer or be chosen to be a vicarious sacrifice for the sins of the whole tribe. See *BARASHNŪM*. [CFP]

 Purification, or formal ritual cleansing of the body prior to undertaking various rites, or after specific contamination of the body, was general among the North American Indians. In several groups the idea of purification was extended to include purification of dwelling houses and personal possessions. Various elements and substances were used as purificatory agents: water everywhere, fire and smoke, angelica root, cedar, tobacco, and other plants in various areas. Fasting from all or from specific foods such as salt, meat, or grease, the drinking of limited amounts of water or abstaining from water, and continence on the part of married persons, also made persons "clean" and fit to participate in sacred rites and ceremonies. Bathing and other purificatory rites were necessary for women, or for both parents, after childbirth; at the end of the menstrual period a woman had to bathe and otherwise purify herself before she returned to her home; after a death the relatives of the deceased, the corpse-handlers, and the gravediggers had to eat alone and sparingly for a prescribed length of time, and had to bathe or have their heads washed before they were again considered clean and of no danger to their fellow human beings.

Incense of one kind or another (chiefly cedar in the eastern United States and on the Plains, and angelica, sage, fir, and other plants in the West) was used both to purify human beings and ritual apparatus such as drums, rattles, and other musical instruments, masks, etc. Often these purificatory substances were burned in an open fire and the articles were cleansed by being held in the smoke from the fire. Ashes were also sometimes thrown over persons to purify, but the more usual specific use for ashes was to drive away disease. [EWV]

 Many South American Indians consider it necessary for the mourners to undergo a purification after the funerals. Among the Chiriguano, Saliva, and Paez, the relatives wash themselves in a river. The Aymara jump over a fire. The belongings of the deceased are often exposed to flames or carefully washed. [AM]

purohita In India, originally the domestic chaplain or family priest of a king or wealthy noble. During the period of the *Brāhmaṇas* the purohita became a temporal as well as a religious adviser. Today he is the most important functionary in the Indian community. He performs all the village's religious ceremonies and is supported by fixed allotments of grain or by special offerings. He not only presides at marriages, births, and death ceremonies, but acts as village astrologer and the magician who controls evil spirits. A purohita once swallowed the ocean in three gulps, another made fire, and a third turned the moon into a cinder. Anyone who

harms a purohita will whirl about in a black hell for a hundred years after death.

Puruṣa (1) In Vedic mythology, a primeval giant sacrificed by the gods to create the world: literally, man. The giant's head became the sky, his feet the earth, his navel the air, and from his limbs came the four castes. In Sāṅkhya philosophy Puruṣa represents the spiritual force opposed to but working with Prakṛti, the material force.

(2) A name of Brahmā as the creator and original male.

Pusa Buddha, a term used by the Chinese people to refer to their gods with little concern whether the god thus addressed belongs to a Buddhist, Taoist, or Christian cult. [RDJ]

Pūshan Literally, the prosperer: an indistinctly defined Vedic sun god, protector and multiplier of cattle, friend and guide of travelers, guardian of paths, and patron of conjurors. As a guide Pūshan conducts the dead to the abode of their fathers. He carries an ox-goad, is drawn by goats, and is toothless. According to the *Mahābhārata* and the *Purāṇas*, Rudra knocked out his teeth at Dakṣa's sacrifice. Pūshan is invoked with Indra and Bhaga and is sometimes numbered among the *Ādityas*.

púskita Same as *busk*.

Puss in Boots Title of a popular folktale belonging to the great helpful animal cycle in which the helpful animal wins riches, honor, and a beautiful wife for the hero. The typical Puss in Boots story begins with the fact that a cat is the only inheritance left to a poor youth (N411.1.1; Types 545AB; 1650; 1651). The cat, however, is a very marvelous cat, who through his magic powers convinces the king that his master is a dispossessed prince (K1952.1); he woos and wins the princess for his master (B582.1.1); borrows a measure to measure his master's money (K1954.1), casually scorning to collect the coins that have stuck to the bottom of it, thereby establishing his master's reputation as a wealthy man, or he talks continually about his master's wealth (K1917.3). When the king is to visit the youth and behold the wonderful possessions, the cat induces all shepherds, cattleherds, etc., en route to say the herds belong to his master. The cat next beguiles a giant (ogre, troll) with conversation and tales all night at his own castle gate; at sunrise the giant bursts (à la all supernaturals who perish at sunrise if they have not regained their own place by then); and the cat takes over the giant's sumptuous castle for his master. Then having equipped the youth with herds and horses, a castle, a beautiful and wealthy wife, the cat demands to have his head cut off. The youth demurs; the cat insists; at last the youth beheads the cat and thus unbewitches the fine young prince who has been compelled to live in cat form.

The Scandinavian versions of this story often have a heroine instead of a hero, and also often include the sensitivity test, in which the cat advises the poor farmer's daughter to say she has not slept well, in order to establish her "royalty." See *PRINCESS ON THE PEA*. In a Norwegian variant entitled *Lord Peter*, the cat is a princess thus bewitched, who helps the youth to wealth, honor, and the castle, and on being unbewitched, marries him herself.

In most western European tellings the animal is a cat, in eastern Europe usually a fox, in Siberia and Mongolia a fox, in India a jackal; in the four known Philippine Island variants, it is a monkey who by a series of thievings and lies brings his paupered master from rags to riches. Perrault's version, *Chat Botté* (1697), has been taken as the version almost everywhere and has altered the detail of the older folk form everywhere that it has penetrated. (See Stith Thompson, *The Folktale*, New York, 1946, pp. 58–59; D. S. Fansler, *Filipino Popular Tales*, *MAFLS* 12, pp. 326–338.)

Pūtanā In Hindu mythology, the female demon, daughter of Bali, who tried to kill the infant Kṛishṇa by suckling him with her poisonous milk. Kṛishṇa, however, slew her by draining her of her lifeblood. Pūtanā causes abortion and diseases in children.

pwe A Burmese dance festival, with occasional dialog and song. There are three main types: 1) the ordinary pwe performed by two girl dancers and two male clown dancers called *loobyets*; 2) *yein pwe*, ensemble dances in rows, men and women separate, for country festivals; 3) *zat pwe*, with dramatic content, such as the tale of the *Rāmāyaṇa* (*yama zat*).

The dancing, particularly that of the girls in the ordinary pwe, is lively, virtuoso, even acrobatic, despite the tight-fitting skirt and the great mound of gleaming black hair. Arms and hands are supple; the steps are intricate; costumes are brilliant and colorful; the musical rhythms are "catchy." They are played on an impressive ensemble of 13 drums, two flutes, a *pattala* or kind of xylophone, wood block, gongs, bells, and whistles. Rapid dances are at times relieved by a slow *yodia*. The composite is sumptuous, merry, and wholesome. [GPK]

pyinsalet Burmese magic, practiced to confer temporary invulnerability or to cause "hallucination in respect of the five kinds of sensations." These effects are achieved by such potent mixtures as one made with equal parts of the livers of a human being, black dog, owl, cobra, and monkey, pounded together with a whole lizard from midnight until dawn. When a little of this concoction is rubbed on the left eye, witches, nats, or ghosts can be seen. Rub a little on the right eye and night will be turned into day. A little on the forehead will make the possessor invisible; some on the hand will

cause an iron safe to open when beaten; on a wind-blown leaf, will change it into a tiger or an elephant; some rubbed on a lotus flower will produce a woman, rubbed on a lotus bud will engender a man. Methods for attaining invulnerability include carrying balls of mercury or pieces of iron, silver inserted under the skin, bathing in medicated water, and wearing various amulets.

pyrrhic dance A battle dance of ancient Greece, named after the vermilion tunics or blood-simulating stains used by the Spartans. Of Cretan origin, it became in Greece a regular exercise and battle preparation for all Greek youths. The martial enactments received rhythmic form from the musical accompaniments. Motifs of magical exorcism may have enhanced the warlike objectives.

Later on the pantomimic element crowded out the original function and by the 5th century it had everywhere, except in Sparta, become a spectacle. In 6th century Athens it was danced at the Panathenaic festivals to flute or song accompaniment. Its mass effects were impressive: sweeping phalanxes, circular and linear battle formations. At times soloists paired off for combat, or a single dancer fought an imaginary adversary in the *skiamachia* (shadow-fight) or *monomachia* (single fight). At times women took part. Finally it fell under Bacchic influence and degenerated into a circus dance of the Roman Christians.

The sword dances and *moriscas* of northern and western Europe and the Balkans are related to the pyrrhic dance, though not necessarily descended from it, for battle dances appear in all primitive ritualism. [GPK]

Pythias or Phintias See DAMON AND PYTHIAS.

Python In Greek mythology, the female dragon who dwelt at Delphi, guarding the chasm there. When Apollo came to Delphi, the dragon tried to prevent him from approaching the chasm and Apollo killed it. He thus became possessor of the oracle. The priestess of the god was known as Pytho or Pythoness. The story of the slaying of the dragon was periodically enacted at Delphi in a ritual drama. The serpent or dragon as chthonic spirit is found elsewhere in the world; the dragon-slayer as culture hero is as widespread. See DRAGON-FIGHT OR DRAGON-SLAYING THEME.

Q

Qaf, Kaf, or Caf In Moslem-Arabic mythology, the mountain range, made of emerald, that encircles the world outside the ring of ocean. It is the abode of the jinn and other supernatural creatures. The term is also generic for mountains, as Alps is in English, but specifically is applied to the Caucasus range.

Qamate The supreme god of the Amoxosa Kaffir Negroes: said to be honored by them with huge burial mounds on which every passerby deposited a stone. Compare HAITSI-AIBAB.

q'ari q'ari The cutting dance of the Aymara Indians of Bolivia. The men wield knives as in the Mexican

morisma and *media luna*. Music is provided by two flutes and two drums. Though without masks, the dancers impersonate q'ari q'ari, the heart-stealing demon. This mythological association suggests an indigenous origin. There is no association with any particular Catholic fiesta, August being the most common time of performance. [GPK]

qat A cultivated arbutus of Ethiopia (*Catha edulis*), a bush sometimes growing as high as 20 feet, whose twigs and leaves yield a dangerous narcotic. In Ethiopia the Imam sanctions the chewing of it by soldiers, especially on Fridays before praying, to encourage pious contem-

plation. It is also taken as a stimulant by groups of young people who meet in gatherings to chew qat leaves. It is an intellectual stimulant, but overuse impairs the mental powers. The reaction to it is insomnia, followed by severe headache, loss of semen through urination, and reduction of sexual vitality. See Coon, Carleton S., "Southern Arabia, A Problem for the Future" in *Studies in the Anthropology of Oceania and Asia (Papers of the Peabody Museum of American Archaeology and Ethnology, Harvard University, Vol. XX)*, p. 202. [DMP]

Qeb An alternative transliteration of the name of the Egyptian earth god, Geb.

q'ena q'ena A wind instrument of the Aymara Indians of Bolivia, which gives its name to the dance and the fiesta using it. Except for two drummers, the musical ensemble is entirely one of self-accompaniment by the dancers. The *q'ena* is a bamboo pipe with six stops, made in several sizes, and emitting doleful sounds. The green parrot provides ornaments for jaguar skin vest and feathered hat, and trousers split at the ankle. These ornaments may not appear indigenous, but the *q'ena* certainly is, as is also the simple circular dance it accompanies. [GPK]

Qiqirn A huge supernatural hairless dog, greatly feared by the Central Eskimo. It is described as having hair only on its mouth, feet, ears, and tail-tip. Its proximity to men or dogs causes them to have fits. But it is a foolish creature, terrified of human beings, and runs away the minute it is mentioned.

Qoluncotun The creator, now referred to as God, of the Sinkaietk or Southern Okanagon Indians of the state of Washington. While Coyote figures as the trickster in Sinkaietk mythology, Qoluncotun is the supreme being who is credited with having created the universe and all the animals, although there is apparently no Sinkaietk myth detailing this creation. [EWV]

quadrilles French term for square formations (Spanish *cuadrillas*, It. *quadriglia*, Norwegian *kadriljs*): a dance for four couples in square formations. The figures are flexible, however, and often blend into double circle or longways patterns. Thus the quadrille is a transitional form between 1) rounds and squares, and 2) longways and squares. There has been much debate about the origin of the quadrille. It is probably a French development from the *cotillon*. The transition from 1) rounds is evident in the *branles carrés* and *tambourin*, which introduce interlacings by the four couples into essentially circular patterns. 2) Longways formations adhere to the antecedent *cotillon*, the Hungarian derivative *körmagyar*, and the New Mexican *cuadrillas*. The earliest quadrille, reported in 1816, consisted of six parts in *Le Pantalon*, *L'Été*, *La Poule*, *La Trenis*, *La Pastourelle*, *Le Finale*, consisting of cross-overs, mills, and circling. The Lanciers or *Quadrille à la Cour* contained five parts, each in a different metre: *La Dorset*, *Victoria*, *Les Moulinets*, *Les Visites*, *Les Lanciers*.

Quadrilles have been enthusiastically accepted in all countries of western Europe, to a lesser extent in Slavic countries and Hungary. In the Balkans, however, they have not replaced the ancient chain dances. Sometimes their nature is disguised by a name as Hunsdon House (England), or *Kanafaska* (Moravia), or by the variant

term *contra*, as the German Föhringer *Kontra*. In the United States quadrilles are always in square formation and thus are essentially identical with square dances.

In true quadrille formation the four couples form a square, with the first couple back to the musicians, the second facing them, and the third and fourth to right and left. A double quadrille is formed similarly by eight couples. The couples alternate and interweave in every conceivable pattern of cross-overs, serpentine, pivoting (see tabulation in DANCE: FOLK AND PRIMITIVE). The step is usually a run, in the United States with a shuffling quality; but in England various skips and slides enrich the vocabulary. Frequently the waltz, galop, and polka steps enrich the Danish Oxcow and New Mexican Galope and Polka Cruzada section of *cuadrillas*. The *körmagyar* introduces typically Hungarian steps. The United States show two contrasting tendencies: the strict sequence and coordinations of steps, patterns, and music in the New England Singing Quadrille, and the improvisatory developments of the play-party games. [GPK]

quartz A hard, vitreous, widely distributed mineral (crystallized silicon dioxide) occurring in many rocks, often colorless and transparent, sometimes existing in diversely colored forms. See AGATE; AMETHYST; CHALCEDONY; JASPER; ONYX.

White quartz crystals are regarded as rain-stones by certain Queensland, Australia, tribes and are attached to the rain-sticks in the rain-making ceremonies. The people of northern Queensland search for the white crystals in the mountains, pulverize them, and use the powder to simulate, or *be*, rain in their mimetic rain-making rite. The powder is showered over the women by the men while the women hold wooden troughs over their heads to keep off the "rain." The people of New South Wales also regard quartz crystal as a rain-stone. The rain-maker holds a fragment of it in his mouth and spits it toward the sky during the ceremony.

Quartz was in common use among North American Indians centuries before the white man came among them. Arrowheads, knives, and ornaments of quartz have been found in the investigated mounds. Quartz crystals surmounting ceremonial wands have been unearthed in southern California. The Cherokee used them for divining stones. In Ife (West Africa) there are still ceremonial stools carved in one piece from a solid piece of quartz. Among the Hottentots, where iron is tabu to the priest, he uses a sharp quartz implement for sacrificing animals and circumcising young boys.

In early British folk belief quartz pebbles were called star-stones and were constantly sought for their curative properties. Nine star-stones collected from a running brook, boiled in a quart of water from the same brook, would impart their curing power to the water, which was given to the patient for nine successive mornings. In the Shetland Islands quartz pebbles were said to cure sterility; they were collected by women and thrown into a pool wherein they washed their feet. In Persian folk practice quartz crystals are sometimes put on babies to insure their getting enough mother's milk.

Qudlivun or Qudliparmuit The happy spirit-land of pleasure and games in the sky in Central Eskimo mythology. All who have fed the poor during life, known starvation themselves, been murdered, or died in childbirth go to Qudlivun after death. Also anyone who has

been miserable enough to take his own life finds joy in Qudlivun. See ADLIVUN.

Queen of Elfan's Nourice A Scottish ballad (Child #40), known only in fragmentary form; some stanzas even of this fragment do not belong properly to it, but rather to *Thomas Rymer*. The Queen of Elfland has stolen a mother to nurse her child, and the mother wakes the queen to complain of her lot. The queen tells her she must nurse the child until he stands to her knee, and then she will be permitted to go back to her own child and to Christendom. At the basis of this jewellike bit of folk poetry lies the belief in the vulnerability to pagan forces of the woman soon after childbirth. The nurse has been stolen when her child is only four days old, hence there has been no time for churching and the woman still remains susceptible to elfish influence. See CHURCHING OF WOMEN.

Queevet or Aharaigichi A deity of the now extinct Abipón Indians of South America: identified with the constellation Pleiades. He was also known as Grandfather. The Abipón believed all their strength and courage stemmed from him, and they accounted for the riches of the Spaniards as having come from him direct. During the months when his constellation could not be seen they feared greatly for his welfare and continuance, and the rising of the Pleiades in May was greeted with rejoicing and a great festival. The priests, known as *keebet*, derived their power from Aharaigichi (or Queevet). They were magicians and transformers, could become invisible or stalk the world in the shape of tigers. Illness, death, thunder, lightning, eclipses, and other natural phenomena terrified the Abipón, who attributed all such manifestations to the *keebet*.

quena The notched end-blown flute of the Incas and its descendant, the only instrument generally played among Andean peoples today; also, the various types of flute played by the Chaco Indians of South America. The Inca quena of reed is the instrument of love songs; bone flutes were the traditional instruments for war and martial music. The Chaco flutes include end flutes of bamboo, sometimes notched like the Andean types; duct flutes of bird bones used by the shamans for magical performances and consisting simply of whistle head and tube without stops; and plug flutes made of reeds with a wax plug at the blowhole. See Q'ENA Q'ENA.

quests Many task tales involve quests. The search for something that will fulfill a condition is one of the common incidents of folktale. The water of life, the speaking bird, the dragon, and the like are the goals of the hero in quest tales. Sometimes he has helpers: animal helpers, helpers with extraordinary powers to see great distances or to withstand unusual extremes of temperature or the like. Often the quest is accomplished only as the end of a chain of quests: to get one thing the hero must first get another, which in turn is dependent on his obtaining something else first, and so forth. Sometimes the quest is undertaken as a suitor task; sometimes, as in the story of the *Three Sillies*, the quest is self-imposed. See TASKS.

Quetzalcoatl The feathered or plumed serpent god: known over all Middle America, and surviving in mythology to this day. Quetzalcoatl was the ancient Mexican version. Primarily he was a wind god, in which form he

was known as Eecatl, the Aztec word for wind. He was also worshipped as lord of the planet Venus in which manifestation he was referred to as Ce Acatl, "one cane." At the same time he was a creator god, the "sun" during one of the previous incarnations of the world, and the god who went to Mictlan, the underworld, whence he brought back the bones of people of the previous worlds and, sprinkling his own blood over them, turned them into human beings. In addition he was a culture hero, for he brought maize to mankind, instructed in the arts of weaving cotton, polishing jade, making feather mantles, and taught people to understand the calendar and movements of the stars. There is much confusion in the chronicles over this name, for a king named Quetzalcoatl also ruled over the Toltecs at Tula, and subsequently was deified. Legend states that, when bested and humiliated by Tezcatlipoca, this light-skinned bearded king-deity went to Cholula, and subsequently to Tlillan Tlapallan, an unidentified spot on the Veracruz coast where, mounted on a raft of snakes, he sailed eastward after saying he would return in the year Ce Acatl. When Cortes landed in Veracruz in the year Ce Acatl (1519), it is not surprising that Montezuma, king of the Aztecs, thought that it was Quetzalcoatl returning. See ANTS. [GMF]

quetzales A ceremonial Mexican dance, named after the gorgeous quetzal bird. The name is justified by the headdress. A tremendous multicolored wheel called *resplendor*, splendor, woven of raffia, colored paper, or ribbons, and tipped with fine feathers, is attached to a conical hat and fastened under the chin by a kerchief. Sometimes the image of a quetzal bird surmounts the hat. The dance of the quetzales is a feature of the fiestas in the semihighlands of Veracruz (Papantla and Coxquihui, notably) and the Sierra Norte de Puebla (Cuetzalan). It is commonly associated with the flying of the *voladores* and incorporates a similar bird symbolism by the headdress, and, in some villages, by a feat of revolving on a trapeze-like contraption. The rest of the costume resembles that of the *voladores* and other groups of this area—red half-length trousers, at times over a long pair, kerchiefs crossed on the chest, a long red cape, and a small gourd rattle (*sonaja*) in the right hand. Primitive tunes are played on a one-man flute and tabor.

With simple two-steps and raising of their knees the quetzales walk or skip through various simple longways figures: they advance, retire, follow the leader down the center and around, they cross over and back into place, the corner men cross over and back, finally each line winds back and forth through the opposite line in a serpentine path, *la viborilla*. These formations do not necessarily point to European introduction, for the name, steps, headdress, and music are essentially indigenous. On the contrary, these figures may well have come down from pre-Columbian times as rare extant samples of Indian longways. If the dance was originally a supplication to the sun and its life-giving powers, symbolized by the quetzal bird, it represents a formal analogy with European vegetation dances, as the Morris processional. Tradition is silent on the meaning. [GPK]

Quikinna'qu or Kutinn'a'ku Big-Raven: the benevolent creator of Koryak mythology: called Kutq by the Kamchadal, Ku'rkil by the Chukchee. Some of the Mari-

time Koryak refer to him not only as Big-Raven but also as Big Grandfather. The Chukchee sometimes differentiate between Ku'rkil and the creator, regarding Ku'rkil merely as Creator's assistant. The Koryak have the concept that the creator is a supreme deity who becomes Big-Raven by donning the raven's coat. The Chukchee say that Creator put on the raven's coat, flew into the sky, and brought back reindeer for the people. His wife is Miti' in all versions.

Quikinna'qu appears not only as creator-transformer in Koryak mythology, but figures also in Koryak religious incantation and ceremony. Not only is he supernatural and creator, but also first man, culture hero, and shaman. He is present at every shamanistic ceremony, and the Koryak shaman treats his patient in the name of Quikinna'qu. "Big-Raven is here," he says, or "Big-Raven did so and so in your case."

The stories are numerous and varied. Among them are those saying that one day creator was sharpening a knife in the sky; a chip of the whetstone fell to earth and became Quikinna'qu; or Quikinna'qu grew up all alone, went hunting, met Miti', and the Koryak are their descendants. There are numerous tales of the tricks the pair play on each other, misplacing or reversing their genitals, serving fecal pudding, and comic as well as serious or explanatory adventure stories, struggles with cannibals, etc. See Waldemar Jochelson, *Religion and Myths of the Koryak*, Publications of the Jesup North Pacific Expedition, MAMNH, VI, part 1.

quilling The playing of tunes on locomotive and factory whistles, a practice once a matter of great pride among railroad engineers. "Whistling Bill" Wardoff was said to play an ear-shattering version of *Home, Sweet Home*, as he brought his engine in. A radio program during the Christmas holidays of 1949 carried an example of this skill with a rendition of *Silent Night* blasted out on a factory whistle.

quirin A marvelous stone found in the nests of lapwings, highly valued by witches and other magic-makers, for "it betrayeth and discovereth." If the quirin is placed under a man's pillow he will talk in his sleep and reveal his own dearest secrets. This may possibly be the famous stone found in the hoopoe's nest and referred to by Encelius (16th century), since the lapwing and hoopoe were often confused by early scientists.

Quirinus In ancient Roman religion, a secondary god of war and of nature, similar to but distinct from Mars; a Sabine god worshipped quite early in Rome at the Quirinal hill where Titus Tatius and a colony of Sabines from the town of Cures settled. The name is sometimes derived from Cures; some say it comes from *curia*, one of the divisions of the Roman state; additional etymo-

logical conjecture derives it from *quercus*, oak, or *quiris*, spear, oak-spear. His festival, the Quirinalia, took place on February 17. He had one of the principal flamens, and a college of priests, the Salii Agonales or Collini, founded by Tullus Hostilius to parallel the Salii Palatini of Mars. Quirinus is identified with Romulus though he is much older than Rome; his cult partner, Hora Quirini, is thus equated with Romulus' wife, Hersilia. His flamen performed the sacrifice at the Robigalia in April to protect the crops against mildew. A. H. Krappe supposes him to be an ancient thunder god, etymologically paralleling Perun, the Slavic thunder god.

quotations and winged words (*Geflügelte Worte*) The German term, for which there is no convenient English equivalent, refers to widely used sayings uttered by historical persons or credited to them and to quotations that have acquired many characteristics of a proverb. Caesar's remark, "The die is cast," which he made on crossing the Rubicon, is a winged word. Büchmann's German dictionary and works like it in other languages (there is no altogether satisfactory English book of the sort) trace such sayings to their origins. Many of these sayings have international currency. Like proverbs, winged words have an indefinite origin (a precise source can rarely be found in the words of the individual to whom they are ascribed), express a didactic idea, and suffer changes in the process of oral transmission. For example, "I am the state" (*L'état, c'est moi*) summarizes neatly the political attitude of Louis XIV, but although these words are ascribed to him, the exact source has not been discovered. The saying "Know thyself," an inscription in the temple of the Delphic Apollo, has been assigned to several Greek sages; it stands on the borderline between the winged word and the proverb. James J. Corbett is supposed to have coined "The bigger they come, the harder they fall."

English collections of familiar quotations are usually arranged according to sentiments (love, patriotism, honor) or general themes (death, spring) and supply the user with a passage appropriate to a particular situation. Some English winged words like "Knowledge is power" can be run down in foreign collections, but those of recent origin like "Don't sell America short" or "Verify your references" are often difficult to trace. See Georg Büchmann, *Geflügelte Worte* (1st ed., 1845; many later enlarged and altered editions). John Bartlett, *A Collection of Familiar Quotations* (Cambridge, Mass., 1855. The latest or twelfth edition is *Familiar Quotations; a collection of passages, phrases, and proverbs traced to their sources in ancient and modern literature* [Boston, 1949]). Burton E. Stevenson, *The Home Book of Quotations* (New York, 1949). [AT]

R

Rā or Rē In ancient Egyptian religion and mythology, the sun god and demiurge of Heliopolis; the most generally recognized form of the sun god and the god whose worship was most widespread in Egypt. Rā was probably originally a Western Asiatic sun god imported into the Delta, where his worship remained strongest and where he supplanted an earlier native sun god, probably Atmu. Because of the constant combination and synthesis among the Egyptian gods, Rā has become confused with other gods, especially sun gods like Horus; but he constantly remains the personification of the sun at its strongest, the noonday sun, as Mentu is the rising and Atmu the setting sun. At Heliopolis, Rā was incarnate in the Mnevis bull; at Hermonthis, another center of his worship, he was the Bacis bull.

Rā was thus the chief god of one of the two principal religious groupings of Egypt, Osiris worship and Rā worship. There were no great centers of Rā worship; his cult was diffuse and formed part of other cults. In his principal center at Heliopolis were the sacred tree of the sun and the pool in which Rā bathed when he descended to earth at ritual periods. The "rival" cult of Osiris eventually completely overshadowed the cult of Rā. Principally contributing to this result was the political history of Egypt. The priests of Rā, after a long struggle, best exemplified in the period surrounding the reign of Ikhnaton, attained political power as the temporal heads of the state. Therefore, when the state itself fell to the Assyrians, the entire Rā complex fell into popular disfavor, and, lacking the political power to enforce Rā worship, the priests lost their religious following almost completely. In addition, the religious atmosphere that led to the rise of the Greek mysteries and eventually to Christianity existed in Egypt too, and concern with the afterlife and the problems of life and death, led to supremacy of Osiris worship. The Rā system was primarily a cosmological one, dealing with the ordering of the heavens, with creation, origins, and the government of the universe. The Osiris cult, on the other hand, dealt principally with the matters of life, death, resurrection, and the future life.

In mythology, Rā created himself from Nun, the pre-existent void. Then, from spittle or by a solitary act of fertilization, Rā created Shu, the air, and Tefnut, moisture. These in turn became parents of Nut, the sky, and Geb, the earth, whose offspring were the four other gods who made up the Great Ennead—Osiris, Set, Isis, and Nephthys. Through confusion with Osiris, Rā is sometimes called the son of Geb and Nut. Rā is one of the creators of mankind of Egyptian myth: he castrated himself, and from the drops of blood man arose—this is probably influenced by the other castration-creation myths of the Mediterranean region, or it may be a euphemistic telling of a masturbation myth similar to that of Khnemu. Though a divine being, Rā had many of the failings of man: he grew old; he was bitten by a snake and feared to die, and to save himself he told Isis his real name (see *ISIS*); he grew displeased with man,

ordered his destruction, and repented his order (see *SEKHMET*). Rā was first king of Egypt, but grew tired of living among men. He therefore seated himself upon Nut, who transformed herself into the great celestial cow overspreading the heavens upon which Rā, the sun, still rides. Rā crossed the sky, accompanied by his court, in a boat by day, *Manzet*, the dawn bark; at night, he rested in his ship *Mesenktet*, the night bark, which traveled from west to east below the world to the point where it rose again in the morning.

Since Rā was the first king of Egypt, all Egyptian kings had a Rā name. Actually it was the kings of the V Dynasty who first took such a name, but all kings afterwards bore a Rā name. Rā was patron of the pharaohs, and in later times was the father of the pharaohs, impregnating the queens as Rā, though he might appear in the form of the king to them.

Rā appears compounded with several other Egyptian gods, for example *Amen-Rā*. Since the power of the life-giving sun was Rā's, he loaned himself to these other gods to give them the power that they needed. In actuality, the local gods of other places were probably identified as local aspects of the main sun god and adopted his name as a sort of hyphenated divinity.

Rā is depicted as fully human, or as a hawk-headed man whose head is surmounted with the uræus serpent and the sun disk, or as the sun disk riding in the celestial boat. Sometimes he is the scarab or dung-beetle, the symbol of the god rolling the sun across the sky as the beetle rolled its ball of dung before it. Rā's symbols were therefore the hawk, the serpent, and the scarab. He appeared also as the eye of Rā, the celestial or god eye, which was also the symbol of Horus. Among the other symbols associated with Rā were the rams' horns of creation and the vulture wings of protection.

Rabbit (1) Chief among several animal tricksters of Indian tribes of the southeastern United States; also, as *Cottontail*, a prominent animal character in Great Basin Indian mythology and as *Hare*, prominent in Eastern Woodlands myths. In the southeast, beside being the main character in innumerable purely trickster tales, Rabbit is also a culture hero, a benefactor to mankind; he obtains fire from across the ocean, brings it back after a chase and sets the woods on fire, much as *Cottontail* of the Great Basin stole the sun for the people. See *LIGHT*. Many of the everyday tales told about Rabbit among southeastern tribes are clearly adaptations or direct borrowings of African and European myths, either in whole or in part (see *BRER RABBIT*; *TAR BABY*). This often makes for confusion and has led to underestimation of the large amount of native material which is still current in southeastern Indian trickster and other tales. Rabbit, as well as *Hare*, is one of the animal characters in Eastern Woodlands and Southwestern tricksterlike tales. See *HARE*. [EWV]

 (2) Rabbit is one of the several animal tricksters (rabbit, spider, tortoise, chevrotain) found in African

folklore. Deriving principally from Nigerian and Dahomean sources, Rabbit has become the best known of these tricksters through the publication by Joel Chandler Harris of the famous Brer Rabbit stories collected from Negroes of the southern United States. Though this has given Rabbit, as well as animal tales in general, an outstanding place in conceptions of Negro lore held by folklorists, the importance of both character and category has tended to be exaggerated. See UNCLE REMUS.

[MJH]

rabbit dance The impersonation of a rabbit, common among eastern North American Indian tribes, the Menominee, Creek, Yuchi, Alabama, Seminole. Menominee dancers of both sexes circle the drum, crouching, pretending to put food in their mouths, and moving their lips like the rabbit, *wa'bos*. The *tsofi* of the Creek and *cadjwanecti* of the Yuchi were traditionally included in the social second evening of the Green Corn dance. Emitting squeaks, the performers crooked their left arms between their faces and the fire. Possibly the original purpose was to cheer the poor little spirit (Chippewa *man'idowens*), to make himself available for food. A totemistic origin is doubtful. Neither song texts nor actions refer to the rabbit's mythological role as trickster. [GPK]

rabies Hydrophobia; an infectious disease of animals, especially dogs, caused by a virus which attacks the central nervous system: readily transmitted to human beings by the saliva of rabid dogs. The folklore of rabies (beliefs and fears regarding its symptoms in man and beast, its causes, and cures) is voluminous and dates from the time of Aristotle to Pasteur. Fear still fosters many misconceptions, e.g. a mad dog foams at the mouth (actually the rabid dog is dry-mouthed and feverish); victims of hydrophobia (dog or man) fear water (actually they crave water but cannot swallow it); people bitten by mad dogs bark and snap (this occurs in hysterical, not true rabies); that the sound of dogs barking rings in their ears is also untrue. In many parts of rural America it is said that killing a sow bug will give hydrophobia to the one who kills it; hence "mad-dog" is a popular term for sow bug in those localities.

One of the most common remedies recorded for mad-dog bite is the liver of the dog, either applied to the wound or dried and taken internally. In medieval England the victims were thrown into lakes and ponds or treated with *madwort* (balaustium root) mixed with soot and olive oil. In Denmark the disease was regarded as so agonizing and so inevitably fatal that victims were mercifully strangled.

One of the earliest comments on rabies is found in the writings of Epicharmus who said that wild cabbage would cure the bite of a mad dog, and would kill the dog if he ate it. Pliny reports the root of wild rose revealed as a cure in a dream to the mother of a victim of rabies.

Galen (2nd century) doubted that the liver of a mad dog would cure its bite, in that several people who trusted to this had died. He recommended theriac, however, the famous cure-all and poison antidote of the ancients, in which the flesh of vipers was one important ingredient. Galen also reported the experience of a man who roasted crabs to an ash in a copper dish during dog

days (August) on the 18th day of the moon, and prescribed the ash to be taken for 40 days by victims of mad-dog bite. Aëtius of Mesopotamia in the 5th century repeated this story and recommended the cure. He also prescribed drinking bitumen in water to prevent hydrophobia after a bite. A well-known 5th century preventive amulet against getting bitten was the tooth of a mad dog who had bitten somebody. The Gnostics recited special incantations to cure the disease.

Epiphanius of Cyprus (315-403) declared that topaz gives forth a milky fluid which cures rabies; this was verified by a number of later physicians experimenting between the 5th and 10th centuries. Constantinus Africanus (11th century) recommended placing a live chicken on the wound; if left there till it died, the man would get well.

Gentile de Foligno, a 14th century scientist and physician, who was called Speculator because of his attitude toward the findings and opinions of his predecessors, in regard to rabies "speculated" first as to whether or not a man could contract the disease at all, whether theriac would help most if applied to the bite or taken internally, whether dogs were visible in the urine of a rabies patient, and why those bitten by mad dogs were afraid of water. To these questions Gentile answered: Yes, man can and does contract rabies; particles resembling dogs do not appear in the urine of a patient, in that "neither matter, agent, nor place are favorable for generation." William de Marra in the *Papal Garland Concerning Poisons* (14th century) answered one of the great recurrent questions concerning rabies: Why are dogs more prone to rabies than other animals? Answer: The dog, living so close to human beings, is "more provoked to wrath and sadness" than other animals.

Johann Varisman of Danzig wrote (1586) a 19-chapter treatise on hydrophobia in which he denied the influence of the dog star as a cause of rabies, but said instead it was caused by a worm under the dog's tongue. He also denied the efficacy of incantations, but recommended a new antidote containing the powdered leaves of ten plants, each of which at one time or another has been called heal-all, this antidote to be applied to the bite if it can be obtained immediately, to be taken internally if any time has elapsed.

The most magical of all remedies, however, is that discovered by Pasteur. Until his day the disease was invariably fatal. Pasteur, after his experiments and successes with vaccination for smallpox and the prevention of anthrax in sheep, grew rabies virus in the nervous systems of rabbits. The rabbits died with rabies; he removed their spinal cords, dried them, injected the virus into other rabbits, who were discovered to develop immunity to rabies. A man or animal infected with the virus from a bite, or from contact with rabid saliva with a scratch or cut, does not develop the actual disease sometimes for three weeks or more. This fact plus the fact that the immunizing agent works more rapidly gives persons bitten by mad dogs a chance to escape rabies. See BREAD.

Raccoon Animal trickster about whom many stories are told in Eastern Woodlands Indian mythologies. Raccoon is never a creator or transformer, as the major animal tricksters are (see for instance COYOTE). He also differs as a trickster, being neither foolish nor a dupe;

the tables are seldom, if ever, turned upon him, as they are on Coyote, Wisaka, or other tricksters. [ewv]

Rada Term for a group of Haitian deities of the *vodun* cult who themselves comprise one pantheon, others being the Pétro, Congo, and Ibo gods. The word is a contraction of the name of the old capital of the Dahomean kingdom of West Africa, Allada (or Arada). This derivation is confirmed by the fact that the majority of the Rada deities are of Dahomean origin. See ACGB; DAMBALLA; VODUN. [MJH]

Ragnar Lödbrok (c. 735–794) A great Viking warrior who succeeded his father, Sigurd Ring, as king of Denmark at the age of 15, and later invaded England. His first wife, the warrior maiden Lodgerda, ruled a remote part of Norway where he lived happily for three years. But as she refused to leave and his subjects were taking their loyalties elsewhere, he returned home. Next he fell in love with a picture of Thora, daughter of King Herodd in East Gothland. It was this Thora who raised a nest of adders which multiplied until they endangered the public, and which Ragnar Lödbrok killed. In the *Saga of King Ragnar Lödbrok*, Thora kept a pet snake in a treasure box of gold; the snake grew to enormous proportions and with his growth the gold kept even increase.

After slaying a fearful dragon which encircled the castle (a monstrous worm hatched from the egg of a swan), Ragnar Lödbrok married Thora and settled down, even forgoing his annual raids. The name Lödbrok (*Lothbrok*) refers to the oxhide armor which he wore while fighting the dragon. After Thora's death, Ragnar resumed his piratical raids and on one of these met Aslaug, the ward of a peasant couple. They were married and she bore him five sons. When his subjects began to mutter about his lowly queen, he turned his thoughts to the daughter of Eystein, king of Sweden. On learning, however, that Aslaug was in reality the daughter of Sigurd and Brynhild, he sent his sons instead to settle with Eystein. Ragnar was killed by Ella, king of Northumberland (England), who removed his magic shirt and threw him into a snake-pit. Here Ragnar sang the joyous death song "... laughing I die!" which characterizes the hero deaths of romantic Viking legend. *The Death Song of Ragnar Lodbrok* was included in Percy's *Reliques*. In revenge for the death of their father, Ragnar's sons (who later founded the city of London) carved a spread eagle on Ella's chest.

Ragnarök In Teutonic mythology, the day of the great battle between the gods and the forces of evil. Teutonic mythology, beginning with the formation of Ymir in Ginnungagap, is a complete cycle of which Ragnarök is the culminating chapter. Ragnarök is more than the final battle of the world in which the forces of good and evil valiantly fight out their predetermined one-sided battle on the plains of Vigrid. It is the complete destruction of the universe and begins, roughly, with the death of Balder and the realization by the gods that, in Loki, they have been fostering the seeds of evil in their midst. Although they have secured him in chains they know that it is too late: the final dissolution has begun. This seems to be the point in the cycle in which the sagas and eddas were written and, in all probability, the time in which we are still living in spite of the intervening millennium.

The end of the world will be announced by the Fimbulwinter, three terrible winters with no summers between, in which the earth will be covered with ice. Following this there will be a further three-year period during which the crimes of man will increase. Since man is, at best, but an imperfect mirror of the gods, their degeneration will lead to his moral and physical destruction by greed, lust, vice, and warfare. The forces of evil, Loki's progeny (the Fenris wolf, Jörmungandr, Hel and their brood) who feed on the evil in man, will so increase in strength that they will burst their bonds.

The loosing of these powers of evil is the signal for the three cocks, Fialar in Valhalla, Gullin-kambi in Midgard, and Hel's dark red bird in Nifheim, to sound the alarm. This is immediately echoed by Heimdall on the Giallar-horn summoning the opposing forces to the final battle of the universe on the spacious plain of Vigrid. Loki will come with his brood in the ship Naglfar, Hrim and the frost giants in another ship out of the north, Surtr brandishing his fiery sword, Hel and her minions, who will oppose the gods led by Odin and his mighty warriors, the Einheriar.

In spite of the predetermined outcome of the battle, the gods, with true northern spirit, will fight valiantly. Odin himself will be the first to perish, swallowed whole by the Fenris wolf, which in turn will be rent asunder by Odin's son, Vidar. Thor will renew his ancient battle with the monster, Jörmungandr, whom, after an epic struggle, he will succeed in killing, only to be drowned in a sea of venom issuing from the serpent's jaws. The one-handed Tyr will battle with the hellhound Garm. Heimdall and Loki will fall, mutually slain. Frey, armed only with a stag horn, will fall by Surtr's flaming sword, and in the end, all will perish.

In the heavens, the two wolves which have been pursuing the sun and moon in their courses will finally overtake and devour them. The brands falling from Surtr's flaming sword will set fire to the earth, and the seas boiling up will engulf the land. The heavens will be rent asunder; the stars will fall into the abyss; and all will be destroyed in the universe save Lif and Lifthraser, asleep in Hodmimir's forest. These two will, at the proper time, step forth to repopulate a world of peace and love presided over by the All-father whose majesty is so great that no one dare even mention his name.

The mortal gods who have lost their lives at Vigrid will go to dwell forever in Gimli, the highest heavenly abode. The evil ones will be sentenced to Nastrond. The dwarfs and the giants, who have been governed entirely by the decrees of fate, will not be punished. The dwarfs, under their leader Sindri, will go to a hall in the Nida Mountains and the giants to a hall called Brimer, where they will live a life of pleasure.

Some look on Ragnarök as the twilight of the gods in which the old gods lose their power through degeneracy and abuse and are replaced by a rule of love as depicted in Wagner's *Götterdämmerung*. This theory was admirably suited to Christian teaching and was probably influenced by it. See BIFROST.

rags-to-riches A generic catchword for the whole reversal of fortune cycle of folktales, the L chapter in Stith Thompson's *Motif-Index of Folk-Literature*. It is especially associated with the unpromising hero (male

Cinderella) motif (L101) and often, but not always, identified with the clever youngest son stories (L10 ff.).

 Rags-to-riches or male Cinderella is a popular theme in North American Indian novelistic hero tales. The hero, a poor boy, usually an orphan or an abused younger son, either has supernatural power or is advised by supernatural beings so that he overcomes obstacles, meets difficult tests, and succeeds in winning the chief's daughter in marriage. Tales employing this theme are especially popular among the Eskimo, on the North Pacific Coast as far south as northwestern California, on the Plains, and in the Eastern Woodlands. (See Stith Thompson, *Tales of the North American Indians*, Cambridge, 1929, pp. 327-28, n. 185.) The rags-to-riches theme also occurs in the Dirty-Boy tale popular among Plateau and Plains tribes (see Thompson, p. 327, n. 183), but in Dirty Boy a supernatural being merely assumes a humble disguise. In a contest for the chief's daughter he wins the girl and unmasks an impostor; he then assumes his original form. [Ewv]

ragtime A gay, syncopated, percussive style of instrumental (particularly piano) music in duple time, arising in the 1890's from American Negro secular song and the minstrel show cakewalks, buck-and-wings, "ballin' the jack," etc., and forming one of the strongest influences on the development of jazz. The piano style is characterized by a rapid left-hand technique, with single notes, octaves, or chords played against the freer syncopations and melodic variations of the right hand. Among the favorite early piano rags were Tom Turpin's *Harlem Rag*, Scott Joplin's *Maple Leaf Rag*, and the traditional *Eagle Rock Rag*. Great players included James P. Johnson, Jelly-Roll Morton, better known for his jazz-playing, and Lucky Roberts. Words were rarely fitted to the tunes, though there are a few texts, generally delivered in recitative or nonsense syllables imitating the instrumental sounds or playing against the instrumental rhythms. The ragtime band played cakewalks, two-steps, marches, etc., in the wide-open, circus-music manner of New Orleans parades, with group improvisation and rhythmic variation. The fusion of ragtime with early jazz took place in such bands as "Buddy" Bolden's and "King" Oliver's, and in the piano music of the New Orleans Storyville district (see JAZZ). In fact, ragtime might be considered a transitional form of music, which had almost completed its absorption into the later popular styles by 1915. The origin of the word is uncertain. It has been suggested that the street chants of ragmen may have entered into its conception. However, in the Sea Islands section of Georgia, "sinful" or secular songs were often called rags. [rcb]

ragweed (1) A tall smooth herb with bright yellow flowers (genus *Senecio*) called in England, *ragwort* or *sinking Willie*. In Cornwall witches used to ride about in the night on the stalks of this plant. In Ireland it is called fairies' horse. The ragweed has a clock, like the dandelion, and is used by children in telling time. It is considered a cooling herb in the dominion of Venus, and, although poisonous to cattle, is given to horses for staggers. The plant is applied whole as a poultice for sciatica, arthritis, gout, and venereal infections, and the juice forms a cooling lotion for the eyes. It is also used for cancer and all manner of ulcers and sores. This is one of the gay plants which spontaneously sprang up in

the bombed ruins in London as well as the rest of England during World War II.

(2) A coarse, common herb (genus *Ambrosia*) which induces hay fever. The Gosiute Indians of Utah use a leaf tea of this plant on bandages for sore eyes. The Meskwaki Indians chew the root of the giant ragweed to drive away fear at night.

Rahab The Rager: one of the names (*Isa.* xxx, 7; li, 9-10; *Ps.* lxxxix, 9-10; *Job* ix, 13; xxvi, 12-13) for the dragon slain by Yahweh in the supposed very early dragon-slaying myth of the ancient Hebrews. Other names for the dragon in the Bible are Leviathan, Tannin, and the serpent. In rabbinical legend the dragon Rahab is the angel of the sea, and probably originally Rahab was equated with other sea dragons slain by such heroes as Marduk. The harlot of Jericho who aided the Israelites was named Rahab; Robert Graves (*The White Goddess*) says that she was a priestess of the sea goddess Rahab. According to the Midrash, Joshua and Rahab had only daughters, further strengthening Graves' belief that the story deals with the political marriage of the invading chieftain with the representative of a group of powerful priestesses.

Rahkoi The ghost of the Finns and Lapps; it has influence on the phases of the moon. [JB]

Rāhu In Hindu mythology and belief, the cause of eclipses, comets, meteors, and guardian of the southwest quarter. Rāhu was the mischievous four-armed Daitya who stole and drank some of the amṛita produced at the Churning of the Ocean. Discovered by the sun and the moon, who informed Vishnu, his head and two arms were cut off by the angry gods, but since he had secured immortality as a result of tasting the amṛita, the upper part of his body was placed in the heavens in the form of a dragon's head to represent the ascending node, and the lower part (Ketu) in the form of a dragon's tail to represent the descending node. Eclipses are caused by him: i.e. he swallows the sun or the moon as revenge for the loss of his head. Rāhu is the special deity of the Dosādhś and the Dhāngars, who worship him by walking through a pit filled with hot cinders. He presages sickness and all kinds of trouble and must be frightened away by music, noise, or by bathing at a holy place during an eclipse.

Raiden or **Kaminari Sama** The Japanese God of Thunder, depicted as a demon with claws and a string of drums. He is fond of eating human navels. The only protection against him is to hide under a mosquito net. [JLM]

Raiko The poetic name of Minamoto Yorimitsu, a celebrated Japanese warrior of the 11th century, whose life was made into a legend. [JLM]

Railroad Bill Negro bad man of Escambia County, Alabama, celebrated in folk song and legend for his combination of Robin Hood and hoodoo. Originally a turpentine-still worker named Morris Slater, he shot a deputy who attempted to arrest him for carrying a gun, and escaped on a freight train. Thereafter his habit of riding freights and looting freight cars of canned food and other goods, which he gave or sold cheaply to the poor, won him the sobriquet "Railroad Bill." With Stackalee he shares the ability of turning into an animal

to elude his pursuers. Once, hunted by the sheriff with posse and bloodhounds, he changed himself into a black dog and accompanied the hounds to his girl's house, where he "stayed behind to do some courtin' when the sheriff left." [BAB]

rain Without rain nothing can live; it is the life-giver and -sustainer of man, animals, vegetation, everywhere regarded as beneficent: deified, venerated, and associated with complex magico-religious ritual for its control among all primitive peoples, especially in arid regions and those parts of the world subject to long dry seasons. The rain-maker is often the most important and influential member of a community. The value of rain is revealed in an old European riddle: How much is a golden plow worth? (H713.1) to which the answer is: A rain in May.

In ancient Greece and Rome, the sky god (Zeus, Jupiter) was the god of rain. Ancient Greek rain-makers dipped a branch of the oak (his sacred tree) in water to induce rain, and the god was addressed with prayer. In Rome, little images were cast into the Tiber to bring rain. The ancient Teutons observed a rite of pouring water over a naked girl to bring rain to the earth.

To the ancient Hebrews, rain was a blessing from heaven in return for obedience to the Law. *Genesis* i, 7 mentions the separation of the waters which were under the firmament from the "waters above"; and the source of rain was conceived as a great reservoir or "treasure of waters" in heaven. The keys to these waters were kept by God. Drought was caused by sin: non-payment of tithes, slander, etc. I *Kings* xviii tells the story of drought and famine in the land of Ahab, God's promise to Elijah to send rain when the people's hearts were turned from Baal, the conversion of the people, the appearance of the little cloud, and the coming of the rain according to promise.

In India, Buddhist priests induce rain by pouring water into little holes in the temple floor to symbolize rain sinking into the earth. In southern India women tie a frog to a winnowing fan, sing to the effect that the frog needs water; others pour water on the frog; it sprinkles through the sieve, and rain comes in torrents. Belief in the power of the snake to give rain is indicated by two great festivals (*Nāgpañchamī*, northern India; *Nāgara-pañchamī*, southern India) both of which occur in the rainy season. Images of snakes are bathed, dipped, sprinkled, etc.

To make rain the ancient Celtic druids, followed by processions, went to certain sacred wells or magical springs; they beat upon the surface of the water, or the water was poured over special stones, or tossed into the air. In Christian times these rites were taken over by the church; the procession was headed by the priest and image of a saint; but such practice was subsequently denounced and forbidden.

Various animals are often regarded either as custodians of rain (frogs, toads, snakes, lizards) or as protégées of the rain god. In some places, certain stones are regarded as infallible rain-givers. They are supplicated, shown water, sprinkled, dipped, submerged, etc., to induce rainfall. If the downpour is too great or floods threaten, they are laid by the fire until the earth is dry again. Liberating rain by pouring water is a common magic practice. Pouring water on leaf-clad mummies or pup-

pets (who symbolize vegetation) is still practiced in parts of Europe.

In general folk belief, a rainy wedding day forebodes an unhappy marriage. The cry of the curlew predicts rain in Ireland. When ants scurry into their hills and close the entrance, it is going to rain. To hear the barnyard ducks quacking at night means rain in the morning; the same is said of geese. In Newfoundland and Nova Scotia, it is said that loons "call for rain"; quail are also said to call for rain. It is a sign of rain if crows, wild geese, swallows, gnats, lightning bugs, etc., are flying low. In Labrador and Nova Scotia, mosquitoes bite hardest just before rain. In Newfoundland, if a cat drowns in the sea it will surely rain. Corns and rheumatism are always more painful just before a rain. It will rain if you kill a frog, or a toad, or a spider. See AMETHYST; BACABS; CEREMONIAL DRINKING; CHACS; JACK IN THE GREEN; KURENA; MOON; QUARTZ; RITUAL DRAMA; TLALOC.

➤ To the agricultural Indians of the Southwest, rain is a gift of the Cloud People, and Pueblo Indian corn ceremonies are given to obtain rain for the crops. Rain and clouds are symbolized pictorially by the Hopi by half circles from which straight vertical lines depend; this well-known Hopi rain symbol is used in the signet of the *Reports* of the Bureau of American Ethnology, Smithsonian Institution, and also appears on the jacket of this *Dictionary of Folklore, Mythology, and Legend*. By many tribes rain is connected with thunder; in a Jicarilla Apache myth, Thunder and Cyclone disputed each other's powers and became angry with each other; as a result there were no storms and no rains. The people, under the direction of four old men representing four water animals (Salamander, Water Frog, Crawfish, Turtle) danced while Old Man Salamander sang, and kept their minds on rain; it rained, and this ceremony has been used ever since by the Jicarilla to obtain rain.

A host of beliefs, rites, and charms center about rain and its artificial production. The Tübatulabal Indians believe that if a certain kind of spider is thrown in a pool, it will rain hard. The Yuchi of the agricultural Southeast, where summer rains are seldom a problem, say that there is a big water vessel in the sky; when someone jerks it, it spills water over the edges, and this is what makes the rain. The Shawnee believe one way to make rain is to dip a buffalo tail in water and sprinkle the water quietly on the ground. See FEMALE RAIN; MALE RAIN. [EWV]

➤ Some Chaco Indian tribes conceive of the rain as a spirit riding a horse. For the Chamaco rain is produced by birds (clouds) whose bodies are full of water. The Aymara Indians have a rain-making rite still observed in time of prolonged drought. Their magician Paqo goes in his balsa out on Lake Titicaca and fills a number of basins with water, frogs, and certain water plants, leaving offerings to the spirits of the deep pools from which he takes them. Men in other balsas go with him, playing on panpipes and drums. Paqo, musicians, and a mixed chorus of men and women then climb the mountain called Atoja and leave the basins full of frogs and plants on two altars in the sun. Paqo prays to Father Atoja and Mother Atoja, the mountain spirits, for rain, to the accompaniment of the mixed chorus singing the frog song. Soon the heat of the sun

evaporates the water, the frogs cry out in distress, and the spirits in pity send rain. [AM]

rainbow Like other spectacular events in the sky—meteors, the aurora, eclipses—the rainbow is ominous. Yet, despite the feeling of an impending supernatural occurrence lying beyond the spectacle of the rainbow, accurate folk observation has evolved the rime, whose conclusions are true:

Rainbow in the morning, sailors take warning;
Rainbow at night, sailors' delight.
Rainbow to windward, foul fall the day;
Rainbow to leeward, damp runs away.

Less true, but just as positive, are the beliefs that a rainbow appearing after a storm means no more rain for quite a while; and that a double rainbow signifies a long spell of dry weather. In Malaya, a partial arc ending in the water means that some prince will soon die. Seneca claimed that a rainbow seen in the south presaged a heavy downpour, one in the west a light misty rain. Pliny said that the rainbow foretold a heavy winter or a war. The Iranian Moslems have developed a complete zodiacal system; e.g. the rainbow in the east in the sign of the Ram brings good fortune; in the west in the same sign, it means famine; in the Bull in the west, good fortune; in the Bull in the east, all women will suffer, etc. (See B. A. Donaldson, *The Wild Rue*, London, 1938, p. 99.) The brilliance of the colors of the rainbow has meaning to the same people: a prominent red means war, green means abundance, yellow brings death. The Arawak of South America believe the rainbow to be a fortunate sign if it is seen over the sea, but when it appears on land it is an evil spirit searching for a victim.

Among the Semang of Malaya, the places where a rainbow touches earth are unhealthy. In Europe, it is believed that anyone passing beneath a rainbow will be transformed, man into woman, woman into man. In Rumania, for example, it is said that the rainbow stands with each end in a river, and anyone creeping to its end on hands and knees and drinking the water it touches will instantly change sex. (See below for the connection of the rainbow with the serpent, and compare TIRESIAS.) The Teton Dakotas say one must not point at the rainbow with the index finger or the finger will swell. But it is safe to make a gesture at it with elbow or lips. A tabu resembling this is maintained by the Hopi and Thompson Indians. This tabu against pointing at the rainbow also appears in folktale (motif C843.1). Generally throughout Europe, the place where the rainbow touches is lucky, because at the end of the rainbow is a pot of gold or other treasure (N516), ready to be taken by its finder. In Silesia it is said that the angels put the gold there, and that only a nude man can obtain the prize. The Malaysans too believe that a treasure lies at the end of the rainbow.

In the mythologies of several peoples, the rainbow is a bridge (F152.1.1) between heaven and earth. The Norse Bifrost is the bridge over which Heimdall stands guard; at Ragnarök the frost giants will storm the bridge and raid Valhalla, breaking the bridge into bits. This rainbow bridge flames in three colors, keeping the giants from mounting it lest they melt; but when the bridge cools the way will be open. Bifrost is not identified with the rainbow in the *Elder (Poetic) Edda*, but Snorri Sturluson's *Prose Edda* so names it. In the Celebes, and in

Hawaii, but nowhere else in Polynesia or Melanesia, the rainbow is a bridge. The North American Catawba Indians of the Southeast and the Tlingit of the Northwest both recognize it as the road of the dead. The messenger of the Greek gods, Iris, is the goddess of the rainbow; a rainbow goddess (A288) is also recognized by the Chibcha of North America. In Siberia, the rainbow is the thunder god's bow; among the Yukaghir it is the tongue of the sun; the Samoyeds call it *munbano*, the hem of the sun god's coat. The Moslems of Iran call it the bow and arrow of Rustam, the sword of Ali, or the picture of the magic mountain Qaf. The Hidatsa say the rainbow is the clawmarks of the red-bird, and they call it the "cap of the water (or rain)."

Most often, however, the rainbow is recognized as a snake, the rainbow serpent (A791.2) of the North and South American Indians, the Australian aborigines, the Dahomeans and their neighbors in West Africa, the ancient Persians, and other peoples. The great snake of the underneath, the rainbow serpent of Yoruba, is, like many other mythological serpents, an earth god. He comes from the earth to drink in the sky. Among the Ewe-speaking tribes, the rainbow serpent stands on his tail in the sea, whence he comes, bends over, and drinks the water. In Malaya, the rainbow is a snake drinking water where he touches earth; on the east coast there is a house where a water jar was drained dry by the rainbow serpent. The rainbow serpent is of great importance—as creator, culture hero, fertility god, Great Father—in aboriginal Australian mythology and ritual. Through him for example initiates are reborn after being swallowed. The Kumana of eastern Bolivia visualized the rainbow as a snake who threw stones at anyone who looked at him. The Ashlusay of the Chaco see the rainbow as a sky serpent. In Brittany, the rainbow serpent has the head of a bull, with blazing eyes.

A Chaga (African) tale includes several of these concepts. A man waits at the place where the rainbow touches the earth, praying for cattle. When none appear he cuts the rainbow in two with his sword; half rises into the sky, half disappears into the earth, leaving a hole. People who climb into the hole discover an underground paradise, but lions drive them out and have driven away anyone who has gone down since.

 Nearly all North American Indian groups account for the rainbow, either in their myths or as part of their bodies of belief or knowledge. The Timiskaming Algonquians call the rainbow "forms from the water"; the Timigami Ojibwa call it "mist from the water"; both groups believe the rainbow is caused by the mist from breakers on some great body of water. The Yuchi of the Southeast believe that a rainbow brings dry weather; stretched across the sky, it prevents the rain from falling. In two Jicarilla Apache myths Rainbow is personalized; he is helpful to the Hactin (supernaturals) and to Killer-of-Enemies when that culture hero is trying to kill the Rolling Rock monsters. In Hopi and other Pueblo Indian myths the Cloud People and the kachinas travel on the rainbows; Navaho gods also travel by rainbow. Rainbow is also a spirit in the pueblos. The interior ladder in pueblo kivas represents the rainbow. In certain sand paintings, rainbow house is represented by three straight lines. A rainbow bridge to an upper or other world is mentioned in various Mackenzie, North Pacific Coast, Iroquois, and Southwestern myths. In sev-

eral instances the appearance of a rainbow in the sky is taken as a sign that a girl is menstruating, or that evil will befall, or that there will be good wild crops. Children in northern California tribes were especially warned not to count the colors in a rainbow or to point at it, else one of their fingers would be crooked or drop off, or they would become sick. Dreaming of a rainbow was regarded as an evil portent. If one ran through a rainbow one would be a good doctor. The Shasta Indians of northwestern California believe that Sun, a shaman, uses the colors in the rainbow to paint himself.

In few if any American Indian myths is Rainbow a main or even an important character, even in Plateau mythology where so many natural phenomena are personalized and active characters in myths. [ewv]

Many South American Indians identify the rainbow with a gigantic water serpent. It was caught when it was still small by a girl who kept it as a pet. It grew rapidly and went around the world swallowing people; but the huge serpent was finally killed by an army of birds. After their victory, each bird dipped itself in the blood of the monster, thus acquiring the variegated colors which characterize them (version of the Arekuna, Arawak, Witoto, Jivaro, and Vilela Indians). [AM]

Among the symbolic appliqué cloths of the Dahomey Negroes, one representing Dā in his Aido Hwedo aspect shows the huge serpent, tail in mouth, in a position that would encircle the earth. This seems to represent the concept of Aido Hwedo as two: the serpent under the earth and the serpent in the sky. The serpent in the sky is the traditional rainbow serpent who carries the thunderbolts from heaven to earth. The Sky cult priests of Dahomey identify their Dji with Aido Hwedo; Dji not only represents the rainbow but is represented as a snake. See OSHUNMARE.

Rainbow Serpent is a mythological character known in much of Australia by various names including that of *Kalseru* in northwestern tribes. He is associated with pools containing spirits of unborn children, rain, and fertility. [KL]

rain crow The yellow-billed or the black billed cuckoo (genus *Coccyzus*): so called throughout the farming regions of the United States because its cry is said to predict rain. N. N. Puckett reports in his *Folk Beliefs of the Southern Negro*, Chapel Hill, 1926, that among Alabama Negroes, however, the cardinal grosbeak is the rain crow; to hear one means rain, even to see one is thought to be a sign of rain. He also cites a Georgia Negro belief that breaking a rain crow's egg in water and washing your face in it will enable you to see ghosts.

Rakan Japanese term for the *arhats*, or Buddhist saints, who have already become perfect in this life; especially, the 500 immediate disciples of Gautama, the historic Buddha. [JLM]

Rākshasas (feminine *Rākshasi*) In Hindu mythology and folklore, the demigod demons hostile to men; literally, destroyers. According to the *Rāmāyana* they were created by Brahmā to guard the water. They are also said to have descended from the sage Pulastya. The Rākshasas appear in the shape of various animals (dog, vulture, owl) and also have the power to assume human form, especially that of a deformed or monstrous human shape or of an old woman. They can also appear as beautiful men or women; they are yellow, green, or blue,

but usually their eyes are mere vertical slits. Their hair is matted, their bellies large. They have five feet, their fingers are set on backwards. They eat human flesh and corpses, also food on which someone has sneezed or trodden, or which has been desecrated by insects. They live in trees; their fingernails are poisonous; and their touch can produce death.

The Rākshasas are exceedingly malignant; they destroy Hindu sacrifices, disturb men at their prayers, haunt cemeteries, animate dead bodies, and enter men via their food, causing disease and madness. If the light goes out while a man is eating, he must cover the food with his hands to prevent them from getting it. But they are stupid; the typical stupid ogre stories abound in regard to them; a victim need only to address them as "Uncle" to escape. They are most effective at night. Their chief is Rāvana. The red ferruginous clay found in various parts of India is said to be the scene of their battles with the gods. Today many Rākshasas are of human origin, having reached or been condemned to this form of existence because of their cruelties in life.

Ram A generalized Hindu term for god or divinity.

Rāma or Rāmachandra The hero of the Sanskrit epic, the *Rāmāyana*, celebrated as a model son, brother, and husband; later deified and recognized as the seventh avatar of Vishnu. Historically, Rāma may have been one of the four sons of Daśaratha, king of Oudh (Ayodhyā). In Hindu mythology, Vishnu, who had resolved to become manifest in the world in order to deliver the gods from the demon Rāvana, gave the childless Daśaratha a pot of nectar. The king gave half the potion to Kauśalyā who bore Rāma (impregnated with half the divine essence). A quarter of it was given to Kaikeyī whose son was Bharata, and the last quarter went to Sumitrā whose two sons, Lakshmaṇa and Śatrughna, each had an eighth part of the divine essence. The four boys grew up together but it was Rāma who performed such miraculous feats as the killing of the demon Tāraka. Vishnu took the brothers to the court of Janaka, king of Videha, and there Rāma won his wife Sītā by bending Śiva's wonderful bow.

When the time came for Rāma to be declared the successor to his father, Kaikeyī, the mother of Bharata, persuaded Daśaratha to install Bharata as king and to send Rāma into exile for 14 years. Rāma, Sītā, and Lakshmaṇa left the kingdom and went south to live at Chitrakūṭa in the Daṇḍaka forest. Meanwhile Daśaratha died, Bharata refused the throne, and set out to bring Rāma back. The latter refused to return until he had completed the period of his exile and Bharata returned to act as his vicegerent.

After ten years of exile, Rāma was advised by the sage Agastya to live at Panchāvati, an area infested with Rākshasas. One of these, Sūrpanakhā, sister of Rāvana, fell in love with Rāma. Repulsed, she finally inspired in her brother such a fierce passion for Sītā that the demon carried her off to Lankā by force. Rāma followed in hot pursuit and, with the aid of Sugrīva and Hanumān, took the city of Lankā, killed Rāvana, and rescued his wife. Jealous of her honor, however, Rāma finally sent her to the hermitage of Vālmiki where her twin sons, Kuśa and Lava, were born. Sītā finally was recalled by Rāma and declared her purity by calling upon the earth to verify her words. See ACT OF TRUTH. The earth did so

by opening and receiving her. Rāma, unable to endure life without his wife, went to heaven with the consent of the gods.

The worship of Rāma today prevails over a large part of India and his followers are estimated to exceed 90 million. His name is invoked at the hour of death and used as a salutation when friends meet. His birthday is celebrated at the great festival of śrīrāmajayanti.

Rāma's Bridge or Rāmasetu A chain of small sandy islands, shoals, or sand bars about 30 miles long between India and Ceylon: said to be the bridge or causeway built for Rāma by his general, Nala, for the invasion of Ceylon; in modern gazeteers called Adam's Bridge.

Rāmāyaṇa One of the two great epics of India: literally, the career of Rāma. Like the *Mahābhārata*, the *Rāmāyaṇa* has had an important influence on the literary as well as the religious thought of India for almost 2000 years. The *Rāmāyaṇa* is a romantic epic, homogeneous in form and the work of a single author, Vālmiki, who probably collected the popular stories of Rāma current about the 4th century B.C. and worked them into an epic celebrating the heroic deeds of that prince. About the 2nd century B.C., the epic was transformed into a poem exalting Rāma as an avatar of the god Viṣṇu. In its present form the *Rāmāyaṇa* consists of seven books, the first and the last of which are late additions, and about 24,000 couplets in the epic, called *śloka*. There are three extant recensions: the Bengal, the Bombay, and the West Indian, each varying considerably in content from the others. The epic is recited for thousands of Hindus at the annual Rāma festival in Benares and is held in such veneration that anyone who reads and repeats the tale is liberated from his sins.

Ramman The Babylonian name of the Canaanite storm god Adad. Ramman, the Biblical Rimmon, means thunder or the Thunderer; he was a god of storm, wind, and rain; he was a war god who carried the hammer and thunderbolt. See ADAD.

Rán In Norse mythology, the Robber, wife of Ægir; goddess of the stormy sea and the drowned, who dragged down ships with her hands. At one time Scandinavian sailors made human sacrifice to Rán before embarking on a long voyage. To drown was to go to Rán, and it was well to carry gold on a sea voyage to appease her, should you go to dwell in her halls. Although she was known as cruel and unfeeling, those who dwelt in her halls were well treated and feasted on lobster and other delicacies. In later folklore she was sometimes seen reclining on the shores combing her long hair, much like any mermaid. Rán is identified with the Swedish Sjöran.

Rangi or Raki The name used in New Zealand for the sky god or Sky Father, the creator and parent of the gods of Polynesian mythology: the Sky Father still is recognized in central Polynesia (Rangi-Atea in the Tuamotus, Te Tumu in the Society Islands). Rangi figures in the famous earth-sky separation myth of New Zealand. Rangi embraced Papa the earth goddess, so closely that nothing could grow. From the union the gods were born, but they lay pressed in distorted attitudes unable to move beneath the weight of their huge father. At last all agreed (except the wind god, who later accompanied Rangi) that the pair must be separated so that light could enter and things could grow. One after another

tried, until finally Tane-mahuta pushed Rangi away from Papa. Now Tane, taking pity on his father, dressed him in the stars, but still every night the sighs of Papa come from her breast and rise to Rangi as the mists, and still Rangi's futile tears fall on Papa as the dew. In another myth, Rangi took several wives—often six—and begot the various gods. But one of the wives he took happened to be Tangaroa's wife, and when Tangaroa returned he wounded Rangi in the thigh with a spear. Rangi sometimes seems to be a primeval deity, sometimes he is born from the preexistent sea, sometimes he is preceded by a long genealogy of gods. See ATEA.

Raphael In Judeo-Christian angelology, one of the seven archangels, and especially one of the four who stand near God's throne. Raphael's special province is the souls of men; he is the angel of healing who stands behind the Throne; his name means "healing from God." It was Raphael who brought to Adam the ancient books of knowledge (in Milton's *Paradise Lost* he is the teacher of Adam and Eve). In the *Book of Tobit*, Raphael accompanies Tobias on his trip to Media and overcomes the demon Asmodeus. Raphael is also called Suriel, the angel who recalls or dissipates disease.

ras (1) The dance of Kṛishṇa, the divine flute player of Hinduism, and his consort, Rādhā. Ras-Lila is the twelve-day festival of Kṛishṇa in Manipur, now greatly condensed in length. The dance is executed in the delicate *lasya* manner of the Manipuri school of *natya*.

(2) A group stick dance of northern India, corresponding to the Tamil *kolattam* of southern India. [GPK]

rasa In the terminology of Hindu *natya*, the emotion represented in music, gesture, and dance movement. The thirteen rasas are: Sringera or Adi, the sex emotion; Vir, the heroic mood; Karuna, compassion; Adbhuta, wonderment; Hasya, laughter; Bhayanaka, fear; Bibhatsa, sense of humor; Raudra, rage; Shanti, serenity; Dasya, devotion; Sakya, friendship; Vatsalya, paternal devotion; Madhura, conjugal felicity. Each rasa is expressed by definite appropriate gestures and postures of all parts of the body, and by fitting *Ragas*, musical modes, and *Talas*, rhythms. [GPK]

Rashnu Old Iranian angel of justice who holds the golden scales in which souls are weighed at Judgment.

raspberry The raspberry is under the dominion of Venus and is commonly a symbol of remorse. The Ifugaos of the Philippine Islands hang raspberry vines by their house doors when there is a death in the house, on the theory that if the spirit of the dead should try to reenter it will become entangled in the brambles.

Raspberry vinegar is a good old folk remedy for feverish colds and sore throat, and is also used as an astringent and stimulant. Raspberry-leaf tea has been given by midwives for childbirth with good effect since earliest times. During World War II the drug *fragerine* was "discovered" by obstetricians for use during childbirth. *Fragerine* is obtained by steeping dried raspberry leaves in boiling water. Midwives ignore the new drug and continue to brew raspberry-leaf tea for their patients.

The rude noise made by vibrating the tongue between the lips, sometimes called the Bronx cheer or "the bird." This manifestation, which originated in England, has been joyfully adopted in America as a gesture of defiance to constituted authority and as an integral part

of American blood sports such as wrestling, prize-fighting, baseball, and the like.

Rat A minor character in certain West African and New World Negro folktales. Unlike such characters as Spider or Rabbit, Rat plays no consistent or significant role. [MJH]

ráth (Irish *rái*) A circular earthen wall, often palisaded or fortified, surrounding ancient Irish dwellings; loosely, the fortified dwelling itself of an early Irish king or chief, surrounded by such a wall. *Ráí rioġ* was a "royal seat." *Ráth Cruachan* (now Rathcrogan) was the famous seat of *Medb* and *Ailill*, queen and king of Connacht. The word is often used interchangeably with *DÚN*.

rattles Musical instruments used in producing a succession of short, rapid sounds by the agitation of enclosed or adjacent objects. These objects, made of a great variety of materials, may be fastened on a dancer's body, an article of clothing, or a staff; or they may jiggle in gourds, turtle shells, bells, or other hollow containers. They may synchronize with a dancer's motion by virtue of attachment, or they may be actively manipulated. They are termed *idiophones* (self-sounders).

I The forms and materials of rattles are derived from the natural resources at the disposal of various cultures, as well as from the purpose of the instrument. These cultures are distributed mostly through the Americas, though rattles also occur elsewhere. See *AÇON*; *ASOGWE*. The *jingler*, which is prominent in nomadic and hunting tribes and which frequently consists of animal hoofs or derivatives, is probably the oldest form of rattle. Alaskan Eskimo dancers shake mittens with attached puffin beaks and belts with animal teeth. Deer-hoofs are fastened to the belts of the Yaqui *maso* deer dancer and *chapayekas*, and to bands worn across the shoulders of Huichol peyote (*hikuli*) dancers. From northern Mexico to South America, we find deer-hoofs on girdles and ankles of curing shamans (*Mataco*), and deer, peccary, or tapir claws on the legs or ankles of Brazilian tribes (*Kamakan*, *Apinayé*, and the Amazonian *Witoto*). Antelope, elk, goat, ox, or buffalo hoofs may augment or substitute for the deer-hoofs, as on Iroquois dancers' kneebands in the former knee-rattle dance and in the Shawnee and Delaware, and Penobscot and other Abnaki leading dance. Metal cones in hoof shapes are now fastened on the dress of the adolescent girl in the Apache puberty rite and of Havasupai women dancers. It is significant that Siberian shamans wear iron cone-shaped jinglers on their drums and kilts and collars, the iron itself conferring power over demons. Aztec dancers emulated their gods in fastening gold, copper, or shell *ayuali*, or *coyolli*, bells, on ankles or breast. In South America snail shells or nuts are commonly substituted, as among the Brazilian Bororo and Amazonian *Jivaro*. The Incas used anklets of fruit-shells or gold.

Deer-hoof rattles are manipulated in clusters by the Yuma Indians of Arizona and by *kachina* dancers of the Rio Grande pueblos, by the leader of the California Diegueño *keruk* or mourning rites, and by South American *Kamakan* dancers. Bunches of hoofs are fastened to short sticks in the rattles of numerous men's societies of the Great Plains, particularly Dog Societies of the Crow, Hidatsa, and Kiowa, and the corresponding Ogala and Iowa *mawatani* society. Among the Flatheads

of Montana such a rattle was used in the hysterical cures of the Bluejay shaman's dance and in bison-calling rites. This form spread east to the Sauk, Fox, and Iroquois Indians, west to the California Hupa dancing doctors, and southwest to the shaman-singer of the Apache puberty rite. In California and South America the deer-hoof rattle is commonly associated with *menarche* rites. The Maidu and Karok girl herself shakes the rattle. Usually a circle of older women surrounds the girl, and thump long, hoof-tipped poles on the ground—the California Klamath, Tolowa, Shasta, Achomawi, Mountain Maidu, and others; and also Chaco tribes, notably in the Choroti and Ashluslay *káusima* and corresponding Lengua *yanmena* demon-exorcising puberty rites.

Sand-filled butterfly cocoons are fastened on sticks in the Yuki *taikomol wok* and *hulk'ilal wok* and are similarly manipulated by the leader of Yokut, Maidu, Pomo, and Miwok boys' initiation rites. In the Papago *wikita* ceremony for rain, the singer-dancers wear cocoons, along with bells and shells, and the Yaqui native dancers all tie strings of cocoons (*téneboim*) around their ankles for the *chapayekas*, *maso*, and *pascolas*.

In recent times the Indian has taken with delight to the sleigh bells and metal pellet bells introduced by the white man, and he uses them in preference to natural materials which are harder to obtain. He ties them around his ankles, below his knees, around his waist, and in a strip from belt to knee, e.g. the *pascolas*, the dancers and runners of Hopi and Taos, San Ildefonso buffalo and Cherokee Shuck Face dancers, and quite generally Oklahoma festival dancers.

Another animal source which provides both types of rattles is the turtle or tortoise. These shells, however, are not as widespread as animal hoofs. With attached deer-hoofs, a turtle shell is worn behind the right knee of members of Hopi men's societies and Snake societies, and commonly by *kachina*, at Laguna and Isleta for instance. (They are obtained at Isleta.) Small tortoise shells are worn at the knees of the leading woman in Oklahoma stomp dances. Delaware reciters of visions shook a tortoise shell, and (a borrowing from the Cherokee) the Iroquois *tpwisas* society of women planters passes such a rattle from singer to singer. Huron shamans are reported to have shaken a tortoise shell filled with pebbles near the ear of their patients. Cure motivates the most spectacular use of the turtle rattle, namely by the False Face dancers, and by singers of the Iroquois, Delaware, and Cherokee-Shawnee. The shells are cleaned and filled with cherry pits, and the neck is reinforced by a wooden handle. The huge turtles furnish instruments for the Iroquois "doorkeepers," the 10-inch ones for the singers, and the little ones for the False Face beggar boys. These rattles also feature in the spring and fall exorcism circuits from house to house—a form of False Face pestilence control.

Agriculture introduced the gourd rattle, which is always manipulated by the dancer or singer, never worn. The shapes and sizes are as varied as those of the squash and gourd, and in addition are ornamented with ingenuity. The Papago shaman, sometimes the Iroquois and Cherokee, leave the stem on as a handle. Usually a wooden handle is inserted, perhaps decorated with beads or feathers (Comanche, *Apinayé*) or with carvings (Cuna of Panama.) Perhaps the largest ones are the pair

used by the Yaqui *maso*; the smallest ones are the tufted rattles of the Iroquois *ganegwa'e* and Fox calumet dancers. In between are the flat Hopi and the egg-shaped Cherokee rattles, and the small round *sonaja* common throughout Mexico, particularly in *matachini* groups. These are an inheritance from the Aztec *ayacachtli*, used for instance in the springtime ceremony. The designs of perforations which covered these calabash rattles have spread to northern Brazil and to California, and have even been imitated in wood by the Tsimshian of British Columbia. Symbolic painted designs cover the surface particularly of the *kachina* rattles. Ritualistically, they should be filled with maize kernels, a few squash seeds, also grains of wheat in the Southeast. The Iroquois prefer chokecherry seeds. Nowadays unsymbolic noise-makers are inserted, buskshot, pebbles, even macaroni.

Where gourds are not available, other materials are pressed into service. Tribes of the North Pacific Coast have developed a fine art of carved wooden rattles in animal and bird shapes. North American Plains Indians and South American Patagonian tribes make them of hide, in various shapes: spherical, doughnut-shaped, or flat disks attached to drum sticks. The Chippewa and Naskapi shaman's *cicigwan* resembles a small drum. The Iroquois and Cherokee-Shawnee have introduced cow-horn rattles, and hickory-bark substitutes for False Face beggars. The Chippewa construct cylinders out of birch bark. Split sticks are quivered in the California *kuksu* ceremonies and Hupa *menarche* rite. The *pascola* shakes a wood-and-metal *sena'asom*, which resembles the *sonajeros* instrument and the Aztec *chicahuaztli*, and is derived no doubt from the sistrum. Peruvian pottery and Araucanian basketry rattles add to the wealth of constructive variety, but by no means exhaust the list. For again civilization has introduced harsh substitutes in the tin can, spice-box, and almost any old box that is handy: even for the sacrosanct *midewiwin* ceremony of the Chippewa and Menominee. Milk tins replace Shawnee tortoise knee rattles.

II Passive and active manipulation depends on the medium. The rattle at all times forms part of the dancer's rhythmic impulse, but is most completely identified with him in the "passive" use of fastening to the body. Be these jinglers hoofs or substitutes, they automatically accompany Siberian shamans, Bella Coola *kukusiut*, and the *kachina*, and are found in northern Brazil and the eastern United States, still today among the Shawnee, formerly among the Iroquois with limited use. Actively, these are shaken or struck on the ground in the western United States (Plains, California) and in the Chaco.

Gourds on a stick may be struck on the ground, as in the Arawak *macquari* dance; horn rattles are often struck with alternate accents against the palm of the left hand by Iroquois dance leaders, and formerly by Penobscot. Usually these hollow containers are actively shaken in any of the three dimensions and with varying accent, always with an elastic wrist-motion. In its wide distribution, the gourd or substitute would show tribal distinctions of manipulation. The Navaho shake it vertically, with a strong and a weak accent; the Cherokee-Shawnee horizontally, the Absentee Shawnee against the left palm. Eastern tribes and the Mexican Tarahumara have a pattern, arising from the song and dance form, of horizontal vibration followed by a metrical beat. The meter of the gourd rattle of the Iroquois *hadi'hi'duus* is an

even, vertical pulsation. The *ganegwa'e* dancers vibrate as they lunge, and shake as they hop. False Faces vibrate their turtle rattles or knock them against door or floor in a rhapsodic fashion; the thunderous even beat is provided by their accompanying singers who strike them on a bench. In the Feather dance this same instrument produces an iambic beat. The continuous sound of these instruments is quite distinct from the staccato notes of the jinglers, for the kernels strike the roof of the container before their impact on the base. The Yaqui deer dancer (*maso*) produces an even more sustained sound by the continuous rotation of one of his rattles.

The various passive and active rattles of this deer dance interplay with the musical accompaniment. The cocoons swish with every step. The deer-hoofs descend with the knee and foot in thumping steps, but in leaping steps their momentum causes them to syncopate, to fly apart as the dancer descends and strike together as he rises. Add to this the circular swish of one gourd and the alternately accented beat of the other. The *pascola* dancer shows a similar complexity, substituting the syncopated rhythm of his *sena'asom* against the left hand. At times, he vibrates this back and forth in front of him.

These few examples show that the manipulation of rattles is a subtle art, adapted to the medium and the dance movement. Every technique produces a different timbre by control of the impulse and force, a timbre which is already variable because of the texture of the container and its contents. Furthermore, the manipulation is an important aid to heightened efficacy of the dance, towards achievement of the supernatural purpose.

III Coercive magic certainly motivates the use of rattles and their varying forms, though in many cases it has become rather confused. Demon exorcism or control is the acknowledged reason for the most primitive noise-making, and this is certainly true of shamanistic and puberty rites, and of rites for the dead, as the *keruk* and *macquari*. These show signs of great antiquity. In *menarche* rites the use of the deer-hoof or its substitutes may be due to association of the deer with renewed life, or else the deer may have derived this association from the use of its hoofs in such rites. These hoofs are combined with the turtle, which embodies the earth and fertility and also produces cures, as in the False Face dances and pestilence-chasing circuits of homes.

One might suppose gourds to be associated with crops and rain, and in the case of the *kachina* this is so. However, among the Huichol, Tarahumara, and Shawnee, it is used in peyote dances along with deer-hoofs. It is the instrument of the Iroquois *hadi'hi'duus* society of curing shamans, who derive their power from mystic animals. Again, in their food-spirit dances for corn, beans, and squash, it is replaced by the horn rattle.

Despite this confusion, or fusion, a number of beliefs remain to explain the power that is inherent in the rattles. The Zuñi believe that the turtle-shell rattle "makes the thunder come" and thus has the same potency as the turtle itself. The corn and grain kernels encourage vegetable growth. At an eclipse of the moon the Kwakiutl believed that their clappers frightened away the demons devouring the moon. On a Tlingit shaman's rattle, the human face touching its tongue to that of a frog signifies the source of maleficent power

and poison in the frog. The Bella Coola *sisook* society dancer holds his bird-shaped hollow rattle belly uppermost; otherwise the bird, symbol of his ancestral crest, will fly away. The perforated rattle in the thunder dance represents the bird of lightning. The Aztecs consciously applied their seed- or pebble-filled rattling stick (*chicahuaztli*) to the symbolic sowing of seeds at agricultural festivals. The maize goddess, Cihuacoatl, is believed to have used it thus. The decorations, too, are symbolic: the painted designs of Pueblo rattles attract rain and promote plant growth by stylized representations; the feathers on South American Guaraní rattles symbolize the souls of the shaman's bird-assistants.

Despite deviations and substitutions, the sum total of rattle forms divide into 1) the male type of self-sufficient jinglers, often combined with the phallic staff, and 2) the female type, containers. Actually certain jinglers are of the female type, namely cocoons and bells; the sistrum is male. The rattling stick combines both principles, as does also the tortoise with hoofs. The male type is associated with the vision quest for renewed life and cure, rarely with the hunt (Yaqui deer and Pueblo buffalo). The more recent female type effects agricultural magic and, indirectly, human fertility and regeneration. They are frequently combined for doubled productivity in *menarche* rites.

These American rattles are for the most part indigenous. The sistrum and metal bells are exceptions. The Cuban *maraca* may have descended from the gourd rattles of the African Slave Coast. Certainly its elaborate manipulation differs from the purposeful shaking of the American Indian rattle. As a whole these integrated dance instruments grew out of the soil to fulfil the needs of the native American tribes. [CPK]

✍ The rattle made of gourd containing seeds or small stones (generally crystal pebbles) is the main accessory of the South American Indian shaman from the Gran Chaco to the Guianas. The sound of the rattle is usually interpreted as the voice of the spirits and is also regarded as a powerful means of curbing supernatural forces. In some tribes, as for instance the Tupinamba, a cult was rendered to these sacred rattles. [AM]

Rauni The wife of Ukko, the Thundergod of the Finns. The name is derived from Icelandic *reynir*, or Swedish *rönn*, rowan, a blessed tree which is often brought in connection with the Thundergod and is a protection against all evil spirits. The Finnish Lapps know a deity as Ravdna and sacrifice reindeer to her as to the Thundergod himself. [JB]

Rāvaṇa The demon king of the Rākshasas and of Lankā (Ceylon); grandson of Pulastya; incarnation of wickedness, breaker of laws, and ravisher of women. Rāvaṇa became invulnerable to gods and demons by doing devotion to Brahmā. He had ten heads, twenty arms, and all the marks of royalty in addition to countless wounds inflicted upon his body in his battles with the gods. He could assume any form he wished. He was as tall as a mountain and could stop the moon and the sun with his arms. His strength was such that he could split mountain tops. Rāvaṇa was not invulnerable, however, to men and beasts, so Viṣṇu became incarnate as Rāmachandra in order to destroy him. Rāvaṇa stole Rāma's wife Sītā and carried her off to Lankā. Rāma, with the aid of Sugriva and Hanumān and their hosts

of monkeys and bears, built a bridge to Lankā. There, after many battles, Rāma slew Rāvaṇa with an arrow made by Brahmā and regained his faithful wife. See CYMBALS; INDRA; RĀMA'S BRIDGE.

raven A large omnivorous bird (*Corvus corax*) of Europe, Asia, and North America, resembling the crow, having lustrous black plumage with the feathers of the throat enlarged and elongated. It is about two feet long, very intelligent, mischievous, and can be taught to speak a few words.

The raven, one of the scouting birds let loose from the ark by Noah, found no place to rest but "went to and fro until the waters were dried up off the earth." And because he did not return with his message he was condemned to suffer thirst, or to be black, or to eat carrion (A2234.1). The raven is one of the unclean birds forbidden as food (*Lev. xi, 15*): "every raven after his kind." Elijah in hiding beside the brook Cherith was fed by ravens, who "brought him bread and flesh in the morning, and bread and flesh in the evening, and he drank of the brook."

In Greek religion, the raven, as prophetic bird, was sacred to Apollo and to the augurs. One etiological story explaining why he is black is the story of Apollo and Coronis (mother of Æsculapius). Coronis was dearly beloved by Apollo, but preferred a mortal lover. Her faithlessness was reported to Apollo by his messenger bird, a pure white raven. Apollo, in rage at the discovery, took it out on the bird and condemned him to be black forever for his tattling (A2237.1). Pliny reported that the soul of Aristeas of Proconnesus came forth from his mouth in the form of a raven. In fact the concept of raven as bird-soul has a spread, both geographic and chronological, from ancient Greece to the contemporary Bororos of Brazil. The ancient Greeks also believed that eating ravens' eggs would restore blackness to gray hair. Great care had to be taken to protect the teeth with oil while eating them, lest the teeth too turn black.

Almost everywhere the raven is a bird of ill-omen who predicts pestilence and death. It was called *Abu Zājir*, Father of Omens, by the Arabs, who said if one saw it flying to the right, good luck might be expected, if to the left, bad. To see a raven on the left means impending evil quite generally in Europe, Great Britain, Ireland, India, and among Slavic peoples. In Germany a raven croaking near a house foretells the imminent death of one of the inmates. If a raven flies over a house where someone is ill, death will surely follow. Speculations as to how ravens know that death is impending was explained by an early British physician who said that their sense of smell is so acute that they can detect the odor of death in the body even before life is gone.

To have the foresight of the raven is a proverbial saying which refers both to the raven's knowledge and his prophetic gifts. *To have raven's knowledge* is an Irish phrase meaning to see all, know all.

In Teutonic mythology Odin's two ravens, Hugin and Munin, were sent over the world every day to see all that happened and to bring news back to Odin (B122.2). The whereabouts of the magic caldron Odhroerir was revealed to Odin by them. In the saga of Olaf Trygvason, when Earl Hakon, after one defeat, made a blood sacrifice and two ravens came upon it "croaking loudly," Hakon believed the offering was by this token accepted

by Odin and that success in battle would henceforth be his.

The raven was a battlefield bird in both early Teutonic and Old Irish mythology. The Old Irish battle goddesses, *Baðb*, *Morrigan*, *Macha*, all were seen on the battlefields in raven form. Cormac's *Glossary* describes the invocation of *Morrigan* in battle by war trumpets simulating the raven's cry. The raven banner of the Danes was described by the Anglo-Saxons as being a banner of pure white on which a raven became visible in time of war. The raven was also the oracular bird of the Old Irish mythological *Bran*; and *bran* is one of modern Irish words for raven, and, figuratively, for chieftain. The legend that on the presence of *Bran's* head in London depends the safety of the kingdom may account for the keeping of tame ravens by the Tower of London garrison to this day. See Robert Graves, *The White Goddess* (New York, 1948), p. 67 n. The Bayeux tapestry shows William the Conqueror at the Battle of Hastings under a raven banner. Owen Glendower had a pet raven who gave him the magic stone by which he could become invisible. In Cornish folk belief Arthur lives on in raven form. The Cornish people therefore do not shoot ravens; to shoot a raven would be to shoot the hero.

In Russian epic the black raven is the symbol of the enemy, in contrast to the bright falcon which symbolizes the traditional Russian warrior. In Lithuanian folklore also the raven is a bird of battle.

In Yukaghir folklore, in contrast with Koryak mythology, the raven is neither creator, transformer, nor ancestor, but a trickster who eats excrements, and because of this habit has a hard time finding a mate. But very old people among the Yukaghir remember an "old word" for raven, *co'mmodo*, meaning Great Bird, which may be reminiscent of a forgotten veneration. See W. Jochelson, *Yukaghir and Yukaghirized Tungus*, *MAMNH* ix, part 2, p. 299.

In folktale the raven plays a varied role: he is a bird of ill-omen (B147.1.1.3); he carries off the souls of the damned (E752.3); man learned the custom of burial from watching a raven bury its own dead (A1591.1); the devil appears in the form of a raven (G303.3.3.13.1), or the raven is the devil's messenger (B291.2); ravens attend gods (A165.0.1; B122.2); in Celtic tale, they carry messages to enemies (B291.1.1); and the helpful raven (B452) occurs in general European and Celtic story.

Man transformed to raven, a German folktale motif (D151.5), occurs typically in Grimm's story *The Raven* (#93). An impatient mother, a queen, one day wished that her troublesome child was a raven; it instantly became a raven and flew away. The story involves the young man who tries to break the spell of the bewitchment (for the child bewitched was a little princess), his many fallings asleep at the crucial moment (from having eaten proffered but forbidden food), his quest for the golden castle of Stromberg, from which the princess cannot depart and which he discovers is on top of a glass mountain. He overcomes the glass mountain by means of a stick which will open any door, a cloak of invisibility, and a horse which can even go up the glass mountain. Thus he sets the little princess free of the raven spell, and they are married.

Raven as revenant turns up in Swiss folktale (E423.3.4). Stories of two ravens which follow the Wild Hunt (E501.4.4) are associated with Odin's ravens, Odin

often being the leader of the Wild Hunt, and also with the night-raven of Danish folklore, which is said sometimes to precede the Wild Hunt, and perhaps personifies Odin himself.

Etiological stories in regard to the raven are legion: why raven is bald (A2317.5), why he is black (A2411.2.6), why he claps his wings (A2211.4; A2442.2). The croaking of the raven is explained in both Finnish and Tahltan Indian folktale (A2426.2.7). See *QUIKINNA'QU*.

 The raven has, in dance and legend, been invested with supernatural powers. In Tibet he is considered the messenger of the supreme being. As crest among the Bella Coola Indians, and as totem among the Kwakiutl, he serves as prototype for a dance mask. The Kwakiutl cannibal dancer may appear in the guise of a raven. The great raven, *gahgagoowa*, is leader of the Iroquois Society of Mystic Animals, *hanáhdos* (Onondaga, Cayuga), *hadihidu'us* (Seneca) and is invoked both in the Marching and Curing songs. While feasting, the shamans claw the pig's carcass singing "gahga." [GPK]

Raven The culture hero of the northern North Pacific Coast tribes; also, a minor myth character in other North American Indian mythologies. In Southwestern Jicarilla and Lipan Apache myths it is Raven who decides people will not return to life; for this reason, say the Jicarilla Apache, Indians hate the raven and call him a sorcerer. Like Buzzard, when he sees that something is dead, he is happy. The Chiricahua Apache, however, credit Coyote with determining that men shall die, and Raven with not wanting death in the world. Compare *ORIGIN STORIES*.

[EWW]

Raven cycle The culture hero-transformer-trickster tale cycle, having Raven as its chief character, of the Indians of the North Pacific Coast from Alaska to British Columbia. The Raven cycle, either in whole or in part, is also known to the western Alaska Eskimo, to some of the most westerly Athabaskan tribes in the interior, and to the Makah, a coast tribe of Washington. Other North Pacific Coast peoples south of the main Raven area have Mink as creator-transformer-trickster, while still farther south Bluejay, Fox, Moon, and other characters are the Changers.

North Pacific Coast mythologies lack any true creation myth; instead, the changing, transforming, or ordering of the world is emphasized in the mythology. The Raven cycle begins with the birth of a boy child, and details the adventures of the boy, who grows to manhood quickly. As a young man he seduces his aunt, or the daughter of the Sky Chief, and a flood ensues. To escape the flood he flies to the sky. His child, Raven, drops from the sky onto drifting kelp (among the northern Haida, is born to a fisherman's daughter). The child is found and adopted by a chief. The child at first will not eat, but when instructed becomes so voracious that it is hard to keep him supplied with food. This voraciousness, or greediness, is thereafter one of Raven's chief characteristics. At that time the earth was bare and flat, lacking trees, hills, and mountains. It was surrounded by water and filled with cannibal monsters that had powers unknown to man; some of these monsters had sharp claws, some could swim under water, and some could fly as the fish and birds can now.

As culture hero, Raven drew mankind out of a clamshell, stole fire, stole the sun (which was hung up in a

ball or box in a chief's house), provided water, animals, etc. Having secured these necessities for mankind, he flew or traveled over the world, transforming animals to their present state and making rivers, mountains, valleys, lakes, and other natural objects. Several of the transformer tales are tales of Raven's deceptions, in which he shows himself sometimes clever, sometimes a stupid being. As a trickster he is always trying to get food; one of the most popular trickster tales of the North Pacific Coast is that of the bungling host, which is concerned with producing food magically. In another tale also concerned with food, Raven dives to the bottom of the bay and steals a halibut from a fisherman's hook; when the fisherman jerks his hook, Raven loses his beak. In this tale Raven is portrayed in bird form; this is usual, but the nature of many of the adventures he undertakes show that he is conceived as also having many human characteristics. For analysis of North Pacific Transformer cycles see Franz Boas, *Tsimshian Mythology*, *RBAE* 31, 1916, pp. 565 ff. See CANNIBALS. [EWW]

rebus A puzzle representing a word, phrase, or sentence by letters, numerals, pictures, etc., having the sounds necessary to form the desired answer; a form of punning by homophones: said to come from the phrase *non verbis sed rebus*, not words but things, though this derivation is doubtful. The popularity of this form of representation on the shields of the "new gentry" in the Renaissance is satirized by Ben Jonson in *The Alchemist* (1610), where Abel Drugger is told to make his device *a bell* followed by a picture of Doctor *Dee* dressed in a *rug* gown, followed by a dog snarling *er*. Rebuses are much older than this. They form a distinct stage in the development of alphabets, where the picture used in pictographic writing stands for the sound associated with its object no matter where the picture appears and without regard for the object it actually depicts.

The conscious rebus appears where word-play is popular. With the ancient Greeks, familiar with the enigmatic responses of the Delphic oracle, the rebus with its word-play was readily understood. Alexander the Great, according to Plutarch, dreamed during the siege of Tyre that he captured a satyr after a long chase. His seers, readily breaking *satyrus* into two words, immediately saw a good omen in *sa Tyrus*, Tyre would be his.

The rebus enjoyed its greatest popularity in the early 16th century. Earlier, in France, the *rébus de Picardie* were used in biting political allusions. English and French forms of the rebus are somewhat parallel. Strikingly similar are two where the position of words in relation to each other make possible the reading of a sentence:

stand I	take you	to throw	taking my
------------	-------------	-------------	--------------

(I understand you undertake to overthrow my under-taking)

pir un	vent vient	venir d'un
-----------	---------------	---------------

(*Un soupir vient souvent d'un souvenir*: A sigh often comes from a memory).

The form of the letters too must be taken into account: the French *G* is to be read *J'ai grand appétit* (*G* grand,

a petit—large *G*, small *a*: I have a huge appetite). Similar is the American rebus reading in part:

BeD—a little darkey (dark *e*) in a big bed.

Pictures of objects of course form the backbone of the rebus, and a popular form of children's puzzle uses illustrations of familiar objects juxtaposed with letters and numbers to give a required sentence. These are not much different from the Druggier "device" mentioned above. In heraldry, however, the symbolism is often somewhat subtler. Breakspear bore a broken spear on the shield; Castleton showed three castles; Butler three cups, etc. See RIDDLES.

rectum snakes Snakes approach their victim when the latter is asleep and enter his body through the rectum, thus killing him: a motif (G328) which occurs in such North American Indian Plains hero tales as *Lodge-Boy and Thrown-Away* and *Old Woman's Grandson*. In these two tales the snakes are foiled; the heroes put flat stones under their rectums, and when all but one snake is asleep they kill them; the remaining snake's head is rubbed against the flat stone, thus causing all snake's heads to be flat thereafter. See SLEEPY STORIES. [EWW]

Red Branch (Irish *Craob Rua*) In Old Irish legend the organized body of warriors around Conchobar mac Nessa, king of Ulster in the 1st century A.D.; also Conchobar's military assembly hall, one of the three great "houses" of the stronghold at Emain Macha. In it were kept the weapons and heads and trophies of conquered enemies. The warriors of the Red Branch were the fiercest and best in all Ireland; not one could hear an insult but he took the head off the man in a minute. For this reason the warriors did not wear their swords at the feasts, but their arms were hung in the Speckled House at Emain Macha until feasting was over. The twelve great champions of the Red Branch were: Cuchulain; Fergus mac Roich, his tutor; Conall Cèrnaic, the Victorious; Loegaire Buadaic, the Battle-Winner; Dubtác Doel Ulaic, the Beetle of Ulster; Eógan mac Durtaic; Celtair; Muinremar mac Geirgind; Cetern mac Findtain, and the three famous sons of Usnech—Naoise, Ailné, and Ardan. More than 100 separate stories are extant celebrating the feats of the heroes of the Red Branch. See BLOOD; DEIRDRE.

Red Heads The red-headed Melanesian culture heroes, Gwau Meo and Sina Kwao, sons of the sun, who slew monsters, performed numerous other great and wonderful deeds, and brought many new culture elements (new foods, magic, weapons, etc.) to northern Mala in the southern Solomons. Cults are associated with them now, as war spirits. See W. Ivens, *Island Builders of the Pacific*, London, 1930, pp. 291 ff. See MELANESIAN MYTHOLOGY. [KL]

red rag The use of red cloth to counteract or enhance magic or ward off the evil eye is widespread. Popularly, the red rag is the tongue. It is widely believed that a bull will react in rage to the sight of red cloth, and that he will charge at anyone wearing red. Bullfighters, however, know that it is not the color but the movement that causes the bull to charge.

A folktale from the British Isles found in the Kentucky mountains is *The Red Rag Under the Churn* (*American Speech* V: 142). A man visited his neighbor

and found that he was out. He sat and talked with the neighbor's wife for a spell and noticed that she seemed to get the churning done much more quickly than his own wife could. When she excused herself on an errand for a moment, he looked under the churn and found a bit of red rag attached to the bottom. He snipped off a piece and took it home to put under his own churn. Then his own butter made more quickly, and more plentifully than the cream put into the churn ordinarily would allow. But payment was due, and the Devil appeared within a circle. He held out a book to the farmer and ordered him to sign his soul over to the Devil. While the man argued the bit of red flag flew out of his pocket in the form of a little red bird and perched on the Devil's shoulder. The man finally put his name in the book but he wrote that what he owned belonged to the Lord. Immediately the Devil vanished, and with him the little red bird. Since that time, the spot where the Devil stood is known as the Devil's sage patch, because only sage grass will grow there. See JACK.

reductio ad absurdum General term for those motifs in which some judgment, question, riddle, or task is reduced to absurdity by the answer or counterproposal. The story of the man who tied his mare to another man's wagon is typical (J1191.1). The mare foaled, but the man who owned the wagon claimed the colt, saying the colt was foaled by the wagon. The owner of the colt reduced this claim to its absurdity either by fishing in the street or hunting fish with a gun in the garden. See ABSURDITY REBUKES ABSURDITY. The question "How can black beans make white soup?" (J1291.1) is answered by the question "How can a white whip raise red (or black) welts?" The disregard of distance in the riddle "Why is the mare restless when the stallions of Babylon neigh?" (H572) is pointed up by the hero's punishing his cat for killing a cock last night in Babylon. The hero assigned some absurd or impossible task answers with an equally absurd or impossible countertask or proposition (H952). See BERRIES IN WINTER; IMPOSSIBILITIES.

reel A figure dance in 2/4 time, thus distinguished from the 6/8 time jig. As the name might imply, many of the figures contain turning movements, but not as an exclusive characteristic. Jigs also have turns. The reel has extended its popularity from the British Isles to Scandinavia (*ril*) and to the United States and the Greenland Eskimos. The most elaborate reels (*cor*) are found in Ireland in the form of rounds, squares, and longways. The four-hand reel (*cor céatrain*) and eight-hand reel (*cor octair*) use cross-overs, as well as turns for one couple or a team of two couples and circling by all. They anticipate the American square dance. The sixteen-hand reel (*cor seisir deag*) preserves more of a round-dance character, including breaking up into four small circles. A number of dances of various names are executed to reel time, as the longways, Bridge of Athlone and Siege of Ennis. The former, like the Antrim Reel, contains no turning. The Galway Reel features the arch as much as the turn. On the other hand, jigs such as the Piper's Dance, employ concentric circling. Counterclockwise turns predominate in reels, but the preliminary circling goes both ways. The formations recur in other European countries, perhaps as a diffusion, and particularly in the American longways, Lady Walpole's Opera, Happy Valley Reels, of New England, and the

widely popular Virginia Reel, with its many pivots by "corners" and turns all the way down the line. The term is also used in English sword dances. [GPK]

 In New World Negro usage, a secular song or dance, as distinguished from music acceptable for the church or by the clergy. In the American South "reels" were "sinful" songs, often with tunes derived from the Scotch-Irish dance tunes of the whites. In Trinidad, a "reel" is a secret ritual dance for the dead, held at the instigation of a lookman, who communes with the spirits, and intended to cure the sick, to invite ancestors to a wedding or betrothal, to ward off sickness or death for a child whose brother or sister has died, or to test a bridegroom. The accompanying songs are based on Scotch-Irish reels or French quadrilles. [TCB]

Regin In the *Volsunga Saga*, the dwarf smith, wisest of men, who taught Sigurd and reformed for him Sigmund's wondrous sword named Gram. He treacherously persuaded Sigurd to slay the dragon Fafnir (his brother) so that he might gain the gold of his father, the dwarf king Hreidmar, which Fafnir was guarding, but he also was slain by Sigurd.

Rei David or dança do Rei David The dance of King David; a Portuguese group dance for men, performed at Braga on St. John's Day as part of the procession. Frilled turbans and breeches carry out the medieval notion of Oriental costume. The dancers execute a variety of steps in two lines resembling a contredanse. They accompany themselves on guitars, fiddles, flutes, triangles, and cellos. They probably tie up with the Mouriscadas and their symbolic vegetation magic. [GPK]

Reinach, Salomon (1858–1932) French archeologist, noted chiefly for his writings, extensive in scope and volume, and covering a wide field, especially in the history of art and religion. His bibliography includes some 70 volumes and nearly 5,000 articles. He was educated at the Lycée Fontanes and the École Normale Supérieure and was appointed to the École Française d'Athènes. In 1882, he made excavations near Smyrna; was secretary of the Archæological Commission in Tunis (1882–85), attaché at the Museum of National Antiquities at Saint-Germain-en-Laye (1886). From 1890–92, he was assistant professor of archeology at the École du Louvre, and associate curator of the National Museum in 1893. In 1889 he was elected to the Académie des Inscriptions et Belles-Lettres, becoming president of that institution in 1906. His most popular works are *Apollon* (1904), a history of art, and *Orpheus* (1909), a history of religion.

reincarnation A rebirth of the soul in successive bodies; one of the stages in the transmigration of souls or metempsychosis. Reincarnation is perhaps best limited to the rebirth of a deity in some earthly form of life, but in certain religious doctrines the ultimate goal of man is divinity through purification of the soul in various reincarnations. Thus, the Pythagoreans and from them the Orphics of ancient Greece believed that the soul was reborn several times and that by living a good life each time it became more purified. See ORPHEUS and compare NIRVANA. In Vedic religion, Vishnu was reborn in several avatars. Hindu religion holds that rebirth in a higher form depends on the rectitude of the life one leads. See KARMA. Thus a man may be reborn as a higher or lower form of life, and even the supernatural beings

may be reborn as men or lower forms of life. Several peoples believe that the souls of the dead are reborn into the tribe. Compare ANAPEL. The Alaskan Eskimos hold mourning rites for the seals after a hunt. The souls of the seals are expected thereafter to return to the hunting grounds and to be caught again after reincarnation.

Return to life in another form (E600). Belief in metempsychosis is evinced rather infrequently in North American Indian myths though instances of a return to life in another form occur now and again in Eastern Woodlands, Plains, Plateau, California, and North Pacific Coast tales and, with much greater frequency, in Eskimo tales. The Caribou Eskimo believe, for example, that the dead are brought back to earth with Moon's help, to live again not only as human beings, but as animals, birds, and fishes. In the Nanabozho cycle of the Eastern Woodlands the culture hero's beloved brother is drowned; later he returns to life as a wolf. In myths from several parts of North America supernatural beings die and return to life as corn, tobacco, squash, beans, and jimsonweed, and in the Southwest the *kachina* or supernaturals, when killed, are believed to become deer. [EWV]

rejong A gong chime of Balinese and Javanese orchestras, consisting of a waisted wooden frame with a gong at either end, held across the lap of the seated player, and struck with sticks. Two *rejong*s of different sizes play counter rhythms on their four notes. See GAMELAN.

religious folk music Probably the most extensive body of music and song in the repertory of all peoples, comprising texts, melodies, instrumental techniques, and rhythms to convey the stories of creation, the pantheons, and mythologies, magical invocations of gods and lesser supernatural beings, and praise and worship of the powers of the earth and other worlds, and providing to the singers a means of enlisting the help of deities or dispelling the influence of demons to acquire some control over natural environment and the dangers of life and death.

In primitive cultures particularly, songs of religious or magical character outnumber secular classes of song such as lullabies, work songs, love songs, game or drinking songs, etc., for not only must the gods be served and placated as a part of religious ritual, but there are hundreds of other beings whose effect on everyday life—on farming, hunting, marriage, burial, war, and travel, for instance—must be dealt with. Ancestors, as among Australian tribes and among the secret Kromanti cult of warriors of the Surinam Bush Negroes, must be honored. Venerable animals, such as the bear in Siberian, Baltic, Eskimo, and North American Indian lore, must be mourned or entertained. Star influence, as in connection with the movement of the Pleiades, important to so many peoples, must be sought.

In primitive custom, the god is seldom summoned by the subdued or private supplications of more sophisticated worship—the hush of a kneeling congregation, the murmured, whispered, or silent prayer, the sweet, soft melody, or the subtle harmony. The great and powerful beings who regulate the sun, the storm, the rain, the procreative capacities of man and beast, and the fertility of the earth come to speak to their devotees on the vibrations of an equally great and powerful noise. The invocation of help and favor must be loud, for the god may

not hear in his dwelling under the ground, high in the air, deep in the sea, or wherever it may be, or he may not be easily distracted from his own personal concerns to deal with the small wishes of man. It takes the undulant buzz and howl of the bullroarer, the earth-shaking blast of the horn or trumpet, the deep reverberation of the log drum or stamping tube, the piercing wail of the oboe, the coaxing, fricative hum and clatter of scrapers, the air-shattering clangor of bells and gongs, or the sharp staccato of rattles—something like the sounds of the god's own manifestation in natural phenomena—to bring him into the midst of his people to work his wonders. Not for such a purpose are such intimate instruments as the *sanza*, the jew's harp, the nose flute.

The singing that calls the god must be strong, repetitive, insistent, flattering, and persuasive. The range of tone in primitive religious song is often narrow, restricted to intervals of a second or a third. The voice production may be nasal, high in the head, plangent and penetrating; it may be low, rumbling, or growling; it may be disguised beyond recognition as human at all by the use of megaphone, hollow fruit or seashell, or other masking instrument; but it is seldom meek or gentle. The god or spirit must be addressed in an impressive manner that he will hear and respond to. He may even have a specific rhythm to which he, rather than any other god, will answer, as in vodun and other Negro cults. If the being is an evil spirit, all the more need for harsh clamor.

Furthermore, the human subject into which the supernatural spirit is frequently called must be cleansed of all other bodily and spiritual distraction by strong rhythm, sound volume, and long-continued and strenuous dancing (see RING SHOUT), so that when the god enters, he may speak clearly and unmistakably through the voice and movements of the possessed. Religious songs of the West African Negroes and the cult songs of their Afro-Bahian, Haitian, and other New World relatives, the magico-religious chants of South American and Siberian shamans, the song ceremonials of the Navaho and other North American Indians, all exhibit some if not all of these characteristics. See CHANT.

In more advanced cultures, the chief form of religious music is hymns, that is, songs addressed to or in praise of a god, sacred lyrics usually sung in group worship, or, loosely, any song of religious or moral character. There are other types also, e.g. carols and liturgical chant.

The custom of hymn-singing is rooted in primitive chants, incantations, and charms, and still retains in folk belief a protective power against evil, sickness, and danger. The texts of many ancient hymns in various languages contain acrostics, riddles, enigmas, macaronic and abecedarian devices, and pagan survivals lightly disguised by the substitution of Christian symbols, saints' names, etc. The melodies, derived from both folk and art sources, with both sacred and profane connections, and of ancient and modern origin, represent an enormous segment of the world's music. And the methods of teaching and transmission on an illiterate level include such mnemonic systems as hand signs and head movements to indicate pitch or tone, notes printed in distinctive shapes (buckwheat notation) to designate the syllables of solmization, and the practice of "lining out" or "deaconing" the hymn (reading or recitation of

a line at a time by the leader before it is sung by the congregation). See MNEMONIC DEVICE.

Survivals from Mesopotamian hymnology salute Ish-tar, Tammuz, Marduk, Ea, etc. Several examples are devoted to the sun and to the new year. One addressed to Nebuchadrezzar I contains an acrostic on the name of the Babylonian god of wisdom, Nebo. Egyptian hymns are known to have been addressed to Râ, Amen, Osiris, Aten, and to kings. In Greek antiquity, hymns or pæans to Apollo called upon him as god of healing and had their origin in primitive medicine dance and song rites. The ancestor worship of China produced hymns in honor of the dead. In Japan, certain hymns introduced with Buddhism were sometimes sung at secular functions with religious intent, and eventually lost their sacred character. Some of the Japanese shrine hymns, *go-eiko*, are still sung, one group being especially reserved for the death of a child. The *kagura-uta* songs, dating from the 9th century, have been sung in connection with the religious dance, *kagura*, of prehistoric origin. (See MIN-YO.) One chant that survived in Japanese Buddhism was the Indian Sacred Hymn, *Bombai*, a recitative from the Sanskrit, similar in sound to Christian psalm-singing. Those parts of the Vedas which may be considered hymns include odes to divinities, riddling descriptions of gods, cosmogonic and theosophic concepts, charms against enemies, diseases, etc., and even a gambler's lament.

Folk hymns in Europe embody the interplay of art and folk elements, the remnants of pagan runes and spells, and the later seeds and sentiments of dissent from established religious orders. Early Latin hymns, evolving from folk song, became systematized into liturgical formulas, and subdivided again in the Middle Ages to form new popular songs and poetry. Among the Celtic peoples particularly, early charms and incantations lie close beneath the surface of certain hymn types. For example, the Irish *loricas*, or charm hymns, named for a piece of armor, invoke the Trinity and give a precise description of the dangers and bodily injuries from which protection is desired. For a believer whose memory was short, the recitation of the three final stanzas was sufficient. One such hymn is ascribed to Saint Patrick, who, so the story goes, composed it in flight from the king of Tara, and by its powers made himself and his companions invisible. Another is said to have been written by Columcille on his way to Donegal after a battle. See FAET FIADA. Another specific hymn with extraordinary powers was *Media Vita*.

The practice of singing religious texts to folk tunes has a long history, but the first extensive use of secular melodies in this way was made by Martin Luther in his effort to make the music of church services attractive to his followers. His inspiration, according to tradition, came from the singing of a carpenter's boy under his window. Many Protestant hymns were made simply by a slight adaptation of the words, such as, "There was a man who had lost God's grace," from "There was a man who had lost his wife."

A similar process went on in the creation of modern Jewish hymns from folk material, some set to the same tunes as those the Protestants borrowed. A Spanish love song beginning "Señora," was imitated phonetically as "Shem nora" (O name revered), and the melody used for Luther's *Nun freut euch, lieben Christengemein*, had

been adopted by Jews in Germany for hymns of the Feast of Dedication before 1450.

From the days of the Lollards on down to the Holiness movement beginning in America in the 1890's, which has evolved such songs as *The Gospel Boogie* and *Telephone to Jesus*, folk hymns have always been the accompaniment of dissent. Shakespeare noted that Puritans sang psalms to hornpipes. Wesleyans, Baptists, and Calvinists, influenced by Moravian hymns, sang their denominational differences to ballad, come-all-ye, and dance tunes. As the dissenters became established in America, their Standing Order gave rise to new waves of dissent—New Lights, etc.—each bringing new hymns. These evolved constantly toward less formalism and complication of text, greater emotional excitement, stronger rhythms, and the use of folk instruments. With the great Southern and Western revival movement of the end of the 18th century, camp meetings in the wide-open frontier atmosphere broke down the hymn to a jingling tune and little more than a chorus. *That Old Ship of Zion, Bound for the Promised Land*, and such first-person narratives as *The Dying Californian* and *The Wayfaring Stranger* were favorites. Tunes for *Barbara Allen*, *Lord Lovel*, and the Irish *Fainne Geal an Lae* (sung also to *Lady Isabel and the Elf Knight*) were matched to scraps from the texts of Isaac Watts, John Newton, John Cennick, etc. Shape-note hymnals circulated widely, and the Sacred Harp conventions for hymn-singing gathered in the rural people at regular sessions. The dialogs, antiphonal songs between the separately seated men and women of earlier dissenters' churches, gave way to the shouted choruses of the camp "mating grounds." Negroes, learning these hymns, or spirituals, from their white masters, gave to the singing their own rhythmic, tonal, and ideological turns, and created from the material a hymn style of their own. The most recent revival is still in progress and its products may be heard on the radio and on records. THERESA C. BRAKELEY

Renaud The French version of one of Europe's most widely disseminated ballads, originating in Scandinavia toward the end of the Middle Ages and known in hundreds of variant forms in France, Italy, Switzerland, Spain, Scotland, and French Canada. The story, told in literary form in the German poem *The Knight of Staufenberg*, is that of a knight who meets a fairy, is enticed to dance with her companions, takes flight, and dies as he reaches his home. This narrative is generally complete in its Scandinavian forms told of the knight Olaf. In Brittany the fairy element is less important and the end of the tale takes the stage. In the French *Renaud* the fairies disappear altogether and the story deals with the knight's (or king's) return home just as his wife has borne a child, his death in his mother's arms, the gradual realization of the wife, through dialog and question-and-answer development, of the death of her husband, and her determination to join him in the grave.

Renenutet, Rannut, or Ernutet The divine nurse and serpent goddess of the harvest of ancient Egyptian mythology. She is depicted as a woman with a serpent's head, or as a huge uræus-serpent with the horns of the cow-goddess Hathor and the solar disk on her head. Her festival took place in April. It is conjectured that she took her form from the snakes which fled to and

were discovered in the last part of the fields as they were harvested.

Rephaim The shades or inhabitants of the lower world in the Old Testament: the name may mean the limp or inert. Gaster (*Thespis*), with the additional evidence of some Phœnician inscriptions, says they may be either upper world spirits or lower world spirits, equivalent to either the Igigi or Anunnaki of Sumerian mythology. Through a common mythological transference, the Rephaim, or underworld denizens, become a race of giants who inhabited the land of Palestine before the Israelites came, in much the same manner as the Tuatha Dé Danann of Ireland were both divine and previous inhabitants of the land.

requests Requests made by mortals to a culture hero or supreme deity whom they go to visit are frequently mentioned in Eastern Woodlands Indian tales of visits to the afterworld, as well as in some Woodlands versions of the Orpheus myth. If the request is moderate the deity grants it; examples of moderate requests are asking for medicine to cure disease, or for power by an unsuccessful suitor to win a wife. But if the request is immoderate, such as asking for eternal life, the human being is not granted it, but is turned into a rock or a cedar tree. See IMMORTALITY. [EWV]

Resheph A Syrian god of war, plague, pestilence, and fire: equivalent to Môt, Canaanite god of death, but depicted in Egyptian monuments very much like Hadad, Mesopotamian storm god. He also resembles Nergal, the Babylonian plague god. In a Cilician inscription of the 8th century B.C., Resheph "of the birds" is mentioned, and in *Job* v, 7 the sons of Resheph are called winged; Resheph was therefore probably a vulture god. The Cyprian Phœnicians identified him with Apollo in the latter's aspect as plague god. In Egypt, where Resheph became an important god, he was depicted as a bearded man with Semitic features, carrying various weapons, with a crown like that of Upper Egypt, from which came a streamer. Above his forehead, Resheph had a hand or the horns of a gazelle. The name means the Ravager, and in the Old Testament the word is used for the punishing thunderbolt of God. Resheph is often associated with Anath, the Syrian war goddess.

resuscitation If reincarnation or metempsychosis is comparatively rare in North American Indian tales, resuscitation or revival of a "dead" being by magical means is a common incident. The means used are many: by rubbing or beating, stepping or jumping over the body of the dead person, by boiling or putting the body in water, or by throwing parts of the body such as the bones and intestines into a river, by sweating, by shooting arrows, by breathing on the corpse, by reassembly of the members of a body, and by other magic means.

The Shawnee and other Algonquian tribes tell how, when a monster was destroyed by fire one single drop of his blood remained on the under side of a leaf; this was found by the ants, and the creature was brought back to life. A Taos Pueblo tale narrates how old male witches, anxious to get a girl for a lover, cause her to sicken and die; after four days they bring the girl's body into the kiva, and roll a sea-shell wheel over it from the east, north, west, south, and again from the east side. "Then the dead body became alive, and human

again" (Elsie Clews Parsons, *Taos Tales*, MAFLS 34, p. 36). For a list of some 15 methods of resuscitation detailed in North American Indian myths throughout the continent, see Stith Thompson, *Tales of the North American Indians*, p. 363. [EWV]

Reuben Ranzo A halyard chantey devoted to the escapades of the scapegrace of chanteydom, Reuben Ranzo, who was the sea's most inept follower. His mistakes gave the sailors numerous opportunities for covert gibes at their own officers, for in some versions Ranzo became the captain of a Black Ball ship. In others he got his just desserts and was flogged. The song may have originated in the whaling fleets, but it was widely known on merchant ships. The hauling effort was timed to fall on the word *Ranzo* or the chorus. See CHANTEY.

revenant Nearly every civilization contains evidence that at some time or other there have been current beliefs that the dead return in either a visible or sensory form. In the Western world, belief in revenants has been on the wane since the 18th century, but ghost lore is still a vigorous element in any area where folklore thrives. It is to be collected not only among the illiterate but also among sophisticated groups in communities where those groups have long lived, especially in England where so many of the county families have ghost stories which they not only keep alive but tend to accept. It is also true that people of the middle class, while not believing in ghosts as such, will be quick to tell of one supernatural incident involving a revenant which they accept as being "one of those things that can happen."

Revenants appear in a variety of forms. In the more mature type of narrative the dead seem so like the living that the difference is discernible with difficulty, and frequently the living are unaware that they are dealing with one of the dead until the revenant disappears before their eyes. Among Irish narrators, the story of the living corpse is commonplace—the corpse which for a brief period rises from its coffin to take part in the ceremonies of the funeral. Spectral ghosts which appear as "an apparition," "a presence," "a spook," "a specter," a "shrouded spirit," are all common, many of these being characterized by a wraithlike quality. In America, the spectral ghost is not as common as it is in England. Another type is the light which appears over the grave, frequently remaining there until the body is reburied in hallowed ground. Occasionally parts of the body appear: heads and hands are the most common. Revenants may be of either sex and of any age or social class. Nor need they ever have been human, for ghosts of animals are reported frequently. It is also significant that occasionally along with the returning dead come objects which have never had life. For example, there is a gangster who reappears driving a bullet-proof car; Lincoln's funeral train is well known in the American countryside and the Irish death coach is known in both Ireland and the United States.

The dead return to complete unfinished business, to warn or inform, to punish or protest, to care or protect, and to impart information which they failed to impart before dying. Sometimes they come back to re-enact their deaths. Behind these reappearances seems to be the implication that these lives have been cut off before their allotted time and that they will reappear until their original allotment of time is completed. Thus it is that

the victim of murder, the suicide, those killed in accidents or by violence most frequently return.

Certain beliefs common in Europe have not survived with any vigor in the United States: that none should touch a revenant, that revenants are incapable of crossing water, that they frequently have a distinctive odor, that they appear only at night. The belief that ghosts come with the rattling of chains is another detail almost never included in American ghost lore.

Except for lovemaking, ghosts seem to take part in all of the normal activities of the living; they eat, drink, play, fish, drive cars, go through religious ceremonies, and hundreds of other activities. They make noise: they groan, cry, scream, yell, moan, wail, howl, holler, and sigh; they curse, laugh, whoop, whisper, cough. They frequently rap on walls, bang shutters, play musical instruments; they engage in all the activities of the poltergeist, destroying and deranging the interior of such buildings as they inhabit.

Ghosts can be put to rest by various techniques, some of them religious, some not. Buildings which have been haunted, upon burning, seem to lose interest for the revenant. Sometimes the ghost is satisfied when his unfinished business is completed, or when certain kindnesses have been done to put his spirit at rest.

The oral transmission of ghost lore in America today is occasionally stimulated by the appearance of stories in the newspapers or on the radio, and one finds such stories quickly entering into the oral stream. This has unquestionably been a factor in the growth and distribution of the commonest of American ghost tales, that of the ghostly hitch-hiker. This is the story, told with infinite variety all over America, of the girl who asks for a ride from a stranger, is taken to her home where it becomes evident that she is not a live girl but a revenant. This is a European tale and known in this country as early as the 1890's, but part of its interest arises from the variety of changes which are rung upon the theme. Like many of the most interesting ghost tales, the narrative interest is dependent upon the fact that the revenant gives every evidence of being alive until she disappears. See ADARO; CON-TINH; DEAD RIDER; ELDER; GRATEFUL DEAD; WILD HUNT. [LCJ]

 Tales or incidents in tales concerning revenants or ghosts are of fairly wide occurrence in North American Indian mythology, but since everywhere on the continent ghosts are more or less feared, anecdotal or humorous ghost tales are notably lacking. In the Plains and Eastern Woodlands tale of the Fatal Swing a young mother drowns, is taken care of by a water monster, and is brought to the surface of the water to nurse her human baby; the incident of a drowned mother returning to suckle her child also occurs in other tales sporadically over the continent. Vampires or blood-sucking ghosts appear in several Plains and Eastern Woodlands tales. On the North Pacific Coast where experience with the world of ghosts is the subject of many myths, the introduction to the tale of Giant's or Raven's adventures is as follows: a boy dies and his parents wail for him; one morning his mother finds a youth, bright and shining, in the place where her son's body lay. The youth explains that their constant wailing annoyed the powers above, so that he had been sent down to comfort them. However, later in the same myth it is made clear that the shining youth is not the dead son, but

a substitute for him, and later the substitute becomes so voracious that the chief, his "father", has to send him away in a Raven skin. The Central Woodlands tribes use an incident, similar to the North Pacific Coast one, of a ghost who returns to stop the inordinate weeping of his loved ones on earth; this has European parallels and perhaps represents borrowing by the Ojibwa, Menomini, or Fox Indians, among whom the tale is told.

Shadow people, seen by the living in their own afterworld domain, are frequently referred to in North American Orpheus myths, and in tales of visits to the afterworld by mortals. These are the ghosts of the dead, who are usually visible only at night; there are few if any references to such ghosts returning to earth unless specifically recalled.

Several Eastern Woodlands tribes believe that a person's spirit does not leave this earth until the fourth day after his death; during the three days after death the spirit retraces all the steps and actions taken during life. These tribes are also accustomed to hold "ghost feasts" once a year, in which the spirits of all dead relatives are fed food which is placed in an unlighted empty room for their consumption, before the feast itself is held by the living. [EVW]

 So great is the fear of the ghost of a dead relative among South American Indians that his kin, even the most remote, take new names in the hope that the ghost will be unable to harm them. This custom is observed by most Chaco tribes. When the ancient Guarani and Tupinamba killed an enemy on the battlefield or executed a prisoner, they took the same precaution. [AM]

revenge Revenge is used frequently for plot motivation in North American Indian trickster, hero, animal wife and husband, and other types of tales. Blood-Clot-Boy takes revenge on his mother's killer; a husband kills his adulterous wife's snake lover and serves the snake to the wife to eat; Corn Mother or Corn Maidens avenge themselves on people, after attempted or actual desecration, by disappearing, so that the people face starvation; a woman's bear husband is killed, whereupon the woman turns into a bear and attacks her family; Porcupine thinks he has killed Coyote and Coyote in revenge kills Porcupine and all his children; Trickster frightens young quails, who later avenge themselves by whirring up at him, thus causing him to fall or deeply frightening him. See BEAR WOMAN; CORN; COYOTE AND PORCUPINE; LITTLE STARTLERS, also BEAR-WOMAN AND THE FAWNS, and BURR-WOMAN for a few only of the many specific instances of revenge, either of a major or minor nature, in American Indian tales.

Revenge in real life was taken in a number of ways among the native peoples of North America. Verbal revenge in the form of sarcasm and irony in everyday conversation and speeches is still employed by the verbally gifted, as Shawnee informants have attested; it was also taken out in song contests (see NITH SONGS) and in songs composed by jilted lovers to revenge themselves on former sweethearts. Physical revenge was of course often taken for murder; it was not always necessary that the murderer himself be killed; in many instances, a member of his family or clan might be killed in revenge.

Revenge was also taken out in potlatches or great feasts among the North Pacific Coast Indians, for insults and for murders; and finally, all over North America,

shamans avenged or were hired to avenge insults, slights, and refusals to comply with demands, by causing the offending party to sicken and die. Witches and sorcerers also took similar revenge on real or fancied enemies. Young women were often forced to marry old shamans or witches, or the sons of such; not to comply with the demand meant that in revenge the shaman would cause the young girl to sicken and die. This actual practice is sometimes the subject of folktales; Parsons, for example, has recorded a Taos tale in which old men witches were trying to catch a girl to be their lover; the girl refused them. Angered, the witches put bad medicine into her body, using their power. The girl sickened and died. They buried her but later brought her into the kiva and revived her (E. C. Parsons, *Taos Tales*, *MAFLS* 34, 1941, pp. 36 ff.). [EWV]

Many South American Indian tribes share the belief that the actual or presumed murderer of a person can be destroyed if the corpse is mutilated. For this reason the Abipon, Lengua, and Ashluslay of the Gran Chaco remove the heart and tongue of the deceased and throw it to the dogs, or insert bones, heated stones, or claws into the corpse. They also shoot arrows at it while pronouncing magic spells. The Macushi Indians of Guiana threw the fingers and toes of the deceased man into boiling water. The first one to come to the surface was supposed to point toward the dwelling place of the witch responsible for the death. [AM]

reversal of fortune The theme of a cycle of folktales found all over the world, comprising the whole L chapter in Stith Thompson's *Motif-Index of Folk-Literature*. It includes the clever or victorious youngest child (son or daughter) stories (L0-99); the unpromising hero stories (L100-199), among these, all the Cinderella (L102) tales; the pride brought low (L400-499) and modestly rewarded (L200-299) tales, such as the modest choice of the worst of three caskets bringing success to the chooser (L211), the worst horse was the right choice (L212), etc., the most modest request turns out to be the best (L220); the triumph of the weak over the strong (L300-399), escape of the weak from the strong, etc. See DIRTY BOY; RAGS-TO-RICHES; UGLY DUCKLING.

reversal of sex Reversal of sex is a quite common incident in North American Indian tales, particularly in trickster tales. Very widespread are stories in which Coyote or another trickster poses as a woman and marries a man, often in order to embarrass the latter. Sometimes, as in a northeastern Algonquian tale, this trick is played on a young man too proud to marry, the son of a chief, and trickster even goes so far as to pretend to have a baby. A Jicarilla Apache tale reverses the situation: Coyote is given a boy dressed in girl's clothing as a wife. By the time he has discovered the situation he has given all his highly prized tobacco to his "bride's" father and to visitors. In more serious tales, as of the jealous uncle, a boy may be raised as a girl for his own protection.

The actual assumption of women's clothing and a woman's role by males, or of men's clothing and a man's role by women, was not uncommon among the American Indians. Transvestites frequently "married" and were not ostracized, but were often highly respected members of the group. In many instances they were shamans. Among the Eskimo, as among the Chinese,

it was customary, if an infant girl was adopted to replace a lost son for example, for the adopting couple to bring up the girl as a boy, teaching her to hunt and fish as men do among the Eskimo, and to engage in boyish activities, as among the Chinese. On becoming adult the girls resumed their normal roles. Two recent autobiographies written by a Labrador Eskimo woman and a Chinese woman (*Land of the Good Shadows*, by Heluiz Chandler Washburne and Anauta, New York, 1940; and *Autobiography of a Chinese Woman*, by Buwei Yang Chao, New York, 1947) present the life histories of two women raised during their youth as boys. [EWV]

revolt of the utensils The famous motif of the rebellion of the utensils against men which figures in the *Popol Vuh* of the Maya occurs also in South American mythology. The episode was painted on a fresco in one of the temples of the Mochica (near modern Trujillo, northwestern Peru) and is known through several versions preserved by Spanish chroniclers. It is still remembered by the Chiriguano Indians of the Bolivian Chaco. [AM]

revolving castle A commonplace of early Celtic mythology, folktale, and legend, occurring also in Arthurian romance (F771.2.6.2), specifically, in the Grail romances as *Ille Tournioint*. Annwn, the Brythonic otherworld, for instance, was sometimes called *Caer Sidi*, or revolving castle, and was conceived as being surrounded by the sea (F163.1.1). Cú Roi, a wizard of Old Irish legend, had a magic so great that no matter where he was in the world, every night he put a spell on his castle so that it revolved all night and there was no entrance into it after sundown. This was *Catair Cú Roi*, the round fort of Cú Roi, where the three first champions of Ulster (Loegaire, Conall, Cuchulain) took turns keeping watch during their tests for the champion's portion. (See BRICRIU'S FEAST.) Each one stood guard outside it for a night. The terrible gigantic attackers could not get into it because of its spinning around; neither could Loegaire, Conall, nor Cuchulain enter it through any door between sundown and sunrise. On the first night the giant terrified Loegaire, keeping guard outside, picked him up and threw him back in over the wall. On the second night the same thing happened to Conall. On the third night, there were many attackers whom Cuchulain fought off, and when all were disposed of, he leaped back in over the wall himself. *Catair Cú Roi* survives today as *Cahirconry*, a huge prehistoric round fortress in Kerry.

Reynard Trickster hero of the great medieval beast epic *Roman de Renart*. Reynard is the fox, the clever unmoral rebel against authority, a hero of the antithesis of the ideals of the *chanson de geste*. There is nothing chivalric about him; he is a coward, a seducer, a liar, a traitor. The epic of Reynard does not exist as one work. Developing throughout the Middle Ages from the beast fables of the classical period, the poems of beasts who acted and thought like human beings grew into the Latin *Isengrimus* of the 12th century written by a Fleming, and the various branches of the *Roman de Renart* (c. 1175-c. 1205). The branches, telling the story of the fox, were separate compositions making use of fable material from the *Isopets*, imitations of Aesop's fables, and of popular folktale material. The mass of the material is French in origin, but the version of the story

translated into English by Caxton in 1481 was a Flemish text, now lost. Surrounding Reynard in Caxton's translation are King Noble the lion, Isegrym the wolf, Bruin the bear, Grymbert the badger, Coart the hare, Bellyn the ram, Courtoys the hound, Tybert the cat, Chanticleer the cock, Partlet the hen, and other such animal-people. See BEAR FISHES THROUGH ICE WITH TAIL; BEAST EPIC; FOX.

režniká The Moravian butcher's dance. The pantomimic theme of buying an ox from a farmer is reduced to an abstracted hand gesture. The first gesture, which follows after a polka step in ballroom position, consists of the boy resting the girl's right hand in his left, palm up, and slapping it with his right, as though counting out coins. The second pattern of hand claps, during a running step, resembles the Pease Porridge Hot. [GPK]

Rhadamanthus In Greek mythology, one of the judges of the dead in Hades, especially, according to Plato, judge of the Asiatic dead, or the overlord of the Elysian fields. He was the son of Zeus and Europa, and the brother of Minos of Crete. Rhadamanthus did not die like other mortals but was taken directly to Elysium. There he married Alcmene, mother of Hercules, and there, because he was so very just, became judge of the Asiatics as Æacus was of the Europeans (Minos, commonly the third judge, had the deciding vote). In other versions of the myth, Rhadamanthus fled from Crete because of the jealousy of Minos, or because he committed a murder, and settled in Boeotia where he married Alcmene after the death of Amphitryon.

Rheinländer Literally, from the Rhineland: the South German version of the polka, identical with the Bayrische Polka. It is also a couple dance, progressing counterclockwise around the room. Couples dance in ballroom position: three two-steps or three polkas forward (or back), then pivot with three hops and a stamp. The Norwegian *Reinlendar* uses a schottische step: two schottische and four turning hops, in ballroom or open promenade position. A special wrinkle is the touching of the heel to the ground after each two-step. The partners pivot with various holds, and the girl hops around the kneeling boy. Finally he tosses her up into the air. [GPK]

rheumatism This Great Crippler has plagued man from the beginning of time, for traces of the ailment have been found in prehistoric remains.

Various herbs were early thought to cure rheumatism or to ameliorate its twinges. This ancient herbal lore spread through Europe, and many remedies found in old recipes may be traced to very ancient sources. Plants cultivated in old monastery and kitchen gardens for rheumatism were burdock, dandelion, fern, flax, hemlock, henbane, holly, horseradish, rosemary, tansy, and many others.

In the 14th century rheumatism was treated with elixirs, injections of gold compound, and other fantastic medicaments. In the 18th century, Cagliostro, a Sicilian, and an early promoter of the faith cure, invented a chair for rheumatism. At this time and even earlier, magnetic belts were worn or a lodestone was carried on the person to assuage rheumatic pain.

Cures for rheumatism in near and far parts of the world included homeopathic magic, transference, sym-

bolic rebirth ritual, and the like. In Afghanistan the sufferer prays and beats himself as he walks around a grave; in Australia afflicted aborigines believe their pains are caused by bits of broken glass, bone, or stone, which some enemy has placed in their footprints. In China the use of the skin of a white-spotted snake is favored as a remedy. In England, Wales, and France, the disease was sometimes alleviated by the victim's crawling through a bramble that had sent down a second branch into the ground. In Ireland people would apply the hand of a corpse to the afflicted shoulder, arm, or leg, and when the coffin passed over the threshold, would cry, "Take my pains with you!" In Java a popular cure for gout or rheumatism was to rub Spanish pepper into the nails of the patient. In Scotland people born feet first had power to heal rheumatism, and in Cornwall the mother of a person so born was invited by sufferers to trample on them.

Various American Indian tribes of the northwestern United States and Canada use a tea for colds and rheumatism made from quills of the ground hemlock; Cherokees may not eat flesh of the gray squirrel for fear of becoming crippled, since the squirrel eats in a cramped position (Mooney); the Shinnecock smoke dried leaves of the catnip, make tea of kelp, and use rotted earthworms for ointment (*JAFL* 58: 113 ff.). The Mexican Pima Indians whip or stroke for rheumatism; at the Hopi Powamu, during the ritual whipping of children, adults suffering with rheumatism frequently asked to be whipped. This rite strengthens and gives luck (power) in hunting, racing, and gambling (Parsons, *Pueblo Indian Religion* I: 471; II: 994). In eastern Brazil, disease in general is treated by massaging with herbs and by flogging. In the delta of the Orinoco, the Warrau tribe allow a certain species of ant to bite the painful rheumatic spot a few times (*BAEB* 143:III: 581).

Common and current practices in the United States to prevent or cure rheumatism include carrying a potato in the pocket, or a horse-chestnut (buckeye, bull's eye). A few other methods of prevention are: take a cat to bed, or a nail from a coffin, or one made from a horseshoe; drink a potion of pokeweed berries or sunflower seeds soaked in whisky; rub the painful parts with mutton-tallow, grease from boiled frogs, polecat or skunk oil; wear the eye-tooth of a pig, or salt-mackerel tied on feet, or dried eel-skin around the joints, rattlesnake rattles in the hat, a copper bracelet around the wrist, or copper wire as a belt around body. Bee-stings are an old remedy. See BEES. These are but a few of the American remedies for rheumatism, though mention of a native Virginia plant should not be omitted, *Jeffersonia diphylla*, popularly called "rheumatism root." [GFS]

Rhiannon According to the story in the mabinogi of Pwyll, one day Pwyll, king of Dyfed, sat on the wonder mound of Arbeth, of which it was said that whoever sat on it would have adventures or see sights. What Pwyll saw was a beautiful woman in garments that shone like gold approaching on a white horse. He sent men to meet her but no one could come near her. The next day he sat on the mound again, and when she appeared he went to meet her himself, but could not shorten the distance between them until he called to her in the name of love. She was Rhiannon, daughter of Heveidd Hen. In a year they were married and in due time a boy

child was born to them in Pwyll's castle at Narberth. But Gwawl, a rejected suitor outwitted by Pwyll, contrived to steal the child in the night while the watching-women slept. The six watching-women, in terror because of their negligence, devised a way of putting the blame on Rhiannon. They killed a pup, smeared her face and hands with blood while she slept, hid the bones in her bed, and accused her when she woke of devouring her child in the night. Rhiannon was condemned to sit at the gate, tell this story to strangers, and offer to carry them to the castle on her back.

There was a man in the country named Teirnyon whose mare foaled on the first of every May, but whose colts always mysteriously disappeared on the first night. At last he resolved to watch, saw a great arm reach into the stable to snatch the colt, cut off the arm with his sword, and ran out to pursue the snatcher, who disappeared in the night. When he came back he found a young baby wrapped in satin sleeping by the stable door. Teirnyon and his wife reared the child with love, and named him Gwri, for his golden hair. Not only was the boy beautiful but at the age of two was as big as six. Eventually Teirnyon heard the tragic story of Rhiannon and her penance, saw that Gwri resembled Pwyll, wondered if this could be Rhiannon's child, and took him to the castle, where the resemblance was recognized to be so great that every one cried he was Pwyll's son. So Teirnyon told the story of the colt and the discovery of the infant at his door. Rhiannon was cleared of the terrible accusation, and when she said here was an end to her trouble, it was voted that she had thus named her child, Pryderi (Trouble). Pryderi was trained as befitting a king's son and, when Pwyll died, reigned well after him. Later in the mabinogi of Branwen, Rhiannon was married to Manawyddan, the good friend of her son Pryderi.

In Brythonic mythology, Rhiannon is identified with an early Celtic goddess known as Rigantona, or Great Queen, i.e. a mother goddess, and as such associated with fertility. She is said to have had three little birds whose singing could cause death or bring the dead to life. Robert Graves (in *The White Goddess*, New York, 1948, p. 318) associates Rhiannon with the mare goddesses of the Mediterranean area. She was accused of devouring her child, for instance (paralleling Demeter, Leucippe); her penance after this accusation was to carry people on her back; her child's fate was tied up with the fate of Teirnyon's foal. Graves also assumes that probably in the original story Rhiannon took the form of a white mare in her flight from Pwyll. See ARAWN; HAVGAN; MABINOGION; VIVIEN.

Rhys, Sir John (1840–1915) Celtic scholar; born in Cardiganshire, Wales, and educated at Oxford, continuing his studies in France and Germany. In 1877 he became professor of Celtic at Oxford; in 1881 a Fellow of Jesus College, and in 1895 its Principal. He was an authority on Celtic philology, author of *Celtic Britain* (1882, 1904), *Celtic Heathendom* (Hibbert Lectures, 1886); *Celtic Folklore, Welsh, and Manx* (1901), in which he collected what remained of the Old Welsh tradition—rites, customs, and festivals that were gradually passing away. Among his other works are *Studies in Arthurian Legend* (1891), *The Welsh People* (1900, with D. B. Jones).

Ribhu In Vedic mythology, one of the three artisans of the gods, named Ribhu, Vibhu, and Vāja, who, because of their great skill, became deities. They renewed the youth of their parents, fashioned Indra's chariot and horses, and transformed Tvashtṛi's bowl into four shining cups. Their dwelling place is in the solar sphere and they are sometimes said to support the sky.

rice A grain (*Oryza sativa*, also other species), probably east-Asiatic in origin, which is the "staff of life" for almost half of the human race. Rice cultivation is of two types: wet and dry. In the former, the rice seedlings are planted in flooded fields; in the latter, the seeds are sown in the soil. Wet rice cultivation is found mainly in southeast Asia and the adjacent islands. This type of cultivation has been carried to various parts of the world, including the southeast United States. (The occurrence of rice culture in Madagascar is viewed by many anthropologists as a weighty proof of the settlement of that island by men from the Pacific Ocean.) It therefore requires either extensive irrigation, or flat river valleys which periodically are inundated. In mountainous regions like the Philippines, Madagascar, Japan, and Indonesia, elaborate systems of terracing, canals and reservoirs, have been devised to abet wet rice cultivation. Possession of these means of production may give rise to marked class distinctions, as among the Ifugao of Luzon.

There is a great deal of ritual and magical belief surrounding the cultivation and use of rice. In Bali, for example, it is thought that rice has a soul, similar to that of man; human beings and rice share the same cognomen, which sets them apart from animals. Rice may be addressed by kinship terms, such as "mother," "grandmother," or "grandfather." Here, as well, the rice may be supplicated, as one asks an older relative for food, for a man may address the rice as mother, saying: "I am hungry."

In Ceylon, before the rice is planted, geomancers and astrologers are consulted. They give all the necessary directions surrounding the sowing, including such minutiae as to what the planter should wear. He must be ceremonially clean as well. A prayer is said over the first seeds sown, and a flower is placed above them. The growing rice is vulnerable; if there are droughts, plagues, or pests, the goddess Pattini has been angered, and she is appeased by a coconut fight. Priests are also given offerings of food as her aid is invoked. The men of the village line up some thirty yards apart, tossing coconuts back and forth, attempting to strike the flying nuts with coconuts held in their hands. They play until a nut is broken, and repeat this performance for several days, concluding with a feast. At all points from the breaking of the ground to the final consumption of the grain, including sowing, cultivation, reaping, threshing, measuring, storing, etc., supernatural advice is sought and followed. The anger of the gods against the welfare of rice is excited by obscene language, uncleanness (contact with birth, menstruation, death, eating of pork and oily fish), and all of these must be kept from contact both with the standing rice in the fields and the threshing floor. Also, the pounding or roasting of rice must be done far from the fields, otherwise the standing crop would be weakened.

The Chinese so highly regard rice (the staple food of

southern China) that its mention is part of the daily greeting. As we say "How do you do?" they say "Have you eaten your rice?" In southern China, as in Burma and Siam, rice is the central food, and all else—soup, meat, fish, vegetables, and condiments—are "garnish."

In Japan, "next to the emperor, rice is the most sacred of all things on earth." (Gautama divided all of mankind into ten classifications, of which Buddha was first, the counterpart of Hell was tenth; rice was second). Money can be squandered and the sinner is forgiven, but there is no forgiveness for wasting rice. Some of the supernatural retributions which follow this sinful and wanton behavior are blindness or assurance of punishment in the afterworld, where the sinner is ground up into a powder. Parallels in regard to bread may be found in Greece and Poland.

For celebrations and holidays, rice is always used. Particularly red rice or rice boiled with red beans. *Sake*, rice wine, is also an essential part of all feasts. So sacred is rice that even the straw used in floor mats has a place of honor, for these mats symbolize cleanliness. Rice-straw rope is tied over the house entrance at the New Year festivities. Offerings of rice cakes are placed on the family altar at this season. A small piece of these cakes is eaten, accompanied by a drink of rice wine, and this indicates that one has achieved another year of age.

Throughout the year there are various rice ceremonies. In May, when the new crop is sown, the emperor personally sets out new plants in the palace grounds. Some weeks later, in June, when the rice is transplanted to the paddy fields, there are further ceremonies. These may be quite elaborate and include theatrical and circus performances. If a drought threatens the rice crop, special dances are performed, in which only ritually purified men participate. Women are barred categorically because they menstruate. The dancers stay away from their homes for three days, visiting shrines and praying. When the harvest is in, rice cakes are made and offered to the gods. A dagger is thrust into each cake, and then it is eaten by a priest. Rice wine is also drunk. During the moon-viewing festival, the moon goddess receives offerings of rice and *sake*. In November, there is a final thanksgiving feast for rice.

Rice is widely used also over the rest of the world. It is an integral part of the cuisine of Europe, the United States, specifically in the south, and in the Caribbean region and South America. Italians say that "rice is born in water, and dies in wine." In our culture, perhaps the most widely known symbolic use of rice occurs at weddings, when the newly married pair is pelted with rice, for "good luck," but its older meaning harks back to rice as a symbol of fertility.

Rice (*Oryza* spp.) is not to be confused with wild rice (*Zizania* spp.), an aquatic plant of eastern North America. This plant, found growing wild in wet and swampy places, gave the French name to the Menomini Indians, "Les Folles Avoines," the wild oats.

riddles Contrary to the common assumption that they are mere word puzzles proposed by punsters at evening parties, riddles rank with myths, fables, folktales, and proverbs as one of the earliest and most widespread types of formulated thought. A good case could probably be made for their priority to all other forms of literature or even to all other oral lore, for riddles are essentially metaphors, and metaphors are the result of the primary mental processes of association, comparison, and the perception of likenesses and differences.

Possibly confirmatory of their antiquity too is the ubiquitous element of humor and wit. The essence of the ludicrous is the unexpected, so the laughter of primitive and simple-minded men and of little children is easily excited by the sudden discovery of similarity in two objects which a person would not ordinarily expect to resemble each other. Sophisticated persons and those of orthodox mind, whether that orthodoxy be of religion, social custom, or materialistic science, seldom appreciate or even understand riddles.

Although Aristotle several times pointed out the close relation between metaphor and the riddle, the fact and its significance seem not to have been often or sufficiently noticed by anthropologists, philologists, psychologists, or students of folklore.

The oldest riddles long predated the ones now definitely associated with the ancient Hellenic, Semitic, and Vedic cultures, which were already producing fairly complicated enigmas. And those very early ones are still in circulation today, a little more polished perhaps, but essentially the same metaphorical illusions to the resemblances between natural objects. The children of the Schoharie Hills of New York, for instance, say:

On yonder hill there is a red deer;
The more you shoot, the more you may,
You cannot drive that deer away.

The average adult has difficulty with that one, but a child or an Indian knows it must be the sun rising, for it is red and impossible to scare away. That riddle, in one form or another, is to be found not only in 17th century English riddle collections, but far back beyond Homer's rosy-fingered dawn, beyond Ikhnaton's "Thy footprints are the day," to the time a primitive man first referred to the sun as a person.

When a child says in Louisiana:

I have an apple I can't cut,
A blanket I can't fold,
And so much money I can't count it,

he is describing the sun, sky, and stars in riddle images which have been repeated for countless generations. Another very old but still popular one was probably created by the first man to note the annual habits of deciduous trees. By the time Mahlon Day in New York published his *New Riddle-book* (1829), the enigma had become:

In spring I look gay,
Deck'd in comely array,
In summer more clothing I wear;
When colder it grows,
I fling off my clothes,
And in winter quite naked appear.

As a boy I learned this old Elizabethan one:

Thirty white horses upon a red hill,
Now they champ, now they stamp,
Now they stand still,

but that is a comparatively modern form of the teeth riddle, which like all those referring to parts of the human body, is really ancient.

The older riddles, perhaps because they have to do with nature and are simply told, contain among them a larger proportion of really beautiful ones, like:

Round the house and round the house,
And there lies a white glove in the window. (Snow)

A hill full, a hole full,
But you cannot catch a bowlful. (Smoke)

From house to house he goes,
So sure and yet so slight,
And whether it rains or snows,
He sleeps outside all night. (Lane)

Jack-at-a-word ran over the moor,
Never behind but always before. (Will-o-the-wisp)

What flies forever
And rests never? (Wind)

The more you feed it
The more it'll grow high,
But if you give it water,
Then it'll go and die. (Fire)

I washed my face in water
That neither rained nor run;
I dried my face on a towel
That was neither wove nor spun. (Dew and Sun)

There seems to have always been something in snow to make riddlers turn poetic or poets make riddles:

White bird, featherless,
Flew from Paradise,
Pitched on the castle wall;
Poor Lord Landless
Came in a fine dress
And went away without a dress at all.

Folklore is the lore or learning or common sense or mother wit of the people as passed down from parent or grandparent to child or grandchild, and that folk knowledge must be packaged and capsuled for easier transmission down through the generations. That is where the proverb and especially the riddle come in. I have sat by the stove of a winter night and given the answers to the riddles my father and mother alternately asked me as they went through the catechism their parents had taught them. It was part of my education, and much more interesting than the lessons in grammar school. It was much more mind-stretching, for the answer to each new riddle was not given me until I had tried long and hard and turned the given situation every which-way seeking the solution.

Perhaps it was the neatness of the packages in which the lore was given which appealed to me. L. W. Chapell, on page 227 of B. A. Botkin's *Folksay 1930*, recognizes this very point: "Riddles, perhaps even more than most types of traditional lore, have a way of 'staying put.' Their vigorous compactness of form seems to give them a peculiar hold on the popular imagination and in many cases to insure their preservation for centuries."

Then again, like all children, I was intrigued by the peculiar combination of beauty and mystery on the

one hand and absolutely logical factual reasoning on the other. The riddle was a puzzle and a challenge and a nut to crack. We called it cracking riddles, too, and we cracked nuts at the same time, and one seemed to help the other. We often began by saying:

There was a little green house,
And in the little green house,
There was a little brown house,
And in the little brown house,
There was a little yellow house,
And in the little yellow house,
There was a little white house,
And in the little white house,
There was a little heart.

This feeling of children for riddles was well explained by Maurice Bloomfield in a paper on Brahmanical riddles which he read in St. Louis in 1904 at the International Congress of Arts and Sciences: "From olden times, as an early exercise of the primitive mind in its adjustment to the world about it, comes the riddle . . . The fresher the vision, when the world was young, so much keener was the interest in the phenomena of nature, in the phenomena of life, and in the simple institutions which surrounded man. All harmonies and fitnesses, all discrepancies and inconsistencies attract the notice of children and the childlike man. Hence children love riddles; hence savages and primitive people put them. All folklore is full of them. They are the mystery and at the same time the rationalism of the juvenile mind. As civilization advances they still sustain life, but they grow more complicated, more conscious and exacting, as the simpler relations become commonplace, and interest in them fades and wears off."

Not only does interest in riddles wear off as civilization grows more complicated, the ability to solve riddles also disappears, just at the time when such skill is more needed than ever. Civilization demands specialists, and the grooved, compartmented, and departmentalized education which is necessary for the production of experts in technical matters often neglects entirely the more fundamental pedagogy which educated children and adults by teaching them through riddles to look at every problem from all sides, and still keep a sense of humor.

The educational character and purpose of riddles is plainly revealed in their very name. Whether we take the English *riddle*, the German *Rät(h)sel*, or the Greek *ainigma*, they all come from the corresponding verbs, English *rede* (Old English *radan*), German *rat(h)en*, and Greek, *aineo*, all meaning to give advice. The Latin *ænigma*, French *énigme*, and English *enigma* are all obviously derived from the Greek original and still retain its meaning. The somewhat redundant term "quiz question" is beginning to take the place of the word "riddle" in America, due to radio program influence. Dictionaries assert that the word *quiz* is of unknown origin and derivation, but it would seem likely that it came from the *quis, quæ, quid* (who, which, what?) of the thousands of medieval Latin riddles. A new folk word for riddle may thus be evolving, of apparently legitimate lineage. Since quiz at present still means an examination or series of questions, the awkward "quiz question" is used for one, but soon we may expect "quiz" to be the modern folk term for riddle, which was itself deliberately shortened centuries ago by popu-

lar usage from the clumsy singular number *rædels* (plural *rædelse*) because the *s* made it too much like a plural, and also perhaps because the *-le* suffix suggested something diminutive, cozy, and pleasant. The folk liked a riddle and knew it for their own.

All apart from the educational function of the riddle (the oldest riddles on record are school texts from Babylon), it served another purpose among primitive men, which, when understood, clarifies certain hitherto unexplained procedures. Sir James Frazer has wondered why among certain tribes riddles are asked at definite times and on prescribed occasions.

He mentions, for instance (*Golden Bough* iii, 154), that in the elaborate rain-making ceremonies of the Ba-Thonga, a South African Bantu tribe, naked women dance, leap, and sing: "Rain, fall!" But if any man should approach the place, the women would beat him, and "put riddles to him which he would have to answer in the most filthy language borrowed from the circumcision ceremonies; for obscene words, which are usually forbidden, are customary and legitimate on these occasions." Again he tells (*ibid.* vii, 194), how in several tribes of the Central Celebes islands, the folk ask each other riddles at harvest and while the rice crop is maturing. When a riddle is correctly guessed, the whole band of rice-watchers shouts: "Let our rice come up, let fat ears come up both in the lowlands and on the heights." But between harvest and the next planting riddle-asking is strictly prohibited. Frazer has a glimmer of the truth when he comments thereon: "Thus among these people it seems that the asking of riddles is for some reason regarded as a charm which may make or mar the crops."

But in a lengthy note on pages 121-122 of *Golden Bough* ix, Sir James confesses his perplexity and inability to solve the riddle about riddles: "The custom of asking riddles at certain seasons or on certain special occasions is curious and has not yet, so far as I know, been explained." He toys with the idea that the riddles may have originally been used as substitutes for direct words, as they are especially "employed in the neighborhood of a dead body." And of course the spirit still hanging round the place has to be deceived lest he remain in the vicinity too long. Sir James then lists a few instances when riddles must or must not be said, such as among the Bolang Mongondo of the Celebes who prohibit riddles except when there is a corpse in the village; in the Aroe Archipelago where the mourners play a sort of riddle telepathy game while the corpse is still uncoffined, as in Brittany after a funeral the old men remain in the cemetery and, seated on mallows, propound riddles to each other. At circumcision ceremonies British East African adolescents must interpret pictographic riddles carved on sticks, and Central Asian Turkish girls ask riddles of their prospective husbands who are punished if unable to give the correct answers. As far back as Vedic times at the great horse-sacrificing ceremonies, the priests recited enigmas to each other.

All these Frazer mentions, yet strangely fails to recognize what they all have in common. He might also have cited the riddle contest at Samson's wedding feast, the symposia of riddles in Rome at the Saturnalia, and the merrie riddles at Christmastide in England, as well as many others which will occur to the reader.

For it is obvious that the solving of riddles was a tech-

nique anciently and primitively employed at times of crisis or on occasions when the fate of someone or even a whole tribe hung in the balance. Rain-making, grain-growing and harvesting, circumcision, weddings, funerals and burials, all these were critical times. Would the blessed rain come or would the drought persist and famine decimate the tribe? Would a storm at harvest time destroy the precious crop or would it all be garnered in with thanksgiving? Would the dangerous spirits enter the boy at circumcision and infect the wound until he died in agony, or would he grow into heroic manhood? Who could tell whether or not the marriage would be a success, or whether the corpse would get properly interred before the reluctant ghost, envious of the fortunate ones who still lived, did some harm to them, perhaps marking one of them as the next victim?

Still farther back in time or culture-pattern, the early men asked at the winter solstice, after they had seen and felt the sun gradually weakening for weeks, whether it would regain its strength, whether the little boy New Year would be born. The Twelve Days between the end of the lunar year and the end of the solar year were critical days. Men wondered what the new year would be like, and tried to determine by odd signs and practices, haruspical, mantic, and divinatory. They did what they thought would properly in-augurate the coming year. A faint echo of that archaic custom is heard when we inaugurate a new United States president: he must kiss a sacred book, and the verse thereof which his lips touch is believed still by some to have certain divinatory value in prognosticating the success or failure of the new administration.

But what has solving riddles to do with all these crises Sir James Frazer has mentioned and the ones we have added? Simply this, that at a critical time, when even a slight thing may decide the issue, solving a riddle correctly may, by a sort of sympathetic magic, help to solve the big problem, may turn the scales the right way. All those "certain seasons and certain special occasions" which Sir James mentions called for the use of riddles, according to primitive custom, that the magic of the riddle-loosing might affect and stimulate the proper forces for the happy solution of the current crisis. To ask and answer riddles at a wedding in order to assure its success may seem superstitious to us and quite ridiculous, now that we have completely given up all such lucky wedding customs as throwing rice, confetti, and old shoes, or advising the bride to wear something old, new, borrowed, and blue, or believing that the girl to catch the bride's bouquet will be the next one married. To say nothing of the wedding ring superstitions!

Psychologically our primitive ancestors may have had something! Solving difficult riddles at a wedding may have encouraged the young couple to think they might similarly tackle and find the solution of the many enigmas of married life. At any rate, it would start them off in the atmosphere of accomplishment and the aura of success. And the Turkish girls who test the intelligence of their wooing lovers by asking them to answer tough riddles seem to have what may be a primitive but is probably a practical form of trial marriage.

Somewhat of that idea or feeling-consciousness of sympathetic magic may have survived the generations to make me in my boyhood feel that cracking riddles and cracking nuts had something to do with each other.

We always cracked nuts and riddles after the Thanksgiving and Christmas dinners, but I knew nothing then about the connection between harvest and the winter solstice on the one hand and enigmas on the other. Yet the reason we did have riddles at those "certain seasons" was because long ages since our progenitors did believe in sympathetic magic. The fact that it still seemed a good thing to do was not entirely due to custom, habit, or ancestor reverence. Let me put it this way, making it very practical: I still think it is an excellent practice to "rede riddles" at Christmas time, in the dark of the year, if for no other reason than to remind ourselves that it is well to sharpen our wits and keep them in good practice at critical times.

There is considerable mental stimulus in this verse:

Is the wit quicke?
Then do not sticke
To read these riddles darke:
Which if thou doe,
And rightly too,
Thou art a witty sparke.

It is found on the back of the title page of *The Booke of Meery Riddles*, which ran through eight English editions between 1600 and 1686. The edition I have used is dated 1629 at London and was "Printed by T. C., for Michael Sparke, dwelling in Greene-Arbor, at the sign of the Blue Bible." (Evidently Michael was either a punster or wished to be sure his name was both on the title page and the back of it.) The subtitle is worth quoting: "Together with Proper Questions, and witty Proverbs to make pleasant pastime; no lesse usefull than behoouefull for any young man, or child, to know if he be quick-witted, or no."

Likely this particular booke of meery riddles is a reprint of the older *Book of Riddles* mentioned by Laneham as early as 1575, with which Shakespeare was familiar. I mention it here especially for the word *meery* which came into the title between 1575 and 1600. Sparke was witty but not a prime speller, for the better spelling is *merrie*. Now we must here be careful not to assume that when the Elizabethans spoke of merrie riddles and Merrie Christmases they had the comparatively innocent and chaste idea in mind that we now associate with the harmless word *merry*. Several passages in the King James (1611) version of the Bible now found in any concordance under "merry" disclose, for example, that when Amnon (2 Samuel xiii, 28) and King Ahasuerus (*Esther* i, 10) were merry, they were not only drunk but rather licentious as well.

Other times, other morals, to be sure, but the idea of license at the winter solstice is a very old and persistent one. You can trace it back from Caroline and Elizabethan England, when Christmas in that realm was very merrie indeed, to the time of the celebration of the same solstice in the Roman Saturnalia, the very name of which is now applied to any orgy of dissolute riotous jollity. From this Roman feast came the customs still obtaining in Christian England of not only the feasting and drinking and the exchange of gifts, but of riddling as well. How far back of the Saturnalia these customs went we do not know, but there is plenty of evidence that carnivals and orgies at Christmas or New Year's were widespread and of very old prevalence. The rites of the Holi festival in January among the North Dravidians of India are characterized by indecent words and ges-

tures and the singing of ribald songs. Periodic orgies accompanied by sexual excesses or substitutionary obscene words and bawdy songs may be explained as reaction to civilized restraints or as psychologically necessary periods of catharsis, or "letting off steam."

Riddles are definitely connected with this background, and this review of the Saturnalian customs has been necessary to explain the character of a large section of the most popular riddles.

The Booke of Meery Riddles which went through several editions in the 17th century contained many which were bawdy, licentious, or just plain dirty. Most of its 76 riddles emigrated to America and are still current orally in New England and the South, especially in mountain or otherwise isolated communities, with many variants and imitations, some very clever and all much relished by the people. They contribute to swell the vast body of folklore known as "Back-of-the-Barn Americana," so popular that it often emerges from its private-home and railroad-smoking-room oral tradition habitat and presses its way into cheap magazines and joke books, burlesque and stag-party shows, night-club and musical-comedy performances, and best-seller historical fiction.

The often lewd nature of the popular word-of-mouth riddles has probably led, or at least partly influenced, scholars to make a simple classification of riddles into the folk riddles and the literary riddles, or *Kunsträtsel* and *Volksrätsel*, or, following Rolland's division, into *l'énigme vraiment populaire* and *l'énigme savante ou littéraire*. The best statement of the grounds and nature of the distinction between the two classes of riddles is found in the first chapter of Archer Taylor's *The Literary Riddle Before 1600*. To that scholarly treatise with its excellent bibliography, we refer those interested in literary riddles, as this article is limited to the folklore aspects of the riddle and is concerned with the literary variety only as far as enigmatographers like Apuleius Athenæus, Symposius, Aldhelm, Alcuin, Bede, Tatwine Eusebius, Boniface, Al-Harîrî, Moses ibn Ezra, Firdausi, Râzi, Psellus, Megalomitris, Makrembolitis, Aulikalampus, Malatesti, Galileo Galilei, Straparola, Claretus, Lorichius, Leuterbach, Reusner, Junius, Fontaine, Swift, Schiller, Goethe, Boileau, Voltaire, Rousseau, Fenelon, and Cervantes (to name but a representative few) won fame in their day by elaborating and putting into polished verse the beloved riddles of the common people. Not merely from the *Volksrätsel* did the literary riddle writers get their inspirations: they selected abstract subjects also, which were very seldom found among the simple, practical, material, and earthy answers to the vulgar enigma.

The folk and literary riddles meet and are indistinguishable in the earliest stories which have come down to us connecting certain enigmas with such semi-mythical semi-historical characters as Samson, Homer, and Oedipus.

The 14th chapter of the *Book of Judges* in the Old Testament records more than the one riddle of Samson. Carefully read, it appears as the chronicle of a riddle contest, or riddle strife, one of those very exciting tournaments of wit held in ancient times when men might bet their fortunes, wives, daughters, and even their lives on their cleverness in riddle guessing. Similar riddle strifes are reported between Solomon and Hiram, Solomon and

Abdemon, Solomon and the Queen of Sheba, Daniel and Belshazzar's wise men, King Amasis of Egypt and the King of Ethiopia, King Lycurgus of Babylon and Nectanebo of Egypt, Alexander the Great and Hindu wise men, Calchas and Mopsus, Theognis and Homer, and many others. Like Samson, Hercules is said to have attended a wedding and joined in the riddle game. Enigma contests at Greek and Roman feasts were later brought to high stages of development with a master of riddles presiding and awarding the coveted laurel wreath to the winners and condemning the losers to drink their wine mixed with salt water. In the 2nd century A.D. the winners were getting rare books and sums of money, and in the 3rd or 4th century (the date is very uncertain), the Father of Enigmatology, Symphosius, put into three-line stanzas of pretty good Latin poetry the famous *Hundred Riddles*, evidently already current for some time as plain folk riddles. Of him Archer Taylor, who dates him as late as the 5th century, says: "He maintained his sovereign place down to the time of the Renaissance, and even later, as the master of the enigmatic art."

To return to Samson's famous riddle party (*Judges* xiv) of a thousand or more years B.C., be it noted, as it seldom is, that when the hero "put forth" the riddle (the Hebrew, very interestingly, for to rede or relate a riddle is to *chud* a *chidah*), "Out of the eater came forth meat, and out of the strong came forth sweetness," and the thirty opponents in the contest had unfairly scared the answer out of Samson's bride-elect, they replied very cleverly with another riddle: "What is sweeter than honey? and what is stronger than a lion?" The answer to the second riddle obviously was: "Love," for Samson's love for the girl was so sweet and strong that it had overcome him who had slain the lion and led him to tell her the secret. He then revealed that he knew the answer to the second riddle by continuing the metaphorical contest with the third enigmatic saying: "If ye had not plowed with my heifer, ye had not found out my riddle." Then he paid his riddle-bet of thirty suits of clothes by slaying thirty Philistines of Ashkelon and giving their garments to the victors in the riddle strife.

In the *Motif-Index of Folk-Literature* by Stith Thompson, riddles are classified into many groups from H530 to H899. Samson's affair, for instance, is in H548, Riddle contests, and also in H630, Riddles of the Superlative, under H633, What is sweetest, and H671, What is sweeter than honey?

Along with Samson we mentioned above Homer and Ædipus as being connected with very old riddles. Probably no riddle has been so often translated and repeated throughout the world and history as the one alleged to have caused the death of Homer from vexation at his inability to answer it when Theognis (or Hesiod) proposed it. It is therefore literary enough, but it is also very folksy in its earthiness, and probably goes back several millenia beyond Homeric days to a day when some cave poet cracked a louse and made a little riddle poem about it, to the great amusement of his kin. The old Greeks knew the enigma; Symphosius made it number xxx "Peduculus" of his c riddles; Latin and French versions of it circulated in the Middle Ages, and you will find it today in the Ozarks—and probably the South Sea Islands. A composite version of the original Greek story runs thus: Boys returning from fishing were asked if they had caught anything and replied:

Hos' helomen lipometha,
Hos' ouk helomen pherometha,

which has been translated, "All that we caught, we left behind, and carry away all that we did not catch," or "What we had we lost, what we did not have we kept," but might be rendered more faithfully to the spirited doggerel of the Greek by:

What we caught, we left behind,
What we brought, we didn't find.

One is reminded of the traditional fishermen's query still popular: "Any bites yet?" "Yeah, skeeter bites."

The old Ædipus riddle was part of another riddle contest—between Ædipus and the Sphinx. The fabled lion-bird-woman, sent from Ethiopia by Hera to Thebes to punish that city for the crimes of Laius, took her stance on a rock overlooking the city, and threw to death from the rock every passer-by who could not answer her riddle: "What walks on four legs in the morning, on two at noon, and on three in the evening?" When Ædipus gave the correct answer: "Man, who creeps in infancy on all fours, walks erect on his two legs in the prime of life, and hobbles with a cane for a third leg when an old man," the Sphinx threw herself to death from the rock; Ædipus thus saved Thebes, and was given the queen, Jocasta, as a reward. She proved to be his own mother; but that is another story. The suicide of disappointed riddlers, even in a fable, seems to us rather drastic, but the ancients took their riddles very seriously.

One more very famous riddle contest needs mention here. The King James translators rendered the Hebrew of *I Kings* x, 1 thus: "And when the queen of Sheba heard of the fame of Solomon . . . she came to prove him with hard questions." It is somewhat of a riddle itself why these scholars should have translated *chidoth* as "hard questions" when it is simply the plural of the *chidah* which they correctly rendered "riddle" eight times in the Samson story. But riddles they were, and how I wished when a boy that the Bible had included the details about those hard questions. Surely we could have spared some of the "begats" to make room for such an important conversation. But Jewish and Arabian traditions claim to preserve the questions of that riddle strife, and even if a few of the more than twenty enigmas do have a strange resemblance to riddles of later Moslem and Jewish lore, we can overlook that little discrepancy. Who knows but that Solomon's great wisdom included what is now termed precognition? At any rate, you will find the alleged Solomon-Sheba riddles in Ginzberg's *Legends of the Jews* (iv, pp. 141-142, 145-149), in W. Hertz's *Die Rätsel der Königin von Saba* (pp. 413 sqq.), and a few in Sir James Frazer's *Folklore in the Old Testament* (ii, pp. 564-569).

Many of these riddles which the queen (whom the Arabs call Balkis) asked of Solomon are by now quite out of the range of our thought-forms and frames of reference. Others are so old and very simple that they do not seem riddles at all, although children might like them. But these three are good samples of the distinctly Oriental type of riddle, whether Solomon ever heard them or not.

Seven there are that issue and nine that enter;
Two yield the draught and one drinks.

Ans. Seven are the days of a woman's defilement;
 Nine are the months of pregnancy;
 Two are the breasts that yield the draught;
 And one the child that drinks.

Perhaps the best one, viewed as a pure riddle, is:

There is an enclosure with ten doors;
 When one is open, nine are shut;
 When nine are open, one is shut.

Solomon is alleged to have answered:

That enclosure is the womb; the ten doors are the ten orifices of man—his eyes, ears, nostrils, mouth, the apertures for the discharge of the excreta and the urine, and the navel; when the child is in the embryonic state, the navel is open and the other orifices are closed, but when it issues from the womb, the navel is closed and the others are opened.

Obviously, the answer is partly wrong, perhaps misquoted somewhere along the long line of oral transmission, for the womb does not have ten doors. The enclosure is the bodily cavity. Gautama Siddhartha, the Buddha, may have known of this riddle, for he referred to the human body as "this nine-holed frame."

The third of Balkis's riddles which we quote here you must have heard, for it is found in every culture which has been exposed to Judaism, Islam, or Christianity. It has the incest element, like the *Œdipus* story, which so fascinates the primitive mind:

A woman said to her son,
 "Thy father is my father,
 And they grandfather my husband;
 Thou art my son, and I am thy sister."

Ans. It was the daughter of Lot who spake thus
 to her son. (*Gen.* xix, 30–38.)

In the folk riddles of the Reformation and Renaissance and even to a lesser extent in earlier Oriental enigmas, there is reflected the people's protest at social inequality. The folk riddle offered a comparatively safe vehicle for hinting at the resentment of the poor and unlearned against the rich and lettered. Class consciousness is quietly but effectively preached in a riddle story in which the intelligent underdog outwits the powerful king, official, or rich fool. And even a medieval baron would hesitate to punish a serf for telling a riddle. More credit is deserved by this humble form of composition for its social influence than has yet been awarded it.

Take for instance motif H551 where a princess is offered to any man, commoner or not, who can out-riddle her, or motif H561, where the solvers of riddles are clever peasants, even girl peasants, who, though doubly handicapped socially, gain advantage, perhaps wealth and position, through their intelligence. I like especially ones like motif H583.4.1 in which a child when asked about the occupation of her poor midwife mother replies proudly: "She shows the light of the world to one who has not yet seen it," and motif H581.1 where a boy, similarly questioned, brags that before his (barber) father the great bow the head and give money and even blood.

More and more, however, what impresses me most about these old folk riddles as I have the pleasure of finding new batches of them from all parts of the world is the startling beauty of imagery the simple native mind is capable of thinking and expressing. Take motif

H583.4.5 of the class type "What is your relative (father, mother, etc.) doing?" The answer for What is your sister doing? is: "She is mourning last year's laughter," meaning that the sister is nursing a child, the fruit of a love affair. In the Riddles of the Superlative (H630) we find (H633) What is the sweetest? with three answers: "Sleep, Peace in Heaven, and Mother's Breast."

What more artistically accurate picture of a grasshopper was ever drawn than the old English riddle still popular in the Schoharie Hills:

Long-legged lifeless (listless?)
 Came to the door staffless,
 More afraid of a rooster and hen
 Than he was of a dog and ten men.

Or the frog:

Old Grandfather Diddle Daddle
 Jumped in the mudpuddle,
 Green cap and yellow shoes.
 Guess all your loftiness
 And you can't guess these news.

That one has age (news was plural) and social protest. "You and your loftiness; you're so high and mighty."

There must be a hundred different riddles about eggs besides the ubiquitous Humpty Dumpty (did you know he also "fell in the beck with all his innards about his neck"? but it would be hard to beat the Irish one:

A long white barn,
 Two roofs on it,
 And no door at all, at all.

And every Gael knows these two:

An iron grey with a flaxen tail,
 And a brass boy drivin'.
 (Needle, thread, and thimble.)

The cow gave it birth,
 It grew in the wood,
 Yet the smith made it. (Bellows.)

Of the needle the Parsees (who are rich in riddles as in all else) say:

What a stunted little thing!
 And it has a plait of hair a yard long!

To their imaginations the stars are "a plateful of mustard seed which could not be counted by anybody"; and a cardamom is a "mother whose skin is white and whose babies are black"; an onion is a Hindu gentleman who says, "Coat after coat do I put on and hot-tempered am I." For them the egg is "a jar which contains two kinds of ghee," a carrot "a golden nail in a jungle," a lighted lamp "a golden parrot drinking water with its tail."

These Parsee riddles are beautiful indeed, but you might remind me that this race has been highly civilized for centuries. Go with me then to the primitive heart of Africa, to the Taveta, the Bantu, the Kxatla, Nyanja, and Tlokwa, who have contests of the most beautiful riddles, trials of the artistic imagination, hardly matched elsewhere on this globe, save perhaps at Japanese flower-arrangement exhibitions. The riddle contest opens:

"Kanawuya!" (A riddle!) says the first contestant. "Let it come!" shout the rest. "I have built my house on a cliff." They all guess, and if their guesses are wrong, he repeats his riddle. If they still cannot guess, they say: "We pay up oxen." "How many?" the riddler asks. If they offer enough cattle, he will then explain his riddle

and give the answer: "Kutu," which, in case you don't know Taveta, means "The Ear." Or the riddler might have said: "Mother is small but she knows how to cook nice food for me," or "Grandmother has died with her mouth open," or "A little child's sweet gruel." The answers? 1) A bee. 2) A banana split and dried on a cord. 3) Sleep. The Kxatla riddler says, "The guinea fowl stands on one leg: his thigh is very tasty" when he means an edible mushroom, or "The white horse goes into the stable and comes out brown," and the answer is bread into the oven. For him the egg is "The white hut which has no door," the fingers are "Ten boys with their hats on the back of their heads," and the eyes are "Birds which graze on a place not near."

The Nyanja riddlers' riddle for the gizzard is "The hide in the middle, the meat outside," and the heels are "Two children disputing the leadership." The Tlokwa pose you "The old lady who cries when knocked by a child," and laugh when they have to tell you it is a drum, of course. But I think even a literary enigmatographer could guess that when "The white goats are descending from a mountain," it must be snowing.

Now it may be that the encyclopedia (Everyman's) is technically correct in defining a riddle as "a paraprastic presentation of an unmentioned subject, the design of which is to excite the reader or hearer to the discovery of the meaning hidden under a studied obscurity of expression," but I am beginning to suspect that a riddle, a real folk riddle, represents a group effort of some humble but intelligent people to find or create a little humor or beauty or both in the rather bleak and often difficult world in which they find themselves.

CHARLES FRANCIS POTTER

For the much debated question as to whether the riddle form was used by American Indians in aboriginal times see the recent comprehensive article by Archer Taylor, "American Indian Riddles," *JAF* 57: 1-15. Taylor inclines to the view that riddling was, for some of the American Indian tribes from which riddles have been reported, a pre-Columbian practice. See NORTH AMERICAN INDIAN FOLKLORE. [EWV]

Like proverbs, riddles are a literary form unfamiliar to most South American Indians who have not been influenced by Europeans. Only the Minuane, a tribe of the Putumayo River in Brazil, are known to have riddles which they ask during pantomime dances. The so-called riddles of the Cashinawa are mainly quizzes. [AM]

rigaudon A French court dance of the 17th century, particularly during the reign of Louis XIII. It owed its lightheartedness and vigor to its peasant origin from Provence, or via Provence and Languedoc from Italy. The name bears a remarkable resemblance to the Italian *rigodone*, *rigolone* (diminutive *rigoletto*) or circle

dance. The court rigaudon was, however, a longways dance with simple formations: down the center and cast off, and with gay jumps and running steps. The music, in quick duple time with an upbeat of two eighth-notes, was as brilliant as the dancing, and inspired able dancers to virtuoso improvisations, footbeats similar to the English hornpipe. In fact, one tradition traces this court dance to Provençal sailors. [GPK]

right and left through or right and left An American square dance term. Two couples cross to each other's places, separating as they pass through, the two ladies keeping to the right as they pass each other in the center and the two gentlemen passing on the outside. When the two couples have changed places, partners join left hands and turn, or the gentleman takes the lady's left hand in his right and turns her around so that she is on his right as they face toward the center of the set (8 counts). They pass back to places in the same way and turn as before (8 counts). [GPK]

Rig-Veda One of the four collections of hymns, prayers, and liturgical formulæ which constitute the Vedas, the most sacred literature of the Hindus. The *Rig-Veda*, the most important and oldest of the collections, is the original Veda from which the *Sāman* and *Yajur* were derived. It consists of a collection of 1017 (1028 when 11 additional Vālahilyas are included) hymns arranged in ten books. Six of these books, ii-vii, or the "family books," are the nucleus of the collection. The ritual of the Veda is prehistoric in character. Most of the hymns are addressed to personifications of the powers of nature, worshipped as deities. Among these are Indra, Sūrya, Agni, Aditi, Varuṇa, Ushās, Aśvins, Pṛithivī, Rudra, Yama, and Soma.

ring-play Party games and songs and dances of American Negroes, now played chiefly by children, combining elements of the white play-party with African styles of circle dancing or circumambulation, as in the ring-shout, and some of the rhythmic plays of hand-clapping and slapping such as *Ham Bone*. There are songs and accompanying pantomimes similar to *Mulberry Bush* (as in *Go Roun' the Border, Susie*), serpentine figures, as in *Go In and Out the Windows*, marching pieces for couples, as in *It's a Cold Frosty Mornin'*, enumerations of the parts of the body, as in *Shout, Josephine, Shout*. Both texts and tunes are largely derived from white songs of English and Scotch-Irish origin, but the emphasis and singing style departs from the manner of white play-parties, and many of the words are garbled beyond interpretation.

ring shout An Afro-American religious ring dance rooted in West African ritual, merged into Christian religion in slavery times in the southern United States and the West Indies, and not yet extinct. The dancers form a circle and move counterclockwise, shuffling slowly at first and gradually increasing the tempo, while singing, clapping, and exclamations of praise and affirmation also increase in speed and volume, until, after an hour or more, the emotional pitch of the participants reaches a state of possession. The strong accelerating beat of clap and shuffle is unbroken, and the interwoven outcries of "shout, sister," "yes, Lawd," "well, well, well," etc., merely elaborate the rhythmic pattern. One or two leaders may keep up a running narrative on

some favorite Biblical story, changing off from time to time, interjecting contemporary elements into the theme, stimulating the fervor of the congregation. Or the accompaniment of voices may be a more formalized song. In some sections a solo form of shout dance is more common. Whether the dancing is group or individual, a circle of the rest of the worshippers, often including the strongest singers, serves as chorus or basers.

Shout songs of various types have been described and recorded, some with slight differences in the dancing procedure. The Watch Night (New Year's Eve) shout of slavery times took place in the "praise house," a building somewhat less sacred than the church, and slaves who had to be back home before daybreak sang *Yonder Come Day*, or "day's a-comin', hark ye angels." *Down in the Mire* was sung as the ring circled around one kneeling figure whose penitent head was shoved "down in the mire" by each passing shouter in turn. Another song, *Oh, Eve, where is Adam?* is in question-and-answer style. Adam, according to the answers, is in the garden pickin' leaves, pinnin' leaves. One similar in structure is "Where was Peter when the church fall down?/ In some lonesome valley with his head hang down." That "lonesome valley" turns up often in Negro religious song, and this particular verse has many humorous and juvenile relatives. ("Where was Moses when the lights went out?/ Down in the cellar with his mouth poked out.") A shout for the Sunday "fore-day" meeting was often "I'm goin' to set in the humble chair/ Goin' to rock from side to side/ Until I die." Other songs sung for ring shouts include *Can't Hide*, *Kneebone*, *Moonlight*, *Starlight* (for burial watches), and the fine example *Run, Old Jeremiah*, recorded for the Library of Congress by John and Alan Lomax in Louisiana in 1934. The last brings in another favorite theme of Negro song, both religious and secular, the railroad, with its engineer and its bell ("ding, ding, ding"). West Indian shout songs are sometimes modified "Sankeys" (from the hymns of Moody and Sankey).

The word shout is believed to be related to the Arabic *saut*, used in Moslem West Africa to mean the circumambulation of the Kaaba. [TCB]

ring-tailed roarer Backwoods bully and "stentorian braggart," also known as screamer, snorter, or squealer: so called from his resemblance to "some strange and formidable animal that roars in the forest or on the prairie" (M. Schele De Vere, *Americanisms*, 1872, p. 224). Although the epithet "ring-tailed" (for which "Mississippi" or "Salt River" is sometimes substituted) is said to have reference to the catamount, the roarer is more commonly identified with the "half horse, half alligator" ("with a little touch of the snapping turtle," "a touch of the steamboat and a sprinkling of an earthquake")—a term applied particularly to the raw Kentuckian and the amphibious boatman of the Ohio and the Mississippi (e.g. Mike Fink; Colonel Nimrod Wildfire in James K. Paulding's lost play, *The Lion of the West*, 1831; and Ralph Stackpole, in Robert Bird Montgomery's *Nick of the Woods*, 1887). The roarer is distinguished by his ritualistic "antic demonstrations of hostility" (flapping his bent arms and crowing like a cock, shaking his mane and neighing like a horse, cracking his heels together while jumping up and down) and his boasting and taunting tall talk. West of the Mississippi his tradition passed

into that of the pseudo, bogus, or mock bad man and his brags survived in "bad man yells." (See B. A. Botkin, *A Treasury of American Folklore*, pp. 2-67.) [BAB]

rinnce (plural *rinnct*) The Irish term for dance, current in Irish figure dances. *Rinnce mór* is a round dance; *rinnce fada* is a longways dance. *Rinnce an tuirne* is the spinning-wheel dance. These are accompanied by the Irish bagpipe in 2/4 reel time or 6/8 jig time. [GPK]

Rio Grande A capstan chantey usually sung on outward-bound ships. Several sets of stanzas are known, but the chorus is always "Away, Rio," with a fare-you-well to the girls ashore and the statement "we are bound for the Rio Grande." The word *Rio* was always pronounced *Rye-o* by American sailors. See CHANTEY.

Rip Van Winkle Hero of Washington Irving's New York state (Catskill region) legend on the magic sleep lasting many years motif (D1960 ff.) in *The Sketch Book* (1819-20), memorably portrayed on the stage by Joseph Jefferson. As the simple, good-natured, henpecked ne'er-do-well of a Dutch colonial village, who wanders off into the Catskill Mountains with his dog and gun, drinks with a strange, nine-pin-playing crew, and sleeps for twenty years, Rip differs from the slumbering martyrs and heroes (e.g. The Seven Sleepers of Ephesus, the kings in the mountain) in that his magic sleep confers upon him not blissful, saintly immortality but escape from a termagant wife and a kind of Ancient Mariner role in the changed world to which he returns. [BAB]

řishi In Hindu mythology, a holy man or sage, especially one of a group of seven saints, the mind-born sons of Brahmā, the traditional composers of the Vedas and the progenitors of Brāhmans. The řishis possessed superhuman powers which made them often equal to and sometimes superior to the gods. There are three classes of řishis, the *devarřishis* or řishis of the gods, the *brahmarřishis* or priestly sages, and the *rājarřishis*, those of royal origin. The names of the seven vary. The oldest list included Atri, Bharadvāja, Gautama, Jamadagni, Kaśyapa, Vasiṣṭha, and Viśvāmitra. The usual list includes Agastya, Aṅgiras, Atri, Bhṛigu, Kaśyapa, Vasiṣṭha, and Viśvāmitra. The řishis play an important part in story and legend. Manu took them on his ship during the deluge. After many adventures they became the seven conspicuous stars of Ursa Major.

rising or growing rock An animal or person falls asleep on a rock; when he awakens he finds the rock has risen upward to such a height that he cannot get down by himself. Usually Bat Old Man or Woman rescues him, bringing him down in a basket. This is a favorite tale among western Indian tribes of the Great Basin, Southwest, and central California; for its distribution as of 1935 see A. H. Gayton, "Areal Affiliations of California Folktales" in *AA*, n.s., 37, pp. 582-599. For the Chiricahua Apache tale of the rising rock and distribution among various Apache groups supplementing Gayton's, see Morris Edward Opler, *Myths and Tales of the Chiricahua Apache Indians*, *MAFLS* 37: 28-31. [EWV]

rites de passage Rites of transition: French term adopted by many European anthropologists to include all the rites and ceremonies which usher an individual into a new way of life or new status in life. The term is defined by Arnold van Gennep as the "rites which ac-

company every change of place, state, social position, and age." See his *Les Rites De Passage*, Paris, 1909. Such rites exist in all cultures everywhere, ancient and contemporary, primitive, peasant, urban.

Birth is the first crucial transition the individual makes as a living being; and all the rites, magic ceremonies, observances, tabus associated with childbirth are *rites de passage*. A. H. Krappe includes the churching of women in his list of such rites, the churching of women being a rite not only of symbolic purification after birthing, but one which liberates the woman from the special dangers, influence of evil spirits, etc., attendant upon her between her delivery and churching, and restores her to the normalities of daily life.

Baptism is a *rite de passage*; so is name-giving. The ceremonies accompanying adoption are also transition rites, involving frequently the symbolic drama of rebirth and new-naming.

The initiation rites of primitive peoples are probably the most obvious or conspicuous of the *rites de passage*, including as they do spectacular ceremonies for the definite cutting off of the initiate from his former ties and condition, involving his admittance into a new (sometimes supernatural) world, sight of sacred objects long forbidden to him, explanations of them, teachings in regard to them, and involving especially the ritual drama of death and rebirth as a new person (e.g. the word for certain Congo Negro initiation rites, *kimbosi*, means resurrection also), the marking of the initiate as a new person (by circumcision, headdress, tattoo, garment, or other symbol), and including finally his reintegration into the reality of which he has been divested.

Confirmation, ordination into a priesthood, coronation, the dubbing of a knight, the initiatory hazings of college and other secret fraternal societies, all belong to the category.

Marriage is another important transition in the life and status of the individual, accompanied by a legion of rites, ceremonies, and symbolic regalia of which the bridal veil and wedding ring are the most familiar. Marriage rites also include, however, various observances to protect the groom against the dangerous power inherent in virgins, to protect the new couple from evil spirits, from the evil eye, etc., to secure the fruitful fulfilment of the union, to secure and enhance the safety and prosperity of the new home.

Death is the last great transition and change. Rites for the dying and for the dead overlap into certain rites performed for the living kin of the recently dead. Purification from contact with the corpse or his belongings often must be accomplished before the living can resume his place in community life. Various ceremonies are performed to free the dying from his sins, to sever his connection with the living and his old environment, to show him the path or road to the afterworld, to ease his journey, pay his way, ensure his non-return, along with those designed to protect the living from his envy. See BARASHNŪM; BAR MIZVAH; BREAD; BURIAL; CREMATION; DEAD SHOES; FUNERAL; GRAVE; INITIATION.

ritual combat As distinguished from athletic events, funeral games, and exhibitions customarily held on national and religious holidays, ritual combats were customary in Europe on May Day and during the spring planting ceremonies and elsewhere during marriage and

burial ceremonies. The May combat was between the Queen of the May and the Queen of Winter, and fighting in the fields until blood was drawn is said to have been to ensure the fertility of the crops. In South Russian marriage ceremonies the groom was stopped on the way to his bride's house and had to fight his way in. The Malayan marriage ceremonies covered many days. On the fourth day the groom went to the home of the bride's parents where entrance was denied him until he fought his way in. Students of the Russian ceremony identify it with marriage by capture (see ABDUCTION), but the Malayan ceremony is said not to be symbolic of marriage by capture but rather of a feeling about the battle of the sexes. Some of the tribes of eastern Siberia and western Alaska also have a custom of "marriage by capture" in that the groom pursues the girl, surrounded by her female friends and is accepted as husband only after he has succeeded in touching her genitalia. This would seem to be less a racial memory of bride-capture than a symbolization of female shyness. In Samoa, Australia, and elsewhere ritual combats are performed at burial ceremonies. One party called friends ritually beats another party representing evil spirits. In the Society Islands the body was protected by its family. "Mourners" from a neighboring district demanded entrance and won. These combats have been rationalized as symbolic attempts to beat off evil. See SWORD DANCES. [RDJ]

ritual drama A mimetic enactment addressed to supernatural powers, fundamentally for the attainment of a practical end, as a later development for esthetic gratification, always as a religio-cultural expression. Drama implies a struggle between two forces. Ritual drama involves a contest between two shamans, between man and demon, beast and hunter, or between the personified forces of life and death, summer and winter, good and evil. It implies a well-defined sequence of encounter, conflict, and dénouement. This sequence may deal with exorcism, with pursuit, capture, sacrifice. It may develop into the stages of sophisticated Greek and Japanese drama. It may contain a brief gem of parody by *koshare*, or a 27-day sequence, as the *kusiut* arrival of Noākxnim. It may involve the entire community or just a select group. The inevitable combination of dance, mime, music, texts, and accouterment vary from the choreographic Iroquois Indian rites to the non-integrated dance and play of the Morris, through time from the choral *orgia* to the speaking characters of Greek drama.

Structure The underlying sequence of exposition, conflict, climax, and catastrophe varies tremendously between races and cultural stages. Iroquois Indian curative rituals progress in a steady crescendo from invocation to attainment (see NYAGWAI'OEHO). The Yaqui Deer Play builds up a farcical series of events—introduction of the deer and *pascolas*, the pursuit down a series of arches, final death of the deer, and epilog of skinning. Hindu and Mexican dance dramas depict a placid, non-climactic succession of scenes, as the leisurely combats of *Moros y Cristianos*. Near-Eastern drama, on the other hand, inculcates excitement, even frenzy, into its contests, and has communicated this to much of the European derivative dance-play.

Many American Indian rites are homogeneous, with well-known exceptions of the *hako*, *sun dance*, etc.

European and Asiatic drama is usually composite. Sometimes the separate parts clearly betray their origin in different cultural levels, as the Abbots Bromley Antler dance and play combination. The Dionysian rites anciently combined a phallic animal procession with a priestess-deity marriage and with the four sections of the three-day *anthesteria*: contest (*agon*), death (*pathos*), lamentation (*threnos*), and resurrection (*anagnorisis*). These same elements recur in the Thracian carnival, the Rumanian *calușar*, the Portuguese *Mouriscadas*, the English Ampleforth sword dance, but everywhere in a different manner. The Thracian play features the shaggy *kalogheroi*; the *calușar* precedes the fertility round and drama by a rough initiation rite of clubbing, and concludes with a curative jig over sick babies; the Portuguese spectacle contrasts orderly longways of good forces with chaotic demons; the sword dance separates the elaborate evolutions from the farce. The medieval liturgical drama built up its scenes on the Greek pattern, with gradual additions. The three-day Easter drama consisted of the *Passio Christi* (*agon*), the *Adoratio Crucis* (*pathos*), *Deposio* (*threnos*), and *Elevatio* (*anagnorisis*) with lighting of new fire. Antiphonal processions and wakes developed into the *Quem quaeritis?* (Whom do you seek?) by the angels and Marys at the tomb, the apostle scenes, and the *Noli me tangere* (Dare not touch me).

Cultural Expression Drama reflects contemporary society. The medieval *Fastnachtsspiele* and Feast of Fools presented farcical scenes from the life of the folk. The guilds represented their occupations in dances and plays, some of which have survived (e.g. *Schäfflertanz*). Mexican dance societies reflect political organization. Ancestral "dream time" (*alchera*) fashioned Australian rituals and wove through their daily comings and goings. Various cultural stages persist separately in the ritual activities of Indian castes: functional rounds among independent mountain tribes, devil dancing among native low castes, stick dances among the better caste Dravidians (see KANIYAN; KOLATTAM), folk harvest and wedding festivals and sophisticated *natya* among Indo-Aryans. Different stages may persevere in the same ritual, as in the *calușar* primitive initiation and cure, later play of marriage, fight, death, and revival, and communal *kolo*.

A complete study of the cultural relationships involves numerous investigations: racial type and mixtures, geographical and climatic conditions, central or peripheral location, hence exposure to migrations, conquest, or trade. It involves the recognition of typical local patterns and of intrusive items. It demands exhaustive choreographic comparisons in dealing with questions of autogenesis or derivation. It must consider historical and archeological facts as supplement to formal analysis, before it can trace distributions and paths of dissemination. It deals with progression through time and space. The following survey will explore in Eurasia the possible paths of diffusion from earliest times. In the Americas it will attempt to map out recent and surviving rituals according to cultural regions.

Eurasia

From the network of interinfluences three major centers of diffusion emerge: the Near Eastern Highlands repeatedly, India, and central Siberia-Mongolia.

A. Near East 1) The little known Paleolithic population (before 6000 B.C. in the Near East, before 2800

B.C. in Spain) has left cave paintings of animal dances in southern France and of phallic rounds in Spain. The surviving masked *Morisca* animal-demons may date back to this period, also the Abbots Bromley Horn dance. Demon and fertility serpentine are probably subsequent.

2) Stick dances may have originated in clubbing initiation, preserved in the *calușar* "horse"-dance; but the "dibbing" and Maypoles of peripheral England and India presuppose agriculture. The wide distribution and persistence among pre-Aryan tribes in India suggest Neolithic diffusion before the Indo-Aryan migrations of the second millennium B.C. The longways forms are probably later than the circles and meanders.

3) Sword dances presuppose a metal culture, and may represent a metamorphosis of the stick contest after 2000 B.C.: prominent in northern Europe.

4) The Dionysus-Osiris-Morisca drama considerably preceded the Golden Age of Greek drama (6th century B.C.).

5) The dragon-fighting hero (e.g. Yima of Iran, Krishna and Śiva of India, St. George of England) probably wandered simultaneously with the hobbyhorse. The horse spread in the Bronze Age from the Russian steppes to Asia Minor 3000 B.C., to the Aegean about 2000 B.C., and subsequently into Germanic mythology. In western Europe and India the masked hobby cavorts with a transvestite and a black-faced clown.

6) Prehistoric combats were reinterpreted as Moors and Christians following the Crusades, after the 11th century.

7) As a form of *pastourelle* the marriage theme became the English May Day play of Robin and Marian (15th century).

8) The resurrection theme reappeared after 1000 A.D. in the Christian liturgical drama, alongside the Mysteries, or enactments of Biblical stories.

9) Another Iranian concept underlies the 15th century Morality Plays of the individual in the battle of allegorized Good and Evil over his soul: Iranian Ahura Mazda and Ahriman, medieval Divine Graces against Vices or demon-clowns (a Paleolithic residuum?), as in *Everyman* and the *Castle of Perseverance*.

The successive impulses reached Iberia both by way of North Africa and by the Mediterranean, and traveled to England both by way of Spain and by the Balkans and the Danube. The latter double route has left the trail of *Morisca*.

B. India was a center of radiation as well as of reception.

1) Reception took the form of Neolithic stick dances and Aryan culture, which produced *natya*.

2) Along with the Vedic religion, *natya* spread to Indonesia and gave rise to the spectacular *wayang wong* epic battles of the *Mahābhārata* and *Rāmāyaṇa*, performed to this day. The *mudras* influenced the gesture code of Java, Bali, and Polynesia, particularly Hawaii, probably not before the 4th century A.D.

3) Along with Buddhism, Indian drama stretched its influence to China in the 7th century and by way of China to Japan. Here it produced the *dengaku* and *nembutsu odori* alongside the Shinto *kagura*, and played a role in the formation of the *nō* drama. In the 13th century Buddhist miracle plays became popular in Burma.

4) Toward the West by way of Arabia, India influenced another center of absorption and radiation, Spain, which in turn has metamorphosed the ritual drama of Latin America.

C. *Siberia-Mongolia* Shamanistic spirit-trance cure is not ritual drama in the true sense of the word; but in its tremendous migrations it has given rise to many dramatic manifestations. To the south it appears transformed in the Balinese *kris* and *sanghyang*, and to the southwest in the self-mutilating dervish dances. The orgiastic cults of Asia Minor may have developed locally or may have emerged from Siberia by way of the Turks and their migrations. If the latter, the multiple family of the *orgia* type and the Anatolian shamanistic *bar* (drum) dances owe a debt to the Tungus.

Siberian shamanism shows extraordinary affinities with the devil-dancing cures of Tibet, India, and Ceylon, by the lowest, hence oldest, castes—Vedda of Ceylon, Nalke, Panan, Pombada of India. The outcast Paraiyan, the lowest Tamil group of southwest India, dances with the greatest frenzy and clatter. Their exorcisms are not linked with the seasons. They are effected without masked demon-identification. A definite and far-reaching expansion of this vision-cult reached through the American continents during successive periods of migration and in manifold guises, masked and unmasked.

The Americas

Despite uncertainties of chronology, New World ritual concepts show strata which correspond largely to those of the Old World and at times show Eurasian influences. 1) The oldest rites (of initiation into men's societies and girls' puberty) mark the most primitive tribes of the Tierra del Fuego and of California. They persist along with newer rites in the Chaco and in Arizona. 2) Shamanism, the cult of the dead and of animal guardians, reaches to southeastern Brazil and has spread in many forms through North America. It is strongest in the northwest area of recent immigration (about 2000 years ago), among the British Columbia Indians and Alaskan Eskimos. 3) A hunting-animal cult, closely allied to the animal guardian, shows local developments, such as the tiger of Mexico, the alligator of the Southeastern Woodlands, the buffalo from the Great Plains to Iroquois rites. The bear extends in the middle belt from coast to coast. The serpent, of the entire South to Middle America, may have an Asiatic and ultimately Near Eastern origin. 4) The plumed serpent is associated with the high agricultural stage of maize cultivation. This is much later than the Old World Neolithic. It radiated from Middle America all the way to the Iroquois area, probably in the course of the first millennium A.D. 5) Colonization since the 16th century A.D. has wrought mestizo forms in Latin America and the vodun cults of the Caribbean and Brazil.

Tribes north of the Rio Grande have remained impervious to medieval ritual, which saturated the Mexican and Andean fiesta, and to native American sectarian trance rites, of the Shakers and southern Negro church. Even the Pueblo Indians have accepted only superficial fragments of moriscas and have left penitential orgies to their neighboring conquistadores.

Intercommunication deified geographical impediments. As in Europe, ritual complexes radiated (sun, ghost dance) and intermingled (*iruska-hako-grass*;

calumet-eagle, wiikita). As in Europe, old and new rites persist side by side, and foreign have mixed with native types. The Iroquois Indians retain shaman and animal cures, agricultural rites, and borrowings, as the Plains calumet (*ganegwa'e*). The following brief lists mention only those survivals and introductions that form an essential part of the ritual pattern, and only the predominant characteristics. Boundaries are not always sharply defined because of marginal transitions. Thus the Papago combine Great Basin and Pueblo characteristics; the Midwest practices Plains and Eastern rites and uses both types of patterns, both types of rounds.

The homogeneous tribal diffusion has been jumbled by migrations and invasions. Each area includes assorted linguistic stock. Algonquian agricultural tribes, as the Cheyenne and Arapaho, under pressure from the whites, retreated recently to the Plains and to a nomadic hunting life. In this location the Arapaho have served as radiation center for the sun dance. In their case the hunting-animal cult was subsequent to maize culture. Within the last century co-residence in Oklahoma has been blurring tribal distinctions and has disseminated dances such as the stomp.

South America

1. Aboriginal Ceremonies, greatly decimated.

a) *Hunters* of Patagonia (Puelche and Tehuelche) and of the Tierra del Fuego (Yahgan, Ona, Alacaluf). Demon impersonations, puberty and initiation rites, death, hunting-animal rites.

b) *Hunters* of eastern Brazil with rudimentary maize culture (Gé, S. Cayapó, Apinayé, Bororo, etc.). Demons, puberty, shamans, rain, secularized animal and clown dances.

c) *Hunt-algarroba* culture of Gran Chaco and western Brazil (Toba, Pilaga, Mataco, Lengua, Ashluslay, Choroti, Terenos, Mbaya) and hunt-maize culture of Venezuela and Guiana (Maipure, Arecuna, Macushi, Arawak). Demon-puberty, shamans, mortuary, war, harvest rites, *yurema* narcotic cult (compare California).

d) *Wheat culture* of Chilean Araucanians (introduced). Cure by women shamans, harvest thanksgiving by women.

e) *Andean maize culture*. Vestiges of ancient seasonal Inca and Chibcha festivals for ancestors and deities of elements, especially for Sungod Inti, in Highlands of Peru (Quechua), Ecuador (Murra), Bolivia (Aymara). Circular or serpentine animal, burial, sowing, harvest rites.

2. Colonial Rituals

a) *Hispanized* religious festivals of Argentina, the Andean Highlands, the Antilles: *carnaval, comparsas, conquista, negros, moros*. Longways.

b) *Afro-American rites*: *macumba* of Brazil, *winti* of Surinam, *vodun* of Haiti (*Nago* from Dahomey, *Congo-Guinée* from Congo), *obeah* of Jamaica, *nañiga* of Cuba. Stick dances of Haiti, with transvestites.

Middle America and Northern Mexico

1) *Indigenous Rites* Animal maskers and seasonal rain ceremonies in counterclockwise circle or longways. Ceremonial clowns, transvestites. On Plateau rarely women.

Guatemala: seasonal observances of Maya-Quiché; *voador* fiestas.

Yucatán (Maya): Cure and rain ceremonies; ribbon dances.

Chiapas (Lacandones, Tzotzil, Tzeltal): shaman cures, cave ceremonies for planting.

Oaxaca: (Huave) *Malinches*; (Chinantec) rain dances.

Guerrero (Aztec): *tecuanes*, *tlacololeros*.

Sierra de Puebla and Veracruz (Aztec, Otomí, Totonac): animal masks, *voladores* (circle), *quetzales*, *acatlaxqui* (longways).

Sierra de Nayarit: (Cora-Tepehuan) *mitote*, (Huichol) peyote and rain ceremonies.

Sierra Madre Occidental (Tarahumara): *rutuburi*, *yumari* for rain, death, peyote for cure (circle).

Sonora (Cahita): deer, *pascolas*, *coyote*, *chapayekas* (Papago): *wakita* puberty, *kapétua* war, *wikita* cure, rain, harvest (circle, longways).

2) *Blended Rites* in corridor of migration and conquest.

Morisco longways: Oaxaca, Jalisco *conquista*.

México, Michoacán *moros*.

Eastern Sierras, *Santiagos*, *moros*, *negritos*.

Northwestern, *matachines*.

México to Querétaro: *Concheros* (circle).

México, Morelos: *chinelos*, *pastorcitas*, *vaqueros*, *arrieros* (longways).

Tlaxcala: *paraguas*, *arcos*, *catrines* (longways).

Viejos, *diablos*, *muerter*, *Malinches*.

3) *European Liturgical Dramas* in Valley of Mexico: *autos*, *colloquios*, *pastorales*, *pasiones*, *penitentes* (Tres Potencias, El Cuerpo y el Alma)

North America

1) *California* (Klamath, Hupa, Yurok, Modoc, Karok, Shasta, Maidu, Miwok, Pomo, Luiseno, Diegueño): initiation, girls' puberty, cure, hunt; North, first-salmon, display; Center *kuksu-hesi* spirit-impersonation with disguise, ghost-clown; South, mortuary, *toloache*.

2) *Plateau and Great Basin* (Babine, Sekani, Salish, Paiute, Ute, Tübatulabal, Mohave, Yuma): vision, dream-cult, song cycles, puberty, mortuary; ghost dance, pine-nut harvest. Lines, clockwise circle.

3) *Southwest Nomads* (Apache, Navaho): puberty, cure-chant, spirit-impersonation, masks of hide, lines.

4) *Southwest Agriculturalists* (Papago, Rio Grande Pueblo, Zuñi, Hopi): set seasonal sequence, mass drama for rain, corn, squash, game-animals; plumed serpent, *kachina* supernaturals, ritual clowns; hide and paint-masks. Rounds, lines, gestures, trot, stamp.

5) *Plains Hunters* (Plains-Cree, Piegan, Blackfoot, Cheyenne, Arapaho, Dakota-Sioux, Kiowa, Osage, Shoshone, Mandan-Hidatsa, Arikara, Comanche): men's war-medicine-animal societies, individual vision-quest, scalp, hunt, buffalo, sun, *iruska-hako-calumet*, fire-clowns, ghost, peyote. Paint, few hide masks. Sunwise circle, leaps, nimble footwork, virtuosity.

6) *Midwest* (Pawnee, Omaha, Shawnee, Winnebago, Sauk, Fox, Chippewa, Menominee, Potawatomi): shamans in North; animal-cure, war, hunt; seasonal corn, beans, squash; calumet, grass. Sacred clowns, wood masks (Shawnee). Antiphonal stomp, men's virtuoso steps; circle both ways.

7) *Eastern Woodlands* (Iroquois, including Huron and Cherokee; Penobscot, Delaware, Tutelo, Creek, Yuchi, Choctaw, Seminole): dreams, sun rite; in North shamans, lunar cycles; South also new-fire worship, gesture, serpentine. Throughout animal-cure, war, seasonal corn,

beans, squash, eagle-calumet; clowns, wooden and husk masks. Counterclockwise stomp, antiphony.

8) *Northeastern Algonquians* (Montagnais, Naskapi) and Labrador Eskimos: shamanism, animal-guardian, cure, hunt.

9) *Alaskan Eskimos*: shamanism, whale cult (seasonal), cult of ancestors and animal-spirits, masked mime.

10) *North Pacific Coast* (Dené, Kwakiutl, Tlingit, Salish, Bella Coola, Tsimshian, etc.): shaman-cure; animal-totem societies, display (potlatch); in south, first salmon (see North California); elaborate enactments of *kusiut*, gesture-code, hand-vibrations; wooden masks of complex construction.

Transvestite, masked clowns throughout. Frequent participation of women, especially in Eastern Woodlands.

The Dramatization of Myths

Aboriginal Origin myths account for traditional ceremonies. Sometimes, but not always, this story is enacted. *Natya* depicts non-seasonal epics of gods and heroes. Faroe rounds commemorate the Sigurd legend. *Kusiut* spectacles represent supernatural occurrences. The *shalako* and *orgia* represent seasonal return. The Hopi emergence tale is less obviously connected with the tribal initiation ceremony. The Hopi Snake-Antelope ceremony does not even suggest the origin legend, any more than the Iroquois *ohgwtwe*. Fairy tales are never enacted in folk rituals.

Modern Since the 16th century masquerades, classical and Germanic mythology, fairy tales, and Indian legends have been distended into pretentious operas, pageants, and folk-plays. These revivals and art products are remote from ritual drama or folk drama, even when they are produced with a rare authenticity. They lack the traditional and communal heritage and function, often also the requisite style. At times art creations approach the aboriginal mysticism, as did the short-lived, sincere dance-interpolations in St. Mark's-in-the-Bowery, New York. However, true ritual drama grows naturally out of the culture and out of its needs. Reconstruction or new invention on ancient tales is an educational artifact, not a process of magical coercion or social cohesion. See separate topics; DANCE; FOLK AND PRIMITIVE; MASKS; RATTLES; ROUND DANCES; SERPENTINE.

ritual numbers Repetition of ritual acts, incidents in tales, dance forms, the number of performers in a ceremony, the length of ceremonies, tabus, periods of mourning in terms of days or years, and many other features of American Indian life are governed by the ritual numbers of the various tribes. The most widespread of these are 3 and 4; 5, 6, 10, or 12 are also ritual numbers for some tribes, but 7 rarely if ever occurs as a ritual or sacred number among the North American Indians. A tribe may have two, three, or even four ritual numbers; among the Shawnee, for example, as stated by an informant, "everything goes by 3, 4, 6, and 12." The origin

of ritual numbers, if explained, is accounted for in the cosmologic myths, but often no origin for these numbers is vouchsafed. The ritual number(s) of a tribe is often deducible from myths taken in text: a hero repeats his adventures 3, 4, or 5 times; four arrows are shot at the hero in a tale; three objects are taken by a hero; a character is successful in a third attempt, etc. For a discussion of ritual numbers among California Indian tribes see A. L. Kroeber, *Handbook of the Indians of California*, BBAE 78, 875-877. [ewv]

Robin Goodfellow In English folklore, a malicious or mischievous spirit, later identified with Puck in his role of household spirit. Shakespeare's Robin Goodfellow (*Midsummer Night's Dream* ii, 1) is a servant of Oberon. In the reign of Elizabeth appeared a work entitled *Mad Pranks and Merry Gests of Robin Goodfellow*, later edited by J. Payne Collier and published by the Percy Society, 1841. Collier believed it to have been first printed before 1588. In this work Robin Goodfellow is the child of a young girl and a "hee-fayrie"; he early ran away from home, and in a dream discovered that his father was a fairy. On waking he found a scroll beside him, describing his powers and admonishing him to punish the mean and love the good. He could transform himself into any kind of animal, and it was not unusual for some dupe who had been induced to mount a riderless horse suddenly to find himself in midstream with no horse in sight and nothing but a saddle between his legs. The second part of this work portrays Robin Goodfellow in the familiar role of household spirit, puck, or brownie, who does the chores in return for a little milk or cream and some bread or cake.

The Friar Rush of medieval clerical legend is said by one writer to be "Puck under another name." Puck he identifies with Robin Goodfellow, and Robin Goodfellow with Robin Hood. See Clouston, *Popular Tales and Fictions* ii, 240 n. 1.

Robin Hood English ballad hero; type of the noble robber who steals from the rich to give to the poor. He is first mentioned in the late 14th century; in 1495 the first detailed "biography" appears, *A Lytell Geste of Robyn Hode*, printed by Wynkyn de Worde. Legend has it that he was born Robert Fitzooth, Earl of Huntingdon, in Locksley, Nottinghamshire, in 1160, and that he was treacherously bled to death by a kinswoman on November 18, 1247. His grave is shown in the park at Kirkstall Hall, Yorkshire, where his bow and arrow are exhibited. But tradition is just as strong that Robin Hood helped defeat Simon de Montfort at Evesham in 1265. "Robin Hood," according to Child (introduction to #117), "is absolutely a creation of the ballad-muse."

The Robin Hood of the ballads is one of the great archers of tradition. He and his band of outlaws lived in Sherwood Forest, poached on the king's deer, robbed passing prelates and merchants and gave the money to widows and orphans, and generally enjoyed their life in despite of the Sheriff of Nottingham or his hired assassins. Child's ballads #117 to #154 detail the adventures of Robin and his band. See *Robin Hood and Allen a Dale* (#138), *Robin Hood Rescuing Will Stutly* (#141), and especially *A Gest of Robyn Hode* (#117). Principal members of the group who dressed in Lincoln green were Little John, Friar Tuck, Will Scarlet, Allen a Dale, and Robin's greenwood wife Maid Marian. Robin Hood,

Maid Marian, and Friar Tuck became prominent characters in May Day plays; the open-air celebration of the marriage of Robin and Marian translated the folk hero of the ballads into the ritual hero of the May Day fertility celebrations.

rock pictures Depictions on rock, characteristic especially of prehistoric art in many parts of the world; they form a stationary art, that is, they occur on rocks which are left in their natural position. Those drawn or painted are called petrographs, those incised or pecked are petroglyphs. The famous Stone Age murals of western Europe are usually referred to as cave paintings and those on cliffs, e.g. in the American Southwest, as cliff paintings.

The rock pictures of Europe and Africa are divided by Frobenius into two styles, both of which he thinks originated in southwestern Europe and spread thence as far as South Africa. The Franco-Cantabrian or "portrait" style, thought to be the older, comprises naturalistic depictions of single animals and human beings, usually polychromes. The Levantine or "action" style are characteristically monochromes, with the figures composed in groups.

The famous South African rock pictures are of this latter type. Their depiction of running, lunging, almost flying figures seems almost an abstract dramatization of movement itself. In that respect they are unique in the folk arts of the world—and in another respect also. The oldest examples were made several thousand years ago; others (not dissimilar) within memory of living man. Petrographs occur in abundance in a strip 150 miles wide paralleling the southeastern coast of Africa. Petroglyphs are concentrated in an area somewhat more inland. Scenes of the hunt, fight, and dance, even pranks, are depicted. The Mantis-Man is a favorite subject. Motifs of fire, rain, and stars may be identified in depictions of ceremonies.

Ancient rock pictures have been found, to give examples, in Australia, Outer Mongolia, India, the Near East, and Russia. Northern Europe offers examples also from the Bronze and Iron Age. Throughout the Americas they are a notable form of older art cultures. [MH]

rods of life Fresh green branches of trees or shrubs (birch, willow, fir, cherry, rosemary, juniper, etc., or vine, in vine-growing regions) just newly budded or blossomed and therefore potent with new life: used by the young village people of southern Germany and southeastern Europe to beat each other on certain feast and holy days. The rods of life impart health and energy, renew life in the weak or ill, bestow fertility, and are used by one sex upon the other. In Bohemia, for instance, birch, willow, or cherry branches are put to sprout on St. Barbara's Day, and are used on St. Stephen's Day or Holy Innocents' Day by the young men of the villages to beat the girls on hands, feet, and face. The girls are beaten with the fresh stinging branches for their own good: it keeps them fresh and fair and young and healthy. Unhappy is the one who does not get beaten. The next day or on New Year's Day the girls beat the boys with the same branches. The fool's whip of European Carnival is probably a direct descendant of these rods of life. See EASTER SMACKS.

The beating of young banana trees in New Guinea with a stick cut from one that has borne fruit also testifies to a common belief that the fertility of the tree

is inherent in the part, and can be communicated. Frazer reports (*Scapegoat*, London, 1913, p. 264) that in Hungary barren women are beaten with a stick that has been used to separate copulating dogs. An early spring custom of Albanian herdsmen is to cut branches of newly sprouting cornel and to beat their companions and animals with them to preserve their health. In Thüringia on Holy Innocents' Day (Dec. 28) it is said that children used to run around the streets with green branches and strike at passersby, expecting pennies in return for this life-giving favor.

rolling head or skull Pursuit by a rolling head is a folktale motif (R261.1) in which decapitation of some opponent or offender does not end the trouble. Instead the head pursues and sometimes kills the decapitator. The malevolent revenant in the form of the wandering skull which pursues men (E261.1) turns up in European, Indonesian, and African Negro story.

In a Bantu Negro folktale a man beheads his wife for eating his porridge instead of her own. After he marries a second wife, the head of the first wife rolls into the hut and tries to beguile the second into eating the wrong porridge also. The head partakes of the husband's porridge, but the second wife is not tempted. At night the head rolls into the hut again, eats of the husband's porridge, and then rolls into bed with the man. The terrified second wife runs away; and in the morning the people of the village find only the man's dead body in the bed.

The North American Seneca Indians have a class of ogres known as the flying or rolling heads. One day a young mother with her child in her arms is pursued by one of these. She throws deer meat behind her from time to time to delay it; when the meat is gone she throws down her blanket. The Head stops only long enough to tear it up in a rage. She tears off her dress, and throws it down, then her leggings, her moccasins; still the Head pursues. Finally she remembers that a baby's moccasin has power to ward off danger, throws back one of her infant's moccasins. This stops the Head, and the young mother rests in a tree. But the Head comes and sleeps at the foot of the tree, and wakes when she tries to climb down. All she can do is tangle it up in a crooked branch from the tree and run on. The Head follows her home, and silently rolls into the lodge. There it sees her picking acorns out of the fire and eating them, thinks she is eating the live coals, tries some, shrieks and disappears, and is never seen again.

That the skull of a suicide must roll in the dust until it has saved a life is the motif (Q503.1) of a story in which a man seeing an owl about to kill a rabbit picks up a skull lying nearby to throw at (or kill) the owl. Thus the skull of the suicide has saved a life and the soul of the suicide is freed of the punishment, after rolling in the dust for 777 years. Compare OFFENDED ROLLING ROCK.

 Pursuit by a rolling skull, head, or rock is a widely known incident in North American Indian mythology. The incident usually occurs in the widespread tale of the *Rolling Head*, in which an unfaithful wife commits adultery with a snake. Her husband kills both the snake and his wife, and cuts off the latter's head. Some of the North Pacific and Plateau tales stop with the husband's serving of the snake, or the snake's genitals, to his unfaithful wife, but in many other versions

the tale continues, as outlined above. For distributions see Stith Thompson, *Tales of the North American Indians* (Cambridge, Mass., 1929), pp. 343, 345. [Ewv]

 Today as in the past the Indians of the Peruvian highlands believe that the flying heads of sorcerers attack people and suck their blood. A rolling head which pursues some men forms the central theme of weird tales in the folklore of the Tumupasa, of the Shipaya, Cashinawa, and Yahgan Indians. In the Cashinawa version of this story, the rolling head becomes the moon.

[AM]

romantic love Sentimentalists have attributed to the American Indians the Euro-American concept of romantic love; American Indian tale material frequently has been popularly presented in romantic versions. Tales of Indian lovers' leaps may exist all over America, as Stith Thompson states (Stith Thompson, *The Folktale*, New York, 1946, p. 313), but it is dubious whether they are of Indian origin. Some North Pacific Coast tales from unimpeachable sources do seem colored, and the actions of their characters motivated, by a sort of romantic love, and the characters may use endearing terms to each other, but in the very large majority of American Indian material the concept of romantic love is either lacking or, if expressed, it is clearly indicated that socially it was not approved. What Margaret Fisher has to say for the Algonquian peoples of northeast North America holds for many other American Indians as well, as far as romantic love is concerned: "[A] theme [in northeastern Algonquian mythology] which receives emphasis in both serious and trickster tales concerns the fate of young women who were 'too proud' to marry the man selected for them. This theme occurs so frequently as to throw into high relief the struggle formerly carried on in Algonkian society against the forming of romantic attachments. This struggle is also reflected in the almost complete absence of romantic love as a theme. The devotion of a man to his family gets some attention, and there is even a tale of devotion so great that a man followed his wife to spirit land and brought her back to life. But these are tales of family love. Tales of star-crossed young lovers can be found, but are for the greater part conspicuously absent. Tales of adultery are told from the injured husband's point of view, with retribution swift and complete" (Margaret Fisher, "The Mythology of the Northern and Northeastern Algonkians in Reference to Algonkian Mythology as a Whole," p. 234, in *Man in Northeastern North America*, Papers of the Robert S. Peabody Foundation for Archaeology, Andover, Mass., vol. 3, pp. 226-62, 1946). [Ewv]

Romany folklore Romany is the name by which a group of people, commonly called Gipsies in English, refer to themselves. Every nation in which they have lived has designated them by various names, some derived from the trades they follow—"Muggers," for instance, in reference to potters—others from characteristics they have or are supposed to have, others from the places or peoples from which they are locally believed to have originated or emigrated. The general name in the United States and England is Gipsy (or Gypsy): a corruption of Egyptian, Egypt having been the land of their origin in medieval belief. In some places they were called "Pharaoh's people." Other forms of the name are Cingani or Acingani (Corfu), Zigani (Russia), Tshin-

ghiané (Turkey), Cygani (Hungary), Tsiganes (France), Zigeuner (Germany), Zingari (Italy), Zincali (Spain). They are also known as Biscayans, Bohemians, Saracens, and other names referring to their supposed origins. They were called Greeks or Bohemians in Spain, for instance, Saracens in France, Tartars in Scandinavia, Bohemians or Tartars in parts of England, Greeks or Moors in Scotland, etc.

Several theories have been advanced to explain the term *Romany*, all of them bearing on the possible origin of these mysterious people. By etymological analysis *Romany* is the adjective of *rom*, male Gipsy, man, from Sanskrit *ṛoma*, a man of low caste. It has also been frequently pointed out that the name might refer to their long sojourn in the Byzantine Empire, anciently called *Roum*; and it has also been suggested that the name derives from their long residence and great concentration in Rumania.

From the literature on the *Romany* it would seem that any statement made by a competent observer about their origins, customs, or folklore is subject to contradiction by other observers equally competent. Thus, though it is undoubtedly true that the *Romany* were at one time nomadic and unsettled, they now seem to be somewhat sedentary. Most of them have settled in cities and towns and follow ordinary trades. But in the spring the *Rom* who has not been assimilated and has maintained his tribal pride likes to move. Racial assimilation and intermarriage which have resulted in Gipsies leaving their tribes and forgetting their customs have failed to reduce greatly the number of *Romany* in all parts of the world who still follow their own ancient arts and crafts. Although the prediction that the *Rom* is about to become extinct has been made for many hundreds of years, Gipsy caravans are still to be seen in all countries of Europe and many countries of Asia, Africa, in the two Americas, and in Australia.

British students have made careful studies of the Gipsy in England. Yet these English tribes, themselves, frequently augmented by tribes from Europe, are, by still other tribes, regarded as not true *Romany* at all. Almost any statement applicable to one tribe is contradicted by members of other tribes in regard to themselves, and thus students of *Romany* contradict each other. One author, unhappily confused by this cacophony of statement and counterstatement, decided while examining a number of hypotheses to accept the least probable of them all. This makes an attempt to arrive at a balanced understanding difficult.

The term *Romany* folklore refers both to the folklore the *Romany* have themselves produced and to the folklore *about* them produced by the peoples among whom they have lived. It is often said, in fact, that there is more folklore *about* Gipsies than there is Gipsy folklore:—Gipsies know magic, for instance; they have second sight; they can cure diseases; they can protect houses from burning; they can tell fortunes and divine the future; they love horses and understand the language of horses; Gipsies have been known to give up their lives for their horses; Gipsy coppersmiths bare their heads to the new moon; Gipsies save old thrushes' nests (which are lined with clay) and use them for milk which they steal from cattle; they are petty thieves; they kidnap children; their women are promiscuous.

Intrinsic Gipsy folklore has been difficult to put a finger

on. Gipsy marriage customs, baptismal rites, burial customs, childbirth and menstrual tabus reflect the practices and beliefs of all the countries in which they have lived. They believe in omens, ghosts, and the evil eye. They avoid having their pictures taken, hence must believe in the separable soul. Most Gipsies have two names: the *nav romanes*, which they use among themselves, and the *nav gajikanes* (or *gájo*) which is a public name (see H. L. Mencken, *American Language*, New York, 1947, 490); this suggests a belief in the various holinesses, tabus, and dangers associated with names.

It has been said that the safest theory in regard to Gipsy folklore is to assume that they brought nothing, originated nothing, but "adopted in every country what they found as they found it." However true it may be that Gipsies have picked up and taken to themselves the marriage and birthing customs, beliefs, stories, musical instruments, tunes, etc., of the countries in which they have lived and traveled through, yet this seems a strikingly unsatisfactory statement in the light of the fact that these people have maintained their own distinctive way of life, a distinctive code of behavior and spiritual values, regardless of centuries of contact with other cultures and other codes, and in the face of persecution. Even the automobiles, which they have wholeheartedly adopted, have done nothing to ungipsify these people.

The Gipsy proverb "When you cut a Gipsy in ten pieces you have not killed him; you have merely made ten Gipsies" bears testimony to the indestructibility of these people. The proverb takes meaning when one understands the Gipsy cult of the dead. Konrad Bercovici stresses the fact that *wherever Gipsy life remains unadulterated* (see his *Story of the Gypsies*, p. 172 ff.) their cult of the dead is a compulsion. They believe that the souls of the dead are not free of this world until the body is burned; the dead return and reproach the living, or materialize and denounce them for neglect. In Spain before the two wars, many Gipsies still burned their dead and the possessions of the dead; in Hungary it is said that in spite of civil prohibitions they disinterred their dead and burned them secretly. In Germany where they were especially persecuted, the more Gipsies were killed, the more Gipsies poured in to search for the graves, burn the bodies, and liberate the souls of their kinsmen. No punishment, not the death penalty itself, stopped them from following their people and performing this service.

Other scholars remark, however, that "with local variations, the burial customs of Gipsies are the same everywhere." If the burning of the dead is still a compulsion among them, the modern increase of available crematoriums in the world must have minimized their problem.

Because they are not tied to the land and have lived mostly in areas where nomadic grazing was impracticable, they have earned their living by skills which required few tools. Everywhere the men have been tinkers, braziers, metalworkers, potters, farriers, clippers and shearers (in herding regions), and skilled artificers. In eastern Europe they were especially famous as musicians, singers, dancers, puppet-show men, bear leaders, and smiths. They have been equally famous as horse dealers, pig traders. They are said to have a great affection for horses, to "understand the language of horses," to cele-

brate the marriages of mares and stallions, and to take as great a pride in these genealogies as in their own. They were looked to, too, as skilled veterinarians in rural communities; but this particular store of knowledge is rapidly being lost among them. The passing of the horse and the coming of the automobile has done little but change the Gipsy rate of travel; the caravan *mobilensa* is as colorful as the old horse-drawn wagons of the Gipsies. The women are fortune-tellers, dancers, skilled needlewomen. They are said to have occult powers, and by the use of spells can cure sterility in women. They can bring back vagrant husbands and bring unwilling lovers into the arms of infatuated females.

All who have written about the Romany have described them as vagabonds of one sort or another and have accused them of all crimes except murder: the Gipsy will not shed blood. Members of hard-working communities find after a time that people who sing, dance, eat, and are merry without doing regular work can become irritating, especially when these people insist that they are superior, because "free," to the sober farmers who work with little gaiety or song from sun to sun. Consequently the Gipsies have been harried through the centuries from one community to another. The office of hangman was often forced on some Gipsy in medieval Germany: a superlative injury in that Gipsies are averse to shedding blood. The kings of Spain spent much time making laws against them. Maria Theresa tried to get them tied to the land. Hitler attempted to exterminate them. Many laws have been passed in many countries forbidding intermarriage with Gipsies or communication with them, but the bands continue to exist and occasionally to marry out of the tribe.

Although Gipsies have been reported on in histories written by many peoples for the last thousand years more or less in Europe and for earlier periods in the Middle East, the Gipsies themselves have never bothered to record their own histories. The only reports we have from the Romany themselves have been transmitted orally and have been transmitted in the light-hearted manner of a people which thinks it is important to make a good story.

One 15th century reporter says that their original home was in Hungary and Turkey. Paul Bataillard asserted that the Romany have been in Europe since prehistoric times and that they taught the art of metallurgy to Europeans. The tribe that rode into Germany in the early 15th century said that their ancestors in Lower Egypt had renounced Christianity and when they returned to the fold they had, each one of them, to do a penance by wandering for seven years; and they were still wandering. A variant of this tale is that they had been forced to wander because they had refused hospitality to the Virgin Mary, Joseph, and the Christ child when they fled from Bethlehem. An Italian medieval tract, however, says that when Joseph and Mary fled with the infant Jesus into Egypt, they were met by an old Gipsy woman who called out to them that she had a little stable, ready with straw and hay: "Behold a shelter for you all." Spanish Gipsies have still another version of their Egyptian origin. After Pharaoh had conquered the world he challenged God. God opened the side of a mountain and raised a great wind that blew Pharaoh and his armies into it. The mountain closed

upon them, and after that it was easy for aliens to overrun Egypt and drive the Egyptian remnants into Spain.

The Rumanians have a story explaining that Gipsies are cursed because one of their smiths made the nails for Christ's cross. The Gipsies themselves have a counter-legend that the Gipsy smith made the nails thin so that they would give little pain. Mary blessed them for this and said let their work be light and their profit great. Another story is that a Gipsy woman tried to steal the nails and thus prevent the crucifixion, but could only get away with one; this is why only three nails were used, two for the hands and one for the feet.

Philologists conclude that the language of the Gipsies is Indo-European, i.e. rooted in Sanskrit. This would make their point of departure central or southeast Asia, and a later home, long after the Vedic age, the foothills of the Himalayas, whence they migrated north and west and reached Persia about 900 A.D. The language, strongly colored by local variations, yet basically the same wherever it is spoken, is closer to Hindustani than to any other living language. Turkish and Welsh Gipsies, for instance, could understand each other.

The Gipsies have another mysterious language called the *patteran*: a sign language known only to themselves. Patteran means leaf, trail, sign, and refers to a system of leaving two twigs and a leaf arranged a certain way and placed every so many hundred feet apart, used by Gipsies everywhere to guide those coming after them. Sometimes one sees the word written *patrin*.

The tribes of Romany throughout the world present almost every type of social structure known. Although the leader of the group is usually a man, women have been known to hold this post. The leader is referred to as Duke or Lord in Europe, and King or Queen in North America. The post is elective and for life (or for seven years). The chief has wide powers, controls the tribe's property, represents the tribe in negotiations with outsiders and with other tribes, officiates at marriages, and settles disputes.

Even in England where Gipsies have established themselves, some groups are matrilineal and others are patrilineal. Exogamy is not a rule. Men have been known to marry their nieces, preferring their brother's daughter, granddaughters, half-sisters, their aunts occasionally, and their cousins frequently. The daughter of the mother's brother is said in these instances to have been preferred. The levirate, which requires the dead husband's older brother to marry the widow, is said to be uncommon. Polygamy has been reported, so too has the sororate, a system by which a man marries the girl of his choice and at the same time all of her sisters. Elsewhere the custom is to get the older sister married before the younger ones.

Gipsy marriage customs not only vary from tribe to tribe, but reflect the customs native to the places where they have sojourned. A number of reports concur, however, that a frequent part of a marriage ceremony is an oath taken by both bride and groom to leave the other when love has ceased. Part of the great body of folklore about Gipsies is that Gipsy women are promiscuous; in actual fact they are notoriously flirtatious and fanatically chaste. The *lubenny kiss* is not unknown in some groups. This is the harlot kiss. *Lubenny* (sometimes spelled *lumi* or *lubni*) means harlot. The lubenny kiss

is a public ceremony in which the husband, sometimes the betrothed, bites off the tongue of the faithless one. The ceremony of blood marriage seems to be important in some tribes. The wrists of the young couple are slightly cut, and tied together in such a way that the blood mingles. The common saying "Gipsy marriage" patronizingly implying "no marriage" refers to the report that Gipsies effect a marriage by jumping over a broomstick. This was undoubtedly a common practice among them at one time, especially in Germany and the Netherlands, where it was also a native peasant practice.

The Romany are famous for their music and dancing. In eastern and southeastern Europe no party is a success without a Gipsy band and usually one or more Gipsy dancers who tell fortunes between numbers. Observers are agreed that the Gipsy contribution to music has been the preservation of folk songs in the several places they have lived and the modification of these songs to their own rhythmic skills. The countries which have contributed most to their repertoires are Hungary, Rumania, and Spain. The Andalusian Romany have become particularly famous for their development of the flamenco. The mood of their music varies from the deep melancholic to the gay and of their dancing from the sensuous to the simple light-hearted. Everything they touch, however, tune, dance, or song, takes on an ardor and intensity, almost an exaltation, that marks the adaptation or the performance as intrinsically Gipsy.

The Romany have professed Mohammedanism, Catholicism, Protestantism at various places and times. English and German Gipsies observe the rite of Christian baptism when they confer the *gájo* (public name) upon a child; and it has been observed (*Folk-Lore* 24: 323) that German Gipsies especially like to have their children baptized as often as possible. Multiple baptisms have also been observed in England. The annual pilgrimage of thousands of Romany from all parts of Europe to the church of the Saintes Maries de la Mer occurs, May 23, at Ile de la Camarque, Bouches-du-Rhône, southern France. This church contains the crypt of Saint Mary of Egypt, called Mary Gipsy, their patron saint. They keep vigil at the crypt for two days and a night and then depart.

The Green George festival of east European Slavs is a favorite of the Romany of Transylvania. This festival is celebrated on St. George's Day, April 23. As in other tree-water-spirit festivals (see WHITSUNDAY) the people cut down a young willow, decorate it with flowers and leaves, and set it up in a central place. Pregnant women may leave a garment under it; if a leaf has fallen on it by morning an easy delivery is indicated. Sick and aging people spit three times on the tree and pray for health: "Let us live," they say. The next morning a boy completely covered with green leaves throws grass to the animals so that they will not lack during the year; he hammers three iron nails (which have lain in running water three days and three nights) into the willow, draws them out, and throws them again into the stream. See JACK IN THE GREEN.

Sawing the Old Woman, a custom of southern Europe formerly observed on the fourth Sunday of Lent (one of the numerous Carrying Out or Killing Death mimes) was taken over by the Gipsies of those localities as a

Palm Sunday observance. The Old Woman, a puppet dressed in women's clothes, was well beaten, then sawed in two, and finally burned; the ashes were saved and thrown in the next cemetery the group came to. There is some vague association on the part of the Gipsies with a Shadow Queen who must vanish in the spring and return in the winter. (See Frazer, *Dying God*, London, 1912, pp. 243 ff.)

In Italy where Gipsies are masons, the shadow of a man is often buried in the foundation of a new house (see SHADOW). English Gipsies do not eat hare because the hare is a vampire; their children are not permitted to eat chicken legs lest they become liars; and children with living fathers do not eat the heart of any animal, for it is the same as eating one's father's heart. Gipsy widows in England leap into their husbands' graves and lie there for a few moments; they are then not allowed to remarry. This suggests a hang-over from ancient Hindu SATI.

Among English Gipsies a woman is unclean for certain periods after childbirth. The term is *mokhadi* (see "Ceremonial Customs of British Gipsies" in *Folk-Lore* 24, p. 323 ff.). For one month she must use only her own cup, plate, knife, fork, spoon, and these are later destroyed. She must have no relations with her husband during this period, must not touch food for the group. Formerly she had to wear gloves for a month and could not touch dough for a year. In Germany a birth had to take place on a straw pallet under the living-wagon. If it happened inside, everything had to be burned. The English Romany believe, however, that before childbirth a woman is good magic; in Lancashire it is said that a pregnant woman can save a man from mortal harm. Women's clothing at all times is somewhat *mokhadi*. In some tribes, especially in Germany, women's clothes may not be hung up inside the wagon, lest a man happen to brush against them and become *baletshido*, which means "disgraced and partially outlawed" (see *id.* 326). White crockery is also *mokhadi* "because it suggests a chamber-pot."

Gipsy folktale is the general European folktale, plus the Gipsy flavor and twist. F. H. Groome in *In Gipsy Tents*, London, 1880, advances the theory of the diffusion of folktales over Europe by the Gipsies. Many others have accepted the concept of folktale transmission via these people. Moses Gaster, however, in *Rumanian Bird and Beast Stories*, London, 1915, p. 24, dismisses the theory as impossible on two counts: 1) they came too late into Europe to have been the carriers of general European folktale, and 2) they were so hated and persecuted that there was no opportunity for intimate or even equal interchange of stories. Even though they possess a good number of popular tales of their own, even these were not "communicated to Europe by them." Gaster also points out that in Rumanian and other European folktale the role of villain is often given to the Gipsy; in popular jest he is the dupe; in certain etiological tales he is the legitimate object of a cheat. See WASP.

The techniques which have been developed to indicate differences between similar and related cultures are so crude and depend so much upon the chances of observation that distinctions between traits which are properly Romany and traits which are not cannot be relied on. Even the observers themselves are unreliable

for the observers like the general public are influenced by envy tinged with disapproval of a life which seems to be happy and carefree.

R. D. JAMESON

Rónán King of Leinster, Ireland, about 600 A.D., famous for the tragic and unjust killing of his son, Mael Fothartaig, his remorse, and his own death at the hands of Mael's two sons. The story, based on the Potiphar's wife motif (K2111), is told in a Middle Irish text, probably 10th century, in the *Book of Leinster*, and entitled *Aided Mael Fothartaig maic Rónáin* (*The Death of Mael Fothartaig Son of Rónán*).

Rónán, long without a wife after the death of Mael's mother, went north to the house of Echaid, king of Dunseverick, and took for wife the beautiful young daughter of that king. "You are no husband for a girl," said Mael, "it were better for you to marry a woman." But Rónán married the girl and the girl fell in love with Mael Fothartaig. She sent him messages and invitations by her maid, but Mael, in loyal anger, left his father's house and went to Scotland, where he and his two wonderful dogs (Doilín and Daitlenn) performed marvels in the hunt.

But the people of Leinster were unwilling to have Mael so long away, so he returned. Again Rónán's girl-wife sought him to be her lover, and Mael Fothartaig asked his foster brother Congal for advice. Congal told Mael to go hunting in the forest, and then sent a message to the young queen to keep tryst with Mael there. Joyfully she set out, but Congal himself met her on the way, taunted her that she was going out to meet a man, and sent her back home. Again she set out, again met Congal, who decried her for a harlot and promised her her own head on a stake in front of Rónán if she were not faithful to the king.

The young queen plotted her revenge. That night she accused Mael Fothartaig to his father with having solicited her. Three times she said Congal came to take her to Mael. But Rónán would not believe, until the half-quaternion made by Mael's jester seemed to fit into the half-quaternion with which the queen made answer, to support the accusation. "It is cold against the wind/ For him who herds the cows of the slope," said Mael Fothartaig's jester. "It is a vain herding/ Without cows, without one you love," said the queen. And because Rónán thought the words were reproach and answer, he believed. He told the warrior beside him to put a spear through Mael. The warrior threw the spear into Mael's back so that it went through him and pinned him in his seat. Congal rose up at the sight and got a spear into his heart. The jester would have escaped but the warrior cast another spear which went into his bowels.

Mael Fothartaig spoke from his seat then that three men were enough. And Rónán reproached his son for entreating his wife. Mael swore by the "tryst of death" he was about to keep that he never wanted to lie with the queen, that Rónán was deceived, that Congal died unjustly, for three times that day Congal had brought the queen home to keep her away from Mael. By then the three boys were dead: Mael, Congal, and the jester.

For three days and nights Rónán grieved beside his son. "The wind is cold/ in front of the warrior's house," he cried, "... Woe is me that Mael Fothartaig/ Was slain for the guilt of a lustful woman." Young Don, brother to Congal, foster brother to Mael, went to

Dunseverick and killed Echaid, his wife, and son, and brought the heads back for vengeance on the queen. When she saw them she threw herself upon her knife. And Rónán cried "The grief that is upon Dún Ais/ Is also upon Dunseverick/ Give food and drink to Mael Fothartaig's hound/ . . . It is sad to me that Daitlenn suffers/ With her ribs spare through her sides; . . . And Doilín . . . / Her head is in the lap of everyone in turn/ Seeking one whom she will not find. . . . My son, Mael Fothartaig/ He has taken a cold dwelling." And the two young sons of Mael killed their grandfather Rónán for the death of their father, Mael Fothartaig.

This is perhaps one of the grimmest and most poetic legends based on the Potiphar's wife motif, in which the woman scorned accuses the man who has refused her with attempting to seduce her. For a more detailed rendering of the story, see Myles Dillon, *Early Irish Literature*, Chicago, 1948, p. 87 f.

Rongo In Polynesian mythology, one of the sons of Rangi (Vatea) and Papa: in Hawaii, he is known as Lono. He is variously god of the sea, of war, of agriculture, etc. Tane was his twin (or younger brother), and throughout the Polynesian area the god Rongomatane (Romatane) appears to be a compound of both these deities. Compare ARIOL.

Roosevelt ballads The day after the death of Franklin D. Roosevelt a printed ballad sheet appeared on the streets of Aguascalientes, Mexico, bearing among several other songs, a *corrido* in tribute to his memory, composed overnight and designed to be sung to a familiar *corrido* melody. The writer, Manuel Delgadillo, worked in the details of the President's death as he was posing for his portrait, mentioned the "good neighbor" policy, censured Japan for its knife-in-the-back blow at Pearl Harbor, and expressed the sorrow and sympathy of Mexican people for the loss of the American leader. (The song was reported by T. M. Pearce in *New Mexico Folklore Record*, Vol. 1, 1946-47.)

Some time later a group of American Negro jubilee singers recorded another lament for the death of Roosevelt called *Tell Me Why You Like Roosevelt*. The answer to the title question is, "everybody knowed he was the poor man's friend." The stanzas, sung in the characteristic staccato style of jubilee and quartet singers of Negro churches to a tune similar to that of many quartet spirituals, give the following information: By all indications Roosevelt "received salvation" at Warm Springs, Georgia. "Elizabeth," who was painting his portrait, dipped her brush into the water, looked up, and knew "the President didn't look right." He died of a cerebral hemorrhage at 3:35, and in thirty minutes the world was in mourning. His wife "notified her sons across the sea and said, 'Don't you worry about poor me. Your father's dead, but you're all grown. Just keep on fighting for victory.'" The song lays stress on Roosevelt's stand against race prejudice. "Only two presidents that we ever felt," it says, "Was Abraham Lincoln and Roosevelt." It remarks on the Negro ladies invited to the White House, on the appointment of a Negro general, and on the assistance of the WPA. "Took my feet out the miry clay, and I haven't looked back since the WPA." It ends with a recommendation to call on Jesus, who is "a president, too."

roots The root of some plant is almost always one of the powerful ingredients of the maleficent, evil-working, or death-dealing charms of southern U.S. Negro conjure doctors, also known as "root-doctors." *Rootin'* means (in Georgia) casting an evil spell. The conjure doctor always carries a piece of some kind of root in his pocket; and a certain wild root, known as High John de Conquer (St. John's-wort), if seen in the conjuror's hand, strikes terror to the beholders. Sometimes, however, the conjure man will give a bewitched person a bit of some root to chew on, which will break the spell, or the liquid from certain roots boiled with a piece of silver will also liberate the victim of an evil spell. Thus roots are potent both to cast and break spells. The root of the plant called devil's-shoe-strings (variously identified as genus *Coronilla* or as sand-vine) if laid in a man's path will prevent him from ever having any money. Little pieces of this root, cut up and soaked in whisky or camphor, and rubbed on the palms of the hands, will blind your enemy when you suddenly grab him. Roots are invariably regarded as maleficent as contrasted with JACKS, which bring luck.

rope trick A marvelous trick ascribed to Indian *yogis*, *fakirs*, *sādhus*—religious mendicants and itinerant conjurors. The conjuror throws high in the air a thin rope which remains upright, the end disappearing in the clear sky. The conjuror's companion, usually a little boy 10-12 years old, then shinnies up the rope and also disappears. After a few minutes the conjuror calls to him to come down; he refuses; the commands are repeated more and more angrily; still he will not come down. Finally the conjuror himself climbs the rope; he needs both hands to climb, so he carries a knife in his teeth. A great rumpus is heard from above—angry threats, blows, piercing shrieks; pieces of the boy begin to fall to the ground—an arm, a hand, a leg. The conjuror comes down, wipes and cleans his knife, and the boy runs up to him, safe and sound, from among the spectators.

This has been the classic trick of India for centuries, and controversy has raged as to whether or not it can be, or ever has been, done. It is slightly referred to in the *Vedānta Sūtras*. Many Europeans claim to have seen it. Large sums of money have been offered by serious European magicians and occultists traveling in India to any one who would perform the trick for their observation, but no one has ever stepped forward to claim the prize. This proves nothing, according to M. P. Dare, late editor of the *Times of India*, in that the holy men of India do not perform tricks for money and the typical itinerant conjuror cannot read the ads.

Rosa A A Portuguese folk dance of the province of Beira. It has the simple circular form characteristic of this agricultural province. Any number of couples, partners facing, run first clockwise, then counterclockwise. After a momentary interchange, partners pivot, and then resume the original run. The accompaniment is a simple love song in duple time, with a flageolet and two drums. [GPK]

rose The national flower of England, once divided between the followers of the white rose of the House of York and the red rose of Lancaster in the War of the Roses. In the United States it is the state flower of New York, Iowa, and North Dakota. Originally from

Persia, the rose is said to have been brought to the West by Alexander. To the Arabs the rose was a masculine flower. It was anciently a symbol of joy, later of secrecy and silence, but is now usually associated with love.

The rose, as one of the most beautiful of flowers, has always been associated in one way or another with Venus. Various legends ascribe its origin to her tears or as a gift of the gods to celebrate her rising from the sea. Some say it became red because Venus (Aphrodite) pricked her feet on the thorns as she sought her slain lover, Adonis. Other legends link it with her son, Cupid, e.g. the roses became red when he mischievously emptied a cup of wine on them, or once, when he stopped to smell a rose, he was stung by a bee which had been admiring the same rose. Cupid was so angry that he shot an arrow into the bush; this accounts for the thorns. Another tale says that Bacchus was chasing a nymph when he was stopped by a thorn hedge which he commanded to become a hedge of roses; the nymph doubled back, and when he saw that the rose hedge would not stop her, he commanded it to be thorn again. The magic was not wholly effective and so now they grow together. In Algonquian Indian etiological story the thorns were added by Gluskabe to prevent the animals from eating the flowers.

When Eve kissed a white rose in the Garden of Eden, it blushed with pleasure and has been pink ever since. The 4th century Bishop Basil said the rose was thornless until the expulsion from the Garden of Eden. Many of the attributes of the rose were inherited by the Virgin Mary. In common with many other thorny plants it is said to have formed the "Crown of Thorns," the tree on which Judas hanged himself, and Christ's blood is said to have turned the rose red at the time of the Crucifixion.

Throughout the Teutonic area the rose belongs to the dwarfs or fairies and is under their protection. In many places it is customary to ask permission of their king before picking lest one lose a hand or foot. The Arabs say that the white rose sprang from the sweat of Mohammed on his journey from heaven. A Rumanian story tells of a princess who was bathing in a secluded pool. She was so beautiful that the sun passing overhead was stopped in his tracks. He stopped so long that the moon complained to the gods, who turned the princess into a white rose. Next day when the sun passed, the princess was embarrassed and she blushed; the flowers on top of the bush turned a deep red, those in the middle became pink, while those near the earth remained white. In Persia the nightingale cries out when a rose is picked and sings because of its love of the red rose which is stained with its blood. In India at one time Brahmā and Vishṇu were of equal rank. One day they were discussing flowers and Brahmā said that the lotus was the most beautiful of flowers. Vishṇu showed Brahmā the rose and he had to admit defeat.

In Persia the infant Zoroaster (Zarathustra) was placed on a bed of burning logs to die, but they turned into a bed of roses. Red roses were often connected in story with fire, and the ashes on which several Christian martyrs were burned turned into roses, but in their cases, too late. However, Zoroaster's couch was not the original "bed of roses" which refers to the Sybarites who slept on mattresses stuffed with rose petals.

In Rome at the time of the Empire roses were lavishly used to add to the luxury of banquets, often in quanti-

ties comparable to such modern fetes as the Festival of Roses in Los Angeles. The rose garden of King Midas was one of the wonders of the ancient world. Anciently in Greece, Rome, and China, and more recently in Europe and England, the rose has become a funeral flower; in Switzerland the cemetery is often referred to as the *Rosengarten*, which in this allusion is a kind of cross between churchyard and heaven. In England it is customary to plant a rosebush at the head of the grave of a deceased lover who died before the wedding. In Wales a white rose is planted on the grave of a virgin and a red one on the grave of any respected person. A rose is often used in the decoration on the tombstone of a virgin.

Sub rosa, under the rose, means in secret, and refers to the ancient custom of hanging a rose over the council table to indicate that all present are sworn to secrecy. This in turn may have sprung from the legend that Cupid gave a rose to Harpocrates, god of silence, to keep him from revealing the indiscretions of Venus. At any event it is known to have been in use as early as 477 B.C. Up to quite recent times a rose in the decoration of the dining room ceiling was a gracious invitation to talk freely without fear, but this custom is no longer observed.

There are various references in story to persons being enchanted and turned into animals who regained their human form by eating a rose, as Apuleius in the *Golden Ass* (see *Ass*), and St. Denis, the patron of France. At one time in England the officiating clergy wore wreaths of roses on St. Barnabas' Day; in Rome there was a Rose Sunday. In Germany the associations of the rose are not always happy. It has been worn as a punishment for immoral conduct. In much of Europe the red rose is an evil omen. Seeing the petals fall is a sign of death although in Germany this may be counteracted by burning some of the fallen petals. In Wales and parts of England, it is an ill omen when roses bloom out of season. In British Columbia, the Thompson Indians pass widows and widowers four times through a rose bush so that the thorns will purify them of the spirits of their dead mates. Whether singly or in chaplets, roses have been used as a chastity test (H432.1), signifying infidelity by fading or changing color. In parts of the southern United States, a folded petal is sometimes struck against the forehead; if it cracks, the person in mind loves you; if it does not, your love is one-sided.

The use of the rose medicinally has continued unabated from the time of Hippocrates to the present day British Ministry of Health. The fruit, or hips, contain more than twenty times the amount of vitamin C found in oranges. Almost every part of the plant is used (root, bark, leaves, petals, fruit) and prepared in every conceivable way from delicious confections with sugar and honey to the bitter root-bark tea. Rose petals from the altar of Aphrodite were used to cure Cyrus, King of the Medes and the Persians. In Greece the petals were used both internally and externally to cure the bite of mad dogs. Gerard recommends rose-petal conserve for "shakings and tremblings of the heart." The Romans believed that the rose would prevent drunkenness either by its presence, or by floating a petal in the cup. The North American Tewa Indians powder the dried petals and use them in a salve for sore mouth. Only a generation ago a syllabub of roses was recommended for sore throat, and a pint of claret in which a handful of rose petals

had been boiled was considered a good compress for a sprain. In 1943 the people of England gathered 500 tons of rose hips and hundreds of pounds of dried petals for the manufacture of needed drugs. [JWH]

rosemary According to Culpeper, an herb of the sun under the dominion of the Ram. Ophelia's famous line, "Rosemary, that's for remembrance," expressed the common knowledge of the day; for rosemary has been symbolic of remembrance, fidelity, and friendship since early times and in this connection was most frequently used as a funeral wreath and in wedding ceremonies. In medieval Germany, however, some brides wore it to guard against pregnancy. In ancient Greece, students wore rosemary twined in their hair while studying for examinations also "for remembrance" (i.e. to strengthen their memory) and because it was believed to bring success to any undertaking. It was one of the early strewing herbs both because of its pleasing odor and because it kept out moths, vermin, and evil spirits. A sprig under the bed induced sound sleep and protected from harm and nightmare. The Romans used rosemary to crown the heads of their guests and of their household gods. Some say this herb will thrive only for the righteous or where the woman rules the household. In the Netherlands it is called elf-leaf, and is a favorite haunt of these little people. Christian legend says that the rosemary opened up to give Mary and the infant Jesus shelter from Herod's soldiers on their flight into Egypt, hence its dull white flowers were given the blue color of the Virgin's mantle. Another Christian legend states that the shrub does not grow higher than Christ's height on earth, and that at the age of 33 it ceases to grow and increases only in breadth. This plant was probably introduced into England by the Romans, but it is also said to have come to England with Queen Philippa of Hainaut in the 14th century. In any event it has flourished there and is said to be more fragrant in England than in any other land. Making a box of rosemary wood and smelling it keeps one young; in Wales, cooking-spoons of the wood are believed to make everything more nutritious.

Because rosemary is a plant of remembrance, it is a sovereign remedy for all diseases of the brain and is strengthening to the mind in all forms. But its uses seem to have spread to the whole head, for besides the brain, a decoction of rosemary in wine is good for loss of speech, sore eyes, and to clear the complexion. The ashes or charcoal of rosemary wood were used in England to clean the teeth, and to this day it is used in preparations for the hair to prevent baldness. Culpeper recommends cigars rolled from the leaves to smoke for coughs and consumption. He also recommends the flowers with bread and salt the first thing in the morning to dispel wind, and a flower conserve to comfort the heart and prevent contagion. Bathing in rosemary water makes the old young again. The boiled leaves bound to the leg with linen cloths are good for gout. A tea brewed of the leaves is good for fevers, pains, and colds, and taken cold with an equal amount of wine it is excellent to restore lost appetite. A decoction of rosemary put into the beer barrel secretly was said to be a sure cure for drunkenness. See ST. AGNES EVE. [JWH]

round dances Dances in circular formation, open or closed. In an open round a line of dancers is guided by a leader in a circular path, which may meander and tie

loops. In a closed round the head and tail of the line are joined. If these separate, the closed round may open into an arc or serpentine. Serpentine processions may wind through fields or streets, or confine themselves in a circular or oblong space. Closed circles focus on a central object, a pit, fire, altar, pole, scalp, shaman, group of musicians, or leading actor.

The circular dance is so universal, and has so many elaborations, that only a few examples can be cited.

Face center: Open—Mediterranean link dances, notably of Greece and Catalonia; Eastern Woodland Indian medicine rites (Iroquois Buffalo) and some social dances (Iroquois Robin dance). Closed—Tungus *ikan-zyezym*, Tamil *kummi*, Rumanian dances, French *branles*, Faroe Island rounds, Mexican *Concheros*, Plains and Sauk Indian Victory dances.

Face forward: Open—Provençal *farandoule*, Breton *gavottes*; Stomp Dances of Eastern Woodlands and westward; many Oriental ritual and social dances. Closed—many Renaissance court dances, as the *pavane*; Slavic couple rounds.

Sexes separate: Many American Indian rituals—men only (*voladores*), women only (*Tohgiwe*), men and women segregated in line (Indian animal dances).

Promiscuous order: Mediterranean link dances.

Couples: Slavic, French, British, Irish rounds; Mexico *sebradoras*, *mitote*, Argentine *pericón*, Sauk Indian social dances (Owl), Iroquois social dances (Fish).

Clockwise: Northwestern Europe.

Counterclockwise: Mediterranean rounds; Eastern Woodland Indians, Pueblo *tablita* dance, Aztec *mitote*, Tarahumara *rutuburi*.

Alternately either direction: Country Dances of the British Isles; Italy *douro douro*; Mexican *concheros*.

Simultaneously both ways in a hey: Maypole dances, *kolattam*; Spain and Latin America *baile de cintas* or *del cordón*; grand right and left in *quadrilles*.

Multiple circles can be concentric: *po'pete disue* of Crow Indians, Penobscot rounds, ancient Aztec, New Guinea, New Ireland dances.

Hand holds: Great variety, as the Faroe light and heavy hold, shoulder holds, hooked elbows of Greece, kerchiefs (Greece), or garlands (Aztecs).

Steps: Commonly a shuffle, especially in America. The *branle* step (double left, simple right) recurs in the Faroe rounds, and in reverse direction in the *hora* and *hasapikos* of Palestine and Greece, with complicated variants. These link dances offer the leader an opportunity for acrobatic turns, crouches, leaps, etc.

With the alternate arrangement in couples, the closed round develops into the *quadrille* by way of the *tambourin* and *branle carré*, or breaks up into the couple dance by way of couple rounds, as those of Czechoslovakia. The *branle gascon* condenses this development within one accelerating routine of circling in single file, then shuffling to the center and out, then pivoting by each couple, and finally a fast step-hop by individual couples. The Moravian *satečkova* (handkerchief) is a single-file progression, the *kanafasca* a quadrille. These Slavic dances use many different combinations of couple arrangements (see DANCE: FOLK AND PRIMITIVE).

Sometimes more complicated dances start off with a circle, sunwise in English sword dances, both ways in country dances and squares; or they may insert them,

as the Chichimec *rayados* and Abbots Bromley Horn dance. Irish rounds combine circles and other figures in a compact structure of opening, body, figures, and finish, similar to quadrille structure. Kentucky running sets combine four-hand reels with progression in a large circle.

Round dances probably represent the earliest form of communal ritual and in the simpler forms preserve this ritual function in many parts of the world. The open round is commonly associated with fertility rites, blessing of the fields, sowing and harvest festivals, and in its serpentine variants can be associated with the productive snake symbolism (see SNAKE DANCE). Many closed rounds still serve a coercive purpose of magical encircling, for invocation or propitiation, as did probably formerly also the dances that are now secular. The Maypole winding, associated with many springtime festivals, intensified its power by combining the double circle and serpentine around the sacred green bough.

All choreographic variants are important, especially the direction, which may be connected with the sun and moon. It is significant that nomadic and hunting tribes of the western United States prefer the sunwise circle, and the agricultural East, Southwest, and Mexico prefer the counterclockwise progression, also that Chippewa women dance against the sun, men with the sun. As there are exceptions, no positive conclusions can be drawn on the relation of the two directions, and their astronomical and cultural symbolism. A great deal of study must precede any explanation of the sunwise preference of western and northern Europe, and the counterclockwise circling of Slavic and Mediterranean peoples. See SERPENTINE; STOMP DANCES. [GPK]

Round Table of King Arthur The Norman poet Wace (1155) was the first to refer to the Round Table in extant literature, saying that the Bretons told many tales about it and that Arthur caused it to be made so that there would be no quarrels about precedence in the seating arrangements. The English poet Layamon (c. 1200) added a savage story of a fracas which broke out in Arthur's hall over the seating and which was quelled only when seven of the offending thanes were killed. Arthur condemned the originator to be dragged to a swamp to die and all his women folk to lose their noses. He then proceeded to Cornwall and had a round table made which had the marvelous property that it could accommodate 1600 knights so that the high should be equal with the low. Other accounts give the number of seats as 150, 50, or 13. We know that neither the Welsh nor the Irish ate at large tables of any shape, but according to *Bricriu's Feast*, an Irish saga of the 8th century, the royal couch of Conchobar was set up in a banqueting hall, with the couches of the twelve chief warriors of Ulster about him, and that in this same hall strife arose as to which warrior deserved the champion's portion. When this tradition reached the Bretons through the Welsh, they were doubtless struck by the fact that, according to pictorial art and the testimony of pilgrims returning from Jerusalem, the table of the Last Supper, at which Christ sat with his twelve apostles, was circular. Moreover, the Lord had rebuked the twelve on this occasion when they quarreled as to which of them should be accounted the greatest. Hence arose the legend that Arthur's table owed its shape to rivalry

over precedence and that it was patterned after the table of the Last Supper. Originating, then, in the Irish custom of seating twelve chief warriors about the royal couch, the concept of the Round Table was developed by the Bretons and later by the French under the influence of Christian tradition. During the 13th and 14th centuries jousts and feastings called Round Tables and observing what were supposed to be the customs of Arthur's glorious days were held throughout Christendom in places as far apart as Acre, Prague, Saragossa, and Falkirk, and at Magdeburg and Tournai burghers imitated this knightly sport. In 1344 Edward III vowed to establish an order like Arthur's at a great Round Table feast at Windsor. The board which still hangs at Winchester castle was probably made for some unrecorded celebration of this sort, and was first decorated with the figure of Arthur and the names of 24 knights in 1486. [RSL]

Roy Bean Kentucky-born Texas judge in the 1880's: "All the law West of the Pecos," according to American frontier legend and ballad and the sign on his saloon. As the Southern Pacific Railroad advanced into Texas, Bean followed the construction camps as saloonkeeper. He was the railroad's answer to the proud slogan, "West of the Pecos there is no law." On Aug. 12, 1882 Roy Bean, then in his early fifties, was appointed justice of the peace. He held court in his saloon, the "Jersey Lilly" (his spelling), named for the famous Lily Langtry with whose picture he had fallen in love. He later succeeded in having the town officially named Langtry.

All his trials began with an invitation to "step up to the bar for a snort of poison" and usually ended with "... and I fine you \$2 now get the hell out of here." Legend piled upon legend in regard to Roy Bean, pocketeer of fines, enforcer of the law with two six-shooters, blustering, original, shrewd, acute, unscrupulous, avaricious, and sentimental! As coroner he fined all dead men the amounts found on their persons. Bruno, Bean's famous bear, who drank beer from a bottle with the best, was often appealed to to add his authority to that of his master's in the sobering of drunks and chastening of runaway husbands. It is said that Bean once married a young couple and later granted them a divorce "to correct the mistake." Probably the most famous of all Roy Bean stories is the one about his turning free the murderer of a Chinese laborer in 1884 because he could find nothing in the Texas lawbooks against murdering a Chinaman. This story has been told and retold with elaborations.

ruach In Jewish belief, the spirit; one of the three elements of the soul, together with *nefesh*, the vitalizing soul, and *neshamah*, the super-soul or that which gives holy character to a man. Ruach is the intermediary between the *nefesh*, which remains with the body, and the *neshamah*, which ascends to heaven, according to the *Zohar*. Ruach, as a spirit, is often conceived of as a *ruach ra'ah*, or evil spirit, one of the types of demon. According to Rashi, it is amorphous. In general, no distinction is made however among the various types of demons or of the different aspects of the soul. Several kinds of demonic ruach are mentioned, e.g. *ruach zelahta*, which causes headaches, *ruach tezarat*, which causes fever and insanity.

rubato-parlando An ancient manner of singing in dramatic recitative style with each syllable of the text sung to a true musical tone and continual rhythmic variation. It is characteristic of Hungarian and other eastern European folk music, and is found among ballad singers of the American Northeast. The last words of the song are frequently uttered in tones of speech to indicate the close. Compare *TEMPO-GIUSTO*.

Rübezahl The Turnip-Counter of German folklore (F465): a mountain and storm spirit identified with the Riesengebirge mountain range between Bohemia and Silesia. Rübezahl once abducted a beautiful princess; she wanted turnips (*Rüben*), so he planted a big field of turnips. In due time she wanted to know how many there were, and asked him to count (*zählen*) them. He began to count, and, as befalls so many dull-witted supernatural kidnappers, the princess escaped while he was counting. A. H. Krappe states, however, that the name Rübezahl is an unsolved etymological puzzle, and may not even be Germanic. See *STUPID OGRE*.

ruby A gem of the sun, generally the birthstone of December, under the influence of Capricorn, though it was formerly the stone of July. The Chaldeans assigned it to Mars and the Arabs to Taurus. The ruby of the Bible and the Koran was probably the carbuncle. The *Rig-Veda* says that he who worships Krishna with rubies will be reborn as a powerful emperor. The ruby was one of the stones of the Hindu *pañchratna* and *navaratna*, five and nine gem combinations; on the Kalpa tree the representations of ripe fruit are rubies. The Mohammedan angel who, like Atlas, bears the world on his shoulders, stands on a rock of ruby. A Burma legend tells of a dragon who laid three eggs. From one was born the king of Pagan, from the second, a Chinese emperor, and from the third came all the Burmese rubies. It has been said that the fire imprisoned within the ruby would shine through clothing or whatever was wrapped around it, and that if it were thrown into the water, the water would boil. In Brazil, lawyers wear rubies as a professional badge. Like most stones, it announces impending disaster by becoming cloudy, but regains its luster after the event. Sir John de Mandeville says the owner of a fine ruby will live at peace with the world, secure in his rank, and protected from all perils. This is in accord with Hindu tradition, for the possessor of such a stone could dwell without fear in the midst of his enemies. It also guards his house and property from damage by tempests. In his *Travels*, Sir John Horsey, messenger from Elizabeth to Ivan the Terrible of Russia, quotes Ivan, shortly before his death in 1584, on the virtues of the ruby: "Oh! this is the most comfortable to the hart, braine, vigor and memorie of man, clarifies the congeled and corrupt blood." Because of its color it was in wide repute to stop hemorrhages, cure inflammatory diseases, remove evil thoughts, banish sadness, dispel nightmare, dissolve anger and discord, protect from plague, control amorous desires, and make a man invulnerable to sword, spear, or gun; in Burma this last required that the ruby be inserted in the flesh. In the Orient the star ruby was particularly lucky because a good spirit was said to dwell within the stone. The Balas ruby, sometimes called the oriental ruby, was the one most often used in medieval times. In India rubies

are powdered and taken in a solution to dispel fear and excite joyous emotions. See CARBUNCLE; CARNELIAN.

Rudra In Vedic mythology, the god of storms who controls the cyclone and inflicts diseases (which he also heals); literally, the howler. Rudra is identified with the god of fire as a destroying agent. He was the father of the Maruts or Rudras, usually eleven in number, and in addition to them he is surrounded by troops of inferior beings. According to the *Purāṇas*, he sprang from the forehead of Brahmā and then separated himself into eleven beings, or he came into existence as a youth and begged Brahmā for a name. Brahmā named him Rudra, but he was dissatisfied until he had seven other names—Bhava, Bhima, Isāna, Mahādeva, Paśupati, Śarva, and Ugra. These names are sometimes used for seven manifestations of, or the sons of, Rudra as well as for Rudra and his successor, Śiva.

In the *Rig-Veda* Rudra has no distinct cosmic function but is regarded as a maleficent deity, the bringer of disease and death. He was also identified with the mountain spirits of India's hill tribes, and is therefore intimately connected with the mountains. He is described as the "ruddy boar of heaven" and is armed either with bow and arrows or with thunderbolt and lightning. His animal is the mole, his home the crossroads. He is the malignant deity of the Vedas, but also the healer and physician; and the epithet Śiva, meaning auspicious, is applied to him in this character. This name grows more and more frequent until it became his post-Vedic name. As it was applied, the character of the god grew more repulsive, making the transition to the Rudra-Śiva of the Brahmanical period and then to the malevolent Śiva of Hindu mythology. In the character of healer, Rudra's chief remedial substance was cow-urine.

rue This is said to be an herb of the sun under dominion of Leo, symbolic of bitterness, grief, and repentance, later of pity and forgiveness. It is also called Herb of Grace and while it was used to sprinkle holy water or in exorcising the Devil and evil spirits, and it is still thought to be a potent charm against evil eye, especially in Italy, at the same time because it is a bitter, poisonous, and mildly narcotic herb, it is a necessity in almost all witch-brews, charms, and spells. Pliny said weasels eat rue to make themselves immune to poisonous snakes. Dioscorides says that the seed is a cure for all poisons; Gerard says that anointing with the juice protects one against venomous bites and the poison from mushrooms, toadstools, and wolfbane. Rue was also proof against contagion and vermin, and was used as a strewing herb in English law courts for this purpose. A bush of rue was often tended as a chastity test of an absent lover; in the 16th century it was recommended to preserve chastity (i.e. it should be eaten when one was tempted). The Romans used wreaths of parsley and rue to protect from evil spirits. In order to make sure that your shot would hit its mark your flints should be boiled in rue and vervain.

Rue has been in high repute in scientific medicine since early times when Pliny recommended it against all poisonous bites, down to the present day when an element isolated from the herb is used for relieving tension in the blood vessels causing high blood pressure. The fact that it is still widely used in folk medicine is attested by its presence in most herb gardens in spite of

the fact that it is too strong to be useful as a culinary herb. Anglo-Saxon herbals at the beginning of the 14th century called it a cure-all and Culpeper is not much behind them in his recommendations. Its present uses are mainly confined to nervous disorders and female complaints, however. The Meskwaki Indians of the United States use the meadow rue (genus *Thalictrum*) in a love medicine to bring together estranged husbands and wives. See BASIL.

rumba A ballroom dance brought to the United States from Cuba about 1925. The step resembles a sinuous, subtle, and stationary two-step. The apparent hip-sway is caused by transference of weight from one foot to the other. As danced on the ballroom floors and in the night clubs of the United States and Mexico, it is a diluted, bloodless, self-conscious exhibition. In the West Indies, where it grew out of the mixture of Negro and Spanish blood, it can, especially in rural sections, transport the dancers into an erotic frenzy, beautiful because functional. Originally it was a marriage dance, depicting simple farm tasks: the shoeing of a mare, the climbing of a rope, courtship in the barnyard, etc. But the mime is subsidiary to the interplay of male and female. In Cuba it is also popular as an exhibition dance, both in the country and in fashionable centers, and as such ranges from sensuous undulations to acrobatic performances. [GPK]

Rumpelstiltskin or Rumpelstilzchen Title of a German folktale (Grimm #55, Type 500) known throughout Europe under various titles. Rumpelstiltskin (Tom-Tit-Tot in England, Titelture, Ricdin-Ricdon, Dancing Vargaluska, etc., on the Continent) is a dwarf who appears to the maiden, married to the prince because her mother boasted either that she could spin flax into gold or could spin impossible amounts into thread. Naturally, she cannot accomplish the task set her, but the dwarf does her work on the promise that she will give him her child when it is born. When the dwarf comes to take the child, she pleads with him; he insists on the bargain; at last he gives her three days in which to guess his name; if she can discover his name she may keep the child. One of the messengers she sends out to collect names which *might* be the dwarf's overhears the dwarf dancing in the forest and repeating a rime that includes his name (N475). The girl tells the dwarf his name, and Rumpelstiltskin is so angry that he stamps his foot into the ground and tears himself in two trying to free the foot.

This story is known all over Europe, to some extent in Russia, but not at all elsewhere in the world except where European influence has taken it. It was studied (along with *The Three Old Women*—Type 501) by C. W. von Sydow in his *Två Spinnsagor*. His conclusion, that it originated in Sweden, he later changed; it seems to be a tale from the British Isles that traveled to the Continent. Earlier studies of the type were made by Edward Clodd and Georg Polívka. A very similar legend is told of the building of churches in Iceland, Sweden, and Germany; the supernatural builder goes off when his name is guessed (F381.1) and leaves part of the building unfinished. No connection between this legend and the Rumpelstiltskin story has been traced, however. See GIRLE GUARLE; NAME TABU.

rune or runo The technical term for Finnish folk poetry in the ancient meter. In the books of the 17th century the word *runo*[i] was used to mean "poet" and in the folk songs the word has had the meaning "singer" until today. A *runo*, as a song or poem, is the work of educated people, but early adapted by the Finns and folklorists everywhere. (See K. Krohn in *FUF* IV, 1904, pp. 79-90.) [JB]

rutuburi A communal ritual dance of the Tarahumara Indians of Chihuahua, Mexico. Tradition derives it from the turkey. It takes place all night on a special dancing patio with three crosses facing to the east. The ceremony starts with the sacrifice of an animal and the dedication and serving of ceremonial food and the sacramental intoxicant, *tesguino*, three times toward each of the cardinal directions. Three shamans face the

crosses. The central one, the chanter (*saweame*), vibrates, then rhythmically shakes his rattle (*sawala*) while he sings, during the wet season to the rabbit, during the winter to the giant woodpecker, during harvest to the blackbird. Three times the shamans pace back and forth across the patio in front of the crosses.

Formerly men lined up separately from women for the actual dance. Today only women cross the patio six times. Then they circle in a counterclockwise direction, holding hands and leaping with a stamp from the left to the right foot. This continues for hours, till shortly before sunrise, when *yumari* is danced. Today the two dances are amalgamated.

Primarily the rutuburi is a rain dance and a thanksgiving for harvest, an invocation to the sun and moon. It is also danced at the curing of fields, animals, and people, and at death and memorial ceremonies. [CPK]

sabā-leippyā In the belief of the Taungthūs, Taungyōs, and the Sawngtung Karens of Burma, the paddy butterfly of the spirit of tilth. When the Karens sell paddy they retain a handful from each container so as not to lose the sabā-leippyā. This spirit is worshipped by sprinkling liquor over the jungle area being cleared by fire.

Sabazius A chthonic god of the Phrygians or Thracians, sometimes identified with Dionysus; he may be identical with the Biblical Sabaoth, and worship was, in Rome, connected with the settling there of Jews in the 2d century A.D. According to Plutarch, the Sabbath was originally the festival of Sabazius. The name perhaps has some connection with the Illyrian words for beer or health. He was a god of agricultural increase and of regrowth. One of the ceremonies connected with his cult, perhaps symbolizing the reacceptance of the god through his symbol and recognized as an adoption rite, was the passing of a golden serpent under the clothes of the initiates, across the breast, and down between the legs. Votive hands have been found decorated with the symbols of the cult of Sabazius. As Zeus or Jupiter Sabazius, his attributes were the eagle and the thunderbolt: this despite his chthonian origin.

Sabbat The witches' sabbath; the great gathering of witches and sorcerers said, in the Middle Ages and Renaissance, to take place regularly under the presidency of the Devil. On Walpurgis Night (May Day Eve) at least, usually on the quarter day eves (Candlemas Eve—Feb. 1; May Day Eve; Lammas Eve—July 31; All Hallows Eve or Halloween—Oct. 31), and sometimes on Good Friday, Midsummer Eve, or other days, the various covens were believed to congregate in some open place, often a mountain-top or a crossroads (compare WILD HUNT) to perform their black rites and reaffirm their subservience to the demon Master. In preparation for the meeting they anointed themselves with oil made from the fat and marrow of murdered babies. Then, carried by demons in the form of goats or asses, while other demons took their places at home, or riding

through the air on the handles of their brooms, rakes, or distaffs, they traveled to the meeting-place. At the meeting the great Master, sometimes in the form of a goat or other animal, recited their service—a parody of the Mass—which was followed by a discussion of evil deeds to be done until the next Sabbath. Novices were accepted: they swore fealty to the Master while placing one hand on the head and holding the sole of the foot with the other; they were baptized with a new name and pinched by an imp to make a blue mark that never disappeared. In return for their oaths, the initiates received the promise of help and protection from the Master and from the other witches and were given a familiar of their own. The company might then have to reaffirm obedience to the Goat by kissing his buttocks, which were said to be masked like a face. All then sat down to a feast of stolen food and followed this with a round dance with their backs to the center of the circle. The dance grew wilder until the Devil selected one of the women of the company as his mate of the evening. The dance broke up into couples, and a sexual orgy lasting until dawn finished the Sabbath. Though some authorities believe stories of the Sabbath to be perverted reports of the meetings of heretical sects (e.g. of the Cathari), the whole apparatus of the meeting indicates strongly a survival of some pagan fertility cult. The leader in the form of a goat having intercourse with a cult member (the sacred marriage of the god and the priestess in the open field), the anointing of the cultists' bodies, the phallic broomstick ride, the masking, the round dance, all are familiar fertility symbols.

Sa-bdag The Tibetan local spirits or "earth movers" who inhabit the soil, springs, lakes, and houses. The image of the local Sa-bdag is placed within the outer gateway of the local temple or monastery and is worshipped with offerings of wine and bloody sacrifices.

Saci A woodland spirit of trickster-like character in Brazilian Negro folklore and African-derived religious beliefs. Though clearly belonging to the African charac-

ter of "little people" of the forest found among many African tribes, the precise provenience of the Brazilian name for this type of being has not been ascertained. See AZIZA; MMOATIA. [MJH]

sacred animal Sacred animals are of two sorts: those associated with divinities as attributes of the god, and those which in themselves have acquired sacredness. Folklorists, impressed for a time by theories of totemism, were inclined to attribute both sorts to forgotten or at best obscure totemic ancestor cults. Others have preferred a theriolatric explanation which involved the hypothesis that men at one time worshipped animals. The theologies involved by these attributions were alive—if they ever were alive before they sprang from the heads of the folklorists—a very long time ago, and, now that we know something about the complexities of ancient cultures, are very difficult to prove. Animals represented as attributes of the gods are usually associated with them in their myths, as being specially favored by them or as having been a form into which the god shifted. The bull is associated with Zeus in the rape of Europa, though the association is probably much older than that seductive tale. The bear and the cow are sacred to Hera as doves are to Aphrodite. The list might be greatly enlarged. See BEAR; CATS; other specific animal entries. Whether or not they are attributes of the gods, they may be further divided into chthonian animals or animals of the underworld, and Olympian animals or animals of the air and sky. The chthonian sacred animals are those living in the earth, in dens and naturally about graveyards. Partly in consequence of this association these animals are thought of as spirits of the dead, messengers of the gods of the underworld, or attributes of these gods.

In India the cow is sacred and wanders unmolested through the streets and into the shops. The bull is one of the attributes of Śiva. In eastern Bengal the cow is given special honors at least twice a year. Considerable evidence has been gathered to indicate that the horse was once a sacred animal and some writers have explained the Aryan reluctance to eat horse meat as a racial memory. The owl, attribute of Athena, is, like the raven, a bird of the dead. Crocodiles in Egypt are sacred because they live in the sacred river. The "mormyrus," sacred fish of the Nile, is the incarnation of the Egyptian god Set. In India, too, the monkey god, Hanuman, is an important figure. Monkeys are kept from harm in the villages. Twins in West Africa have tutelary spirits in the form of small monkeys. The monkeys of Gibraltar are traditionally protected from harm. [RDJ]

sacred prostitution The question of sacred or temple prostitution has been given more importance by the folklorists of the Euro-American tradition than it probably deserves. If the fact that human beings are normally in a state of tumescence or subtumescence is accepted as a postulate, the relief of that condition in temples when ritual, music, procession, and dance produce a state of emotional elevation can be understood. Women attached to the temples are usually referred to as the servants of the god, the brides of the god. Inasmuch as religious ceremonies among many peoples are solemn and holy festivals, it is fitting that as the god, represented by an image, is unable to avail himself of the pleasures prepared for him, his representatives, the

priests, or strangers who have a quality of sacredness should do so. This was particularly appropriate in the temples of the Babylonian Ishtar, a goddess whose lasciviousness is reported by unenlightened travelers to have been remarkable.

In the Central Provinces of India dancing girls were initiated after a bargain had been made by their parents. They were dressed as brides, married to a dagger, and walked several times around a central post. In Hyderabad Hindu girls were married to Śiva and Krishna and were called "servants"; Mohammedan girls also were married to a dagger. The training was sometimes elaborate. In the Southern Provinces large numbers of women, initiated by symbolic marriage, were attached to the temples. Their duties, to dance before the gods on festivals, were generally prostitution, not of necessity confined to the temple grounds.

Among the Ewe-speaking peoples of the Slave Coast, Africa, girls between the ages of ten and twelve were trained in the temples and served priests and seminarists. Temple prostitution was customary in Syria and matrons were expected to, or perhaps, permitted to, serve in this capacity. The report there of male prostitutes to serve either men or women is an expansion of the general theme.

Although the rule is not universal, temple prostitutes (Babylonia and Syria) were required to accept without protest any gift their clients offered. Usually these gifts were personal gain and, if the women serving were townsfolk and unmarried, were used to build up the marriage portion. The steps whereby matrons persuaded their husbands that they might enjoy complete license at certain times in the year, whether as temple prostitutes or in orgiastic women's festivals, must be examined in relation to the special sexual mores of the several communities. Fragmentary reports are available from all parts of the world. The custom was clearly useful in reducing tensions and strains peculiar to societies in which action is controlled by rigid prohibitions.

The close association between religious and sexual exaltation has suggested to some scholars that "the religious impulse is *really* sexual," etc. See PHALLISM. Other students, impressed by the superstitions attached to purification, menstruation, blood, virginity, have given reason to conclude that virginity should be sacrificed to the god, or that fornication with a god or his priestly or human representative is more commendable than fornication under other conditions. Any act, particularly any act which is highly charged with emotion is a transition from one state of being to another and therefore dangerous and is to be surrounded by sanctions. [RDJ]

sacred thread A ceremony ritualized in India where investiture with the thread symbolizes entrance into rights and privileges. The ceremonies are complex and the rights are varied with the several castes and cults. Like so many folk ceremonies, the investiture with the sacred thread (*upanyana*) not only initiates the novice into the rites and ceremonies of his ethnic group but binds him more closely to the group itself. In this sense it has associations with the domocentric folklore of the umbilical cord, and with the thread used as a guide in the labyrinth or guide to the shapeshifted lover. [RDJ]

 The sacred thread is conferred upon a Hindu boy of the Brāhman, Kshatriya, and Vaisya castes as the most important ceremony in a Hindu's life, and is the mark, which must always be worn, of these castes. The thread, made of cotton and white for Brāhmins, red for Kshatriyas, yellow for Vaisyas, is in length 96 times the breadth of the four fingers of a man. This measure is used because each of the fingers represents one of the four states he will experience—waking, dreaming, dreamless sleep, and the state of Absolute Brahṁā. The cord is threefold, representing reality, passion, and darkness, or the three qualities of the body, and it is twisted three times so that darkness cannot gain the ascendancy. The whole cord is knotted with a triple knot representing Brahṁā, Śiva, and Viṣṇu.

It is presented to a Brāhman boy when he is eight, to a Kshatriya at eleven, and to a Vaisya at twelve. The ceremony originally lasted three days but in modern India is usually restricted to one day. The boy must spend a night in silence after which he eats with his mother for the last time, is shaved and washed, and then faces the sun holding the thread while his *guru* (teacher) repeats a mantra. When the prayer is concluded the boy slips the thread over his head so that it lies on his left shoulder and falls on the right side. He is then taught the *gāyatrī*, the most sacred of the mantras. This learned, the initiate offers nine pieces of wood dipped in clarified butter to the fire while addressing Agni, Sarasvatī, and the Sun. He is then "twice-born" and ceremonially pure. His duties now include the performance of the Sankhyā or evening worship. He can carry an umbrella, look in a mirror, and wear shoes, but he must not play or sing, walk the streets in the evening, spit toward the sun, speak unworthily, or make fun of women. He can never dine with women and must sleep in the men's section of the house. For a full account of this ceremony see S. Stevenson, *Rites of the Twice-Born*, London, 1920, pp. 27–45.

Kustī, (*kōstī kushtī*) is the sacred thread with which every Zoroastrian boy or girl is invested when he or she can recite the "Four Avestas," i.e. the *Śrōsh Bāj* (prayer to the angel Sraosha), the *Kushtī-bastan* (tying the thread), the *Pa Nām-i stāyishn* (in the name of praise), and the *Birasād* (may it come).

The *kustī* is a string about the size of a corset-lace, having six strands, each made up of 12 very fine white goat- or camel-hair threads twisted together. Near each end the six strands are braided together and in the last inch they are braided into three string ends, each containing 24 threads. When the two ends are knotted together the resulting six strings are a reminder of the six seasonal festivals (*Gāhanbārs*). The 72 threads symbolize the 72 chapters of the *Yasna*.

The *kustī* is usually presented with the *sudra* (sacred shirt) to Parsi children when they are 12 to 15 years old by a priest who is invited to the house. The *kustī* is a badge of the faithful, uniting the initiate to Ahura Mazda. The presentation and acknowledgment of this union is an occasion for a feast and a gay social gathering. Among some sects, however, the *kustī* is either put on at home without formality, or the youth goes to the home of the person who has taught him the four Avestan formulas and puts on the cord in his presence. This is followed by the presentation of a gift of sugar loaf to the preceptor. The *kustī* is always worn there-

after except at night. It can be washed when soiled. Those who do not wear the symbol are refused bread and water by the devout. [SPH]

sacrifice In the ritual sense, the consecration of an offering to a supernatural being or ancestral spirit, in placation, petition, or thanksgiving. Offerings may take the form of incense, flowers, vegetable food, drink, animals, or human beings, sometimes practical objects, or money. The offering may be tendered by an individual, by a representative for the community, or by communal participation and communion. Burnt offerings may take the form of the preliminary tobacco offerings in the American Indian calumet dances, the Hako, and generally in seasonal and curative rites; or of the incense or lighted candles placed at the altars during Catholic and Catholic-pagan rituals of Europe and the New World, and even more anciently in the Orient.

Food is placed on the fire during Bella Coola Indian *kusiut* ceremonies to please the ghosts of the deceased and supernaturals such as *Tlitcāplitāna*, the supernatural woman curer. Special cakes are baked for the dead and consumed by the Iroquois in the *ʔohgiwe* (related to the former Huron feast for the dead), and by Mexicans in the form of *panes de muertos* during the Feast for the Dead (Halloween). The Iroquois elevation of the cakes after the *ʔohgiwe* resembles the pillaging of the *ichas* at the *sumamao*, though the latter is mingled with Christian symbolism.

All corn and harvest rites offer first-fruits in thanksgiving. Both incense and foods are dedicated by the priest during the rain and harvest ceremonies of the Tarahumara and Maya Indians, as well as at death feasts. The Tarahumara *rutuburi* is consecrated by Jedications to the cross and cardinal directions, of tortillas, gourd bowls of stew, and *tesgüino*, the sacramental intoxicant. Portions are subsequently spilled or buried. The Maya of Chan Kom differentiate between foods for Christian and for pagan gods. For the Christian gods, e.g. St. Michael, St. Gabriel, etc., the women prepare *atole* and cooked meat like ordinary food, with the addition of special cakes, thick tortillas of maize meal and honey; for the *yuntzilob* and *chacs*, the ancient spirits and rain deities, special breads of maize meal (*zacan*) are wrapped in palm leaves and cooked in an earth oven, and the *noh-uah* and *yal-uah* breads are prepared by the *h-men* or shaman. *Sopas*, stews, consist of the meat of wild animals or consecrated domestic animals. These foods placate the gods of the fields before the burning of the bush to the number of seven dishes of *zaca*, to the number of 13 at the *okotbatam*. At the rain ceremony 13 vessels of the sacred drink (*balche*) consecrate the altar, the food offerings, and the participants.

Small animals or fowl are commonly sacrificed in Mexico, as turkeys by the Western Mixtec of Oaxaca and hens by the Otomí preliminary to the *volador*, hens or goats by the Tarahumara. North American Indian ritual food used to consist largely of dog meat; nowadays it is unsalted beef or venison. Animal sacrifice usually culminates in the sprinkling of the ground with the blood, which is imbued with life-giving properties. *Ianyī* is dispersed with the blood of roosters torn asunder in the rooster-pulls by the Santa Ana Santiagos on the Rio Grande. The Huichol shaman sprinkles the blood of a hen on the ground.

Wholesale slaughter of animals has a similar motif in southern India, e.g. the buffalo sacrifices at the Malayalam devil dances, and the Madiga festivals for the goddess Mahalashari and other deities. On the contrary, the shedding of blood may be tabu, as in the strangling of the white dog (formerly part of the Iroquois Midwinter festivals) and the strangling of a tame reindeer by the reindeer nomads of Siberia, for marriages, funerals, the Samoyed sun festival at Avamsk, etc. For a blood sacrifice the Yurak subsequently cut the throat.

A similar belief in sympathetic magic, of feeding the gods and conjuring rain, condones the gruesome practices of human sacrifice which are largely now a thing of the past. In their Mariah sacrifice the Khonds of southern India impaled their victim on a post or cut pieces of flesh from his back to fertilize the ground. The ancient Aztecs tore out the heart for Huitzilopochtli and for Xipe Totec, flayed the victim so the skin could be worn by the priest impersonator of the deity—a symbol of reincarnation. The tales of the dismembering of Dionysus, the twice-born, by frenzied Mænads, and of the death and resurrection of Osiris, point to similar rituals in ancient Greece and Egypt. It appears that in all cases the victim is deified and stupefied by intoxicants.

The noblest form of sacrifice, and the most misunderstood, is the voluntary offering of the celebrant's own body: the self-torture in the Plains Indian sun dance, of the *penitentes* and *arrieros*, scarification at initiations into sacred societies or into puberty, and the ancient Aztec ritual bleeding with cactus thorns.

At the other end of the scale are the substitutions in degenerate modern ceremonies, the gifts of brandy, cigarettes, cloth, money, skyrockets, for instance, during the Maya *okoztah-pol*, the Menominee-Chippewa drum dance, and the Iroquois *ganegwa'e* and *wasase*. These gifts are mutual between hosts and guests, and are also dedicated to the central ceremonial object, as the drum.

Sometimes the ceremonial consists of chants and prayers of thanksgiving, as commonly among the Maya. Usually a dance follows, as the *rutuburi* and *omigiwen*, or it is integrated, as in the Iroquois *ganegwa'e* and *nyagwai'oeng*, and the Maya *okoztah-pol*. In many of these integrated dances the motif of sacrifice has become vestigial, as in the sword dances of northern Europe and Spain, with their climactic symbolic decapitation (*degollada*) by a sword lock. The various forms of *Morisca* retain elements of sacrifice and rebirth, some with transformed ritual content, others as secular play. [CPK]

☞ The presentation of valued or holy objects and materials to deities and spirits, to induce or compel these latter to bestow their favors on the giver of such objects, is a common practice among North American Indians. Individual men and women were constantly offering sacrifices to spirits, ghosts, deities, plants, and so forth; these consisted of bits of food thrown into the fire, pollen and down offerings, beads, pinches of tobacco, among other things. A man or woman digging plants to be used as medicine in the eastern United States always left tobacco at the spot, in payment—if not, the cure would not be efficacious. Groups also sacrificed together; probably the two best known such group sacrifices are the Seneca (Iroquois) White Dog ceremony, and the Morning Star ceremony, in which a female captive was sacrificed, of the Skidi Pawnee.

Among the most prominent beings to whom sacrifices are offered are: the sky, earth, sun, moon, the cardinal points, the winds, thunder, the mountains, rocks, especially peculiar shaped ones, animals and trees, springs and eddies, lake and river and ocean-dwelling monsters. Materials used for sacrifice were tobacco (of paramount importance everywhere except among tribes in the northern third of the continent), food, clothing and adornment; these were the most widely used sacrifices. Implements were used less often; dogs, especially white ones, by a limited number of tribes (Iroquois, Cree, Ottawa, Illinois, Arikara, Skidi Pawnee). Buffalo skins, buffalo offal, bear skins and skulls, deer, elk, and moose hoofs, feathers of many varieties, and down, especially eagle down, were widely used as offerings. Corn, in the form of meal, is much used as an offering by agricultural groups, also corn pollen. Bits of the human body were also sometimes offered, the joint of a finger being a common sacrifice among several Plains tribes. In some instances, war prisoners were sacrificed; sometimes the bodies of these were later eaten. For an extended discussion of sacrifices among the American Indian see John R. Swanton's article on "Sacrifice" (*BBAE* 30, pt. 2, pp. 402–407). [EWV]

☞ Sacrifices of human beings, animals, and goods were widely practiced in the area of the ancient Andean civilizations. No ceremony, private or public, was performed without a bloody sacrifice and offerings. The Chibcha kept children in the temples and killed them when they reached puberty. Sacrifices of war prisoners by ablation of the heart was a characteristic feature of the religion of the Indians of the Cauca valley. The Inca also sacrificed children and women in honor of their gods but not on a scale comparable to that of the Aztecs.

Llamas and guinea pigs were the animals most commonly offered to the gods in ancient and modern Peru. The Araucanian and Patagonian Indians strangled mares at funerals to appease the ghosts and when danger was lurking to placate the spirits. The Peruvians also sacrificed animals for divinatory purposes in order to read the future in their entrails. The choice of the animals to be offered to the god was determined by very strict rules. [AM]

☞ In all of Africa, the concept of "feeding" gods, ancestors, charms, and all manner of beings or objects associated with the supernatural powers is basic for any comprehension of the nature of sacrifices and the act of sacrificing. Because of the closeness of the supernatural to the everyday world, its beings are thought of and approached much in the manner in which human beings are thought of and acted toward. Therefore, just as human beings become weak and irritable, lose power, and feel frustrated, thus perhaps becoming dangerous if they do not receive sustenance, so supernatural beings must be properly provided with the food they need if they are to function as aids to men, and are not to turn on those to whom they look for provision of their needs. It is against this concept that the wealth of ritual observances involving offerings of various sorts must be projected.

Certain special kinds of offerings may be noted. Human sacrifice, where it was practiced, was not done to feed a supernatural being, but was rather a means of sending a messenger to a royal ancestor or, in the case of a newly-dead ruler, providing him with a ghostly

entourage worthy of his position. Many different kinds of animals are offered to gods and ancestors—bullocks, sheep, goats, and, among the smaller forms, chickens, guinea fowl, and the like. Other sacrifices were of vegetables—millet, beans, maize, among others—while charms are “fed” by being sprayed with rum or by allowing the blood of a chicken to flow over them. In most cases, the “food” of the supernatural being consists of those portions of the animal not consumed by humans; the meat is ordinarily cooked and consumed by those concerned with the rites, at stated times in the rituals where the offerings have been made. [MJH]

sādhū A general term for a Hindu ascetic or mendicant holy man; often also a religious teacher, teller of parables, etc. The feminine *sādhvī* is used for a woman ascetic. The *sādhū* carries a begging bowl, a water pot, a staff, a rosary, and an *Oghi* or brush from which he must never part. *Sādhūs* belong to various sects but the greater number are *śaivites*. *Śiva* is the god who practiced austerities and became the patron god of ascetics. Followers of *Vishnu* generally practice abstinence from certain foods and drink and sometimes follow the rules of *yoga*, but they rarely emulate the self-torture which characterizes the life of *śaivite* *sādhūs*. The latter have attracted attention by such austerities as lying on a spike-bed (practiced in imitation of the fate of *Bhishma*, leader of the *Kauravas* in the *Mahābhārata*, who was pierced by so many arrows that his body did not touch the ground and he was thus supported for 48 days and nights before his death), taking difficult postures and holding them until a part of the body becomes stiff and atrophied, prolonged fasting, sticking knives or skewers into the flesh, treading on beds of live coals, or being buried alive.

The *sādhū* is recognized by his dress—ordinarily a salmon-colored robe, although some *sādhūs* are practically naked. He rubs ashes on his body as a defense against insects or demons, and uses colored earth to mark the *tilaka*, symbol of his sect or of the god whom he is serving, on his forehead. His hair is long and matted, coiled on top of the head, or entirely shaved off. He sleeps on the ground and collects food and alms twice daily, taking care to approach a house only after the regular mealtime has passed. At death the *sādhū's* body is not burned but is buried in a sitting posture since the ascetic is really in a trance and may revive at his pleasure.

saffron The dried orange-colored stigmas of the autumn crocus (*Crocus sativum*) used for their flavor, fragrance, and color for thousands of years in the Old World. Saffron was valued by the ancient Hebrews (see *Song of Solomon* iv, 14). In the Orient and the Middle East, and especially in Greece, it was much cherished for its bright yellow color. It was sprinkled in Greek theaters, courts, and rooms as a scent and deodorant; in Rome it was used to perfume the giant baths and to sprinkle the streets.

In India and Greece saffron was considered a strong aphrodisiac. The *Arabian Nights* mentions saffron as an aphrodisiac so powerful as to cause women to swoon; its perfume is also listed as one of the two things which “corrupt women” (the other being gold). The Arabs also believe that saffron kept in the house will drive away

a certain dreaded lizard; and they also use it to dispel melancholy.

Through the Arabs saffron was introduced into Europe; from them the French learned its medical value, i.e. that it cured gout and rheumatism. *Hakluyt* states that a bulb of the plant, hidden in a hollow stick, was brought to England from the Holy Land in the reign of Edward III by a pilgrim. According to the English herbalist Gerard, saffron “quickens the senses, makes merry, shakes off drowsiness”; but too much of it affects the brain.

In the 15th century saffron was carried by German peasants to ward off plague, and in Switzerland it was tied about children's necks to prevent disease. In Westphalia apple juice and saffron were given for jaundice (probably the doctrine of signatures, i.e. yellow cures yellow). Southern Germans valued it so highly that people in Nuremberg were sentenced to death for adulterating it. A similar value was put upon it in rural England, where saffron was often used as a standard to denote something unusually rare and expensive. In Ireland the crocus plant (*cróc*, *crocus*) is used by women in washing their sheets so that their arms and legs will be strengthened during sleep.

In Ku-lin (China) the people rub saffron on their bodies after bathing to make them resemble the gold body of a Buddha; Anamese mothers use saffron powder on the bodies of their babies as a tonic for the skin. Magic properties are ascribed to it in Persia; pregnant women wear a ball of it at the pit of the stomach to ensure speedy delivery and expulsion of the afterbirth. Saffron water is drunk in Persia also because of its magical virtues; in India it is used to write *mantras*.

Saffron tea is a general folk remedy for measles throughout the rural United States, and is also used as a mouth wash for babies with thrush.

Meadow saffron (*Colchicum autumnale*) is said to have sprung from the witch brews of Jason and Medea; its root is poisonous but cow's milk is an antidote. In rural England its flowers are called “naked ladies” from the fact that its leaves disappear so early.

sage This famous herb of Zeus (Jupiter) was used in Greece and Rome from early times for the seasoning of rich meats. At one time the Chinese drank sage tea as a beverage and before the importation of China tea at the beginning of the 17th century it was drunk as a beverage in England and throughout Europe. Now it is used as a tonic tea in the spring and fall. *Pepys* mentions a churchyard near Southampton England where the graves were planted with sage. *Culpeper* thought it good for the liver, helping it to “breed” blood; he recommended it also for the headache which announces the coming of a cold. Seven sage leaves, eaten fasting, for seven mornings was an old Sussex remedy for ague. It has long been held to promote longevity and to strengthen the brain as well as the muscles. It was also used for epilepsy, palsies, fevers, and laryngitis. Sage vinegar was once used as protection from the plague but is now usually used as a gargle or to whiten the teeth. In Texas the tea is used for rheumatism, among the Iroquois Indians for colics, colds, and for stiff joints. The Jicarilla Apache call the plant “ghost medicine” and brush the patient with it to shoo away bad dreams and nightmare. In the rural sections of the United States

sage leaves are often used to keep away ants. Georgia Negroes say that the names of the twelve Apostles written on sage leaves and worn in the shoes during a lawsuit will insure a favorable verdict.

Sagittarius A constellation, ninth sign of the zodiac, between Scorpio and Capricorn. From early times in Mesopotamia it has been recognized as an archer; it seems to have been identified with the Babylonian Nergal, their war god. The Greeks kept the bow-and-arrow-shooting mounted man and made a Centaur of it, but distinguished it from the non-zodiacal Centaurus. Where Centaurus represented Chiron the good, Sagittarius was a wild Centaur, modeled perhaps after the wild man of the Babylonian Gilgamesh epic, Eabani. According to legend, Chiron himself described Sagittarius to the Argonauts to guide them in their quest for the Golden Fleece. In India, the constellation was one of the Āsvins. It is the Persian Kamān, the Turkish Yai, the Hebrew Keshet—all meaning bow. It was identified with Joash (see II *Kings* xiii, 14–19), Ishmael, St. Matthew. The symbol of the constellation is an arrow with part of the bow across its shaft.

Saint Brigit or Bride (pronounced *breed*) (453–523) One of the three patron saints of Ireland (with Patrick and Columcille); also called the Mary of the Gael. She was born near Dundalk in County Louth, daughter of a local chieftain, Duġtaċ, and his bondwoman. Duġtaċ sold mother and child to a druid in the north, who on becoming a Christian gave Brigit her freedom, and she returned to her father's house. There she took the role of serving girl, as her mother had before her; she minded the dairy and milked the cows and filled the butter tubs; "she bettered the sheep and she satisfied the birds and she fed the poor." She wove the first piece of cloth in Ireland and for this reason her day (February 1) is a feast day for weavers and spinners. One night with a noble guest in the house Brigit threw to a lean, hungry hound the five pieces of bacon she was cooking for dinner, but when the meal was served no bacon was missing. The things Brigit wished for have delighted the world for centuries: "... a great lake of ale for the King of Kings; ... the family of heaven to be drinking it through all time; ... cheerfulness to be in their drinking; ... Jesus to be here among them; ... vessels full of alms to be giving away." In fact Brigit fed and gave to the poor so enthusiastically that she was the despair of her father. He tried to marry her off but she refused all suitors; he tried to sell her to the king, who not only was entertained by her stubbornness but impressed with her sincerity. With his permission she became a nun and founded the order and church at Kildare, which later became so famous.

At Brigit's shrine in Kildare burned her sacred fire. It was watched by 19 nuns in daily turn; on the 20th day Brigit herself kept watch. This fire burned and was guarded in her honor up to the time of the Protestant terror in the reign of Henry VIII. Today the blessing of the sacred fire on Candlemas (Feb. 2) is associated with this ancient sacred fire of Brigit, just as the ancient Celtic druid fire festival of February became replaced and syncretized to Saint Brigit's Day.

In Scotland in the 18th century, people still made Brigit's Bed on the eve of Feb. 2: a sheaf of oats dressed in women's clothes was laid in it; the housewife would

cry, "Bride is here! Bride is welcome!" This little ritual is interpreted by Stokes and others as a survival of an old fertility observance associated with the ancient Celtic Brigit, just as the sacred fire at Kildare was thought to reflect the flame of Brigit in her role of goddess of fire.

In Ireland Brigit's ribbon is a rush worn round the head on St. Brigit's Eve. It cures headache. St. Brigit's bow (*baġa Brīġde*) is a little cross made of straw and tucked into the roof thatch for protection to the house. A sheaf of oats or a loaf of bread or cake is placed on the doorstep on St. Brigit's Eve. Her day is the beginning of spring in Ireland. Brigit dipped her finger in the brook, they say, and off went the hen that hatches the cold. See DECEPTIVE BARGAINS.

Saint George Patron of England, Aragon, Portugal, and the Slovenes: one of the synthetic saints venerated by the fighting men returning from the Crusades who had come across his worship in the Near East. As patron of the Slovenes St. George took on many of the attributes of Kresnik, who was also associated with crops and cattle. In 1222 the Council of Oxford decided that his day should be kept as a national English festival on April 23. In this same century Jacobus de Voragine gave a notable account of his hagiography. St. George is particularly remembered for his adventures with the dragon (known to every schoolboy) and his prowess in fertilizing barren women (carefully kept from the youth of England). Both attributes are obscurely associated with the Greek legend of Perseus. After Perseus had slain Medusa he came across Andromeda, chained to a rock as a sacrifice to a local monster who was ravaging the country. After a great fight he slew the dragon and won the lady. This story, or one of the many others on the same theme known in all parts of the world, became one important part of the legend of Saint George. The other part, his ability to cure barrenness among women, if the sophisticated Pausanias is to be trusted, is associated with Syrian fertility cults, themselves obscure and fertile subjects of speculation. Barren women who visit the shrines of Saint George in northern Syria can be impregnated by the puissant saint incarnate in his priests. Women in all parts of the world who have had children, which according to local custom were illegal, have attributed the experience to supernatural beings: saints, gods, demons, and ghosts. The story of Perseus and Andromeda may well have connections with obscure cults of fertility or atonement. Whatever may be the validity of these speculations, the capacity of Saint George to cure barrenness and slay the dragon is a significant pattern in female folklore. [RDJ]

Saint Johnswort Any of a genus (*Hypericum*) of hardy perennial herbs and shrubs with deep yellow flowers. It probably originated in Assyria where it is hung over doors at the time of religious ceremonies to frighten demons and evil spirits. It was brought into Europe by the Crusaders under the name of *devil's flight* and in some localities has supplanted older herbs used in the same way to keep out the Devil, imps, ghosts, and thunderbolts. Since June 24 (Midsummer's Day or St. John's Day) is a favorite time for festooning doors and windows against demons, it is not surprising that the Saint's name should attach itself to this plant. On August 29, the anniversary of St. John's decapitation at the behest of Salome, it is said that red spots appear

on the leaves of some species. St. Johnswort was used in the 17th century to exorcise demons from those possessed; and it both revealed and thwarted witches. On the Isle of Wight, if a person makes the mistake of stepping on the plant, a fairy horse will rise up under him and carry him about at top speed for an entire night. Hung on the bedroom wall, it causes a maiden to dream of her future husband; in Denmark, if two sprigs are planted between the rafters by two lovers, there will be a marriage if their branches intertwine.

On St. John's Eve a sprig of the plant was hung about the neck of children to protect them from sickness during the entire year; a sprig about the neck was also believed to cure melancholy. Gerard recommended it for deep wounds, especially those which were poisoned or where gangrene had set in. It was considered good for sore eyes, nervous disorders of the heart, the blast in cow's udders, for chilblains, bed sores, and as a gargle. Today it is used principally in diseases of the chest such as colds, coughs, and bronchitis. The Meskwaki Indians of the United States use the great St. Johnswort (*H. ascyron*) in a cure for tuberculosis. The powdered root draws out the poison of water-moccasin bites.

Saint Nicholas Patron saint of Russia, of sailors, thieves, children, and virgins. Santa Claus, the stocky, bearded, red-coated gentleman of nursery folklore who is the patron of children on Christmas Eve, is the American counterpart (of Dutch origin) of the legendary Saint Nicholas, whose festival day is December 6.

The existing data on St. Nicholas is based entirely on oral tradition; the first written legends were composed about five centuries after his death. According to Methodius, St. Nicholas, only son of parents known for their good deeds, was born in Lycia, Asia Minor, early in the 4th century. When he received his inheritance, he gave it to the needy. In all accounts of the saint's life there appears the story that he threw gold into a house to provide three daughters with dowries. Shortly after his ascent to the bishopric, during a famine in his country, Nicholas acquired enough grain from ships bound for Alexandria to keep the region well fed for two years. In return for the grain, he promised the sailors of the ships that they would find the original quantity of grain on board when they arrived at their destination. After the miracle, the sailors became converts of St. Nicholas. Tradition maintains that in his old age Nicholas sat at the Council of Nicea, 325 A.D., but there is no historical evidence to support this. When he died, on December 6, 342 A.D., his tomb became a place of pilgrimage and it was said that a miraculous curing oil flowed from it.

Since the early Middle Ages, Nicholas has been a patron saint in Greece, Russia, Germany, Austria, Belgium, the Netherlands, France, Naples, Sicily, and recently the United States. The miracles of St. Nicholas held particular fascination for the Normans, a seafaring people. St. Nicholas, patron of children, has left his mark on society through such institutions as the Foundlings' Tower in Metz and the Santa Claus Home for Sick Children in London. The celebration of St. Nicholas' Day in this country during colonial times was marked by the putting out of wooden shoes in which his presents might be received on the eve of December 6. The St. Nicholas of those days was dressed in a bishop's robe

with mitre and was accompanied by a Negro servant, Black Pete. In Albany, N. Y., in 1848, St. Nicholas was called Sinti Klass, wore a tricorne hat, silver-buckled shoes, and smoked a long white pipe with orange ribbons. Santa Claus, a Dutch name for St. Nicholas, rides over the roofs in a sleigh drawn by reindeer on Christmas Eve and delivers presents to worthy children who have hung stockings over the fireplace. Thus transmuted into Santa Claus, the saint has become a traditional part of nursery lore. His usual symbol, three bags of gold, has become the bulging pack of presents for children. The celebration of St. Nicholas' Feast is apparently an old custom, originally observed on Martinmas (November 11), at which fertility ceremonies like the slaughter of cattle before the winter tree occurred. At this time, good children were rewarded by St. Martin with cakes, nuts, apples, etc., and bad children were whipped. Compare the Père Fouettard of French folklore, who travels with the gift-giving Bonhomme Noël at Christmas time, and Knecht Ruprecht. The St. Nicholas cake is lucky; Irish fishermen carry it in their boats to insure safety. See CHRISTMAS.

śakti The female side or consort of the Hindu gods. Śakti is important in one of the central doctrines of the Tantrists who, though capable of wild flights into magic and the empyrean of the esoteric, have chosen a comfortably concrete and commonplace symbol for their conception of humanity at its point of highest and noblest achievement. That is a śakti or female figure in the embrace of a Bhagavat with the lingam, as can be seen by separating the two, fully inserted into the yoni. At this moment, the worshippers believe the female and male forces (yin and yang) which control the universe and are frequently in opposition, are at a point of harmony. The two forces are flowing together and in the same direction, a situation which the Tantrists and many others believe is a boon devoutly to be hoped for. The contemplation of these two figures, who are thought to be in a condition of eternal ecstasy, is accompanied by rituals and exercises which are only slightly known because of the secrecy which surrounds them and because of the prohibition with which western European cultures have imposed. Similar views are held by the adherents of the Bon cult in Tibet and by some of the Taoist adepts of China. [RDJ]

śaktism In Asiatic India and surrounding areas, a convenient name for the worship of the female components of Śiva, powerful member of the Hindu trinity, in his aspect of creator and destroyer. Scholars are not in agreement on the origins of śaivism, śaktism, Tantrism, how these religions acquired their strongly erotic symbolism, or the force of that symbolism in contemporary worship. At present more careful studies need to be made of the Tibetan Bon cults, Chinese Taoism, and Tantrism itself. The Hindu theologians whose grammatical bent is to tidy things up present the śaktis and the other female divinities as concrete projections of the force conceived of as Śiva. The folklorist is tempted to reject this rationalization as metaphysical and to look at least tentatively for the origin of these divinities in local cults with the expectation that several local goddesses with an agrarian interest in fertility were combined.

In India these cults are very ancient. The existence of

similar cults in the Shang dynasty, China, in the second millennium B.C. and the fact that the priests of that time became the propagators of the cult-Taoism still strong in modern China may justify a very tentative hypothesis that Śaktism in one form or another is characteristic of eastern, probably northeastern, Asiatic folklore.

As in all popular religions the popularity, spread, and force of the cult has varied in the several areas where it has existed in different periods of history. The present stronghold of Śaktism in India is in Bengal, as Tantrism is strong in Nepal and Tibet. An account of Śaktic ceremonies in Assam in the 16th century emphasizes the cruelties and ecstasies of its worshippers. Large numbers of human males offered themselves as sacrifices to this female aspect of Śiva. This aspect is worshipped through meditation and ritual before pictorial representations or the living object. The worshippers seem to be fascinated by the cruelties of birth and death as well as by the ecstatic aspects of sexuality. Thus some Śaktic cults represent the Śakti or Devī, the consort of Śiva, and a more generalized concept of his female component, as either terrifying or beneficent. [RDJ]

Sally Brown A capstan chantey dealing with the favorite female of sailing men, a lady of comfortable morals and varied charms. She is "a Creole lady," or sometimes "a bright mulatter," and she knows her way to a sailor's pocketbook as well as heart. "Spent my money on Sally Brown," is the constant theme. Not only has she a song of her own, but her name turns up in other chanties, as in certain verses of *Santy Anna*. See CHANTEY.

salmon Tales concerning Salmon, Salmon Boy, Salmon village, and the release of salmon, are prevalent among the tribes of the Plateau and North Pacific Coast regions of North America, where salmon were caught in great numbers each year and were a staple article of diet. The release of salmon is credited to the trickster Coyote, who disguises himself as a baby, is adopted by women who have salmon, and who breaks their weir and causes the salmon to go upstream to people who previously had not been able to catch them. Other Coyote tales credit him with introducing salmon into various rivers, as payment for wives provided for him by people living on these rivers; if wives were refused, Coyote refused to let the salmon go into certain rivers. The tales in which Salmon or Salmon Boy are the chief characters are adventure stories or hero tales; in most of them a village of Salmon people is mentioned. [EWV]

Salt River A Kentucky tributary of the Ohio named for the salt once made on its banks and fabled in folklore as the haunt of the Salt River (ring-tailed) roarer (see Ralph Stackpole in Robert Bird Montgomery's *Nick of the Woods*, 1837) and the scene of political and other defeat. The phrase, to *row* (some one) or *be rowed up Salt River*, applied usually to a defeated candidate for office, is said to have originated in the supposed difficulty of navigating the river on account of its winding course and shoal- and snag-infested waters and also in the custom of punishing refractory slaves by hiring them out to row keelboats against the powerful current. However, by a curious transfer of ideas, in the figurative and slang use of the phrase, it is the passengers, not the oarsmen, who are considered unlucky. (See Clark B. Firestone, *Sycamore Shores*, 1936, pp. 124-134.) [BAB]

Salt Woman, Salt Old Woman, or Salt Mother One of the spirits of the Pueblo Indians, and a fairly prominent character in Sia, Cochiti, Isleta, and Zuñi mythology. Ever migratory, Salt Woman and Turquoise Man deserted the neighborhood of Zuñi because their flesh was being wasted; Salt Woman now lives at Zuñi Salt Lake. Salt Mother, when brought into a house at Zuñi, is addressed thus: "We hope you will come many times." Among the Hopi and at Taos, Salt is a male spirit, Salt Man, and for the Hopi, a war god. The procuring of salt is a ritual undertaking among the Pueblos, as it is among other Southwestern groups; men fast before going on the dangerous journey, and a man when returning, gives his first present of salt to his "aunts," after his head and body have been washed by them. At Isleta pueblo Salt Woman is "brought in" in an autumn ceremony, and her "veins are cleaned"; this is dangerous, for at it anyone with bad thoughts is liable to be turned into an animal. In Zuñi myths the Twins (see AHAYUTA ACHI) stole salt for human beings from the animals. Among the Navaho Indians Salt Woman is a variant of CHANGING WOMAN. See AWL MAN. [EWV]

Salus An ancient Roman goddess of well-being, prosperity, and health; identified with the Greek Hygeia. Though Salus is often depicted with Hygeia's snake and bowl, her older attributes of ears of grain seem to indicate that her identification with Valetudo (Hygeia's name in Rome) submerged the agricultural aspect to that of the health goddess. Prayers were offered to her at the beginning of the year, on the emperor's birthday, and in time of general sickness. Her temple on the Quirinal was dedicated in 302 B.C., some time before the appearance of Valetudo in Rome; Salus Publica, to whom the temple was devoted, is obviously a simple personification of public health.

Salutation Carol A carol of the annunciation, one of those preserved in the commonplace book of Richard Hill, and therefore of 15th century composition. The word "salutation" was frequently used for "annunciation." In this song the angel Gabriel says to the Virgin Mary, "Lady, from heaven so high,/ That Lordes heritage,/ For he of thee now born will be;/ I'm sent on this message."

Samain (pronounced *sovan* or *sowan*) The festival of the beginning of winter, celebrated on or about November 1 in Ireland and Gaelic Scotland and of very great antiquity. The word means "end of summer." One of the oldest Irish sagas states that the barrows where the fairies dwelt were open about Samain, and in Scotland a demon who stole babies at this time was called a *samhanach*. Another old saga relates that for three days before and three days after November 1 the warriors of Ulster assembled for eating, drinking, and boasting of the men they had killed, producing the tips of their tongues as evidence. According to Keating, in heathen times the druids of Ireland assembled to sacrifice to the gods and burn their victims on Samain eve. All other fires were to be extinguished, to be rekindled only from that fire. This custom still lingers on, without the sacrifices, in parts of Ireland and Scotland. The peat fires are extinguished in the cottages on Halloween and are relighted from the bonfires which burn on the hilltops. In the Highlands families used to circumambulate the

fields sunwise, holding fir torches. At Waterford groups of country lads, headed by horn-blowers, visited the farmers' houses and collected pence and provisions for the ensuing celebration. In parts of County Cork the procession was led by a man called the White Mare, wearing a white robe and the semblance of a horse's head, while in other parts the lads dressed as mummers and professed to be the messengers of the Muck Olla, a boar slain by one of the Geraldines. Until about 1850 the inhabitants of the Isle of Lewis used to assemble on the same night, bringing ale and provisions, repeat a paternoster (though mostly Protestants), and walk down to the sea. One of them waded into the water, poured out a cup of ale, and cried out: "Shony, I give this cup of ale to you, hoping that you'll be so kind as to send us plenty of sea-ware to enrich our ground for the coming year." The group then went to the church, stood silent for a while, and then adjourned to the fields for drinking, dancing, and singing. MacCulloch in 1911 mentioned the license permitted to youths on Samain Eve in the quietest townships of the West Highlands. Vallancey in the 18th century recorded that Irish maidens observed the festival by sowing hemp seed and believed that if they looked back they would see the apparition of their future spouse, or they would hang a smock before the cottage fire, convinced that his apparition would come down the chimney and turn the smock. See CELTIC FOLKLORE; CROMM CRUAĆ.

ROGER S. LOOMIS

samba A Brazilian couple dance, similar in history to the *rumba*, i.e. as racial blend, developed probably from the *batuque* danced by slaves on the plantations. Even in Cuba it is more restrained than the *rumba*, and in the United States its 200 intense and erotic step variations have dwindled into a precise sequence of small, bouncy two-steps. [GPK]

Sambo-kojin The Japanese Kitchen God, with three faces and two pairs of hands. [JLM]

samiri Hills, caves, or lakes from which the ancestors of the Aymara local groups and lineages are said to have emerged. They are regarded as sacred and the Indians visit them to gain new strength and energy. Samiri are also stone fetishes which protect the villages and herds. [AM]

samisen A three-stringed, banjo-like member of the lute family, probably the most popular of Japanese musical instruments. Its frame is rectangular, its neck long, and the resonance box is covered, like a double-headed drum, with stretched skin of cat or dog, or, in early times in the Ryukyu Islands (from which it was introduced about 1560), with the skin of a large serpent. It is played with a bone plectrum and used as accompaniment to folk singing and dancing, banquet entertainment and other festivities, geisha songs, and street songs. See MIN-YO. A special type of song rendered to the samisen alone is called *jiuta*. The samisen is frequently played in combination with the bamboo flute, *shakuhachi*, and the long zither, *koto*. A small bowed instrument similar to the samisen is called *kokyu*.

Samoyeds A Uralic group of people, related to the Finno-Ugrians, living in the arctic and subarctic regions of Asia. There are about 20,000 of them, divided into three groups: Yurak, Ostyak, and Eastern Samoyeds.

Their folklore is very rich. One kind of tale is sung, another is recited; they can be divided into customary and fantastic tales. The fantastic hero-tale has a hyperbolic form. The hero is usually a warrior wandering in search of adventures. The hero Itte of the Ostyak Samoyeds, for instance, struggled with the giant man-eater, Pünegusse, whom he conquered; but finally Itte was forced by foreign evil spirits to leave the land. The Samoyeds await his return, believing that he will come and make the people rich and happy. The northern Samoyeds have many lyric songs sung at burials and for matchmakings.

The common name for the chief spirit of all Samoyed religion is Num, meaning god, sky, or thunder. The domestic gods are called *hahe*. Each family has one male and one female domestic god, who are kept covered on a special sledge. Women are not allowed to take care of the domestic gods. The bad spirits are called *illike*. The worshipping of a tribal ancestor is common to all Samoyeds. Shamanism is also common, and the shaman or *tadibey*, often a woman, is a very important person. The shamans have their supporting spirits called *tadebtsy*. A man possesses, it is believed, three kinds of soul: the intellectual soul, the physical, and the shadow-soul.

Sampo A wonderful thing, often mentioned in the Finnish epic songs, probably a mill or idol, which brings good luck and produces all kinds of good fortune. The people possessing Sampo can live free from care. The hero Ilmarinen forged the Sampo for Louhi, mistress of Pohjola (Northland), but did not get the promised beautiful daughter of Louhi in return. The Sampo was hidden deep in a stone mountain where it ground out wealth. Väinämöinen persuaded Ilmarinen to go to Pohjola and bring away the Sampo; and the two heroes started off together in a boat. Lemminkäinen joined them as a third comrade. When the heroes arrived at Pohjola, Väinämöinen announced that he had come for the Sampo; he would take it either with good-will (i.e. divide the wealth among them), or by force. Väinämöinen lulled all the people of Pohjola to sleep with the playing of *kantele*, took the Sampo from the stone mountain and carried it to the boat, and they sailed homeward. On the third day Louhi woke from her sleep, prepared a thick fog and strong wind to oppose the robbers, equipped a war vessel, and went in pursuit. In the fight which ensued Louhi dragged the Sampo from the boat into the sea where it broke to pieces. Louhi then went home in great distress, taking with her only a small piece of the cover of the Sampo. Väinämöinen carefully collected the fragments of the Sampo which were washed ashore by the waves, hoping for welfare for the land of Suomi. Louhi sent all evil upon Kalevala, but Väinämöinen was able to protect his country successfully (see *Kalevala*, songs 10, 39, 42-3).

Even today Finnish scholars discuss what the Sampo really is. According to the opinion of Jakob Grimm this is not a myth, but a folktale about a wonderful mill

like the Grotti mill in Scandinavia. K. Krohn was convinced that the theft of the Sampo is reminiscent of a robber-expedition of Finnish Vikings to the rich isle Gottland or *Vuoja* of the runes. Finnish scholars differ also about the shape of the Sampo; books have been written on the subject, but the problem is not yet solved. For instance, Kaarle Krohn sought a parallel with the wooden idols of the Scandinavians, because the word *sampo* means "pillar." The famous philologist, E. N. Setälä, in *The Riddle of Sampo* (Helsinki, 1932), tried to prove that the Sampo symbolizes the Star of the North, which was nailed on the top of the "world-pillar," since the price for forging the Sampo was the beautiful daughter of Louhi, the Dawn. He was influenced by the astral-mythological school. In an earlier article he explained the Sampo as a dragon which brings goods like the para. Neither explanation has found the approval of other scholars. According to the most recent theory of U. Harva, the Sampo is a copy or idol of the mythical "column of the world," like the Irmin-column of the old Saxons (see his *The Theft of Sampo*, 1943, [in Finnish] and the Swedish article in *Saga och Sed*, 1943). The problem must be regarded as not being solved.

Reference: V. J. Mansikka, "Das Neueste über den Sampo" in *Mitteilungen des Vereins für finnische Volkskunde* I, 1943, pp. 59–63.

JONAS BALYS

Sämpsä Pellervo or Pellervoinen The genius of vegetation of the Finns, like Frey and Njordr in Scandinavia (see K. Krohn in *FUF* IV, 1904, pp. 231–48). In Finland Sämpsä was represented as being conveyed from an island, sleeping upon a corn-ship, with his mother as wife. A song from Ingria relates that in his absence nothing could grow. The name Sämpsä may be a Teutonic loan-word (from *simse* or *semse*, bulrush) and signifies a species of fodder grass, one of the earliest plants to appear in the spring. [JB]

Sancus, Semo Sancus, or Semo Sancus Dius Fidius An ancient Italian god of oaths, treaties, hospitality, marriage, and perhaps of the sown fields: sometimes identified with Apollo, sometimes with Jupiter. Information about this divinity is confused, and many of the conclusions about him are conjectural and vague, based on etymological reasoning. The oath *medius fidiis* is probably connected with Sancus, whose name derives from *sancio*, to make sacred, and is related to and often confused with *sanctus*. As a god of oaths, Sancus was connected with daytime thunder. He was invoked under the open sky; the roof of his temple had an opening in it; private worshippers stood beneath the compluvium (an open space in the roof). There was minor cult worship, especially on the Tiber island; his temple was on the Quirinal, and in it were the spindle and distaff of the virtuous wife of Tarquinius Priscus. He was, in Christian times, confused with Simon Magus because of inscriptions in his shrine on the island. Sancus has been identified with the Italian Hercules, but modern scholars believe this to be an error.

Sand Altar Woman or Child Medicine Woman Among the Hopi of the Southwest, the spirit of childbirth. She bestows infants and guards the game animals. She is the wife of Masauwü, and the sister of Müy'ingwa, Hopi chief of the nadir and of germination. [EWV]

sand, dry, or ground paintings Outline symbolic "paintings" made with colored sands or earth, on the ground, by various Southwestern Indians in connection with various ceremonies. The art also exists, but in less well developed form, among the Cheyenne, Arapaho, and Gros Ventre of the Plains region. Popularly referred to as "sand painting," the more exact term is dry or ground painting, since dry colored earths, not sand, are most frequently used. The art of dry painting has probably reached its highest perfection in North America among the Navaho Indians, who make their highly stylized ground pictures almost exclusively in connection with religious ceremonies. The paintings are in various sizes, some as large as 10–12 feet in diameter, and represent, in conventional form, various gods of Navaho mythology, divine ceremonies, lightning, sunbeams, rainbows, mountains, animals, and plants having a mythical or traditional significance. Since color symbolism is prominent in Navaho religious belief, the dry paintings afford a fine vehicle for expressing this. The five sacred colors of Navaho mythology—white, blue, yellow, black, and red—are used in Navaho ground paintings.

To be efficacious, a ground painting must be made without any error in the traditional design; among the Navaho it must be completed and also destroyed in one day. When the picture is finished, ceremonies are performed over it, and then with song and ceremony it is destroyed. Among the Pueblo Indians dry paintings are allowed to remain for several days before being destroyed. No permanent copies of the sand paintings which are made in connection with the various Navaho curing ceremonies or chants are preserved for guidance, nor are dry paintings made in the summertime.

During the past few decades the Navaho have begun to copy their sand painting designs, always with some error in one part of it so the original design will still be efficacious, for their rug designs.

Color reproductions of Navaho dry paintings have recently been published by anthropologists and collectors in several de luxe volumes; see for instance Franc J. Newcomb and Gladys A. Reichard, *Sandpaintings of the Navajo Shooting Chant* (New York, n.d.). [EWV]

Sand-Man A character in a nursery story found throughout western Europe. He is the man who puts children to sleep by sprinkling sand or dust in their eyes. Mothers say, "The Sand-Man is coming—the Sand-Man is coming . . ." This imaginary figure, like the East Frisian Finger-biter and other figments, is part of the development of children's folklore by mothers everywhere. See LULLABY.

sandunga or zandunga The regional couple dance of Tehuantepec, Juchitán, and Salina Cruz in Oaxaca, Mexico. The meaning, "beautiful and graceful woman," is appropriate to the statuesque demeanor of the Tehuanas who dance it. Men and women face in two lines and partners weave back and forth in front of each other. Then the man follows the woman around. Sometimes a languid waltz step is used, sometimes a step-pat in 2/4 time with the 3/4 time music.

The romantic song, to marimba accompaniment, speaks of frustrated love—*tu no sirves para amores*—and adoration—*Zandunga tu amor me mata, cielo de mi corazón*—(Zandunga, I perish for love of you, my heart's heaven). It is distinctly a secular courtship mime, with

the woman always demure yet provocative, haughty yet yielding, always the queen of the occasion in her magnificent lace-trimmed and embroidered costume. She is the perfect blend of Indian and Spanish reticence and fire. The dance is popular at social occasions, along with the similar *llorona* and *tortuga* (turtle). For weddings, stringed and brass instruments augment the orchestra. In a sophisticated, "dressed-up" version, it has invaded the theaters and tourist centers of urban Mexico, and the United States. [GPK]

śani In Hindu mythology and belief, the planet Saturn or its regent, the god of bad luck. śani is represented as a black man dressed in black; he was the son of Balarāma and Revatī, or of Chhāyā and the sun. He was left out of the invitation of the gods to rejoice at the birth of Ganeśa and so appeared at the gala affair uninvited and in a great rage. With a glance of his glowering eye he caused the child's head to drop off; and the gods substituted the head of a young elephant. śani as the planet Saturn is especially dreaded; he is represented (in Bengal) by an earthen pot filled with water. He is propitiated with an offering of *prasād*, a kind of pudding made of flour, sugar, milk, and plantains which must be eaten by his devotees in his presence. His day, also named śani, is not propitious. See SATURDAY.

Sañjñā In Purāṇic mythology, the daughter of Viśvakarma and wife of the sun (Sūrya) by whom she had three children, Manu, Yama, and Yamī. When Sañjñā could no longer endure Sūrya's fervors she gave him a shade as handmaid and retired to the forests as a mare. The sun approached her as a horse and from them sprang the Āsvins and Revanta. Upon returning to their home, she found the sun's brightness too overpowering and her father cut away an eighth of his brilliance on a lathe. Compare SARANYŪ.

sanjuanito A couple dance of Ecuador, mingling an Indian sadness with the coquetry of the Spanish colonial dance. Without ever touching, the partners glide toward and away from each other, and raise and lower a kerchief resignedly. The melancholy song in 4/4 time is accompanied on the guitar. The sanjuanito, literally little St. John, corresponds to the more worldly *marinera* of Peru and gay *cueca* of Chile. [GPK]

Sankeys Hymns derived from or patterned after those of the 19th century evangelical hymn-writers Dwight L. Moody and Ira David Sankey, as sung in Negro congregations of certain sects such as the Shouters of Trinidad. The singing begins fairly close to the originals but in slow, dragging, and mournful measures; then after a stanza or so, clapping and accelerating rhythms transform the song into a "shout" leading up to the emotional excitement in which the spirit is possessed by the supernatural. See RELIGIOUS FOLK MUSIC; RING SHOUT.

sannyāsi or sannyāsīn One of the seven chief sects of śaivite ascetics: literally, one who has cast off, i.e. home and possessions. The term is frequently used for any ascetic or mendicant. It is also used to designate the fourth stage of the life of an orthodox Brāhman—that in which he abandons earthly things and devotes himself to meditation. The sannyāsi wears a necklace of rudrāksha berries and a salmon-colored robe. He accepts food only from Hindus, avoids spiritous drinks, but smokes excessive amounts of *ganja* or hemp. Daily he must bathe

and worship Śiva. Frequently he bears the śiva mark on the forehead. The sannyāsi is buried in a sitting attitude after being bathed, rubbed with ashes, and clad in a reddish-colored shirt. Sometimes the skull is cracked so that the soul can exit easily. No śrāddha ceremonies are performed, since the ascetic quit this life when he entered the order. Compare SĀDHU.

Sans Day Carol One of the "holly-and-ivy" carols, named for Sans (or St.) Day in a Cornwall parish where it was first recorded. St. Day or They was a saint of Brittany whose cult was influential in Armorican Cornwall. The stanzas repeat: "Now the holly bears a berry as white as the milk" . . . "green as the grass" . . . "black as the coal" . . . "red as blood," and each time the second line brings in a statement about the life of Jesus. The song is known in a Cornish as well as an English version.

Santa Claus Father Christmas; the Christmas gift-bringer, usually represented as a fat, jolly old man who drives over the roofs in a sleigh drawn by reindeer. He is identified with Saint Nicholas, the patron of children, and his name is a corruption of the Dutch name of the saint, Sant (Ni)kolaas.

Santiago Saint James, the patron saint of Spain: identified by the Aymara Indians of South America with their Thunder God, Apu-illapu. All twins, all children born during a storm or conceived when lightning struck nearby, are dedicated to Santiago and regarded as his sons. Any place struck by lightning is said to have been visited by him and is consecrated by the sacrifice of a white llama.

The Fiesta of the Llamas is a minor celebration for the llamas, celebrated on July 25, the day of Santiago, by certain South American Quechua Indians. Every llama is given a little drink of chicha on this day to give him strength. Chicha is a mild beer fermented from certain grains and fruits by the South American Indians, among the Quechua mostly from maize. [AM]

Santiagos A masked form of *Morisca*, a typical fiesta dance of central Mexico, the Sierras de Puebla, and Veracruz, especially near Cuetzalan, Puebla, and in Aztec Huasteca: named for St. James, patron saint of Spain. As seen in Tecapulco, Guerrero, Santiago Caballero straddled a hobbyhorse supposedly imbued with life, and, half clown, half leader, he incited six *Cristianos* to battle against six *Moros*. A ragged buffoon meanwhile cracked obscene jokes and molested ladies in the audience with a repulsive desiccated squirrel. In medieval-type costumes the two lines of opponents shouted challenges at each other and engaged in stilted combat with their 22-inch machetes, skipping, whirling, and crossing over at stated intervals. Meanwhile a one-man flute and tabor tootled a little tune. This pattern prevails in other Santiago regions. In the Sierras the spoken drama is definitely concerned with the evil *Pilato*, and vengeance is taken upon him for the execution of Christ. Sometimes, in Puebla, the *Moros* are termed *Pilatos*. This dance is the same as *Los Moros y Cristianos* and *La Danza de los Pilatos* and is related to *Los Santiaguitos* of Chila, Puebla.

In several New Mexico pueblos Santiago appears on a real horse in connection with a bull-killing mime, with Geronimo and a group of soldiers or with Bocaiyanyi. He possesses supernatural power. [GPK]

Santy Anna A capstan chantey with a text dating from the Mexican War, relating the encounters of the American general Taylor and the Mexican Santa Anna. Some versions reverse history by having the American chased off by "Santy Anna" and these were sung with relish by British sailors. It has been suggested that the air may have originally belonged to a Breton sailor's prayer to their patron, Saint Anne. Negro influence is noticeable in some of the texts.

sanza, sansa, or zanza A musical instrument of African Negroes, consisting of a series of flexible metal or rattan strips of varying length attached at one end above a resonant box and plucked with the thumb to play a slender melody: popularly called the *African piano* or *thumb piano*.

sapphire The gem sapphire is usually the birthstone of April and Taurus. It has been variously ascribed to Saturn, Jupiter, Mercury, Gemini, and Venus. The Hindus call it bitter to the taste, lukewarm; wearing the sapphire was thought to render the planet Saturn favorable. Although sometimes confused with the hyacinth and lapis lazuli anciently, as in the case of the Mosaic tablets, it was probably one of the stones of the High Priest's breastplate and is mentioned in *Revelation* as one of the foundations of the New Jerusalem. *Ezekiel* i, 26 mentions the throne of God as having the appearance of a sapphire stone. Moses and Aaron saw the God of Israel with a paved work of sapphire under his feet (*Ex.* xxiv, 10). In Christian times it was symbolic of St. Paul and much in favor for ecclesiastical rings, because it protected from spirits of darkness and promoted chaste thoughts. The Hindus used it in their five- and nine-gem combinations (the *pañchrātna* and the *navarātna*); in an astrological charm, it represented Saturn and was placed to the west of the center. It was a stone of good omen, bringing health, wealth, strength, energy, and both divine and princely favor. It banished fraud and enchantments, preserved the wearer from envy and the fury of his enemies, mended his manners, and could even deliver one from prison. It provided a test of virtue by changing color in the presence of infidelity and the unchaste. Prester John is said to have slept on a bed of sapphire to preserve his chastity. It was used by witches in their enchantments; necromancers valued it highly because it enabled them to hear and understand the most difficult oracles. In Brazil the sapphire is worn as a professional badge by engineers.

Sir Jerome Horsey in his *Travels* quotes Ivan the Terrible of Russia thus: "The saphier I greatlie delight in; yt preserves and increaseth courage, joies the hart, pleasinge to all the vitall sensis, precious and verie soveraigne for the eys, clears the sight, takes awaye bloudshott and strengthens the mussells and strings thereof." It was an antidote for poison and poisonous bites; it healed severed membranes; cured fevers, agues, cataract, and duodenal ulcers; cleared the mind, skin, and sight; prevented the plague, boils, pustules; it prevented smallpox from affecting the eyes, as well as stopping excessive perspiration. In the 17th century, even looking at a sapphire made the eyes so strong that no harm could touch them. The star sapphire is especially lucky in the Orient because of a spirit imprisoned in the stone. Sapphires are used against the evil eye and witchcraft of all kinds. The Germans believed they

would bring victory. The good influence of this gem is believed to follow the first owner even after he has passed it on into other hands. See AARON'S ROD.

sarabande A 16th century Spanish court dance, also adopted in France and Italy. It is of unsolved exotic origin, probably Arabic-Moorish, with the name derived from *serbend*, song, or *sarband*, fillet for a lady's head-dress. The likelihood of Guatemalan origin is remote, considering the propriety of Indian dances and the wild and licentious character of the original *zarabanda*, also considering its presence in 12th century Spain. It would be sung and performed to bawdy verses by a single woman or by couples on the streets of Barcelona.

The music soon acquired a liturgical flavor, and the motions a noble sweep, less pompous than the *pavane*. Castanets were often played, as even by Cardinal Richelieu. The accompanying melodies flowed in sedate triple time, with accent on the second beat. The couples, in two lines, advanced and retired, changed places, and paraded down the center.

In the 18th century, when abandoned by the court and adopted by the theater, the steps took on elaborate designs: *coupés* (cuts), *rondes des jambes* (leg-swings), *glissés* (glides), *pirouettes* (turns), and other preballet evolutions. As an art product, the sarabande was incorporated into Lope de Vega's comedies, and into the musical suite, between the *courante* and the *gigue*. [CFK]

Sara-mama Literally, mother maize: the maize spirit of the religion of the ancient Peruvians. She was symbolized by strangely shaped ears of maize or by especially large specimens. After harvest, these were placed in a miniature bin made of maize stalks; various rites were celebrated in their honor and sacrifices were made to them. And these ears in which the Maize Mother or Spirit was believed to be incarnate were kept until the next harvest. The Chimú vases representing maize ears with human heads are probably images of the Sara-mama. [AM]

Saranyū In Hindu mythology, the daughter of Tvashtri, wife of Vivasvat, and mother of the Āsvins. According to the *Bṛihaddevatā* she was also the mother of the first human pair, Yami and Yama. Literally, her name means the fleet runner, a name well deserved, since she is said to have substituted another woman for herself and to have fled swiftly in the form of a mare.

Sarasvatī In Vedic mythology, Sarasvatī is both a river and a river goddess, worshipped for her fertilizing and purifying powers. She is described as graceful, white in color, with a crescent on her brow, and reclining on a lotus. In later mythology she was the wife of Brahmā and goddess of wisdom and eloquence. She was identified with Vāch. The Sarasvatī river was to early Indians what the Ganges is today. The identity of the river thus personified, however, is controversial and the name is now applied to two rivers, one flowing through the Punjab, the other rising in the Aravalli range. The Kāyasths or writer class of Hindus observe the festival of Dawāt Pūjā or "worship of the inkstand" in honor of their patron goddess Sarasvatī. This is held in the month of Māgh (January-February); on this day no Kāyasth will use any writing instrument except a pencil. After the festival a new inkstand and pen must be used. In Bengal, pens, ink, and account books are worshipped to honor the goddess.

sardana The national dance of Catalonia, similar to the *contrapàs* in the circular formation of couples, instruments, composition of *curts* and *llargs*, the steps, and the differentiation of the *ampurdanès* and *selvatà* versions. Its similarity to the Rumanian *sarba* and Greek *syrtos* has suggested Hellenic origin; also the name has suggested a legendary importation by the tall nomadic race of Sards who peopled Sardinia. At all events, though recorded for the first time in the 16th century, the archaic character of the steps and chant carry it back to ancient, probably pre-Christian times. Possible solar magic is inherent in the division of the older version into a melancholy 8-measure phrase of *curts* and 16 livelier measures of *llargs*, making 24, the hours of, respectively, night and day, as the dancers trace the course of the sun. The modern version, allegedly crystallized about 1840 by a musician, "Pep" Ventura, presents the leader with a new mathematical problem for each tune, a new combination of shorts and longs which have to come out even.

Notwithstanding Balkan affinities, the sardana is identified with the Catalan spirit, and in city and country alike draws together people from all walks of life, into circling in street or park. Its optional direction places it transitionally between the counterclockwise rounds of the Mediterranean and central Europe and the clockwise circling of western Europe. See ROUND DANCES. [GPK]

Sarkap Literally, Beheader: the Raja hero of many Indian folktales: so named because those who played *chaupur* with him and lost forfeited their heads. Possibly Sarkap was a historic ruler but he has never been identified. He was famous as the successful contestant in the game of *chaupur* until he was defeated by Raja Rasalu, with whom he is frequently associated.

Sasabonsam A forest-dwelling monster in the belief-system of the Ashanti Negroes of the Gold Coast. Sasabonsam is conceived as a tall being, with long legs and feet which point both ways, hairy, and with blood-shot eyes. With his feet, he hooks up hunters who pass beneath him. He is associated with evil magic, and is also linked in the conceptions of the Ashanti with the *mmoatia*, or "little people," who likewise live in the forest and are also workers of magic. [MJH]

sassafras Europe learned the medicinal virtues of the tree from the Indians of North America who taught the Spaniards and the Huguenots of its use to cure ague. In the 16th century whole shiploads of the root were sent to Europe, where it enjoyed a popularity as a cure-all comparable to that of the sulfa drugs and penicillin in the popular mind today. The Iroquois use the powdered leaves as a blood purifier, for wounds, and in venereal infections. The root they use as a tonic after childbirth, against fevers, and rheumatism. The Mohawks extracted the pith from the young shoots and soaked it in water for the eyes. The root-bark tea was a good spring tonic. Elsewhere the root, bark, berry, and crushed leaf are all used in various forms of tonic. The root is also used to flavor a beer or soft drink. Around Baltimore it is considered bad luck to burn the wood; in the Ozark mountains and Louisiana if the wood pops while burning, it is a portent of death in the house before the end of winter.

Satan The adversary; the fallen angel who became the great opponent of God; personification of the evil principle; prince of Hell and ruler of devils and imps. Satan, the Devil, is usually pictured as a handsome man, sinister and slick, with horns on his forehead, pointed ears, bat's wings at his shoulders, a pointed tail, and at least one cloven hoof in place of a foot. He is accompanied by the hellish odor of brimstone. In Renaissance Germany, he was depicted as a huge crow; in medieval art, he appears as a serpent with a human head. Satan obviously is the repository of the cattle, serpent, goat, and dragon deities of ancient cults; he is the pagan god reduced to subservience to the true God, yet always he strives to convert people to his evil ways (see FAUST). Satan is a Semitic demon in origin; Arabic lore distinguishes the shaitans as one of the classes of jinn; the word means opponent or adversary. He is placed in a duality with Jehovah; the Zoroastrian Ahura Mazda and Angra Mainyu show the same opposition, as do Tiamat and Marduk in the Babylonian epic. But Satan is not directly comparable to such underworld deities as the Greek Hades or the Norse Hel, nor to such adversaries of good as the Egyptian Set or Apepi or the Greek Titans. Such beings are somber, or they battle the gods, but they are not evilly malicious. All evil, however, has been attributed to Satan; sin, sickness, lies, death, treachery are the direct result of Satan's work. In fact, the world is more or less completely his domain, and, in German folklore, he is so busy running the world that he has to send his grandmother to do much of his work. Satan is known by many names, most of them euphemisms from the fear that merely naming him will put one in his power: the good man, the great fellow, the old gentleman (he is always that), Auld Hornie, Cloutie, the black one, Old Harry, Old Nick, Old Scratch. But most often he is the Devil, to distinguish him from the devils, like Beelzebub, who are his assistants and messengers. In many Christian countries, Satan is conceived as a master musician, and virtuosity on the favorite instrument of the people (violin in Europe; bagpipe in Scotland, etc.; banjo or guitar among American Negroes) is to be achieved only by a Faustian compact with the Evil One, in which the soul is exchanged for the skill. The crossroads at midnight is the proper setting for this bargain and lesson, in American Negro belief.

Satavaēsa (Avestan *satavaēsa*, Pahlavi *sat-vēs*) In Persian mythology, one of the four leaders of the stars, produced by Ahura Mazda to preside over those of the west.

šateček or šatečková The Moravian "handkerchief" dance for couples arranged in a counterclockwise round. Each couple is linked by two handkerchiefs held at shoulder level, the woman in front with elbows flexed, the man in back holding his arms out straight. The first part consists of eight smooth waltz steps around the circle, the woman looking back at the man alternately over the right and left shoulder. The second part is a fast light polka pivot under the joined arms held high with the taut kerchiefs. These two contrasting parts in smooth triple and staccato duple time alternate as often as desired. [GPK]

Satī In Hindu mythology, the daughter of Daksha and wife of Rudra (i.e. Śiva). She killed herself by entering the fire after a quarrel between her husband and

her father. The practice of sati (suttee) is in imitation or memory of this act.

sati or suttee The practice of burning a Hindu widow on her husband's funeral pyre; also, the widow herself: literally, a faithful or true wife. The rite of sati was abolished by British law in 1829 but it still survives in Nepāl. Sati was based upon the belief that the husband would need everything dear or necessary to his comfort in the next world. It was not Vedic in origin, for it is mentioned neither in the *Rig-Veda*, the *Sūtras*, nor in the *Code of Manu*. The custom was never accepted throughout India but was widely practiced in Bengal and Rajputana. It dates from the 4th century B.C. and by the 6th century A.D. it had religious sanction. During the 10th to the 15th centuries it was a Brāhmanic rite. Probably the rite persisted as long as it did because the sati was promised 35 million years in Svarga and the veneration of her spirit as a reward. Also, all members of her husband's and her own family were cleansed of evil, even that of killing a Brāhman.

✍ The satis are thus important female saints; all widows who have burned with their husbands on the funeral pyre are saints possessing healing powers. [mws]

satire In Old Irish mythology and legend, a spell or curse, usually a magic rime that brought dishonor, illness, and death to the victim. The ancient Celtic druids could rime people to death; later the gift passed to the poets (*filid*). There was no greater dishonor or disaster could befall a man than to be satirized, especially for ungenerosity, cowardice, or disloyalty. The first satire in Ireland was pronounced by Cairbre, a poet of the Tuatha Dé Danann, against Bres for meager hospitality, and Bres "decayed" after that. The satire was often used as a form of blackmail. The satirist who took Cuchulain's last spear in the last fight threatened to satirize him and all Ulster as "ungiving" if he did not give up the spear. So Cuchulain gave it and died without a weapon. The satire was usually recited at the victim face to face; red or black blotches and blisters came out on his face; soon he sickened and then died. See BATTLE OF MAG TURED.

Saturday or Saturn's Day The Jewish Sabbath when no work of any kind may be done, fire struck, or money carried: called *Shiyār* by the early Arabs. People are divided on whether it is a lucky or an unlucky day. Some believe that the sun will shine if only very briefly every Saturday, and others that a moon on Saturday is unlucky. In Ireland it is a good day for drownings: "Saturday's moon will drown or burn," the people say; and a rainbow on Saturday predicts a week of foul weather. The belief that people born on Saturday can see ghosts is widely distributed; in eastern Europe people born on a Saturday have the gift for seeing and detecting vampires. Saturday, which marks the end of a cycle, is a bad day everywhere to get married or to begin work. [RDJ]

✍ In Greece, even into the 19th century, Saturday was the right day for disposing of vampires; it was said that vampires occupy their graves or tombs only on Saturdays. If exorcism by a priest fails to quiet a vampire, the people go to his tomb on a Saturday, take up the body, and burn it. Southern United States Negroes, reflecting European beliefs, also say that Saturday holds "no luck at all," except that if you sneeze on a Saturday you will see your sweetheart on Sunday, and Friday night dreams told on Saturday are bound to come true.

In India also Saturday is a bad day; it is *ṣani's* day, day of the Hindu god who brings bad luck. See FLAX.

Saturn In ancient Roman religion, the god of agriculture: identified with the Greek Cronus, perhaps because of the equating of their two consorts in myth, Ops and Rhea. Saturn is generally held to have been a somewhat minor deity who came into prominence as an early king, culture bringer, and ruler of the Golden Age because of a tenuous identification with Cronus. As Krappe points out, the two theories of Saturn's nature contained in such a statement are irreconcilable unless a much earlier god, brought both to Greece and to Italy independently, is supposed. For Saturn appears early as a rather important figure; the Saturnalia was an important festival. In classical times, Saturn was thought to have been a king at the time of Janus. His temple stood at the foot of the Capitoline hill, where he was supposed to have made a settlement. The whole country was sometimes known as Saturnia, emphasizing the Golden Age of agriculture and civilized conduct thought to be a result of Saturn's rule. In myth, he is indistinguishable from Cronus; he was father of Jupiter, Pluto, Neptune, Juno — parallels to the Greek children of Cronus; he was dethroned by Jupiter. The name Saturn first appears applied to a day of the week, *Saturni dies*, in Tibullus, at about the beginning of the Christian era; Cicero mentions a planet name, Saturn. Compare SATURNALIA.

Saturnalia In ancient Roman religion, the festival in mid-December commemorating the Golden Age of Saturn's rule and actually a solstice ceremony of the turning of the year and of protection of the winter-sown crops. The Saturnalia was originally observed on the 19th of the month, but after the reform of the calendar by Cæsar on the 17th. The 17th and 18th were later observed as the Saturnalia, the 19th and 20th as the Opalia (Ops was Saturn's cult partner). Under Caligula, a fifth day, the *dies juvenales*, was added, and eventually a week of festivity was observed, from the 17th to the 23rd of December. From the custom of giving presents of waxen fruits, candles, and dolls, the later days of the Saturnalia came to be known as the Sigillaria, after the Sigilarii, the doll-makers, who made the figurines and who held a fair at this time.

The usual was suspended during the Saturnalia: no punishments were handed down by the courts; schools were closed; war-making ceased; the toga was replaced by an undergarment; masquerading and change of dress between the sexes occurred; gambling, especially dicing, was fully countenanced; social distinctions not only were not observed, but often reversed, as in the instance of masters serving their servants; speech and action (as in many fertility ceremonies) were to some extent unbridled. The whole series of observances obviously place the Saturnalia among the fertility rites; everything tended towards increasing the fruitfulness of nature and of the people and of ensuring the rotation of the seasons by observing the turn of the sun northward again. The gift of imitation fruit has apparently to do with increase; the candles indicate the making of new fires customary at the solstices; the dolls, as has been noted as early as Varro, are the remains of the custom of human sacrifice. Frazer indicates a late survival of the human sacrifice in a Roman outpost camp; the Phœnician Baal, notoriously a man-eater, was called by the Greeks Cronus and

Saturn; a king, Saturn, was elected and permitted great license before and during the festival, only to die at its close. The choosing of a mock king for the duration of the festival is thus seen to be a survival of this custom. Compare BELTANE; CHRISTMAS; LORD OF MISRULE.

satyrs In ancient Greek mythology, the goat-like fertility spirits of mountains and forests who formed part of Dionysus' train. The satyrs were male and always sexually aroused. They had athletic bodies, with goat legs, tails of goats or horses, flat noses, pointed ears, hornlets on the forehead—thus they resembled Pan in many respects. Typically drunken and lustful, they romped with the nymphs, and are often depicted chasing them. The satyrs were cowards, always fleeing, but dangerous to men when in their delirious rage. In early representations they were ugly in form; but later they were graceful youths, the ugliness being attributed to the fat silenī, really older satyrs. According to Aristotle, the satyrs were mortal.

The satyrs are often compared with other similar beings. The Romans identified them with the fauns, who originally were field and harvest spirits, duplicates of Faunus. The *seirim* (hairy ones) of the Bible are parallels, as were the old Arabic mountain-pass demons. The modern Greek *callicantzari* preserve some of the satyrs' features: hairiness, goats' ears and feet, the addiction to women and dancing.

The *sikinnis* was the special dance of the satyrs. Their membership in the dithyrambic procession led eventually to the drama of Greece—through a formalization of the dithyramb with a chorus of satyrs, to the satyric drama parodying the more serious legends, and to tragedy (goat-song) itself.

savin A plant (*Juniper sabina*) known for centuries for certain medicinal properties. It is a sterile plant, and according to the doctrine of signatures causes sterility. It was called the Devil's herb from being so universally used by European witches and sorcerers in their spells, and perhaps from its reputation as an abortifacient. In many English and Scottish folk ballads, savin leaves were eaten by illegitimately pregnant girls as an abortifacient. See PULLING THE HEATHER GREEN.

Savitri In Vedic mythology, a name of the sun, especially in its life-giving creative aspect: literally generator.

Sāvitri In the *Mahābhārata*, the heroine whose devotion to her husband was so great that Yama (god of death and lord of the underworld) was forced to restore her husband to life. Sāvitri, daughter of King Asvapati, insisted upon marrying Satyavāna in spite of the fact that he had only a year to live. After his death on the appointed day she followed Yama who carried off her husband's spirit. Yama was so impressed by her constancy that he offered her any boon except the life of Satyavāna, but she continued to follow him until he restored her husband to life.

savory Either of two plants of the genus *Satureia*. Both of these plants, as their name (savory) implies, are much used in seasoning, especially meat. They are plants of the satyrs under the dominion of Mercury. Culpeper says that they may be used interchangeably in medicine. They were recommended to expel wind, especially in pregnant women, and can be taken either internally or smelled. They were formerly much used

to cure stubborn coughs of the chest and lungs. The juice snuffed up the nostrils was good to brighten dull lethargic spirits; if dropped in the eyes, the juice cleared the sight. A savory poultice mixed with flour is good for sciatica. Savory was also used for impaired hearing, though its chief uses now are in digestive disorders.

saxifrage Any plant of the genus *Saxifraga*, native to Europe and the British Isles. It grows in the cracks of rocks and is popularly called breakstone. In Europe in the 16th century wet-nurses were wont to carry a sprig of saxifrage in their bosoms to increase the flow of milk; but it was so efficacious that it had to be removed in a few hours. In Great Britain the fresh root was chewed as a remedy for toothache and paralysis of the tongue, and was used in a decoction to take away freckles. Taken internally it cures a disordered spleen and drives away melancholy. According to the doctrine of signatures, it is efficacious for gall- and kidney-stones. It is said to dissolve mucus, and is therefore used as a gargle for hoarseness and sore throat. Dropped into wounds, the juice of the plant dries and heals them. In Russia women drink an infusion of the roots to prevent conception; and an infusion of the roots was drunk by the daughters of Attila to induce sterility. In Italy it is eaten by women to increase their beauty; and in German folk belief, the possessor of saxifrage can see witches on Walpurgis Night.

scalp dances American Indian victory dances around the enemies' scalps. From the Papago to the Blackfoot, returning victorious parties were met by dancing women. They dried, bleached, and decorated the scalps and fastened them on poles for display. The Juaneño scalps might include the ears, those taken by the Papago only a lock of hair. The scalps were tabu, and so were the warriors who had taken them; i.e. the scalps contained supernatural power and so did the men who had touched the enemy, and this power could be baneful previous to the proper ceremonies. Thus the warriors had to blacken their faces and undergo a period of ordeal and purification, among the Papago for 16 days.

In many tribes, men and women circled around a central scalp-pole: the Chaco Toba and Pilaga, the Zuñi, Papago, Oglala, the Ute in two concentric opposing circles. The Shoshone, Blackfoot, and San Felipe dancers carried the scalps on sticks, as men and women crossed and recrossed in two lines. Isleta and Blackfoot men and women flanked the scalp-takers in two facing lines. San Felipe men flanked the Opi war captain. Here, a selected girl danced with one Opi warrior after another, weaving in and out in the group.

Common features were a dramatization of deeds of prowess, frequently with weapons; races (Papago, Isleta); burlesque, often of an obscene nature (Zuñi *owinahaya*; women of Santa Clara, San Juan, Tesuque, Nambe); transvestitism (many pueblos); obscenity towards the scalp (Zuñi, Isleta) to reduce its power. After the insults, the Zuñi adopted the scalp into the tribe as a rain-maker. It also had that power at Santa Clara and other pueblos. The Papago *kuihui* or leaping dance around the pole consisted of forward and backward jumps with hands interlocked, as in the rain dance. Add to these fertility practices the sexual license frequently culminating the festivities—the scalps on their phallic poles were definitely invested with phallic properties.

Today the scalp and victory dances of the more easterly tribes have become secular amusement. The Sauk men and women limp in their clockwise Victory dance as a social pastime and to celebrate Armistice Day. The Iroquois enact stereotyped scenes of capture, rescue, conquest, in their *ganesho* for white audiences in connection with shows and lacrosse games. The songs for these last are also of a secular nature, separate from the ceremonial cycles. Originally, however, scalp-dance songs had great significance. The Oglala sang about the warpath, the Papago about the myth of Elder Brother who killed the monster eagle.

These ceremonies, dances, and songs of the warpath and of victory were destined to extinction along with the intertribal raids, or to secularization or transference to their secondary function of rain-making. [GPK]

scalping Removal of a portion of the skin, with hair attached, from an enemy's head: a practice of the North American Indians in aboriginal times, as shown from certain archeological material, which apparently was greatly increased in historic times. Scalps were exhibited in the war or scalp dance, particularly by eastern and southeastern tribes, as trophies after the return of a victorious war party; curiously enough it was often not the warriors (who were undergoing purification at the time), but old women who danced with the scalps in their mouths, or on the end of a pole, etc., during the victory dance. In colonial times the bounties offered by the French and English to Indian warriors for scalps were probably responsible for the spread of scalping to many western tribes which originally did not scalp. Contrary to popular impression, scalping, while painful, was not necessarily fatal; there are many instances in which scalped victims were sent back to their tribes alive as a direct defiance and an incitement to retaliation. Scalping receives infrequent mention in North American Indian tales; the wider practice of taking the entire head of a slain enemy is more frequently noticed. See *Handbook of the American Indians* (2 vols., Washington, D.C., 1906 and 1910), vol. 2, pp. 482-83. [EWV]

scapegoat Any material object, animal, bird, or person on whom the bad luck, diseases, misfortunes, and sins of an individual or group are symbolically placed, and which is then turned loose, driven off with stones, cast into a river or the sea, etc., in the belief that it takes away with it all the evils placed upon it. The term is derived from the goat upon whose head Aaron symbolically laid the sins of the people on the day of atonement, after which it was led away into the wilderness (*Lev. xvi*). The transference of sickness and sin to a tree, animal, or human being is a world-wide, usually annual, folk custom; it was practiced in the ancient classical cultures and is common among all primitive peoples. In ancient Greece, the scapegoat was often a volunteer; he was bedecked and led about the city, then stoned to death outside the walls. The culmination of the scapegoat idea is the dying god of numerous religions, typified by the crucifixion of Jesus, who took upon himself the sins of the world. See *SIN-EATER*.

 The expulsion of diseases by means of a scapegoat was widely practiced in the Inca empire and is still a popular method of curing among modern Quechua and Aymara Indians. Formerly, when a village was af-

fectured by an epidemic, a black llama was loaded with the clothing of the sick and driven out of the village to carry away the disease.

The Aymara and Quechua medicine men transfer the diseases of their patients to an animal, generally a guinea-pig, which is killed and burned, or to an object which is destroyed. They also abandon along a river food and clothes which have been touched by a sick person. Whoever carries them away takes with him the disease. See *DISEASES*. [AM]

scarab A beetle (*Scarabæus sacer*) of the Mediterranean region; also, its representation in stone, faience, etc., used as an amulet, seal, or the like. The Egyptians identified the scarab with the god Khepera. Its habit is to roll balls of dung for food supply and to lay its egg in such a dung pellet (Fabre showed that the egg was laid in a pear-shaped ball of dung, not in a spherical one). The hatching of the new beetle was a marvel to the Egyptians, who believed that this was an example of spontaneous generation, or at least of unisexual creation, since only the male beetle makes the dung pellet and since they did not recognize the female beetle. The scarabæus beetle was called *kheperer*, a word meaning to become, or phenomenon, or marvel. Thus identified with Khepera, the beetle became a symbol of the force that rolled the sun across the heavens, and of the rising sun, self-generated. Khepera was figured as a man with a scarab in place of his head.

The shape of the scarab lent itself readily to use as a ring or chain-suspended seal. It is found also in tombs on a heart-shaped base. These heart-scarabs of green stone set in gold were placed over the heart of the dead while a chapter of the *Book of the Dead* was read during the funeral service. The significance of the scarab here is that of resurrection; just as the sun was reborn, so would the soul of the man be born again. Since the scarab laid only one egg, phoenix-like it was the original beetle when reborn fully formed. In later times, Christ was known as the Good Scarab, for he was the "only-begotten son" of God.

Very early the scarab became a characteristic amulet in Egypt. Scarabs are found in tombs as early as the pre-Dynastic period (before 3500 B.C.). By the VI Dynasty (c. 2600-2500 B.C.), scarabs had become combination amulets and seals, bearing the names of the kings. Even during the Empire period (following 1580 B.C.) scarabs in popular circulation still bore the names of Khufu and Khafre, the great kings of the IV Dynasty, because of the magical power inherent in the names of these great pyramid builders. Still more popular, for many centuries after his reign, was the name of the great conqueror Thothmes III (c. 1501-1447 B.C.) of the XVIII Dynasty, the temple builder and restorer (Karnak, Memphis, Heliopolis, Abydos, etc.) and erector of such monuments as the obelisks now in New York and London; the Phoenicians, who manufactured cheap amulets for trade purposes, seem to have continued the use of his name on their mass-produced scarabs as late as the 4th century B.C. By the XII Dynasty (2000-1788 B.C.), scarab seals were in private use among the well-to-do. During the XVIII Dynasty (1580-1350 B.C.) the scarab became very popular as a common souvenir for visitors to temples, fairs, shrines, and the like. The hand-carving that made each scarab a work of art dis-

appeared almost completely, and in the XIX Dynasty scarabs were mold-cast and objects of little value.

Scarabs were fashioned in many shapes, all more or less maintaining the oval form, sometimes realistic representations of the beetle, sometimes abstract and stylized. In addition to the heart-scarabs, there were scarabs with human faces, especially during and after the XVIII Dynasty with Negro faces and with bull's or cat's or ibis' heads. Scarabs were known wherever Egyptian influence or Phœnician trade carried them: Canaan, Greece, Etruria, etc.

Schäfflertanz or **Böttchertanz** A carnival dance formerly performed in Munich every seven years. The two lines of men polkaed through various quadrille and longways formations and formed patterns and archways with iron hoops or, rather, barrel staves. The men appeared in brilliant scarlet jackets, black breeches, and gold aprons, and the hoops were adorned with flowers and boxwood branches. One tradition attributes the dance to the guild of coopers. (*Schäffler* is South German for cooper, *Schaff* meaning tub); another tradition traces it to the control of the plague of 1517, although the dance was already reported in 1463. The flowered arches relate it to the *arcos* of Spain, religious vestiges of ancient vegetation rites; and the potential contents of the tub suggest water magic. The seven figures are in keeping: *Schlange* (serpent), *Laube* (bower), *Kreuz* (cross), *Krone* (crown), *Kleiner Kreis* (small circle) of four circles, *Chassieren* (which advance and retire), and *Reifenschwung* (hoop-swinging by two central dancers in a large circle). In 1683 the *Schäffler* still fenced, thus relating them to sword dancers or *moriscas*. The *Schäfflertanz* was last performed in Munich in 1928. [GPK]

Schemen (from Middle High German *scheme*, mask): Carnival runners of Germany and Austria, still functional in processions at Imst in the Austrian Alps. Twenty of them appear in two groups, male *Scheller* and female *Roller*, named after the huge sleigh-bells and cow-bells fastened to their belts. The former wear bearded masks, the latter smooth, pink faces; and both have huge mirrored crowns, *Scheine*. They are parodied by grotesque *Lagge Scheller* and *Lagge Roller*, and accompanied by water demons, *Spritzer* (squirters), and *Hexen* (witches), who have their own round dance. The *Schemen* run and leap in their serpentine course. They are to this day a votive society.

In the Middle Ages similar maskers accompanied the Nüremberg butchers' guild or *Metzgertanz* in a similar running course, *Schemenlaufen*, as part of the phallic carnival procession. This course, also called *Schembartlaufen* (course of the bearded maskers) or *Schönbartlaufen*, was discontinued after 1539 because of excesses, but is commemorated in some 40 illuminated manuscripts.

The *Schemen* belong to the company of fantastic creatures surviving in rural Europe from pre-Christian fertility demons. They have a clear relationship with the (also Austrian) *Perchten*. [GPK]

Schlauraffenland The German term for the Land of Cockaigne. Medieval European satirists poked fun at the idealistic paradise conceptions of tradition, both religious and secular, by creating a mock country called by such names as Cockaigne or Schlauraffenland.

Schlauraffenland, an isle to the west, beyond the horizon, is a land of unspeakable wonders. Roasted geese chase themselves down the streets, turning themselves over as they flee. There are the traditional rivers of wine; ladies are perennially fair, and there is no such thing as an ugly wench. Here one finds neither night, death, hail, rain, nor futile disputations. In Schlauraffenland sleep is paid for instead of work. The inhabitants slake their thirst from rivers of wine or streams of milk; they surfeit themselves on roast geese and pigs that are always at hand; broiled fish simply serve themselves. At certain intervals in the week it rains torte, milk, or soup. Houses are built of cake and other delectables.

For the history of the word, consult the Grimms' *Deutsches Wörterbuch*. Old writers in Germany frequently used the phrase *Affenzeit* to date their stories; *Schlauraffe* is used by Brant (*Narrenschiff*, 1494) to indicate a lazy person. The word was used by Hans Sachs and also by Luther. Much influence on Continental lying tales of this type may be ascribed to Lucian's *Vera Historia*. See Erwin Rohde, *Der Griechische Roman und seine Vorläufer* (Leipzig, 1914). [GPK]

Schnitzelbank A cumulative drinking song of Germany, introduced into America by German settlers of Pennsylvania, Milwaukee, etc., and a favorite of beer-halls until the World War I prejudice against anything German reduced its popularity. Its pattern is question-and-answer: "Ist das nicht ein schnitzelbank?/ Ja, das ist ein schnitzelbank." Each stanza adds another item which is repeated in reverse order each time. A Pennsylvania Dutch variant is called *Di Lichputscher* (The Candle Snuffer).

schottische A couple ballroom dance of Swedish origin. The regular step is right forward, left close, right forward, hop right—all in fast, light duple tempo. The running schottische is three running steps and a hop. As many couples as will are arranged in a counterclockwise circle. The man's right arm is around his partner's waist and her left hand is on his shoulder. Fundamentally in all Scandinavian countries the two figures consist of sideward separation and meeting, then pivot right with four step-hops, in shoulder-waist position. As a variant the girl alone moves away to the right and back in. Or she moves back and the boy forward, and she finishes with a turn under his arm. The Swiss schottische is also called the "Swiss Changing Polka," because of the partner change. After each succession of steps the man moves right to the next lady. This dance includes various positions: ballroom, back skating hold, etc. At one time the boy kneels while the girl dances around him. For the finale he tosses her into the air. The American schottische introduces several other variants, as hand-clapping and pivot during the separation. The *chote* of New Mexico uses a buzz step for the pivot and introduces a heel-toe step and under-arm turn for the girl. As other "old-fashioned" dances, the schottische is increasing in popularity in the United States. [GPK]

Schuhplattler Shoe-swatting dance of Bavaria. In addition to local variants, there are two chief types: 1) for a man and woman (or a number of couples); 2) for two men. The first is a courtship mime of refusal and final acceptance, the woman calmly gyrating while the man strenuously beats a resounding tattoo on his leather breeches, his thighs, and on his shoe-soles. He

follows the woman with seductive clicking sounds. This sound, his postures, and the extravagant swinging of his arms during the swatting are a vestige of animal mime, of the antics of the black grouse and his female. In the final acceptance the arms are wound into a "mirror" through which they steal a kiss, as in the *Ländler*. The gay triple-beat music and the waltz step of the woman also resemble the *Ländler*.

The second, the men's Schuhplattler is a humorous and fierce challenge, a fight between two rivals, and the victory of one. (Compare OXDAENSEN.) Keeping up the swatting rhythm, the rivals crouch stealthily, leap, push with their shoulders, box their ears, strike their hands, pull their hair, beat knuckles on the floor, till the victor sits astride his rival and pummels him on the rear. An exuberant ease pervades this horseplay, the strenuous leaps (called *Haidauer* and *Tölzer Sprünge*), and the lifting of the girl into the air in climactic moments. [GPK]

Scorpio The Scorpion: a southern constellation, eighth sign of the zodiac, adjoining Libra, and containing the brilliant red star Antares. In classical legend Scorpio is the monster that stung Orion to death and terrified the horses of the sun while they were being driven by the inexperienced young Phaethon. Orion still flees before Scorpio; as Scorpio rises Orion sets. To the ancient Hebrews this constellation was also Scorpion (*'Akrabbh*) and emblem of the tribe of Dan. To the Akkadians it was Girtab, the Stinger. Among the ancient Babylonians it was regarded as one of the monsters created by Tiamat and as a symbol of the setting sun and darkness. Scorpio was Tsing Lung, the beneficent Azure Dragon of a former Chinese zodiac, but in the time of Confucius the whole constellation took the name of the fire star, Ta Who, Great Fire (Antares), and was worshipped as a protection against fire.

The people of New Zealand call this constellation the Fish-Hook of Maui, with which, their mythology says, he fished up their island from the underworld. Among the Miskito Indians of Honduras and Nicaragua, Scorpio's heliacal rising occurs a few days before Christmas, hence these people have named Antares Kristmas. See Heath's "Miskito Glossary," *IJAL* 16: 25. Among the Berbers, the constellation is sometimes likened to a scorpion, sometimes to a palm tree. They identify Antares as a youth climbing the palm tree, who stopped half way up to eye some pretty young girls.

In astrology Scorpio is an ill-omened constellation, bringing in its wake cold, darkness, storm, causing wars, and exerting an evil influence on the affairs of men. Its red star Antares is said to be as baleful as Mars, whose twin star it is considered. A comet appearing in the sign of Scorpio is thought sure to bring plagues. But the alchemists rejoiced in the heliacal rising of Scorpio, for only when the sun was in this sign could their coveted transmutations of baser metals into gold take place.

Scotch snap The inverted dotted rhythm characteristic of the Scottish national dance, the Strathspey, in which, for example, a quarter note may be followed by a three-quarter note. A similar rhythm is observed in certain jig tunes and in jazz, and it has been suggested that a part of the rhythmic character of jazz is derived from these European musical types.

Scott, Sir Walter (1771-1852) Scottish novelist and poet. Scott's interest in the ballads of the Scottish Low-

lands culminated in his *Minstrelsy of the Scottish Border* (1802-03); for this anthology he is assigned a prominent place in the annals of European balladry as early collector and enthusiast. The collection consists of authentic ballads supplemented by original pieces written in the ballad manner by both himself and his collaborator, John Leyden, a literate peasant. Concerning the "authentic" ballads, some controversy has arisen from time to time. For pronouncements on the matter, consult Albert C. Baugh, *A Literary History of England* (New York & London, 1948), p. 1208, n. 7.

That Scott was conversant with folk beliefs and customs, current both in his own time and in past periods, is evident from his use of folklore in his romances. There is much Scandinavian lore in *The Pirate*; Manx superstitions in *Peveril of the Peak*; a revenant in *Waverley*; a demon dog in *Count Robert of Paris*; a witch, Meg Merrilies, in *Guy Rannering*. More extensive suggestions on Scott's use of folklore may be found in several articles by C. O. Parsons in *Notes & Queries* clxxxiv (1943), pp. 95-97; clxxxv (1943), pp. 4-9, 92-100; clxxxviii (1945), pp. 2-8, 30-33, 76-77, 98-101.

scraper A primitive musical or noise-making instrument known to paleolithic man and still in use among certain peoples as widely separated as West Indian Negroes, North and Central American Indians, natives of India, etc. The instrument consists of a notched or dentated stick, bone, shell, or gourd, rubbed with a stick or horn or other hard instrument to produce a rasping sound; in an acculturated state it may be replaced by a kitchen grater or similar manufactured gadget. Its original significance is not so much musical as magical, both the phallic significance of the bone or stick and the fricative motion of the playing suggesting the sexual act and thus procreation and life-giving properties. Its chief uses have been as accompaniment to funerals and sacrificial rites, as in ancient Mexico (see AYOTL), in connection with dances of fertility and rain-making (see KACHAWHARR; DEER DANCE), and for wooing. Its use at funeral ceremonies, like that of the flute, is for the renewal of life, rather than for mourning, though the sound of the Aztec bone scrapers (*omichicahuaztli*) was described by a Spanish observer as very sad music. Wooden scrapers, or *raspadors*, are used in Mexico today by the Seris, Tarahumaras, Yaquis, and Mayos for their deer dances, which are rain dances. Among North American Indians both notched sticks and baskets rubbed with a stick or horn are associated with rain and fertility. The Yuman *Frog Song* series, for example, is accompanied by the scraped basket, and the association of frog, scraper, and rain is completely linked in symbolism. The Hopi have similar associations with their notched stick scraper rubbed with a bone (*truhkumpi*). The Cheyennes have a tale of wooing in which a maiden whose interest was difficult to arouse was finally won by a young man who courted her, following the advice of a wise man, by rubbing an elk horn with an antelope bone. The scraper of the Kānika tribe of India is an iron tube, the harsh noise of which stimulates tremendous emotional excitement as it accompanies the recitation of prayers and names of deities. Two survivals of the African scrapers in the New World are the jawbone and the dentlé. In China a scraper called the "tiger" (*yü*), a wooden carving in the form of a crouching tiger with

a serrated backbone is sounded three times at the close of the Confucian service.

sculpting dance A Labrador Eskimo burlesque of the skinning of a hunter's quarry. A small boy mimics the dead animal by lying down and covering himself with a shawl. The "hunter" dances in joy over the kill and in anticipation of the rare fur. He mimes the sculpting, crooning to himself. Suddenly the "animal" jumps up and runs off, leaving the hunter with a worthless skin. The moral is not to be greedy or vainglorious. [GPK]

seasonal ceremonies In many North American Indian tribes, ceremonies were performed during part of the year only. For example, on the North Pacific Coast winter was the ceremonial season of great and holy quiet, when dances and rites of all sorts were held; in summer the tribes devoted themselves almost exclusively to fishing, berrying, and laying up supplies of food. Among Eastern Woodlands tribes such as for example the Shawnee, summer was the season for the large ceremonies such as the Bread dances, and the Green Corn or Man's dance; at this time people lived in their semipermanent villages and tended their crops, while in winter they camped in small groups in brushy river bottoms and the men went off on hunting and trapping expeditions. Among the Maidu and other Central California tribes, October to May was the season for the *kuksu* ceremonies. In the Southwest among the Pueblos, although dances are held the year round, masked or kachina dances are held during the winter months only. [ewv]

Sebek, Sobek, Sobk, or Souchos A local god of the Fayum in ancient Egypt, figured as a crocodile or as a man with a crocodile head; his worship seems to have been especially prominent in the XII Dynasty, though he never was more than a local god. As Sebek-Râ, he was a man with a crocodile head; as Sebek-Osiris, he was the Fayum god of the dead, a crocodile with a human head; sometimes he appears as a crocodile with a hawk's head, probably identified with Horus. Sebek, as a sinister crocodile god, was often identified with Set, the slayer of Osiris. The sacred crocodiles in his lake within the temple precincts were under the care of his priests, who adorned them with jewels.

Sébillot, Paul (1846–1918) French folklorist, often referred to as the "Father of French folklore studies." Although he studied law and became a notary in Paris, he soon turned to painting and from 1870–1883 exhibited his pictures in the Salon. Having become interested in the life and lore of the people of France during his travels about the country, he turned his attention to their folklore and published a varied array of volumes on his findings: *Contes populaires de la Haute Bretagne* (3 ser., 1880–82); *Légendes, croyances, et superstitions de la mer* (2 v., 1886–87); *Littérature orale de l'Auvergne* (1898); *Le folklore de pêcheur* (1901); *Le folklore de France* (1904–07; 4 volumes of 8 projected); *Le folklore, littérature orale et ethnographie traditionnelle* (1913). For thirty years, he was editor of the *Revue des traditions populaires*, a periodical that published tales and other folk materials from all parts of France, gathered by Sébillot himself and by Cosquin, including original articles by each.

seconde The middle-sized drum of the Haitian vodun group of three, entering the rhythmic pattern after the

first (*bula*). It is usually about 22 inches high and 8 or 9 in diameter and may be played with the hands or with one hand and a stick.

Sedna The tale of Sedna, mistress of the underworld, is one of the most widely known of all Eskimo tales. Among the Central Eskimo the woman who is the chief figure is known as Sedna; in other Eskimo groups as Arnaknagsak, etc. The tale is practically the only origin tale existent among the Eskimo, but accounts only for the origin of fish and sea animals. Briefly, it is as follows: A girl refuses suitors, and marries a bird (often a fulmar) or a dog. The girl's father kills her husband and takes his daughter home in a boat. On the way a storm arises, and the father throws Sedna overboard. She clings to the boat, and he chops off her fingers; these become fish and sea mammals. Her animal children eat up the father. Sedna becomes the chief deity of the lower world, and each fall the Eskimo hold a great feast and festival in her honor. The Sedna tale is told throughout the Eskimo region, but in some versions is merged with that of Dog Husband. For references to treatments of the Sedna myth see Stith Thompson, *Tales of the North American Indians* (Cambridge, Mass., 1929), pp. 272–273. See ANGAKOK; ANGUTA; ADLIVUN; BEAST MARRIAGE. [EWV]

 The famous Sedna myth of the Eskimos has an interesting parallel in the mythology of some Chaco tribes. The Great Goddess of the Chamacoco is said to have mated with dogs and to have given birth to dog-like spirits. A similar story is told by the Mataco. [AM]

seguidillas An intricate, widespread couple dance of Spain. It is a descendant of the *fandango* and has developed not only many regional forms, but also has produced numerous other dances: *arriba* and *pasan* of Burgos, *habas verdes* of Extremadura. Regional variants are *guipzcoanas*, *gallegas*, *zamoranas*, *aragonesas*, *valencianas*, *murcianas*, *manchegas*. The last is the most typical, and is the source of the famous *seguidillas sevillanas*, commonly known as *sevillanas*. Combination with the *bolero* fashioned the *seguidillas-boleras* and *sevillanas-boleras*. Out of the *sevillanas* developed the *peteneras*, *guajiras*, *fandanguillo*. The *malagueña* is similar.

All seguidillas have a family resemblance. The *sevillanas* dazzle with their graceful coordination of arm lines, full leg-swings (*fouettés*), high *pas de basque*, and rhythmic counterpoint of castanets and footwork. They are proud and gay, more aristocratic than the abandoned *flamenco* dances, though they have become gipsified within the last half century. Characteristic steps are called *manchegas*, *lazos*, *piruetas*, *pasadas*, *panaderos*, etc. An important feature is the *paseo* (walk around). Each of the seven *coplas* concludes with *bien parado* (well stopped), a sudden posed halt, accompanied by shouts of *Olé*. It is essentially a virtuoso dance for one or two couples, and entirely secular, in contrast with the ritualistic communal dances of northern Spain. [GPK]

seide The sacred stones or luck stones of the Lapps; natural stones often having a peculiar form, resembling human beings or animals. They are used for divination and are offered for good luck in fishing, etc. [JB]

seises The six: the dancing boys of Seville Cathedral, now ten in number, formerly evidently six, as in the Cotswold Morris. The elaborate longways figures resemble those of the Morris. One of the sections of the dance

calls for stick play. Formerly in one variation the dancers dressed as girls, but usually they wear breeches, plumed hats, and bells, and ply castanets in their hands. They chant a hymn in two parts to orchestral accompaniment.

It is a chaste and entirely ritualistic performance, in contrast with the fiery couple dances of Andalusia. Though first mentioned in 1439, the dance of los seises is doubtless an ancient ritual form, related, according to Curt Sachs' cogent argument, to the *Moriscas*. In 1685, when on the verge of suppression, they were preserved by papal edict, "so long as the costumes" lasted. Thanks to repairs, they last to this day. Formerly the seises also danced in Toledo Cathedral, and there were similar groups in Valencia and Jerez. Corpus Christi is their great celebration, other sacred festivals being three evenings before Lent (Carnival), the octaves of Corpus Christi, and La Purissima.

The similarity to the *santiaguitos* of Chila, Puebla, Mexico is amazing, in formations, in the cast of young boys, the votive purpose, and the location in a church as part of a religious fiesta. [GPK]

Seketi songs A type of satirical song sung by Surinam Bush Negroes in connection with secular dancing and made up of topical comment. The origin of the type is the songs of Dahomean women's choruses devoted to eulogizing the chief and defending him and his ancestors against the taunts of enemies. (See M. J. Herskovits, *Suriname Folklore*.)

Selene The ancient Greek moon goddess: the Roman counterpart was Luna. Her mythology is minor; she appears importantly only in the Endymion myth (M433). Endymion's beauty so enchanted Selene that she came to Mt. Latmos to kiss him as he slept and to sleep at his side. As with other mortals loved by divinities, Endymion found only fatal peril in this situation, and, either because he begged Zeus to put him to sleep that he might always enjoy such dreams, or because Selene herself thus enchanted him to have him with her always, he was placed in eternal sleep, the never-waking lover of the moon. Another myth concerns Selene and Pan, to whom she submitted for the price of a white fleece or who had intercourse with her as a white ram. Selene was in later times identified with several other goddesses: Artemis (Hecate) principally, but also Hera, Io, Pasiphae. Her parentage—usually she is daughter of Hyperion and Theia—varies; she is, for example, sometimes daughter, sometimes sister, of Helios, the sun god. She is a charioteer driving winged white horses or cows or bulls (the lunar crescent as the cow's horns is a familiar symbol), or she rides a horse, mule, steer, or ram. As the counterpart of Phœbus Apollo (late sun god), she is sometimes called Phœbe; another name, Mene, is due to her change of aspect through the month. (The moon god Men was worshipped in Asia Minor, whence his cult came to Athens.) She was thought to have influence on reproductive powers, plant, animal, and human, and was invoked at the new and full moons. Selene, the moon, was in the Hellenistic era thought to be the place where the souls of the dead went.

sells Hoaxes, practical jokes, and hazing pranks which carry "aggressive humor" to the point where the butt of the joke is also its victim. Sells range from April Fool pranks (e.g. calling up the zoo to ask for Miss Campbell, Mr. Fox, Mr. Leo Lion) and children's tricks and catches

(see ADAM AND EVE AND PINCH ME; CATCH TALE) to fool's errands (sending a green hand in search of a mythical or fictitious object, such as a left-handed monkey wrench, a bottle stretcher, a four-foot yard stick, a sky hook), and hoaxing, coddling yarns and tall tales (see FEARSOME CRITTERS; LIARS AND LYING TALES).

As a playful deception of the gullible and ignorant, sells are aimed especially at the stranger, tenderfoot, novice, or greenhorn. Hence, their wide use in initiation rites in occupations and associations and their prevalence in backwoods and frontier communities, where rough horseplay affords an outlet for surplus energy and animal spirits and a relief from monotony, loneliness, and insecurity. The Western love of practical joking has been attributed variously to sadism and to democratic attack on pretense and affectation.

Two time-honored Western tenderfoot sells are the snipe hunt and the badger fight. In the former, the victim is lured on an evening expedition into the country, preferably to a lonely, swampy, mosquito-infested spot near a river, where he is left holding the sack in the dark, sometimes with a lighted candle on the ground, while the others retire presumably to beat up the snipe but actually to return home. (Compare the French custom of hunting the dahut, described by Jo Chartois, *JAFL* 58:21-24; see DAHUT.) In the badger fight the victim is inveigled into betting on a fight between dogs and a "badger," and, in order to prevent cheating, is requested to pull the badger out of the sack, only to find, to his public embarrassment, a chamber pot at the end of the rope.

In California gold rush days, a "noteworthy swindle, a practical joke, a brilliant hoax" was known as a whizzer, "plain whizzer" or "bald-headed whizzer" according to its adroitness (e.g. "jack-pine gold," in which a gullible stranger is inveigled into staking a claim and risking his neck on a jack pine said to bear gold nuggets near the top). Out of the rough humor of the mining camps developed the "hoax story" or journalistic sell (e.g. the petrified man in Mark Twain's story of that name and Dan De Quille's "The Silver Man"). Akin to the pastime sell, but to be distinguished from it, are swindling trade ruses like the Yankee razor-strop trade and humbugs like Barnum's "To the Egress." A link between the two is to be found in hoaxing, nature-making myths (mass hallucinations and deceptions) like sea serpents and flying saucers. (See Curtis D. MacDougall, *Hoaxes*, 1940.)

B. A. BOTKIN

Selu Proper name of the Cherokee Indian Corn Mother. She is the wife of Kanati, the Hunter, and the mother of the two Thunder Boys of Cherokee mythology. [EWW]

še'lu dīlskusti The "corn dance" of the Cherokee Indians of North Carolina and northeastern Oklahoma. Similar to the Iroquois *oneptōenp*. The dancers stomp in a counterclockwise arc, men and women separated. However, the Cherokee songs are antiphonal and accompanied by antiphonal gestures, the women planting, the men covering the seeds with a hoe. In the course of the dance, the men break into the women's line in alternation. Finally the leader winds the whole group into a spiral, as commonly among the Cherokee.

This dance is related to the women's planting rite (compare *rowisas*). It is included in the all-day corn

ceremony (*agohundi*) just as the Iroquois corn dance is a part of their Green Corn festival. Both invoke a good harvest and give thanks for it, the *agohundi* with curative rites, formerly incidental, now prominent. In the Christianized milieu, much of the original ritual significance has been lost. [GPK]

sembradoras Literally, the sowers: an agricultural dance for men and women of the Michoacán highlands (Mexico), especially Tzintzuntzan. The aboriginal function is still evident in the action and properties, though the steps, music, and costume are colonial. The men carry a hoe, shovel, or other farming implement, and the women hold baskets filled with fresh turnip blossoms, maize, and wheat, which they strew during the dance, and tortillas which they throw to the audience. Side by side partners circle counterclockwise around a yoke of oxen decorated with ears of corn, flowers, and ribbons. The first and third part of the dance uses a heel two-step, the second part a *zapateado*. In this section, the *jarabe*, the animals are driven off and the men and women dance face to face or cross over in two lines. The gay changeable music for violin and drum is as festive as the dancing. The costumes, too, are their best, the men with their cleanest white peon suits and finest fringed black-and-white serapes; the women with the modern Tarascan "roll" (a voluminous pleated wool skirt), embroidered blouse and sash, ribbons in their braids, all in blacks, reds, and whites.

This dance combines the actions of planting and sowing with the celebration of the first-fruits. At Candlemas (February 2), the date of the dance, the first harvest is in and the soil is ready for a second. The first-fruits are offered in the decorations of the oxen and the contents of the women's baskets, clear vestiges of sacrifice to agrarian spirits for thanks and further protection. [GPK]

Semele In Greek mythology, daughter of Cadmus of Thebes and Harmonia and mother of Dionysus: the name is that of the Phrygian earth-mother *Zemelo* (compare Russian *zemlya*, land; Lithuanian *Zemeþatis*, lord of earth); her Greek title seems to have been Thyone. According to the principal tradition, Zeus visited her clandestinely and fathered Dionysus. Hera disguised herself as an old nurse of Semele and, seeking revenge, convinced the girl that she must make Zeus appear to her in his glory as the divine bridegroom. In a very human manner, Zeus, the expectant father, could deny Semele nothing and promised to do anything she asked of him. Despite his warnings, Semele insisted that he appear in his splendor. The flame and power of the god of lightnings burned her to ash, but from her remains Zeus rescued the six-month Dionysus and sewed him into his thigh. Later Dionysus rescued his mother from Hades and made her a goddess. It is said that her sisters, Ino, Autonoe, and Agave, after she had been burned to death, reported that she really was pregnant by a mortal, and that Zeus killed her because she claimed him as her lover. The story reflects the common belief that to see or to be loved by a divine being is dangerous and often fatal: compare the stories of Iasion, Actæon, Tiresias.

Semiramis The Greek form of Sammu-ramat, wife of Shamshi-Adad V of Assyria; a historical personage (regent from 811–808 B.C.) about whom many legends collected and whose story as we know it today is entirely legendary, except for the reestablishment of her actual

identity. In legend, she was the daughter of Atargatis, who was a fertility goddess of the region to whom fish and doves were sacred. Semiramis was abandoned as an infant, and was nourished by doves: she is thus far identified with Atargatis, the dove goddess, but perhaps the popular etymology tying her name to the Assyrian word *summat*, dove, lies at the base of this identification. The royal shepherd Simmas found the baby and brought her up. Onnes (the name is reminiscent of the fish god Oannes, in turn linking her with the fish aspect of her mother) married Semiramis and in turn Ninus, the emperor, fell in love with her. Onnes committed suicide and Ninus made Semiramis queen. (Another etymological chain explains the legendary Semiramis: Nina, the feminine form of Ninus, is the goddess identical with Ishtar, with whom Semiramis is identified as fertility deity.)

The next event in her career makes Frazer suspect the attachment to her name of the ceremonial killing of the king myth of the region. She persuaded Ninus to make her ruler for five days, and on the second day she exerted her power and had him killed. As reigning queen, Semiramis traveled through her realm, building cities, roads, and monuments. Eventually all the great building feats of antiquity in the Persian and Armenian area were credited to Semiramis; especially is she noted as the builder of Babylon. During her 42-year reign, Semiramis (in this she is the counterpart of Ishtar) took many lovers from among her subjects; and, when her appetite for the lover of the moment waned, she had him put to death. Her own son was said to have been one of the victims of her lust. At the end of her reign, she turned her kingdom over to her son Ninyas and was changed into a dove. Another story says that she simply disappeared.

Throughout the story of Semiramis, there is clear evidence of the accretion of myth about a historical character—here a somewhat minor person—the myths being in several instances clearly much older than the queen they deal with. The seizing of the throne, for example, during the short-term reign of a temporary ruler involves material much older than the 9th century B.C. The abandoned child motif (S300) is found in the "histories" of great heroes from Moses and Œdipus. See ARA.

Semitic folklore A loose overall term used for convenience to designate the sum total of what are really the separate and distinct folklores of the peoples who spoke (or speak) Semitic languages. For the purposes of this article, however, the area is restricted to the ancient civilizations of the Babylonians and Assyrians, Canaanites and Israelites. Modern Semitic folklore, including especially that of the Arabs and Jews, has been excluded, on the grounds that so much of it is due to direct borrowings from other peoples and can therefore not be described as distinctive. The material thus embraced is by no means homogeneous, for the peoples in question never constituted a single ethnic unit nor possessed a single common culture.

Nor is the material necessarily of native origin. The Babylonians and Assyrians, for example, inherited much of their popular lore from the earlier non-Semitic Sumerians; just as a great deal of what passes today for Jewish folklore really represents direct borrowings from

the Gentile peoples among whom the Jews happen to have been dispersed. The criterion for calling the material Semitic is currency rather than provenience.

It is to be observed also that the term *folklore* must be interpreted, in this context, in a somewhat liberal sense; for many of the so-called Semitic peoples have long since disappeared, and their extant literary and other remains rarely permit us to decide with certainty whether a given practice or belief falls properly within the category of religion, as being a matter of living faith, or within that of folklore, as being but a popular survival. No one can say definitely, for example, whether the long lists of deities and spirits invoked in Babylonian magical incantations represent beings actually adored or merely form part of a traditional mumbo-jumbo, like the "ghoulies and ghosties and long-leggity beasties" of the familiar Cornish prayer. (The present writer has adopted the principle of assigning to folklore any element of a popular ceremony or any feature of a tale or myth which is no longer intelligible to performer or narrator, which is neither logically nor organically related to the whole, and which is out of harmony with the normative thought and usage of the period.)

Study of this ancient folklore is still in infancy; for although much attention has been paid to the Old Testament and to the later and more accessible Arabic and Jewish material, the earlier Mesopotamian and Canaanite sources, preserved in cuneiform script, remain virtually unexplored. The reason for this is that those sources are of relatively recent discovery and have not yet emerged fully from the preliminary stage of purely philological exegesis. Consequently, they have not yet been integrated, to any appreciable extent, into the general stock of world folklore, nor have the recognized techniques of folklore research been brought to bear on them.

To the trained folklorist, the present situation is, indeed, little short of chaotic and possesses all the features of a scientist's nightmare. With but rare exceptions, customs and ceremonies continue to be interpreted on an isolated, individual basis, without reference to their analogies elsewhere and to the fundamental significance which such analogies suggest; while tales and myths are artificially detached from their types and elucidated in terms of their specific settings, without recognition of generic motifs and without regard to the fact that they are, *au fond*, but particular variants of common and widespread themes. Nor, unfortunately, has there been any adequate *rapprochement* between Orientalists on the one hand and folklorists on the other, with the result that the former have tended to elucidate the material without proper regard for its cultural content and folkloristic context, and the latter to indulge in highly fanciful and even fantastic combinations unsupported by disciplined control of the original texts or familiarity with the known facts of Semitic culture.

Two major difficulties confront the student of this ancient material. The first lies in the fact that it reaches us, almost exclusively, at one or more removes from its original form. Most of the texts which have come down from Mesopotamian and Canaanite antiquity are of literary, religious, legal, or administrative character. There are no pure folktales, no popular songs, and no pure descriptions of popular ceremonies. Accordingly,

our task is not, as in other areas, that of collecting what still survives *explicitly* in popular usage, but rather of extracting from these secondary forms elements of folklore which are at once latent and *implicit*; and the only feasible way of accomplishing this task is by the always treacherous comparative method. If, for example, we can recognize in an otherwise inexplicable Babylonian custom something which in fact recurs in divers other cultures and the interpretation of which is everywhere the same, stemming from a constant and familiar feature of primitive thought, we are entitled to conclude that we have recovered a piece of Babylonian folklore. By the same token, if the point of a Canaanite myth, or of a particular incident within it, depends on the tacit assumption of an idea or motif widely attested elsewhere, it is not unreasonable to suppose that such idea or motif likewise found place in Canaanite popular lore. This, it may be added, is the method adopted by the late Hugo Gressmann and Hermann Gunkel in their pioneer studies of Old Testament *märchen*; and it has recently been extended by the present writer to the interpretation of Canaanite and Hittite myths (*Thesis*, New York, 1950). It scarcely needs to be pointed out, however, that it is a method attended with inherent perils and pitfalls.

The second difficulty stems from the obstinate problem of semantics. It is the easiest thing in the world to base interpretations upon purely conventional renderings of distinctive Semitic terms, without regard to the fact that such renderings merely squeeze distinctive concepts into alien molds. The Semitic word *ilu* (Hebrew *el*), for instance, is conventionally rendered "god," but to assume that whenever the word appears in connection with a Semitic ceremony or myth, something like our own concept of godhead is implied, is thoroughly to distort the true meaning and significance; for the fact is that to a Semite, *ilu* denoted any member of a wider category of gods, ghosts, spirits, demons, goblins and, in fact, any assumed agent of a suprasensory experience. No less easy is it to interpret the material in the light of such established anthropological categories as totemism, ancestor-worship, divine kingship, vegetation cults, and the like. The fact is, however, that the Semites possessed distinctive and original categories of their own, and these must be recognized and respected. A Semitic king, for example, may have been regarded as the punctual counterpart of some durative spirit, but that does not mean that he received his powers from that spirit or that he was actually invested with sovereignty by it. The two things may have run parallel on different levels, and the one need not have been informed by the other. Accordingly, to interpret the role of the king in custom or myth as merely that of a representative of deity is again to distort the picture. Finally, it must be realized that no reliance can be placed upon snap identifications of figures in the Semitic pantheons. The Babylonian Shamash, for example, is usually regarded as the god of the sun. But to interpret his role in custom or myth exclusively in terms of his solar aspect would be grossly misleading; for Shamash was also the god of justice, and many of his attributes and characteristics issue from this side of his nature. Thus, when he is portrayed carrying a saw, it does not follow that this was the instrument with which he was believed to cut through the doors of darkness when he emerged every morning. It

is equally plausible that the saw represented the same notion as is conveyed in Semitic speech by the fact that most words denoting "decide, adjudge" mean basically "cut" (compare our "clear-cut decision").

Offsetting these difficulties, however, the recovery of ancient Semitic folklore is aided by one valuable and reliable clue, namely, that of language. Just as Jakob Grimm was able to retrieve a great deal of early Teutonic folklore by studying the history of Germanic words, so it is possible for the student of Semitic lore to find in etymology a wealth of information concerning early practices and beliefs. The Hebrew word for "bridegroom," for example, derives from a verbal root meaning "to circumcise," immediately recovering to us the information that in early usage circumcision was a preparation for marriage. Similarly, the word for "bride" would appear to be connected with a term meaning "to confine, seclude," pointing to the custom of secluding brides at the time of the nuptial ceremonies. Again, the word for "to initiate, educate" is a denominative verb formed from the noun "palate," and recalls the fact that it was customary to anoint with oil the palates of new-born children. These examples could be multiplied a hundredfold.

For the purposes of this article, it will be convenient to divide the total domain of Semitic folklore into the two major divisions of oral or written folklore and of practices and customs, and to consider each in terms of the separate cultures involved.

Tales, Songs, Riddles, and Proverbs

Babylonian and Assyrian No Babylonian or Assyrian folktales have come down to us. Familiar märchen motifs, however, abound in the major myths and epics, and not infrequently the true point depends upon the assumption of an idea or folk belief attested in other cultures, and evidently part of the common stock of Babylonian folklore. The myths and epics (all of which are characteristically anonymous) are to be regarded as traditional books to which each generation added its own quota and which each adapted to its own needs and tastes. The longer of them therefore represent accumulations of tales, originally distinct but eventually welded together into a seemingly consistent whole.

Thus, the famous *Epic of Gilgamesh* is really a repertoire, rather than a single narrative; and the progressive adventures of the hero are merely an artificial literary cadre. The constituent tales include such familiar but originally unrelated types as (a) the Rivalry of the Two Culture Heroes; (b) the Fight against the Ogre of the Mountain; (c) the Circe or Lorelei Legend; (d) the Journey to the Otherworld; (e) the Primeval Deluge; and (f) Man's Loss of Immortality. Each tale preserves the characteristic motifs of its type. Thus, in the Rivalry of the Two Heroes—a counterpart to the stories of Jacob and Esau and of Proetus and Acrisius—the one is the master of knowledge and founder of the city, while the other is an uncouth vagabond. In the Fight against the Ogre of the Mountain, that monster appears to have possessed a Gorgonlike face (F526.3) which ordinarily petrified his opponents (D581), and he belongs to the same class of beings as Rübzahl (F465). The Circe or Lorelei Legend appears in the tale of Ishtar's attempted seduction of Gilgamesh. In refusing her advances, the hero reminds her that she has trans-

formed all her previous human lovers into animals; and, as the late A. H. Krappe has pointed out (*Balor*, 70 ff.), such transformation is a common euphemism for death in folktales. What is implied, therefore, is that the goddess played the role of a siren. In the story of the Journey to the Otherworld, we are introduced to the motif which Clouston (*Popular Tales and Fictions*, ii, 96) has made familiar under the title of "Old, Older, Oldest," the hero being passed on from one helper to the next until he finally reaches the antediluvian sage Ut-napishtim. Moreover, the details of the journey bear a marked resemblance, as S. H. Hooke has observed (*Folk-Lore*, 1934: 195–211), to incidents in the Biblical saga of Elijah (*I Kings* xix; *II Kings* ii) and to certain Melanesian myths. Other well-known motifs also appear in this tale, likewise derived from popular lore. Gilgamesh reaches a magic garden—a kind of *Schlawraffenland*—the trees of which yield jewels (F166.1), and when he crosses the perilous River of the Underworld (F141.1.1), he has to be careful not to touch the waters with his hand, but only with poles. Moreover, he has to be provided with food for the journey, and the point of this—not explicitly brought out—is that he must be saved the temptation of eating the food of the otherworld, for this prevents return. Finally, in the story of Man's Loss of Immortality, we meet with the familiar feature of the magical plant which confers that boon (D1346.5), and also with the equally familiar idea that the possession of the boon passed, by untoward circumstance, from man to the serpent. Despite its heroic framework, therefore, the *Epic of Gilgamesh* is, at bottom, a collection of popular märchen artificially clustered around a traditional figure of legend. The folklorist who recognizes its constituent types and composite nature can but look askance at the conventional attempts to interpret it as an organic whole, e.g. as representing the progressive journey of the sun through the constellations of the zodiac!

Even the framework of the story betrays the influence of märchen. The opening verses which introduce the hero as "he who saw the abyss, knows the seas, visited the [far-off land], who knows all things, has beheld all secrets, journeyed the long road of death and returned to tell the tale" has all the hall-marks of the beginning of a fairy tale, and bears a close resemblance to the initial verses of the *Odyssey*. Moreover, Oppenheim has suggested (*Orientalia* 17 [1948]: 19 f.) that the compiler may have regarded the twelve tablets of the story as representing what was inscribed on the first twelve tablets laid by Gilgamesh in the walls of the city of Erech. Such an artificial cadre would correspond, in general idea, with the scheme of the *Decameron* or the *Thousand and One Nights*, by which the successive tales are integrated into a connected whole. It would be part and parcel of the traditional technique in composing repertoires.

The myth of *Ishtar's Descent to the Netherworld* likewise draws freely on märchen and popular lore. If Oppenheim's reconstruction of the story is correct (*Orientalia* 19 [1950]: 129 ff.), one of its cardinal elements is simply a variant of the well-known motif of Literal Pleading (J1161). Ereshkigal, queen of the netherworld, outraged at the reception which has been accorded to one of her emissaries, issues an order forbidding any of the male or female deities of heaven to enter her

realm. Ea, lord of wisdom, evades this decree by promptly fashioning two androgynous creatures—neither male nor female!—to undertake a mission into that domain. The story seems also to incorporate a piece of popular lore in the statement that when the goddess Belili heard of the fate of Tammuz, she tore her necklace and scattered its jewels of lapis lazuli upon the face of the earth. This is evidently an allusion to some popular belief concerning the origin of a dark blue flower; it may be illustrated from the fact that in Latin the word *gemma* means both “jewel” and “bud.” Somewhat analogous would be the Greek legend that roses and anemones sprang from the blood of the slain Adonis.

Other motifs which occur in Babylonian and Assyrian myths are discussed below in the article SEMITIC MYTHOLOGY. The point that needs here to be stressed is that all of them are drawn from the storehouse of popular tale. The inference is, therefore, that such tales had wide currency in ancient Mesopotamia; and the task of the folklorist is to recognize their traces in the more elaborate literary compositions.

Animal Fables A few Babylonian and Assyrian animal fables have come down to us. One of these (CT, XV: 34) contains a dialog between the horse and the ox. The former boasts of its prowess in battle and of the fact that “without me nor prince nor governor nor rich nor poor could travel by the way”; while the latter retorts that the horse’s harness in fact comes from *his* hide and that without him earth could not be plowed. Another fable features the fox and the dog and seems designed to account for the trapping of the one and the domestication of the other. The text, however, is fragmentary.

Canaanite What is true of Babylonian and Assyrian folktales is equally true of Canaanite. No independent specimen has come down to us. Many familiar types and traits, however, are incorporated in the long mythological poems discovered in recent years at Ras Shamra, site of ancient Ugarit, on the north coast of Syria.

The *Poem of Baal*, for example, is fundamentally a mere variant of the familiar Fight of the Sky-God against the Waters (A162.2) and of the Combat of the Seasons. Moreover, in the sequence of the story, a number of folklore motifs are introduced. Baal is lured into the netherworld and detained there through eating its food (C211.2; *Thespis*, 191). He defeats his enemy, the dragon Yammu, by the use of a self-returning cudgel (D1094; *Th.*, 158). His other adversary, Môt, lives beyond the two mountains which hem in the earth (F145; *Th.*, 184). Baal is frightened lest the Dragon of the Sea carry off his daughters: a reflection of the common motif that youths and maidens must be sacrificed to the spirit of the waters (B11.10; *Th.*, 170). The presence of his sister, the goddess ‘Anat, is announced by a wonderful scent (*Th.*, 211). His return from the netherworld is heralded by the fact that the wadies run with honey (F701.1; *Th.*, 200 f.). He pours rain from heavenly windows (F56; *Th.*, 181). His enemy is chased into the streams—like the Death in European seasonal customs (*Th.*, 165). When he disappears, he is located by the sun. He wears the sky as a garment (*Th.*, 186). Hell is portrayed as a monster with gaping jaws (*Th.*, 189).

The narrative also reflects a number of popular customs. When Baal is ousted, an interrex is appointed

(*Th.*, 67, 197), and he has to be both the tallest and the most handsome of the people: a trait which recurs in African coronation ceremonies and in the Biblical story of the appointment of Saul (*Th.*, 197 f.). To acquire dominion, he has to walk around his domain (*Th.*, 179 f.). The favored guest sits at the right hand of his host (*Th.*, 175).

Nowhere in Canaanite literature, however, is the influence of *märchen* upon myth more apparent than in the intriguing *Story of Aqhat*. The entire tale is told in the vein of popular story, with all the characteristic tricks and devices of that *genre*. Particular use is made, for instance, of the device whereby, in order to heighten dramatic effect, a thing is said to be done abortively twice and to be successful only at the third try. Twice the hero Daniel tries to recover the remains of his son Aqhat from the gizzards of eagles who have devoured him, but each time he finds no trace of fat or bone. Only when he tries for the third time does he succeed. Twice he pronounces curses upon cities whom he saddles with responsibility for the murder of his son. On both occasions, he picks upon the wrong city. The third time, he curses A-b-l-m A-b-l-m; this is where the foul deed was really committed. The number seven is likewise employed in this story in the familiar schematic manner of folktales. Daniel serves as an acolyte in the temple of Baal for seven days and seven nights in order to obtain the blessing of a son. Baal is invoked to send drought upon earth for seven years in retribution for the murder of Aqhat; the mourning for the slain youth lasts seven years. Furthermore, the plot of the story involves several popular beliefs. The shedding of Aqhat’s blood renders the soil infertile (*Th.*, 296). The eagles which devour him are said to come from the west, in accordance with the belief that the eagle always flies toward the sun and is never blinded (*Th.*, 301).

The influence of folktale conventions may also be recognized in the *Poem of Keret*, which is more of a *chanson de geste* than a myth. Here again the number seven is employed in a schematic manner. Keret marches against the city of King Pabel for seven days, and beleaguers it for a further seven days. When he falls sick, the gods are invoked seven times to cure him. This story also involves the well-known motif that when the king falls sick, the land languishes; and much of its point depends upon the notion that, when a monarch has once suffered illness, he is thenceforth unfit to rule—an idea made familiar especially by *The Golden Bough*.

Lastly, in the Canaanite *Myth of Dawn and Sunset*, we encounter the motif, paralleled elsewhere, that children begotten by a divine father upon a human mother will nevertheless refuse any breast but that of a goddess (*Th.*, 254). Moreover, if the present writer is correct in assuming that the story harks back to some earlier version in which the gods Dawn and Sunset were twins and not siblings, it might be possible to explain the strange incident of their wandering through the earth as an allusion to the common custom of expelling twins from the community (*Th.*, 255; compare S314).

Old Testament It is the merit of Hugo Gressmann (ZAW 30 [1910]: 1–34) and Hermann Gunkel (*Das Märchen im Alten Testament*, Tübingen, 1917) to have pointed out that many of the most familiar stories of the Old Testament are really but Hebrew variants of folktales widespread throughout the world. Examples of

such stories (together with references to the standard classification and to pertinent literature) follow:

Man formed out of clay (A1241) and animated by the breath of God (A141.1). Paradise as a garden of God (A151.2; A. Brock-Utne, *D. Gottesgarten*, Oslo, 1936), situated beside four rivers (F162.2.1; Albright, *AJSL* 39: 40 ff.) and containing a Tree of Life (F162.3.1; H. Bergema, *De Boom des Levens* . . ., Hilversum, 1938), the fruit of which is forbidden to man (C621). Woman formed from man's side or rib (A1275.1). Man expelled from Paradise (A1331). The way to the treasure of immortality guarded by cherubim, or winged dragons (B11.6.2; D950.0.1). The blood of the slain Abel cries out (*BP*, ii:274, 526) and renders the soil barren (A2631.1; *Thespis*, 296). A world-calamity (deluge) ensues as punishment for man's waywardness (A1018). Noah's Ark (A1021), into which pairs of animals are taken (A1021.1). Survivors of flood repopulate the earth (A1006.1). The Tower designed to reach to heaven (C771.1; F772.1). Abraham entertains angels unawares (compare Philemon and Baucis, etc.; Q45.1). Sodom and Gomorrah destroyed in a fire-deluge and submerged (F944). Lot's wife turned into a pillar of salt for breaking tabu (C961.1). Abraham ordered to sacrifice his only son, but a ram substituted by God at the last moment (S263.2.1). Jacob and Esau rivals, the one domesticated and the other wild (compare Gilgamesh and Enkidu, etc.; A516.1.1). Leah substituted as bride instead of Rachel (Frazer, *Fasti of Ovid*, iii, 125 f.; Westermarck, *History of Human Marriage*, ii, 521 f.). Jacob's Ladder (F52; Block, *Acta Orientalia* 6: 257-69; A. B. Cook, *Zeus*, ii, 127 f.). Jacob's struggle with an angel at the ford of Jabbok (*FOT min.*, 251-58). Jacob at Mahanaim (Wild Host; Gunkel, *Märchen*, 82 f.). Joseph's "coat of many colors" (Eisler, *OLZ* 1908: 368-71). Joseph cast into a pit (S146) and sold into slavery (S210.1). Joseph wrongfully accused by Potiphar's wife (compare the Egyptian tale of Anpu and Batu; Phædra and Hippolytus, etc.; K2111; Frazer, *Apolodorus*, ii, 146n.)

Moses in the bulrushes (Exposed Child; compare legend of Sargon of Agade, etc.; S331; L111.2.1; Gruppe, *GM*, 1171, n.1). Moses secretly nursed by his own mother (S351) and reared at court (S354). Moses sees a non-consuming magic fire (Burning Bush; D964). Moses is provided with a magic staff (D1254; Cook, *Zeus*, ii, 1043), which, *inter alia*, parts waters (D1551), procures water from a rock (D1567.6). The plague of frogs (Gunkel, *Märchen*, 89; Gruppe, *GM*, 1234, n. 2). Complaining Israelites destroyed by fire sent from heaven (F962.2). Miriam suffers leprosy as punishment (compare C941.1). Korah and his company swallowed up by the earth (F942.1), thus descend to netherworld (F92.2). Aaron's dry rod blossoms (F971.1; *BP*, iii, 471, n. 1; Saintyves, *Folklore Biblique*, 59-137). Balaam's ass sees the angel, though its rider does not (Krappe, *Folk-Lore* 54:391-401; *TM*, 667, 1107). Rephaim, early inhabitants of Seir and Bashan, regarded as giants (A1301; Mayor on *Juvenal*, xv, 70). Moses dies on mountain (compare A571).

Joshua makes sun stand still and lengthens day (D2146.1.1; compare Matthes, *ThT* [1908]: 461-94; Maunder, *Expositor* [1910]: 339-72). Jael proffers drink to Sisera and kills him (G521; *Thespis* 328). Gideon's Fleece (Nestle, *ARW* [1909]: 154-56; Schultz, *OLZ* [1910]: 241-51). Jotham's Parable (Diels, *Int. Wochenschrift*, 4: 99 f.; Gunkel, *Märchen*, 16 ff.). Jephthah's

Vow (Barbes, *ThSt.* [1909]: 137-43; Baumgartner, *ARW* 18:240). Samson (A. S. Palmer, *The Samson Saga* . . ., London, 1915). Samson's Foxes (Hartmann, *ZAW* 31: 69-72). Samson's strength lies in his hair (*FOT min.*, 270-74). The rape of the women of Shiloh (*Thespis*, 25). Elijah "measures" a sick person (*TM*, 1163 f.). Elijah fed by ravens (Gunkel, *Märchen*, 34). Jonah thrown overboard to allay storm (S264.1). Jonah and the whale (F911.4). Jonah and the wondrous gourd (*D965.2?).

Biblical folktales thus embrace almost all of the usual categories, cosmogonic tales; animal tales (the serpent in Eden, Balaam's ass, the ravens which feed Elijah, Jonah and the whale); tabu tales (Lot's wife; Miriam's leprosy); magic tales (Moses' and Aaron's staffs; the parting of the Red Sea, etc.); tales of marvelous creatures (Leviathan and Behemoth, the ageless phoenix [*Job* xxix, 18], the giant Rephaim); tales of deception (Leah as False Bride, Jacob stealing the blessing); tales of rewards and punishments (the rescue of Lot from Sodom; the destruction of Korah and his followers); tales of sex (Judah and Tamar); and etiological tales (e.g. origin of the place-names Baerah (*Numbers* xi, 1) and Ramath Lehi (*Judges* xv), and of the tabu against eating the ischiatic nerve of animals (*Gen.* xxxii).

Most of this material was derived by the Biblical writers from the popular lore of Canaan and the adjacent lands, and was by no means their own primary invention. Not infrequently, however, what was originally a general folktale without specific local reference was pointedly adapted to serve as a particular etiological tale. Thus, the tale of the exposed child who eventually becomes the national hero is part of the common stock of world folklore, but when the Biblical writer applied it to Moses, he added the significant detail that the Israelite leader derived his name (Hebrew *Mosheh*) from the fact that he had been drawn up (Hebrew *mashah*) from the Nile! Similarly, the tale of Jacob's struggle with the angel is merely a particular variant of a common theme, but the Biblical writer specifically locates the encounter at the ford of Jabbok because the name Jabbok suggests the Hebrew word *abak*, struggle! So, too, the common story of the submerged city is linked to the destruction of Gomorrah because that name is reminiscent of a Semitic word *ghamar* meaning "to steep, submerge." The story of Jacob and Esau provides a further illustration of the same process. Basically, the rivalry of the two heroes, the one tame and domesticated, the other a wild and wooly vagabond, is but a variant of the common motif which we find, for instance, in the Babylonian tale of Gilgamesh and Enkidu; and it is, indeed, by no means improbable that Seir, the alternative name by which Esau was known, really meant the "Hairy One." But to a Hebrew or Edomite writer, the "Hairy One" immediately suggested a convenient eponymous hero for the wild tribes of Transjordanian Seir, for that name could be plausibly connected with the Hebrew word *sa'ir* meaning "hairy." Accordingly, the Old Testament narrative introduces the specific and particular detail that Esau was also called Seir and was the ancestor of those tribes.

That several of the stories indeed go back to older originals is shown also by their very form. The name of Noah, for example, is inconsistently derived in our Scriptural account from the Hebrew root *n-h-m* meaning "to comfort." This, however, is not mere *bizarrie*,

nor is the incongruity to be removed by the cheap expedient of textual emendation. On the contrary, it is a valuable indication that the story dates back to a remote antiquity, namely, to the period before 1600 B.C. when Semitic nouns ended in *-m*. The original name of the hero would thus have been *Nahôm* (or the like) and the explanation given, though due of course to mere folk etymology, would at least be consistent. Similarly, although, in the first chapter of *Genesis*, the several acts of creation are fitted into six days plus a seventh day of rest, there are in fact *ten* fiats, and these are unevenly distributed, thus suggesting that the poem (for such it really is) was originally written at a period when the Semites recognized a *ten*-day week, and that it was later somewhat clumsily adapted.

Sometimes, too, the original point and motivation of a story was ironed out or altogether lost in the course of its subsequent transmission, although features of that earlier version were retained, without logical explanation or organic connection with the new form. In the story of the Garden of Eden, for example, the wife of the first man is called *Hawwah* (Eve) and she is said to have been tempted by a serpent. The fact is, however, that the name *Hawwah* itself means "serpent." In all likelihood, therefore, our present version of the tale harks back to a more primitive folklore, in which the first man was believed, as in so many cultures, to have been mated with an ophidian bride (see *ERE*, xi, 410). By the time it reached the Biblical writer, this trait had been forgotten, although it was still remembered that a serpent somewhere featured in the action. The two characters which were originally one were therefore differentiated.

Similarly, the bow which God placed in the sky after the deluge could not originally have been the rainbow, since the early Semites, like many primitive peoples of the present day, did not recognize a bow in that celestial phenomenon. The bow was simply a constellation, clearly recognized by Mesopotamian astronomers and composed of certain stars of *Canis Major* combined with others of the neighboring *Puppis*. Moreover, the reason why it was introduced into the tale is because, in the original version, the flood was caused by a demonic monster whom the sky god vanquished with the aid of that weapon. He therefore hung his triumphant arms in heaven as a warning to future upstarts. This version underlies the Babylonian tale relating how *Marduk* suspended in heaven the sickle wherewith he had conquered *Tiamat*, and it is likewise to be found in the Arabic legend of *Qozah*. All that the Biblical writer knew was that a bow played some part in the story, and with this dimly remembered feature he did the best he could.

It is probable that the stories were originally preserved *in verse*, for such is the form of both Mesopotamian and Canaanite myths. Moreover, it is sometimes possible to detect an earlier metrical source behind our present prose version. Thus, *Sarah's* words at the birth of *Isaac* (*Gen.* xxi, 6-7) scan perfectly; while the account of the intended sacrifice of *Isaac* (*Gen.* xxii) is, for the most part, pure verse, as are also those of *Isaac's* meeting with *Rebekah* (*Gen.* xxiv) and of *Jacob's* theft of the birth-right (*Gen.* xxvii). Moreover, several of the stories preserve the ancient technique, familiar from the Ca-

naanite texts of *Ras Shamra*, of reproducing messages *in extenso* when they are said to be repeated.

Sometimes, the writers will actually quote earlier poetic sources, as in *Numbers* xxi, 14 where an excerpt is given from a work entitled "The Book of the Wars of the Lord." We should be on our guard, however, against assuming too rashly (as do most Biblical scholars) that a specific composition is meant. Since, in ancient times, books were traditional repertoires rather than the products of individual artists, it is not unlikely that the title really refers to an entire genre of popular literature, not unlike the Arabic *māghāzī*, or legendary descriptions of the initial wars of Islam.

Nor should we be deluded into supposing that wherever the prose narrative is interrupted by songs (e.g. the Song of the Sea in *Exodus* xv; *Hannah's* Song; *Jonah's* prayer in the belly of the whale), we have before us the earliest metrical version. On the contrary, most of these songs are later and were inserted into the account merely because they seemed appropriate and because they relieved the tedium of the recital by means of "audience-participation." In precisely the same way, the Canaanite myths from *Ras Shamra* seem to introduce traditional hymns at convenient intervals (*Thespis*, 68 f.)

Unfortunately, the vast majority of Biblical scholars have been slow to appreciate the implications of a folkloristic approach. Consequently, the stories of the Old Testament continue to be interpreted in a one-sided and thoroughly unscientific manner. Thus, because the name of the hero may itself be associated with the Semitic word for "sun," it is still commonly asserted that the legend of *Samson* is really a decayed solar myth, and the detail of his strength's lying in his hair is then promptly explained as a reference to the sun's rays. The truth is, however, that this motif recurs frequently in tales where the hero has no such solar name and that it rests on a belief very widely attested in primitive cultures (*FOT*, ii, 484 ff.). What we have in the Biblical story, therefore, is simply a Hebrew variant of a widespread folktales motif (D1831).

Again, it has been assumed by some commentators and exegetes that the story of *Elijah's* having been fed by ravens arises from a misunderstanding of the original Hebrew text, the word '*Arabim*, "Arabs," having been misread as '*orebim*, "ravens"! The fact is, however, that many parallel stories attest the motif of a man's being fed by birds, so that once again our Biblical tale is but a variant of a widespread theme and cannot be interpreted simply from its own terms of expression (compare B531).

By the same token, the system of interpreting the heroic sagas of Israel as being mere personifications of tribal activities is seen to be fallacious, once it is realized that virtually the same tales are told elsewhere. The story of *Jacob* and *Esau*, for example, cannot be explained exclusively as a personification of the relations between Israel and Edom, if the same story is told in a dozen other places where no such particular reference would have been pertinent. Nor again, is it possible to explain such stories on an astral basis—a line of interpretation developed especially by *Hugo Winckler* and the so-called "Pan-babylonian" school—since the same stories are in fact found in a variety of regions wherein the same astral figures are not always recognized. Lastly, the fundamentalist position that the stories are genuine history

becomes altogether untenable, when analogies and parallels are found to exist throughout the world.

Folk songs No Babylonian or Assyrian popular songs have come down to us. It has been suggested, however, that the lament which the hero utters over his slain friend Enkidu in the *Epic of Gilgamesh* really reproduces a conventional dirge sung at funerals.

Canaanite folk song is represented by the single specimen of a vine-dressers' work song found in the so-called *Poem of Dawn and Sunset* discovered at Ras Shamra. This song likens the trimming of vines to the emasculation of some dionysiac spirit, and it possesses analogies both in ancient Greece and in modern France. Each line ends with the emphatic word "vine," so that it is probably a work song designed to keep time when a crew is working together (see *Thespis*, 241).

Several types of folk song are included in the Old Testament. *Genesis* iv, 23-24, for example, presents us with what is really a "taunt-song" sung by the champions of the tribe of Lamech when they engaged their foes in combat. Analogies to it may be found in the *hijā*-poetry of the Arabs. Similarly, *Numbers* xxi, 17-18 gives the text of a traditional chant which, if we may trust the analogy of modern Arab custom (compare Musil, *Moab*, 288), was sung in spring when each family dug its water-pit for the year. (In the scriptural narrative, it is related artificially to an event in the exodus of the Israelites from Egypt.)

A peculiar form of Hebrew popular verse was that in which an enemy was lampooned by a derogatory pun on his name. This was used especially in prophetic execrations upon hostile cities and peoples. Thus, the name of the Kenites suggests two homonymous words meaning respectively "nest" and "smith." The prophet Balaam therefore curses this tribe in the words: "Though thine home seem permanent, and thy nest set on a rock, nonetheless the day will come When the smith shall be the fuel!" (*Numbers* xxiv, 21-22). Similarly, because the place-name Mareshah suggests the Hebrew word for "dispossession," the prophet Micah curses the city in the words: "Thou that in Mareshah dwellest, I shall bring a dispossessor unto thee" (*Micah* i, 15). And because the name Dimon recalls the Hebrew word *dam*, meaning "blood," the prophet Isaiah is able to exclaim (xv, 9): "The waters of Dimon are filled with blood." The device is rooted, of course, in the well-known primitive principle: *nomina omina sunt*.

Popular wedding songs are recognized by many scholars in the *Song of Solomon*, which is regarded by them as a repertoire of such compositions. Support for this view is found in the close parallels afforded by the *wasfs* still chanted at Syrian nuptial celebrations.

An example of a nursery rime may perhaps be recognized in *Isaiah* xxviii, 10, although the point is obscured in the English version. The prophet is complaining of the hopelessness of teaching the word of God to the "drunkards of Ephraim," and observes: "To whom is one trying to teach knowledge? And to whom is one trying to convey a meaning? Is it to new-weaned infants, or to babes who have just left off suckling? Is it a matter of *tsav le-tsav qav le-qav*, here-a-bit and there-a-bit?" The untranslated words are usually rendered "precept by precept, line by line"; more probably, however, they represent a children's jingle, somewhat like our "oops-a-daisy" or "pat-a-cake, pat-a-cake."

Finally, there is the dirge. The peculiar feature of Hebrew dirges is that they are usually composed in a special limping meter, the second half of the stitch being one beat shorter than the first, e.g. "Outdoors they lie on the ground,/ Young men and old./ My youths and maidens all/ Fall by the sword (*Lamentations* ii, 21). The present writer has suggested (*Journal of Biblical Literature* 67:iii) that this curious structure originated in the fact that early Semitic funerals were characterized by the performance of a *limping dance*, and that the accompanying lament had to mark the pace of the mourners. Such dances are still current in Syria and Egypt, and appear to be attested also in ancient Mesopotamian and Canaanite sources.

Riddles No Babylonian or Canaanite riddles have come down to us. Specimens occur, however, in the Old Testament. The most famous is the riddle allegedly propounded by Samson to his Philistine friends (*Judges* xiv, 10). Although embodied in a quasi-historical setting and related artificially to an incident in the career of the Israelite champion, it is probable that this was really a traditional conundrum the true point of which had been forgotten in later generations. That point lay, as in so many riddles, in a play on words, the Hebrew *ari*, "lion," also meaning "honey," while "the eater" (as we now know from the Ras Shamra texts) was a popular expression for a ravening beast. Thus, the original form of the riddle would have been: "Who is the 'eater' out of whom comes something to eat? And who is the strong one out of whom comes something sweet?" And the answer would have been: "*Ari*, because *ari* denotes both the lion, who is a ravening beast (i.e. an 'eater') and also honey, than which nothing is more sweet!" Further examples of Hebrew riddles may be found in *Proverbs* xxx, 4, where a number of recondite mythological conundrums are propounded, e.g. Who went up to heaven and came down? (Answer: Etana). Who gathered the wind in his garment? (compare C322.1). Who supported all the ends of the earth? (Answer: some Semitic counterpart of Atlas; see A842).

Proverbs The famous library of King Ashurbanipal included collections of Babylonian and Assyrian proverbs, and the excavations at the ancient Hittite capital of Hattusas (Boghaz-köy) have yielded even older bilingual Babylonian-Hittite texts of the same genre. It must be observed, however, that much of what passes for Babylonian proverbial literature falls more properly into the category of didactic admonitions. Often, in fact, the so-called proverbs are expressly introduced by the phrase "my son" (as in the Biblical *Book of Proverbs*), showing that they belong to the same class of composition as, for example, Isocrates' *Manual for Demonikos*. On the other hand, even in these collections there are several instances of what appear to be genuine popular sayings, e.g. "Never goad a toiling ox"; "In a strange city, the ass is mayor"; "Where there are servants, there are bound to be quarrels, and where there is a barber shop, there is bound to be gossip"; "Is a swamp paid for producing reeds, or a field for yielding crops?"

The same general observation applies to Hebrew proverbs. The Biblical book of that name is largely a collection of didactic maxims, and the same is true of the apocryphal *Wisdom of Ben Sirach*. The former work

(or the bulk of it) was attributed to King Solomon, but it is plain from the numerous repetitions and variants which it contains that it is really a traditional compilation. The ascription to Solomon is due simply to the fact that he was the proverbial wise monarch, and is therefore of the same order as the American tendency to attribute forthright "wisecracks" to Will Rogers. Some portions of the book appear to have been taken directly from the ancient Egyptian *Proverbs of Amenem-Opet*, but these, too, are mainly didactic maxims rather than genuine popular sayings. Nevertheless, the Biblical collection *does* include a few specimens of the latter. Moreover, many of the proverbs embody allusions to popular lore. Thus, the house of the "strange woman" is said to "sink down unto the realm of death" (ii, 18) where the point is that it is likened to the submerged castle of common folktale (F941). Similarly, Wisdom is a "Tree of Life" which confers bliss on those who lay hold of it (iii, 18). The lips of the king possess magic; he is unable to err in judgment (xvi, 10). A bribe is like a magic jewel, ensuring success in all directions (xvii, 8). The late D. S. Margoliouth has made the attractive suggestion that many of the proverbs embodied in the Biblical collection were really the "morals" of folktales by which their point was brought home.

Folklore in Custom and Usage

It is impossible in the space of this article to give anything like an adequate account of the folkloristic traits to be found in ancient Semitic religious customs or to the many allusions to popular beliefs scattered throughout Mesopotamian, Canaanite, and Old Testament literature. A few selected examples may be cited, however, as illustrations of the type of material which the folklorist should seek.

Babylonian and Assyrian If the real parents of a child wished to reassert their claims to it, after it had been given out for adoption, they did so by offering it a vessel filled with human milk (Landsberger, *Ana ittišu*, Rome, 1937, 51-57). This, of course, is merely a conventionalized survival of the more ancient practice of simulating nurture by placing the child in one's bosom.—Brides were consecrated by pouring oil on their heads, a practice which doubtless goes back to the notion that they are thereby informed with a new "essence."—At funerals, the bier was circuted three times, as was also the mortuary chapel itself (Dhorme, *RA* 38:63). This custom is still observed among Sephardic Jews in their sevenfold circuit of the bier of dignitaries. Its original purpose was to make a closed circle in order to keep away demons. See CIRCUMAMBULATION.—At eclipses of the sun and moon, it was customary to beat drums (S. H. Hooke in *Studies Presented to J. H. Hertz*, London, 1944).—The dragon Humbaba, who features prominently in the *Epic of Gilgamesh* was thought to possess a Gorgon's head, and bizarre masks made for purposes of magical "transfixion" were known as "Humbaba heads."—The wind was regarded as a bringer of disease (Fish, *Iraq* 6:184; compare Corso, *Riv. d. Antropol.* 22:80).—Images were burned in order to work black magic upon a person (Langdon, *RA* 26:39-42).—The dead suffered thirst in the netherworld (Tallquist, *Sumerischakkadische Namen der Totenwelt*, Helsingfors, 1934, 37, n. 1; *Thespis*, 188).—The goddess of the nether-

world was accompanied by infernal hounds (*Thespis*, 214).—The dead assumed the form of winged creatures, an evident reminiscence of the bird-soul concept (see Aptowitzer, *Die Seele als Vogel*, Breslau, 1925; Grimm, *TM*, 828; Klebs, *Zeitschr. f. Aegypt. Sprache* 61: 104-08; Gruppe, *GM*, 1502, n. 1; 1618, n. 1; Cook, *Zeus*, ii, 524, 697n., 1132).—Toothache was said to be caused by a worm (compare *Homeric Hymn to Demeter*, 228-29; Shakespeare, *Much Ado About Nothing*, III, ii, 28; *Notes and Queries* [1876]: 255, 476).—The desert was the haunt of evil spirits (see *Marco Polo*, i, xxxix and ch. 57, ed. Yule; Burton, *Anatomie of Melancholy*, I, 2, 2; Milton, *Comus*, 207-09; Trench, *Studies in the Gospels*, 7).—Human destiny was conceived of as a design (*uṣurtu*) shaped by the gods. This is analogous to the ancient Teutonic *scap* (Grimm, *TM*, 857).—The gods were surrounded by a nimbus (Oppenheim, *JAOS* 63: 31-33; compare Grimm, *TM*, 323).

Old Testament The Israelite high priest wore bells on the hem of his robe. This was a survival of an ancient device for forfending evil spirits (Dölger, *Antike und Christentum*, 4:233-42; *FOT min.*, 417).—Dawn was regarded as possessing wings (*Psalms* cxxxix, 9; compare Grimm, *TM*, 745).—The sun could be portrayed as a champion running a race (*Ps.* xix, 6; compare Grimm, *TM* 738).—Yahweh possessed a magic sword (*Isaiah* xxvii, 1; xxxiv, 5; *Jer.* xlvi, 6; Gunkel, *Märchen*, 46).—Waves of the sea could be regarded as chargers (*Hab.* iii, 15). This is clearly a counterpart of the familiar "white horses" concept.—God was attended by two ministers, identified as Plague and Pestilence (*Hab.* iii, 5). This recalls the fact that, in Babylonian myth, the gods Nabu and Sharru escort Adad when he sends the flood (*Gilgamesh* xi, 100). Compare also the Homeric Deimos (Alarm) and Phobos (Fear) who escort Phœbus and Ares (*Iliad* iv, 44; xv, 119) and the Tras (tremor) and Strakh (terror) of Bohemian folklore (Grimm, *TM*, 208).—Hell is "the final synagogue of all the living" (compare Grimm, *TM*, 801).—Orion is chained to heaven (*Job* xxxviii, 31; Gunkel, *Märchen*, 77 f.; *Thespis*, 263).—Disease can be inflicted by the arrow of a demon, or of God (*Ps.* xci, 5; *Job* vi, 4). This recalls the Homeric arrows of Apollo (*Iliad* i, 44) and the elf-shot of Teutonic folklore (Grimm, *TM*, 1182, 1244; see also Eitrem, *Papyri Osloenses* I, Oslo, 1925, 52 ff.).—According to an emendation proposed by F. Perles (*OLZ* 12: 251 f.), there is an allusion in *Ezekiel* xxxvii, 11 to the concept of the "thread of life," for instead of "we are clean cut off," we should there read "our thread is cut off." (For classical parallels, see Lucian, *Philop.*, 25; Theocritus i, 139; Babrius, p. 11, 49; Vergil, *Æn.* x, 814).

Semitic mythology Semitic mythology means, for all practical purposes, that of the ancient Babylonians and Assyrians, of the Canaanites and of the Hebrews; for it is only in the literature of those peoples that the traditional myths are preserved in full narrative form. To be sure, there are references to them also in later Jewish and Arabic sources (as when the Koran speaks of the three daughters of Allah or the rabbinic midrash alludes to the primeval battle of God against Leviathan or to the depredations of the giant bird Ziz), but such references are secondary—mere popular reminiscences of the older material.

Semitic myths are embodied in poems designed originally to be chanted or recited at religious exercises. Their object was to provide an interpretation of ritual in terms of connected stories. In course of time, however, many of the underlying rituals fell into disuse, so that the myths survived as purely literary compositions, to be modified or elaborated at will. It is mainly in this developed form that they have come down to us; but for the better understanding of their contents, patterns and structures, reference must often be made to the primitive rites which they in fact "project."

The study of Semitic myths is still in its infancy and has thus far scarcely proceeded beyond the bare translation of texts and the discussion of isolated topics. Very little has been done by way of comparative research or of correlating the relevant themes and motifs with those familiar from general folk literature. The present survey therefore concentrates attention upon this phase of the subject, indicating throughout the presence of such themes and motifs by reference to the appropriate entries in Stith Thompson's classic *Motif-Index of Folk-Literature* (6 vols., Helsinki 1932-36), where parallels are cited.

Babylonian and Assyrian Myths

Sources Babylonian and Assyrian myths are known principally from cuneiform texts unearthed, during the past one hundred years, at Ashur and Nineveh, the earlier and later capitals of Assyria respectively. The former date, in some cases, to the beginning of the second millennium B.C. and are now preserved at Berlin. The latter are of the 7th century B.C., and consist of transcripts, translations, and new editions of older material prepared for the palace library of King Ashurbanipal (669-626 B.C.). They are now in the British Museum.

In addition, excavations at the site of ancient Nippur have yielded a number of earlier recensions written in the Sumerian language. These date between the latter half of the third and the earlier half of the second millennium B.C. Distributed mainly between the University Museum at Philadelphia and the Archeological Museum at Istanbul, many of them have now been pieced together by the phenomenal skill of Samuel Noah Kramer. They prove of great value in supplying portions

of myths missing in the later Babylonian and Assyrian versions and in recovering the earlier form of stories which were not infrequently changed or garbled in subsequent transmission.

Mythological scenes engraved on seals constitute a further source of information. These, however, are still imperfectly understood, nor can they be related, except in a few instances, to the literary versions.

Cosmology The chief cosmological myth of the Babylonians and Assyrians is a long poem of composite origin known (from its opening words) as *Enuma Elish* ("When above"). Recited as part of the New Year liturgy, this poem is, *au fond*, nothing but a retrojection into the remote past of conditions which actually obtained at the beginning of each year—namely, the abatement or "subjugation" of the swollen rivers, the ceremonial reinstatement of the king, and the renewal of life and the cosmic order. The story relates the victorious combat of the national god (Marduk at Babylon, Ashur at Ashur) against Tiamat, the cosmic or primeval dragon; his dispatch of her allies to the netherworld; his subsequent installation as king and enthronement in a special pavilion; his determination of the world order; and the creation of man from the blood of Kingu, slain husband of Tiamat. In our extant recension—the product of long development—the main narrative is prefaced by a summary account of the origin of the gods, and it is also skilfully combined with a duplicate version in which the protagonists are the god Ea and Apsu, deity of the fresh water ocean.

Enuma Elish is but one version of a myth widespread throughout the ancient Near East. Other versions are: the Hittite myth of the sky god's battle against the dragon Illuyankas; the Egyptian myth of Ra's fight with the monster 'Apep; the Vedic myth of Indra's conquest of Vritra; the Iranian myth of Thrētaona's defeat of the dragon Azi Dahāk; the Canaanite myth of Baal's encounter with Yammu, alias Leviathan; the Phœnician myth of the conflict between Zas (Baal) and Ophioneus (Tannin); and the Greek myth of Zeus' conflict with Typhon.

Moreover, the tale is replete with motifs familiar from general folk literature:

The primal element is water (A810). The first gods are created in pairs (A116; twin culture heroes, A515.1.1). The hero (Marduk) is a precocious child, born fully mature (T615). He has four eyes and ears, is of gigantic stature, and his eye flashes (A123-124). He is at first in disgrace with the father-god Anshar, but is recalled to encounter Tiamat (compare Oppenheim, *Orientalia* XIV [1947]: 221). He therefore fills the familiar role of the recalled prince or vizier who returns from disgrace to save his master; i.e. banished minister found indispensable (P111). Compare АЧИКАР. Before engaging the monster, he smears himself with a magical red paste (compare red as magic color, D1293.1). Then, as culture hero, he subdues the dragon (A531). The latter is invulnerable by weapons (B11.12.1), and is overcome only when the stormwind inflates her belly. Her allies are imprisoned in the netherworld (Q433.2). The culture hero then determines the world order (A530). Man is created out of the blood of a god (A1211.1. *FOT*, i:3-29; Dähnhardt: *Natursagen*, i:89-111).

Shorn of its seasonal and cosmological traits, the myth

also survived as a mere story of the slaying of the dragon (B11). Mesopotamian literature and art contain several allusions to such an encounter between a god, variously identified as Ninurta, Marduk, Papsukkal, etc., and a griffinlike creature called Mushrushshu; while a tablet from Nineveh relates the story of a battle between the storm god and a dragon called Labbu (Rager?).

To the same genre of seasonal-cosmological myths belongs the legend of Zû. Zû was a gigantic storm-bird who stole the "tablets of decision" and other insignia of the high god and who, after several major deities had flinched from giving battle, was finally overcome by a heroic champion who lured him to a banquet and be-mused him with liquor. (In our extant version the hero is identified with Lugalbanda, a legendary king of Kish, but there are indications that he was originally a full-fledged god, such as Marduk, Ashur, or Ninurta.)

Zû (whose name means tempest) is a personification of the angry winds which beset the earth at the beginning of the year and which have to be "subdued" before the new lease of life can be assured. He is thus a natural alternative to Tiamat, spirit of the turbulent floods.

Zû is but a Semitic version of the Eddic Hroesvelger and the Vedic Garuda—giant bird the flapping of whose wings causes tempests (*TM*: 633–35; *ERE*, i: 429a). His being overcome by drink is paralleled in the Hittite myth of the dragon Illuyankas (*KBo*, III: 7)—actually designed for the seasonal festival of Puruli!—and in the Biblical story of Jael and Sisera (*Judges* iv–v), as well as in folktales concerning the defeat of the ogre (G521).

It is probable that both the myth of *Enuma Elish* and that of Zû were represented in sacred pantomimes at the New Year festival.

More strictly cosmogonic in tone are references in several minor texts to the emergence of the ancient cities of Babylonia from a primal watery chaos. These reflect the fact that such cities were indeed built upon lagoons. Upon this fact the Babylonians and Assyrians seem to have constructed the idea that the earth as a whole was of like origin.

Creation of Man The common belief about the creation of man was that he was fashioned out of clay to serve the gods and relieve them of menial chores (A1241; compare *Job* xxxiii, 6). His creator was the goddess Mami (or Aruru), sometimes varied, sometimes associated with such gods as Enlil, Ea, or Marduk. The idea is expressed in several texts, but nowhere more elaborately than in the myth of Ea and Atrahasis of which we possess both an Old Babylonian and a later Assyrian recension.

Enlil, the high god, perturbed at the "uproar" created by men, visits upon them a series of scourges until at length a certain Atrahasis (i.e. Superwise) entreats the god Ea to deliver the human race from impending extermination. Ea orders Mami to mold fourteen lumps of clay. These are separated into two lots, a slab being placed between them. Fourteen women are then summoned and, by some magical means, the lumps are introduced into their wombs. Seven of them bear males, seven females. Thus the human race is perpetuated.

The slab, the function of which has hitherto remained obscure, may perhaps be identified with the magical "birthstone" of world-wide folklore, contact with which impregnates barren women (*GB*, V: 35, *ARW*, XIV

[1911]: 308 f.; R. Patai, *Adam we-Adamah*, II [Jerusalem 1943]: 19 ff.). Indeed, a postscript to our text states explicitly that such a stone forefends demons at the delivery of a child and enables a woman to "bear by herself"! It is probable, in fact, that the text was designed as a charm to be recited in a lying-in chamber.

An alternative account says that *the clay was mixed with the blood of a slain god*. This version is found in Berossus, who does not name the victim; in *Enuma Elish*, where it is Kingu, husband of Tiamat; and in a text from Ashur, where it is the double god Lamga.

The idea has abundant parallels (A1211 ff.). In Vedic myth, man springs from the blood of the slain Puruṣa; in Greek myth, from that of the slain Titans.

Moreover, it may be suggested that the double god Lamga is really but the divine prototype of the first man regarded, as in many cultures, as androgynous; compare the Vedic Yama, the Eddic Ymir, the Avestan Mashya and Mashyoi (originally joined together), the rabbinic view of Adam, and the Germanic Mannus (i.e. Man) descended from Twisto, "the double god" (Usener, *Kl. Schriften*, IV: 37; Ginzberg, *Legends of the Jews*, V: 88, n. 41; Krappe, *Orient and Occident* [London 1936]: 312–22; Plato, *Symp.*: 189d; 190d; Tacitus, *Germ.*, c. 2).

Mortality of Man In the familiar Biblical tale, man loses the chance of immortality because God expels him from Eden and thereby prevents his tasting the fruit of the Tree of Life (*Gen.* iii, 22–24). Babylonian and Assyrian mythology knows analogously of a magical draft of life which man is prevented from drinking through the jealousy of a god. The story is told in the myth of Adapa, one portion of which was found at Tell el-Amarna in Egypt and another at Nineveh.

Adapa, ministrant in the temple of Ea at Eridu, on the Persian Gulf, is out one day catching fish for his god when he is caught in a storm and his boat capsizes. In anger, he breaks the wings of the storm bird (compare *Psalms* xviii, 11; civ, 3), so that it ceases to blow for a full seven days. Thereupon, Anu, the high god, orders the offender to be brought before him. In desperation, Adapa appeals to Ea. The latter tells him to dress in rags and go like a mourner to the gate of heaven. There he will meet two doorkeepers, the fertility god Tammuz and his brother Ningishzida. Adapa is to tell them that he has come to look for them, following their seasonal disappearance from the earth. This will ingratiate them, and they will offer him clean clothes and cleansing oil. These he may accept. When, however, they subsequently offer him water, he is to refuse; for the water will be the water of death. Adapa does as ordered. However, the proffered water turns out to be, in fact, the water of life and immortality. By following Ea's instructions, therefore, Adapa—in this sense, typical of mankind—forfeits the latter gift.

The story may be best explained as a variant of the well-known motif of the falsified message (A1335.1; *FOT*, i: 52 ff.; Dähnhardt, iii: 22), the theme of which is that *Man forfeits immortality because a divine message telling him how to acquire it is deliberately perverted by a malevolent or jealous messenger*. To be sure, as here narrated, the story is rather one of perverted counsel than of a perverted message, but the central idea and motivation is clearly the same. (It may be observed also that, according to Frazer [*FOT*, i: 52 ff.], the role of the

serpent in the Eden story was originally that of the subversive messenger.)

The idea of a paradisaical tree of life is ubiquitous (E90). So too is that of the Water of Life (E80), which is, of course, the familiar nectar of Greek mythology (A154). In Jewish apocalyptic literature, food, water, and oil of life are reserved for the righteous in paradise (Ginzberg, *Legends of the Jews*, 1: 94).

To this main incident is added a sequel. When Adapa finally comes before Anu, the latter realizes that there is really no call to put him to death, since his action in breaking the wings of the storm bird was in fact inspired by piety, i.e. by indignation at the way in which that demon had deprived Ea of his fish dinner! However, a delicate problem now arises. On the one hand, Adapa cannot be rewarded with the fitting guerdon of immortality, because he has already refused the water of life and (apparently), once declined, that cannot be proffered again. On the other hand, if he is now allowed to return to earth, he will furnish to all men an example of that which is forbidden—namely, of a mortal who has beheld the secrets of heaven and yet lives (compare *Job* xv, 7–8). In his predicament, Anu decides to compromise and to overlook the latter consideration. He therefore allows Adapa to live out his days on earth and to become the founder of a dynasty; and he rewards him for his piety by commanding the gods and demons never to assail him with sickness or hurt.

This part of the tale was evidently intended to account for a popular belief that the reigning dynasty was descended from Adapa.

From the viewpoint of comparative folklore, Adapa is to be recognized as yet another version of the familiar theme of the Fisher-King (compare J. L. Weston, *From Ritual to Romance* [Cambridge, 1920]: 118 f.; R. Eisler, *Orpheus the Fisher* [London, 1921]: 20 ff.; *id.*, *OLZ*, xxxix (1935): 721 ff.; A. H. Krappe in *MLR*, xxxix [1944]: 18 ff.).

Etana Concerned more strictly with the propagation of the species, but interwoven also with other motifs, is the myth of Etana and the Eagle—in two parts.

Part One relates how the eagle and the serpent agree to hunt food for each other and for each other's young. The eagle, however, eventually betrays the serpent and, despite a warning from a far-seeing eaglet, raids the latter's hole and devours its young. The serpent appeals to Shamash, god of justice. On the latter's instructions, it then creeps into the carcass of a bull and, when the eagle swoops down on it, maims his wings and leaves him lying in a ditch.

Part Two relates how Etana, a legendary king of Kish, being without issue, implores Shamash to supply him with the magical "plant of birth" so that he may give it to his wife to eat. Shamash tells him to go to the eagle. The latter, grateful at being released from the ditch, informs him that the plant is in heaven, but offers to transport him thither on his back. When they reach the heaven of Anu, Etana begins to feel giddy, but the eagle assures him that an even higher ascent is necessary. On this subsequent flight, however, Etana succumbs to vertigo, and both are thereby dragged down into the underworld (or sea?).

On the face of it, the point of this story would seem to lie in the way Shamash exploits the plight of Etana in order to visit retribution on the eagle. It may be sug-

gested, however, that far more really underlies it, and that there is a far closer connection than has been suspected between the initial struggle of the eagle and serpent and Etana's being sent to the latter when he seeks the "plant of birth." The fact is that *both the eagle and the serpent were believed in antiquity to possess immortality, or the power of constant renewal*, the former because it seems to molt and renew its feathers, the latter because it sloughs and renews its skin. (Compare for the eagle: *Psalm* ciii, 5; *Isaiah* xl, 31; Morgenstern, *ZA*, xxiv [1915]: 294 ff.; for the serpent: *Sanchuniathon apud Euseb.*, *PE*, i: 10; Plutarch, *De Is. et Os.*, §74; *FOT*, i: 60 ff. Compare also Gardiner-Davies, *Tombs of Menkheperresonb* [EEF 1933]: 26, "Mayest thou have the life of the k̄k-bird and mayest thou wax old like the na'y-serpent!"). The story may therefore be reconstructed as follows:

At first it was the serpent who possessed the magic plant of birth, i.e. of perpetual rejuvenation (compare *Epic of Gilgamesh*, XII: 274–320, which describes how he acquired it!). The eagle was jealous and stole it by raiding the serpent's hole. When, therefore, Etana sought just that plant, Shamash (who had been apprised of the matter) naturally sent him to the eagle. But the eagle was again treacherous, and merely pretended to Etana that the plant was in heaven, knowing full well that the ascent would overtax his powers. However, as it turned out, the deception redounded upon the eagle's own head, for not only Etana but he too was dragged down into the abyss. Thus justice was done.

Thus reconstructed, the story is a fusion of several familiar motifs: borrowed feathers, the essence of which is that *a dupe lets himself be carried aloft by a bird and dropped* (K1041); pride required, as in the Icarus myth (L421); and deceiver—in this case, the eagle—caught in his own trap (K1600).

Myths of the Netherworld Babylonian and Assyrian myths were also concerned with the fate of men after death. The main description of the netherworld is contained in the myth of the descent of Ishtar.

The goddess Ishtar decides to go down to the netherworld to sorrow for the "young men torn from their brides, the young women from their bridegrooms, the babes snatched away untimely." After gaining admission by threatening to break down the portals, she is admitted through the seven gates and is progressively disrobed until finally she stands naked before Ereshkigal, queen of the dead. The latter orders her henchman Namtar, god of plague, to visit Ishtar with all manner of diseases. At this point, however, Papsukkal, the messenger of the gods, notices that Ishtar's disappearance has led to infertility on earth. He therefore entreats Ea to rescue the goddess. Ea does so by dispatching the eunuch Asnamir into the netherworld to serve as a substitute for Ishtar. Thereupon Ereshkigal orders the water of life to be sprinkled upon her, and she is allowed to return, her clothes being progressively restored to her at each of the seven gates. At the end of the text, a few obscure lines relate it somehow to the annual festival of wailing for Tammuz, the god of fertility who disappeared annually into the netherworld and was later resurrected.

An earlier Sumerian version has been found at Nippur. Here, the rescue of Ishtar (called Inanna) does not depend on the fortunate vigilance of Papsukkal but is planned in advance. Before descending, the goddess in-

structs her henchman Ninshubur to make the rounds of the gods and solicit their aid, should she not return within a specified time. All refuse except Ea (called Enki) who sends two sexless creatures with food and water of life. They arrive after Ishtar (Inanna) has been turned into a corpse and impaled on a stake for three days, but eventually manage to restore her and bring her back to earth.

The story is but a variant of the familiar descent of Demeter and, like that myth, was probably the cult-text of the annual mysteries for the deity of vegetation (Tammuz, Persephone). It is replete with familiar motifs: descent to underworld (F81). Absence of goddess causes infertility (compare *Homeric Hymn to Demeter*: 305 ff.; Hittite version: *KUB*, 17.10, i: 8-9). The dead eat mud (Gaster, *JRAS*, 1944: 35). They have the appearance of birds (E732; Scheftelowitz, *Alt-palästinensischer Bauernglaube* [Hannover, 1925]: 13 f.). The netherworld has seven gates (Koran, *Sura XV*: 44). It is governed by a goddess (A310.1). Disenchantment is effected by aspersion with the water of life (D766.1; E80).

Another myth dealing with the underworld is that of Nergal and Ereshkigal, found on a tablet from Tell el-Amarna, in Egypt. This relates how the gods once held a banquet and invited Ereshkigal, queen of the underworld, to send a messenger to fetch her share. She sent Namtar, god of plague. When he arrived, all the gods greeted him except Nergal. Ereshkigal ordered the offender to be brought before her. Nergal, however, appealed to Ea who provided him with an escort of terrifying demons. Posting these at the gates of the netherworld, Nergal institutes a general slaughter, kills Namtar, and drags Ereshkigal from her throne. To save her life, the latter capitulates and offers to share her dominion with her victor. Nergal accepts, and the two thenceforth reign as king and queen of the dead.

The purpose of the myth was obviously to account for the fact that the primitive queen of the netherworld was later replaced in mythology by the god Nergal. A similar development took place in Greece, where the earlier chthonian goddesses Demeter and Kore (Persephone) were later replaced by Hades (Pluto).

Nergal was identified with the summer sun which descended to the netherworld at the solstice (Tammuz 18). Our myth may have been the cult-text for that occasion.

The Epic of Gilgamesh The longest and most complex of all Babylonian and Assyrian myths is the story of Gilgamesh. This myth enjoyed wide popularity throughout the Near East. Portions of Sumerian, Hittite, and even Hurrian (Horite) versions have come down to us. In its present form, it is clearly the product of long mythological and literary development, welding together, in the manner of the *Iliad* and *Odyssey*, what must once have existed as separate and independent tales. Reduced to bare essentials, the resultant corporate narrative now runs as follows:

Gilgamesh, a hero of divine or miraculous birth, rules the city of Erech with an iron hand. To offset his despotism, the goddess Aruru fashions out of clay a wild and savage man called Enkidu. Living at first among animals, Enkidu later falls in with a harlot who teaches him the ways of civilized man and leads him to Erech, where he engages Gilgamesh in combat. However, it is Gilgamesh who wins, though the two champions there-

after become friends and together slay a Gorgonlike monster Humbaba who inhabits the forest of Lebanon. The prowess of Gilgamesh excites the passions of the goddess Ishtar, but when she offers herself to him, he rudely repulses her. Infuriated, she appeals to the high god and persuades him to create a monstrous heavenly bull to attack the two stalwarts. They, however, succeed in subduing it, and Enkidu contemptuously flings its phallus in Ishtar's face. Thereupon the gods decree his death.

Torn with grief, Gilgamesh embarks on a perilous journey to the immortal sage Ut-napishtim (the Babylonian Noah) to learn from him the secret of eternal life. First, he reaches the great mountain which hems in the earth. The strange scorpion-men who live there try to dissuade him, but eventually speed him along to the next stage of the journey, the Garden of the Gods, whose trees are hung with precious stones. There the sun god attempts to dissuade him, but he too eventually speeds him to the next stage of the journey, the abode of a hedonistic Circe-like fay called Siduri. She too tries to dissuade him, but eventually shows him the way to Ur-shanabi, the boatman of Ut-napishtim, who transports him to that venerable sage. Ut-napishtim then relates to him the story of the Flood—strangely parallel to the Biblical version—ending with the account of his own attainment of immortality. Subsequently, he goes sailing with Gilgamesh and points out to him the plant of immortality at the bottom of the ocean. Gilgamesh dives in and seizes it; but later, while he is taking a swim, a serpent emerges and devours it. In despair, Gilgamesh returns to Erech.

A subsequent passage (which must originally have formed an independent story) relates how Gilgamesh ultimately reached Enkidu at the door of the netherworld and heard from him a description of that realm.

The story of Gilgamesh is likewise characterized by several motifs familiar from folk literature:

The hero is the child of a supernatural or miraculous birth (A511; T540). Gilgamesh and Enkidu are a *pair* of culture heroes (A515; 515.1.1). His companion is a "wild and woolly" huntsman, a hairy anchorite. The latter is seduced by a woman and domesticated (D733.1). The heroes' prowess is tested by combat with monsters (A531). One of these (Humbaba) is a Gorgonlike monster. A goddess attempts seduction (compare Albright, *JBL*, XXXVII [1918]: 116 f.). The hero goes in search of the plant of life (H1333.2; compare D981; D1346.6). In his quest, he is passed on from one helper to the next (H1235). He journeys to a world-encircling mountain (compare Arabic Kaf or Qaf; Wensinck, *Navel of the Earth* [Amsterdam, 1916]: 6 ff.). Paradisal trees yield precious stones (compare F166.1). Serpent, instead of man, acquires plant of life and becomes immortal (A1335.5 [ad.]; Morgenstern, *ZA*, XXXIX [1914-15]: 284 ff.).

Stories of World Disasters The Babylonians and Assyrians possessed a story of a primeval deluge, evidently inspired by the phenomenon of seasonal floods which so frequently work havoc in Mesopotamia. The most complete account is that put into the mouth of Ut-napishtim in the *Epic of Gilgamesh*. It runs closely parallel to the Biblical version. Enlil, the high god, sends the flood in punishment for men's sins, but Ea visits Ut-napishtim, a righteous man, forewarns him and

delivers him and his kindred in an ark which ultimately lands on Mount Nišir. The hero then sends forth successively a dove, a swallow, and a raven. When the last-named fails to return, he emerges from the ark. Enlil is at first furious at the deliverance, but Ea persuades him that sins should be visited on individual sinners rather than upon mankind collectively. Thereupon Enlil rewards Ut-napishtim and his wife with immortality and transports him to the "mouth of the rivers"—the scene of Paradise.

An earlier Sumerian version (fragmentary) tells substantially the same story, but omits the incident of the dispatch of the birds and has the hero translated to the sacred island of Dilmun. He is named Ziusudra, and is said to have bequeathed a code of conduct upon men—an idea which recurs in Jewish legends of Noah.

The Myth of Irra describes the destruction of Babylon and, subsequently, of a larger area by the plague god Irra, assisted by seven personified weapons. It has been suggested that the myth commemorates certain historic disasters and invasions. Because it ends with the eventual appeasement of the god, it came to be used as a charm against sickness and epidemic.

The Dying and Reviving God The alternation of the seasons was the subject of an elaborate myth relating how Tammuz, god of fertility, sank annually into the netherworld and was subsequently resurrected. During the period of his absence, all vegetation and fecundity ceased, and he was mourned by his sister and beloved, Ishtar, and her companions. The myth had its counterpart in ritual, the disappearance and revival of Tammuz being enacted in sacred pantomime. Parallels to both myth and ritual are to be found, of course, in the Egyptian myth of Osiris, the Phrygian myth of Attis, the Syrian myth of Adonis, the Greek myth of Persephone, the Hittite myth of Telipinu, and in many primitive religions.

Canaanite Myths

Canaanite myths are known principally from the cuneiform texts unearthed, since 1929, at Ras Shamra (Fennel Head), site of ancient Ugarit, on the north coast of Syria. Written in a peculiar alphabetical script and in a proto-Hebrew language, they date in their present form from the 15th century B.C., and are now preserved in the Louvre, Paris. None of them is complete.

The *Poem of Baal* describes how that god, genius of rainfall and fertility, acquired dominion over the earth. First, he subdued Yammu (alias Leviathan), lord of the waters. Second, he had himself installed in a gorgeous palace. Third, he consigned his potential rival Môt, god of death and aridity, to the barren places and the netherworld. Môt, however, complained of unfair treatment and invited Baal to see for himself how dismal was existence in the infernal regions. Baal therefore made the descent, but Môt trapped him by persuading him to eat the food of the dead, which prevented return to earth. During Baal's absence, all fertility ceased. The gods attempted to appoint one 'Ashtar as a substitute for Baal, but this god proved inadequate to the task. At length, the goddess 'Anat, going in search of Baal, encountered Môt roving upon earth, and cut him in pieces. She then urged the sun goddess to retrieve Baal during one of her nightly journeys to the netherworld. This

was done, and Baal was restored to dominion. (In this brief summary we omit several subsidiary details.)

The story allegorizes the alternation of the seasons. In Arabic, "land of Baal" means rain-watered soil, "land of Môt" barren soil, and "land of 'Ashtar" soil artificially irrigated. Baal, therefore, is the genius of the rainy season, Môt of the dry season, and 'Ashtar of artificial irrigation—no adequate substitute for rain.

The poem combines the well-known motif of the battle of the seasons (*GB*, one-vol. ed.: 316-17; *TM*; 764 ff.) with that of the dying and reviving god (compare Osiris, Tammuz, Attis, Adonis). Moreover, it runs parallel, in general plot and sequence, to the Babylonian myth of *Enuma Elish*. Not improbably, it was originally the cult-text of the autumn festival, at the beginning of the rainy season.

The role here played by the solar deity is paralleled, to some extent, in the Greek myth of Persephone and in the Hittite myth of Telipinu, the dying and reviving god of fertility (*KUB*, XVII: 10). It is probably to be explained from the fact that the festival for which these myths were designed usually took place at solstice or equinox.

On the motif of the food taken in the underworld (*C211*; *C262*), see Gaster, *JRAS*, 1944: 37 f.

The *Story of Aqhat* relates how a mortal youth of that name came by chance into possession of a bow which the divine smith (Kôshar) was carrying to 'Anat, goddess of hunting and war. When he refused to surrender it, she plotted to recover it by a trick. Luring him to a distant place on the pretext that she would teach him the arts of the chase, and hiring as her henchman a local thug named Yatpan, she waited until Aqhat sat down to his dinner and until birds of prey circled around the viands. Then she herself flew amongst them and, having previously concealed him in a sack, released Yatpan directly above the head of Aqhat with instructions to knock him unconscious and hastily snatch the bow during the general mêlée. Yatpan, however, misunderstood or bungled these orders and actually slew Aqhat. Moreover, while flying away from the scene, he dropped the bow into the sea. Thereupon, realizing that her devices had come to nought, 'Anat resolved to revive the youth.

Meanwhile, as the result of spilling of innocent blood, the earth became infertile. Aqhat's father, Daniel, perceived this fact and later learned that the victim of the crime was Aqhat. Noticing the birds of prey still wheeling in the air, Aqhat's father prayed to Baal to break their wings and bring them down. Then, ripping open their gizzards, he retrieved the remains of his son and solemnly interred them—a regular preliminary, in all myths, to resurrection. Aqhat's sister resolved to avenge him. She therefore set out, under cover of darkness, to recruit assistance from the neighboring Bedouins. By chance, her steps led her to the tent of Yatpan himself. The latter entertained her and, his tongue loosened with wine, boasted of his prowess in slaying Aqhat! When he had thus betrayed himself, Aqhat's sister plied him with more and more drink until he fell into a stupor. Then (apparently) she slew him. In a sequel, now lost, Aqhat was evidently restored to life, and fertility returned to the earth.

In the present writer's opinion, this story is developed from a Semitic version of the myth of Orion, and its primary purpose was to account for the infertility of

the earth during the high summer when the heavenly huntsman is in fact absent from the evening sky. The central character is assimilated to the familiar figure of the dying and reviving god of fertility—a process paralleled in Egyptian and Babylonian mythology, where Orion was likewise identified with Osiris and Tammuz respectively. It is, indeed, for this reason that the motif of resurrection through assemblage of dismembered parts is so prominently introduced, for this was a cardinal feature of the Osiris, Tammuz, and Adonis myths (E30; E607.1; V63).

The prominence of the bow in this Canaanite version of the myth is readily explicable from the fact that in Mesopotamian astronomy the constellation Canis Major was known as the Bow. Accordingly, just as a dog figures prominently in classical versions of the story, so in the Oriental counterpart would the element of the bow have had to be introduced.

The bemusing of Yatpan by drink recurs in the Biblical tale of Jael and Sisera (*Judges* iv-v), in the Hittite myth of the battle of the storm god against the dragon Illuyankas (*KBo*, III: 7) and in folktales concerning the defeat of the stupid ogre (G521).

The Legend of Keret relates how a monarch of that name, king of Hubur, prevented the progressive extinction of his line by contracting a union with the beautiful Horiya whom he won from her father, King Pabel of Udumu, by laying siege to the latter's city. Subsequently, after children had been born to him, Keret fell ill, whereupon his land languished and his eldest son Yašib sought to usurp the throne. Keret, however, was restored to health by the intervention of the high god El who sent a divine witch named Sha'taqat (Remover of Sickness) to perform various magical rites.

The purpose of this text is still obscure, and scholars are divided as to whether it is to be regarded as myth or legend. In the latter case, it may be a kind of primitive *chanson de geste*, perhaps composed to honor some descendant of the legendary Keret.

The Marriage of the Moon-god describes the espousals of that deity and the goddess Nikkal. The preliminaries of the ceremony are reminiscent of those related in *Genesis* xxxiv, 11–12. The poem appears to have formed part of the repertory of the professional singing women (*kôshardt*) employed, as among the modern Arabs, at weddings and funerals. It is therefore probable that the poem was really a mythological interlude introduced into a wedding song designed for a human couple.

A secondary source of information concerning Canaanite and Phœnician mythology lies in a series of excerpts made by the church father Eusebius of Cæsarea from the *Treatise on Matters Phœnician* compiled, about 100 A.D., by Philo, a scholar of Byblus. This work professes to have been based in large part on the earlier writings of a certain Sanchuniathon who may have lived between 700 and 500 B.C., and who wrote in the Phœnician language. The excerpts cover the origins of the gods, their primeval wars, and the creation of the world. They must be used, however, with great caution; for in the course of translation and transmission the original Semitic material was overlaid with a Greek veneer.

Other late writers likewise preserve reminiscences of Canaanite myth. Celsus, for example, quotes from a certain Pherecydes of Tyre the story of a primeval battle between the god Zas and the cosmic dragon Ophi-

oneus (compare Greek *ophis*, serpent), in which it is not difficult to recognize the old Canaanite myth of the combat between Baal and Yammu. This myth, it may be added, is also cited in the *Argonautica* of Apollonius Rhodius, and thence found its way into Milton's *Paradise Lost* (X, 570 f.).

Hebrew Myths

Hebrew myths are preserved mainly in the earlier chapters of the Biblical *Book of Genesis*. Therein are related the stories of Creation, Paradise, the Fall of Man, the Flood, the destruction of Sodom and Gomorrah, and the legendary origins of Israel. It has long been recognized that some of these stories possess marked affinities with Mesopotamian lore, and it was formerly thought that they represented material picked up by the Jews during the Assyrian and Babylonian Exiles and then incorporated into the later strata of the Pentateuch. The rediscovery of Canaanite literature, however, has now strengthened the alternative view that they may have enjoyed a far longer currency in Palestine itself and that they may represent a redaction of popular traditions themselves going back to the second millennium B.C. Activity in collecting such traditions appears to have been especially characteristic of the 7th and 6th centuries B.C., as witness the work of Ashurbanipal in Assyria and of Peisistratus in Greece. Accordingly, there would be nothing inconsistent with this view in the fact that the strata of the Pentateuch and the Prophetic and other writings in which these myths are embodied happen themselves to date to this comparatively late period.

Besides the major myths, such as those of Creation and of the Flood, which appear to have enjoyed wide and general circulation, there were others associated more specifically with particular shrines and similar sacred sites or with the very special customs and usages of this or that clan. Even in these, however, general motifs were interwoven. Thus, the story of Samson may have originated in myths about the sun god (Hebrew *Shemesh*) current at the sanctuary of Beth-Shemesh; while his exploit (*Judges* xv) in destroying the Philistines with "the jawbone of an ass" (Hebrew *lehi*) was simply a local saga designed to explain the name of the place Lehi. Similarly, the tale of Jacob's struggle with the angel at the ford of Jabbok (*Gen.* xxxii, 22–32) was partly designed to account for a tabu against eating the ischiatic nerve of an animal; while that of the Brand of Cain was probably intended to explain a Near Eastern usage whereby itinerant smiths and tinkers (Hebrew *qayin*, Cain) were distinguished by a mark on their brows and held sacrosanct.

It is apparent also that the Hebrews knew of several other myths besides those presented in formal literary manner in the *Book of Genesis*. In some of the *Psalms*, for example, and likewise in *Isaiah* and *Job*, there are references to a primeval battle between Yahweh (Jehovah) and a dragon variously named Leviathan or Rahab (Rager); and this is simply a variant of the Canaanite tale of Baal's fight with Yammu or Leviathan or the Mesopotamian story of Marduk's conflict with Tiamat. Moreover, it is significant that in most of the passages relating to that combat (e.g. *Ps.* lxxiv, lxxvi, lxxxix, xciii), the victory of the god is associated, as in the Canaanite and Mesopotamian versions, with the establishment of

the world order and the installation of the triumphant hero in a special palace.

Again, in *Proverbs* xxx, 4, following the author's express statement that he is unversed in sacred lore, there are propounded a series of riddles which may best be explained as allusions to current myths, viz.: "Who went up to heaven and came down? Who gathered the wind in his fist? . . . Who upheld all the ends of the earth?" The answers, it may be suggested, are respectively: Etana and some beings like the classical Æolus (compare C322.1; A842).

It must be recognized also that the heroic sagas of the Old Testament often embody familiar motifs, showing that certain types or cycles of stories indeed enjoyed currency in Israel and Judah, even though no explicit literary formulation of them may have come down to us:

Paradise is bounded by rivers (F162.2; F162.2.1). It contains a tree of life and one of knowledge (E90; C621.1). The sacred treasure is guarded by a dragon, griffin (cherub) (B11.6.2; N575). Eve, the mother of mankind, was originally a serpent-woman, as is clear from the fact that her Hebrew name Hāwḥāw really means serpent. Abraham entertains angels unawares (Q45.1). Esau is a hairy anchorite (D733.1; compare Enkidu). Jacob sees a ladder leading to heaven (F52). Joseph is falsely accused by Potiphar's wife (K2111). Moses is an exposed child (S301). He uses a wonder-working staff (D1254). He ascends a mountain at death (F132). Aaron's staff blossoms (F971.2). Elijah is fed by ravens (B452). David is the Messianic king who will return in the hour of his people's need (A580; H. Schmidt, *Der Mythos vom wiederkehrenden König im Alten Testament* [Giessen, 1925]). Samson's strength lies in his hair (D1831). Jonah is cast into the sea to quell a storm (S264.1). He is swallowed by a great fish and then disgorged (F911.4). Ahasuerus offers one half of his kingdom to satisfy Esther's wish (Q112). The Land of Promise is an earthly paradise "flowing with milk and honey" (F701; F701.1; F162.2.5).

The sagas of the Pentateuch were derived from several sources and sometimes the same motif recurs in different narratives. Thus, not only Moses but also Aaron and Elijah die on mountains: a reminiscence of the folkloristic mountain of death, common to many cultures. Similarly, the tale of the two culture heroes, one representing civilized and the other uncivilized man, occurs not only in the case of Jacob and Esau but also in that of Isaac and Ishmael and, to a certain extent, of Cain and Abel. Moreover, many of the motifs which appear in Old Testament myth are found again in other ancient Near Eastern tales. Esau, for instance, has his counterpart in the Babylonian Enkidu; and the exposure of Moses in a basket of reeds is paralleled in a legend associated with King Sargon of Agade.

It is probable too that Old Testament poetry frequently contains, in its language and imagery, reminiscences of ancient mythology. Thus, when Micah refers (*Micah* vii, 19) to Yahweh's "treading our iniquities underfoot" and "casting all our sins into the depths of the sea" he is probably harking back to the ancient myth which related how the god trampled on the dragon and cast its carcass into the ocean. Again, when Amos and Joel refer to the heavens dropping sweet wine and the rivers running with honey in the last day, they are using language which is employed in the Ras Shamra texts to

describe the inauguration of the golden age when Baal returns to earth. Doubtless, as more of Canaanite and Mesopotamian literature is recovered, further allusions of a similar character, now concealed, will become apparent.

Bibliography: There is no good over-all presentation of Semitic mythology. S. Langdon's *Semitic Mythology* (Boston, 1931) offers translations of the principal Sumerian and Mesopotamian texts, but both renderings and interpretations must be received with considerable caution. S. H. Hooke's *Myth and Ritual* (Oxford, 1933) is a series of expert essays correlating the principal myths with their ritual backgrounds.

The Sumerian material may be studied in S. N. Kramer's *Sumerian Mythology* (Philadelphia, 1944), but this must be read in conjunction with Th. Jacobsen's "Sumerian Mythology: a review article," in *Journal of Near Eastern Studies*, V (1946): 128-52.

A good summary of Babylonian and Assyrian myths will be found in E. Dhorme's *Les religions de Babylonie et d'Assyrie* (Paris, 1945), ch. xi, pp. 299-330. There is no comprehensive volume of translations in English. In German, however, there is H. Gressmann's *Altorientalische Texte und Bilder* (Leipzig, 1926). For the poem *Enuma Elish*, see A. Heidel's *The Babylonian Genesis* (Chicago, 1942), and for the Gilgamesh epic, the same author's *The Epic of Gilgamesh* (Chicago, 1944). G. A. Barton's *Archaeology and the Bible* (6th ed., Philadelphia, 1926) also contains renderings of some of the documents.

Extremely valuable are A. L. Oppenheim's three articles on "Mesopotamian Mythology" in *Orientalia* 16 (1947), 207-38; 17 (1948), 17-58, and 19 (1950), 129-58, containing many novel and suggestive reinterpretations of the texts.

Most of what has been written about the Canaanite texts from Ras Shamra is now antiquated. For a good bibliography of editions and studies, see R. de Langhe, *Les textes de Ras Shamra-Ugarit et leurs rapports avec le milieu biblique de l'Ancien Testament* (Gembloux-Paris, 1945), vol. i, pp. xvi-lvii. The presentation in this article is original, and is based on the writer's *Thespis Ritual and Drama in the Ancient Near East* (New York, 1950), which contains translations and full discussions.

The Phœnician sources may be studied in *Cory's Ancient Fragments* (ed. E. Hodges, London, 1876), but the introductions and notes must be altogether dismissed.

Of interest for the study of Old Testament myths are Sir James Frazer's *Folklore in the Old Testament* (3 vols., London, 1918), and H. Gunkel's *Boghöpfung und Chaos* (Göttingen, 1895).

Sen'deh or Sen'deh Old Man Culture-hero-trickster of the Kiowa Indians of the Plains: a character of paramount interest to Kiowa tale-tellers. Sen'deh is never thought of as Coyote or any animal, though he may change into an animal whenever he wishes. Unlike many North American Indian culture-hero-tricksters, Sen'deh does not belong exclusively to the past; he often appears as chief actor in Kiowa tales relating to the present time. In character and deeds he much resembles other Plains tricksters such as Coyote, and many of the stories told about Coyote are also told of Sen'deh. [EWV]

sending A magician's or sorcerer's familiar sent out to work harm or kill, sometimes an actual animal, sometimes an animated object; often also the sorcerer himself (or herself) transformed, on a death-dealing errand; also the evil spell itself directed at a victim, usually by pointing. The concept and practice of sending is widespread throughout Oceania, but is also known among primitive peoples from Siberia to Africa, among American Indians and Eskimos, and it occurs also in the witchcraft of the Baltic peoples and in Scandinavia.

In British New Guinea, a snake is often conditioned to be sent on an errand of death: the sorcerer procures a piece of his victim's clothing, puts it in a pot with a snake, heats the pot until the snake strikes at the garment with the human smell; the snake is then liberated near the victim, strikes at the associated smell when the victim passes, and usually kills (see J. A. MacCulloch, "Sending," *ERE* viii: 218). Elsewhere in New Guinea disease-producing sendings, in the form of slivers of bone, stone, or coral called *labuni*, are said to be hidden within the bodies of certain women; these can be "sent" as far as 60 yards to lodge in the body of the victim. The only way to get them out is to propitiate the sender with gifts. Medicine men of the Chippewa Indians have been said to stuff an owl-skin with magic substances and to send it flying through the air to the victim's dwelling, usually to cause starvation.

Pointing is the most usual form of deadly sending among primitive peoples and of later witchcraft. Power is believed to stream from the pointer to the victim. When the Malay pawang points his kris at a victim, blood begins to drip from the point of it as soon as the spell begins to work. It is still improper in polite society today to point at people or at sacred objects. On northern coasts of the world pointing at a ship is said to bring bad luck to it. See FAMILIAR; KILLING BY POINTING; PAWANG.

separable soul The soul (heart, life) conceived as dwelling apart from the living body, often in a tree or plant, animal, bird, egg, stone, or other inanimate object, and usually in a secret place for safe keeping. The concept occurs in most primitive religions and is a commonplace of world folktale. The soul *in the form of* an animal, bird, insect, plant, etc., is a different idea from the soul hidden away in animal or plant, or even kept in another part of a man's body than the heart for protection. When Abigail warned David that a man had

risen to pursue him and seek his soul, she added the comforting words that his soul was "bound in the bundle of life with the Lord God" (1 Kings xxv, 29).

Probably the most familiar folktale based on the separable soul motif (E710 ff.; Type 302) is the Norwegian story of *The Giant Who Had No Heart In His Body*, but whose soul (heart) was safely hidden away in a series of things (E713)—in an egg, in a duck, in a well, in a church, on an island, in a far-off lake. In Greek story the life of Nisus, king of Megara, was in one purple hair in the midst of his locks, which his daughter Scylla pulled out when she fell in love with the invading Minos, king of Crete. The Old Testament story of Samson belongs to this cycle: his power, if not his life, was in his hair; and the secret was wheedled from him by a loved woman, who betrayed him, the usual accompanying circumstance of the story (K975.2). In the Old Irish story of *Cano, Son of Gartnán*, Cano would not accept the love of Créd while he was a common soldier; but he gave her a stone which contained his life, as pledge of his return as soon as he was king. Later when Cano was king of Scotland, Créd traveled north to meet him, bringing the stone with her. They were in sight of each other when Cano was attacked by a rejected lover of Créd. When Créd saw the blood streaming from his wounds she dashed her own head against a rock; the life stone of Cano fell and broke and Cano died. See Myles Dillon, *Cycles of the Kings*, pp. 82–83. See ACACIA; BUSH SOUL; DREAM SOUL; LIFE TOKEN.

separating sword or sword of chastity A folktale motif in which a man and woman not married must for some reason sleep together. They do so but with some object—usually a sword in oriental and medieval story—between them. The object (sword) is the token and guarantee of their chastity. Often in medieval story the woman is not aware that the man she is sleeping with is not her husband. He may be the husband's twin brother impersonating the husband to gain information, or he may, like Siegfried, take on the likeness of the husband. This motif occurs widely in folktale and myth, but rather infrequently in literature of record. It is found in the following romances: *Amis and Amiloun*, *Tristan*, *Generides*, certain versions of the *Seven Sages of Rome*, *Oliver and Artus*, *Ludwig and Alexander*, *Der Arme Heinrich*, *Grinado*, *Enfances de Garin*, *Engelburt and Dietrich*. It is also found rather generally in Germanic saga literature: The Siegfried, the *Bjarki-Saga*, Saxo Grammaticus, *Volsungs Saga*, the *Saga of Orendel and Breide*. It occurs also in Germanic balladry and in the English ballad *Lord Ingram* (Child #66, B 14). *Amis and Amiloun* seems to be the source, direct or indirect, of this episode in all the romances including the celebrated *Tristan*. *Tristan* is certainly originally a Celtic elopement story, the pattern of which is as follows: A nephew elopes against his will with his uncle's wife. They are pursued by the uncle; each night when they must sleep together, at the nephew's insistence they remain chaste, sleeping with an object (often a stone) between them. The original *Tristan* must have centered around the flight into the forest with the emphasis on Tristan's preserving the chastity between him and his uncle's wife. When the *Tristan* was developed and made over into a courtly romance the sword was substituted for the original stone, borrowed, it would seem, from *Amis and Amiloun*, for this romance is the oldest piece

of recorded literature in western Europe to use this motif, and as a romance it was very popular in all the languages of Europe. *Amis and Amiloun* can likewise be proved to be the source of the motif either directly or indirectly in the other romances of the West which use it. *Amis and Amiloun* serves in this way as an intermediary between folktale and literature of record, for the motif comes into *Amis and Amiloun* directly from the folktale of the *Two Brothers*. In the *Two Brothers*, one of the most wide-spread of all European folktales, this motif constantly occurs; so constant is it that it must be a part of the original *Two Brothers* story. This famous folktale has been studied in detail by Ranke in *FFC* 114. Some 770 versions are listed from all over the world; about two thirds of them contain this motif or show evidence of having contained it. It is highly significant that in European folktale this motif seems not to occur except in the *Two Brothers* story, of which *Amis and Amiloun* is the literary descendant.

The part of the story pattern of the *Two Brothers* that interests us can be abbreviated as follows: A man who has long been married but without children catches the King of the Fishes, who instructs him to give a portion of his body to his wife, who in due time produces twins. From some of the bones cast aside two trees spring up. When the twins are grown one leaves to make his fortune, telling his brother that if harm should come to him his tree will wither. Eventually he comes to a great city where he marries a beautiful girl. Some time later he asks her what lies beyond the mountains he sees from his window. She tells him that no one who has gone there has ever returned. The next day he sets out to see for himself, and is bewitched and turned to stone. Back home his tree withers; seeing this the second brother starts out to find the first. Eventually he comes to the town where his brother had married and there is mistaken for his twin. He says nothing, hoping by that means to find out what has happened to his brother. Posing as her husband he sleeps each night with his sister-in-law, but each night puts his sword between them . . . It is significant, it seems to me, that this is the only folktale of wide range which contains this motif and that the motif is rarely found except in the *Two Brothers* story. After a detailed study of the tale Ranke decides that it belongs to western Europe and perhaps to northern France. At any rate it is clear that the story is commonplace in Europe and has been so for a long time. Ranke takes as the first recorded version the *Bjarki Saga* (14th century) seeming not to be aware of the Latin version of *Amis and Amiloun* of the 11th century, which is clearly a reworking of the folktale.

That the motif is no literary convention or invention is proved by the fact that it is in the *Two Brothers*, and secondly by the fact that the practice of placing an object between a man and woman who must sleep together is common among many early peoples. In early stages of culture and extending down even today the practice of continence for specific purposes is common. One might observe continence to increase physical powers, to obtain property, to get success in hunting, fishing, war, to guarantee germination and growth of crops, to increase milk in cattle. Almost any activity involving risk might be accompanied by a tabu against sexual intercourse. In addition, many people practiced

continence for a varying length of time after marriage; after child-birth for as long as the child was being suckled; or as a part of religious ritual. The Masai of Africa must remain continent during the brewing of the poison to be used on arrows, lest it have no potency; during this time they sleep with their wives but with a stick between them. The Arunta of Australia remain continent during the period of sowing of grass seed; at this time they sleep with their wives, but with fires burning between them. On Luzon, P. I., a bride and groom must remain continent for a period after marriage but sleep together with a boy between them. It is not necessary to multiply illustrations. The fact is that people the world over during periods when abstinence from sexual intercourse was necessary for any of a wide variety of reasons were accustomed to sleep with some object between the man and woman. The separating object seems totally without significance. Found in addition to those already mentioned are: a log of wood, cloth, rolled up clothes, drinking gourd, matting, cooking pots, etc. No common denominator can be struck. It would seem that any object that came to hand would serve and that the whole significance of the action is in the belief that something tangible be placed between the sleepers as symbol of their continence, as a token of a condition that was accepted by both, like the bundling boards in New England beds. Never found in this connection are elements thought to have magical powers, such as certain plants or wood. No use for this purpose is made of mandrake, rowan, garlic, hazel; missing too are ritualistic objects and charms. Nor is there any account of the object placed between the two having been sung over or imbued with magic. Weapons in general are conspicuously absent as separating objects in early cultures.

The sword (dagger, knife, deer-sticker, pistol) as an object of separation first appears in the Orient. From there come the earliest references; they are all in cultures advanced and sophisticated: Hebrew (3rd century), Persian, Arabic. The sword had developed as a symbol of law and morality; the gradual substitution of the sword for a casual object would in a more advanced culture be inevitable. For the same reason the cross is occasionally found in Christian societies as the separating object.

The development then of the motif of the sword of chastity or the separating sword would seem to be as follows: In the early stages of culture it was the common practice of men and women, who for any of a variety of reasons had to preserve abstinence from sexual intercourse, to sleep together with some object between them as a token of their abstinence. As society became more advanced and sophisticated the sword, symbol of law, became the accustomed object. Folktales reflecting this practice were told, especially in the Orient. One such story, the *Two Brothers*, became immensely popular over Europe and Asia and was finally reworked in the 11th century into the general popular romance, *Amis and Amiloun*. This romance in turn became the source of the motif in later literature in such stories as the famous *Tristan*. MACEDWARD LEACH

separation of sexes In the emergence myths of several of the southern Athapaskan tribes of North America, some prominence is given to the period when men and

women were separated in the underworld, before emerging to the earth. The Navaho say that this occurred in the last of the 12 worlds below the earth; the Jicarilla Apache are more interested in assigning a reason for the separation, which they say was caused by the women's faithlessness, or by a woman's scolding a chief; the chief, enraged, called all the men to him, even the baby boys, male dogs, and male horses, and took them to the other side of a river which the women could not cross. The sexes remained separated for four years, by which time the women were starving, not having planted crops that year. Finally, with the help of Coyote, the sexes came together again. A Tübatulabal (east central California) tale, to which no parallels have as yet been found to exist among any other tribes, also deals with men and women at a time when the sexes were isolated from each other; the men find the women, and invite them to visit them, during the mythical age. [JWV]

Serapis In Greco-Egyptian religion, the dead Apis-bull assimilated in Osiris; Osiris-Apis, a chthonic god combining Osiris with an aspect of Ptah, who had a strong place in popular religion. Serapis seems to have been an artificial fusion made for political purposes to consolidate the position of the Ptolemies (the Macedonian dynasty in Egypt, after 323 B.C.). The underlying idea, that of identifying a ruling house with a god, was common enough; Alexander had similarly tried to identify himself with Amen when he conquered Egypt. There was no mythology concerning Serapis. His physical appearance was Greek in concept: a Hades seated on a throne, wearing a basket on his head, the infernal watchdog at his feet. This statue of Serapis in the Serapeum at Alexandria was brought from Sinope by Ptolemy Soter. The unknown god had come to him in a dream and told him where to find it. Then two who knew discovered it to be the image of Serapis. It was said that the only god invoked as Alexander lay dying was Serapis, and, though this may have been Ea Sarapsi, a Babylonian deity, the name of Serapis became famous throughout the Greek world. Serapis was part of a triad with Isis and Harpocrates: he was thus equivalent to Osiris. In later times the cult of Serapis spread throughout the Roman world. The Alexandrian Serapeum was destroyed by Theodosius in 385 A.D. and Serapis worship eventually died out before the attacks of Christianity.

Sere Dina A Fijian type of song called "true songs," actually epic chants of exploits and history of the times beyond men's memory, composed by specially endowed singers for notable occasions such as the visit of an honored personage, a death, or a natural visitation (hurricane, etc.), and believed to be transmitted to the poet by the spirits of his ancestors during a dream or trance. The songs are long rimed chants broken by an intermission during which the audience relaxes and fills the time with jokes and anecdotes. (See B. H. Quain, *The Flight of the Chiefs*, New York, 1942.)

serpentine A serpentine course grows naturally out of an open round, for the leader of the line may digress from the steady circling to describe meandering figures, zigzags, figure-eights, or spirals. Commonly the dancers hold hands, or link garlands, as in ancient and modern Greece, in the Serbian *kolo*, French *fandouille*, and

in ceremonies of the ancient Aztecs. Eastern Woodland American Indians are not always linked.

The Greek labyrinthine *geranos*, or crane dance, is said to have its origin in the Theseus legend, the rescue of Athenian youths and maidens from the labyrinth. Or it may simply imitate the swerving flight of the crane. Similar serpentine of Europe may have originated in this dance or in the older serpentine of the Eleusinian mysteries. More likely, the *Schemenlaufen* and *Metzger-sprung* are descended from autochthonous fertility rites, as also the *ball de la teya* and Hungarian *gyertyas tánc* with their fire symbolism. All of these dances use a running step or skip and often introduce an arch figure—two fertility traits. All of these features have been transferred to the New World in the Kentucky Running Set.

Independently, the American Indian follows a serpentine course, particularly in the Southeast, also in the Ute turkey dance. A meander is particularly characteristic of Cherokee rounds, the corn, ant, snake, and friendship stomp dances. This has been accepted by the Iroquoian Seneca in their corn dance and "Cherokee" dance, and by the Sauk and Fox in their grapevine and snake dances. Like the European versions, they are associated with fertility. See DANCE: FOLK AND PRIMITIVE; ROUND DANCE; SNAKE DANCE; STOMP DANCES. [GPK]

serpent worship Though serpents are sacred in many parts of Africa, it is rare that they are worshipped as such. African "serpent worship" is rather manifested in respect shown certain species of snakes, usually those whose habitat is in rivers or other bodies of water, as manifestations of certain supernatural beings, or because of their association with water deities. The theological setting of beliefs of this nature have been explored only slightly, but in Dahomey, at least, it is known that the serpent is conceived both as the rainbow and as the instrument which brings or takes away wealth. It is placed in the general category of sinuous objects, such as the umbilical cord or a column of smoke. The Dahomean rainbow serpent, Aido Hwedo, is best known in the New World because of the prominent role Damballa plays in the Haitian *vodun* theological and ritual system. However, respect is shown snakes by Negroes in all parts of the New World, this varying from the Dagowe of the Bush Negroes, where this variety enters into the patterns of worship, to the lore about the power of snakes that has been recorded from the United States. [MJH]

sesame An East Indian herb (*Sesamum indicum*) containing seeds which are used as food and which yield a pale yellow emollient oil. The oil is widely used in India for both cooking and anointing. Both the seeds and the oil are used not only medicinally, but widely in various ceremonies for the dead and for fertility.

Sesame seeds are boiled with rice and barley flour and honey and milk to make the special balls (*pindas*) which are offered to spirits of the dead at the Hindu *śrāddha* ceremony. These, provided for a dead relative for ten days, enable him to by-pass as many hells as balls are offered, and provide him day by day and part by part with a new body. Certain Hindu dancing girls offer a sweetmeat made of sesame and sugar every Wednesday to Ganeśa, their patron.

In Indian folktale, one of the noodle stories in the *Avadānas* (#67) is about the sower who sowed roasted

sesame seeds to no avail. The story of the "Brahman's Wife and the Sesame Seeds" (see *Ocean of Story* V: 76, 77) is a moral tale against hoarding. When told to prepare milk, sesame, and rice for a guest, the wife demurs because of poverty. The husband then tells the story of the jackal who watched the hunter kill a wild boar and die from the wounds from the boar's tusks. The jackal, thinking to hoard the abundant meat, went first to eat the little piece that was on the bow; the arrow fixed in the bow flew up and killed him.

The phallic cakes representing female organs which were a feature of the Thesmophoria in honor of Demeter at Syracuse were made of sesame and honey.

The aphrodisiac properties of sesame seed have been praised for centuries. The *Kama Sutra* prescribes sesame seeds, especially the covering of the seeds, soaked in sparrow eggs and boiled in milk with sugar and ghee along with two or three other things, to make a man able to enjoy "innumerable women." Costa Ben Luca, an Arabic physician of the 9th century, prescribed an aphrodisiac remedy, which he found in the *Book of Cleopatra*, to one afflicted with impotence and which was found effective: anointment of the body with crow's gall mixed with sesame.

Pliny stated that "Sesame stamped or beaten into powder, and so taken in wine, restraineth immoderate vomits." Today the leaves soaked in water produce a mucilaginous fluid used with great success for dysentery and diarrhea of children. Sesame is commercially grown in the United States for this particular purpose. The oil from the seeds is slightly laxative. See OPEN SESAME.

śeṣha The world serpent of Hindu mythology; one of the Nāga kings who ruled in Pātāla. śeṣha is depicted with a thousand heads, dressed in purple, and holding a plow and pestle. He supports the world or the seven Pātālas or hells. He is also the servant of Vishnu, who rests on him while sleeping. Sometimes he is represented as forming the canopy of the god, sometimes as having become a man in the form of Balarāma. At the end of each kalpa, or eon of 1,000 yugas or ages, he destroys the world with fire. Earthquakes are caused when he shakes one of his heads. See ANANTA.

Seven Against Thebes The group of heroes in Greek legend who fought to remove the usurping Eteocles from the throne of Thebes. When Polynices and Eteocles, sons of Œdipus, grew of age, they agreed to share the throne, year and year about. Polynices went into exile the first year, and while at Argos married Argea, daughter of Adrastus. When it became obvious that Eteocles would not surrender the throne at the end of the year, Adrastus got together an expedition to help his son-in-law obtain his right. Besides Adrastus and Polynices, the Seven included Tydeus, Amphiaras, Capaneus, Hippomedon, and Parthenopæus; some versions of the story make changes in this list. (Compare for example Aeschylus' play *Seven Against Thebes*.) During the march on Thebes, the expedition stopped for water at Nemea. Hypsipyle offered to show them where a spring was located, but while they were gone a dragon killed her child. The heroes slew the dragon and instituted the Nemean games, one of the great game festivals of ancient Greece. When they arrived before Thebes, each of the Seven attacked one of the seven gates of the city, which were defended by seven Theban

heroes. The assault failed: Capaneus was killed by one of Zeus' thunderbolts; Tydeus, almost given immortality by Athena, lay wounded and ate the brains of Melanippus, and Athena changed her mind; Amphiaras was swallowed up, chariot and all, by the earth; Polynices and Eteocles, because of a curse laid on them by Œdipus, killed each other. Only Adrastus escaped alive. Creon then resumed the Theban throne, forbade the burial of Polynices, and brought great trouble to his house thereby. In later years, the Epigoni, Those Born After, the sons of the Seven, led by the aged Adrastus, took the city and razed it. The fall of Thebes is said to have occurred just before the Trojan War began.

Seven Gods of Luck or Shichi Fukujin Patrons of good fortune and longevity of Japanese mythology: a syncretism of Shinto and Buddhist concepts, formalized during the 16th century. They are: Bentei, patroness of the fine arts, female beauty, and a giver of wealth; Bishamonten, also a giver of wealth; Daikoku, god of inexhaustible wealth, usually depicted standing on two rice bags and carrying one on his shoulder; Ebisu, god of fishing and food and honest dealing, depicted with a merry face and a fishing rod with which he catches the fish of good luck out of the sea; Fukurokuju, god of fortune and longevity, depicted with the crane, symbol of long life; Hotei, the fat and cheerful god who carries a bag of treasure, from which he gives to non-worriers; Jorōjin, patron of health and longevity.

seventh son A seventh son is always a lucky or especially gifted person, often gifted with occult powers. He makes a good doctor; he usually has instinctive knowledge of magic and medicinal herbs; and the seventh son of a seventh son can stop hemorrhages. Throughout England, Scotland, Ireland, and the United States in general, any seventh child is regarded as having exceptional healing powers. In Ireland, the spittle of a seventh son is especially potent. In French folklore, a seventh consecutive son is said to be "gifted with the lily" (i.e. *fleur de lis*). The gift seems to be a kind of clairvoyance or telepathy by which hidden things are brought to light. Among Gipsies, the seventh daughter of a seventh daughter always tells a true fortune. Rumanian folk belief in regard to a seventh child is more sinister: any seventh child is doomed to become a vampire.

sex token Implements used by males and females are hung up or placed within reach of a mysterious visitor; whichever falls or is taken denotes the sex of the unborn child, or the sex of the unseen visitor. Usually the implement hung up for a boy, by North American Indians, is a tiny bow and arrow; for a girl a basket, or mortar and pestle. This incident occurs in several North American Indian tales, especially hero tales. For sex token customs associated with the afterbirth of newborn infants among the Kwakiutl Indians of British Columbia, the Aymara Indians of Bolivia, and the Siberian Yukaghir, see AFTERBIRTH. [EWV]

sextur Six dance: a Danish figure dance for six couples (not six dancers). It is essentially a sunwise round, conforming to western European type, but includes simple interaction of couples. A chassé slide, with joined hands, opens and closes the dance. With a two-step and two walking steps, opposite couples meet in turn (one

and four together, one and four apart, two and five together; these apart while three and six together; finally these last apart). Then the girls circle left in the center and the men circle left. Partners thereupon turn in separate couples. There are other versions, as the *polka sextur*, danced with a polka step. They are all modern developments built on the ancient round dance. [GPK]

sexual aberrations (North American Indian) Several tales concern a maladjustment of the sexual life such that satisfaction is sought in aberrant ways. From the European viewpoint the most telling examples of such Indian tales would be those recorded by Opler from the Jicarilla Apache, of the sexual use of cactus, the girl who had intercourse with dogs, and that section of the Jicarilla emergence myth in which the First People separate according to sex, and the men and women use themselves sexually: to the women monsters are born, which the culture hero, Killer-of-Enemies, later destroys. See Morris E. Opler, *Myths and Tales of the Jicarilla Apache Indians*, *MAFLS* 31, 1938, pp. 24 n.1, 266, 369-70, 373.

Several other instances of sexual aberrations are found in North American Indian literature. The toothed vagina is one (see *VAGINA DENTATA*); long-distance intercourse, in which Trickster's penis lengthens to enable him to have intercourse with a woman sleeping on the other side of a stream is another. Trickster's seduction of his own daughter by feigning death and returning to his home in disguise (T411.1); a brother's seduction of his sister by suggesting a deceptive remedy (usually sitting on a certain plant) to cure the sister's burned groins (T415.1); a son-in-law's trick which enables him to sleep with his mother-in-law while on a camping trip (T417); Trickster's use of a tree as a wife (T471); the incestuous relations of the brother and sister who become sun and moon (see *LIGHT*), or the wish for such relations on the part of Loon Woman; and some of the animal paramour tales, all revolve around, or touch upon, the obtaining of sexual satisfaction in socially non-approved ways. [EWW]

sexual continence Peoples all over the world observe continence during the sowing of grain, during a war, during many occupations of a seasonal character, before and during a long period of tabu (e.g. mourning of a dead chief). Certain Indians of Mexico must remain continent during the search for the sacred cactus, the Gourd of Fire. Workers at the salt pans, brewers of beer and wine, must remain continent during these processes. Hunters and fishermen likewise observe such prohibitions against sexual indulgence. Of course, wives during these times must also be continent and chaste. Should a hunter be killed by an animal, or should he fail to get the expected meat, his wife will at once be suspected of unfaithfulness. Though continence is the practice of many people on these occasions, yet there are some who reverse the whole procedure, especially at planting time, and engage in wild and promiscuous sexual excesses to bring about the same result. Frazer holds that some believe repression of the strength they might expend in reproducing will cause that strength to go into the plants or animals, and that others reason that a pouring out of sexual energy will stimulate nature to an abundance. See *CHASTITY*. [MEL]

sexual intercourse (North American Indian) The myths of several tribes tell how people learned to have

sexual intercourse; among the Thompson Indians of the Plateau region, for example, it is the trickster, Coyote, who when he came to a country inhabited by men and women who did not know how to propagate, showed them how to mate; the women would not let him go until he was thoroughly fatigued and ran away, whereupon they chased him. Many other tribes, as for example the Shawnee of the Eastern Woodlands, recount in their creation myth how man, when originally created, was improperly provided with sexual organs and did not mate; only after these organs were put where they are now, did he learn to have intercourse and thus have children. All North American Indian groups seem to have been aware of the connection between intercourse and child-bearing. For the continental distribution of the misplaced genitalia motif (A1313.3) see Stith Thompson, *Tales of the North American Indians* (Cambridge, 1929), p. 288, n. 59a.

Illicit intercourse by various means is attributed to Trickster in many North American Indian trickster tales. In one widely distributed tale Coyote or other trickster characters sees women at a distance or across a stream; he causes his penis to become long, and has "long distance intercourse" with them. In another trickster tale Coyote travels with his mother-in-law; at night; they lie down near each other and he frightens her so that she moves nearer and nearer to him until finally he has intercourse with her. In still another tale he disguises himself as a baby in order to have intercourse, and in yet another he feigns death so that he can have intercourse with his own daughter. Incest of this sort, or intercourse with one's mother-in-law, with whom one stood in a respect relationship, were both utterly beyond the pale in actual living, in all American Indian tribes. [EWW]

shadow The interpretations of shadows in folklore revolve about the idea that shadows are the souls, life essence, or strength of the individual. The people of the Amboyna and Uliasse Islands fear to go out of their houses at midday because, in those equatorial latitudes where the shadow at that hour is tiny, they may lose their souls. On the Malay Peninsula the prohibition against burying the dead at noon has to do with short shadows and short lives. The strength of the Manganian warrior hero was greatest in the morning and least at noon when his shadow was short.

Some peoples teach that shadows have independent lives of their own. In England "no man can escape his shadow" and Lucian explained that when we die our shadows become our accusers. They are trustworthy because they were always associated with us and never separated from our bodies. The Egyptian view was that men have three kinds of body: the flesh, the "double," and the shadow. Some West African peoples believe that man has four souls of which one is the shadow soul. Consequently it is important to keep in the shade at noon lest the shadow soul be lost. The soul rests after sunset and arises with renewed power in the morning. The owner must die when an enemy stabs the shadow soul. Among the Indonesians, people who have no shadow or only a faint one will die soon. Among the Dyaks, Niassians, Javanese, and other Malays, a food on which a human shadow has fallen must not be eaten lest the soul substance be consumed. In fact, throughout the Malay

Archipelago shadows must not fall on graves, trees, or other objects inhabited by spirits which might consume the shadow and thus cause death.

The belief that life essence, frequently referred to by observers as "soul," is implicit in shadows has been reported from all parts of the world: Tasmania, Africa, North and South America, Asia, and Europe. Consequently many tales exist about the need to immolate a living man, child, or virgin in the walls of a house with the assumption that the souls of these victims will give the house strength. Builders in modern Greece are said to kill an animal, let its blood flow on the foundation stones of the house, and bury it in the walls. Elsewhere (Transylvania) people believe that the shadow of a living man can be built into the house. Passers-by are warned not to come near a house while it is being built lest their shadows be caught and they die. Shadow traders take the dimensions of a man's shadow which they sell to builders. In some parts of China it is dangerous to let your shadow fall into a grave. A further conjugation of this is the Warrau belief that looking at a person draws the shadow or soul toward one. In the Island of Wetar magicians can make a man ill by stabbing his shadow. In Nepal Sankara's neck was broken while he was demonstrating his supernatural powers. The Grand Lama stabbed Sankara's shadow while he was soaring in the air. Sankara fell, fatally. In the Banks Islands certain stones are inhabited by "eating ghosts" who draw out the souls of men whose shadows fall on them. When built into houses these stones protect against intruders. A small snail in Perak can suck the lifeblood from the shadows of cattle. In ancient Arabia a man was paralyzed if a hyena stepped on his shadow, and if a hyena stepped on the shadow of a dog on the roof of a house, the dog would fall to the earth as if pulled down. The Basutos believe that crocodiles can drag a man's reflection under the water and thus kill him.

Many peoples believe that the shadows of women, particularly mothers-in-law, women in mourning, or menstruous women, are particularly ominous. If the shadows of Shuswap widows of British Columbia fall on any one, they will cause illness. The shadow of any woman can cause loss of weight, laziness, and stupidity to the Kurnai of Australia. In New South Wales it is grounds for divorce if a man's shadow falls on his wife's mother. In Lebanon the peasants believe that the shadows of menstruous women cause flowers to wither and trees to perish. In folk belief ghosts have no shadows (E421.2). [RDJ]

Shāhnāmāh The *Epic of Kings*: a historical epic written by the Persian poet Firdausi about 1010 A.D. The central subject of the poem is the deeds of the Rustamids. It makes extensive use of legendary and semi-historic material contained in the *Karnamak i Artakhsir i Papakan* (*The Book of Mighty Deeds of Ardashir, Son of Babak*). The epic was undertaken by Dakiki, probably a Moslem, who had completed a thousand verses when he was murdered by a slave. Firdausi completed the enormous project during a period of 35 years. The poem begins with Gaya Maretan, Haoshangha, and Takhmürath, the earliest Iranian heroes, and ends with an account of the Sassanian dynasty.

Shakers An indigenous and flourishing religious sect of the present-day Indians of the Pacific Northwest, hav-

ing no connection with the Christian Shakers of the Atlantic states. The founder of the Indian Shaker religion was John Slocum, a Sahewabsh-Squamish Indian of the Puget Sound region. In 1881 or 1882 Slocum died. While his father and brother were buying him a coffin Slocum came back to life. He had, he said, been refused admittance to heaven because of the life he had led, and had been sent back to tell his people they must confess and be reborn. After this experience he spent his life preaching, and founded the Indian Shaker Church. The "shaking" which is characteristic of the sect is however attributed to John Slocum's wife. Mrs. Slocum, it is said, "got a spirit," fainted, and when she recovered started shaking; Slocum, who was ill at the time but who had refused the services of Indian medicine men, was shaken over by his wife and other relatives, and improved under the treatment. During the past sixty to seventy years the Shaker religion has been spread by zealous converts, south as far as the Hupa of northwestern California, north as far as Victoria and Nanaimo of Vancouver Island, and eastward to the Yakima reservation and the Dalles in Washington. The rites are always held in a one-room church, rectangular and proportioned like the native North Pacific Coast houses, and church beliefs and practices represent a fusion of old native and new Christian beliefs and behavior. For a comprehensive description of the Indian Shaker church see Erna Gunther, "The Shaker Religion of the Northwest" pp. 37-76, in *Indians of the Urban Northwest*, Marian W. Smith, ed., New York, 1949. [EJV]

shakuhachi A long vertical bamboo flute of Japan, named for its length (*shaku*, a measure, plus *hachi*, eight), probably introduced by Buddhist priests from China in the 13th century. It is now played as an accompaniment to folk songs and sometimes makes one of a trio with the samisen and koto.

shalako The six giant kachina of Zuñi pueblo, each one impersonated by two men. The masks are turquoise-colored, with a crest of eagle and macaw feathers, and horns with red feather pendants, ball eyes, long snouts which open and close; long hair, a collar of raven feathers and fox skins, dance kilts, and white blankets are also part of the costume. The mask is carried on a pole, simulating a creature ten feet high. The masks are accorded great deference and are consecrated with cornmeal before each use. Each mask is associated with one of the six kivas.

The shalako "kachina advent" is prepared on the ninth day of winter solstice, and spreads through the year, with periodic planting of prayer-sticks by the shalako in February, May, September, October, November, and the actual escorted arrival in November or December, at a ceremony called *koko awia* (the kachina come). In the public ceremony, when they approach the pueblo, they are escorted by the *koyemshi* clowns, who also do considerable dancing, and by Long Horn kachina with their heavy-step quadrille. They are associated with war and hunt (striking a shalako gives luck in hunt), burlesque, sexual license, ritual continence, and killing, and communal dances by all men. Chants refer to the ancestors' fate after emergence, and to progeny. It is primarily a ceremony for the dead, and thereby for rebirth. Kachina depart after Shalako, at summer solstice in July. [CPK]

shaman and shamanism The term shaman is usually used by Americanist ethnographers in reference to men or women who, through the acquisition of supernatural powers, are believed to be able to either cure or cause disease. In contrast to priests, shamans are not instructed in a body of formal knowledge, but acquire their powers individually, and while shamanistic performances follow definite tribal or areal patterns, the details of such are not set, as in priestly ritual, but may vary considerably according to the powers and whims of individual shamans. In early travelers' accounts, shamans are usually referred to as "medicine men"; this is however too general a term to be very useful.

Shamanistic practices are strongly developed among the Eskimo, on the North Pacific Coast, among the Plateau, California, Great Basin, Plains, and Eastern Woodlands tribes, and among some of the Southwestern tribes, but not among the Pueblos of the Southwest, where societies or priesthoods take charge of curing, and witches, with no curing powers, are blamed when misfortune befalls a person. The Southeastern tribes had notions of disease which differed to a considerable degree from those held elsewhere in North America; they believed that all bodily afflictions came from the presence of some harmful foreign matter in the sick person's body (a belief widely held in North America), and that this harmful matter was placed there either by some animal spirit or by a shaman, but mostly, however, by offended animal spirits. To cure disease in the Southeast a "shaman" is called in to diagnose the case by secret methods, then to sing the songs or formulas appropriate to the animal who has caused the particular disease (such as Deer, Sun, Young Deer, Water Moccasin, Hog, Water Wolf, Little Turtle, Panther, etc.) and finally to administer medicinal herbs, either externally or internally to the patient, in order to remove the harmful foreign matter which the animal spirit or, rarely, another shaman, has put into the patient's body. Southeastern shamans, then, combine the functions of 1) herb doctors of other parts of the continent, 2) Southwestern priests who chant songs or formulas which can cure, and 3) the true shaman who, as part of his practices must of course diagnose the cause of the disease, before he attempts to cure. It is not surprising therefore to learn that among Southeastern tribes the powers of a shaman are open to any successful candidate (i.e. that they are learned, rather than supernaturally revealed to individuals by the spirits), and that the Southeastern shaman is also likely to be the town chief.

Central Eskimo shamans (*angakok*) are usually men, notable not only for their curing performances, but for their drum-dance exhibitions and public displays of feats of agility. They are distinguished from the majority of North American shamans in that they are actually possessed, when performing, by their spirit helpers, and as a part of this possession they speak at that time in a private, or "angakok," language.

In another part of North America notable for shamanistic practices, namely the North Pacific Coast, shamans were men who, on the guardian spirit quest, had been befriended or visited by magical beings, invisible to all but themselves. The powers of these beings made them dangerous, and the shaman himself sometimes feared what they could make him do in the way of killing or harming other human beings, for example. Therefore in

this region, as in most others, the shaman usually waited until he was middle-aged, and felt able to control his powers before he began to practice. In most cases, this practice followed the usual North American pattern: diagnosis and determination of the cause of disease (usually a foreign object in the patient's body), singing and sucking out by the shaman of the foreign object, and destruction of the object. The belief that soul loss, as well as the intrusion of disease objects, caused illness and death appears on the North Pacific Coast, and shamans with special powers made trips to the land of souls, in some Pacific Coast tribes, to recover the souls of persons who were ill but were still alive (see Ruth Underhill, *Indians of the Pacific Northwest*, Riverside, Cal., 1945, pp. 192 ff.).

In coastal Oregon and in northern California shamans were either women or, in rarer cases, transvestites. They underwent, in this area, training or "doctor dances" after it became clear that they were destined to be shamans. Payments exacted by them for their services after they became shamans were heavy, since wealth in goods or currency was esteemed in this region; but all over the continent some payment, at least, for shamanistic curing (or disease-producing) services was usual.

Shamans' magical contests were features of Northwest Coast and central California shamanism; to a certain extent, the "shooting" performances of the Eastern Woodlands Midewiwin Society, by Mide initiates, may also be the survival of Eastern shamanistic contests. Using objects charged with magic power (a bird's claw, a shell, or other small object) shamans lined up and "shot" each other, the object being to make one's opponent fall down unconscious. If strong enough in magic, the opponent could revive himself, but if he was not, the shooter revived him. See HESHWASH CEREMONY. Shamans, with their interest in religious matters and in conserving the ways of the past, were often the persons who best knew the folklore of a tribal group, especially the more ritualistic myths. For the creative role that shamanism played in Mescalero Apache mythology see Morris Edward Opler's article (*JAFL* 59: 233-68). [ewv]

South American shamans were men who as the result of a supernatural call or of special training became the intermediaries between the supernatural world and the communities. Through their medium the spirits spoke to men and helped them in their undertakings. Their principal function was to cure sick people, but they also foretold the future, uncovered hidden things, caused rains to fall, and led the religious ceremonies of their group.

With the outstanding exception of the Araucanians, most South American shamans are men, though medicine women are not exceptional. There is little evidence to show that shamans were individuals with a neurotic personality. However the Araucanian shamans or *machi* were recruited among berdaches and persons afflicted with mental or nervous disorders.

In many tribes, e.g. Ona, Toba, Campa, a man enters the profession only if he has received a supernatural call. A spirit appears to him in a dream and gives him a chant or the supernatural weapons which he needs to destroy his enemies. Sherente Indian shamans were recruited among those who had a vision of the anthropomorphized planet Mars. Even today Araucanian sha-

mans claim to have been forced to practice their art by a divine order.

The shamans of the tropical region are prepared for their career by a lengthy and painful initiation. Among the Caribs of Guiana there are real shamanistic schools. By taking tobacco juice or as strong a narcotic as *ayahuasca*, the novices put themselves into a state of trance and have visions of the supernatural world. They establish friendly contacts with spirits and obtain from them magical chants. They become full-fledged shamans when their teacher injects into their body darts, quartz pebbles, or some mysterious substance by which they can cause illness and kill their victims. The candidates to the shamanistic professions learn also about the use of herbs and of magic substances.

The shaman's power rests on his ability to summon spirits who can perform tasks beyond the capacity of ordinary people. The spirit called by the shaman sometimes is his own soul, which he can detach from his body. In other instances, shamans are assisted by ghosts, sometimes of dead shamans, animal spirits, and spirits who take animal forms. The shaman's power is often identified with his breath or with tobacco smoke which materializes his breath. It is also conceived of as a mysterious substance (Apapocuva, Guaporé tribes) which the shaman handles at will. The darts and the quartz pebbles which he carries inside his body are also materializations of his magic power.

Most South American shamans provoke in themselves a state of trance in order to communicate with the spirits. They smoke to the point of swooning, absorb *parica* snuffs or drink decoctions of *ayahuasca* or *floripondio*. The main accessories of the shamans are a gourd rattle and in the tropical regions a special wooden bench. For the treatments see CURES. Although the practice of medicine is the shaman's main function, he fulfils other duties, such as warding off the attacks of bad spirits, finding the whereabouts of game animals, performing fertility rites on behalf of the community, offering sacrifices to the spirits, making war magic, causing rain to fall, etc.

In South American primitive communities, the shamans are the only specialists who can accumulate wealth, since they are paid for their work. Their influence is considerable and in many tribes (for instance, the ancient Guarani), has taken the form of a virtual theocracy. [AM]

 The word shaman is derived from Tungus *shaman*, from Sanskrit *śramaṇa*, ascetic. The shaman is an individual possessed of supernatural power derived from a spirit, ghost, animal, or inanimate object. Either men or women may be shamans, though men are in the majority. The gift is inborn, sometimes conceived of as hereditary, and usually realized by ordeal, fasting, abstinence, and consequent revelation of the guardian spirit. Or the power and knowledge can be learned and bought from another shaman. Communion with the spirit brings the power to curse or cure, to commune with the dead, to prophesy, to affect rain and weather, to perform superhuman feats of magic, as self-mutilation, sword-swallowing, handling and swallowing of fire.

Asia The most complete manifestation of shamanism is centered in eastern Siberia and Manchuria, notably among the Tungus, and also the Yakut, Samoyed, Koryak, Ostyak, and Chukchee, i.e. from the Eskimos to the

Chinese frontier. Among these tribes, despite the encroachments of Russian Catholicism and Buddhism, the shaman remains the spiritual father, openly in the desolate fastnesses of the tundra, secretly in the cities of Manchuria. He always exercises his powers in a state of self-induced trance, which is of two kinds: 1) Religious and functional, which annuls his spirit and replaces it by powers in charge of hunting and agriculture; or by spirits who contact through him a family or community; or by unknown spirits whose healing powers flow through him to a patient. 2) Exhibitionistic, under the influence of a definite spirit, with demonstrations of prodigious strength, self-laceration, conquering the evil spirits with a spear, or contests with a rival shaman. Every shaman has harmless animal familiars, worshipped in Manchuria in pole-shaped effigies (weasel, eagle, otter, sometimes bear or tiger). In the midst of a ceremony, he may suddenly be confronted with an evil spirit.

Trance is induced by the rhythm of his large flat oval drum and by simultaneous chanting, sometimes also by a narcotic or incense. On the appearance of the spirit, his body trembles, grows rigid, then relaxes. He dances stooped forward, counterclockwise, with a shuffle of slow left foot and fast right foot. He leaps and whirls, and finally falls in a trance. During the healing ceremonies a lay youth may execute the dance, while the seated shaman transfers his power to the patient. In the tundra this dance may act in reverse and cast a curse on an offending layman or rival shaman in a contest of power.

Cone-shaped iron jinglers on the drum and on an apron intensify the rhythm as he wriggles his hips. These and mirrors on the front and back of his shirt protect him from evil spirits. During the Elk Spirit Dance he may wear a circlet with iron antlers, bits of sturgeon skin, and a mask of fringe—a type of headdress also worn by the lamas of Tibet.

Shamanism extends through Tibet, China, Japan, and Korea to many Mongoloid and Turkic tribes. The Japanese *yamabushi*, who officiate in Buddhist temples and Shinto shrines, has a full array of magical activities (without the trance element): divination, exorcism, cure, fertility, rain-making power, and associations with foxes and badgers. Magic healing functions recur in the Chinese *wu-i*, the Ceylonese masked devil-doctors, and in the masked devil-dancing castes of southwest India, the exorcising Pombada, Parava, Nalke, and Panan. Trance symptoms recur in the *sanghyang* and other Balinese dances, and, together with exhibitionism, in the Whirling Dervishes of the thirty Islamic sects, e.g. Bektashi (beggars), Rufai (howling), Sadi (fire-eaters), Mevlevi (mystical). At present, the Finns, Lapps, Estonians, and Hungarians form the western frontier of Old World shamanism.

Middle America In Middle America (Mexico to Panama), shamanism becomes incidental to other aspects of ceremonialism, particularly in the high maize-growing cultures. The Huichol and Tarahumara ceremonial leaders invoke rain, by song and by ritual action bordering on priestly function. Pagan beliefs and fears remain in Mexico, Yucatán, and Guatemala, as the terror of the evil eye and evil wind, of spells and witchcraft, and on the other hand, the faith in the practitioner of ancient remedies and formulae. The Lacandon shaman and the

Maya *h-men* continue many of their aboriginal incantations for health and rain. But in many communities the traditions have become confused with Catholicism. The *chimanes* (grandfathers) of Chimaltenango, Guatemala, sacrifice incense soaked in turkey blood at shrines, for power to divine and cure in the ancient manner. But they work for "Dios."

Not all trance dances are shamanistic, any more than all feats of magic, cure, or all dreams and visions. Competent wizardry is possible with the omission of one or the other of these traits, with or without the aid of masks. Its fullest manifestations are combined in the Tungus visionary (*badyushka*), the little father of the tribe, ministering to body and soul, a man of intellectual ability and powerful personality, with full faith in his identification with supernaturals. During the transitions to hunting, agricultural, and mechanized cultural stages, these manifestations split up into types, or multiply into societies. Inevitably the faith and the power have become attenuated till the final breakdown into exhibitionism. See DATU; EPILEPSY; MEDICINE RITES.

[GPK]

shamrock (Irish *seamróg*, diminutive of *seamair*, trefoil, shamrock, clover) The national emblem of Ireland: chosen because this trifoliate little plant was used by St. Patrick to illustrate the mystery of the Trinity. It is always worn on St. Patrick's Day, and a little is taken along by emigrants leaving Ireland. To drown the shamrock means to go the rounds drinking on St. Patrick's Day in honor of the shamrock. *Seamróg na gceitre gluas*, the four-leafed shamrock, brings luck, possibly because of its Christianized association with an early apotropaic figure enclosed in a circle (*triquetra*), the ancient Celtic sun wheel.

Shango The Yoruban Negro deity of thunder, found in those portions of the New World where Yoruban cults have persisted, notably Brazil, Cuba, and Trinidad. In the Peruambuco region of Brazil and in Trinidad, African cults as a whole are known by the name of this deity. Like other African gods, he is syncretized with Catholic saints; for example, he is also known as Santa Barbara in Cuba, and St. John the Baptist in Trinidad.

[MJH]

Shang Ti The personification of T'ien or Heaven in the Imperial Cults of China; referred to as the supreme ruler, the source of imperial power. He was worshipped only by the emperor. See YÜ HUANG. [RDJ]

shantey or shanty See CHANTEY.

shaped notes or buckwheat notes A simple system of musical notation introduced in America early in the 19th century, making use of four different shapes placed on the staff to denote the four syllables of fasola solmization (fa, sol, la, mi). The system was widely used in hymn and song books for a century, particularly in the hymnals of the many new Protestant sects of the Great Revival. Singers who could not read a word or a note of music could follow the melodies so set down.

shapeshifting An important mechanism in the folklore of all peoples. A shapeshifter is a creature or object which is able to change its shape either at will or under special circumstances. Shapeshifters may be evil or benign, and only experts can distinguish their character.

Thus Hamlet's question of his father's ghost was whether it were a spirit of health or a goblin damned.

Although no census of shapeshifters has been taken, the number of them found in all parts of the world is astronomical. Because of their elusive character, they have not been studied with the care that has been given to some of the clans that constitute their nation. Thus, the principles which govern the behavior of ghosts are fairly well understood in several parts of the world, but the behavior of shapeshifters in general is not clear. Two general facts, however, emerge: first, shapeshifters are common in all folklore; second, the explanation of them given in popular tales is more frequently the narrator's editorial comment than an essential explanation of the phenomenon. The mysterious elderly couple who help the hero by advice or the gift of magic objects is often in Europe, and frequently in Latin America, identified as the Virgin Mary and Saint Joseph. American Indians may identify them as animals friendly to the group, and Europeans again may identify them as "fairy godmother" or other benign spirits. They are, however, generally regarded with a mixture of fear and gratitude. Strangers are always dangerous and people who have dealings with them are apt to be odd.

Nor are the conditions under which animals or things shift shape generally understood. Werewolves are impelled to shed human form at certain phases of the moon. Shapeshifting foxes, of whom there are a very large number in North China, are fond of wine and, when intoxicated, resume their fox forms. Others, however, are able to shift at will. The mistress of a scholar in Peiping was a shapeshifting fox. She was never seen by his friends but, though invisible, carried on conversations with them about history, poetry, and Confucianism in which she was very learned. When friends entered the room they noticed that it had a musty smell and was chilly.

Shapeshifters fall into five general categories: spiritual entities, ghosts, animals, things, and interveners.

The translation of gods into men or animals or of men and animals into gods is a commonplace of religious-mythical folklore. Jacob wrestled with an angel; Zeus became a bull to seduce Europa; the Chinese Kuan Yin is often a helpful old lady. Although attempts have been made to explain these in the terms of racial history and complicated mythologies, in which Max Müllerism is still powerful, success must be elusive until all the stories have been studied in terms of their cultural backgrounds.

The shapeshifting of ghosts leads into complications. Sometimes ghosts return from the dead in order to repay a debt of honor as in the complex of the Grateful Dead Man (Types 505-508) and sometimes to take revenge on their murderer or on others. Even when the debt is a debt of honor, the issue is often in doubt. They will help, they say, if the hero will give them half of what he wins on his quest. He wins a wife and the wife has to be cut in two. A snake or monster crawls out. The intervener puts her together again and announces his identity. The children in the *Wife of Usher's Well* (Child #79D) returned because their mother's tears wet their winding sheet. Sometimes a ghost, in order to acquire more "vital essence," pretends to be an incubus. Ghosts in all parts of the world may assume the exact shape of their owners and thus, by appearing in

several places at once, create the lore of the "double" and cause great mental distress to their friends. Dead lovers in all parts of the world have the unpleasant tendency of returning to trysts, kidnapping their sweethearts and carrying them off to grim otherworld orgies. See DEAD RIDER. Ghosts are always hungry. They like human food or, as in the *Odyssey*, a drop of human blood. The Chinese have a festival in honor of hungry and homeless ghosts whose descendants have failed to lay out food and sacrifices for them.

Plants, animals, and human beings are often able to shift shape. The facility with which this can be done depends on the degree or quality of life the creature possesses. It is more difficult for plants and least difficult for human beings, though human beings are often too lazy to undertake the long and arduous discipline they need. In China, foxes and tigers, in Europe domestic animals, kittens, dogs, horses, and among American Indians, coyotes and other animals are often shapeshifters.

Power to shift shape, according to Chinese Taoists, can be acquired by either of two methods, of which one is "legal" and the other is "illegal." The legal method is to strengthen or improve one's "vital essence" by the study of the classics. This method is slow and very difficult. The "illegal" method is by stealing the vital essence of others and this is accomplished by coitus reservatus. The theory is that when orgasm is simultaneous, the couple merely exchanges vital essence. If, however, it is premature, a quantity of vital essence is lost and acquired by the partner. Once a sufficient amount has been acquired, the animal or human being can shift shape at will. This sort of theft is frowned upon and the thief is in constant fear of the thunder god.

The principles by which inanimate objects can shift their shape to become, usually, human beings present another order of problem. The sculptor Pygmalion made a statue of Galatea, fell in love with it, and endowed it with so much vitality that it came alive. Witches and magicians have created armies by throwing stones into arid fields, by cutting figures out of paper or cloth.

The interveners are psychologically and folkloristically probably the most primitive of the shapeshifters. They are mysterious beings, usually human but sometimes animals and sometimes indiscriminately either, who appear to give help or advice. Many of the thousands of Cinderellas now available have been given material help and counsel by their dead mothers or by creatures who are obviously their mother's surrogates. Mysterious old men frequently appear and disappear in the stories to help girls out of their difficulties.

Another complex of shapeshifters known in all parts of the world is the mysterious housekeeper. A lonely woodcutter, farmer, or fisherman returns several evenings to his slovenly hut to find it mysteriously cleaned up and a supper cooking on the stove. He conceals himself to find that some animal, in China usually a fox, comes to the hut in the morning, turns a somersault, sheds its skin, and becomes a beautiful girl. The hero steals the skin. She remains with him, becomes the mother of his children. Many years later, sometimes on the occasion of the marriage of a son, she gives the house a thorough cleaning, finds her skin, slips into it, and disappears. In other formulae, the hero sees swans or seals shed their skins to become lovely maidens. He

steals one and gets power over the owner. In other developments the hero tries to find his lost wife and often fails.

The formula of the mysterious housekeeper is obviously a special variant of the conviction that things, animals, and wives are mysterious and never to be counted on. If you can get control of something that belongs to them, they may serve you for a time, but at some unexpected moment they may again become foxes or seals or swans and escape forever.

The problems of the study of shapeshifters derive in part from the very large numbers of them that are known to us which require the use of macroscopic rather than microscopic techniques. The studies made of shape-shifting foxes, otters, etc., are sound but miss the central problem of shapeshifting itself. Shapeshifting in folklore is clearly connected with hallucination in morbid psychology. Until the phenomena in both areas have been scrutinized with care, we are not able to go beyond the general observation that nothing is, in fact, what it seems to be.

R. D. JAMESON

sharpened leg A folktale motif (J2424) common to both North and South American Indians. A man who has lost his leg sharpens his shin bone and stabs his visitors. He is finally killed by the culture hero. This story has been recorded in the Gran Chaco, and among the tribes of eastern Brazil and the Guianas. [AM]

 The sharpened leg is the subject of a popular short tale, or incident in a tale, in North American Indian tales of the Plateau and Eastern Woodlands, especially the Iroquois, tribes. Trickster is given the power to sharpen his leg, stick it into a tree, and thus suspend himself in the shade of the tree on hot days, for a specified number of times (see RITUAL NUMBERS). Excited by an admiring audience, he breaks the tabu, i.e. does it too often, and gets stuck in the tree. [EWV]

Shé A Chinese ceremony in honor of the soil, part of the Imperial Cult and highly controversial. Although sacrifices to Heaven probably belong to the earliest of Chinese sacrifices, the sacrifices to Earth, Soil, and Millet may have been folkloristic accretions. [RDJ]

sheepmen stories The traditional feud between cattlemen and sheepmen, originating in the struggle for grass and breaking out in range wars like the Tonto Basin War between the Grahams and the Tewksburys of Arizona, has left a folk heritage of phrases, sayings, and anecdotes libeling the shepherd and his flock: Crazy as a shepherd; Like attracts like is why all sheepmen's covered with bedbugs; Herding is nothing to do and all day to do it in; There ain't nothing dumber than sheep except the man who herds 'em; A ewe has just enough sense to be ornery. The shepherd's solitary calling gave rise to calumnies concerning his forgetting of human speech. A traveling man sat down beside an old shepherd in a crowded train and inquired where the other was from. "Montanaa-aa-aal" bleated the herder. "Where are you going?" "Baa-aa-aack!" Another herder was advised by his lawyer during a trial to answer every question with a plaintive blat. To the lawyer's request for his fee following the acquittal, the herder replied, "Baa-aa-aal!" Typical of sheepmen's humor are the saying, "A sheep shearer is a shepherd with his brains knocked out" and Dick Wick Hall's Arizona story of the tenderfoot shepherd

from Yale, who was known as "Hotfoot Mac" on account of his sprinting ability. Being warned, in jest, not to let any of the lambs get away (when there were no lambs in the flock), he returned from the first day's herding on the duddled with the announcement that he had run all the lambs back into the band but was quitting because they were too fast for him. The surprised owner investigated and found 47 jackrabbits and 16 cottontails huddled in a corner of the corral. (See Archer B. Gilfillan, *Sheep*, 1928; B. A. Botkin, *A Treasury of American Folklore*, pp. 364-367). [BAB]

Shenandoah One of the most beautiful of all sea chanteys, a native American composition, possibly of voyageur origin, sung at the capstan. In the earlier versions Shenandoah is an Indian chief whose daughter is wooed by a trader. Other versions relate the name Shenandoah to the valley. Apart from its working history, the song has been sung in the cavalry and is a favorite glee-club selection.

shepherd's score Anglo-Cymric Score or Indian Counting are other names for this apparently meaningless collection of semi-riming syllables. In the 1890's, when this writer was a child, he was taught by his mother (who had learned it in her youth in Natick, Massachusetts) what she called Indian Counting, which ran from one to twenty-one as follows

Een, teen, tuther, futher, fipps;
Suther, luther, uther, duther, dix;
Een-dix, teen-dix, tuther-dix, futher-dix, bumpit;
Anny-bumpit, tanny-bumpit, tuther-bumpit, futher-bumpit, gigit;
Anny-gigit!

I remember the emphasis on Anny-gigit, for we used Indian Counting for a counting-out rime, and the boy or girl on whom fell the count of Anny-gigit (21) was "out." In this connection it is worth noting that in *The Counting-Out Rhymes of Children*, by H. C. Bolton of the Smithsonian Institution, published in 1888, he has classified the rimbles into 13 groups, of which the "Rhymes for counting twenty-one" form Group iii, and "The Anglo-Cymric Score" is Group xiii, but he evidently knew of no connection between the two.

William Wells Newell, in his *Games and Songs of American Children*, 1883, gives on page 200 two versions of Indian Counting, one from Scituate, Mass., and the other (practically identical with the one I learned), said to have been learned "from an Indian woman, Mary Wolsomog, of Natick."

In the 1850-1860 decade in Claremont, N.H., there was current a version said to have been used by the "Plymouth Indians," running as follows:

Een, teen, tether, fether, fitz;
Sather, lather, gother, dather, dix;
Een-dix, teen-dix, tether-dix, fether-dix, bompey;
Een-bompey, teen-bompey, tether-bompey, fether-bompey, gigit.

A variant in Maine was attributed to the Wawenoc Indians. One from Indiana had "bunkin" and one from Connecticut "bumpum" for fifteen. Still others have showed up from Rhode Island and Ohio.

There is no doubt that in the mid-19th century scattered individual Indians friendly with the whites taught the latter, mostly in New England, this method of

counting, but it was not Indian in origin. The Indians had themselves been taught it by white English settlers two centuries earlier and had preserved it by oral tradition all that while! Yet it is not and never was English numerals! Here we come upon one of the interesting items of the history of the oral transmission of folk learning involving several races and languages, and in time at least two millenia.

For centuries the shepherds of Lincolnshire, Essex, Durham, Cumberland, and the North Riding of Yorkshire, and of the lowlands of Scotland have been counting their sheep, and Cornish fishermen their mackerel, and old ladies their knitting-stitches, by the same old syllables we in Massachusetts thought were Indian Counting.

The nearest modern language numerals to the shepherd's score are found in the Welsh, but neither one came from the other. The borderland territory between Wales and England is the old home of the Anglo-Cymric or shepherd's score.

But why "score"? Because it was counting by twenties, that is, using 20 as a radix, or scale, or base of a numerical system. Counting by five is a quinary scale, and by ten is a denary or decimal scale. In certain barefoot countries, the scale of 20 (vicenary) has been popular, for not only the ten fingers but the ten toes as well are visible. With some native Mexicans today the word for twenty is "man finished." They count to twenty and then begin again. Relics of old systems of counting by twenty still persist in countries now using the denary scale, as in the French word *quatre-vingt* for 80 or the English three score years and ten. And since to score meant originally to cut or notch a stick for a tally and still means to count, we have here in the word *score* itself the evidence that in very old English times men counted up to twenty, scored the tally stick, and then started counting again at one.

As a matter of fact, the shepherd's score is a peculiar combination of the quinary and vicenary radix systems, for if you will examine any version of it, you will find that instead of sixteen being "six-ten" as it is with us, it is *een-bompey* or *anny-bumpit* or some other spelling, all of them meaning "one-fifteen."

In an old English version the numeral for sixteen is *ain-a-bumfit*, while in modern Welsh it is *un-ar-bymtheg*. The relationship is obvious. It is confirmatory of the prehistoric method of counting by fives on fingers and toes that an old shepherd in Winteringham in Lincolnshire, reciting from memory his shepherd's score, paused after every fifth word.

In 1877, the Vice-President of the Philological Society of Great Britain, Mr. Alexander J. Ellis, collected more than sixty versions of the shepherd's score and published them in the *Transactions* of the Society for 1877-78. A more recent, extended, and interesting study of the shepherd's score and its relation to the counting-out rimes of children is in the third chapter, "Number and Memory," pages 45-63, of Henry Betts' *Nursery Rhymes and Tales, their origin and history*, first published in 1924. He points out that at the Ayr Academy which was established by Alexander III of Scotland in the 13th century, the boys still count out in their games with:

Zinty, tinty, tethera, pethera, bumf,
Alester, aseeter, over, dover, ding.

And Mr. Betts states: "One of the writer's earliest recollections is of sitting on his father's knee, as a very little child and being amused by the recitation of the words which the old shepherds in Lincolnshire used in counting their sheep:

Yan, tan, tethera, pethera, pimp,
Sethera, lethera, hovera, covera, dik;
Yan-a-dik, tan-a-dik, tethera-dik, pethera-dik,
bumfit;
Yan-a-bumfit, tan-a-bumfit, tethera-bumfit, pethera-bumfit, figgit."

He notes that the relationship is obvious between the beginning of the shepherd's score, especially in the Yarmouth version: "Ina, mina,—," and the familiar counting-out rime of the Eeny, meeny, miny, mo type "with all its bewildering varieties," and suggests that the other familiar rime: "Hickory, dickory, dock" may be from the 8, 9, 10, "hovera, covera, dik" of the version he learned from his father.

Mr. Betts' excellent interpretation and explanation of the rather complicated problem of the numerals and rimes is of importance to students of folklore, for it gives an insight into the natural system of operation, the economy, in fact, of oral transmission. He says that the numerals of the prehistoric Celts, who antedated Hengist and Horsa and Caesar, have survived in three forms, best in Welsh, less well but plainly enough in the shepherd's score, and rather corruptly in the children's counting-out rimes. When the Romans and Saxons and other conquerors came, the common people, the shepherds, fishermen, and housewives, would continue to use their own old language, especially in counting. While the children, "who are always the most rigid conservatives of the race," would keep on using the old numbers in their counting and number games long after the language of those numerals had itself passed from the knowledge and use of men.

This is another confirmation of the fact that in folklore as everywhere else, ontogeny recapitulates phylogeny, and the children's game-rimes reproduce the thought-forms, dance patterns, and even the language of our primitive forebears. CHARLES FRANCIS POTTER

Shingrawa In Kachin (Burma) mythology, the divine man-creator of the earth who was produced by Chinūn Way Shun as a pumpkin. When Shingrawa came into existence the water was undrinkable and the trees and shrubs were covered with thorns. A great flood came and when it receded Shingrawa fashioned the present earth out of the remains of the old one, using a hammer. For a long time he looked after the earth and its people, and then went to the sky. Shippawn Ayawng, the Kachin forefather, was a descendant. Shingrawa is kind and good but he has no interest in mankind, so his shrines are few in number and neglected. See NAT. Compare CHANG-HKO.

Shipap, Shipapu, Shipapulima, or Shipapuyna Pueblo Indian (Keresan-speaking pueblos especially) name for the place of emergence and the underground realm for certain of the dead; the land where the Kachinas stay for half of the year when they are not on earth. It is also the place where Iyatiku, the Keresan Corn Mother, lives. From her underground house at Shipap mankind emerged, from there infants today are born, and thither go the dead with the prayer feather they carry to their

Mother. Keresan medicine society members, especially, go to Shipap after death to join their Mother or their beast gods. At Taos pueblo the place of emergence is a lake called by some the "lake of the summer pilgrimage" (Blue Lake), but, by others, Chipapunta, a lake located at Monte Vista, Colorado. See EMERGENCE MYTH. [EWV]

shirt of Nessus The shirt steeped in the blood of the centaur Nessus by Deianira. When Nessus tried to run off with Deianira, Hercules shot him with one of the arrows poisoned with the Hydra's blood. Nessus, dying yet vindictive, told Deianira to dip a shirt she was carrying for Hercules in his blood, and that, if ever she felt that she were losing her husband to another woman, to send Hercules the shirt. It would be a charm, he said, to recapture his love. When finally Hercules became infatuated with Iole, Deianira sent him the shirt; the hero put it on; and it clung to him, fatally burning skin and flesh. Hercules fled to Mt. Ceta, where he built his funeral pyre and immolated himself.

Shitta A beneficent nat of the moon of the Burmese Kachins, worshipped once a year with Jan, the sun nat, by the *duwa* (chief).

Shiwana or Shiwanne Specifically "Cloud People" of the Keres Pueblo Indians, equatable with such other Pueblo Indian spirits as the Cloud chiefs of the Hopi Indians, the Cloud or Rain People of Jemez pueblo, Clouds of the color-directions at Tewa, the Chiefs of the Directions of Isleta, and the lightning, cloud beings, or deceased chiefs of Taos pueblo. In the broadest sense Shiwana are supernaturals or spirits who bring rain. They are a special class within large groups referred to by the Hopi term *kachina* which refers to nearly all Pueblo spirits who are impersonated with masks in ceremonies and dances. The storm clouds or Shiwana of Keres are spirits who give rain and extended blessings such as health, life, and everything for the welfare of man. At Cochiti and San Felipe the masked dancers are referred to as Shiwana; at Zuñi Shiwannee or Priest Man and Shiwanska, Priest Woman, are believed to have existed in the beginning and to have created heaven and earth; before the emergence the Zuñi had rain priests in the lower world, of whom six were assigned to the six directions. Rain priests today are called Shiwanni. See E. C. Parsons, *Pueblo Indian Religion* (2 vols., Chicago, 1939) 1:170-74, Table 2 facing 208; Matilde Coxé Stevenson, *The Zuñi Indians* (RBAE 23 Washington, 1901-2). See KACHINA. [EWV]

Shka-Bavas The God of the Sky of the Moksha-Mordvins. He is supreme among the gods, and offerings and prayers must be made to him first, before all other gods. **Shki-Pas** or **Tshi-Paz** is the God Creator of the Erza-Mordvins. [JB]

shmoo All-providing animal created by Al Capp in his popular comic strip, *Li'l Abner* (see COMICS). A possible origin of the word is *schmo* (*shmoe*), a term used in the garment and theatrical industries for a person midway between a dope and one who rushes in where angels fear to tread. In a period of runaway radio giveaway programs and inflation, the shmoo combined tall tale with satirical fable, the American dream of getting something for nothing with the economics of abundance.

Akin to magic, grateful, and helpful animals and

magic objects that are a source of inexhaustible plenty, this savory, ham-shaped, and slightly phallic-looking animal with the rapturous smile on its face eats nothing, multiplies rapidly, and drops dead out of sheer joy when looked at hungrily. Not only does it lay fresh eggs, give the finest creamery butter and Grade-A milk, and make steaks when broiled and boneless chicken when boiled or fried, but its eyes make suspender buttons and its hide makes the finest leather. Because, in solving the inflation problem in the underfed Ozarkian hamlet of Dogpatch, it also upset the nation's economy, the shmoo had to be killed off and its creator was accused of "shmooicism." (See Al Capp, *The Life and Times of the Shmoo*, 1948).

B. A. BOTKIN

shoes The folklore of shoes is voluminous and has been the occasion of differences of opinion which will here have to be glanced at rather than conjugated. Certainly the broad statement that "during all ages and in the folklore of all races, shoes have been a symbol of the female genitals" needs modification. Shoes are frequently used in marriage ceremonies. They are thrown after the newly married couple, used to discover the direction from which the groom will come. In Chinese ceremonies the groom burns incense before the shoe of his betrothed who died before marriage, and the Manchu bride gave shoes to her betrothed and all of his brothers who had sexual access to her. The old woman who lived in a shoe and had a great many children must have been sexually very active and, if one follows folk psychology, it is not difficult to go from that to the notion that her life centered in her sexual organs, she "lived in them." These customs associate shoes closely to the sexual aspects of marriage. However, the use of the shoe as a symbol of submission is another part of the polysemantics of folk belief and custom.

A gleaning of scattered references will display the complexity of this lore. The Japanese believe that you will have bad luck if you wear new shoes to the lavatory. The peoples of India, like those of the Euro-American culture, believe that throwing shoes at a wedding will bring good luck and many children. A shoe, placed heel upward on the top of the house of the poor, will protect it; and, in parts of India too, hailstones beaten with a shoe by a magician will cause the storm to cease. A report from Greece is that women have brought back faithless lovers by having a witch fumigate their sandals with sulfur and say incantations, i.e. if a sandal was left behind. In Egypt the figure of an enemy in the lining of a shoe indicated that he was trodden upon. The sandals of Perseus brought prosperity. Among the Hebrews the shoe was removed from the foot of a man who refused to marry his dead brother's wife; the refusal was considered disgraceful. In Anglo-Saxon England the father gave his daughter's shoe to the groom. That this was a symbolic transfer of authority is possible, though here again the sexual implication must be considered. The Scots custom of throwing shoes after a sailor making his first voyage, or at a man starting a new enterprise, seems to be associated with the idea that shoes have to do with prosperity. In Germany, shoes placed wrong end to at the head of the bed keep nightmares away; and the wife who puts on her husband's slipper on their wedding day will have easy labor. In Sicily shoes made of wolf skin give a child luck and

courage. Among the American Omaha Indians a small hole is cut in the sole of an infant's moccasins so that the child can refuse to accompany an otherworld messenger because his moccasins are worn out. Dutch children put their shoes in a corner near the chimney so that they will not be forgotten when gifts are given at Christmas. The rationalization is that in this way Saint Nicholas knows they are tucked in bed. In Scandinavia formerly, the placing of all the shoes of the family in a row on Christmas Eve was done in token of their intent to live together without quarreling for the year. The patron saint of European cobblers is Saint Crispin, an early missionary, who made shoes for the poor at night from leather supplied by an angel.

The general connection between shoes and luck, good or ill, is in the German belief that sneezing while putting on shoes is bad luck or the Filipino belief that it is bad luck to leave a pair of slippers far apart. Old shoes were thrown after Queen Victoria when she entered Balmoral Castle; John Hayward and Ben Jonson both identify the casting of shoes with good luck.

The symbolism of putting shoes on or off is connected with the idea of ownership. The Arab divorcing his wife is reported to say that she was his slipper and he put her off. Note the sexual implication. Egyptians swapped sandals to show that property or authority had been exchanged. The Assyrians and Hebrews gave a sandal when property was exchanged. In the ninth Psalm, the casting of a shoe on the land of Edom was a symbol of possession.

Several reports show the belief that shoes should be removed in sacred places or in the presence of royalty. Moses and Joshua were instructed to put "off the shoes from off thy feet" for the place was holy ground. The Rhodians were forbidden to carry shoes into the temple of the Tegean Mother. Worshipers in the temple at Crete had to be barefooted. The rule also is reported from the Roman temples of Cybele and Isis. Moslems remove shoes at the door of the mosque and carry them sole to sole in the left, the unclean, hand. Generally these customs seem to imply that contagion from the secular world must not infect holy ground though the belief that shoes might remove some of the sacredness from dedicated ground is also reported. The Greeks, Romans, and Hebrews removed shoes as signs of mourning and grief. The Persians bared their feet in the presence of royalty.

Shoes sometimes enter into funeral ceremonies. The Russians place a pair of new shoes on the feet of the dead in anticipation of a long journey. In Old Norse these were the *kek-sko* and in German the *Totenschuh*. See DEAD SHOES. The Indian tribes of Lower California, though normally barefooted, provided shoes for the dead. In Brittany "Death greases the boots of its victim." Lucian has a story of a dead wife who returned because one of her shoes was not burned on her funeral pyre.

Special shoes are appropriate for special occasions. The Emperor Marcus Aurelius reserved the use of white, green, and red shoes for women, though before this time senators wore red shoes and magistrates wore red shoes with crescent-shaped ornaments. At their annual fire ceremony the chief of the Creek Indians wore buckskin moccasins kept in a sacred enclosure for the rest of the year. Herodotus reported that Egyptian priests must wear shoes made of papyrus. Syrian boys during their initia-

tion wore shoes of sacrificial animal skin. The skin of animals dying a natural death was impure and could defile holy places. The winged sandals of Hermes and Perseus and the seven-league boots made by the Norse Hermod are applications of the sumptuary laws of folklore.

Stories of the wooing of Rhodope and Aphrodite bring to full circle the use of the slipper as a recognition symbol in Cinderella. An eagle stole the shoe of Rhodope while she was bathing and dropped it in the bosom of Psammetichos, who sought its owner through all Egypt. Similarly Zeus sent an eagle to steal the shoe of Aphrodite who was being coy toward Hermes. Aphrodite had to find her slipper again and in consequence Hermes had his will of her.

R. D. JAMESON

shofar An ancient and primitive type of trumpet, made of ram's horn or the horn of the ibex flattened and curved, used by the Jews of Biblical days to signal alarm, attack, or withdrawal of army in war, to give notice of great events and occasions, for exorcism, for new moon ceremonies, to announce the year of Jubilee, to usher in the New Year and the Day of Atonement; it survives in modern synagogues for the last two occasions. The modern shofar is gracefully curved, usually having a dentated edge on the underside, and is sometimes engraved with sacred words and emblems. Early practice required the ibex horn for the new moon and New Year ceremonies, the ram's horn for fast days and the Day of Atonement, and a black ram's horn for the great ban against transgressors of the law.

Many magical beliefs and practices connected with horns and trumpets in various civilizations are vestigially preserved in the use, etiquette, and customs related to the shofar, though they are no longer recognized as such. (See Curt Sachs, *History of Musical Instruments*, New York, 1940, p. 110.) At the sound of the ram's horn, for example, the walls of Jericho fell as miraculously as the walls of Troy and Thebes in Greek legend assembled themselves to the sound of the lyre. The custom of keeping the shofar covered and unseen by the congregation is related to the primitive belief that sacred instruments must be hidden. Sex tabus connected with instruments belonging strictly to men and kept secret from women are reflected in the recommendation that men are obligated to listen to the blowing of the shofar, while women and children are not required to. Further, a Talmudic passage discussed the sounding of the shofar in a well or pit, a trumpet ritual of certain primitive tribes in connection with fertility practices mimetic of the sex act. See HORN; TRUMPET.

shooting or falling star The phenomenon of the shooting star in its spectacular flight and sudden vanishment has been explained in many ways and fraught with significance for good or ill since earliest times. In early Hindu mythology meteors were the offspring of Rāhu's severed body. In Islamic lore they were missiles hurled by angels against the jinn to keep them from listening at the gates of heaven. Teutonic mythology predicted that all the stars would fall at the end of the world, i.e. Ragnarök (A1051). Pliny says there is a star in the sky for each person in the world, which shines bright or dim according to his luck, and falls when he dies. This belief has been common in Europe for centuries and is the motif (E741.1.1) of a number of

folktales. It occurs also among the Lolos in western China: when a man sickens, offerings are made to his star; when he dies a hole is dug for his star to fall in, lest it strike and injure some living person. (See Frazer, *Dying God*, London, 1912, p. 65.)

Shooting stars were portentous among the ancient Greeks and Romans. In Sparta (c. 1200 B.C.) wise men went out and scanned the sky one night in every eighth year; if they saw a shooting star they knew the king had sinned and deposed him. Seneca (3 B.C.–65 A.D.) in his *Problems of Nature* described a meteor "as big as the moon" which appeared when Paulus warred against Perseus. Roman sailors regarded a shooting star as a sign of storm. Wolfgang Meurer of Leipzig (16th century) writing on meteorological questions declared that nature produces meteors for the glory of God, to adorn the world, purify the air, and to be signs and warnings of future events.

That a shooting star is the soul of someone who has just died is a common saying in Europe and America and among aboriginal peoples from New Guinea to the Eskimos. The Serbians say, "Someone's light has gone out." In New Britain the people say it is the ghost of a murdered man.

Meteoric stones are regarded as mysterious, holy, and powerful among many primitive peoples. Aleuts and Eskimos use them as amulets. In Manchuria they are revered as having come from heaven. In some parts of China to find one is a bad omen. In Japan they are said to have fallen from the Milky Way, and are picked up and given into the keeping of temple priests.

If you can say, "Money, money, money," before a shooting star disappears, you will find money in your hand. If you can make a wish on a shooting star before it disappears, the wish will come true. In Ireland when a shooting star hits the earth it spatters far and wide and becomes "butter dew" (*im sochair*), specks of butter on the surface of rich milk.

Pliny said a corn could be easily extracted if done at the very moment that a star falls. A medieval admonition that still survives is: Count as high as you can while watching a shooting star; the final number will be the number of years you will be free of eye trouble. In Estonia it is said that to see a star fall on New Year's night means one will die within the year; if seen over a certain house, there will be a death in that house.

In folktale to wish on a shooting star is motif D1761.1.1. Other motifs include the shooting star as good omen (D1812.5.2.6); shooting star as angel (V231.2); shooting star as the sign of a birth (E741.1.1.2). This occurs in Siberian and also in North American Mandan Indian story: the stars are the souls of the dead; when one falls it is being reborn.

The Bushmen also maintain that a star falls for the death of every man. The *hammerkop*, a marsh bird of the Bushman regions, when he sees the star fall into the water also knows and cries out at the same moment. The Bushman people say that the *hammerkop* looks into the water and sees all things. Whoever sees a falling star and hears that cry at the same moment knows that some one of his own people has "fallen."

shout In New World Negro usage (1) To sing in the manner of the preaching style of Negro preachers or in the accelerating tempo and exclamatory style of

songs accompanying the ring shout. (2) The circular religious dance, the ring shout. (3) A religious song accompanying the ring shout.

Shouters Term employed in Trinidad and elsewhere in the British West Indies to designate certain unaffiliated Protestant (usually Baptist) sects. Their worship is characterized by marked reinterpreted retentions of African ritual forms. [MJH]

Shvod In modern Armenian belief, the guardian of the house. On the last day of February peasants, armed with sticks, old clothes, and bags, strike the walls of barns and houses shouting, "Out with the Shvod and in with March!" to force these lazy guardians out to do their duty as guardians of the fields for the summer. Shvods are believed loath to leave their winter comforts and have been seen crying and asking why they are thus disturbed.

Siddha In Hindu mythology, one of a class of semi-divine beings: literally, one who has acquired *siddhi* or perfection. The Siddhas dwell between the earth and the sun and are said to number 88,000. Their king is Viśvāvasu. They are sometimes considered as the descendants of the Uttarakurus. The śaktas call the initiated Siddhas or the "perfect ones."

side (pronounced *shee*) Plural of Irish *síd* or *síod*, a round barrow, mound, hill: the Tuatha Dé Danann, the divine race of Old Irish mythology; later, the fairies of modern Irish folklore: so called from the mounds and hills they occupy. They are often also referred to as *aes* or *aos síde*, people of the mounds. The term was first applied to the Bronze Age Tuatha dé Danann after their defeat by the Milesians when they divided up the hills and mounds of Ireland into kingdoms among themselves. They wove for themselves then the veil of invisibility, which divided Ireland into two populations forever: the seen and the unseen. The *side* are still visible to human beings on Midsummer Eve, it is said; and certain persons with second sight are apt to see them any time. The *Book of Armagh* mentions the *síd*-dwellers as *dei terreni*, and they are still regarded as a kind of earth spirits, though the personal names and identities of the old Tuatha Dé Danann have slipped out of popular memory. They still have personal names, however, and dwell in or rule over specific places. Finnbeara is king of the fairies of Connacht, for instance. See ÁINE; CLÍODNA.

The barrows were the burial mounds of the traditional high kings of Ireland; and it is not surprising that the concept of the barrow-dwellers involves the same confusion of fairies with the spirits of the dead found in other folklores. See FIGHTING OF THE FRIENDS.

The Irish *side* are perhaps the most famous fairies of European folklore. *Side* lore includes the *sluaḡ side*, the fairy host, thought of as riding on the wind; the *bean síde*, the fairy woman whose keening foretells a death (see BANSHEE); *ceo síde*, the fairy mist in which people go astray; *ceol síde*, the fairy music which lures people out of this world; *corpán síde* or *stodbrað*, the changeling; *poc síde*, the fairy stroke or elf-shot; *suan síde*, the fairy sleep from which one cannot wake until the appointed moment; *seideán síde*, the fairy wind.

Stories of a mistress or lover in the *side* are the same as tales about fairy mistresses (F302 f.) everywhere. There

are great goings on among them, much as among mortals: marriages, birthings, churning, cooking, sewing, spinning, weaving, plowing, sowing and reaping of crops, building, traveling, attending fairs, milking or stealing farmers' cattle, hunting and racing, holding great feasts and dances or wars, and working mischief or performing services among human beings. See FAIRY; FAIRY FOOD; IN THE WAY; TUATHA DÉ DANANN.

Siebenschritt Seven-step: a German-Austrian couple dance, which originated in Tyrol, and became adopted in many countries of central and northern Europe. In a counterclockwise circle, the couples, man on the left, inner hands joined, run seven steps forward and seven back, following the musical phrases; then apart for three steps, and together for three; then pivot with joined hands with seven runs. This little stretto pattern can also be performed with running *schottische* steps, and with an exchange of partners for each pivot, the man progressively obliquely counterclockwise. This latter version resembles the Swiss *schottische* or Changing Dance and the Czech four-steps or *čtyři kroky*. [GPK]

Siebensprung Seven Jumps: a men's dance of Germany, Holland, and Denmark, corresponding to the Basque *zaspi janusiak* (seven jumps). Actually the seven jumps are now seven successive postures, each with the body closer to the floor. With a constant refrain of arm swinging, two men face to face stamp on the right foot, then the left, then kneel on the right, on the left, place the right elbow on the ground, then the left, and finally touch the forehead. This results in absurd postures. This traditional mime has evolved a variant in French Canada, as *Bonhomme, que sais-tu donc faire?*, the answer involving successive floor contacts of "*un seul pied par terre*," "*les deux pieds*," "*le genou*," "*une main*." [GPK]

Siegfried In the German *Nibelungenlied*, the son of Siegmund, king of the Netherlands, and Sieglinde. He became invulnerable by slaying the dragon Fafnir and bathing in its blood. During the bath, however, a leaf fell on his shoulder, leaving him with one vulnerable spot. Siegfried killed the owners of the Nibelungen gold and became their ruler. He went to the Burgundian court of Gunther at Worms and, while there, helped defeat the Danes and Saxons. By donning his cloak of invisibility (*Tarnkappe*) he was able to help Gunther overcome Brunhild, princess of Issland, in the feats of strength she required of a suitor, and for this favor he received the hand of Gunther's sister, Kriemhild. The two queens became jealous, and Brunhild persuaded Gunther's uncle, Hagen, to murder Siegfried, after first learning from Kriemhild his vulnerable spot. Compare SIGURD. See ALBERICH; ANIMAL LANGUAGES; HAGEN.

Sigmund In the *Volsunga Saga*, the youngest son of Volsung, who alone of his family could remove Odin's sword Gram from the oak Branstock. Siggeir, the husband of his twin sister, Signy, ambushed and slew all of the Volsungs save Sigmund, who escaped and eventually avenged his family. Shortly before his death he married Hiordis who bore him a son, Sigurd.

sign language The expression of ideas by signal codes with the hands, smoke, flags, etc. The sign language or gesture language of the American Plains Indians, a system of hand symbols, has served as efficient communication

between tribes with mutually unintelligible languages, to the point of telling myths and stories. It is complete, including signs for things, actions, and emotions. It proved useful and consequently underwent considerable development during a confederation of the Cheyenne, Sioux, Arapaho, Kiowa, Comanche, and Apache against the Ute. Gestures can develop and die out. New concepts evolve new gestures, as "coffee" and "mill." The white man's God became designated by an upward gesture, distinct from the indication of one of the cardinal directions indicating the Siouan *wakanda*. The precision, tempo, and quality of the gesture are also variable with the individual's temperament.

The Plains code never extended to the Algonquian or Iroquoian tribes, except for the Algonquian Sauk. The Pueblo Indians employ an incomplete set of gestures for ceremonial actions and for some of their dances. However, the Plains sign language is utilitarian, the Pueblo ritualistic, and frequently rhythmical. Furthermore, not all of the symbols correspond. The Plains sign for lightning is the same as that of the Tewa *kossa* clown: a zigzag motion of the hand above the head, on the Plains with emphasis of the index finger. Rainfall is suggested by dropping the hand and fingers, palm down. But the gesture for "finished" is not the same. In sign language the speaker concludes a statement with a striking together of the fists, thumbs up. The Pueblo Indian, like the Europeans, passes the right palm across the left at right angles. Done with feathers, this is a gesture of exorcism.

Indian sign language is generally considered an autochthonous development to supply a practical need. Yet this claim cannot be dismissed without examination of possible relationship to the elaborate gesture codes of Asia, notably the Hindu *mudras*, and secondarily the derived gestures of the Hawaiian *hula*. It will be found that the symbol for rain is similar. The sign for crescent moon is consistently made by forming a crescent with thumb and index and closing the other three fingers into the palm; in India this is known as the *chandra-kala* hand, slightly different from the half moon or *ardha-chandra* hand with extended fingers. A bud is similarly formed by closing all of the fingertips together, in India the *padmakosa* hand. On the Plains a flower opens by inserting the closed right hand into the cup of the left, and turning and opening it upward. In India the opening *padmakosa* hand signifies sacrificial offering to Śiva, the *alapadma* hand depicts the full-blown lotus by separating and slightly twirling the fingers. Related but not identical symbols include fire, the *arda-chandra* spread in a crescent, on the Plains a closing of the fingers and snapping open into a crescent; horns, the *ardha-pataka* hand of raised ring and index fingers, in contrast with the extended thumb and index for the American antelope; and erotic desire of the *sikhara* or spire hand, with its vertically extended thumb and otherwise closed fist, analogous to the Plains gesture for copulation with vertical thumb and insertion of the right index in the space formed between the left thumb and index.

Many symbols do not, however, conform, as naturally those in particular which refer to different cultural objects. It is possible that similarities are due to the natural suggestion inherent in certain objects or occurrences. Furthermore, the *mudras* represent a highly refined art

and the sign language is simply a form of speech. Yet the latter could quite conceivably be stylized into rhythmic forms. The question can only be raised for thoroughgoing study.

Quite apart from questions of origin, the sign language furnishes valuable ethnological clues, because of the vocabulary of native tribal occupations and preoccupations, and the changes introduced by white civilization. It may also throw light on gestures whose meaning has become obscured or forgotten in ceremonialism, as the "thumbs up" of the Iroquois False Faces—the *sikhara* phallic hand. Such isolated signs recur among tribes who do not make use of a complete code, possibly by diffusion, possibly by chance. For the signs, far from being arbitrary, are based on the fundamental qualities of each concept, on keen observation as well as symbolic penetration. See GESTURES; MIME; MUDRAS. [GPK]

Sigurd In the *Volsunga Saga*, the son of Sigmund and Hiordis, and the last of the Volsungs. He was educated by the dwarf smith Regin who treacherously persuaded him to slay the dragon Fafnir, Regin's own brother, hoping to secure the Andvari treasure for himself. By eating the dragon's heart, Sigurd was able to understand the language and conversations of birds and, learning of Regin's treachery, slew him.

At Hindarfiall he found the Valkyrie, Brynhild, in her magic sleep, encircled by flame. He awoke her, pledged his troth with the ring Andvaranaut, and resumed his travels, some say immediately, some say after the birth of a daughter, Aslaug.

In the land of the Nibelungs he was given a potion of forgetfulness, forgot Brynhild, and married Gudrun, sister of Gunnar, whom he helped win the hand of Brynhild by assuming Gunnar's form. When Brynhild came to the court, she eventually discovered that Sigurd had substituted Gunnar in her wooing, and she persuaded Gunnar's brother, Gutorm, to kill Sigurd and avenge her. In the end she killed herself and was laid beside him on the funeral pyre.

Sigurdsvaket A Finnish round dance for men and women, originating in the danced ballads of the Faroe Islands. During a sunwise circuit, the dancers chant the myth of Sigurd, with alternating solo and chorus. [GPK]

Silenus In Greek mythology, a deity of forests and springs, similar to but thought of as being older than the satyrs: the name is sometimes given to one god, sometimes (in the plural *sileni*) applied to a class of woodland spirits. Generally, he is a fat old man with hairy body and bald head, upturned nose, horse's ears, hardly able to walk, riding on an ass or a wineskin and held on his mount by attendant satyrs. This figure is often said to be Papposilenus (Papa Silenus), father of the *sileni*. The *sileni* are very wise, but usually very, very drunk, unable to move, or sleeping off the effects of liquor. They taught Dionysus the culture of the vine; they were fine musicians; they could prophesy. But to this latter effort they had to be forced. If one came across a sleeping *silenus*, he could bind him with a chain of flowers. Midas once captured one (or filled a spring with wine and got him drunk) and then brought him back to Dionysus, receiving as a gift the power to change things to gold. (Compare Solomon's capture of Asmodeus and the obtaining of the schamir, and Numa's capture of Picus and Faunus. See also Grimm #136, *Iron Hans*.)

silver A white ductile metal which, because it occurs in a pure state in nature, was one of the first known metals. It has always been highly prized and is now regarded as money by two thirds of the world's population. Until the discovery of America and the almost boundless supplies of the Peruvian mines and later those of the United States (especially Nevada which is called the Silver State), most of the silver mines were in Asia Minor and the Aegean Islands, some of which have been worked at least since 2500 B.C. Silver ornaments have been found in Chaldean tombs from as early as 4500 B.C.; silver and gold were the first metals minted in Gyges' Lydian mint in the 8th century B.C., along with electrum, a mixture of silver and gold.

In ancient Egypt where it does not occur in a native state, silver was more valuable than gold until trade in the XVIII Dynasty made it more common. In China it is sometimes called the obstinate metal because it is not plentiful, but during the T'ang period, silver is said to have overflowed from the hills.

Because of its color, silver has always been associated with the moon. Alchemists referred to it as Diana or Luna; its alchemic symbol was a crescent moon and it was associated with birth. It generally ranks a close second to gold and hence is widely used for religious and ceremonial purposes, especially for bells and musical instruments. It is said to improve their tone. Among the ceremonial trappings of the British Crown are fifteen silver trumpets (one was stolen and never recovered) which are sounded by the heralds at coronations and other state occasions, such as at the end of World War I.

In Greek mythology, the second age of the world was called the Silver Age, when men ceased to revere the gods and fell to killing each other. After death, these men became the good spirits of the earth. The Silver Age of Latin literature was the period from 14 to 180 A.D. The Silver Fork School in English literature (c. 1830) is a popular term for a group of novelists who stressed the social graces and includes such people as Theodore Hook, Bulwer-Lytton, and Mrs. Trollope.

Among the Moslems, the second heaven was constructed of silver and many of their charms are written on, or mounted in, silver to increase their effectiveness. In Hindu mythology, one of the three fortresses in heaven from which the Asuras attacked the world before Siva destroyed them was of silver. Hindu married women wore bangles and two toe-rings of silver until the death of their husbands. The Egyptian god Rā had bones of silver, members of gold, and hair of lapis lazuli.

But silver, though usually a symbol of purity, is not always associated with the higher things of life. The thirty pieces of silver for which Judas betrayed Christ is not the only instance of bribery. Long before Christian times the Delphic oracle told Philip of Macedon that he could conquer the world with weapons of silver and in our own day we still hear the expression, "passing the barrier with a silver key."

It is common knowledge that it takes a silver bullet to kill a ghost, sorcerer, witch, giant, or a person who leads a charmed life (D1385.4). Silver nails are often used to make a coffin, or to secure the lid to make sure that the spirit will not escape. Silver charms and counter-charms are used all over the world. In China a silver locket around a child's neck protects from evil spirits. In parts of France couples going to the church to be

married are encircled by a silver chain lest they be bewitched en route. Among the Negroes of the southern United States a silver dime suffices, either swallowed, worn round the neck or ankle, in the shoe, or made into a ring. Crossing a Gipsy woman's palm with silver enables her to predict the future. The Navaho Indians of the United States make little silver bells from quarters which both men and women wear in their war dances. Old women also wear these on their sashes so that their sons-in-law will hear them coming. See JOKING RELATIONSHIP AND KINSHIP TABUS.

A rich person is said to be born with a silver spoon in his mouth. The 25th anniversary is called the silver jubilee and it is customary to present a silver gift on this occasion.

In folktale there are many examples of magic in connection with silver. There is a Votjak tale of a horse who drops silver coins from his mouth; a silver statue which always laughs on hearing a lie (Persian legend); silver chains which increase in volume when cast into a fire (D1671). There is some basis for this last, as pure silver will absorb up to 20 times its volume of oxygen when heated, but if it does not disintegrate on cooling, it will lose it again. In Germany they say that the dwarf king has a silver miner's lantern which is as bright as the sun (F451.7.4). The English Channel is sometimes referred to as the Silver Streak. In China the moon is often called the silver candle and the Milky Way, the silver river.

Sterling silver is a grade of silver of the fineness and weight established originally for English coinage in 1300 by Edward I when 240 Sterlings (pennies) .925 pure equaled one pound. This standard was maintained with more or less honesty until 1920 when British coinage silver was reduced by law to .500 silver. Some say the term is derived from the Esterlings, the North German Hansa merchants who persuaded the king, as they had previously persuaded Charlemagne, to establish a permanent standard of currency. Others say it comes from a star imprinted on the silver penny. In any event it has remained the standard for silver articles to the present time, and the hallmarks for silver and gold articles were established by Edward I at the same time.

Silver Fox or Silver-Gray Fox Creator of the Achomawi Indians of northeastern California. Out of nothing appeared a small cloud, which condensed and became Silver Fox, the Creator; immediately thereafter a fog condensed and became Coyote. The Achomawi story of the creation from this point on contains many parallels to the Maidu creation myth. See KODOYANPE. [EWV]

silver rule The rule of life embodying the same concept as that of the golden rule, but stated negatively: i.e. Do not unto others whatsoever you would not have them do unto you.

simidor The song leader of the Haitian work songs of the combite, who sets the pace of the work, playing his singing rhythms against those of the drums. He improvises stanzas or lines on topical subjects, local gossip, or present personalities, and on his wit and sting depend both the good humor and the efficiency of the labor group. See COMBITE SONGS.

simnel cakes Unleavened cakes or buns made of wheat flour and boiled; later, rich cakes stuffed with currants,

plums, raisins, etc., and exchanged among friends in Lancashire, Shropshire, and Herefordshire, England, on Simnel Sunday (Mid-Lent). As early as the 14th century we find *simenels* mentioned in *Havelock, The Dane*. Herrick (in 1648) refers to the custom of young people of Gloucester of carrying such cakes to their mothers on Mid-Lent Sunday or Mothering Sunday, hence they are also often called Mothering cakes. The custom was still current in Lancashire and Cheshire in the 19th century.

The word *simnel* is apparently derived from the Latin *simila*, finest wheat flour. Folk etymology, however, attributes it either to the father of Lambert Simnel, a baker in the reign of Henry VII, who is said to have originated the cake, or to an elderly couple named Simon and Nelly, who in an altercation over the correct method of cooking an Easter cake, produced a new kind, first called "Simon-Nelly cake," later "Sim-Nel."

simple (English *single step*) The French term for the simplest step of court and country dancing. The right foot advances, the left is brought up; then the left forward and the right up. This forward version is used for instance in the *pavane*. The sideward stepping characterizes the *branles*. Both forms have a widely spread and fundamental use in folk dances. [cpk]

Siñ A sky god, chief deity of the Haida Indians of the North Pacific Coast. The name is the Haida word for day. [EWV]

sin-eater One who takes upon himself the sins of a dead person by eating food, a piece of bread or the like, placed upon the breast of the corpse: a custom closely involved in the scapegoat concept. Sometimes food, drink, and a little money is merely passed to him across the corpse. This custom was observed in Wales as late as the 17th century. In the Scottish Isles, the sin-eater must be a stranger to the dead, even a chance passer-by. This is to prevent anyone with a grudge against the dead from taking his sins and flinging them into the sea, whence they could arise as demons to torment the poor soul. Also it is said that he who eats the sins of the dead with grudge in his heart will never be able to cast them off himself, and he will live as one accursed.

In India, the sin-eater is sent out of the country and never allowed to return. Among the Mende of Sierra Leone and Liberia, those who have committed incest are tied together and seated on a mat. Grains of rice are placed on their heads and upturned palms. Then a chicken is brought in; if it eats all the rice, the sin of incest is removed from the pair.

The corpse cakes of Bavaria are kneaded, laid upon the corpse to rise, then baked. The dough is believed to absorb the virtues of the dead, which are thus not lost to the world but passed on to the eaters thereof. Among certain Melanesians, Australian peoples, and some South American Indians, small pieces of the corpse itself are eaten for the same reason. E. S. Hartland assumes that the practice and concept of sin-eating is derived from numerous primitive practices involving eating the corpse. See Hartland's "Sin-eating," *ERE* xi: 272-276.

singing bone A Eurasian folktale motif (E632 ff.; Type 780) in which the spirit of a murdered person is reincarnated as a musical instrument (usually a harp or flute). The instrument is made of the bones of the vic-

tim, or strung with the hair of the victim, or is made of the wood of a tree growing out of the burial place. When played the instrument sings the story of the murder or the tree speaks and reveals it. In the folktale entitled *The Singing Bone* (Grimm #28), the younger of two brothers kills a wild boar for whose capture the king's daughter is promised in marriage. The elder brother kills the younger, buries him in the forest, takes the boar to the king, and claims the prize. No one knows the difference, until years later a shepherd finds a smooth white bone beside a brook and makes a mouthpiece out of it for his horn. When he blows through it, the bone sings the sad story of the younger brother's fate. The shepherd makes a present of the wonderful singing horn to the king; thus murder will out. In *The Juniper Tree* (Grimm #47) a little bird rises from the bones of the murdered child and sings his story. In *Binnorie* (Child #10) a harp made from the bones and hair of the drowned girl accuses the jealous sister. The motif is also used in the prison scene in Goethe's *Faust*. Stith Thompson finds eight African borrowings of this story. See his *Folktale*, p. 291.

singing snowshoes A man has a pair of snowshoes which, when he is returning from the hunt, precede him, singing like birds, and fly through the smokehole into his house: a recurrent element in Great Lakes American Indian tales, particularly in those of the Menomini Indians. [ewv]

Sinlap A Kachin (Burma) beneficent nat, the spirit of wisdom who dwells in the sky and is believed to give wisdom to his worshippers.

Sirens In Greek mythology, sea nymphs whose sweet music lured hearers to their death at the Sirens' hands; they embody the concept of the fatal supernatural lover. Their number varied: Homer says there were two; three are often pictured; usually the number is indefinitely large. They were the offspring of Phorcys or Achelous and one of the Muses. In some way they resembled birds: either they were birds with women's heads (sometimes bearded) or they were women with birds' legs and often winged. This has led to the hypothesis that originally the Sirens were the unhappy souls of the dead (a conception held of them in the Middle Ages), which often are thought of as birds or winged beings, and, like the Harpies and other soul-beings, were maleficently envious of the living. Odysseus stopped the ears of his men with wax and had himself lashed to the mast to pass the island of the Sirens (J672.1) with its meadow strewn with the bones of their victims. The *Argo*, too, slipped past them while Orpheus sang more sweetly than the Sirens. It is said that Butes, one of the Argonauts, threw himself from the ship and tried to swim to them, but Aphrodite rescued him. After Orpheus vanquished them in song, the Sirens, as had been foretold, leaped into the sea and became rocks. Naples, Sorrento, the Messina Straits have been called at various times the locale of the Sirens' abode. Compare LORELEI.

sirvinacuy Trial marriage among the Quechua Indians of South America. In most Quechua communities marriage becomes permanent after a trial period which lasts from 6 months to 2 or 3 years, during which period the couple resides at the man's home. The reasons given for sirvinacuy are: time to build a new house, till a new

and separate plot of soil, or save enough money to celebrate a church marriage. Statistics show that in most cases these trial marriages become permanent. [AM]

sisao A member of a dancing society of the Bella Bella and Bella Coola Indians of British Columbia. Sisaok names can be willed, inherited, or received by supernatural experience. The name gives the initiate the prerogative to enact myths of the first beings, of the animal or bird of his crest. The same man may have several names.

At the end of a period of seclusion, each sisaok initiate dances at a potlatch with a small forehead mask and a circlet decorated with eagle down, formerly woodpecker tail-feathers. The first night of a potlatch, the members dance, each one to two especially composed songs, and each donates wealth and food. This dance is performed in one place, body stiff, legs close, with slight jumps and sometimes slow pivots. On the third night they give dramatic representations of the sisaok myths and distribute more presents. Dances by initiates may continue another night. In their masks they mime wasps, ferocious grizzlies, or the gyrating, hopping eagle. Their rattles, too, are carved with images of their crests.

The sisaok are related to the *a'alk* society, which is an older institution, and belongs entirely to chiefs with special ancestral prerogatives. See KUSIUT. [GPK]

sistrum (Greek *seistron*, from *seiein*, to shake) A form of dance rattle made of a metal or wooden frame with perforations through which are strung thin metal rods. These rods jingle by jarring against the frame, or else by loosely holding a series of metal disks. The instrument is manipulated by a handle. Both the handle and the frame are frequently ornamented and at times surmounted by an animal figure.

The sistrum was originally a symbolic instrument in the cult of Hathor, the Egyptian goddess of fertility and sexual desire. She is variously identified with the mother and earth goddess Isis, wife and sister of Osiris, and with the Mesopotamian fertility goddess Ishtar. The sistrum spread with the cult of Isis all along the Mediterranean, through the Roman Empire to Gaul. It survives in Abyssinian liturgical music, in Ethiopia, in Nigeria and other parts of North Africa, in Spain, Asia Minor, and Caucasia. A similar instrument, the *khartal*, often accompanies dancers in northern India. A variant form—a cone of bronze bells on a wooden handle—is one of the props of the *kagura* dancing priestesses of Japan. In the war dance of a bridal procession, the Oraons of India shake a bow strung with wires and metal jinglers.

The appearance of the sistrum in dance rites of the New World poses an interesting problem. The Aymara Indians of Bolivia use a *čulučulu* in their Christmas ceremonies: a wooden wire strung across a wooden Y or handled U-shaped frame and holding a series of round disks cut out of food cans. Weston La Barre considers it of African origin, or from colonial Spanish models. The *sená'asom* (or *sonazo*) of the Cahita *pascola* dancer resembles the Abyssinian sistrum. It is a skilfully carved narrow ironwood frame with two nails hammered flat at the point. Each holds three brass disks. These are sounded by striking the rattle with the right hand against the left on a strong beat and in the air on a weak beat. This weak beat is frequently syncopated, in accordance with the phrasing of the dance steps, for instance, three

beats of accent and release, and one syncopated beat. The metallic clashing combines dramatically with the mysterious swishing of the *teneboim* anklets and the tinkling bells on the belt.

These Indian versions certainly are of European derivation. The *pascola* dancer uses other Occidental instruments and *zapateado* steps, though not in conjunction with the *sená'asom*. However, the method of manipulation in his primitive dance suggests a native prototype and ritual significance. One of his rattle-shaking motions mimes the strewing of seeds. This recalls the same gesture as performed with the *chicahuaztli* rattle-stick at the ancient Aztec *ayacachpicholo* ceremony of the spring festival (*tlacaxipehualiztli*) and by the earth and maize goddess Cihuacoatl. This instrument, though shaped like the *sená'asom*, rattled kernels or pebbles that were inserted in a tip carved in human or animal form. Whether the *pascola* originally manipulated a native or Aztec-derived stick-rattle cannot be proved.

A dance survives in Aztec territory, in Tuxpan, Jalisco, named after the elaborate sistrum with four tiers of disks—the *sonajeros*. Any symbolism of their vigorous stamping and jumping dance is forgotten and the derivation of the *sonaja* even more so. Traces of indigenous ritualism remain in the votive organization, the steps, and the accompanying flute and drum.

Both the Aztec and Egyptian instruments were associated with fertility cults. Phallic potency is one of the chief *pascola* traits. The *kagura* also originated in the life-recalling dance for Amaterasu. Thus in its dissemination the sistrum has remained associated with its original function. See RATTLES. [GPK]

Sisyphus In Greek mythology, a king of Ephyra in Corinth, noted for his cleverness, whose punishment in the underworld, rolling a stone uphill eternally, is one of the famous classical allusions. The reasons for his punishment vary: he tried to rape his niece; he revealed the secrets of the gods to men; he slew travelers who sought his hospitality; he revealed the whereabouts of Ægina to her father Asopus after Zeus had hidden her, one of his mistresses, in a cave. For this Zeus ordered Death to take Sisyphus. Sisyphus, the cleverest of men and the prototype of the master thief, chained Death, and no one died on earth. Ares undid Death's bonds and delivered Sisyphus to him. The clever Sisyphus had foreseen this and had warned his wife, Merope, to omit the customary sacrifice for the dead. Therefore, when he was taken before Hades in the underworld, he was able to convince the god that his wife needed punishment. Hades permitted him to return to earth until he had persuaded her to make the sacrifice. Which of course Sisyphus made a point of not doing.

In the long life which followed, Sisyphus accomplished many other deeds, among them the tricking of Autolycus, the greatest of thieves. The latter had been stealing Sisyphus' cattle, but no evidence to prove this could be obtained. Sisyphus branded his name on the bottom of the hoois of the cattle, came to Autolycus, and was able to prove his case. Then, to repay the dishonesty of Autolycus, Sisyphus seduced Autolycus' daughter, and thus became the father of Odysseus. (The latter, since Autolycus was the son of Hermes, thus had in his ancestry the greatest personages of craft known to antiquity.) Eventually Sisyphus died of old age, and when he arrived in

the underworld Hades, fearing disruption of his realm, put Sisyphus to work rolling a stone up a hill, the stone always slipping from his grasp as he neared the top and plunging to the bottom again. In this way the attention of the clever Sisyphus was constantly fixed. The punishment of Sisyphus is the type of motif Q501.1.

Sītā Literally, furrow: in Vedic mythology, goddess of agriculture. Sītā is described as a radiant beauty, black-eyed, and adorned with lotuses. According to the *Rāmāyaṇa* she arose from the earth while her adoptive father Janaka was plowing. She is said to be a human form of the goddess Lakṣmī, born into the world to bring about the destruction of Rāvaṇa, wicked king of Lankā. As the wife of Rāma she was the embodiment of conjugal affection and purity. When she was carried off by Rāvaṇa she remained faithful to Rāma despite all of the demon's threats. When Rāma recovered his wife she established her purity by an ordeal. See ACT OF TRUTH. Doubts assailed Rāma, however, and he banished her to the hermitage of Vālmiki where she gave birth to Rāma's twin sons, Kuśa and Lava. After 15 years of exile she was recalled by Rāma and she then publicly declared her innocence and called upon her mother earth as witness. The earth opened and she disappeared into it, leaving Rāma disconsolate.

Sitalā In modern India, the goddess of smallpox, often represented as a naked woman painted red, and mounted on an ass with a bundle of broomsticks in one hand, an earthen pot under her left arm, and a winnowing fan upon her head. When worshipped Sitalā is represented by a clay image, by a stone, or by a piece of screw pine (*Pandanus odoratissimus*). She is of the Chāṇḍāl or sweeper caste. In Bardwan where she has become more Brahmanized she is represented as a four-armed figure seated on a lion, sometimes studded with spots or nails of gold, silver, or brass in imitation of smallpox pustules. The Pods regard her as their chief deity. In the Punjab she dwells in the Kikar tree (*Acacia arabica*) and women water the tree to cool the sufferers from the disease.

During an attack of smallpox the victim is possessed by Sitalā; the house in which he lives is sacred and must not be entered unless the shoes are removed and feet washed. A branch of the *nīm* tree is hung over the door as a sign that smallpox is in the house. The presence of a Brāhman would make the sufferer worse.

Sitalā's priest is often of the Māli or gardener caste, especially in Bengal. When someone has smallpox the priest is called in. He begins treatment by forbidding the use of meat and all food which requires oil or spices in its preparation. A lock of hair, cowry shell, piece of turmeric, and bit of gold are tied to the right wrist of the patient who must lie on a plantain leaf and drink the water used to bathe an image of the goddess. During the crisis a water-pot is filled with fruit, flowers, *nīm* leaves and rice, and the priest recites the exploits of Sitalā. These offerings are later given to the priest as his fee.

Sitalā is one of seven sisters who control pustular diseases. These are given various names depending upon the locality, but one list includes Basanti, spring godling when smallpox is rife; Maṣāni, dealer of wasting diseases; Agwāni, Lamkariya, Mahāmāi, and Polāmdē. Sitalā is attended by Chāṇḍākaraṇā who, in the Himalayas, is worshipped as the healer of skin diseases. In

the southeastern Punjab she is attended by Sedhu Lāl, a servant often worshipped as an intercessor.

Sitkonsky Trickster of the Assiniboin Indians of North America. [EWV]

situa One of the most important feasts celebrated (in September) by the Incas of Peru to expel all diseases and calamities from the cities and towns. Mummies of ancestors and minor idols were carried in procession and offered libations. Blood puddings or bread prepared with the blood of llamas were eaten by all the participants and were sent to the shrines of the empire. [AM]

śiva One of the Supreme triad of Hindu gods; god of nature, the arts, learning, dancing, revelry; impersonation of the opposing forces of destruction and re-integration; and the typical ascetic and sage: in Śaivism, the supreme God. Śiva early in the development of Hinduism absorbed the Vedic Rudra just as the popularization of his cult has since involved a constant process of syncretism, the adoption of local deities as his manifestations. The name śiva does not appear in the Vedas signifying an independent deity, but that of Rudra is common. Rudra is praised as the lord of sacrifices, granter of prosperity, wielder of the thunderbolt, and acclaimed as being as destructive as a wild beast. In the *Yajur-Veda* Rudra is the first physician, the increaser of prosperity, and protector of cattle. In the *Atharva-Veda* he is fierce and a destroyer. The epithet śiva is, however, applied to Rudra as the auspicious, and the latter term has gradually developed into the powerful and terrible śiva of modern Hinduism.

Śiva is fair in color, has four arms, five faces, and three eyes. The third eye is so destructive that the gods and all created beings were destroyed by its glance. He wears the skin of a tiger, deer, or an elephant, a necklace of skulls; serpents twine about his blue neck (made blue by the poison he drank to prevent it from destroying the world). His vehicle is the bull Nandi and his attributes include the bow Ajagava, an hourglass drum, a club, a trident, a cord, the elephant, and the rat. On his forehead is depicted the crescent moon, symbol of the sovereignty assigned to him at the Churning of the Ocean. His symbol is the lingam. See LINGAM. Its connection with śiva as a god of reproduction is obvious. He has more than a thousand names and epithets, of which Mahādēva is the most common. He has no real incarnations, although his followers claim 28. His abode is Kailāsa where his worshippers hope to go.

Śiva is a terrestrial god, living on the Himalayas, or in Benares, and practicing asceticism. In the form of a sannyasin he is represented as sky-clad with unkempt hair, ash-smeared body, and protected by a snake canopy. As Bhairava he is the destroyer; as Bhūteśvara he is lord of ghosts, and haunts cemeteries. When drunk he dances the Tāṇḍava with his wife Devī.

The worshippers of śiva are a majority among Hindus and all sects worship him as a god of luck. His cult (Śaivism) was established in India probably about the third century and its consequent popularization has been the work of many missionary preachers. Śaivism is essentially the exaltation of śiva as the Supreme Being and the merging of the other members of the triad, Brahmā and Viṣṇu, into śiva. See BATĀRA GURU; BHAIKAVA; BHAIKON; BRAHMĀ; DAKSHA; DEVI; DRUM; GANEŚA.

As one of the divine dancers of Hinduism, Śiva is the third in the trilogy of Brahmā, Viṣṇu, and Śiva. In early mythology Śiva was known as the lord of agriculture, with his home in the Himalaya mountains; he rode a bull as his *vahan* or conveyance. As Nataraja he performs his cosmic dance of five movements—creation, preservation, destruction, reincarnation or illusion, salvation or ultimate release (*nirvāṇa*)—and thus converts into rhythm the essential doctrines of Hindu mystic philosophy.

Another dance commemorates his humorous contest with his consort, Kālī, the goddess of destruction. He won by raising one of his legs to the level of his head, a feat which Kālī was too modest to emulate. This dance is called *Urdhva-Tandava*. Śiva uses the *Tandava*, virile style, and often gestures with the *Patāka* hand from the code of *mudras* (a gesture type that came from Brahmā) and the *Tripātaka* which he himself originated. His dances are often represented in Hindu and Cambodian art. He is often shown surrounded by a circle of fire, the vital principle, and with four arms.

In his cosmic dance he has combated evil. Once in an argument with heretical rishis, he destroyed creatures of their black magic—a ferocious tiger, a serpent which he wound around his neck, and an evil dwarf—for he crushed them under foot and continued his triumphant dance. [CPK]

Sivirri Cape York culture hero of the Tjununji tribe, inventor of the drum used in initiation rites, builder of the first wooden canoe, and a traveler who eventually went north into Torres Straits Islands. The Papuan origin of the elements in the cult associated with him have been discussed by McConnel and Thomson (see bibliography of article AUSTRALIAN ABORIGINAL MYTHOLOGY) and Haddon (Cambridge Exped., vol. 1). Sivirri is allied with Kwoiam, culture hero of Western Islands, Torres Straits, who carries an Australian spear and spear-thrower. [KL]

skakácsasszonyok tánc The cooks' dance, which is performed on the evening of a Hungarian wedding celebration. Neighbor women, who have worked all day to provide the feasts for the guests, emerge into the courtyard in single file procession, circling clockwise. Each carries a cooking implement in her hand and waves it above her head—a plate, wooden spoon, pan; or she may carry a wine bottle on her head. They perform a two step to the left and a *simple* to the right (step right, close in with left) and rotate the free hand in time to the music. One or the other may add *din* to the curious spectacle by striking a plate like a tambourin. [CPK]

Skanda In Hindu mythology and belief, the god of war; general of the gods; the younger of Śiva's two sons; the patron of thieves. Skanda is represented riding the peacock Paravāṇi and carrying a bow and arrow. When divested of his martial attributes and represented as a beautiful youth he is often called Kumāra. His father is sometimes also said to be Agni, his mother Uma, Gangā, or Pārvatī. The gods feared a child of Śiva and Pārvatī and so entreated Śiva not to discharge his seed. But part of it had come forth and this was taken by Agni and thrown into the Gangā. The river threw it into a thicket of reeds and it was transformed into a boy. The six Krittikās or Pleiades found him and, since each wished him as her son, he assumed six faces. From this rela-

tionship he gained the name Kārttikeya. His wife is Senā, Devasenā, or Kaumārī.

Skanda killed the Asura Tāraka who was oppressing the gods. On a later occasion when the Daitya Bāṇa attacked the gods from the mountain Krauncha, Skanda pursued the Daitya and split the mountain with his javelin in order to get at and kill the demon. This opened a passage for the geese and other birds flying north each spring. Skanda has a retinue of monstrous followers. He was probably introduced after the office of general was instituted in Indian states in order to make the temporal and the religious systems similar. Skanda was generally worshipped at one time but at present is worshipped chiefly in southern India under the name of Subrahmaṇya.

ska'wehe Literally, greeting: the Penobscot Indian Greeting or Election Dance, performed on the occasion of intertribal visits for the inauguration of chiefs. These visits were reciprocated among the Penobscot, Passamaquoddy, and Malecite. The visitors were received in their canoes with friendly ceremony and some quasi-hostile demonstration in the firing of guns. The regalia also symbolized peace within potential hostility in the colors and designs. In the dance hall each visitor sang his individual song. Then followed a feast, and, on ensuing nights, communal round dances. The songs were of two types, the solemn, old-style greeting songs, and the livelier new-style dance songs in antiphony between the dance leader and chorus.

The combined mourning for a dead chief and installation of a new one was spread throughout the Eastern Woodlands, and survives among the Iroquois as their Condolence Chant. [CPK]

skip-rope rimes We include here other sidewalk rimes as the same rimes are often used interchangeably for bounce-ball, skip-rope, counting-out, and other games, sometimes showing up even in autograph albums when the juvenile writer can think of no nobler sentiment. The ones we give first are the ones more frequently used for rope-skipping. Since skipping fast requires skill and also makes the skipper very warm, we have often in the rimes words connoting warmth, like pepper, mustard, and ginger. Words italicized indicate where the rope is speeded up and the rope-swingers chant much more loudly:

My mother uses salt,
Ginger, mustard, *pepper*.

Mother, mother, I am sick;
Send for the doctor, *quick, quick, quick!*

Sugar, salt, pepper, cider,
How many legs has a bow-legged spider?

Butterfly, butterfly, turn around;
Butterfly, butterfly, touch the ground;
Butterfly, butterfly, show your shoe;
Butterfly, butterfly, twenty-three to do:
One, two, three, etc. to twenty-three.

In using the following very old English rime for skipping rope, the children start slow and gradually accelerate until the last line is fast and furious. It takes a very nimble and skilful girl to "stay in" until the end. There are many variants of this rime in different parts of English-speaking childhood, but the following version is commonest:

One, two, buckle my shoe;
 Three, four, shut the door;
 Five, six, pick up sticks;
 Seven, eight, lay 'em straight;
 Nine, ten, a big fat hen;
 Eleven, twelve, let us delve;
 Thirteen, fourteen, maids a-courtin';
 Fifteen, sixteen, at work in the kitchen;
 Seventeen, eighteen, maids a-waitin';
 Nineteen, twenty, the larder's empty;
Please mama gimme some dinner!

For sidewalk races, this rime is used:

One to make ready;
 Two to show;
 Three to start,
 And four to go.

which somewhat resembles the older English rime:

One to make ready,
 And two to prepare,
 Good luck to the rider,
 And away goes the mare.

The old "catches" still survive, for each new generation or immigration to "bite on," such as telling the "green" child to be the key in the lock. When the leader says, "I am a gold lock," the victim must say, "I am a gold key." The metal changes several times during the rime until the "green" child finds himself saying "I am a monk key." See CATCH TALE.

Tickling rimes are old and keep bobbing up for new "runs" from time to time, the object being to try to tickle the other child under the arm, on the knee, or at the neck, until he begs for mercy, and to hold your breath when your turn comes so that you won't give in to the tickling. Here are three old ones from Newell's *Games and Songs of American Children*:

Tickle'e, tickle'e on the knee;
 If you laugh, you don't love me.

If you're a little lady, as I take you for to be,
 You will neither laugh nor smile when I tickle
 your knee.

Old maid, old maid, you'll surely be,
 If you laugh or you smile while I tickle your knee.

The first of these is from Philadelphia; the second, Georgia, and the third Massachusetts.

New York City children like to change the old rimes to suit their whimsy. In World War II they altered A tisket, a tasket, by inserting the line "Put Hitler in a basket," and Eeny, meeny, miny, mo, by "Catch old Tojo by the toe." Two other Mother Goose rimes became, quite startlingly to some adults:

Hickory, Dickory, Dock,
 The mouse ran up the clock;
 The clock struck one—
 Time for lunch.

"Mary, Mary, quite contrary,
 How does your garden grow?"
 "Silver bells and cockle shells—
 And one stinkin' petunia."

Anyone familiar with the condition of New York City window, stoop, and sidewalk flower boxes by mid-August appreciates the realism of the children.

The last day of school the children recognize as a day of license for expressing their antipathy to the teacher by chanting time-honored rimes. These anti-

teacher and anti-school verses are at least sixty years old in the form given below, but probably have ancestors way back:

No more pencils, no more books,
 No more of teacher's cross-eyed looks.

O Lord of Love, look from above
 And bless the poor committee
 Who hired a fool to teach our school
 In dear old (New York) City.

O Lord of Love, look from above
 And pity us poor scholars;
 They hired a fool to teach our school
 And paid her forty dollars.

The bum-tiddy-go formula was used on teacher:

Teacher, Bum Beacher, Tiddy Eacher, Go Feacher;
 Hi-legged, Ho-legged, Bow-legged Teacher,

with *legged* pronounced in two syllables, but it was often heard on sidewalks applied to any playmate temporarily out of favor, like Henry, Bum Benry, etc., sometimes with rather startling results. A similar taunt rime, adaptable to any name, was:

Charley, Barley, Pudding and Pie,
 Kissed the girls and made them cry;
 When the girls came out to play,
 Charley Barley ran away.

Another version was sent me from Hawaii, but it originated in Ohio:

Johnny, bum bonny, Teeairika tonny,
 Tee-legged, toe-legged, bow-legged Johnny.

And from the same source came a fine "jingle to be used when you felt like cussing":

Darn, darn, double darn,
 Triple darn, hang!
 Gee whiz, golly, gosh—
 Gol darn, dang!

It was also used at the turn of the century in girls' schools and women's colleges in New England when such euphemisms and semiprofanity still met the ladies' needs.

There are still current a number of animal verses popular for generations among children who use them for sidewalk games, ball-bouncing, rope-skipping and even, with O, U, T, Out goes he, for counting out. These are samples of hundreds:

Ask your mother for fifty cents
 To see the elephant jump the fence:
 He jumped so high he touched the sky
 And never came down till Fourth of July.

Ask your mother for fifty cents
 To see the elephant jump the fence:
 Ask your mother for fifty more
 To see the elephant sweep the floor.

Monkey, monkey, bottle of beer;
 How many monkeys are there here?

Billy, Billy Booster
 Had a little rooster;
 The rooster died and Billy cried,
 Poor little Billy Billy Booster!

Dickery, Dickery, Dare;
 The pig flew up in the air:
 The man in brown
 Soon brought him down;
 Dickery, Dickery, dare.

As I was walking near the lake,
I met a little rattlesnake;
He ate so much of jelly-cake,
He made his little belly ache.

Jane ate cake and Jane ate jelly;
Jane got a terrible pain in her—
Now, don't get anxious!
Don't be misled!
For all that Jane had was a pain in her head.

For other children's rimes see COUNTING-OUT RIMES;

RIMES; SHEPHERD'S SCORE. CHARLES FRANCIS POTTER

Skogsfru The Woods-woman of Scandinavian folklore. It is very unlucky for hunters to meet her in the forest. She comes to their fires at night and tries to lure off the young men.

sky Various beliefs are expressed about the sky and inhabitants of a sky world in North American mythology. Originally all people lived in the sky until one young woman fell through a hole down onto what became the earth (confederated Iroquois: see SKY WOMAN). A young woman, mortal, marries a star and lives in the sky. One day she peers through a hole or "window" in the sky and sees the earth below; this has later dire consequences for her (see STAR HUSBAND). In many North American Indian tales, but particularly in the Orpheus tales, the sky is referred to as rising and falling on the horizon (Symplegades); people who desire to pass into the sky would have to time their jump over the horizon exactly, else be crushed between sky and earth.

A Southwestern Indian belief is that during the world flood, the birds clung to the sky, which resulted in their tail feathers being colored. The zenith is one of the six cardinal directions of the Pueblos and other Southwestern peoples; the Zuñi, as well as several other tribes in different parts of the continent, believe the sky has plural levels; a variant Zuñi belief is that the sky is a "stone cover," solid and resting on the earth like an inverted bowl. If one can pass through the breaks, or a passage in the cover, one reaches the home of the Eagle people. Many other tribes believe that the sky is the abode of the dead. The Kato of northern California have a good deal to say about the making of the sky with its four columns and four cloud gates in their creation legend (see Pliny Earle Goddard, *Kato Texts*, University of California Publications in American Archaeology and Ethnology, Vol. 5, 1909). [EWV]

Sky Father One of the two original World Parents in the mythologies of several southern California and Southwestern (Zuñi, Pima, Mohave, Yuma) Indian groups. Originally the earth and the sky were joined together, the earth being the mother and the sky the father of mankind. Later it became possible, in one way or another, to push the sky up and make room for mankind to live on the earth. See EARTH. [EWV]

Sky Woman The tale of the Woman Who Fell from the Sky, which constitutes the origin myth of the northern Iroquoian-speaking tribes (Seneca, Mohawk, Cayuga, Onondaga, Oneida, and so forth) concerns a chief's daughter, Ataensic, who lived in the sky and who fell ill. The Seneca version of the myth relates how, to cure his daughter, the chief had her laid beside a tree which

every year bore fruit (corn) on which people lived; then he had this tree dug up. A young man, enraged at the cutting down of the tree, shoved the young woman into the hole where the tree had been growing. This hole opened into the present world, which was then all water and inhabited by waterfowl. As the woman was falling the birds joined their bodies together and made a platform for her to fall on. To provide her with a permanent resting place, the birds decided to prepare the earth; various animals dived for earth (see EARTH DIVER) and when earth was secured it was spread out on the back of the Turtle, who now supports the world. There the young woman lived, and in due course brought forth a daughter. This daughter had in turn twin boys, Flint (Othagwenda) and Little Sprout (Juskaha); the grandmother of the twins liked the latter, but hated Flint, who was cast away in a hollow tree. From this point on the myth is concerned chiefly with the deeds of the twin boys in enlarging and changing the earth; the struggle between the evil twin Flint and his brother, and the death of Flint. Ataensic, or Sky Woman, is recognized as one of the chief mythological characters of the Iroquois, but as a deity is more or less otiose. [EWV]

Slappy Hooper "The world's biggest, fastest, and best sign painter," legendary hero of old-time billboard craftsmen, who scorned helpers and pounces (perforated outlines or stencils transferred with powdered chalk or pounce) and whose love of big jobs or true-to-life jobs proved his undoing. His biggest job of sky-painting (for which he used sky hooks to hold up his scaffold) was for the Union Pacific railroad and stretched from one end of the line to the other. He had to give up sky-painting when airplanes came in and started fouling and cutting his lines. Turning from big to true-to-life signs, he painted a loaf of bread so real that the birds broke their bills or necks when they flew against it to peck at it and the humane society made him paint out the loaf and just leave the lettering. He painted a stove with a cherry-red jacket that was so hot that the dandelions and weeds popped out in mid-January and the bums who made the place a hangout became a public nuisance. In order to get rid of them, he painted the stove white-hot, blistering the paint off parked cars and setting fire to a building across the street. That billboard had to come down, and Slappy was ready to quit because "they don't want big sign-painting and they don't want true-to-life sign-painting, and he has to do one or the other or both or nothing at all." (See Jack Conroy in *A Treasury of American Folklore*, pp. 546-550.) [BAB]

slaughter of the innocents When the Magi came to Jerusalem seeking the child destined to become King of the Jews (*Matt.* ii, 16-18), Herod the king was naturally much interested and asked them to let him know when they had found the infant. Since they did not do so, Herod, determined to remove this threat to his sovereignty, ordered slain "all the children that were in Bethlehem, and in all the coasts thereof, from two years old and under, according to the time which he had diligently enquired of the wise men." Warned in a dream, Joseph "took the young child and his mother by night, and departed into Egypt," and stayed there until the death of Herod. The story has the marks of a folktale, not only the connection with the prophecies

of *Hosea* and *Jeremiah* (verses 15, and 17–18) but particularly its similarity to other stories of the killing of groups of infants in order to destroy one predicted to become great, who always escapes the wholesale infanticide (M375).

Krishṇa, famous eighth incarnation of Vishnu, (in Indian myth) escaped a slaughter of the innocents and survived to preach Vishnu's gospel of salvation.

According to *Exodus* i and ii, Moses escaped a typical slaughter of the innocents by his mother's stratagem, in a story resembling much the older tale of the basket escape of the Babylonian Sargon from death when an infant. By acculturation the story of a slaughter of innocent infants is likely to appear in any sun god or hero myth. The body of Zulu folktale also produces a story in which all male children are killed for fear they will overcome a parent (M375.1).

The Latin, Eastern, and Anglican Catholics have made much of the Feast of the Innocents (Dec. 28 or 29). See *CHILDREMAS*. Their feast is a holiday of obligation in Bethlehem, and every evening the children of the choir visit the altar under the basilica. There they sing the hymn *Salvete, flores martyrum*, "Hail, Blossoms of the martyrs." See *ABRAHAM*; *CRONUS*. [CFP]

Slavic folklore The Slavic world (now numbering about 200 million) presents three linguistic subgroups: the Eastern Slavs—Russians, Ukrainians, and Byelo-Russians—now almost entirely concentrated in the Soviet Union; the Southern Slavs—Bulgarians (mostly in Bulgaria except for a few border regions) and four nationalities residing (except for a few border minorities) in Yugoslavia; Macedonians (a transitional unit from Bulgarians to Serbs), Serbs and Croats (both closely linked ethnographically and using a common Serbocroatian language), and Slovenians; the Western Slavs—Czechs and Slovaks (both concentrated in Czechoslovakia), Lusatian Sorbs (now a small ethnic island in two German provinces, Saxony and Prussia), the population of Poland: the Poles, and the Kashubs, their close kinsmen on the lower Vistula, the last remnant of the Pomeranian people which was entirely Germanized, like their relatives of the Elbe area, the Polabians. Before the final extinction of the Polabian language during the first half of the 18th century its few residua, among them one folk song, were recorded at the threshold of the 18th century. The Eastern Slavs and the Bulgars, Macedonians, and Serbs belong, in an overwhelming majority, to the Greek Orthodox Church while the other Slavs are, except for some small minorities, Roman Catholics, although most of them underwent a more or less profound Reformation movement. A Serbian minority, converted under the Turks to Mohammedanism, presents peculiar features in its oral tradition.

Folklore has had and still plays a very important, vital, and productive role in the cultural life of all Slavic peoples. There are various reasons which favored the preservation and development of Slavic folklore: the prevalence of rural population and its historical significance in most of the Slavic countries; a high percentage of illiteracy, which until recently characterized the whole eastern bulk of the Slavic world; the great role of folklore for the rise and development of national self-consciousness in those Slavic countries where literature written in the vernacular arose only in the last century,

or where the development of written literature had been for centuries interrupted.

Among Greek Orthodox Slavs the written literature was, until the period of Enlightenment and its later echoes, essentially confined to the spiritual domain, whereas the secular literary art was predominantly oral. This explains the particularly rich and multiform development of the oral tradition within the Orthodox part of the Slavic world in comparison with the Slavs of the Western denomination. Among these, Czechs, Croats, and Poles have an old written literature whereas the others owe the beginning of their literary activities to the Reformation and Counter-Reformation and their full literary development to the Romantic period.

Allegiance to the Orthodox or to the Roman Church are among the main reasons of divergent development and character of the lore of Slavic East and West. Catholicism fostered Western culture since the Middle Ages, while the Orthodox Church long impeded Western cultural trends. Also, the Catholic Church was much more effective than the Orthodox Church in its fight against pagan survivals among the Slavic people, so that certain folklore genres, particularly the epos and laments, disappeared there almost entirely. The distinct neighboring cultures on the east and west borders of the Slavic world only added to the striking differentiation of its oral tradition. The Orthodox countries possessed a much richer contact with the Ural-Altaic world: the Eastern Slavs with the Finnish peoples and with different Turkic nomads, especially with the Kumans and Tatars; Bulgarians, Macedonians, and Serbs with the Turks. In the Catholic (and Protestant) part of the Slavic world, especially in its marginal areas from the Kashubs and Sorbs down to the Slovenians, a clear-cut influence of the Germans is apparent. In the southwestern Slavic area Romance culture has left its imprint. Some Hungarian elements entered into the musical tradition of Croatia, Slovakia, and Moravia, and spread to the adjacent regions of Poland and the Ukraine.

As to the influence of Slavic folklore and the oral tradition upon neighboring peoples, the fairy tales of the Western Finns were subjected to the influence of Russian lore, while in Lithuanian folklore a Byelo-Russian influence is apparent, and in the German regions with a Slavic substratum traces of Slavic folk poetry and beliefs may be detected. Hungarian folk songs absorbed some stimuli from the Slavic environment. The North Albanian epics owe much to contact with Serbian tradition. In Greece and Rumania there are many evident vestiges of Slavic folk beliefs and rites.

The first documents on folk poetry appear almost at the beginning of the literary history of Slavic nations. In the early Middle Ages in such Russian literary works of the 12th century as the *Primary Chronicle* and the *Igor' Tale* there are fragments of epos, fairy tales, riddles, proverbs, ritual songs, laments, and incantations. Also old Russian homilies cite and condemn folk songs as part of the pagan tradition. Likewise the medieval writings of the Western Slavs reflect some folklore elements. Particularly the rich Czech literature of the 14th and 15th centuries both in vernacular and in Latin includes short folktales, riddles, the first collection of proverbs by Smil Flaška of Pardubice, fragments of songs, and a treatise on the winter ritual by the monk Jan of Holešov, the oldest Slavic folklorist. In the 15th century

single folk songs are inserted in some manuscripts of Polish monks. Only a few folklore vestiges of the oral tradition are preserved in the medieval literature of the South Slavs.

With the political and social upheavals of the 17th century folklore forms widely infiltrate into the Russian written literature. In the following century a new Russian literature shaped according to Western models was created. But even at this time the native folklore was still imitated in the lower literary genres. The reaction against the predominance of foreign influence provoked toward the end of the 18th century recognition and admiration of the national past and of the popular tradition. Recordings and publications of Russian folklore, partly in its genuine form, partly reshaped, began to appear. Among them the epic collection of Kirša Danilov, written down in the late 18th century and first published in 1804, is particularly important. Romanticism emphasized the attractiveness of folklore forms. These latter leave appreciable traces in the work of nearly all significant Russian authors and composers of the 19th and 20th centuries. In the Catholic Slavic world, the Reformation and even more the Counter-Reformation, tending to appeal to the folk masses, used their poetic patterns and inversely influenced the oral tradition. In particular, the Czech baroque period created many transitional forms between literature and folklore. The further development of this interpretation as well as the decisive influence of folklore on the new Czech literature and music was favored by the intensive ties and interchange between the Czech rural and urban population in the 18th and 19th centuries. In Poland with its clear-cut social differentiation the influence of popular tradition upon the art of the upper classes, although occurring since Renaissance poetry, plays a more marginal role, with the brief exception of the great Polish romanticists. Serbocroatian folk lyric and epic entered into the written poetry as early as the rise of the Dalmatian Renaissance (15th and 16th centuries) and underlies the whole Serbocroatian literary development of the 19th century. The first significant attempts to establish Ukrainian, Slovak, and Bulgarian literature in the middle of the last century, start with the imitation of the folklore pattern, while the further development shows the tendency to a sharper differentiation between the oral and literary forms.

As to the recording and investigation of Slavic folklore, the first phenomena which attracted enthusiastic international attention were the Serbian and Russian heroic epos. The initial steps in arousing the interest of the scholarly and literary world were made through the collecting and publishing activity of the Serb Vuk Karadžić (1787–1864) and in the second half of the 19th century through the field work of the Russians P. Rybnikov (1832–1885) and A. Hilferding (1831–1872). They discovered rich sources of the Russian epic tradition in the Olonec region of northwestern Russia, and were the first to pay systematic attention both to the social background of the epic tradition and to the individual features and the creative contribution of the narrators (*skaziteli*).

The collecting and publishing of other genres of oral poetry in all Slavic countries have progressed more and more and the techniques of recording as well as studies of the folklore milieu have been perfected, especially in

Russia from the beginning of this century and in the international studies of the Serbocroatian epos. It reached its peak in the expedition of M. Parry (Harvard University) to Yugoslavia in 1934.

During the last hundred years much has been done also in the interpretation of Slavic folklore, especially concerning epic poetry. Different views have been successfully applied (mythological, diffusionist, historical, anthropological, sociological, and formalist approaches). Still there is a great lack of survey work which would compare the oral tradition of individual Slavic nations and point out both their original, national features and their common patrimony. In spite of some excellent isolated attempts to analyze the verbal and musical structure and symbolism of folk poetry, we still lack a systematic inquiry into this field. There remains also an almost complete gap in the studies of folklore in relation to the folk mind.

Types of Slavic Folklore

The various types of Slavic folklore can be characterized according to the kind of performance, to the way of delivery, to the prosodic form, to the semantic genre, and to the function the work performs. We may divide the material accordingly as drama or monolog: spoken or sung, and a recitative type, transitional from song to speech; prose or verse; narrative or non-narrative, either lyric or gnomic; ritual or non-ritual. Prose in Slavic folklore is always spoken, and narratives have no connection with rites.

Plays Ritual plays linked with various winter festivities are widespread in the Slavic world and present certain common archaic features: pantomimes with frequent phallic motives, animal masks (special favorites are the goat, the aurochs, the horse, the bear, the wolf), humorous dialog, and a clearly discernible magic purpose. The plays pertaining to the funeral ritual of the Carpathian Ukrainians represent particularly archaic survivals. In Bohemia, dramatized Christian legends, which had their roots in the medieval and baroque theater and literature, were frequently substituted for the magic plays, and subsequently spread into Slovakia and Poland. The Russian folk drama, which developed during the 18th and 19th centuries and offers a fanciful intermingling of tragic and comic elements, draws its inspiration from the stage and literature of the upper classes. The most popular among these plays, however, *Tsar Maximilian*, was originally an adaptation of the Czech drama of Saint Dorothy, used by the Russians to lampoon Peter the Great. The puppet drama and farce (with the comic hero Kašpárek) is especially developed in Czech popular tradition, while the Russian tradition, which may be under its influence, is confined to comedy (using Petruška as the central figure). Prose and verse as well as speech and song intermingle in the Slavic folk drama.

Folktales The spoken narrative, represented by folktales, occupies an important place in the whole Slavic folklore field, but in the Eastern Slavic area, especially among Great Russians and Byelo-Russians, it presents a particularly highly developed formal tradition, distinct from that of the Western and Southern Slavs. Prologs and epilogs, petrified formulas, ornamental expressions, differentiated styles, and dramatic dialogs are typical features. Not fairy tales but novelettes and anecdotes form the majority of the Slavic tale plots and

are the most original of them. Legends, local and religious, are likewise numerous and varied. The mythology of the Slavic fairy tale differs sharply from folk belief. The folktales as a rule are in prose, but sometimes include versified formulas. In Russia the traditional semiprofessional (formerly also professional) narrators often tend to versify the whole tale.

Ritual rimes The non-narrative type is also represented by spoken forms in Slavic folklore. Here are found the rimes of the best man (Russian *družko*, Czech *družba*, etc.), formally and functionally similar in the wedding rituals of all Slavic people. The Serbian ritual toasts (*zdravice*) belong here also. All these speeches, like the versified Russian folktales, use a syllabically free rimed verse, forming a bipartite syntactic unit with final intonational cadence.

Incantations make up another species of the non-narrative forms connected with rituals. These magic formulas, based rhythmically on syntactic parallelism and making extensive use of various euphonic and semantic devices, survive in the oral and partly in the written tradition of all Slavic peoples. The most numerous and most varied forms of incantations are found in Russia. They are a highly professionalized and esoteric branch of folklore, preserving many pre-Christian elements on which a new layer of Christian symbolism has been superimposed.

Proverbs and Riddles The non-narrative spoken forms without ritual ties are proverbs and riddles. Proverbs play a particularly important role in the colloquial language of Orthodox Slavic nations, but they are familiar to all Slavs. From the early Middle Ages they entered into Slavic written literatures, while on the other hand proverbs from medieval anthologies of parables and aphorisms were adopted among the people. The proverbs of Bulgarians and other Balkan Slavs frequently follow Turkish models. A Slavic proverb usually consists of one bipartite syntactic unit with some sort of parallelism or consonance between the two parts. Many Slavic proverbs, especially among the Southern Slavs, originated as quotations from didactic stories, or they use the decasyllable which associates them with the epics. Not infrequently the riddles of different Slavic nations are similar or even identical; for example, many use zoomorphic metaphors. Their imagery is related to that of songs, and sometimes riddles become an integral part of songs and tales. The rhythmic form of the riddles is close to the structure of proverbs and incantations.

Epics Recitative epics are spread in three areas: 1) The Balkan Slavic epics, called in Serbian *junačke pjesme* or *starinske pjesme* (heroic songs or songs of yore), are recited in a great part of Serbian territory, in Macedonia, and in Bulgaria, especially in its western region. 2) The Russian epics, called by their narrators *stariny* (those of olden times) and in the scholarly nomenclature *byliny*, are spread along the coast of the Arctic Ocean, around Lake Onega, and also occur among Siberian colonizers and Don Cossacks. 3) The Ukrainian *dumy*, or as the narrators call them *kozac'ki pismi* (Cossacks' songs), have been recorded mostly in the region between the Dnieper and the Desna rivers.

As to the events and heroes reflected in the epics, the action of the *byliny* is usually set in Kievan Russia of the 10th or 11th century, or concerns the fight against the Tatars from the 13th century. Also the economic

and political flourishing of the Moscow state left its mark, as did the reign of Peter. Most of the Balkan Slavic epics deal with the resistance against the Turkish invaders since late 14th century, while the Ukrainian *dumy* sing the Cossacks' struggle with Tatars, Turks, and Poles in the 16th and 17th centuries. Study of the Russian and Balkan Slavic epic tradition reveals, in addition to the essential historical elements, many migratory heroic plots and vestiges of an ancient mythological substratum. Whereas the Balkan Slavic epics usually glorify the rulers of the country, in the *byliny* the Kievan sovereign, Vladimir, appears only as a secondary figure. The *bogatyr* (hero) is usually an outstanding individual from the ruler's retinue; sometimes he stems from the merchant or even the peasant class; rarely is he a provincial prince.

The epic tradition is inherited from generation to generation only by a few particularly gifted peasants, and in the Balkan Slavic countries it is limited to men. A higher degree of professionalism probably existed in the past; especially in Russia vagrant minstrels (*skomoroxi*) are thought to have been for centuries the main bearers of the epic tradition, and elaborate parodies of the epic form (*nebylicy*) represent interesting survivals of their repertory. The *dumy* have almost disappeared, while the Russians, and even in greater degree the Balkan Slavs, still possess a rich though rapidly decaying epic tradition.

In the Ukraine and the western part of the Balkan Slavic area the performers accompany recitative epics by stringed instruments, while elsewhere no accompaniment is used. The Southern Slavic epic decasyllable line, having a break after the fourth syllable, a clear-cut trochaic tendency, and three predominant word-accents, is related to the Russian epic verse, since the latter presents almost the same syllabic scheme with certain fluctuations, and uses the same overlapping of dichotomy and trichotomy; in Russian, however, there is substituted an accentual dactylic ending for the quantitative cadence of the Serbian verse. Striking similarities in meters and figures, as well as in the structure and compositional role of parallelism, permit reconstruction of the common prototype of the South Slavic and Russian epic form. In addition to the loftier decasyllable, the primitive Slavic epic tradition seems to have used the simpler meter which now is represented by the Bulgarian epic octosyllable and by the short line of the Russian historical songs. These songs describe Russian historical events of the 16th and 17th century in a simpler way, as compared with the more grandiose presentation of the distant past found in the *byliny*.

Spirituals The epic tradition in Russia and the Balkan area is supplemented by spirituals, based on Christian legends. These are usually performed by professional pilgrims and beggars.

Laments The Slavic laments can be classified under the heading of non-narrative recitatives. The funeral laments are known to all Greek Orthodox Slavs, but only in the three epic areas are they richly developed. In these regions semiprofessional women or relatives improvise laments in the most skilful and varied fashion. This female counterpart to the epic tradition is closely linked with the latter by poetic devices. Both of the metric varieties of the Serbian laments, i.e. the symmetrically bipartite octosyllable, and the more solemn

symmetrical tripartite line of twelve syllables, correspond exactly to both Russian lament meters, and this comparison reveals the common prototypes in Primitive Slavic. The Ukrainian laments as well as the *dumy* are performed in freer verse forms, reverting, however, to the same prototypes. In addition to the funeral laments there are in the Russian tradition laments concerning men at war (or in military service), and the laments of the bride, which are an integral part of the wedding ritual.

Ballads The narrative songs, i.e. ballads, have a more lyric character than the recitative epics. They occur in all Slavic countries but are more deeply rooted in the Slavic West than in the East. This form is especially developed in the central area, including Moravia, Slovakia, southeastern Poland, western Ukraine. Here in addition to the usual international plots some peculiarly local themes occur. Ballads are supplemented in these regions by religious songs inspired by the Western Slavic medieval and baroque legendary literature.

Lyric Songs Among the lyric songs connected with rituals two cycles may be distinguished. The first, linked with the calendar holidays, are better preserved by the Eastern Orthodox Slavs. Many pre-Christian mythological survivals are found here which have been mostly eliminated or supplanted by Christian motives in the Catholic Slavic countries. The symbolism of these songs is focused upon agricultural magic, fertility charms, and ancestor worship. The songs are grouped around the equinoxes and the solstices. The winter ritual and its songs is most fully represented in the Ukraine, Bulgaria, Macedonia, and Serbia, where many common features may be observed. The second cycle of ritual songs is linked with family life, and particularly with the wedding. Wedding songs vary in style and function, and together with the bride's laments and the best-man's rimes they are parts of a complex dramatic performance, the most vital of the Slavic rituals. Beside striking common features, the wedding songs of the Southern, Western, and Eastern Slavs offer numerous divergences. The form and especially the symmetric bipartite verse of the ritual songs is characterized by various archaic features.

Among non-ritual lyric songs the main place belongs to love songs, which often are linked with dances and games. In those countries which possess an epic tradition, emotions are usually not referred to directly but are expressed by allusive, sometimes enigmatic metaphors. An obvious reaction against this stage is seen in Russia in the growth of couplets and quatrains (*častuška*), originating in dance tunes, yet emancipated from the dance, and particularly appropriate to improvisation and emotional expression. Similar development is exhibited in the Polish *krakowiak* and in the Ukrainian *kolomyjka*.

In the Slavic West, particularly in Bohemia, Slovakia, Croatia, and Western Poland, the lyric song has been influenced by Western instrumental music and the melody has been superimposed upon the text. Elsewhere the text is quite autonomous. The songs are the most commonly used of the Slavic folklore forms. There are, however, songs connected with special types of work, outlaws' songs, and soldiers' songs, songs performed for children or by children, and songs exclusively belonging to women.

SVATAVA PÍRKOVÁ JAKOBSON

Slavic mythology The Christianization of the Slavs expanded gradually from the 8th until the 13th century, now and then provoking local pagan revolts (in Bohemia soon after its baptism which dates from the late 9th century and among the Poles and Eastern Slavs throughout the 11th century) or creating those whimsical combinations of paganism and Christianity labeled in Church Slavonic vocabulary as “double faith” (*duoevěrie*).

The conversion of the Kievan court belongs to the end of the 10th century and the pagan tradition is still fresh in the minds of the earliest Russian annalists. Both the *Primary Russian Chronicle*, compiled about 1111, and the *First Novgorod Chronicle* reproduce many records of the 11th century which contain a detailed report on the annihilation of the official paganism in Kiev and Novgorod and various reflections of the subsequent double faith. Moreover the *Primary Chronicle* includes the authentic text of Russian-Greek treaties (945, 971) with native pagan oaths. From the 11th century many allusions to the old deities and pre-Christian beliefs occur also in the various Russian writings against the pagan survivals. Former Russian gods are occasionally interpolated into translated literary works (*Malalas Chronicle; Alexandria*) or in accord with the Byzantine pattern, appear as rhetoric adornments in the original epos (*Igor’ Tale*).

The Northwestern (Maritime) Slavs from the Vistula to the Elbe stubbornly resisted German crusades and the history of this struggle is told (a) in the Latin Chronicles of three German clergymen—two from the 11th century (Thietmar of Merseburg; Adam of Bremen), and one from the 12th century (Helmold); (b) in three biographies of Otto of Bamberg compiled in the 12th century; (c) in *Gesta Danorum* by Saxo Grammaticus (about 1188). These sources, supplemented by some less important German documents and by the Icelandic *Knytlinga Saga* (around 1265), exhibit a rich picture of the Northwestern Slavic idolatry; and their authors, in spite of their Roman bias and insufficient acquaintance with Slavic people and language, have proved to be, in the light of recent archeological research, noticeably more accurate in their reports than it was usually assumed.

The literary data on the beliefs of the other Slavs are much scantier, partly because of their early Christianization (particularly in the case of Czechs and Bulgars) or because of the late origin of documents relating to the pagan past (e.g. most of the mythological testimonies in

the *Polish Chronicle* of the 15th century have been found to be mere inventions). Marginal residues of Slavic heathenism as recorded in 1331 from the Slovenes on the Isonzo are rather exceptional, but the folklore of all the Slavic peoples, notwithstanding the various superstrata, borrowings from abroad, and modifications, offer to a careful investigator many striking survivals, especially in demonology and in both calendary and family rites. From times preceding the Christianization of the Western and Southern Slavs, a few Greek and Latin writings give scrappy indications of single Slavic religious concepts or terms: in the 6th century the Byzantine historian Prokopios briefly refers to the Slavic faith and the Gothic chronicler Jordanis cites the Slavic *strava* (funeral meal); a Latin document of the 8th century mentions *treba* (sacrifice).

The relative linguistic unity and negligible dialectal differentiation of the Slavic world until the end of the first millennium A.D. and particularly the considerable lexical uniformity of the Slavic pre-Christian beliefs corroborates the supposition of a substantial unity for the cult of the Primitive Slavs. In the vocabulary originally connected with worship, the Slavs and partly the Baltic peoples, their closest linguistic neighbors, present striking similarities with the Indo-Iranian as well as with the Thraco-Phrygian nomenclature. The fund linking the Primitive Slavs with the Iranians is particularly important. The proximity in the religious pattern and terminology finds its expression both in the features which they preserved jointly from the Indo-European heritage or which they modified in one and the same way. In some cases where we are authorized to presume a direct borrowing, the direction is from Iranian to Slavic. These Slavic-Iranian affinities are all the more indicative in that Indo-European languages are mostly divergent in their religious vocabulary.

Slavs and Iranians nearly eliminated the Indo-European name of the worshipped sky (**diēus*). They agree 1) in substituting the name of the cloud (Slavic *nebo*) for that of the sky, 2) in converting the derivative celestial (**deiwos*) used by Indo-Europeans to denote gods into the word for “hostile demonic beings” (compare the term *divŭ* attested in the demonology of various Slavic peoples and the corresponding she-demon *diviŭ, diva, divožena*), 3) in assigning the general meaning of “god” to a term which originally signified both wealth and its giver (*bogŭ*). Thus the Slavs participated in the Iranian evolution into a clear-cut dualism and, according to Helmold’s accurate testimony, they were wont to worship divinities of good and those of evil “being convinced that happiness comes from the god of good while misfortune is dispensed by the deity of evil.” And the Slavic term for faith (*věra*) coincides with the Iranian term for religious choice between good and evil. The Slavs (and the Balts too) share with the Iranians the use of the same term for holy (originally “provided by supernatural beneficial power,” Slavic *světŭ*). The Slavic term for “peace agreement” and for “community agreeing” (*mirŭ*) is connected with the Iranian Mithra. In Slavic and Iranian similar verbs express the various processes originally pertaining to the religious pattern, as: worshipping (*žřeti*), wailing (*vŭpiti*), invocation (*zŭvati*), divination (*gatati*), proclamation (*věštati*), drawing (*pisati*), chastising (*kajati*), fearing (*bojati se*), protecting (*xraniti*), etc. Such fundamental spiritual terms as word

(*slovo*) and deed (*dělo*) are common to Slavic and Iranian, as are also such designations of the basic ritual implements as fire (*vatra*), chalice (*čaša*), burial (literally, magian) mound (*mogyla*), and such curative terms as cure (*goiti*), healthy (*šūdravū*), and sick (*xvorū*). There are several common expressions for ill-omened concepts: evil (*zūlo*), shame (*sramū*), guilt (*vina*), sinister (*šui*); moreover the Slavic stem **kostjun-* (literally, osseous) denoting profane, temporal, seems to be a loan translation. The Common Slavic *rai*, paradise, has been acknowledged as a direct borrowing from Iranian *rāy*, heavenly radiance, beatitude.

Like the religious terminology, the pantheon of the Slavs offers more Common Slavic than tribal features and partly points to Indo-European roots or at least shows Indo-Iranian, especially Iranian, and perhaps Thraco-Phrygian connections. It was hinted by Prokopios and six centuries later observed by Helmold, that among the multiform divine powers worshipped by the Slavs, one is believed to rule over the others in heaven and to care for celestial things, "whereas the rest, obeying the duties assigned them, have sprung from his blood and enjoy distinction in proportion to their nearness to that god of gods." The scattered data we possess on the Slavic deities, and in particular on their mutual kinship and hierarchy, do not permit us to reconstruct this whole system. Nevertheless there are indications arguing for a kinship and hierarchy.

The storm god Perunū is closely connected by name and functions with the Vedic Parjanya, with the Lithuanian (as a matter of fact, Common Baltic) Perkūnas (replaceable under tabu by Perūnas), with the Norse Fjörgynn (supposed to be the archaic designation for the Thunderer) and with the Albanian Perëndi, now denoting both "god" and "sky." It is probable that the Greek Keraunós, name or epithet of the thunder god, is a rime-word substituted for a tabued **Peraunós*. The Indo-European name for this hypostasis of a sky divinity contains, beside a nasal suffix the alternating verbal root *per-/perk-* (or *perg-*), signifying "to strike, to splinter," and used particularly of lightning. This root appears, e.g. in Latin and Germanic, as a substitute name for the oak, a tree favored by the thunderstorm and devoted to the thunder god; and in the Indo-European tradition the same root with a nasal suffix denotes the "oak-wooded hill"—Celtic Hercynia (Silva), Gothic *fairguni*, Slavic **pergynja* (Old Church Slavonic *prĕgynja*, Old Russian *peregynja*, Polish *przeginia*). The leading role of Perun in the Russian heathenism, the connection of the oak with this god, and the veneration of the *peregynja* are clearly attested by Russian sources. Perun was identified with Thor by the Varangians, with Zeus by the Russian bookmen, and with Elijah in Christianized folklore. Outside Russia, the god Perun, distorted to Prone and worshipped in oak-groves, appears in Helmold's *Chronicle*; Perun's son, Porenutius, figures in the mythological records of Saxo Grammaticus; Perun's name is echoed in Slovak maledictions (Peron, Parom), in the Polabian word for Thursday (*peründan*), in such appellatives for thunder and lightning as the Polish *piorun* and the Bulgarian folklore form *perušan*, as well as in West and South Slavic proper names, both personal and local, these mostly linked with oak-forest or hill. The ritual of the rain charm, widespread among Bulgars and Serbs and thence in Greece and Rumania, assigns the para-

mount role to a rigorously chaste girl (yet unable to conceive and born of a mother who since has become unable to conceive). Nude and draped with flowers she whirls ecstatically in the middle of a ring, invoking in song the sky or Elijah to moisten and fructify the earth. She bears the reduplicated name of Perun, unchanged (Perperuna) or undergoing hypochoristic modifications. This couple Perunū-Perperuna recalls the Germanic Fjörgynn-Fjorgyn and the Lithuanian Perkunas-Percuna tete. In another variant of the South Slavic ritual, the main role was performed by a boy assuming Perun's name reduplicated and altered: the people, whirling and drinking, besought him for rain. To the same cycle refer the old Russian reminiscences of Pereplut, worshipped by whirling and libations, as well as the Magdeburg epistle of 1008 damning the "impudent" god Pripegala. In some areas of Serbia and Bulgaria the name Perperuna is replaced by Dodola or Dudula and a similar form *du(n)dulis* (tied with an onomatopoeic verb for thunder) is currently substituted by Lithuanians for the tabued Pergunas. Thus in the Balkan Slavic rain charms, one not only finds archaic features reminiscent of Jupiter Elicius and *aqualicium*, of Zeus Náios and Dodona as well as of the Vedic hymns to Parjanya, but even the tabu name itself together with its substitute reveals a prehistoric origin.

The Slavic Svarogū is recorded and identified with Hephaistos by an old Russian glossator of the *Malalas Chronicle*. Svarogū's son was venerated both by Russians as Svarožiči and by the Northwestern Slavs as Svarožiči. The name survives in the Rumanian *sfarog*, torrid, and in the names of hills along the Slavic German borderline (Kashubian Svarożyn, elsewhere with a tabu substitution Tvarog, Tvarożic, etc.). Under another substitute name (Rarog, and further modifications as Rarach, Jarog) this spirit continues to live in the Western Slavic (particularly Czech and Slovak) demonology as a supernatural falcon and fiery dwarf who beams and turns into whirlwind and various animals. The name and the characteristic traits of this Slavic deity are obviously connected with the Iranian Vrthragna and his main incarnation Vāragna, the supernatural falcon, and with the cognate figures in Indic (Indra Vrtrahan) and Armenian mythology (Vahagn). Also the other incarnations of Vrthragna—wind, gold-horned aurochs, horse, boar—as well as his close ties with fire and smithery are reflected by the Slavic tradition. Indra, the virility epithet of this deity, lost its mythological connotation in the Slavic adjective *jendrū*, virile, vigorous, fast (in the same way as Slavic secularizes the adjective *svobodī*, free, corresponding to the Phrygian Sabadios). But the various aspects of this divine virility find their expression in the conjoined names recorded from the Northwestern Slavs, Svĕtovitū (overlapped by St. Vitus after Christianization but still figuring in toponymy), Jarovitū (surviving as Jarilo in the folk-Russian phallic spring ritual), Porovitū (with the same first root as Perunū), and Ruevitū. These four manifestations of the military deity were apparently symbolized by the polycephalic form of the Northwestern Slavic idols and could be compared to the Iranian four-faced warrior god, Vrthragna, with such attributes as "making bright" and "making virile." At least two of the mentioned designations had a calendary connotation: 1) *jaro* (spring) is connected with *jarū* (young, ardent, bright, rash), and Jarovitū's priest pro-

claims in his name, "I am your god who covers the plains with grass and the woods with leaves"; 2) *ruenŭ* is the autumnal month named for the ruts and mating calls of newly matured animals. The whole ritual, focusing upon the annual cycle and predestination, displays associations with Vřthragna's cult. The prophetic role of the horse in the divination ceremonies of the Northwestern Slavs is confirmed by its magic functions in the Russian popular tradition, particularly by the traditional horse epithet—*věščij*, seer—which has an exact correspondence in the *Avesta*. And the common Slavic term for time (**verme*) conceives it as a wheel-track (compare Old Indic *vartman*-).

Like the Vedic Vřtrahan, the Slavic Svarogŭ generated the sun, Xŭrsŭ Dažibogŭ, according to the Old Russian records. These designations survive among old personal names, Dadzbog in Polish, Hrs in Serbian. Helmold's "ydolum . . . Podaga" is perhaps a distortion of Dabog. For the bookmen, Dažibogŭ was identical with Helios. In old Russian tradition both the celestial and the hearth fire is said to be Svarogŭ's son. Xŭrsŭ is an obvious borrowing from the Iranian expression for the personified radiant sun (*Xursid* in Persian), Dažibogŭ means "the giver of wealth" like the Vedic Bhaga. Stribogŭ, the neighbor of Dažibogŭ on the Kievan hill before Russia's conversion, means literally "the apportioner of wealth" like Bhaga's partner Amça, and Palmer detects a striking parallel to this couple in the mythological references of the oldest Greek poets. Větrŭ (wind), personified in Primitive Slavic (compare Indo-Iranian Vāta-), is quite naturally termed "Stribogŭ's descendant" in the *Igor' Tale*.

The Russian peace treaties with the Greeks do not mention Svarogŭ probably because of his bellicose connotation, but after the sovereign Perunŭ the oath of 971 invokes Volosŭ as "the god of flocks." Also, a Russian form, Velesŭ, is attested, and the Czech tradition of the 15th and 16th centuries remembers a demon Veles. The alternation of two variants, **velesŭ* and **velsŭ* (wherefrom Volosŭ), seems to root in Primitive Slavic. The etymology is still controversial. Volosŭ was identified with Apollo in the Old Russian literary pattern and replaced by St. Blasius (Vlas) in Christianized folklore. Beside Volosŭ, Russian tradition knows another god of the cultivators with the characteristic name Rodŭ (literally, kin) thus corresponding to such deities as the Celtic Teutates, Latin Quirinus, Umbrian Vofionus. Among the Kievan court idols neither Volosŭ nor Rodŭ were admitted, although the Old Russian literary tradition presents the latter as the primordial god. His feminine counterpart, Rožanica (in Serbocroatian and Slovenian popular tradition Rodjenica, Rojenica) literally meaning "genitrix" and mostly named in the plural, was identified by Russian bookmen with Artemis. The only goddess of the Kievan official pantheon, Mokošŭ, literally moist, and represented by some vestiges in Russian folklore and in Slavic toponymy, is probably nothing but another name for the slightly personified "Mother moist earth" (*Mati syra zemlja*), still adored in the Slavic, chiefly Russian, popular tradition, and closely related to the similar female deities in Baltic, Phrygian, and Indo-Iranian mythology. The Iranian Ardvī (moist) Sūrā Anāhitā is particularly close to Mokošŭ: both of them protect semen, child-bearing, and sheep-breeding.

It is noteworthy that one of the Iranian demonic

beings, the winged monster Simorg, was adopted under the name Simarglŭ in the Kievan official pantheon on the eve of Russia's Christianization, and that the Persian poet Khaqani at the end of the 12th century symbolizes the Russian intruders precisely as Simorgs. However the whole Slavic demonology still awaits an attentive comparative analysis both of its peculiarities and of the multifarious ties linking it with the environment.

ROMAN JAKOBSON

Sleeping Beauty Generic catchword for motif D1960.3 featured in a widespread European folktale (Type 410) specifically entitled *Little Briar Rose* (Grimm #50), *La Belle au Bois Dormant* (Perrault), etc. See **LITTLE BRIAR ROSE**.

sleepy stories Phrases suggestive of dozing off, told by opponents in an effort to "hypnotize" their rivals into falling asleep; a device used in Plains Indian hero tales, between the rectum snakes and the hero adventurers. The snakes are anxious to have the heroes sleep so they can crawl inside their rectums and kill them; the heroes wish to put these monsters to sleep so that they can cut their heads off. The heroes win, and kill all but one snake. Two typical Crow Indian "sleepy stories" are: "In the fall, whenever there is a little wind, when we lie in some shelter, when dried weeds rub against each other and we listen, we generally get drowsy, is it not so?" and "At night when we are about to lie down, listening to the wind rustling through the bleached trees, we do not know *how* we get to sleep, but we fall asleep, is it not so?" Both these examples derive from Lowie's recording of the Crow Indian tale of Old Woman's Grandson (Robert H. Lowie, *The Crow Indians*, New York, 1935, p. 145). Sleepy stories are all identical in motivation, yet no two are ever quite the same in the telling. See **RECTUM SNAKES**; **SUBSTITUTE EYES**. [EJV]

Sleipnir In Teutonic mythology, Odin's eight-legged grey horse, the son of a giant's powerful stallion and Loki in the guise of a mare. He carried Odin everywhere on his travels and carried Hermod to Hel to try to ransom Balder. Sigurd the Volsung's horse Crane was a son of Sleipnir.

slit-drum A primitive musical instrument made of a log hollowed out by fire or by scraping through a narrow aperture and sounded by stamping with the feet, beating with sticks, or ramming through the slit with poles. Sometimes the shape of the slit is like an H, in which case the two lamellas formed may give different notes. The instrument is conceived of as female, and in many parts of the world is related to the deities of water, the new moon, and fertility. Among the Indians of California, the northeasternmost section in which it is found, it may only be used for dances of secret societies and only in the "house of the spirits." The Saliva tribe of the Orinoco River make their slit drums by hollowing a log with fire and cementing a resonating stone into it. It is suspended from a framework of poles for playing and serves as a musical instrument and as a means of communication. Perhaps the most primitive form of all is the hollowed log placed over a pit crossed by planks and pounded against the planks by a row of men standing in the slot. This type is also still found in South America. The ritual of its sounding celebrates the vanquishing of the old moon by the new. Various forms are found in Indonesia, in Africa, in Melanesia, etc. For further examples and customs, see **DRUM**.

slow train humor The slow or late train, like the Ford joke (see **LIZZIE LABELS**), is one of the hardy perennials of the humor that crystallizes popular distrust of new-fangled inventions. In earlier days the speed of trains was the subject of jests and tall tales: "Now I kin git from Bosting to Filadelpy in one day, and I've been cal'latin' that if the power of steam increases for the *next* ten years as it has been doin' for the *last* ten years, I'd be in Filadelpy just two days before I started from Bosting." (B. A. Botkin, *A Treasury of New England Folklore*, New York, 1944, p. 232). Then, as people became accustomed to speed and were irked by the lack of it, it was the slow train that, like other old-fashioned things, appeared funny. Of late, however, the wheel has turned full circle; and with the growth of the short or branch line or "mixed train daily" hobby, the slow train is regarded with nostalgic affection and passionately defended by its fans, while the fast train has again become the subject of jest. "I lit my cigar leaving New York, knocked the ashes out of the window, and they fell on a man's head standing on the platform at Syracuse, three hundred miles away" (Harry G. Jackson, *On a Fast Streamliner*, 1938).

James R. Masterson (*Tall Tales of Arkansas*, 1942, p. 269) traces the first slow train joke (including the cows that climb aboard the rear car and disturb the passengers) to Mark Twain's *The Gilded Age* (1873) and the first slow-train-in-Arkansas joke to Opie Read's periodical, *The Arkansas Traveler*, in 1882. The real vogue of Arkansas slow train humor dates from the appearance in 1903 of *On a Slow Train through Arkansas*, the first of the twelve paper-backed jokebooks written and published by Thomas W. Jackson (1867-1934) of Chicago and sold on trains and at railroad stations. On the first page is a variant of the Mark Twain cow story: "One old cow got her tail caught in the cow-catcher and she ran off down the track with the train. The cattle bothered us so much they had to take the cow-catcher off the engine and put it on the hind end of the train to keep the cattle from jumping up into the sleeper."

Other states have their slow trains. Indiana: "You may think I'm overdrawing it, but I'm not when I tell you that a fellow took down with typhoid fever on the thing just after I got on, and when I got off at the end of my journey, he was sound and well, and he had a long siege of it too" (George D. Beason, *I Blew in from Arkansas*, 1908, p. 49). Idaho: "It's so slow that farmers who load hay at Kamiah discover that the cars are empty by the time they reach Lewiston, because cows along the way have eaten it" (*Idaho Lore*, 1939, p. 119).

The classic late train story tells of the engineer who is promised a reward if he brings in his perennially overdue train on time. At last, when it seems as if the impossible has happened and the train arrives on time, the engineer modestly declines (or, in some versions, ironically accepts) the reward, explaining: "This is yesterday's train." Closely related to slow and late train humor are the rough train and the crooked line ("Whenever the conductor wanted the engineer to stop," writes Harry G. Jackson, "he would just swing out going around a curve and slap the engineer on the back").

The humorous extension of railroad initials rings the changes on slow train humor: e.g. Can't and Never Will (Carolina & Northwestern); Delay, Linger, and Wait

(Delaware, Lackawanna & Western); Footsore and Weary (Fort Smith & Western); Leave Kansas and Walk (Leavenworth, Kansas & Western); May Never Arrive (Missouri & Northern Arkansas); Never Did and Couldn't (Newburgh, Dutchess & Connecticut). (See Archie Robertson, *Slow Train to Yesterday*, 1945, p. 24.)

B. A. BOTKIN

Smiera-gatto Literally, the butter cat: a household spirit of the Lapps which goes out and steals butter for the family: analogous to the *PARA*.

smilax The North American Chippewa Indians used smilax as remedy for kidney trouble. The root was carried in a bag made of bear paws and could be used only by men holding a high degree in the Midewiwin; the Chippewa name for it means "bear root." Combined with other roots, the plant was used in a decoction for ailments of the digestive system. Among the Omaha, fruits of the plant were eaten as a pleasant remedy for hoarseness.

The thorny *Smilax mexicana* is common in Yucatán. In many Mayan Indian churches the crown of thorns on the figures of Christ are made of this smilax. Mexican smilax (called greenbrier) is the source of sarsaparilla.

Smintheus One of the epithets of Apollo: the mouse god. The title either derives from his ability to destroy mice or is a remnant of possible origin in totemism (Lang). According to legend, when Teucer landed in Asia Minor, mice ate the strings off his bows and the handles off his shields. He therefore founded the town of Smintheum (*sminthius* was the Cretan word for mouse) and built a temple to Apollo Smintheus.

Smith, William Robertson (1846–1894) Scottish philologist, physicist, archeologist, Biblical critic, and editor (from 1880) of the 9th edition of the *Encyclopædia Britannica*. His education at Aberdeen University was followed by studies in theology and philosophy at the universities of Bonn and Göttingen. His ideas on Biblical subjects were so far ahead of his time and so unacceptable to the authorities of the Free Church that he was removed from his chair as professor of Oriental languages and Old Testament exegesis at Free Church College, Aberdeen. Later, however, he became professor of Arabic at Cambridge University. Relieved, at the moment, of academic responsibilities, he pursued his studies in Sanskrit. He knew the East intimately since he had visited Arabia, Syria, Palestine, Tunis, and southern Spain. Through his various studies and contacts made during these travels, he became interested in the comparative study of primitive customs. His contributions to these fields of interest include an article, "Sacrifice," for the *Encyclopædia Britannica*; also, *Kinship and Marriage in Early Arabia* (Cambridge, 1885); *Lectures on the Religion of the Semites* (Cambridge, 1889, 1894), each definitive and of permanent value.

Snake Snake functions in African and New World Negro folklore only as a minor character, except in the case of the well-known story of animal gratitude for human aid, where in some areas this creature is protagonist. [MJH]

 Snakes of all varieties (or **Snake** as a general character) enter into the myths or religious observances of nearly all American Indian tribes. In the east and southeast the great horned underwater serpent with one

red and one green horn is a powerful, mysterious creature who could be lured to land and to his death by shamans, only when they used the most powerful of all medicines, the ashes from the fireplace of a hut occupied by a menstruating woman, or a few drops of menstrual blood. When the body of the serpent was burned his heart refused to burn, and was cut up and used thereafter, always alive and quivering, as witch medicine.

Another origin story, not of witch medicine bundles, but of a snake ceremony, is told by the Apache Indians of the Southwest. The Apache origin legend of their ceremony to cure rattlesnake bites narrates how Slayer-of-Monsters, returning from a war raid with a companion, kills a porcupine or other animal. The companion cooks and eats the porcupine and is transformed into a snake. Slayer-of-Monsters tells the people (supernaturals); they repair to the spot, track the snake to a river, raise the waters of the river so they can travel beneath the water, find the snake, roll four hoops at it, retransform the snake into his previous human form.

In the Pueblos, especially at Hopi, the Great Horned or Plumed Serpent, a form of sky god, is prominent in sun ceremonies.

In the far west, among the Yokuts of central California, shamans, or men with special powers to whom rattlesnakes had spoken in their dreams, lured the snakes out of their dens in early spring, took them home and at a public ceremony placed the snakes, in a sack, on the heads of spectators. The next day the shamans "cured" these spectators of prospective snake bites by the usual sucking method. After taking these precautions for the health of the community, the snake shamans played with the snakes, threw them about, allowed them to bite their thumbs or hands, and so forth. Finally there occurs the "stepping" rite (rattlesnake stepping rite); the snakes are put in a small hole out of doors, and people come with poles to prod them. The shamans, to ensure the snakes' not being killed, pay each person shell money. Finally each man, woman, and child in the community files past the hole and places the right foot into or over it. This ensures that for a year every snake, when approached, will rattle in warning instead of striking blindly. Songs were attached to the ceremony; one such, is reproduced in A. L. Kroeber, *Handbook of the Indians of California* (BBAE 78, Washington, 1925), p. 506, from which the account of this ceremony is taken (pp. 504–06 and 517). The Yuki of northern California also had rattlesnake shamans (Kroeber, pp. 199–200), as did the Shasta in the same general area (Kroeber, p. 303) and the Valley Maidu farther south (Kroeber, p. 427). The Mohave Indians of southern California believe in a gigantic Sky-Rattlesnake who was killed and from whose blood came Rattlesnake, a supernatural being who now lives at Three Mountains, "who has a road to every tribe; who often thinks of war and wants to bite a person . . . Then he asks the mountain. If the mountain says yes, the man will die; but if the mountain is silent, the man will be bitten and live" (Kroeber, pp. 775–76). Mohave shamans treat rattlesnake bites, however, by producing a cooling wind and sprinkle for the patient, and then singing four songs—everyone being forbidden to drink during the curing (Kroeber, pp. 777–78).

Returning to the Southwest, perhaps the most spectacular performance with snakes is the so-called "Snake-Dance" of the Hopi pueblos. Snake-medicine or Snake-

Antelope societies exist not only at Hopi, but in Zuñi and other pueblos; they are in effect usually curing societies, although sometimes they are also war societies. At Hopi, snakes are given prominence and the members of the Snake-Antelope societies perform, every second year, secret kiva rites concerned with snakes, as well as a public snake dance, the striking feature of which is the carrying of live snakes, grasped by their middle in the carrier's mouth, four times each around the plaza. The snake dance, like other Hopi ceremonies, is celebrated largely as a prayer for rain. The origin myth attached to it recounts how Snake Hero and Snake Maid had children who were transformed into snakes; hence the Hopi regard snakes as their elder brothers, and powerful in compelling the Cloud People to bring rain. See *Handbook of the American Indians*, vol. 2, pp. 604-606. [EWV]

Snake-Antelope dance An ancient Hopi ceremonial; a prayer for rain, held in alternate years. One year it is held at the "Snake Rock" in Walpi, in Mishongnovi, and in Chimopovi; the next year in Shipaulovi and Hotevilla. It was discontinued in 1912 in Oraibi. The snakes have rain-bringing power, and are also venerated as legendary ancestors. These "elder brothers" are descended from a Snake hero who married a Snake maiden after a long voyage, and brought forth a progeny of snakes.

Well in advance of the ceremony the medicine men gather snakes and wash them in yucca suds for purification. They gather bull snakes, whip snakes, and rattle snakes. During the secret kiva rituals the young people of the Snake and Antelope societies join in ceremonial races. The public spectacle takes place during the last dry week in August.

1) The Snake and Antelope priests file out of the kiva and circle the plaza four times, stamping during each circuit on the wooden cover of *sipapu*, the entrance to the underworld.

2) To rattles and a guttural chant the lines sway on either side of the brush shelter containing the serpents.

3) They divide into groups of three: the carrier kneels before the head priest and takes a snake in his mouth. The hugger places his left hand on the carrier's shoulder. The gatherer follows. Four times they circle the plaza. The carrier releases the snake and the gatherer retrieves it. Women of the snake clan sprinkle them with cornmeal.

4) They scramble down the cliff and release the serpents to the four directions on their mission for rain.

Snake dances are widespread among Indian tribes, and vestiges of this ceremony remain also at Zuñi, Acoma, and Cochiti. It is separate from the worship of the plumed water serpent, whose cult once extended to Middle America, and which still forms a vital part of Hopi ceremonialism. [CPK]

snake dance Symbolic invocation of the serpent's magical powers by imitation, handling, or a meandering course. 1) In the Haitian vodun cult a man possessed by the *loa* Damballa falls to the ground and writhes like a snake. A Bella Coola *sisao*k dancer may represent his ancestral crest with equal realism. In Europe and Asia the serpent has assumed the humorously horrific form of a dragon. The Balinese *barong* in the *Tjalon Arang* (Witch Play) consists of two men who wriggle the masked

flexible body with quick changing poses of the feet and clapping of jaws. There may be a connection between this dragon, the serpent Kaliya danced to death by Kṛishṇa, and the dragon killed by St. George in the medieval Morris play, also the *bicha* or *serpe* of the Portuguese *Mouriscadas*.

2) Live snakes may be carried by dancers, as for instance by the female worshippers of the Dahomean Da and by the snake dancers of the Shoshonean Hopi and Comanche Indians. In the Sierra de Vera Cruz of Mexico all *Negrito* dancers are accompanied by a *Maringuilla* with a live snake in a gourd vessel and are bitten and cured. (Compare ACATLAXQUIL.) In the Huichol *hikuli*, the wooden sticks which the dancers manipulate are called snakes. Whips manipulated by the *tlacolo-leros* may symbolize serpents. Bella Coola *kusiut* dancers and Kwakiutl women war dancers may manipulate snakes on strings. California Yokut shamans rival for prestige in snake-handling tricks.

3) Frequently American Indians suggest the motion of a snake by the serpentine course, the meandering, the coiling and uncoiling of a long line of dancers guided, as in the Penobscot *yune'ha*, by a leader. The Iroquois, Winnebago, Sauk, and Fox Indians probably derived their versions from the southeastern Cherokee, Creek, Yuchi, and Seminole. The Fox Indian dance is a source of particular pleasure, with its antiphonal songs and parallel follow-the-leader imitation of steps and gestures. Ancient Aztec harvest rites frequently included meandering chain dances for Xipe Totec, and Chicomecoatl (Seven Serpent), but today these dances are extinct. They survive, however, in the snake-figure of the *Quetzales*, and the Maypole meanderings of the Aztecs, Otomí, and Cora of today. Similarly, vestiges of ancient rites survive in the Greek *geranos*, the French *farandoule*, and the concluding "snail" of many open rounds, closed rounds (such as the Kentucky Running Set), and American square dances.

Ordinarily the snake symbolizes the fertility inherent in the earth and rain. To the Dahomean, Da is the principle of life. In the Maya sacred book, *Popol Vuh*, the plumed serpent, together with three pristine creative divinities, produces life and humanity out of immobility and silence cut by the lightning path of Huracán. The winged serpent effigies of the Aztecs and of the prehistoric and modern Pueblo Indians have been identified with incipient life, thunder, lightning, growth, and agriculture. This is evidently the significance of the pre-Columbian Aztec chain-meanderings and the Hopi Snake-Antelope Dance, and probably originally motivated the currently social serpentines of the Woodlands Indians and Europeans. Along with its role as the power of evil, the dragon forms part of vestigial Old World vegetation rites. The snake may be associated in a curious fashion with the bull and the buffalo: the bull enacted by the Huichol Indians is, in their mythology, derived from the deer-snake of Nakawe, Grandmother Growth, and the kilts of the San Ildefonso buffalo dancers are ornamented with a black snake. Candle dances and torch dances commonly follow a serpentine path, as the *gyertyas tánc* and *ball de la teya*, probably by identification of the flickering flame with life and rebirth.

Snake beliefs may be connected with dances without actual enactment. Thus the Yaqui *pascolas* are initiated by walking into a cave-serpent's mouth, being ejected,

thereupon meeting the king of snakes, and receiving their gift of knowledge and paraphernalia from the king. Iroquois songs of the *hadi'hi'duus* medicine society and the *deydasqdaye*, or dark dance, refer to the monster serpent that rescued a girl abandoned on an island. The origin legend of the *ʔohgiwe* death feast tells of ancestors devoured by the earth serpent.

In some children's singing games the snake plays the villain: in the southern American Negro "Black Snake, Black Snake, where are you hiding?" the impersonator hides, is taunted by the children, and finally seizes one, who is thereupon "it." See SNAKE-ANTELOPE DANCE. [GPK]

snakeroot Any of various plants whose roots are used for the cure of snakebite. 1) *Senega snakeroot* (*Polygala senega*) or milkwort; mountain flax. This plant, whose medicinal virtues were taught to the Scotch physician, Dr. Tennent, by the North American Seneca Indians, proved so effective in pneumonia and pleurisy, and later in asthma and rheumatism, that he sent it to London. Largely through his work it became so well known as a cure-all that it was purportedly added to all the nostrums of the quacks and charlatans, along with such staples as snake oil and swamp water. The Meskwaki Indians use the root tea as their chief remedy for heart trouble. Among the Chippewa it is carried on journeys as a charm to assure good health and safety. In Europe it is known as Rogation flower and is carried in processions on the Rogation Days.

2) *White snakeroot* A plant of the genus *Eupatorium* which is named for the king of Pontus, Eupator Mithridates, who is said to have first used it as an antidote for poison. It was not always a beneficial plant, for cattle eating the plant in the United States caused a mysterious disease known as "milk sickness" which started in Colonial times and continued periodically until 1920, reaching its height in the 1830's. It is said to have killed off a quarter of the settlers of Madison County, Ohio. It was also rife in Illinois and Indiana during this period and killed off about ten percent of the settlers in the frontier region. Even after its cause was known, it continued to break out periodically. The Meskwaki Indians used this plant as a steaming agent in their sweat baths and as a diuretic. Another plant of this genus is the Joe-Pye weed which, besides being a snakebite cure, was used in a tea to cure arrow wounds by the Navaho.

3) *Black snakeroot* (genus *Cimicifuga*) was used by the Algonquians as a balm for aching joints; it was later taken over by the settlers and is still used for rheumatism.

sneezing Whether sneezing is a good or a bad sign depends on the culture you happen to belong to. It may also be the sign that a devil or evil spirit is trying to get out of the body. The historian Carlo Signonio reports that the Christian custom of saying "God bless you" when somebody sneezed started in the 6th century when Gregory the Great was Pope and an epidemic was raging, though the custom was in fact originally a Latin one. In early Christian times the sign of the cross was made. This was later opposed by the church. Popular usage disregards this opposition. In New Guinea the people wish health and prosperity to the chief when he sneezes. The Koita of British New Guinea believe that sneezing in sleep is a sign that the soul has come back to the body. It is bad not to sneeze for some weeks because the soul must be far away. The Zulus return

thanks when they sneeze; if a sick man does not sneeze he is very ill. Among the Tonga sneezing before a journey is a bad sign. Jamaica Negroes believe that if your nose itches someone is saying bad things about you. In North Carolina, you will hear of a death if you sneeze at a meal. In Estonia if two pregnant women sneeze together, they will have girls; if two husbands sneeze, their children will be boys. In Germany it is bad luck to sneeze while putting on shoes; but to sneeze in conversation means that the last statement was true. The Moslems wash their noses out with water because the devil visits it at night. The ancient Persians uttered prayers when they sneezed because a fiend in the body was coming out and persons who heard the sneeze also prayed, presumably to keep the fiend out of their own bodies. The Hindus also believe sneezes have to do with spirits entering or leaving by way of the nose. It is unlucky to sneeze at the threshold of a house, and a person who hears somebody sneeze while he is beginning work has to stop and begin all over again. The ancient Hebrews thought men sneezed once and died. Among the Greeks, sneezing was a favorable or divine omen. When her son Telemachus sneezed after Penelope prayed that her husband be returned, she took it as an omen that her prayers would be answered. [RDJ]

societies In anthropological usage, an esoteric, formally organized group of related or unrelated men or women, or both, within larger local units, who meet together to practice established rites and ceremonies, chiefly of a religious nature, but which may also pertain to witchcraft, war, or other pursuits. Membership in a society may be attained by payment of goods, as in the Plains Indian age-grade and ungraded societies, and in the Eastern Woodlands Grand Medicine Society (see MIDEWIWIN), by inheritance, as in certain Eastern Woodlands witch societies, by virtue of social status, as in the North Pacific Coast cannibal society (see BLACK TAMANOUS), or be incurred as a civic responsibility, as in the numerous Pueblo Indian weather control, crop control, game control, war, witch control, curing, clown and other so-called societies, cults, or priesthoods. The origin of many of the North American Indian societies is explained in tribal origin myths; often the supreme deity is said to have taught the people the rites of various societies, for their benefit, and to have enjoined them never to let these rites fall into abeyance. (See HULKILAL WOK; NANABOZHO.) For a detailed treatment of Southwestern Pueblo societies see Elsie Clews Parsons, *Pueblo Indian Religion* (2 vols., Chicago, 1939), vol. 1, pp. 112-69; for Plains Indian societies see Robert H. Lowie, *The Crow Indians*, New York, 1935. [EWV]

 The African distribution of secret societies includes much of the Guinea Coast area and the Congo basin. Some of the better known of these societies are the Poro and Sande of Sierra Leone and Liberia, the Egungun and Oro of Nigeria, and the Leopard Societies of the Congo basin peoples. Membership in African secret societies, like those elsewhere in the world, is mainly restricted to persons of one sex, and societies for males far outnumber those of females. These societies function as educational institutions and as instruments of political and social control. The Sierra Leone Poro provides a course of study that includes the teaching of crafts as well as those elements in the culture which

must be controlled by a man before he can take his place as an adult; the Sande is a similar institution for young women, though the period of training is somewhat shorter. Other societies, such as the Oro, functioning politically, supervise the actions of the ruler, deposing him if his policies run counter to those adopted by the heads of the secret organizations. Leopard societies are best known for the social controls they exert; offenders against accepted codes of behavior are visited at night, taken from their huts, and subjected to punishment. One outstanding characteristic of African secret societies is the fact that their sanctions derive from supernatural forces—deities, magic, and spirits of the dead. In some parts of the area where they might be expected to be found they are not present because they constituted a challenge to the established political regime. This was the case in the kingdoms of Ashanti and of Dahomey. The problem of their absence in East and South Africa has not been solved. However, it is not unreasonable to assume that the prevalence of age-sets in these parts of the continent may provide at least some explanation for this. [MJH]

Sogbo Chief of the Thunder pantheon of Dahomey. The designation Sogbo is used by those vowed to the worship of the Thunder deities, and is the same being as Agbe which is the name given this god by those who follow the Sky deities. See AGBE; XEVIOSO. [MJH]

Sol In ancient Roman religion, the personified sun as a deity: equivalent to the Greek Helios or Phœbus Apollo. Sol Invictus was an epithet of Mithra.

solstice dances Celebrations in dance form to aid the changing of the sun's course, particularly in its return at midwinter. Solstice ritual is practically universal. Naturally it strikes opposite seasons in the northern and southern hemispheres. Thus the Inca *Inti raimi* observes the winter solstice in June, and *capac raimi*, the summer solstice in December. Agricultural peoples are particularly dependent on the cycle of the seasons, but hunters, too, rejoice at the return of a new year or the height of the summer. Thus the Sioux Indian sun dance takes place the end of June.

These rituals are well preserved among the Pueblo Indians. Though they show considerable variations, they are all associated with kachina dances, corn and meal, and war society ceremonies. The Keresan winter solstice, includes all-night ceremonies with prayer-sticks and offerings to the dead and to a sun-image bundle, mock combats between kivas, and the return of the kachina. These dance for three months after the winter solstice and again for three after the less important summer solstice. The Hopi Soyal follows immediately after the men's society fire-making ritual, and includes sun, prayer-stick making, war, curing, and phallic rites, kachina dances, and special Hawk Dances by Hawk Man and Soyal Woman with various ceremonial officials. Walpi also impersonates supernaturals, Cloud, Hail, Ice, etc., and dramatizes the placing of the sun. A most essential feature of the Zufi Itiwana dances is the making of a new sacred fire, with dances by the kachina of the Big Firebrand Society and Blue Horn exorcisers, and carrying out of refuse and ashes by all people on the 19th day. Snake and growth rituals and a round dance are included in the Jemez *pesa* (sun-work) in December

and June, in the Tewa winter *t'ant'aii* (sun lives now), and Isleta *nape'i* by Corn groups for drawing down the sun.

Solstice was evidently a matter of great importance in pre-Christian Europe, considering the functional vestiges of today. *Perchten*, *Schemen*, and other maskers and *Moriscas* exorcise evil spirits and mime the victory of the New Year, from Christmas to Carnival (a gradual shifting of dates). St. John's Day (June 24), the substitute for the ancient summer solstice, retains many fertility practices, and virtually pan-European fire-jumping and round dancing at night. Processions and *Moriscas* abound at this time in Catholic Europe and Middle America. It is interesting to find common elements in the contrasting Pueblo and western European customs, particularly the new fire concept and mimic combat. [CRK]

Soma In Vedic mythology, the god of the soma-juice and of the moon; also, the lord of stars, plants, and Brāhmans. Soma, said to be son of Atri or to have been produced at the Churning of the Ocean, married the 27 (or 33) daughters of Daksha (the Naksatras), but neglected all except Rohiṇī. Daksha, therefore, cursed him to die of consumption. But as Soma grew weaker, so all creatures weakened, until Daksha mitigated his curse to the extent that the moon should wane and wax each month. From Soma came the lunar race of kings. He carried off Tārā, wife of Brīhaspati, thus causing the war of the gods which is described in the *Purāṇas* and the epics. She bore him Budha (Mercury) from whom stemmed the lunar race.

The soma plant (*Asclepiacida* or *Sarcostemma viminalis*) provides an astringent narcotic juice regarded as having divine power. It was offered, mixed with milk, butter, barley, and water, to the gods, but was drunk by all Aryans. Later only the three upper castes were permitted to drink it and then only for religious ceremonies, while a rice-brandy, *surā*, became popular generally. The soma sacrifice was one of the two chief rituals (the other being fire-worship) of the *Rig-Veda*. Consequently Soma, as a personification of the juice of the plant, was a prominent deity, occupying the third most important place among the Vedic gods. Soma was the "lord of plants." Its original home was heaven but it was brought to earth by an eagle. Compare HAOMA. See AMRITA; ASVINS; EAGLE; ECLIPSES; INDRA.

Somnus The Roman god of sleep: identified with the Greek Hypnos. Somnus is the twin of Death, and is a pleasant youth, carrying a poppy and a horn from which he dispenses sleep. His nature is contrasted with that of Death, smooth and pleasant against vicious and grasping; but in later times both Sleep and Death became different aspects of the same god.

sonajeros The exciting dance of the rattlers (from *sonaja*, rattle) popular throughout Jalisco, Mexico; made famous by the group from Tuxpan, an Aztec town. Fifteen young men in colorful costume violently shake their huge painted sistrum-like rattles and, to the accompaniment of a drum and shrill flutes, perform in single file the difficult acrobatic steps and stamps. [CRK]

song; folk song and the music of folk song Folk song comprises the poetry and music of groups whose literature is perpetuated not by writing and print, but through oral tradition. These groups, primarily rural, are better

able to preserve some of the older culture of the national unit of which they form a part, than the population of the cities with its more sophisticated, more international civilization, which is subject to faster changes and fluctuations of fashion. Folk song is thus part of folk culture, which is distinct from that of the cities and represents only certain facets of the culture of the nation.

The concept of "folk," incorporated in "folklore," denotes a group in which the cultural, economic, and educational diversity of the city is much less pronounced, where modes of life, customs, and lore, including songs, are known and shared more homogeneously throughout the group; where the cultural possessions of the individual more nearly resemble those of his neighbor. Just as folk culture contrasts with city culture, so folk song—which embraces folk music—contrasts with the poetry, popular song, and art music of the city.

This dichotomy, perhaps a little oversimplified, holds for the old European folk community and its life which were preserved on the whole better in the east and the south than in the north and the west of Europe, until comparatively recently. This life is changing and breaking down very rapidly. The generalizations presented here need or will soon need qualifications; they pertain to the past and the near-past which lingers in the present. An important qualification pertains to the United States. Perhaps because this country, from its inception, did not perpetuate the old rigid European class society with its true "peasant" class, the distinction between "folk" and "urban" was and is less clear cut here. As a result, the United States will be cited repeatedly for exceptions to the general picture.

Folk songs flourish in rural areas in the Western world, and also in the Orient and the Far East. However, the great classic traditions of the urban literatures of China, Japan, and other countries of southeast Asia, of India, and the Arabic countries, have preempted the interest of students not only in the West, but to a large extent also in these countries themselves. Our knowledge of Near Eastern and Oriental folk song is as yet too cursory to justify specific treatment in this article. It may be borne in mind, however, that the general characteristics of folk song recur wherever it is found.

In so-called primitive or preliterate societies there is no contrast between folk and urban groups, and between traditional and cultivated arts. For that reason, as well as for the fact that primitive poetry and music represent varied and large fields of their own, their songs are not treated here. But see the bibliography following for references to primitive song.

Like all other forms of verbal folk arts, such as the folktale and proverb, folk song is perpetuated by *oral tradition*. Even when folk singers are literate, they rarely use writing for their songs. If we take the word of a folk singer from Tennessee for it, "They ain't nary grain of use setting song ballets down in writing to keep."¹ Writing down the words in song-books is a comparatively recent practice and is perhaps stronger in this country than elsewhere.² There is no music writing in folk groups except when introduced from the city; songs are learned and remembered by hearing. Here we have a characteristically American exception, in the existence of the "shape-note" notation of our hymn tradition.³

Although folk song is *perpetuated* by oral tradition, not all folk song needs to have *originated* in oral tradi-

tion and by folk creation. The discussions as to whether songs which are sung in a folk setting but came from the city are to be considered "true folk songs" are perhaps beside the point. Folk songs are best defined as songs which are current in the repertory of a folk group; the study of their origin is another matter. The repertory of the village or the countryside and that of the city have exchanged some of their products time and again. Much influence has been at work in both directions. Folklore, according to one theory, descends from higher to lower groups in the social scale; it has also often ascended from lower to higher groups.

The folk song of most countries has often been exposed to the influence of the music and poetry of the cities. Ballads in the folk tradition especially of Western Europe were strongly affected by broadsides, and many indeed began their life as broadside poems. Many ballad texts of the Anglo-American folk tradition show decidedly the effect of the publications of the broadside presses, chiefly in Great Britain: the "black-letter" ballads, which continued to appear until about 1700, and the 18th and 19th century "white-letter" or "stall ballads."⁴

A few other outside influences on folk-song tradition may be briefly noted here. The religious folk hymnology of some reformed countries or denominations has been shown to consist chiefly of folk melodies which after modifications imposed by editors and composers became current again in folk usage.⁵

In the United States we must recognize the importance, particularly in the 19th century, of various forces—songsters,⁶ minstrel shows, and medicine shows⁷—in bringing songs into the folk tradition. Herbert Halpert and other collectors who have reported on their folk song field work during the 1930's report also the strong influence of the so-called "hillbilly" and "race" records,⁸ and the growing traces of the activities of school teachers and recreation leaders in introducing or reintroducing singing games and play-party songs.

The purist often looks exclusively for those songs which to him are the most original and distinctive expression of the special character of the folk culture. But we must be aware that there are no "pure" folk art styles, as there are no "pure" cultures or races. All styles have grown and benefited through assimilating influence and material from other folk groups or from the city. Whatever the sources, however, it is oral circulation that is the best general criterion of what is a folk song. The singer himself is rarely aware, as a matter of fact, of the ultimate origin of his material. But once incorporated, outside material is apt to be molded by the same forces which shape the authentic products of folk tradition all along.⁹

There is usually no technique of teaching, certainly no formal technique, connected with the making and singing of folk songs; they are learned by ear, and transmitted in this fashion from generation to generation. Nor is there a conscious awareness of form or construction on the part of the folk singer; there is no esthetic or analytic theory in his mind. Training and rehearsing, essential earmarks of our technically sophisticated musical practice, are on the whole absent. A few exceptions are found here and there, especially with instrumentalists whose skill is more likely to be recognized as

such, whereas the capacity to use the voice is apparently taken for granted.

Folk song is an art in which the average member of the group participates more generally than is the case with the cultivated music or literature of the city. Nearly everyone in a folk group knows songs and sings them, or at least listens to them and knows a good deal about them. On the many occasions at which singing is by a group, the less outstanding singers have ample opportunities for participating. Skill and a good voice, however, are appreciated; better equipped singers are recognized for their aptitude; and a less accomplished singer may not necessarily perform in the hearing of others.

Different standards apply in different places when it comes to the question of what makes a folk singer outstanding in the estimation of his group. A good or pleasing voice is often appreciated but hardly essential; a good memory is usually prized. In the Baltic countries collectors speak of old women singers who knew thousands of songs or verses; elsewhere hundreds of songs were occasionally collected from single individuals. In the United States a singer is often praised for his repertory by the formula: "He can sing all night and never repeat."

General participation does not exclude some specialization in folk song. Some types go with age: Children's game songs are rarely sung by adults. Many calendric songs, for instance Christmas carols, may be sung primarily by children or youngsters, because of custom. Love songs are not apt to be sung by old people. In many countries, some songs, e.g. lullabies, are more properly sung by women, others by men. In Yugoslavia, lyrical songs, ballads, and some other types of songs are called "women's songs." They are sung by men too, however, only in some areas less frequently than by women. The contrast is with the protracted heroic epic songs which the literature calls "men's songs"; they are hardly ever sung by women.¹⁰

Specialization may be connected with the role an individual plays on a given occasion. In the elaborate marriage ceremonies of eastern Europe the bride says good-bye to her family by singing special songs; the best man and other participants have their own songs.

There are finally cases which approach a level of professionalization. Good singers of the Yugoslav heroic epic songs are respected for their skill, and they function as recognized entertainers. In earlier centuries they were bards at the small feudal courts.¹¹ In Ireland and in eastern Europe, old women are regularly called in at burials because of their recognized excellence in "keen-ing," or in singing dirges and farewells to the dead person in behalf of the bereaved family. But there is little economic manifestation of true professionalism: modest gifts, feasting, and drinks rather than pay are the returns these performers are offered. Instrumentalists are more likely to receive some monetary recompense.

Such specialization approaches the professionalism of the city musician. What is significant is the comparative rarity of this development in folk practice. For the cultivated arts there is a distinction between the artist, the connoisseur, and the lowbrow. In poetry, we have the poet, occasionally the performer, and the reader; in music the composer, the performer, and the concert audience. In folk song these levels are much less distinct. The dividing line between performer and listener is

tenuous. Performance by an individual does not as a rule depend upon special professional skills laboriously acquired, and the group, instead of forming a silent audience, participates in many songs and on many occasions.

The distinction between creator and performer is also a tenuous one. Normally, the original composer of a folk song is not known at all. The art itself is much less dependent on new creations produced by every generation. The number of songs newly made during a given generation is usually quite small in a folk group. By the time the song has spread over an area and through a generation or two, the name of the originator of the song is usually forgotten. Folk songs are normally not created by a process comparable to that of our composer or poet who is expected to manifest some degree of originality. The body of folk song grows, rather, through a process of re-creation of materials already in existence. Phillips Barry and others coined the phrase "communal re-creation" for this process; a fortunate phrase which contrasts with the outmoded origin theory of a communal, group creation of folk song.¹² Still, it is not the community as such, but individuals *within* the community who are active in the process. Singers constantly add, often unconsciously, their small modifications. These changes in time lead gradually to different local versions and variants,¹³ to regional variants, to the growth of song-families,¹⁴ and to the branching-off and emergence of new texts and melodies. The creative process is not one begun and finished by a single individual; it is spread over many individuals and generations, and it never comes to an end as long as the tradition is alive. This is certainly one reason why folk song is anonymous, and has no true owner. Possession of a song is more a matter of social courtesy in a folk group. A song made by an individual, or one that he sings especially well, or one that is his special favorite, may be considered "his" so that when he is present it may be left to him to sing the song, as a matter of deference.

Folk song is often said to be more *functional* in its use or application than cultivated poetry or music. In the life of the old European folk community, singing accompanied important periods or turning-points in the individual's life, such as childhood, marriage, and death, and was also part of many important activities of the group.

There is a large group of songs concerned with these turning points in a person's life. Each of these may be marked with great elaboration in song usage. We may cite, for example, the unusual variety of songs for children which survived in the French Pyrénées. There, in addition to the ubiquitous lullabies, songs were collected which are used to teach the child to walk, to help him use his fingers, to teach him numbers and counting, to wake him, to urge him to eat his meals, to teach him to be industrious and good-natured, and so on.¹⁵ In short, songs form an important adjunct of child-training in this area, and a similar picture may have been prevalent in the life of the old European village.

Children's game and round songs are found wherever there is folk song. They often contain fragments of songs of grown-ups, and reflections of grown-up activities, connected with mimetic play. In some of them there may be survivals of fragments of pre-Christian rites and usages, but these elements, while of historical interest, have no functional significance today.

Love, courtship, and marriage are the topics of innumerable songs; teasing songs to pair off courting couples and songs of elaborate marriage rituals are common especially in eastern Europe. Courting songs are often connected with winter evening gatherings of the young people, under the supervision of some older women, for the performance of various household tasks such as spinning or the husking of corn. Special songs are sung on such occasions in eastern Europe and the Balkans, while in some areas any entertainment songs would do, as at the corn-husking bees which were popular in this country.

Burying the dead is an important social occasion in the life of the village. While the wailing and the dirges furnish a socially patterned outlet for grief, they also form part, and the most dramatic part, of the setting of display and elaboration which surrounds the occasion.

Another large group of songs may be called *calendric*; they are sung on special days or during special periods of the year. Many of these songs may well go back to pagan antecedents and practices which became associated with the holidays of the Christian calendar so that the custom of singing such songs survived mainly by virtue of the association with the official calendar of the Church. Songs at Christmas, New Year, and Easter are almost universal in our folk society. Other important occasions with which special songs are connected are May Day, the solstices, and the name-days of various saints. Christmas and New Year's songs are usually sung by children or young people, bringing the good news and blessings and asking for gifts. Christmas is also the time when the most widely known folk plays, those dealing with the Nativity, are performed. The folk plays are replete with songs. While not all of these plays are of folk origin, they have been incorporated into folk practice and style.¹⁶ In some Slavic countries where one's name-day is more important than one's birthday, special songs are sung during the family rite (*slava*) held on the name-day of the master of the house.

The more specifically agricultural calendar is also represented in the functional array of folk songs. Songs connected with agricultural activities include various types of work songs, such as those for harvesting and threshing; songs connected with the cultivation of different plants; and the songs accompanying the tasks of the winter. Songs for rain-magic are still sung in eastern Europe. In some Catholic countries this custom has been modified so that the village priest and the villagers go out in procession to the fields and ask for rain by singing religious hymns.

Dance songs are in one sense on the borderline of functional folk song. They come from two general sources. The simpler dances such as round dances are apt to be rather old. Many of them must have had ritualistic connotations, which today are usually forgotten. Other dances, often more intricate, have come in through city influences. Most of them are sung or played for sheer entertainment.

As against the specifically functional songs, all regions in the Western world have a great profusion of songs which are generally performed by individuals, purely for entertainment and enjoyment, or as an emotional outlet. They require no set, formal occasions and at least ostensibly serve no social or group purpose. These are the epic songs: the heroic epics, ballads, and ro-

mances; and lyrical songs including humorous, teasing, and mocking songs, and the like. In view of the rich and varied content of these categories, it is hardly true today that folk song is predominantly functional, in contrast with its use for entertainment or for esthetic satisfaction.

It is rather likely that at one time folk song was dominated by a more functional character. There are various reasons for this assumption. Functional songs are very often simpler, less artistic, and less varied in content than the other groups. This holds equally for texts and tunes. They are less often influenced by the city (although the Christmas carols of England, France, and Germany form an exception here. On the other hand, the Christmas carols in some districts of Rumania form the richest and most varied category of local folk songs, although this development is purely rural, not due to city influence.¹⁷) They may represent more archaic developments in folk song. It is significant in this connection that proportionately more functional songs are found in eastern and southern Europe: regions where the life of the old village-community survived, at least until recent times, on the whole better than in western and northern Europe where urban influences have been at work longer and more intensively.¹⁸

It should be borne in mind, however, that the distinction between functional and non-functional songs, while useful, is somewhat crude. It may be better to think of the contrast as one between obvious social or group function, which can be observed on the surface, and psychological function, which affects the individual more intimately—in the lyrical songs, for instance—and in which the social connotations are more subtle, submerged, but by no means absent.

The relation of functional and esthetic purposes, which has been discussed intensively and time and again, is even in folk art not a simple one; these are not mutually exclusive categories. The esthetic element never needs to be absent when functional songs are performed, but it is difficult to demonstrate. In some cases language usage is illuminating. For example, the women who in eastern Europe specialize in wailing and in mourning songs for the dead are compared with each other as to how "beautifully" they wail. Yet, the folk singer has apparently little *conscious* esthetic awareness, and his vocabulary is not articulate on such subjects. A song which is liked is referred to much more often as a "good" song than as a "beautiful" one.

A catalog of the types of songs which are sung, and of the various uses to which they are put, to some extent reflects the life and customs of a folk community. But there is a more rewarding if more difficult approach to the question of the role of folk song in its social setting. To what extent does the *content*, and even style, of folk songs serve as an expression of the social background, of the present and the past of the community? Early theorists and collectors offered a somewhat romantic answer. Man living closer to the natural environment was thought to be a more "natural" man. Being closer to the soil, he was viewed as being closer also to grasping his own life. His songs, lacking the artificial refinements, distortions, and self-consciousness which cultivated art often showed, were thought to speak always directly and immediately of the feelings and problems of singer and listener. But these philosophical generalities do not stand up under scrutiny. The relation of the life of the group

to its expression in its songs remains an intricate one that needs much further study.

It is striking how often themes and elements are found in folk song which are foreign to the life-mode and experience of the group. American farmers sing surprising numbers of British ballads concerned with the fate of lords and ladies, with their castles, gold, and milk-white steeds. The name of the place, of the hero or heroine, may change and be adjusted to the singer's locale; but the setting and action appropriate to the feudal upper class changed only in a few cases to that of the American or English farmer. At the same time, the picture is hardly a very realistic one; it is a rustic "literary" conception of feudal or upper-class life. Such songs must serve fantasy and fancy, but it is rarely admitted that they do just that. It is usually assumed in a folk community that ballads represent true happenings. The glamor of strange adventures and occupations is powerful; songs about sailors and cowboys are popular in this country in regions far from the sea and from the cattle country. (Many of the cowboy songs, as we know, were actually written in the East but were accepted quite hospitably in the cattle country.)

It is equally striking how much stereotyping occurs in folk song. An obvious example is the choice of the physical type of the actors. In Hungarian folk songs the country girl is always brunette, the city girl—referred to as a Miss, not as a "girl"—is invariably a blonde. In actual fact, the majority of the population at large are brunette, and the proportion of blondes in the cities is not much higher than in the countryside. Yet the songs treat blondness as an urban—and thus upper-class—feminine characteristic. And if one judged by the folk songs, he would assume there are no blond men in the whole land. Physical surroundings may be idealized; one's village is pleasant and pretty in eastern European folk song, never tumbledown; the land is good black farming land, never barren, whatever the actual surroundings.

More surprising perhaps is the frequency of the recurrence of some topics and situations in folk song, and the rarity of others. In the tragic British ballads, love is the paramount source of clash and tragedy, disappointment in love leads to death, and death is the only real tragedy. On the other hand, complaints about being separated from one's beloved are comparatively rare in British lyrical songs, in contrast with many more in French songs and an exceedingly large number in eastern Europe. Some of these stereotyped themes no doubt spread from country to country, for example the marriage complaint of the husband, which is always humorous (our *Willie Weaver*) or of the wife which is very often serious, or tragic. The humorous complaints of the wife in the French "maumariée" songs represent a special type. Other themes seem more restricted and localized. The forbidding or inimical stepmother recurs constantly in some eastern European countries; she is never kind or helpful. In the folk songs of western Europe she is seldom mentioned, except in ballads, although she is not a rare figure in folktales. The same contrast holds for the orphan; a frequent and pitiable image in Slovak, Hungarian, and Yugoslav folk songs, but rare in western Europe.

These phenomena call for explanation, whether by considering differences in social structure and attitudes,

or by trying to substantiate speculative assumptions concerning the role of psychological factors in folk song: of indirection, sublimation, over-emphasis, day-dream wishes, or of the avoidance and even repression of some topics and attitudes. In British folk songs crime and violence are usually portrayed in some exotic setting or at some distance: the world of lords, of past history, the high seas, or the highways. Violence of the kind that must have been displayed or felt time and again in the daily life of the village seems absent from the picture. Antagonisms, rivalries, brawls, family tensions, hostilities of the more common and less glamorous sort; these rarely show up in direct portrayal. In some eastern European countries the picture is much more realistic. The incidence of open hostile acts in the village may have been occasionally higher than in the average English village, and the socially permissible expression of hostility may have been at some points more free. Yet, undoubtedly one factor is whether or not such topics are proper or permissible, within the standards of the style. In English folk songs, it would seem, there is a reflection of a desire, hardly conscious, to represent life as more pleasant and livable than it often must have been. The trials of old age, of disease, land shortage, poverty, of failure, rarely appear on the scene. The songs of the United States Negro form a striking contrast here.¹⁹ Of the difficulties the English peasant had with the big land-owners there is little trace if any, although possibly British collectors have slighted local and more recent songs which express some of these attitudes.

The long history of the inferior and precarious position of the peasant class throughout Europe, which in some countries continued up to the very near past, found little overt expression in folk song. Again, the tone of many U. S. Negro songs, with their sharp expression of an awareness of the position of the group, and occasionally of protest, is rather unique.

One should mention, however, the figure of the bandit and highway-robber. He is present in most European countries, either as a legendary hero of the past with a cycle of great deeds, like Robin Hood, or as a less heroic and more contemporary figure. He may be a stranger to the village scene, or instead, as the Hungarian peasants phrase it, "the bad one of the village." There are signs of identification with these figures. In Hungary they are called "poor fellows"—they have no home or hearth. Many Slovak, Hungarian, and Ruthenian lyrical songs bemoan their loneliness and sad life. At times they are indistinguishable—both in folk song and in historical reality—from other homeless figures whom national defeats, religious strife, and unsuccessful revolutions forced to live the life of the outcast, the fugitive, and the exile. Another sign of identification is the charitable role these figures usually play in all European folk song: they pursue only the rich. Yet, the flouting of the law is not condoned in the songs: the picture of heroic daring merges with one of crime. The bandit-heroes are almost invariably caught and taken to their execution, and often the song represents the subject telling his own story as he is taken to the gallows, with the proper moralistic warning to his listeners closing the song.

These few examples may suffice to indicate some possible leads for future study in the functional aspects of folk song. This type of analysis is hardly foreign to the literary scholar. Still, the student of folk song—or of

folklore in general—will benefit from greater familiarity with the views and findings of social scientists such as the ethnologist or anthropologist, the sociologist, and the social psychologist.

The Music of Folk Song

The general characteristics of folk song as a verbal art hold equally for folk song as a musical art. On the musical level too, we find that form and content are not fixed with the rigidity of cultivated music codified in writing or print. Flexibility and variability characterize the tune as well as the text of a folk song.

Melodies which have spread over an area are apt to show considerable variation, and even major differences, between their versions in different localities. Often singers in the same community give a different form to the melody. Even within the song itself, while the tune is repeated for different stanzas, changes may be introduced which go beyond what could be expected from differences in the text. Nor is it very surprising if a folk singer sings a tune somewhat differently on different occasions. Far from ascribing these phenomena to a lack of formal assurance, we must interpret them as manifestations of a flexibility which is a basic characteristic of all traditional music.²⁰ It is after the folk tradition has become somewhat rigid, as in England, or even petrified, as in Germany, that this creative flexibility disappears. New forms of melody or new melodies branch out from old ones through variations on the basic "theme" of the melody, rather than by sudden innovation. The number of new tunes which appear in a given generation through individual composition is often quite small.

It is noteworthy that the cultivated music of the Orient is dominated by these very same forces, and even its indigenous musical theory is based on a recognition of them. The *maqām* system upon which Arabic music and the *rāga* system upon which Hindu music is built at first appear to be comparable to our "mode" system, but they can be understood only if we perceive them as systems of different melodic models which in execution are exceedingly elastic and fluid. The mode system of Gregorian church music itself presented great difficulties when applied to the body of traditional Gregorian melodies until the paramount role of recurrent melodic formulas and models was taken into consideration.

If we look at the field of folk song again, we find that while folk singers at times argue about the correct words of a song, they seldom do so when it comes to variations between different renditions of the tune. When their attention is called to such differences, they are apt to react the way a folk singer from Tennessee did: "Every person has got a born right to sing hit his own way."²¹ The singer is usually still less aware of the changes in the tune as it is repeated stanza by stanza. These may affect the rhythm, the melody and its intonation, and even the structure, but the basic pattern of the melody is apt to remain intact. Occasionally special factors can complicate the picture, for instance when the singer is acquainted with different forms of the melody, perhaps learned from different sources, so that his rendition oscillates between them. Yet, it is usually the melodic flexibility rather than "faulty memory" which is manifested here.²²

This flexibility no doubt has been the major factor in the development of regional variants of well-known

melodies. In this country at least one hundred melodies have been collected for *Barbara Allen*; most of them are closely related descendants of three or four tunes. It is not surprising, then, that melodies, like song texts, have often found their way even across national and language boundaries, whether because of their popularity or because they were carried along by special influences. Many tunes of the *Twelve Apostles*, for example—an incremental song which is found in numerous versions in almost every European nation—show similarities which suggest that the text spread together with a tune. Not much study has been devoted as yet to this general problem of the migration of single melodies, and accidental similarities between simple tunes or motifs must be carefully distinguished from actual cases of "wandering melodies."²³

Folk music, like folk poetry, has assimilated very much extraneous material, and depending upon the culture history of the region it has been subject to influences of varying intensity from the city. But here, too, the question of ultimate sources and influences, while of great interest to the historian, should not let us lose sight of the question of what folk tradition has done with melodies which it received from the outside or from "above." Some scholars have stressed cases in which intrusive melodies became disorganized and impoverished, in the process of *Zersingen*. Others have demonstrated, to the contrary, the regenerative forces through which folk music improves its material rather than wearing it down. Much depends here on the bias of the scholar, including bias generated by the specific setting of the case. Only a dispassionate appraisal of United States Negro folk songs can show, for example, that while so much of the melodic material has white antecedents, a *distinctive creative reshaping* has taken place rather than mere imitation and disorganization. Returning, however, to the question in general, undoubtedly while the tradition is alive the destructive forces are weaker in folk music than the constructive ones.

Where neighboring peoples are in intimate contact, and especially where they intermingle, much more exchange of melodies takes place than otherwise so that it becomes at times exceedingly difficult to trace the original source of the melodies. Stylistic features of one style may invade the style of another group so that the musical description of the style of a national body of folk song becomes in some cases difficult. It is not too easy today to decide whether a melody which is popular in the British Isles or in the United States is of English, Irish, Scots, or Welsh origin.²⁴

The folk music of colonizers offers many points of interest. In some cases they preserve their old music better than the mother country. Anglo-American melodies have retained some old musical features—the modal cast, old pentatonic scales, and an ornamented manner of singing (found chiefly in our South)—better than the original melodies in England. French-Canadian melodies preserved traits which are now rare or have died out in France.²⁵ Among Sephardic Jews, who kept intact many features of the Spanish spoken at the time of their expulsion from Spain, many tunes of romances survived in a more archaic form than those recorded in Spain. The Volga-German colonies represent a similar case.²⁶ Often the melodies themselves disappeared in the mother country before they could be recorded, but they

could be recovered in the new territories. But instead of remaining conservative, the style of the migrants may develop new types and novel flavors in its new surroundings. In the United States it did both. In other cases impoverishment was the outcome. In many Latin-American countries, for instance, one would hardly guess from the folk music at the richness of the folk music of Spain, although the song texts often fared much better.²⁷ Tunes from Italian light operatic music and German popular melodies displaced very much of the original Spanish musical lore.

Textual Form

The following observations are not meant to be comprehensive but may be useful for the reader as a preliminary to the discussion of the relation of text and music.

Folk song is characterized by the prevalence of small forms. While the stanza is by no means universal, it is very general. In the stanza a number of lines constitute a unit which is usually repeated throughout the song. Different forms can be distinguished according to the number of lines in the stanza, and according to the various features which make for the pattern of the stanza structure.

In folk song, especially in western and central Europe, the most frequent stanza length is one of four lines. If the number of lines is larger, this is often the result of extension by repeating lines or by the use of a refrain. Although shorter stanza forms are not unknown in the West—very many French and Spanish folk songs are based on couplets—they are on the whole more common in eastern Europe. In Yugoslavia, for instance, four-line stanzas are clearly comparatively recent and due to foreign influence. Shorter stanza forms of two or three lines may have been in general older; scholars working on western European ballads have come to such a conclusion for their own material. (Many of the Anglo-American ballads may be interpreted either as consisting of two couplets or of two long lines.)

The pattern of the stanza either utilizes features which pertain to the construction of the line, or to such as cross the boundaries of the line and establish effects of parallelism and contrast between different lines.

The organization of the stanza line follows two general principles. In one, which is familiar to us through very much of cultivated poetry, the line consists of a number of metric feet. In the other, the recurrent contrasts of stress or length which constitute a foot do not play a role. Instead, the line consists of a specified number of syllables; their number may be rigidly fixed, or it may vary about an approximate average.

The foot is apt to be a less stable or less rigid unit in folk song than in classical cultivated poetry; the number of syllables more variable. The foot is the important unit in folk songs of the Germanic languages. The songs of the Romance-speaking peoples have both the foot and the syllable-count. The syllable-count dominates the folk songs of the Slavic peoples, of the modern Greeks, the Hungarians and other Finno-Ugrian-speaking peoples. Many types of Slavic folk song are based on the ten-syllable line (*deseterac*). The Finnish *Kalevala* utilizes an eight-syllable line, often described as a trochaic tetrameter—the meter consciously used by Longfellow for *Hiawatha*. Syllabic lines may be quite short: many

Hungarian, Slovak, and Yugoslav texts have only five or six syllables per line, but longer units are on the whole in the majority. As examples for a variable syllable-number in the line may be cited the Russian *byliny* (with syllables varying above and below ten), and the Ukrainian *dumi* (epic songs), with rimed couplets. Both metric features and syllable-count structure can be used to achieve either parallelism or contrast within the stanza. Accordingly, stanzas may be classified as *isometric*, in which every line has the same metric structure; and *heterorhythmic*, where they do not. To take just one example, the structure of the Anglo-American "ballad-stanza" is heterorhythmic; there are two pairs of alternating lines of four and three feet. This pattern is not uncommon in German and other folk songs. Quite a few Anglo-American ballads have, however, an isometric structure; every line has four feet.

Both parallelistic and contrastive effects are achieved in the stanza much more colorfully and with more varied means by the use of the principle of recurrent sound-value: rime, alliteration, assonance, and related devices. It is striking that their use is rare in eastern Europe on the whole, and can often be shown to be of recent and foreign origin. Alliteration—the recurrence of initial consonants—was used intensively in ancient Germanic poetry but it is not prominent in folk song today; line-final devices (rime) dominate. In the rime schemes of folk song, lines are usually paired and opposed through simple repetition and alternation of effects, resulting in forms such as *abab*, *aabb*, *abcb*, etc. Where true rime is lacking or rare, as in Hungarian and Yugoslav folk song, we are apt to find that assonance or final alliteration usually play a major role. In three-line structures, *aba* schemes (like that of the Spanish *solea*) and *aab* are most common. More complex structures such as *aaabab*, common in French dance-songs, are rather rare.

The principle of recurrent sound-value may be seen at work also in devices such as repeating a line or part of the line of every stanza, and the refrain. It has been often thought that these devices entered cultivated poetry from folk tradition. Refrains usually close the end of the stanza, but in many English, Scandinavian, and French examples they invade the stanza itself and contribute to a complex structure. Refrains are also common in the folk music of the Baltic peoples. Elsewhere in eastern Europe, as among the Balkan peoples, line repetition is the dominant device. It has been often remarked that refrain lines frequently consist of meaningless, ornamental syllables. Where the refrain lines do have a meaning, often they have little to do with the text of the song, and may have been transferred to it from other songs.

Language structure obviously constitutes a major factor in the choice of some of these devices. In languages like Hungarian, with its many suffixed elements added to the word, some of which are exceedingly frequent in occurrence, rime may not have been appreciated since it could arise all too mechanically, with a recurrent meaning wedded to the riming element. It is noteworthy, however, that rime and other ornamental devices seem more frequently associated with metric than with syllabic structure; metric structures themselves may possibly represent later developments and syllabic structures may be in general older in European folk song.

Certain formal features of the text may have some

flexibility in a folk tradition, until city influence becomes strong and the tradition is losing its vitality. Nevertheless, as the features and devices discussed above indicate, very much of folk song has a strictly formalized structure. In some types of folk song, however, the structure is less easily definable. Often in songs of these types the text forms are considerably larger than the conventional stanza. Many songs of Romance-speaking peoples have stanza-like sequences of varying length (the *laissez* of the *chansons de geste*, based on assonance). In a number of types of folk poetry there are no strophic divisions. This is particularly true of epic poetry: the Russian *byliny*, the Finnish *Kalevala*, the Yugoslav heroic epic poems, and of many ballads and lyrical songs of eastern Europe. In some cases, it is only the musical structure which makes it possible to subdivide the text. In many Balkan songs (Yugoslavia, Bulgaria), repetition of a single text line or of parts of it builds up a musical—not textual—stanza. In other instances, as in the Yugoslav heroic epic songs, the musical structure is so irregular or unorganized that even the musical stanza is absent.

Where simple and regularly recurrent formal devices are absent, other features that form a link between form and style become of added interest. Some of them impinge at definite points of the poem. The moralizing end of songs about violence and crime is apt to be phrased in the same words. First lines with which the song begins often constitute formulas which again must have traveled from song to song. Of the many, we might mention the Irish-American "Come all ye . . ." line; or the lines "There was a . . . in . . ." which no doubt has its roots in folktales. French folk songs go in very much for localizing the beginning of a song: *Au jardin de mon père*, or *A la claire fontaine*, and many others. German and Hungarian songs often begin with a reference to a tree (*Lindenbaum*), flower, or bird. Often, as with refrain lines, the relation of the starting line to the entire poem is unclear. To quote a statement about Rumanian usage: "Many lyrical and epic texts begin with the stereotype line, 'Green leaf of . . .' or with some other image of nature; such lines occur at times also within the song, before some of its sections. There is no connection between them and the content of the song."²⁸ In other cases, there can be a connection, not always clear, between the mood of the poem and the folk symbolism ascribed to flower or bird.²⁹

The construction of the entire poem may be based on subtle principles not often considered in conventional analysis. Some of the simpler ones are those of repetition and contrast, often operating at the same time. An interlocking principle is present when a new stanza is introduced with the last line or lines of the previous stanza. This is very frequent in French songs. The gradual introduction of new elements, with much else repeated, is often used as a dramatic device, as in the Anglo-American ballad *The Maid Freed from the Gallows*.

The principle of cumulative effect finds its expression in a special form, the *cumulative song* or *randonnée*, in which content and length of the stanza expand with each repetition, by the introduction of new elements which are then repeated. The fact that quite a few of these songs (*The Twelve Apostles*, *La Perdriole*, etc.)

have a more or less international distribution suggests that this type may not be of strictly folk origin.

The Relation of Text and Melody

The texts of folk song form a large part of folk verse. Counting-out rimes, formulas of all kinds, charms, often also proverbs and riddles can have a metric organization, or alliteration, rime, and the like, which would at least with regard to form qualify them as poetry; many of them are also rich in metaphor and other poetic figures. These forms generally are very short, but what is more important, they are not sung. It is the essential trait of folk song that it is sung.

Collectors have repeatedly observed that singers often find it difficult, or even impossible, to dictate song texts; they must sing them. As an old Highland woman whose ballads Sir Walter Scott was collecting said to him, "They were made for singing and no for reading."³⁰ For the folk singer, text and melody form an integral unit. But the bond between a specific text and its tune may not be indissoluble. The fact that the same text is often sung to different tunes in different parts of a country, or even in the same locality, indicates that a text may become separated from its tune and attached to another. When folk singers do not recollect the melody to which they usually sing a text, they sometimes substitute one of their favorite tunes. The singer's apprehension of the text is apparently more clear cut than that of the tune, which should not be surprising, considering that the tune in itself is abstract. This is suggested among others by the fact that singers and listeners often accept as a "new" song one set to a standard tune but with a new—or only slightly changed—text. That the melody is not a new one either is not noticed or may receive no comment.

It is noteworthy that in some of the older groups of functional songs (described previously), and also in some archaic but still living styles, the number of different texts may be quite large but the number of basic melodies is quite limited. This holds, for instance, for children's songs and for east European calendric songs and dirges. The songs of the Rumanian *hora lunga* ("long song") type—a large number of separate lyrical songs—have only one basic melody. This melody, with slight variations, is used for all the different texts. Most if not all of our children's chanted play-calls, taunts, and the like, have one single melody—a melody which recurs in similar materials or children's songs all over Europe.

The phenomenon of a comparative paucity of melodies as opposed to a comparative abundance of texts in these older song groups led some scholars, like the late Béla Bartók, to believe that in some stages of folk-music development there may have been only a limited number of tunes in the repertory, branching out later into the "tune-families." These considerations strengthen the view that the function of music in folk practice is not necessarily to furnish a distinct setting for a distinct text. Rather, since the text cannot stand alone, melody is the necessary medium for it to be carried along.

There is often at least an all-over relationship, if not actual coordination, between formal elements in folk melodies and in their poems. The stanza of the text has its equivalent in the *melodic stanza*. The melodic stanza is the tune itself, usually repeated without major

changes. The text stanza is normally not repeated bodily, only its structural pattern, except where it serves as a chorus, or in certain dance songs. Possibly, the musical stanza is on the whole an older development than the text stanza; in a number of east European countries, text stanzas occur only in recent songs so that usually the textual unit can be established only secondarily, as the amount of text sung to a single repetition of the tune. Where the text stanza is a real unit, however, it is apt to constitute a unit also with regard to content: a stanza usually represents a fairly self-contained and rounded set of ideas or images.

Both melodic and textual stanzas have certain architectural traits which hold them together, but their effect or force does not need to be parallel. "Melodic rimes" for instance (similar cadences at phrase endings), need not be employed in the same lines in which text rimes are used, so that cross-currents and counterpoint-like effects are achieved.

There is as a rule rigid correlation, however, between the musical and textual expression of another unit, the *line*. The occurrence of line-units which subdivide texts, and of line- or phrase-units which subdivide tunes, is universal in folk song. A text line may be set off as a unit on the basis of various rhythmic and other criteria. The musical line may be established on various grounds such as rhythmic structure, melodic contour, and the like. Long notes or pauses, or both, very frequently mark the end of the musical line as a temporary resting point. The text line, i.e. the line of poetry, usually contains a more or less rounded idea or statement, comparable to the sentence or the sentence-phrase of prose. Frequently it is a unit which, in prose speech, could be followed by a pause. Text line and musical line almost invariably coincide. It is noteworthy in this connection, how rarely pauses occur within a musical line in folk tunes. Pauses breaking into words are quite unique; they do occur in Yugoslav and Bulgarian melodies.

The *foot* of poetic meter has its parallel in the *measure* of musical rhythm, although the two can by no means be equated. They do not need to be rigidly coordinated in folk song, but their peak points quite often are. For instance, if the meter is based on an alternation of stressed and unstressed syllables, textual stress tends to be coordinated with musically stressed or rhythmically "strong" position within the measure. Contrasts of long and short syllables on the other hand are correlated much less consistently with musical length, or not at all.³¹

The question is often asked, whether it is the musical or the textual element which is "stronger" in folk song. The answer obviously cannot be a simple one. In some respects the musical factors seem to be stronger, or to have been stronger at one time, in others the textual factors. Yet, there is a constant interaction between the two, and an intimate welding together, so that isolating the textual from the musical forces is often the result of arbitrary abstraction. It is true that many of the changes which a melody may undergo, while it is repeated stanza by stanza, are caused by the flexible patterns of the text (for instance, by the variable number of syllables within the metric structure in English, German, and other folk poetry). But there are also strictly musical variations, which often run counter to the dic-

tates of the text or the meter. Accordingly, it is hardly possible to state whether tune or text have the "upper hand" in folk song, without quoting specific cases and a maze of technical detail. One general element stands out, however. The fact that so many repetitive and ornamental devices, or features of form, which flourish in folk poetry are almost entirely lacking in folk speech—refrains, line repetitions, rime, the use of meaningless words, the stanza—indicates that in folk song the possibilities of speech are much expanded and that they are employed in ways which are closely connected with the fact that folk songs are sung.

The relation of text to tune with regard to content is again a complex and subtle problem. In our cultivated or "art" music, we have established a distinction between music which is representative or "programmatic," and music which is "abstract." When our art music is coupled with a text, it is frequently adjusted to the general mood and content of the text, even though it may not attempt to represent given elements of the text in naturalistic fashion. Folk music in general appears to be abstract in this sense; it is very rarely programmatic or representative (our *Barnyard Song* is one of the few examples). Even a generalized relationship between the mood or emotional content of the text and of the tune seems very often to be lacking, or at least it is not clear to us. The climax-points of a ballad or of a lyrical poem rarely receive special musical emphasis, although, at least in this country, there is much variation in how expressive the manner of singing of different singers is. Yet, it is often said that folk singers sing "without expression." At any rate, authentic folk singing does not use our hackneyed expressive devices.

It often happens that a text is sung to versions of tunes, or to different tunes, one of which affects us as sad and another as gay. Certainly the musical connotations of sad and gay which our books on Music Appreciation ascribe all too mechanically to music, and to major or minor tonality, cannot be assumed to be present in the same fashion in the experience of the folk singer and listener. Probably the musical features which have ties with the emotional aspects of the folk poem are, instead, the general rhythmic character, the speed, and various subtleties of rendition. But it is easier to sense than to prove the presence of such ties. One difficulty is that folk singers are rarely articulate about the mood or emotional quality of their tunes, unless they use words and notions taken over from city usage. Our own responses on the other hand do not form a reliable basis for judgments since they are unavoidably conditioned by special associations and values. Of many of these associations we are not aware; they have arisen from our experiences in listening to cultivated music, and from what we were told about this music. The same holds, of course, even if to a lesser degree, for esthetic and emotional values in folk poetry.

If, then, the relation of the content of folk poetry and folk music remains a fascinating but as yet uncharted area, a similarly unexplored area is the role of bodily movement in folk song. Here a third aspect is added to those of text and tune.

In work songs, game songs, dance songs, and marching songs, the rhythmically organized movements of the body are integrated with music; interactions and cross-influences take place which are comparable to the inter-

actions between poetry and music. Dance songs are numerous in every folk music style, although many of them may be performed without singing, on instruments. Often it is quite difficult to delimit this rich category. As Phillips Barry said, "There is no hard and fast line which can always be drawn between dance music and song music."³² Work songs are ubiquitous, but they form, usually, a comparatively small part of the song-lore of a group. The U. S. Negroes with their prolific work songs are unusual in this respect. At least the custom of singing work songs, if not the songs themselves, may be part of their African heritage. Songs in which occupational groups describe or refer to their work, but which are not sung during work, are sometimes misleadingly called work songs. (For instance, the songs of American lumbermen and miners.) Marching songs are usually soldiers' songs; their use is comparatively recent, as is the very practice of rhythmically regularized marching. Songs while working or walking along must be separated, of course, from work songs and marching songs proper. In some localities, almost any kind of song may be sung at work or in walking.

There is usually a general coordination in folk song between the rhythm of music and that of dance or work. But the more specific relations between the character and design of dance steps, for instance, and the musical and textual features of the associated songs have been little studied so far and often escape mere observation. Sound film recordings will make it possible to learn more about these intricate and interesting relationships.

Manner of Singing

Many details of melody, intonation, and rhythm, often quite subtle, make up a special phase of folk song, its manner of rendition. This manner or technique of singing may have different characteristics in different regions, but some of them are general or widespread. Folk singers do not often attempt a melodious "singing" tone. They rarely use expressive modulations of the voice; they sing in a matter-of-fact fashion. These statements, however, should not be taken too literally; often the mode of expression is merely restrained or austere, the expressive devices not obvious.

Two general types of singing manner have been distinguished in Eastern Europe: the *parlando-rubato*, a very free, highly ornamented technique, and the *tempo giusto*, one held in more strict rhythm and with much less ornamentation. These techniques have been described in especial detail in Hungarian folk music where both were part of the old stylistic practice: the first in ballads and lyrical songs, the second in dance songs.³³ The *parlando-rubato*, or similar techniques, must have been widespread over other sections of Europe too. It has been observed in our South and Northeast,³⁴ and the highly ornamented French-Canadian melodies show a comparable technique. Songs sung in this manner are very difficult to render in exact musical notation.

Two special phases, intonation and ornamentation, may be mentioned here as part of the traditional technique of singing. Often only acoustical recordings give us an inkling of these features. Even an excellent musician can find it quite difficult to identify, much less to transcribe, details of intonation and of ornamentation, unless he has had special training for these tasks.³⁵

Until recently, the average folk singer heard and used little instrumental music with fixed and standard pitches. Thus he can hardly be expected to have the professional standards of "pure" intonation. The intonation of a traditional folk singer is not necessarily worse than ours, but it is often more flexible. A tone is often taken somewhat higher or lower than might be expected, for expressive or ornamental purposes. Some of these fluctuations of pitch recur regularly at given points of the melody; upward and downward movement often call for some sharpening or flattening of an intervening tone.

Elaborate ornamentation appears to have been an integral feature of many old folk music styles. In different styles, ornamentation can have different functions. In Anglo-American and French tunes ornamental tones are used mainly to bridge gaps in the melody; in Hungary and in Rumania they often lend special emphasis to important tones; in Yugoslavia they frequently almost bury the essential skeleton of the melody.³⁶

The authentic manner of singing is disappearing in some regions faster than the melodies themselves. One reason why folk song may be doomed to extinction is that the younger generation often feel that the old songs—meaning the old mannerisms of singing—set them or their parents apart as odd and old-fashioned. The absence of authenticity in the renditions of concert singers of folk songs is often the absence of the traditional manner of singing. The concert singer is usually not acquainted with this manner, or cannot learn it.

Melody

This brief treatment of melody in folk music takes up the following topics: compass, scales, intervals, tonality, and melodic contour. Up to the present much of the actual analysis of folk music has concerned itself with matters like scales, perhaps at the expense of the study of rhythm and form. There has been considerable terminological confusion which calls for clarification.

The *compass* or range of folk melodies is characterized by a certain economy. They seldom come even near the limits of the range of the singing voice. Melodies with a compass beyond an octave and a half are rare.

The melodies in a very archaic group have a very restricted range and tone content: two tones within the compass of a second, or three tones within that of a third. This type is found especially among lullabies, children's songs, and calendric songs, and is more frequent in eastern and southern than in western and northern Europe.³⁷ Many of the more complex melodies must have developed from tunes of this type. The melodic range of a fourth or a fifth is quite common in Slavic melodies, and French tunes also very often have a somewhat restricted range.

It is important to realize that these restricted tone-series form the *scales* of these tunes. It is erroneous to consider them incomplete segments or fractions of our scales, which call for tone-series filling out an octave, and misleading to refer to them by the terms used for those "octave-scales" (major, minor, or modal) which they sometimes resemble. The scale of a folk tune is nothing more nor less than the series of tones which it employs.

It is well known that ancient Greek musical theory considered the fourth and the fifth as the basic scale-

frames of melody, not the octave. Byzantine theory speaks of the sixth. Their terms for these frames—*tetrachord*, *pentachord*, and *hexachord*—and the underlying concepts are very useful in application to folk music, although they do not apply with all the special meanings Greek theory imparted to them.³⁸ The borrowing of the terms does not imply, however, any influence of ancient Greek music on European folk song, which is theoretically possible but has not been demonstrated so far. Rather, it might be suggested that the Greek theorists merely gave a formulation to the unconscious principles of melodic construction which were in force in the folk music of their day. From the wide applicability of these concepts to folk music we might further infer that the principles involved are ancient in Europe and were current also in the folk music of groups with whom the Greeks had little or no contact.

Some of these scale-types are widespread. The hexachord *gabcde* is a striking example. It is probably one of the roots of our modern major scale, and some German scholars have claimed it—together with the scale and tonality of major—as an ancient Germanic achievement. It underlies very many folk tunes all over Europe. Its wide distribution presupposes an ancient origin and renders a Germanic origin quite unlikely.

As we move to scale terminology which employs more familiar terms, we find usages which are confusing—and not only to the uninitiated. One group of scales are referred to as *modes*. A smaller group (our major and minor) are not called *modes* but *scales* or *tonalities*. To add another system: we also speak of “gapped” scales such as the pentatonic and hexatonic.

The “chordal” scales (pentachord, hexachord, etc.), the modes, and the major and minor scales all share one principle. They are diatonic: the tones are arranged stepwise. The “-tonic” scales (hexatonic, pentatonic, etc.) on the other hand are “gapped.” Actually, the difference is in the size of the building-blocks. In diatonic construction the contrasting sizes of the successive intervals are minor seconds and major seconds (the augmented second of minor is considered secondarily raised). In gapped construction the constituent interval steps are major seconds and thirds; the thirds are usually minor (pentatonic scales rarely use the minor second or half-tone).

It would be more convenient if the modes and major and minor were called *octochords*; they consist of tone-series within the octave as the limiting frame. But for various reasons it is of practical advantage to retain the terminology. The modes which stem from ancient Greek theory and the theory of Gregorian church music, form a simple and closed system. As is well known, the seven “Church modes” can be visualized as the seven possible tone-sequences using the series *c, d, e, f, g, a, b, c* (the white keys of the piano), but beginning for each mode with a different tone as the basic tone or tonic. It is further of advantage to set major and minor apart, because their treatment in our music is inextricably interwoven with harmonic considerations and relationships. This is not so in connection with other scale-types in folk music. Since the great bulk of folk music is performed without a harmonic setting, whatever scales occur must be thought of as systems carrying only melodic relationships, but *not* harmonic relationships.

The definitions and comments offered above by no means do justice to the complex historical and theoretical

problems connected with scale and mode in our cultivated music; they merely indicate useful ways in which the terminology and some of the concepts can be applied in folk music. Some of the confusion in the description of folk music is due to the circumstance that unclarified meanings were carried over into the analysis of folk music, and that the specific circumstances and usages of folk music were not taken sufficiently into account.

Modal scales are widespread in European folk music, although their frequency varies in different countries. In older collections editors often changed modal melodies to give them a more “correct” major or minor appearance. The modal scales pose an as yet unsolved problem. They—and more restricted scales which resemble the modes—predominate in the traditional music of the Catholic church. To what extent is their presence in folk music due to an influence from this direction? It has been demonstrated that church music had a strong effect on folk music; but it should also be recalled that much folk melody was incorporated into the music of the Church.

It was a startling discovery in the early 20th century in this country—just about the time when it was officially discovered that this country *had* its folk music—that many folk melodies are modal. This led some students to believe that melodies cast in these scales were bound to be old, and that the melodies and their scales represented the purest and clearest survivals of an ancient Anglo-Saxon heritage. These wholesale assumptions are dubious. Modal melodies are not necessarily old. Singers have been known to change a non-modal tune so that it became modal. Furthermore, many melodies whose scale is not modal are undoubtedly as old as many modal tunes.

Pentatonic scales are found all over the world. They have probably arisen time and again, and in various places, rather than spread from one common source. The existence of such scales in different countries is no proof of historical connection between them. Pentatonic scales of the British Isles and of Scandinavia may be related, but they are hardly connected with pentatonic scales in Hungary, or in Russia, which are different either in construction or in treatment.

Major and minor are not common in folk music—minor is especially rare—unless heavy city influence has been at work, as for instance in German folk music. All too often, however, these terms are erroneously ascribed to folk music when some element is present which *to us* signals the presence of major or minor: either a partial sequence of tones incorporated in our scale, or a characteristic interval such as the major or minor third.

Turning to the use of intervals in folk music, some general preferences or avoidances may be mentioned. In pentatonic melodies half-tone steps are rare. Progressions which use clusters of half-tone steps (chromaticism), or augmented and diminished intervals, are also rare. Where they appear, in Spain and in the Mediterranean, they may well be due to Arabic influence. Augmented seconds are more common in the Balkans and in some parts of eastern Europe. They reflect in part Oriental influences, in part the influence of the Gipsies who have been important as purveyors of certain kinds of tunes in these regions. The interval is much more frequent in the popular music of small-town bands or of the café musicians than in peasant tunes.

Some intervals in folk music are classed as "irrational" from the point of view of our tempered tone-system; they do not coincide with our standard intervals. In Anglo-American melodies the sixth and seventh above the tonic are at times approximately between the major and minor intervals. The blue note of Negro folk songs, which has been preserved in some jazz usages, is usually a neutral third, between our major and minor third. The occurrence of such intervals becomes less puzzling if we consider how recent and specialized our tempered tone-system is. Where city influence has been strong, these intervals tend to disappear.

In the study of folk music there has been perhaps a little too much preoccupation with scales and intervals, which are merely the raw materials of melody, at the expense of studying tonality. *Tonality* may be best defined as the system of dynamic interrelations which are carried by the tones of the scale, including the various roles assigned to different tones. The term is very useful in folk music, as long as harmonic ideas of tonality are eliminated. It is convenient to apply also other conventional technical terms, such as "tonic," "dominant," and "leading tone," but either they are to be given wider meanings, or the meanings need to be adjusted to the specific circumstances of folk music.³⁹ Our dominant, for instance, which is second in importance to the tonic, is defined also by its position as the fifth above the tonic. In many folk tunes a tone of comparable importance is found on the fourth, or on the second above or below the tonic. The function of the leading tone which, because of major and minor, we automatically connect with the position of the seventh, a half-tone below the tonic, is in folk melodies often associated with a major second above the tonic, or with a major second or a third below the tonic.

Because of the same preoccupation with scales and intervals, there has been as yet little study of *melodic movement* and *melodic contour* in folk music. The most archaic tunes, with their limited tone-material, have a melodic movement which is almost level, or which oscillates back and forth. Downward melodic movement is exceedingly frequent, especially in older tunes. It predominates in much of eastern and southern European folk music. When ascending and descending lines are comparatively balanced, the contour approximates the arc. Many Anglo-American, Scandinavian, and German ballad or lyrical tunes are built in this fashion; they first ascend to one or two melodic peaks and then return to the main level of the melody.⁴⁰ An undulating type of movement, with repeated short waves of ascent and descent, is frequent in Slavic and Balkan songs. Many old Hungarian and Turkish melodies display a movement of graduated descent by levels, in which each musical line sinks lower. At present we can hardly guess at the nature of the forces, whether musical or esthetic, motor or psychological, which have made different trends dominant in different styles.

Musical Rhythm

Two general modes of rhythmic organization may be distinguished in folk music. One is comparatively free so that it hardly permits division into bars or measures; it may be compared with free verse. Different forms of this mode are found in dirges; in many songs of Spain where Arabic music left a strong imprint; and in the

heroic epic poetry of Russia, Ukraina, and Yugoslavia. In some east European countries, for example in Hungary, it is the old and authentic way of performing ballads and lyrical songs, and was designated as the *parlando-rubato* mode of performance (see section *Manner of Singing*). Many complex and unusual rhythmic figures have arisen after the free element of this type of performance became solidified and rigid.⁴¹ The other mode of rhythmic organization has more regular patterns so that the rhythmic design elements can be easily located, and the use of bars or measures is not too artificial. In eastern Europe the term *tempo giusto* has been used for this type.

The rhythmic pattern of the musical lines or phrases which make up the melody may be the same for every line of the melody (*isorhythmic* structure), or not (*heterorhythmic* structure). Metric uniformity of the lines of the text is related to the first; lack of such uniformity to the second. The pause as a rhythmic device tends to be restricted in folk music to the end of lines, or of the tune; together with long notes it is one of the prime features that indicate a temporary close or finality.⁴² But long notes may also stand at the beginning of a line or of the tune as dramatic starting devices.

The *measure* or bar concept of our classical musical theory can be applied to folk music, but some caution is required. Many collectors and editors of earlier days were swayed by standards of classical music, where a measure is usually constant through the entire composition. Consequently they forced measures on melodies of a free rhythmic organization, or they forced folk tunes into a Procrustean bed of rhythmic uniformity. More recent collections and recordings have amply shown that folk tunes very often are not based on a measure that runs through the melody, but that the length of the measure may change repeatedly in the course of the tune. These changes are anything but haphazard; they belong to the structure of the tune and recur regularly from stanza to stanza. They are the expression of a special esthetic principle manifesting itself in effects of contrast and change which a mechanical consistency of measure does not permit. The frequent rhythmic shifts in the compositions of a Stravinsky or a Bartók have undoubtedly been stimulated by the rhythm of their native folk tunes.

One result of shifting rhythmic measures is the variety of asymmetrical balances which underlie the rhythm and form of many folk tunes.⁴³ This asymmetry already appears in rhythms of $5/4$, $7/4$, and the like: they consist of 2 and 3 or 3 and 2; 3 and 4 or 4 and 3 units, and so on. Other folk song rhythms which are rare in cultivated or classical music are $9/4$ consisting of 4 and 5 beats; $8/4$ consisting of 3, 2, and 3 beats; $11/4$ consisting of 4, 4, 3 beats; and so on. The so-called "Bulgarian rhythm" which also appears in Greek folk music, consists of comparable rhythms; they are performed, however, very fast so that signatures like $17/16$ and $21/16$ are not at all uncommon.⁴⁴

In western and northern Europe on the whole simple measures based on groups of 2 or 3 units and their multiples predominate: $2/4$, $3/4$, $4/4$; $6/8$, $9/8$, $12/8$. In eastern and southern Europe the more complex rhythms based on alternating groups of 2 and 3 beats are much more frequent. (It has been observed, however, that $5/4$ and $7/4$ are not rare in Anglo-American melodies.⁴⁵) In

these areas shifting measures and the resulting asymmetrical structures are also more frequent than in the West and the North. These differences probably do not go back to great antiquity. Older folk songs from the West show these phenomena more frequently, when editorial "improvements" made to "regularize" the rhythm are stripped off and the true rhythmic structure is reconstructed. Meanwhile, however, the influence of the printed song collections and of the city, which in its classical and popular music had little experience with rhythmic shifts, have often imposed a regular rhythmic structure on many folk melodies.

Some simple rhythmic devices are universal in folk music, such as the opposition of longer and shorter values, or of stressed and unstressed tones. Others, despite their simplicity, are more restricted or more favored in given styles than in others. Triplets alternating with groups of two beats, for instance, are used in great profusion in French folk tunes; much less often in other national styles. In Spanish folk music the alternation of 3/4 and 6/8 is very common. Triple rhythms are comparatively rare in some east European countries; very frequent in some west European ones. Upbeats, a commonplace device in most west and north European styles, or in German folk tunes, are very rare in Hungary, Slovakia, Yugoslavia, and Rumania. Syncopated rhythms are very common in Scotch tunes. The syncopation of Negro melodies in the United States which is often ascribed to the survival of African rhythmic patterns is more likely to have its antecedents in Scottish-English folk music.⁴⁶ Other types of syncopation have some currency in Slavic tunes, and are especially frequent in more recent Hungarian melodies. Hungarian and Gipsy influence spread these rhythms through eastern Europe, and they are reflected in the rhapsodies of Liszt and Brahms.

The connections between textual and musical rhythm have been touched upon before (see section *Text and Melody*). The function and subject matter of the tunes is not without its influence on rhythm. Calendric songs, children's songs, work songs, and especially dance songs, perhaps because of their closer connection with bodily movement, tend to have simpler rhythms and to be sung in a more strict rhythm than ballads and lyrical songs. Still, in dance songs in the Balkans and in a few other areas, extremely intricate rhythms are found side by side with the simplest.

Musical Form

The architectonic clarity of formal organization in folk music has often impressed and stimulated the composer. The organization ranges, however, from types of elementary simplicity to ornate complexity.

Many children's songs or songs sung to children, and some calendric songs consist merely of a musical line or phrase which is repeated over and over again. The line may be split into two or three brief motifs. The principle of repetition is the same as the familiar repetition of a longer melody for successive stanzas of the text. This type of line-repetition, sometimes called the *litany* form,⁴⁷ is also found in some styles of so-called primitive peoples. In folk music it no doubt represents survivals of a very archaic development. The calling and taunting formulas of children which are often chanted rather than sung and are on the borderline of music

(*Come out, come out, wherever you are!, Johnny is a sissy!*, etc. in the United States) belong to this type.

The single repeated musical line may have been the germ for the development of some of the more complex forms. In one type, the musical line is repeated with many variations which cannot be marked off into stanza-like units. This loose form is often employed for heroic epic poetry. In the long heroic epic poems of the Yugoslavs, one musical line is used for the beginning and the end of the poem; another or a number of others serve to carry the main body of the song; and still others may be used at points where the story turns to moments of increased interest.

In another development, the repetition of primary musical motifs leads to more regular formations: recurrent musical stanzas. In Slavic melodies quite frequently the song consists of two or three repetitions of a basic musical idea which differ only slightly from each other. A similar form, *A A' B B'*, where the line-pairs differ only in their cadences, is common and probably old in Spain.⁴⁸ As the similar musical lines become more differentiated, forms like *A¹ A²* or *A¹ A² A³* can easily lead to forms like *A B*, *A' B C*, *A¹ B A²*, and so on. In French melodies phrases are very often repeated, with or without modifications, within a more complex structure often built up from numerous short musical motifs.

Two- and three-line forms are more frequent in eastern than in western Europe: the three-line form of the folk blues sung by our southern Negroes and white mountaineers are somewhat unusual. It is not surprising that when W. C. Handy published his *Blues*, he usually expanded the old three-line form into the more familiar four-line musical stanza.⁴⁹

Musical stanzas of four lines, or their expansions, dominate most of European folk music. The four-line construction may have satisfied a feeling for balance based on older two-line constructions. The main musical subdivision of four-liners is very commonly at the end of the second line. This simple symmetry has probably not been without effect on the development of the "period" formation in our art music. There are many examples in folk music, however, in which the break at half-point is not marked off strongly. One instance which may be mentioned is the *ABCD* form and its ramifications: here the musical content is different from line to line. This form occurs in quite a few Anglo-American ballads and lyrical songs. Another is the *ABBA* form in which the musical content of the outside and inside pairs of lines is the same. This form is quite common in Irish tunes, but also in more recent Hungarian melodies.⁵⁰

While repetition is the most basic structural force in folk music,⁵¹ it can manifest itself in various special forms; and other principles also contribute to formal variety. Some of the most common structural principles in folk music may be designated as "progression" (type *ABCD*); "reversion" (types *ABAC*, *ABCB*: common in our children's game, play-party, and square-dance tunes); and the "cyclic" principle (types *ABCA*, *ABBA*).⁵²

When the last line or lines of a melody are repeated, this may be at times merely a detail in the manner of performance, rather than a feature that enters into the basic structure. For instance, in the more recent Hungarian tunes the last two lines of the stanza are repeated quite mechanically, but the usage is still somewhat optional. If, however, such casual repetitions become

fixed, they become part of the structure which is thus expanded and modified by their intrusion. Sometimes textual elements call for repetitive expansion, as in the cumulative or *rondeau* songs (*The Twelve Apostles*, *La Perdriole*, *The Barnyard Song*, etc.). Other connections between textual and musical form have been touched upon in the section *Relation of Text and Melody*.

While the great bulk of folk music contains itself within comparatively simple stanza-like arrangements, there are developments which move toward more complexity and longer forms. Often these are connected with textual factors, or others that are originally not musical. In more elaborate children's games sometimes a number of musical motifs, with their repetitions, are woven together loosely into a larger whole which may be compared with our *potpourri*. The "verse and chorus" arrangement, which is probably not old and may have been brought about through the influence of art music or popular city music, often joins together two originally independent melodies (as do many of the play-party and square-dance tunes of the United States).

Instrumental dance pieces often show rather complex and elaborate forms. A growing interest in the performer and his virtuosity has played a role in these developments. Another factor must have been the need for repetition, coupled with the freedom from limitations imposed by the text and its stanza-structure.

Formal growth moves in another direction when a number of songs or pieces are performed in regular sequence. This points to the *suite* form of art music. Modest beginnings of the *suite* appear at times in instrumental pieces. In one example which has been found in a number of east European countries, three flute pieces are played in succession: in the first the shepherd mourns for his lost sheep; in the second he is searching for them; in the third he rejoices over having found them.

Regulated sequence is also the principle when a number of songs are used in a story, or in the religious folk plays, although in both prose sections or parts which are not sung separate the musical items. The folk plays, at least in conception, represent the most ambitious formal development in folk music, the *music drama*.

It has been suggested before that mode of performance can have an impact on musical form. One interesting example of this process is the form in which a solo and a group sing the melody in responsorial fashion. This technique is found very commonly in eastern Europe (the Baltic countries, Russia, Ukrainia, dance melodies in the Balkans); less often in western or northern Europe if we except the Anglo-American sea-shantey and its relatives elsewhere. Its use in southern Negro folk music is well known, whether in the spirituals or in the work songs. It is still a controversial point whether this southern Negro usage represents a survival of African usage—even though most of the melodies themselves may not be of African origin—or whether it is connected with European and American white customs, such as the "lining out" of the hymn tune by the song leader, with its subsequent repetition by the group, in early American practice.⁵³ Alternation of solo and group singing is too general a phenomenon to serve as a guide. A more reliable criterion of African carry-overs appears when the solo-line displays great variability, in contrast with the stability of the refrain by the group.⁵⁴ The study of

Negro folk music in the West Indies, in Dutch Guiana, and in Brazil, has done much to clarify the intricate question of the survival of African music in the New World.

Harmony and Polyphony

The great majority of folk tunes are sung or performed in one voice. Thus, examples of *harmony* (a single melodic line supported by subordinate voices) and of *polyphony* (a number of more or less independent melodic lines performed together) are comparatively rare. Much of folk harmony or polyphony is purely instrumental, or arises when instruments accompany singing. But there are also purely vocal forms of part singing. It is noteworthy that despite the comparative rarity of part singing in folk practice, many music historians assume that the beginnings of part singing in European art music lie in folk usages.

A number of geographic centers may be mentioned for part singing in folk music. One center is northwestern, embracing Scandinavia and the British Isles. Rounds or canons, modest counterpoint-like forms, and singing in parallel intervals were cultivated here, especially in the British Isles, although the forms have on the whole dropped out of folk usage. Singing in parallel fourths and fifths (the *organum purum* of our early musical theory) is still cultivated in Iceland.⁵⁵

A central European center is noted for the prevalence of singing in parallel thirds. This may have been an old folk practice in South Germany and Austria; but there is a strong suspicion that the practice was at least reinforced and influenced by harmonic developments in the cities in which thirds became prominent. From Germany, the parallel thirds spread over some Slavic territory. They are used also in Switzerland, southern France, Italy, and Spain, and all over Latin America. Another type of polyphony was used in the famous *jodlers* of the Swiss Alps and the contiguous mountain regions, although nowadays the melodies have the simple settings of our conventional harmonic system.

A third area is south Slavic. In Dalmatia, the Adriatic littoral of Yugoslavia, there are very curious polyphonic forms in which melodies are sung in parallel seconds. When these melodies are played on paired reed instruments, the seconds turn by inversion into parallel sevenths.⁵⁶ The history of this very unusual development is obscure; the "howling" of the Lombards of northern Italy, by singing in seconds, is mentioned by some early medieval sources.⁵⁷ Elsewhere in Yugoslavia and in Bulgaria seconds are heard frequently, either when a lower voice repeats one tone throughout the melody ("interrupted" or "repeated" drone) or in canons.

A fourth area is east European. In Lithuania, the earlier mode of performance for most songs was in canon or round fashion, two or three voices singing the melody on the same tone level. Today songs performed in this manner are called *sutartines*.⁵⁸ In the Ukraine and in White Russia many songs are sung in true counterpoint; this technique is also employed with reed instruments.⁵⁹ Vocal drone effects occur here as well. The famous Don Cossack choral performances are based on these folk roots, although their technique and manner of singing has been much influenced by our concert stage.

Perhaps the most complex forms of folk part singing are found in the music of various non-Russian-speaking

peoples in the Caucasus. These show surprisingly close parallels to some of the forms described and taught in early medieval treatises on musical theory and composition.⁶⁰

Apart from these special areas, scattered forms of singing or playing in voices are found in many other places. Some forms came about when autochthonous stringed instruments accompanied various types of songs. Unfortunately these forms have not as yet been well described.

Folk Song and Instrumental Music

Musical instruments play a subordinate, yet interesting role in folk music. The subject, however, has received on the whole little attention. Independent instrumental music forms a comparatively small part of the repertory of most folk groups. Instrumental music used to accompany folk song is by no means universal. In some countries, such as Hungary, it is not known at all; in others, it is employed only for specific types of songs. On the whole, the majority of folk songs are sung without any accompaniment.

Some of the generalizations that have been made about oral folk music are less valid for instrumental folk music. Unlike the folk singer, the instrumentalist may approach the standing of a professional. He often possesses a skill that many others in the community lack. In a number of countries, expressions like "to make music," "music," and "tune" occur in folk usage for instrumental playing, but not for singing. The instrumentalist is also apt to have a more developed musical terminology than the folk singer.

The mutual influences between instrumental and vocal music have been studied intensively in art music. In the following, some examples will be given to indicate the various ways in which instrumental music has exerted an influence on folk song.

The role of musical instruments in the growth of more elaborate forms in folk music has already been mentioned.

Instrumental scales may have had an occasional effect on the scales of vocal melodies. It is noteworthy, however, that the tone-material of many folk musical instruments, for example flutes, is often much more limited than the tone-material employed in singing.

There are interesting parallels between instrumental and vocal technique. The great speed of many Bulgarian and Greek vocal melodies is probably the result of the influence of instrumental performance. The peculiar manner of singing the Swiss *jodel* melodies, with their wide jumps, changes into the *falsetto* register, and other features, has been ascribed to the influence of instruments like the *alphorn*.⁶¹ In the United States and elsewhere, fiddlers do not use the vibrato, which parallels the absence of a vibrato and of similar expressive devices in singing.

The development of harmonic and polyphonic forms has been stimulated by musical instruments. The bagpipe, with its characteristic drone, is used everywhere in Europe, or was used at one time. American fiddlers use open strings for drone effects; this curious practice may well have had its origin in the imitation of bagpipes.

Harmonic or polyphonic effects arise also when musical instruments are used for accompanying the voice. Apart from the older stringed instruments used for accompanying some types of songs, there is a group which

are comparatively recent introductions from the city. These include the guitar, mandolin, and banjo in western and central Europe, and the *tambura*, *tamburica*, and others in Slavic folk music.

The great profusion of fiddle-tunes and other instrumental melodies in the British-Irish-American tradition is somewhat unusual. The material has not been intensively studied, but it has been stated that very many of the tunes are at the same time used also as vocal melodies.⁶² It is of incidental interest that Robert Burns set many of his songs to instrumental melodies that he collected.

Classification of Folk Melodies

As increasing amounts of material accumulate in archives, the question of the best method of classifying folk melodies becomes of increasing importance. In countries in which no such system is used, collections of melodies are often published without any regard to their musical interrelations.

It is of importance to distinguish between two aims which a classification may have; these aims touch upon each other but are nevertheless distinct. One aim is to establish a *typology* for the material. The interest here is descriptive; the task is to organize a large body of folk tunes according to some convenient system which will lead to a finding list or a *melodic index*. It is another aim to establish the *genetic relationships* between melodies, and to trace all the various intercrossing influences which have shaped them. The interest here is historical, and leads to the study of dynamic processes in folk music. Tune-families and hybrids instead of types will emerge.

In both kinds of procedure the ideal is to arrive at a grouping in which related or similar melodies will be found near each other, instead of being separated by many others. In either procedure the ideal is difficult to achieve, because variants of the same melody can easily differ from each other on various levels: in rhythm, in scale or mode, or in structure. Similarly, unrelated melodies or types can influence each other in all these respects. A typology which would be internationally applicable would have great advantages. On the other hand, further experience in different countries will probably show that for genetic purposes different systems are the most useful for different styles.

It is probably useful to separate, for primary grouping, vocal melodies from instrumental. So is a further subdivision according to the function of the song or the subject matter of the text. A third principle of grouping may follow basic formal features of the text. These principles of grouping must be tested for their usefulness, however, from style to style.

In eastern Europe large bodies of folk melodies were published, organized according to a system of classification which was introduced by Finnish scholars like Ilmari Krohn, and expanded by the Hungarians Béla Bartók and Zoltán Kodály. In this system, instrumental and vocal melodies are treated separately. The vocal melodies are grouped first according to the text—the number of syllables in the text line, and the number of lines in the text stanza. Next, they are subdivided according to musical traits, such as the phrase-final tones of the melody, the melodic range, and a few others.

The system, including the use of the phrase-finals, has been rather successful in the eastern European material.⁶³ When it is applied to western European tunes, the use of the phrase-finals does not seem very satisfactory.⁶⁴

In western European countries there has been less systematic application, but various methods of classification have been discussed. In this country and in England classification according to modes is a favorite device; it has its weaknesses. An important study by B. H. Bronson has shown that related Anglo-American ballad tunes, or versions, often are in different modes.⁶⁵ Furthermore, pentatonic and hexatonic melodies are usually drawn into the modal classification, and this procedure is questionable.⁶⁶ A hexatonic tune is ambiguous; it can be grouped with at least two modes, and a pentatonic with three, depending on what tones are assumed to be "missing." The implicit wholesale assumption, however, that pentatonic and hexatonic scales represent incomplete or reduced modes is not justified. This is not to deny that in specific cases melodies have secondarily taken a pentatonic or hexatonic structure.

In this country, suggestions have been made for melodic classification on the basis of the exact tone content, the intervallic progressions, and some other features of the tune, or of its first line.⁶⁷ These systems have an element of simplicity and could be handled, if put into practice, comparatively easily, even mechanically. Yet, because of their oversimplified and mechanical conception, they do not appear to be very promising.

The most suggestive method, which is occasionally proposed, is that by melodic contour. This method seems very worth testing on a large scale, since often the melodic contour turns out to be the most stable element in melodies which have been in the process of differentiation. This type of analysis is also of considerable psychological interest. It recalls and may substantiate the contention of the German configurational or *Gestalt* school of psychology, that melody at large is a prime example of a true "configuration": a pattern which remains essentially intact as long as its shape or contour remains the same, even if its elements shift and change.

Notes

(The following Notes and Bibliography are for the reader who wishes to follow up points. For several statements he may not find reference. Some are well-known facts; some have not as yet been expressed in print. These statements have been stimulated by conversations with the late Béla Bartók, with Samuel P. Bayard, with Herbert H. Halpert. The article has benefited greatly by the suggestions of Dr. Halpert.)

son-in-law tests Tests and tasks set by a powerful person for his prospective or actual son-in-law are part of nearly all North American Indian mythologies, and have been the subject of inquiry by Robert H. Lowie in his paper, "The Test-Theme in North American Indian Mythology" (*JAFL* 21: 97–148, 1908). Lowie lists, for various areas, the North American test-tales proper (pp. 134–38), as well as miscellaneous tales and herotales in which various characters, such as Lodge-Boy and Thrown-Away, the Pueblo twins, Blood-Clot-Boy, etc., overcome obstacles. Several of the incidents in the son-in-law test-tales have independent distributions and appear as elements of narratives in which tests are not the primary object. For references to some of the most common tests in North American Indian tales, such as tests of prowess (quest for berries in winter, quest for dangerous animals, heat test, smoke test, poisoned food test, etc.) see Stith Thompson, *Tales of the North American Indians* (Cambridge, Mass., 1929), p. 364. See ABANDONMENT ON THE ISLAND; TESTS. [EWV]

Sons of North Britain A ballad collected in Nova Scotia, dealing with the theme of combat between father and son who do not know each other. Two young men, who were searching for the parents who had left them in Scotland seven years before, encountered a stranger in the woods. A fight grew out of some trivial incident and the stranger killed them both, learning as they died that they were his sons. The motif is the same as that of the story of Cuchulain and his son Conla.

sooner hound In American folklore, a dog that would sooner run than eat and sooner eat than do anything useful. A sooner dog, at least in New York City, is a creature that likes his comfort; he sooner wets on the living-room rug than anywhere else in the house.

sortition A form of divination employing the casting of lots or other chance choice to determine the answer to a previously thought-of question: perhaps the most ancient and certainly the most widespread of all forms of divination. The casting of dice or knuckle-bones is the typical example: the result of the cast is checked against a predetermined code to discover the interpretation of the throw. The casting of lots is described in Homer; the seer Mopsus divined by lot-casting before the *Argo* sailed. Vergil (*sortes Virgilianæ*) and the Bible have both been used to determine the will of the gods: a line is chosen at random and read in the light of the problem in mind. Polynesians spin a coconut to determine the identity of a thief, and a bottle is spun to discover a kissing-partner in the United States.

In the Greek democracies, sortition was used (in Athens after 487 B.C. for magistrates) to replace election by voting. Determining the wishes of the gods was felt to be more reliable than the possibly corrupt political method of voting for demagogues. Often a double sortition occurred; nomination by lot was followed by election by lot.

soul Belief in one or multiple souls for living beings, particularly for human beings, is practically universal among North American Indians. Many tribes believe that not only humans, but all other animals, have souls.

There are few if any explanatory myths accounting for the soul, but there is much evidence in American Indian mythology and curing practices to indicate that the belief in soul(s) existed. Tales of visits by human beings who appear "dead" for a few days while the soul leaves them and goes to the afterworld are numerous over the continent, as well as the Orpheus myth, in which a person visits the afterworld, sees the souls dancing there, and recovers the soul of a beloved relative which he brings back to earth. See SOUL LOSS.

The beliefs of two or three widely-separated North American Indian groups may be taken as a sample of native beliefs about the soul. The Fox Indians of the Eastern Woodlands believe each person has two souls: a small one, located in the heart during life and bestowed on a person by the supreme deity, and a large soul, the shadow, given by Wisaka, the culture hero. Only the small soul goes westward at death. This small soul can be reborn four times; it will have a new large soul each time. If the soul gets too big, the owner will become a murderer (William Jones, *Ethnography of the Fox Indians*, *BBAE* 125, 1939, p. 16, n. 19). The Tübatulabal, a tribe on the edge of the Mohave desert in east-central California, say of the soul, or *shu'nun* (also the term for heart) that it resides in the head, that it leaves the body temporarily through the ears when a person sleeps, so that when one dreams "it is one's soul that goes out and does the things one dreams." The capture of a person's soul by an evil shaman results in the victim becoming insane. When a person dies his breath (*i'kin*) which stays in the heart during life goes out, together with the soul. The soul becomes breath, but looks like a human being and is referred to as an

abawinal, "ghost" (Erminie W. Voegelin, *Tübatulabal Ethnography*, Anthropological Records, vol. 2, No. 1, 1938, p. 62). The Penobscot of the New England coastal region use as the term for soul the word which also means goodness; they believe that souls have a detached existence as stars.

The belief that animals have souls, and that when they are killed, it is only at the fourth killing that an animal's soul leaves its body permanently, exists among many Eastern tribes. [EWV]

✍ In a considerable number of South American tribes, the soul is identified with the shadow or the reflection in water or in a mirror. Sometimes the idea of soul, heart, and pulsation is expressed by the same word.

The Carib Indians believe in the plurality of the souls which are located in different parts of the body. According to some Guaraní tribes two souls coexist in every man: one gentle and another one the animal soul, which is believed to be responsible for a person's temperament. Sleep, catalepsy, and states of trance are the results of the temporary absence of the soul which sometimes abandons the body to wander far away, often to the land of the dead. Dreams and visions reflect the adventures of the soul.

Souls are not considered by the Indians to be necessarily immortal. They are often destroyed during the journey to the land of the spirits. [AM]

✍ In Chinese belief, man has two souls: *hun*, the superior or spiritual soul, which if proper ceremonies are performed, ascends into heaven and meets its ancestors, and *p'o* which, depending on the adequacy of the sacrifices and its own physical stamina, informs the body in life and the corpse after death. After death or in dream or trance states the *hun* can materialize and appear in every respect similar to the living body. So too the *p'o*, except that after the disintegration of the body it may appear as a skeleton or only a few bones. Souls of the ancestors are also thought of as inhabiting ancestral tablets. Because it is improper to appear before ancestors in a disfigured condition, parts of the body lost in life must be preserved. The heads of decapitated criminals are often buried with the bodies and eunuchs always carefully preserved the sexual organs which had been severed.

In Kueicho a young man committed horrible crimes. He was frequently executed but three days later, even when parts of his dismembered body were buried at distant places, he returned and five days later recommenced his wickedness. One day he beat his mother. The old lady then came to the mandarin with a small box. She said that when he was about to commit his crimes he put his superior soul in the box. Consequently after execution the superior soul could find the parts of the body and bring them together again. See CHINESE FOLKLORE; SAMOYEDS. [RDJ]

✍ The doctrine of the soul is one of the most difficult aspects of African and New World Negro theology to group. Any analysis of the concept must begin with the cult of the dead, which holds a place of primary importance in the belief-systems of these people. Especially complex are the various concepts of multiple souls, which may take the form of the shadow, or may represent what in Euro-American thought would be the personality of the individual, or may be the element

that relates him to the forces that rule the world, or may be equated with what might be termed intuition. The soul is everywhere in Africa the mechanism whereby one's affiliation to one's relationship group is achieved and validated. The concept is thus of great social significance as a force making for integration and stability. The soul, in some one of its manifestations, is believed to live on after death, and thus links the living to the dead. Reincarnation is a widely spread belief, though in many parts of Africa no contradiction is felt between a belief in reincarnation and a concomitant belief that the soul of the ancestor reincarnated lives on after death. Various terms for soul found in West Africa have been retained in the New World, notably that of *'kra* (Ashanti *okra*), heard in the Guianas. The concept of the *zombi*, prominent in the belief-system of Haiti, has as its essential element the idea that the soul of a person can be captured and employed by a worker of evil magic to make available to him the services of those who come under his power. This type of belief, that the soul as personality, often related to the "real" name of an individual, must be protected if the person is to avoid an evil fate, is as deep-seated as any single item in the religious and magical system of Africa and the Negro New World. See ANCESTOR WORSHIP. [MJH]

soul-animal or **soul-bird** An animal or bird who is the co-existent double of a human being. The animal or bird is usually born in the forest (or on the farm) at the same moment as the human infant whose double it is; the fate of the one depends on the fate of the other in matters of growth, health, safety, etc.; the life of the one is inextricably bound up with the life of the other; when one sickens or dies, the other sickens and dies. See LIFE TOKEN. Animals in whom the souls of the dead are reincarnate are referred to by some writers as soul-animals; many others, however, refer to the reincarnation of the soul as animal or bird as animal soul or bird soul. But since reincarnation as animal (E610 ff.) is not the same concept as animal as actual soul or double of a living person, an effort has been made to use the two terms distinctively throughout this book. See BIRD SOUL; BUSH SOUL; TONAL.

soul cakes Little cakes baked for the dead to eat, or to benefit the dead: offered during funeral rites, during feasts for the dead, placed on graves, or given to the poor as proxy for the souls. In ancient Egypt little cakes were left inside the tomb for the *ka* to eat. The primitive Ainu of Japan make millet cakes for their dead. The Japanese leave cakes for the souls of the dead beside their shrines for three days during the festival called Bon, which is their feast for the returning souls. The Chinese also prepare little cakes and other foods for their Festival for the Hungry Ghosts, Yü-Lan Hui, on the 15th of the Seventh Moon. Hindu soul cakes are the famous *pindas*, or honeyed rice balls. See SESAME.

In Europe in general soul cakes were commonly left out for the dead on All Souls' Day, or taken and placed on the graves. In Russia soul cakes were formerly gingerbread and rich sweet tarts. In Belgium it was said that for every cake eaten on All Souls' Day, a soul was released from Purgatory. In southern Germany and Austria people were wont to go to the graveyards and leave cakes on the graves for the hungry dead. In some sections they were given instead to beggars, as proxies for the dead.

In England the bread formerly handed out to the poor at funerals was a kind of soul cake by proxy. Soul cakes are usually made in England about October 28, to be eaten on All Souls' Day. In north Wales they were distributed among the poor. On the Welsh border and in the rural shires of England, children sometimes still go from farm to farm *a-souling*, i.e. singing and receiving little cakes. Formerly in Shropshire the soul cakes were heaped high on a platter and every visitor to the house on All Souls' Day was given one. Visitors were importuned to eat with the following chant: A soul cake, a soul cake/ Have mercy on all Christian souls for a soul cake. See CAKE CUSTOMS.

✍ In the United States, begging on Halloween is an attenuated form, and the request may be couched as "Trick or treat?"; the former being a penalty if a bribe (usually in the form of sweets or money) is not forthcoming. In Mexico and other parts of Latin America this symbolic eating takes another shape: miniature skulls of sugar or candy are sold and eaten. The eating of the dead, which may be regarded as the obverse of eating for the dead, also appears in many guises. In Melanesia, for instance, parts of the corpse are eaten by the relatives of the deceased out of respect for him, and form part of the mourning rites. Cannibals may eat parts of the valorous enemy to capture his power. Eating of the divine body also occurs, of which perhaps the best known example is the communion rite found in the Christian churches. [NEJ]

soul loss Absence of the soul from the living body, resulting in sickness, and eventually death, if it is not regained. In the belief of the primitive peoples of the Americas especially, loss of soul is a danger attendant upon all sleepers, sneezers, and yawners, but it is usually caused by the evil magic of an enemy, i.e. witchcraft. Soul-catching, or the restoration of the soul to the living body, is a complicated and detailed ritual requiring the services of a highly specialized shaman.

South American Aymara Indians believe that sometimes when a child sickens, its soul has been kidnapped by the spirit of a road, hill, river, field, or even a Christian church, and the kidnapper must be appeased with offerings of wool, candy, coca leaves, etc., at the place where the parents believe the kidnapping took place. The Aymara also believe that soul loss can be caused by body exuviae accidentally getting into a *chullpa* (burial place for the mummified dead) resulting in a horrible disease known as *culpa-usu*. This is because the soul has been snatched by the spirit of the dead in the tomb. [AM] See DREAM SOUL; *Folklore of the primitive tribes of South America* in SOUTH AMERICAN INDIAN FOLKLORE.

✍ Ethnic groups in many parts of the world have devised ingenious ways to keep our souls in our bodies and to keep alien souls, demons, evil spirits, devils, and the like, out. The mouth is an obvious danger zone and one of the functions of lip ornaments, nose rings, earrings, and the like, was to keep the soul in and to frighten away evil spirits who might be tempted to enter. The present custom of covering our mouths when we yawn is simple self-protection; and the courteous Chinese cover their mouths when they come close to speak, a habit which makes communication sometimes difficult. The suggestion has been made that the veils of Arab women and some of the North African men

served a similar purpose, though, like the cowboy's kerchief, they were also useful during dust storms. The Marquesans held the mouth and nose shut at the moment of death to keep the soul from escaping. The Alfoors of the Celebes took precautions at the time of birth to keep the infant's soul from slipping away, and the Zulus and Persians are said to have regarded yawning and sneezing as signs of approaching possession. When people sleep, their souls wander and the soulless body may thus become possessed by other homeless ghosts. The homeless soul, being unable to enter its own body has to find whatever habitation it can. One of the Chinese Eight Immortals, Li with the Iron Crutch has the body of a beggar. Consequently, precautions taken to keep mouths shut during sleep prevent snoring, a boon in itself, but also discourage souls from engaging in nocturnal adventures. The *Han* or grave jades of China, beautifully carved crickets of precious stone, stopped the openings of the corpse and thus prevented the physical ghost, who tends to be violent and evil, from escaping and molesting the family and community. The pads over the mouth introduced as a protective measure in the epidemic of 1918 are still worn by many Japanese whose folk wisdom has taught them that much evil can enter through the mouth. [RBJ]

✍ Loss of one's soul by a living human being, usually because of witchcraft being practiced against the victim, is held to be a common cause for illness among North American Indians; if the victim's soul is not recovered death results, and there are in many tribes shamans with special powers to recover souls of sick persons. Sometimes, as on the North Pacific Coast, these shamans make special annual "voyages" in spirit canoes to the land of souls to recover all the souls stolen from human beings who are still living, but are ill at the time. The soul when recovered is put back into the victim's body either through the top of the head, the navel, or the ears, mouth, etc. (see Forrest E. Clements, *Primitive Concepts of Disease*, University of California Publications in American Archaeology and Ethnology, vol. 32, pp. 185-252, 1932; also, Ruth Underhill, *Indians of the Pacific Northwest*, Riverside, California, pp. 195-99). See SOUL. [EWV]

✍ It is commonly believed in Middle America that the soul may be jarred loose or stolen from the body of a person. This results in sickness and eventual death if it is not returned by the medicine man. *Espanto*, or fright, is commonly thought to be a cause of soul loss. Sometimes the word *susto* is used. See CHANEQUES; DREAMS; MEXICAN AND CENTRAL AMERICAN INDIAN FOLKLORE. [GMF]

South American Indian folklore In a great continental area such as South America where many native peoples have been long subjected to outside influences, but where others still live as did their ancestors 400 years ago, the extent of what may be characterized as Indian folklore must be clearly delimited. The customs and beliefs of those Indian tribes, such as the Nambikuara, Rukuyen, and others who still keep a functioning native culture cannot be considered to be "folklore," as this science is usually defined, but where the native population has been converted to Christianity and where European civilization has taken root, as for

instance in Peru and Bolivia, similar customs, still retained by the Indian masses, may be called folkloric.

Anthropologists dealing with primitive tribes are apt to limit the use of the term folklore to the body of tales and myths, the interpretations of natural phenomena and of features of the milieu found among a primitive group. Folklore in this sense is almost co-extensive with oral literature, philosophy, and natural sciences. Therefore, in giving a general outline of South American Indian folklore here, we shall distinguish between those Indians who have kept their old ways and those whose present culture is a blending of the old and the new. For the former we shall discuss oral literature, for the latter some of the folk customs that come from the Indian past. We shall end with a short summary of the main outlooks and folkways of those Indian tribes who are considered "primitive" in contrast to the ancient civilized people of the Andes, such as the Inca and the Chibcha.

Myths and Tales of the South American Indians There is a large body of Indian myths and tales in South America, but few have been completely or faithfully recorded. Most of the religions and traditions of the civilized people of the Andes have been lost and little attempt has been made to draw upon the memories which their modern descendants may still retain. Similarly the folklore of the primitive tribes has seldom been recorded with the scientific care required. Best known is the folklore of the Carib and Arawak Indians of the Guianas, the Kaggaba, the Witoto, the Cashinawa, the Tenetehara, the Apinayé, the Sherente, the Timbira, the Bakairi, the Guaraní, the Toba, the Mataco, the Ona, the Yahgan, the Araucanians.

Comparative study of the main motifs of South American mythology and folktales reveals a surprising identity even among cultures as different as those of Brazil and the Andes. In far apart regions and among tribes who have little in common, one finds parallels not only in themes but also in sequences and detail. The frequent recurrence of similar themes justifies a general treatment of South American lore.

In South American mythology, there are few accounts of the creation of the world. Its existence is taken for granted, or it is barely mentioned as the initial act of some vague deity or First Ancestor. Instead the Indians are primarily interested in the origin of the special features of the universe, such as the first appearance of sun and moon, of men, animals, or other aspects of nature. Even when the notion of a Supreme Being is clearly conceived, as among the Tierra del Fuego Indians, the task of giving to nature its definite shape is assumed by a culture hero (e.g. Kenos, the first man among the Ona). This personage may be the creator himself, as in ancient Peru, but more often he is the creator's son or the first man. The traditional pattern of myths describing the origin of our world is to present it as the work of a wandering magician and transformer (Viracocha in Peru, Bochica in Colombia, Maria among the Tupi-Guaraní, Keri and Kame among the Bakairi, etc.). The episodes of his adventures are usually associated with changes or innovations in nature as he found it. The stories do not establish a hierarchy of events. Less importance may be given to the creation of the moon and the sun than to explanations of the spots on some animal's fur. Consequently Indian cosmogonies

often have for us a disconcerting lack of proportion, but may at the same time indicate that important episodes have been lost. Details which appeal to ordinary storytellers are not always those which have the greatest importance for the shamans or those preoccupied with the great problems of the universe.

Just as the present order of nature is the result of successive creations and transformations realized by the culture hero, his teachings are the sources of laws, of the social system, and of the most valuable arts and crafts. Culture heroes are creators, civilizers, and often also epic heroes.

A pair of twin heroes plays an important role in the mythology of South America. Often they overshadow the figure of the culture hero so much that they take his place as creators, transformers, and benefactors of mankind. This is particularly true in the mythology of the Caribs, Bakairi, and Tierra del Fuego Indians. The Twins are generally personifications of sun and moon, for their contrasting nature is explained by the difference between these two celestial bodies. Sun, the elder brother, is strong and clever; Moon, the younger, is weak and subject to periodic mishaps in which he loses his life and must be revived by Sun.

Myths about the origin of man follow two patterns. In the one case, the first men were created by the culture hero out of clay, reeds, or wood; in the second, men migrated from the underworld, or in a few instances, from the sky (e.g. Warrau). According to the mythology of the ancient Peruvians and of some Colombian tribes (Choco), present mankind is regarded, as in Central America, as the last and best of successive types of beings who were created and destroyed by the gods in various cataclysms.

Indian cosmogony describes four major cataclysms that destroyed all or most of the life in the world: the Great Fire, the Long Night, the Flood, and a long period of cold (the last motif only in the Chaco and Tierra del Fuego). Versions of the Deluge story are particularly numerous. Very often the disaster is said to have been caused by an angry deity, but violations of tabus (Toba, Witoto) are also made responsible for it. The motif of Noah's ark is rare in South America; in many cases it is obviously of recent European origin.

In their folktales and myths, South American Indians have shown considerable interest in the origin of fire, of useful plants, and other cultural goods. Often either the culture hero or the Twins have made these available to men; many are also attributed to the intervention of helpful animals. Almost as common as flood myths are those describing the introduction of fire. Usually fire was owned by some animal or monster, from whom it was stolen by the culture hero or some animal. There are also many stories telling how men obtained their staple food plants. According to a widespread tradition (Peru, Guiana, Brazil), they grew from the body parts of a mysterious child who was killed or appeared suddenly. According to a very popular myth found in the Guianas and among the Cuna and the Choco Indians, all the food plants grew on a single big tree (theme of the tree of life) which was felled by the culture hero. In the trunk was water which flooded the world.

Sun and moon are often identified with objects, for instance, feather balls, which were stolen from their

original owners, the vultures (Bakañri) or a feather head-dress worn by a man.

The constellations are named after animals and men; myths explain how they went to the sky. Orion was a man whose leg was severed by his unfaithful wife (Arekuna). Some tribes personify natural phenomena like rain, lightning, and fire. The Thunderbird motif figures also in Chaco and Amazonian folklore, but does not have the importance it enjoys among North American Indians.

The most familiar protagonists of South American folklore are spirits and animals. A large part of Guiana folklore consists of stories of men who met spirits and who, through their cleverness, succeeded in escaping. Sometimes the spirits are depicted as friendly beings who are willing to help people, but their amiable contacts with men generally have a bad ending because they are touchy, shy, and subject to tabus. In many tribes a favorite story is about a man who went to live with the spirits and brought back the knowledge of plants or useful arts. Spirit stories are often animal stories because the supernatural characters involved are the spirits of animal species. The cycle of the culture hero includes a large number of animal characters, and we have already seen that animals play the part of civilizers and benefactors in the traditional lore of many tribes.

In the Chaco and in Peru, the main hero of the popular oral literature is Fox, the Trickster, who is greedy, mischievous, and stupid. His aggressive and ambitious disposition leads him into adventures which end disastrously and make him a laughable, abject character.

The classic cycle of animal stories in the Amazon basin and in the Guianas is built around a small land turtle, *jabuty*, who, though slow and small, outwits jaguars and other strong animals. There is some doubt, however, whether turtle stories are all of Indian origin. Many have a distinct African flavor and may have been spread by the Negro slaves.

An etiological intention is the basis of many animal stories. They have been inspired by some peculiarity of the species which is explained by an adventure or an accident that happened to an ancestor.

As South American folklore becomes better known, parallels with the myths and tales of North American Indians multiply. Resemblances cover not only the motifs but sometimes their combinations and small details, as for instance, the myth of the giant with a stone heart, and the marriage of Trickster with his daughter. A few of the common traits may be listed here: Trickster juggles with his eyes, the flying or rolling head, the star woman, the obstacle flight, magical pregnancy, miraculous recognition, the sharpened leg, the misfortunes of Fox, and Trickster's adventures. The last cycle follows the pattern of the well-known Coyote stories.

Other Forms of South American Indian Oral Literature In addition to prose tales, South American Indian folklore includes other forms. Poetry exists but is inseparable from songs and chants. Often songs are merely strings of meaningless syllables, or short ditties whose meaning is difficult to ascertain (Tierra del Fuego, Chaco, Caingang). In the Guianas and in the Chaco, brief and often trivial statements may be sung over and over again. Among the Yaruro, a very primitive tribe of Venezuela, shamans are said to compose long poems describing their voyages to the land of the spirits. The ancient Abipón

and the Mbayá of the Chaco recited epic songs relating to exploits of their ancestors. Some form of epic poetry seems to have existed in Peru and might have been used by the Spanish chroniclers for their accounts of Inca history. Poetry was well developed among the Incas; unfortunately few specimens have been preserved.

Indians who have kept their native culture do not seem to know either proverbs or riddles. The Araucanians are the only tribe among whom a substantial collection of proverbs has been made, but here one cannot disregard the possibility of strong Spanish influences. As far as is known only the Minuane of the Rio Putumayo have riddles. Elsewhere there is not the slightest evidence of their existence.

Peruvian Indian Folklore In the countries where the influence of the Inca empire was strongly felt, such as Ecuador, Peru, Bolivia and the northwest of the Argentine, there exists a wealth of traditional beliefs and customs which give a fundamental unity to the area and set it apart within the continent. Modern Andean folklore is, to a large extent, a heritage of Inca civilization, but in the transmission it has suffered many losses and has incorporated many extraneous elements.

The Peruvian and Bolivian Indians reacted to Christianity very much as the European peasantry did at the beginning of the medieval era. Catholicism was imposed on the Indian masses soon after the overthrow of the Inca empire in 1532. After more than half a century the Spanish clergy discovered that the rural population had remained pagan under a very thin veneer of Christianity. The ensuing campaign to extirpate "superstition" failed; for modern Indians are still surprisingly faithful to the ancient deities and the ritual of their pagan ancestors. Four hundred years of Catholicism have, however, left their imprint. Ancient beliefs and practices are intermingled with Christian doctrines and rites. Some old gods have been forgotten and saints have been adopted in their pantheon. The degree to which Quechua and Aymara Indians cling to old beliefs varies in different regions, yet even in large cities, such as La Paz, the Indian proletariat holds to the past. In large sections of the city market, herbs, magical substances, and ingredients for sacrifices are openly sold to numerous patrons.

The religious system which the Spaniards found in the Inca empire was elaborate. It combined the cult of the great nature gods with that of countless nature spirits, especially those of the mountains and of the rivers. The cult of the sun, the ancestor of the emperor, was supported and spread by the state. There were theologians who devised a divine hierarchy presided over by a Supreme God, Viracocha. The deities, great and small, were served in sanctuaries attended by trained priests and by the famous maidens of the sun.

Modern Quechua and Aymara Indians have forgotten most of the major gods of their ancestors. In Peru, the Quechua still regard the sun as a benevolent and powerful godhead, but one who is removed from human affairs and on the same plane as God, the Father, and Jesus. On the other hand, all the Indians from Ecuador to Argentina, still have a deep attachment to the earth goddess, Pacha-mama, who bestows fertility on crops and herbs. So great is her importance that she is often equated to or identified with the Virgin Mary. In most of their feasts, the Indians make offerings and sacrifices

to the Pacha-mama and implore her help. The thunder god, Illapu, who was also very popular in the old empire, has survived in the guise of Santiago (Saint James, patron of Spain). He demands the sacrifice of a white llama whenever he strikes the ground with lightning, and from him emanate the mysterious powers possessed by priests and shamans.

The villagers of the Andes render a cult to the spirits of the mountains, lakes, and rivers. These supernatural beings, according to the region or the category to which they belong, are known as *achachila*, *apo*, *auki*, or *mallcu*. The sites from which the ancestors of a community are believed to have emerged to the surface of the earth are still regarded as sacred places and the Indians visit them to get comfort and strength. The welfare of villagers, of their crops and herds is still dependent on the virtues of some fetish (*samiri*) which may be a rough stone or some other object. Aymara Indians keep in their houses stuffed wildcats and hawks, which are tutelary spirits. Twice a week offerings are placed before them. The demons who were the supernatural custodians of the game or of the fish continue to receive the prayers and offerings of hunters and fishermen. Modern Indians are no less afraid than their ancestors to meet in the solitudes of the Andes such cruel spirits as the *Anchanchu*, the *Ccoa*, the *Larilari*, etc.

Although modern ceremonies and rites are only pale memories of the solemn and elaborate feasts celebrated in the days of the Inca empire, many of their salient features have been preserved. Human sacrifices, which formerly seem to have been common, have disappeared, but llamas, alpacas, and guinea-pigs are still consecrated to the gods or the saints and are killed according to the ancient rules. The oozing blood, for instance, is still mixed with different sorts of flour and is sprinkled in the four cardinal directions. The Incas offered to their gods gold objects and clothes; their descendants present more modest tribute, but still know how to select and to prepare the many ingredients which were combined in the *chachhalla*, the ritual libations. Fetuses of llamas or sheep are often burned as substitutes for the animals which are beyond the means of the impoverished Indians.

Each month of the Inca calendar was marked by some feast. Most were festive ceremonies to ask the gods for a good harvest; others commemorated magico-religious events, such as the expulsion of the bad spirits, or honored the sun god. The feast of *Inti raimi*, which took place at the time of the June solstice, is said to have been surrounded with unsurpassed splendor. The fiestas of the modern Quechua and Aymara perpetuate in our time some of these festivities. They are the occasions for the display of wealth in the form of costumes embroidered with silver, splendid headdresses, and carved and painted masks. The dances are often pantomimes which derive directly from magico-religious performances, such as the *choqela* dance in Bolivia, which imitates the incidents of a hunting drive against vicuña and the slaying of one of these animals.

Agrarian ritual probably has altered little in the course of centuries. Work in the field is regulated by the phases of the moon. Before sowing or harvesting, omens are carefully observed. Fields are plowed by oxen, profusely decorated, to the accompaniment of songs. Maize beer and coca leaves are thrown into the furrows

to propitiate the earth mother and the local spirits. After harvest, sacrifices and offerings are again made. At a communion meal, music is played and dances are executed to keep the souls of the plants in the fields.

Now as formerly, the everyday life of the Indian is permeated with magico-religious practices; libations and sacrifices must be made before or after any undertaking. No Indian would leave his house for a journey without spilling alcohol on the ground, and muttering an invocation to the Pacha-mama, the saint, and the tutelary spirits of his village or of his house. Every time a Quechua or Aymara traveler climbs a hill he throws a stone or a handful of coca on the *apacheta*, a heap of stones built by generations of travelers. This rite is performed not only on the ordinary passes of the Andes, but even at the beginning of the streets leading into cities. The trade in amulets, charms, and magic herbs flourishes all over the highlands. A caste of ambulant vendors, the *collahuallas*, visit the most remote villages to cure patients by pre-Columbian methods.

Many functions of the Inca ceremonial priests have been taken over by village medicine men who today make the sacrifices and offerings to the gods and lead the ceremonies. These men also are the heirs of the popular shamans who summoned spirits, cured diseases, and counteracted witchcraft. They practice divination with coca leaves or by consulting the viscera of sacrificed animals. Witchcraft is greatly feared by the Indians. The leeches bewitch their victims by subjecting their exuviae or symbolic figures to rites of sympathetic magic. Cures are often based on the principle of the "scapegoat"; a llama is charged with the clothes of the sick and expelled from the village, or objects which have been in contact with the patients are left on the road in the hope that someone will find them and carry the disease away.

The customs observed by the modern Andean Indians at the time of various life crises combine ancient magic rites with practices borrowed from the Spaniards. At childbirth evil spirits are kept at bay with charcoal and a knife; the afterbirth is buried with miniature utensils to make the child a good worker, etc. The first cutting of the hair is as important a ceremony today as it was in Inca time. The *huarachicoy* ceremony, the puberty rite of the Incas, which was performed annually in the Cuzco was partly religious and magical, partly a series of tests of strength and courage. Because it was celebrated exclusively on behalf of the nobility, it disappeared with the fall of the empire. Modern Indians do not attach any special significance to the transition from childhood to adulthood.

The custom of the *sirovinacuy*, or trial marriage, is well established among the Quechua. In some districts of Peru, betrothals take place on a certain day of the year, as seems to have been the case in the old empire. The marriage ceremony among the Aymara is often followed by a mock kidnapping of the bride and the pursuit of the couple.

Death requires of the mourners the observance of a whole set of ceremonial practices. Not long ago, the Aymara still strangled dying persons to liberate their souls. Black as a sign of mourning is an old pre-Columbian tradition. During the death vigil, the clothes and other belongings of the deceased are gambled away with a die made of a llama astragalus. Armed men keep

watch around the mortuary house to prevent the new ghost from carrying off with him the souls of his relatives and friends. From time to time the sentries cast stones from slingshots to frighten away the ghost. Ashes are strewn on the threshold during the night. The marks which are found the following day are considered clues, which foretell the death of some other members of the community. A llama may be sacrificed to accompany the dead person to the other world. The Indians of the northwest of Argentina kill a dog which will help the soul to cross a river. The personal belongings of a dead person are often destroyed.

Worship of the dead had a prominent place in Inca religion. Dead emperors remained in their palaces and were taken on solemn processions during certain feasts. The Spanish Inquisitors often refer to the obstinacy with which the Indians, despite the strictest prohibitions, continued to render a cult to their dead. In October of each year, the Aymara hold a ceremony for the skulls which they dig out of the graves and have a drinking bout to send away the souls. On All Saints Day, they bring food to the cemeteries where they share it with persons who are willing to pray for their dead.

It would be impossible to list all the minor practices of the Indians, the omens which they observe, the practices which they follow to avert bad luck. Those which have been recorded show, like their popular religion, a strange blending of old Indian beliefs and European superstitions.

Folklore of the Primitive Tribes of South America. East of the Andes, from the Guianas to the Gran Chaco, lived and in many areas still live countless small tribes whose civilization may be roughly classified into five types: the forest tribes of the Guianas and of the Amazonian basin, the more or less archaic tribes of eastern and southern Brazil (Ge, Botocudo, Bororo, etc.), the Chaco Indians (Toba, Mataco, Abipón, Mbayá), the tribes of the Pampas (Charrua, Puelche, Tehuelche, Pampas, etc.) and the tribes of Tierra del Fuego (Ona, Yahgan, Alacaluf).

Compared to the people of the Andes, the natives of the plains and plateaus of South America have simple and primitive cultures. There are considerable differences between the various culture areas, but underlying them are many common outlooks on the world and some basic attitudes toward the supernatural.

The vision of the universe shared by all these Indians may be termed animistic in the full sense of the word. Nature appears to them to be the abode of countless spirits who are powerful and elusive, but not fundamentally different from human beings. In Tierra del Fuego, however, animism occupied a secondary position in relation to a highly developed theism.

The spirits are conceived by most Indians as touchy creatures who, for this reason, are apt to be harmful. Many of them are definitely malicious and by temperament inclined to persecute men (the *kanaima* spirits of the Guiana Indians, the *anan* of the Tupi-Guarani, for example). Others, as the servants of shamans, are responsible for disease and death. In each tribe there is a rich spirit lore. Through tales and traditions every Indian is familiarized from childhood with the appearance, the ruses and deceptions of these supernatural beings. This knowledge helps him to avoid the dangers lurking about. He learns that at night he must travel with fire

to ward off spirits (Tupi, Carib, etc.); before passing rapids he must rub his eyes with Cayenne pepper (Guiana); offerings must be made when a storm threatens (Tupinamba); he knows that certain puzzling contraptions may delay the spirits who follow his tracks (Macushi); that changing his name may disconcert a revengeful supernatural. He knows also that masks worn at feasts have coercive power over demons (Indians of the Caiari-Uaupes region). The tales and myths which he hears at night teach him to recognize the presence of spirits by the noises they make, or to detect them when in human guise they approach him with evil intentions.

Most spirits that appear to men belong to large groups, each of which has common characteristics. There are water, mountain, air, tree spirits, just as there are spirits that have protruding eyebrows, jointless limbs, or hairy skin. Some spirits stand out of these undifferentiated crowds because of their distinctive personality and may be called demons. Natural phenomena, though often personified in myths and tales, are seldom regarded as deities or even demons. It is only in the religion of the Apinaye, Sherente, and Timbira that Moon, Sun, and Planets are divinities that appear to men, listen to their prayers, and bestow favors on them. There are also some faint traces of a solar cult among the ancient Guarani. Thunder, among the Tupinamba and Guarani, was so colorful a demon that the first missionaries promoted him to the dignity of the Christian God. Of special importance are the "Fathers" and "Mothers" of game animals and fish because of the control which they exercise on food resources. Certain demons would deserve the title of god if they received a regular cult. For instance, the goddess Tae of the Tucuna and the cannibal god, Kumaphari, of the Shipaya. Their will is felt by men, but little is done to placate them or to obtain favors.

The Great Ancestor mentioned in the cosmogony is no more than a vague figure lost in the night of time. Now and then certain tribes, such as the Caingua or the Guarayu, make efforts to approach him. Contrary to the common notion that belief in a supreme god occurs only at a high level of civilization, in South America it is among the extremely primitive tribes of Tierra del Fuego that theism has found its highest expression. The Powerful One was conceived as an invisible spirit without material needs, omniscient, and all-powerful, who lived in the sky beyond the stars. Prayers and simple offerings were the only manifestations of his cult. He was entirely separated from all the other spirits and presided alone over the universe.

Ghosts are generally confused with the invisible swarms of spirits and it is seldom that a strict distinction is made between them and the other supernatural beings. For the Bororo, for instance, the two categories of spirits were carefully differentiated and each had a special kind of shamans as mediums.

Everywhere in primitive South America, the relationship between man and the supernatural is the special concern of professional shamans, the *piay* of the Amazonians, the *machi* of the Araucanians. They enter this career after a long training during which they feast and take narcotics to get visions. Many shamans claim to have been chosen by the spirits to become intermediaries between the supernatural world and mankind. In order to be a shaman, one must possess magic chants and have

invisible missiles (darts, quartz pebbles, some amorphous substance) inside the body. Shamans are credited with the power of sending their souls away to see the spirits or to witness events in distant places. They also summon spirits and converse with them in the presence of the people. Actual possession, that is to say the belief that a spirit has entered a man and speaks through his mouth, is rare in South America (Bororo, Tenetehara, Toba).

The principal function of the shaman is to cure disease. Ailments are usually explained by the presence of some pathogenic object or animal in the patient's body or by the kidnapping or loss of the soul. The former theory is by far the most widespread and determines the usual treatment. The shaman, after having blown smoke on his client, sucks his skin with great energy to extract a stick, a stone, or an insect which, he explains, was the missile sent by the witch or by a spirit that assumed material form. If the disease is diagnosed as soul loss, the shaman looks for it and tries to recapture it. The cures, irrespective of the method used, are accompanied by the recitation of spells and also by treatment with herbs and other drugs. The scientific knowledge of the Indians has been somewhat exaggerated. By no means all the products used in their pharmacopœia actually have medicinal worth.

Shamans foretell the future, make rain fall, secure abundance of game and fish. They also take the lead in magico-religious ceremonies.

Even more than in the Andean region, the daily activities of the Indians are interwoven with countless magico-religious practices. Hunting, fishing, warfare are surrounded with the tabus and magic rites, as is also the firing of a pot, or the playing of a game. Whenever an Indian strives toward an aim in which he feels there is an inevitable element of chance or incertitude, he resorts to charms, magic performances, or propitiations to ensure success. The ordeals to which the Guiana Indians submit themselves voluntarily, such as ant bites or flagellations, are, in their eyes, means to increase their strength, their skill, and their good luck. For the same reason they pass knotted cords through their noses into their mouths. Around the houses they grow *binas*, i.e. plants which help them to find and kill game animals. In the Chaco, the Indians prick themselves with awls to fight fatigue and impart to their bodies the qualities of the animals from whose bones their awls are made.

Warfare among many South American Indians was accompanied by many magico-religious practices. Omens were always consulted before the campaign. Dreams assumed an enormous importance. Before leaving for the battlefield, the ancient Peruvians sacrificed llamas which were starved in order to weaken magically the hearts of the enemy. The Jivaro executed posture dances which were believed to have a magic influence on the issue of the war. Various food tabus were also observed before and during the campaign. Thus, for instance, the Toba refrained from eating the head or the legs of game animals. Among the same Indians women could not spin or twist strands on their thighs and girls could not sit on the ground. The Araucanian shamans blew tobacco toward the enemy's land and recited charms which they expected to bring ruin and destruction to their foes.

Yuracare and Mosetene hunters appease the souls of the game which they have slain with flatteries and gifts.

They keep the bones away from their dogs and bury them in the forest in the hope and expectation that they will be turned into new game animals.

Chanting and rattling of a gourd with seeds inside are the most usual methods of coercing the supernatural and of facilitating the realizations of one's wishes.

Magico-religious folklore also tends to cluster around the main crisis in man's life. Pregnancy obliges a woman and her husband to observe the strictest tabus. They shun any food and any action which magically may affect the physical and moral condition of the child or complicate childbirth. For instance, both parents do not eat animals or plants which have some salient peculiarity which may pass to the infant, such as a long nose, black color, twisted limbs, etc. Similarly the husband must not tie anything lest the delivery be slow (Mataco). Immediately after the birth of a child a man subjects himself to tabus which (in South America) have been improperly likened to the European couvade. For a period which varies in different tribes from a few days to several months, the father avoids engaging in any activity or eating any food which might endanger the life of his child. For instance, he may neither use cutting instruments nor eat heavy food. (Couvade was especially strict among many Tupi, Guarani, Carib, and Arawakan tribes, and also among the ancient Abipón.) During this enforced idleness, the father rests in his hammock; this has been falsely interpreted as a symbolic lying-in. Twins often are killed at birth lest they bring bad luck. The name given to a child is inseparable from his personality. Frequently names are kept secret (Chamacoco, Mataco) or are changed whenever a person is sick or is threatened by some supernatural danger, for instance after the death of relative (Tierra del Fuego, Chaco Indians).

The first appearance of puberty in a girl is a momentous event for her and her family. She is generally secluded in some corner of the house or in a special hut where she must fast and sometimes do symbolic work, for her behavior at that time may determine her character. In many cases, severe ordeals such as flagellation, ant bites, excision of the clitoris, are part of the puberty ritual.

Puberty ceremonies are less frequent for boys. However in some tribes (Apinayé, Sherente, Timbira, Chamacoco, Ona, Yahgan, Alacaluf) they assume considerable importance and are the highest manifestations of their religious life. Among the Ge tribes of eastern Brazil, the complex initiation rites and the long periods of seclusion formed cycles sometimes extending over ten years.

The initiation rites of the Fuegian Indians were also occasions in which the religious, ethical, and social aspects of their culture took a dramatic expression. The candidates were secluded for several months and became hardened by a harsh life and strenuous exercises. Among other things, they had to drink through a hollow bone tube. At the same time their elders instructed them in the tribal ethics and lore. Among the Ona, the initiation was also a pretext to reassert the dominance of men over the women. Masked dancers did their best to inspire terror in the women and to convince them that the boys were in the hands of dangerous spirits. The same rites occurred in some tribes of the Chaco. Flagellations and other cruel ordeals figure also in the male

puberty ceremonies of many Guiana and Venezuelan tribes.

Death unleashes the most varied expressions of grief and fear. The corpse is generally buried with greatest haste; the funerary house and sometimes the whole village is abandoned. However in most tropical tribes, the dead are buried under the floor of their own houses. Wailing for the deceased at first takes the form of vehement reproach for his desertion, later it becomes a ritual crying performed at set hours. The mourners cut their hair, gash themselves (e.g. the ancient Charrua of Uruguay mutilated their fingers). The name of the departed becomes tabu and if it includes a word in common usage, this word also is avoided (Abipón).

It is frequent, among South American Indians, for a widow, after the death of her husband, to be secluded in a corner of the hut or in a special cabin. The confinement may last for a few days (Minuane, Guenoa), or several months (Mataco, Pilaga, Vilela, Cobeuo), to a year (Araucanians of the Pampas).

Amazonian and Guiana tribes practice the second interment; i.e. they unearth the bones and place them in a vase or basket which is kept in the house.

Fear of ghosts is everywhere strong, but has rarely led to an organized cult of the dead. Ghosts are part of the spirit world. After remaining on earth for a certain time, they are said to go to special countries where they lead the same life as here. The journey of the soul to the afterworld is fraught with many dangers which are described in the mythology (Guaryu, Tembe, for instance).

ALFRED MÉTRAUX

Southern Cross The Chaco Indians interpret the stars of the Southern Cross as hunters and dogs that pursue a rhea. The Conibo describe it as the skeleton of a manatee. [AM]

Soyal or Soyala Hopi Indian nine-day winter solstice ceremony celebrating Sun's arrival at his house. Soyola follows directly after the WüWüchim ceremony in which Hopi youths are initiated into tribal status. At Soyala prayers are said for the new year, and the way is "opened" for the return of the kachinas who have been absent since the Shalako (Zufi) or Niman (Hopi) ceremonies the previous July. The summer solstice is also observed by the pueblo peoples, but ceremonial celebration is everywhere less important than at the winter turning. [ewv]

Spanish ballad The Spanish ballads constitute the national popular narrative poetry *par excellence* of Spain. In view of their historical origins and their realism they represent better than any other type of popular or learned poetry the ideals, feelings and sentiments of the Spanish people. They are the symbols of the national spirit, the quintessence of the soul of Spain, and they are a contribution of permanent value to universal literature and folklore. For these reasons they have been a source of inspiration to all lovers of the beautiful, Lope de Vega, Cervantes, Corneille, Chateaubriand, Lockhart, Longfellow, Herder, Jacob Grimm, the Schlegels, Zorrilla, Marquina, and a host of others.

The most important groups are the following:

I. The old historical ballads.

II. The historical ballads not considered old, dating perhaps from the 16th century.

III. The frontier ballads, or ballads that relate the history and legends of the Conquest of Granada.

IV. The Carolingian ballads.

V. The ballads of the Breton cycle.

VI. The chivalric and novelesque ballads that narrate the choicest lyric themes of the general folklore of Europe.

The historical ballads are the oldest, the most truly national, and in all respects, the best of the *romancero*. Some of them have passed the national frontiers and have become the common possession of the master-spirits of literature in many countries. Their origin and development is most fascinating. The literary discussion concerning the origin of the Spanish ballads began when Friedrich Schlegel discovered the beautiful Spanish ballad of Count Alarcos and inspired by its tragic love story, composed the first tragedy of the Romantic School and presented the play at Weimar in 1802. They were looked upon by the romanticists as the popular, traditional poetry *par excellence*. The *romances* were supposed to be hoary with age and some, such as the German scholar Karl Lachman, thought that the ballads of Spain represented the earliest examples of Spanish epic poetry and from them there had developed the long epic poems. The Spanish ballads are not older than the 16th century; and instead of giving origin to the epic poems, some of the old historical ballads are themselves derived from the longer and older epics.

The old epic poems of Spain were composed in the 11th and 12th centuries during the first centuries of the definite triumphs against the Arabic invaders. They represent the intense national and religious feeling of the Castilians in their three times secular struggle to reconquer Spain and achieve national and religious unity. They were composed for an aristocratic public, and sung or recited in the palaces of kings and noblemen, or in the midst of the Castilian hosts that marched to the battlefields. These long epics were not popular anonymous or communal poetry. There were about a dozen long epic poems of this character composed in Castile in the 11th-12th centuries. Only two have come down to us, in anything like their original form, the famous *Cantar de mio Cid* or *Poem of The Cid*, and the *Crónica Rimada*, or *Rimed Chronicle of The Cid*. The others have been discovered by modern investigators, especially Menéndez y Pelayo and Menéndez Pidal, in the prose chronicles of the 13th and 14th centuries.

These old, aristocratic, and noble epics, however, did not disappear after they were prosified in the chronicles. They became in the 13th and 14th centuries the poetry of all classes, both aristocratic and plebeian. The 13th and 14th centuries are the centuries of the bitterest part of the great struggle between Christian and Moslem Spain. The first victories of the 11th and 12th centuries had given a great impetus to the reconquest, and the capture of Toledo, Zaragoza, and later Seville and Cordoba had developed in reality a great united Spain out of the haughty and glorious Castile of two centuries before. The intensity of the struggle created a new and powerful nationalism, and the old Castilian Counts Fernán González and Garci-Fernández, the Castilian Kings Fernando el Grande, Sancho II, and Alfonso VI, and the great and invincible Castilian hero, the Cid, all sung in the best of the old epics, were no longer Castilian

aristocrats of a bygone age. In the 13th and 14th centuries they belonged to all Spain and to all classes of society. The old epic poems that sang their deeds became the common property of all Spaniards, and became popular and democratic.

But the ordinary memory of man could not and would not preserve the epic poems in their entirety and the result was that the nobleman, the soldier, the man in the street, carried away in his memory certain episodes of the epics: those that pleased his fancy; those that had a universal, human appeal; those that flattered his national vanity. These episodes of the old epics, preserved in the oral tradition of the people, popularized, changed and developed, were finally fully appreciated as real, popular traditional poetry and collected from oral tradition in the *romanceros* or ballad collections of the 16th century. These old epic episodes, isolated parts of the old epics, are precisely, *our oldest and best historical Spanish ballads*. Their form and spirit, even their meter, are similar to those of the epic poems from which they are derived. They differ from them only in length, being of a fragmentary character, and in their intensely popular and national character.

Not all the historical ballads that have come down to us since the 15th century are derived from the old epics. The genre once developed toward the end of the 14th century ballads began to be composed independently. The most popular themes of the old historical ballads are: the heroic struggles of Count Fernán González, "the Good Count," the first count of an independent Castile, against the Mohammedans on the one side and against the autocracy of the kings of Leon on the other side, the imprisonment and freeing of the count on two different occasions, etc.; the epic battles between the sons of Fernando el Grande, in the age of the Cid, the 11th century, for possession of the divided kingdom of Castile, Sancho, Alfonso, Urraca and García; the death of Sancho at the siege of Zamora by the traitor Vellido Dolfos; the ritual challenge and consequent duels of Diego Ordóñez de Lara at Zamora; the rise and numerous exploits of the Cid, the most popular of Castilian heroes; the struggles of Castile for supremacy and its final triumph with Alfonso VI and the Cid, etc.

As an example of an old historical ballad I give below a Cid ballad in the English translation of John Gibson Lockhart, whose work, *Ancient Spanish Ballads, Historical and Romantic*, published in London in 1823, is now a classic among English-speaking peoples. The ballad narrates the episode of the old epic where the Young Cid goes to Burgos, the capital of Castile, with his father, to do homage to the king, but refuses to kiss the king's hand.

The Young Cid

Now rides Diego Laynez to kiss the good King's hand;
Three hundred men of gentry go with him from his land;
Among them, young Rodrigo, the proud Knight of Bivar;
The rest on mules are mounted, he on his horse of war.
They ride in glittering gowns of soye—he harnessed like
a lord;
There is no gold about the boy, but the crosslet of his
sword;
The rest have gloves of sweet perfume—he gauntlets
strong of mail;
They broidered cap and flaunting plume—he crest un-
taught to quail.

All talking with each other thus along their way they
passed,
But now they've come to Burgos, and met the King at
last;
When they came near his nobles, a whisper through
them ran—
'He rides amidst the gentry that slew the Count Lozan.'
With very haughty gesture Rodrigo reined his horse,
Right scornfully he shouted, when he heard them so dis-
course;—
'If any of his kinsmen or vassals dare appear,
The man to give them answer, on horse or foot, is here.'—
'The devil ask the question!' thus muttered all the
band:—
With that they all alighted, to kiss the good King's hand,
All but the proud Rodrigo—he in his saddle stayed—
Then turned to him his father (you may hear the words
he said.)
'Now, 'light, my son, I pray thee, and kiss the good
King's hand,
He is our Lord, Rodrigo—we hold of him our land.'—
But when Rodrigo heard him, he looked in sulky sort—
I wot the words he answered, they were both cold and
short.
'Had any other said it, his pains had well been paid,
But thou, sir, art my father, thy word must be obeyed.'—
With that he sprung down lightly, before the King to
kneel,
But as the knee was bending, out leapt his blade of steel.
The King drew back in terror, when he saw the sword
was bare:
'Stand back, stand back, Rodrigo! in the devil's name,
beware!
Your looks bespeak a creature of father Adam's mould,
But in your wild behaviour you're like some lion bold.'
When Rodrigo heard him say so, he leapt into his seat,
And thence he made his answer, with visage nothing
sweet:—
'I'd think it little honor to kiss a kingly palm,
And if my father kissed it, thereof ashamed I am.'—
When he these words had uttered, he turned him from
the gate—
His true three hundred gentles behind him followed
straight;
If with good gowns they came that day, with better arms
they went,
And if their mules behind did stay, with horses they're
content.

Next in importance to the old historical ballads are the frontier ballads. These ballads have to do with the conquest of Granada, the final triumph of Christian Spain in its seven-century struggle against the Mohammedans and with the realization of national unity. They come into existence in the midst of the battles they describe, they have the realism, and spirited dialog of the historical ballads and like them are the quintessence of Spanish character. The frontier ballads of the 14th and 15th centuries are much nearer the sources they deal with and are very often real history. In view of their equally intensive nationalism and chivalric character, however, they came to be by the middle of 16th century as popular, if not more so, than the old historical ballads; and one of the most popular works of the Spanish literature, *Las Guerras civiles de Granada*, or *The Civil Wars of Granada*, of Pérez de Hita, a novelistic history of the epic struggle, has documented for us many of the best of these ballads, and is inspired in them. This is the fascinating novelistic history of the glorious and triumphant Spain of the Catholic Kings,

Ferdinand of Aragon and Isabella of Castile, that Washington Irving read when a boy and later described in his *Chronicle of the Conquest of Granada*.

The subject-matter of some of the best of the frontier ballads may be briefly outlined: the story of the lamentations of the Moors when news is received at Granada of the capture of Alhama and Antequera; the heroic deeds of the young Bishop of Jaen, Don Gonzalo, who marches to battle with his Castilian army, and when he alone remains attacks his enemies single-handed, fights with utmost valor, is finally captured and taken as a prisoner to the dungeons of the Alhambra; the romantic and memorable departure of the King of Granada, Boabdil, to attack the Castilian hosts, accompanied by the flower of Moorish nobility, all armed with silver helmets and swords the hilts of which are of shining gold, the Moorish mothers, wives, and lovers weeping, but applauding and urging them to defend the fatherland; the daring deeds of the Moorish knight Tarfe who fights his way to the very gates of the camp of the Catholic Kings and insults the Castilians by riding about with a portrait of the Virgin Mary tied to the tail of his horse; and the valiant deeds of the Castilian nobleman Garcilaso de la Vega who secretly leaves the Christian camp, challenges the Moor, and when despised on account of his youth opens the duel and slays him, removes the Ave-Maria from the Moor's horse and kisses it with great reverence; the daring sally of the Castilian hosts under the leadership of don Alonso de Aguilar to attack a powerful Moorish army near Granada, their crushing defeat, and the gallant fight of don Alonso who is finally killed by the Moors. Some of the very best of the frontier ballads are those where Spanish ballad-poetry has been actually denationalized in order to seek a more human, more universal form and spirit.

A good example of a frontier ballad is the ballad of Abenámár, where King don Juan II of Castile is represented as being deeply in love with Granada, pictured to us as a bride, whom he ardently longs to possess. I give the English translation of James Young Gibson, *The Cid Ballads and other Poems*, London, 1887.

Abenámár

'Abenámár, Abenámár,
Moor of Moors, and man of worth,
On the day when thou wert cradled,
There were signs in heaven and earth . . .

'Abenámár, Abenámár,
With thy words my heart is won!
Tell me what these castles are,
Shining grandly in the sun!

'That, my lord, is the Alhambra,
This the Moorish Mosque apart,
And the rest the Alixares
Wrought and carved with wondrous art.' . . .

Up and spake the good King John,
To the Moor he thus replied:
'Art thou willing, O Granada,
I will woo thee for my bride,
Cordova shall be thy dowry,
And Sevilla by its side.'

'I'm no widow, good King John,
I am still a wedded wife;
And the Moor, who is my husband,
Loves me better than his life!'

The Carolingian ballads treat of subjects that belong to the cycle of Carolingian chivalry. They are popular and traditional and narrate in Spain the exploits and wonderful deeds of Roland, Renaud de Montauban, the Marquis of Mantua, and some of the other twelve peers of France, and other marvelous adventures only vaguely related to the Carolingian cycle or to French epic sources. These ballads bring to the *romancero* more sentimentality, more of the love themes, often very passionate, and more elegance in the form of composition. The national Spanish ballads are tranquilly objective, realistic and austere. The Carolingian ballad brings to it the refinement and perfection of form of a more refined, yet almost superstitious and romantic age. The ballads of French origin bring to the *romancero* the new themes of unbridled passion, enchantment, divination, prophetic dreams, prodigious and enchanted trees and fountains, cursed sons that are turned into beasts, etc., all foreign to the old Castilian ballad. But by the 16th century these ballads were nationalized, they became as popular as the originally national ones, and like them were known by young and old in all walks of life.

The novelesque ballads are very old, perhaps as old as any of the historical ballads derived from the epics, and are some of the best of the *romancero*. They have as subject-matter the more universal, human themes of love, fidelity, honor, valor, vengeance, and ideal justice. They are chivalric and romantic and the lyric element is often predominant. The contents of some of the best known may be given here. One of the most popular narrates the romantic story of the ideal knight and lover, who is loved by all ladies who lay eyes on him, even to the point of giving their lives for him. There are several beautifully tragic ballads of this type, Gerineldo, classed as a Carolingian ballad, Virgil, Tristan, and Lancelot of world fame. Other novelesque ballads treat of: the faithless wife who is surprised by the husband and her subsequent death, an oriental theme; the wedding that was to be or the finding of the long-lost husband, a common theme in European folktales; the story of the persecuted woman, wife or daughter, also a common theme in the folktales; the romantic story of the warrior-woman, the daughter of a prince who disguised as a knight goes to war in the king's service for seven years and in the end marries the king's son; the knight who returns from war and speaks to his wife who does not recognize him; the charming lyric themes of the prisoner's lamentations; the sad wanderings of the turtle-dove that has remained a widow and in grief; the Lorelei story found in the ballad of Count Arnaldos; and finally the narrative of Count Alarcos, dramatized by Lope de Vega and Friedrich Schlegel.

As an example of a novelesque ballad, I give below in the English translation of John Bowring, *Ancient Poetry and Romances of Spain*, London, 1824, the ballad of Fonte Frida, the theme of which, fidelity in love, has a universal appeal.

Fount of freshness! fount of freshness!
Fount of freshness and of love!
Where the little birds of spring-time
Seek for comfort as they rove;
All except the widow'd turtle—
Widow'd, sorrowing turtle-dove.

There the nightingale, the traitor!
Linger'd on his giddy way;
And these words of hidden treachery
To the dove I heard him say:
"I will be thy servant, lady!
I will ne'er thy love betray."

"Off! false-hearted!—vile deceiver!
Leave me, nor insult me so:
Dwell I, then, midst gaudy flowrets?
Perch I on the verdant bough?

Even the waters of the fountain
Drink I dark and troubled now.
Never will I think of marriage—
Never break the widow-vow.

Had I children they would grieve me,
They would wean me from my woe:
Leave me, false one!—thoughtless traitor!—
Base one!—vain one!—sad one!—go!
I can never, never love thee—
I will never wed thee—no!"

The real greatness of the *romancero* or Spanish balladry is to be found in the fact that it inspired, gave origin to, and created one of the great dramatic literatures of the world. The best of the dramatic productions of Lope de Vega and Guillén de Castro and others are inspired directly in the historical ballads, found for the most part in the oral tradition of the 16th century. Even the legend of *Don Juan* is found in an old Spanish ballad from which Tirso de Molina may have taken it to join it to the theme of the double invitation and give it the definite artistic form that the world admires.

The ballads of Spain have an importance, a literary history, that surpass the importance and literary history of the ballads of any other nation. They influence and give inspiration, subject-matter, and even literary form to the most important literary genres and develop a great national drama, a drama that has been a source of inspiration for dramatic composition for all countries since the 17th century.

But this is not all. The Spanish ballads have long ago traversed the national frontiers to be translated into other languages, to be incorporated into poetic legends, and to be dramatized by the lovers of the beautiful in all lands. Some of them, a few of the Cid ballads, Carolingian ballads, and novelesque ballads, for example, are now the common property of universal literature.

If the real worth of Spanish balladry as a lasting work of art is to be found in their human appeal as manifested in their world-wide popularity and diffusion, a few of its gems having become today the common esthetic patrimony of all peoples and races, it is no less true that their genuinely popular and traditional character is also attested by their longevity. A large number of the old Spanish ballads are still recited and sung in all parts of the Spanish-speaking world, in Spain, in Spanish America, in the Philippines, among the Spanish-speaking Jews of Africa, the Balkans, and the Orient. The ballads of modern oral tradition are of all types, but the historical ballads are disappearing and found only in fragmentary form. One of these, the ballad of Chimène who complains to King Ferdinand that the Cid has killed her father, is sung today by all the old Jewish women of Tangier.

The German philosopher Hegel said about the *romancero*:

"The Spanish ballads are a necklace of pearls; each picture is finished and complete in itself, and at the same time these songs form a harmonious whole. They are conceived in the spirit of chivalry, but always interpreted according to the national genius of the Spaniards. The subject matter is rich and full of interest. The poetic motives are founded on love, marriage, family life, honor, glory of kings and princes, and above all in the struggle of Christians against Moors. But all this material is so epic, so plastic, that historical reality appears to our eyes in its highest and purest meaning, and this does not exclude the most realistic descriptions of brilliant scenes of human life and deeds. All of this forms a poetic crown so beautiful, that we moderns can proudly compare it to the greatest artistic productions of classical antiquity."

Spanish folklore This article treats of the folklore of Spain and of Spanish America.

The folklore of Spain is a part of the folklore of Europe. There can be no doubts about the direct relations between the various peoples and races of Europe both in prehistoric and historical times. This is due in the first place to the western migrations of Indo-Europeans from the north and east of Europe, and also to the later historical migrations of peoples that came to the Occident in ever-increasing currents from Byzantium and the Orient.

Spain has been invaded, settled and governed within historical times by Iberians, Phœnicians, Carthaginians,

Celts, Greeks, Romans, Suevi, Visigoths, and Arabs, and all of these peoples have left traces of their culture and traditions. Christianity has been a dominant factor in the lives of Spaniards for about eighteen hundred years, but the remnants of paganism are everywhere to be found in beliefs, customs, and traditions of all kinds, as in all parts of Europe.

Pagan survivals Under this heading we take up the important survivals in Spain of what appear to be very old, pagan traditions, or those contaminated by them. That many of these are of Roman provenience there can be no doubt, and it is often easy to determine the Christian elements involved; but it is not so easy to determine the contributions from pagan sources that are not Roman.

In the first place we must consider the popular fertility cults and harvest festivals, such as have been so admirably studied for many parts of Europe by James Frazer in his *Golden Bough*. In Spain these have often survived attached to religious feasts, and indeed the pagan elements of the ceremonies involved take place in the churches or near them.

Among these festivals, perhaps the most popular is the *Fiesta del Gallo* or Cock Festival. Those in charge of the ceremonies are two groups of young men and women, usually twelve of each, who form a so-called *reinado*, or kingdom, with a king and queen for each group, named or elected at Christmas time for this and other festivals in which they may take part during the year. The *Fiesta del Gallo* is popular all over Castile and northern Spain. At Barbadiño del Mercado and other villages in the province of Burgos the Cock Festival is held on the second day of February or Candlemas, immediately after the mass, which is attended by the two groups. The young women, all dressed in white, leave the church, led by the *reina* or queen and march to the plaza, where the *alcalde*, or mayor, of the village awaits their coming. They bring with them a live cock and ask permission of the *alcalde* to conduct the ceremony and kill the cock. The young men take the cock and tie it from the legs to a pole or bury it in the ground with its head showing. At Barbadiño del Mercado the *reina*, usually blindfolded, attacks the cock with a wooden sword until she finally succeeds in killing it; in Villanueva de Burgos and also in other villages the cock is buried and any young man who wishes can attempt to kill the cock, blindfolded and turned around several times in order to confuse him. In all cases, after the cock is killed, there is a feast of which all partake, food having been provided for the occasion.

Before the ceremony of attacking the cock, however, the *reina* recites a long composition in verse in which the cock is called a traitor and satisfaction is expressed concerning his future torture and death, ending in some cases with the last will and testament of the cock. There are, of course, many variants of the ceremony, and many versions of the verses.

The *Fiesta del Gallo* usually takes place on Candlemas, or the feast of the Purification of the Blessed Virgin, February 2, and it symbolizes the renewal of life or of the harvests, as did the old Roman festival of the Lupercalia, which was celebrated on the 15th of February, the last month of the old Roman calendar, and Candlemas was formerly celebrated on the 15th of February. There is no evidence, however, of a direct relation between the

Lupercalia and the *Fiesta del Gallo* in Spain. Indeed festivals of the type of the *Fiesta del Gallo* are to be found in many parts of Europe, and all of them belong to a more general type of vegetation cult as Frazer has demonstrated in the *Golden Bough*, vol. II, chapter III.

In some villages of northern Spain the ceremony of the killing of the cock has an important variation. Young men on horseback and blindfolded attack the cock with wooden swords. The cock has been hanged from a rope that is stretched across a street from one house to another. One rider attacks at a time, and he often gets entangled with the ropes and misses his target, but in the end several cocks are killed in this way.

In many regions of Spain and Spanish America there are other games in which cocks are killed. Especially to be noted is the game of *correr el gallo*, literally running the cock, in which a cock is buried in the ground with its head sticking out above the ground, and the young men, one at a time, run by on horseback and try to pick up the cock by the head. When one succeeds, he usually runs away with the cock and the others follow him to take it away from him. He can strike them on the face with the cock, and the combat is bloody, for the cock is usually torn to pieces. These cock games occur on any festival. In Spanish America they usually take place on St. John's Day.

In many regions of Spain and Spanish America there are, of course, the well-known cock fights.

Another pagan tradition curiously joined to Christian ceremony is that of the *Toro de San Marcos*, or Bull of St. Mark. This tradition has apparently disappeared in modern times, but throughout the 16th century and up to the end of the 19th century it was very popular and well known. The feast corresponds chronologically to the Roman Robigalia, an agricultural cult festival.

Those in charge of the ceremonies of the Feast of San Marcos go out on April 24, the day before the feast, in search of a wild bull, select one, and call him by the name of Marcos. Hearing the name, the bull leaves the herd and obediently follows them to the vesper services and is obedient and humble throughout the ceremonies. He is then taken back to a stall for the night. The next day, April 25, or the Day of St. Mark, the bull is taken to the church in a solemn procession, adorned with garlands of flowers and with bread loaves on his head and horns. He behaves properly during the mass, but after the mass is over, he is led out of the church, whereupon he immediately regains his ferocity and runs away.

The devout behavior of the bull and the extraordinary devotion of the women towards him, for apparently he is believed to represent the saint himself, contrasts sharply with the frivolity of the people in general. The ceremony has been condemned by ecclesiastical authorities many times, and in the year 1598 Pope Clement VIII complained especially of the veneration of the bull by the women in the church.

In an article recently published by Julio Caro Baroja in *Revista de tradiciones populares* (I [1944]: 88-121), the ritual of the Bull of San Marcos is compared with the ritualistic ceremonies of the Olympian god Dionysus. A bull represents the saint and the pagan god; it is taken to the temple or the church; the women have a special devotion to the bull; and lastly there is a relation in both cases between the bull and wine.

A bull appears at other solemn occasions of a religious

character. In some Basque villages it was customary until very recent times to have a bull at funerals, caparisoned in black, and with a large loaf of bread on each horn. When the funeral was over, the bull was ransomed by the owner or someone else.

Another pagan survival in modern Spanish tradition is the *Fiesta de la Vaca*, or Festival of the Cow. This has been recorded from the village of San Pablo de los Montes, in the province of Toledo. On the feast of St. Paul, the 25th of January, the regular religious feast of San Pablo is celebrated, with procession and mass and other festivities. At the same time, a group of young men take charge of the *Fiesta de la Vaca*, apparently a survival of the opposition to the Christian ceremonies, tolerated by tradition. One of the young men represents the cow, La Vaca, and carries a long pole adorned with ribbons and flowers and two bull or cow horns, also covered with ribbons and flowers. There is another youth attired as a woman named the Madre Cochina, or the Mother Sow. Still another young man is dressed as a shepherd, and two more, in ordinary clothes, go along ringing cow bells.

On the day of the feast of San Pablo and during the procession young men of the above group march in contrary direction to the procession several times, and as they pass by the image of the saint, they call out, "*Ahi va la Vaca* (Here goes the cow)!" When the mass is terminated, the *alcalde* and the councilmen as well as the priest march to the town hall to await the *correr de la Vaca*, the race of the cow. La Vaca and the others of the group run from the church to the civic hall, the Cow threatening all those on the way. When the Cow reaches the hall the group is received by the *alcalde*, and all are regaled with fine wine. When the church bells ring for the noon hour, all leave for their homes and the festival is over.

The *Olentzaro* of the Basque regions is a pagan survival related to the winter solstice. On Christmas Eve a few young men organize a village party to give *Olentzaro* a ride around the village to beg for food for a dinner. *Olentzaro*, which is also the word meaning Christmas Eve, is represented by an ugly, big-headed boy, dressed in an overlarge coat, a big hat, and with a pipe in his mouth. He is carried in a box adorned with laurel leaves, and provided with a lantern. The youths carry the box from house to house like a litter. They are led by a young man who calls at every house. He sings, accompanied by others, and tells the story of *Olentzaro*, who is described as an ogre-like being, powerful and terrible, with blood-shot eyes. Instead of an actual human being, an effigy is sometimes put in the box, a straw man, that is burned on Christmas Day. This burned effigy is sometimes substituted by a real Yule log. *Olentzaro* is said to come down the chimney on Christmas Eve. He kills people if the chimney is not clean, or steals the children and carries them away. In other stories *Olentzaro* is described as a gentle and kind spirit or as a mere charcoal-maker.

The fear that Basque children have for the ogre-like *Olentzaro* is similar to the fear that New Mexican Spanish children have for *el Agüelo* or *el macaco*, the Bugaboo, who also is said to come down from the mountains on Christmas Eve to punish children who do not know their prayers; but there is apparently no direct relation between the two traditions.

The months of the year and the important popular feasts and festivals The days of the saints are of course celebrated in Spain with pomp and ceremony. Processions, dancing, and bull fights accompany most of the regular religious feasts. For Holy Week in Seville popular festivities, many of a traditional character, accompany the religious practices, such as the mockery and burning of the effigy of Judas on Holy Saturday.

New Year's Day The festivities of New Year vary considerably in the Spanish world. In Madrid and other cities and villages of Spain it is customary for families to gather on New Year's Eve in small groups to celebrate the coming of New Year with music and other amusements. At the first stroke of the bell at midnight each person begins to eat twelve grapes, and all must be eaten before the twelve strokes of the bell to be sure the new year will be a happy one. In Spanish America there are similar festivities. On New Year's Day there is of course mass in the morning, and visits, greetings, amusements, feasting, and giving of presents the rest of the day.

Christmas Day Christmas festivities are usually of a religious character and begin with Christmas Eve and midnight mass. Christmas trees are found in some places, but in the past they were unknown in Spain. In Spanish America they are more popular. Spanish children usually receive their presents from the Magi Kings—Casper, Melchor, and Baltasar—on the *Día de Reyes*, Day of Kings, or Epiphany, January 6. The children place their shoes somewhere, so that the Magi Kings will leave presents in them, and also grass for the camels, on the eve of Epiphany. On Christmas Day itself there is singing of Christmas carols, feasting, and dancing in the homes. In Castile there is a regular *reinado*, or society of youths, who collect *aguinaldos*, or gifts of money or provisions, to provide a feast for Christmas. These feasts are also provided by the members of the *reinado* for *el Día de Reyes*, or Epiphany.

El Día de San Juan, St. John's Day, June 25 There is mass and processions in the morning. The rest of the day is given over to amusements and feasting. In Spain there are always the bull fights and dancing. The numerous customs and beliefs attached to this feast are found all over the Spanish world. In Spanish America bull fights are rare, and dancing and feasting prevail.

El Día de Santiago, St. James' Day, July 25 Santiago is the patron saint of all Spain, and the day is a national holiday. The day is celebrated with the usual festivities of bull fights, dancing, and feasting. The day may be compared with the celebrations of the 4th of July in the United States.

The purely religious feasts are not discussed here, although they are accompanied by many popular non-religious practices and the usual amusements. Religious feasts in Spain are still celebrated with all the pomp and ceremony of the Middle Ages, and the same may be said of many countries of Spanish America. Here the mixture of purely religious ceremony with native American Indian traditions is quite common, and indeed is not different from the same fusion of Christian and pagan traditions that are found even today in European religious feasts. Compare the Bull of St. Mark above.

Marzas The *marzas* are, properly speaking, the March songs, or March *coplas*, that the young *marceros*, or March serenaders, sing in their *rondas*, or street roamings, on the last night of February and the first of March,

to serenade their girl friends or lovers, or merely to ask for contributions of foods and sweets to celebrate the coming of March. The *marzas* are also the gifts asked for and given. They have been explained as festivities to express joy at the passing of winter and the coming of spring. That the ceremonies have their origin in a pagan tradition related with the passing of winter and the regeneration of nature in the spring there can be no doubt, for in all these love songs the month of March is specifically named. A very common *marza* is the following:

Marzo florido,
seas bien venido,
por el mucho pan,
por el mucho trigo.

Welcome, flowery
month of March
for plenty of bread,
for plenty of wheat.

The *marzas* that are actually sung in these *rondas*, or street roamings from house to house, vary according to circumstances, but many are traditional. Some of those recorded, with the music for voice and string instruments are the following:

Si nos dan licencia,
señor, cantaremos,
y con gran prudencia
las marzas diremos.

If you give us permission,
sir, we shall sing,
and with great prudence
we shall recite the *marzas*.

A cantar las marzas
tos juntos venimos,
y a las buenas mozas
las marzas pedimos.

We come to sing the
marzas
all of us together,
and we ask young women,
to give us gifts [of food].

Si nos dan las marzas
de marzo florido,
tendrán un buen año,
de cariño un nido.

If you give the *marzas*
of flowery March,
you will have a fine year,
filled with lots of love.

May Day There are numerous May songs and festivities. Here we will record only a few of the important May customs, which also have their origin in pagan cults. The May tree is *el mayo*; May songs *mayos* or *mayas*.

In the last days of April young men and women select a tall pine tree and adorn it with ribbons, egg-shells, glass beads, etc., and on May 1 it is set up in the plaza, where they dance around it and sing their May songs. These ceremonies take place after mass for several days. In origin it is a celebration of the coming of the summer solstice, or the struggle between winter and summer, corresponding in all probability to the Roman festival of the goddess Flora, or Floralia. Customs vary. In some Spanish villages bachelors get the May tree with the permission of the *alcalde* and place it in the plaza. After the ceremonies around the tree, they sell the tree on the last day of May in order to provide refreshments or a dinner.

Among the most common *mayos* sung on May Day in Castile the following may be recorded here:

¡Vitores, Mayo,
que te empinaron!
Pero fué con la ayuda
de los casados.

Hail, Month of May,
here they placed you!
But it was the help
of married men.

Para bailar este mayo,
licencia, señores, pido;
no digan a la mañana
que yo he sido el atre-
vido.

In order to dance this
mayo,
I ask for permission,
gentlemen;
for I don't want anyone
to say
in the morning that I
was too daring.

En Mayo me dió un
desmayo,
en Mayo me desmayé,
en Mayo cogí una rosa,
en Mayo la deshojé.

I fainted in the Month
of May,
in the Month of May I
fainted,
in May I picked up a
rose,
in May I plucked its
petals.

Da la vuelta al Mayo,
dala con aire,
hasta que se te caiga
el pulido talle.
¡Ji, ji, ji!

Dance around the
Maypole,
dance around with glee,
until your beautiful
dress
falls to the ground.
Ha, ha, ha!

At Belorado, in the province of Burgos, a dummy is hung from a rope that is stretched across a street on the last day of May, dressed in white trousers, black coat, hat and gloves, and with a parasol. In some places the dummy is placed on top of the May tree. In the evening the burning of the effigy, called *el Mayo*, takes place, with the permission of the *alcalde*. At Belorado the burning of the effigy is followed by a dramatic scene in which a woman pretends that the one sacrificed is her own husband, and she weeps and laments until the effigy is completely burned.

In Spain there is also another type of May festivities. The feminine form *maya* means also the May Queen. A group of boys and girls select a beautiful young girl as the *Maya*, or May Queen, dress her as a queen, place her on a couch or in a chair on the first day of May, and dance around her, singing love songs or *coplas*, in which they also ask for money and food from all those who pass by, for a feast or banquet. These activities and ceremonies last in some villages for several days after the first of May. In recent years these types of May celebrations are gradually disappearing, and in some regions instead of the real living *mayas* they have only the *Cruz de Mayo*, or May Cross. An altar is erected in a particular home or near a church, with a white cloth and candles and a beautiful May Cross, adorned with flowers and ribbons. Boys and girls dance around the May Cross, and ask for money and food. In some cases the girls alone appear in the streets with wooden May Crosses, asking for contributions. The May Crosses of the two types above described and the ceremonies that accompany them are still known in Puerto Rico and other parts of Spanish America. There is some confusion here obviously with the regular Christian Feast of the Holy Cross, May 3.

In popular poetry there are traces of all the above types of May ceremonies. That the tradition of the *mayas*, or May Queens, was in origin a festival in honor of Aphrodite is clear from the beginning and from the oldest references. The love theme prevails. In 1611, Covarrubias in his famous dictionary, *Tesoro de la lengua castellana*, under the word *maya*, says: "This is a sort of play performed by boys and girls, who place a little boy and a little girl on a nuptial couch to symbolize matrimony, and it is very old." From other sources we learn that at that time the couch had already been replaced by a table or chair, on which a young girl alone sat. There are many such references in the plays of Lope de Vega and other writers. There is a wealth of information on the *Maya*, or May Queen, in a recent

work of Angel González Palencia and Eugenio Mele, *La Maya*, Madrid, 1943.

Ritual dances The number and types of the dances that have accompanied religious ceremonies in Spain are legion. We know of their existence since the 6th century, because at the Council of Toledo of 589, a few years after the conversion of the Visigoths to Catholicism, dances inside of the churches were forbidden. That many were continued in spite of the ecclesiastical and official prohibitions is certain because they were forbidden many times afterwards in the Church councils. A few have survived until modern times, although perhaps changed somewhat to make them more proper for religious ceremony. Liturgical drama began in the churches, and dancing was often a part of it.

Space forbids a discussion of the ritual dances of Spain, with the exception of the *Baile de los Seises* of Toledo. This extraordinary dance has been very well known since the 16th century, but there are references to the dance much earlier. At Toledo the *Seises* (Sixes) were young boys originally dressed as angels wearing rose crowns on their heads who danced and sang before the Blessed Sacrament on Corpus Christi festivities, and in the choir or before the main altar of the cathedral on Christmas Day and on the Feast of the Blessed Virgin, August 15. At Seville they usually danced on the Feast of Mary Immaculate and other feasts, and instead of the original six there have been as many as ten. They all wear red tunics with white surplices, and instead of crowns they have recently worn hats both at Toledo and Seville. The dances are of Mozarabic character, and it is believed that they were already executed in the days of the Visigothic kings. The dances, accompanied with song, were usually the following: *Danza de los pastores*, Dance of the Shepherds, and *Danza de la Sibila*, Dance of the Sibyl. The dances are no longer given; only the singing continues. The *seises* now sing also for Holy Week and on a few other occasions.

In many parts of Spanish America where the native Indians are racially prominent, such as Mexico and Central America, Indian dances are performed, usually with singing, in the churches on Christmas Eve and other religious feasts. In New Mexico the Pueblo Indians dance and sing in the churches on Christmas Eve.

A few examples of Spanish-American ritual dances may be given, in which we find pagan Indian traditions confused with Christian ceremonies.

In Mexico, for example, there is the Pig's Head Dance from the Maya regions, called in the Maya language *Polkekin*. A roasted pig is prepared for the feast of any saint or of the Virgin of Guadalupe. It is adorned with colored paper and ribbons, a cigar in its mouth, etc. With dancing and singing the pig is taken to a house, the owner of which promises to supply the pig and feast for the next year. Wine and cakes and sweets are provided and everything is placed around a table on which the pig has been already placed. Ceremonial dancing and singing around the pig take place, with great dignity and reverence, and after this the pig is cut up and the head goes to the host. All eat and drink merrily.

In some villages there are many pigs' heads for as many different houses, and when the heads are cut off, they are taken in procession to the church, with dancing and singing, each celebrant carrying a lighted candle, where they pray the rosary in the presence of the pigs' heads.

Then they return to the respective houses, dancing and singing again, with the pigs' heads, and the feasting follows.

On the 5th of May, the above ceremonies may be followed by other ritual dances. Two girls and a man perform, and begin the ceremony after a chicken dinner. The man appears with a small box on his back, with a live cock tied to it; in his hands he carries laurel branches. With these he teases the cock to make it scratch and scream, while the two girls dance around him. He ends by dancing with one of the girls.

In many parts of Mexico ritual dancing and singing take place at *Velorios*, or evening devotions, in honor of the saints and the Virgin Mary, and especially in honor of the Christ Child for Christmas or on other occasions, and the dances sometimes take place inside of the churches.

Witchcraft The dominant characteristics of the witchcraft of western Europe are well known. From all the information available it seems certain that its organization in Spain was similar to that throughout Europe in the 15th-17th centuries. The accounts of the assemblies—for example, the presence of the Devil in the form of a goat or some other animal, the followers adoring him with humiliating and repugnant acts of faith in his powers, such as kissing him under the tail—are documented in Spanish accounts, and found in popular tales of a traditional character both in Spain and Spanish America. Accounts of witches transforming themselves into animals, or flying on brooms, or flying unmounted, after anointing themselves with certain ointments and repeating certain diabolical formulæ, are also common. These details are very similar all over Europe, as are even the words of the formulæ. In a tale from Cordoba, *Cuentos populares españoles*, no. 162, for example, we have a version of the tale that narrates the story of the child who wanted to fly like a witch, but who did not repeat the formula properly:

A Cordoba witch used to take out an ointment from a little jar and apply it under her armpits every Thursday and Saturday. Then she would sit on the window sill and call out, "Without God and without Holy Mary, from town to town (*Sin Dios ni Santa María, de villa en villa*)!" And she then would fly about doing her mischief. A little granddaughter saw her and tried to do the same. She applied the ointment under her armpits, but she repeated the magic formula wrongly. She said, "With God and Holy Mary, from beam to beam (*Con Dios y Santa María, de viga en viga*)!" And she flew violently several times against the beams of the house and fell down almost dead. When the witch grandmother arrived, she picked up her grandchild and put her in bed. With her witch remedies she cured her, and in the end she taught her how to be a real witch.

The following folktale from Mexico, published by Vázquez Santa Ana, has similar versions from all parts of the Spanish world:

A certain man was married to a witch. One day he followed her to her mother's house to see what they were doing. They began to strike each other with branches of shrubs, took off their clothes, and then called out, "Without God and without Holy Mary!" They went to the chimney, took out their eyes and placed them on burning coals. Instead of their own eyes, they put on owls' eyes. Then they went out to the roof of the kitchen and called out as before, "Without God and

without Holy Mary!" Immediately they began to fly through space. The husband saw two brilliant lights as they described circles and other figures in the heavens.

There is no end to Spanish witch stories and most of these have versions in Spanish America. Volumes would be necessary to record Spanish witch activities and practices. In a book recently published in Madrid by Don Sebastián Cirac Estopañán, *Los procesos de hechicerías* (Spanish witch trials), we have a wealth of information about the witch practices of Spain in the 16th and 17th centuries. In general they are similar to those found at that time in all western Europe. In 1622 there was found in the house of the witch, Josefa Carranza, in Madrid, a regular witch laboratory. The following things were found there: resin and pitch for the hips of women; little figures of heads, arms, legs and other parts of the body; a cloth with a piece of paper that read "Cemetery Earth"; a small jar covered with black objects and labeled, "To cause hatred"; various burnt objects; a human skull; dried hearts of pigs, frogs, bones of birds; earth from the three principal prisons of Madrid; three wax candles; holy water; grains of wheat and beans; a piece of bread partly eaten; a cord with three knots; a large sack filled with hoopoe feathers and bones. In addition Josefa was accused of keeping buried images of men and women with pins stuck in them. Another Madrid witch, María González, had in her house two pieces of coarse bread dipped in the blood of a man that was still living. At the house of the witch, María Sánchez de Rosa, in Madrid in 1699 were found some of the above-mentioned objects, and also a long list of "medicinal" powders and drugs, and printed or hand-written conjurations, charms, exorcisms, and superstitious prayers.

The conjurations of the witches, destined to obtain their usually wicked wishes, were directed primarily to the Devil or infernal spirits; but frequently they were directed also, or solely, to the sun, moon, stars, material objects, and also to God and the saints. A common Spanish conjuration, repeated preferably at midnight and holding lighted candles, was the following:

Conjúrote, diablo	I conjure you, Devil,
con San Polo y con San	with St. Polo and St.
Pablo	Paul
que vengas a hacer	to come and do
esto que te mando.	what I command.

In modern times witchcraft does not have the organization that it had in the past centuries and it has lost much of its influence; but it still survives both in Spain and Spanish America, in the beliefs of illiterate people, and in many places there is evidence that it is still practiced. Magic and witchcraft are practiced especially by witch doctors, who take advantage of the credulity of the ignorant. In Barcelona a group of these modern "witches" and "magicians" has been found recently, making their living by many of the practices of the 16th and 17th centuries. There are probably many more in other parts of Spain.

In Spanish America witchcraft has suffered the same relapse that it has undergone in Spain; it exists everywhere, but with less power and influence. The details of a witch assembly, identical with those found in Spain and other parts of western Europe, are narrated in a Spanish folktale from such an isolated region as New Mexico by Dr. J. B. Rael in his *Folktales from New*

Mexico and Southern Colorado. In some regions of Spanish America, however, notably in the Caribbean countries, where African influence is great, racially and culturally, witchcraft is more prevalent than in Spain or other parts of Spanish America. In Mexico, Central America, and the western coast of South America, there is also the native Indian witchcraft to be taken into consideration. In Mexico and Central America, for example, the successive transformation of witches from one animal into another at will in order to battle with each other is a common element in folktales.

Popular Superstitions Of the thousands of popular superstitions of Spain, we record here only a few of the most important:

When cats play, it is going to rain.

When reddish clouds appear at sunset, it will rain the next day.

To keep witches from entering a house, an old horse-shoe must be placed over the door.

A black cat in a home forebodes evil. It represents the Devil.

One should never dance alone and allow the shadow to be seen on the wall, because it is the same as dancing with the Devil.

Speaking to oneself is the same as speaking with the Devil.

When one looks at oneself in a mirror at night, one sees the Devil.

When one yawns, one should make the sign of the cross over his lips so the Devil will not come in.

The Devil appears to a dying person the number of times that person has mentioned him while living.

If you cut your fingernails and toenails at night, the Devil cuts them.

To make sure that one will not have toothache, one should cut one's fingernails on Fridays.

To make sure that a child will not have toothache, one should cut his fingernails behind a door.

A hair with its root thrown into a pan of water grows into a snake.

For every hair that is pulled out seven more appear.

All carnations planted on the day of the Ascension bloom at the moment of the hour of ten.

If you wish to find out the secrets of anyone, drink water from a jug immediately after that person.

If you dream of water, you will cry the next day.

If you eat grapes on New Year's Day, you will have money the whole year.

To spill wine on the table is a good omen.

Salt should not be spilled anywhere. If it is, misfortunes will happen.

Tuesday is a day of ill omen. Anything done on Tuesday will not come out well. A Spanish proverb says, "On Tuesday never set sail or marry (*En martes, ni te cases ni te embarques*)."

If thirteen persons eat at the table, one of them will die during the year.

When a mirror is broken, it means a death.

The screeching of the owl is a sign of mourning.

The fig tree is a tree of evil, because Judas hanged himself from a fig tree.

When a hen crows like a cock, someone in the family will die.

Misfortunes always happen in a house where doves are kept.

When one has a ringing in the right ear, it is a good sign. When it is in the left ear, it is a sure sign that someone is saying evil things about one.

Fever may be cured by drinking water from seven different wells.

A turtle in a home keeps away attacks of erysipelas.

One should never count the stars, because as many wrinkles will appear in the face as stars counted.

When one sees a falling star, he should say, so that no evil will happen, "May God guide it!" It may be the soul of someone who has just died.

The lizard is the friend of man and the enemy of woman.

The water snake is the friend of woman and the enemy of man.

White marks on the fingernails are indicative of telling lies.

To find a lost object a cord is tied around the leg of a chair. Then one says, "Stay there until I find what I have lost." The practice is called "Tying the Devil's leg."

To protect oneself against tempests or lightning, one should pray to Santa Bárbara. There are fixed formulae in verse to be recited.

The swallow is sacred because she removed the thorns from the crown of Christ at the Crucifixion.

Souls from purgatory often appear to the living to ask them to say masses for their deliverance or to ask them to pay debts they owe.

On the day of St. Bartholomew, August 24, the Devil is free (wanders about with complete freedom). The saint keeps him tied with a chain on his feet, and allows him to go free only on his day. To keep him away one should place crosses on the houses and pray continually.

If a young woman will look into the water of a fountain on St. John's Day, she will see reflected by the side of her own image that of her future husband.

On St. John's Eve, at midnight, young women pour down buckets of water from their balconies. She asks the first man who steps on the wet ground what his name is. That will be the name of her husband.

To find out if a young woman is to marry her lover, she throws a shoe in the air three times on the day before St. John's Day, or June 24, at noon. If on the third time the shoe falls right side up, she will marry.

Idem. She will make a small ball from a piece of bread and put into it a grain of wheat or rice. She will then divide the ball into three small balls, without noticing which contains the grain. She will place one of the balls under her pillow, another one at the edge of the well, and the third at the street gate. The next day, St. John's Day, she will open the balls to find out which one contains the grain. If it is in the one under her pillow, she will marry her lover; if it is in the one near the well, the matter is undecided; if it is in the one at the street entrance, she will not marry her lover.

Many of these beliefs and practices are also found in Spanish America—practically all those that are related to saints or have a religious significance—but there are of course many new ones in the New World. If we examine Spanish-American literature or superstitions, for example the recent book *Las supersticiones*, by Rafael Jijena Sánchez and Bruno Jacobella, Buenos Aires, 1939, we find many that are prevalent in Spain, especially simple and religious superstitions. But if we turn to those that have to do with the fauna and flora of the New World,

there are many new ones, especially those of a "medicinal" or magic type.

Folktales By the end of the 19th century numerous and extensive collections of folktales from many parts of Europe had already been published, but few had been published from Spain. In the catalogs of types of folktales, such as Aarne-Thompson, *Types of the Folktale*, FFC 74, Spanish folktales are hardly represented, and the same is true of serious comparative studies, such as the internationally known *Anmerkungen* of Bolte-Pöhlke. In the 20th century, however, Spanish folktales have been collected in great abundance, the author's *Cuentos populares españoles*, with some 300 versions, his son's *Cuentos populares de Castilla*, with some 500 versions, and many other smaller collections. We now know that folktales are at least as abundant in Spain as in any part of Europe. They are an important part of the general folktale treasures of Europe and many of them are versions of those found in all parts of Europe. But there are many new and important types, indeed so many that the work of Aarne-Thompson has to be completely revised if it is to be a true catalog of the European types of the folktale.

If we take the single case of the so-called Tar-Baby Story, for example, we find that Spain takes a leading role in the history of its development. The type with human protagonists, similar in this respect to *Jataka* 55, in which the Prince of the Five Weapons, or Buddha, is caught fast at five points after a five-point attack on a giant with a sticky body, is a Spanish type *par excellence*. Nine versions have been found in Spain and two in Portugal of this type and variants.

It is remarkable that in spite of this human protagonist similarity, the human is caught, in this Spanish type, with an artificial, or fashioned, tar-baby. This Spanish type is unknown to those who have studied the origins and history of this tale, which is of Indian origin. I give below a brief résumé of one of the versions of this Spanish type, my *Cuentos populares españoles*, no. 35.

A man and a woman who were very rich had no children. They asked God to give them a child, and when finally their wish was granted, their child soon grew up to be a very tall and strong man, and they named him Samson. He ate so much that he soon consumed all his parents' wealth and had to leave home. Wherever he went, he asked for work, but he ate so much that he was dismissed the day after his arrival. When no one would accept him as a laborer, he went to the king's palace and destroyed everything in the palace gardens. The king sent a group of his best knights well armed to attack Samson; but he picked up one of the horses by the tail and striking the knights with the horse he easily killed them all. The story ends as follows:

Then they decided to set up a tar-man to catch him. And they made the tar-man and placed it near the palace. Samson passed by, and in view of the fact that the tar-man did not salute him, Samson said to him, "Are you going to make a bow to me? If you don't, I'll strike you. Are you going to make a bow to me? If you don't I'll strike you." The tar-baby did not reply; so Samson gave him a blow with his right hand, and it stuck fast. He then continued saying, "Are you going to make a bow to me? If you don't, I'll strike you. Are you going to make a bow to me? If you don't, I'll strike you." Again there was no reply, so Samson struck the tar-baby with his left hand. That stuck fast also. He then spoke thus,

"Are you going to let go of my hands? If you don't I'll hit you with my foot. Are you going to let go of my hands? If you don't I'll hit you with my foot." And he gave the tar-baby a kick, and his foot stuck fast. Samson then became very angry and said, "Are you going to let go of my hands and foot? If you don't, I'll hit you with the other foot. Are you going to let go of my hands and foot? If you don't I'll hit you with the other foot." And he gave him a kick with his left foot, and that stuck fast also. And then he said to the tar-baby, "Are you going to let go of my hands and feet? If you don't, I'll strike you with my belly. Are you going to let go of my hands and feet? If you don't I'll strike you with my belly." And he struck with his belly, and his belly stuck fast.

He was so well stuck now that the king's knights came out, caught him, and killed him.

The folktales from Spain are of all types, but especially abundant are animal tales of the Æsopic and Oriental types, tales of enchantment in which the Virgin Mary or the saints appear as the supernatural helpers, moral and religious tales, legends, stories of water and mountain spirits, dwarfs and fairies, picaresque tales of numerous and diverse types, riddle tales, and accumulative tales.

The tales of *Pedro de Urdemalas*, Peter the Mischief-maker, are the most popular of the picaresque types, and some of the versions are known since the 16th century. They are often mixed with elements of the tales of *Juan Tonto* and *Juana la Lista*, *John the Fool* and *Mary the Smart Woman*. The best types are characterized by the anger bargain and the death of the master's wife, substituted by the rogue for himself. The element of Pedro de Urdemalas finally entering heaven through deceit, taken from the tales of death deceived with magic objects, *Cuentos populares españoles*, no. 170, is characteristic of the Spanish-American tales of Pedro de Urdemalas.

The folktales of Spanish America are for the most part of peninsular Spanish origin, and indeed all the types above mentioned are prevalent. The extraordinary similarity of the versions is eloquent proof of the vigor of Spanish tradition. It would be very difficult to establish any definite important changes in Spanish folktale tradition in the migration from Spain to America. In the regions with strong African or Indian influences we have, of course, African and Indian elements to contend with, especially in the case of animal and witch tales. If we take any given type or any special tale, the tar-baby tale, for example, we can follow the various influences in the different fundamental elements of the tale. Although the fundamental theme is of Indian origin, so many secondary elements of other proveniences are definitely of African, Spanish, or native American Indian origin that we can actually establish Spanish, Spanish-American and Indian types. In the case of the tale of the magic flight (Type 313), we can also establish such variant types in Spanish-American tradition.

In many witch tales, African and native Indian elements are frequent in many Spanish-American folktales that are of European Spanish origin, and in some cases versions of tales that are obviously of African or Indian origin have elements of Spanish origin. Examples of African tales with Spanish elements are found in Puerto Rico and Santo Domingo, and of Indian tales with Spanish elements in Mexico and Central America.

Spirits Northwestern Spain, especially the Asturian

region, is the area *par excellence* for brief anecdotal stories or superstitions concerning supernatural benevolent or evil spirits, usually with generic names.

Among the most popular of these spirits the following may be mentioned:

El Nubero, Tempest, is an ugly and malignant spirit, who wears a long beard, dresses in skins of animals and rides on a cloud. He is called Juan Cabrito, and he lives with his wife and children in a mysterious mountain in Egypt, perpetually covered with fog. There are numerous tales about the *Nubero*. In a certain village of Asturias the *Nubero* appeared, and the people feared their crops would be destroyed. The priest came out and threw a shoe into his garden to frighten the *Nubero*, who was raining hailstones there, and called out, "Destroy there!" The *Nubero* rained a pile of hailstones there, the priest's garden was ruined, but the others' crops were saved.

The *Xanas*, or nymphs, are small and beautiful women with long and flowing hair. They live in caves and fountains, and some of them are merely enchanted women. They give jewels to those who disenchant them. They work and play with golden objects in the meadows in the morning of St. John's Day. There are scores of localities, caves, mountains, etc., where Asturian *Xanas* are said to live. One tale about the *Xanas* relates that they used to ride horses all night and left them exhausted. Some boys covered the back of a horse with tar and thus caught one of them.

El Cuélebre is the winged serpent who guards secret treasures and enchanted persons, and lives in forests, caves, and fountains, similar to the dragons that keep and guard treasures and people in the classical myths, as in the myth of Jason and Medea.

La Sirena, or siren, is similar to the classical sirens.

El Trasgu, or house dwarf or *lar*, is described as a small dwarf, who appears at night, enters a house, does some housework, or breaks up the furniture. He is dressed in red. The *trasgu* is known in other parts of Spain and in Spanish America as an ordinary *duende*, or dwarf; both the *trasgu* and the *duende* follow the family who moves from one house to another, and frequently they appear with an object that has been forgotten, such as a broom or a kitchen pot.

La Güestia or *Estantigua* is derived from *hueste antigua*, ancient host. In the Middle Ages, 12-14th centuries, the word *estantigua* meant a group or procession of demons or infernal spirits. In modern times it is a concrete malignant spirit who travels about in the night dressed in white, with lighted candles in her hands, ringing a bell and muttering prayers for the dead. She attacks all those she meets and says: "Travel during the day, for the night belongs to me."

Proverbs The proverbs and proverbial expressions of Spain constitute one of the important branches of European folklore. They are the judgments based on the experiences of the race, expressed in brief artistic forms, both in prose and verse. Young and old use them in conversation and consider them as traditional authoritative opinions on most of the important problems of human conduct. Many of them express, of course, universally accepted truths, and in view also of the fact that they are often expressed in beautiful artistic forms, they have been extensively used in formal literature.

To some extent Spanish proverbs are the Spanish variants of similar materials that are found in the folklore of Europe; but most of them are typically Spanish in form and content and depict accurately some of the outstanding traits of Spanish character. Their philosophic and religious content, particularly those that deal with life's most serious realities, such as poverty and wealth, old age and youth, love and hatred, death and the life hereafter, is an indication of the Roman, Christian, and Arabic heritage of the Spanish people.

The proverbs of Spain are very old. By the middle of the 15th century even the learned and aristocratic Marqués de Santillana had appreciated them to the extent of collecting what is probably the first European collection of proverbs, *Los refranes que dizen las viejas tras el fuego*. In the 16th century Gonzalo Correas published his monumental *Vocabulario de refranes y frases proverbiales*. By that time they had already become the philosophy of the people and had been accepted as such by the great men of letters, such as Cervantes in his immortal *Don Quijote*. Sancho Panza cites them by the dozen, and Don Quijote also cites them frequently. After Cervantes, however, they are not extensively used in formal literature; they have been relegated to the common people, and in this way they have become really traditional and popular. They are preserved in the memory of the people both in Spain and Spanish America, many of them in the identical or nearly identical metrical forms of the 15th and 16th centuries.

The poetic forms of some proverbs developed into regular octosyllabic *coplas populares*, or assonanced or rimed quatrains. These forms are very old also, and they are found today in oral tradition in all parts of the Spanish-speaking world.

In modern times the most important collection of Spanish proverbs collected and published is the monumental work of Francisco Rodríguez Marín, in three volumes, *Más de 21,000 refranes castellanos*, 12,600 *refranes más*, and *Los 6,666 refranes de mi última rebusca*, Madrid, 1926-34, a total of some 40,000 proverbs and proverbial expressions, collected from both literary and oral sources. S. Gurney Champion, in his *Racial Proverbs*, London, 1938, gives English translations of 726 Spanish proverbs.

I give below a brief list of Spanish proverbs, all of them with rhythmic accents and assonance or rime:

Abrazos y besos
no rompen huesos.

Hugs and kisses do not
break bones.

Al mentiroso
conviene ser memorioso.

Those who tell lies
should have good
memories.

De mozo rezongador
nunca buena labor.

The complaining ser-
vant never does his work
well.

Desde el tiempo de
Adán unos calientan el
horno y otros se comen el
pan.

Since the time of Adam,
some warm up the oven
and others eat the bread.

Dime con quién te acom-
pañas y yo te diré tus
mañas.

Tell me your company
and I will tell you your
ways.

Donde hay saca y nunca
pon, presto se acaba el
bolsón.

If you always take out
and never put in, the cof-
fer will soon be empty.

En boca cerrada
no entra nada.

Nothing can enter into
a closed mouth.

En lágrimas de mujer
no hay que creer.

A woman's tears are not
to be believed.

Entre la cuna y la
sepultura no hay cosa
segura.

Between the cradle and
the grave there is nothing
sure.

Genio y figura
hasta la sepultura.

Character and appear-
ance never change (are
the same until death).

Grano de trigo no es
granero, pero ayuda a su
compañero.

A grain of wheat is not
a granary, but it helps its
companion.

Juramento del amante,
ni le creas ni te espante.

A lover's oath should
not be believed, neither
should it frighten one.

La gallina de mi vecina,
pone más huevos que la
mía.

My neighbor's hen lays
more eggs than mine.

La cabra de mi vecina
da más leche que la mía.

My neighbor's goat gives
more milk than mine.

La memoria del mal, es
por vida; la del bien,
presto se olvida.

The memory of evil
lasts forever; the memory
of what is good is soon
forgotten.

Marido mío, que nos
perdemos; tú para poco y
yo para menos.

My dear husband, we
are lost; you are not worth
much and I am worth
less.

Ojos que no miran,
corazón que no suspira.

When the eyes do not
see, the heart does not sigh.

Pobreza no es vileza,
pero por ahí empieza.

Poverty is not baseness,
but it begins that way.

The following are given only in English translation:

So many heads, so many opinions.

A great heart can suffer, and a great intellect can listen.

The Lord blesses those who suffer for others.

Even a fine horse stumbles once in a while.

The best Mr. is Mr. Money.

Too many gifts spoil children.

Great pleasure is followed by great sorrow.

A rich man has always many friends and many relatives.

Those who are wise return good for evil.

Only those who seek adventure find a fortune.

The husband and the devil may appear at any moment.

Sorrows are lessened when there is plenty of bread.

No matter how well dressed a monkey may be, it is still
a monkey.

A cowardly man cannot make a great lover.

To accomplish anything, work is necessary.

It is not the cook that provides a good meal; it is a fine
supply of food.

No pain lasts a hundred years; nor is there anyone who
could stand it.

The jug goes so often to the well that it is finally broken.
In the darkness of the night all cats look black.

I am saying it to you, my daughter; but I want you to
understand it, my daughter-in-law.

There are no remedies for stupidity and poverty.

He who has a full stomach does not believe anyone is
hungry.

Talking back to an angry man is putting more fuel on
the fire.

Lovers quarrel on Monday and they seek each other on Tuesday.

If you wish to have a bad day, leave your home and come to mine.

We see a spark in our neighbor's house; but we fail to see that our own house is on fire.

Riddles Spanish riddles are legion. The majority of those now current in the Spanish-speaking world are very old and traditional and have identical or nearly identical forms, for most of them are metrical, with accentual rhythms, syllabic meters, and assonance or rime. New ones appear here and there, of course, but most of them are old. If we compare the outstanding collections of Spanish riddles from Spain and America, we can observe the vigor and vitality of Spanish tradition at its best. Young and old know them, recite them, and enjoy them.

The riddle of the ax (it barks in the mountains and is silent at home) has the following metrical forms:

Spain	Argentina
En el monte ladra y en casa calla.	En el monte grita y en su casa calladita.
New Mexico	
Rita, Rita, que en el monte grita, y en su casa calladita.	

The riddle of the name of the lover, Elena Morado, has the following metrical forms:

Spain	Argentina
El enamorado esté advertido, que queda dicho mi nombre, y el color de mi vestido	El enamorado en el vestido lleva mi nombre y el del vestido
Chile	New Mexico
El enamorado, si eres advertido, ahí va mi nombre y el del vestido	El enamorado que fuere advertido hallará mi nombre, color del vestido.

The riddle of the letter has the following forms:

Spain	Argentina
Blanca como la paloma, negra como la pez, habla y no tiene lengua, anda y no tiene pies.	Blanca como la leche, negra como la pez, habla y no tiene boca, camina y no tiene pies.
Chile	New Mexico
Blanca como la nieve negra como la pez, habla y no tiene lengua, anda y no tiene pies.	Soy blanca como la leche y negra como la pez; hablo sin tener boquita, y corro sin tener pies.

Additional riddles from Spain that have close parallel forms from Spanish America are the following:

Quién fué el que no nació y su madre se lo comió? (Adán)	Who was it that was not born, and his mother ate him? (Adam)
Cuál es el hijo cruel que a su madre despedaza, y la madre con mil trazas se lo va comiendo a él? (Arado)	Who is the cruel son, who tears his mother to pieces, and whose mother by devious ways gradually eats him? (Plow)
Redonda soy como el mundo, sin mí no puede haber Dios; papas, cardenales, sí, pero pontífices, no. (Letter o)	I am as round as the world and without me there is no God; there can be popes and cardinals, but there cannot be pontiffs. (Letter o)

(In Spanish the word pope, *papa*, does not have the letter o.)

Una vieja remolona
tiene un diente en la
corona, y con aquel diente,
llama a la gente.
(Campana)

A lazy old woman
has a tooth in her crown,
and with that tooth
she gathers the people.
(Bell)

Una señorita
muy señoreada,
con muchos remiendos,
y ninguna puntada.
(Gallina)

A very ladylike
young woman,
with many patches,
and not a stitch.
(Chicken).

There are also many riddles in the form of *décimas*, special octosyllabic or eleven-syllable meter verses with certain strophic arrangements and rimes, or semi-erudite forms and origins, that have become very popular, and new ones of this type appear in modern tradition both in Spain and Spanish America. Equally popular and traditional are the numerous riddle tales, common all over Europe, such as the riddle of the shepherd, *Cuentos populares españoles*, nos. 9-11 (Type 85). Among these riddle tales there are a few brief tales, which have been known in Spain since Roman times, and which are still popular in Spain and America. An example of one of these is the one known all over Europe and documented by Valerius Maximus. The Spanish version from Spain is as follows:

Antaño fui hija, hoy soy madre.
Un hijo que tengo fué marido de mi madre,
Aciértala, buen rey, y si no, dame a mi padre.

Formerly I was a daughter, now I am a mother,
The son that I have is the husband of my mother.
Guess the riddle, good king, or else give me back my father.

A man was imprisoned by the king, and through a hole in the prison wall, his daughter nursed him so he would not starve. She went to the king with the riddle. She gave him three days time to solve the riddle, but he could not solve it. She then explained as follows: "I was his daughter, but nursed him, so I then became a mother to him. He was the husband of my mother." The king then gave the man his freedom.

There are similar versions from Spanish America, almost identical to the Spanish version, from Argentina, Chile, Puerto Rico, and New Mexico.

Coplas Populares The Spanish *copla* is the shortest lyric composition in the Spanish language. The term is used to describe any short poetical composition of a popular character in a single stanza, as a rule an octosyllabic quatrain, although they may be composed in other meters and in strophes of five, six, or more verses. Since the 16th century the most popular of all have been the *cuartetas* or octosyllabic quatrains with verses 2 and 4 in assonance or rime. This type is the Spanish popular *copla*, *par excellence*.

In Spanish tradition the *coplas* are the philosophy of the common people expressed in lyric form. They express the emotions, feelings, and ideas of the people, their joys and sorrows. They are as old as the ballads, proverbs, and riddles, and hundreds of them have come down from the 16th and 17th centuries with little or no change in form. They are found today wherever Spanish is spoken. They often express feelings and emotions that are universal; but they also always express the spirit of Spain: stoicism, Christian faith and resignation, mysti-

cism, chivalry, loyalty to family and country, democracy, charity, fidelity in love, love of nature, and humor.

New *coplas* based on the old ones, and even entirely new ones, are being composed all the time. Sometimes they keep their form, but change their content. The popular *cantadores*, singers, who are often *guitarristas*, guitar players, at the same time, compose them at will at dances or other popular festivities, sometimes in competition one with another. *Echar coplas* means to compose and sing *coplas* or to merely sing old ones, often to the accompaniment of the guitar or other musical instruments. One of the modern *cantadores* of Spain boasts of his art in the following *copla*:

Tengo mi cuerpo de coplas,	My body is so full of coplas,
que parece un avispero.	that it is like a wasps' nest.
Se empujan unas a otras,	They push one another
por ver cuál sale primero!	to see which comes out first!

The artistic beauty of the *coplas populares* can be appreciated only in the original Spanish language and the form in which they are composed. In English translation we get only the thought. We cite, therefore, only five *coplas* with English translation, all of which have the same or nearly the same form in many parts of the Spanish world. The last two are really proverbs composed in the form of *coplas*.

Dicen que lo negro es triste,	They say that black is sadness,
yo digo que no es verdad;	I say it is not true;
tú tienes los ojos negros	you have black eyes
y eres mi felicidad.	and you are my happiness.

El clavel que tú me diste el día de la Ascensión, no fué clavel sino clavo que clavó mi corazón.	The carnation that you gave me on Ascension Day was not a carnation but a nail that pierced my heart.
---	--

Piensan que nos quere- mos porque no nos ven hablar; a tu corazón y al mío se lo deben preguntar.	People think we do not love each other because they do not see us talking; they should ask your heart and mine about it.
---	---

Nadie diga en este mundo, "De esta agua no beberé." Por muy turbia que la vea, le puede apretar la sed.	Let no one in this world say, "I'll never drink of this water." However turbid it may look to him, he might become very thirsty.
---	---

Ninguno cante victoria, aunque en el estribo esté, que muchos en el estribo se suelen quedar a pie.	Let no one proclaim vic- tory, although he may be in the stirrups, because there are many who have their feet in the stirrups and still have to walk.
--	--

Décimas The *décima* (ten or tenth) is a ten-verse stanza. In popular tradition, however, the term *décima* is also applied to a poetical composition of several strophes or stanzas of ten verses each, arranged in various rime schemes. The most important types are in octosyllabic and hexasyllabic verses. The most popular type is the octosyllabic *décima* with four ten-verse stan-

zas, glossing an initial quatrain, the verses of which are repeated each at the end of each stanza, respectively. This last type is the Spanish *décima par excellence*, very popular in Spanish literature of the 15th-17th centuries, and one that later became a popular genre and was relegated to the common people. It became traditional and many have been treasured in the memories of the people until the present day in the same way as the traditional ballads, proverbs, riddles, and *coplas*. The subject-matter of the *décimas* is well-nigh universal: old and modern narratives, even ballad themes, novelistic themes, religious themes from the old and New Testaments, all sorts of philosophic themes, and many other materials. The types that have the quatrain and the four stanzas glossing it are especially common in Argentina, Chile, Colombia, Mexico, New Mexico, and Puerto Rico. In Spain they have almost disappeared from popular tradition, but many of a semiliterary type are recorded in the *Cancionero Sagrado* of Justo Sancha, published in 1853.

The importance of this popular poetic genre is obvious from the fact that in some regions of the Spanish world, such as Argentina and Puerto Rico, the *décima* is the rival of the *copla popular* in view of the universality of its subject-matter. It is surprising to find these traditional poetic forms, some of which, as a rule those that do not have the initial quatrain, have as many as ten or even more stanzas, faithfully treasured in the memory of the people. As in the case of the ballads, these poetic compositions were first composed by erudite poets, but they finally became the poetry of the people and truly traditional. As an example of a popular Spanish *décima*, I will give only one, a version from Puerto Rico:

No sabes como te quiero ángel mío consolador; dame un besito de amor, brillantísimo lucero.	You don't know how much I love you, my consoling angel; give me a kiss of love my brilliant morning star.
--	---

En fin, mujer tan in- grata, no me mires con enojo, porque la luz de tus ojos a mi corazón abrasa. Eres clavel en la mata en un jardín verdadero. Yo seré tu jardinero y al mismo tiempo tu dueño. Con tu mirar halagüeño, no sabes cómo te quiero.	In short, ungrateful woman, do not look at me with anger, because the light of your eyes consumes my heart. You are a carnation un- plucked, in a natural garden. I will be your gardener and at the same time your owner. With those beautiful eyes, you don't know how much I love you.
--	--

Yo me encuentro tras- tornado, lo debo decir así. Desde el día que te ví, el corazón me has robado. Quisiera estar a tu lado para expresarte mi amor; serías la única flor que en mi pecho me pon- dría. Si eres tú la vida mía, ángel mío consolador.	I am utterly confused, I have to state it that way. Ever since I saw you, you have been stealing my heart. I would love to be with you to tell you how much I love you; You would be the only flower that I would keep on my breast. You are indeed my life, my consoling angel.
---	--

Bello, pulido alelí,
no me trates de olvidar;
para acabar de penar,
duélete ahora de mí.
Dame de tu boca el sí
para calmar mi dolor;
viviríamos con fervor,
alegres toda la vida.
Bendita nena querida,
dame un besito de amor.

Eres una mariposa,
eres un jardín florido;
eres tú la más querida
y eres tú la más hermosa.
Eres la más linda rosa,
eres la estrella de Venus.
Eres para mí un cielo,
nenita, sol de los soles;
eres para mis amores
brillantísimo lucero.

Popular drama Both in Spain and Spanish America, religious folk plays and pageants have been always popular, and many of these, such as *Los Pastores* (The Shepherds), *El Niño Perdido* (The Lost Child), and other Nativity and Passion plays, are still given in various regions of the Spanish-speaking world, some from printed copies, others from manuscript copies. The traditional character of all these compositions is obvious from the language. All are derived from Spanish 17th and 18th century sources, when their popularity in Spain was at its height. All had, of course, individual authorship, and some are the work of literary authors of some merit; but at present most of them are anonymous, and the folk have had a share in their elaboration from time to time.

The Passion plays reach their height of religious fervor in the practices of the flagellants, who have been active in some parts of Spain and America, and also in the Philippine Islands. In Mexico and New Mexico, the *Penitentes* have a fixed ritual, and produce certain scenes of the Crucifixion on Good Friday. In Spain these practices are no longer public, but up to the end of the 19th century public flagellation during Holy Week was still practiced in some communities.

As for secular folk plays or pageants, the most popular in the Hispanic world have been for centuries the *juegos de moros y cristianos*, or out-of-doors mock battles between Moors and Christians, extraordinarily popular in Spain and Spanish America for the last 400 years. They are usually produced from manuscript or typed copies. The battle usually begins when the Moors attack a Christian village and steal the statue of the Virgin Mary. The rest of the play is concerned with the Christian counter-attack and their final triumph and rescue of the Virgin. The compositions are usually in octosyllabic verse. Other types of secular folk plays are too numerous and varied for discussion here. Children's games, and even games for adults, are in some cases very dramatic and have long

Beautiful, dainty gilli-
flower,
do not try to forget me;
if you wish my grief to
cease,
have pity on me at this
time.
May your lips pronounce
a Yes
that will end all my grief;
we would have love in our
life
and be forever happy.
My darling, my beloved,
give me a kiss of love.

You are a butterfly,
you are a garden full of
flowers;
you are the most loved
and the most beautiful of
all.
You are the most beautiful
rose,
you are the star of Venus.
For me you are heaven it-
self
my darling, my love;
for my life of love you are
my brilliant morning star.

and short passages in verse with frequent dialog. Most of these are traditional and very old.

Spanish folklore studies The first Spanish folklore society, Folklore Español, was organized in 1881 by Antonio Machado y Álvarez, the second to be established in Europe, the English Folklore Society having been organized in 1878. Its first and most important publications were *El Folklore Andalúz*, one volume, and *Biblioteca de las tradiciones populares españolas*, 11 small volumes, 1883-1886. Machado y Álvarez had already published *Cuentos, leyendas y costumbres populares* in 1873, and *Colección de enigmas y adivinanzas* in 1880. In 1882-83, Francisco Rodríguez Marín, who later became one of Spain's greatest folklorists and its leading Cervantes scholar, published his famous *Cantos populares españoles* in 5 volumes, and in 1878 and in 1887, respectively, there appeared Fernán Caballero's *Cuentos, oraciones, adivinas y refranes populares e infantiles*, and *Cuentos y poesías populares andaluces*.

In Catalonia, folklore studies began much earlier, with the 5-volume publication of F. P. Briz, *Cansons de la terra*, 1866-1870, and the folktales of F. Maspons y Labrós, *Lo Rondallayre*, in 3 volumes, 1871-1875. A few years later P. Bertrán y Bros published in 3 volumes his *Cuentos populars catalans*, 1886. In 1899, when most of the older Spanish folklore societies had ceased to function, a group of Catalan scholars, under the leadership of V. Serra y Boldú, organized the *Agrupació Folklorica de Barcelona*. Its most important publication was the 10-volume collection of folktales from Mallorca by the distinguished ecclesiastic José María Alcover, *Aplech de rondaies mallorquines*, 1915-1926.

During the 20th century, folklore studies in Spain have had an extraordinary development, under the leadership of three outstanding scholars and literary critics, all of whom may be properly called distinguished folklorists, Menéndez y Pelayo, Rodríguez Marín, and Menéndez Pidal. The bibliography alone of the folkloristic publications of Marcelino Menéndez y Pelayo would take several pages. Among the most important are his ballad studies in volumes VIII-XII of his *Antología de poetas líricos castellanos*, 1899-1906, which contain a reprint of Wolf-Hofmann, *Primavera y Flor de Romances*, a collection of modern traditional Spanish ballads from all parts of Spain and from the Spanish Jews, and his famous *Tratado de los romances viejos* (vols. XI-XII), the best and most authoritative study of Spanish balladry published. Francisco Rodríguez Marín was not only Spain's greatest Cervantes scholar, but was also a folklorist of note. His outstanding folkloristic investigations have already been mentioned, his *Cantos populares españoles* and his publications of proverbs. He has many minor publications of a folkloristic character. Ramón Menéndez Pidal, the world-famous Romance philologist and literary critic, has also many publications in the field of folklore, beginning with his first great work, *Leyenda de los Infantes de Lara* of the year 1896. He is today the greatest living authority on Spanish balladry, has published numerous books and articles on the subject, and for the last forty years he and his wife have been preparing for publication a monumental collection and definitive study of all Spanish ballads, old and modern, including all written and oral sources, with the help of a group of younger scholars and ballad collectors from all regions of the Spanish-speaking world. One of

the pupils of Menéndez Pidal, Vicente García Diego, is now the editor of an outstanding folklore journal, *Revista de dialectología y tradiciones populares*, now in its fourth year of publication.

In Spanish America folklore studies are of very recent date. Traditional Spanish ballads and folk songs have been collected and published in Argentina, Chile, Mexico, Cuba, Puerto Rico, New Mexico, and California, by Juan Alfonso Carrizo, Ismael Moya, Julio Vicuña Cifuentes, José María Chacón y Calvo, Carolina Poncet, and the present writer; folktales have been collected from many regions, especially Chile, Peru, Puerto Rico, Mexico, and New Mexico by Ramón Laval, J. Alden Mason, Paul Radin, José Manuel Espinosa, Juan B. Rael, and others; large collections of riddles, most of them traditional, have been collected and published from Argentina, Chile, Puerto Rico, and New Mexico, by Robert Lehmann-Nitsche, Eliodoro Flores, Mason-Espinosa and others; customs, superstitions, and folklore materials of all sorts have been collected and published by Julio Vicuña Cifuentes in Chile, by Frances Toor in Mexico, and by Fernando Ortiz in Cuba, the well-known Cuban sociologist and folklorist, who has published a score of important books on Afro-Cuban history, sociology and folklore, and who edited in 1924-1930 the *Archivos del Folklore Cubano*.

Numerous folklore societies have been recently organized in Spanish-American countries, but none has yet accomplished any outstanding work of investigation and research. Much of the folklore research of the last 25 years done in Mexico and the Antilles has been done by North American folklorists under the leadership of Dr. Franz Boas of Columbia University and through the generosity of Dr. Elsie Clews Parsons, both deceased.

AURELIO M. ESPINOSA

speaking head A common motif of folktale and myth (D1610.5) in which the head of a decapitated person retains its power of speech over a period of time. Magic heads speak, sing, advise, prophesy, entertain. Bran's head entertained his companions for 87 years. The decapitated head of Conaire Mac Ness Buaicalla, high king of Ireland in the 1st century, on receiving a drink from Mac Ceót, spoke and praised his friend. The Green Knight's head after decapitation bade Gawain come to his castle one year from the day to fulfil his half of the bargain. The head of Orpheus sang and prophesied on the isle of Lesbos and was an oracle for many years. Mimir's head, cut off by the vanir, was preserved by Odin and consulted as an oracle. A certain Balitok and his companions (in Ifugao, Philippine Island, mythology) decapitated the god Montinig, who went right on chew-

ing betel nuts and mimicked and mocked his beheaders until they were terrified. The heads of numerous Mohammedan saints continued to speak and advise after decapitation. There was great discussion and speculation during the French Revolution about the consciousness of the brain after decapitation. In *The Goose Girl* (Grimm #89) the head of the horse Falada continued to speak (B133.4) and comfort the little goose girl after being nailed above the village gate. The oracular artificial head is the subject of motif D1311.7.1.

Spentā Ārmaiti (Avestan *Spentā Armaiti*; Pahlavi *Spendarmat*; Persian *Asfandarmad*) Literally, bountiful devotion: in Zoroastrian mythology and belief, the goddess of the earth, one of the Amesha Spentas. Spentā Ārmaiti is the daughter of Ahura Mazda and Heaven. She sits on the deity's left hand. She is a personification of obedience and religious harmony and presides over the earth. Her flower is the musk.

spider The term spider is from Old English *spinnan*, to spin. Spiders are widely distributed in the world, ubiquitous companions of mankind. "The spider taketh hold with her hands and is in kings' palaces" (*Prov.* xxx, 28). In England, small spiders are called "money makers" or "money spinners"; and they must not be killed. If one is found on the clothing, money is coming; in Polynesia, a spider dropping down from above in front of you is sign of a present. In Ozark folk belief if you find a spider web with your initials on it near the door, you will be lucky forever. In the United States in general it is said that if you kill a spider, it will rain.

Stories of Christ's protection from Herod's cruelty, Mohammed and David from apprehension by enemies through a freshly-spun spider-web are two which are to some degree responsible for the statement that "in all ages spiders have been looked upon as friends of man." While Robert Bruce languished in his hiding place (1305) he was encouraged to continue his efforts by watching a spider persevere to finish its web after seven failures.

Spider remedies were considered efficacious in folk medicine. For common contagion, people in England were advised to carry a spider in a silk bag around the neck or in a nut shell in the pocket. For ague one should be tied up and bound on the left arm. Live spiders were rolled in butter and swallowed, or taken in molasses, or rolled in a cobweb and swallowed like a pill. See MEDICINE.

In South American Toba Indian folklore, Spider was the first weaver. In Tahiti spiders are regarded as shadows of the gods and are never harmed. North American Chippewa Indians hang spiderwebs on the hoop of infants' cradleboards "to catch the harm in the air." See ANANSI; ARACHNE; BOX DROPPING FROM SKY.

Spider For Spider as a character in West African and New World Negro folklore, see ANANSI; ANANSESEM; ANANSI-TORI.

Spider, Spider Man, Spider Woman A powerful, nearly always beneficent character in the myths of many Plains, Southwestern, and Western American Indian tribes. In some of these groups Spider is the creator (Pima and Sia Pueblo Indians), or at least the trickster (Santee Dakota and other Dakota groups). See UNKTOMI. Among the Arapaho the trickster's name, Nihansan,

means spider, although there is no attribution, in the myths, of spiderlike characteristics to the Arapaho trickster. The Jicarilla Apache have Spider as a helpful, but rather minor, character in their emergence myths; Spider puts his web all around near the emergence hole to the earth, and he and Fly are sent up on it, before the people emerge; sunbeams stand for the spider's web and the Jicarilla will not kill spiders. Spider and Fly are also told by the Jicarilla Holy Ones to make a web and extend it to the sky, and then bring the sun down; the spiders also help Killer-of-Enemies slay the monster elk, and the monster rocks imperiling people on earth.

Sex of the spider-character is often made explicit in the myths of other groups. Spider Man and Spider Woman are Navaho supernaturals or Holy People who taught the Earth People how to weave, and established four warnings of death, for example. At Taos Pueblo, Spider grandmother takes the usual part of resourceful helper in the folktales that she plays in other Pueblo mythologies, and Spider Man is referred to at Taos as a good medicine man. Among the Kiowa, Spider Woman is an astute and helpful old lady, and among the White Mountain Apache, Black Spider Old Woman helps the son of the Sun when he accidentally trips over her hole; she tells him to spend the night with her before going on his dangerous quest, and when he enters her hole he sees many Spider girls lying together without clothes on. In the mythology of the Coeur d'Alene, a Plateau tribe, Spider women are again beneficent beings; they live in the sky and help Coyote's son drop back to earth in a box. See BOX DROPPING FROM SKY. [EWV]

spikenard An ancient fragrant and costly ointment prepared mainly from a plant of the same name, a perennial herb (*Nardostachys jatamansi*) whose roots yield a strong perfume believed to be the spikenard of the ancients. In India spikenard was one of the rarest perfumes as it had to be made from a plant growing high in the Himalayas. It was highly valued by the Hebrews and is said to have been the principal ingredient of the precious ointment of Mary Magdalene. In Europe it was used in perfumes for gloves and candles.

Indian spikenard (*Aralia racemosa*) is variously used by American Indians; the Potawatomi pound the root to a pulp for a hot poultice on inflammations; the Menomini use it to cure blood poisoning; the Meskwaki season other medicines with its roots, and it is sprayed on the heads of women during childbirth.

False spikenard (*Smilacina racemosa*) is combined with oats by the Ojibwa Indians to fatten ponies, combined with dogbane to keep the kidneys open during pregnancy, and to cure sore throat and headache. The Meskwaki and Potawatomi Indians both call the plant deer berry, because deer are said to eat its fruits. The Meskwaki hush crying children and cure severe illnesses with a smudge of the plant. Insanity especially is helped by a smoke from the root of this plant.

spirit A disembodied essence, comparable to a soul, but never associated with a human or animal being; popularly, any soul-like being manifesting itself to the senses, like a ghost; sometimes, a fairy, elf, brownie, or the like. Strictly, a spirit is the indwelling animus of some place—mountain, headland, field, forest—or object—tree, stone, rapids. Usually these spirits are anthropomorphized, and such beings as the *vile* or the Satyrs,

originally forces that made some place individual and unlike another, are conceived of as human or semi-human in shape. Some spirits are monstrous; they resemble human beings to some extent but are compounded with other creatures; field spirits take on some of the aspects of grazing animals; cave spirits look something like snakes, etc. The use of the term spirit to apply to the ghosts of the dead is technically erroneous, but haunts and specters and will-o'-the-wisps are usually classed as spirits, though essentially they are thought to be wandering souls. The Japanese *oni*, demons, are the monstrous ghosts of the dead, but are commonly called spirits. One source of confusion is the varying humanization of similar spirits in different cultures: the child-stealing hag of various peoples is said to be a maleficent principle, an outcast woman turned "spirit," the ghost of a woman recently dead who searches for her lost child. The ghosts who travel with the Wild Hunt are in some areas simply spirits who have never been born into a human body, while in other places they are the ghosts of those who have died within the year. Compare ATUA; AVA; section *Spirits in SPANISH FOLKLORE*.

✍ The number and variety of spirits which the North American Indians believed in can be illustrated by a sample list from one part of one culture area only, namely, the Pueblos of the Southwest. The Pueblo spirits, as enumerated and described by Elsie Clews Parsons (*Pueblo Indian Religion*, 2 vols., Chicago, 1939, vol. 1, pp. 170-209 and Table 2, opp. p. 208) are: Clouds (Cloud chiefs, Cloud People, etc.), Mountains, Chiefs of the Directions, Lightning, Rain Beings, Sun or Sun Youths, Dawn, Moon, Stars (Morning Star, Evening Star, Pleiades, Orion, Galaxy, even falling stars at Taos Pueblo), Wind (North winds, Winds of the Directions, Whirlwind, Wind Old Man, Wind Old Woman, etc.), Earth (Mother), Maize (Corn Maidens, Corn Mother[s]), Salt Woman, White Shell Woman, Clay Woman, Turquoise Man, Stones (concretions, small stones, petrified wood, stone kachina), Fire and Ashes (Grandmother Fire, Ashes Man, Ash Boys, Poker Boy[s]), Echo, Animals (Mountain Lion, Bear, Badger, Wolf, Coyote, Red Bear, Gopher Woman), Birds (Eagle, Knife-Wing, Hawk, Buzzard, Shrike), Insects (Spider Woman, Dragonfly, Ants, Beetle, Locust, Spider Man), Serpents (Horned Water Serpent, Rattlesnake, Serpent of the North and 5 Serpents of the Directions, Big Snake), Frog, War Gods (twins; see AHAYUTA ACHI), Clown Patrons, Poshaiyanki, The Dead (Old Ones, Scapls), Kachina.

Many of these spirits are also recognized by other Indian groups; some of them, such as the Sun, Morning Star, Moon, Earth, by nearly all groups. In addition, the Thunders, Thunder Boys, or Thunderbirds are widely recognized as important spirits outside the Southwest. Several North Pacific Coast tribes believe in a strikingly conceptualized spirit, Black Tamanous or the Cannibal Spirit, as well as other frightful ones such as Cannibal-Who-Lives-at-the-North-End-of-the-World. The Iroquois also believed in what seem to us a large ensemble of grotesque spirits—flying heads, etc. The Eskimo spirit world was filled with giants and half-human, half-animal beings, while all over North America belief existed in "little people" or dwarf spirits; some of these were water sprites, of which there were also a great variety.

Many North American Indian groups conceived of

spirits living in lakes, streams, springs, rivers; sometimes these were dwarf humanlike creatures, the sight of which frightened persons, although often the spirits did no real harm to people. At Taos Pueblo, for example, the river spirit is Big Water Man, who has a big mouth, round yellow eyes, and a spiny body. He is prayed to, having power against disease and for health; when he moves he may cause landslides, and he can broaden and deepen the river bed and send floods. Other springs, lakes, and rivers near Taos are the abodes of other river spirits. Big Water Man at Taos has several of the characteristics of the horned water serpents of the other pueblos, especially those of the Tewa flood-causing Avaiyo. Like Avaiyo, Big Water Man punishes the Corn Girls for rejecting his suit in Taos tales. [ewv]

✍ South American religion and folklore are centered around the countless spirits that form the supernatural world of the Indians. Myths and tales give us a good insight into the notions which the Indians have developed about these supernatural beings. Spirits associated with an animal or vegetal species often assume human form, but their true nature is revealed by some physical feature, some taste, or some habit characteristic of the personified creatures or objects. There is a tendency, especially in the Guianas, to conceive of the spirits as beings with human shape, but with some unpleasant feature: they may be hairy, bicephalic, have protruding eyebrows, jointless limbs, or they may be linked together like Siamese twins. Some spirits look like skeletons or skulls. Certain noises are invariably attributed to them, in particular the creaking of trees or the chants of lugubrious birds.

Many spirits are fond of taking the shape of a person closely related to their intended victims, but they never succeed in concealing entirely their identity, and can be recognized by some sign, such as for instance the lack of a big toe.

The descriptions which myths give of the land of the spirits could apply to any Indian village (as for instance the stories about the land of the spirits in Witoto mythology). Spirits marry, have children, and die just like ordinary men. There are spirits who lived unrecognized among the living until some accident unmasks them or forces them to leave. Many spirits are helpful, especially those who are at the service of a shaman.

The animism of the primitive tribes of South America constituted also an important part of the religion of the civilized Incas. The *huaca* were often local spirits who received a cult. They were the genii of mountains, of oddly shaped rocks, of caverns, lakes, rivers, trees, and even of houses. Even the Fuegians who feel themselves in the hands of a Supreme God, believe in the existence of countless spirits.

The Indians themselves have established classifications of the spirits by whom they are surrounded. For instance the Witoto add qualifying epithets to the name of the spirits mentioned in their tales. Thus, the *muinane* are the people of the past, the *hunessai* the people of the waters and plants associated with fish, the *rigai* are spirits of the air, of birds, and insects. Similar distinctions in the supernatural world are made by the Caribs.

There is in general no clear division between nature spirits and ghosts. Certain tribes, however, in particular the Bororó, attach the greatest importance to a clear-cut

differentiation between these two categories of supernaturals. [AM]

spirit trap An object plaited in a puzzling manner which Guiana Indians leave on the paths to divert the attention of the spirits, who become so intrigued by the contrivance that they forget to pursue their victims. [AM]

spiritual A religious song type stemming from the folk hymns of dissenters in America and comprising two closely related and interwoven bodies of music: the "white spirituals" and the "Negro spirituals." The word spiritual, as early applied to religious song, was used simply to distinguish the "godly" from the secular or "profane." In 1560, in England, for example, was published Wedderburn's *Ane Compendious Booke of Godly and Spirituall Songs, Collected Out of Sundrie Parts of the Scriptures, with Sundrie of Other Ballates Changed out of Prophaine Songs, for Avoiding of Sin and Harlotrey*. The word was also used in the title of a revised edition of the *Bay Psalm Book*, called *Psalms, Hymns, and Spiritual Songs of the Old and New Testaments*, which was carried south by missionary groups from Massachusetts at the end of the 17th century. However, it was not until the height of the "Great Revival," which began about 1800, that "spiritual" became the popular name for camp-meeting songs or revival hymns. Its special application to Negro religious song is of fairly recent date as a catch-all term for the "hallies," shouts, jubilees, carols, gospel songs, and hymns for regular services, prayer meetings, watches, and "rock" services.

The white spiritual tradition has had three main stylistic phases. The earliest was the slow and dreary psalm-singing of the Puritans, likened by a critical divine of the times to the braying of asses because the extremely slow tempo and the individual variations of singers who could not read music almost destroyed all tune. The songs were "lined out" by a leader and dragged out after him by the congregation. Since the texts of many hymns so sung were by Isaac Watts, songs sung in this manner are still referred to as "Dr. Watts," as well as "lining songs" and "old long meter." The style is still used in "hard shell" Baptist churches of the Kentucky mountains and other parts of the South, where *Amazing Grace*, *Guide Me*, *Oh Thou Great Jehovah*, etc., may still be heard as survivals of the long, slow, and quavered delivery.

The second phase, promoted by the many splinter-sects of Baptists and Methodists, the Free Willers, Open Communionists, Dancing Baptists, etc., enlivened the earlier doleful manner with marching and dancing rhythms, livelier tunes borrowed from ballads, and the reduction of texts to simple and colorful lines easily assimilated and sung by the heterogeneous crowds at frontier camp-meetings and revivals. During the 19th century the wanderings of the saddle-bag preachers, the tent meetings, the Sacred Harp singing conventions, and the printed hymnals used at these gatherings all contributed to the establishment as favorites of such white spirituals as *Bound for the Promised Land* (a simplification of *I Will Arise and Go to Jesus*), *Old Time Religion* (*Old Ship of Zion*), and *Poor Wayfaring Stranger*. The last is an example of the entangled history of these songs. It is a descendant of a love song, *The Dear Companion*; its lines are related to many others about the

"poor pilgrims of sorrow," the wandering preachers, and the search for a "city called heaven"; and it has a progeny of its own among the Negroes, notably *I'm Just a-Goin' Over Jordan*. Among the tunes adopted from ballads for spirituals are *The Brown Girl*, *The False-Hearted Knight*, *Lord Lovel*, and *Barbara Allen*; modal melodies are common among them. Another feature of many revival-style spirituals is the enumeration of relatives in repeated stanzas, very similar to the climax of relations of the ballads—"I'm going there to meet my mother (father, sister, brother, savior, etc.)." This device carried over strongly into Negro spirituals, along with scraps of tunes and texts of this style.

The third phase, related to the Holiness Revival which began about 1890 and continues today, is jazzy, syncopated, contemporary in detail. Negro and hillbilly mannerisms have entered white spirituals of this type, and instruments formerly considered profane, such as the guitar, the accordion, and the banjo, are used for accompaniment. Songs in this style can be heard in the poorer white churches of almost any Southern mill town, as well as on the radio and on phonograph records.

The most important study of the development of the spiritual repertory, both musically and textually, and of the hymnals by which much of it was preserved and transmitted, is the work of George Pullen Jackson.

The exact relationship of Negro spirituals to their white antecedents and counterparts has been a matter of controversy. Jackson has pointed out numerous identities of wording and a considerable similarity in melodic material between Negro songs and white hymns and the European tunes to which they have been sung. Various authorities, including Hornbostel and Herskovits, have compared the "Scotch snap" feature of many such tunes to the syncopations of Negro songs. It is natural that beginning with a language, a deity, and a sacred literature not originally their own, and learning to make music of these under the tutelage of white masters in slave-holding communities, or in white "meetings" as a minority of freedmen on the frontier, the Negroes composed their own first spirituals out of borrowings. However, the singing of a Negro congregation presents marked differences to the ear from white group singing in any of the three manners described, and the various types of American Negro folk song—hollers, blues, work songs, jazz, as well as spirituals—are more like each other than like any form of white song. It does not seem important to strike an exact balance between melody borrowed from European sources and rendition stemming from the African chant nor to establish one part of the fusion as dominant over the other. The fact remains that, out of the early psalm tunes, "spiritual" songs, "fuguing tunes," ballad hymns, evangelical hymns, and revival songs of the whites, the Negroes made a choice of themes deeply influenced by their condition of slavery and isolation, transmuted them, and overlaid them with their own traditional singing style, and thus created a new repertory distinguishable from its forebears and beautiful in its own right.

Some of the characteristics of the textual part of that Negro repertory are: the subordination of the more abstract elements of the religious concepts (as in *Amazing Grace*) and of sectarian differences (*Romish Lady* into *Moanish Lady*) to the narrative, pictorial, emotional, and personal; complete visualization of the

scriptural heroes, the Deity, and the members of the holy family in contemporary, earthly, and shirt-sleeve terms; incorporation of the current appurtenances of life, including the railroad, the telephone, the sewing machine, etc.; a double level of meaning, as in certain African song types, by which death, resurrection, and the new life, as well as the exploits of some of the Biblical figures, are identified with escape, emancipation, and the overthrow of the slave system; the picture of heaven as an expression of the desire of a dispossessed people for fine clothing, beautiful surroundings, acceptance, and a little glitter; a strong interest in wonders and miracles; a simple code of ethics as distinguished from the concern in white spirituals with doctrines of grace and salvation and sin; a strong preoccupation with a few symbols—the railroad, the river, and the rock—seldom clearly presented in any one song but often enough repeated to assume significance.

The heroes of the Negro spirituals are many of them the same as those of the ballad hymns of the whites—the men who were delivered by divine aid from persecution, hardship, and danger. To the descendants of the Lollards, the Lutherans, the Hussites, the Calvinists, and the Separatists, these stories meant freedom for the faithful from religious persecution and social rejection. To the Negroes they meant delivery from slavery. The roster includes Lazarus, who was raised from the dead; Moses, who was hidden from the overlords in the bullrushes and lived to lead his people out of bondage; Daniel, who survived the lion's den in Babylon ("Didn't my Lord deliver Daniel?/ Why not every man?"); Paul and Silas, who were bound in jail; Joshua, who made the walls of Jericho tumble; Noah, Jonah, Jacob.

Jesus and his mother, Mary, are treated with an especial tenderness and sense of kinship. Jesus appears as a king ("King Jesus come a-ridin' 'long,/ Wid a rainbow cross his shoulders"), as a "po' little baby," a Friday's child, born to a life of woe (*Po' Little Jesus*), as a fellow sufferer ("They whipped him up the hill,/ An' he never said a mumbalin' word,/ He jus' hung down his head and cried," like many another "po' boy" of jailhouse balladry), and as a sort of kindly pullman porter on the train to glory ("Jesus gonna make up my dyin' bed"). Mary is "Sister Mary," who was "walkin' in the garden,/ Waterin' the wilted plants," and who "wore three links of chain,/ And every one bore Jesus' name."

Heaven in the spirituals is a city somewhat grander than Richmond, or Charleston, or New Orleans; its streets are gold, as in the white hymn descriptions of the New Jerusalem, and the feet of the redeemed will "slip and slide those golden streets." The inhabitants are dressed in long white robes that "fit very well," in "golden slippers," a "golden waistband," and a "starry crown." There the accepted soul of the black man will "rise and shine" ("my little soul goin' shine like a star"), and there will be a continual banquet for the chosen ("Jesus has a table spread/ Where the saints of God are fed/ He invites his chosen people to come and dine./ . . . You may feast at Jesus' table all the time.") Heaven is the place where work and trouble and weariness are ended. "When I git to Heaven gwine ease, ease,/ Me and my God goin' do as we please,/ Settin' down side of the lamb," "I wants to go to Heaven, have some angel wing, see de Jesus King, shout like de angels shout, set

in de angels' seat, eat what de angels eat," etc. To get there you have to "walk a lonesome valley," or cross a wide river, or ride in a chariot or train.

That train, which roars, whistles, and clangs its way through the blues, the shouts, and the prison songs, is one of the most common symbols in all Negro song for escape, for nostalgia, and for salvation. It takes a poor boy who done wrong to a wandering life; it takes a good woman from the side of her loving man; it shines its "ever-loving light" into the prison cell; it brings pardon from the governor; it carries father, mother, sister, brother, and the repentant sinner over into the promised land. It is underground railroad, Cannonball, Midnight Special, heavenly express, and gospel train all rolled into one. "De train done whistled and de cars are gone," "I got my ticket for de train." Even when the heaven-bound vehicle is conceived as a ship or a chariot, its attributes are confused in one stanza or another with those of a train. A Bahamas version of *Git on Board*, for example, says, "no second class on board de train,/ No diffren in de fare;" and *Let Me Ride*, a version of *Swing Low, Sweet Chariot* says "I got a ticket to ride,/ Got a right to ride."

The river is Jordan, as in the white spirituals, and it washes sins away by the rites of baptism; it is the bank where burdens are laid down ("goin' to lay down my burden,/ Down by the river side"). But it is also the boundary and the barrier to freedom ground. The baptismal ceremonies take on something of the aspect of puberty rites when the children are taken into the church. Perhaps the awe and fear in which immersion is held carries over from the African belief that some gods live in the river. It is the river of life.

The symbolism of the rock is less clear, but somewhere in the transmutation from white to Negro song the rock of Peter, the solid foundation of the church and the religious doctrine, acquires some new meanings. Texts that might be compared on this subject include *Lead Me to the Rock* and *No Hidin' Place* ("If I could I surely would,/ Stand on the rock where Moses stood,/ Pharaoh's army got drowned," etc.) with blues and work-song lines such as "standing on a rock pile with a hammer in my hand," and "Don't care where you bury my body,/ My little soul gwine rise and shine" with "You may bury my body on solid rock," in a late prison spiritual which goes on, "Why don't you lead me to that racial rock that's higher and higher?"

"If you want to go to Heaven, over on the other shore, keep out of the way of the long-tongued liars," and a number of other sinners. "None but the righteous shall get in the gate." The drunkards and the swearers must repent or be excluded. This is the simple and practical level of the moral code expressed in many of the Negro spirituals. "Don't you hammer on Sunday (sew, etc.), God gave you Monday, Tuesday, Wednesday, Thursday, Friday, and Saturday, Don't you hammer on Sunday, That's a shame." This song, like many other bits of spirituals, because of the ease of parodying its naive sentiments and because of the interrelation of all American Negro song types, passed over into secular use. In the musical comedy *Shuffle Along* in 1922, it was sung as an encore with these words: "Ain't it a shame to steal on Sunday, When you got Monday, etc.?" A similar transition was made by the line "all my sins are taken away" from *Hold On* to a drinking song, *Hand Me*

Down my Walking Cane, and by Gimme That Old Time Religion into Gimme That Old Time Corn Liquor.

Some of the favorite wonders of the spirituals are the "wheel way in the middle of the air," seen by Ezekiel; the dry bones which rose again so that "the leg and the foot bone begun to walk, and the skull and the jawbone begun to talk like a natural man," also from the visions of Ezekiel; and the visions of angels on Jacob's ladder. "Jacob's ladder was long and tall/ Reached all around to the heavenly walls/ Two bright angels came stepping down/ Dress so neat and so complete/ Not a sign of a stitch nor a sign of a seam/ This was made on the gospel machine."

The widespread variations in the texts of these songs and the frequent appearance of certain lines in completely different songs shows that the whole body of material is viewed as much of a piece by its singers, and that any one text may be rather casually accumulated by the injection of any familiar line occurring to a leader and suited to the pattern of the song being sung. Any one performance may thus be a communal creation to the extent of combining loosely related familiar elements.

The singing style varies considerably according to the occasion. It may be slow, mournful, as in *Sometimes I Feel Like a Motherless Child*; it may involve the vigorous chant, the shouting preaching style, as in *Rock, Daniel*; it may be deliberate and rhythmic as if timed to the strokes of the hoe, as it may have been actually in the early days of *Steal Away to Jesus*; or it may be in the staccato, syncopated beat of the present-day quartets and gospel singers, as in *Each Day* and *Dig a Little Deeper*. In the earlier style the African polyphony prevails, with each singer using his voice in an individual line that contributes to an ensemble which is neither strict unison nor a harmony on the vertical pattern of Western music. The choral tone is rich and complex and the line of the song is continual and undulating, apparently without break, so interwoven are the individual pauses. The later styles make use both of "close harmony" somewhat in the manner of the barbershop quartet, and of the boogie beat. See BASERS; RELIGIOUS FOLK MUSIC; RING SHOUT.

THERESA C. BRAKELEY

Spitters The *Bumugi* of Ifugao (Philippine Islands) religion: a class of deified spirits who wait for the souls of the newly dead and try to trick them into betraying their living relatives into their power. The newly dead, being greenhorns, so to speak, in the afterworld, are more gullible or more easily terrified than experienced souls. So the *Bumugi* (perhaps the one named *Dumudui*, the Pointer), walking along with the new soul, will suddenly point at a living person and ask if that is the new one's relative. If the soul says No, the Spitter says, "Shall I spit on him and find out? If the spit strikes, that will prove he is your kin." If the soul is frightened into saying All right, then the spitter spits, and if the spit touches the living person, he gets leprosy or a Philippine disease called big-belly.

There are eight Spitters (*Bumugi*, *Dumudui*, *Lumok* [Dirt], and others with names meaning Soft-rot, Itcher, etc.) and two special deities who protect from the Spitters. These are *Tudong* (Shade) who shades the living from their glances, and *Yungayung*, giver of a

talisman which renders the living invisible to the Spitters. This consists of two plants: Job's tears and *konùpa*, a kind of epiphytic fern which grows on stone walls and completely covers them. The latter plant especially is often seen in the hair of women and children, or fastened to young babies. See R. F. Barton, *The Religion of the Ifugaos*, MAAA 65, pp. 73, 176, 181.

spittle and spitting Spitting as a symbolical regurgitation is, in all parts of the world, a symbol of disgust. Because of the complex operations of the secondary nervous system, the flow of saliva increases at moments of emotional excitement. In folklore spitting is either a gesture of disgust, when it assumes almost a ritualistic importance ("I spat upon him"), or a device to bring good luck or ward off bad luck. The structure of the belief is somewhat monotonous. The applications of it show a great variety. Every young fisherman knows that to spit on his hook will make the fish bite. Many fishing communities spit on the trawl before they cast it overboard. Pliny said that spitting on the hand that has struck "a blow will remove all feelings of resentment in the person who was struck." Two persons who wash in the same water will have bad luck unless one spits in the water or makes the sign of the cross over it. The first money taken in the day's trade should be spat on.

As the subject has been studied extensively, only a general survey will be attempted here. Although the attempt is made to give the locations of the superstitions as they are reported, they are so general that it would be more remarkable if a custom practiced in Japan, for example, were not known in ancient Rome or the back lots of modern New York than if it were known there. Japanese fighters spit on their hands before entering a fight. So too did the Roman fighters, and so do small boys in every part of the United States. Headaches in Japan are cured by wetting a piece of straw with saliva and placing it in the middle of the forehead. Sometimes magic formulæ are used. In Japan, China, ancient Rome, and elsewhere, spittle will cure blood-shot eyes or the inflamed eyes of infants. Compare in this context *John* ix, 6. Chinese midwives bind the navels of newly born infants by making a mud pie of earth from the courtyard moistened by spittle and clapping it on the spot. In Imperial China, the emperor's levees were opened at midnight and the courtiers had to stand for hours awaiting audience. As the palace was forbidden to males and would be defiled if a male left any part of himself there, the Pekinese breed of dogs was developed who would receive the spittle of the noble lords.

In New Zealand, South Africa, and elsewhere, care is taken lest the spittle fall into the hands of an enemy who can use it to cast a spell. The Marquesan sorcerer wraps spittle in a leaf, buries it, and makes incantation against an enemy. On the island of Nias hunters digging pits for their game may neither spit nor laugh lest the game be driven away. Malay sorcerers generally folded specimens from every part of their enemy's body into clay figures which were then toasted until the enemy died. In East Africa the king's spittle was carefully gathered and hidden lest enemies find it. In the Wajagga covenant, the contracting parties have a bowl of milk or beer between them, take some in the mouth, and ceremoniously spit it into the mouth of the other. Similarly, small boys in Scotland and America have been

known to seal a covenant by spitting three times into the air, over their heads. The Koran mentions the use of spittle in magic. Spitting four times is the Hopi Indian method of ridding the inner self of bad thoughts. Pliny and many others have reported that spitting on the ground will protect against the evil eye and that spitting on a wound will heal it.

Grimm reported in his *Teutonic Mythology* that the æsir and vanir "made peace and in token thereof spat into a common receptacle." See KVASER. The Swedes removed a birthmark by rubbing it with "fasting spittle." In Sweden sore eyes will heal if rubbed with spittle the first thing in the morning, i.e. "fasting spittle"; in northern Iceland this must be repeated three mornings in succession. In several parts of Britain you cure a toothache by spitting into a frog's mouth and requesting it to make off with the pain. A new shilling will cure ringworm if moistened with fasting spittle. A wart will disappear if moistened with fasting spittle several days in succession. In parts of Great Britain you cure a toothache by spitting into a frog's mouth and requesting it to make off with the pain. A new shilling will cure unless new fuel is being put on it.

Generally in North America it is unlucky to meet a cross-eyed person, but the bad luck can be changed by spitting. Similarly in England a lodger is reported to have had to spit three times a day on a fellow lodger who squinted. The saliva of an angry horse or rat is said to be poisonous. To spit over the little finger of the right hand in the direction of a white horse will bring good luck. In northern North America a cramp in the foot will disappear if a cross of spittle is made on the sole. If the right foot is asleep rub the right eyebrow with the right forefinger after having moistened it with saliva. Persons who walk beneath a ladder change their bad luck by spitting. A corn will disappear if moistened by fasting spittle nine mornings in succession. Although the saliva of angry animals or men is poisonous, the saliva of others is therapeutic. If you spit on the back of a frog or toad, it will burst open; but if a toad spits on a human being, warts will appear. A stitch in the side from running will stop if you spit under a stone and replace the stone. When an article has been misplaced it can be found if you spit on the palm of the hand, strike the spittle with a finger, and note the direction taken by the largest drop. This also helps in finding birds' nests. Dead animals in the road should be spat on. When the left hand itches, the procedure is to spit in the palm, close it, and put it in the pocket to keep the money that is coming.

Among some groups of Negroes, death presaged by a bird flying into the house may be averted by spitting on the floor, drawing a circle around it, walking around the circle with one's back to it, and spitting in it again. To discover one's future home one may spit on a hot shovel and note the direction the bubbles take. If after starting on a journey you have to turn back, make a cross on the ground and spit in it. If a rabbit crosses in front of you when walking, squat in the middle of the road, make a cross and spit in it. Never cross the trail of a snake without making a cross on the trail and spitting in it. Fever can be averted by spitting on caterpillars. To the customary superstitions about spitting, certain American Indians contribute the following: 1) if you spit after seeing a polecat, your hair will turn gray;

2) a covenant may be assured by spitting into a hole in the ground. See BEAD-SPITTER AND THROWN-AWAY; JEWELS FROM SPITTLE. R. D. JAMESON

Split Boys Title of a Kiowa Indian version of the Star Husband tale, which although known to nearly all members of the tribe, was told only by the priests or keepers of certain sacred bundles, at a ceremony held in spring when the first thunder was heard. Each bundle keeper told the myth separately in his own tipi. For two versions of *Split-Boys* see Elsie Clews Parsons, *Kiowa Tales*, MAFLS 22, 1929, pp. 1-8. [ewv]

Springfield Mountain A native American ballad, perhaps the most popular and widely sung of all songs originated in New England, relating the death of a young man who was bitten by a snake while mowing in the hayfield. An eight-line rimed version of the incident on which the song was based is given in Joseph Fiske's *Ten Years' Almanack* (n. p., 1765): "At Springfield Mountain there was one/ Bit by a rattlesnake alone/ This poor man he to death did yield/ As he went home died in the field . . .," etc. The date of the occurrence is given as 1761. The young man whose fate is lamented, according to early accounts, was Timothy Myrick, of Springfield Mountain (now Wilbraham), Mass., and the authorship of the original ballad text is usually credited to Nathan Torrey, of Springfield, Mass., though some stories have stated that it was written by the young woman who was to have married Myrick.

It was originally sung to the hymn tune of *Old Hundred*, but about 1840 a humorous stage version was set to music by an actor, George Gaines Spear, who performed it on platforms all over the country; later the Scottish jig tune, *Merrily Danced the Quaker's Wife*, was attached to it. From these sources many melodic variants have been made.

The song is known all over America in many versions, which may be distinguished as forming at least four quite different types: One follows the Myrick story; one is the story of Miss Curtis, the bereaved fiancée; one deals with a sweetheart named Sally and the doomed youth is called Johnny; one, the stage version, has a heroine called Molly. Nonsense refrains of considerable variation are sung in different parts of the country, and except in New England, where serious versions may still be heard, the humorous tradition has won out in the narrative. In California, a variant is known as *The Pizen Serpent*. Lomax's *Cowboy Songs* records a stammering text used as a haying song in the West. Other variants are popular in Mississippi, Texas, Michigan, etc.

springwort The key-flower of medieval European folklore, which opens doors and mountains and often reveals treasure: thought by Grimm to be spurge. It is sometimes identified with mandrake. It is obtained from a woodpecker by stopping up the hole to her nest; she will go off and return with this flower to reopen it. Pliny (*Nat. Hist.* x, 18, 20) tells this story. Theophrastus also mentions such a plant. Scholars are undecided as to whether the Open Sesame formula in the Ali Baba story refers to magic words or to this magic plant.

spruce Much of the lore of the spruce tree is the same as that of other evergreen trees, such as the pine and fir. The Navaho Indians make extensive use of the branches of this tree in their ceremonials, as cos-

tume, and as wands and brushes, as in the chant of the Sun's House where branches of blue spruce are used. Hunters of the Penobscot tribe carried a spruce twig next to the skin to prevent a pain in the side. An origin myth of the Tewa Indians of New Mexico says that man entered the world at Shipap in the far north by climbing a Douglas spruce. In Newfoundland the green buds are used to cure toothache. The Mohegan, Pequot, and Penobscot tribes used spruce gum as a poultice for boils and abscesses. The gum is chewed generally in America wherever the tree is found, especially by children. The spruce ale of England is made of the sap of the silver fir and ivy leaves.

square dances Dances performed in square formations, usually by four couples, each forming one side of the square, by eight couples in the double quadrille. It shares the initial circling and promenade with the round dance, but rarely divides off into two lines (*Glory, Glory, Hallelujah*). Sometimes in the end it winds into serpentine, grapevine-twists, snails. The particular characteristic, notably in the American versions, is the progressive activity of one couple after another during the body of the dance, each couple visiting the others in turn with a set figure peculiar to the dance. These patterns include ladies' chain, birdie in the cage, dip for the oyster, docey-do, forward up six and fall back six, star by the right, and a legion of other picturesque figures, always ending with "partners swing." The step is a springy easy shuffle.

The singing quadrille of the East developed characteristic calls in the West, such as: "Up and down and around and around/ Allemande left and allemande aye;/ Ingo, bingo, six penny high;/ Big pig, little pig, root, hog or die"; "Swing the Indian, swing that squaw,/ And now that boy from Arkansaw./ Swing your maw, swing your paw,/ And don't forget your mother-in-law."

The square is of the quadrille category, but the quadrille is a more flexible and inclusive form. For the regional variations and provenience of this rollicking yet well-ordered dance form, see DANCE: FOLK AND PRIMITIVE; REEL; ROUND DANCES. [GPK]

squash The word derives from Algonquin (specifically Narragansett) *askuta-squash*, literally eaten green, indicating that they were not recommended when ripe. Among the Meskwaki Indians squash stem was ground up and boiled to make a medicine for female ailments; the Ojibwa and the Menomini used it as a diuretic. In the mythology of the Seneca Indians, squash is, along with corn and beans, one of the three daughters of the Earth Mother. See DEOHAKO.

Squash designs are frequent in Pueblo ritual art. Squash blossoms made of dyed rabbit fur or devised of yarn over twigs are placed at either ear on Hopi masks as a symbolic prayer for plentiful squash and melons. The Hopi also put squash effigies in their garden patches to encourage the crop. See COD-EYES. Among the Papago, squash effigies were made for the visiting dancers when a visiting village entertained its host before racing with them. In Pima Indian rain-making songs, the squash also appears as a sacred plant.

D. M. Fansler records a cleverness test motif in which the king gives or sends to a peasant, or a young girl, a narrow-necked jar and a large squash, with the order to put the squash in the jar without breaking either

(H1023.11). The clever one inserts a very tiny squash in the jar without removing it from the vine, and allows it to grow until it is as large as the jar. Sometimes the large squash is returned to the king in the small-necked jar with the counter-request that the king remove it without breaking either. This same task occurs in the *Arabian Nights* regarding a melon instead of a squash. See Fansler, *Filipino Popular Tales*, MAFLS 12, pp. 56, 58, 62-63, 434.

śrāddha A Hindu rite performed to honor the family ancestors; also, a rite observed to provide a recently departed spirit with an intermediate body and to aid it to become enrolled with the sainted dead: literally, offering given with faith. The śrāddha probably evolved from the custom of feeding the dead. It is an intricate rite. When performed for the ancestors of the family each ancestor is named and propitiated, but food is offered only for three paternal male ancestors—father, grandfather, and great-grandfather, since earlier ancestors, once united with the sacred dead, need no further special attention. This ceremony is celebrated once a month at new moon.

When the rite is performed for one newly dead, the ceremony lasts ten days and is performed near running water. On the first day an offering of sesamum, barley, water, sprigs of kuśa grass, and a lamp is made to allay the thirst and heat which the spirit suffers during cremation. The rite of feeding the spirit is then performed and repeated on each of the ten days. Rice balls for Brāhmins and barley-flour for Kshatriyas and the illegitimate sons of Brāhmins are used. On the first day one ball is offered, on the second two, and so on until at the end of the ten-day period the spirit has received 55 balls, escaped from ten hells, and gradually has acquired a new body. The officiant and relatives then return home and on the eleventh day present a cow to the chief Brāhman. Today such an animal is usually branded with the sacred discus and trident and allowed to wander on the village lands. On the twelfth and final day food is offered and the roots of a fig tree are watered. With the conclusion of the ceremony the spirit ceases to be a disembodied ghost and becomes one of the sainted dead.

The śrāddha is not performed for unmarried girls or for boys who have not undergone investiture with the sacred thread. The ceremony, among lower castes, is generally abbreviated.

Sraosha In Persian belief and mythology, the embodiment of divine service and the angel of obedience who aids righteous souls in their battles with demons after death. Sraosha was the first to use the barsom. He will be sent by Ahura Mazda to arouse Keresāspa at the end of the world. See AĒSHMA; AMESHA SPENTAS.

Srin-po One of the eight classes of indigenous Tibetan country gods: ghouls and vampires, raw-flesh colored.

Stackalee, Stackeree, or Stagolee Negro bad man, who, according to the ballad, shot and killed Billy Lyon (Lion, Galion) in a barroom brawl (some say in Memphis and some say in St. Louis) for stealing his "magic Stetson." Legend says (Onah L. Spencer, in B. A. Botkin, *A Treasury of American Folklore*, pp. 122-130) that this magic hat, for which Stackalee sold his soul to the Devil, enabled him to assume various shapes, from mountains

to varmints, to walk barefooted on hot slag, and to eat fire. When he got too ornery for even the Devil to stand, the latter caused him to lose his hat and his magic, via Billy Lyon, and, ultimately, to burn in hell.

Stacker Lee, for whom many Negro children along the Ohio and the Mississippi were named, was one of the four sons of Captain James Lee, founder of the Lee Line, and was celebrated for his prowess with ladies as well as steamboats. The packet *Stacker Lee* (nicknamed "The Stack," "The Big Smoke," "Stack o' Dolluhs," and "Bull of the Woods" and noted for its size and speed) plied between Memphis and Cincinnati, St. Louis, and Vicksburg. The original StagoLee is said to have been a stoker or roustabout on this boat, also the son of a woman who was chambermaid or cook on this or another of the Lee boats; and the ballad is said to have been composed on the levees, where it was sung. (See Mary Wheeler, *Steamboatin' Days*, 1944, pp. 99-103). [BAW]

stamped pit A hole in the ground covered with a rough platform of planks or bark and stamped to produce a dull resonant sound in connection usually with primitive fertility rites. The device merely extends and amplifies the sounds of the stamping feet and is related to the women's dances of planting, which are close restricted motions, held near to the ground, and involve shuffling and stamping. It is used in the Solomons and among the Indians of certain South American tribes and was known almost all over the world in the Paleolithic period. The same idea is carried out by building a low platform over the earth or by dancing on an inverted pot. A similar device, called the sand drum, is made by digging a tunnel through sand, as children do on the beach, and beating its roof with the flat of the hand, as is done in New Guinea and in Ethiopia. While the significance is not recognized, a related dance is performed in the *jarabe Tapatio* of Jalisco in Mexico, for which a platform is erected over a hole in the ground or over jars buried in the earth. It is a couple dance with elements of courtship, and as danced in cities is sophisticated rather than primitive.

Star Husband, Star Boy A widely known North American Indian myth, which relates the wish of a girl (or girls) for a star and the ascent of the wisher(s) to the sky. There the girl marries a star (or the sun or moon); later, disobeying instructions, she discovers a sky-hole and sees the earth beneath. She plans to escape with her son, usually by a sky rope; she is killed, but the son reaches the earth alive and is adopted by an old woman whose secret husband he murders before he undertakes a remarkable series of adventures. In those versions in which two women ascend to the sky, no offspring are born to them; they descend to earth alive, usually land in a tree, and then undergo a series of adventures while escaping from their rescuer. Reichard, who has made an analysis of this tale, found 51 versions of Star Husband told by tribes extending from the North Pacific coast to the New England coast, and since 1921, when her analysis was published, several additional versions of the Star Husband story, such as the Kiowa ritual myth, *Split Boys*, have been published. The Star Husband story embraces two main types, one of which centers in the Plains area, the other in the Eastern Woodlands. For a succinct outline of the episodes in these two types see Gladys A. Reichard, "Literary Types

and Dissemination of Myths" (*JAF* 34: 269-307, 1921), pp. 269-272. [EWV]

star of David or Solomon's seal The six-pointed star formed by the superimposing of one triangle on another: see jacket of this book. The symbol is a combination of the male (apex upwards) and female (apex downwards) triangles; it is said, in cabalistic writings, to comprise the signs of the four elements and the four letters of the Tetragrammaton, and thus it came to be the symbol for God. Since the Biblical commandment puts a tabu on the use of the Name of God and on the depiction of God, the symbol was inscribed as the graphic representation of God in synagogues and wherever the Name was appropriate. In alchemy, the star of David combined the symbols for fire and water; hence, it meant distillation. Until recently, therefore, it appeared on shops selling brandy. The *mogen David*, star of David, is the symbol of Zionism and appears on the flag of Israel. As Solomon's seal, the hexagram possessed power to control demons of all kinds. The stopper on the bottle containing the bottle imp or jinni was stamped with the seal of Solomon. In the Nsibidi script of West Africa, a native form of writing, the symbol means ardent love: the universality of the male-female content of the sign is here apparent. See PHALLISM.

stars Many beliefs concerning the stars, as well as a few particular tales in which the chief actor(s) is a star person, exist among North American Indians. While too much emphasis was laid on the importance of the stars among primitive peoples by 19th century theorists, it is none the less true that notable celestial phenomena such as the Milky Way, the Pleiades, and the Great Bear did interest the Indians, and tales or beliefs circulated concerning the origin of these, and the Morning and Evening Stars, which figure as actors in certain specific tales, or whose origins are explained in folk beliefs.

The Pawnee and Cherokee are two tribes whose star lore was early investigated, and found to be, for North American Indian groups, notably extensive. Among the Skidi Pawnee the morning and evening stars represented the masculine and feminine elements, and were connected with the advent and the perpetuation on earth of all living forms.

Among the Fox Indians, some of the stars are great and powerful spirits; most of them are people who have died and gone to live in the sky. So likewise with the linguistically related Delaware, Shawnee, and other Algonquian peoples: among the spirits the stars are given a rather prominent place and referred to as "grand-fathers"; they are thought to render service in that they help illuminate the world at night, and in Delaware prayers the stars are often mentioned.

The Pueblo and other Southwestern Indians also accord the stars prominence as spirits; the Morning Star (often called the Big Star), the Evening Star, the Pleiades, Orion, and the Galaxy are recognized as spirits by nearly all Pueblo groups; Aldebaran is also a spirit at Hopi, and falling stars are spirits at Taos. The Pleiades are known as seed stars (Zuñi), clustered ones (Hopi), seven stars (Jemez); Morning Star is known as Dark Star Man in Tewa pueblos, Evening Star as Yellow-Going Old Woman (Tewa), or prayer star (Isleta). [EWV]

Star Woman This folkloric motif is popular among South American Indians. An ugly man, despised by

everyone, expresses the wish to marry a bright star. A mysterious woman appears and marries him. He becomes handsome and successful. Finally his wife takes him to the sky whence she came. He cannot stand the cold and dies. Versions of this story have been recorded in the Chaco and among the Ge tribes of eastern Brazil. [AM]

stick dances Folk and ritual dances distinguished by the manipulation of sticks or staves. They are found in many parts of the world in various forms, almost always as a male prerogative.

1) *Combat dances* or derived opposition dances, performed in two lines are the most common, especially in Europe. As such they are similar to the *Moriscas*, are often associated with them, and suggest the stick as a substitute for a wooden sword. The Basque *banakoa* and *binakoa* form part of the suite of the *ezpata dantz* or sword dance. Portugal is particularly rich in versions of the *dança dos paulitos* or *dança das pelas*, predominantly featured at Epiphany or St. John's Day, at Miranda da Douro where the performers are dressed as women, in villages of São Pedro de Sarrazinos near Braganza, at Braga, etc. Spain, Italy, Lithuania, Hungary each has its special stick dance, and the English Morris displays elaborate stick-striking.

Egypt also has a men's stick dance, and India has several regional variants (the *kather-natch* of Bengal, *ras-lila* of Kathiawar, and *kolattam* of South India, specifically of the Kaniyan caste), some in longways, some in round formation. In the New World, Haitian Negroes duel with sticks, one line dressed as women. The Chaco Terenos fight with sticks as the Good and Bad Moiety in the Dance of the Rhea Feathers. The Iroquois Indians formerly struck rods together in their sun rite, *waieno'e*, which is now a simple longways.

2) *Wielding of sticks* without vestigial combat forms part of the pattern of the Morris, but appears independently in the Danish stick dance. Huichol Indian peyote dancers gesticulate with bamboo rods called "serpents." Yuchi feather dancers also waved plumed rods.

3) *Crossing of sticks*. Stepping in and out among two crossed sticks on the ground is probably also a sword-dance vestige, in view of the similarity between the Catalan *L'Hereu Riera* with sticks, and the Scotch *Gilly Callum* with sword and scabbard.

4) *Striking of a staff on the ground* serves three objectives, which may merge: a) As support—the Mexican *viejitos* and Iroquois Husk Face who lean on one staff, and the San Juan and Taos deer dancers, who walk with two short staffs as legs. The cane of the Haitian loa Legba replaces the *olisbos* or penis of the Dahomean prototype; b) As agricultural symbol—the Morris dibbing; c) As musical instrument—the long staff with deer-hoof rattles of the Chaco *káusima* and California Indian girls' puberty rites. The Mexican *paixtle* staff serves both as cane and rattle.

The stick, like the sword, appears in the role of phallic symbol. In combat dances it probably has the same purpose suggested for *Moriscas*, namely as vegetation symbol; it appears at the same festivals, and is similarly connected with transvestitism. The Haitian Legba cane most clearly shows its phallic origin; the clown and puberty functions have similar implications. The staff is more than a support for tottering old age; in the hands

of the *viejos*, *abuelos*, and Iroquois "our grandfathers," it symbolizes deference to ancestral spirits and an appeal to their chthonic powers. Added to their power is the spirit of the living tree which produced the cane.

Such blended concepts would extend to the several varying forms of the stick, to the *matashin* plumed trident, to attenuation into the whip, the *Lebensrute* of the German Carnival, the serpentine whip of the Aztec *tlacololeros* agricultural dance, the Arawak *macquari* memorial rite, the Quechua *sumamao* blood-letting, the numerous disciplinary whippers of American Indian ceremonialism. This wriggling effigy is frozen into the *hikuli* serpent, the wooden snake of the Otomí Malinche, and the spear of the Cáhta *chapayekas*. These horned phallic clowns combine the snake shape with that of the spear and sword, two wooden tools which they rhythmically strike together.

In this network of widely distributed forms and symbols, priority cannot be asserted for any one form, not even for the sword, nor for any one location. In Europe and Asia, the most abundant and elaborate forms pervade India and the Iberian peninsula, to a lesser extent England. They are most complete in India, where they combine the longways of the Morris and *paloteo* with the circular hey of the Maypole, and also include the "dibbing" found in the Morris. The ground plans and patterns of stick-striking show remarkable similarity in these two widely separated areas, though the steps are peculiar to each region. This would point to a very early dissemination, possibly to a common Neolithic heritage previous to the Aryan migrations in the second century B.C. The Indian stick dances flourish among Dravidian tribes, as the *kolattam* of the Tamil. See PHALIC DANCES; RATTLES; SWORD DANCES. [GPK]

stick-fast Catchword commonly applied to the tar-baby motif (K741) but including also the incidents involved in various stories in which the characters stick together or stick to some magic object which will not release them. Typical of these tales is *The Golden Goose* (Grimm #64) in which a group of thieves are thus caught one after the other and the sight of them all stuck together makes the sad princess laugh. See GOOSE THAT LAID THE GOLDEN EGG. There are also European witchcraft stories of chairs to which a person sticks (D1413.6) and African tales involving magic medicines which cause people to stick to their seats or other objects (D1413.11). The sack which holds onto the hand thrust into it (D1413.9) and the chamber-pot to which a person sticks (D1413.8) are other European variants. Compare BURR-WOMAN; TAR BABY.

stomp dances Among the Indians of the Southeast and Eastern Woodlands areas of the United States, many dances which were perhaps originally sacred in nature, are now danced at social, all-night dances known as "stomp dances" among the present-day tribes of Oklahoma. A great many of the so-called stomp dances are named for animals: garfish dance, quail dance, rabbit dance, eagle dance, etc. Each has its own distinctive movements and steps; many are drum dances, while others are danced to the accompaniment of tortoise-shell leg or hand rattles, gourd rattles, etc. Nearly always both men and women participate in such dances. [EWW]

 A stomp is a shuffling stamp, sometimes executed as a rapid trot. It is included in the vocabulary of boogie-

woogie. Many of the open rounds of the Iroquois and Eastern Algonquians use this step. Frequently the accompanying songs are antiphonal. In the southern area these rounds frequently develop into serpentines. Farical gestures are permissible.

Specifically, "stomp dance" is an alternate term for the "leading dance," "friendship dance," or mixed social dance of these tribes. It was disseminated to the Munsimohicans, the Lenape, the Creek, Yuchi, and Seminole. In the close tribal proximity of Oklahoma it spread like wildfire to the Sauk, Fox, Iowa, Osage, Comanche, and other Midwestern and Plains tribes. It is very similar to their adopted snake dance.

Usually it is performed in single file; among the Penobscot, four abreast. The Iroquois use no instrument; the Penobscot leader shook a cowhorn rattle. Southern and Oklahoma women leaders fasten a tortoise rattle to their knees. This counterclockwise antiphonal round for men and women is typical of the Eastern tribes, but atypical of the Plains, and definitely contrasts with their clockwise "limping" squaw and victory dances. [GPK]

Stone Giant The Yahgan Indians of Tierra del Fuego have a story about a giant who is invulnerable except on the soles of his feet. He was finally overcome by a hummingbird who could not destroy him until the giant's heart exploded. The same story with many local variants has a wide distribution among North American Indians. [AM]

Stone Men The two Pueblo Indian war gods, the *hayunu* of Taos, sons of the Sun and Yellow Corn Girl: so called because of two stone images enshrined in the mountain at Taos. Their mother told them not to go eastward for their hunting, but they did, and met their father, the Sun, who aided them thereafter in all their adventures. At last they went to live with their father, the Sun, who was "not a man to stay in one place." He was always traveling day and night. So he placed one son upon his right and one upon his left. But their earthly parents swelled up and died of sadness. At Tewa the sons of the Sun are thought of as winter sun and summer sun, instead of two attendant stars in the sun's course. Compare AHAYUTA ACHI.

stork It is bad luck to kill a stork (N250.1). Many believe that storks were once men and that they become men in Egypt in winter (B775; D624.1). In Morocco, if the stork builds on the roof, the house will become empty; if in the trees, the trees will wither. If the birds are white and clean when they arrive, there will be much sunshine and heat; if they are dirty, it will be a bad year. Storks are especially popular in Germany and the people like to have them nest on the roof.

That storks bring babies (T589.6.1) is a familiar saying. In Germany it is even said that a stork flying over the house presages a birth. The belief was that storks picked up infants from marshes, ponds, wells, springs, and stones where the souls of unborn children dwell. See ADEBORSTEINE. It is also said that if storks leave their nests and build others hurriedly in trees, it is a sign of war; they have been known to leave a whole area before pestilence struck; if they leave their nests forever great calamity is foreseen. [GPK]

Stormalong A favorite chantey for heavy work at the capstan, as when the anchor was deeply buried in mud,

or sometimes for pumping ship. The hero, Stormalong, was the sailor's ideal of a seaman, who met his end and was buried at sea. There are many variants, attesting to many of Stormalong's exploits and giving his burial place as off Cape Horn, in Mobile Bay, etc.

Stormalong Mythical hero of deep-water sailormen, embodying the ideals and delusions of grandeur of the old days of iron men and wooden ships. Figuring chiefly in the windlass chantey that bears his name, Stormalong is also the hero of typical tall tales of the sea, such as the soaping of his giant ship *Courser's* sides to ease her through the English Channel, the scraped-off soap whitening the cliffs of Dover, and the digging of the Panama Canal when the ship is whipped about in a hurricane and goes right through the Isthmus. See Frank Shay, *Here's Audacity*, 1930. [BAB]

story formulas Formulaic beginnings and endings of tales are usual in North American Indian folklore, though not universally used by all tribes, nor, in tribes where they do occur, are they used by all narrators, or for all tales. Examples of formulaic beginnings are: Person-ages and the place where they live are mentioned ("Those people were living at Cottonwood"; "Seed-marked boy was living at Cottonwood with his grandmother," etc.). This is typical of the openings of Pueblo myths; Cottonwood is usually the place mentioned in Taos and other Pueblo tales, but other locales may be also specifically referred to. The White Mountain Apache conventional opening for a tale is the phrase "Long ago they say," to which the listener(s) should reply "ya," meaning assent or confirmation. The Coeur d'Alene Indians of the Plateau begin many of their Coyote tales with "Coyote had a house," others with "Coyote was going along"; other tales start by naming the chief actor and where, or with whom, he or she is living.

Formulaic endings to tales are as frequent as formulaic beginnings. A few examples of such are: "You have a tail" or "So then you have a tail," directed to the person whose turn it is to next tell a story; the explanation given is that the person must tell a story to take off the tail, so that it will not freeze (Taos Pueblo). "My yucca fruits lie piled up" is the conventional White Mountain Apache ending for a tale; the Coeur d'Alene use "The end of the road" or similar expressions, "That is the end of my road," "The road comes to an end," "I have come to the end of the trail" as a tale ending; this is sometimes extended, according to Reichard, to "the little bird sat on a tree at the end of the road and was shot" (Gladys A. Reichard, *An Analysis of Coeur d'Alene Indian Myths*, MAFLS 41, p. 28). [EWV]

strangle-weed or dodder This parasitic vine begins life normally from seed, which roots in the ground. When a tentacle grows from the main stem and anchors to another plant, however, the root and stalk die and the plant derives its sustenance from the other plant. It was used extensively by medieval herbalists, but had no inherent virtues of its own. It was substituted for herbs on which it grew, on the theory that it absorbed only the essential essences of that plant. Southern Negroes throw a piece of dodder over the left shoulder toward the home of their love without looking back; if it grows the love is returned. Dodder is also used in other forms of love divination, and is sometimes known as love-vine. Pantagruelion, probably hemp, is also called

strangleweed, from the fact that rope is made of it with which to strangle felons.

strawberry The strawberry once was sacred to Frigga and has since been transferred to the Virgin Mary. Culpeper calls it a plant of Venus, cool and dry when green, cool and moist when ripe. Frigga was wont to conceal children who died as infants in a strawberry and smuggle them into heaven. John the Baptist is said to have lived on these berries. Strawberry leaves form part of the coronets of certain British dukes, earls, and marquises, and alternate with fleurs de lis in the coronets of younger members of the royal family. Because Bavarian peasants believe that the elves are fond of strawberries, they tie a basket of them to the horns of their cattle so they will cause them to prosper.

Medicinally both the wild and cultivated berries are in high repute, but usually the wild are preferred. They are good for melancholy, fainting, and all inflammations except fevers. They are considered beneficial for the blood, liver, and spleen. At one time they were considered harmful for persons with gout, but now are believed beneficial. If taken in excess they cause hives in some people. They are also good to remove excess flesh. The juice of the strawberry is used as a dentifrice to remove tartar and to preserve the teeth. The root is also used as a dentifrice. The juice or a decoction of the root is good for ulcers; made into lotions and creams it will remove freckles and whiten and preserve the skin. A distilled water of the berries is a cure for jaundice and good for palpitation of the heart. The leaves and roots in wine cool the liver; in water they cool and clear the eyes, tighten loose teeth, and are a remedy for venereal infections. An infusion of the leaves is a good tonic for the kidneys. See **BERRIES IN WINTER**.

street cries Rhythmic chants and songs of hucksters and itinerant tradesmen, flourishing in the days of "hawkers and walkers" and still found among peddlers and street vendors who depend upon word-of-mouth advertising. As the vocal and musical equivalent of trade signs and slogans, these traditional formulæ have passed from trade lore into general folklore and the arts as well as into social history. Thus street cries have inspired children's rimes and games (*The Muffin Man*, "One a penny, two a penny, hot cross buns," *Hot Pies*), ballads (*Molly Malone*), the illustrations of Rowlandson and Cruikshank, poems by Lydgate and Herrick, musical settings like those of the Elizabethan composers, Charpentier (in *Louise*), and Gershwin (in *Porgy and Bess*).

Collected and illustrated, street cries have provided picturesque and pictorial data on trades and on the changing manners and customs to which the cries themselves have been responsive. Left behind by modern progress and periodically banned by official anti-noise edicts, they have withdrawn to shabby and outlying districts or survived in the provinces, or followed outmoded occupations into limbo. Following the successive migrations of Europeans to the United States, they illustrate the sequence of trades within ethnic groups and their succession from one group to another. Local foods, speech, and folkways add color to street cries, as they in turn add color and variety to the local scene. As street cries have always amused as well as advertised wares and services, so individual vendors compete with one another in the humor and originality of their per-

formance, showing a preference for esthetic effects (tune and intonation), often to the neglect of intelligibility.

One hundred years after the publication of Samuel Wood's *The Cries of New York*, the *New York Sun*, Sept. 20, 1908, in a story on Commissioner Bingham's order for the suppression of unnecessary noises, listed the following among the street vendors affected, only a handful of which have survived to-day: vegetable huckster, umbrella mender, kettle mender, chair mender, hot corn man, broom man, scissors grinder, line-up (clothes-line) man, banana peddler, old-clothes man, shoe lace and suspender man, kindling wood man, oyster and fish peddler, melon man, bootblack, and newsboy. (See Charles Hindley, *A History of the Cries of London*, 1881; *Les Cries de Paris*, 1887; articles on Charleston and New Orleans cries in *A Treasury of Southern Folklore*, 1949.) B. A. BOTKIN

Streets of Laredo Another title of *The Cowboy's Lament*.

string figures Generic term for play with a string or thong passed around and between the fingers to form figures; the European four-hand variant is known as *cat's cradle*. String play, in which the fingers weave a loop of string into a variety of line-forms, is known throughout the world; the Eurasian continent seems to have lost most of its figures (even cat's cradle is thought to be adopted from Malaysia), but in Africa, North and South America, the Arctic and Pacific areas, so-called primitive peoples still know a great variety of string figures. According to a survey made in 1930 by Kathleen Haddon (*Artists in String*, p. 149), more than 800 figures had then been published, only a fraction of those collected. String figures are primarily a pastime in which inventiveness (seeing for example a myth with its personages depicted in the string) plays the major part, but sometimes there are magico-religious overtones. The Eskimos play at their string figures when the sun begins to south after the summer solstice; they try to entangle the sun, to hold it back from the long winter setting. Haddon (*op. cit.*, pp. 21-22) quotes a story from Jenness in which the spirit of cat's cradles draws out its intestines and tries to defeat a boy in a figure-making contest; the boy's mother, by rapid making and unmaking of a simple figure, forces the spirit to retreat and flee. Haddon also points out that the names of the string figures match the environment and general culture of their makers. Thus there are coyotes from western America, palms from the tropics, seals and polar bears from the North; there are hogans and tipis from North America, a slit drum from Australia, a hammock with an old man's legs hanging out of it from British Guiana. Often figures evolve in a sequence. The house is built, broken, repaired, broken again, and then one sees the two vandals running away (Chukchee). Or earth, heaven, and the stars may be depicted in one sequence, each evolving from the preceding, each in a different plane of the figure (Gold Coast). Often the same figure is found in two or more widely separated parts of the world; the name is different, the technique of making the figure varies, but the final figure is the same. Thus the three-pronged fish-spear of New Guinea (Torres Strait) is the same as the tent of the Northwest Coast of America; the trap of the Guianas is the outrigger canoe of New Caledonia.

W. H. R. Rivers and A. C. Haddon (*Man*, Oct. 1902, p. 146) described a method of noting string figures that has come into general use. A *loop* is a string passing around a digit (finger or toe sometimes, hand or arm). A string on the side of a finger towards the thumb is *radial*; towards the little finger, *ulnar*. Where two strings are on the same finger, the one nearer the palm (or point of attachment of hand, arm, etc.) is *proximal*; the one farther is *distal* (nearer the free end of the extremity). A string on the front of the hand (or the front of the finger) is *palmar*; one on the back is *dorsal*. These terms are extended to include the motions of making the figure; a string may be passed proximal to another (below it), or it may be picked up by the palmar aspect of a finger from the distal side (the finger is passed into the loop from above and the string is hooked). For example, to make the outrigger canoe (trap) mentioned above:

Use a loop about three feet long (a six-foot string tied in a loop). Place the loop on the left hand so the single string passes behind the thumb, between the thumb and index finger from the back, in front of the index, middle, and ring fingers, between the ring and little fingers, and in back of the little finger. Do the same on the right hand. There is now a radial string passing from thumb to thumb, and an ulnar string from little finger to little finger; each hand has a palmar string. (This is known as *Position 1*—it is a common starting place for string figures.) With the index finger of the right hand pick up on the dorsal aspect of the finger the left palmar string from the proximal side (slip the finger into the palmar loop from below and pull the hands apart). Do the same with the left index, making sure to pick up the right palmar string from within the right index loop. Extend (stretch the figure to its tightest). This figure is known as *Opening A*—it too is a common beginning. Now pass the thumbs away from you, distal to the radial index string, and pick up on their dorsal aspects the ulnar index string. Bring the thumbs back to position, and extend the figure. There are now two loops passing radially on each thumb. Take the proximal (lower) loop (with the mouth) and lift it to the ulnar side of the thumb. Release the string from the mouth and extend. Release the little finger loops and extend the figure. The strings passing between the index fingers form the canoe; the single string between the thumbs is the outrigger. (When the figure is called the trap, the thumbs are released and the figure extended. As the figure is extended, a finger or stick thrust into the large loop will be caught.) [JF]

Strömkarl Literally, river man. In Norway the Strömkarl is specifically the spirit of a waterfall. He is a great musician and will teach his wonderful tunes to human beings in return for a black lamb or a white kid sacrificed on a Thursday. He has eleven tunes, good dance rhythms, ten of which he will teach to mortals. But if anyone dares to play the eleventh, chairs, benches, tables, plates and cups, aged men and women, blind, crippled, and infants in the cradle needs must rise and wildly dance. In Sweden the Strömkarl is any fresh-water spirit.

stūpa Mounds which vary in size from a few feet to several hundred feet dot the country side of most Asiatic countries. These are variously known as *stūpas*, *dagobas*, *pagodas*. The large and elaborate ones are often richly

decorated and, because they are thought to contain the relics of saints or of Buddha himself, are the objects of worship. Tall stūpas have a number of parasols, or platforms, and are often surmounted by a staff.

The pious Indian king Asoka is said to have erected 84,000 stūpas as an act of devotion in the 3rd century B.C. These were to preserve relics of Buddha. Authorities are of the opinion, however, that stūpas were used long before Asoka. The fact that stūpas are often associated with relics leads to the easy assumption that they are elaborate developments of simple grave mounds. Because they are tall monolithic erections others have seen in them a phallic symbolism, an interpretation to which the shapes of many stūpas taken together with the phallic symbolism in a number of the Hindu cults give color. However, the popularity of stūpas, particularly in those countries where Buddhism has flourished, suggests, whatever their origin may have been, that the building of stūpas was encouraged by Buddhist missionaries and pilgrims.

Chinese geomants believe that tall pagodas should be set outside the walls of cities. In this way they will attract evil spirits and thus protect the towns. In India the worship of the stūpa is by circumambulation, clockwise with the stūpa on the right, washing with milk, illumination by candles.

Buddhist monks are said to make small stūpas to be set on a table for devotional purpose or to be worn as amulets. [RDJ]

stupid ogre A folktale motif (G501) furnishing the theme for a whole cycle of folktales involving the foolishness, gullibility, and stupidity of ogres (G500-599). The ogre typically gets burned up in his own oven (G512.3.2) or is enticed into a hole and buried alive (G512.4); he gets tricked into injuring or killing himself (G520); he imitates the hero (who has stabbed a concealed bag of blood) stabs himself, and dies (G524); or he allows himself to be castrated on being assured that the operation will increase his strength (K1012.1). He gets tricked into trying to drink up a pond (G522), tries, bursts; he is tricked into killing his own children (K1611); he unwittingly rescues his own victims (G561); or sometimes he is just terrified by a pair of gigantic shoes which a man has made and put in front of his barn, and runs away. See ABANDONMENT ON THE ISLAND; AIGAMUXA; DECEPTION BY LOUSING; FALSE BEAUTY DOCTOR; OGRE.

Stymphalian birds In Greek legend, huge flocks of birds chased from the Stymphalian lake in Arcadia by Hercules as the sixth of his labors. The birds had feathers like arrows which wounded all who approached; they may have been man-eating, or they may have devoured all the crops. With a bronze rattle, said to have been made by Hephaestus, and given to Hercules by Athena, they were frightened off. The birds settled on the island of Ares in the Euxine Sea, where the Argonauts encountered them.

substitute eyes In some North American Indian myths, especially certain stories of Old Woman's Grandchild told by the Crow Indians of the Northern Plains, the hero of the tale, in a contest with snakes to keep awake during the telling of a tale (see SLEEPY STORIES) exchanges eyes with a jackrabbit before entering the contest. Thus he can appear to be awake at all times,

even while asleep. In the North American Indian tale of Eye-juggler, trickster loses his eyes and obtains substitute ones, but these are usually of pitch. The exchange of body parts is not especially common in North American Indian mythology, despite the wide distribution of the Eye-juggler tale. [EWV]

subway lore As a convenient setting for stories of the macabre and shaggy-dog order, the New York subway has contributed two minor classics to American folklore. One is the story of the corpse in the subway, a favorite of Alexander Woollcott's, which tells of two men who board a train with a third man between them apparently dead drunk and then get off and leave him behind—dead, as one observant passenger explains to another less observant one, while solicitously hurrying him off the train. The shaggy-dog story tells of a passenger watching a man opposite him reading a newspaper unconcerned by the presence of two pigeons on his shoulders. Unable to restrain his curiosity, the first man finally asks the other politely what he is doing with the pigeons on his shoulders, only to be informed: "I don't know, they got on at 14th Street." Like these stories, many jokes about rush hour in the subway, straphangers, and sadistic subway guards, have been "switched" from or to other forms of transportation—the older horse-drawn bus, the streetcar, the motor bus. Subway station walls and posters also provide a convenient outlet for fools who like to see their names or initials in public places, draw mustaches on women's and babies' faces, and scrawl phallic symbols and latrine inscriptions. [BAB]

succubus A demon in female form who comes to men when they are asleep at night: from Latin *sub*, under, and *cubare*, to lie down. The succubus belongs to the class of demons known generally as incubi. The offspring of the union of man and succubus is demonic, but the proper prayers, spells, or charms recited by the men upon awakening will prevent its conception. See INCUBUS; LILITH; NIGHTMARE.

Sudharmā or Sudharman In Hindu mythology, the hall or court of Indra, which, at the instance of Kṛishna, was given to the Yādavas as a meeting place. After Kṛishna's death the hall returned to Svarga.

Sugrīva In Hindu mythology, the monkey king, son of the sun, who, with his adviser Hanumān and an army of monkeys, was Rāma's ally in his battle with Rāvaṇa.

Sukhāvātī In Buddhist belief, the heaven of Amitābha and the bodhisattvas Mahasthamaprabhā and Avalokita, the "happy universe of the West," peopled by candidates for Buddhahood. Sukhāvātī is a blissful region and a school where candidates can hear the preaching of Buddha. It is open to all and in practical thought has replaced the less accessible nirvāṇa. It can be gained sometimes by merely repeating the name of Buddha Amitābha. There are no women there, for those who attain it become male. Pleasure is universal, the life span immeasurable. The land is bounded by the four gems—gold, silver, beryl, and crystal. Its lotus lakes are adorned with gems and in its rivers flow waters of different odors which produce exquisite music. Everyone in Sukhāvātī is endowed with an accumulation of virtue and rewarded with all things he may desire—dress, food, ornaments, and even a palace.

sukuyan Trinidad Negro term for vampire. A vampire woman will come to your house in the daytime asking for salt or matches. But you must never give it. Once you give one of them salt, there is no way of keeping them out of the house. The true Trinidad method of escaping the power of the sukuyan is to whisper "Thursday, Friday, Saturday, Sunday" three times. Then every door and window must be marked with a cross, and a mirror must be hung over the door. Once a sukuyan sees herself in a mirror in her sukuyan guise, she is terrified at the sight of herself and runs away. The Surinam vampire, the *azeman*, is analogous to the Trinidad sukuyan.

Georgina Negroes believe very strongly that it is a bad thing to lend salt, though few can remember (or will tell) the reason.

sukya The sorcerer or shaman of the Miskito and Sumu Indians of eastern Nicaragua and northeastern Honduras. He is a skilful medium and cures diseases through his mediumistic powers. Each spirit by whom he becomes possessed is identified with a specific specially treated stick. In one of his ceremonies (*tala prakaia*) he runs a cotton thread through a hole in his tongue until it is soaked with blood. This he knots in various mysterious ways and ties around the body of his patient to prevent the exorcised disease-spirit from re-entering. See R. G. Heath, "Miskito Glossary," *IJAL* 16: 31, 32.

sumac This plant was extensively used in tanning and as a dye. The berries were used in a sauce for meat in place of salt, and in the 18th century they were smoked in place of tobacco in Europe; in the United States the leaves are sometimes mixed with tobacco. In 1630 the gum was used in New England as a base for perfume.

Among the Navaho Indians baskets made of sumac hold their sacred grain. These people say that if sumac is placed on the head of a child it will stunt his growth and bugaboos for stubborn children are made from this plant. The Tewa Indians and the Jicarilla Apache smoke the leaves of the sumac in pipes or cigarettes, either mixed with tobacco or plain, and as it produces hallucinations it is used by the medicine men when they consult the gods. The medicine men of the Meskwaki use the root bark (*R. glabra*) to produce blisters on a patient or in a tea to give appetite. The berries they make into a gargle; the berries of the staghorn sumac (*R. typhina*) they use for pin-worms. In Texas the leaves of the evergreen sumac are made into a tea to cure asthma. Among the Chippewa a decoction made from one white blossom of *R. glabra* and one root, boiled in a cup of water, is recommended for the digestive system and is used for a mouthwash for teething babies.

sumamao Literally, beautiful river, from Quechua *sūmaj*, beautiful, and *máiu*, river. The *fiesta de sumamao* is an Argentine ritual drama named after its location on an arroyo of the Río Dulce. Formerly it took place in a deserted chapel near the river; now it is sponsored by a ranch owner, called *el síndico*, and it focuses on a small altar erected on his ranch. On the day of San Esteban, December 26, *el santo*, an image of the saint, is placed on this altar decorated with flowers, fresh branches, and fruits. An avenue of *arcos* leads up to the altar, i.e. trees stripped of their branches except for a tuft on top, and coupled into *arcos* or arches by

cords hung with *ichas* (cakes in puppet form). These were dedicated, each one by an *alférez* or *promesante*. The drama unfolds from dawn to dark in three major stages: *los arcos*, *correr al indio*, and *fiesta*.

Dawn is welcomed with trumpets and fireworks. The *alfereces* and *promesantes* ride their horses in slow procession through the *arcos*, while another group of horsemen, *celebrantes*, dash about shouting. This part, termed *las vivas* (the salutes) takes place to the music of native trumpets called *erques*, violins, and accordions. During the *consecración* the *sindico* throw *ichas* to the *alfereces* and *promesantes* with liturgical gestures. During the third part, *la Quila* (generous gift), the populace demolishes the *arcos*, seizes the *ichas*, and feasts on them.

During the intermission a group called *indios* disperses to the woods. They enact the *correr al indio* by running from the woods to the *santo*, beating their calves with fresh branches, followed by the shouts and trumpets of the horsemen. The *indios* approach the *santo* on their knees, kiss his robe, and deposit the branches (*varejones*). The *sindico* cuts incisions in their calves. Women offer holy water and fragrant branches.

The evening is given over to a fiesta with social dances, the *zamba*, *gato*, *chacarera*.

The Spanish Catholic terms thinly veil the agrarian ritual procedure. The sacred tree, doubled into a nuptial symbol of arch with fruits, has been multiplied into an avenue and focused on the image of the saint. The pillaging and eating of the *ichas* remain symbols of the sacrifice and communion with a deity. Exorcism of evil spirits is apparent in the procession and the running, i.e. the *correr al indio*; fertility magic in the voluntary blood sacrifice and aspersion, and in the vestal unction of the altar women. Mestizo dances have replaced the ancient orgiastic post-sacramental rounds. [GPK]

Sumé One of the names of the culture hero of the Tupinamba and Guaraní Indians of South America. His name was interpreted by the first missionaries to Brazil and Paraguay as a deformation of that of the apostle Saint Thomas. The miracles performed by St. Thomas during his fabled wanderings in South America are often exploits of the Tupi-Guaraní culture hero misinterpreted by the early chroniclers. See MAIRA-MONAN. [AM]

Sumer is icumen in The earliest and best-known round, dating from about the middle of the 13th century, preserved in the M.S. Harley 978 in the British Museum, and standing as the oldest six-part composition known. It is often called the Reading Rota (round) and is probably the oldest recorded English folk song, though some authorities have believed it to be the composition of a monk, John of Fornsete. A Latin text accompanies the English, but is not the original. The form of the music is two simultaneous circular canons, one for four parts over a two-part *pes*, or tenor.

sun Of all the heavenly bodies the sun commanded the widest and greatest interest among North American Indians. In many tribes Sun was the supreme deity; this is true of the Plains Indian Crow who addressed their prayers to Sun and regarded him as their most eminent deity; it is true also of the Yuchi of the Southeast, who regard themselves as descendants of the Sun, or of the son of Sun; Sun is thought of as female, and her child was born from her (or Moon's) menstrual

blood. The Natchez, another Southeastern group, built temples to the Sun and held elaborate ceremonies in worship of this deity. In the Southwest the Pueblos and other tribes also venerated the sun. At Zuñi Pueblo Sun is the great object of worship; the Zuñi All-Container or supreme deity makes himself Sun, the father; everywhere else among the Pueblos Sun is also a deity of paramount importance. Among the White Mountain Apache likewise Sun is the most important male being in the religious system. Among the Navaho Sun is the husband of the chief female deity, Changing Woman.

In nearly all American Indian languages Sun is referred to as the "daytime luminary" and moon as the "nighttime luminary"; in the esoteric language of the Eskimo *angakoks* or shamans, sun is *qaumativun*, moon *qaumavun*.

Tales explaining the origin or the procuring of the sun are numerous in native American mythologies. The Eskimo tale of Sun Sister and Moon Brother relates how a brother has incestuous relations with his sister; she discovers her lover's identity and flees to the sky to become the sun, while he pursues her and becomes the moon. The pursuit of the sun by the moon is also a Central Woodlands belief; the Ojibwa, for instance, say the sun, a male spirit, travels west across the sky and passes under the earth to the east again; the moon, a female spirit, and sister of the sun over whom she rules, follows the sun across the sky. Both sun and moon were honored each autumn by certain Ojibwa groups who held a white dog feast for them, since Sun and Moon were believed to eat white dogs at their meals. Other rites held by tribes near the Ojibwa, such as the Iroquoian Seneca, included one for Sun and the Thunderers, which was never held more than once a year, usually during a drought.

Obtaining the sun and placing it in its present position are the subject of many myths. Widespread in the west are forms of the theft of sun (or light, or fire) tale, in which Sun is stolen by the culture hero, and placed in the sky. The Jicarilla Apache credit Holy Boy, a powerful supernatural, with obtaining the sun in the form of a very small object from White Hactcin, another supernatural, at Whirlwind's suggestion. Moon was obtained similarly, but from Black Hactcin.

What the sun was supposed to look like is discussed by M. W. Stirling, "Concepts of the Sun Among American Indians" (*Smithsonian Report for 1945*, pp. 387-400). It is interesting to note, from Stirling's paper, that personification of the sun usually makes this body a male being; three groups only, the Eskimo, Cherokee, and Yuchi, regard the sun as a female being. [EWV]

 The Sun was the main deity of the Incas of Peru. He was regarded as the ancestral god of the imperial family and his cult was imposed on the conquered tribes. Wherever the Incas established their rule, temples were built in his honor. In the temple of the sun, Cuzco, the capital of the empire, he was symbolized by a large gold disk. Outside of ancient Peru, few Indian tribes rendered a cult to the Sun. However, the Apinaye, Sherente, and Canella of eastern Brazil, regard him as a great spirit who assumes a human shape. There are also some faint traces of a solar cult in the religion of the ancient Guaraní. Elsewhere the Sun is a purely mythological character, very often one of the mythical Twins.

The Caraja Indians of Brazil have a myth reminiscent

of one of the most famous stories of the Polynesian Maui cycle. Formerly the sun crossed the sky at such speed that men did not have time to work. The culture hero broke the sun's leg to make him slow down. [AM]

Sünawavi Creator-culture-hero-trickster of the Southern Utes of southwestern Colorado. In some Southern Ute myths Sünawavi and Coyote are represented as brothers; in others Sünawavi, shaman and chief, figures in apposition to Wolf, another prominent character in Great Basin mythology. Among the Southern Paiute, also a Great Basin people, Sünawavi is known as Cünawabi. The latter does not figure as a creator, but appears from nowhere soon after the earth is formed and marries the female creator's daughter. Many Southern Paiute stories detail Cünawabi's various hunting adventures with his brother, Töba'ts, and his erotic, tricksterlike adventures with women. [EWV]

sun dance A ritual dance addressed to the sun and its life-giving powers. Universally the importance of the sun cycle for crops and sustenance is commemorated in solstice dances. In aboriginal America the sun receives special homage in a variety of ceremonies.

The sun is personified only in the Inca dance to Inti, the sun god, by a dancer in a tremendous gold mask and headdress. He is confined to the simplest stepping because of the weight of the disk. He is accompanied by musicians with flute (*pinquillo*) and drum, and by two acolytes bearing swords. Though not as a divine impersonation, the Mexican *quetzales* of the Sierra de Vera Cruz suggest the sun in their spectacular disk headdresses. They are associated with the *voladores*, who circle to earth suspended from a pole.

In Arizona the Papago Indians danced a supplication to the sun in their *ciwiltkona*, hopping around a symbol of the sun, first in one direction, then in the other, extending their hands and then stroking the body in a ceremonial manner, thus acquiring its power. On the Rio Grande, two men and two women used to perform a sun dance, called *acéqueia* (turning on the water), in the spring as a planting rite. It has lately been revived at Santa Clara.

Early in the summer, usually in July, the Iroquois Indians perform for their crops a sun rite consisting of a longways called *wai'eno'e*, stick-striking. In costume and to drum and rattle, two lines of men approach each other, recede, and cross.

The most famous and spectacular sun dance, that of the Great Plains, is a votive rite centered about a consecrated tall pole. It is a combination of a buffalo rite and sun sacrifice, and retains the buffalo associations in its paraphernalia, and among the Blackfoot, in the simultaneous performance of the women's *ma'toki* buffalo-cow society. It reached its fullest development among the Teton Sioux, who regarded the sun as the greatest manifestation of the mysterious all-pervading power, *wakq tqqa*. In moments of stress, as during danger on the warpath, warriors vowed participation, sometimes in large groups, and thus offered their bodies to the divine spirit.

The ceremony was held usually during summer solstice, when all nature was rejoicing and the sage plant was succulent. The preparations included prayers by the medicine men for fair weather, the ceremonial scouting and cutting of the pole by four impeccable youths and

virgins, prayers by the *kuwa kiyapi* (intercessor), painting of the pole or sun symbol, preparation of the sacred place, and assembly by the dance leader of the sacred, ornamented pipe, perfect buffalo skull, and some buffalo fat for setting up the pole; then the rite of raising the pole, a tobacco offering, and a begging dance. These preparations took three or four days, while members of the tribes came from near and far to set up their tipis in a circle (representing the aurora borealis) around the brush dance enclosure fifteen feet west of the pole.

During the one to four days' duration of the dance, the participants abstained from food and drink. On the first morning they took a sweat bath and painted their bodies in symbolic colors, red (sunset), blue (sky), yellow (forked lightning), white (light), and black (night). They donned a deerskin apron, rabbit-fur wristlets and anklets, and a downy feather in their loose-hanging hair. They carried in their mouths an eagle-wing bone whistle with porcupine quill or beadwork and eagle-down decoration. To a large drum and special songs, they circled in procession and saluted the sun with lamentation. They danced in place facing the sun, on their toes or the balls of their feet. They fulfilled their vow in various ways: 1) Laceration of arms and thighs with 100 or 200 gashes, some of which could be taken over by a female relative; 2) Suspension by fastening ropes from the pole to gashes in the breast or back, only the toes touching the ground; 3) Suspension with the feet clear of the ground; 4) Suspension with buffalo skulls or a horse attached; 5) Suspension between four poles. Dancers continued until they fell unconscious or tore themselves loose, and thereupon obtained a vision. After a prescribed duration they smoked pipes, had a vapor bath, food, and water.

The entire tribe gave the dancers moral support. Sometimes children participated by the piercing of their ears and the giving of gifts. Between times they played at the sun dance. The secret rites in the ceremonial tipi were concluded by public social dances.

Other tribes performing the entire ceremony with its voluntary torture were the Ponca, Kiowa, Bûngi, Mandan (*okipa* dance), Hidatsa, Arapaho, Cheyenne, Blackfoot, Crow. Without torture it was adopted by the Shoshone, Ute, Comanche, and others. San Ildefonso and other pueblos adopted it as pure dance, with toe-heel motion and jumps, in place around a pole. The symbolism and form varied between tribes. Everywhere the buffalo was prominent.

The Mandan *okipa* included a dramatic performance commemorating the subsiding of the Deluge. The Bûngi connected the rite with thunder and with a mourning ceremony. Among the Wahpeton and Sisseton Dakotas, the *heyoka* society performed simultaneously. The Ute considered the dance curative, especially for rheumatism. They enacted a sham battle the first morning. Both the Ute and Cheyenne fastened a willow brush in the fork on top of the cottonwood pole. The Northern Cheyenne still perform it as the *willow dance*, without the Siouan sun worship. The dancers wave feathers and dance in a circle in place, flexing their knees rhythmically. The Crow move toward the pole and recede. In this tribe the motive of revenge played a role. As magical means of killing an enemy, the ceremony was organized by a whistler, the owner of a doll symbolizing the moon. He was painted with designs representing the morning star and

lightning. He did not join the group who submitted to torture, but danced himself into a trance. Thus the ceremony was a particular composite.

The Indians believe that with the eclipse of August 7, 1869, the sun died. The Teton Sioux performed their last sun dance in 1881. It has been generally condemned because of misunderstanding of the torture elements and ignorance of its importance to the spiritual and moral strength of the tribes. However, it survives among the northern and western tribes, usually as a spectacle. Lately, one of the Cheyenne again vowed torture.

Despite their formal divergences, these representative sun rites share fundamental concepts—the circling, with suspension in two instances; the meteorological symbol of the bird (quetzal, eagle); the phallic symbol of the pole (or sword or stick), emphasized among the Cheyenne by the practice of ritual intercourse. The Plains rite weaves the many symbols into a strange and eloquent composite, a summary coercion of supernatural power for communal welfare by voluntary personal blood sacrifice, of human survival and prosperity by means of the source of sustenance, the buffalo, who depends on vegetation (sage and willow), thus; ultimately on the sky and sun. See BUFFALO DANCE; EAGLE DANCE; HEYOKA; MA'TOKI; QUETZALS; VOLADOR. [GFK]

sunflower The sunflower (*Helianthus*) was worshipped by the Incas as a representation of the sun. The seeds were eaten during certain religious ceremonies, and priestesses of the sun wore a large sunflower of virgin gold on their breasts. In Europe, where the plant was taken by the Spaniards, it was found to be a valuable and useful plant. The leaves were smoked, the buds eaten either in salads or cooked. The flowers provide a dye and the seeds are eaten by man, bird, and beast; an oil from the seeds is used for salads, cooking, and burning in lamps. Medicinally, the seeds, because of their oil, are good for coughs and are a specific for whooping cough; they are also said to be good for the teeth.

The American Navaho Indians make crude flutes of the stalks and a Tewa song says that the sunflowers are watered by the tears of Navaho girls. The Meskwaki Indians make a root poultice for stubborn sores from *H. decapetalis*. They use a sawtooth sunflower (*H. grosse serratus*) poultice to heal burns, and a root tea from *H. strumogus* for lung troubles. The Jerusalem artichoke (*H. tuberosus*) is said to have been a native of the Dakotas and to have been eaten long before the discovery of America.

In Greek mythology Clytie, a sea nymph, daughter of Oceanus and Tethys, was beloved of Helios. She always looked toward the sun, and for her constancy was changed into a heliotrope or sunflower. The calendula, chrysanthemum, elecampane, marigold, etc., have also been called sunflowers at one time or another, as has every plant whose flowers tend to face towards the sun.

Sung Ti In China, the king of the Third Hell where people are punished who were guilty of unfilial behavior, disobedience, disloyalty, rebellion. He is honored on the eighth day of the Second Moon. [RDJ]

Sun Sister, Moon Brother The usual English title given to a widespread Eskimo myth which accounts for the sun and moon. Briefly, the tale is concerned with a man who visits his sister secretly at night; in order to learn the identity of her clandestine lover the girl rubs

her hands with soot or paint and leaves telltale hand-marks on her brother's back; or she smears paint on his face. When she learns that her lover is her brother she cuts off her breasts and offers them to him; then flees to the sky, where she becomes the sun. Her brother attempts to catch her, and becomes the moon. [EWV]

Sun Snarer A boy who thinks himself mistreated lies down alone and has his robe burned by the sun. Angered, the boy makes a noose, usually from a public hair obtained from his sister, and snares the sun. Darkness ensues and the sun nearly chokes to death before one in a succession of animals is able to gnaw through the noose, thus relieving the sun and causing darkness to disappear. This North American Indian myth has a wide distribution among the Northern, Plateau, California, Great Basin, and Plains tribes and is also popular among nearly all Eastern Woodlands tribes. Another native American belief concerning sun-snaring is evinced in Central Eskimo playing of cat's cradle in autumn to enmesh the sun, and playing cup and ball when the sun moves north. [EWV]

supay The evil spirits of the Quechua-speaking Incas of Peru. Today the Catholic Indians of Peru and Bolivia apply the word to the Devil. [AM]

Superman Deus ex machina of the comics, radio, and screen, who, as the alter ego of Clark Kent, reporter, transforms himself at will into the godlike, invincible "man of tomorrow." With his superhuman strength (especially in his arms and fists) and his magic powers of flight and seeing and hearing through walls, plus a perfect physique (a Tarzan in interplanetary costume of tights, trunks, and cape), Superman conveniently comes to the rescue of girl reporter Lois Lane and their friends; exposes frauds and hoaxes; plays cops and robbers with the enemies of society; and engages in other legendlike, prankish exploits. The creation of Jerry Siegel and Joe Shuster and first appearing in *Action Comics Magazine*, June, 1938, Superman represents a development of the interplanetary hero of the Buck Rogers type into the "changeling personality," who bridges the gap between reality and fantasy. From a strong man who takes justice into his own hands, Superman later became a crusader for brotherhood and other worthy causes, thus directing his tremendous popularity and influence (inspiring many imitators) into socially useful channels. [BAB]

Supreme Being The existence of a Supreme Being has been so often noted among African peoples that there are those who maintain that African religions are essentially based on the concept of a Creator who, having made the world and being its ultimate power, has withdrawn from man and, though recognized by the people, has no cult. Some of these entities are: Nyame (Nyankompong) of the Ashanti; Mawu (Mawu-Lisa) of Dahomey; Oshala of the Yoruba; Chuku of the Ibo; Nzambi, Zambi, and other variants in the Congo; Mulungu of the Zulu; Ngai of the Masai; Wak of the Galla. The exact character of most of these deities, however, is to be determined. Certain currents in present-day theology run strongly in the direction of seeing in these beings the survival of a single revealed deity, corrupted over the generations by men who introduced other beings to worship. The resultant compression of data into this frame results in any principal deity being interpreted

as evidence of an original Supreme Being, despite the fact that on the Guinea Coast, at least, research has demonstrated the methodological indivisibility of this approach. [MJH]

Surabhi Literally, the fragrant one: in Hindu mythology, the cow of plenty who grants all desires, created by Prajāpati from his breath, or produced at the Churning of the Ocean. Surabhi bore a number of cows regarded as mothers of the world. Having practiced austerities and pleased Brahmā, she was granted immortality and given her own heaven, Goloka, which can be reached only by the most pious, especially by worshippers or givers of cows. Devotees of Surabhi must bow in reverence to cows, subsist on the five products of the cow, and sometimes live among cows.

surtida (Spanish, assortment) A Philippine folk dance of courtship mime for eight couples in quadrille formations. The various sections of this elaborate composite are each a complete regional dance and are arranged so as to express the various stages of courtship. These sections and their meaning are: 1) *birgoire*, the meeting; 2) *camantugol*, an imitation of ocean waves; 3) *tambururay*, the girl's shyness; 4) *haplin*, a gay interlude; 5) *ligui*, a declaration of love and coy reaction; 6) *voluntario*, acceptance; 7) *incoy*, imitation of drunkenness; 8) *estrella*, rejoicing; 9) *salpumpati*, homeward flight of the doves.

Each dance has its special music, in Spanish style, by a native composer. The waltz and mazurka steps, and the semi-Spanish posture are also derivative. In a word, this "poem of Philippine love" is native wine in Spanish bottles. [GPK]

Surtr In Teutonic mythology, the flame giant who presides over Muspellheim, the realm of fire to the south of Midgard. Here he stands ever alert, brandishing his fiery sword which sends off showers of sparks. At Ragnarök he will lead the fire giants and battle with Frey whom he will overpower because Frey has no weapon. Surtr's fire will destroy the world. See BIFROST; HODMIMER'S FOREST.

Sūrya In Hindu mythology and belief, the sun god, or the sun itself worshipped as a god. In Vedic times there were several sun gods. These were later merged into one, who was indiscriminately given the name of any of them: Sāvitrī, Mitra, Aryaman, Pūshan, or Mārttaṇḍa. Sūrya is the most concrete of the solar deities. He is described as short, with a burnished copper body, riding in a chariot drawn by four or seven horses and driven by Aruṇa, the dawn, who tempers his splendor. The three aspects of the sun—rising, culminating, setting—are not distinguished as three deities but are considered attributes of the same god.

Sūrya is variously considered the son of Dyaus, of Aditi, of Ushās, of Brahmā. By his wife Saṅjñā he had three children, Vaivasvata, Yamī, and Yama. Saṅjñā, unable to bear his brilliance, left him a shade (Chhāyā) as a handmaid and went to live in the forest in the form of a mare. There the sun found her and approached her in the form of a horse. From their union sprang Revanta and the two Aśvins. Saṅjñā's father, Viśvakarma, then cut away an eighth of the sun's brilliance, so that his daughter could live with him. Sūrya was also the father of Karna, leader of the Kauravas, and of

Sani and Sugrīva. Through Vaivasvata he was the ancestor of the Sūrya-vansa or solar race of kings. He communicated the *Yajur-veda* to Yājñavalkya while in the form of a horse.

One of the most ancient of the sun cults was that of Mitra (Persian Mithras) which has led some scholars to believe that India's solar religion came from the West, but the exchange probably was in the opposite direction.

Sūrya maintained his early popularity as a god even after the rise of the *trimūrti*. Few temples dedicated to his worship have survived (the most important are at Kanarak and Gayā), but he is still worshipped in Bihār and more openly by the Dravidians and Kolarians who invoke him as Paramēśvar, creator and preserver. Orāons identify him with their supreme deity, Dharmesh. The Sūryapuja (sun festival) is held annually in the spring in Sylhet. A plantain tree is set up in each courtyard, decorated with flowers, offerings are made, and hymns in honor of the sun are sung. The symbol of the sun is placed over booths in the bazaars for luck in many parts of India and Sūrya is invoked to heal disease and put to flight evil spirits.

Susa songs Secular dance songs of Surinam Negroes associated with a pantomime battle with spears and shields. The "Susa play," or dance, is held annually and the winner of the "fight" is named "King of Susa" and must fight the challenger the following year.

Susu or Esusu Nigerian (Yoruban) term for cooperative savings systems, under which each member of a group gives a certain sum to a leader each week or month, the total amount of every set of payments being turned over to one member each week, until all have received their share of the money paid in, when another round may be initiated. The Esusu of Nigeria has survived in unaltered form under the name of Susu in Trinidad. Elsewhere in the West Indies it has other designations, but with principles and procedures essentially similar to the original. See BOXI-MONI. [MJH]

sūtra or sutta In Brahmanism, an aphorism or short precept in brief technical language: literally, a string or thread. The term *Sūtras* generally refers to four groups of precepts: the *Śrauta*, dealing with rules for the use of mantras and the Brāhmaṇas of the Vedas in connection with sacrifice; *Gṛihya*, dealing with the rules for family worship; *Dharma*, dealing with social duties; and a group dealing with astronomy and magic. They belong to the period in Brahmanical history, 500–200 B.C.

In Buddhism the term refers to the narrative parts of the Pali Canon. Trillions of sermons have been delivered since the beginning of the universe dealing with the elevation of man to the blissful state. Those which have been recorded are called *sūtras*.

For the Jainist the term *sūtra* is applied to a scripture, especially to one dealing with the life of Mahāvīra.

suttee See SATI.

Suvinege One of the earth gods of Dahomey Negro religion; eighth (or ninth) child of the twins who rule the earth (Dada Zodzi and Nyauhwe Ananu). Suvinege has the bald head of a man and a vulture's body, and as a vulture carries the sacrifices from the place of offering to the deity for whom they are intended. Suv-

nenge, as vulture, also carries messages between Sagbatá (the earth-god group) and Mawu (creator). He is further identified with the vulture, a sacred bird in Dahomey, by the fact that he eats the dead. M. J. Herskovits points out (in "An Outline of Dahomean Religious Belief," *MAAA* 41, p. 18) that the last two syllables of this name, *-nenge*, resemble the Dutch Guiana word for Negro, *Nengere*, in striking parallel to the fact that in Surinam, Jamaica, and the South Carolina Gullah Islands, the vulture is also identified with the Negro.

Swarga Indra's heaven, a temporary paradise on Mount Meru where the blessed live before their next birth on earth. The elephant Airāvata stands at its entrance; its capital is Amarāvati; and the Apsarases and Gandhārvas serve Indra there.

Svartálfar Black elves: the dwarfs of Teutonic mythology which grew from the maggots of Ymir's flesh. They are now living in the earth and in stones; they have the shape of men, though they are often misshapen. One of their favorite tricks in lonely places is to repeat the last few words of conversation they overhear. It was the Svartálfar who made the wonderful necklace Brisingamen for Freya, and other wonders of the old Teutonic gods. They are often identified with the *dvergar*, and are hard to distinguish from the *Döckálfar*. See ALFAR.

Svartalfheim is the underground home of the black dwarfs; here they are constrained to remain during daylight on pain of being turned to stone. See ALVÍSS.

Swayamvara An ancient Indian form of selecting a husband; marriage by choice: a maiden of high rank may choose her husband from an assembly of suitors by throwing a garland over his neck; often the man chosen was the winner in a test of skill. The custom was observed by the Rajputs until a late time. It has played an important part in Indian epics and folktales, especially in the story of *Nala and Damayanti*, and in the winning of the princess Draupadi by the Pāṇḍu princes in the *Mahābhārata*.

swallow songs Songs sung by Greek children on the streets in March to welcome the return of the swallows and of spring. The songs go back more than 2000 years to the procession of the Rhodian youths described by Athenæus in quotation from Theognis. In modern times the occasion takes on the character of many other children's festivities, with offerings of food in the houses they visit.

swallow story A type of folktale based on the extraordinary swallowings motif (F910 ff.), appearing almost everywhere in the world, and following several distinct patterns: 1) in which the hero is swallowed by one or more monsters but is disgorged (F914) or emerges in safety when the monster is killed (F911.3; F911.4; F913); 2) in which a glutton swallows his own children, neighbors, etc., and is killed, the victims emerging alive (F913); and 3) those appearing throughout the ages in all parts of the world: etiological stories accounting for various natural phenomena, as the countless eclipse tales, the Paiute Indian story of how the sun swallows the stars (to explain their disappearance at dawn). Typical of the first group are the stories of Tom Thumb (F911.3.1) who was swallowed by a cow, a fish, and a giant, *Little Red Riding Hood* whose grandmother was

swallowed by the wolf, and *The Wolf and the Seven Little Kids* (Grimm #5) who walked forth well and happy out of the wolf when their mother slit him open.

Among the famous swallow stories of the world are the Greek myths of Cronus who swallowed his own children, and of Zeus who swallowed Metis, the story of Jonah swallowed by the whale, the Teutonic Odin swallowed by the wolf, etc. The giant (as mouse) was swallowed by Puss in Boots in one version of that tale. Sometimes the victim kills the swallower from within (F912 ff.). For the benevolent swallower, see AGASTYA.

Various heroes in North American Indian hero tales, such as Blood Clot Boy, undergo several ordeals while pursuing their adventures; one of these often is that the hero is swallowed by a monster animal or ogre. Inside the animal the hero often encounters other victims, still alive, who have also been swallowed. He kills the monster from within, and liberates his companion victims.

In some North Pacific Coast and Siberian tribes the swallowing incident is further elaborated; as a result of having been swallowed, all the victims of the monster become bald.

Swallowing incidents are not, however, limited to hero tales. In North American Indian trickster stories the incident also appears in less elaborated form. The Navaho, for example, tell how Coyote, the trickster, swallowed Horned Toad; from inside Coyote Horned Toad asks Coyote the name of his various internal organs. When Coyote mentions his heart, Horned Toad makes incisions on it twice with his "knives"; Coyote dies and Horned Toad comes out of Coyote through his anus (W. W. Hill, *Navaho Coyote Tales and Their Position in the Southern Athabaskan Group*, *JAF* 58:317-343).

[EWV]

swan maiden The motif (D361.1) typifying a worldwide cycle of folk stories characterized by the metamorphosis of a beautiful half-mortal, half-supernatural maiden from swan to human form. The swan form depends upon the possession of a magic feather robe (or pair of wings), or a ring, crown, or a golden chain; usually the swan maiden is under some enchantment or tabu that affects also her human lover. That the swan maiden marries the youth who finds and steals her swan garb on the shore is common to almost all Asiatic and European versions. Either the lover hides the enchanted feather dress (ring, chain, crown) and thus keeps the wonderful swan maiden with him in human form until she finds it, or he breaks the tabu and she vanishes and returns to her swan shape and supernatural life.

There is a late Rumanian Christmas carol on the swan maiden theme in which the beautiful swan cannot marry the hero until first he wins the bird of heaven to sing at their wedding and the crown of Paradise for the bride to wear. So the hero makes his journey. St. Basil in Paradise has mercy on him and gives him the bird and the crown. He returns and calls to the swan to come and hear the bird sing; and "When the swan came forth it turned into a maiden fair/ The crown leapt onto her head/ The bird began to sing."

The motif is found everywhere in Asia and Europe: in all Slavic folklore, in Icelandic, Finnish, Celtic, and Teutonic story. It is known in Persia, Ceylon, China, Japan, and in Australian, Polynesian, Melanesian, and

Indonesian mythology; it also turns up in Africa, East and West, among the Zulus, and in Madagascar. Among the most famous swan maiden stories are those in the Indian *Satapatha-Brāhmaṇa* and the Arabian *Thousand and One Nights*. The Old Irish *Angus Og and Caer* is among the famous swan maiden stories of the world.

Various scholars have sought to identify the swan maidens with the Valkyries (*Lay of Wayland*, about 900 A.D.) but Penzer judges the analogy far-fetched (*Ocean of Story* VIII: 223), pointing out that "nowhere among the early primitive beliefs of Europe are . . . found the roots of the swan maiden motif" and adjudging that early Sanskrit was the original hub of radiation.

 The swan maiden incident in the European folktale *The White Cat* was borrowed by several North American Indian groups (Plateau tribes, Biloxi, Ojibwa, Assiniboin, Micmac, Natchez, Tepecano). The incident is also widely told in elaborated form as a tale complete in itself by the Eskimo and by many American Indians. The American Indian tale of swan maidens concerns a hunter who, on passing a lake, sees several geese divested of their feathers and in the form of women. He seizes the women's feather-garments, but relents and gives back all except one. All the geese save this one fly away. The man marries the one who remains, and she has two children by him. Later, his wife finds her garments (or a pair of wings) and she and her children fly away as geese. In some versions the husband pursues his wife and children and finds them; he finally kills the wife, but the children escape. See MUDJIKIWIS. [EWV]

 The swan maiden motif was also popular with South American Indians. The earliest version was recorded in the 16th century among the Canari Indians of Ecuador. The two survivors of the deluge were assisted by parrots who became two girls after they succeeded in capturing them. In a tale of the Tenehetara Indians of Maranhao, a man seizes the feather-dress of a girl, actually a vulture, who is bathing in a river. She becomes his wife and takes him to the sky where her father lives. The same motif forms part of the mythology of several Guiana tribes. [AM]

swastika The swastika, a more complex symbol than the cross, which is one component of it, is made by drawing two short lines either to the right or left of the terminal of a simple Greek cross. It is also called the gamma cross for if one joins four Greek gammas, a swastika will be formed. When the designs are commonly used and when the meanings attached are generally accepted by the users, they may be said to be symbols of the meaning.

The meanings are various but often not very clear. Some students content themselves with observing that the swastika is a sacred sign in India (it was one of the body marks of the Lord Buddha, for instance) and that it has a solemn meaning among both Brāhmins and Buddhists. This assertion does more to describe the emotion the swastika arouses than the reasons why the emotion is aroused. Other observers suggest that the swastika represents the apparatus used prehistorically to make fire (see *NEW FIRE*) and thus represents sacred fire, living flame, and Maia, who symbolizes productive power. Milani thought it was a symbol of the sun and "seems to denote its daily rotation." Or it may be lightning, the storm, the Aryan pantheon; benedic-

tion, good omen. When in the 10th century a wave of demonism swept over Tibet, pious worshippers began turning the prayerwheels from right to left instead of from left to right as the orthodox do.

Whatever meaning the swastika may have in any community that attaches a meaning to it, the symbol is very ancient and very widespread. The swastika on the pudenta of a naked female figure Schlieman excavated at Troy may have been simply decoration, or a talisman, or a classifier of the figure. It was used in Crete, in ancient Rome, on Celtic rocks in Scotland, rock carvings in Sweden, and throughout the Orient. The wheel cross, which is thought for Stone Age man to have symbolized the sun, is displaced in the Bronze Age by the swastika.

American Indians of the pre-Columbian period used this cross for a number of purposes. The most frequently mentioned is as a symbol of the four directions which were important in Indian ritual. It has also been identified as a wind symbol, storm symbol, and phallic meanings have been attributed to it.

Another refinement in swastika lore is whether the cross pieces point to the right, which makes it a lucky sign, or to the left, which makes it unlucky.

Hitler used it as the symbol of the Nazi party and in China the swastika was the symbol of a benevolent society.

The difficulty with all of these interpretations is not that any of them is of necessity a wrong, improbable, or even false attribution. Any symbol can mean anything the observer decides to make it mean. The difficulty is to determine at any given time or place what meaning the people who used the symbol attributed to it. Data for many ages and cultures which were certainly complex is too scanty to justify conclusions about meanings attached to relatively simple symbols. For comparative analysis see *CROSS*. See also *BON*; *DOOR SIGNS*. [RDJ]

Sweat Lodge Creator and benevolent deity of the Sanpoil Indians, an Interior Salish tribe, formerly on the Columbia river, Washington. Not only in the mythology, but in the religion of the Sanpoil, Sweat Lodge, a unique character, seems to possess the characteristics of a true deity. He is credited in the mythology with creating and naming all the animals and birds, and instructing them on what they should do after human beings were created. See V. F. Ray, "Sanpoil Folk Tales" (*JAF* 46: 129-187, 1933, pp. 131, 132). [EWV]

Sweet Trinity or **The Golden Vanity** An English traditional ballad (Child # 286) in which a ship beset by pirates is saved by the feat of the bold cabin boy, who swam alongside the pirate ship, bored holes in its hull, sank it, and in different versions was either well rewarded or left to drown by his own false captain. Pepys recorded an old broadside ballad called *Sir Walter Raleigh in the Lowlands*, which may have been the original of the many traditional variants or may itself have been an offshoot of some parent version. The basis of the tale may have been the appearance of Barbary pirates in the English Channel in open galleys in the 17th century. These pirates were popularly thought of as Turkish, and in some of the texts the adversary is called Turkish. Others make the enemy Spanish, French, or an unidentified "false gallay." The English ship is variously named "The Sweet Trinity," "The Golden Vanity," and in America, "The Golden Willow Tree" (Illinois), "The

Mary Golden Tree" (Kentucky), "The Turkey Shivaree" (Ozarks), "The Gold China Tree" (Vermont). The tool that the cabin boy used was remarkable; it was a sort of auger that could bore, depending on which version is followed, from one to fifteen holes at a time. The ballad was a favorite of sailors as a forecandle song under the title of *Lowlands*, *Low*, one of its refrains. Other titles are *The Pirate Ship*, and any of the names of the ship itself. In America it is an instrumental piece favored by banjo-pickers. The instrumental air differs from the singing versions and picks up a rapid, percussive, staccato style far removed from the slow and mournful melody to which the words are generally sung. However, the different texts vary greatly in meter and are distinguished by Child as belonging to three groups.

sword dances Men's dances involving the rhythmic manipulation of one or several swords, often in combination with elaborate configurations. They are still performed in many parts of the world, at weddings, funerals, and particularly at solstice ceremonials which have been shifted in the Christian calendar to Carnival, Corpus Christi, or San Juan's Day. As solo or group dances they show a variety of forms.

1) The brandishing of weapons, particularly in the Caucasus and Asia Minor, as in the Ukrainian *zaporochez* and the Arabian self-mutilating *Aissâoua* dance, both with frenzied leaps and turns.

2) Skilful stepping between a crossed sword and scabbard, as the famous Scotch *Gilly Callum*, said to have originated in a victory dance.

3) Battle mime by two opposing factions, particularly in the *Morisca*s of Europe and Mexico, and related ritual combats, as the Shetland Island sword dance between the patron saints of six countries, the *Schwertlestanz* of Überlingen, and the *bacchu ber* of the French Haute Savoie.

4) The sword dances of northern England, which have eliminated the mimetic combat and use the double-handled flexible blades as choreographic tools.

The succession of figures varies with the village of origin, yet coincides in essentials. Usually the progression is a sunwise circle or weaving within a circle; but the Flamborough Sword Dance straightens out into longways formations and a straight hey (grand right and left in a line). The number varies from five (Sleights, Swallow), six (Grenoside), to eight men (Flamborough). The character of the figures depends on the length of the sword: long (Kirkby-Malzeard, Grenoside, Ampleforth, etc.), or short (Swallow, Earsdon, Winlaton, etc.). A ring-and-step usually starts the dance, that is, a circling with a steady run, shifting the sword from shoulder to shoulder, and concluding with "stepping," foot-tapping in place (Grenoside); sometimes also a clash is included, that is, a meeting of the swords in a central pyramid (Kirkby-Malzeard, Sleights). The most common evolutions are the "single-under" and "double-under," in which the dancers in succession twist under the upraised swords; "single-over" and "double-over," in which they step across the lowered swords; the roll or waves, in which the swords are held parallel, with a successive raising and lowering as dancers pass under and over (Grenoside, Ampleforth); the reel, a circular hey with raised swords (Grenoside, Sleights); "threeding" with double overhead arches (Flamborough); most important of all,

the final triumphant "lock" of all swords into a star shape, displayed by the leader during "stepping," or wrapped around the neck of an attendant character while all circle clockwise in the "rose." Each section is called a "nut." But each section flows into the other smoothly and rhythmically, with the incessant running to rapid 6/8 tunes of accordion or fiddle. Never do the dancers loosen their hold on the chain of swords held between them hilt-and-point.

The performance is always preceded by a naive declamation, with characters similar to those of the *Morris*—the Captain, Bessy, Queen, Fool or Tommy, or various historical characters. Costumes vary from sweaters and trousers to elaborate vests and hats. In the Sleights dance, seven Toms have blackened faces. In the Grenoside dance the captain wears a helmet covered with a rabbitskin; in the Earsdon dance, the Bessy wears a furry cap. In the former the captain steps into the middle of the lock; in the latter the Bessy is "hung." In the Askham Richard Sword Dance the fool kneels and passes his head through the lock. When the swords are withdrawn—as always in conclusion—he feigns death and all cry "A doctor!" The Besom-Betty says "I'll cure him," and resurrects him.

This vestigial sacrifice identifies human and animal victim, in combination with choreographic sun symbolism and the sword's phallic symbolism. In the elaborate Basque *ezpata dantza* both longways and circular types are combined with stick dances, a Maypole, and a *txonkórinka* or hoisting of the captain onto the plaited swords in an apotheosis of death and resurrection. This corresponds to the "lock" and the Spanish *degollada* or decapitation of the *capitán*.

The theory of origin in vegetation magic suggested by these various symbols finds support in practices of antiquity. The Roman *salii* (war dancers) honored Saturn, god of sown seed, in their solemn singing processions in March and December, and by their leaps induced the cereals to wax tall. The Ampleforth sword-dance play has a curious parallel in ancient dramas of Dionysus and surviving Carnival plays of Hagios Gheorghios in Thrace. The Dionysian *anthesia* cycle of seasonal death and rebirth consisted in an *agon* (contest) like the *Moriska*, a *pathos* (sacrificial death), *threnos* (lamentation), and *anagnorisis* (resurrection). Both the Thracian and English plays involve a suddenly grown babe of an old woman, a mock marriage with a transvestite, death, lament, and resurrection. The animal skins of the *kalogheroi*, the fools of Thrace, reappear in England, and the seed-sowing and plowshare have only recently vanished from the Sleights sword dance. (They are retained in the English Ploughstots and Portuguese *mouriscada*.)

This phallic and vegetation symbolism could be applied to other forms of European sword dances, including the vestigial animal sacrifice of the pyrrhic German cutlers' and butchers' dances (*Metzgeranz*) of Carnival. See RITUAL DRAMA; STICK DANCES. [GPK]

sword of Damocles A motif from classical folklore repeated in varying form, e.g. a millstone in Grimm, in European folktales: a sword suspended by a single horsehair over the head of a guest. In its original setting by Cicero, Damocles was a courtier at the court of the elder Dionysius, who praised the tyrant's wealth and power and happiness. Dionysius invited Damocles to a

sumptuous banquet and then pointed to the sword, indicating the constant threat of violence hanging over a king's head.

swords The personalized sword is invariably one of the possessions of a hero. Roland's Durandal, Siegfried's Balmung and Gram, Ogier's Courtain and Sauvaigne were individual weapons which were just as much a part of their owners as their right arms. Excalibur, the magic sword of Arthur, is the type of the sword in the stone: only Arthur, its destined user, could remove it from the stone in which it was embedded. Only Sigmund could withdraw Gram from the Branstock oak. Perseus, Achilles, Odysseus, Finn, Odin, Heimdall, Charlemagne, Tethra, Isonokami, Kullervo, all owned magic swords. Magic swords are talismans; they protect against injury and always kill or wound an opponent. They may render the owner invisible; they grow or shrink at need; they give the magic power to travel great distances. The magic sword brings up the wind (Chinese), speaks (Celtic), emits fire (Chinese). The infallible sword is found in Icelandic, Celtic, French, Spanish, etc., folklore. The sword, being of iron, is a charm against witchcraft and a potent judicial influence. Traditionally (Celtic, Teutonic) evildoers die by their own swords. The sword often is a chastity index or a life token; it becomes discolored or runs with blood when unfaithfulness or death occurs. See *AMLETH*; *SEPARATING SWORD*; *TYRFING*.

symbolism An aspect of thinking or expression in which the process of association is brought into play so that a concept or, more often, a climate of thought is encompassed or suggested by a word, phrase, sign, gesture, object, depiction, diagram, etc.

The word *symbol*, as it is generally used, does not convey precisely the same range of meaning as the derived forms *symbolic* and *symbolism*. That which is called symbolic seems to contain the means (sometimes nebulous) of arousing associations and conveying connotation. The word is so loosely tossed about that anything which is suggestive, to any slight degree, of ideas, however vague, is likely to be described as symbolic. One can become so enmeshed in exploring the associative processes, increasingly able to read meanings into shapes, that eventually everything which exists takes on some degree of the symbolic. A symbol, on the other hand, is a definite thing on which one can, so to speak, put the finger. A vague suggestion is not definable enough to be called a symbol. At the same time the word *symbol* is widely used for a variety of signs, insignia, marks, diagrams, etc., which are a precise indication or equivalent of the meaning they are designed to convey, without any aspect of "suggestion" at all. Purely identifying symbols are, for example, chemical, pharmaceutical, or alchemists' signs, signs of the zodiac and of planets, musical notations, proofreaders' marks (some of which reproduce the gesture of correction), emblems of rank or group or profession such as the policeman's badge, hallmarks or trademarks.

Such identifying symbols or labels are often arbitrarily adopted as contrasted to symbols in the realm of ideas, which appear to accumulate or develop almost of their own volition. However, these adopted symbols often repeat ancient ones, like the wings on an airman's collar, and they may accumulate symbolic connotation with use, like the national flags which come to arouse

all the complex emotions associated with home and country. But the accumulation follows its own natural course. The American eagle, for example, is probably not symbolically identified with the United States to any great extent in the general mind; it more often suggests the coin on which it happens to appear. The naturally evolved symbolic character of Uncle Sam is more widely used as an expression of the American spirit than the predatory, solitary, and rather terrifying bird.

In order to devise a limitation of the subject which is reasonably susceptible to discussion, the common denominator in this varying usage might be adopted. Symbolism would thus be construed as that which has the element of suggestive or connotative meanings, but which conveys them by means of symbols sufficiently definite to be recognized and analyzed. Signs that are purely labels are not pertinent to folklore and mythology in any case. Even those symbols which serve, perhaps primarily, purposes of identification, like the "vehicles" of the Hindu deities or attributes of the saints (the key of St. Peter, arrows of St. Sebastian, the rope around the waist of St. Francis, etc.) carry other implications—the power of the god or the history of the saint; *Garuḍa* implies the supremacy of Vishnu in the airy element. In this field, a symbol is something which has an aura of emotion or thought, which condenses a range of ideas or creates a framework of context—a means by which people express something more than is specifically stated in words or literally depicted in the arts. The "color" of one thing is added to that of another, and the accumulation of human experience is brought into play in the communication of mood or meaning. Symbolism, in this sense, stretches the capacity of both expression and comprehension, and becomes the medium through which some of the most universal, elemental—and intangible—concepts of man are conveyed.

On the other hand, symbolism is something more precise than mere suitability or association of ideas. The pictures of birds hung in the nursery would not be exchanged for the wall-hangings of a harem; but no symbolism is involved until a characteristic depiction conveys a perceptible meaning, as when the mating birds on the tree of life convey associations connected with creation. The phoenix as resurrection, the crane as long life, the incorruptible peacock are unmistakable symbols. The toe patterns tooled on the sole of a Persian sandal are an example of natural association rather than symbolism, but the foot becomes symbolic in its phallic associations, as the sacred toe of Buddha, the winged foot of speed or victory, the footprints which symbolize the passage of time. The butterfly shape of a kite and the fruit painted on a fruit dish are most likely a result of simple association, but the apple of the forbidden tree is a symbol of evil, the peach in China is longevity.

Symbolism in folklore is the recognizable and usable property of a cultural group. Literary symbolism and the "private symbolism" which may occur in sophisticated art are outside its scope. A symbol remains a private symbol, just as a word remains a nonce word, until the identity between the symbol and the meaning are established and the purpose of communication is served. The following list of certain common forms which symbolism takes in many parts of the world is an indica-

tion of how completely it pervades the various aspects of life. Many of them are discussed fully elsewhere in this volume. The examples are merely indicative of the nature of the material.

Gesture—the finger to the lips for silence, the tapping of the forehead for thought, the hands over the eyes, the shrug, the thumbs down for death, the two uplifted fingers of the "V for victory," or any of the movements, small or significant, by which meaning is conveyed. An elaborate religious symbolism may evolve around specified gestures. The fixed attitudes of Buddha, for example, were rigidly prescribed in all Buddhist art: meditating, with the right hand palm up in the left, both on the lap; protecting, with the right hand raised, palm out; earth-touching, gift-bestowing, preaching or teaching, etc. The gesture of blessing or benediction in Christian art shows the hands uplifted with three fingers touching. The open hand is a defense against evil powers. The ancient mother goddesses, Ishtar and Padma, were shown uplifting the breasts with the hands in the gesture which conveyed bounty and fertility.

Posture or Position—the kneeling or standing position of worship or supplication; the seated position of the person in authority—the ruler, the judge, or Christ in his character as judge. In catacomb art, the head resting in the hand is the position of dejection, and the suffering Christ of east European peasant art is always shown with one hand on knee and the other supporting the head. The meditating Buddha sits crosslegged. The frontal view, with enlargement of persons to indicate their importance, is a feature of Semitic art. In early Christian art, the orant (the blessed dead) stands with arms upraised in the attitude of prayer or adoration.

The movements of the dance.

Symbolic acts—the washing or cleansing as a symbol of purification, which is almost world-wide, anointing for prosperity or joy, breaking bread as an indication of willingness to share, drawing back the curtains which admit the soul to paradise; circumcision which admits the Jew to the Covenant of Abraham; three taps for the act of penance. Death is the felling of trees in the garden of life. To dive into water is to delve into the mystery of Maya or the secret of Life. Shamash pours water from the jars on his shoulders to symbolize his beneficence and, for the same reason, the elephant pours water over the goddess Padma and her lotus.

Location and direction—facing the rising sun or Mecca or Jerusalem, the north as the origin of evil demons, the prescribed position of saints in Byzantine churches or of guests at the table, as a symbol of honor. The four quarters of the universe are significant in many cultures, and with each direction may be associated certain colors, plants, elements, animals, etc.

The body and aspects of appearance or dress—the queue unbraided for mourning, the enlarged tongue which is the sign of a great man, the long hair which shows the Nazarite's consecration to special service, the skull as death, the heart as the seat of life, the evil eye, lameness as a symbol of royalty, the tonsure of the priest, Buddha's tuft of hair, the scarification for various symbolic purposes common among primitive peoples. The sexual organs appear universally as basic symbols associated, of course, with creation and fertility, whether depicted literally as the lingam may be or in association

with other forms such as the female lotus or spiral, the male bull or sun. The physical aspect of important or supernatural personages is generally stylized with details or features indicative of their power or character. The earliest depictions of Christ, for example, focused on the outstretched hands, showing no features. Innumerable items of dress and ornament are symbolically used (the belt with keys signify womanhood, the ring for union) or decorated with symbols, notably in the case of ritual and ceremonial garments.

The cosmos, the elements, the earth, and landscape—the cosmos as an egg or an endless serpent, the sun and moon as sky father and mother, the sky as cow or cosmic hide, the earth as a giant tortoise, the star, the dawn of hope, the fire of divine presence or purification, the lightning of destruction, the height of mountain symbolizing spiritual supremacy or sacredness, the rock, the ocean or river or fountain of life, the sacred lake in the western heaven, the silver stream of matrimony. The visualizations of the cosmos, the nature of earth and life in it, and of paradise and hell and the abodes of spirits, which cannot be actual, make use of natural elements in elaborately symbolic ways. This is perhaps the most significant aspect of this subject, particularly in terms of primitive religions.

Plants, flowers, and fruits—the lotus of the feminine principle, the lily of purity, the prunus of happiness, the corn of fertility, the millet seeds for numerous progeny, grape vines for Jerusalem or the world, the palm of victory, ginseng as the root of life, betel nut for conciliation, straw scattered at Christmas to commemorate the birth in the manger, the tree of life.

Food—particularly the ritualistic partaking of especially prepared food and drink which is a part of almost every people's customs. The six symbolic foods of the Jewish Passover include the bitter herbs symbolizing the sufferings of the Israelites. The early Christian feast signified the joy of the hereafter, and in the later Eucharist, bread and wine are the body and blood of Christ. The Chinese eat vermicelli on birthdays, a particularly graphic association of the long strands with wishes for a long life, and send congratulatory rice cakes as a symbol of good fortune. The blood puddings of the Incas are another example.

Animals—the lion which may represent Judah, the solar god, Britain, or courage, the snake which symbolizes protection on a Rumanian doorway or Jewish temple, the endless cosmic waters in India, or the ultimate in treachery, the fish which may be fertility or Christ. These indicate the variation and extent of animal associations. All important animals are associated with the supernatural, adopted as guardian spirits, viewed as friendly or unfriendly, or associated with specific traits in each culture. With animals used in supernatural associations, it is natural that various mythical creatures should have been created, like the winged horse and cherubim, the unicorn associated with virginity, the fecundating dragon, or the horned dragon of the storm.

Supernatural beings and legendary personages—the gods and spirits visualized in every culture, usually by fusion of human, animal, and natural shapes, which mutually symbolize each other, or various forces of nature, supernatural powers, or attributes and characteristics. Here may be included such symbolic characters as Father Time with his scythe, the Russian Grandfather Frost

symbolizing winter, the Chinese Old Man Long Life with gnarled stick and peach, John Bull. Historical or semihistorical individuals also come to be or to be presented by symbols—Christ as the Good Shepherd, Jonah as the symbol of resurrection, the young Washington with his cherry tree as a symbol of truthfulness.

Buildings—particularly the entrance to the home and places of ceremony or worship, every aspect of which may be designed or decorated with symbolic connections—the four towers or corners or walls associated with the directions, the columns or pillars representing the deity, the exact measurements symbolizing the divine order, the holy of holies as the residence of the deity or the womb of creation, the high seat of authority, the holy door to the path of purification. The temple itself may be god's footstool. A door may be the barred door of virginity or the open door of hope, steps prescribed, house beams significant.

Other objects—either as they happen to exist or as they are especially designed for symbolic purposes, like the crown, the scepter, the fetish, the charm, the laver of purification or the sea. There are the wing of royalty, the ax of destruction, the knot of death (Navaho) or life (India), the ashes of death or (Chinese) prosperity, the candle or flame of faith, the lamp of the law or life, the anchor of hope, the jug of knowledge, the mug which symbolizes unity in guild ceremonies or the peace pipe of American Indians, the wheel of life, the precious jewel of Buddha, or any of the jewels with their specific meanings, the drum as the voice of the god.

Colors.

Numbers.

Geometric and purely graphic symbols—the yang and yin, the shri yantra, the wheels of life, the swastika, the sign against the evil eye, the aureole of divinity or saintliness, the zigzag of water, the circular design of clouds, the cross with its numerous forms and significances, the various forms of the star (the five-pointed star of perfection, and the six-pointed Seal of Solomon), the interlacements. The basic geometric shapes are surrounded by symbolic associations all over the world, with important resulting art forms. The associations may be of universal character like the circle and the sun, or highly localized. The triangle, for example, is readily associated with any group of three, like the Trinity; the threefold nature of the universe; body, mind, and spirit; the law of life. It connotes wisdom, and as a sex symbol is widely associated with the female principle (and the moon) or upward and downward pointing triangles with male and female. The square, spiral, scroll, chevron, meander, interlacements, etc., are likewise susceptible of many interpretations.

This is an almost random selection of more general or widely known symbolic connections. There are, as well, innumerable localized significances or highly specific depictions among art objects, which require full description for an analysis. In typical depictions of the Dance of Death in the Middle Ages (originating in the plague), the soul is represented by a little naked human figure, without sex distinctions, shown making its exit from the mouth of the body. This symbol of the soul as a miniature naked human figure must be seen before its meaning is completely communicated. An example of highly specific ritual acts is the removal of the Torah curtain in

the Jewish synagogue on the anniversary of the destruction of the Second Temple, which symbolizes the emptiness of Jerusalem robbed of its treasures.

The meanings expressed through symbols may range from small matter-of-fact details to concepts of cosmic importance. In primitive cultures one may note in general the prominence of symbolism connected with sex, fertility, and creation, with the nature of the universe, with natural forces and supernatural powers, and with the objects and rituals designed to ward off evil, induce good fortune, or to accompany worship. In more advanced cultures, the symbolization of abstract qualities and personal characteristics (like greed or envy) is added to greater extent.

We may assume that symbols arise inevitably in the process of communication, but in some cases definite elements may be seen as giving shape to them. The attempt to give tangible form to the invisible or interior idea, the attempt to compress a ramified framework of thought into an instantaneous expression, and the attempt to organize the scheme of life into a comprehensible system (the Chinese trigrams, for example) are prominent motivating or shaping forces. The natural associations formed around a natural shape, like the sun and the circle, play a very large part in the form that symbolism takes. Sometimes identification, as has been noted, or concealment, as in the use of the fish for Christ, offers a motivation. And a number of associations are obviously accidental, as in the attachment of the hare to Jewish Passover lore from a verbal connection; the same factor accounts for a variety of Chinese symbols having the same syllable in the name.

The tendency to develop symbols in groups or to evolve systems by which symbols are equated is a feature of certain cultures, notably the Chinese. They have for example, the twelve branches of time, governed by the twelve cyclic animals; the four celestial animals (dragon, bird, tiger, tortoise) associated respectively with the four quadrants of the heavens, east, south, west, north, with spring, summer, autumn, winter, and with blue, red, white, and black; and eight precious articles—a jade triangle or musical stone, a jewel, cash, lozenge (victory), pair of books, painting, a pair of rhinoceros horn cups, and an artemisia leaf. The eight sacred symbols of Buddha are: the canopy (representing the tree under which he received enlightenment); conch (his voice); jug (knowledge); knot (continuity of life); umbrella (power); fish (freedom); lotus (divine birth); wheel (rebirth). The Navaho depictions are based on fours, including sacred plants, directions, elements, etc.

Symbols in the course of their existence are subject to many borrowings and migrations. Studies of the migration and diffusion of symbols are unfortunately generally tinged with an element of speculation. There seems to be no doubt that certain ideas like the tree which suggests life, the sun disc, or the celestial cow are so inevitably suggested by actuality or the primitive environment that they could (whether or not they did) spring up independently—and also that certain shapes like the swastika, triangle, and spiral are such suitable vehicles for human thought that they have a world-wide diffusion even though the meaning may vary partially or completely. Symbols are also subject to many changes, resulting from either development or borrowing, in the course of their existence. The god Sin, for example, in

the ancient Mediterranean area, was shown with crescent, or crescent and disc, but since the crescent resembled horns, he came to be represented as an old man wearing a cap with horns of the moon, and the horns readily became a crown; thus, the horned crown of Assyrian kings was a symbol of both power and divinity. Under WHEEL has been indicated the process by which circle, disc, sun, wheel, wing, life concepts, etc., built up into an elaborate symbolic structure.

Art symbolism may be related to the general subject of symbolism in the following respects: 1) simply as the depiction in art of such symbolic acts, gestures, objects, etc., as have been described; 2) as a standardized or stylized expression of these concepts, by which these symbols crystallize into a set shape or instantly recognizable form, as when the symbolic sun is depicted as a circle with a face and a ring of stylized flames; 3) as the medium by which natural objects and shapes, invented shapes, and/or geometric forms may be fused to create the form of the symbol, as when animal horns and human head are combined in the god or the "tear line" is devised in the god's face to show the connection with rain; 4) as purely graphic symbols, a few of which were listed above.

The essence of a symbol is the meaning which it conveys. The decorative motifs of art are not symbols unless the element of meaning is present. Unfortunately, in prehistoric art and in some later art, the means of ascertaining significance is lacking and the presence of symbolism cannot be conclusively demonstrated. Much of early South American art, from the stylizing and repetition of the form, suggests a symbolic impression, but the possibility of demonstration is infrequent. Many motifs, however, like the popular rose in present-day American fabrics or the field flowers used in European peasant art, are completely lacking in symbolism; and the decorative arts are full of "dead symbols"—the multitudinous examples of fleur-de-lis, lotus, lily, or rosette, for example, whose meaning is forgotten, or ignored, but whose popularity remains.

There is a tendency loosely to associate symbolism and abstraction in connection with art symbolism, which is erroneous. Symbolism makes use of either purely realistic or purely abstract shapes, or a combination of the two, or of a stylized form of natural objects. This is demonstrated in the yang and yin (a purely invented form), the evil eye, usually a stylized version of the actual eye, and the lingam, which is often literally depicted. Abstraction has to do with deviation from nature in respect to form, for whatever reason; symbolism has to do with meaning, regardless of the form the art symbol may take.

M. HARMON

Symplegades In Greek mythology, the clashing rocks (D1553) at the mouth of the Euxine Sea, through which the *Argo* passed. Phineus advised the Argonauts to send a pigeon through first; the rocks would come together and, as they opened again, the *Argo* could slip through. If the pigeon were crushed, the *Argo* was told to go back. The pigeon flew through; its tail feathers were caught. The *Argo* then rowed forward quickly and got through with only minor injury to its stern. The Symplegades then became fixed and never moved again. The clashing gateway or passageway is very common in folktale, often in connection with the quest for the water of life (e.g.

Russian, Rumanian, Greek folktale). J. R. Bacon (*The Voyage of the Argonauts*, Boston, n.d., p. 80) suspects that the Symplegades had such a connection at one time, for Phineus is blind and the water of life is a regular cure for blindness. In an Eskimo tale, the rocks are icebergs; the kayak's stern is injured. Lizard, in Bushman myth, was broken by the mountain pass that pinched him in two as he tried to get through. In Tsimshian mythology, it is a cave that opens and shuts. Variations on the theme are found in North American Indian tales all over the continent from the Seneca and Cherokee to the Miwok and Tlingit. The gates to the underworld often are a similarly clashing entrance. Teutonic folktale has many references to heels lost as gates to magic mountains, rocks, and caves snap shut just behind those who venture into them. A. H. Krappe (*Balor with the Evil Eye*) detects a separate folktale motif in these stories: "the motif of the frustrated redemption and the slamming doors." In many of these myths and folktales, a faint resemblance may be traced between the perilous passageway and the vagina dentata concept.

syncretism An extreme form of the mechanism of cultural dynamics known as *reinterpretation*. Reinterpretation occurs when a people take over the cultural forms of another group, reading new meanings into them as they integrate them into their own body of traditions. Syncretism takes place where two similar elements of cultures in contact actually merge their meanings, both forms remaining intact. The most striking examples of syncretism have been found among African and New World Negroes in contact with Mohammedan and European religious systems. Greenberg established that the Hausa of Nigeria identified the *'iska* of their aboriginal religion with the *jinn* of the Koran. In the New World, Catholic saints are identified individually with African deities by the members of the full-blown African cults found in Brazil, Cuba, Haiti, and Trinidad, to cite only the established examples. An African deity will be called *santo*, for example, in Bahia, or *orisha*, the Yoruban term, without any distinction being apparent in the mind of the worshipper. There is great variation in the actual beings that are syncretized, this being the result, in a given locality, of the particular historical experience of the group concerned. However, the principle, which has to do with the process of identification, holds firm. It is applicable, indeed, in most cases of cultural change over the world, and in all aspects of culture.

M. J. HERSKOVITS

syrtos A folk dance of modern Greece, for men and women in arbitrary order. With a handhold, the dancers progress counterclockwise in an arc, round and round the room. The clarinet melodies, with their guitar, mandolin, and drum accompaniments in 7/8 time, are slower in tempo than those of the *tsamikos* and *hasapikos*. The syrtos shares popularity with these two dances, both in Greece and in Greek festivities in America. The grapevine step hesitates in iambic rhythm, always to the right—right side, left back, right side; left front, right, left front; balance forward and back. The body turns slightly with the step, first facing left, then right. As in other open rounds of this area, the leader, usually a man, exults in acrobatic variations on the theme, in twirls and leaps called *scherza*. These are par-

ticularly daring when danced by the *Evzone* national guard. The ancient *syrtos* is known by the recent name of *kalamatianos*, the national dance. One tradition carries it back to the pyrrhic dance of antiquity, another to the suicidal dance of the Souliot women, who hurled themselves over a cliff during a death dance rather than surrender to the Turkish invaders. A commemorative ballad, the *zalongo*, sometimes is sung in chorus to lyre accompaniment during the *syrtos-kalamatianos*. [CPK]

T

Ta'aroa In Polynesian mythology, specifically that of Tahiti, the chief god; the creator. Living in darkness within the cosmic egg, Ta'aroa broke out. Then he lived alone in heaven for a time. Eventually he created a female being, his daughter, and with her assistance made the sea, sky, and earth, which latter, in some versions of the myth, he fished up from the depths of the ocean. At last he took some red earth and fashioned men. Men lived on the red earth as food until the breadfruit was created. In some of the Polynesian myths, Ta'aroa then called man by name, thus throwing him into a sleep during which a bone (*ivi*) was taken from man's body and made into a woman to be his wife. Some students believe this to be indigenous myth, others claim an obvious descent from the Biblical story of the creation of Eve. In further myth, Ta'aroa is said to have become angry with mankind; he flooded the world with the sea, leaving only the islands protruding. Compare ATEA; TANGAROA. See WORLD EGG.

Table, Ass, and Stick The title of a folktale (Type 563; Grimm #36) of the loss and recovery of magic objects: found all over Europe and Asia, in Africa and the Americas: perhaps of Oriental origin, for a variant is known in the 5th century A.D. Buddhist *jātakas*, though origin in Europe with spread to Asia is equally probable. This type, along with Types 564 and 565—*The Magic Providing Purse* and *The Magic Mill*—was studied by Antti Aarne in his monograph *Die Zaubergaben* (MSFO XXVII, 1911). In addition to the huge number of European and Asiatic variants—Stith Thompson says it appears in practically every collection—at least 7 Indonesian, 14 African, and 4 North American versions are known of Type 563.

Typically, the hero, out to seek his fortune in the world or to obtain some "most wonderful" thing, is given a magic table which, on command, sets itself with all kinds of good food; sometimes this is a tablecloth which is spread on a table and commanded to bring forth food, sometimes it is a self-replenishing sack. The hero, on his way home, stops at an inn, and his magic possession arouses the cupidity of the innkeeper. The thieving host substitutes an ordinary table and hides the self-setting table. When the false table refuses to work, the hero returns to the person who originally gave him the gift, and is given this time a horse or an ass whose droppings are gold. Again the innkeeper steals the wonderful gift. Finally the hero is given a stick which will beat anyone on command. The

szopka A small box theater, made by Polish peasants of cardboard and bright-colored paper. Some are crude with paper figures pasted down, others gay and elaborate with movable puppets resembling the figures in the Bethlehem mangers in the churches. They are traditionally carried by Christmas carolers, who also often carry a star made of translucent colored paper with a candle inside; this star revolves sometimes on a stick like a pinwheel.

wicked innkeeper is trapped and forced to return the stolen things before the hero will call off the cudgel.

In the Buddhist tale, three ascetics are given respectively a hatchet that will chop when commanded, a drum that will rout enemies when beaten on one side or summon up a fourfold army when beaten on the other, and a bowl that will supply a river of curds when inverted. But a fourth man, who has obtained a gem that enables its owner to fly through the air, steals the hatchet and orders it to cut off the heads of the three ascetics. In possession of these four magic objects, he conquers the kingdom of Benares and becomes the just King Dadhivāhana.

All these magic objects are of course related to other magical objects of folktale: the purse of Fortunatus which is always full, the horn of plenty (cornucopia, Amalthea's horn), the *kibisis* or wallet of Perseus, the lamp of Aladdin which could summon up the jinni who could do anything, and the whole land of Cockaigne (Schlauraffenland) where the animals and plants sacrificed themselves to become food for the inhabitants. See INEXHAUSTIBLE FOOD, DRINK, OBJECT.

tabu A system of religious and social interdiction and prohibition, the most famous and fundamental of the social institutions of Polynesia. The concept and observance, however, are common among most primitive peoples. Tabu sets apart a person, thing, place, name (sometimes even the distinctive syllable of a name) or an action as untouchable, unmentionable, unsayable, or not to be done for a number of reasons: 1) because of its sacredness or holiness; 2) because it possesses some inherent mysterious power; 3) because it has become "infected with the supernatural" (as priests, kings, chiefs, strangers, pregnant women, etc.) and therefore has acquired this mysterious power; or 4) because it is unclean (as certain foods, sick persons, criminals, corpses, etc.) or because it is highly dangerous (as corpses, the names of the dead, names of gods, etc.); 5) or to effect an end (as the tabus against interference with birth, marriage, sexual functions, etc.); 6) or to insure protection from theft, trespass, damage (as tilled fields, personal belongings, etc.). Tabu, among Polynesians especially, is indicated by a symbolic mark or sign, which usually consists of a branch of a certain tree placed across a door or hung in a prohibited place, or bunches of certain leaves, or the setting up of wands. A violated tabu avenges itself and need not be punished by man. Disease and death overtake the breaker of a tabu.

Tabus fall in general into two classes. The first consist of those imposed and announced by king or priest and accompanied by ritual act, and which can be also ceremonially removed. A certain hunting ground or group of fruit trees, for instance, can be declared tabu for a prescribed period of time and restored to common use when the time is up. The British Sunday was declared the one big tabu by the king of Hawaii in 1819. The second class of tabus are those inherent tabus charged with the supernatural and therefore fraught with mysterious power and danger. See BARAKA; GENNA; HLONIPA; ILA; JOKING RELATIONSHIP AND KINSHIP TABUS; NAME TABU.

The Old Irish prohibition or compulsion (*geis*, plural *gessa*; modern Irish *geas*, plural *geasa*) is a tabu, i.e. a certain thing must not be done for fear of the results, but the *geis* includes also the terrific obligation placed upon one person by another, a kind of magic injunction to break which brought calamity and death. It was *geis* for Diarmuid to join in a boar hunt because his life was tied up with the life of a certain boar; it was *geis* for Cuchulain to eat dog. The tragic death of the three sons of Usnech could have been avoided had it not been *geis* for Fergus mac Roich to accept whatever ale-feast was offered to him (i.e. he was obligated to accept), and *geis* for the returning sons of Usnech to eat food in Ireland until they reached Emain Macha (i.e. they were obligated not to eat until they came to Conchobar's house). Conchobar saw to it that Fergus (who was surety for their safety) was delayed with invitations and himself put the *geis* on the three sons of Usnech not to eat until they reached Emain. Thus Fergus was compelled to delay, the three sons of Usnech compelled to hurry to their betrayal and death.

The long tragic story of *The Destruction of Da Derga's Hostel* is based on the power of *gessa*. Conaire, high king of Ireland about the beginning of the Christian era, was compelled to break his nine *gessa* in one night by the *side* (supernaturals) who thus took revenge on Conaire's grandfather for having once destroyed one of their mounds. Conaire's nine *gessa* were: 1) not to kill birds (birds should be dear to him because his father was a bird); 2) not to go around Tara with Tara to the right of him or with Mag Breg to the left; 3) not to hunt the evil beasts of Cerna; 4) not to go out every ninth night beyond Tara; 5) not to sleep in a house from which the light or firelight could be seen from the outside; 6) three reds (i.e. three red-headed persons) never to go before him to a red's house; 7) no booty to be taken during his reign; 8) after sunset no lone woman or lone man to enter the house where he was; 9) never to settle the quarrel between any two of his thralls. It was the doing of the *side* that Conaire was forced to break all nine *gessa* in one night and that night lost a battle and met death.

✍ The various tribes of North American Indians had hundreds of tabus affecting a great many aspects of daily living; some were peculiar to one or two tribes only, other tabus were continental in their distribution. In the realm of folklore, in many tribes it was tabu to tell stories of any sort in summertime or in the daytime; if this prohibition were broken Coyote or Rattlesnake would bite narrator or listener, or some other misfortune would befall the offenders. The folktales themselves contain mention of many tabus; a tabu against

digging roots occurs in the Star-Husband tale, for example; a tabu on sexual intercourse for a certain number of nights occurs in many of the North American Orpheus myths and other tales; digging, drinking, eating tabus are common, and likewise a tabu against looking backward, or in a certain direction. In all cases in tales, if a tabu is broken the consequences are unpleasant or even fatal to the character breaking it. Thus, if Trickster learns a magic trick but does it more than the prescribed number of times, misfortune befalls him. See EYE-JUGGLER, for example. For the enumeration and distribution of almost a score of tabus found in American Indian tales see Stith Thompson, *Tales of the North American Indians* (Cambridge, Mass., 1929), p. 362, C. The list in Thompson does not exhaust the tabus mentioned in tales. [EWV]

✍ South America provides us with a few examples of the well-known tabu that prevents persons going through a rite de passage from scratching themselves with their fingers. In the Guianas, girls who undergo the puberty rites, fathers during the couvade, and shaman novices must use a stick to scratch themselves. Likewise, among the Yahgan of Tierra del Fuego, the youth going through initiation must take the same precaution. [AM]

tabu motif The basic motif of countless folktales occurring everywhere in the world, in which the life, happiness, success, or failure of the characters depends upon the observation or violation of some tabu. The whole of chapter C of Stith Thompson's *Motif-Index of Folk-Literature* is devoted to the tabu motif in close to a thousand ramifications (C0-C980). The most familiar cycles of stories using this motif are probably the forbidden chamber or door (Bluebeard) cycle (C611 f.), the forbidden casket, chest, box (Pandora) cycle (C321 f.), and the lost husband or wife cycle, typified in the classic Cupid and Psyche, Orpheus and Eurydice stories. See these; see LOOKING TABU.

In addition there are hundreds of tales presenting the fatal effects of all kinds of broken tabus: there are flowers not to be picked (C515) lest transformation result; a drum not to be touched (C181.1); tabus against setting foot on the ground (C520 f.). Oisín was warned not to dismount from the horse when he returned to Ireland from Tír na n'Og (C521); fruits of certain trees are not to be eaten—the forbidden tree, fruit, etc.—(C621 f.); the midnight tabu in the Cinderella tales (C761.3); other time-limit tabus, such as those compelling a revenant to leave this world at midnight or cockcrow; supernaturals must not be called by name (C10-C12) lest they appear; wishes must not be unthinkingly expressed (C15 f.) lest they come true; possessions of supernaturals must not be taken or touched (C51 f.). C100-C199 includes stories using all sexual, nuptial, incestuous, menstrual, and childbirth tabus. There are numerous stories also involving eating and drinking tabus, looking, touching, speaking, saying tabus, boasting, laughing, etc. There exist both famous and obscure examples of each one. Lot's wife was turned to salt for looking back; Uzza died for touching the ark of the covenant. There is an Eskimo tale about a man married to a fox, who lost his wonderful supernatural wife when a visiting relative mentioned the strong smell of fox about the place. See

ANIMAL LANGUAGES; FOOD TABU IN THE LAND OF THE DEAD; NAME TABU; OFFENDED SUPERNATURAL WIFE.

Tagaro One of the conflicting brothers of Melanesian mythology. In the Banks Islands, Qat, the hero, is hindered by his brothers, two of whom are Tagaro the Foolish and Tagaro the Wise. In the New Hebrides, Tagaro is the wise one and comes into conflict with Suqe-matua, Meragbuto, or his 11 brothers. For example, Tagaro creates the useful fruits, Suqe-matua the useless ones. In a tale probably of Indian provenience (found also in India, Siberia, etc.), Meragbuto so hinders Tagaro's work that Tagaro plots to do away with him. First he prepares a pit beneath his house. Then he asks Meragbuto to be so kind as to burn the house down while he is in it; this, he says, will give him greater power. Meragbuto willingly agrees. Tagaro hides in the pit and comes forth unscathed. Meragbuto in turn asks Tagaro to burn him in his house. Of course, the flames burn him to death and Tagaro is left alone to continue with his work.

Tahmūrath or Takhma Urupi Persian epic hero: in the *Avesta*, successor to Haoshangha (first ruler of Persia) and brother of Yima; conqueror of Angra Mainyu; culture hero who taught men to domesticate animals, and how to clothe themselves by spinning the wool of sheep. Tahmūrath, after defeating Angra Mainyu, rode him as a horse around the ends of the world until he was betrayed by his wife. She revealed to Angra Mainyu that the only place Tahmūrath ever felt fear was on the mountain Alburz. Knowing well that the moment of fear was the only vulnerable moment, next day the great horse opened his mouth and swallowed his rider on the fatal mountain. Yima managed to recover his brother's corpse, and thus rescued the arts and civilization which disappeared with the hero. According to Firdausi, Tahmūrath conquered the *daēvas* who, in return for their lives, taught him to write 30 scripts.

Taikomol Creator-culture-hero of the Yuki Indians proper and the related Huchnom of north-central California. Among the Kato, Athabaskan neighbors of the Yuki and Huchnom, Taikomol (Nagaicho) is secondary to another creator, Thunder; among the Coast Yuki, Taikomol disappears and Thunder (Ehlaumel) is the one great deity. The Huchnom version of Taikomol's deeds is as follows. Taikomol was alone in the universe. He made the land, made human beings from sticks, and instituted a dance. But the primeval water on which the world had been floating came up and the earth disappeared. Taikomol made another world, without daylight, sun, or game; the people ate one another. This world was burned. Then Taikomol named himself, "He Who Walks Alone," and again made an earth. He put in it rivers and made mountains; but the earth swayed, floating too lightly on its substratum. So Taikomol set at its northern end a great coyote, elk, and deer, and made them lie down, so the earth would finally come to rest. When these creatures stir, the earth quakes. Then Taikomol again made human beings from sticks, and gave them a dance. One person did something wrong and died. Taikomol buried him. In the morning the dead man rose and returned, but the people sickened from the smell of the man, so Taikomol abandoned his idea of resurrection. He bade the people carry on the

hulk'ilal wok, ghost dance, he had given them (not related to the 19th century ghost dance) so that they might live well and long. Cult observances to Taikomol include two dances, the one Taikomol gave the people, and the Taikomol wok in which the male impersonator of Taikomol wears the "bighead" costume of the Kuku cult. The dances are tabu to all persons uninitiated in the cult, which means to all women and children. The Yuki share with the Huchnom the Taikomol cult observances. See ANIMAL AS EARTH ANCHOR; DEAD SMELL BAD; KUKSU; NAGAICHO. [EWV]

Taikomol wok Literally, Taikomol dance: a ritual dance of the Yuki and Huchnom Indians of north-central California. This dance was given to the people by Taikomol, the creator, and can be performed only by initiates of the Taikomol cult. See HULK'ILAL WOK.

Táin Bó Cuáilgne or The Cattle Raid of Cuáilgne (pronounced Cooley) Title of the most famous epic in the Ulster cycle of Old Irish literature, and the oldest epic of all western Europe, recounting the details of the great cattle raid known as the War for the Brown Bull, and embodying the life and exploits of Cuchulain and his defense of Ulster single-handed against the united provinces of Ireland. The original version of this epic is thought probably to have been written by a *filí* and is placed by scholars about the middle of the 7th century. The earliest extant manuscript (about 1100) exists in the *Book of the Dun Cow*; another text, by a 12th century author using the Dun Cow version, is preserved in the *Book of Leinster*. The *Yellow Book of Lecan* (14th century) also contains a version. See BOOK OF THE DUN COW; CUCHULAIN.

T'ai Shan The highest and most sacred of the five sacred mountains of China: in the province of Shantung. The sacrifices on the summit of T'ai Shan had fallen into disuse but were reinstituted by the first emperor of the Han dynasty. In this ceremony the emperor, alone on the summit, performed again the ceremonies of the Temple of Heaven. The mountain is covered with shrines and inscriptions. Near the very top, the Lady of T'ai Shan or T'ai Shan's daughter, patroness of immortals, has a great temple. She is attended by the Lady of Fecundity. In another temple, the Princess of the Colored Clouds sleeps for nine months of the year but is ceremonially awakened at the beginning of the rainy season. It has been the subject of many studies. [RDJ]

Takarabune The Treasure Ship, bearing the Seven Gods of Luck of Japan, which is believed to sail into port on New Year's Eve. Its picture under one's pillow on that day insures lucky dreams. [JLM]

tak-keng The posts on which human skulls are set up by the head-hunting Wild Was of Burma. The setting-up of skulls on posts insures to these people an abundance of food and rice-liquor; without them crops fail, pigs and bullocks die, liquor disappears. The spirit of a dead man hovers around his skull and fights off predatory demons and disgruntled or malicious ancestral ghosts. Nothing is more potent than a skull for protection against and propitiation of spirits. Avenues of tak-keng protect whole villages, and tak-keng are set up and dedicated also for specific purposes, e.g. to end drought, stop the spread of disease through a village, etc.

tale titles Not all North American Indian tribes have native titles for the tales they tell; in collections of printed tales the titles are, more often than not, of necessity supplied by the collector. However, there is by no means a universal lack of native tale titles; Goodwin, for example, notes for the White Mountain Apache that some of their tales, but not all of them, have standardized Apache titles; the untitled ones are alluded to or known by a sentence descriptive of the main event in them which varies from person to person. Titles which are native Goodwin indicates with an asterisk. Some of these, translated, are: *The Earth Is Set Up, He Goes to His Father, Vulva Woman, Naye-nezyane Wins His Wife Back, The Emergence, The Flood, Lost With Turkey*, and so forth (Grenville Goodwin, *Myths and Tales of the White Mountain Apache* (MAFLS 33, 1939). Titles for some, at least, of a tribe's stock of tales have also been noted by other collectors for tribes in areas other than the Southwest; Boas, for example, notes titles for certain North Pacific Coast tales. It seems probable however, that standardized tale titles are exceptional rather than the general rule for any tribe, and that they are entirely lacking among some groups. [EWV]

Taliesin A historic Welsh bard of the 6th century, probably attached to a king of the North Britons, Urien, and his son Owain. In the ms. called the *Book of Taliesin* (c. 1275) there are songs of battle and of mourning which may represent his authentic work; but along with these are ten prophetic poems composed later than 900, strange boasts of the many forms which the bard has assumed and of his preternatural knowledge, and one, "The Spoils of Annwn," in which he tells of going with three shiploads of Arthur's men on a raid against the glass fortress of the Otherworld, presumably to carry off the caldron of the Head of Annwn. In the 16th century a mass of poems and traditions about Taliesin was brought together, which Lady Guest translated in her *Mabinogion*.

Bibliography: Williams, I., *Lectures on Early Welsh Poetry* (Dublin, 1944), pp. 49-65. Loomis, R. S., "The Spoils of Annwn," *PMLA* LVI (1941): 887-936. See ALDER; BATTLE OF THE TREES. [RSL]

talisman A wonder-working object; a charm possessing and transmitting certain qualities, as opposed to an amulet, which is a passive protector or preventive charm. The amethyst worn to protect its wearer from the effects of alcohol is an amulet; Aaron's rod, the magician's wand, and the transforming wand of the fairies are talismans. The active principle of the talisman clearly distinguishes it from other charms, though often the talisman and the amulet, both usually small and carried on the person of the possessor, are confused in common terminology. Many of the magic objects of folklore—the cap of invisibility, the seven-league boots, the self-setting table, etc.—can be classed as talismans, for they have a positive power of themselves. The animistic stage of religion may be thought of as the stage of belief in talismans, because the inherent power of the things of the world may be utilized by supplication, prayer, coercion, or the like, to the worshipper's benefit. The holy relics of the Middle Ages were also talismans; touching a piece of the True Cross, or a saint's mummified finger might cure any manner of illness.

Possession of such an object rendered its owner

powerful too, sometimes even in the absence of the object. In this, the talisman parallels the charms and spells privately known and owned and passed on from father to son, or sold and traded, as many of the magic spells of the Dobu Islanders. Thus Aladdin's lamp, a talisman capable of summoning a jinni, had to be sold to the wicked magician in order for him to be able to use it; simply stealing it would not have sufficed. But Aladdin, to whom some of the power of the lamp adhered even when he did not have it, did not have to buy it back.

During the Middle Ages, when the alchemists and other thaumaturgists were active, talismans were sought after or prepared with appropriate incantations under the influence of the proper astrological configurations and with summoning of the proper spirits to inhere in the objects. The philosopher's stone is the most famous of the medieval talismans, for possession of this touchstone would enable its owner to perform many wonders, one of the least of which was transmutation of the base metals into gold. See HAND OF GLORY.

talking doctors Shamans among the North Pacific Coast Indians of southwestern Oregon who cured the sick by reciting a long myth about the creation. The regular shamans of this region were women who derived their power from supernatural spirits; the "talking doctors" were men who were taught the myth by members of their families. A talking doctor smoked tobacco, recited the myth, then diagnosed the sickness or cured minor ailments. Other activities of these doctors included ceremonial recitations of myth material, officiating at the first salmon ceremony and putting fresh food into the mouth of a person who had been fasting. He was not paid for these services, which were priestlike in nature. However, like the shamans, a talking doctor did not escape at times from suspicion of practicing witchcraft. Like shamans, he was powerful enough to cure disease; therefore he was also believed powerful enough to cause it if he had a grudge against a person. [EWV]

talking privates, talking excrements A man is given advice by his private parts or, in some instances, by his penis only (*mentula loquens*). This is a recurrent element in trickster and other North American Indian tales of the Great Basin and Plains. In the Plains it is usually the man's penis that advises him. A related incident is that of talking excrements, in which the man is advised by his feces. This latter incident is widespread over the western half of North America and is also found in Ojibwa and Pequot-Mohegan myths of the Woodlands area (see Stith Thompson, *Tales of the North American Indians*, p. 296, nn. 83 a, b, c). [EWV]

tall talk A species of "expansive eloquence" and strong language—racy, picturesque, and boisterous—identified with the Southern and Western American backwoods and frontier and with the "rankness and protestantism in speech" accompanying the growth of nationalism after the War of 1812. Half folk, half literary, tall talk was part of the picturesque trappings of the backwoodsman, along with coonskin cap and deer-skin shirt and leggings. In its use of fanciful, facetious, and factitious intensifying words and bold, extravagant metaphor, tall talk combined dialect and slang elements. The process of word-coinage by "analogical extension or enlargement," blending, and onomatopœia, resulted

in such grotesque formations as *spontaneous*, *tarnacious*, *tetotaciously*, *rampageous* or *rambunctious*, *angelliferous*, *slantindicular*, *obfuscate*, *explatterate*, *explunctify*, *boliterate*, *ramsquaddle*. Tall talk drew many of its figures and allusions from the objects and activities of backwoods life: wolfy (wolfish) about the head and shoulders; I wouldn't risk a huckleberry to a persimmon; You do take the rag off the bush (originating perhaps in the improvised target used in shooting matches). Applied originally to the boastful talk of the backwoods braggart and bully (see RING-TAILED ROARER), the term tall talk has been extended to include the hyperbolic style and bombast of the backwoods stump-speaker and preacher, who combine the homespun art of making a noise in language with spreadeagle, sky-painting oratory.

B. A. BOTKIN

Ta Mo Founder of the contemplative Ch'an school of Buddhism in China. The doctrine is that the Law of Buddha (*Bodhidharma*) is to be perceived by contemplation independently of books and rituals. In Japan this school is known as Zen Buddhism. Ta Mo, repulsed by a Liang dynasty emperor at Nanking, floated across the Yangtse on a reed to enter the monastery of Shao Lin at Lo Yang, where for nine years, wrapped in thought and surrounded by vacancy, he meditated. During this time his legs fell off. A doll without legs, so constructed that no matter how it is placed on the ground it always returns to a sitting position, is, in Japan where Ta Mo is known as Daruma, dressed in Buddhist costume. Ta Mo's day is the fifth of the Tenth Moon. [RDJ]

Tamoi The mythical first ancestor and creator in the mythology of several Tupi-Guarani Indian tribes. After creating the world and giving to mankind the elements of civilization (see CULTURE HERO) he departed to the west to the land of the dead. There he presides over the dead. The Tupi-Guarani expect him to return, and his return will bring about either great changes in the world or its destruction. Tamusi, the otiose great god of the Caribs, is identical with the Tupi-Guarani Tamoi. [AM]

Tane One of the chief deities of Polynesian mythology; the creator of man; god of forests, birds, and insects, of creation and procreation. Tane was one of the sons of Rangi (Vatea) and Papa; Tane-mahuta, in New Zealand mythology, was the actual separator of the sky god and earth goddess. According to Maori mythology, Tane had a number of wives, but their offspring dissatisfied him—grass, trees, stones, snakes, etc. He continually complained to his mother, Papa, the earth goddess, with whom he wished to copulate. She induced him to take some earth (red clay) from the beach and shape it into the desired creation, Tiki, the first man. Then from the earth of Hawaiki, the mythical ancestral home of the Polynesians, Tane fashioned a woman, Hine-ahu-one, the Earth-formed maiden. These, Tiki and Hine, were the ancestors of the human race. In another version of the creation myth, Tane made a woman at Hawaiki, brought her to life, and covered her up. He went away, but when he returned she so captivated him with her curiosity, liveliness, and laughter that he married her and became father of humanity. At the other end of Polynesia, in Hawaii, the work of creating the first human couple is done by Kane, Ku, and Lono. Kane, the Hawaiian equivalent of Tane of the Maoris, is the

demiurge who fashions the earth and the two heavens—one for the gods, one for men. He creates the plants, animals, and human beings, and is the ancestor of all life.

Tangaroa In Polynesian mythology, the sea god; patron of fishermen; in Hawaii, he is called Kanaloa. In Maori mythology, Vatea and Tangaroa disputed about the first-born of Papa's children. Each claimed to be the father. Papa settled the dispute by cutting the child in half and gave each of the gods his portion. Vatea cast his half into the sky, where it became the sun. Tangaroa kept his part for a time, and after it began to decompose he also threw it into the sky, where it became the pale and marked moon.

Tannhäuser A 13th century minnesinger whose adventurous life wandering about Germany and on a Crusade to the Holy Land led him to be identified with a knight in a 16th century ballad who, on passing the Hørselberg in Thuringia, sees a beautiful woman beckoning. He follows her and finds himself in the court of Venus (Frau Holde) and gives himself up to revelry and a life of sensual pleasure. He finally returns to the world and goes on a pilgrimage to Rome to seek absolution from the pope. The pope declares that he has as much chance of forgiveness as the papal staff has of blossoming. Three days later the pope's staff bursts into bud, but meanwhile Tannhäuser has returned to the Hørselberg (Venusberg). This story is the basis of Richard Wagner's opera *Tannhäuser*. See ALMOND; DRY ROD BLOSSOMS; *Migratory Legend* in EUROPEAN FOLKLORE.

Tans Local gods of the Hupa Indians of California, who protect the deer in the mountains. Great herds of deer are kept safe from hunters in a huge world within the hills. The Tans let out a few now and then as a reward to hunters who keep all their tabus and know and sing the special songs. The Hupas fear them greatly, pray to them, and propitiate them, but almost never speak of them.

tansy The spicy flavor of tansy is sought in making Lent cakes dedicated to St. Athanasius and an Easter pudding. The same delightful aroma, which flavors cakes and cures headache merely by its fragrance, also keeps away ants. Culpeper says of the tansies "Now Dame Venus hath fitted woman with two herbs of one name, the one to help conception, and the other to maintain beauty, and what more can be expected of her? What now remains for you, but to love your husbands and not be wanting to your poor neighbor?" He recommends the garden tansy be bruised and applied to the navel to prevent miscarriage; boiled in beer it aids conception, although other authorities claim that it promotes abortion. The distilled water of wild tansy is good for cleansing the skin of freckles, pimples, sunburn, and all blemishes, and to clear inflamed eyes. Another complexion aid is made by steeping tansy in buttermilk for nine days. Tansy tea, either from the leaves or blossoms, is universally respected as a tonic and for stomach complaints, cramps, and sick headaches. In some localities it is also used to tighten loose teeth, cure worms, and bathe ulcers. The Chippewa Indians use the root either chewed or soaked in water for sore throat, fevers, and diseases of women. In Newfoundland a poultice of the flowers is used on sprains and on the chest for inflammations of the lungs. In Ohio a vinegar

and leaf poultice is put on bruises, wounds, and dog bites. The garden variety is used for stoppage of urine and attendant discomfort and the wild for sciatica and rupture in children. In Sussex the leaves are worn in the shoe as a cure for ague.

Tantalus In Greek mythology, a rich king of Lydia (or of Argos or Corinth) who was befriended by the gods; son of Zeus and father of Niobe and Pelops. This friendship Tantalus in some way abused, and his punishment in Tartarus (Q501.2) became famous in antiquity. The transgression varies: he did not keep secrets entrusted to him by Zeus; he demanded to be made immortal; he and not Zeus stole Ganymede; he gave his mortal friends some stolen nectar and ambrosia; he tested the gods by serving them a dish of the flesh of his own son Pelops. The distracted Demeter was the only one of the gods not to realize immediately what the meal was; she ate part of Pelops' shoulder. The gods restored Pelops to life, giving him an ivory replacement for the eaten shoulder. For his evil deed, whichever it was, Tantalus was doomed to stand forever thirsting up to his chin in a cool lake. Whenever he bent to drink, the water disappeared. About him swung boughs heavy with fruit. Whenever he reached for the fruit, the wind carried the branch away from him. Later writers than Homer add a stone precariously balanced above his head. A different version of the story says that he hid a dog stolen from Zeus and then lied to Hermes when Hermes asked if he had it. For this Zeus tossed Mt. Sipylus in Lydia over him. This latter does not belong to the cycle of stories that made the punishment of Tantalus proverbial in ancient Greece. Perhaps as great punishment, though not as drastic, was his supplanting by Cræsus in men's memories as the richest of men.

Tantras A collection of approximately 64 books which many Hindus consider sacred because they are thought to have been produced by Dattātreya who, as incarnation of the Hindu trinity Brahmā, Viṣṇu and Śiva, spoke with the authority of these three supreme deities. The word *tantra* once signified a web. Later it became rule or ritual and finally a treatise which set forth a religious ritual. Most of the *Tantras* are in the form of a dialog between Śiva and his wife Devī who is his śakti, or female counterpart. The topics of these connubial discussions are varied: mysticism, black magic, white magic, the arts and postures of love, diagrams, spells, sacred circles, charms, amulets, mūdras or the sacred positions of the hands. Because they were uttered by the god's fifth mouth they were secret. This condition is further strengthened by the extraordinary jargon they are written in, cryptic allusions which to be understood must be explained by an adept, strange words, foreign words, mystic syllables, and the like. Every *Tantra*, in principle, discusses five subjects, the creation and destruction of the universe, worship of deities, attainment of power by means of magic, and union with brahman.

The *Tantras* are the religious texts of the sects of India known as Śaivite because they worship Śiva. The "right-handed" sect (Dakṣiṇāchārins) follow the pure ritual in harmony with the Vedas; but the "left-handed" sect (Vāmāchārins) study to identify themselves with the hierarchy of female divinities, śaktis, Matris, Yoginis, Vātukas. The method of identification is by sexual union after severe training in concentration. The neophyte

thinks of the virtues, powers, attributes of the goddess, and in time is able to evoke her. Even a human woman may serve his purpose, for whether a human woman is a goddess or a demon is often difficult to determine.

The *Tantras* are supposed to have been put together in the 6th or 7th centuries of this era. A comparison of the Tantrist doctrines with the doctrines of the Tibetan *Bon* cults or some of the doctrines of the Chinese Taoists displays similarities so striking that one is tempted to derive all three bodies of belief from a corpus of superstition, magic, fertility rites, and the like which was possibly operative in the second millennium B. C.

The orgiastic ceremonies, little known because they are secret, seem to be connected with some sort of belief that the vital powers should be constantly in play and these powers among some, at least, of the Tantrists are thought of as the sexual powers. See PHALISM. [RDJ]

Tao The Way: central in the theory of Taoism. He who knows the Way and follows it is above justice, compassion, the rites. Because he is in harmony with the forces of the universe he has attained serenity. [RDJ]

Tapio The Finnish God of the forests. He has a whole family: his wife, Mielikki, the mistress of the forests, a son, Nyyrikki, and a daughter, Tuulikki. [JB]

tărăkämä Nomad: a folk dance of Azerbaijan. It shows Persian provenience in the 3/4 time and cross two-step. Progressing counterclockwise, the women cross the right foot on half toe in front of the left, then balance back left and forward right very subtly. Simultaneously they hold their arms at shoulder level and sway them in opposition to the step with an elegant opening and closing of the wrist and hand. The torso follows the motion but stays erect, and is never shaken in the violent shoulder and abdominal vibrations which characterize such Turkish dances as the *çifte tel*. The men, in arbitrary alternation with the women dancers, execute the step energetically, with a slight jump, and hold out their arms in strong rectilinear positions, one arm straight out to the side shoulder level, the other sharply flexed in front of the chest. The tempo is lively and much faster than for the *turadji*. The musicians play a tambour (*kabal*), a guitar (*tar*), and a *kamanca* which resembles a violin. They interpolate remarks: *Shebash* (live long), *Bravo*, or Give 1000 tumans (a Turkish coin) to the players. It is at present a purely social dance, without any explanation of its nomadic title. Unfortunately it is being superseded by ballroom dances of European and American importation. [GPK]

tarantella An Italian folk dance. Popular tradition attributes a therapeutic origin to this dance, as a cure against the poisonous bite of the tarantula. At the present time it involves neither cure nor frenzy, but a succession of lively steps by sets of two couples. The lilting 6/8 music and many of the steps resemble those of the Irish jig. Dancers hop on one foot and heel and point with the other. However, there are distinctive steps, pivot-hops on one foot, with stamps and shaking of a tambourine overhead, sliding into new positions, and "matching pennies," where the boy, on one knee, matches the girl's gesture of slapping a knee and pointing a finger. The Sicilian version replaces the jig step by runs forward and back, lowering and raising the body and arms, by elbow hooking and *dos-à-dos* by alternate

partners, and a "star" formation, thus resembling the west European quadrille. All versions are boldly flirtatious. [GPK]

Tar Baby One of the best-known of the Uncle Remus stories, this American Negro tale has given its name to a series of motifs that has been keypoint in the discussion of such matters as the origin and spread of Old World tales, the provenience of New World Negro folklore, and the extent to which animal tales are the dominant forms of African unwritten literature. The essential elements of the tale include depredations by a trickster, to trap whom a figure made of tar, rubber, wax, or some other sticky substance is erected. Trickster, seeing the figure, speaks to it, becomes angry when it fails to return his greeting, and strikes it. One hand being held fast, he hits with the other, then kicks first with one and then his second foot, and sometimes butts it with his head. He is held secure until apprehended. The tale has been reported from various parts of the Guinea Coast area, the Congo and Angola, and has its widest distribution in Africa. A number of versions have been recorded in Europe, and one or two from India, this latter fact having been relied upon heavily by Espinosa to document his claim for an Indian origin of the tale—a position that has been held by many students to be scarcely tenable in the light of the weighting of the distribution toward Africa. New World Negroes have everywhere preserved this story, many versions of it having been recorded in Brazil, the Guianas, and the West Indies, in addition to its famous nominative form from the United States. See ANANSI AND THE GUM DOLL; BRER RABBIT.

M. J. HERSKOVITS

 The tale of a rogue who is captured by setting a figure made of an adhesive substance such as tar, pitch, or gum where the rogue must come in contact with it is known not only throughout western Africa, among the American Negroes, and elsewhere, but is also widely told by various groups of North American Indians. Frank G. Speck, in his *Ethnology of the Yuchi Indians* (Anthropological Publications of the University Museum, University of Pennsylvania, vol. 1, No. 1, 1909), not only records the tale, "Rabbit is Trapped by the Tar-man, and Escapes" (pp. 152-53) for the Yuchi of the Southeast, but discusses the Jicarilla Apache story, for which see "Coyote and the Pitch Baby" (see Morris Edward Opler, *Myths and Tales of the Jicarilla Apache Indians*, MAFLS 31, 1938, pp. 310-312); the Eastern Algonquian version in which Glusabe, the culture hero, punishes Pitcher, a rogue, by causing him to stick to a tree and turning him into a toad; the Arapaho tradition of a buffalo who pursues a child and gets his head caught in a hollow tree in which the girl is hiding; and the Wichita tale of After-Birth and his brother, who lie on a stone they find and stick to it. Of the various Tar Baby stories which resemble Yuchi and other Southeastern versions, those from Southwestern groups offer the closest parallels. Beside the Jicarilla Apache tale mentioned above, Pitch Baby stories have been recorded for the Navaho (Skunk, who is stealing corn, kicks a dummy, and sticks to it: see W. W. Hill, "Navaho Coyote Tales and Their Position in the Southern Athabaskan Stock," JAF 58: 317-343, 1945, p. 333 and n. 35) the Tewa Pueblo Indians ("Gum Image" in E. C. Parsons, *Tewa Tales*, MAFLS 19: 165) and the Taos Pueblo Indians

("Gum Baby," four versions, E. C. Parsons, MAFLS 34: 136-38). It seems probable that those Tar Baby stories which closely parallel the Old World tale and which are found among the Southeastern and Southwestern Indians diffused to these groups from the Negroes and the Spanish, respectively, in post-Columbian times. [EWV]

tarots In certain European decks of playing cards, a group of cards (usually 22) belonging to none of the suits and bearing no denomination. With exceptions, they are numbered in sequence and bear both pictures and legends. The *tarocchi* of Venice and Lombardy are believed to be fashioned after the earliest of the Italian types; but their origin—from the *tarocchi di Mantegna* (used for pedagogic purposes), from the "Egyptian book" imported from the East by the Gipsies, or eventually from certain Chinese card games—is a matter of dispute. Resembling these, and in most instances identical with them, are the Florentine *minchiate*, the Bolognese *tarochino*, the French *tarots*, the German *Tarok-Karten*. The cards, used for some few special games, are principally significant in fortune-telling, which probably is their original use.

Typically the tarots and their numbers are:

I	— The juggler	XII	— The hanging man
II	— The female pope	XIII	— [Death]
III	— The empress	XIV	— Temperance
IV	— The emperor	XV	— The Devil
V	— The pope	XVI	— The tower
VI	— The lovers	XVII	— The star
VII	— The chariot	XVIII	— The moon
VIII	— Justice	XIX	— The sun
IX	— The hermit	XX	— The judgment
X	— The wheel of Fortune	XXI	— The world
XI	— Necessity	[XXII]	— The fool

Number XIII bears no legend; XXII has no number. The supposed significance of each of these in cartomancy may easily be deduced from its name. Traditionally these are the pages of the ancient Egyptian book of mysteries, the "Book of Thoth," and the one able to read them knows, and controls, the secrets of the universe. Sometimes other cards are added to the regular tarots, as for example the signs of the zodiac, or the virtues—faith, hope, and charity. See GAMES.

tasē Burmese malignant ghosts: generic term for all disembodied spirits which have existed as human beings. The tasē include the *hminzā*, *thayē*, and *thabēt*. All are bloodthirsty, and delight in causing the death of human beings. They hang around the dwellings of men at sunset and are active during smallpox and cholera epidemics. All their acts are prompted by a desire for vengeance for their misfortunes during life. The ghosts of the recently dead are most feared. They can become incarnate in animals (e.g. crocodiles, tigers, the poisonous hamadryad snake); they may be contained in a pillar, take the form of cats and dogs (*hminzā*), or appear as hideous giants with long tongues (*thabēt*, *thayē*).

During epidemics the tasē can be frightened away by loud noises. The people beat upon the walls of their houses, on tin kettles, trays, and cymbals to drive them off. The Red Karens will not permit a dead body to be taken through a village; in fact, throughout Burma

all death customs are designed to prevent the spirits of the dead from injuring the living. Wakes are held to propitiate them, and these are usually followed by ceremonies designed to drive the spirit away: death-dances, the firing of guns, noise-making. The Shans clear away evil spirits from the grave-site by sweeping it with brambles and thorns. Some tribes bury in remote places to keep the dead spirit far from the living. The Burmans set up no marker in the hope that if they forget the place, the spirit will likewise forget where he once lived. The Karens and Chins, on the other hand, believe in burial at the ancestral home since the spirit of the dead will haunt the living until the corpse has been buried according to the desires of the spirit.

tasks The focal or incidental events (motifs H0-1599, especially H900-1199) in a vast number of folktales from all over the world: the hero must do something difficult or impossible in order to win a bride, preserve his life, obtain some necessary magic object, etc. The task motifs are often undistinguishable from the test and quest motifs since one blends into the other, but essentially the task is the performance of a given act, rather than the search for something (quest) or the general accomplishment of fitting some specification previously announced (test, the more general term). The test of the real princess is the pea under 20 mattresses and 20 feather beds; the search for the lost swan-maiden wife is a quest tale; the separating of grain and sand is a task. The two latter are of course tests also: one a test of perseverance in love often ending with a recognition test; the other a test of the patience required of a servant or a prospective wife. Sometimes the tasks performed by the hero or heroine are only a side issue in the story: spinning gold in the Rumpelstiltskin (Tom Tit Tot) story is only incidental to the main plot of finding out the name of the helper in the task. Such casual tasks often change in the different variants of the story type, but the main plot remains constant. In the Cinderella tale, for example, some variants pose the task for the heroine of separating lentils from the ashes in the fireplace, but this task is not usually present, and is not essential to the story. But the quest, usually with the slipper, by the prince, for the mysterious lady remains constant throughout the many versions of the tale.

In several distinct types, however, the task is a central incident and distinguishes the type. *The King's Tasks*, Norwegian folktale (Type 577), is one of the suitor tales. The father of the princess imposes certain tasks; the two elder brothers fail through unkindness; the youngest brother succeeds by being kind to an old woman, who rewards him with certain magic objects. In Type 402, *The White Cat*, the hero brings back several things that surpass his brothers', all with the aid of a white cat who is later transformed into a beautiful girl and marries the hero. This tale is found all over Europe, but is rare elsewhere. In both of these, the tasks to be performed are essential to the plot, but are not especially central. In Type 329, however, the story hinges on the hero's being able to hide from the princess, who owns magic windows in which she can see everything. If he succeeds, he wins her hand. He hides in a bird's egg and in a fish's belly, but she finds him. Finally, with the help of grateful animals or of an old man he has been kind to, he is transformed to a louse, a "sea-hare," etc., in the

hair of the princess. She is unable to find him; he is eventually retransformed and weds her. This story, Grimm's *The Sea-Hare* (#191), is told throughout Europe, principally the eastern part.

An entire group of suitor tasks is typified in the son-in-law tasks (H310), popular not only in Europe and Asia but also among the North American Indians. In these stories the tasks are set by the bride's father, rather than by the bride herself or by the hero. The North Pacific Coast tale of *Sun Tests His Son-in-Law* revolves about the unsuccessful attempts of the Sun to kill his son-in-law by assigning him tricky and dangerous tasks. He is given blunt arrows with which to kill Sun's daughters disguised as mountain goats and escapes only by transforming himself into a feather ball; he is pushed into the river when helping Sun raise his salmon traps; he is sent to get Sun's hammer from the water and barely escapes when the water ices over, etc.

Among the famous tasks of folktale are the *athloi* of Hercules, the obtaining of the various magic objects by Perseus, the underworld punishment of Sisyphus, the tasks imposed on Väinämöinen by Pohjola's daughter. Typical of folktale tasks are planting a vineyard overnight, cutting down a forest overnight, sorting mixed grain, digging a canal overnight, building a castle in three days, making the princess laugh or speak, answering riddles or outriddling the princess, recovering a ring lost in the sea, getting bull's milk, putting a large squash in a small jar, sowing salt or dragon's teeth or cooked corn.

tattler An animal friend of a man, often the man's dog, plays the role of tattler in the myths of several American Indian groups. Usually the animal tattles to a husband about his unfaithful wife, as in two Zuni and Shawnee tales. As a result of speaking, the dog may die. See DETECTIVE STORY; RAVEN. [EWV]

Taurus The Bull: the second constellation or sign in the zodiac, containing the bright star Aldebaran and the two smaller constellations, Hyades and Pleiades. It was identified by the Greeks with the bull-transformation of Zeus, in which guise he abducted Europa. He rises from the sea, his hind-quarters submerged, as did Europa's bull, coming to Crete. The bull was important in Mithraic religion and astronomy and his symbol was carved on ancient gems of Persia. To the Akkadians he was the Bull of Light. To the ancient Sumerians and Babylonians he was the heavenly bull who brought the vernal equinox (c. 4000-1700 B.C.) and was identified with the bull created by Anu to challenge Gilgamesh, and which Gilgamesh killed. Its rising marked the new year, the beginning of spring, brought the fresh rains, and ushered in the season of plowing and sowing. In the ancient Hebrew zodiac this constellation was Aleph, the first letter of the alphabet represented by the simple triangular face and horns of a bull. Later Biblical astronomers associated it not only with the Old Testament sacrifices but also with the ox in whose stall Jesus was born. In the old Chinese zodiac it was part of the huge White Tiger; but following Jesuit usage it became Kin Neu, the Golden Ox. Astronomers place Taurus under the guardianship of Venus. Those born under it are earthy, melancholy, and strong-willed.

Tchā, Tchā Bushman name for a little bird, one of the chats (*Saxicola castor*) which these people say flies

around in the bushes and laughs at the wildcat. When the wildcat lies down to sleep, the little bird comes and laughs "tchā, tchā, tchā". All the other little birds, hearing this, come to the place and flit around and all laugh at the cat. See Bleek and Lloyd, *Specimens of Bushman Folklore*, London, 1911.

Tchué Approximate transliteration of the name of a Bushman folktale character who seems to be a kind of creator-transformer-culture-hero. Tchué's works are "many, many and not one," for instance. W. H. I. Bleek and L. C. Lloyd, in their *Specimens of Bushman Folklore* (London, 1911) show four *!kuñ* texts (pp. 405-413) relating the various transformations of Tchué, in which the sun rose and Tchué was a tree (bearing edible fruit) and the sun set and he was dead, and the sun rose and he was himself. In another country he was a palm tree (also with edible fruit). In the four narratives recorded, Tchué became three different kinds of trees, a fly, water (a little water-hole), a lizard, an elephant, a little bird. Each time he died and rose, and finally was again a lizard. His father saw him thus upon the ground and recognized him. The father saw Tchué rubbing sticks together to make fire, and saw him blow upon the fire and make flame. Then Tchué saw his father watching and died. The father therefore feared his child, not only because of the fire but because of the unexplainable death. The story does not say that because the father, a mortal man, had thus learned how to make fire, the firemaker could now depart. But here is the dying god story in its primitive and simplest form, existing as factual tale quite apart from organized mythology.

Tcikapis Major culture hero of the Montagnais-Naskapi Indians of northeastern North America. Tcikapis is a dwarf whose parents were killed by bears just before he was born. Taken from his mother's womb by his sister, he always remained the size of a small child, but was possessed of great strength and used trees as arrows for his small bow. To the Montagnais-Naskapi he is a true culture hero, with an altruistic concern for mankind and great powers for conjuring. Many of the principal episodes of the cycle of tales told about Tcikapis are known also outside the area where he is regarded as a culture hero, among the Cree, Algonquian, and Ojibwa Indians. [ewv]

tecuanes (from Nahuatl *tecuanī*, tiger or wild beast) One of the surviving native dances of Guerrero, Mexico. Originating in the terror of the predatory tiger, it is now a comic dance-drama of the hunt. The action, characters, costumes, and dialog in Nahuatl or mixed Spanish and Nahuatl, vary in different villages. In general, four to twelve *huehues* or *viejos* (old men) constitute a double dance line, followed by one or two *Cristianos* or *hacendados* (ranch owners), two dogs, a deer in gray suit with head and antlers, two *zopilotes* (vultures), one or two doctors (*quebrantehuesos*, bone-busters), one or two hunters with bow and arrow, and a man dressed as an old woman (*vieja*). The tiger is dressed in a spotted skin and a mask of fearful mien, with great jaws, tusks, and sometimes whiskers, a mask of wood, tin, or petate. He annoys the dancers with his detachable tail, as they cavort and pirouette to their one-man flute and tabor. The *vieja* on the outskirts ridicules all of them; and vies with the *viejos* in horseplay. After naïve dialog, the tiger is hunted, killed, and "eaten" by

the vultures. The doctor suggests resurrecting him, amid jeers. Then all join in a dance of leave-taking in the church atrium.

In Villa Alta, Oaxaca, a simpler version is enacted by two masked boys, who are caught by several men with lassos. The masks also exhibit less elaborate skill, for the Guerrero Indians are past masters. [CPK]

telling Wishes must not be told. When two people snap a wishbone, the one who gets the longer piece, the one with the flattened joint, will have his unspoken wish come true. But he must not tell what his wish is, or nothing will happen. So too if one makes a wish on seeing a shooting star, the wish must not be told, because that destroys the power of the wish. In many parts of the world, magical gifts and supernatural powers remain potent only as long as the possessor does not mention them to anyone else. The magic pot, for example, that produces food on command, becomes just another pot when its owner tells someone else. Perhaps some such thing happens when a man "kisses and tells"; the private magic that exists between him and the woman is dissipated. In folktale, the supernatural or animal wife is lost when the husband mentions her origin (C441): the Eskimo *Fox-Woman*, related to other versions of the same tale in Siberia and Japan, cleans house for the man, marries him, but leaves him when he mentions that she is a fox. One who sees the Cherokee "little people" must be very careful, because saying that one has seen them results in death. Secrets, of course, should not be told, because when a third person knows a secret, the whole world knows. Midas's barber discovered that his master had the ears of an ass. The secret was too much for him; he had to tell. So he dug a hole in the ground and whispered the secret; then he covered the hole over. On the spot grew a reed, and every time the wind blew the reed whispered the secret to the world: "Midas has ass's ears." See BEES; NAME TABU.

tempo-giusto A style of singing characteristic of certain types of Hungarian and other Middle European folk songs, particularly topical and dance songs, in which the rhythm is strictly observed and ornamentation is not used. It is in contrast with the *rubato-parlando* style of dramatic recitative song.

Têng Kao or Climbing the Hills A Chinese outdoor festival of the 9th day of the Ninth Moon. At this time city-dwellers have picnics in the country, particularly on hills, drink chrysanthemum wine, and eat crabs which by then have grown fat and sweet in the *kao liang* fields. By punning on the word "têng kao," têng kao cakes are eaten in hopes of promotion. This festival has obscure connections with ancient harvest festivals, though here the facts of folklore should not be confused with the fantasies of folklorists. [RDJ]

Tengu In Japanese folklore, the mythical winged inhabitants of the forests, some in the shape of human beings, some resembling birds. [JLM]

terlain or terlaik Sakai (Malay Peninsula) name for disastrous storms. These are caused by imitating the notes of certain birds, by burning lice, or by teasing dogs, cats, and tame monkeys. Compare HENWEH.

Terminalia The ancient Roman festival on February 23, once the end of the year, supposedly to honor

Terminus, god of boundaries, but said by Wissowa to commemorate the *termini* or boundary stones. Terminus is typically Roman as a deity; he is the personification of the distinction between a stone erected as a boundary marker and an ordinary stone. However, since Terminus stood in the temple of Jupiter on the Capitoline, it has been conjectured that this power was simply an aspect of Jupiter. The myth claimed that when the temples of the other gods on the Capitoline were to be razed in order to erect Jupiter's temple there, only Terminus and Juventas failed to accede. This augured well for Rome, for thus its territorial integrity and youthful vigor would remain unimpaired. In keeping with tradition, this stone was not roofed over, since *termini* were never completely enclosed. The terminus of Rome stood between the fifth and sixth milestones on the road to Laurentum. At the observance of the Terminalia there, and at the *termini* between private holdings, the owners of property met. Having placed garlands each on his own side of the stone, they erected an altar, made bloodless offerings (though later lambs or young pigs were sacrificed), and ended with singing and pleasantry among the members and servants of the families. That the marking of the boundaries should occur on the last day of the year is a natural parallelism; for similar marking of the division of time, compare HABDALAH. See BEATING THE BOUNDS; HERME.

tests Subject of a group of folktale incidents comprising tests, contests, quests, and tasks: the form section H (H0 ff.) of Thompson's *Motif-Index of Folk-Literature*. Many tale types include test motifs, so much so that they form one of the most widespread groups in the world. That the hero must prove himself a hero is a "given" of folktale technique; and what better way than by having some perilous and suspenseful test through which he must come? Often the hero is the youngest son, the unpromising hero, who succeeds where his older brothers have failed. Compare, for example, KIND AND UNKIND. The hero must perform certain tasks, or succeed in a dangerous quest, or conquer some terrible adversary, before he may be accepted as a suitor for the hand of the princess. He must be a faster runner than an Atalanta; he must return with the water of life; or he must slay the dragon with the seven heads. Perhaps he must prove himself by selecting his own true bride from among others looking like her, or pick out his child whom he has never seen from a group of children—the recognition test. He must be clever at answering riddles, or he will lose his head. He may be honest, like the handsome prince of European *märchen*; or he may be sharp and indulge in trickery or skirt dishonesty, like the trickster hero of the Jack tales. See Stith Thompson, *The Folktale* (New York, 1946), pp. 329 ff., especially pp. 339–344, for an analysis of the test tales among North American Indians. See CONTESTS; QUESTS; TASKS.

 Tests of all sorts, motivated for a variety of reasons, are prevalent in North American Indian tales, especially in hero and adventure tales. One popular and widespread motivation is the testing of a hero by his prospective or actual, often supernatural, father-in-law, who is malevolently inclined and desires the death of the hero. In certain Seneca tales, tests are assigned a hero not by his father-in-law, but by his mother-in-law, which may reflect the social structure of a matrilineal society.

Besides the son-in-law tests, there are also tests by jealous uncles or nephews, suitor tests in which a rich or handsome girl is the prize, tests of visitors to a village, and paternity tests in which a child or infant picks out its parent(s). To enable the hero successfully to meet the test, the device of supernatural advisers is often resorted to; the hero encounters an old woman, or a magic animal, etc., who explains to the adventurer how he can successfully perform seemingly impossible tasks.

Test tales are particularly widespread and popular among the North Pacific Coast tribes, but are also well known in other areas of North America. The tests themselves are of many sorts: the hero has to pass through a door or across a horizon that alternately is open and closed, or through a door which snaps at him or is guarded by animal watchers; he is subjected to boiling, roasting, or otherwise being overheated in a sweat lodge or near a fire, or being overcome by smoke; he is forced to eat burning food, or to swallow red-hot stones, he is sent to obtain a dangerous bird, or to bring back acorns or berries at the wrong season of the year, or to kill rare game such as a white deer, and so forth. For an analysis and treatment of the test theme see Robert H. Lowie, "The Test-Theme in North American Indian Mythology," (*JAF*: 21: 97–148). [EWV]

Tezcatlipoca One of the most important gods in the Aztec pantheon: literally, smoking mirror. In codices he is represented with an obsidian mirror as a foot, and with his face painted different colors, depending on the desired significance. He was one of the original creator gods, being both a single god and four gods in one, each of which was associated with a cardinal direction and a color peculiar to him. According to legend he was one of the first "suns," being knocked from the sky by Quetzalcoatl and then turned into a tiger, and subsequently into the constellation Ursa Major. As god of the night he was associated with witches, thieves, and evil-doers in general, and with death and destruction. At the same time he was eternally young, the patron of warriors, in which form he resembled the Aztec god of war, Huitzilopochtli. Moreover, he was omnipotent, invisible, and ubiquitous, an all-powerful deity who could take or give life, a god of drought and a god of plenty. [GMF]

thabet In Burmese folk belief, the disembodied spirits of women who have died in childbirth: inimical to men. The thabet are represented in folktales with hideous huge bodies and long, slimy tongues.

thaliri In Bolivia the name given to the men and women who act as midwives or are called in to set the heart in its right place after it has been dislocated by shock or accident. [AM]

thayè In Burmese folk belief, the disembodied spirit of a person who has died a violent death: inimical to mankind. The thayè are represented in folktales with hideous, giant bodies and long, slimy tongues.

thefts Thefts of a major and minor order form the basis for several American Indian tale plots, or appear as incidents in various North American tales. One of the most popular of all American Indian tales is one which concerns the theft of fire, or light, or the sun; this tale occurs in all parts of North America except among the Iroquois and northeastern Algonquian tribes; it receives special emphasis in central and northwestern

California, on the North Pacific Coast, and among the Great Basin groups. For the latter groups, the *Theft of Pine Nuts* (a Great Basin food staple) is also a popular tale; people in one country had no pine nuts, people in another one had them; the two groups gambled for pine nuts and through Coyote's cunning, his group won. But the possessors of the pine nuts did not want to give them up; Woodpecker, however, flew up in the tree and took them. Coyote and the people then ran for home, but nearly everyone was killed; Crow took them, and in his flight scattered pine nuts, from which piñon trees grew (see Julian H. Steward, *Some Western Shoshoni Myths*, BBAE 136, Anthropological Papers 31: 256).

Other important things stolen are water, the seasons, and game animals which are kept impounded by a master of the game. Many of the theft stories form part of the cosmogonic material of a tribe; however, trickster cycles also contain stories of theft of food, either by or from trickster. See LIGHT; SUN. [EWV]

thein Burmese rain nats who live in the stars. Showers are caused by their emergence from their homes to hold a mimic battle; thunder and lightning result from the clash of arms. When rain is needed, a Burmese village holds a formal tug-of-war to arouse the thein and get them out of their houses.

Thesmophoria An ancient Greek fertility festival, on October 24–26, in which only women, perhaps only married women, took part. It honored Demeter Thesmophoria, the giver of the riches of the soil (or of laws), and in outline reenacted the myth of Demeter and Persephone. The first day was called the Ascent or the Descent, the second was a day of fasting, the third was known as the Kalligeneia or fair-born. Triptolemus, first priest of Demeter, was said to have begun its observance. During the festival, pine cones, pigs, and other offerings were cast into caverns filled with serpents. Later, after the meat had decayed, it was recovered from the caves and planted with the seed. Symbolically the offering of food within the earth was intended to increase the fertility of the earth and of the womb. As an explanation for the use of pigs, it was said that a herd of swine disappeared into the cleft with the underworld lord, at the spot where Hades entered the earth with Persephone. However Krappe sees in the swine an indication that both goddesses were once sows and were later anthropomorphized. Among the customs observed by the women were abstention for nine days before the festival from sexual intercourse, avoidance of pomegranate seed as part of the diet, no decking of the person with garlands; in Syracuse, cakes in the shape of female sexual organs were passed about; there was jesting in honor of Iambe: beds were strewn with *Agnus castus*, the chaste tree.

Thingyān Pwe Burmese New Year's Feast (known to Europeans as the Water Feast), held on a movable date between the 9th and 12th of April (*Tagū*). During this celebration pots of clear cold water are offered to the monks at monasteries and the images of Buddha are washed. Then follows a ceremony of water-throwing on the streets and in the houses. The women throw first and the men reciprocate, or it is thrown on others of the same sex. The water represents the consecrated water used for washing the sacred images. By throwing water on human beings, the participants honor them as sacred.

At this time Thagya Min, chief of the Thirty-Seven Nats, descends to the earth and whatever he carries in his hands—sword, firestick, or waterpot (ascertained by the astrologers)—determines the destiny of the year.

thistle One of various prickly plants (genera *Carduus*, *Cirsium*, *Cnicus*, and *Onopordum*) with cylindrical or round heads of tubular flowers. The national flower of Scotland, it is also called the Devil's own plant, and is sacred to Thor and the Virgin Mary. Several varieties are called blessed, while pious farmers continue to curse all thistles as a scourge. No single thistle is designated as the Scottish thistle, although the common cotton thistle (*O. acanthium*) and the stemless thistle (*Cnicus acaulis*) are usually so designated in Scotland. It is venerated because during the reign of Malcolm I (938–958) the Danes invaded Scotland and stealthily surrounded Staines Castle. They took off their shoes to wade the moat, only to find it dry and filled with thistles. The resultant yells and curses roused the garrison, and the Danes were soundly defeated. The Scottish Order of the Thistle (sometimes called the Order of St. Anthony) was instituted in 1687 by James VII with eight knights. It was revived by Queen Anne of England in 1703 and now consists of the Sovereign and sixteen knights. The French also had an Order of the Thistle founded in the 14th century in honor of the Virgin Mary.

The blessed thistle (*Carduus benedictus* or *Cnicus benedictus*) is so called because the Virgin buried a nail from the Cross which grew in the form of a thistle. This also accounts for the thorns (A2688.1). In another story a man of Bethlehem was weeding his garden and threw a thistle into the road in front of the Virgin. She bade him replace it, as it would be revered throughout the ages. It is sometimes called Our Lady's thistle. Some call the thistle the Devil's vegetable (G303.10.13) or the Devil's grain because of the story that God granted the Devil one crop of grain merely for naming it, but he was tricked into calling "thistle" at the proper moment (K249.1). The torch thistle (*Cnicus*) is also called Ceres' lamp. In eastern Europe the yellow star thistle guards against evil spirits; in Estonia it is planted on the doorstep and hung on the grain to rout evil spirits. In England they say that if the down flies off the thistle when there is no wind, it is a sign of rain. In Suffolk if you cut your thistles before St. John's Day you will have two crops instead of one. A thistle blossom in the pocket protects from evil. If a young woman will take a few thistle heads with the points cut off, naming one for each of her beaux, and place them under her pillow, the one which sprouts during the night is the one who loves her most.

The Caroline thistle was named for Charlemagne because, when his soldiers were dying of the plague, he prayed for guidance and shot an arrow into the air. It transfixed the thistle, showing him that this was the plant which would cure his men. This story is told of many leaders and plants. This thistle is also good for toothache and, tied round a cat's neck, will give her a sharper appetite for mice. The root of the cotton thistle, an herb of Mars, will cure a crick in the neck and rickets. The melancholy thistle (*Cnicus helenioides*) is an herb of Capricorn under the influence of Saturn and Mars, and Culpeper says that a decoction in wine makes a man "merry as a cricket." Of Our Lady's thistle, he

admits that it will open obstructions of the liver and spleen, cure jaundice and pains in the side, and, as a spring tonic, will change the blood as the season changes. This is a lot for his Protestant conscience to allow as he was very skeptical of the virtues of all "holy" or "blessed" herbs.

Thok In Teutonic mythology, the old hag, found by Odin's messengers in a cave, who refused to weep for Balder and thus fulfil the conditions which would guarantee his release from Hel. She is usually interpreted as Loki in disguise. See HERMOD.

Thoms, William John (1803–1885) English antiquary, bibliographer, and originator of the word *folklore*. In a letter published in the *Athenæum*, August 22, 1846, Thoms wrote, after using the word *folklore*, ". . . remember I claim the honor of introducing the epithet Folklore, as Disraeli does of introducing Father-land, into the literature of this country." The new coinage seemed more apt than the commonly used phrase *popular antiquities*. How well it was received is attested by its immediate and continued use. The word has established itself in several languages "as the generic term under which are included traditional institutions, beliefs, art, custom, stories, songs, sayings, and the like current among backward peoples or retained by the less cultured classes of more advanced peoples."

Thoms was for twenty years a clerk in Chelsea Hospital, becoming a clerk to the House of Lords and its deputy librarian (1863–1882). He founded *Notes & Queries* in 1849 and edited this periodical until 1872. In 1878, at the establishment of the Folk-Lore Society, he was named Director. The American Folklore Society, founded ten years later, was patterned in general after the English institution as is shown by reference to the original Rules of the American society, whose aims were similar to those of the English society.

Thor, Thunær, Thunar, Donar, or Thur In Teutonic mythology, one of the greatest of the gods; god of yeomen and peasants as opposed to Odin, god of the nobility. He was also god of thunder and brought the rains which were needed for the crops. He is known and worshipped throughout the Teutonic area and is considered an older god than Odin and, even in recorded times, maintained a higher place in Norway and a close second in the rest of the area. Thursday is Thor's day and in many localities, especially in North Germany, no work was done on this day. In Scandinavia he is associated with law and justice and the Thing is opened on Thursday. Legal or business oaths are sworn with the words, "So help me, Frey, Niord, and the almighty god (Thor)." The Normans, who called him Thur, sacrificed to him before a long sea voyage to insure success and favorable winds; this was also done in Iceland. The Saxons called him Thunær, and the Anglo-Saxons, Thunar. In most of Germany he was called Donar.

Thor's sign of the hammer was made by his worshippers much as the sign of the Cross is made by Christians. The first cup of drink at a banquet was dedicated to him in this way. Babies were baptized with water and Thor's sign when they were named, signifying that the father accepted the child as his own and that it was not to be killed.

Although generally admitted to be of an older order of gods, Thor in recorded mythology is listed as a son

of Odin, either by Frigga or Jörd (Erda). Even as a child he was large, strong, and while generally good-tempered, he was capable of epic rages which caused his mother to send him out to foster parents, Vignir and Hlora. When he came of age he was given the realm of Thrudvang in Asgard where he built Belskinnir, the most spacious of the palaces of the gods, which consisted of 540 halls for the accommodation of the thralls whom he welcomed after death. Thor was married twice, first to the giantess, Iarnsaxa, who bore him two sons, Magni (strength) and Modi (courage) who, some say, will survive Ragnarök and carry on their father's good qualities in the next world. Thor's second wife was Sif, the beautiful golden-haired goddess, who bore him a son, Lorrider, and a daughter, Thrud, who was renowned for her size and strength.

Thor is generally pictured as a tall, well-formed, muscular man in his prime with red hair and beard, and, in the North, with a halo of fire around his head. Sometimes he was dressed as a god; sometimes he wore the garb of a peasant with a basket on his back. Because the heat of his presence was so great, he was not allowed to use the Bifrost bridge (rainbow) but waded the numerous rivers between Asgard and Midgard.

Thor possessed the wonderful hammer Mjölnir (emblematic of the thunderbolt) made for him by the dwarfs, which returned to his hand like a boomerang. He had an iron glove, Iarn Greiper, which enabled him to handle his hammer even when it was red-hot. His magic belt, Megin-giörd, doubled his natural strength. The brazen chariot which he drove across the sky caused the rumble of thunder and was drawn by two he-goats, Tanngniort and Tanngnisr. In South Germany this did not seem sufficient reason for the noise of a thunderstorm, so he was said to be carrying a collection of copper caldrons in his chariot; this gave rise to the somewhat impious name of kettle-vendor. Thor's favorite color was red, and in Scandinavia the rowan tree was sacred to him under the name of "Thor's deliverance." In Germany the oak was consecrated to Thor. The Yuletide period of feasting, which began with the winter solstice and varied in length from one day to a month was dedicated to Thor as well as to Frey.

Thor spent much of his time in combat with the giants and in so doing protected both Asgard and Midgard from the inimical forces of nature. Also it was Thor alone who could silence Loki, though in most of the myths they were friendly, often sharing adventures. His favorite sport was trying to conquer the Midgard serpent, Jörmungandr, but he will not succeed until Ragnarök and then he will be drowned by the venom issuing from the serpent's mouth. For Thor's encounters with the giants, see GEIRROD; HRUNGNIK; JÖRMUNGANDR; THRYM; UTCARD; see also EGIL.

Thoth, Thot, or Tahuti The scribe of the gods of ancient Egypt; record-keeper of the dead; creator and orderer of the universe; god of magic, wisdom, learning; patron of the arts; inventor of writing. He is depicted as a man with an ibis head, carrying the pen and ink-holder of scribes, or as an ibis. Sometimes too he has the head of a cynocephalus ape and bears the lunar disk and crescent, but, though he is closely associated with the baboon, he is never depicted as a baboon. His center of worship was Hermopolis, where he headed the Ogdoad,

the eight gods. He is seldom pictured standing alone, but usually is in a funeral group in tomb pictures, as reader of the books of the good and bad deeds of men, or taking part in the ritual of the judgment, reading the scales in which the heart was weighed against the feather of truth and recording the result. At Hermopolis he, as god of order and measure, was identified with the moon, hence his lunar crest. In late mythology, Thoth (Tahuti, the Speaker), self-created and existing in chaos, spoke, and his words became covered. Thus began creation. Each word became the thing it signified. Thoth also arbitrated between Horus and Seth, dividing Egypt between the two. Thoth, the god of wisdom, was in Hellenistic times identified with the Greek Hermes, who took over many of Thoth's qualities. He thus became the god and patron of the later magicians and thaumaturgists, being transformed into Hermes Trismegistus, the supposed author of the Hermetic books. The modern pack of cards, believed by some to be an adaptation of an ancient Egyptian book of hieroglyphics, is sometimes called the "book of Thoth." Perhaps as much as the gambling associated with card-playing, the identification of Thoth-Hermes with the forbidden and dangerous secrets, incantations, and evocations of the medieval and Renaissance magicians have caused this "book of Thoth" to be called the "Devil's picture book." Thus, to some extent, the crescent-crowned Thoth has become associated and identified with the sly and knowing Satan of Western belief.

Three Bears A tale appearing originally in *The Doctor* (1834-47), a miscellany by Robert Southey, the poet, and since modified into the familiar children's story *Goldilocks and the Three Bears*. Southey put the story into the mouth of Dr. Dove, who told it as "one of Uncle William's stories"; the printed version of the original Southey tale indicates the voices of the father, mother, and baby bear in appropriate type sizes. The sources of the tale were investigated by M. J. Shamburger and V. R. Lachmann ("Southey and 'The Three Bears,'" *JAF* 59: 400-403); Grimm's #53—*Schneewittchen*—provided the house in the forest and its absent inhabitants, the mystified comments of the owners of the house when they return, and the nap in the bed; a Norwegian tale in the oral tradition may have suggested the bears and the porridge. In Southey's tale the intruder in the bears' home is a mannerless little old woman. In 1881, Horace E. Scudder retold the tale with Silverhair, a little girl, as the trespasser. Later in the 19th century the girl's name changed to Goldilocks, which name she retains to the present. This story, like *The Three Little Pigs* and *Jack and the Beanstalk*, is notable for its repetitive formula. The little girl enters the little house she discovers in the woods. She tries the three chairs (one too hard, one too soft, one just right), eats from the three bowls of porridge, rests in the three beds and falls asleep in the smallest, which too is "just right." The three bears come home and see the damage she has done. "Who has been sitting in my chair?" says each. After similar repetition, they discover Goldilocks asleep in the baby bear's bed and chase her clear out of the woods.

Three Golden Sons Title of a folktale (Type 707) known in some 600 to 700 versions from all parts of the world. The plot, one of the most familiar in all folktale, comes primarily from the oral rather than the literary

tradition; it appears in Straparola in the 16th century, thence in D'Aulnoy; Galland seems to have taken his variant from Arabic rather than European tradition.

The king overhears three girls saying what would happen if they should marry him; he marries the youngest, who has said that she would bear him triplets with golden hair, a chain about their necks, and a star on their foreheads. (Or he marries a girl he meets by chance.) The two jealous older sisters substitute a dog or some other animal for the triplets when they are born, and throw the children into the river. The wife is imprisoned or banished. The children are found by a fisherman or a miller and are brought up by him. After the passage of years, the eldest of the children sets out to find his father and to obtain the speaking bird of truth, the singing tree, and the water of life. He fails and is transformed into stone. When the second brother too fails, the youngest brother (or sometimes a sister) undertakes the quest. Through kindness to an old woman, he manages to obtain the magic objects, the brothers are released from their petrified state, and all return. The king hears of the wonderful things; the bird of truth tells the story of the three children and the maligned wife; the king and his family are reconciled; the sisters are punished.

This type is often compounded with other types, for example *The Maiden Without Hands* (Type 706), *The White and Black Bride* (Type 403), *Our Lady's Child* (Type 710), *Born From a Fish* (Type 705), *Three Hairs from the Devil's Beard* (Type 461), with all of which it shares incidents modified and adapted to the several types. The story utilizes many familiar motifs, at least 18 in the Grimm version *The Three Little Birds* (#96). It is probably of European origin and appears all over the Continent; collections from Siberia, India, the Near East, and Africa include it; it is known in Canada (French), Brazil and Massachusetts (Portuguese), Chile and Mexico (Spanish), and among the Thompson River Indians of the northwest Pacific coast. Compare FALSE BRIDE.

Three Old Women Title of a folktale (Type 501), known in the Grimm collection as *The Three Spinners* (#14), of western European distribution. Von Sydow, who studied the type in his *Två spinnsagor* (Stockholm, 1909), indicates either Swedish or German provenience; the tale is known in Finland, Scandinavia, Germany, and most of Europe west of Russia.

Through jealous reports or because her mother foolishly boasts of her daughter's ability to spin (an imaginary ability), the queen calls the girl to the palace, where she is shown three rooms full of flax to be spun into thread. Success will be rewarded with marriage to the prince. The girl, who knows nothing at all about spinning, is at a complete loss as to what to do. At last three old women appear—one with a large foot, one with a huge lip, one with a tremendous thumb—who offer to help her if she will invite them to her wedding. She agrees and they spin the flax into thread. (It is perhaps too easy to see here the three spinning Fates of European mythology, yet their occupation and their presence at a wedding leads attractively to the conclusion that this tale is one of the "Broken-down myths" of which the Grimms wrote.) At the wedding, the old women sit at the bridal table. The prince asks them why they are so deformed. They tell him—from working the treadle to spin

the wheel, from wetting the thread, from twisting the thread. The prince vows that his wife will never again have to spin, and all ends happily.

Three Ravens Title of an English ballad (Child #26) first printed in London in 1611. "There were three ravens sat on a tree,/ Downe a downe, hay downe, hay downe." The three ravens were discussing how to obtain breakfast: a knight lay slain in a nearby field, but his hounds kept watch at his feet, his hawks kept off all birds of prey, his love, though big with child, came alone to his side, carried him on her back to bury him, and died herself before sunset. "God send every gentleman/ Such hawks, such hounds, and such a leman."

The traditional Scottish ballad, *The Twa Corbies*, first printed in Scott's *Minstrelsy of the Scottish Border*, 1803, deals with the same situation but is a less romantic, starker thing than the English ballad. Two crows are discussing where to get a meal: a knight lies slain in a nearby field. "His hound has to the hunting gane,/ His hawk to fetch the wildfowl hame,/ His lady's ta'en another mate,/ So we may mak our dinner sweet." One of the two crows will start in on his neck bone; the other will peck out his bonny blue een; they will line their nests with his golden hair; no one will ever know what became of him. "Oer his white banes when they are bare/ The wind sall blaw for evermair."

The Three Ravens was an extremely popular ballad all over England, and through the medium of the Percy *Reliques* variants of it, including the *Twa Corbies*, traveled as far as Russia. See W. J. Entwistle, *European Balladry*, Oxford, 1939, p. 240.

In surviving American variants, all chivalrous atmosphere has disappeared and only a burlesque remains with three old crows cawing hoarsely over the carcass of a cow, as in *Three Old Crows* (sometimes sung to the tune of *Bonnie Doon*) and *Billie McGee, McGaw*.

Three Sisters See DEOHAKE. [EWV]

Three Snake Leaves Title of a folktale (Grimm #16; Type 612) embodying the belief in the esoteric knowledge of snakes. The snakes, by means of leaves of a certain plant, resuscitate their dead (E105). This idea, here in märchen form, is of widespread occurrence. The ancient Greek story of Polydus and Glaucus is built around the theme: the snakes know the means of reviving the dead; they are immortal; they are connected with healing and all the mysteries of life and death.

Thrym In Teutonic mythology, lord of the frost giants; he stole Thor's hammer. When Thor discovered his loss he confided in Loki who set out to find it. Thrym admitted the theft, but refused to return the hammer unless Freya were brought to him as his wife. This favor Freya refused the gods, so Thor, with Loki as a handmaid, dressed in Freya's clothes and presented himself at Thrymheim. Because of Thor's thirst and appetite, Loki was put to it to continue the deception, but at length Thrym placed the hammer in Thor's lap fulfilling his part of the bargain, whereupon a great battle ensued in which all the assembled company of giants were killed.

thunder The actual phenomena of thunder and lightning are accounted for in the mythologies of nearly all North American Indian tribes, and thunder is, furthermore, personified by many tribes (see THUNDER, THUNDER

BOYS; THUNDERBIRD). Among the Yuchi of the Southeast thunder and lightning are said to be caused by a great black snake with rattles on its tail, on whose back a supernatural being rides. In tribes where the concept of the Thunderbirds is found, thunder is believed caused by the birds flapping their wings, or striking trees. Among the Chiricahua Apache and other groups, thunder and lightning are considered aspects of the same force; among the tribes of southern Oregon and northern California the noise of thunder is explained as a man's voice, or a man and woman talking or making noises, or a bird ripping a tree, or the moving of a bat's (Thunder's) wings, or the shaking of an old man's long gray hair, or of a man moving or kicking things, or of supernatural twin boys searching for their baby cradles.

In the Pueblos, thunder and lightning are called or reproduced in kiva ceremonies; if the thunder crashes several times it is a sign that the year will be good with rain; if only twice or thrice, that there will be no rain. The bullroarer is used to arouse Thunder, since it makes a noise like thunder; or two stone balls are rolled along in front of the meal altar in the kiva to call the thunder—these balls being used because they make a noise like thunder. The Shawnee dip a buffalo tail in water to produce rain; if this is done too hastily it will cause thunder and heavy rain, which is undesirable. The Tübatulabal Indians of California believed that if any sort of spider was thrown in a spring, it would thunder immediately. See LIGHTNING. [EWV]

 Thunder was conceived as a powerful god by the ancient Peruvians. White llamas were sacrificed to him and sites struck by lightning became sacred. Today the thunder god is still worshipped in Peru and Bolivia as Santiago (Saint James) who has taken in most of his attributes.

Several tribes of the Amazon and of the Chaco associate thunder with birds which are believed to produce it.

The demon Tupan of the ancient Tupinamba and Guarani, who was promoted to the rank of the Christian god, was originally a thunder demon. He caused thunder and lightning every time he crossed the sky in a wooden trough. In some tribes (Lengua, Macushi, Cashinawa) thunder is produced by birds. See THUNDERBIRD. [AM]

Thunder, Thunder Boys Many North American Indian groups personify thunder and tell stories of the deeds of this character, which include tales of contests between Thunder and other personified natural forces. Some tribes, such as the Kato of California, even accord to Thunder the role of creator of mankind. In Kato mythology the two original beings were Thunder and Nagaicho; Thunder was the more powerful of the pair, the creator of man and of many of the animals, mountains, trees, and springs on the earth. The neighboring Huchnom Indians recognize Taikomol as their supreme being, but Thunder once challenged Taikomol. He failed to do what Taikomol did, such as walking on the water, and Taikomol sent Thunder north. In the spring Thunder was told he was to travel south and play with the hail, then return north in the winter. Among the White Mountain Apache, Black Thunder is a holy being who quarrels with Sun and becomes involved in a contest with the latter; among the Lipan and Chiricahua Apache, Thunder quarrels with Wind over his, Thunder's, alleged supremacy. Among the Coeur d'Alene,

Thunder is a being who kidnaps a hunter's wife and takes her to his cliff home; the hunter pursues the couple, and, while Thunder sleeps, steals his shirts; these shirts give Thunder the power of flight and without them he is helpless, so he flops down and cries. This myth, according to Reichard, seems to be unique to the Coeur d'Alene (Gladys A. Reichard, *An Analysis of Coeur d'Alene Indian Myths*, MAFLS 41, pp. 171-174).

Among several tribes in southern Oregon and northern California, Thunder is an old man; sometimes he has an old woman for a wife, sometimes a tree. Other groups in this region believe Thunder is a boy; some say he is twin to a brother, Lightning. On the other side of the continent, among the Cherokee, the idea of the Thunders being two boys also exists; one of the Cherokee Thunders is Tame Boy, the other Wild Boy. Both are sons of Kanati and Selu (Hunter and Corn Mother). The two boys, often referred to as twins, live either in the sky vault or in rock cliffs. They wear snakes as necklaces and bracelets; when they play ball in the sky they cause a thunderstorm. The twins are beneficent and powerful, and are involved in several of the formulae used by Cherokee shamans; they are also central figures in Cherokee origin myths. [EWV]

Thunderbird An apparently very old concept, which appears both in Asia and in various tribes of North American Indians, is that of thunder as a large bird or birds. This conceptualization of thunder is found on the North Pacific Coast, in the Plateau, and as far south as the Pomo in central California; it also appears among the tribes of the Plains and the Eastern Woodlands. The Thunderbird or birds are powerful supernatural creatures who not only produce thunder, but war with other beings and forces and often grant supernatural blessings. They are depicted as wearing eagle cloaks by the Crow Indians and other tribes; they produce thunder by flapping their wings, and lightning by opening and closing their eyes, or by ripping open trees with their claws in order to find a large grub which is their favorite food. The Algonquian-speaking tribes of the East refer to them as Our Grandfathers, and they are included in the beings addressed in prayers, as well as being fairly frequently referred to in myths. Among the Shawnee, a borderline tribe between the Southeast and the Eastern Woodlands, the Thunderbirds are mentioned in myths, but the Thunders are also said to be small boys who use backward speech and who can move mountains, but are nonplused over moving a handful of dirt or getting across a very small stream; this latter belief in the Thunders as boys is Southeastern.

One of the most frequently referred to pursuits of the Thunderbirds in Plains and Woodlands mythology is the birds' constant warfare with the powers beneath the waters, particularly the horned underwater snakes. References to this familiar feud occur frequently in Plains and Woodlands myths. See WATER SERPENT. [EWV]

 The association between thunder and birds exists in various South American tribes, though the Thunderbirds never assumed the same importance in mythology as in North America. Among the Chaco Indians (Mataco and Lengua), birds produce thunder and lightning by flapping their wings. An identical performance is attributed by the Chane to a mythical character with wings. The Cashinawa Indians believe that

the xexeu birds gather the clouds and unleash storms. The Wapishiana and the island Caribs seem also to have related storms and thunder with mythical birds. A similar notion is still alive among the Cayapa Indians of the Ecuadorian coast. [AM]

thwē-thauk Literally, one who has drunk blood: the Burmese name for a custom, common among the Chinese, Indochinese, Karens, Kachins, Chins, and the wild tribes of Burma but not among the Burmans. The blood of an animal or man, infused in water or spirit, is drunk as a mark of the exchange of friendship or fraternity. Human blood, when used, is obtained from a puncture in the arm; that from an animal is usually obtained by killing a fowl (Chinese, Karen), a dog (Chin), or a buffalo (Kachin).

thyme Thyme is an herb of Venus and Mars and a symbol of strength. It is loved by the bees and fairies, especially in the north of England. In the Middle Ages, ladies gave their knights a sprig of thyme to increase their strength and courage in battle. On St. Agnes' Eve, if a young girl places a sprig of thyme in one shoe and a sprig of rosemary in the other, and one on either side of the bed, she will dream of love and the man she will marry. In ancient times thyme was strewn about the house to drive out vermin and provide a pleasant odor.

Medicinally it was considered good for depression and to strengthen the head, brain, stomach, and lungs. Used in baths it cleared the skin and soothed the nervous system. It was a cure for insomnia, and the 17th century Parkinson recommended distilled water of thyme and vinegar of roses applied to the head to guard against "frensy" or nightmare.

Tiamat The primeval dragon of the Mesopotamian cosmological myth, *Enuma Elish*; the mother of the gods who was destroyed by the king of the gods, and from whose body the heavens and the earth were created. Tiamat is thought to be the personification of the sea or chaos, or, according to some, the Milky Way (thus paralleling Nut, the sky-mother-cow of Egyptian myth). Tiamat's husband Apsu sired on her the gods, but this progeny annoyed their mother by their constant movement and dancing. She plotted with Apsu and Mummu to destroy them. (Or the gods may have planned to destroy Tiamat because she prevented the establishment of order in the universe; she had so many offspring that she threatened to overcrowd all of the universe.) Ea slew Apsu "with his word," some sort of powerful spell. First Ea, then Anu (who was armed with the "word" of all the gods), tried to conquer Tiamat, but she turned them back. Finally Marduk (earlier Enlil or Bel) moved against her, armed with the delegated power of all the gods. He overcame Kingu, Tiamat's second husband, though the latter had control of the tablets of destiny. Marduk threw his net over Tiamat, and when she opened her mouth to bellow and engulf him, he caused the winds to hold it open while he shot an arrow into it and through her heart. He smashed her skull, cut her arteries (the winds carried the blood away), and cut her in two. Half the body made the firmament; the other half became the earth, on which Marduk built his palace. The myth is thought to be a ritual statement of the Mesopotamian spring floods: the waters are dispersed by the sun and winds and new fertile land is left behind. T. Gaster (*Thespis*, pp. 63 ff.) traces in this myth the

pattern of the seasonal drama—combat, assumption of sovereignty, installation in palace, feast of gods, sacred marriage—though several of the elements are obscure incidents in this particular myth. Many of the incidents of the myth have become commonplaces of derived myths and folktales. The dragon-slayer cycle of Europe, for example, undoubtedly owes much to the myth of Tiamat. The slaying of Tiamat through her open mouth is obviously the prototype of the vulnerable spot motif; Marduk can kill the dragon only in this way.

tide The belief that no creature can die except at the ebbing of the tide is reported from all over the world. On the Pacific coast of North America and in southern Chile and elsewhere people believe that a child cannot be born until the tide comes in. Darwin derived the sexual rhythms of women from the tides on the grounds that the greatest part of the evolution of life took place in the sea.

Breton peasants believe that clover sown when the tide is high will be good but, if sown when the tide ebbs, will grow badly and cows eating it will burst. Their wives think that the best butter comes just as the tide begins to flow. At that time the milk will foam in the churn until after the tide is full. Pliny reported that the skins of seals would ruffle at ebb tide, even after flaying. Malay Peninsula natives believe tides are caused by the movement of a giant crab who leaves and enters his cave at the foot of the world tree. The people of New South Wales burn their dead on a flood tide, because an outgoing tide would carry the souls to far places. See DJUNGGAO; MOON. [RDJ]

T'ien Heaven; the highest of all things in the Imperial Cult of China. It has shape but no substance. It nourishes creation and once a day revolves on the north and south poles. It is nature or providence and the abode of the gods and spirits. Though without personality it has wisdom and foreknowledge. As Imperial Ancestor it was worshipped only by the emperor. [RDJ]

T'ien T'an The Temple of Heaven in Peking; site of the most solemn of the Imperial Sacrifices. Here, after complex rituals prescribed by the Board of Rites, the Son of Heaven paid homage to his imperial ancestor. Although the ceremonies were carefully guarded secrets, a sufficient number of details is available to justify the conclusion that the ceremony was derived from very ancient times and was an essential dogma in the Chinese theory of social organization. [RDJ]

tiger Tigers are sensitive and easily insulted. In Malaya, Sumatra, Assam, Bengal, and southern China where tigers are native, they are notable for their bravery, and are man-killers, and shapeshifters. In a central Chinese version of the Red Riding Hood story, the tiger takes the place of the west European wolf and eats the old woman. The people of this area also believe that having eaten a man, the tiger can force the man's physical ghost to walk before him through the jungle and entice other victims. When the next victim has been devoured, the ghost of the first is liberated.

Propitiation ceremonies are frequent and often concern the sensitiveness of tigers. In some of the Sumatran villages, people will not speak disrespectfully of tigers. If a trail has been unused for some time the villagers will not use it because they fear they might be tres-

passing. If they travel bareheaded the tiger might take this as a mark of disrespect; when traveling at night they will not look behind them because the tiger might think they are afraid of him and this too would offend him. At night they will not knock out a firebrand because the sparks are the tiger's eyes. They will kill a tiger only in self-defense or after a tiger has killed a near relative. When strange hunters set traps villagers have been known to go to the place and explain to the tiger that *they* did not do it. Normally they try to catch killer-tigers alive and before killing them explain why it is necessary to perform the execution and ask forgiveness for what they are about to do. The Bataks, who kill only killer-tigers, bring the carcass back to the village, pray its soul into an incense pot, burn incense, and ask the spirits to explain to the tiger why it was necessary to execute it. They then dance around the carcass until they are exhausted. They believe that human souls may have migrated into the tiger's body. A priest offers food and drink and asks the soul not to be angry. The hill folk of Bengal believe that if a man kills a tiger without divine orders he or a near relative will in turn be killed by a tiger. Having killed, the hunter lays his weapons on the tiger's carcass, reports to his god that this was a just punishment for the tiger's crimes, and promises not to kill again unless provoked. The Cochin Chinese trap tigers and then lament over them.

Certain peoples of the Malay Peninsula believe that tigers live in houses in cities of their own, and describe a fabulous Tiger Village where the roofs are thatched with human hair. A young boy who was "given many stripes" by his teacher ran away into the forest and became the first tiger, and he knows the secret of certain magic leaves to heal his wounds. All over the Peninsula tiger claws and tiger whiskers are valued as potent charms. One tiger whisker knotted into a man's facial hair will terrify his enemies. Quite generally also the tiger is regarded as the familiar of the medicine man or magician, and is said to be immortal.

The Miris of Assam think that tiger meat when eaten will give strength and courage to men but should not be eaten by women because it would make them too strong-minded. In Korean belief, tiger bones when ground to a powder and taken with wine will give strength and are more potent than leopard's bones which serve the same purpose. A Chinese in Seoul is reported to have bought and eaten a whole tiger in order to become brave and fierce. The gallbladder is considered particularly potent.

In south and central China the tiger is as notable a shapeshifter as the fox in north China. The stories are much the same but the protagonist differs. [RDJ]

Tihküyi Child-Medicine Woman or Sand Altar Woman; an important Hopi Indian female deity; Mother of the Game, spirit of childbirth, wife of the deity Masauwü and sister of Miyyingwa. This Hopi deity is equated by Parsons with the Zuñi, Keres, Tewa, and Taos Earth Mother, or Earth Old Woman, and with the Jemez and Isleta character Earth. The deity's name, Tihküyi wühti, Child-Water Woman, may refer to the misdelivery of her child; this happened when she was wandering with Snake Clan Woman. She still wanders and wails, and it is she who sends women their children by projecting into them infant images. See Elsie Clews

Parsons, *Pueblo Indian Religion* (2 vols., Chicago, 1938), p. 1267; p. 183 n.; Table 2, opp. p. 208. [EWV]

Tiki The first man of some Polynesian mythologies. According to a Maori myth, Tiki was created by Tane from red clay. In another Maori myth, the first man was made by the god Tiki and so resembled the god that he was called Tiki-ahua, Tiki's image. Sometimes Tiki makes a wife for himself, sometimes the woman is created as his companion. The tiki is an important figure in Polynesian sculpture, carved usually from nephrite or whalebone, and worn around the neck. The Maori hei-tiki is shaped like an embryo and probably represents an ancestor. Each hei-tiki has its own personal name.

Till Eulenspiegel Hero and title of a 16th century German chapbook, a collection of satirical tales pointed at certain class distinctions of the period and region. Till Eulenspiegel, son of a peasant, was born in Brunswick somewhere around the turn of the 13th-14th century, and died at Mölln in 1350. The tales recount a long series of jests and pranks showing up the superior wit of the clever peasant (often under the guise of thick-headedness) over the typical townsman: tradesman, shopkeeper, innkeeper, even priest and lord. The jokes are scurrilous, sometimes cruel. Although Till Eulenspiegel is best known today through Richard Strauss's piece of program music written around his pranks, he has been known to every German school-boy since the Middle Ages, as a personification of peasant wit over bourgeois dullness and smugness.

'Ti Malice The Trickster in the folklore of the Negroes of Haiti and other parts of the Créole-speaking New World—Martinique, Guadeloupe, and the Lesser Antilles. In Haiti, as elsewhere, his foil is the lumbering Uncle Bouki. [MJH]

tinikling A Philippine dance of skill. While two men hold two bamboo poles and move them apart and strike them together, a dancer (man or woman) leaps in and out between the poles with a variety of light steps. The timing to the waltz music has to be perfect to prevent accidental crushing of a foot. It is danced by peasants on the threshing floor at harvest time, in Manila society, and by Philippine groups in the United States as a popular offering. The origin is attributed to fishermen of the coast of Anadalousia and their play with two oars. [GPK]

Tirawa Chief deity and dominating power of the Pawnee Indians; generally referred to in myths and ceremonies as "father." The heavenly bodies, winds, thunder, lightning, and rain were his messengers. [EWV]

Tiresias In Greek mythology and legend, a blind Theban soothsayer. There are several versions of how he obtained the power to foresee. He saw Athena bathing and was blinded as inescapable punishment despite the unpremeditated nature of the act. The goddess, his mother's companion, gave him the power to understand the language of the birds and also a staff to act as his eyes. Or he was taken into the counsel of the gods, and was blinded for revealing their secrets.

Perhaps the best known of the stories is that as he was walking on Mt. Cyllene or Mt. Cithæron he came upon two snakes coupling and killed the female. For this act he was changed into a woman. Years later he again

came upon two snakes in intercourse and, being now a woman, slew the male. Therefore he was chosen as a knowing arbitrator when one day Zeus and Hera argued about which sex had the greater pleasure in intercourse. His answer, that woman's pleasure was as ten to man's one, so angered Hera that she blinded him. This story, folktale rather than myth, is found in India. In the *Mahābhārata*, a king is transformed into a woman by a bath in a magic river. As a woman he bears a hundred sons whom he sends to share his kingdom with the hundred sons he had as a man. Indra causes them to kill each other off and asks the woman which group to revive. He decides on those he bore as a woman because a woman loves more than a man. And he refuses to be changed back into a man because a woman takes more pleasure in the act of love than does a man. Krappe suspects from this that the original Greek version was more pointed: Hera changed Tiresias back into a man—as punishment.

The danger in spying on the gods is reflected in myth and folktale all over the world: the change of sex for this reason occurs in Cretan, Indian, and German stories. The world-known relationship between serpents and soothsaying is made in many tales of animal languages; the story of Melampus, whose ears were licked by snakes as he slept, is perhaps the best known.

In legend, Tiresias alone retained his mind and memory in the underworld; there Odysseus encountered him and learned how to return to Ithaca. According to Hesiod, Tiresias lived for seven generations. He notified Amphitryon that Zeus had slept with Alcmena to engender Hercules. He also, during the siege of Thebes by the Seven, said that one of the Sparti must die to cleanse the city of blood-guilt laid upon it when Cadmus slew the dragon. Monæcus thereupon killed himself. Tiresias fled from Thebes after indicating how the inhabitants might escape during the siege, but on the road he drank of the spring at Tilphussa and died. An oracle of Tiresias existed at Orchomenus, but it became silent forever as the result of a plague there.

Tishtrya (Persian *Tīr*) In Persian mythology, one of the *yazatas* (celestial beings); also, the dog-star (Sirius), leader of the eastern stars; also, a god of rain. It is Tishtrya who listens to the prayers of the faithful, plagued by summer droughts, and then descends to Vourukasha (the sea) in the shape of a golden-eared white horse to battle with the bald-eared, dark horse, the drought demon, Apaosha. When he is victorious Tishtrya causes the sea Vourukasha to boil over; thus vapors rise which are blown by the mighty wind of Mazda down upon the fields and villages, even to the seven regions of the earth. Tishtrya is also represented as a bull with golden horns, or as a brilliant youth. In the latter form he is invoked for wealth of male children.

Titans In Greek mythology, the children of Uranus and Ge: Cronus, Oceanus, Iapetus, Rhea, Tethys, Themis, Coeus, Crius, Hyperion, Thea, Mnemosyne, Phoebe, Dione. Uranus was also father of the Cyclopes and the Hecatonchires or Hundred-handed giants. These latter so irked him that he thrust them back into the womb of their mother, Earth. For this she agitated among her sons to dethrone Uranus; only Cronus dared the act, and with a sickle he castrated Uranus. In the fight between Cronus and Zeus, the Titans fought on

both sides; but with the aid of weapons forged by the Cyclopes, Zeus defeated his attackers and imprisoned them in Tartarus with the Hecatonchires as their guards.

Another group called Titans slew Dionysus Zagreus. These Titans, sometimes confused with the others, obviously derive their name from the gypsum (*titanos*, a kind of white earth) with which they daubed themselves in disguise. Zagreus tried to escape by shapeshifting, but when he assumed bull form they killed and ate him, all but the heart, which was saved by Athena and swallowed by Zeus to be born again from Semele. Zeus destroyed the Titans and from their ashes mankind was made. Thus mankind has both evil and divine nature, from the Titans and from Zagreus.

Many scholars see in the Titan children of Uranus a pre-Greek group of gods, deities of sky and earth and the forces of nature, replaced by another group of gods, the Olympians: the succession seems to indicate two waves of conquerors imposing their pantheons on the original inhabitants of the country. The struggles of Cronus against Uranus and of Zeus against Cronus may thus reflect real struggles between peoples worshipping different gods.

Tjalon Arang The Balinese Witch Play between Rangda the witch (literally widow) and Barong the dragon. They symbolize the mother and father principles. The drama follows a traditional enigmatic sequence:

- 1) Dragon circles the ground three times to mark off the boundary which no witch (*lejak*) can cross. Two men form the flexible body topped by a terrifying mask with movable jaws and protruding tongue and teeth. They cavort with fierce puppyishness and quick changing poses of the feet and head.

- 2) For an hour to three hours little girls, the witch's disciples (*sisia*), dance in pairs, much as in the *legong*.

- 3) The witch instructs the disciples in the attack on a king, whose son has refused to marry her daughter. They are to cause a plague.

- 4) Scenes of pestilence, birth, and death are enacted with much burlesque of ceremonial gestures.

- 5) The witch is attacked by the dragon's followers and temporarily "killed." The male attackers hold krisses, approach her squatting, then fall powerless while she waves her white cloth or *anteng* (the sling in which a mother carries her baby). She reels like a rag doll, and they fall limp.

- 6) Laid out in two rows, they are sprinkled with holy water and revived by the dragon.

- 7) Then follows the dramatic attack on the self with the *kris*, first by a group of women with a downward movement, then by the men with an upward and backward gesture. After the final trance they are carried into the temple and revived.

Phallic elements are clearly represented in the *kris* dance and motherhood concept. At the same time this drama has a therapeutic role by releasing emotions of fear, by burlesquing the fearful. [CPK]

Tlaloc The rain god of central Mexico; his cult goes back to Toltec times. In codices and stone carvings he is represented with tusklike teeth, rings around his eyes, and often with a scroll emerging from his mouth. The eye-rings represent snakes, intimately associated with rain in Mexican mythology. In addition to the chief

god of this name there were innumerable minor rain deities known as *tlalocs*—almost every hill was the abode of one—who could bring rain to farmers. The chief *tlaloc* had as wife (some accounts say sister) Chalchihuitlicue "Our Lady of the Turquoise Skirt," represented by the blue-green color of turquoise, who was a goddess of lakes and rivers. See BACABS; CHAC. [GMF]

tlacololeros (from Nahuatl *tlacoloa*, to prepare the land for cultivation) An indigenous men's dance of Chilpancingo, Tixtla, and surrounding villages of the state of Guerrero, Mexico. Ten to twelve dancers, in a double line, led by a *capitán*, dramatize the activities of the agricultural season in seven sequences: they search for the land, find it, share it out, prepare their agricultural implements, burn down the brush, seed the soil and symbolically beat it, and after an interlude return for the harvest. Their ceremonial mime is associated with the Aztec deities of agriculture, Toci and Xilonen.

Their costumes are unique: burlap tunics reaching to the knee, boots, broad straw hats with conical crowns, and red wooden or furry masks. The left arm is padded, for in the right hand they carry whips, and during the "burning of the bush" they strike each other on the protected arm, simulating the crackling of the flames. This action, as well as all of the mimetic action, keeps time with the music, at times drum and fiddle, or drum and flute.

Another enactment, with dialog, shows the *tlacololeros* in battle with a tiger (*tecuaní*), who has been molesting the owner of the cornfield. A dog called *el maravilla* (the marvel) and other characters assist them. The dialog alternates with longways dancing of cross-overs, dos-à-dos, turns, and jumps, all primitive in character. [CPK]

Tloque Nahuaque During the century before the Conquest some of the philosophically minded persons of the Valley of Mexico began to speculate about the existence of a supreme god, invisible, omnipresent, above all others. This speculation took its most advanced form under Nezahualcoyotl, king of Tezcoco, 1418-72, at which time Tloque Nahuaque was worshipped as the center of a semi-monotheistic religious philosophy. [GMF]

tobacco An annual plant of the nightshade family, genus *Nicotiana*, native to the New World: originally cultivated or gathered wild and used for smoking, chewing, snuffing, or as an offering by the majority of the North American Indians, and unknown outside of the New World until the time of the Discovery. Tobacco may not have been used by the Indians in the extreme north of the North American continent, and was unknown to the Eskimo until introduced by the whites after the Discovery. The word tobacco derives from Spanish *tabaco*, Carib *tabaco*, the name for the pipe in which tobacco was smoked.

Among the North American Indians, particularly those of the Eastern Woodlands and Southeast, tobacco of the *Nicotiana rustica* species was cultivated in small plots and regarded as something of a sacred plant. Nearly all eastern tribes have an origin story for tobacco; the Yuchi of the Southeast, for example, say that tobacco originated from drops of semen; in mythical times it was named by a boy and distributed among the people for their use. The Fox of the Woodlands area tell the

tale of a man to whom the Great Spirit spoke telling him to go north and find a plant under a certain tree, to tend this plant carefully, and raise other plants from its seeds. This the man did; when he had many tobacco plants he called the old men of the tribe and gave each of them some plants of the sacred tobacco; this tobacco is the sacred tobacco used as an offering to Wisaka, the culture hero, and to the Thunders by the Fox. Other Woodlands tribes have similar tales accounting for the origin of their sacred tobacco, and rules for the actual raising of the plant; it must be grown in a secluded spot, menstruating women must never approach the spot, etc.

In the Great Plains area, tobacco was cultivated by the eastern agricultural Plains people, but only one nomadic Plains tribe, the Crow of Montana, raised the plant. The species of tobacco planted ceremonially (*N. multivalvis*) by members of the Crow Tobacco Society was not the species anciently smoked; this latter (*N. quadrivalvis*) was derived from the Hidatsa, linguistic relatives of the Crow who lived on the upper Missouri in North Dakota. The Crow considered *N. multivalvis* holy, and identified it mystically with the stars. In one version of the Crow creation story the Transformer, while walking about the newly shaped earth, catches sight of a person, whom he identifies as one of the Stars from above. As he approaches this star-person, the latter transforms himself into a plant, Tobacco. The Transformer decrees that the Crow shall plant this tobacco in the spring and dance with it; it shall be their "means of living," their mainstay. The Sun, chief Crow deity, adopts a poor fasting boy and starts the Tobacco order or society, to which both men and women belong. The society's ritual is concerned with the initiation of members into the society (usually husbands and wives together), planting of the tobacco, harvesting of the tobacco. The seeds only are preserved at the harvesting, the leaves and stems of the plant being chopped up and thrown in the river. See Robert H. Lowie, *The Crow Indians* (New York, 1935), pp. 274-96, for an extended description based on his own field material of the Crow Tobacco Society.

In the Pueblos, tobacco is used ritually either as an offering or smoked in corn-husk cigarettes; it is also used as payment. The Hopi do not cultivate tobacco, but gather a wild species, *N. attenuata*, which is also used at Zuni and by the Tewa, who formerly cultivated the same species. At Santa Ana today, however, *N. rustica* is cultivated for ritual use; this is the eastern species that was cultivated by the Iroquois and Algonquian tribes, and by the Southeastern tribes; how it got into the Southwest is not known (E. C. Parsons, *Pueblo Indian Religion*, 2 vols. Chicago, 1959, vol. 1, p. 18 n.; see also Index, vol. 2, p. 1268). In California most of the tribes gathered wild tobacco plants, either *N. attenuata* or *N. bigelovii*, dried them, and smoked them; a few Central California tribes pulverized tobacco, mixed it with lime, and "chewed" it. The Yurok and their neighbors to the north and south in Oregon and northern California cultivated the plant, the one plant which all these non-agricultural groups raised. They smoked the native tobacco and used it as an article of trade; apparently there was not, as among the non-agricultural Crow of the Plains region, much ceremony attached to Yurok tobacco-raising. The native California tobaccos have been characterized as "rank, pungent, and heady";

they were smoked in moderation, often at bedtime. An indication of the strength of native tobacco is given in Yurok mythology: Downstream Sharp, a grave, unconquerable character in Yurok mythology who smoked tobacco but never ate, destroyed several monstrous beings with their own devices, including those beings who killed people with overstrong tobacco. [EWV]

 Tobacco was smoked by South American Indians more for magic purposes than for enjoyment. Even those who used it in ordinary life expected to benefit from it in various ways. In a great many Amazonian and Guiana tribes, only shamans smoked cigars. Tobacco smoke provoked a mild state of stupor during which they were able to converse with spirits. It also gave more strength to their breath and facilitated the extraction of magic missiles from their patients' bodies.

Tobacco juice was drunk by candidates to the shamanistic profession. It plunged those who took it into a state of trance favorable for dreams and visions. Moreover the drug is valued for its imputative purifying virtues. [AM]

Tobit Title of one of the books of the Old Testament Apocrypha, which tells a tale of demons, bewitchment, a quest, etc. The story, from the Septuagint and not from the later Hebrew versions, is influenced by Persian and Egyptian tales. Tobit is a very pious man and, in captivity in Nineveh, takes it upon himself to evade the decrees and bury the Hebrew dead. He is always in trouble because of this, and finally one day he arises from his table at the feast of Pentecost to bury a new corpse. He spends the night outside the house, since he is ritually unclean after his contact with the dead, and during the night sparrow droppings fall into his eyes and blind him. He quarrels with his wife some time later, because she has been forced to go to work and has come home with a bonus, a kid Tobit suspects she has come by dishonestly. He is so miserable that he prays to God for death. At the same time, his kinswoman in Ecbatana, Sara, prays to be relieved of a misfortune that has befallen her. Her beauty has attracted the demon Asmodeus who has killed her seven bridegrooms on their wedding nights. God sends Raphael to earth to help the two. Tobit remembers that he has loaned some money to someone in Ecbatana and sends his son Tobias to collect it. Tobias hires Raphael, masquerading as a member of Tobit's tribe, as guide and companion. They leave, accompanied by Tobias' dog. At the Tigris, a fish tries to swallow Tobias, but it is caught. On Raphael's advice, Tobias saves the heart, liver, and gall. When they get to Ecbatana, Tobias becomes affianced to Sara; they burn the heart and liver in the bridal chamber, and the sweet smoke prevents Asmodeus from killing Tobias. Once the wedding is consummated and the bride is consecrated to the bridegroom, the demon has no power over them. They leave for home at last, accompanied by the dog, and arrive in good time. The gall is applied to Tobit's eyes; the scale falls off them and he sees again. Raphael announces who he is and all ends happily. The story may once have contained a reference to the water of life, which often is the goal of the quest to restore the father's sight. The monster in the bridal chamber (Type 507B) is usually defeated by means of the grateful dead (thus Tobit's burying of the dead); the dead gets half the prize (half the girl who is cut in half and is later re-

stored). In the Tobit story, they voluntarily offer half the money to Raphael before he announces who he is.

tonal The belief that every human being has a guardian or companion spirit in animal form, whose soul is so closely linked to that of the human that if one dies the other follows shortly, is found in much of Middle America. The animal often is known as the *tonal* (also the corruptions *tona*, *tono*), and in some places as *nagual*. This concept appears to be a post-Conquest form of the ancient Aztec belief (undoubtedly shared by other Indian groups) that the *tonalpouhque* diviner must cast the horoscope of each newborn child, reading the *tonalamatl* book to determine the child's fate. The horoscope is rarely if ever read today, but the *tonal* of the child is sometimes still determined. See MEXICAN AND CENTRAL AMERICAN INDIAN FOLKLORE. [GMF]

tonalamatl The hand-illuminated "books" made from the bark of the wild fig tree, in which was recorded the *tonalpohualli*, or day count, of the Aztecs. By consulting the page corresponding to the week of the birth of a child, a diviner determined whether the birthday was lucky or unlucky, and advised the parents as to what they might do. Other advanced peoples of Middle America also made use of the *tonalamatl*, though under different names. [GMF]

tongue twisters Tongue tanglers would be a better term for accurate description of these tricky sentences which are so popular a part of folklore, particularly in America. The tongue twister proper is not merely an amusing sentence in which all words begin with the same letter, as many seem to think. It may be a sentence or stanza, a whole poem or only a word, but it must be difficult to repeat aloud rapidly several times because the succession of initial consonants or consonantal combinations is suddenly slightly varied to trip and tangle unwary tongues. In the southern states they are aptly called "cramp words."

When the writer innocently asked the readers of a short piece listing a dozen tongue twisters in a magazine of national circulation to send him any others they might know, he greatly underestimated the popularity of these tongue trippers, for he received more than 13,000 of them from country crossroads and great cities alike. Nearly every correspondent was sure his family favorite was better than any which had been printed, and challenged the writer to say it three times without stumbling. Inadvertently a key had been touched which released a rich jackpot of American oral tradition and folklore.

For generations tongue twisters are passed on by word of mouth alone. Again and again correspondents write: "I learned this one from my grandmother and she told me her grandfather taught it to her" or "These have been in our family for well over a century to our knowledge." An Ohio woman wrote that the old rimed twister she was sending "has been known to us folks for several generations but I ain't sure of the spelling for I never saw it in print or even writing until I set it down for you." And children learn this old rimelore from each other "over the childhood grapevine" as a Maine woman put it.

To be sure, a few can be found occasionally in old rhetorics, fifth readers, orthographies, orthoepies, and elocution books, but these few are simply samples col-

lected from the previous oral tradition. It was a rather common custom a hundred years ago, still continued by a few old-timers, to keep "commonplace books" or "scribble-in books" wherein uncommon sentences and "hearsay verses" were copied in one's best handwriting. From such sources as these, correspondents refreshed their memories and sent along their treasures to me.

My own frame of reference for these twisters was among the winter evening games of my Massachusetts boyhood. They were permitted and even encouraged by our elders because they were supposed to train us to speak more distinctly. But it appears that these peculiar trick sentences are deep-rooted in the life of the whole country and have more uses than I had thought.

The way in which in varied forms the tongue twisters are interwoven in our culture is illustrated by the following sample. A Rhode Island young woman wrote that her dentist father makes patients with new plates practice:

She strikes her fists against the posts
And still insists she sees the ghosts.

Hundreds of persons sent me this rather mysterious "post-ghost" twister, usually abbreviated and incorrect. The original version evidently ran:

Amidst the mists and coldest frosts,
With barest wrists and stoutest boasts,
He thrusts his fists against the posts
And still insists he sees the ghosts.

Like 99½% of all folk rimes, the author of this one is unknown, but, fortunately, one gentleman of 88 remembered that in his youth it had a title, "The Drunken Saylor," which somewhat explains the rime. One old lady informed me that this twister is really the rest of the famous "Ragged Rascal" which should read:

Around the rugged rock the ragged rascal ran,
And through the mists
He thrusts his fists
And still insists
He sees the ghosts.

The version which particularly pleases me was sent by a California Jesuit priest who learned it a half-century ago from an old Shakespearean actor who taught elocution in a private academy in San Francisco:

Amidst the mists and frosts the coldest,
With wrists the barest and heart the boldest,
He stuck his fists into posts the oldest,
And still insisted there were ghosts on
Sixth Street.

The post-ghost complex has had a more recent incarnation in a set of silly sibilant syllables popular in initiations at girls' schools, with variations unmentionable but usually beginning:

Three little ghos'es
Sittin' on pos'es
Eatin' buttered toas'es

and ending with something like:

Smeary with greaseses
Runnin' down their cheekeses
Down to their kneeseses,
Nassy little beas'es!

Dentists may use these folklore ghost stories to test dentures, and sororities to tease candidates, but a pro-

fessor of pathology reminds me that "a standard test sentence among doctors for speech difficulty" is still the "Ragged Rascal," occasionally varied by:

Third riding artillery brigade.

Just for the record, the original complete version of the oft quoted and oftener misquoted "Ragged Rascal" rime of the trilled R's r-r-ran as follows:

Robert Rutter dreamt a dream.
He dreamt he saw a raging bear
Rush from the rugged rocks,
And round and round the rugged rocks
The ragged rascal ran.

An anonymous New Yorker said that frequently those who are given auditions for the stage must repeat:

Three gray geese in the green grass grazing:
Gray were the geese and green was the grazing,

and a Metropolitan Opera star told me rather acidly that tongue twisters might be a plaything and a joke to me but they were literally a pain in the neck to her, as they were a monotonous requisite of her daily practice grind.

The California version of the gray geese is more difficult for my tongue:

Eight great gray geese grazing gaily into Greece,
and so are the short and tricky ones:

Gaze on the gay gray brigade, or
The sun shines on shop signs.

The latter one cured a Detroit woman of teen-age stammering, she says, while a Waynesville, Ohio, woman wrote that she was told when a little girl that it would make her mouth small if she would only purse her lips "like going to whistle" and repeat:

Fanny Finch fried five floundering fish
for Francis Fowler's father.

Others say frogs instead of fish, which does make the plot more exciting. Even more vivacious is the version from Salt Lake City:

Four fat frogs frying fritters and fiddling ferociously,
which the Utah lady says was given her sixty years ago by a teacher who was "a positive crank on clear enunciation."

One of the common speech troubles which tongue twisters are alleged to have cured is lisping, and one correspondent affirms that for her it was done by saying:

She sells sea shells,

but I wonder if the cure was thorough enough so that she can say without lisping a really tough one like:

The sixth sheik's sixth sheep's sick.

These "cures" of big mouths, stuttering, and lisping habits by repetition of tongue twisters may be good medical practice, or perhaps psychotherapeutic, but they should be at least studied by folklorists. Purely as oral tradition rimes they are folklore, of course, but when they are said to work cures, they verge on the mantric as well and are doubly interesting.

Certain twisters are even dangerous, they say. A California woman claims that when she repeats:

Ninety-nine nuns ran ninety-nine miles in Nineveh,
lingering on the nasal N sounds, her dog always promptly bites her. She says that she doesn't know whether it is his sensitive ears that are offended, or his sense of

propriety. So it is best to be careful, at least in canine company, about intoning:

Nine nimble noblemen nibbling nuts,
or that other old one, related to Peter Piper:

Needy Noddle nipped his neighbor's nutmegs.

Speaking of the sense of propriety, I have one fat folder full of letters containing tongue twisters which I would not read aloud to anyone, even a dog, and they will for all of me remain forever in the oral tradition, although one woman insisted that the very rich ones she sent were certainly genuine back-of-the-barn Americana.

Habitual drunks and radio announcers, I am told, are also allergic to tongue twisters, having been required to recite difficult ones frequently as tests. A Chicago judge required a suspected inebriate to pronounce:

Sister Susie sat in the soup,
and from Nottingham comes the information that the British police use as a sobriety test the much more dignified and difficult:

The precedents and associations
of the British Constitution.

Candidates for broadcasting positions at one of our American studios are examined on their ability to say:

The seething sea ceaseth and thus the seething sea sufficeth us.

The corresponding French test-sentence is:

Un chasseur sachant chasser chassa son chien de chasse dans un chasset sèche (A hunter knowing how to hunt pursued his hunting dog in a dry hunting thicket).

Like most elaborations, it is not so good as the original excellent:

Un chasseur sachant chasser chassait sans son chien de chasse (A hunter who knows how to hunt hunts without a hunting dog).

This is a fine example of how much prestige is added to a proverb when it can be phrased as a twister.

That American radio company also spoiled one of our oldest and most popular tongue trippers by amplifying it. The original wording:

The sea ceaseth and it sufficeth us,
has reached me from practically every state in the Union, many persons claiming it to be the tongue twister *par excellence*. Popularly it is supposed to come straight from the Bible and to have greater significance and virtue thereby, but you would have to combine part of an Old Testament verse with part of one in the New in order to approximate it. When Jonah was thrown overboard, "the sea ceased from her raging," *Jonah* i, 15, and in the Gospel of *John* xiv, 8, "Philip saith unto him, Lord, show us the Father, and it sufficeth us."

The port of Edinburgh is Leith (pronounced Leeth), and it has the best advertised constabulary in the world, for I have received from all over this earth many hundreds of letters and postcards containing the cryptic statement:

The Leith police dismisseth us.

Obviously, the same dental difficulties exist in this as in the previous one, but it is tougher for some tongues. In Texas, it is "the church at Leith" that does the dismissing, which is easier to say, and to believe. White Plains,

New York, simply moves it to the schoolroom where, with a sly smile:

Miss Smith dismisseth us.

A great favorite in the south and west is easy the first time, but almost impossible three times rapidly:

Black bug's blood,

which is combined with another similar California one to make the very difficult:

A black bug bit a big black bear,
and sometimes tied in with the old "Ragged Rascal"
thus:

A big black bug bit a big black bear,
Made the big black bear bleed blood,
As round the rough and rugged rock
The ragged rascal ran.

Often it is the bear that does the biting, and the blood may be blue, bad, or bubbling, and in a bucket or on the barn floor. The bear story has infinite variations and goes back to pioneer days. It definitely belongs in western and southern folklore along with:

The rat ran over the roof of the house
With a lump of raw liver in its mouth.

A later one, usually sent in by westerners who like the buggy bear, is:

Rubber baby-buggy bumpers.

This also varies greatly: I have ten versions, one from an English professor in an Ohio college:

Ruby Rugby's brother bought and brought her
back some rubber baby-buggy bumpers.

The very difficult and world-known old English one:

She stood at the door of Burgess's fish sauce shop
welcoming him in,

has a deceptive change of pace. In America it has become "Mrs. Smith's fish-sauce shop" which, on Long Island at least, "seldom sells shellfish," while from Ottawa comes a variation which will make you feel like swallowing hard before trying it the second time:

She stood on the balcony, inexplicably mimicking
him hiccuping, and amicably welcoming him in.

By the way, according to popular lore, hiccuping can be cured by saying certain tongue twisters. In J. O. Halliwell-Phillips' *The Nursery Rhymes of England*, 1886, tongue twisters are classed as "Charms," and on page 137 it is noted that in Dr. Wallis's *Grammatica Linguae Anglicanae*, published at Oxford in 1674, there are given, on page 164, ten tongue twisters which "are said to be certain cures for the hiccup if repeated in one breath." Among the ten are:

Three crooked cripples went through Cripplegate,
& through Cripplegate went 3 crooked cripples.

My father left me, just as he was able,
One bowl, one bottle, one ladle,
Two bowls, two bottles, two ladles,
(& so on, as far as you are able in 1 breath).

Hiccup, snicup, Rise up, right up!
Three drops in the cup, Are good for the hiccup.

and the famous:

Peter Piper picked a peck of pickled peppers;
Did Peter Piper pick a peck of pickled peppers?
If Peter Piper picked a peck of pickled peppers,
Where's the peck of pickled peppers Peter Piper
picked?

Sometimes "off a pewter plate" is added at the end of each line. Again the peppers become peppercorns, or they are purple, and in our western country these peppers originally imported from England go native as "prangly prickly pears." In fact, I have 40 variants. Few Americans know that Peter Piper is but the letter P of a complete alphabet in which the same formula is followed for Andrew Airpump, Billy Button, & Co. Of these Robert Rowley and the Thatcher of Thatchwood are among those recommended by Dr. Wallis as good for curing hiccups. See ALPHABET RIMES.

There may be more than superstition behind the idea that tongue twisters cure hiccups, but, on the other hand, it is quite possible they may be brought on by such ones as the dialog of the duchess and the tinker:

"Are you copperbottoming 'em, my man?"
"No'm, I'm aluminiuming 'em, mum."

Among the best of the older short twisters are:

Gigwhip.
Truly rural.
Troy boat.
Peggy Babcock.
A cryptic cricket critic.
Shave a cedar shingle thin.
Pure food for four poor mules.

Yet new ones keep appearing. These are modern:

Flash message.
Preshrunk shirts.
Tillie's twin sweater set.
Six twin-screw cruisers.
Old oily Ollie oils old oily autos.
Platinum, aluminum and light linoleum.

Song-writers and limerick-makers have scratched the surface of this material from "Mairzy Doats" and "Six Long Slim Slick Sycamore Saplin's" to "The Canny Canner" and "The Flea and the Fly in the Flue." Before they change and exploit them beyond recognition, we should diligently collect and preserve the best of these old twisters and tongue-tangling rimes.

CHARLES FRANCIS POTTER

Tonttu The household spirit of the Finns: derived from the Swedish *Tomte*. He controlled the household. The Tonttu must be brought from the churchyard, and a special apartment with a well-provided dining table must be prepared for him. He enriches the giver of offerings with crops and money. [JB]

topaz Topaz is usually considered the birthstone of November under the influence of Sagittarius, Saturn, and Mars, though 17th century Arabs called it a gem of Leo. Much of the topaz of the ancients, especially in Egypt, was really chrysolite. The Egyptian kings had a monopoly on topaz from the Serpent Isle in the Red Sea, where its presence was noted at night by its radiance. This region still produces fine chrysolite.

The Hindus call this stone sour and cold and say that it will prevent thirst if placed above the heart. They believe that it assures long life, beauty, and intelligence. It is one of the gems in their nine-gem charm (*navaratna*) and, in an astrological gem grouping, its place is to the northeast, where it represents the planet Jupiter. It is one of the gems of the New Jerusalem mentioned in *Revelation*, and is mentioned also in *Exodus* as one of the gems of the High Priest's breastplate. According to

Christian tradition, it stands for uprightness, and was a gem of St. Matthew and St. Hildegard. In Brazil it is worn by dentists as a professional badge.

In the 12th century, Marbod recommended that it be suspended from the left arm by the hair of an ass to guard against evil spirits and influences. It could also be worn on the left hand to banish melancholy and to brighten the wit and courage. In 15th century Rome it was used as a touchstone for plague sores. It was useful to detect poisons, calm anger, and to cure piles, wind, and enchantments. See RABIES.

topeng A Balinese mask or masked play. This form of drama is presented by a single performer who appears in a succession of different masks. These are commonly burlesque and grotesque, such as the limp form of a wounded warrior. Topeng follows the conventions of Balinese dance, in the gestures and the puppetlike limpness of the trance. [GPK]

Torii Gateways in front of Japanese Shinto shrines, consisting fundamentally of two vertical and two horizontal beams. [JLM]

el torito Literally, the little bull: bull impersonation in Mexican fiestas, introduced by the Spaniards but performed in true Indian style. a) A carnival dance of Ocotlán, Tlaxcala, enacts a bullfight similar to the *huehuenches* of Villa Alta, Oaxaca. b) In one of the *huapangos* of Veracruz the men take out their handkerchiefs and play at bullfighting with their partners. c) At the conclusion of the *jarana* of Yucatán, the girls, as "bullfighters," try to make their partners, the "bulls," lose their balance or step off the platform by pushing with their shoulders. d) Fireworks in the form of a bull are let loose in the crowd and explode amid much shrieking and laughter. [GPK]

tornak or **tornaq** (plural *tornait*) In Central Eskimo religion, the guardian spirit of an *angakok* (shaman): believed to inhabit both animals and inanimate objects. There are three specific kinds: those in the shape of human beings, those in the shape of stones, and those which inhabit bears. The Eskimos believe that the spirit of the bear is the most powerful of all. The tornak warns its protégée of danger by some mysterious token within the intuition of the self.

Törökös tanc Turks' dance: Hungarian men's dance in burlesque imitation of Turks. It dates back to the Turkish invasion of Hungary, when the Hungarian soldiers would take great delight in making fun of their unwelcome visitors. During wedding festivities they then became a popular attraction with their fantastic masks and humorous yet graceful steps. They would proceed counterclockwise with leaps and knee-bends, sideward jumps, and turning with partners. The accompanying song was an old folk tune with an irrelevant text about the neighbor's son who gave the neighbor's daughter a pair of red boots. [GPK]

Tortoise One of the principal characters of the animal tales of the Guinea Coast of West Africa: also found in New World Negro folklore. In Dahomey and among the Yoruba of Nigeria, Tortoise figures in the mythology as a bearer of fire to man. [MJH]

totem, totemism The term totem is derived from the native term *ototeman* of the Ojibwa, "his sibling kin,"

Algonquian *nto'te-m*, "my kin," Cree *ototema*, "his kin," and so forth in other Algonquian dialects; in several of these dialects it refers to the animal associated with a clan or gens group, who is either regarded as the mythical ancestor of the group, or a protector and friend of the group. The terms totem and totemism passed into general circulation in English when J. G. Frazer published, in 1887, his studies *Totemism* (London), "The Origin of Totemism" (*Fortnightly Review*, April and May, 1899), and "Beginnings of Religion and Totemism among the Australian Aborigines" (*Fortnightly Review*, July and September, 1905); all three studies are reprinted in volume 1 of Frazer's *Totemism and Exogamy*. A totem, according to Frazer, "is a class of material objects which a savage regards with superstitious respect, believing that there exists between him and every member of the class an intimate and altogether special relation."

After Frazer, a host of philosophically inclined theorists have speculated on the origins and significance of totemism; their contributions, up to 1910, are summarized in *Totemism, an Analytical Study*, by Alexander Goldenweiser (*JAFL* 23, pp. 179-292, 1910), who himself offers several definitions of totemism, the briefest, and most general being, "Totemism is the specific socialization of emotional value" (p. 275). Goldenweiser's analysis, however, is notable chiefly for a negative point; after reviewing world-wide data on "totemism" he concludes that neither clan exogamy or endogamy, nor totemic names, nor the concept of descent from the totem, nor tabus on eating or killing the totem animal, nor any other features assumed to be part of the totemic complex, are universally found associated with it; in other words, Goldenweiser's analysis shows that the "totemistic complex" is not a stable complex, but one of conglomerate independent features, each more or less independently distributed, and that the term totemism has been applied to one set of features in one place, to another set in another, and so forth. Goldenweiser therefore makes the following caution quite clear: that the term totemism can "no longer [be applied] to any concrete ethnic content; for, while almost anything may be included, no feature is necessary or characteristic." Unfortunately Freud and various speculative philosophers have not borne these cautions in mind, and continue to refer to totemism as a concrete, definable, stable complex existent in many parts of the primitive world. Except for northern Algonquian material, from which the term derives as stated above, the terms totem and totemism are seldom used now by Americanist ethnographers in reference to specific material outside the northern Algonquian area.

The spectacular "totem poles," carved with animal crests of the royal North Pacific Coast families, and set up in post-Columbian times as interior houseposts or in front of North Pacific Coast houses, are also erroneously named. Originally these were grave posts, set beside the aboveground box graves of that area; the animals depicted on the grave posts and on the newer totem poles are heraldic (Tsimshian, Haida, Kwakiutl) or are carved representations of stories or heraldic (Tlingit), or may even represent an event that happened to the owner of the house (Nootka and Coast Salish). See Marius Barbeau, "Totemism, a Modern Growth on the North Pacific Coast" (*JAFL* 57, pp. 51 ff.). [EWV]

Tovodū Term for "family," that is, ancestral deity, in Dahomey. In the religious system of the Dahomeans, every ancestor is sooner or later elevated to the status of a deity, a *Tovodū*, and in this capacity is believed to watch over his descendants. [MJH]

Tower of Babel The tower built by Nimrod and intended to reach to heaven (*Gen.* xi). Nimrod, king of Babylon, wished for greater power and decided to war on God. His tower of bricks in Shinar was built by 600,000 men and was so tall that it took a year to reach the top. From it some men shot arrows at the sky, and they came back bloodied. When the tower was not quite finished, God sent 70 angels to confuse the tongues of the workmen. One did not understand the next; they fought, some were transformed into apes and demons, and the survivors were scattered as the 70 nations on the face of the earth. One third of the tower sank into the earth, one third was burned, one third remained. Whoever passes the place where the tower stood loses his memory completely. Tradition names the tower of Birs-Nimrud at Borsippa as the original. The story may have been inspired in the nomadic people by the zigurats and the swarming cosmopolitan life of the large Babylonian cities. Somewhat similar legends accounting for the diversity of languages are found in Africa, eastern Asia, and Mexico. Compare *ARROW CHAIN*; *RISING ROCK*.

tower of silence The Zoroastrian *dakhmah* in which the bodies of the dead are exposed to birds of prey on a stone slab. When the bones are denuded they are put in a separate place in the *dakhmah* and are allowed to turn to dust. For Zoroastrians burial in the ground is unlawful. See *BURIAL*.

tōwisas Literally, women: the Iroquois Indian society of women planters; also, the term for their ceremony. Tradition speaks of Cherokee origin, of transmission by two female Iroquois captives who escaped from the Cherokee with knowledge of the chants and with the special box-turtle hand rattles. Now the *tōwisas* form part of the green-corn festivals and sometimes the planting festivals. The words of the archaic songs concern progeny, ancestry, and sustenance in a broad concept of fertility. At first the society members are seated on two vis-à-vis benches. The introductory chants of thanksgiving are intoned by the leading matron and echoed by the chorus: "Throughout the earth the turtle is stirring." Or they refer to grandmother moon: "I have begotten grandchildren. They are coming creeping on the ground."

The individual thanksgiving chants by each woman in turn are sung in a standing position. They refer to the fruits of the forest and fields: "It is a nice garden that is planted. It shows nice ears of corn." Any man may now approach from the other end of the long-house and sing his individual thanksgiving chant. If the women can capture him, he is the butt of jokes, must sing a women's song and have his face blackened by a joking relative. Finally the company of *tōwisas* marches in slow procession, holding ears of corn and singing: "Now I am marching. Thanks I am saying. They have fulfilled. They have participated. Our children." [GPK]

Town Mouse and Country Mouse One of Aesop's fables (Jacobs #7; Type 112), in which a Town Mouse spurned the simple food and dull life of his friend, the

Country Mouse, and invited him to visit the city. There the Country Mouse, while tasting the wonderful foods, was interrupted and frightened so frequently that he returned to the country saying, "I prefer a crust in peace to fine things in the midst of fear." A similar tale (Type 201) is told of the fat dog and the lean dog (who doesn't care for the collar marks on the fat dog's neck, though the prospect of abundant food is appealing).

In a Rumanian fable (M. Gaster, *Rumanian Bird & Beast Stories*, CV), the town-mouse visits the field-mouse and sees the store of nuts and grains his country cousin has. The field-mouse returns the visit and samples the goods in the town-mouse's house, a grocer's. The simple field-mouse is not frightened when the cat walks in and asks the town-mouse who the gentleman is. "That," says the town-mouse, slipping into a hiding-place, "is our priest. Go and kiss his hand." As a result, the town-mouse achieves his end, and occupies the well-stocked home of the field-mouse.

transformation Metamorphosis; the change of shape from one form to another. When the transformation is voluntary or accomplished without the action of another, the accepted term is shapeshifting. In the transformation combat, where the contestants change form to outdo each other, they are shapeshifters. But transformation is usually the result of magic. The witch casts a spell on the hero or heroine, who then turns into an animal, a loathly person, man into woman, etc. The transformation is removed by true love or by the magic object. Self-transformation is the essential of the swan maiden stories; the donning or doffing of the swan feather-garment changes the girl into a swan or the swan into a girl. Transformers use their power to change shape to kill, rob, seduce. The gods may transform themselves into terrestrial shapes for various reasons; Zeus became a white bull, a shower of gold, a man (Amphitryon), etc., in order to consummate his amours. See *WEREWOLF*.

 The changing of human beings, mythical characters, animals and even inanimate objects into a different form is a literary device freely used in North American Indian tales. Transformation is effected for a variety of reasons, some of which are: that the hero of the tale may escape death, be able to reach a difficult place, kill his enemies, seduce women, win a combat, or receive food. Animal-human marriage tales such as those of Fox Woman, Bear-Woman, Dog Husband, Swan Maiden, and so forth, hinge mainly on the fact that an animal transforms himself or herself into a human being, often later retransforming himself into an animal again. In the loathly bridegroom and poor suitor tales, an apparently unattractive boy or youth is transformed, at the end of the story, into a handsome young man.

A specific example of several transformations which the hero of a tale may go through within a short space of time is as follows: The hero is pushed over a cliff by four mountain goats (who are transformed girls), but saves himself by changing into a ball of bird-down as he falls; later, he changes into a salmon, still later, into another sort of fish (North Pacific Coast). Hero tales contain perhaps the greatest number of transformation incidents, but they also occur in trickster tales with a fair amount of frequency: trickster becomes a dish; he enacts the role of Protean beggar by repeatedly asking for food

in a different guise; he transforms himself into a baby in order to seduce women, and so forth. See Stith Thompson, *Tales of the North American Indians* (Cambridge, Mass., 1929), p. 362, "D. Magic, Transformation," for references and distribution. [EWV]

 Transformations of men into animals or vice versa constitute one of the favorite themes of South American mythology and folktale. A large number of these transformations are ascribed to the culture hero or to the divine Twins and represent a substantial part of their adventures and great deeds. However, these changes may occur for other reasons and be the expression of the will of the animal or of the person who assumes a new shape. [AM]

transformation as punishment A common incident of folktale, combining the transformation group of motifs (D0 ff.) with the punishment motifs (Q200 ff.). Often it is a witch who casts a spell and changes the prince or princess to some loathsome creature for an imagined slight. Sometimes, as is common in mythology, the mortal violates a tabu and is thus punished by the gods. Tiresias saw two snakes copulating and was changed into a woman. Actæon saw Artemis bathing and was changed into a stag. Lot's wife was changed into a pillar of salt for looking back. Io became a heifer when Zeus tried to cover up an amour, and was kept a heifer by Hera. Arachne became a spider because she rivaled Athena in spinning. In mythology the transformation is usually permanent, but the conventions of the märchen often require retransformation to take place.

transformation combat A struggle, usually between two magicians, in which each assumes various shapes in an attempt to defeat the other. The parlor game in which "stick breaks scissors, scissors cuts paper, paper wraps stick" bears a resemblance to the transformation combat. Proteus, the old man of the sea of Greek mythology, assumed many horrible shapes to avoid having to tell the truth to a questioner; if the questioner maintained his hold through the transformations, Proteus at last made his prophecy. The mortal Peleus won Thetis as his bride by keeping hold of the goddess until she returned to her proper shape. Achelous changed himself into a bull, but Hercules nevertheless defeated him. In the "Second Kalandar's Tale" of the *Arabian Nights*, the princess and the ifrit battle through many transformations: lion and sword; scorpion and serpent; vulture and eagle; cat and wolf; worm in a pomegranate seed and cock; fish and bigger fish, etc. In the Scottish ballad *The Two Magicians* (Child #44) the smith vows to gain the lady's maidenhead; she changes into a dove, he into another, she into an eel, he a trout, she a duck, he a drake, she a hare, he a hound; mare, saddle; hot griddle, cake; ship, nail; blanket, bedspread; and there he had her. The ballad, according to Child, is known throughout southern Europe and among the Slavs. He points out that folktale parallels include the transformation flight (like the obstacle flight except that the ones fleeing rather than objects are transformed) and the master-vs.-apprentice magician combat in which the pupil eventually defeats his master.

Transformer A character in North American Indian creation tales, particularly in those of the North Pacific Coast and Plateau areas who, after the creation of the earth, travels about the world transforming animals and

the physical environment into the form it has today. Usually the transformer is identical with the creator-culture-hero-trickster. On the North Pacific Coast, where the transformer aspect of the culture hero is especially stressed in mythology, Raven is the transformer among the Northern tribes, Mink and Kwati the transformers around Vancouver Island, and Bluejay the transformer of some of the tribes farther south. The southerly interior plateau tribes have a plethora of transformers: Among the Coeur d'Alene, Chief Child of the Root (who finally becomes Moon) is a transformer, while among related tribes, Moon, Coyote, four brothers, and the Chief are the transformers.

Many of the North Pacific Coast and Plateau transformer tales are trickster stories of deception; in some the cleverness of the transformer is illustrated, in others his stupidity gives point to the story. An Okanagon tale, for example, accounts for the Columbia River as follows: While traveling Coyote hears water dripping. He imitates the sound, but the noise does not stop, so he kicks the place where the water seems to be dripping; the noise then stops. Coyote jeers at the water and leaves; he is pursued by the water, to his annoyance. Finally he becomes thirsty and descends from the dry plateau on which he is traveling, to a small creek in a coulee; he goes down to the creek and drinks his fill, four times. Each time he drinks, being unaccountably thirsty, the stream increases in volume. He finally walks, first up to his knees, then to his waist, then to his armpits, in the water; at last he swims so that his mouth will be close to the water and he can drink all the time. Finally he has drunk so much that he loses consciousness. Thus the water got even with Coyote for kicking it, and thus from a few drops of water originated the Columbia River.

In most other parts of North America the transformer aspect of creators-culture-heroes is present, but is not stressed so strongly as it is in the Plateau and among the North Pacific Coast tribes; in one area at least, that of the Great Basin, transformer tales seem to be extremely rare, if not lacking altogether. For Eastern Woodlands transformer incidents see JUSKAHA; † ANABOZHO. [EWV]

transvestites, transvestitism Men who dressed and behaved as women, doing woman's work: such as gathering and preparing plant food, cooking, weaving baskets, collecting firewood, and women who dressed and behaved as men, doing man's work such as hunting and trapping, were not of uncommon occurrence in American Indian groups. In some tribes male transvestites "married" men, and the couples lived together; the same was occasionally true of female transvestites. In a great many tribes no social stigma attached to being a transvestite; many were shamans and, as such, respected for their powers to cure, to prevent or cause sickness, to find lost objects, and so forth. The Yuki of California called male transvestites "men-girls"; Yuki transvestites not only dressed as women, but were tattooed, and are reputed to have spoken in high, feminine tones. A Shasta transvestite, still living a few years ago, also spoke in high tones, enjoyed cooking and sewing, had been a shaman, but dressed in man's clothes. The Yuki transvestite sometimes married men. The number of transvestites per hundred population in any tribe is difficult to estimate, but probably was in proportion to the normal frequency of well-defined homosexuals in all populations.

Among the Navaho the transvestite enjoyed more opportunities for personal and material gratification, and was more respected and revered, than the normal individual. The reverse was true among the Pima, another Southwestern tribe. For bibliographic references to transvestitism among American Indians and a discussion of Pima *berdaches* or transvestites, see W. W. Hill, "Note on the Pima Berdache" (AA 40, pp. 338-40, 1938). [ewv]

✍ Transvestitism in dances is always associated with vegetation or phallic rites. The best known instances are the Maid Marian of the Morris and the Bessy of the English sword dance. As in a similar carnival play in Thrace, she features in a wedding and a death and resurrection mime. The *Schemen* maskers are half and half male and female. The *seises* of Seville Cathedral and personages in the Basque *masquerade* likewise dress as women. The Mexican *malinche* is probably a blend of the European and a similar native concept (Aztec men danced as women in *menarche* rites). Transvestitism features as satire in the *jardineiros* and *catrines*. The Aymara *marmichatha* or *memillaatha* similarly figures in dances.

In several Pueblo war and scalp dances men and women change clothes and roles, as in the *puwêre* of Santa Clara, also at the initiation of girls. A similar exchange takes place in the trading feast of Alaskan Eskimos.

In the Far East it is a custom, possibly descended from ritual, for men to take women's roles in the Japanese and Chinese theater (see KABUKI; ODORI; ONNAGATA). A decadent ritual vestige remains in the obscene dances at bazaars by the *khōja* caste of South India, men with women's robes and gestures. [GPK]

tree of life In the folklore of many peoples of the world, the great tree, evergreen, ever-blooming, ever-bearing, whose fruit assures its eater of immortality; also, the great tree that is the essence of all trees. To different groups, different trees were identified with the tree of life: the apple of the Celts, the peach of the Chinese, the date of the Semites, etc. The tree of life that stood in the Garden of Eden was not the prohibited tree, which was the tree of the knowledge of good and evil. J. G. Frazer reconstructs an original version of the story in which man was to choose between the tree of life and immortality and the tree of death. The serpent, in leading Eve astray, thus deprived man of the eternal life meant for him by the Creator. The tree of life is usually guarded, as was the apple tree of the Hesperides, by a dragon or serpent. Thus, the Biblical serpent may have been the archetype of the serpent in several folktales who brings the healing leaves that cure the dead man. Compare POLYDUS. Oriental art, and thence Aegean art, have a stylized figure known as the tree of life, of which the branched candlestick (e.g. the menorah) is an example. The tree of life, a spreading branched tree bearing varied fruits, is a well-known quilting and embroidery design. See AGAVE; CASSIA; CROSS; DJAMBU BAROS; YGGDRASIL.

✍ Most Guiana Indian tribes (Carib, Maskushi, Arekuna, etc.) have a myth about a wonderful tree bearing all the food plants. This tree was first discovered by an animal, generally an agouti or a tapir, who after trying to keep the secret for himself was finally forced to divulge it. The culture hero and his brother felled the tree, thus causing the dispersion of the plants

throughout the world. The trunk contained water which flooded the earth.

Versions of this same myth have been recorded among the Cuna and Choco Indians of Bolivia and the Witoto of the Putumayo River. The motif of the tree bearing the food plants was carried by the Arawakan Chané to the Gran Chaco. The Mataco and other Pilcomayo tribes know it, but according to them, the tree was full of fish. The Trickster provoked a flood when he shot one of the fish in the trunk. [AM]

trick, tricken bag Generic term for the southern U. S. Negro charm variously known as hoodoo hand, mojo or mojo hand, toby, grigri, etc. It is called fingers-of-death and sometimes root-bag, especially when intended or used to work evil. See JACK; ROOTS; WANGA.

✍ Trick is the name given by Trinidad Negroes to a magic charm which enables the owner to achieve his desired aims at the expense of others. Its opposite is called *guard*, the term for protective magic. As is customary in Negro cultures, however, the line between these two forms is not clearly drawn, so that both functions may be incorporated in a given charm. [MJH]

tricks North American Indian tales are full of tricks played by or on the Trickster, or by various other animal or supernatural characters on each other. Many of these are of a miraculous nature, such as those of a giant's arrows being broken in mid-air, or pumpkins being changed into ducks; some are broad practical jokes, such as the incident of Fox stealing the sleeping Trickster's feast, or that of the Little Startlers, or that of Trickster enticing birds to dance with their eyes closed and then wringing their necks, or that of luring people over a bank, where they fall to their death. Some are tricks of expediency, such as when the Chiricahua Apache character, Child-of-the-Water, wraps deer entrails around himself in order to be borne aloft to the nest of man-eating eagles; some are mischievous tricks, such as a third person annoying two companions who each believe the other is at fault, and causing the companions (sometimes two blind men, sometimes a man and his wife, or two old men) to fight. The number of tricks recounted in American Indian mythology must be legion; as a general rule in the tales, no sympathy is wasted on the person tricked. Sometimes tricks are successful, sometimes they fail; if a tabu is violated, they always fail. [ewv]

Trickster Tricksters are found in the unwritten literature of peoples over all the world, and usually many tales or cycles are devoted to their exploits. They vary with the fauna of the area in which they are found. Thus Coyote is a widespread trickster of North America, while Spider is the trickster of the Gold Coast and neighboring regions of West Africa. Psychologically, the role of the trickster seems to be that of projecting the insufficiencies of man in his universe onto a smaller creature who, in besting his larger adversaries, permits the satisfactions of an obvious identification to those who recount or listen to these tales. The trickster is frequently a character in the sacred mythology of a people, and is often regarded as the culture hero who has brought the arts of living to mankind. In at least one African mythological system, that of Dahomey, the divine trickster, Legba, youngest son of the creator, represents the philosophical principle of accident—the

way out—in a world where fate is predetermined. See COYOTE; LEGBA; MAUI; REYNARD; YO. [MJH]

☞ Trickster is an important character, about whom many stories are told, in almost all North American Indian tribes: usually identical with the creator-culture-hero-transformer of these same tribes. The stories in which trickster and, usually, a companion are the chief characters can be grouped for each tribe into a loosely knit cycle: a considerable number of identical tales are told in various areas, as the adventures of different tricksters.

Most of the tricksters in North American mythology are animal-human beings. Characteristically the trickster is greedy, erotic, imitative, stupid, pretentious, deceitful; he attempts trickery himself in many forms, but is more often tricked than otherwise. In a sense, trickster is nearly always on the side of evil; if people die, he votes that they stay dead (and is punished by having his own son die and not being able to revive him); however, in several trickster tales, such as that of theft of light, or the sun, the people benefit by trickster's thievery and deceitfulness.

On the North Pacific Coast Trickster is also Transformer: Raven, Mink, or Bluejay. In the Plateau, in the Great Basin, in California, in the Southwest, and in parts of the western Plains the trickster *par excellence* is Coyote, best known of all North American Indian tricksters. In the Plains area as a whole Coyote is replaced by various named characters, a few of whom are thought of as coyote-human beings, others as spider-beings, others simply as mythical characters: some of these are Sendeh or Sendeh Old Man of the Kiowa, Old Man of the Blackfoot and Crow, Nihansan of the Arapaho, Inkotomi (Inktumni, Ishtiniki) of the Siouan tribes, Sitkonsky of the Assiniboin. In parts of the Great Basin and in the Southeast Rabbit is the chief trickster; in the Eastern Woodlands Nanabozho or the Hare and Wisakedjak (Whiskey Jack) are not only culture heroes, but to a certain extent tricksters as well. The tales told about the Southeastern and Eastern Woodlands tricksters are not nearly so numerous, however, as those told about the midwestern and western tricksters.

No trickster character or trickster tales comparable to the Indian ones mentioned above are told by the Eskimo. Although Coyote (and other animal characters) as trickster is a popular myth character in the Southwest among many tribes (Navaho, Apache, Pima, and so forth), Coyote stories are told in only one Pueblo group, namely, at Taos, where they have diffused from neighboring Plains tribes.

Characteristically, trickster stories often begin with the statement, "Coyote (or another trickster character) was going along. . . ." Then follows the tale of deceit, or violence, or thievery, which is usually fairly brief; in the end trickster is, as likely as not, killed, and the tale ends, "Then Coyote died there." Death is however never permanent; in the next Coyote story told by the raconteur, Coyote is very much alive again. Death and revivification may also occur within the tale itself as part of the plot; if such occurs Coyote, when he is revived by his companion, usually pretends that he has merely been asleep.

The matter of trickster's companion should perhaps be emphasized more than it has been in the past. Various animals play this role, Fox, Wolf, Wildcat, Lynx among

them. At times these animals serve as stooges for trickster's braggadocious claims; at other times they completely outwit him, stealing meat that he has secured and set to cook, and so forth.

Trickster stories are told chiefly for amusement, and are greatly enjoyed by Indian audiences. Many tribes have definite tabus against the recital of trickster tales, especially in the summertime; among the rationalizations are the following—that the weather will become cold, no rain will fall, Coyote is around and will hear the stories and become angry, or Rattlesnake will bite narrator or listeners. There is no tabu against telling trickster tales, which are often obscene or erotic, in mixed Indian company, but Elsie Clews Parsons, when collecting myths among the Kiowa, failed to obtain any obscene Sendeh tales because the audience present when she was recording was a mixed one and white-influenced narrators were "ashamed" to tell such tales to her in front of a mixed audience.

For a recent summary discussion of North American Indian trickster tales see Stith Thompson *The Folktale*, pp. 319–328. He also lists, in *Tales of the North American Indians*, various motifs under the general title of Deceptions, which nearly all appear in trickster tales (p. 365, K). Some of these are of "contests won by deception" (such as Trickster's race); others are "thefts and cheats" (such as Trickster frightens people from food and eats it himself); "deceptive escapes and captures" (example, birds enticed into bag); "fatal or disastrous deceptions" (example, Trickster carried by birds and dropped); "seduction and deceptive marriages" (example, Trickster poses as woman and marries man); "deceiver falls into own trap" (example, originator of death first sufferer); "other deceptions" (examples, Trickster shams death and eats grave-offerings, impostor claims prize, Trickster poses as helper and eats women's stored provisions). In his Section J, The Wise and the Foolish, Thompson also lists various motifs which usually appear in Trickster tales; under "Fools," for example, appear such motifs as diving for reflected food or reflected enemy, sleeping Trickster's feast stolen, eye-juggler, bungling host, death through foolish imitation, and so forth.

A recent comprehensive study of one widely known trickster tale, that in which trickster feigns death, is buried, and then reappears in disguise in order to marry his own daughter, has been made by Henrietta Schmerler, "Trickster Marries His Daughter," *JAF* 44, no. 172, pp. 196–207, 1931.

The combined role of creator and trickster in one character who is portrayed in one aspect as altruistic and creative, in another aspect as gross and greedy, is puzzling to Indian narrators, and is frequently commented upon by them. In few tribes is there a duplication of what occurs among the Navaho, namely, that Coyote as a holy being is one character, Coyote as a buffoon is quite another being. About the latter, "trotting or traveling" Coyote stories are told, often to children; these trickster tales are used to point a moral, namely, that if in the tales Coyote breaks many Navaho tabus, he is often punished, and Navaho children are *not* to do as Coyote does. Gladys A. Reichard's interpretation of Coyote among the Navaho does not emphasize the dichotomy between the secular and profane roles of Coyote. Her sketch of Coyote in *Navaho Religion* (2 vols., Bollingen Series XVIII, New York, 1950), vol. 2, pp.

422-26, is an excellent summary of Coyote as trickster.

A popular North American Indian trickster motif is the false bridegroom (K1915), which occurs in all parts of the continent. In the tale of the false bridegroom Trickster pretends to be a man of supernatural power; usually he is gifted to produce magic treasures. Because of his pretended gift he is able to marry girls whom he covets. At a dance, however, he is unmasked, and is subsequently deserted by the girls when they learn that their bridegroom is an impostor.

In a trickster tale of the North American Algonquians, Woodland Cree, and Ojibwa, Trickster transforms himself into a snake to get meat inside a skull which he has found. Before he gets his head out of the skull it is changed from that of a snake's head to his own. In several popular Plains Indian versions of a somewhat similar tale, Trickster sees mice performing a Sun Dance inside a buffalo skull. He sticks his head inside the skull to watch them, but cannot pull it out. After this episode the tale often continues with a recital of various misfortunes which befall Trickster while he is trying to extricate his head from the skull. [EWV]

Animals enticed over cliff is a common motif (K894.1) of the folktales of the western North American Indians: trickster by stratagem brings his victim to the edge of a precipice and pushes him or causes him to fall over the edge and then eats of the carcass. The incident is perhaps based on the primitive practice of driving herds of animals towards a cliff as a simpler method of obtaining meat supply than corralling. The tale in which Raven and Deer dispute before Raven pushes Deer over the cliff is found among the Bella Coola, Rivers Inlet, Kwakiutl, Nootka, and Comox. The Crow of Montana point out a gully in which are the bones of many animals, and explain that when buffalo, deer, or elk step over the opening it widens, precipitating them to the bottom of the gully, and then closes back to its former dimensions. Related to this is the North Pacific Coast story of the unstable bridge of reed, rotten log, etc., which breaks and drops the animal into a chasm.

The trickster is as important a character in South American as in North American Indian folklore.

In some tribes of the Chaco (Toba), it is Fox who plays the part of the lewd, boastful creature who throws himself into countless adventures which invariably end badly for him. The role of Fox in the folktales of the modern Quechua and Aymara Indians follows an identical pattern.

In the Amazonian area, the trickster is generally one of the mythical Twins. He takes absurd initiatives which bring trouble to him or to his brother or even cause his death. As in the Fox stories of the Chaco, the trickster comes back to life, thanks to the power of his brother the culture hero. As soon as he is alive, he runs into new adventures. In the Mataco and Apinaye folklore, Moon has the distinctive traits of the trickster. He dies several times while attempting to imitate the deeds of Sun.

The part of the trickster in Yahgan mythology is played by the culture hero who prevents the first men from enjoying advantages offered to them by the Creator and by his younger brother. [AM]

Trimūrti The Hindu trinity, including Brahmā, the creator, Viṣṇu, the preserver, and Śiva, the destroyer: the supreme spirit manifested in three forms and rep-

resented by one body with three heads. The personalities of the triad vary with the sects of India. Among the śaivas the absolute or supreme spirit is Śiva and the others were produced by him from himself. Among the Vaiṣṇavas it was Viṣṇu who became threefold.

triori or trihory A form of branle, a couple dance of Breton peasantry and of the Renaissance French court. The dancers circle to the left in lively duple time, with three side steps and a kick, followed by a jump and three kicks or *grues*. In the late 16th century the triori took the form of a kind of *cancan* for women, a vestigial fertility dance with high kicks and swirling skirts. In his observations on Huron Indian dances, Champlain likens one of their steps to the "triholy." [GPK]

Tristan, Tristram, or Tristrem Hero of the legend and romance of Tristan and Isolt. Tristan was probably a Pictish hero (Drostan). Borrowed by the Celts probably of Cornwall the legend developed into a love story on the pattern of the Irish *ailed*, or elopement stories. Romanticized by the French it becomes common stock of European story.

An outline of the main plot is as follows: Tristan, nephew of King Mark of Cornwall, fights for Cornwall against the giant Morholt of Ireland and kills him, but in doing so he is terribly wounded. At the urging of the nobles who wish to destroy Tristan, King Mark orders Tristan placed in a boat and thrust out to sea. He is picked up by fishermen who take him to Isolt of Ireland, for she is renowned for her skill in healing, a skill learned from her mother, a lady from the land of the fairy. Isolt heals Tristan and falls in love with him. But her love turns to hate when she discovers, by a nick in his sword, that he had killed her brother, Morholt. Tristan, recovered, rids Ireland of a marauding dragon and then returns to Cornwall. In time he is sent back to Ireland to negotiate the marriage of Isolt and Mark. On the way back to Cornwall Tristan and Isolt accidentally drink the love potion Isolt's mother had prepared for Isolt and Mark. And so they come to love one another blindly and completely. On her wedding night Isolt sends her maid to substitute for her and for a while Mark does not know of the relation between his nephew and wife. Follows now a series of episodes telling of the clandestine meetings of Tristan and Isolt and finally of their elopement into the forest. There Mark eventually finds them asleep with Tristan's sword between them. Mark replaces Tristan's sword with his own. By that they know that Mark thinks they are innocent and that they must return to the castle. Later the nobles accuse Isolt to Mark and he is forced to order her to submit to the ordeal by fire. Tristan in disguise carries her across a stream so that she can swear truly, "I have never been in any other man's arms, except for this fellow who just now carried me across the stream, than those of my husband, King Mark." So she, swearing to the truth, comes unscathed through the ordeal. Finally they can no longer endure the torture of being together and not being together; Tristan goes over the seas to Brittany. There he finally marries Isolt of the White Hands because she loves him, but, remorseful, he cannot consummate the marriage. When he is mortally wounded in battle some time later Tristan sends a message to Isolt of Ireland asking her to come to him, and he directs the messenger to fly white sails if she is aboard, but black if she is not.

In time the vessel is sighted and the sails are white. Tristan, being told that the vessel is in the harbor, asks his wife, "What is the manner of her sails?" She replies, "Black, my lord, black as night." Tristan dies and Isolt when she finds him dead throws herself on his body and dies too, thus proving the words Isolt's mother uttered when she gave the love potion to the maid, "Guard this with your life for it contains love and death." [MEL]

✎ Since Miss Gertrude Schoepperle's book (*Tristan and Isolt*, Fränkfort and London, 1913) was published a good deal of information has accumulated on the sources and migration of the Tristan legend. The original figure was a Pictish king (c. 780) named Drust, and to him was attached a story of the Perseus and Andromeda type (later attached to Cuchulainn in the *Wooing of Emer*), which was the source of the fight with the tribute-gatherer Morholt, the false claimant motif, and the recognition of the hero in the bath by a princess. The legend passed from Scotland to Wales, where it took many features of the Irish love story of Diarmuid and Grainne and where the hero was known as Drystan or Trystan, son of Tallwh. Probably there was a Cornish stage, which established Mark's court in the romantic castle of Tintagel, overlooking the sea. By 1000 the legend had reached Brittany, for after that date we find men who had been christened Tristan. The Breton storytellers did much to shape the story and to add to it. The influence of the French word *triste* emphasized the tragic element, and the story of the second Isolt was patterned after the famous Arabic romance of Kais and Lobna. By 1150 Tristan was known to troubadours of the court of Poitou as the supreme lover, and a decade or two later Chrétien de Troyes was writing a poem (now lost) on Marc and Isolt, and the Anglo-Norman poetess, Marie de France, was familiar with the tradition both in oral and written form and incorporated a bit of it in her *Lai of the Honeysuckle*. There are several analogs to incidents of the legend in Breton folktales of the 19th century, e.g. the dragon-combat and false claimant theme, Mark's equine ears, the black and white sails. These Breton versions seem to be not so much derived from the romances as survivors from that fund of stories on which the early *conteurs* drew. [RSL]

Triton In Greek mythology, a monstrous son of Poseidon and Amphitrite, human from the waist up, fish from the waist down. Triton blew a conch-shell trumpet to raise or calm storms. He reared Athena as companion to his own daughter Pallas, for whom, after she had killed her in play, Athena fashioned the Palladium that kept Troy safe from its enemies. As with several such minor deities, the name Triton became a class name, and tritons were spoken of, while Triton himself became confused with such marine deities as Nereus and Proteus. Ichthyocentaurs or centauro-tritons also existed, like tritons but with the forelimbs of horses. Since many of the monsters of Greek myth have been traced back to Asiatic sources, it is not difficult to see in Triton a reminiscence of Dagon or Oannes, the fish-human god of western Asia.

troll A supernatural being of Scandinavian folklore, originally gigantic, but later, especially in Sweden and Denmark, conceived of as dwarfish and inhabiting caves and hills. These too, like the German dwarfs, were wonderful and skilful craftsmen. In Scandinavian folk-

tale the trolls are usually huge ogres with the great strength and little wit of the typical ogre. They live in castles, guard treasure, hunt in dark forests, and burst if the sun shines on their faces. In the Shetland and Orkney islands the word survives as *trow*. Trows are regarded as inimical to mankind and are as closely associated with the sea as with the hills. Terror seizes any fisherman who sees a trow.

true stories It has been noted for several American Indian groups that a distinction is made by native narrators between so-called "true stories" and "lie," "joke," or other types of stories. This distinction does not, however, always jibe with that made by European folklorists between myth and tale. The Tübatulabal, for example, regard as true stories pseudohistorical accounts with human actors as their main characters, which are set in the present period; they include among these the Orpheus myth. All their tales which have animal actors and are set in the mythical age are also regarded as essentially true, but belonging to the long-ago; a different native name is used for them. The Kiowa, on the other hand, refer to as "true," ritual tales such as that of Split-Boys; the "lie" or "joke" story may concern Sendeh, their trickster, about whom tales are told with present-day, as well as old native settings. The Shawnee also regard as true stories the account of the creation of the Shawnee, accounts of their early migrations, as well as pseudohistorical accounts of happenings after the white men came. It is of interest to note that in this tribe also (as in several others beside the Tübatulabal) the Orpheus myth is told as a "true" story. "Joke" tales among the Shawnee are the trivial, tricksterlike stories having to do with Rabbit's, or Wisako's, or Raccoon's pranks. The Winnebago also distinguish between two types of native narratives: one (*waika*) is set in the irretrievable past, or mythical age, the other (*worak*) takes place within the memory of man (Paul Radin, *Winnebago Hero Cycles: A Study in Aboriginal Literature*, Indiana University Publications in Anthropology and Linguistics, Memoir 1, 1948, pp. 11-12). The Navaho likewise distinguish between two types of Coyote tales. In serious tales Coyote is taken as a serious character; in the more trivial tales, told to children to point a moral, he is a trickster, and such tales are referred to by the Navaho themselves as "Trotting Coyote" tales. These few examples represent native classifications of bodies of North American Indian mythology—a subject about which, as yet, little is known. In presenting their collections of North American Indian tales, few if any collectors have classified their material along strictly native lines; the usual procedure is to arrange the tales in the order of ritual tales (cosmology, cosmogony, etc.), trickster material, hero or adventure tales, and pseudohistorical narratives. [JWV]

trumpet A musical instrument consisting of a tube or narrow cone of wood, cane, bark, bone, metal, etc., enclosing a column of air which is set into sounding vibration by the lip vibration of the player, who blows into the end or a hole at the side; also a conch shell, gourd, or similarly shaped instrument of clay, and certain other instruments combining the tube with globular resonance chambers, as in many South American examples. The trumpet has been significant since Neolithic times to peoples of many races for religious

and magical observances, burial rites, initiation ceremonies, curing, expulsion of evil spirits, communication with the dead and the gods, for fertility and weather charms, for sunset rites, for military signals and general alarms, for hunting calls, announcement of assemblies, arrivals, and festivities, for pacing or instituting work, or dance, or games. Thus its functions in some respects parallel those of the bullroarer, in others those of the flute, and in still others those of the drum.

The voice, shape, size, and material of the trumpet all contribute to its magical powers, though the variation of types is so great and the similarities in use are so frequent that no hard-and-fast separation as to the significance can be made. However, certain associations are common.

For example, the sound of primitive and folk-made trumpets is harsh, loud, compelling, frightening, adequate and suitable for attracting the attention of gods or spirits, whether malevolent or kindly, and for speaking instruments through which they may answer. To those who do not see the instrument, it can readily be accepted as the voice of god, monster, or spirit. It is powerful enough to frighten away any menacing being. The Cheremis use long trumpets of lime-tree bark to expel Satan; in Bali demons are summoned by trumpet or horn blasts to a feast, and then driven away; the Aymara Indians blow on cow's-horn trumpets to scare hail away. In its simplest form, the primitive trumpet is no more than a megaphone, which the shaman uses to magnify or disguise his own voice in magical utterances. The Payaguá shamans of the Chaco use a rudimentary calabash trumpet in this way, and in Ceram, one of the Moluccas, the chief speaks with the voice of the spirits through a bamboo trumpet at boys' initiations.

On a more mundane level, the sound of the trumpet is practical, since it can be heard over great distances and above other noises, for signals, alarms, and communications. Thus war trumpets have served the Romans, the Egyptians, the Jews, the Incas, English armies at Crécy and Halidon, and the Abipón of South America, to name a few, for military signals in camp and in battle and to carry fear to the hearts of the enemy. The bugle still preserves some of the functions of the military trumpet, though modern mechanized warfare, with telephone, cable, and radio communications, has robbed it of others. For other kinds of signaling, the blast of conch, horn, or brass has been used for centuries. In ancient Tahiti, a large conch shell (*pu-ta' i-i-te-ae-ha*) was carried in the canoes on long voyages so that communications could be maintained between separate crews and so that the arrival of a party could be announced to the islands. Fiji Islanders use conch-shell trumpets to call meetings and to convoke labor groups. The long ivory trumpets of Dahomey, formerly used to announce the approach of the king, now serve occasionally for signaling. In 17th-century German cities, trumpet music played from tower tops was used as a time signal at noon and sunset.

The shape of the trumpet may be a straight tube, with or without a bell at the end. In this form, as often made of a hollow cane or branch or bone, it is, in primitive concept, essentially a male instrument, associated with the phallus, procreation, fertilization, and rebirth. Like the flute, it is appropriate, therefore, for funeral ceremonies, invoking a new life, and for rites of circum-

cision and other initiation practices admitting boys to the status of men. The Babwende of the Belgian Congo actually carve their funeral trumpets in phallus shape. In initiation ceremonies, the Ceram rites cited above are characteristic of many. The ceremony, which admits boys to the Kakian society, is conceived as a death and resurrection of the initiates. The long bamboo trumpet sounds periodically through the several days as the boys ostensibly have their heads chopped off by devils, die, and are restored to life. The trumpet is the voice of the devils.

Trumpets of this type are often tabu for women, as the bullroarer is. Among the Uaupes of the Orinoco, for example, women who see the trumpet are poisoned; boys may not use it until after their initiation rites of beating and fasting; when not in use it is hidden in a stream.

The longer the tube, the deeper the voice of the instrument. Thus, some of the deep-voiced straight trumpets are of extreme length. The reed trumpet (*erke*) of the Andes is 21 feet in length and is jointed so that it can be folded up when not in use. The 16-foot copper trumpets of the Mongols and Tibetans, played in lamaistic rites, are either supported by an attendant or rested on the ground for playing. A tremendous spirally wound bark trumpet of the Orinoco tribes, sometimes called the "devil," has two projecting sticks bound along its length to permit a helper to support it. In China, tubular metal trumpets carried in funeral processions are so long that they can be played only when the march comes to a halt and the instruments can rest on the ground. They can be collapsed when not in use.

Certain peoples skilled in bronze work have solved the length problem by the construction of looped and spiral shapes, retaining the full length of tube required for the sound and yet producing easily portable instruments. The 11-foot *cornu* of the Romans was a coiled trumpet, of which the menacing growl described by Horace was heard at funerals, public festivities, military processions, etc.

Other trumpets assume a curved or bent shape, in which form they are frequently indistinguishable from horns, and may, even when made of metal, reflect the animal horns used for hunting signals, religious purposes, etc. The northern European *lur* is an example of the horn shape. The crescent form of many horns, as in the Jewish *shofar*, has seemed to many peoples especially appropriate for new moon rites. Occasionally a hook-like curve is produced by the extension of a straight cane with a cow's horn or calabash, a primitive construction pre-dating the bronze *lituus* of Rome, which imitated its curve, and still used among certain South American Indians and in Burma and Ethiopia. The Colombian tribes often use a five-foot cane with a calabash bell as a funeral trumpet.

Materials of the straight and curved trumpets in primitive and folk usage often are meaningful: bone is thought of as phallic, and as retaining the powers of the being from which it was taken; horn, as bearing the characteristics of the animal on which it grew; wood, as retaining the magic meaning or quality of the tree. The willow bark used for trumpets of the Whitsuntide ceremonies in Bohemia and elsewhere in Europe is not only appropriate and available, but part and parcel of the idea of killing the king of the occasion, a tree spirit dressed in willow branches.

When the shape of the trumpet is more globular, as in the conch shell, the gourd, or the rounded clay form, the fertility significance to some peoples is female. In the case of the conch, shell means water and tides, moon and menses. Thus men may even be excluded from its use, as in New Ireland, where the conch shell sounds in women's pregnancy rites, and men may not use it for their dancing. Because of its power over water, it can either bring or prevent rain, and thus benefit crops. The pottery trumpets of the ancient Peruvians were made in imitation of shells, and Central American rain priests blow them. Apart from shape, both gourd and clay may have more female meaning because agriculture and pottery-making are female industries in many primitive societies.

Some types of trumpet, as played, represent a combination of straight forms with pots or other vessels. The Saliva used cane tubes thrust into side mouths of clay jars, and along the upper Rio Negro a similar instrument called the "roarer," consisting of a tube tied into a jar, is used for the jaguar dance. In the New Hebrides, in Ceylon, and in the Congo, trumpets are also blown into hollow vessels, sometimes partly filled with water. By these methods the sound of the instrument is made louder and more unearthly, and the fertility symbolism is enhanced by the mimesis of combining male and female forms.

A construction peculiar to South American Indians is the polyglobular trumpet, which somewhat resembles the playing combination just mentioned. Among the Bororo this type consists of three or four gourds joined end to end by wax. Funeral trumpets of the Saliva were clay tubes broadened at intervals into two or three rounded hollow resonance chambers. These produced a deep bassoonlike note suitable for mourning.

It is obvious from a comparison of the beliefs about trumpets on a world-wide basis that the sound has greater influence than the shape. Almost any sort of trumpet may be a funeral instrument, depending on the typical crafts of the people and the material available. The primitive ideas of fertility and rebirth may be vestigial or even completely lost in modern or highly civilized usage. The bugle, as still used for military funerals, plays *Taps*, in token of the long sleep. Sunset rites are performed with both straight trumpets, such as the alphorn, and curved horns, as in India. Witches, devils, and demons of bad weather, sickness, and madness, may be exorcised with any type of trumpet.

The more specific sex connotations and tabus related to shape are more localized than the general magical and religious concepts in which the instrument speaks with a terrifying voice and brings a response either in sound or in activity from an other-world power or being. The straight trumpet is never a woman's instrument, though the customs vary as to whether women may participate in the ceremony of its playing, see or hear the instrument. While the Uaupes kill women who see the bark trumpet, their nearby neighbors the Wapishana, Taruma, etc., permit women to see it. Women were excluded from the all-day music and dance ceremony (*corroboree*) of the Australian natives of Arnhem Land, in which the flight of the bees is imitated and the long wooden trumpet, *didgeridoo*, contributes its bass blasts. The conch shell and the other trumpets ideologically connected with female fertility, while occasionally re-

served for women's rites, as in the New Ireland ceremony mentioned above, serve in many other places as the instruments of the circumcision rites, as in Madagascar, to call the dead, as in the New Hebridean feast of the dead, which involves the ritual slaughter of boars, etc. The Sherente of South America use the gourd trumpet to frighten women.

Paired trumpets of any shape, thought of in some cultures as male and female, have been used widely. These are seldom combined for musical purposes of harmony or counterpoint. The duplication has more to do with the magic of twins and with the interests of symmetry. Six-foot wooden tubes of black bamboo, played in pairs, are used for wedding music among the Guayquire and Mapoye of South America. Various South American instruments of this character may be distinguished as either trumpets or giant flutes, depending upon the construction of the mouthpiece. Other examples of pairing occur in the *lurer*, in shell trumpets of Melanesia, and in curved or straight forms of India, Tibet, and ancient Afghanistan.

Primitive sex tabus and connotations, the original meaning of which is extinct in current usage, survive in connection with the shofar, and with the Advent trumpet of southern Holland, which is concealed in a well between usings. In Europe the restrictions most generally applied to trumpets were formerly in relation to class. Only royalty, high nobility, cavalry regiments, and certain cities could employ trumpeters.

Whatever the shape or the material of the trumpet, its sound in many religions is devoted to the service of the gods and its origin often is credited to a special god. The conch shell is used in the Trinidad Shango cult to warn the gods of trouble. Tibetan religious ceremonies make use of either the thigh-bone trumpet or the long copper trumpet. Long bamboo trumpets called *vaccines* are used in the Rara pre-Easter processional dance of Haitian Negroes. Fijian priests used large shell trumpets in their houses of worship, and the chiefs and priests of ancient Tahiti used huge conch shells for processions and pronouncements. A sacred Tahitian trumpet, according to legend, was thrown into a whirlpool with other properties of the old religion when Christianity overthrew the old gods. This trumpet was brought from Po, the spirit world of darkness, by the children of a king, who were lost and wandered into Po. In temples of the Bombay region, horns and trumpets are blown night and morning by devils. In Bengal a conch shell is blown at the recitation of the *Purānas*. In the Bible, it is recorded that the Lord told Moses to make a pair of silver trumpets for signaling and alarms, for the opening of a new month, and to blow over burnt offerings. These, together with the ram's-horn shofar, which survives in use today, were among the most important of the instruments serving the worship of Jehovah and used in calling upon him for aid. In Jewish post-Exilic custom, a Feast of Trumpets was initiated for the first day of the 7th month. In the Far East, Buddhist priests use the end-blown shell trumpet.

Sea gods, moon gods, and rain gods are particularly associated with trumpets. In Greek mythology, Triton, son of Poseidon and Amphitrite, is the trumpeter of the deep. He controls the waves and conquers giants by the blast of his conch shell. His children, the Tritons, also blow conches and attended the rape of Europa with their

blowing as the great bull bore her across the water. The conch shell, either as a trumpet or as a sacrificial vessel, is an attribute of Vishnu, Lord of the Waters, who as Krishna wrested it from Panchajana, an undersea demon, and its name (*śankha*, meaning conch shell) is the second name of his wife Lakshmi. Vishnu is pictured as holding the conch shell, which commands the mystical syllable *om*, as does the tambura (lute) of Śiva. A metal trumpet was used in the worship of Osiris, fertility god of Egypt, who was credited with inventing the instrument, and the conch was the attribute of the ancient Mexican rain god Tlaloc.

When the last day of earth comes, the trumpet will sound (A1093). It may be the conch shell blown by Śiva above the licking flames; or it may be the ram's horn of Israel sounding the resurrection, which carries over into Christian concept as the trumpet blown by the angel Gabriel on Judgment Day. "Where will you be when the trumpet sounds?" asks a Negro spiritual of the sinner. And a song of the East Tennessean mountain whites says, "The ram's horn blown; the children did shout/ The winders flew open and they all looked out./ Oh, John, sing hallelujah, Fer the spirit of the Lord has fell upon me."

The trumpet figures in a number of folktale patterns, including the singing bone motif (E632 ff.) Magic trumpets (D1221; D1222), wishing trumpets (D1470.1.33), resuscitation by blowing a trumpet (E55.3), a statue blowing a trumpet at the approach of a stranger (D1317.9.1), and trumpet is blown before the house of one sentenced to death (P612) are among the folktale motifs. See ALPHORN; DA-CHA; HORN; LAMBI; LUR; POTOTO; SHOFAR. [TCB]

Many South American Amazonian tribes, especially those of the Orinoco and of the Caiari-Uaupes basins, symbolize nature demons and their ancestors by huge bark trumpets which are kept hidden from the women in special huts or in some sacred spots. These instruments are referred to in travelers' accounts as the trumpets of Yurupari. The Arawakan tribes carried the cult of the trumpets south of the Amazon. It figured prominently in the religion of the Moxo and Paressi Indians. See YURUPARI. [AM]

tryst foiled The motif of a number of European popular ballads in which a suspicious husband pretends to depart but hides in the house in order to spy on his wife and her lover. The lover arrives and at the crucial moment the husband "discovers" them.

One of the strangest and most tragic of the tryst foiled stories is the Old Irish *Baile of the Clear Voice*.

Baile of the Clear Voice was the son of Buan mac Caba of Ulster. Men and women loved him for his beauty and his sweet voice (Baile the Sweet-spoken, he was called) but his love was given to Ailinn, daughter of Lúgaid, king of Leinster. They made a tryst to meet one time at Ros na Ríg on the River Boyne. Baile got there first and as he waited with his companions, saw a strange figure, yet in the shape of a man, approaching from the south. Baile's people asked news of him, but all he said was that he had no news, except that Ailinn had given her love to Baile and was going to meet him when the youths of Leinster prevented her and she died of grief from being held back. It was druid truth, he said, that Baile and Ailinn were not to have

their love in life, but would meet after death. Baile died of grief for Ailinn. He was buried there on the strand and a yew tree grew out of his grave. Then the vision turned south and met Ailinn on her way to see Baile. She asked him for news. He said he had no news, except that he had just seen the men of Ulster digging Baile's grave upon the strand and putting his name on a stone beside it. It was prophesied, he said, that they should not meet in life, but after death. Ailinn fell dead with grief for Baile, and an apple tree grew out of her grave. In seven years the poets cut down the yew tree on Baile's grave. They made a poets' tablet of it and wrote thereon the visions and love tales of Ulster; and it happened that the feast tales and wooings and visions of Leinster were written on a like tablet from Ailinn's apple tree. During one Samain celebration held by Art, son of Conn, in Tara, these two tablets were brought to the feast, and Art asked to see them. As he held them, they sprang together face to face and no man could pull them apart. After that they were kept with the treasures of Tara, until they were burned by raiding Leinstermen in the reign of Cormac mac Airt.

Tsai Shên The God of Wealth of Chinese folklore. All classes do homage to the God of Wealth. His images frequently contain the wealth-producing box, Ho Ho Er Hsien (the spirits of concord), the three-legged frog, the Bat, children, coins, and ingots. Days of pilgrimage to his shrines are the second day of the First Moon and the 15th day of the Ninth. [RBJ]

tsamikos A folk dance of modern Greece for men and women in arbitrary order. They progress in an open round, linked by their hands, in counterclockwise direction. To fast clarinet or Turkish bagpipe tunes in triple time, they weave grapevines—a short one to the left, a long one to the right—finishing each phrase with a hop and a flourish of the free foot. A subtle flexion of the knees and vertical pulsation of body and arms marks each step. The leader, sometimes connected to his neighbor by a kerchief, embroiders the step with leaps, squats, and pivots, and with punctuated shouts. The dance is spectacular when performed by soldiers of the Evzone guard, notably on Easter Sunday. Though in "the old country" the tsamikos are fading in popularity before the encroachment of the modern ballroom dances, Greek communities in America continue to dance the *tsamikos*, *syrtos*, and *hasapikos* at weddings and other festivities.

Tradition traces the *tsamikos* to a martial dance of the Klephts, or guerrillas, during the Turkish occupation—a fierce round punctuated with cries and the brandishing of sabers and firing of pistols. In mountain retreats men still vie with each other in the intricacies of the virile version of this dance. [CPK]

Tsao Chün or Shên The kitchen god of Chinese folk belief; god of the stove or hearth; also known as *Tsao Kung* and *Tsao Wang*, Lord or Prince of the hearth. Rich and poor, ignorant and educated alike perform his ceremonies. He returns to heaven once a year—though some think he returns several times a month—to report on the misdeeds of the family.

His annual journey is on the 23rd, 24th, or 26th of the Eleventh Moon (depending on the part of China). He returns a week later. After the evening meal on the date of his departure, sticky sweets and agglutinated rice are

offered him, because he likes them and in hopes that his lips will stick together and he will make no bad reports. Then his paper image, together with, at times, petitions prepared by the Taoists, is burned. At times strings of firecrackers are set off and rice brandy is offered.

The rules he enforces have to do with hygiene and decency. A few of them are listed here: In his presence there must be no irreverence toward Heaven or Earth, cursing of weather, or any thing which might hurt the feelings of any spirit. Ancestral sacrifices must be performed, filial piety observed; the wife must show reverence to the father and mother of her husband. Wives must show deference to their husband's uncles and members of his family; they must not quarrel with neighbors. Fraternal discord is prohibited. The five cereals must not be wasted or spoiled. Living creatures must not be killed in the kitchen either for food or for sacrifice. Onions, garlic, or vegetables with strong odor must not be cut on the stove. In front of the stove obscenities must not be spoken nor may gross songs be sung. One must not weep or become angry. One must not be naked in front of the stove. Babies may neither urinate nor evacuate in the kitchen. Flesh of dog, beef, or game may not be cooked on the kitchen stove. The following may not be burned in the kitchen stove: old papers, feathers, animal bones, old rags, old brooms, hair or anything with a bad smell. Women may not bind their feet, dry their feet, comb their hair, or nurse children at the stove. Soiled clothes or dirty shoes may not be dried by the kitchen stove. After meals no dirty dishes may be left in the kitchen or on or near the stove. Stoves must be rebuilt each year. When ants or insects make their nests in old stoves Tsao Chün becomes angry. Poor people must rebuild at least once every three years. Only very clean bricks and mortar may be used. The door of the stove must face southeast. No animal may ever be put in a pot on the stove while it is alive. Incense may not be lighted at the stove or burned in the oven. Water must not be left in the cooking utensils overnight. Spitting near or toward the stove is prohibited. Vegetables may not be chopped on the stove. Clothes or hands may not be washed in the cooking pot or on the stove. Women, when tending the fire, may not squat with their legs spread one on each side of the stove door. Women may not sacrifice to Tsao Chün within a month after childbirth. No chicken or dog can spend the night in front of the kitchen stove. Kitchen utensils can safely be washed on the following dates of each month: 2, 6, 10, 11, 14, 20, 21, 23, 28 (other authorities give other lucky days).

Burn incense before Tsao Chün's image morning and evening. Light a lamp in his honor the 1st and 15th of every month. If propitiated on certain cyclical days during the first month of each year, Tsao Chün will help in sericulture. Though women may propitiate him, the annual sacrifice is done by the male head of the household, as he is responsible for the good conduct of his family. While Tsao Chün is absent reporting, the rules of propriety are relaxed. On the date of his return a new image is pasted up and welcoming sacrifice is offered.

R. D. JAMESON

Ts'ao Kuo-ch'iu One of the Eight Immortals of Chinese mythology. Ts'ao was related to the reigning Sung family in that dynasty. After murdering another man's

wife, he was freed by general amnesty and practiced perfection. He was admitted to the band because he had "the disposition of a genie," also because one of the grottos of the upper spheres where the Immortals lived happened to be vacant. [RDJ]

Tuan Yang The Dragon Boat Festival, a popular festival of China celebrated on the 5th day of the Fifth Moon. Special cakes are made for the day and wrapped with leaves in a triangular shape. In earlier times they were thrown into the water as propitiatory sacrifices to the ancestors, water spirits, etc. Races are held in boats with dragon-shaped heads. The festival is associated with the Dragon King who controls rains. One of the various origin stories for the festival is that a Chinese scholar of the 3rd century B.C., grieving over the evils of the government, drowned himself in protest: the boat races symbolize the search for his body. [RDJ]

tuatal Literally (Irish), a turning to the left; the countersunwise turn or "unholy round" of Irish folklore: opposite of deiseal. It is performed to effect a curse or bring illness, even death, upon an enemy. Stones and other objects were turned antisunwise to effect a curse or bring bad luck. At Inishmurray in Sligo are a group of spotted stones called cursing stones, which when turned to the left work the curse in the mind or on the tongue of the turner. The countersunwise turn also symbolizes riddance, however, for a few drops of water from a backwards-turning mill will get rid of whooping-cough; and going tuatal around the house will work riddance to the disease of an inmate. But when herbs spin countersunwise in a boiling pot it is usually taken as a sign that the remedy being prepared will have no effect or that the patient will die. Anciently to drive a chariot tuatal around a fort was a signal of defiance and enmity, and constituted a challenge. See BOÁNN; WITHERSHINS.

Tuatha Dé Danann Literally, the people of the goddess Danu: the gods or the divine race of Old Irish mythology, also often referred to as the Tuatha Dé, the people of the goddess. They came upon Ireland from the east over the sea, shrouded in clouds of mist, and defeated the Fomorians. See BATTLE OF MAG TURED.

The *Book of Invasions* identifies these people as descendants of Nemed, or that one of the three groups who scattered after the defeat of the Nemedians and who became learned and powerful in the northern isles of Greece, and returned because it was their right. They were a tall, strong, and beautiful people, learned in magic and druidism and the scientific arts. They brought to Ireland with them four wonderful talismans: the Stone of Fal (see LIA FÁIL), the infallible sword of Nuada, Dagda's inexhaustible caldron, and the invincible spear of Lúg. The date of their coming to Ireland, as figured from the *Book of Invasions*, was the middle of the 15th century B.C.

The Tuatha Dé Danann were eventually defeated by the Milesians and retired into the hills and mounds (*side*) of Ireland, which they divided into kingdoms among them. Dagda took the Brug na Bóinne, for instance, on the north bank of the River Boyne near Stackallen Bridge, Leinster. Henceforth they were called *aes side*, people of the mounds, or *fir side*, men of the mounds; eventually they came to be named for their dwellings, just *side* (pronounced shee). The *Book of*

Armagh mentions them as *dei terreni*; and today they are still regarded as earth spirits.

The Tuatha Dé Danann were euhemerized as mortal warriors in the Mythological Cycle, but as possessing extraordinary size, beauty, wizardry, and magic. In the tales they appear as a strange mixture of god plus mortal plus spirit. They were immortal yet could be slain in battle; they loved and married human beings; they were marvelous transformers; they were visible or invisible at will; they could give supernatural aid to favorites or send defeat and death to offenders. They lived in an otherworld known variously as Mag Mór, the great plain, Mag Mel, the pleasant plain, Tir na n'Og, the Land of Youth, or Land Under Wave, etc. This was the immortal land of music, ale, and beautiful women, without want, sickness, or death. As underground dwellers in the hills and mounds (*side*) they eventually developed into the fairies of modern Irish folklore. Mortals still pay visits to or are enticed into the mounds, with the usual results, i.e. years seem days, eating fairy food prevents their return to this world, etc. Seventeen of the mounds exist today and are pointed out to sightseers as the graves of certain princes of the Tuatha Dé Danann; the legendary kings of pagan Ireland were also buried in them. The three largest are New Grange, Dowth, and Knowth.

Tuchaipa The name of the creator among several Yuman tribes of southern California and Arizona. The Yuma tribe itself calls its creator Kwikumati; the Diegueño, a California Yuman tribe, refers to its creator as Mayoha. [EWV]

Tukma Creator of the first human being in the mythology of the southern California Juaneño Indians. As soon as Tukma got the ocean to the right size, he created Ehoni, the first human being. Ehoni had two descendants, Sirout (a bit of tobacco) and Ikaiut (above), who became the parents of Wiyot or Wiamot, progenitor and culture hero of the Juaneño Indians.

tulasī The sacred or holy basil of India: so sacred in itself that it is worshipped as a deity. The tulasī (*Ocimum sanctum*) is grown in almost every Hindu household, and especially in the courtyards of those who worship Vishnu. It is believed to be Lakshmi (wife of Vishnu) incarnate, or Sitā, and the devout Hindu woman circumambulates the plant daily with offerings of rice and flowers. Its leaves heal the sick and are a remedy against snakebite. Sprigs of it are inserted in the rice-balls used to feed the dead during the *śrāddha* ceremony, for Yama cannot look upon a man who dies with this sacred plant in contact with his body. During eclipses all housewives take leaves of tulasī, sprinkle them with Ganges water, and place them in water jars and cooking vessels to keep them pure until the eclipse is over. When a well is dug or a tank built, the water is given its fertilizing powers only after a tulasī plant has been wedded to the anchorite representing Vishnu at a solemn ceremony.

Tung Wang Kung The Taoist Lord of the Immortals. When the primitive and inactive void moved to produce creatures, it created first in the east the sovereign male principle *yang*. Tung Wang Kung is the Lord of the East. His consort, Hsi Wang Mu, was formed from the female principle, *yin*. The congress of these two produced heaven and earth and all the creatures. Tung Wang Kung is attended by a male servant, the Young

Immortal, and a female servant, the Jade Girl. Lavender clouds are the roof over his palace and the blue skies are its walls. [RBJ]

Tuonela or Manala The kingdom of Tuoni or Mana, the dead-land of the Finns; a common underworld for all. Tuonela is a dusky island, and according to the folk songs, life there is as in the grave. On the way to it one has to cross the black river on which neither sun nor moon ever shine, and over which stretches a bridge. The dead are usually transported over this river in a boat. Väinämöinen visited Tuonela while still alive in search of ancient wisdom, but without success. Only with great difficulty did he succeed in escaping. "Many heroes cross the channel but few return from Tuonela to tell the story" (see *Kalevala*, song 16). [JB]

Tuonetar or Manatar The daughter of Tuoni or Mana. In the *Kalevala* she takes Väinämöinen in a boat to the island of the dead. The belief about the crossing of a river of death in a boat is derived, according to U. Harva, from Greek mythology. [JB]

Tupan The ancient thunder demon in the mythology of the eastern Tupi-Guarani tribes of South America. His name was adopted by the early missionaries to designate the Christian God and is still so used in the Guaraní spoken by converted Indians and mestizos of the Amazon basin. The word *tupan* has taken on the meaning of sacred. [AM]

tupilaq One of the souls of the dead in Davis Strait Eskimo mythology: so termed during its stay in Sedna's house in Adlivun. Sometimes it returns to the village and roams around. It is greatly feared and is never allowed to enter a house. If the angakok sees it first, warning is sent to all the people to stay in their houses, for its touch will kill and the sight of it causes disease. It knocks desperately on the doors of the huts in the fall seeking shelter from the icy storms. But the angakok invokes the help of the good spirits against the terrible one and after a while it goes away. When the soul's year in Adlivun is up and it goes to Adliparmiut, it is then called an *adliparmio* and is no more feared.

The Greenland Eskimo designate as *tupilaq* a supernatural creature devised by them to outwit and destroy their enemies. It is made from the parts of various animals and can appear in the shape of any of them. This idea seems to be unknown among the Central Eskimo.

turadji Quail: a woman's solo dance of Azerbaijan. It uses the typically Persian triple time, like the *tārākāmā*, but in slower tempo, and the same fundamental swaying cross two-step. Holding a large silk scarf or two kerchiefs to suggest the wings of the quail, the dancer circles counterclockwise, sometimes with the two-step, sometimes with a slow pivot, lightly touching the ground with the free toe to effect the turn. She drops the scarf, then dances forward, opening and closing her arms and hands; then she looks for the scarf and continues dancing as at the beginning. The style has the same gracious restraint as other native women's dances of this region, and the same individuality of interpretation as to tempo, sequence of steps, and quality. [CFK]

Turkey A popular character in Jicarilla and other Apache Indian mythologies. Turkey is the beneficent character who brought corn to the people; he is associ-

ated with corn and crops. It was Turkey, also, who aided in the growth of the emergence mountain, who fooled the cannibal Big Owl, and who fought with Eagle. Turkey Hactin, or Holy One, is also associated with corn and farming, and in one Jicarilla myth he brings tobacco which he himself has raised, and shows people how to make cigarettes.

Turkeys were the only birds domesticated in pre-Columbian times by the Indians; their occurrence at that period was limited to the Southwest, although in many other regions such as the eastern United States, wild turkeys were hunted for food. In the pueblos domesticated turkeys are used as food and as sacrifices; at Zuñi during the Shalako dances the clowns give children kachina dolls hung with bread in the shape of turkeys. Turkey feathers are used in the Southwest for making cloaks or blankets; they are put on prayer sticks and used as a charm. These feathers are associated with clowns and the dead. [ewv]

turkey dance A non-sacred imitation of the motions of a turkey, confined to dances of North American Indian tribes, whom the bird serves as a traditional delicacy; thus the Comanche, Delaware, Choctaw, Seminole. In the northern Ute turkey or jiggling dance—*tho'nkani'tcap*—men and women thrust their heads forward and wag them from side to side, as they toe-heel rapidly in an erratic course. The music is equally humorous and erratic, with variable melodies and changing drum beats.

Mexican tribes have drawn little choreographic inspiration from the *guajolotl* (turkey) in spite of its gastronomic importance. He is supposed to have originated the Tarahumara *rutuburi*, but not to the point of mimicry. On the other hand, a courtship dance of the 'uichol Indians of Jalisco and Nayarit at the same time imitates the turkey. [GPK]

Turkey Girl A character in various Pueblo Indian myths, especially those from Taos and Tewa pueblos. In a Taos collection Turkey Girl is a young woman who outwits Coyote; Turkey Old Woman is a grandmother who lives with her grandson. In a Tewa myth which is probably a Pueblo version of Cinderella, turkeys befriend a poor girl; they dress her up, and give her beautiful hair; she goes to a dance, and sleeps with a suitor. Finally she goes west with the turkeys to Shipap, and her mother accuses her of being a witch. [ewv]

Turkey in the Straw A lively American dance tune, a favorite of fiddlers, banjo-pickers, etc. It is the same melody as a minstrel song, *Old Zip Coon*, sung at the Bowery Theater in New York in 1834, and has many parody offshoots. *There Was an Old Soldier* ("and he had a wooden leg") is a Civil War period example. Another is a drinking song, "There was an old hen/ And she had a wooden leg,/ Finest old hen that ever laid an egg/ And she laid so many eggs all around on the farm/ That another little drink won't do us any harm." The origin of the tune has been suggested as the English *Haymaker's Dance*, the Irish *Rose Tree in Full Bearing* or *My Grandmother Lived on Yonder Little Green*.

turmeric The root of an East Indian plant (*Curcuma longa*) of the ginger family, extensively cultivated (especially in India and China) as a dyestuff, aromatic stimulant, and flavoring agent. The name may be from French *terre-merite*, from Medieval Latin *terre merita*, deserved

or deserving earth; some scholars, however, regard it as derived from Sanskrit *kunkuma*, saffron, a not too surprising conclusion since it has been used as a substitute for the saffron yellow dye for centuries.

Because of its color turmeric is an auspicious plant in Hindu belief; it has great erotic significance and is involved in wedding rites and sex relationships. Any garment marked with turmeric becomes lucky. A girl's body is smeared with turmeric before her wedding; her wedding garments are dyed with it; and the clothes of a pregnant woman are also marked with turmeric. The marriage contract is sprinkled with the powder, which is also daubed on the walls of the groom's house. And five pieces of turmeric are among the offerings involved in the Hindu ceremony of dedicating the young sacred prostitute to the temple. In the *Rāmāyana*, turmeric is mentioned as one of the eight ingredients of the *Arghya*, a respectful oblation made to gods and elderly men.

Supernaturals, especially evil spirits, dislike the smell of burning turmeric. In Bengal this ghost-test is still sometimes made to discover whether a person is an ordinary mortal or a ghost. Among the Khonds in Bengal human sacrifices were formerly made in the cultivation of turmeric, in the belief that it could not have its deep color unless blood was shed. In Orissa turmeric mixed with oil is rubbed on the body of a dancing girl for five days before she takes up residence with a wealthy man. In some parts of India married women dip their hands in turmeric water and pass them lightly over their cheeks to prevent the visitation of Lakshmi.

Turon A festival observed by Polish peasants in the period following Christmas Day, a survival of an ancient festival in honor of the winter god Radegast. It takes its name from the *turon*, a fabulous beast with enormous wooden head and jaws that open and close, chief of the animal disguises which the peasants assume as they go from house to house, celebrating, singing carols, and receiving food and drink. Other costumes represent a wolf, bear, or goat.

turquoise A greenish-blue opaque precious stone, principally phosphate of alumina. Oriental or true turquoise is found principally in a mountain range in Persia, coming into Europe through Turkey, hence its name. Among the Poles and Russians it is the birthstone of December and dedicated to Saturn; it has also been called a stone of Venus and Mercury.

Turquoise is to the Tibetans what jade is to the Chinese. They believe it to be a stone of good fortune, physical well-being, and a protection against contagion and evil eye, a belief which is quite general. Hindu mystics say it will bring immeasurable wealth if on first looking at the new moon, you immediately look at a turquoise. It is the national stone of Persia, and Iranian peasants place a piece of turquoise in a sheep's eye as an amulet against evil eye. In northern India it is worn in the water to protect a bather from serpents and boils. It removes animosity when given and is a favorite gift between lovers. In the 17th century it was worn mainly by men and was considered effective only if it was received as a gift. It prevented falls and bodily harm, but a part would crack off each time it exerted its influence. From the 13th century onward it was a prime charm against falls from horseback, and was also a charm to protect the horse. The turquoise was said to "move" to

warn its owner of impending danger. See AGATE; JEWELS FROM SPITTLE.

 From earliest time, turquoise has been accounted a jewel for personal adornment by the Pueblo Indians of the Southwest and their forebears, and has been a trade article or exchange medium between these groups and those of southern Arizona and northern Mexico. Present-day Pueblo Indians venerate turquoise; the "flesh" of turquoise is thought to remain unimpaired if the jewel is mined and handled with respect. Besides being used for jewelry, turquoise is also used as an offering by the Pueblos, and is deposited under the floor when a house or kiva is built. The color turquoise is associated with maleness, in contrast to yellow which is associated with femaleness in the pueblos. [EWV]

Turquoise Boy or Man A Zuñi Pueblo spirit, companion of Salt Old Woman at the time both deserted Zuñi because their valuable flesh was being wasted. [EWV]

Turquoise Woman Navaho Indian deity. In some accounts she is a variant of Changing Woman, chief female deity of the Navaho. In other accounts she is said to have been created, together with White Shell Woman, by Changing Woman from epidermis rubbed from under Changing Woman's breasts. The two sisters lived on this earth when monsters overran it; in a contest with Corn Maidens they lost the chance of having Monster-Slayer, chief Navaho deity, as their husband. Turquoise is casually mentioned in the Jicarilla Apache origin myth as having been used in the creation of man, but no Turquoise Woman appears as a character in Jicarilla or other Apache myths. [EWV]

Turris, Turisas, or Turilas The god of war of the Estonians and Finns. The word means a huge, evil, strong, and dreadful person. [JB]

Turtle A fairly prominent being in North American Indian mythology and religious beliefs, especially for tribes living east of the Mississippi River. The Iroquois hold the belief that the earth rests on the back of Turtle, he being the only animal who could keep the earth stable; the Delaware, also, say that the turtle is "he who carries our mother's (the earth's) body," and identify their earth-bearer with the box-turtle (*Cistudo carolina*). Other Algonquian-speaking tribes also make Turtle the bearer of the earth (see Frank C. Speck, *A Study of the Delaware Indian Big House Ceremony*, Publications of the Pennsylvania Historical Commission, Harrisburg, Pa., Vol. 2, 1931, pp. 44-47).

Besides being regarded as a sacred, beneficent being, Turtle is also looked upon by the Delaware as a potentially dangerous character who can hurt human beings (Speck, p. 47). In a story told both by the Delaware and Shawnee, men who meet and climb on the back of a giant turtle are all, save one, unable to get off his back as they approach the ocean and are carried out to sea.

Turtle is also, surprisingly enough, the butt of Gluskabe's practical jokes in northeastern Algonquian Gluskabe-Turtle stories, and is the butt for humor in other northeastern tales. In central Algonquian animal tales Turtle races other animals and wins. [EWV]

 In the folklore of the modern Indians and mestizos of the Amazon and of the Guiana, the small land turtle (*jabutí*) is the clever, but somewhat mischievous animal who knows how to emerge safe or victorious out

of every contest with stronger rivals. His constant enemy and victim is the ferocious and stupid jaguar. For instance, Turtle kills Jaguar by falling on him from a tree; Jaguar is about to catch him, but Turtle vanishes into a hole and tells Jaguar who has grasped his arms that he is only holding onto a root.

There is also a very popular story about a race between Turtle and Deer which is won by Turtle who has asked his brethren to deceive Deer. Turtle also challenges the demon Curupira in a tug-of-war, but instead of pulling the rope himself, he ties it to some powerful animal.

Many stories of the turtle cycle seem to have been transmitted to the Indians by the Negro slaves with whom they were in contact. [AM]

turtle dance An appeal to the fertile potentialities of the turtle, rarely a mimetic performance. In several Rio Grande pueblos the turtle dance is the maskless kachina or good kachina dance, as the *oku share*, performed at San Juan on Christmas Day, when 37 men and boys stomp in line; and the *ahatsaana* at Taos on King's Day, performed thrice in the morning and thrice in the afternoon, with 26 dancers in stomp line or running circuits. They all carry turtle-shell rattles at their knees, wear belts of bells, carry a gourd rattle in the right hand, and a spruce twig in the left. At Isleta this same dance is called the spruce or evergreen dance. At Taos it is performed by the water kiva.

The *ketowai* dance of the Iowa Indian men's society was taught by a man who saw the turtles dance. In the spring they imitated these creatures, pawing the air to simulate crawling. The Yuchi Big Turtle Dance, performed on the first day of the Green Corn ceremony, started in a compact mass led by a woman with a turtle knee-rattle, in sunwise circuit, to antiphonal song; then it thinned out into a single file.

The turtle is believed to make the thunder come (Pueblos), to represent the earth dome (Delaware, Iroquois). It communicates its power to rattles, e.g. the *chelydra serpentina* of the Iroquois and Delaware False Faces, and the *cistudo* hand rattle of Delaware and Cherokee dance leaders, vision reciters, and *tpwisas* singers. It brings perseverance and long life, hence can cure. See RATTLES. [GPK]

tüzet vszek Literally, I carry fire: a singing game of Hungarian peasants around Méra. It resembles drop-the-handkerchief, the kerchief representing fire. The dancers sing, "Fire I carry. Do not see it. Burns my dress, but do not let it. Who may see it, may not say it. Whither does my sweetheart's way tend?" The group stands in a circle and the carrier of the kerchief (fire) runs around it, drops the fire behind one of the players, who is supposed to pick it up and pursue him, beating him on the back with it; if this is not done, the carrier pursues the player. The carrier should, if pursued, try to get into the vacant place in the circle. Once safe in, the game begins all over again. There is no recollection of the origin of this game. [GPK]

Tvashtri In Vedic mythology, the divine artisan and architect of the universe, who made all things; bestower of generative power. Tvashtri possesses wealth and can grant riches. He was the father of the three-headed Viśvarūpa, Indra's special enemy, and of Saranyū (wife of Vivasvat and mother of the Aśvins, and of the primeval twins, Yama and Yamī). Tvashtri fashioned Indra's

thunderbolt and the drinking-cup of the gods, he made men, and even husband and wife. He is often referred to as the Hindu Vulcan.

Twa Sisters An English-Scottish ballad (Child #10) of the drowning of a young girl by her jealous elder sister, the robbing of her body by a miller, the conversion of her hair into harp strings (or other parts of her body into some type of musical instrument), and the revelation of the murder by the instrument when it was played. This is the singing bone motif (E632 f.). The song has been widely found over the British Isles, is known in Icelandic, Danish, and other Scandinavian languages, and has been collected in numerous variants in the United States. In some texts the revelation is made at the wedding of the elder sister; some end with the punishment by hanging and burning at the stake of the miller and the sister; the more corrupted versions lapse into low comedy over the construction of the instrument from the girl's body. In America some of the versions are used for dancing; a Nebraska song, "There was an old woman lived on the seashore," for example, includes dancing instruction in its refrain; and a Kentucky version is a courting dance performed by two lines of men and girls facing each other. Both of these have the refrain of "Bow down," one of the most common of the great variety of refrains attached to this ballad. Others include "down-a-down," or "derry down," and "bin-norie." The story appeared as a broadside in print in 1656 under the title of *The Miller and the King's Daughter*. The airs to which it is sung vary considerably. One was used with *The Three Ravens* in Ravenscroft's *Melismata* (1611). See BINNORIE.

Twelve Apostles or Carol of the Twelve Numbers A cumulative song built on the number-chain formula (Z21), in which the numbers from 1 to 12 are associated with various concepts or ideas, generally of a religious nature. In England, under the title above or as *The Dilly Song*, *Green Grow the Rushes, O*, or *The Ten Commandments*, several versions of the song have been sung as a carol, as a harvest song, as an Eton and Oxford student song, and as a song of the Biddeford boatmen. Analogs have been known all over Europe since the 15th century in German, French, Spanish, Greek, etc. On the Rhine it was known as the *Catholic Vesper*, and as a drinking song; in Austria, as *The Pious Questions*; in Languedoc it served as a mnemonic for learning the catechism. The question of the origin of the song has been debated for half a century, with three main sources proposed: a Latin hymn of Clinius published in 1602 (*Dic mihi: quid est unus? / Unus ist Deus qui regnat in coelis*); a Hebrew chant of the Passover service, *Echod Mi Yodea* (Who knows one?); and a legendary dialog between a druid and a child, from Brittany. All three develop in question-and-answer form the sequence of sacred numbers and their corresponding subjects. These subjects differ widely, both in these three texts and in the many surviving songs. Archer Taylor suggests that *Echod Mi Yodea* originated in the Sanskrit and spread to Europe from the East.

Twelve Days of Christmas An English cumulative carol (Z21.2.1) belonging to the category of the number-chain formula (Z21), enumerating the gifts sent by a lover to his lady on each of the twelve days from Christmas to Epiphany. Published in Husk's *Songs of the*

Nativity, in 1868, it was there noted as having been printed in broadsides during the preceding 150 years. It has been sung in the British Isles and in America not only as a carol but also as a game song in which each person following a leader in the repetitions must pay a forfeit if he misses a line. Some of the versions of this type turn the descriptions of the gifts into tongue twisters. The first gift, a partridge in a pear tree, may have been inspired by an old drinking song and nursery rime, *A Pie Sat on a Pear Tree*. There is also a French-Canadian version called *Une Perdriole*. See CAROL.

twins Twins, though statistically not uncommon, are looked upon in many parts of the world as being ominous. Sometimes one of the twins is attributed to a god and one to a human parent (compare HERCULES). The Lillooet believe that twins are the children of Grizzly Bear, that they are bears' sons. When a twin died and went back to the bears, he was placed in a tree far from a settlement and the bear came to take him back. Sometimes two men are thought to be involved, one father for each child. Often twins are thought to be the offspring of adultery. In more sophisticated communities, twins are attributed to superior virility on the part of the father. But among more primitive peoples, twins are often destroyed and the mother must be thoroughly cleansed. Twin fruits, like double almonds or twin bananas, are not eaten for fear that twins will result. On the other hand, twins are sometimes considered lucky. They have second sight, for example, or some other superior power resulting from the doubling of the single personality. Among the Cherokee, twins could see the little people, but they lost the power if they ate food prepared by a menstruating woman. See AIZA; ANIMAL CHILDREN; BIRTH OMEN; DIOSCURI; DOSU; EXPOSURE OF FAMOUS PERSONS IN INFANCY; HOHOBI; HUACA; IBEJI.

Some importance generally attaches to multiple births in almost all American Indian groups: twins are either welcomed or feared, and either treated well or one of the two disposed of. The more unusual occurrence of triplets is generally considered as an omen, if considered at all in such small populational groups as those which inhabited native North America.

In north central California twins happen to have been considered unlucky, and attempts were made to prevent their conception; young girls were taught not to eat "twin" wild plums or acorns or other double fruits, nuts, or berries; if fruits or nuts were bunched together on one stem, a young girl when eating them should point each nut in the cluster in a different direction and say, "I'll have a child over there" (pointing east, for example); "Next time I'll have a child over there" (pointing west); "Next time over there" (pointing north). If twins were born to a woman, a relative generally took one to raise.

Among the Tübatulabal farther south in California, twins were treated well; if one twin was treated badly and died, the other would die too and give the family bad luck; hence both were accorded more consideration than other children. The belief also existed in this tribe that if a person laughed about a woman having twins, that person would also have twins.

The Shawnee exhibit contradictory attitudes toward twins; one informant said that twins, and triplets even more so, are lucky, and were welcome; another infor-

mant; that the Shawnee were as a rule afraid of twins, especially the first born of the two, and usually allowed the first born to be adopted by an unrelated person. The elder of twins was the one who wielded a mysterious influence for evil over members of his or her family, and thus was the one sent away for adoption. It is among the Shawnee that some pseudo-historical material on triplets occurs; the historical figures of Tecumseh, the Shawnee warrior, and Tenskwatawa, the Shawnee Prophet, are said to have been either twins or triplets, the third being a girl who died young. [EWV]

✍ In West Africa and New World Negro belief the cult of twins, where found, or the abhorrence of twin births, is part of a generalized attitude toward children born with any kind of abnormal characteristics. The line between worship of twins and abhorrence of them may be drawn at about the mid-point of Nigeria, the Yoruba and Guinea Coast tribes to the west "liking" twins, the Ibo and other Negro Delta and Cameroons tribes taking the opposite position. The New World Negro twin-cult derives from the Yoruban-Dahomean tradition, as is evidenced by the carry-over of the terms *ibebi* and *hohovi* (*hohobi*) on this side of the Atlantic. Further evidence of this provenience is found in the retained belief that the child born after twins, the *dosu*, is "stronger" than his predecessors. The inclusion of the *dosu* in the rites and beliefs of the twin-cult, and the retention of these rites, especially in Brazil, Cuba, Guiana, Haiti, and elsewhere in the Caribbean area, is in almost uninterpreted African form. [MJH]

✍ The ancient Aztec custom was to kill one of twins at birth to prevent the death of a parent; the surviving twin was believed to have great powers for evil. Twin infanticide probably was widespread in pre-Conquest times. It is reported that formerly the Miskito Indians of Nicaragua killed the female of twins, or left both exposed to die, since the father believed that he could not be the parent of more than one child at a time. Hence, his wife had borne him an illegitimate child.

Twins apparently are no longer killed, but it is often believed that they have magical powers, both for good and evil. Among the Tarascans of Mexico, female twins are unsuccessful in cooking tamales and squash. But twins of either sex are particularly gifted in curing wounds or injuries, and those who plant corn, chayotes, or squash are rewarded with pairs on the vine or stalk, where a single fruit is the rule. The Tarascans also believe that a pregnant woman who eats "paired" fruits, i.e. chayotes, bananas, cherries, and the like, will give birth to twins. The Popoluca of Veracruz believe that twins result from the position of the parents during intercourse. They believe twins to be unusually fortunate in that they can break horses and mules easily, can cure colic by kicking the sick animal seven times in the stomach, and have unusual success as curers specializing in toothache, headache, and fever. They are also thought to be unusually intelligent, and fortunate in love. [GMF]

Twins Brothers who figure prominently in the mythologies of many peoples all over the world. One is usually the culture hero, the other opposes him or represents some other way of life. For discussion of the characteristic elements of the Twins, see DIOSCURI. See

also AHAYUTA ACHI; AŚVINS; BALDER; DUAL CREATORS; HAHGWEHDYU; HONSU; JACOB; TAGARO; TAMENDONAR.

✍ Male twin culture heroes occur in Iroquois, Central Woodlands, Kiowa, Pueblo, Apache (including Navaho), and a few other North American Indian mythologies. Among the Plains and certain Woodlands tribes tales are also told of twin boys who are not culture heroes, but who none the less accomplish wonderful deeds and go on perilous journeys, much as the twin culture heroes do.

Among the Iroquois the twin culture heroes are Flint and Sapling, who quarrel over who shall be born first while they are still in their mother's womb. One of these twins, Flint, was of an evil mind and was thrown out of the lodge soon after birth, but his brother Sapling brought him back. After they grew up, they both enlarged the earth and created various things on it; finally they quarreled and Flint was killed.

Similar in several details to the Iroquois myth is the Central Woodlands myth of Nanabozho and his brother, or White Hare and Wolf. These two twins, like the Iroquois twins, speak to each other in their mother's womb, but are friendly to one another. When Wolf is drowned his brother Nanabozho is inconsolable; his lamentations bring his brother back to earth. Also unlike the Iroquois myth, Wolf does not figure as a destructive culture hero, in apposition to his brother's constructive acts for the good of mankind.

Among the Micmac and Passamaquoddy the culture hero Gluskabe is the elder of twins; Wolf, the younger twin, bursts through his mother's side at birth killing her. The two deceive each other, and Wolf is finally killed by his elder brother. See GLUSKABE.

Pueblos who figure as culture heroes are the twin war gods, two small boys who are the sons of Sun and Dripping Water or Waterfall. These two boys are known as Ahayuta achi, War Brothers, or War Twins, at Zuñi, but knowledge and respect for them and their exploits as culture heroes, inventors, hunters, destroyers of monsters, and war gods is general throughout the pueblos. See AHAYUTA ACHI.

Comparable in several respects to the twin culture heroes of the Pueblos are the two Apache and Navaho brothers, also sometimes represented as twins—Child-of-the-Water and Killer-of-Enemies. Several Apache myths revolve around the exploits of one or both of these heroes, especially their exploits in ridding the earth of monsters.

Other supernatural twins are the Winnebago twins, Flesh and Stump, who when their mother is killed are taken from her body and raised by their father. These twins kill snakes, leeches, and the thunderbirds; their father flees from them, and is directed by the Twins to a village; they then kill the evil ogre who murdered their mother, go on visits to an evil spirit and to Earthmaker, the Winnebago deity. Later they go on the war-path and destroy a beaver, one of the foundation-posts of the earth. Earthmaker finally sends his messenger to frighten the twins and stop their wanderings (see Paul Radin, *Winnebago, Hero Cycles: A Study in Aboriginal Literature*, Indiana University Publications in Anthropology and Linguistics, Memoir 1, pp. 291-322). The Kiowa also tell ritual myths about two twins, Split Boys or Half Boys; the manner of birth of the second of these twins is peculiar. One boy was playing by himself one

day, with a hoop which his grandmother had told him never to throw upward. When he broke the tabu and threw it up, it fell back on his head; he looked around and there were two boys, himself and a replica of himself. These two boys later do various things forbidden them by their grandmother; they visit Thunder, escaping death from a falling bluff, change into moles to obtain hide from a ferocious white buffalo, and so forth.

The widely distributed Plains tale of *Lodge-Boy and Thrown-Away* (or *Lodge-Boy and Spring-Boy*) is also the tale of twin heroes, similar in some respects to the Winnebago Twin cycle outlined above. [Ewv]

 Twin heroes are among the most important characters in South American Indian mythology. Their adventures form whole cycles in the oral traditions of many tribes from the Guianas to Tierra del Fuego. One of the Twins is described as strong and clever, the other as weak and stupid. Their contrasting natures and temper are reflected in adventures and actions which to a large extent determined the physiognomy of our world. In most tribes the Twins are personifications of Sun and Moon; thus are explained the weak condition of the younger brother who is the Moon, and like it killed and torn into pieces to be restored by his older brother Sun.

The Twins are not only transformers but also great culture heroes to whom mankind is much indebted. For instance, in Bakairi mythology, the Twins steal Sun and Moon from Red Vulture and regulate their courses, introduce sleep by stealing Lizard's eyelids, separate the earth from the sky, rob Fox of fire, form rivers with the water of the Great Serpent, create the Bakairi and other tribes, and teach people how to dance and play music. They also provide men with food plants. Kame, who personifies the Moon, is the weak and silly brother who is swallowed by a jahu fish and is eaten by Fox; however he is saved from his misfortunes by Keri, the Sun, who always restores him to life.

In Yahgan mythology the divine pair introduced the use of fire, the art of killing birds and of hunting sea-lions, and many other useful techniques. They also told people the names of things, revealed menstruation tabus, and initiated people into love. The older brother, who is described as being both lazy and stupid, would have made life easy for men had he had his own way. He wanted fire always to burn, spears to return by themselves after they had been cast, the sea to be a deposit of fish oil, and men to be immortal. The younger brother thwarted his intentions because he felt that man must exert himself in order to appreciate what he has.

The Twins are the central figures in a cycle of adventure stories which have a wide distribution in South America. The main episodes of these myths have been recorded from Panama to the Chaco and from the Brazilian coast to Peru. The pattern of the myth is as follows: The wife of the creator or culture hero is killed by jaguars who find twins in her womb. The jaguar mother brings up the twins, who later learn from some animal that the jaguars whom they regard as their relatives are the murderers of their mother. They take revenge and then, after performing several miraculous deeds, climb to the sky by means of a ladder of arrows to become Sun and Moon. The earliest versions of this myth go back to the middle of the 16th century and were recorded in Brazil among the Tupinamba and in Peru in the region of Huarochiri. The widespread diffusion of

the myth in the Amazonian basin suggests that it forms part of the common cultural background of the Carin, Tupi-Guarani, and Arawak tribes. [AM]

Two Brothers An ancient Egyptian tale, also known as *Anpu and Bata*, dating from the reign of Rameses II (about 1250 B.C.) and contained in an almost perfect papyrus in the British Museum. It has an obscure connection with the Osiris story, and contains several primitive folktale motifs overlaid with later material. Anpu, the elder brother in the story, is perhaps identifiable with Anubis; Bata may be either Ptah (who became confused with the Apis bull), or Sati, the long-lived serpent of heaven, or perhaps a local god connected in some way with Anubis.

Bata, having been kind to his brother's cattle, understands their language, and, when Anpu's wife attempts in vain to seduce him and accuses him to Anpu, is warned by the cattle and flees. He is chased by Anpu, prays to Râ, who interposes a crocodile-filled river between the brothers. From the far bank, Bata explains matters to Anpu, perhaps castrates himself, and tells of how he will live in the valley of acacias where his heart (soul) will be in a flower. Anpu will learn of his death when his beer roils. The gods make for Bata a wife whose violent end is predicted by the Hathors. A lock of her hair floats downstream, comes to the Pharaoh's attention, and its fragrance causes him to send to find her. His soldiers are slain by Bata, but a woman tempts the girl away. The acacia tree is cut down when the wife tells Pharaoh the secret; Bata dies, and Anpu's beer bubbles. Anpu spends three years looking for Bata's heart in the valley of the acacias, at last finds it, and revives Bata by putting the heart in water and giving it to Bata to drink. Bata then transforms himself into a bull, is brought to the Pharaoh, and is killed at the wife's request. Two drops of his blood spring up overnight into Persea trees, which the wife orders cut down when he identifies himself. A chip from one tree flies into her mouth, she conceives, and Bata is born again in his own identity. When the old Pharaoh dies, Bata becomes ruler, the wife is slain, and Anpu becomes heir to the throne.

The latter part of the story, with its several reincarnations, has perhaps been added to an older framework, and contains some religious significance now lost. The use of many common folktale motifs, at least 18 (helpful or grateful or speaking animals, Potiphar's wife, obstacle flight, separable soul, life token, death prophesied, love through sight of unknown's hair, quest for princess from her hair floating on river, treacherous wife, resuscitation by replacing heart, water of life, reincarnation, plant from blood of slain person, speaking tree, impregnation by swallowing, transformed person swallowed and re-born as self), makes this, antedating Homer and the Bible, one of the oldest written folktales, of uncommon interest.

The *Two Brothers* story (Type 303) of Europe has been intensively studied (Kurt Ranke, *Die Zwei Brüder*, FFC 114, 1934). It appears in combination with several other types, principally *The Dragon Slayer* (Type 300), *The Magic Bird-Heart* (Type 567), *Strong John* (Type 650). Essentially it is the story of the twins born at the same time with twin horses and twin dogs, as the result of woman, bitch, and mare all having eaten pieces of the

same magical fish. One brother goes to seek his fortune; his tree (one of twin trees) is to be a life token—it will wither if he gets into trouble. With his magic sword (one of a pair), he slays the seven-headed dragon; he reveals the impostor who seeks to take credit for the deed; he becomes king and marries the princess. On his wedding night he leaves the bridal chamber to investigate a strange fire. The witch in the house at which he arrives manages to chain his dog with a hair from her head; she strikes the king with her staff and he is transformed to stone. Back home the tree withers. The other brother sets out, finds his way to the city, is mistaken for his brother, but does not reveal the truth, since he wants time to investigate the situation. At night he sleeps with the princess but places his sword between himself and her (see *SEPARATING SWORD*). He too follows the light, does not permit the bewitching of his dog, kills the witch with her own rod, and retransforms his brother. The hundreds of variants of this tale—Ranke analyzes 770 different tellings of the type—are spread all over the Continent. Ranke believes it to be of western European origin, since wider variation from the established type occurs the farther eastward the tale is found.

two friends The central characters of a number of folktales of the world illustrating extreme faithfulness. Damon and Pythias are perhaps the most famous friends of folktale: each proved willing to die for the other. Amis and Amiloun were more than friends; there was a blood covenant between them, and their lives, from birth on, were exactly parallel. So dear to each other were they that Amis killed his two children to cure Amiloun of leprosy. See *FAITHFUL JOHN*. See also *ARAWN*; *SEPARATING SWORD*; *TWO BROTHERS*.

Tyche The ancient Greek goddess of fortune: identified with the Roman Fortuna. Tyche, like Fortuna, carried the cornucopia of plenty, the rudder of destiny, and the wheel of fortune.

Tylor, Sir Edward Burnett (1832–1917) English anthropologist; one of the leaders of the anthropological school in England. He was educated at the Friends' School at Grove House, Tottingham, since his parents were members of the Society of Friends. On account of uncertain health, he traveled widely, visiting the United States, Mexico, and Cuba. From these tours resulted his book, *Anahuac: or, Mexico and the Mexicans, Ancient and Modern* (1861). Somewhat later, he produced his *Researches into the Early History of Mankind* (1864; 2d ed., 1868), followed by the two-volume work, *Primitive Culture: Researches into the Development of Mythology, Philosophy, Religion, Language, Art, and Custom* (1871; 7th ed., 1924). This work was immediately hailed as a standard general treatise on anthropology. It is particularly connected with his theory of animism, which he developed in this work. "Time has shown that his theory does not cover all the facts relating to the beginnings of mythology and religion, but it nevertheless has furnished a standpoint of commanding outlook, as seen in its effects in inspiring the work of Frazer and many others" (R. R. Marett in *Encyclopedia of the Social Sciences*). In 1881, Tylor published a smaller and more popular handbook, *Anthropology*. Tylor, in 1896, was named Oxford's first professor of anthropology. Previously, in 1888, he was named first Gifford lecturer at

Aberdeen University where he delivered a two-year course of lectures on "Natural Religion."

type A term used by students of folk literature to designate narratives capable of maintaining an independent existence in tradition. Any tale, no matter how complex or how simple it is, told as an independent narrative is considered to be a type. Some types like the longer folktales in Grimm's collection may contain dozens of motifs, and others like the anecdotes of the animal cycle may consist of a single narrative motif. In the latter, type and motif are identical.

If types are thus understood to mean independent narratives, there are obviously a limited number of them within any particular culture. For a discussion of the relation between type and motif see *MOTIF*.

It is usually possible to determine with some ease whether a particular narrative belongs or does not belong to a certain type. But there are always borderline cases where there seems to be confusion between tale-types or where a narrative has only a slight resemblance to a particular type. These variations from type have produced in some scholars, particularly those of eastern Europe, a skepticism as to the validity of classifying tales by types. This skepticism would seem to arise simply from a difference in interest on the part of the investigator. Such scholars are more interested in differences between variants and in the individuality of particular tale-tellers than they are in resemblances. As to the main fact of the validity of the tale-type conception within the countries in question, there has been no doubt in the minds of those who have made type indexes of those countries.

There now exist indexes of tale-types for many countries of the world. The European and western Asiatic area has been rather well covered, and work is constantly going on in classifying the types for other parts of the world. It would seem to be imperative that an entirely different classification of types should be made for each of the large culture areas of the world, for example, for Africa, for Oceania, and for the North and South American Indians.

The only way in which a tale-type can be formulated is to study the variants of the type. This process is somewhat circular because in order to tell what is the variant of a type, it is necessary to have some idea of the type. In practice this means that the investigator finds many tales containing so many striking resemblances that he places them in a single category. He then studies these resemblances and notes the common characteristics. Later he brings together as many variations of tales having these characteristics as possible, and eventually he is able to make a satisfactory statement as to the contents of the tale he is studying. His investigation implies a basic assumption, namely that the tale he is studying is an entity, that it has had a history with a beginning in time and place and has suffered certain changes in the course of its life.

A difficult philosophical problem for the student of types is whether to assume that one version is better or worse than another and, if so, what can be the criteria of good and bad when applied to versions. When the student who is working by means of the historic-geographic method constructs what he calls the archetype, he is not dealing in terms of good or bad. Rather he is

constructing a theoretical form from which all the versions could eventually be derived. His is the problem of historical reconstruction and not of esthetic judgment. On the other hand, some collectors of folk material are concerned exactly with this question of the search for the esthetically ideal type of song or tale. The assumption is that all who tell the tale or sing the song are striving to attain a certain ideal. It is fair to say, however, that most folklorists feel that such speculations are beyond their competence. See HISTORIC-GEOGRAPHIC METHOD; MOTIF; VARIANT.

STITH THOMPSON

types and classification of folklore The annual folklore bibliographies, published by the author since 1937 and kept in a cumulative master card file, served as a proving ground upon which this classification has been developed, tested, and adjusted to the practices of publication in folklore. When the author went to teach folklore in the University of Santo Domingo, a brief form of the classification was published, in Spanish, by the Faculty of Philosophy of that university in 1944, which was distributed among school teachers over the Dominican Republic as a questionnaire for the collection of folklore, and the classification was put to further test when it was used to classify the manuscript archive accumulated at the University from data sent in by the teachers. It received further tests when the author went to teach folklore in the National University of Mexico in 1945 and applied it not only to publications and field work, but also to a slide collection in the Benjamin Franklin Library in Mexico City, which illustrated various aspects of Mexican folk life and lore. A revised form of the classification, amplified from 11 (1944 ed.) to 40 pages, appeared in *Folklore Americas* (1948) VIII, and *Southern Folklore Quarterly* (1949) XIII: 161-226, and is, substantially, the form given here. In general, it represents a compromise between the broad concept of the German word *Volkskunde* and the more restricted concept of the English word *folklore*.

Libraries must classify all types of material, and from their broad viewpoint it seems logical to classify folk music with music in general, folk arts with art in general, and perhaps even folk narrative with literature. Their interests may lead them to split a folklore unit like mythology among other, for them more important, headings such as American Indian and Classic Antiquity. Different interests dictate different groupings, hence it is only natural that non-folkloric interests should scatter folklore materials far and wide in their classifications.

Folklore interests, however, should have their own classification, defined by the unity of their field, and with major or secondary importance given to various kinds of categories according to their significance in folklore. The classification of types of folklore offered here is designed for those whose special interest is in folklore. Furthermore, library classifications usually are designed with the particular problems offered by printed materials in mind. The classification given here also has in mind problems in grouping manuscript materials, cards, pictures, phonographic or sound recordings, museum objects, and other forms of documentation of folk-

lore data. It is hoped that this list of folklore types may serve as a kind of questionnaire, to remind the collector of the different kinds of material he should ask for. This classification tries to provide a place, too, for various types of background data the folklorist cannot ignore about the region and people among whom he collects his folklore. It even takes some cognizance of the relation of folklore to other fields, for there are more people interested in folklore as it relates to some other field in which they specialize than there are folklorists, who are interested in folklore simply as folklore.

From major to minor importance, the different ranks of headings used here are called *groups* (designated by capital letters A to Z), *categories* (designated by hundred numbers 000-900), *types* (the ten numbers 00-90), *forms* (unit numbers 0-9), *divisions* (the tenth decimals .0-.9), and *subdivisions* (the hundredth decimals .00-.90). Further subdivisions can be made by using the thousandth decimals (.000-.999), and even by introducing a second decimal point with its tenths, hundredths, and thousandths, and a third, and so on (A 000.000.000.000, etc.).

Some parts of the field of folklore have had their classification well developed, such as the prose narrative in the *Motif-Index of Folk-Literature* by Stith Thompson. But such categorical terms as myth, legend, tale, and ballad have been established by long usage in the field, and do not coincide with the major divisions in the *Motif-Index*, except in the case of "Mythological motifs," in which this classification can and does follow Thompson rather than introduce a new set of subdivisions for Myth. The great system of indexes in *Folklore Fellows Communications* has definitely established Aarne's classification for tales, which is followed in the present classification in the folktale category. The excellent synthesis of *The Proverb* by Archer Taylor indicates some general agreement on the major types in this field, which have been followed here. Indeed, the present classification follows rather than departs from any fairly well established classification where such are available. In some parts of the field, such as in folk music, there has been considerable discussion and divergence of opinion about classification. And in other categories, such as in legend and game, little progress in classification has been made. In such cases, we follow here simply the most logical order that the materials seem to dictate, using abstract and comprehensive terms that may take care of most branches of these fields until a more precise classification is provided for them. In this way, we have developed a system which, though still incomplete, at least offers a general plan of correlation of the field into a unified whole.

No matter what system of classification is used, the unity of the field will always present many interrelations among its various parts, which are indicated by cross-references. Materials in different sections sometimes may be classified in the same way, and such correlations are shown by the system of numbering and the terms used. For example, in Belief, P 200, P 400, and P 500 utilize the same system used in B 200 (Myth), B 400 (Legend), and F 500 (Custom). In other cases, only partial agreement of numbers is possible, as in the "Crucial moment in life cycle" section, which appears in C 340 (Song), F 540 (Custom), and C 434 (Dance). In C 300 (Song) and F 500 (Custom), only the ten numbers (40's) could be made to coincide. Where such coincidence is not pos-

sible, one section may be elaborated, where such seems desirable, by introducing the divisions of another section after a decimal point. For example, in C 400 (Dance), in which "Crucial moment in life cycle" must bear the number C 434, which coincides in no way with C 340 or F 540, a correlation can be made by adding .546, from F 546 (Death), so that the number C 434.546 indicates C 400 (Dance) related to a "Crucial moment in life cycle" C 434, namely, Death: C 434.546. Where one section is interested in the form and another in the function of the same type of material, this same system of decimal linking can be used to correlate the two. This method has been elaborated rather fully here only in the case of Verse, which is assembled as a unit for interest in its form in C 700 and C 800, and is carried out, for its functional interest, to other major sections. The same could be done for other form units, such as Art and Craft, which could be elaborated, for their functional interest, in other sections.

The A (General), G (Geographic), or L (Linguistic) divisions may be introduced at any point in the classification at which such type of subdivision may seem desirable. However, the folklorist should first consider whether it might not be more desirable to carry out further the subdivision of his folklore material before introducing A, G, or L subdivisions. These subdivisions are not along folkloric lines, so their numbers are added to the folkloric numbers to which they are applied, not after a decimal point, but after the small letters, a, g, or l, which designate their group. One example, so detailed as to be unlikely in actual practice, but which illustrates the application of a, g, and l subdivisions, is: C 434.549 a 660 l 736 g 730, which means Classification (a 660) of the war (.549) dances (C 434) of the Cherokee Indians (l 736) of the United States of America (g 730).

When several items accumulate under one heading, they may be given individual item numbers, beginning with hundred numbers, and progressing on down through tens, units, and decimals. This system allows more flexibility than that of numbering 1, 2, 3, . . . , and always permits the insertion of a new item number at any point. For example, if four items appear under one heading, they may be given item numbers 200, 400, 600, and 800. If five more items appear, they may be numbered 100, 300, 500, 700, and 900. If three more items appear, closely related to items 100, 200, and 300, respectively, they may be numbered 120, 220, and 320. If a new item appears, which belongs between 199 and 200, it may be numbered 199.5. If one appears which belongs between 199.9 and 200, it may be numbered 199.95. Numbers may thus be expanded always to the right, keeping each item in its proper relative position. After many items have been accumulated under one heading, further subdivisions in the classification number of that heading should be considered. After such further classification subdivision, new item numbers may be assigned to the smaller groups. Thus item numbers should be written in pencil, as temporary numbers and subject to change, and they should be set apart from classification numbers, preferably below them, forming a second line of numbers by themselves. Classification numbers bring together all materials of similar nature. Item numbers maintain in proper order all materials of similar nature, each with its individual number. The

order of item numbers should indicate future subdivisions in classification.

The question of whether certain materials should be classified in one section or another often can be resolved by determining which section's topic is in greatest accord with the major interest of the materials as presented in each case. Materials about a fox belong in Myth if they are concerned chiefly with narratives about his origin, form, nature, and innate qualities, in Legend if they are chiefly narratives of a certain individual fox necessarily localized in time and space, in Tale if they are chiefly narratives of adventures applicable to any fox typical of his class, in Art and Craft if the fox generically is treated as an object of hunting, in Food if interest is primarily in his preparation for human consumption, in Belief if the primary concern is with his use in the preparation of remedies or charms, in Speech if major attention is given to the folk names for him, and so on. Frequently this question can be settled by determining whether the major interest in the presentation of the material is in form or function. For example, if the major interest in musical instruments is in their manufacture, such materials are classified under Art and Craft, but they go under Music if interest is chiefly in the way the instruments are played and the kind of music they produce.

key designations

GROUPS (A-Z)

CATEGORIES (000-900)

TYPES (00-90)

FORMS (0-9)

DIVISIONS (.0-.9)

SUBDIVISIONS (.00-.90)

The general headings of group A may be introduced into the classification at any point by adding, after the number at that point, the small letter a, followed by the numbers of the A headings needed: C 300 a 420 Individual publications of folksong materials; a periodical like American speech could be classified under S a 320; B 433 a 850 Use of legends of secular heroes in educa-

tion. Geographic headings may be introduced into the classification at any point, as under A 200 Bibliography, by adding, after A 200, the small letter g, followed by the numbers of the G (Geography) headings: A 200 g 382 Bibliography of Australian folklore. Under G Geography, approximate divisions of the major areas of the world are made longitudinally: the 30 degree meridian, in the Atlantic ocean, divides America from Europe and Africa; the international date line, about 180 degrees, in the Pacific ocean, divides America from Asia; and the 60 degree meridian following the Ural Mountains and the Iran-Afghanistan border, divides Asia from Europe, the Near East, and Africa. G 200 Ancient lands are those whose individual identity has ceased to exist in large part. Often numbers assigned here can be made to coincide with corresponding numbers for the same approximate locality in G 300 to G 800, as illustrated in the examples in that section. Linguistic headings may be introduced into the classification at any point, as under S Speech, by adding, after S, the small letter l, followed by the numbers of the L (Language) headings: S l 534.2 Spanish folk speech. If a speech area is large, it may be desirable to add, after the Language number, the small letter g, followed by the numbers of the G (Geography) headings: S l 534.2 g 762 Spanish folk speech of Cuba. Linguistic and geographic headings may be introduced in like manner elsewhere as desired.

A GENERAL FOLKLORE

- A 200 Bibliography

- C 400 Dance
For manufacture of dance mask, see M 245.
For structure in which dance is performed, see M 868.
- C 420 Form Grouping Movement
- C 422 Individual
- C 424 Couple
- C 426 Group
- C 430 Function Purpose Theme
- C 432 Adoration
Dance to honor, gain favor, avoid harm from being, spirit, thing, force of nature. . . . Is divided like B 200 and B.400: C 432.465 (like B 465) Rain dance.
- C 434 Crucial moment of life Life cycle
Is divided like F 540: C 434.546 (like F 546) Death dance. For song or custom concerning crucial moment in life cycle, see C 340 or F 540.
- C 436 Festival
Is divided like F 600: C 436.665 (like F 665) Harvest dance.
- C 437 Medicine
For medical belief, see P 700.
- C 480 Accessories
Included here also are accessories for D Drama, when considered apart from rest of drama.
- C 482 Musical accompaniment
For music itself, see C 600.
- C 484 Costuming
For materials and methods of making costumes, see M 227.
- C 486 Properties Staging effects
- C 490 Dramatic
For dramatic game or drama, see C 526 or D.
- C 500 Game Pastime Sport
For game rime, see C 750. For structure in which game, pastime, sport is played, see M 868. For vocabulary of game, pastime, sport, see S 555.
- C 520 Bodily Activity
- C 522 Athletic sport and exercise Gymnastics
Includes body part, such as Finger game.
- C 523 Singing Dancing Marching
- C 524 Racing Chasing Fighting
Racing of people, horses, dogs. . . ; fighting of people, bulls, cocks. . . .

- C 526 **Dramatic**
 For dramatic dance or drama, see C 490 or D.
- C 530 **Mental Activity**
- C 532 **Wit**
- C 534 **Memory**
- C 536 **Knowledge**
- C 538 **Guessing**
- C 560 **Special Object or Implement**
 Those which depend primarily on chance, skill, or amusement, played with a special object or implement, equipment or apparatus, like cards, dice, counters, wheels, balls, marbles, pins, tops, string, rope, kites, knives. . . .
- C 580 **Water Ice Snow**
 Boating and water games, sledding and ice games. . . .
- C 600 **Music**
 Music itself is classified here. Music with words is classified under C 200 Ballad, C 300 Song, etc. For musical accompaniment to dance, see C 482. For materials and methods of making musical instruments, see M 246. For musical instruments as means of communication, see S 720.
- C 700 **Verse Without Music**
 Chanted, recited, written. Such matters as meter, rime, poetic structure may bear the number C 700 a 760 (like A 760 Form).
- C 720 **Narrative Verse**
 Like C 200.
- C 730 **Lyrical Verse**
 Is divided like C 300; C 730.329 (like C 329) Rime of mockery; C 730.334 (like C 334) Trade and occupation rime; C 730.360 (like C 360) Children's rime; C 730.370 (like C 370) Prayer Supplication Benediction
- C 740 **Dance Verse**
 Is divided like C 400.
- C 750 **Game Verse**
 Is divided like C 500: C 750.560 (like C 560) Rope-jumping rime. For game in which rime is used, see C 500. Counting-out rimes may be correlated here, as they are used in many different types of games.
- C 800 **Verse in Other Group of Folklore**
 For verse in other category of group C itself, see C 700.
- C 820 **Prose Narrative**
 Is divided like B: C 820.425 (like B 425) Verse in Devil legend.
- C 830 **Drama**
 Is divided like D: C 830.200 (like D 200) Verse in religious drama.
- C 840 **Custom Festival**
 Is divided like F: C 840.546 (like F 546) Verse in death custom.
- C 850 **Art** **Craft Architecture**
 Is divided like M: C 850.246 (like M 246) Verse on bell; C 850.860 (like M 860) Verse on wall of public toilet.
- C 855 **Food Drink**
 Is divided like N: C 855.800 (like N 800) Verse about tobacco.
- C 860 **Belief**
 Is divided like P: C 860.646 (like P 646) Verse in charm.
- C 870 **Speech**
 Is divided like S: C 870.570 (like S 570) Verse in formula.
- C 880 **Proverb**
 Is divided like V: C 880.200 (like V 200) Verse in proverbial metaphor.
- C 890 **Riddle**
 Is divided like W: C 890.200 (like W 200) Verse in true riddle.
- D DRAMA**
- Drama accessories are classified with C 480 when considered apart from rest of drama. For dramatic dance or game, see C 490 or C 526. For verse in drama, see C 830. For structure in which drama is performed, see M 868.
- D 200 **Religious**
- D 400 **Secular**
- D 600 **Puppet**
- D 800 **Shadow Pantomime**
- F CUSTOM FESTIVAL**
- For verse in custom and festival see C 840.
- F 500 **Custom**
 Traditional pattern of human action accepted by a group. Individual habit is not included. Custom is what folks do, belief is why they think they do it. For explanation of belief related to a custom, see P 500.
- F 530 **Daily Life**
 For song concerning daily life, see C 330. For vocabulary of special group, see S 550.
- F 532 **Home**
 For hours of working, eating, sleeping, see F 574.8.
 For food and drink, see N.
- F 533 **Street Trip Relations between relatives, friends, host and guest Social class Rank**
- F 534 **Work Commerce Business**
- F 536 **Entertainment Diversion**
- F 537 **School**
- F 538 **Church**
- F 539 **Common law**
- F 540 **Crucial Moment of Life Life Cycle**
 For song or dance concerning crucial moment in life cycle, see C 340 or C 434.
- F 542 **Birth**
- F 543 **Baptism Naming rite**
- F 544 **Maturity**
- F 545 **Marriage**
- F 546 **Death**
- F 549 **War**
- F 570 **Number Measure**
- F 572 **Numbers System of counting Calculation**

- S 720 To Be Heard
Drum and other percussion instrument, horn and other wind instrument, bell. . . For technics of playing musical instrument, see C 600. For materials and methods of making musical instrument, see M 246.
- S 740 To Be Seen
Light, smoke, pictograph, orthographic symbol. . .

V PROVERB

Any saying which has become current and traditional in a group. For verse in proverb, see C 880.

- V 200 Proverbial Metaphor
Stated in the form of one of its particular applications: A new broom sweeps clean.
- V 300 Proverbial Apothegm Maxim
Stated directly, in broad, general, abstract, categorical terms: Seeing is believing.
- V 400 Blason Populaire
Proverbial saying about peoples or places: It takes nine tailors to make a man; Italy to be born in, France to live in, Spain to die in.
- V 500 Wellerism
Cites a direct quotation "as so-and-so said when . . ." and follows with some inappropriate application of the quotation, for comic effect: "Every man to his taste," said the farmer when he kissed his cow.
- V 600 Proverbial Phrase
Can vary subject and tense of its verb to fit its application; usually is listed in infinitive form: To break the ice.
- V 700 Proverbial Comparison
Of similar nature (like), equal (as . . . as), greater or lesser degree (than): Like a fish out of water; As white as snow; Wiser than Solomon; Scarcer than hen's teeth.

W RIDDLE

A thought-provoking question which asks for a solution. For verse in riddle, see C 890.

- W 200 True Riddle
Presumably sufficiently precise in its description to be logically solvable: Little Ann Netticoat, with a white petticoat, and a red nose, the longer she stands, the shorter she grows—A burning candle.
- W 400 Riddle Question
Insufficiently precise for logical solution; can be answered only by the initiated; asker intends to give answer himself, with intention of ridiculing person asked: Where did Jesus go when He was twelve years old?—Into His thirteenth year.

RALPH STEELE BOGGS

(1) **Typhon, Typhaon, or Typhœus** In Greek mythology, a monstrous being associated with the winds and with volcanic eruptions: his origin in Asia, perhaps in Cilicia, has been suggested. Two such monsters are distinguished by some writers: one, the son of Tartarus and Ge, out-tops the mountains, his thighs and legs are coils of serpents, his hands are a hundred dragons' heads, his body is all feathered or winged, he has a hundred heads of dragon shape each with a terrible voice. (2) **Typhon**, a fearful wind, is son of the former and father of the monsters of Greek legend—the Chimera, the Nemean lion, Orthrus, Ladon the dragon, the Sphinx, the eagle eating Prometheus' liver, the Crommyan sow killed by Theseus. (From the latter, by way of China, is derived the English word typhoon; it in turn is connected with

the Indo-European root meaning mist). Typhon in later times was identified with the Egyptian Seth, the foe of Osiris; the myth shows evidence of some connection with Egypt. The gods were frightened of Typhon and fled to Egypt, transforming themselves into animals to hide from him: this seems to be a Greek explanation of the animal-headed gods of Egypt, a *pourquoi* story. Zeus attacked Typhon with his lightnings and injured him with a sickle of adamant, which Typhon then wrested from Zeus. With the sickle Typhon cut out Zeus' foot and hand sinews, crippling him. He hid Zeus in a cave and wrapped the sinews in a bearskin over which he placed a dragon guard. But Hermes and Ægipan (or Cadmus) managed to regain the sinews; they healed Zeus, who then chased Typhon from Nysa, through Thrace, to Sicily. There he buried Typhon beneath Etna, or, according to other tradition, confined him in Tartarus or banished him to some other volcanic region. The Zeus-Typhon myth bears a vague resemblance to the Egyptian myth of Osiris and Seth, which may have influenced it; in other ways it makes the third in a sequence, an unsuccessful attempt to dethrone the gods, paralleling the Uranus-Cronus and Cronus-Zeus episodes. Certainly the myth has the earmarks of great age.

Tyr (Old English *Tiu* or *Tiw*; Old High German *Ziu* or *Ziw*) In Teutonic mythology, god of war, courage, and the sword: one of the three principal deities (with Odin and Thor). His name survives in Tuesday. The ancient Aryans personified the sky, which personification took the form of the Vedic sky god, Dyaus, the classical Zeus, Old Norse Tyr, Old High German Ziu, god of war. Tacitus called him Mars. He is also identified with the old Saxon sword god, Saxnot.

In the myths he is usually the son of Odin and Frigga. He is a wise and very great warrior, and was invoked in battle as frequently as Odin. He helped Odin pick the heroes who were to be carried to Valhalla by the Valkyries. It was Tyr who helped the gods bind the Fenris wolf, put his hand in the wolf's mouth as pledge, and lost it. At Ragnarök he will battle Hel's watchdog, Garm, and they will both fall, mutually slain.

Tyrfing A marvelous invincible sword of Scandinavian epic poetry that fought by itself: famous for its many terrible deeds. It was named for the ancient Tervingi (Visigoths) and first belonged to Angantyr, traditionally having been made for him by the dwarfs. Tyrfing could not be vanquished, but eventually brought death to whoever held it. Once drawn from the sheath, it could not be put back until it had shed blood. It is said to have caused two brothers to fight to the death in the island of Samsö and then (in the hand of the father) to have killed the winner. This follows the ancient Danish conviction that a murderer or traitor must die by his own sword. Legend says that by the order of Angantyr the sword Tyrfing was buried with him, that his daughter called him forth from the grave to ask for it, received it, and used it bravely herself.

Tzū Sun Niang Niang The very virtuous wife of a Chinese official: patroness of weddings. After producing the perfect family, five sons and two daughters, she committed suicide to escape the attentions of her sovereign. [RDJ]

U

Uazale The first Paressi Indian, culture hero of the Paressi Indians of the Matto Grosso. He discovered manioc, produced tobacco, and planted his hair to produce cotton. He was very hairy, had a tail, and a membrane between his arms and legs like a bat.

Udó Moon god of the Sumu Indians, companion to Uhubapút, Sumu chief deity, sun god, and creator. The planet Venus, when seen above the crescent moon, is called Udó's wife. See R. G. Heath's "Mískito Glossary," *IJAL* 16: 20–34.

ugly duckling Catchword for the unpromising surpasses promising group of motifs (L140 ff.). All kinds of unpromising characters turn out to be wonders and "get theirs" in the end: the stupid surpasses the clever (L141 f.), the pupil surpasses the teacher (L142 f.), the ugly sister is chosen instead of the pretty one (L145), the neglected child proves his worth (L146), even the tardy and slow win over the prompt and swift (L148 f.). In *The Ugly Duckling* by Hans Christian Andersen, a young swan is hatched out by a duck, is belittled, ridiculed, and persecuted by all the ducks because of his strange appearance, but eventually grows into the most beautiful bird on the pond.

Uhepono A woolly-skinned underworld giant in Zuñi Indian mythology. He has eyes like saucers and human arms and legs. [EWV]

Uilleann pipe Irish bagpipe (*piob uilleann*) of the bellows type which came into use late in the 16th century. Improvements in its construction permitting some variation of tone in the drones by wrist manipulation made it a gentleman's instrument in the 18th century. The name is corrupted to union pipe.

Ukko Literally, Old Man: the thunder god of the Finns: often identified with Jumala, god of heaven. Ukko commands the clouds, rain, and thunder. There are many survivals of the festivals and sacrifices for Ukko from the mid-16th to the beginning of the 20th century. Such ceremonies, called "Ukko's wedding" or "Ukko's chests," were held until St. John and the Christian God were asked for rain and the fertility of the crops in Ukko's stead. A cock or a sheep was sacrificed. The "chests" were made of birch bark, and sacrifices for Ukko were placed in them and carried to Ukko's mountain. For the sacrifice the best sheep was slaughtered. Its flesh was boiled and portions of the meat, together with other victuals, were put into the chests, along with a large quantity of beer and spirits, and taken to the holy mountain where they were left untouched until the next day. Ukko was said to eat his share during the night; in the morning the rest was eaten by the worshippers. Part of the drinks was poured on the ground to ensure a summer free from drought (U. Holmberg). In describing this feast Michael Agricola (c. 1550) said: "Ukko's goblet was drunk at the sowing of the spring's seeding; Ukko's chest was also brought, and then maid and wife drank to excess, and moreover many shameful

things were done there." Such festivals have been held in Finland almost to the present day. (See K. Krohn in *FFC* 104, 1932, pp. 33–40.) [JB]

Ukupanipo In Hawaiian mythology, the shark god who controls the fish by driving them to or from the shores and thus supplying or depriving the people of their food. Ukupanipo is believed occasionally to adopt a human child and to give him the power to change into a shark at will.

Uller or Ullr In Teutonic mythology, one of the æsir, the son of Thor's wife, Sif, and an unknown father: god of winter, hunting, archery, skating, and snow-shoeing. From the number of places in Sweden which bear his name it is probable that his importance had waned by the time of the sagas and Eddas. As god of winter, in some myths he alternates with Odin (summer), taking Odin's place (even with Frigga) while Odin is away during the winter months. His home in Asgard is Ydalir (yew grove) because the yew yields the best bows. He is also said in Germany to have a summer home on the top of the Alps among the snow-capped peaks. In Anglo-Saxon he was probably Wuldor, glory; in parts of Germany he is known as Holler, the husband of Holde, and it is he who spreads the white blankets over the fields in winter to protect them from the cold. He is also said to have married Skadi (the divorced wife of Niörd) who likes it very well in his abode. He is another of the gods who in some localities is said to lead the Wild Hunt. Oaths were often sworn by the ring on his altars. Some say that he alternates with Balder in Hel according to the season.

Ulster cycle The oldest and most famous of the cycles of Old Irish epic, legend, and romance. The manuscripts date from the 7th and 8th centuries, but celebrate the Ireland and Irish heroes of the 1st and depict the civilization of barbaric splendor that dates back centuries earlier. Most of the stories are laid, however, in the 1st century B.C., when Conchobar was king of Ulster with his seat at Emain Macha. Cuchulain is the central hero. The *Táin Bó Cúailgne* is the longest and principal text. The cycle also includes, among others, the story of the *Visitation to Guaire* and the revealing of the *Táin Bó Cúailgne* (see BOOK OF THE DUN COW; KING OF THE CATS), the *De-bility of the Ultonians* (see MACHA), the *Táin Bó Regamna*, the *Táin Bó Fraic* (see AILILL MAC MATACH), the famous *Exile of the Sons of Usnech* (see DEIRDRE), the *Wooing of Emer*, *Bricriu's Feast* (see this; also CHAMPION'S PORTION), the *Tragic Death of Aife's Only Son* (see CONLA), the humorous *Story of MacDatho's Pig*, the *Intoxication of the Ultonians*, the *Dream of Angus* (see ANGUS OG AND CAER), *Cuchulain's Death* (see CUCHULAIN), the story of the *Red Rout of Conal Cárnaic on the Plain of Muirthemne* to avenge it, the *Phantom Chariot of Cuchulain*, and the *Destruction of Da Derga's Hostel* (see TABU) which became attached to the Ulster cycle.

Ulysses The Latin name of the Greek hero Odysseus and the name by which he was best known in Eu-

ropean literature until the latter decades of the 19th century.

umbilical cord The umbilical cord is thought to be intimately associated with the fate of the child. Among the Swahili the cord is placed around the child's neck and then interred on the spot where the child was born in order to draw him constantly to his parents' house. In New Zealand the cord and placenta are buried under a tree planted at the birth of a child; the Hupa Indians of California split a small tree, place the cord in the split, and tie the tree together again. The fate of the child is indicated by the fate of the tree. In some parts of Europe the cord is worn for a time, but precautions are necessary to see that it is not eaten by an animal or operated on by magicians or spirits. The Spanish belief is that the child will acquire the bad qualities of whatever animal eats the cord; the German belief is that the cord eaten by the child himself will make him clever. See AFTERBIRTH; AMULET; CAUL; CHILDBIRTH. [RDJ]

✍ In almost all of Middle America there is a special disposition of the afterbirth and umbilical cord. It is generally believed that the treatment accorded the placenta will affect the child in later life. In hot countries it may be placed under a rock in a cool stream "so that the adult will not perspire unduly when working in his fields." In cold countries often it is buried under the hearth or in the potter's oven so that the child will not catch cold. Usually the umbilical stump is saved for its healing properties, often throughout the lifetime of the individual. A little may be crumbled in water to be drunk to cure various illnesses. Traders from the Tarascan area in Mexico are known to carry their stump on their first long trip away from home, to bury it under a tree in the plaza of a town to which they expect to make frequent trips, in the expectation that this will bring many sales. [GMF]

umbrella In the Far and Near East, parts of Africa and Mexico, umbrellas denote royal or divine power. They are carried over the heads of monarchs and high priests. One view is that umbrellas are derived from the solar wheel over the head of Buddha. The umbrella is one of the eight symbols of Buddha. See DA-CHA. In an Athenian ceremony the priests of the sun and of Poseidon and the priestess of Athena walked from the Acropolis under a large white umbrella. An umbrella is on a coin from the period of Herod Agrippa I. In one of the *Jatākas*, a prince who wants to get his brother's kingdom demands to be given the royal umbrella. In 1855 a Burmese king spoke of himself as a monarch who reigns over the great umbrella. Umbrellas are used in the marriage ceremonies of the Lower Congo and mark the place of the chief in a Dahomey ancestor ceremony. Some of the Dahomey umbrellas are highly decorated. The high priests of one of the Mexico cults were protected by umbrellas. The fact that all the places noted are in or near the tropics and that persons of power and position could find some protection from the sun's rays is perhaps as significant as the interpretation that umbrellas were used by persons so sacred that they must not be touched by the sun. The two views may well be complementary. See BODY MARKS. [RDJ]

Uncle Remus The narrator of Joel Chandler Harris' famous collections of Negro animal tales from the southern part of the United States, of which Brer Rabbit is

the protagonist. So popular have the Uncle Remus tales become that they are regarded as the prototype and "real" form of Negro folklore. The effect of this has been to direct the attention of collectors of tales, both among New World Negroes and in Africa, toward animal stories, and to cause them to neglect the rich store of literature in which the characters are human beings.

[MJH]

✍ The plantation story-teller in the Uncle Remus books (1880-1918) of Joel Chandler Harris. Based on several Negroes of Harris's acquaintance (including George Terrell), Uncle Remus is an individualized portrait of a type of privileged house servant who, in his role of entertainer to white children, was encouraged to preserve and transmit his African folk heritage, and, along with it, traditional Southern attitudes. Humorous, poetic, philosophical, as well as a skilled story-teller, Harris's alter ego made the Uncle Remus story synonymous with the American Negro animal tale, especially of the trickster type (see BRER RABBIT), but not neglecting the explanatory myth. In his hands and in the character of Uncle Remus, folklore, folk speech, and folk fantasy are fused into folk art. For an analysis and evaluation of the folklore elements in the Uncle Remus books, see Stella Brewer Brookes, *Joel Chandler Harris—Folklorist*, Athens, Georgia, 1950. [BAB]

Uncle Sam Popular personification of the people or government of the United States, corresponding to the British John Bull. By the 1850's, the image of Uncle Sam as a tall, lean, sinewy, unmistakably Yankee figure, with long hair and chin whiskers, in striped pantaloons, swallow-tail coat, and plug hat, had become established in political caricature, replacing the earlier and somewhat similar Brother Jonathan, and the still earlier graphic emblems of America—the Indian, the rattlesnake, the bucking horse, and the eagle (which became an official emblem).

While the name is obviously a humorous extension of the initials of the United States, it has, after the fashion of "historical" traditions, become attached to a particular person, time, and place; namely, Samuel ("Uncle Sam") Wilson (1766-1854), of Troy, N. Y., a meat inspector for a government contractor, Elbert Anderson, at the opening of the War of 1812. When asked what the initials, "E.A.—U.S.," stamped on casks, stood for, a facetious workman replied that "he did not know, unless it meant *Elbert Anderson and Uncle Sam* [Wilson]" (Bartlett's *Dictionary of Americanisms*, 1859 ed., pp. 492-493). The joke passed into army circulation and into print and then legend, where it has stuck, in spite of the efforts of historians to dislodge it.

Besides Brother Jonathan, another and junior prototype of Uncle Sam is Major Jack Downing, a political cracker-box philosopher, friend and critic of President Andrew Jackson, whose "Jack Downing" letters, contributed by Seba Smith to the Portland, Maine, *Daily Courier*, beginning in January, 1830, made him a familiar literary and graphic figure in American politics, along with the more folksy and more enduring Davy Crockett.

B. A. BOTKIN

underworld In the cosmography of peoples all over the world, a region under the ground, to which an entrance on the surface exists somewhere, and in which live the souls of the dead, though sometimes the souls have

been modified in popular belief and are considered the fairies, elves, or the like, living inside hills, in wells, on river beds, etc. The Christian underworld is Hell where the souls of the wicked receive eternal punishment. More anciently, the Greeks believed in an underworld where the dead lived a colorless but not a hard life. The Egyptian Fields of Aalu were a paradisaical underworld where the grain grew well. To reach the underworld one must cross a river in a boat guided by a spectral ferryman; at any rate, a guide is needed, the psychopomp or conductor of souls. The opening to the underworld is often kept closed with a rock; on certain festivals, for example, the Greeks and Romans opened the way for the souls to return to earth to be entertained. The god of the underworld is usually a forbidding personage, a prince of darkness or a prince of evil. It is perhaps only natural that the underworld of the tropical or semi-tropical peoples is usually a warm place, while the underworld of peoples of cold climates is a place of eternal ice. See AFTERWORLD; DESCENTS TO UNDERWORLD; JOURNEY TO OTHERWORLD; ORPHEUS.

ungkulatem The national round dance of the Siberian Yakut, corresponding to the *ikandzyedzyem* of the Tungus. The literal meaning, "I sing," refers to the monotonous chanting by all participants. Men and women progress sunwise, either in one large circle in arbitrary order, or in separate circles. With the right arm under the next dancer's left, the clasped hands are held close to the body. All step sideways with the left foot, swaying the torso slightly forward; then all bring up the right foot in back of the left, leaning backward. The dancing may continue for a long period on festive occasions such as marriages. [CPK]

unicorn This one-horned animal resembles a white horse but is larger and is distinguished by a single horn growing from the middle of its head. The horn is 27 to 36 inches long. Euhemerists trace unicorn stories back to the rhinoceros.

Dr. Olfert Dapper saw a wild unicorn in the Maine woods in 1673, and in 1936 Dr. Franklin Dove, biologist at the University of Maine, described in the *Scientific Monthly* in some detail an operation he had performed in 1933 on the horn buds of a one-day-old Ayrshire calf. The consequence was a single spike solidly attached to the skull and used to pry up barriers. The thrust of the single horn was more powerful than the thrust of a two horned animal. Dr. Dove reminded his readers that transplantation was known in the time of Pliny. Although the classical reports give the unicorn's horn a white base, black middle, and red tip, Dr. Dove notes that only the females have red tips. Unicorns have been reported from southern France in the Middle Ages and from China, where a one-horned animal is described as the "four-not-likes," i.e. body of a horse but not like a horse, feet of an antelope but not like an antelope, etc. The unicorn was at one time thought to be a native of India, later of Africa.

The medieval church ascribed many characteristics to this animal. It was the symbol of chastity and fierceness but because it would inherit the earth it was very meek. Although normally powerful it was gentle at mating time and thus symbolized virginity and demonstrated the power of love. In ecclesiastical art it is associated with the lamb and the dove. In heraldry, the unicorn is

associated with James I and thus the British crown.

In Biblical etiology the unicorn is now extinct because he was thrown out of the ark and drowned (A2214.3). In a European tale of capture by deceit, he is tricked into running his horn into a tree (K771) and is captured before he can get it out. Traditionally it can be tamed by the touch of a virgin.

If the horn of a unicorn is dipped into water the water will become pure. If a dish containing poison is touched by a unicorn's horn, the poison will be disclosed. The Chinese still use ivory to detect poison and the gates of Prester John's palace contained the horn of horned serpents to prevent the smuggling in of poison. The essence of unicorn in distillate or elixir is an antidote to poisons.

In the 16th and 17th centuries unicorn horn was a popular though costly ingredient in medicines. In 1789 it was still used to detect poison in royal foods. In 1605, Johann Baptist Silvaticus reported in his *De Unicornu Bezoar* that Paul III had paid 12,000 gold pieces for a horn to be used against pestilential fevers; and another horn is said to have been sold in Dresden for \$75,000. In the 16th century learned men were of several opinions. Copernicus trusted it. Andrea Bacci said that the horn sweats at the approach of venom. Erastus thought it was valueless against poison. De Boot's skepticism was not of the virtues of the horn but rather of the existence of the animal itself. Nevertheless, unicorn's horn is listed among the possessions of many medieval kings, pontiffs, and popes as an amulet used at table to detect the presence of poisons.

Robert Graves reports that "the unicorn's single exalted horn represents the single exalted pole" which reaches directly up to the zenith, the hottest point attained by the sun. In Egyptian architecture it is the obelisk and expresses dominion over the four quarters of the world and the zenith. [RdJ]

universe Many South American Indian tribes visualize the universe as a series of superimposed floors or strata, above and below the surface of our earth. The Witoto conceive of the universe as being formed of five strata, each of a different color. The one in the middle is our world. The uppermost sky is inhabited by a supernatural being resembling a spider. The stratum under us is the World of the Ancestors and underneath this is the lowest world, known as the "Abode of the First Father."

The Chamacoco describe the universe as being formed of five or even seven floors, each of a different color. The floor under us is now empty but was formerly occupied by mankind. The lowest floor belongs to the sun that every morning emerges from the lower spaces.

Other tribes (Mataco, Conibo) speak of only three layers. Formerly the sky and the earth were connected by a big tree. The men of this earth went hunting in the land above until the tree was destroyed by a jealous person (Toba, Mataco, Chamacoco, Shipaya, Cariri). [AM]

 A series of worlds, one above the other, if not explicitly stated, is usually implied in the creation myths of nearly all the American Indians. The myths of many groups stress the worlds which exist above the earth; there may be anywhere from one to eight or nine such. The Southwestern tribes, in their emergence myths, emphasize the numerous worlds below the earth, in which

the people were living before they emerged upon this earth. [ewv]

Unktomi Santee Siouan dialectal form of the name of the Siouan trickster-culture-hero. Variants of this personal name for the trickster among other Siouan groups are: Iktomi or Ikto (Teton Sioux); Ictinike (Ponca and Omaha); Ictcinike (Missouri). Unktomi is identifiable as the spider; although there is some belief that he is a culture hero and creator, the tales told about him are typical trickster tales, ridiculous and often obscene. [ewv]

unpromising hero (heroine) One of the common-places of folktale (motif L100): the hero who for various reasons is supposedly not typically a hero. The most famous of all unpromising heroes is Cinderella, the step-daughter, an ash girl, ragged, dirty. Often the hero is deformed, ugly, loathly, yet proves in the end to be a transformed prince or other hero type. The Princess on the Pea needs testing, for bedraggled as she is she does not look like a princess. The unlikely hero is as often as not the youngest son (usually the third son) who by kindness or some other virtue not possessed by his elders succeeds where they fail. He may be small, like Thumbling; he may be in a menial position, like Gareth, the kitchen knight of Arthurian legend whose older brothers Gawain, Agravain, and Gaheris were established knights of the Round Table. This menial often proves to be an angel or deity in disguise, as in Greek and Irish stories. The unlikeliness of the hero is typical of the folk hero; he is found in a basket, brought up as a shepherd's child, has a speech impediment or is lame, etc. The fable of the hare and the tortoise plays on the same theme: the tortoise cannot reasonably be expected to outrace the hare, yet he wins. The ugly duckling too turns out to be more beautiful as an adult than its supposed brothers. The idea lies at the base of the modern detective story; the least likely suspect often is the criminal. The unpromising hero motif plays on the self-identification of the hearer with the lowly, and the consequent gratification from the story. See AMALA; DIRTY BOY; YOUNGEST SON.

Unquiet Grave An English ballad (Child #78), one of the relatively few in English folk song about the belief that prolonged mourning disturbs the rest of the dead, though the theme is common in story and song of Scandinavia and other parts of Europe. The lover weeps on the grave of the departed sweetheart until the spirit fretfully begs to be left in peace. Variants have been collected in Newfoundland, in Kentucky, and in New Jersey.

Uranus In Greek mythology, the sky god; personification of the sky, as his consort, Ge, was of the earth: etymologically the name may be connected with Varuna, the Indian sky god. Uranus and Ge figure in a cosmological myth to which striking parallels have been noted in Egypt and New Zealand. Uranus, finding the Cyclopes and the Hecatoncheires, his gigantic sons, troublesome, pushed them back into Earth. Ge on her part resented this burden she thought she had quitted herself of, and induced Cronus to avenge the insult. With a sickle of adamant, Cronus mutilated his father and threw the amputated penis into the sea. From the drops of blood falling upon Earth there were engendered the Erinyes and the Gigantes; from the mixture of blood and foam

in the sea there arose Aphrodite, called Anadyomene from her rising from the sea. Cronus then seized power; Uranus and Ge prophesied his overthrow by one of his own children.

The castration myth is found elsewhere in the world and is in essence a natural cosmological explanatory myth. How were earth and sky separated? In Egypt, Nut, the sky goddess, and Geb, the earth god, were forcibly separated by Shu, their son, the air. Rangi, the sky god, and Papa, the earth goddess, of Maori myth embraced so closely that their children could hardly be born; they too were separated violently by the children. Krappe sees in the story of Noah and Ham an echo of this kind of myth: Noah, survivor of the flood and the culture hero who discovered viniculture, originally may have been made drunk by his son and then castrated. In the *Rig-Veda* traces are found of a myth wherein Indra slays his father. Compare TITANS.

Urashima Taro The hero of a popular Japanese fairy tale having the Rip van Winkle motif. [JLM]

Ursa Major The Great Bear: a constellation of the northern hemisphere conspicuous for its circumpolar motion and its shape. From earliest times it has captured the imagination of mankind and has been identified as a bear (and usually a she-bear) from the classical period on. See CALLISTO. An ancient Cretan story identifies both the Greater and Lesser Bears as two bears who fostered the infant Zeus: an interpretation repudiated by later European astronomers on the grounds that there were no bears in Crete! A 10th century Old English *Manual of Astronomy* calls the constellation Arctos from the Greek myth, adding that the unlearned call it Carles-Wægn. This was because the old Teutonic Wagon or Odin's Wain, later Carles Wægn (i.e. Charlemagne's) was more familiar to the populace than the classical story. In Icelandic and Scandinavian reference it was the Wagon or the Karl Wagon. In modern Germany it is often called Himmel Wagen. Sir Walter Scott in the *Lay of the Last Minstrel* referred to it as Arthur's Wain. The Plough or the Heavenly Plough have also been common English designations of long standing.

The ancient Hebrews called this constellation Döbh, Bear; the Arabs called it Al Dubh al Akbar, the Greater Bear. To the early Syrians it was the Wild Boar. Job's reference to "Arcturus with his sons" (*Job xxxviii, 32*) has been thought to refer to the stars of Ursa Major. In late Indian mythology, its seven bright stars were identified with seven illustrious rishis.

In Chinese astronomy, our Ursa Major is known as Pih Tow, the Emperor's Chariot, and its perpetual motion around the pole star symbolizes the emperor's unceasing overseeing of the empire. Also, a Chinese goddess known as Seven Star Mother lives in this constellation. In Chinese legend a famous astronomer and magician of the 7th century I-hsing (or Yi-hsing) Ch'an-shih once caught the seven stars of Ursa Major in a bag, in the shape of seven little pigs. The Emperor was then persuaded to declare a seven-day amnesty throughout the empire to effect their restoration. I-hsing then let one little pig per day out of the bag; each night one star reappeared in the sky. Thus this wily old man saved an old boyhood friend who was scheduled to be executed that week. See KUEI HSING.

The Berbers of northern Africa regard Ursa Major and

Ursa Minor as a camel and her calf; the pole star (*Lemkechen*, hold) is the woman who holds the little camel while the mother is being milked. To the Buriats of eastern Siberia the seven stars of Ursa Major are Seven Old Men. One of the Koryak names for the constellation, when regarded as a bear, is Notakavya, the One Who Walks Around the Earth. Another Koryak name for it is Elwe'kyeñ, Wild Reindeer Buck. The Koryaks believed that the creator went to the stars to get reindeer for the people.

Ushās The Vedic goddess of dawn, the bright and ever young daughter of heaven (Dyaus) and sister of the Ādityas. She opens the gates of the sky, drives off the evil spirits which gather at night, leads the white horse of the sun.

Utgard In Teutonic mythology, one of the divisions of Jotunheim presided over by Utgard-Loki. According to Snorri, Thor and Loki with two servants journeyed to Jotunheim and spent the night there, trying several feats of strength to entertain the assembled company. In all of these they were beaten: Thialfi, Thor's servant, lost a race to a lad named Hugi; Loki was bested in an eating race by one Villi-eldr; Thor failed to drain a drinking horn, could not lift Utgard-Loki's cat, and was thrown to one knee by the old nurse, Elli. Next day, as Utgard-Loki was escorting his guests on their way, he admitted that they had been tricked: Hugi was, in reality, thought; Villi-eldr, wildfire; the drinking horn was forever replenished from the sea; the cat was Jormungandr, the Midgard-serpent; and Elli was old age—yet they had nearly succeeded. Saxo grammaticus treats Utgard-Loki as a medieval devil in one of his stories.

vagina dentata Catchword for a motif (F547.1) which occurs in the widely distributed American Indian hero tale, *Sun Tests his Son-in-Law* (or *Son*) but also found as an incident in other American Indian material, even in some trickster tales. The hero, a male, encounters a woman who invites him to have intercourse with her. She has had many men but they have all died because of her toothed vagina. The hero inserts sticks in the vagina; the first of these are ground up but the teeth cannot chew the harder ones; he then knocks out all of the teeth, or all except one. [EWV]

☞ The toothed vagina motif, so prominent in North American Indian mythology, is also found in the Chaco and in the Guianas. The first men in the world were unable to have sexual relationship with their wives until the culture hero broke the teeth of the women's vaginas (Chaco). According to the Waspishiana and Taruma Indians the first woman had a carnivorous fish inside her vagina. [AM]

Vahagn The ancient Armenian god of war and courage; god of sun, lightning, fire; the Armenian god who replaced Mithra in the Zoroastrian triad of Aramazd, Anahit, and Mithra; also, a national hero, competing

Uther Pendragon According to Geoffrey of Monmouth and later writers, the father of King Arthur. There is a poem of uncertain antiquity in the *Book of Taliesin* (c. 1275) called the "Death-Song of Uthyr Ben," which is so obscure that one can extract little from it except that Uthyr claims a ninth part in the prowess of Arthur. Another poem, perhaps of the 10th century, names in a list of Arthur's warriors Mabon and describes him as the servant of Uthir Pen Dragon. There is nothing, then, in authentic Welsh tradition that makes this Uther the father of Arthur, and it is probably one of Geoffrey's characteristic audacities to create a history for Uther Pendragon and to bring him into relation with Arthur and Merlin. Geoffrey represents him as the brother of the historic Aurelius Ambrosius, who on the latter's death reigned over Britain, begat Arthur on the wife of Gorlois Duke of Cornwall, killed Gorlois in battle, and wedded the widow. Uther in his declining years defeated the Saxons, but was poisoned by their spies and buried in the Giants' Dance (Stonehenge). Through Wace's *Brut* much of this found its way into the Merlin romances, which added the story of Uther's founding the Round Table by Merlin's advice at Carlisle on the day of Pentecost. Geoffrey explained the title Pendragon as meaning "dragon's head in the British tongue," and said that Uther was so called because at his coronation Merlin gave him two golden dragons, one of which he carried in his wars as a standard. Loth, however, thinks that the title originally meant "chief of warriors."

Bibliography: Brūce, J. D., *Evolution of Arthurian Romance from the Beginnings to 1300* (Baltimore, 1923). See index. Parry, J. J., "Geoffrey of Monmouth and the Paternity of Arthur," *Speculum* XIII (1938): 271-77. [RSL]

successfully with Mihr and Barshamina for first rank. Vahagn was, like many dragon-slayers, born from a plant. He emerged from a reed with hair of fire and eyes that were suns, the son of heaven, earth, and the sea. He was always youthful. His warlike nature is typical of the weather gods of the world. Vahagn is the conqueror of the dragon Azhdak (Azhi Dahāka).

He stole straw from Barshamina on a cold night and in escaping dropped it. From the straw the Milky Way was formed. In modern Armenian folklore he has been succeeded by Dsovean. In his heroic aspects he became identified with Hercules. Compare AGNI.

Vailala Madness One of many new religious cults of revivalist type that included a base of native religious elements, which swept Papua after European occupation. Similar cults have appeared elsewhere in Oceania, as well as in North America and Africa, wherever a primitive culture has been shaken by contact with European complexities and has attempted to readjust itself by seeking refuge in cults of the revivalist type. See F. E. Williams in *Essays presented to G. G. Seligmann* (1934), "Orokaiva Magic," p. 3 ff., which has additional bibliography and tells about the Papuan revivalist cults called Taro, Kekesi, and Baigona. [KL]

Väinämöinen The chief hero of the Finnish runoes (see *Kalevala* songs 1-9, 15-17, 44-47, 50), called *Aine-möinen* by Agricola (in 1551); the great magician and singer (see KANTELE), inventor of the harp, and "forger of runoes." His mother is Ilmatar, "the daughter of the air," but Väinämöinen was born in the water. His name, from *väinä*, mouth of a river, indicates that he has some relationship with the water. The sea-maidens in the songs are called *väinän tyttö* or *tytär*. He builds ships and likes sea voyages. Otherwise he is a culture hero (fells trees and sows barley) and is protector of his country, Väinölä or Kalevala, from all enemies and witches, especially from the sorceries of Louhi. He is an enemy of the Lapp people and their hero Joukohainen. He was shot dead by a Lapp and rescued. He visited, alive, Tuonela, the island of the dead. He is always thought of as old and wise; in war he is the leader of the people. The people love him more than any other hero, and have even given his name to some of the stars: Orion is called "the scythe of Väinämöinen," the Pleiades the "sword or shoe of Väinämöinen." He is not a god, but a hero. See BARLEY.

JONAS BALYS

Vairochana One of the five Buddhas of Contemplation: the Brilliant, the illuminating one. See ADIBUDDHA.

Vaitaraṇī In Hindu mythology, the river of death which flows between the land of the living and the kingdom of Yama (the land of the dead). The river Vaitaraṇī is filled with blood, hair, and filth. To cross this loathsome stream, especially in Bengal, a dying man must grasp the tail of a cow which is then given to a Brāhman or a cow is given away so the soul can cling to its tail while passing over the river. The name Vaitaraṇī is also given to the Hindu hell reserved for destroyers of beehives and pillagers of villages. The Vaitaraṇī is identified with the Baitaraṇī, a river in north India.

vajra Among the theistic Buddhists of Nepal vajra is the symbol of mystic or divine energy and is at the same time the polite and decent name for the male sexual organ. Vajradhara or Vajrasattva who is the incarnation of the complex of ideas designated by vajra is a Tantric brahman. Vajra is "hard as adamant and clear as emptiness." He is a thunderbolt against demons. The trident is one of his attributes. [RDJ]

Vajrasattva In Buddhism, one of the five Buddhas of Contemplation: literally, thunderbolt-being. The Tibetans believe Vajrasattva analogous to Adibuddha.

valentine 1) A piece of folded paper bearing the name of a boy or girl, drawn by lot at parties on the eve of **St. Valentine's Day** (February 14), the one named to be the sweetheart of the drawer for a year. 2) A person of the opposite sex deliberately chosen or whose name is drawn by lot on St. Valentine's Day to be one's sweetheart or special friend for a year. This party play of the young people on this day has been associated in England from medieval times with the choosing, wooing, and mating of birds at this time of year (B232.1). 3) The first young man (or woman) one chances to meet in the street or elsewhere on St. Valentine's Day. The custom formerly was to kiss this "first-met"; thus he (or she) was your valentine or special love for a year. 4) The fancy, dainty valentine or card, beflowered and befrilled with ribbons and paper lace, bearing printed or written verses couched a love greeting or proposal: a common-

place of the modern observance of the day, as is also the take-off on the sentimental valentine, i.e. the mock or comic valentine, lampooning the weakness or ridiculing some peculiarity of the recipient. These are supposed to be sent anonymously. Presents of candy, flowers, etc., sent on this day are also called valentines.

valerian (from Latin *valere*, to be strong; so named probably for its medicinal properties) This is an herb of Mercury which the Arabs said was hot and moist and would stir up lust. The Greeks said it was hot and dry and used it to stop bleeding. The Romans used it as incense; and it was widely used to scent linens and clothes and to keep out moths and vermin. Cats and rats both love the smell of this herb and roll in it; cats are said to dig up the roots and eat them.

Early English herbalists recommended valerian as a diuretic, also for rickets, and as a nerve-calmer. In the doctrine of signatures it was good for the lungs. It inspired love, and sorcerers used it in a concoction to raise and commune with spirits. Culpeper recommended it for wind, sight, inward sores and outward hurts, and said that it would draw thorns. Many herbalists have called it an all-heal. It is a mild sedative and has no after-effects, a fact which makes it useful in nervous disorders; during World War I it was used successfully in cases of shell-shock. The Meskwaki Indians of the United States used it to stop hemorrhages and to quiet hysteria and functional nervousness. The Gosiute Indians of Utah use it for bruises and swellings and the pounded roots for rheumatism.

Valhalla In Teutonic mythology, the favorite of Odin's three homes, where he entertained the Einheriar, the warriors chosen from among the slain. Valhalla is a great hall whose rafters are of spears and whose roof is made of polished shields. Its 540 doors are each wide enough to accommodate 800 warriors abreast. It is situated in the shimmering grove of Glaesir whose trees bear leaves of red gold, and is surrounded by the river Thund. Half of the warriors slain in battle are chosen by Odin or Tyr and are carried to Valhalla by the Valkyries (battle maidens) where they are welcomed by Odin's sons, Hermod and Bragi, and brought before his throne. The other half of the slain warriors go to Freya at Sessrymnir in Folkvang. They spend their days in combat, but at the end of the day their wounds are healed and they gather in the great hall for a glorious feast prepared by Odin's cook, Andhrimnir, from the magic boar, Sæhrimnir, which comes to life again after each killing. It is prepared in the giant caldron, Eldhrimnir. Their mead is provided by the she-goat, Heidrun, and is brought to them by the white-armed Valkyries who have put off their armor and are dressed in becoming white gowns. Their evenings are spent in hearing again the tales and songs of their battles.

Vali In Teutonic mythology, 1) one of the æsir; son of Odin and the giantess Rinda; born for the purpose of avenging the death of Balder. He was a daring warrior and a clever archer but he will take no part in Ragnarök, although some sources say that he and Vidar will survive this battle. No mention is made of the way in which he destroyed Hoder, Balder's slayer. All we know is that he was but one night old at the time. He is considered the god of eternal light and personification of the lengthening days of spring.

2) The son of Loki and Sigyn, said by some to be a namesake of Odin's son. When Loki is captured by the gods, they turn Vali into a wolf who kills his brother, Narvi, whose entrails they use to bind Loki.

Valkyries In Teutonic mythology, a group of battle maidens included in the *æsir*. They are Odin's personal attendants, and daily they ride forth over the battlefields of the world to see that his wishes are carried out and to carry the slain warriors designated by Odin or Tyr over the rainbow bridge, Bifrost, to Valhalla. Their number varies with various authorities from three to three times nine, but they are all beautiful golden-haired maidens with dazzling white arms. When riding into battle, or warning of impending battle (for their appearance heralded a coming fray), they rode white horses and were attired in shining helmets and armor, but in Valhalla where they served mead to the fallen heroes, they were attired in white robes. Some say that those about to be carried to Valhalla received a kiss of death from one of these maidens. These maidens are sometimes confused with the Norns, whom they resemble. See BRYNHILD; FREYA.

Vālmiki A hermit, the legendary author of the *Rāmāyana*. Shrines have been built to Vālmiki in many parts of India and two hunting castes of the United Provinces, the Aheriyas and the Baheliyas, claim descent from him. The sweepers' god, Lāl Beg, has been identified with him.

vampire One of the types of the undead; a living corpse or soulless body that comes from its burial place and drinks the blood of the living. Belief in vampires is found all over the world—in India, China, Malaya, Indonesia, etc.—but typically it is a Slavic concept; Russia, Poland, Bulgaria, Croatia, Slovenia, and thence Greece, Rumania, Albania, Hungary are the great vampire area. In Hungary in the 18th century, the uproar about vampires was as great as that during the witch hunts of colonial New England. The vampire cannot rest in the grave; it must spend the night searching for a victim, but at cockcrow, when the sun rises, or when the bells ring in the morning, it must return to the coffin. Anyone bitten by a vampire becomes a vampire upon death; vampires are also made if a cat or other baneful creature jumps or flies over the corpse before it is buried; suicides, witches, those under a curse become vampires. Light, bells, iron, garlic are all effective against vampires. If a corpse about to be buried has its mouth open, it will probably be a vampire; the mouth must be stuffed with clay before the coffin is closed. If it is suspected that a certain corpse already buried is a vampire, it must be dug up and examined; if it proves to be red-cheeked and fresh, not decomposed, with blood-stains around the mouth, it is a vampire. Such a body must be decapitated, burned, buried at a crossroads, or a wooden stake driven through its heart. It will twist in agony as the stake pierces it, but after that it will lie in peace. See AZEMAN; BORN WITH TEETH; PRET; SATURDAY; SEVENTH SON; ZOMBI.

Vanant (Avestan *vanant*; Pahlavi *vanand*) In Persian mythology, one of the four leaders of the stars which fight for Mazda; the guardian star of the west who conquers evil.

vanir (singular *van*) A group or class of early Teutonic deities who later became associated with the *æsir*.

Originally they were fertility gods and later became associated more specifically with weather, crops, and commerce. The three vanir whose names are familiar in mythology were Njörd, Frey, and Freya. The only other of the vanir of whom we have record by name is Nerthus, who was later identified with Njörd. Very little is known of the vanir, except that their home was Vanaheim and they waged war against the *æsir*. Njörd and his children Frey and Freya went to Asgard as hostages in exchange for Hoenir and Mimir, who were sent to the vanir. Hoenir relied so entirely on Mimir's wisdom, that when consulted in his absence, he put the decision on others. This angered the vanir, who felt they had been worsted in the hostage exchange. So they beheaded Mimir and sent his head to Odin. Some versions of the vanir story say that Njörd, Frey, and Freya will return to Vanaheim at Ragnarök.

vaquería Literally, cowboy doings: the festal dance of the Maya of Quintana Roo. It follows the custom of naming fiesta officials after the characters in the oldtime hacienda. The dance company should consist of thirteen married couples. They are dressed in their best mestizo costume, but not as cowboys and cowgirls, except for the lasso draped across the shoulder of the *vaqueros* and the large men's hat worn by the *vaqueras*. It corresponds to the *jarana* of Yucatán in choreography, music, costume, and function. That is, though a social couple dance, it is part of religious as well as secular celebrations, and is attended by ritual actions, such as preliminary blessing, food offerings, and feasting on a sacrificed hog. In honor of the Virgin of the Concepción, the *vaqueros* assist at the planting of a sacred tree, *yaxche*. In the tree-setting and subsequent dancing they interact with a clown, called *chic* or *chiquero*. Like the *jarana*, each vaquería ends with *el torito*. Each fiesta includes four vaquerías, sponsored by four different *cargadores*. The last night is given to visiting the *cargadores* in their homes, followed by a *corrida* or bullfight, and a short dance called "half a night." The concluding ceremony is the "back beating" in the house of the *nohoch mayol*, or manager. His assistant, the *chan mayol*, beats the back of each *vaquera* with a handkerchief rope; and the *h-men* or shaman, gives them rum and strokes their heads with zipche leaves. This ritual is to protect future offspring from the evil winds which might attack the *vaqueras* in their exhausted state. Thus the attendant rituals of the vaquería preserve ancient practices of fertility magic. [GPK]

Varāha The boar avatar or incarnation of Vishṇu, assumed in order to deliver the world from the power of the demon Hiranyāksha, who had seized the earth and carried it to the depths of the ocean. After a thousand-year battle, Varāha killed the monster and brought back the earth to the surface. Another version of the myth says the earth was pressed down by an overabundant population. The boar lifted it on one tusk and made it again fit for habitation. In modern Hindu belief earthquakes are caused when Varāha shifts his burden from one tusk to the other. In modern Hinduism Varāha is the third incarnation of Vishṇu.

variant By its very nature, folklore is traditional and its preservation depends upon custom and memory. It is, therefore, subject to all the variations that come from the attempt to repeat exactly the customary action, or to

tell or perform that which has been learned from listening to someone else. Every performance of such an act and every repetition of such a tale or song displays differences from all others. These variations may be involuntary, where the aim is an exact repetition, or they may represent a conscious attempt at creation within the framework of the tradition. Since every repetition thus displays variations, it is customary to call each example of an item of folklore a variant. If the idea of variation is not foremost in the mind of the speaker, he is more likely to use the term *version*. There is otherwise no difference in the use of these two terms. [ST]

Varuṇa In Vedic mythology, the supreme ruler of the gods; guardian of the cosmic order; bestower of rain. Varuṇa was one of the oldest of the Vedic deities. As such he was the upholder of the physical and moral order and the divine judge. In the Brāhmanical period, however, most of his duties as creator and supreme god were assigned to Prajāpati and he was reduced to dominion over the waters and rule of the west. In this capacity he is worshipped in eastern Bengal at the full moon in the month of Kārttik (Oct.–Nov.). He is worshipped by fishermen in many parts of India. In Gujārat he is invoked as “king of waters, who curbs the wicked, who made a road in the heavens to receive the rays of the sun.” He is generally worshipped as a fertility deity at marriages. He holds the noose used to fetter sinners and a vessel of jewels. His consorts are the river goddesses Jumna and Gangā. He also possesses an umbrella made from the hood of a cobra and impervious to water. See ADITYA; DYAUŠ.

vasu In Hindu mythology, one of eight divine beings, children of Aditi and attendants of Indra: personifications of natural phenomena. The vasu include Āpa (water), Anila (wind), Anala (fire), Dhara (earth), Dhruva (pole-star), Prabhāsa (dawn), Pratyūsha (light), and Soma (moon).

Vāsuki In Hindu mythology, one of the three great serpent kings who ruled the Nāgas in Pātāla. Vāsuki was the serpent who was twisted as a rope around Mount Mandara at the Churning of the Ocean. Fearing the annihilation of his race by Garuḍa, he made a compact promising to send one snake to him each day. Garuḍa agreed and still eats one Nāga every day on the shore of the southern sea. In Punjab legend, the daughter of Vāsuki brought amṛita to cure her father of leprosy and rubbed it all over him but forgot his thumb. So she went again to get more, and en route one of the Pāṇḍava heroes carried her off and married her. Her father's thumb remained leprosy, which explains why that disease is still rife in the Punjab. See ŚEŠHA.

Vaṭak, Aūṭak, or Udai In Zoroastrian belief, a female demon who forces men to speak when they should not and disturbs them while they are performing their physical functions; a fiend of incest, half human, half monster, who is said to be the mother of Azhi Dahāka in Pahlavi texts.

Vatea In Polynesian mythology, the name of Atea, the primary male parent of the universe, on Mangaia in the Cook Islands: in Hawaii he is known as Wakea. Vatea and Tangaroa disputed about the fatherhood of the first child of Papa. She cut the child in half; Vatea immediately threw his half into the sky, where it became the

sun; Tangaroa waited until his half had decomposed, and when he threw it into the sky it became the paler moon. See ATEA; RANGI.

Vāyu (1) In Vedic mythology, the god of the wind and atmosphere; the breath of life which sprang from the breath of Puruṣa. He is often associated with Indra and is frequently one of the triad of Agni (earth), Sūrya (heaven), and Vāyu (air). He is regent of the northwest quarter. Since the concept of wind does not lend itself to anthropomorphism, there are few myths told about Vāyu, and he did not receive popular worship. The popular wind gods such as Hanumān are generally described as his sons. The Maruts, likewise wind gods, were first considered companions of Indra, later of Vāyu. Vāyu is represented by the antelope. He is gentler in nature than Rudra.

(2) In Iranian mythology, as a gentle wind god, Vāyu is a *yazata*; as an evil, ruthless wind god, he is a demon.

Veḍa Literally, divine knowledge: specifically, one of the four collections of prayers, hymns, and ritualistic formulae which contain the basic religious lore of the Hindus; also, one of more than 100 books containing religio-philosophical material, legend, ritual, and sacred lore. The four chief Vedas are the *Rig-Veda*, oldest and most important; the *Sama-Veda* or chant veda, containing many of the hymns found in the *Rig-Veda* but with musical notation indicated; the *Yajur-Veda*, prayers and spells; and the *Atharva-Veda*, popular material. The date of the earliest Veda is believed to be about 1200–1500 B.C. The Vedas vary in age and are spread over a long period of Indian history.

The origin of the Vedas is variously explained: they emanated from Brahmā or were revealed to the ṛishis. Each Veda is divided into the *Mantra* and the *Brāhmaṇa*, the latter supplying glosses and commentary. To it are added the *Āryanakas* and *Upanishads*, treatises speculating upon the nature of god. The books into which the hymns of the *Mantra* are collected are called *Saṁhitās*.

Vellamo The Finnish goddess of the sea and of the waters; the wife of Ahti. The name is derived from *velloa*, to rock himself. [JB]

Venus An ancient Italian, originally Latin, goddess of growth and the beauty of orderly nature: the root, found in the Norse *vanir*, is the same as that of *venustus*, charming, graceful. It was through the more or less political efforts of the Julia gens in Rome to establish their descent, hence Julius Caesar's, from Æneas that Venus became solidly identified with Aphrodite as the goddess of love, Venus Genetrix; actually there was no native Roman goddess of love and human passion. Venus may more properly be identified with Charis, the Greek goddess of grace. Her proper sphere was the gardens and the tilled fields. Adding to the force of the supposed identity with Aphrodite was the fact that one of her Roman temples stood in the sacred grove of Libitina, the goddess of burials, who in turn was anciently and wrongly identified by the similarity of the name to *libido* as the goddess of passion. The other Roman temple of Venus, designed by Hadrian, was the largest in Rome and was located on the Circus Maximus. Outside Rome, Venus Pompeiana has a great temple in Pompeii; Venus Victrix was an important subject of worship among the colonizing Romans. Venus attained

great prominence in the Middle Ages as the pagan, earthly power opposed to the spiritual power of the Church. In the Tannhäuser legend, for example, Venus (in reality Holda) is the epitome of the forces keeping Tannhäuser from salvation. The identification of Venus with the planet parallels the naming of it after Inanna and Ishtar by the Sumerians and Babylonians. Compare CUPID AND PSYCHE.

Verethraghna, Vrthraghna, or Bahram In Iranian mythology, the chief of the fravashis and the genius of victory. Verethraghna was born in the ocean, conquered the dragon Azhi Dahāka whom he fettered on Mount Demāvand. He appears in ten incarnations: a strong wind carrying the Glory of Mazda, a golden horned bull, a white horse, a burden-bearing camel, a wild boar, a handsome youth, the bird Vāreghna, a wild ram, and a fighting buck. The tenth is a hero. The Armenian hero Vahagn is identified with him.

vervain A sacred herb of the Greeks, used to cleanse the table of Zeus before feasts. In Rome it was a plant of good omen, sacred to Venus, and used to decorate the altars of the gods. Roman brides picked a wreath of vervain which they carried; in Germany the bride was presented with a spray. In Persia vervain was used in the worship of the sun. The druids also revered vervain, because the leaves resemble those of the oak. They gathered it in the spring at the rising of the Great Dog Star when neither sun nor moon was visible, using an iron instrument, and being careful not to touch it. They poured a dish of honey into the ground to recompense its loss. The Crusaders brought back the story that vervain sprang up on Calvary when the nails were driven into Christ's hands, hence it is called a holy herb or herb-of-the-Cross, and is used like the hyssop to sprinkle holy water.

Because it was a holy herb it was thought by many to be proof against witchcraft, enchantment, and charms; it would drive away incubi, evil spirits, and unwanted persons, as the jingle: "Vervain and dill/ Hinder witches from their will," indicates. Witches themselves seem to have known better, for it was a symbol of enchantment and was used in most of their brews, divinations, charms, incantations, and sacrifices. Those who bathed themselves with the undiluted juice or smeared themselves with any part of the plant could see into the future, have every wish fulfilled, make friends with their worst enemies, cure disease, and be proof against disease and enchantment themselves.

Gerard (16th century English herbalist) recommended vervain as a stewing herb in the house to promote happiness and content. Another 16th century herbalist recommended a decoction of four leaves and four roots steeped in wine to be sprinkled around the house "where eating is done so that the folk will be merry." Many others have said that vervain would promote joy; it will "make infants apt at learning, and they shall be glad and joyous."

Culpeper called this plant an herb of Venus; it was therefore a woman's plant and good for the womb. Old Jewish lore recommends its use to facilitate childbirth. Culpeper also recommended it for jaundice, dropsy, gout, worms, the stomach, liver, spleen, wounds, ulcers, piles, and to give good color. The leaves bruised in vinegar would clear the skin and eyes. The Meskwaki

Indians of North America also regarded it as good for women and used white verbena (*V. urticifolia*) to cure profuse menstrual flow.

Vervain was often called pigeon grass on the theory that pigeons and doves ate it to strengthen their eyesight. The old Anglo-Saxons hung the root around the neck to cure ulcers; and for centuries in England it was considered a remedy for epilepsy if gathered in the sign of the Ram and mixed with grain or peony root. It was also good for toothache and would tighten loose teeth and falling hair. The juice was used in love potions all over Europe, in Africa, and still today in New Orleans and other parts of the southern United States. Early American folk doctors recommended vervain root hung around the neck and touched occasionally to cure various diseases. In rural Illinois it is called feverweed. The Pawnee Indians identified vervain as "pleasant-dream-drink"; the Omahas called it stomach-ache medicine.

vetāla In Hindu belief, an evil spirit which haunts cemeteries and animates dead bodies. The vetāla is represented in human form with hands and feet turned backwards. His hair stands on end. As guardian of Deccan villages he occupies a stone smeared with red paint or one of the stones in the prehistoric stone circles scattered over the hills. In folktale he is a mischievous demon, always ready to play a practical joke on the unwary.

Vičak Literally, fate: an Armenian festival beginning the day before Ascension Thursday and lasting until the Sunday of Pentecost. Village girls meet on the first day and choose a committee. Its members fill a clay pitcher with water drawn from seven sources and place in its mouth flowers picked in seven fields. Each girl then throws an object such as a ring, button, or bead into it, while keeping her eyes closed and making a wish for her brother, father, or sweetheart. After all the girls have made their wishes, the pitcher is hidden in a garden. The boys of the village that night hunt for the pitcher. If they find it the girls must exchange quantities of eggs and olive oil for it. If they cannot discover it, the girls sing songs poking fun at them.

Vichama In the mythology of the ancient people of the Peruvian coast, the son of the Sun God and half-brother of Pachacamac, the Creator. He took revenge on Pachacamac for the murder of his mother, changed the first people into stones and their chiefs into sacred rocks and islets. He brought the three eggs from which the classes of new mankind were hatched. [AM]

Vidar In Teutonic mythology, one of the æsir, the tall, handsome, strong son of Odin and the giantess Grid. He is called "the Silent" and has his home deep in the forest. Some consider him the guardian of peace while others say that he represents the primeval forest, and, as such, is one of the imperishable forces of nature who, with Vali, will survive Ragnarök. He is the only one of the gods against whom Loki has nothing derogatory to say at Ægir's banquet. At Ragnarök he will avenge Odin's death by placing his iron shoe on the Fenris wolf's jaw and rending him asunder.

Vidyādhara In Hindu mythology and folktale, one of a group of benevolent supernatural beings who inhabit the regions between the earth and sky. The Vidyā-

dharas are famous transformers and have supplanted the yakshas in popular tales. They live in towns in the northern mountains under kings or emperors and intermarry with men.

Vikramāditya The celebrated Raja of Ujjayinī who figures in a cycle of Indian folktales. His era is placed about 57 B.C. He is endowed with marvelous powers and is said to have obtained from Gaṇeśa the power of transferring his soul into any kind of body, and from Kubera the ability to fly through the air. He was incurably fond of wandering. His position in folktale is similar to that of Harun al-Rashid or of Solomon. There is no record of a Raja Vikramāditya at Ujjain, but such a king may have existed. His identity is a subject of controversy. He has been identified by some scholars with Chandragupta II (375–413 A.D.).

vila (plural *vile*), **veela**, or **willi** A Southern Slavic (Serbian, Slovenian, etc.) nymph of woods, fields, streams, lakes. The vile are said to be the spirits of virgins and children who must leave their graves to dance at night. Their dancing rings are typical fairy rings; they must not be disturbed, and anyone joining them must dance until he dies. They were hostile to men, but several of the hero tales tell of the help given to the heroes by the vile. The vile could marry mortals and have children; they possess many of the attributes of the fairies and the swan maidens. The vile sometimes appeared as birth-propheisiers, deciding and telling the fate of the newly born.

Vili and Ve In Teutonic mythology, Odin's two brothers, sons of the god Borr and the giantess Bestla. These two, together with Odin, killed the giant Ymir, rolled his body into Ginnungagap, and from it created the earth. Later they created the first human pair, Ask and Embla, from an ash and elm. Odin gave them souls; Vili, motion and the senses; Ve gave them life and blood. In the *Völuspá* creation myth they parallel Hœner and Lōdur, but elsewhere there is no connection. Vili and Ve are mentioned also in the account of Odin's protracted absence when he is feared lost and they assumed his duties and privileges (including that of his wife, Frigga) which, as Odin's full brothers, was their right. They are mentioned again when Loki brought up Frigga's relations with them at Ægir's banquet. Some authorities interpret them merely as aspects of Odin.

Vinatā In Hindu mythology, the mother of Garuḍa and co-wife, with Kadrū, of Kaśyapa. The two wives disputed about the color of the sun's horses and agreed that whichever was wrong would become the slave of the other. Kadrū won the dispute by deception, since she had her children, the snakes (nāgas), darken the horses by covering them with black venom. Thereafter Garuḍa became the implacable enemy of all serpents.

violet One of many plants called *heart's-ease* in the doctrine of signatures. Many stories are told of the origin of the violet. The most common is that when Zeus was sporting with Io, a priestess of Hera, he heard Hera approaching. He had no time to hide Io so he turned her into a white heifer, and made the violets for her special food. In a Roman story, Venus, seeing a group of dancing maidens, asked Cupid which was more beautiful, the maidens or herself. He preferred the contours of the maidens so Venus beat them till they were purple,

and Cupid turned them into flowers. Legend also has it that the violet sprang from the blood of Attis and was used in his worship. In Christian legend the violet droops because the shadow of the Cross fell on it, and it is one of the many flowers dedicated to the Virgin.

In France, Napoleon was known to his followers as Corporal Violette, and the violet was their badge during his exile, hence it was forbidden during the restoration of the Bourbons and the Second Republic. In Germany violets are used to decorate the cradle and bridal bed. In England they guarded the living from emanations of the cemetery and were carried at funerals. In Yorkshire bringing less than a handful into the house will cause all the chicks and ducklings to die, but including a leaf counteracts the ill luck since the leaves are more potent.

Culpeper calls the violet an herb of Venus and recommends the dried petals for quinsy, epilepsy, jaundice, and complaints of the liver. The green leaves make a good poultice on swellings. Violet root was eaten for pleasant dreams, and a decoction was used as a foot bath; bound to the temples it induced sleep. The Greeks wore wreaths of violets to induce sleep, cure headache, assuage anger, and to comfort the heart. They are still used for acute inflammation and as a cure for cancer. Helvetius recommended dogtooth violets for the teeth.

violins and fiddles Names most commonly applied to the many lutes played with a bow, including primitive, Oriental, Islamic, and European types used as accompaniment to singing and dancing. The use of the bow for playing the lute arose before the 9th century A.D., probably from an Asiatic origin.

Many Oriental and Islamic fiddles are of the long-necked, pierced lute construction. The *hu chin* of China and much of the Far East has a long slender neck inserted in a small cylinder of bamboo covered at one end with snakeskin to form a soundboard. Its bow is not separate but threaded through the strings. The Japanese *kōkyū* is a three-stringed fiddle similar in appearance to the *samisen* and a century ago was often used in combination with the *samisen* and *koto* as accompaniment to song; more recently its place in the trio has been largely taken by the bamboo flute *shakuhachi*.

From Malaya and Bali to North Africa among Islamic peoples there is found a type of pierced fiddle (*ke-mantche* or *kamanga*) with a small body of skin-covered coconut shell or the like and a very long neck which protrudes at the lower end in a spike. The most primitive of these have only one or two strings. Various other bowed lutes of the Moslems are called *rebab*, including a short-necked slender instrument and a flat four-sided frame covered front and back with skin in the manner of a drum with a long neck. A one-stringed *rebab* of the latter type is used as accompaniment for epic recitations of public entertainers; a two-stringed version is a singer's instrument.

Several fiddles peculiar to India have short, broad necks and bodies of eccentric shape. Members of low castes play the *sarinda*, a round-backed instrument curved on the front edges into hook shapes and partially covered with a leather soundboard; it has three horse-hair strings. The *sarangi* of northern India is a heavy wooden fiddle, boxlike at the back and hourglass-shaped at the front. It has three or four bowed strings and many underlying sympathetic strings.

Fiddles entered Europe from the Byzantine area to the east and by Arab transmission through Spain. Bottle shapes, pear shapes, long, narrow shapes derived from the rebab, and waisted shapes made their appearance, and the names of the medieval instruments included *rebec*, *gigue*, *geige*, *lira*, *viele*, *viol*, *fydel*, *kit*. The viols became favorites of courtly music and, with several other types of fiddle, gradually fused by the 16th century into the classical violin family. More primitive instruments served the folk of Europe for their singing, dancing, and epic recitations, and have survived in use until recent years. Among these are the *gusla* of the south Slavs, which contributes the dry buzzing notes of its (usually) single string to the extended chant about old battles and heroes, and derives its horsehead ornament and horsehair and horsehide materials from some long-past background of an equestrian people; and the Norwegian *hardingfele*, a peasant fiddle with many underlying sympathetic strings, now disappearing as the favorite accompaniment to folk song and dance. In Hungary, especially, the Gypsies became noted as fiddlers and developed a characteristic rubato style of playing, with elaborate cadenzas, which, until the earlier style of Hungarian native music was uncovered by Bartók, was accepted as the national hallmark of Hungarian dance music. Gypsy fiddling has a high reputation as an aid to courtship.

In America the fiddle has been one of the chief instruments of the folk performer. Backwoods musicians have created homemade instruments ranging from the extreme crudity of garden gourds and cornstalks to handsome and pure-toned examples of the violin-maker's art. Many of the homemade fiddles preserve the long, slender, unwaisted or only slightly waisted shapes of medieval fiddles. One huge and earsplitting example called "the Devil's fiddle" was devised in New England as a part of the foolery of the charivari, skimmerton, or mock serenade. It consisted of a coffin-sized box, resined on the edges and bowed with a two-by-four plank.

Primitive fiddles are found today in Siberia, in the Philippines, in Java, Sumatra, and Borneo, in Africa, among the North American Apaches and the Indians of the South American Chaco, in the Nicobar Islands, among the Lushai, among Mexican Indians, etc. These are either survivals of the early Oriental and Moslem types, with little change in construction or method of playing since the Middle Ages, or are more recent adaptations of European fiddles imported at the time of conquest. Among the Gilyak and the Assamese, primitive fiddles similar to the Chinese *hu chin* are but a stage beyond the musical bow. The homemade violins of the Mexican Seris, probably crude versions of Spanish importations, are narrow wooden boxes with one string wound over a peg thrust through and under an opening at the upper end, resembling the narrow rebecs.

The lore of the fiddle is extensive. Primarily it is a magic instrument. If you play the fiddle, you may summon almost any kind of being. If you dance to the fiddling of an unknown performer, your soul may be in danger. In American belief, both New England and southern Negro, the Devil is the master fiddler, as he is in the European beliefs reflected by the Walpurgisnacht of *Faust* and in the *Histoire du Soldat* of Stravinsky. To learn to play it, you trade your soul to the Devil, whom you may meet in all his brimstone and pitchfork character at the crossroads at midnight, or as a polished and

ingratiating gentleman. When you play the fiddle, you are communicating directly with him. Confessed witches deliberately dance to his playing; the unsuspecting maiden who dances with others to the playing of an unidentified black man or a sinister but handsome man in a black cape will find at the end of the dance that she has unwittingly become a witch. On the American frontier the voice of the fiddle would summon help when no other sound could. The entrance of a fiddler into a community was the signal for a shindig, a square dance, or a fiddling contest, and for the disapproval of the church, because the fiddle was one of the instruments of sin, leading the righteous to the paths of Satan.

In European folklore the fiddle is magic, too (D1233). It is one of the instruments to which fairies dance, and mortals who join them are bewitched. It may cause uncontrollable dancing among those who hear it (Grimm #110). It may summon a dwarf or call animals (Grimm #8). In New England also, animals come to its playing, as in the tale of the fiddler who played in the woods and found himself surrounded by wolves. The fiddle may restore the dead to life; it may play of its own accord; it may play a man out of prison; and it may, like other instruments, be the means of revealing a murder, as in some 'versions of *Binnorie*. See FIDDLIN' TUNES; GUSLA; LUTE. [TCB]

vira A folk dance of Portugal. In sunny Minho province, northern Portugal, the dancers bear themselves proudly, as in adjacent Spain, their heads and arms held high. With a smooth waltz or *pas de basque* they sway and leap to the strains of a bagpipe, click their fingers, and the heels of their mules. The longways formations for four couples are simple, alternate reeling of partners and opposites down the line, with full embroidered skirts a-whirl. The charm of the dance consists in the gradual building up of movement intensity and the decrease at the end of the dance. This is called the *vira extrapassado* (progressive turning dance).

In Lisbon the posture and vitality have deteriorated. This citified version is danced in a circle by two couples, with *pas de basque* and skipping steps. Fingers are clicked on the first beat of the quick waltz time. This *vira* displays a characteristically Portuguese fusion of French quadrille and Spanish gesture. The *vira corrido* of the province of Beira, on the other hand, is a simple running round dance, arms curved slightly above shoulder level. [GPK]

Virabhadra In Hindu mythology, an emanation of or the son of Śiva, created as a "form of his anger," to stop Daksha's sacrifice. Virabhadra has a thousand heads and feet, is shining and fierce, and decorated with the crescent moon. He is represented at Elephanta as a fierce-faced, tusked image, probably Bhairava.

Viracocha The supreme god and creator of the Incas of Peru. His complete name was Con-Ticci-Viracochapachayachac: literally, the ancient foundation, lord, and instructor of the world. He made the earth, the stars, the sky, and mankind. But it was very dark. He destroyed the first people (giants) by a flood and then created new and better men. Like the culture hero of all primitive peoples, he wandered across Peru establishing social and moral order, teaching the people agriculture and the useful arts, and establishing languages and songs. His wanderings were marked by many miracles and

transformations. He gave the new world light by bidding the sun and the moon to rise into being out of the Island of Titicaca. Finally he disappeared toward the west, promising to return in some distant future. He was worshipped in Cuzco and in the famous temple of Cacha near the Inca capital. The name Viracocha was given by the Peruvian Indians to their Spanish conquerors. See DELUGE. [AM]

virginity The reports of virgin goddesses who produced numerous children on Mt. Olympus and elsewhere have been a cause of considerable confusion. The reason for the confusion is the ambiguity, linguistic as well as ethnographic of the term "virginity." Whereas in modern Euro-American cultures the term virgin refers, except in Catholic theory, to a female with unruptured hymen, in other cultures it may refer to an unmarried woman even though she be a prostitute, or to a married woman who has had no children. This ambiguity in the concept of what a virgin is has led to further ambiguities in the reports of observers who have not informed themselves as to which theory of virginity is accepted by the culture they are describing.

The Greek Artemis, symbol of fierce virginity, was too modest to approach Endymion while he was awake, but nevertheless arranged that he become the father of her fifty daughters; and the priestesses of the Roman Vesta whose virginity was strictly guarded referred to her as the Mother Goddess and used phalli as ritual objects. Children of unmarried mothers in Greece were regularly referred to as born of virgins, and, although conclusions about the Ægean cultures must be cautious, it seems probable that the goddesses in the Ægean cult-centers taken over by the Greeks were thought of as virgins in the sense that they were unmarried though not inexperienced. Similarly, though the Babylonian Ishtar, who had among her other attributes that of love and procreation, was at one time the goddess of the morning star and wife of the moon god, she was generally referred to as the Holy Virgin and the Virgin Mother. She was also referred to as the "prostitute" and in a hymn says of herself that she is a compassionate prostitute. The women who prostituted themselves in her temples were also called virgins. The Brythonic moon goddess Arianrhod had children and indulged in scandalous amours. The Valkyries who entertained the heroes in Valhalla were virgins and were forbidden to marry. De Groot reports from Amoy, China, that the virgin goddess there is the patroness of prostitutes. Priestesses in Tahiti were greatly respected though not strictly guarded. Temple prostitutes, whether appointed to serve the god, the priests, or strangers, were somewhat ambiguously called virgins. The reports refer to the Akamba, the Uganda, Mexico, Peru. Pausanias was somewhat amazed to note that at Sicyon the priestesses of Aphrodite were vowed to chastity.

Even with these ambiguities of the term "virgin" in mind, it is somewhat difficult to interpret reports about people who put great value on "virginity." In China, particularly North China, the term refers to the intact membrane. The wedding sheets are proudly displayed the morning after marriage. In one instance a little girl who ruptured her membrane by falling on a stone was a subject of great concern to the entire village. The stone was carefully wrapped up and the village scholar wrote

an account of the accident which was to be delivered to her husband. Hesiod shrewdly advised his younger brother in terms not unknown in modern cultures to marry a virgin so that he could train her up the way she should go. The king of Uganda would have been incensed if a girl not a virgin had been offered him as a bride, but she was by royal order deflowered by proxy. The Nigerian tribes "attach considerable importance" to bridal virginity but are indifferent to later behavior. Because some of the élite of California Indian tribes demanded a high bride price, observers have concluded that they were chaste and respected virginity, but other observers have suggested that infant betrothal was for the purpose of assuring husbands that their fiancées were at that moment virgins. The protection of the virginity of the women of the upper Amazon is, according to one observer, excessive because of the eunuchoid quality of the males. G. Brown has reported after a careful investigation that in some Samoan villages there was exactly one virgin to a village. She was being saved for marriage to a chief. Stories about the lengths to which women have gone in order to protect their virginity are legion, but to become understandable need to be interpreted in terms of the cultures which produced the stories.

Other cultures, the Naga tribes of Manipur, for example, regard virginity as a disgraceful state. A report from Portugal explains that girls in a village near Lisbon who reached the age of sixteen without having become pregnant were objects of ridicule and took any lover who approached them. As soon as the girl became pregnant the man who assumed that he was the father married her. Granet has reported a similar situation in the festivals of ancient China. The Dené Indians thought that sexual intercourse was necessary to induce the menstrual flow. The Thonga of South Africa believe that a girl who refused sexual advances must be deformed. Among the Nigerian tribes the bride price of a woman who has already borne a child is higher than the bride price of a virgin, an attitude common among peoples who regard the purpose of marriage to be the production of offspring rather than the release of passion. Consideration for the needs of the individual, however, is shown in the Burmese code which instructs that persons who have not been given in marriage by their sixteenth year are not at fault if they indulge in sexual acts. In a Chinese folktale the master of a household accuses himself of negligence when one of his female servants becomes promiscuous because at the age of sixteen she had not been supplied with a husband.

A considerable spiritual potency is thought to reside in that type of virgin who might be defined as *virgo intacta*. Thus in the Middle Ages only a virgin could tame a unicorn. In many cults—the Vestal of Greece, the cult of Brigit in Kildare, and others—the sacred fires were guarded only by virgins. Briffault suggests that the custom of reserving a virgin for the tribal chiefs in Polynesia arose because the chiefs, endowed with extraordinary spiritual potency, could combat the magic which virgins contain. Among the Algonquians during epidemics a complicated ceremony was performed in which a young man went through a ritual death and was revived by five virgins.

The emotional and spiritual forces produced by continence are no doubt important in an examination of

the folklore of virginity. Some of the medieval churches required that persons who took communion must be chaste for a stated period before they performed the mystery. In other places continence for periods of 24 hours to several weeks was required before religious ceremonies were performed, and in many of these the ceremony was concluded by a sexual orgy.

Some of the peoples who believe that virginity is lost only when a child is born have odd views as to the mechanics of conception. Whether the Australian aborigines are aware of the relation between conception and the sexual act has been debated with heat. The Aruntas (Australian) and other peoples believe that conception occurs when a spirit seeking rebirth enters a woman. The African Hausa believe that pregnancy occurs when a woman has sat on a spot made warm by a man. Mongol and Tartaric tribes are inaccurately reported to believe that conception occurs by divine interference, a doctrine which has been announced by numerous mothers of the Euro-American culture. Eberhard has a list, which might be greatly enlarged, of extraordinary pregnancies in Chinese folktales. They result from bathing, swallowing an egg, mists, and the like. Belief in immaculate conception, which may be similar to the theory of pregnancy occurring when a soul wishes to be reborn, has been reported of Aztec divinities, North American Indians, national heroes of Paraguay, the Bushmen, Ainu, Samoans, Banks Islanders, Tibetan and Siamese saints. The Greek view—that woman is merely the host in which the child produced by the male is stored until parturition—is well known. See MAGICAL IMPREGNATION.

The Catholic doctrine is that virginity is "reverence for bodily integrity" which is suggested by a virtuous motive. Thus God miraculously preserved the bodily integrity of the Blessed Virgin Mary during and after her childbirth. Virginity implies absence of all voluntary delectation either in lust or marriage. Virginity is not destroyed by every act against the sixth or ninth commandment and goes farther than a mere protection of bodily integrity. Virginity is a great victory over the lower appetites. The Catholic doctrine further teaches that the perfect integrity of the body, enhanced by perpetual chastity, produces a likeness to Christ and the angels, and, according to St. Thomas Aquinas, entitles the virgin to one of the three aureolæ or rewards. Sexual pleasure voluntarily and completely experienced destroys virginity so that even God cannot restore it, though the right to the aureola may be restored after an incomplete fault or failure in resolution. [RDJ]

✍ Virginity enters only infrequently into American Indian tales, except for those concerned with virgin births. The Cree, Ojibwa, Blackfoot, and Cheyenne, all Algonquian-speaking tribes, have trickster stories concerning virgins, of the type in which Trickster's prank is paid back; the virgins, when tricked into intercourse, either wear out Trickster or are appropriated by other characters for their pleasure. In certain Woodlands, Southwestern, and Eskimo tales a virgin is imprisoned in order that she will not be impregnated.

Virginity was emphasized in certain American Indian religious ceremonies; the chief female dancer in a Crow Indian Sun Dance had to be a virgin, for example: this in a tribe where premarital sexual experience for girls seems to have been the usual rule. [EWV]

Virgin Mary The legends about Mary, the mother of Jesus, are many of them beautiful; all of them are interesting; and a few of them inspiring. We are indebted mainly to one collection of books, the *Protevangelium of James*, for most of the early legends about Mary; later tales are largely expansions, dramatizations, and embroideries, together with incorporations from local folklore. There was an early apocryphal infancy gospel with which the name of Thomas was connected. In the 2nd century A.D. some unknown person evidently took that *Gospel of Thomas*, removed parts, mostly speeches, and on its skeleton built up the *Book of James* by adding a number of legends about Mary's parents, childhood, and motherhood. This book was popular in the East but was little known in the West until Guillaume Postel introduced it into Europe in the 16th century and gave it the name *Protevangelium* (First Gospel). By that time it had a number of additions, and it is now practically impossible to unravel the strands in its fabric. Much of the religious folklore of the Middle Ages is indebted in one way or another to it: for instance, it was the basis of the *Golden Legend* of the 13th century. [CFP]

✍ Medieval European religious folktale is full of episodes in which the Virgin Mary substitutes for a mortal (K1841): a knight lingered so long at mass that he missed his engagement in a tournament; the Virgin Mary took his place (K1841.2); Mary substituted herself for a woman whose husband had pledged her to the Devil; at sight of the Virgin Mary the Devil fled (K1841.3). The story of the nun who saw the world (K1841.1) is probably the most famous and widespread of these. Mary took the place of the romantic young nun for years while she lived a life of sin; her own grief and despair were the only punishment she received; when, heartbroken, she crept back into the convent she took her own place without ever having been missed.

There are six stories in the *Catalogue of Romances in the Dept. of Manuscripts in the British Museum* describing how the image of the Virgin Mary miraculously prevents some foolish nun from deserting the convent (V265). The Virgin Mary rescues a child from the Devil (S251); she retards death to save a sinner's soul (V251); a tree bows down to help the Virgin Mary in childbirth (D1648.2.1); the statue of the Virgin Mary sews for a suppliant (D1620.1.4); or it bows to indicate favor (D1622.2). There are stories also of the Virgin Mary protecting illicit lovers (T401); and comforting repentant criminals (V275).

There is an Irish story about the Virgin Mary asking a tinker to make a pin for her; she needed a pin for her cloak one windy day. The tinker refused, but the smith made her the pin. Mary's remark, "The weariness of the smiths is on the tinkers," is given as reason why tinkers are always poor. Once during a drought the Virgin Mary saw a poor man sprinkling water out of a bucket on his crops; the next day it rained. Any fire which has a cast of potatoes on it lights well, because the Virgin Mary was once allowed to cook potatoes in that way in a house to which she came.

Virgo The Virgin or Maiden: a constellation, sixth sign of the zodiac between Leo and Libra, containing the brilliant star Spica. Virgo is figured as a girl dressed in flowing robes, carrying in her right hand a palm leaf, and in her left an ear of wheat (Latin *spica*, represented

by the star). All over the world, from earliest times, the constellation has been identified with the harvest maiden (Persephone, etc.) or the fertility goddess (Ishtar, etc.). Always the constellation is named for some prominent goddess; it was for example Belit in ancient Assyria. Christian star-cataloguers identified it with the Virgin Mary holding the Christ child. One interesting speculation, completely untrue, was that the Sphinx at Gizeh was a representation of Virgo's head on Leo's body, since the Nile floods occurred when these constellations were ascendant. The early Chinese called it the Serpent or the Quail's Tail; later, under Western influence, it came to be known as the Frigid Maiden.

viser (plural *viser*) The common Danish name for a folk narrative song or ballad. See BALLAD.

Vishṇu One of the three supreme gods of Hinduism; the all-pervader and the most important of the solar deities; the supreme deity of the Vaiṣṇavas into whom have been incorporated some of the characteristics of Indra and Prajāpati. Vishṇu lives in his heaven, Vaikunṭha, with his wife Lakshmi or Śrī. He is represented as a comely youth with four hands which hold the Panchajanya or conch shell, the *chakra* (wheel or sun disk), a club, and a lotus. On his breast are the jewel Kaustubha and the śrīvatsa mark. His bow (Sārṅga) and sword (Nandaka) are ever handy. His vehicle is the gigantic bird Garuḍa. Among his manifold titles are: Primeval Being, Lord of the Universe, Lord Creator and Generator of All, Lord of Sacred Wisdom, Lord of Waters, World Maintainer.

In the Vedas Vishṇu occupied a subordinate position but was occasionally associated with Indra. In the *Rig-Veda* he is described as encompassing the universe in three steps (earth, sky, space). The same feat, in Brāhmaṇic mythology, is performed by Vāmana, the dwarf avatar of Vishṇu, in order to recover the earth from the demons. During the period of the *Brāhmaṇas* Vishṇu acquired new attributes and, in the *Purāṇas*, he became the second member of the Hindu triad (*Trimūrti*). As such he is self-existent and the embodiment of mercy and goodness. In this guise he was associated with the primordial waters as *Nārāyaṇa*, "moving in the waters."

His preserving and restoring powers have been manifested in his avatars or incarnations in which a part of his divine essence has been incorporated in a human or supernatural form. These incarnations were effected in order to correct some great evil in the world such as the presence of the demon Rāvaṇa. Generally the avatars are ten in number; in the *Bhāgavata Purāṇa* they are 22, or innumerable. See AVATAR. In the boar and tortoise avatars he raised the earth from the bottom of the ocean. His most important incarnations are those of Rāma and Kṛishṇa. Vishṇu had no children in his non-avatar condition, but divided his essence into male and female. The former descended into Rāma and Kṛishṇa, the latter into Sītā and Rādhā.

The worship of Vishṇu, especially in the forms of Rāma and Kṛishṇa, is widespread in India. The early worship of Kṛishṇa-Vāsudeva gave rise to the Jain doctrine of the nine Vāsudevas, nine Balādevas, and the nine Prativāsudevas. The later worship of Kṛishṇa and Rāma has continued as the prevailing forms of popular Vaiṣṇavism. This term is applied to the sect whose

members worship Viṣṇu as the supreme god of the Hindu triad. See ADITI; ANANTA; AQUILA; BRAHMĀ; CHURNING OF THE OCEAN; CYMBALS.

Viśvakarma or **Viśvakarman** In Vedic mythology, originally the epithet of a powerful god such as Sūrya or Indra; later, the name of an independent creator-god, identified with Prajāpati and described as having eyes, faces, arms, and feet on every side. He produces heaven and earth, gives the gods their names, and is beyond the understanding of mortals. In post-Vedic myth he is the artificer and architect of the gods, assuming the powers of Tvashtri. He revealed the science of architecture, formed the chariots of the gods, built the assembly hall of Yudhiṣṭhira, the city of Indra, Lankā (city of the Rākshasas), and Chandrapura, city of the king of the Vidyādharas. He made the image of Jagannātha and generated the ape Nala who built Rāma's bridge. When his daughter Saṅjñā was unable to endure the splendor of her husband the sun, Viśvakarma cut away an eighth of his brilliance and from the fragments made Śiva's trident, Viṣṇu's discus, and the weapons of the other gods. In the Central Provinces masons worship Viśvakarma and at four annual festivals revere the book on architecture which they use as well as the tools of their trade.

Vivien or **Vivian** The name given by Tennyson and Matthew Arnold (*Tristram and Iseult*) to the enchantress who beguiled Merlin in the forest of Broceliande. This story has doubtless been influenced by the common medieval tradition about the susceptibility of wise old men (Aristotle, Vergil, Hippocrates) to female charms. The name of Merlin's enchantress appears in the French manuscripts in many forms and in Caxton's edition of *Book of Arthur* as Nyneue or Nymue. She was identified with the Lady of the Lake, who appears in sympathetic roles as the protectress of Arthur and the foster mother of the child Lancelot. According to the *Huth Merlin* (condensed by Malory, Bk. II, ch. 5), she is the lady who came riding at a great pace on a white palfrey into Arthur's hall, and this leads us to identify her with the fairy lady Rhiannon in the first of the *Mabinogion*, who rode past Pwyll and his courtiers on a white horse of preternatural swiftness. Rhiannon means "Great Queen" and was presumably a divine title. Thus we have, as in the case of Morgan le Fay, a clear example of the evolution of a Celtic goddess into a medieval enchantress. [RSL]

Vodū Dahomean Negro term for deity. This word is the one from which the *vaudou* of Haiti, the name of the African *vodun* cult of the peasants of that island, has been derived. See VODUN. [MJH]

vodun or **voodoo** This term, for most persons in the United States, carries a vague connotation of exotic rites and magical practices. Both *voodoo* and *hoodoo* are derived from the word *vodun*, as far as can be ascertained. This word was introduced into the United States by Haitian Negroes who were brought to Louisiana when the French were evicted from that island during the latter part of the 18th and the early years of the 19th century by the slave uprisings that eventuated in the establishment of the Haitian Republic. In Haiti, *vodun* (there spelled *vaudou*) is the name of the African-derived popular cults that comprise the religious belief-

systems of a large proportion of the people. Its origin, however, goes beyond Haiti, and can be very precisely traced to Dahomey, old French West Africa, where the word *vodũ* is used to designate the polytheistic deities worshipped by the Dahomeans. Why, in Haiti, the word for "deity" of this particular language should have become the term for the total non-European belief-system cannot be said. However, since it is known that many Dahomeans were imported into Haiti as slaves and the impress of Dahomey is strong on all African retentions of Haiti, it may be assumed that numerical strength and the tradition of discipline and organization that the Dahomeans brought as a part of their African heritage adequately explain their primacy among the Negroes of the island. The complexity of the vodun cult of Haiti precludes listing its numerous deities, while the many aspects of its theology that have been recorded are such that book-length exposition has been found necessary to do justice to this belief-system. The American word hoodoo is used in the southern United States to signify an evil force and, as used in the term *hoodoo man*, means practitioner of magic. The common use of the word *voodoo* to designate any New World African-derived Negro rite, found in popular and travel literature, is obviously incorrect. See PÉTRO; RADA.

M. J. HERSKOVITS

voladores Literally, flyers: the Mexican flying pole dance, a spectacular and acrobatic feat. Centuries before the Conquest Aztec dancers flew from a pole, four of them, dressed as eagles or macaws, the sun-dedicated birds. Today the dance has survived in the mountains of the states of Puebla and Veracruz, in Hidalgo, San Luis Potosí, and the highlands of Guatemala. The Huastecs dress as sparrow hawks, and call their performance *la danza del gavilán*. The Otomí, Aztecs, and Totonacs wear a fan of feathers on their cone-shaped hats, but red trousers, sometimes over an ordinary pair, and bandoliers across their shoulders, on their feet sandals or store shoes. They keep time with a rattle in their right hands and wave a scarf in the left while "flying."

Ritual associations continue, especially among the Totonac who observe continence. The cutting of the 70-80-foot tree for a pole is attended by a prayer to the spirit of the trees, and sometimes a dance. The installation includes a food sacrifice to the pole, in the form of a turkey, cooked or live hen, maize, brandy, cigarettes. The pole is wound with ropes in a special way, raised amid ceremony, and fortified with stakes and stones. Every day, sometimes twice a day during a fiesta, the flyers first dance around the pole with their musician and his flute and tabor. Traditionally there are four, but the Otomí prefer six, including a man-woman, Malinche. They climb up a rope ladder and seat themselves on a small framework near the top, while each in turn dances on a two-foot central platform, each to two tunes, but Malinche to four. During the flight songs they launch themselves into space with ropes tied around their waists and descend head down in 13 ever-widening circles till they reach the ground and land skilfully on their feet. The musician often performs special acrobatics, leaning back in an arc as he sits on the platform, or jumping or pirouetting as he salutes the four directions. He may slide down one of the ropes amid acclaim.

There are regional variants, in numbers, costumes,

and forms. The *tocotines* of Papantla, Veracruz, weave a dancing chain seven times around the pole before ascending. Their flight climaxes a series of elaborate dances by the Quetzales, Negritos, and Santiagos. The voladores of Chila, Puebla, dance in a procession which winds up in the church; here they dance simultaneously with the Santiaguitos, the voladores circling with a toe-heel step. Malinche, in pink skirt and necklace, runs back and forth with a pendulum motion. Everywhere the dancers and musicians are greatly admired for their skill and courage, and many fliers continue for decades. Sometimes, however, the pole breaks or a dancer falls from the pole because of too much *aguardiente*. Because of the danger, the dance has been banned in many communities.

The meaning has faded into the past. Some old men remember the voladores as the sacred birds that guarded the points of the compass, others as messengers from the sun. Allusions to the ancient calendar are still evident in the number symbolism: the 13 revolutions of four flyers, making 52, the number of years in the Aztec cycle. The vestiges of tradition, the imitation of birds in the flight, and the scraping step connect the ceremony with sun, rain, and their beneficial effect on vegetation. The ceremony is now interwoven with Catholic festivals, and takes place on the saint's day of the village, during Holy Week, or on Corpus Christi. The dance and the melodies are certainly native, though the one-man flute and tabor recall a similar European medieval combination. The costume has modern touches, however. In fact, this breath-taking spectacle remains as one of Mexico's few completely Indian ceremonies. [GPK]

Volla The Thuringian name for the golden-haired goddess of the fullness of the earth, sister of Fría or Frigga. She was sometimes called Vol in other parts of Germany and is an early form of Abundia: same as FULLA.

Volsung The great hero of Teutonic legend who gave his name to a race of warriors. His father was a kinsman of Odin, King Rerir, long childless, into whose lap Gna (messenger of Frigga) dropped the miraculous apple of fruitfulness. Rerir gave the apple to his wife to eat, and in due time, the coveted son, Volsung, was born. The young Volsung became king at an early age, grew great in strength, prowess, and wealth, and begat nine sons and one daughter. Through the floor of his great hall grew the oak, Branstock, into which Odin himself thrust the sword named Gram, declaring to the people that the sword belonged to the hero who could pull it out, and that it would give him unfailing victory. Sigmund alone, youngest son of Volsung, was able to withdraw it. Siggeir, king of the Goths, who had wedded Volsung's daughter Signy, coveted this miraculous sword. He issued a treacherous invitation to Volsung and his sons to visit him and outnumbered them in the encounter as they arrived and approached his castle. Volsung himself was killed; the sword was taken from Sigmund; and the nine brothers were chained to an oak tree in the forest where one by one they were devoured by a wild beast. Sigmund alone survived. Signy, bent on revenge, managed to slip away from Siggeir's castle and visit Sigmund in the forest. From their incestuous union, Sinfjotli was born, last of the heroic, royal race of Volsungs.

The exploits of Volsung and his family form the

second or poetic portion of the *Elder Edda*. Many later works have been based on these lays, notably the great Scandinavian *Volsunga Saga*, the German *Nibelungenlied*, and Wagner's opera cycle, *The Ring of the Nibelungs*. See SIGMUND; SIGURD.

Völuspá A poem in the Icelandic *Poetic Edda*.

Vo sadu li v ogorode "In the orchard, in the garden": a Russian couple dance which derives its name from the opening words of the accompanying song. Further words are "She was followed, she was haunted, By a handsome lover . . ." Both the dance and the tune show their origin in the elegant and restrained old Boyar dances of the Russian court. The girl offers one of a pair of fine kerchiefs to a man as a sign of favor and of choice for the dance. All couples move in a counter-clockwise circle of the Slavic type, gently swaying their arms and kerchiefs in and out, forward and back, with gliding polka steps and push steps (left up to right with a cut), and finish with a buzz pivot. The kerchief is a frequent courtship symbol, either swayed as in *vo sadu* and the Chilean *cueca*, or held between the dancers, as in the Moravian *šateček*. [GHK]

Votjak or **Udmurt** A Finno-Ugric people, about 530,300 in 1920, living mostly in the districts of Kazan, Vjatka, and Perm. Inmar is their god of heaven (compare ILMARINEN of the Finns). His mother or wife is Kildisin-mummy, mother of the procreating Heaven. A white sheep is sacrificed to her at the birth of a child. The word for mother is used with the names of many nature deities (see MUMY); other deities are tied up with the word for man (see MURT; VU-MURT). The sanctuary of the family or many families is *kua* or *kuala* (see Harva in *FUF* XXII, 1934, pp. 146-54). Sacrificial groves, *lud*, are surrounded with fences. The offering table is often placed at the foot of some thick tree, under which the sacrificing priest reads his prayers. The night before Maundy Thursday is called "the wandering-night of the dead." This is the most remarkable memorial feast of all the Volga peoples. They believe that all the dead then move about, that after sunset they rise from their graves and walk to the villages. During this time the Votjak take many precautions. A cheerful feast with wedding songs and wedding presents, called the "horse-wedding" or "wedding of the dead," is a memorial feast in honor of particular persons. The sacrificial animal must be a horse for the deceased man, a cow, if the honored person is a woman. [JB]

Vourukasha In Persian mythology, the sea; also, the sea deity; also, the heavenly lake whose waters supply the world and in the middle of which grows the Tree of Life.

Vulcan, Vulcanus, or Volcanus In ancient Roman religion, the fearsome god of destroying fire, e.g. of volcanic fire: his late classical identification with the Greek

Hephæstus is therefore misleading, since Hephæstus was a kindly god and an aider of mankind whereas Vulcan was disliked and was not at all the divine smith. His Etruscan name was Sethlans. Vulcan's festival was the Volcanalia, August 23, the dry month when destructive forest fires might be expected and when the stored grain was in danger of burning. See for example the prominence of his cult at Ostia, Rome's principal storehouse of grain. His epithet Mulciber, literally the melter, may come from the root meaning to soothe, to appease, and thus be a euphemism to divert his wrath somewhat as the festival might be expected to. At the Volcanalia the flamen Volcanis performed a sacrifice, and small fish, caught in the Tiber, were burned by heads of families. See HEPHAESTUS.

vulnerable spot A world-wide folktale motif, often called the Achilles heel motif from the legend that Achilles was invulnerable except in his heel. This invulnerable except in one spot motif (Z31i) occurs in folktale, song, and legend from Ireland and Siberia to the Zulus in South Africa. The vulnerable spot varies, however. Siegfried was vulnerable in one spot between the shoulders where a leaf fell upon him in his bath of dragon's blood. In the story "King Chandamahesena and the Asura's Daughter" in the *Kathā Sarit Sāgara*, the powerful Daitya was vulnerable only in the left hand. In the *Mahābhārata*, Krishna, vulnerable only in the sole of one foot, was killed by an arrow shot by Jarā. Ajax too was invulnerable from having been wrapped in the invulnerable skin of the Nemean lion, except for one spot which the skin did not touch.

The one vulnerable spot is a common and widespread concept also among North American Indians. The White Mountain Apache hero, Metal Old Man, was invulnerable except for one spot under his armpit. In a Black-foot Indian story, Bear-Woman, while in her bear shape, was vulnerable only in the head. The idea carries over also to animals. One of the creation myths of the Yana Indians tells about the wicked Gowila, vulnerable only in the little toe, who had a big dog also vulnerable only in the little toe. The burlesqued *Dragon of Wantley* in Percy's *Reliques of Ancient English Poetry* was invulnerable except for a certain place in his rear end.

Vu-murt The Man of the Water; Votjak water deity. He is naked and has long black hair. He often places himself on the bank of the river and combs his hair. Sometimes he appears as a naked woman. Both male and female water deities fear man and hide themselves in the water. Vu-murt is an evil being and it is a bad omen if one meets him. But he can be helpful to fishers and millers, therefore sacrifices are offered to him. The worship of water by the Votjaks has the following purposes: to get rain, secure fertility of man and animals, avoid diseases, and secure good luck at fishing.

W

Wabosso White Hare, or Maker of White: one of the three brothers of the Algonquian creator-culture-hero-trickster, Nanabozho. See HARE. [EWV]

waienqe The Iroquois Indian stick-striking dance. Some claim that it is the true old fighting dance, while *wasáse* was originally a rain dance. Like *wasáse*, it is now both a curing rite performed at Midwinter and a weather rite in July, as *en'í'dj'i*, the sun rite. The choreography is, however, quite different. In two parallel lines, face to face, the dancers advance toward each other and retreat, then cross over, with a double thump on each foot. Formerly it was a men's dance, with actual striking of sticks. Nowadays, without sticks, women may join in at Midwinter, using the women's *eskánye* step when in place, and a springy walk while crossing. Both water drum and rattle are played by the two singers. See SUN DANCE; WASÁSE. [GPK]

wairu or **guairo** The astragalus of a ruminant which is used by modern Quechua Indians of Peru and Bolivia as a die to gamble for the belongings of a deceased person during a vigil. The game is very similar to the popular *taba* played by the Argentine gauchos. [AM]

waits Christmas street carolers: formerly, the musicians who played and sang in the streets at night or at dawn. The waits at one time were regular watchmen who "sounded off" four (during the summer, three) times a night to indicate that all was well.

waiung-arree The circumcision ceremonial of the tribes of Broome and other parts of western and central Australia. The boys, who are initiated in groups, are each accompanied and prepared by a brother-in-law to be, and by a group of men in the higher stages of initiation. These last have their legs sprinkled with blood and are painted in weird designs of blood and down; the initiates are anointed with fat, charcoal, and red ocher. The climactic event is the *wallang-arree* dance performed in a double circle with spear and spear-thrower. In succession each neophyte and his attendants make a circle and form coils, without intermingling. The men then stack up in human piles with the *balgai* (initiates) on top. In the *moorooboy*n alternate rows go in opposite concentric directions. Women dance on the outskirts, and are in fact tabu during the ceremony. The next day the actual circumcision rituals are followed by seclusion of the boys. At the final ceremony the boys fall from a gum tree into the lap of a man in the high stage of initiation, and form again a human pile. These rites hark back to dream time, when men and birds were the same. See ALCHERA. A dream song is sung throughout the ceremony. [GPK]

wakan, wakanda Sioux Indian term for supernatural power, applied to specific objects; as, a "wakanda sword," meaning a very sharp sword. See MANITU; ORENDA. [EWV]

waka t'ogori The bullfighting dance of the Aymara Indians of Bolivia. The central figure wears a special

poncho and a hide-covered frame representing a bull. Others, called *Negros*, wear black masks and carry swords and timbrel rattles. They turn round and round and then unwind; they shake the sword and timbrel in the direction of the bull, who rocks back and forth. A *tinticaballo* (hobbyhorse) cavorts back and forth. This mild play is accompanied by two men playing a snare drum with the right hand and with the left a *pusipia*, or four-holed flute. They wear the same vests of jaguar skin and parrot feathers as the *q'ena q'ena* dancers. The bull motif is natural, Spanish, as in similar Mexican dances of *toritos*; but the paraphernalia and execution are Indian. This may be one of the many blends of imported motifs with indigenous animal hunting or sacrifice rituals. [GPK]

walichu Evil spirits and all evil supernatural influences among the Araucanian Indians of Chile and the Argentine Pampas. Formerly these Indians waged battles against the walichu to drive them away from their villages or camps to avert epidemics or bad luck. [AM]

walnut In classical Greece and Rome the stewed nuts were traditionally served at weddings as a symbol of fertility; but in Rumania today the bride who wishes to remain childless places in her bodice as many roasted walnuts as the number of years she wishes not to bear a child. After the ceremony she buries these nuts in the earth. An old Lithuanian myth says that during the great Flood God was eating walnuts, and the righteous who climbed into the empty shells were saved. In general European belief witches and evil spirits gather under walnut trees, yet dropping a walnut under the chair of a witch will root her to the spot. A walnut branch singed in the Easter Saturday fire and hung in the house will protect that house from lightning for an entire year.

The 17th century English physician, Nicholas Culpeper, called the walnut a tree of the sun and considered the nuts most effective in medicine if used before they formed shells. He recommended the green husks as a gargle, and to be put in hollow teeth to stop pain or in the ears for deafness. The oil from the kernels he regarded as good for colic and wind, the old meats to heal carbuncles, and in red wine to stop falling hair; the leaves distilled in water also he considered good for running sores. By the doctrine of signatures walnuts were universally recommended for any disease of the head: husks for the scalp, shells for the skull, meats for the brain. The English herbalist Turner, writing in 1551, recommended walnuts "for the bytings both of men and dogges." John Gerard, 16th century English herbalist, made it clear that he did not consider the use of spiders enclosed in walnut shells effective in medicine. In many parts of the United States a walnut, like the horse-chestnut, is often carried in the pocket as a preventive and cure for rheumatism.

The black walnut (*J. nigra*) is said in England to put a blight on all apple trees in the neighborhood. It is a common practice in Europe, and especially in the Medi-

terranean region, to beat the trees to make them bear big crops. In much of the rural United States black-walnut leaves are used to keep away ants and houseflies. The North American Meskwaki Indians used the inner bark of black walnut to make a strong physic, but were careful to give it only to those who could stand a potent dose. The inner bark was charred and placed on snake bites.

Walpurgis Night The night before May 1, originally dedicated to St. Walpurgia, an English nun of the 8th century who founded religious houses in Germany, but associated in German folklore especially with the witches' Sabbat on the Brocken. See SABBAT.

waltz A ballroom couple dance, usually in rapid $\frac{3}{4}$ time, always with pivoting. The fundamental step is forward right, forward left, close right; reverse. The Viennese waltz gyrates in rapid tempo with this step, and always to the right; the Boston slowly turns in alternate directions. There are many variations. The Pursuit waltz goes straight ahead. Waltzing in a square is effected by back right, side left, close right; forward left, side right, close left. The waltz-balance starts with a dip forward right, rise on ball of left, close in right. The Hesitation Waltz of Vernon and Irene Castle is a balance with the man dipping back, the woman forward. The French waltz progresses with hops, the Spanish waltz with a half-turn on each measure and cross-over of two couples. The Kashubian Polish waltz (*walc kaszubski*) combines sideward slides (two to each side) and waltzing for eight measures. The Rye Waltz is in two parts: 1) to duple time a point side, point in, side, in and sashay (slide) to side; 2) to triple time a turning waltz.

Folk dances of many nations use a waltz as fundamental step: the *Ländler*, *Lauterbach* (balance), *Neubayrische*, *kujawiak* (balance and regular). In these the arms are not always in a ballroom clinch, but swing freely and permit figures like "wringing the dishrag" in the *kujawiak*. The Venezuelan *joropo* heavily stamps the first beat of every measure. Mexican mestizo dances emphasize the heel with a lilt from side to side and with skirt manipulation. The *Chiapanecas* is a light-footed variant, to a *Ländler* tune introduced during the reign of Maximilian. New Mexico has several entertaining versions of the *vals*. In the *vals de la escoba* (broom), all couples stand in two lines, while an extra man waltzes down the center with a broom. As he snatches one of the girls, all of the men make a pell-mell dash for a partner. All waltz, the unfortunate partnerless man dancing with the broom. In the *vals de la silla*, the girl sits down in a chair as the couple passes it; she will not arise till her partner has offered a *bomba*, a complimentary verse. In the *vals de los paños* two sets of three stand face to face, the central boy holding the girls by two linking kerchiefs. They advance and retire, and then the girls dance under the arches of upraised arms.

The waltz is an Austrian peasant product, popular with the bourgeoisie and accepted by the Austrian court but not by the French court. Its origin in the 17th century is variously attributed to the *volta*, *Weller*, or *Ländler*. From the late 18th to the late 19th century its amorous embrace and mad whirling were passionately welcomed as a relief from the prim court dance. No censorship could squelch it. But the fire died naturally and gave way to the sentimentality of the 90's. Folk dances, however, retain the vigor lost in the ballroom.

Both musical and dance art have drawn inspiration from the waltz, some in the simple style of Mozart's *Deutsche Tänze*, some in multiple form, with introduction, six parts, conclusion, and programmatic content, as Johann Strauss' *Walzer*. The stage waltz combines swaying arm and body movement with elaborations of the step. The most ambitious art product has been Ravel's *La Valse*, choreographed by Doris Humphrey, with perception of the incipient eroticism and ecstasy and final decadence. [GPK]

Walum Olum Red painted stick record: the name used in reference to the Delaware Indian account of their origin and migration. This account was chanted, and red symbols painted on tally sticks were reputedly used as mnemonic devices during the recitation of the legend. The sticks and texts of the Walum Olum were given to Constantine Rafinesque, and the text, with translation and reproduction of the symbols on the sticks, was published by Squier and Davis, and by Daniel G. Brinton (*The Lenapé and Their Legends*, Philadelphia, 1885). Brinton translates Walum Olum as "red score," but there is some doubt that this is correct. The origin legend in the Walum Olum is a usual North American Indian story of primeval water, earth diving, the support of the world on the back of a turtle, and so forth; farther along the myth departs from the usual in that it lists, in a fairly systematic manner, the movements and wars of the Delaware (Lenape) Indians, and their successive chiefs. The account ends with a listing of historic Delaware Indian chiefs. Extensive research, the results of which are as yet unpublished, is now in progress on the historical, linguistic, and cultural background of this Delaware document. [EWV]

wampum Tubular or hollow cylindrical shell beads varying in length from 4 to 17 mm. and in thickness from 2 to 5 mm., probably used aboriginally by the Indians of the southeastern United States as one kind of repository of value; in post-Columbian times, used as money in transactions between Europeans and the Indians of the eastern United States. Wampum beads were also used as necklaces, wrist bands, to ornament clothing, and in the manufacture of belts which were used by messengers and chiefs to certify to the validity of, or to commemorate, speeches made and treaties signed.

The most common wampum beads are the white ones, made from several kinds of shells found along the eastern seacoast, but half-reddish, half-white, purple, and black wampum beads were also manufactured and used.

No descriptions of native methods used to drill the beads seem to be extant, and, because of the difficulties of manufacture, it was commonly assumed wampum and its use were the result of western European influence; however, in a recent article Slotkin and Schmitt cite documentary material which would seem to prove that it was also made and used in the Southeast prior to the advent of the whites (see J.S. Slotkin and Karl Schmitt, "Studies of Wampum," *AA* 51:223-236, 1949).

Wampum does not enter into the mythology of the North American Indians to any great extent, except that the eastern tribes, Algonquian, Iroquoian, and Muskegean, employ the motif of bead-spitting or jewels from spittle in several of their tales, and identify the beads that are spit as being wampum. The Wawenock of the northeastern Algonquian area narrated for Speck a text

on the origin and use of wampum; at Wawenock councils where shamans were present, every time a shaman drew upon the pipe he was smoking, wampum fell from his mouth. Shamans of medium power produced white wampum; shamans of the least power, half red and half white wampum; shamans of the most power, almost black wampum (Frank G. Speck, "Wawenock Myth Texts from Maine," *RBAE* 43:165-197, 1925-26, page 196). For a summary of the uses of wampum, especially in treaty belts, and the derivation of the name from the Algonquian *wampumpeak* or related forms, see the article on wampum by J.N.B. Hewitt in *Handbook of the American Indians*, *BBAE* 30, pt. 2, pp. 904-09, 1910. See BEAD-SPITTER AND THROW-AWAY. [JEW]

wanga Haitian Negro term for a charm that works evil magic. It is the opposite of a *garde*, a protective charm. Other types of Haitian charms are the *arrêt*, which also wards off specific forms of evil, and the *drogue*, that gives protection against universal forces falling in a given category, such as war or being arrested. The use of the term in the popular literature to signify all forms of Haitian magic is incorrect. [MJH]

wapaq Koryak term for the powerful spirits believed by them to be inherent in the fly agaric.

war dances Strictly speaking, war dances should intensify belligerent spirits previous to battle or should celebrate victory. Among American Indians they have lost their original function and have either transferred their purposes or become amorphous show pieces.

In many parts of the world, warriors still prepare for battle by miming combat, either as a duel for two opponents or as a group encounter. At times these may end in bloodshed, as among the Oraons of India. The Oraons, the Malayan Dyaks, and the Philippine Bontocs may also present these dances for entertainment, or in connection with weddings. The islanders carry shields and spears, the Oraons shake bows with metal jinglers.

In the Far East these combats have invaded the theater as deft sword play or spectacular and often acrobatic scenes. In the Japanese *kabuki* these scenes, termed *tatimawari*, are highly stylized. On the Chinese stage whole armies cavort at breakneck speed and somersault their vanquished exits, all to the din of gongs, catgut, and piercing flutes.

South American tribes anticipated battle with sham encounters, which are now rapidly becoming anachronistic: the Caingang, Parintintin, Bororo, Pariagoto. Their war dances often contained much mimic comedy, and usually terminated in feasts with sexual license and intoxication. The elaborate masked encounters of the Andes and Middle America have been lost, absorbed, or metamorphosed. The Inca *cachua* is a social dance; the Aztec *ochonchayocacalihua* for Huitzilopochtli has given way to *Moriscas*.

Throughout western North America, women had an important share in war dances. In the Rio Grande pueblos they still dress as men and burlesque the men in war regalia: in the Santa Clara *puwere* and San Ildefonso shield dance (*ti'di share*) executed with bow and arrow. In the Santa Clara *kwitara share* and San Juan *frase share* or "French" dance, the women turn from side to side in a straight line and the men wind in and out with their pistols, war clubs, and other weapons. In Acoma and Tesuque the steps and gestures are like those of

the corn dances, the men prancing, the women moving their arms up and down alternately or simultaneously. In so far as any significance is attached, these "war dances" are connected with rain, harvest, fertility, girls' initiations. Sometimes they show Plains influence in the men's headdress or the names of "Ute" or "Comanche" dance.

Though the Pueblos and Plains war societies performed ceremonies preliminary to raids, the mimic encounters were narrations of great deeds in connection with victory and scalp dances. The Papago shared these boasting scenes, and also the face-blackening and purification ceremonies and other victory dance features. In the Plains the war dance has become confused with the grass dance, eagle-calumet dance, and *iruska*. It is a composite of enactments from the warpath or hunt of old times, of show-off steps or hoop dancing. Along with the costume, the Sioux "war dance" is now displayed by the Chippewa, Sauk and Fox, Kiowa, and other Oklahoma tribes, and in the east the Cherokee and Iroquois. Chippewa war dancers progress in two concentric circles; Sauk and Fox victory dancers circle left. But the Oklahoma war dance is a free-for-all. The steps and gestures have intruded into the ceremonial thanksgiving and feather dances of the Iroquois (*ganeo'q* and *ostówegowa*), though these have nothing to do with war. The old time *wai'eonoe* is a sun rite; and the *wasdse* is a thunder rite or cure. Display for the white man includes Sioux steps, in the scalp dance or *ganeho*.

From India to Europe to the American Indian, the war dance has had fertility associations. The scalp dance not only rejoiced or avenged, but brought rain. Thus the Iroquois transference of functions is not far-fetched. Various separate articles explain this more in detail. See CALUMET DANCES; *Battle Mime and Moriscas* in DANCE, FOLK AND PRIMITIVE; GRASS DANCE; MORISCAS; PYRRHIC DANCE; SCALP DANCES; STICK DANCES; SWORD DANCES. [GPK]

wasase The Iroquois Indian men's war dance. Morgan described it as a fierce enactment of belligerent exploits. Today it has lost all ferocity and has replaced it by jump-hop steps *ad lib.* by a group of boys and men in the middle of the dance floor. Two singers, on a bench near the wall, intone ancient war songs or versions dating from the war of 1812. This serves two occasions—the Midwinter festival as a charm for communal welfare, and as thunder rite in time of drought. In fact, *wasdse* belongs to Hino, the thunderer.

Like *ganegwa'e*, its songs may be suddenly interrupted by someone striking the floor with a staff, declaiming a speech of praise or bantering insult, and distributing a gift, nowadays of cakes or coins—an echo of the Plains grass and calumet dances. There is a rumor of Sioux origin, but the steps show no influence from the Plains, resembling rather the False Face jump-hop. [GPK]

Washer of the Ford The apparition of a beautiful weeping maiden or ugly grimacing hag seen at a ford washing the bloody garments of the beholder: a death omen of ancient Celtic folklore. She usually turns and tells one that it is *his* garments she is washing. See CELTIC FOLKLORE; CUCHULAIN.

wasp Any of numerous predatory, slender-bodied hymenopterous insects of which the females and workers are provided with effective stings. Among some South American Indians, the wasp is a culture hero from whom

men learned pottery-making and house-building. The soul of the Siberian shaman sometimes takes the form of a wasp; in Mongolia, the shaman chooses this insect as the hiding place of his external soul. In sympathetic magic, the wasp figures prominently in French Guiana where young people are trained by their parents to endure the painful stings of ants and wasps with much the same hopes for them as cause the Indians of Vancouver Island to encourage their warriors going into battle to rub their faces with the ashes of burned wasps, namely, that in this way they will be rendered as pugnacious as these insects. In Morocco, if a woman wishes to have a boy child, she swallows a male wasp coated with honey; and it is the belief that a decoction made from wasps' nests will make barren women prolific. Mississippi Negroes use wasp stingers in various good luck charms and hands to make debtors pay up. Wasp stings are plastered with mud, snuff, or tobacco to ease the pain.

In folktale the wasp is both wise and cunning. A fable by the Roman Phædrus has the wasp sitting in tribunal as judge between drones and working bees in regard to honey collected by the bees to which the drones had pretensions. There is a general European story about Fox leading Bear into a wasp's nest to get honey (K1023; Type 49). Witches are sometimes detected by someone's seeing a wasp (her soul) reenter her body while she is asleep (G251.1); the fact that she cannot be awakened until the wasp returns proves that she is a witch (i.e. in wasp form she has been absent from her human body on her various evil errands). [GFS]

 *Why Is The Wasp the Gipsies' Bee?* is title of a Rumanian folktale translated by Moses Gaster in his *Rumanian Bird and Beast Stories*, PFLS 75, 1915, in which God made the bee first of all living creatures. The Gipsy was so eager to taste the honey that he took the bee out of God's hand, saying in return he would make candles from the wax for God's Church. God was angered by the Gipsy's forwardness; he said nothing, but created the wasp and gave it to the Rumanians. The Rumanians accepted the wasp and thanked God. When the Gipsy saw the wasp, he asked the Rumanian if his bee made much honey; the Rumanian said he brought it home in bagfuls. So the Gipsy wanted to exchange. The Rumanian was willing. He accepted the little hive full of bees and honey from the Gipsy and showed the Gipsy the wasps' nest in a big hollow tree, saying the tree was full of honey. When the Gipsy tried to collect the honey he was well stung for his trouble. Since then bees belong to the Rumanians; wasps belong to the Gipsies. In another version the Rumanian tells the Gipsy his big bees make gold instead of honey and induces the Gipsy to trade.

wasted food A grave and almost unforgivable sin in European folk belief. The sinfulness of wasting food is a concept rooted in a code probably as old as man himself. That destroying or wasting food is punishable by Heaven is demonstrated in the Tyrolese legend of Frau Hütt, who was turned to stone for doing so. Hans Christian Andersen has pointed out the vain young girl who laid the loaves of bread in the muck so that she might cross the road without soiling her shoes, and who immediately found herself unable to step away from the loaves which sank slowly under her feet, and continued to sink, gradually submerging her in the

muck until she was gone and forgotten. Warnings against wasting food are preserved in the more or less literary proverbs: Waste not, want not. Waste makes want. Wilful waste, woeful want. See BREAD.

water babies Small beings, often human in form, who inhabit springs, streams, lakes, and other bodies of water, not necessarily malevolent, but generally feared by the many American Indian groups whose folklore includes tales of encounters with such beings. Emphasis on folkloristic belief in water babies of various types is especially strong among the tribes of the Great Basin; a little man, a dwarf who pulls at fishermen's lines, an old woman who occupies a specific spring and is seen sometimes at dusk, are among the numerous sorts of "water babies" whose existence these groups believe in. Narrative material concerning them chiefly has to do with anecdotes of accidental encounters with them. See LITTLE PEOPLE. [EWV]

water drum A vessel partially filled with water and struck in the manner of a drum, generally for primitive curing and rain-making ceremonies. The Aztec type, still used by the Yaquis to accompany their deer dance, consists of a clay vessel of water on the surface of which a half gourd is held and struck with a muffled stick wrapped in corn husks. The *mitig'wakik*, or wooden kettle, of the Chippewa Midewiwin medicine society is a hollow log with a plug hole in one side, a wooden bottom, and a head of wet deerhide. Water in the cylinder can be let out through the side hole. It is played with drumsticks representing the loon or the owl, or sometimes simply a curved stick. See DRUM.

water of life In folktale the magic liquid that brings the dead to life, cures all illnesses, or bestows immortality. It appears in numerous quest tales, in which the hero is sent to get the water of life (E80) from a well, spring, lake, river, etc., at a great distance. Sometimes the motif is combined with the magic helpers motif: the far-sighted helper sees the king or princess dying; the long-stepping helper takes the water of life and brings life back to the expiring person. Drinks like ambrosia and soma which the gods imbibe to keep themselves eternally young are an extension of the idea. Belief in the water of life is so strong that it led explorers like Ponce de Leon to the New World to search for its source, the Fountain of Youth. But it is not limited to any time or area; numerous peoples all over the world have had belief in the water of life from ancient times. Perhaps the most ancient example of this belief appears in the Babylonian myth of Ishtar's descent to the underworld seeking Tammuz to restore him with the water of life. She, too, having once passed into the region of death, had to be sprinkled with the living water before she could return to the upper world. See ABANDONED WIFE.

Water Serpent The horned water serpent is a monster of considerable importance in the Pueblo pantheon, and a figure which appears also in Eastern Woodlands mythology. At Hopi, a dance is given in honor of the serpent; at Zuñi, he appears in the ceremony of initiating children. In the mythology of the Zuñi, and in daily references, the horned water serpent is more conspicuous than at Hopi, however. [EWV]

Wati Kutjara Literally, Two Men: also called *Men Iguana*, from their totem. They lived in the mythical

past and on their travels created trees, plants, animals, physiographic features, and ceremonial objects. Ceremonies now depict events in these travels. They are known to the tribes of central-western Australia in the Great Western Desert. See **PLEIADES**. [KL]

waulking A Hebridean type of song sung by women at group work on the shrinking and fulling of hand-woven textiles. The women sit face to face across a long table while the fabric is passed along from one to the next. The singing is begun by a leader, usually an old woman, who opens the theme and is followed by the rest in chorus. She continues with improvised phrases or lines, each repeated by the group in unison, until the leader has sung through all of her verses, punctuated by the group refrain. See **WORK SONGS**.

Wawilak Two creator sisters of the Australian Murngin, whose careers form the basis of four great totemic ceremonies lasting for months and focused around the *rites de passage* of an individual. The myths tell of the wanderings of the two sisters and their children after committing clan incest, and of their being swallowed by Yurlunggur, Great Python, for violating his pool. A flood forced him to regurgitate them but he swallowed them again. The last part of the myth concerns men learning the Wawilak ritual secrets from the women and using their blood and ritual paraphernalia. [KL]

wayang wong Dance drama of Java and Bali. The sequence of development from ancient times is: 1) *wayang topeng* (or *raket*), a masked magic rite, which today presents events in legend and political history, performed by two or three men in changing masks; 2) *wayang kulit* (shadow leather), named for the leather puppets silhouetted on a screen; 3) *wayang golek*, which used wooden puppets; 4) *wayang dalang*, with masked human actors; 5) *wayang wong* (shadow man), with unmasked human actor-dancers. In all forms which survive to this day, a *dalang* or operator speaks the lines while the actors pantomime. Sometimes the lines are improvised.

The motions are two-dimensional and puppet-like, but in Bali the style is more vivacious, and the impassive facial expression becomes more animated. A special style is dictated for the various characters: 1) the gentle dance for women, who are in Djokja, Java, enacted by men but in Solo by women; 2) the lyric style of noble heroes and gods like Arjuna and Rāma; 3) the fierce style of aggressive heroes and gods; 4) the brutal style of villains, demons, and giants; 5) the comic, free-style dance of clowns who ridicule social ills. In Java a scarf embellishes the conventionalized gestures; in Bali a fan may speak as in the Japanese *odori*.

The Indonesian theater (a court form in Java, a folk art in Bali) derives from India. After the first influx in the second century, theater and dance rose to prominence in the 9th century and to their apogee in the 14th and 15th centuries. In 1900 the present rules were crystallized by the Krida Beksa Wirama Society of Music and Dance. Hindu mythology provides the subject matter: tales from the *Mahābhārata*, *Rāmāyana*, and *Arjunawadaha* (the nuptials of Arjuna); but they have been greatly modified. The recent *wayang suluh* (educational wayang) deals with contemporary life and problems.

Today as in ancient times the Indonesian theater is an exquisite art form and at the same time it retains a

ritual function and a role in the education of the people. [GPK]

way-goose, waygoose, or ways-goose A 17th century English printers' feast, given by the master of a print shop at his home for his employees: later called a *beans-feast*. The time for the way-goose fell late in August, on or about St. Bartholomew's Day (Aug. 24). Before this date the compositors never worked by candlelight; after the way-goose the shortening days made it necessary.

Nathan Bailey's *Dictionary Britannicum, a more compleat universal etymological English dictionary than any extant* (1730) explains the term waygoose as a *wayze*, or stubble, goose; but Murray's *New English Dictionary* states that the etymology of the word remains an unsolved puzzle and that the association of a stubble goose with the feast is unsupported. Later, in the 19th century, the way-goose celebration became a big annual picnic and excursion into the country held by the employees of printing establishments. Similar printers' outings were observed in the United States during the 19th century, but have gradually fallen into disuse. The waygoose was revived in New York on January 15, 1949, by printers' union and management personnel for a big way-goose cocktail party.

The same festival in Germany was called *Martinschmaus* or *Fastnachtsschmaus*. No one worked by artificial light up to or on that day, hence it was sometimes also called *Lichtschmaus*.

weasel The weasel differs little in its way of living from the ichneumon and plays the same role in folktale, myth, and fable. Pliny stated that the weasel eats rue to make himself immune to snakebite, and the same is reported of the ichneumon.

In Ireland weasels are said to be descended from "Danes' cats"; it is unlucky to meet one, especially in the morning. Its bite and spit are considered poisonous. In Germany to see a weasel on the roof means good luck, but in Bohemia even its glance will blind or blight you. In Switzerland the weasel is regarded as a conjurer (B191.1); in Macedonia mentioning the name of the weasel is avoided. Carpathian farmers honored the weasel; they feared its bite and believed it was a danger to cattle and sheep; but to kill a weasel meant that hundreds of weasels would come and fall upon their grain and cattle to avenge their kinsman. On St. Matthew's Day (Sept. 21) therefore, or sometimes on St. Catherine's Day (Nov. 25), these people observed a festival for weasels to propitiate them and ward off their depredations. (See M. Summers, *The Vampire in Europe*, p. 55.)

In folktale we find numerous etiological stories explaining why the tip of weasel's tail is black (A2378.8.3), or why weasel is white with a black tail-tip (A2411.1.3). There are stories of man transformed to weasel (D124); Douglas Hyde's story "The Weasel" in *Beside the Fire*, London 1910, is the story of a witch in weasel form. Soul in the form of weasel is a general European motif E731.4. A popular medieval story credits the weasel with power to restore the dead to life. In the *Lai d'Eliduc* by Marie de France the weasel brings its mate to life by means of a magic plant, much as the incident in Grimm's *Three Snake-Leaves* (#16). See Bolte-Polívka's *Anmerkungen zu den Kinder- und Hausmärchen der Brüder Grimm*, 4 vols., Leipzig, 1913-30, for comments and variants. In Æsop's fable *The Mouse and the Weasel*, the Weasel

plays the role of adviser after the fact. A lean and hungry little mouse has crawled through a crack into a corncrib, eaten his fill, and then been unable to get out again through the crack. The Weasel, highly amused, tells him that he will get out all right when he is lean again.

wedding anniversary The celebration of the anniversary of a marriage, like the observance of the yearly birthday, is a sort of minor *rite de passage*. Often a party is given to which selected friends and relatives are invited. Flowers are a customary gift to the couple on any anniversary, but certain anniversaries are marked by special gifts, i.e. gifts of special materials. The most widely known are:

- 1 year—Paper
- 5 years—Wood
- 10 years—Tin
- 15 years—Crystal
- 20 years—China
- 25 years—Silver
- 50 years—Gold
- 75 years—Diamond

Other anniversaries are similarly marked, but not as universally: 2 years—cotton; 3 years—leather or muslin; 4 years—silk; 6 years—iron; 7 years—copper or wool; 8 years—electrical appliances; 9 years—pottery, and so forth. The practice of observing the wedding anniversary, while primarily an excuse for gift-giving, probably has underlying it a belief in the correspondence of certain luck-bringing substances with a distinct *number* of years.

weeping bitch or bitch and pepper The motif (K1351) of a cycle of stories in which a virtuous woman is seduced into yielding to a lover by the ruse of an old procuress. The old woman throws pepper into the eyes of a little bitch, whose eyes then weep, or throws a piece of meat to the bitch so saturated with pepper as to make the animal's eyes weep. The procuress then explains that the bitch was once a woman, now thus transformed for hardness of heart to her lover, and that she continuously weeps her fate. The woman is thus persuaded to avoid a like fate. The original of this motif is in the "Story of Devasmitā" in the *Kātha Sarit Sāgara*. Devasmitā, whose chastity token was the unfading lotus in her absent husband's hand, was not seduced, but turned the tables of ridicule and humiliation on the four young merchants who sought her. But the motif itself, with the virtuous lady persuaded, is said to have migrated from India via Arabian folktale into Spain, whence throughout Europe. Original, variants, and migration are fully discussed in the *Ocean of Story* I, 169 ff.

weeping salutation In a great many South American tribes, visitors or members of the tribe returning from a journey are received with loud wailings and other expressions of grief. This custom was first observed among the Tupinamba Indians of the Brazilian coast and since then has been variously interpreted: it has been said that the hosts were expressing their sympathy to the guest for the hardships he has faced, or that the newcomer was regarded as a ghost, and so on. Actually the keening for the guests is a practice connected with the funeral rites. The traveler is told of the deaths which have taken place in the tribe and is invited to join in the ritual laments. Thus, for instance, the Cobeuo

mourners lead their visitors to the graves of their relatives so that they may mourn in their presence. [AM]

weggis dance A Swiss couple dance performed in a counterclockwise circle, typical of central Europe. Holding hands lightly in skating position, or with the girl's palms placed on the boy's, the couples move in a single or double circle, freely and gaily. The Weggis song equally gaily refers to the village of origin, with a yodeling refrain:

From Lucerne to Weggis on/Hol di ri dia, hol di ria;
Shoes nor stockings need we don/Hol di ri dia, hol dia.

Each verse brings a new couple arrangement and step, a heel-and-toe polka or point, hop, and polka, with vigorous arm-swings. Sometimes partners separate and join again, or cross over; but they do not weave quadrille patterns with the other couples. It is a care-free round, expressive of the Swiss temperament. [GPK]

Wellerisms Wellerisms or quotation proverbs like "*Neat but not gaudy*," said the monkey (or: *the Devil*) when he painted his tail blue constitute one of the strangest varieties of proverbs. The term Wellerism alludes to Sam Weller's frequent use of such sayings in the *Pickwick Papers*. Some Wellerisms like "*All's well that ends well*," said the monkey when the lawnmower ran over his tail include a familiar proverb; others like "*Every man to his taste*," said the farmer when he kissed the cow ascribe the remark to a generalized figure representative of a class; and still others like "*The case is altered*," quoth Plowden ascribe it to a particular individual, who can often be identified. (Edmund Plowden was an eminent barrister in Queen Elizabeth's reign.) In the first of these types the incongruous combination of a serious proverb with an inappropriate act or scene produces a characteristic effect. Kalén, who has studied modern Swedish examples, believes that Wellerisms in which the speaker is a farmer, an old woman, or some other representative of a class, originally assigned the remark to a particular, named individual and later replaced his name by a class designation when the allusion was no longer understood. He was able to find a historical basis in rather recent tradition for modern Swedish Wellerisms containing a proper name. It would be impossible to find similar explanations for English Wellerisms containing a proper name. When accepting John Heywood's collection of proverbs, Queen Elizabeth is said to have asked whether it was complete. Although Heywood assured her that it was, she found "*Bate me an ace*," quoth Bolton to be lacking. She gave no interpretation of the saying, and none has since been found. Wellerisms in which an animal is the speaker like "*Many masters*," said the toad when the harrow turned him over are probably a special variety of Wellerism. Wellerisms are reported from classical times, and some that were current in the Middle Ages have survived in modern folklore. They are now especially popular in northern Germany and Sweden. Those current in the Romance languages rarely contain a proper name. In the 19th century, Wellerisms, often embodying bad puns, were frequently printed in American newspapers. Many Wellerisms are unprintable and circulate only in oral tradition.

Wemicus Trickster of the Timigami Ojibwa Indians. See WISAKEDJAK. [EWV]

Wen Ch'ang Chinese god of literature; he has collected a number of legends which display the prowess of scholars. His icon shows him in a long blue gown holding the staff of high office (*ju yi*). His two servants, as is proper for a minister of state, are Dumb as Heaven and Deaf as Earth. Kuei Hsing, an ugly little dwarf standing on one foot, is frequently part of the icon. [RDJ]

werewolf Literally man-wolf (from O. E. *wer*, man, plus *wulf*, wolf): a human being transformed into a wolf by bewitchment, or one having the power to assume wolf form at will. In most instances the taste for human flesh accompanies the change, and the werewolf hunts at night, devouring human beings. In general European belief, the werewolf must return to human form at daybreak; this he does by doffing the wolf skin and hiding it. If he hides it in a cold place, he shivers all day; if it were found and destroyed by another, the owner would die. There was widespread belief that one became a werewolf by putting on a magic girdle made of wolf skin. In Germany, however, a girdle made from the skin of a hanged man was considered just as good. The minute the werewolf is wounded he changes back to human form; the wound will be seen on the corresponding human part the next day. The werewolf was known to the ancient Greeks and Romans, and exists in the folk beliefs of peoples on every continent in the world. In regions where there are no wolves, the prevailing fiercest animal takes its place. Thus we find the weretiger in India, Borneo, and western Asia in general; tiger and fox in China and Japan; boar (Greece and Turkey); hyena, leopard, lion, crocodile (Africa); bear or wolf (North America); jaguar (South America). In Greece it is said that a man who has been a werewolf in life becomes a vampire after he is buried. The cat and the hare are both were-animals among southern United States Negroes and European peasantry. See JAGUAR-MAN; LOUP-CAROU; SHAPESHIFTING.

Among the Navaho and other American Indians, human beings having power to assume wolf form may be either men or women, are evilly disposed toward fellow humans, and go about practicing witchcraft against them. Evidence that a person is a werewolf is thought to be conclusive if a wolf or mountain-lion skin is found in his or her house; these are the skins werewolves wear when on their nefarious business. See William Morgan, *Human Wolves among the Navaho* (Yale University Publications in Anthropology, #11, 1936). [EWV]

wēzā Literally, wise men: Burmese necromancers. The wēzā are of two kinds, good and bad, and each kind is divided into 4 classes. Each of these works with an element (iron, mercury, medicine, magic squares) in order to obtain influence over the spirits. The wēzā supply charms against injury, epidemics, and enemies.

whale The hunt and capture of the whale amounts to a cult among the Eskimos of the Alaskan coast and of

northeastern Siberia, because of the dangers involved in the pursuit and the importance of the catch for food and oil. In fact, the hereditary role of whaler used to verge on shamanism, with revelation, ritual preparation, initiation, ritual bathing with human mummies, and tabus contingent on the whaling season in the early summer months. In the Fox and Aleutian Islands, King Island, Bering Strait, all the way over to Point Barrow, from the Nootka of Washington to the Chukchee of Siberia, similar ceremonies prevailed.

Preliminaries included the rhythmic mime of a successful whale catch, with a woman enacting the whale; then the sprinkling of ashes on the ice to drive away evil spirits, incantations and songs when leaving shore, sighting the whale, before throwing the spear, songs which the great *kashak* sang when he created the whale. As the whale was towed in, Fox Islands men and boys danced naked in wooden masks which reached to their shoulders. At Cape Prince of Wales the whaler's wife came to meet the boat in ceremonial dress, dancing and singing, and boys and girls performed gesture dances on the beach. Then inside a circle of large whale ribs the whaler's wife and children performed a dance of rejoicing. On the west coast of Hudson Bay communal feasting, dancing, singing, games, and shamanistic performances took place within the circle of bones or stones. The men's motions consisted of vigorous and angular arm-jerking and jumping; the women's of curving gestures and swaying with the torso and arms in a seated or standing posture. Various types of rattles made of puffin beaks and barnacles were manipulated by some of the dancers, to the inevitable accompaniment of the Siberian-type drum.

A final three-day "mourning" period, to placate the animal's spirit, ended with feasting and frenzied dancing, the women wearing masks during the incantations. With the return of parts of the whale's flesh, his spirit also returned to the sea to be reborn.

On land the same animal spirit could be a wolf, according to beliefs. In fact, wolf-spirit once revealed to man the details of the whale cult. [GPK]

wheat If, as may be said, Eastern civilization is based on the cultivation of rice, and that of the New World on maize, that of the West, particularly Europe and derivative societies, has wheat as its staff of life. Wheat is a cultivated form of grass, but like corn (*Zea sp.*), and unlike rice (*Oryza sp.*), it is a hybrid. The first evidences that we have of wheat come from the prehistoric and early historic civilizations of the Near East, prior to the wide use of metals. Since wheat is a hybrid, its use implies a considerable degree of botanical sophistication among the inhabitants of western Asia, who, to our knowledge, were the first to practice cultivation of this grain. Two forms seem to be ancestral to wheat, *dinkel* and *emmer*: the former a single-seeded variety (German *einkorn*), the latter containing the seeds in an ear. Cultivation of wheat first reached elaboration in the river valleys of the Middle East, the basins of the Tigris and Euphrates (ancient Mesopotamia), and the Nile in Egypt. Otherwise arid lands, the flooding of the river basins left the soil moist and easy to cultivate, and the receding of the waters was the time for planting. Wheat, barley, oats, and rye are best planted by broadcast sowing. (Rice, the wet variety, has to be set out seedling by seedling;

maize or corn was planted by hand in hills.) Accompanying the diffusion of wheat culture went the use of the plow, drawn by man or domestic animals, and in later times, labor-saving mechanized techniques of harvesting, threshing, sowing, etc. The heavy seeding of the ground, whereby the stalks of the grain grow closely together, means that later cultivation and weeding are kept to a minimum. Wheat is now grown all over the world, particularly in flat areas, where the climate is such that the period of greatest moisture and precipitation occur at the beginning of the growth cycle, for wheat needs dry weather to mature and form ears. Thus, we can see that wheat is best adapted to temperate, subtropical (or Mediterranean), and to some extent, subarctic regions. These now coincide with areas settled largely by Europeans: Canada, Argentina, Australia, the United States of America, as well as the mother continent. Wheat is also extensively raised in northwestern India, northern China and the Near East.

Sites dating from about 1000 B.C. to 500 A.D. have been found in the Danube Valley, the British Isles, and as far north as Scandinavia, which contain wheat, rye, oats and barley, the latter though in greater abundance, since they are better adapted to the rigors of the climate.

Early in history wheat became a focus of ritual. Along with other harvested crops and various animal products, it became associated with several divinities. In Crete, for example, it was believed that Demeter, who with the passing of centuries became the deity of all the harvest, gave wheat to mankind. It was her special gift, and even more specifically she bestowed it on the Greeks. So strong was the esteem held for wheat that one of the tenets of Mazdaism stated that "who sows wheat, sows good." Ceres, of the Romans, was the goddess of the harvest, especially of grain crops, and, as such, received homage. It appears logical that with the spread of Christianity, many of the rites attached to the pre-Christian pantheon throughout Europe became associated with the local saints, as well as specifically attached to the Virgin. In Ireland, St. Vulgan was considered the patron of both the sowing and the harvest. In France, one of the sobriquets of the Virgin was *Notre-Dame Panetière*, Our Lady the Bread Giver.

In order to assure a successful harvest, many magical practices were followed. For example, in France, twigs of box which had been blessed on Palm Sunday were planted when the wheat was sown. During Holy Week, the poor sought alms of wheat, so as to insure the donor of an abundant harvest. Another form of insurance consisted of the practice whereby the oldest worker engaged in reaping the wheat offered a small sheaf in token to the owner of the farm; this was saved and hung over the mantel or in the parlor of the farm. Sometimes the aid of strangers was invoked so as to guarantee the harvest, as in Montreuil, any visitor to a field where the grain was being cut was presented with a nosegay. In a like fashion divine assistance was sought. In Lillers, France, a mass was said in the parish church on the 25th of July. A handful of wheat, a pear, and other fruits, the first of the season, were brought to the church to be blessed. In some instances the final load of the harvest rather than the first grains to be cut were the objects of special attention. In many cases the last load from the wheat field was gaily decorated with flowers and branches, while the reapers sang as they hoisted the final sheaf.

In the West the prerogative of gleaning has lost its significance, but to the peasant of the Old World it was of great importance. (The average schoolchild is familiar with the painting of J. F. Millet, "The Gleaners.") This right dated back to Biblical times. It concerns the right of the impoverished to cull what is left after the wheat or other grain has been taken in. In some areas gleaning is supervised. In Mont St. Eloi, in the region of Arras, gleaning takes place under the eye of a *garde champêtre*. This official rounds the gleaners up in the morning, watches them while they collect during the day, and rounds them up before the end of the day, because gleaning is forbidden at other times.

Failing of the wheat is another point at which the crop may be considered as vulnerable. In September, in the south of France, a wagon goes from farm to farm, to which sheaves are offered, and these later are sold at auction to augment the funds of the parish. Local people as well as those outside the parish may be buyers.

At times the benison of local saints may be invoked. In Valenciennes, on the Monday following the feast of St. Veronica, the street porters in costume parade about the village. In their midst is a young and pretty girl, dressed in white who is called *Marie au Blé*; she is accompanied by the youngest and handsopest of the carriers. At intervals they dance and offer grain to the spectators, who give them money in return. At each café they stop and drink, and by the end of the day are drunk. In other areas the harvesters may swap a sheaf of grain for drinks from the farmer. This sheaf may be hung in the kitchen for good luck until the following year. Although much of the ritual attached to wheat has vanished from American farms, thrashing time is still one of hard work, accompanied by great eating, and it is a point of pride for the farmer's wife to vie with her neighbors in setting a large and varied table. See HARVEST HOME. [NFJ]

wheel A diversely used symbol whose meaning is closely interwoven with that of other rounded forms and with such other symbols as fire, wing, cross, pole, star, or the four quarters. To say that a circle is a disc is a ring is a rim is a wheel sounds like an excerpt from Gertrude Stein, but symbols become elaborated by such associative processes and, in the case of the wheel, all these identities are established at some point.

Strictly speaking, the circle claims that symbolism which derives from its linear form—the never-ending line expressive of eternity or continuity, the perfect shape with the dead center suggesting the focal point of the universe. Its complete enclosure gives rise to the idea of protection, familiar in the magic circle of necromancy, or the circle of fire, thorns, ashes, lime, or pebbles, described around a birth, death, or other critical event. It contributes to the circular shape of holy places as removed as the druidical circle and the Chinese Temple of Heaven, and is extended into protective talismans such as armlets and rings. (The circle has other basic suggestions, notably that of female and of water, but these seem less connected with the wheel.)

The disc is a flat round object, and the sun and moon were formerly so conceived. In Egypt, the two discs were viewed as the two celestial eyes. The Siberian shaman wore two rounded bits of metal symbolizing sun and moon. But in general the disc is solar, perhaps because the moon with its waxing and waning bestows much of

its connotation on the crescent. The Hindu Vishnu holds a disc, or a rounded piece of gold in his hand. The Egyptian Rā wears a disc as a crown.

The sun has other attributes than mere roundness. It is a fiery disc and may therefore be surrounded by flames. The rayed circle or the circle surrounded by flames has been a common decorative or heraldic motif for centuries. The god Śiva in his destructive aspect is surrounded by a rim of fire; similarly a saint or supernatural being appears with aureole or nimbus. The sun also travels through the sky and this phenomenon is made possible by boat, fish, chariot, or bird (the eagle of Zeus, the falcon of Rā, the Garuda of Vishnu, or the three-legged crow of the Chinese sun). As a result, the sun wheeling through the sky, the wheel of the chariot, and the wing became associated. A sun disc with falcon wings appears in Egypt. (Similarly an angel on an early American tombstone may be depicted by a face within a circle, flanked by wings.) An ancient seal of Asia Minor shows the god in human form with four-spoked wheel and a single wing.

Thus, the sun is the earliest and the most persistent connotation of the wheel—the beautiful wheel of the Celtic sun god, the sun chariot of Helios, the *rota altivolans* of Lucretius. The fiery wheel mentioned in the first chapter of *Ezekiel*, which has provoked the imagination for centuries (e.g. “Ezekiel saw the wheel a-rolling” in a Negro spiritual), is identified by Robert Graves with the solar year. Throughout Europe it was the custom at Midsummer, when the sun changes his course, to throw burning discs in the air, to roll flaming wheels down hill or across the fields, and to start fire by rotating a wheel around a pole. Such ancient connections with the sun have survived in some localities until recent times.

The wheel may be identified strictly as the vehicular one, as an object that spins and turns, or a design that has spokes. But the vehicle is likely to be of cosmic or magical proportions, the spinning to signify the cycle of the universe or the turn of fortune. The hub of the wheel is like the focal point of the circle. And as it multiplies into innumerable designs, the wheel with spokes merges with the circle containing cross, star, triangle, or becomes divided into quarters or other significant segments. By the same process, the whirling sword (related to the swastika motif) with which cherubs guarded the gates of Eden (*Genesis* iii) became in Celtic legend a cherub with a turning wheel.

The chakra of India The most elaborate wheel symbolism evolved in India, where in some form it permeated both Vedic, Jainist, Hindu, and Buddhist thought, generally with something of its solar association preserved. The word *chakra* (Sanskrit) originally signified circle or wheel, and later disc, specifically the disc of the solar deity Vishnu. The word *chakravartin* (literally, abiding in the wheel, sometimes rendered as wheel-king or wheel-turner) is the word for the ancient but persistent concept of the “universal monarch.” The earlier chakravartins were perhaps conceived as the beings into whom the supreme creator was resolved or subdivided. Later they became human, wielding the highest temporal power just as Buddha or Jina exercised spiritual authority. However, because of their connection with the *chakra* (either as the ancient wheel of the sun or the disc of Vishnu) they approached divinity in the popular

mind; and in later Buddhist works the chakravartin reappears as a semi-mythical solar hero.

In early Vedic ceremonies, the *chakra* represented the sun, and came to symbolize the regular course of the sun in the sky, hence the celestial or cosmic order. Among passages in the *Rig-Veda* are an invocation to the god who directs “the golden wheel of the sun” and reference to the “immortal wheel” which nothing can hinder and on which existence depends. Varuna, the universal monarch of the early Vedic gods, is represented as possessing the wheel, the nave of which is apparently intended to personify lightning. The connection of the solar wheel with a vehicular wheel is evidenced in a rite of the Brahmins (perhaps connected with earlier Scythian rites of Central Asia) in which chariot wheels are revolved around a stake while a hymn to the sun is chanted.

In both Brahmanical and Buddhist writings, the chakravartins are endowed with seven jewels, attributes which are traceable to pre-Vedic antiquity. These are the divine treasures of life and immortality which were won by the powers of light from the powers of darkness in the struggle known as the Churning of the Ocean. First on either list of these famous treasures is the “luminary disc,” the “mighty and auspicious wheel.” It is described in one of the Pāli sūtras as having a thousand spokes, complete with tire and nave, ornamented with gold, and as tall as seven palm trees.

In the Legend of the Mystic Wheel, the king goes to the upper story of his palace on the day of the full moon at his inauguration and purifies himself, whereupon the treasure of the wheel appears to him in the east. He sprinkles water over it, saying, “Go forth and overcome.” The great wheel then rolls toward the region of the east, and the king with his army follows, camping wherever it stops. By the power of the wheel the rival kings of the east are subjugated and instructed by the chakravartin in righteous rule. The wheel sinks into the waters of the east, rises again, and rolls onward to the south, conquering the people of the south, then the west and the north, in turn. Then it returns to the royal palace and remains fixed at the entrance to the apartments of the king. At the approach of the king's death it falls from its place; when he dies or abdicates it disappears, returning to his successor or a subsequent king only when the law is kept, since it is the attribute only of a righteous king.

This legend, with many details from earlier sun myths, appears in most ancient Buddhist documents. Buddhism, quite naturally, made use of the earlier symbols, adapting or subordinating them to the new teachings. The oldest Buddhist sculptures show the wheel in the place of honor upon the altar. The seven jewels are ascribed to the possession of Buddha in the earliest Pāli Canon. The wheel became the Wheel of the Law with its thousand spokes—the Dharmachakra, the chain of cause and effect—which was set in motion for the salvation of humanity by Buddha's revelation of the Four Great Truths. The title of the founder's first discourse is “The Setting in Motion Onwards of the Wheel of the Law.”

Just as the sun cannot be turned backward, the wheel is described as one which can never be deflected from its course. The wheel of the Chakravartin Bharata was said to have met no obstacle when he went to war. Similarly, in Buddhism, the Wheel of the Law could never

be turned backward, not even by Buddha himself. In Hindu writing, the chakravartin is simply a great emperor or war lord—one who is able to drive the wheels of his chariot over all lands without hindrance; however, the wheel is a single one, not a pair, hence reminiscent of the solar disc rather than a simple chariot wheel.

In the Jainist temple, a so-called saint wheel (*siddha chakra*) is always present. This is a small eight-sided metal plate having the five figures of the Great Ones who are saluted for their asceticism, the names of the three tenets or jewels of the Jain religion (Right Knowledge, Right Faith, Right Conduct) and the word for austerity. Twice a year this plate, which is viewed as a summary of Jainist principles, is taken to water, bathed, and then worshipped for eight days.

Praying Mills and Prayer Wheels It is not unusual, in tracing the course of a symbolic idea, to observe that it starts out as a literal depiction such as the fiery sun disc, evolves into a highly abstract and literary idea, like the Wheel of the Law, and returns again to the literal or material in perhaps quite different form. This happened to the Wheel of the Law in the northern reaches of Buddhism. It was materialized by placing prayers and texts, sometimes with shrines, images, or lamps, into a cylinder (a praying mill) which could be revolved by hand and would thereby yield the benefit of saying the prayers or reading the texts. Some were small silver containers revolved in the hand for days at a time; larger ones set up near lamaseries were given a turn by passers-by, some being so large that several persons were required to turn them. In the Himalayas they were often set over a stream which turned the wheel continually, and among the Mongols they were made of paper and set over fire so as to be turned by the circulation of heat. Always the cylinder or wheel must revolve with the sun—a fact reminiscent of the ancient solar wheel. To anyone who attempts the arduous task of mastering the Buddhist tenets, this must seem a very happy invention indeed, since hundreds of texts could be disposed of with the turn of the wheel. However, the act of turning inevitably tended to become a formality and degenerated into a symbol of good luck or, in Tibet, a superstitious invocation.

The Buddhist praying cylinders have a counterpart in many other parts of the world, in prayer wheels which were hung in temples and turned by hand or by rope for spiritual or magical purposes. In some cases the wheels were vehicular. They are known to have been used in Babylon, in Egyptian temples of the 3rd century B.C., in the temples of ancient Greece. In some Japanese pagodas, a metal wheel is fixed in the pillar at the entrance. In the 10th century a gilt wheel with bells was placed in the cathedral of Winchester, to be revolved on saint days. So-called Wheels of Fortune survived in a few European churches to modern times; in Breton churches a Saint of the Wheel was worshipped by paying a small sum and turning the wheel. From the name, these wheels were probably considered oracular, as presumably were the wheels in the temple of Apollo at Delphi.

The Wheel of Life The aspect of wheel symbolism which deals with the nature of the cosmos and the cycle of life therein is very abstruse and difficult of approach. Hence, it is the more remarkable that it should have given rise to some of the most beautiful, precise, and

simple geometric diagrams in the history of art, in addition to providing the framework for some of the most complicated symbolic painting. Obviously in this connection the symbolism of either the circle or the wheel, or both, is involved.

With the wheeling planets overhead and the circumference of the horizon, the cosmos of the ancients must have seemed obviously circular. In the flat delta of the Nile it was a round plate; to the Chinese it was like an egg. Life in the cosmos was created, and maintained, by the balance of opposing forces—male and female, day and night, heat and cold, good and evil. Such ideas as this concerning the nature of the universe were summarized in the “wheel of life.” Brief descriptions are misleading but the two best-known examples are familiar—the yin-yang of China and the Shri Yantra of India. The yin-yang is a circle containing two complementary curved segments (light and dark) and surrounded by eight trigrams (*pa kua*) which summarize all wisdom by depicting all possible combinations, in groups of three, of a broken and an unbroken line. The Shri Yantra is composed of concentric circles, some bordered with stylized lotus petals, with nine interpenetrating triangles in the center, five pointing downward, corresponding to the female symbol of the *yonis*, and four (the male *lingam*) pointing upward. The nine signify, according to Heinrich Zimmer, “the creative activity of the cosmic male and female energies on successive stages of evolution.” The Absolute is not represented but is to be visualized, he says, as a vanishing point “amidst the interplay of all the triangles . . . the elusive center from which the entire diagram expands.” An indented square surrounds the diagram, signifying the four walls of the sanctuary or, in turn, the four directions of the universe. The Gnostic wheel also carries the concept of four, being composed of four cone-shaped spokes which terminate in four perfect circles.

To these self-contained and therefore almost quiescent diagrams of cosmic principles, must be added a concept which seems, almost visibly, to set the cosmic circle to revolving like a “wheel.” This is the idea, present in Sanskrit, Pāli, and Greek, that life occurs in an endless cycle of rebirths. The concept of succeeding cycles based on four—emanation, fruition, dissolution, and re-emanation—is fundamental in Hindu philosophy and art.

Paintings in the wheel pattern, that is, in a design of concentric circles with each circle or divided segment thereof containing a depiction, developed into a magnificent art, particularly in Tibet. A temple ceiling in Lhasa shows the cosmic lotus, with the primal Buddha occupying the central circle, surrounded by eight manifestations of Buddha, each with separate attribute, gesture, and color, all contained within the flower, which is within the square of the sanctuary, one of the famous *maṇḍalas* of the world. The New York American Museum of Natural History has a beautiful series of small wheel paintings depicting such subjects as the Wheel of Transmigration, the Wheel (or Magic Circle) of the Conqueror of Death, of the Omniscient One, of the Peaceful and Wrathful Deities of the After-Death Plane, and the Wheel for Casting Horoscopes. The first of these, also called the Wheel of Life, depicts the three cardinal sins in the center, symbolized by cock, serpent, and pig; in the surrounding circles are figures following the bright upward path and the dark downward path,

scenes from the six worlds of rebirth, and Buddha's chain of causes.

Turning to the other side of the world, we find another work of art constructed in the concentric wheel pattern, and again it is related to the sun and concerned with the sacred nature of the universe and of time. This is the Aztec calendar stone. The central circle is occupied by the sun god with his protruding tongue and the surrounding circles carry symbols of the days of the month and other signs of the calendar.

The Wheel in Divination The Tibetan Wheel for Casting Horoscopes, referred to above, leads to another use of the wheel, that is, as the characteristic form of the graphs used in various parts of the world for oracular purposes. Again, it is not always easy to see when these designs derive from the spinning wheel and when from the magical circle. This Tibetan Wheel has a sort of tick-tack-toe design in the center circle, in which the numbers add to fifteen. The surrounding bands show the eight trigrams (resulting from their connection with the Chinese, of course), the twelve cyclic animals, and the twelve lotus petals.

The Geomancer's Wheel of China (usually called a Compass) also makes use of the trigrams, though they are usually replaced by words (characters) with somewhat broader meaning. This is a wooden disc with rounded bottom and flat yellow-varnished face, minutely inscribed with red and black characters in concentric circles. A glass-covered depression in the center contains the needle which, in the hands of an accredited manipulator, is expected to locate the "lucky line" of the year, the proper location for a building or date for a marriage, or such other information as is required. The instrument varies in size and complexity, and different compasses are used for different purposes. (The Chinese also elaborate the eight trigrams into 64 hexagrams arranged in a square for purposes of divination.)

In Arabia the magical circles described on parchment provided a basis for astrological calculations, which were adopted in the areas to which Islam spread; a leaf from a divining book in Indonesia, for example, shows a design with eight spokes each terminating in a crab symbol. The cabalistic lore of medieval Europe, and the use of horoscopes up to the present time, are familiar.

The Mechanical Wheel In modern times, the actual wheel is not necessarily vehicular. It has many mechanical applications which have added to and to an extent replaced the ancient solar disc or fiery chariot wheel. St. Catherine's wheel, for example, was an implement of torture, and she is the patron saint of those who turn the spinning wheel. The wheel within a wheel is not so likely to connote Ezekiel's vision as some elaborate mechanism. The wheel of fortune is more associated with games of chance than with the prayer wheel hanging in church or temple. The wheels of time belong to the clock. The sun and moon are no longer conceived as revolving discs but as spheres. However, ancient symbols remain stored deep in the recesses of the human mind. In the middle of the 20th century discs took to the air again in the shape of "flying saucers."

MAMIE HARMON

whipping Many Amazonian Indian tribes ascribe great magic virtues to whipping. During certain ceremonies, in particular during puberty rites, men flog

each other with long whips made of manatee skin. This treatment is believed to have a purificatory value and, in some cases, it is considered as a rite with a beneficial influence on the output of fields. Compare FLAGELLATION.

[AM]

 Whipping, both as a punishment and as a ceremonial practice, is not common among North American Indians, except in one or two areas. In the Southwest, among the Pueblo peoples, Parsons reports public whipping of adults for adultery at Taos and Acoma, the whipping of a man for using modern agricultural machinery at Jemez, the whipping of a small girl for breaking a new pot at Zuñi, and of a boy for almost strangling his little brother with a slipnoose during play. At Zuñi the Governor is entitled to hit a recalcitrant four times to enforce an order. Whipping in punishment is also referred to in Zuñi myths. A girl, for example, in a Zuñi tale abandons her baby to Red Deer Woman; she is struck by her uncles when they hear her story. "You big fool!" each uncle says and strikes her. In another version of the same tale the girl's brother whips her.

Whipping is also used for cleansing purposes, or for exorcism in the pueblos. A Zuñi tale relates how a boy who mocked a kachina was whipped or "cleansed" with the yucca whip, the usual object used in this area for whipping (however, see also below). At Zuñi also dreamers of bad dreams are exorcised by ritual flagellation; dreaming of the dead is generally treated by whipping by the kachina; Hopi kachinas whip persons suffering from rheumatism. Four strokes with the whip are the ritual number of strokes used.

Whipping is a regular part of the installation of adults in various ceremonial offices. At Acoma the annual War chiefs are whipped at their installation and at their retirement from office. Anyone may request to be whipped by shamans at this time to give him power in hunting, racing, or gambling. The warlike Cactus societies of Zuñi and Jemez whip with cacti.

Whipping is also part of adults' initiation rites for membership in various Pueblo societies. At initiation rites into the Hunt society of Sia a shaman whips the initiate and, in fact, all the society members, and is in turn whipped. The kachinas of Cochiti and Sia, and of the Zuñi Ne'wekine clown society, whip at initiation.

In the western pueblos the kachinas also whip children and adults who request this in an early spring ceremony of general exorcism (Powamu at Hopi). Hopi and Zuñi ritual whipping of ten- to twelve-year-old children at initiation ceremonies which acquaint them with the kachinas is an important and elaborate part of the initiation rites. The children, boys and girls, are severely whipped several times both in the kiva and in the open; they appear badly frightened, and are said to tremble, while several cry or scream. After undergoing this initiation Pueblo children know that the kachina which visit the pueblos for half the year are actually fellow townsmen dressed and masked to represent the real kachina or spirits.

For other instances of ritual initiatory whipping, of whipping before first wearing a mask, of whipping as a substitute for killing, for whipping after killing one's first jack rabbit, for whipping as a cure for sickness, etc., in the pueblos see Elsie Clews Parsons, *Pueblo Indian Religion* (2 vols., Chicago, 1939), pp. 1271-72.

Whipping of children in initiatory rites has also been reported for the Alabama and other Southeastern groups along the Gulf coast, but few details are known concerning whipping in these extinct groups. Children were made to pass in array, and were whipped until blood was drawn. A common practice in the Southeast now, for initiation and as a purificatory rite, is to scratch a boy's or man's arm with a garfish jaw in order to draw blood. Among the Eastern Woodlands peoples the practice of forcing captives to "run the gantlet" between two lines of persons armed with clubs, tomahawks and other weapons amounted in effect to severe whipping of captives. [ewv]

whirlwind Whirlwind is personified by the Jicarilla Apache and other Southwestern Indian groups; the use of whirlwind (also referred to simply as Wind) as a messenger or spy on the Hactcin (Jicarilla supernaturals) is an ever-recurring incident in Jicarilla folklore. Among many California and other western Indians whirlwinds or dust spouts are associated with evil; they are said to consist of a dead shaman's dust, or to contain poison, a shaman's "pain" (magic object), or an evil spirit. They may sicken people with bad dreams, may capture a person's shadow or spirit, or may cause a person to meet with an accident and die. Precautions taken against whirlwinds are to hide from or dodge them, to throw dirt or water into them, or talk to them informally, at the same time smoking, clapping the hands, and stomping the feet. Victims of a whirlwind are smoked to cleanse them of its evil effects. It is considered especially bad for mourners to dream of a whirlwind; any who do must be doctored or else they will sicken. In the pueblos Whirlwind is a spirit: at Jemez it is believed that a whirlwind causes miscarriage. Among the Hopi, who believe that Whirlwind is abroad at noon, a child's expression is, "I'll be back before Whirlwind gets me." A Laguna tale recounts how Whirlwind Man actually does carry off a girl, and at Zuñi, witches are believed to travel in whirlwinds. The Papago of the Southwest say Whirlwind causes a dizzy sickness. (See E. C. Parsons, *Pueblo Indian Religion* [2 vols., Chicago, 1938], p. 178 and note.) [ewv]

When Whirlwind appears as a character in Mandan-Hidatsa Indian myth or folktale, it is always a spirit of the dead. These people say that a very small whirlwind rises from a grave and that the spirit of the one interred goes abroad in the form of this little whirlwind. The Gros Ventre Indians also believe that the spirits of the dead come forth in the form of these eddies; they point out that little whirlwinds are often seen in cemeteries when there is no wind elsewhere.

Whiskey, Johnny A halyard chantey in praise of whiskey, probably known as long ago as the times of the Spanish Armada, though the drink eulogized then was malmsey. The text is similar in many stanzas to the familiar verses of *Little Brown Jug*.

white animals, white Coyote Marked respect is attached to albino or to white animals among American Indians. These were the animals selected for sacrifice, as the white dog of the Seneca and other tribes, or the white full-grown buffalo or buffalo calf of the Plains tribes, which, among the Crow, was dedicated to the Sun, Crow supreme deity. The Yurok of northwestern California believe in a White Coyote, the father of all Coyotes on

earth, who lives at the head of a river in the sky, and has a yellow mate. This tribe and its neighbors prize white (albino) deerskins highly as treasures, and hold a dance in their World Renewal Ceremony, the White Deerskin Dance, in which these family treasures are displayed.

Since white animals are believed to have supernatural power, they were often feared as well as sought after. To see a white animal was a sign of bad luck for a Timiskaming Algonquian hunter, for example. [ewv]

White-Painted-Woman or White-Shell-Woman A female deity of the Navaho and other Apache groups of the American Southwest. Among the Navaho, Yolkai Estsan, White-Shell-Woman, is the younger sister of Changing Woman, highest deity in the Navaho pantheon. The white shell is White-Shell-Woman's symbol; white is the color of dawn and the east, and she is related to the waters. Her husband is Moon-Carrier. In some Navaho myths there is some confusion as to the separate identities of Changing Woman and White-Shell-Woman. Among the Chiricahua Apache White-Painted Woman is the mother of Child-of-the-Water. A white shell is, among the White Mountain Apache, a holy object possessing power, and symbolizes females. In the Eastern Woodlands Midewiwin, a white shell (*megis*) was also a holy object, the "shot" which Mide initiates learned to keep in their bodies, and shoot into fellow members in Mide rites; this shell, however, was not symbolic of females. [ewv]

Whitsunday A festival for both Jews and Christians. Among the Jews, the 50th day after the second day after Passover was celebrated by an offering of first-fruits. Later, celebrations were in commemoration of the giving of the Law which occurred 50 days after the Jews left Egypt.

Among Christians, Whitsunday, seven weeks after Easter, and Whitsuntide, seven weeks and a day, i.e. as among the Jews 50 days, commemorate the descent upon the disciples of the pentecostal fire, the gift of the spirit. The feast is mentioned in the 1st century A.D. but was not celebrated with great ceremony. Red rose leaves were scattered from the roof of the church and the vestments for that day are red. In France, trumpets blown during the divine service were said to represent the sound of the mighty wind which accompanied the descent of the Holy Ghost.

Whitsuntide, like Shrove Tuesday, Carnival, Easter, and other less known festivals, is an occasion to express the feelings generated by the return of good weather, the new green of the fields, the spring flowers, and the general resurgence of animal and spiritual powers. That in some communities people thought that the exercise of their fertilizing powers would increase the fertility of the cattle and crops is natural, though the extent of this belief must in each instance be examined in terms of the culture which entertains it. Each community seems to have chosen a day or period in the spring season for festivities which include processions, mimes, dances, and sexual license of various sorts from simple obscenities to general intercourse.

The particular day chosen by any community is determined by a number of factors too complex to be examined here. Important among them are traditions, possibly from pagan times, geography, climate, and lo-

cal factors. The fact that many Christian feasts occur on dates which were formerly celebrated as pagan feasts (Christmas, Easter, St. George's Day, and Saint John's Day) is evidence that while the missionaries were Christianizing the world, the world was paganizing the missionaries. Climate had some influence. Festivals and ceremonies characteristic of the English May Day are very similar to those in Sweden on Saint John's Eve, the summer solstice, and to those of Whitsunday elsewhere. The day seems to be determined in part at least by the time the sap begins to flow and the flowers begin to bloom. Finally, the several communities may and sometimes do repeat ceremonies at different times during the spring. The grief and joy which in every Christian community accompanies the murder, burial, and resurrection of God at Easter may be and often are repeated with a less solemn timbre at Whitsun and St. John's. Thus if these ceremonies, which show marked similarities in all parts of the world, be taken as the expression in the many dialects of ritual of emotions, the ceremonies themselves with such correlations as can be made with tradition, climate, and local factors show a splintering of the emotion. Consequently Whitsunday ceremonies in Germany are often Easter or May Day ceremonies elsewhere.

Perhaps the most characteristic of Whitsuntide ceremonies is the custom of going out into the woods or the fields and bringing back green boughs to dress up some member of the village. Thus Green George, Jack-in-the-Green, the Leaf Man, the Whitsuntide Lout are associated with Whitsuntide in Switzerland, parts of Russia, Carinthia, Transylvania, Rumania; elsewhere this ceremony occurs on April 23 (St. George's Day) or May Day in England. The youths are completely disguised by green boughs attached to two hoops and usually have a high headdress of leaves. In places where the mummer is executed, he is supplied with an artificial neck and false head, or a series of hats, one on top of the other. At Wahrstedt the chief figures are the King and Steward, chosen by lot and dressed gaily. At Hildesheim the Leaf King is the leader on Whitmonday of a band that goes from house to house collecting gifts. In Bohemia the boys with birch bark caps gay with flowers drag a king on a sledge to the village green with various sorts of skylarking. When they arrive there, one member, sometimes the Town Crier, recites scurrilous lampoons about the members of every house. Sometimes the central figure is a girl and called, as in German Hungary, a Whitsun Queen. The children of Königgratz in Bohemia choose a king and queen on Whitmonday. In Silesia the king was the boy who won an athletic contest.

Frazer has collected impressive accounts of the folk drama in which Green George was murdered at Whitsuntide. The places mentioned are Niederporing, Lower Bavaria, Wurmlingen, Swabia, Saxony, Thuringia, Bohemia. The protagonists are dressed in leaves and flowers. The ceremony of "murdering" and burning a straw puppet dressed like an old woman known as Shadow Queen is performed on Palm Sunday in Russia and among the Central European Gypsies. The ritual is at times elaborate.

The ceremonies mentioned here as associated with Whitsuntide are celebrated at other festivals in other parts of Christendom. Similar ceremonies are known in non-Christian areas.

The Irish are reported to believe that it is unlucky to go into the water at Whitsuntide, that people born on that day will kill or be killed or both, and that the Pentecost days are dangerous for them. [RDJ]

Wife Wrapt in Wether's Skin A British ballad (Child # 277), derived from an old story, *The Wife Lapped in Morrel's Skin*, and relating the disciplinary device of a man whose wife was too high-toned to attend to her housework: since he did not dare to offend her influential relatives by beating her, he wrapped her in a sheepskin, which he whipped vigorously. Many variants are known in Britain and in the United States. The hero's name is Robin in several texts, Robin-a-Thrush in one; one Scottish version makes him a "wee cooper of Fife," and another, the laird of Fife. In Mississippi and other places in the United States the man "lived in the West" and the song is known as *Dandoo* from the syllables of its refrain.

wíkita (from *wiiki*, bird down, + *ta*, made) The prayerstick festival of the Papago Indians of southern Arizona and northern Sonora. Prayersticks are made of bird down, for *wíkita* of turkey feathers. The festival is often spoken of as a harvest ceremony, but is actually more in the nature of a solstice ceremony to keep the world in order, as in the pueblos. The two surviving versions differ somewhat: the winter ceremony at Archie, Arizona, and the summer celebration at Quitovaca, Sonora. Both are sacred and elaborate. Both were instituted by the culture hero I'toi during his march of conquest. *Winter Ceremony*—

1) The large roster of hereditary officials is grouped by fours. Dancers and singers are especially appointed, eight for each of the participating five villages. They are called *vipinyim* (north), and many of their songs and refrains suggest Pueblo derivation. They wear gourd masks and cocoon anklets. The *navitcu* clown goes begging from house to house and cures sickness.

2) Preparations include the erection of a ceremonial enclosure, shade, and council house on a special plaza; the making of prayersticks to be placed by eights in four piles of sand; the consecration of cornmeal for aspersions; the making of effigies, etc.

3) A bullroarer announces the ceremony. Four flood children (two boys and two girls) or corn dancers commemorate four children once buried alive for the salvation of the tribe. They are accompanied by scraping-sticks and basket drums. They flex their knees during drum tapping, and stamp and raise effigies during stick-scraping.

4) A procession includes maskers representing the sun and moon, and a snouted creature.

5) The dancer-singers prance in a counterclockwise circle, carrying images of things wanted in abundance. Their songs to these images always end with the *wíkita* word *ku-uh*.

6) The *navitcu*, numbering perhaps 30, enact planting, harvesting, and looking for rain; and they exert healing powers.

7) The prayersticks are distributed, for rubbing away evil.

Summer Ceremony—

The less elaborate Quitovaca festival combines features of the cleansing rites and of rain-making by fermentation of the cactus liquor, *tiswin*. There are no

specially composed songs or effigies. The local fetish, a basket, contains the heart of the monster killed by I'toi. Two enclosures accommodate the northern and southern villages.

1) Four ceremonial clowns in deerskin masks, the *kuatcu'h* (finishers) shoot ceremonial food with bows and arrows. They sprinkle meal and squeak *ku-uh* to kill sickness. Later on they enact an impromptu pantomime of looking for tracks, ducking each other in a spring, etc.

2) Two dancer-singers for the north and south villages don deerskin masks and cocoon anklets. They wave tufted wands while stamping in time with their song. Then they dogtrot in a procession.

3) Six cornmeal sprinklers march in procession, then sprinkle meal on the ground, while stepping backwards.

Both versions of the ceremony suggest introduction from the Rio Grande pueblos, along with the culture of the sacred corn and squash. The clowns combine properties of the *kachina* and *koshare*, including the *kachina* cry, *ku-uh*. The shooting of food, the sun and moon representations recall Hopi rituals; the prancing of dancers in a counterclockwise circle recalls Pueblo *tablita corn dances*. [GPK]

Wild Hunt The ghostly hunters (E501) who ride through the sky on stormy evenings: known in nearly all parts of the world. The appearance of the wild hunters, usually said to be the ghosts of the restless dead, presages evil for the community. This phantom host, its horses and dogs (ratchet hounds, Gabriel's hounds, etc.), make a wild noise in the night, the sound of spirits passing overhead in their eternal wandering; and the sound of the spectral dogs makes earthly dogs howl and yelp in company. Typical explanatory stories of the Wild Hunt are:

Dando, a pleasure-loving, overly lenient Cornish priest, became a wealthy, sensual, and selfish man. He was an ardent hunter. One Sunday morning, after a long chase, he stopped and called to his companions for a drink, but all the flasks in the party were empty. Dando insisted if there were no drink at hand they could "go to Hell for it." At once a handsome hunter offered Dando a brimming cup, assuring him that it came from "the establishment just mentioned." Dando drank deep, but noticed as he did so that the man was counting up several head of the game for himself. Dando remonstrated but the suave hunter insisted that whatever he could catch he could keep. Dando's anger mounted but the hunter refused to give up his count. "I'll go to Hell for them, but I'll get them," cried Dando. Whereupon the hunter said, "You shall indeed," picked him up, and sat him before him on the horse. The horse dashed away and Dando's dogs followed with wild din. When they came to the stream the horse with its two riders leaped into the middle and the dogs followed. A blaze of fire rose about them and the stream boiled. But in a moment the face of the earth was as peaceful as ever. Sometimes Dando still rides and the spectral dogs can still be heard early Sunday mornings in the neighborhood of St. Germans.

Malay folklore also has its phantom huntsman with the phantom dogs, the *hantu si buru* or *hantu pemburu*, an evil spirit of the Malay Peninsula who hunts the wild boar and the mouse deer during the full moon. A preg-

nant woman once had a violent longing for meat of the mouse deer, specifically for that of a doe big with male young. Her husband vowed to get what she wanted but by mistake went looking for a buck big with young. He hunted across the world without success. Finally he sent his dogs to hunt the sky while he watched them from the earth. His head became fixed to his back from always looking up and a shoot from a leaf which fell into his throat grew up in front of his face. Because his son, born while he was hunting, was often reproached for having an evil spirit for a father, the *hantu si buru* punishes mankind. To meet him induces fatal illness; but he sometimes cures the illnesses of those who propitiate him. He still hunts the mouse deer and the note of the brik-brik bird at night is a warning of his approach. See ARTHUR; ASGARDSREID; BERGTA; CELTIC FOLKLORE; CHRISTMAS; GABRIEL'S HOUNDS; GANDREID; HECATE; HERODIAS; HOLDE; HORSE; ODIN.

William Tell The Swiss national hero; central character of a legend of the 14th century independence movement against the Hapsburgs. The story of William Tell was for many years considered to be literally true, but recent scholarship, after stripping the tale of many of its trimmings, has demonstrated the completely legendary character of Tell himself. In outline, the story goes that Gessler, the local governor, set up a cap in the market place and ordered the inhabitants to bow to it as a symbol of imperial rule. William Tell, on November 18, 1307, refused. Gessler, knowing of Tell's skill in archery, ordered him to shoot with one shot an apple from the head of his own son. The bowman placed one bolt in his crossbow and another in his belt. Then he shot the apple from his son's head. Gessler asked what the other arrow was for. When Tell said it was for his tyrannous heart if he had missed, Gessler had him bound and taken across the lake to imprisonment. But Tell leaped ashore from the boat at a place afterwards known as Tell's Leap, and soon after ambushed and slew Gessler. This spark from Uri set fire to the Swiss desire for freedom and the Confederation soon was formed.

This story, for all its exactness of date, name, and place, is made out of whole cloth. The story of the Greek archer Alcon, companion of Hercules mentioned by Vergil, has no direct connection with the Tell story, but Alcon was noted for his ability to shoot rings from people's heads and once, when his sleeping child was encircled by a serpent, Alcon killed the reptile with an arrow without harming the child. A closer relative of the Tell legend appears in the *Vilkina* (or *Thidrek's Saga*). There, King Nidung orders Egil, one of Volund's brothers, to shoot an apple from his son's head. There too appears the story of the second arrow. Gheysmer's version of Saxo Grammaticus tells the story of one Tokko (or Toki), whose name means simpleton. (Tell, *der Tall*, from *toll*, senseless, mad, means approximately the same thing.) Tokko bragged of his ability with the bow, and the cruel Harold Bluetooth gave him one chance to shoot an apple from his son's head. Tokko kept two spare arrows for the king if he missed. According to Saxo, this took place in 950. The English archer of balladry, William of Cloudesly, too is hero of a parallel tale. He, because of his misdeeds, had forfeited his life. But by shooting an apple from his child's head at 120 paces, he convinced the king that he was too fine an archer to be

executed. Such stories are found also in Norway (2 versions), Holstein and the Rhine country in Germany, and Iceland. The William Tell story appears in Swiss balladry well before the 16th century.

will-o'-the-wisp The jack-o'-lantern or ignis fatuus (French *feu follet*), also known in widespread folk belief as fox-fire, corpse light, friar's lantern, etc., and almost everywhere regarded as a supernatural manifestation. One of the German names for it is *Irrlicht*. It is an omen of death, or a wandering lost soul; it is accompanying some invisible funeral procession; or it is a forest spirit (see LIEKKIO). *Blud* is the Wend term for it, and the Wends believe it is the soul of an unbaptized infant.

American Penobscot Indians called this manifestation *Eskuddit'*, fire creature, and regarded it as an omen of calamity and death. Thonga Negroes of South Africa identify these mysterious lights as witch-fires; either they are actually the witches (*baloyi*) or are sent by them to terrify wrong-doers. If one is seen by a group, measures are taken at once to discover which one among them is the wrong-doer and to extract a confession from him. The Valenges believe that their sorcerers fly by night like balls of fire above the trees. (See *Folk-Lore* 50: 289). For fuller discussion, see JACK-O'-LANTERN; CORPSE LIGHT. See also FETCH CANDLE; ST. ELMO'S FIRE.

Wind, winds Wind as a character appears in the mythologies of many American Indian tribes in specific tales which have to do with regulating the wind. In a Coeur d'Alene version of this tale, Coyote snares Wind and stands ready to shoot him, but Wind begs him to take pity, and promises to blow only four times in the future, not all the time as he had been accustomed to doing. The inclusion of this tale in the Coyote cycle is unique to the Coeur d'Alene, but the incidents in the tale have a wide distribution on the North Pacific Coast and in the interior Plateau area. Regulation of the wind is also one of the things Eastern Woodlands culture heroes do for human beings; Nanabozho causes the wind to stop blowing all the time, and Gluskabe overcomes a giant bird whose wings cause the wind; he breaks the bird's wing. When the wing heals it is much smaller, and when flapped it produces light, gentle winds. The Pueblos have various Wind spirits. At Taos Pueblo, Wind Old Woman is believed to live at the middle of the world, to be mean and witchlike. She receives offerings of meal, pollen, and a single turkey feather from persons suffering from rheumatism. Wind Old Man is also referred to at Taos; some say he has died, else the winds at Taos would be far worse than they are. "Sweepings" or "refuse wind, Kliwa," is a terrible wind spirit, according to Taos belief, the "sickness man" who brings smallpox and other epidemics. He lurks near the houses; in former times people could see him, "an awful sight," who had to be exorcised by the chiefs with medicine water. At Zuñi the wind spirits are North Winds, the six Winds of the four cardinal directions and zenith and nadir, and Whirlwind; at Hopi Wind Woman and Whirlwind; at Laguna Feather Man and Whirlwind; among the Tewa Wind Old Woman and Wind Old Man; at Isleta Wind Old Man.

The idea of winds at the four quarters of the earth is not limited to the Pueblo peoples. The Apache peoples have Black, Blue, Yellow, and White Winds of the four

directions, and almost all over the continent there exist origin stories of the establishment of winds at the four quarters of the earth. In the Southwest the four or six main winds are associated with color symbolism, as exemplified above in the Apache data. The Apache, like the Pueblo peoples, envisage more winds than those of the directions; in a White Mountain Apache myth "thirty-two little winds" for each of the four directions smoke four pipefuls of strong tobacco offered to the hero of the tale as a test by Sun, the hero's unwilling father (Grenville Goodwin, *Myths and Tales of the White Mountain Apache*, MAFLS 33:7).

A cave in which the winds are confined, and from which they are released, is mentioned in California and southern Oregon tales about the wind, and there are also, in western American Indian mythologies especially, tales of conflicts between the north and south winds, and of the winds being kept in a bag (C322), in a fashion similar to that in which light is kept in a bag, box, or basket in Plateau and North Pacific Coast tales. See GA-OH; LIGHT; WHIRLWIND. [EVV]

windigo, wendigo, or wiendigo A man-eating creature who roams through the forest devouring luckless victims, in the mythology and belief of the northeastern Algonquian tribes. It is believed that any hunter who becomes lost in the bush, without food and provisions, preys like an animal for food and becomes cannibalistic; once having eaten human flesh he becomes a windigo, a fearsome and dangerous enemy to his former fellow human beings. Among the Ojibwa the term windigo is used in reference to an ogre, not necessarily cannibalistic, with whom children are threatened if they are naughty. See Frank G. Speck, *Naskapi*, Norman, Okla., 1935. [EVV]

wintergreen Oil of wintergreen has great reputation as a folk medicine for successful treatment of rheumatic pain and toothache. The North American Potawatomi Indians make a tea from the leaves of wintergreen to break a fever and to cure lumbago and rheumatism. They consider the berries balsamic and invigorating to the stomach. The Menomini and the Ojibwa also drink wintergreen tea to cure rheumatism; among the Shinnecock it is recommended for kidney trouble. Country people in the eastern United States attribute the delicate flavor of venison to the berries of wintergreen—hence one of its names, deerberry.

The leaves of the herb wintergreen (*Pyrola minor*) are cooling and drying, good for inward and outward wounds, also for hemorrhage, ulcers in the kidneys or bladder, and against making bloody water and excess of the catamenia (Culpeper).

winti or wintima' Dutch Guiana Negro word for spirit, a winti-man being a practitioner of magic and a priest of the African deities. As is the case with its African counterparts, the word *winti*, the *taki-taki* term for wind, has been accorded this meaning since, like the wind, the supernatural beings are not of material substance and invisible. The importance of the word is reflected in the fact that it gives its name to the African forms of worship found in the Guiana coastal area, which are also referred to as *winti* or, in the literature, as the *winti*-cult. [MJH]

Wisakedjak, Wisa'ka, or Whiskey Jack Cree and Saulteaux Ojibwa Indian culture hero, identical with

Nanabozho of other Ojibwa and central Algonquian groups, and explicitly identified with Wolverine in some Cree tales. Wisa'ka is the Fox Indian form of the name. He is the creator-trickster of the Fox Indians, being credited by them with having created the earth and everything on it, including man, but also figuring in Fox trickster stories. Wisa'ka now lives in the north and no one can visit him except by his will; he, on the contrary, can go and come as he pleases. His younger brother, Iyapa'ta, lives in the west in the spirit world. Some Shawnee know Wisa'ka as a trickster, but most of the Shawnee equate him to the Shawnee-Delaware mythologic character Nashitheki, and to the Sauk and Peoria Withihakaka. See NANABOZHO. [EWV]

Wise One Younger brother of the Lipan Apache culture hero, Killer-of-Enemies. Wise One equates with the younger brother, relative, or friend of the Navaho, Western, Jicarilla, Mescalero and Chiricahua culture heroes, and to him are attributed the characteristics usually associated with the younger of the Apache divine pair of culture heroes. [EWV]

Wissler, Clark (1870–1947) American anthropologist and authority on the American Indian. In 1906, following studies at the University of Indiana and Columbia University, he became curator of the department of anthropology of the American Museum of Natural History, a position he held until his retirement in 1942. In 1924, he returned to teaching, becoming then Professor of Anthropology at Yale University where he lectured until 1940.

Dr. Wissler's lifelong study and interest was in the American Indian; the collection of Indian material in the Museum of Natural History which he built up is one of the best in the world. Although his work was mostly in the United States, Dr. Wissler carried on significant researches elsewhere—in Australasia and Hawaii as well as in New Zealand where he studied the mysterious Maori stone carvings. Some of his books dealing with the Indian are *Indian Cavalcade* (1938), a treatment of Indian life in which science and romance are blended; *Indians of the United States* (1940), a summing up of his lifelong study; *North American Indians of the Plains* (1912); *The American Indian* (1917); *Man and Culture* (1923); *The Relation of Nature to Man in Aboriginal America* (1926); *Social Anthropology* (1929) and many other related subjects in book and periodical, of both scientific and popular appeal.

witch, witchcraft A person who practices sorcery; a sorcerer or sorceress; one having supernatural powers in the natural world, especially to work evil, and usually by association with evil spirits or the Devil: formerly applied to both men and women, but now generally restricted to women. Belief in witches exists in all lands, from earliest times to the present day. The wise woman and the medicine man of primitive societies, the learned pagan priestess, and the divinities of early religion became, through the influence of Christianity or the modification of folk tradition, the malignant, accursed witches and sorcerers of the Middle Ages and later folk belief. World folklore almost universally reports them as having the following powers: divination, invulnerability and superlative strength, transformation of self or others (Circe, Beauty and the Beast, the *Six Swans* of Grimm), ability to fly, power to become invisible or cause

others to become so, ability to impart animation to inanimate objects, to produce at will anything required, knowledge of drugs to produce love, fertility, death, etc., and, invariably, power over others through charms and spells. One of the attributes of the witch or sorcerer is the magic wand, staff, or rod, surviving to the present day in the hazel wand or divining rod used to discover water. One may distinguish a witch by several well-known tests: a witch cannot weep, at most she sheds only three tears; she has a birthmark under her armpit or hidden elsewhere under her hair; she has long eyes; she has to stop when she sees a broom and count the straws, or count seeds, grain, holes in a sieve, letters in a piece of writing, etc. The great Renaissance work on witchcraft *Malleus Maleficarum* (*The Hammer Against Evil-doers*) by Sprenger and Kramer indicates clearly the great danger witches were. Some of the chapter headings are: Of the Method by which they can inflict every sort of infirmity; How witch midwives commit most horrid crimes when they either kill children or offer them to devils in most accursed wise; How witches impede and prevent power of procreation; Of the manner whereby they change men into shapes of beasts. See HAG; SABBAT; witchcraft in SPANISH FOLKLORE; MEDICINE MAN; SHAMAN.

Witch stories analogous to European witch tales, and reflecting ideas of witchcraft similar to European ones, are found in Eastern Woodlands, Southeastern, and Southwestern Indian mythologies. Elsewhere in North America such tales are none too prevalent, although witchcraft in various forms is practiced by evilly disposed shamans and other persons in many North American tribes. American Indian witching practices are perhaps in part native, in part borrowings of European forms of black magic. Witching is not restricted to either sex; men or women, as long as they have the power or knowledge, practice witchcraft for purposes of revenge, or out of envy or jealousy, or to impose their own will or wishes on someone else. An old man who wished to marry a young, desirable girl might obtain her because she knew, or her family knew, that to refuse his demands would mean death; a mother might obtain a desirable wife for a son, because the mother's powers as a witch were known. Curing shamans, in most of North America, had powers for evil as well as good and often witched their victims, causing them to become ill or die. The Navaho and other American Indians believe that men and women, disguised in wolf or mountain-lion skins, go about practicing witchcraft; tale and myth material about such beings are plentiful. Among the Eastern Woodlands tribes witch bundles enabled their possessors to work black magic; such bundles had to be "fed" annually, often with the flesh or heart of the owner's own children or other close relatives. Witch bundles might be owned by individuals, or by a group or witching society; group organization of male and female witches is known for the Shawnee, Fox, and other eastern tribes, and cannibalism is usually connected with the rites of such societies. For examples of Pueblo Indian witch tales see Ruth Benedict, *Zuni Mythology* (2 vols., Columbia University, Contributions to Anthropology, Vol. 21, 1935), especially pp. 110–163, 297. For a general description of Pueblo witches and witchcraft see Elsie Clews Parsons, *Pueblo Indian Religion* (2 vols., Chicago, 1939), vol. 1, pp. 62–68; for a description of the origin of

Shawnee witch medicine see Vernon Kinietz and Erminie W. Voegelin, eds., *Shawnee Traditions*—C. C. Trowbridge's Account (Occasional Contributions from the Museum of Anthropology of the University of Michigan, vol. 9, 1939, pp. 43–46). [EWV]

☞ The usual technique used by sorcerers in tropical South America to kill their enemies is to shoot at them the darts and pebbles which they carry inside their bodies. Often they send out their own souls to strike down their victims. Some shamans inject into their victims a blackish substance which may be a deadly poison. Sorcerers also practice rites of imitative and contagious magic on the exuviae of their victims (see EXCREMENTS SWALLOWED). Moreover they can change themselves into dangerous animals, especially jaguars. Suspected witches are, as a rule, killed or expelled from the group. [AM]

witch hazel A shrub extensively used by the Indians of New England in medicine; tea brewed from the bark was used to stop bleeding of the stomach and kidneys. The bark and leaves are good for dimming eyes. It was considered good medicinally because the flowers show the snakes of Æsculapius. The astringent water cures inflammations, varicose veins, and is a tonic and clearing agent for the skin. Slips of witch hazel are used as water divining rods. See HAZEL.

wither-shins or widdershins Circumambulation to the left; the countersunwise circuit: an act of sinister and malign influence resulting in bad luck, calamity, or the death of the victim of it. It has been used by sorcerers and magicians in the north of Europe from early times. Scottish fishermen will not allow their boats to turn withershins, lest they have bad luck. Running withershins three times around a church was a practice associated with European witchcraft. See CIRCUMAMBULATION; TUATAL.

Wiyot Son of the Earth, and first ancestor of human beings, in Juaneño and Luiseño mythology. Like the neighboring Luiseño, the Juaneño believed that the first things in the universe were sky and earth, brother and sister. From the union of this couple was born, first, earth and sand, next, stone and flint, trees, animals, and finally Wiyot. From Wiyot was born a first race of beings that preceded mankind. As they multiplied, the Earth grew southward and the people followed. Wiyot was poisoned and died; he was cremated, but Coyote, Wiyot's assistant chief, leaped upon the pyre, tore off a piece of flesh from the body, and swallowed it. After this Chingichnich, another deity, appeared, converted the first people into animals and plants, or spirits, and in their place made the present human species out of earth, and taught them their laws and institutions. See A. L. Kroeber, *Handbook of the Indians of California*, BAEB 78, pp. 637–639. Wiyot is also the name for a small tribal group in northern California. [EWV]

woge Yurok Indian name for the race of people who first inhabited this world, but disappeared long before the advent of human beings. The woge include the amatory-minded creator, Wohpekumen, who finally was carried to a land across the salt water by Skate Woman, also a woge, to join the other woge who had previously departed from this earth. The Yurok hold that the woge are largely responsible for the present condition of the world. They differ from characters which, among

other tribes, are said to have lived during the mythical or prehuman age in that the Yurok woge are not depicted in the mythology primarily as animal-beings. [EWV]

Wolaro Leading mythological character of a northern Australian Kimberley tribe, the Gwini. A man, he created heaven, earth, and all in it, and now lives in the sky. Most of his creative activities were carried on through demiurges including birds, his son Dagubal, and the Rainbow Serpent himself. Wolaro delineated the boundaries of the hordes and gave the original dual organization. [KL]

Wolf A prominent character in the mythologies of the North American Indians of the Central Woodlands, of the Great Basin, and of certain Southwestern tribes; also, a moiety division of the Tlingit of the North Pacific Coast; the clan or gens animal of several Woodlands and Plains tribes.

In Woodlands mythology Wolf figures most prominently as the beloved brother of the culture hero Nanabozho; he is drowned, revived, and ultimately becomes the ruler of the country of the dead. In Basin myths Wolf and Coyote, the trickster, are brothers or partners who travel and share adventures together. Yuma origin accounts also make the two characters brothers. The Pomo Indians of California credit Coyote with creative acts, but Wolf, also, is given prominence in their myths. On the North Pacific Coast Wolf figures in the social organization of the Tlingit Indians, and in certain North Pacific Coast ceremonies; the Tlingit are divided into two moieties, one of which is Raven, the other Wolf or in some villages, Beaver. See NANABOZHO. [EWV]

Wolf Society A doctoring society of the Quileute and Makah Indians of the North Pacific Coast. The society, according to the origin legend told for it, originated when Changer, the transformer, killed the Wolf chief and danced in his skin, thus gaining power for curing. The society enacts the Wolf dance for a sick person, but must be given high payment. [EWV]

Wolverine Trickster of some of the Abnaki Eastern Algonquian Indians: a character distinct from the culture hero, Gluskabe, of these groups. Among the Montagnais-Naskapi, Cree, and Ojibwa, and in some Menomini tales, Wolverine is identified with the culture hero Nanabozho or Wisakedjak of these tribes. Wolverine is also the state animal of Michigan. See OFFENDED ROLLING ROCK. [EWV]

woman It is no linguistic accident that the name of the human race is *Homo* or man, and woman is thus automatically placed more or less in a race apart. In a good many creation stories, woman is created as an afterthought, although sometimes man and woman are made at the same time. The Biblical story of the creation of woman from man's rib because man needed a companion is paralleled in many European stories. In a Baltic story, woman was made from the tail of a dog (A124.3). Some tales say that God created man and that He turned the creation of woman over to the Devil. Several creation stories make a point of the physical differences between man and woman and explain the sexual drive as the desire of the imperfect creation (woman) to attain completeness. In many primitive myths of the Americas and elsewhere, women descend from the sky. Living with

them is perilous, for the women have toothed vaginas; the culture hero breaks the teeth with a stick or a stone. See GRANDFATHER; MAN; VAGINA DENTATA.

✍ In South American Indian mythology, the origin of women is often conceived of as different from that of men. The existence of males is taken for granted (Toba, Mataco), or men are described as the only survivors of the flood (Cañari), or of a massacre (Carajá).

The Chaco Indians say that formerly a group of hunters noticed that the mysterious thieves who stole their food were women, who descended from the sky by a rope. The rope was cut by the culture hero and the women stayed with the men. According to the Cañari, Jivaro, and Carajá, the first women were birds who helped the survivors of the flood and then assumed human shape. The first woman was fished from a lagoon by the culture hero (Wapishiana, Taruma).

Secret initiation rites for men are often represented as an institution which males took over from the women. A myth which has been recorded in Tierra del Fuego, the Chaco, and among some Brazilian tribes (Mundurucu, Puinave, etc.) tells of a time when women ruled over men by virtue of a feast during which they impersonated spirits and demons, and who required from the males the most complete subservience. One man discovered their secret, and he and his companions took revenge on the women by slaughtering them, with the exception of the very small girls. Then, the men decided to use the initiation rites themselves to keep control over the women. In Ona and Yahgan mythology, the women were led by Moon. Sun, her brother, overheard her boasting about the success of her plot and guided the men in their rebellion against women. [AM]

woman "dies" to be with lover A married woman who has a lover pretends to be ill and instructs her husband concerning her burial. After she "dies" she leaves her grave, or meets her lover in her grave box. The deception succeeds for some time, but is ultimately discovered by her husband or her children, and she alone, or she and her lover, are killed. This tale was early recorded in native North America for the Tsimshian Indians of the North Pacific Coast; in the Tsimshian version the child born of the dead woman feeds on his mother's entrails and grows up in her grave box; he becomes Raven, the Transformer-Culture-Hero of the Tsimshian Indians.

Other tales of a woman who "died" to be with her lover have also been recorded from other North Pacific Coast tribes (Tahltan, Wasco), but these are not linked with the birth of Raven or any other Transformer. The fact that this tale of a deceitful wife is "unique among American Indian tales" and limited to the North Pacific Coast led A. H. Krappe to postulate that the American Indian versions of the tale represent borrowings of a popular European and Near Eastern tale, the so-called Solomon legend (A. H. Krappe, "A Solomon Legend among the Indians of the North Pacific," *JAF* 59:309-314, 1946). The same story has however been collected among the Jicarilla, Chiricahua, and Lipan Apache of the Southwest, and among the Shawnee of the Eastern Woodlands. It may be that when more extended work is done on the distribution of this tale in North America its provenience may not be so certainly Old World as Krappe assumed. [ewv]

wondjina A figure depicted in Australian aboriginal art, in the rock shelters of northern Kimberley; it is semi-human, with no mouth, a skull-like face, and rudimentary or sometimes missing limbs. Prof. A. P. Elkin (University of Sydney) concluded that it represents the power which controls the rain, and it is often shown with drawings of the rainbow snake. The natives apparently believe that if the wondjina had a mouth, the rain would never cease and that man would be destroyed. The figures are executed in the red ochre, white, and black characteristic of prehistoric art. [MH]

work song A song sung at a task to increase the efficiency of the effort by timing the work stroke, setting a steady work pace, or whiling away the tedium of the working hours. The variety of the songs in this category is tremendous, covering the output of both primitive and advanced peoples, the songs of individuals and of work groups, gangs, or crews, and the countless occupations of both men and women. Since earliest times the hewers and haulers, the plowmen and reapers, the spinners and weavers, the herders and teamsters, the oarsmen, fishermen, raftsmen, lumbermen, sailors, laundresses, builders, craftsmen—the toilers of the world, slave and free—have sung at their labor, as they still do wherever power tools have not yet been substituted for the strength of men and their draft animals and the patient skill of handcrafts.

In ancient Greece there were work songs for making rope, for drawing water (fountain songs), for stamping barley and treading grapes; songs of wool spinners, watchmen, and shepherds. Fiji Islanders today chant at their navigation, gardening, and house-building. In Dahomey there are special songs of the ironworkers, the weavers, and other cloth workers. The West African pattern of antiphonal chanting by leader and chorus of workers in communal work groups (*dokpwe* in Dahomey) was brought to the New World with the Negro slaves and survives as a powerful influence in the music of this hemisphere. From it stemmed the American Negro work songs of plantation, levee, steamboat, and chain gang; the cocoa-dancing, wood-pulling, fishing, and agricultural songs of Trinidad (see GAYAF); the combite songs of Haitian group labor; the *plena*, songs of the work cooperative (*junta* or *compañía*) in the Dominican Republic, which accompany road-building, cane-cutting, felling of trees, etc. The range of work songs in the Orient is exemplified by the repertory of Japanese laborers (see MIN-YO). Even in the midst of mechanized warfare in Korea (1950) gangs of North Korean soldiers raised traditional coolie chants as they strained to lift and carry heavy machinery bogged down with the bombing out of roads and bridges.

In most of the civilized world, however, work songs are gradually dying out, their sound silenced in the roar of machines; their purpose outmoded by such inventions and devices as the pneumatic drill, the bulldozer, the power loom. Yet the effectiveness of music in raising the workers' productivity is acknowledged by the psychologists and efficiency experts who recommend the piping of music into factories where manufacturing noise permits.

The simplest of the work songs are little more than the absent-minded humming of a solitary worker at an all-day repetitious job (listen to a laundress at her

ironing) or an elaboration of work exclamations and shouts, such as the ancient and still-current chant of Chinese laborers, "Hung, ho, hai, ho," or of directions to a working gang, "Hold it . . . steady . . . now!" or "Ready . . . pull!"

The more developed examples rank with and may be identical with or adapted from the favorites in any other class of folk song—love songs, complaints, laments, spirituals, cumulative formulas, ballads, come-all-ye's, topical improvisations, dance and carnival songs.

The cumulative or counting songs have found special favor with English workers. *Barley Mow*, for example, is a cumulative toast, "Here's a health to the barley mow, my brave boys," and the size of the drink increases progressively stanza by stanza with the refrain, "We'll drink it out of the jolly brown bowl" (pint, hogshead, ocean). *Mowing Down the Meadow*, a haymakers' counting song, also sung by soldiers marching, counts from one to 100 men "to mow down the meadow" and in reverse from 100 to one in the cumulative refrain. Cornish laborers shoveling ballast on ships sang *The Long Hundred*, a number song matching one line to each shovelful, a total of 120 (a long hundred) by the time the number 100 was reached in the text of 20 six-line stanzas. *The Dilly Song* has also been sung as a work song in England (see TWELVE APOSTLES).

Working ballads include *John Henry*, *Gray Goose*, and *Stewball*, an Americanization of an Irish popular ballad about a racehorse named originally Skewbald, which is sung in leader and chorus style by work gangs.

Among the spirituals sung at work are *Norah* (Noah), a hammer song of American Negro work gangs, all about Noah building the ark, and *Steal Away*, sung in slavery times for hoeing. The shout song *Kneebone* developed a rowing version in South Carolina, which said, "Kneebone bend to the elbow bend," as adapted from the original "Bend my kneebone to the ground."

Love songs are sung at work by both men and women. The medieval French *chanson de toile* (linen song), sung by one voice without refrain to accompany weaving or spinning, was generally a love song or pastoral story devoted to the sorrows and emotions of one woman. The fountain songs, sung at the traditional scene of trysts, elopements, and abductions, reflected the romantic atmosphere of the public well or fountain. These women's songs were likely to be sad. The love songs of working men are more humorous and broad in allusion. The chanteyman, the stevedore, the gang leader often describe their lights of love (Anniebelle, Jumping Judy, Miss Rosie, etc.) graphically and unrestrainedly and in driving rhythms. See LOVE SONGS.

Work songs may also be the prototypes of other types of folk song. For example, they lie at the heart of the blues. A characteristic stanza form of American Negro work songs is a line repeated three times followed by a final line of comment. Many blues songs fit this form. The free line of the field holler also characterizes the blues. A song sung by colored workers on steamers and in the fields, *In the Morning*, has the accents of the blues when it says, "What's the use of working so hard, in the morning?" (three times) and then, "My gal works in a white man's yard."

The only accompaniment to most work songs is the beat of implements—flails, pestles, axes, and sledge hammers—the tinkle of animal bells, the clack of heddles, the

heavy tread of feet, or the sharply expelled breath or grunt of the workers as the stroke falls. Yet for some tasks and in some countries instruments have been used to liven the song or pace the work—the bagpipe for harvesting in England, drum and rattle in the Dominican Republic, conch-shell trumpet (see LAMBI), flute (or oboe) for Greek oarsmen, banjo for American plantation workers.

The rhythmic character of the songs is largely dictated by the nature of the work they accompany. The broad divisions of rhythm by tasks are clearly shown in the sea chanteys. If the work requires a heavy blow or pull, particularly when the efforts of a group must be pooled to accomplish something beyond the strength of an individual, the words may be sung fairly slowly but in strongly accented rhythm, each stress signalling the moment of effort. A Kwakiutl paddle song cited by Boas consists entirely of monosyllables with vowels of long value, each sung to a single stroke of the paddle. Songs for wielding the ax, pickax, sledge hammer, scythe, or oars, for hauling nets or sails, timber or stone, or for pounding foundations or roadbeds fall naturally into such rhythms. They are called forth most often for the harsh labor of men, though women may sing them where they engage in strenuous jobs, such as earth-pounding in Japan.

When the effort is slow and continuous, but heavy, the rhythm may be a funeral-march tempo, as in the capstan chanteys and in songs for dragging sledges, grinding, pumping, or carrying massive loads.

If the work consists of more rapid, repeated motions of less muscular demand, as in hoeing, husking grain, mashing food, or picking crops by hand (ginger in Jamaica, hemp in Normandy, tea in Japan, tobacco in Virginia), the rhythm is sometimes a more jingling, dancing tempo, not necessarily tied to the motion, but designed to keep the whole process going at a good speed. Mixed groups of men and women, as in the combite, gayap, and junta, and the cotton pickers of pre-Civil War plantations have sung to such rhythms. "Cotton needs pickin'/So bad." "Pick a bale of cotton/Pick a bale a day."

If the work is physically light, but long-continued and without marked intervals of greater effort, a variety of rhythms may be used—slow-paced and mournful, free and improvisational, or gay and lilting—for the purpose of the song is to divert the worker. Women's songs such as the luinig, the complainte, and the waulking, and the songs of shepherds and other solitary workers fall into this category.

Sometimes work songs are paced to the gait of men or the animals they ride or drive. A light, trotting rhythm was characteristic of the ship-loading songs of Mississippi River and Chesapeake roustabouts. These songs timed the steps of every man as he carried his load across the limber, bouncing plank from shore to boat. A failure to ride the swing of the plank would have tossed men and goods into the water. Similar jogging rhythms or quick marching time are characteristic of bearers' chants in the Orient and in Africa. The hoofbeat rhythm of horses may be heard in some of the wagoners' tunes and cowboy songs. Others take their tempo from the slow turning of wheels and the deliberate plodding of herds.

The songs and whistles of the man behind the horse- or mule-drawn plow may be either sprightly or doleful, according to the mood of the plowman, the heat of the day, or the length of the furrow; and they are often in-

errupted by calls to the animal. The Irish plowman's lilting whistle, the rhythmic and melodic improvisation of the holler, and the sorrowful measures of the Spanish arada indicate the variety of mood and rhythm in this type of agricultural work song.

The role of the song leader in labor groups is important. He sets the pace which the crew must follow. By his choice of song and tempo he can give them an interval of relaxation or step up their efforts. By his cleverness at improvisation and variation on well-known texts he can win their laughter, give interest to their working hours, and control their moods. The chanteyman or the *simidor* has the creative part of the performance. The chorus must sing a traditional refrain well known to every member so that the work strokes coincide as they hit the rhythm. In some types of work the leader actually sings directions to his gang, as in the track-lining song of American railroad section gangs. He chants a singsong of instruction to them; when he gets them set for the combined stress, he gives them a singing rhythm with a short, sometimes improvised and jocular, stanza of real song; then they go into action with the refrain "Ho, boys, can't you line 'em."

In this type of work song, the words are directly related to the job at hand. Other railroad songs for tie-tamping, moving and spiking rails, also suit the action to the words. When specific verbal directions are not required of the leader, it is sometimes the chorus words that carry the work cry—the heave-ho—while the solo part forms a diversion. "Cape Cod girls they have no combs," sings the chanteyman in the preparatory interval. "Heave away, heave away," the crew comes in as the ropes are hauled.

Probably the most down-to-business songs of all were the sounding calls of the Mississippi River boatmen. They were strict reporting of the depth of the water as shown by the heaving of the lead line—"Quarter less twain/ Mark twain/ Quarter twain/ Half twain," etc., all the way to "No bottom"—sung out long and clear to guide the pilot.

Many other types of work song form a comment on the task or a complaint about the hard life it entails, the condition of the worker, or the meanness or cruelty of the boss. The corn-grinding songs or mill songs of women in Greece and other ancient civilizations (*cantilena molaris*), to which grain was ground in hand querns for the community, were often narratives about persons whose unhappy fate was grinding. The *Song of Grotti* (see Frodi) or *Quern Song* of the Eddas, tells such a story; others tell of King Pittakos and of King Kyzikos of Mysia, also doomed to grinding. The banana-pound-ing songs of the African Bongili women tell of the goodness of the banana paste, which forms a staple article of their diet. The paddle songs of the Baduma men tell of the rigors and danger of their labor. An Irish-American work song from the stone quarries, *Drill, Ye Tarriers*, said wryly, "It's work all day for the sugar in your tay/ Down behind the railway/ And blast/ And fire." It relates the tall tale of a tarrier (rock driller) who was blasted a mile in the air and was docked for the time he lost in the sky.

Many of the agricultural work songs of Jamaica, the songs for digging (see DIGGING SINGS), for brush-cutting, and for ginger-pulling, are closely related to the occupation. They are always, in the African pattern, lead by a

soloist with a chanted chorus, and sometimes the work is competitive, a match between groups, with antiphonal singing either between or within the groups. *Wam Bam Hoe*, a digging song, accompanies the chopping strokes of the hoe with the words, "wam bam hoe, dis heah grass goin' to kill a' me yam." The narrative complains about the laziness of various relatives who have let grass grow up in the garden and ruin the yam crop. A brush-cutting song, *Bull, Oh*, or *Bullo*, which has also been sung as a ring game, has many versions, one of which says, "Lemme yo rope, lemme rope de bull. De bull mash up my groun'."

Among the bitterest and grimmest of all work songs are those of American Negro prison labor, sung by striped-clad convicts contracted for work on the roads, levees, land-clearing projects, etc. They sang of bad-man heroes (Stagolee, Lazarus, Long John), of escape, of the hard bosses, poor food, hot sun, of nostalgia, loneliness, cruelty. "Go down ol' Hannah," they sang to the sun. "Don't you rise no mo'. If you rise up in the mornin', bring Judgment Day." The steel-drilling song, *Take This Hammer*, complains, verse after resentful verse, "I don't want no cornbread and molasses. They hurt my pride." "I don't want no cold iron shackles around my leg," etc. The most extensive study of these songs was made by the Lomaxes, who found that the styles of singing varied from state to state and the characteristic work exclamations (*whuk, hunh*, etc.) also showed state-to-state variation, but everywhere the spirit was the same. "You should have been here in 1910/ They was drivin' the women just like the men." "My mother (and a long string of relations) she don't write to po' me . . . It makes a long-time man feel bad." "White man, white man, sittin' in the shade/ Laziest man that God ever made." "Well, Captain, Captain, how can it be?/ Whistles keep blowin', you keep workin' me." "Some o' these days, Lawd/ It won't be long/ Captain gonna call me/ An' I'll be gone." Such are the words suited to the last surviving body of work song in the United States that is still close to the African work chant.

In contrast to the songs which are actually songs about the work, a large segment of the world's work songs have nothing to do with the task, even though they may traditionally accompany a specific job. They deal with food and drink, with nostalgia for home, with local incidents or far-off places, with bits of foolery, wisdom, bawdry, or wishes, with girls, with heroes—almost anything under the sun. The short-drag chantey, *Paddy Doyle*, was sung only for bunting a sail; it was named for a Liverpool boarding-house keeper who had set up in his yard a cow's horn around which inexperienced sailors marched three times so that they could tell the skippers they had been around the Horn three times. The song ended with the line, "We'll pay Paddy Doyle for his boots," and on the word *boots*, which was yelled, every man grabbed in the flapping fold of canvas to furl it. The French-Canadian work songs, *À La Claire Fontaine* and *La Rose Blanche*, are both love songs; *Dans les Haubans* and *Le Miracle du Nouveau-né* are narratives. The chantey *Whiskey, Johnny* obviously is in praise of drink. Many of the ancient weaving songs of women, while rhythmically suited to the motions of the hands, are sad tunes about the desertion of a woman by her husband or lover and her disgrace or loneliness as she bears his child. Various others of the types of songs

unrelated to the task have been mentioned above in connection with ballads, cumulative songs, etc., sung at work.

There is a large body of song about various occupations, including many lumbermen's and miners' come-all-ye's, some of the forecastle songs and cowboy songs, etc., which are better called occupational songs, since they are not sung at work, but do describe the life, deliver the boasts, and jeer at the rivals of the men of these callings.

Somewhat different from the other work songs, but still folk inventions applied to the task, are those first singing commercials, the songs, chants, and cries of vendors. They may be rimed and melodic and regular in rhythm, or merely repeated singsong utterances worn and smoothed by endless iteration to a chain of nonsense syllables scarcely recognizable as words, like the tobacco auctioneer's chant now familiar through radio advertising. They include the selling songs of the peddlers of fruit, flowers, firewood, cheese, confections, seafood, vegetables, newspapers, herbs; the rant of train butchers, souvenir merchants, and sidewalk pitchmen with their miscellany of catchpenny goods; the announcements of the grinders of scissors and knives, the umbrella menders, the ragman, and the junk collector.

Some of them, for example the "What d'ye lack" of the London cheapjacks, are no longer heard; they are gone with the cries of the watch and the town crier. Others are as alive today in the streets and markets of every community as if mass production and distribution, chain stores, mail order, and installment selling had never come into being. Chinese fish peddlers, with a kettle of swimming fish, invite the householders to try their luck with hook and line. Mexican street merchants of tamales, sweetmeats, and carnival claptrap chant their *pregones*. Up through the grandstands at any circus in America still goes the singsong, "Peanuts, popcorn, chewing gum, and soda."

Other chants still heard, or only recently dead, are "Fresh fish, fresh fish, fresh-caught fish," "Any rags, any bones, any bottles today?" "Violets, who'll buy my violets?" "Lemonade made in the shade," "Watermelon, red to the rind." In the United States the cities of Baltimore, Charleston, and New Orleans especially have been famous for their vendors' songs; the loaded wagons creaked through narrow alleys and streets, and the Negro women carried napkin-covered baskets of deviled crabs and shrimp and other delicacies, while the holler-like calls of the sellers lured the customers.

Both work songs and street cries are often imitated or incorporated into popular and art music. *The Peanut Vendor* was a radio hit some years ago, in which the sales chant of a Latin-American peanut vendor was used. Gershwin made use of the Negro vendors' songs of Charleston in *Porgy and Bess*. The movie *Snow White and the Seven Dwarfs* had a little work ditty to which the dwarfs went off to work with their picks and shovels.

TERESA C. BRAKELEY

world egg The cosmic egg from which the universe was born, often from which mankind emerged, or from which the creator of the universe and mankind emerged; a concept of the ancient cosmogonies of India, Egypt, Greece, Phoenicia, etc., also found in the mythologies of many primitive peoples. In Orphic philosophical cos-

mogony Chronos produced an egg in vaporous space which contained both male and female seed and from which emerged the creator of the world. In Vedic cosmogony, deep in the primeval waters grew a golden germ (*Hiranyagarbha*) which evolved into the creator Prajāpati, and later Brahṁā. In the *Purāṇas* the world egg (*brāhmāṇḍa*) floated in the universal waters enveloped in water, air, wind, fire, etc.; within it Brahṁā appeared, who created the world. See *Cycle of Vāināmōinen* in FINNISH FOLKLORE; *HIRANYAGARBHA*; *KHNUM*.

world fire Destruction of the world in the past by fire, either accidentally or due to the deeds of the culture hero or trickster, or its near-destruction in the past as a result of the poor regulation of the sun, is a cosmogonic notion which appears in the mythologies of various American Indian tribes of western North America (Plateau, North Pacific Coast, California, Plains, Mackenzie, Southwestern areas). The Wintu of California, for example, say that before the human race supplanted the first people (who changed into animals) a world fire occurred, kindled by Loon Woman; the neighboring Pomo attribute the world fire to Coyote, the trickster, who formerly roamed the earth, fanned a world fire, created mankind, stole the sun for them, and transformed the animals into their present condition.

A world fire is also forecast for the end of the world as it exists today; this belief is especially prevalent in eastern North America. See *LOON WOMAN*. [EWV]

World Renewal A cult system of several American Indian tribes in northwestern California (Yurok, Karok, Hupa, Wiyot). The World Renewal cult, as developed by these four tribes, is comparable to the Kuksu cult of native central California, the Chingichnich datura religion of southern California, the Kachina cult of the Pueblos, and the Hamatsa or cannibal secret society initiations of the North Pacific Coast. The World Renewal cult is practiced for the purpose of reestablishing or firming the earth, for first-fruits and new fire, and to prevent disease and calamity for another year or biennium. It was instituted by members of the prehuman spirit race who later departed this earth or transformed themselves; the core of the ceremony is the recital of a formula repeating the words of these spirits, accompanied by acts symbolic of their actions. The formula is recited at specific locations in a fixed order, by a priest who has previously been purified by abstention from water and sex contacts, and by sweating and semi-fasting. For the ceremony a sacred structure is rebuilt or repaired; new fire is kindled during the ceremony, and there is ceremonial taking or consuming of acorns and salmon in first-fruit rites, to mention only a few of the esoteric features of the cult. The exoteric, public part of the World Renewal system consists of two dances, the Jumping dance and the White Deerskin, or Deerskin, dance; either one or both of these may be performed. Regalia for the former are woodpecker-scalp headbands and dance baskets; for the latter albino and other deerskins, otter and wolf skins, and long flint and obsidian blades. This regalia is worn and carried by the dancers, who are men, and with dentalium shells it represents the wealth of these tribes. The ceremonies are held chiefly in July and August, when the New Year starts with the salmon run and the ripening of the acorn crops. A detailed field account and analysis of the World

Renewal cult has recently been published by A. L. Kroeber and E. W. Gifford, *World Renewal: A Cult System of Native Northwest California* (Anthropological Records 13, Berkeley, Cal., 1949). [EWV]

wraith The apparition of a living person in the exact likeness of the moment, even as to details of dress; his ghostly double become visible. To see the wraith of a friend usually means that he has just died or is about to die. To see one's own wraith is an omen of death. The poet Shelley is said to have seen his own wraith shortly before he was drowned. In Germany, this manifestation is called *Doppelgänger*, literally, double-goer. Almost all peoples seem to have the concept of the visibility of the spirit-double: Nyassa tribes believe that the soul is a "copy" of the man, but visible to others only in dreams; North American Iroquois think of the soul as a spiritual duplicate of the living body; the Celebes term for soul is translated *image*. The general Melanesian concept, according to Codrington, is that a man's soul is a reflection of his material body. In Maori belief the spirit-double of a man cannot be distinguished from the man himself unless it becomes filmy or vaporizes and thus reveals its ghostly quality. See **FETCH**.

wu cults Until well into the last millenium before Christ the wu cults and their priests represented the official religion at the courts of the emperors, kings, and nobles of China. The priests were organized into colleges, kept records of the sacrifices, prognosticated, and were probably the guardians of the sacred and mystic ideographs. The wu priests are known to have officiated at the reading of the oracle bones and to have performed ritualistic dances. [RDJ]

Wu Kuan King of the fourth Chinese hell, the hell of the Lake of Blood where cheats and counterfeiters are punished. His day is the 18th of the Second Moon. [RDJ]

Wu Kung Ching The Centipede: in China, one of the five venomous animals to be pacified on the 5th day

of the Fifth Moon. Wu Kung Ching was one of the seven devils of the sacred mountain, Mei Shan, who became a military officer. He pretended to flee when he was attacked, then in a black fog blown by a terrific wind he resumed his true form (centipede) and killed his adversary. The adversary's followers saw nothing and were amazed to find their leader dead. He is depicted as a warrior in armor with two swords, black beard and mustache. See **CENTPEDE**. [RDJ]

Wüwüchim An annual Pueblo Indian ceremony given by members of the Wüwüchim men's society. Held in its "long form," it is a boys' initiation ceremony: a boy is pledged or given in infancy to a "father" who breathes in his mouth and later will sponsor him. Among the Hopi Wüwüchim initiation is a prerequisite to a man's dancing as a kachina. At the time of the emergence from the underworld, according to Hopi (Oraibi) legend, Mockingbird sang the songs that are still sung at the ceremony. Wüwüchim novices in Hopi kivas are represented as being in the underworld. The Hopi Wüwüchim ceremony in November precedes the winter solstice, and the new fire ritual is associated with Wüwüchim rather than with solstice observances, as at other pueblos. Wüwüchim at Hopi is thought of as the beginning of the ceremonial period or new year, when the kachina spirits emerge from Shipap to stay on earth for the ensuing half year. [EWV]

Wu Yo The five sacred mountains in the north, east, south, west, and center of China. The most famous of these is T'ai Shan in Shantung. The mythical emperor Yao is said to have paid homage to them in 2346 B.C. [RDJ]

Wyrdes or Weirds The Anglo-Saxon fates, usually three sisters, who weave the destiny of man. Originally they were closely parallel to the Norns, but today the term is principally applied to witches or soothsayers, and generally confined to Scotland. Wyrd is sometimes mentioned as the goddess of Fate, mother of the Norns.

Xanthos and Balios The two immortal horses given by Poseidon to Peleus as a wedding present. They were the offspring of Zephyrus, the west wind, (or Zeus) and the Harpy Podarge (Fleetfoot). During the Trojan War they served as chariot horses for Achilles. When he rebuked them for permitting Patroclus to be killed, Xanthos reproved Achilles by saying that a god had slain Patroclus and that a god would soon kill him too. After thus prophesying, the horse was struck dumb by the Erinyes. Compare **BALAAM**.

Xelas The transformer-culture-hero of the Lummi Indians of the Puget Sound region in the Pacific Northwest. [EWV]

Xevioso (pronounced *Hevioso*) Generalized designation for the Thunder pantheon of Dahomey. This is the So (the deity of Thunder) of Xevie, a small settlement in southern Dahomey, where the principal shrines to the Thunder gods are located. See **AGBE**; **SOGBO**. [MJH]

xoil' Yukaghir term for the figure of a dead shaman topped by the man's skull. The body is made of a trunk of wood; to this the skull of the dead man is attached; the figure is dressed in embroidered jackets and caps, fawn-skin coat, and wrapped in a blanket. This figure was kept in one corner of the house of the dead shaman's sons, was worshipped, "fed" at every meal, prayed to, and consulted in regard to various undertakings (hunt, war, etc.) The answers of the xoil' to questions were ascertained as follows: it was laid on the ground and lifted three times. If the people could not budge it, the answer was No, and the undertaking was abandoned; if it lifted easily and buoyantly, the undertaking would succeed. If the answer was uncertain, i.e., if the xoil' could be lifted twice but not thrice, or if it seemed sort of heavy, the outcome of the undertaking was obviously in doubt, and serious consultation was in order. Today the term *xoil'* is applied to the Christian god and the saints. See W. Jochelson, *The Yukaghir and The Yu-*

kaghirized Tungus, Publications of the Jesup North Pacific Expedition, MAMNH, vol. ix, part ii, 1924.

x-ray drawing A method of depiction frequently encountered in prehistoric and primitive art, in which the interior of the animal is depicted as well as the exterior, or within the silhouette. The animals painted on rock in Arnhem Land (Murngin), for example, clearly show stomach, alimentary canal, and heart. In the cliff paintings of Siberia, internal organs may be shown and so may the young within the female. The Eskimos may depict the bones of the fish and sometimes the swallowed hook and line. Northwest Coast Indians characteristically indicate the bone in the joints, and may show vertebrae and other features. The technique also appears in Melanesia and South America. [MH]

xwulequola or hrolequola The term for the trembling or hand vibration of male dancers of the Kwakiutl, Bella Coola, and neighboring Northwest Coast Indian tribes. With the arms at shoulder height, the hands and fingers shiver while the feet beat out the rhythm. This quivering is used both by shamans and by *kusiut* dancers at Midwinter festivals. This is part of the stylized dance vocabulary of this area. [GPK]

xylophone A musical instrument consisting of graduated lengths of wood, each resting on two supports at right angles to the bars, and played by striking with sticks. It is a primitive invention known since neolithic times and is still played by certain primitive peoples,

notably in Africa, but it has also developed into an orchestral instrument for art music and is sometimes made of metal bars.

The crudest form of the xylophone is simply a set of wooden bars laid across the outstretched legs of a seated player, often a woman. Development from this simple device proceeds to log supports for the bars, then to efficient table-like stands and to varieties hung from the players' shoulders. Some primitive types are played over a pit. In Africa, where the xylophones have a complicated resonator system of gourds attached to each bar and a vibrating membrane over a hole in each gourd, the instrument serves singly or in combinations of two or three to provide music for village festivities of the Yaswa, Azande, and other equatorial African peoples.

In Indonesia xylophones play in the gamelan and are highly developed instruments. One type, the *gambang*, has a cradle-like support and bamboo keys. In Bali this instrument is played for cremations, and its players learn their melodies by a mnemonic system of connecting musical themes with poetic texts.

In the New World an African-derived xylophone, the *marimba*, is played in Latin American popular bands and in some band music of the United States. In Guatemala the making of a marimba is a matter of great craftsmanship and ceremony. The wood for the keys is selected from choice hardwoods cut according to the propitious phase of the moon. Gourd resonators of the African type are used underneath the bars, and the sticks are tipped with raw rubber.

Y

Yahweh, Yahwe, Jahweh, or Jehovah A reconstruction of the Tetragrammaton, YHWH, the four consonants making up the ancient Hebrew Ineffable Name of God, and using the vowel points of Adonai, the Lord, another of God's names. The power of the name spelled out by the Tetragrammaton was such that its original pronunciation was lost, and conjecture has only approximated it. Yahweh is the name most often used, in discussion, to indicate God as the Hebrew tribal deity as distinguished from God as the Judeo-Christian deity, Jehovah. Yahweh is the baal of Israel, perhaps identical with or perhaps absorbing other local tribal gods of the region, like Sin, the moon god of the Sinai peninsula. The temple of Yahweh was on Mount Moriah. However, the relationships of Yahweh to other tribal deities, and the very identity of his original worshippers, remain matters of debate. The use of various names of God—Elohim (a plural form of El), Adonai, Yah, Shaddai, etc.—further confuses the picture of the primitive Hebrew god. All these names, but especially the Tetragrammaton (or parts of it) and its vowels in all the combinations of the letters and vowel points, were of importance in gematria and other magical practices of the Middle Ages. This name, YHWH, it was said, was on Moses' rod, and its power caused the sea to divide. He slew the Egyptian merely by pronouncing the Name.

yaka (plural *yaku*) The spirit of a dead person in Vedda (Ceylon) religion and belief. The yaka throws

stones at survivors if they hang around the corpse or its former dwelling, yet the yaku of the recently dead (*Nae Yaku*) are regarded as benevolent and affectionate and disposed to help their surviving kinsmen. (Among the Sinhalese the yaku are regarded as malignant, however). Offerings of food are made to the Nae Yaku and a special Nae Yaku ceremony is performed whenever their aid is invoked (see KAPURALE). After such a ceremony the people attending (men, women, children) usually eat the food that has been offered, believing thereby that they partake in an actual communion.

The yaku fall into three groups among the Veddas: 1) the Nae Yaku, benevolent ancestral spirits, including the yaku of heroes (see KANDE YAKA); 2) spirits of the Sinhalese and Tamils, which have taken on the benevolent nature of the indigenous Vedda yaku; and 3) foreign spirits, terrible and hostile.

yakshas In classical Hinduism, supernatural beings who seceded from the demons and took over the mountain areas: regarded as harmless. See YECH. [MWS]

ya'lgil The Yukaghir (Siberia) word for drum; literally, lake, in reference to the lake into which the shaman dives when he goes into the spirit world. The characteristic drum is a large, single-headed instrument of asymmetrical shape, grasped by an iron cross tied near the center of the underside. Four groups of iron rattles are attached to the rim. Around the outside edge are

a number of protuberances, which are conceived of as the horns of the shaman's spirits. See DRUM.

Yama In Hindu mythology, the king of the dead; later, the judge of the dead. In Vedic mythology Yama was a deified hero and the first man to die. He and his sister Yamī, the first mortals, were the children of Vivasvat, the Sun. When Yama died he went to the spirit-world in the upper sky where he reigned as a kind of president or friend of the dead. During the period of the epics and the *Purāṇas* Yama became the terrible judge and punisher of the dead, now pictured as green of color, clad in red, holding a club and noose, and riding a buffalo. He is also a guardian of the south in which direction are his palace (Yamasadana) and his city (Yamapura). Between the land of the living and this region flows the bloody river Vaitarani which all spirits must cross. This ordeal is escaped, however, by many virtuous worshippers of Brahmā, Kṛishṇa, Śiva, and Viṣṇu, who go instead to the heavens Brahmāloka, Go-loka, Kailāsa, and Vaiṣṇava respectively. Yama's emissaries are sometimes the owl and the pigeon, but his regular messengers are two, broad-nosed, four-eyed dogs, Śyāma and Śābala, who guard the path to the afterworld. Yama's messengers usually visit a dying man, bind his spirit with a noose, and convey it to Yamapura. When the spirit is led before the judgment seat it is confronted by Chitragupta, the recorder of men's deeds, who produces the dead man's account, and judgment is rendered. Then the spirit is rushed back to the place of cremation to receive a physical frame by feeding on the oblations offered during the śrāddha ceremony. See SESAME. After the new body is completed, it is conducted to heaven or to one of 21 hells. If the latter, the soul must travel 200 leagues a day through scorching, treeless plains or against icy winds, meeting lions, tigers, venomous serpents, thorns, rain, coals, blood, filth, and boiling water until it reaches the lowest depths where other inconceivable tortures await it. Yama corresponds to the Persian Yima and to the Buddhist Yen Lo.

Yamunā In Hindu belief, one of the three most sacred rivers of India. The Yamunā is unmarried, so is not as sacrosanct as is the Gangā or the Sarasvatī, and her water is heavy and indigestible. Allahabad, where the yellow Gangā and the blue Yamunā meet, is one of the holiest spots in India and the resort of pilgrims.

Yang Ching The Goat God. Chinese peasants in mountainous regions sacrifice to this spirit for protection against wild animals. He is depicted with a goat's head worn like a bonnet and a goatskin. [RDJ]

Yankee Doodle Although patriotic songs are generally excluded from the canon of folk song, this humorous jingle would seem to be an exception, partly because of its many folk versions and partly because of its traditional tune. In addition, a good deal of folklore has grown up about the origin and history of the song and the words, "Yankee," "doodle," and "Yankee Doodle." According to the legend, the original doggerel was composed in 1775 by a British army surgeon, Dr. Richard Shuckburgh (the most generally accepted of a half-dozen variant spellings), presumably at Fort Crailo, Rensselaer, New York, to express his amusement at the ragged appearance of the Continental troops.

The air (which is better known than the words) is

most familiar as the tune of the nursery rime, "Lucy Locket," and is said to have been used to accompany a Cavalier rime ridiculing Cromwell, beginning, "Nan-kie Doodle came to town." Resemblances are found in Holland, Spain, and Hungary. In this country the tune was first published in 1795 in Benjamin Carr's *Federal Overture* (composed in 1794), though it probably appeared first in print in James Aird's *A Selection of Scotch, English, Irish and Foreign Airs*, Vol. I, Glasgow, 1782, as an English country dance, which later became a New England jig.

By a stroke of Yankee shrewdness, recognizing a good thing when they saw it, the Americans took over the song and made it their own. Its popularity and patriotic appeal were attested by the fact that it was played at Cornwallis's surrender at Yorktown in 1781. The best of the folk parodies are *The Yankee's Return from Camp* and *Corn Cobs Twist Your Hair*, which have the authentic Yankee note and accent. [BAB]

✎ The melodic ancestors of the tune have been suggested variously as a Dutch harvest song with a refrain of "Yanker didde doodle down," the Irish air *All the Way to Galway*, etc., but the tune has never been tracked to its final origin. One explanation of the word "doodle" is that it is onomatopoeic for the sound of tonguing as played on the flute. In addition to the stanzas and refrains generally found in songbooks are many improvisations and parodies. One of these says, "And there came General Washington,/ Upon a snow-white charger/ He looked as big as all outdoors/ And thought that he was larger." [TCB]

Yankee tricksters and trickster stories The Yankee's legendary reputation (more comic than shady) for close dealing and sharp trading is reflected in the proverbial changes rung on the word "Yankee." As a noun, it has become virtually synonymous with "ingeniousness, thrift, and 'cuteness.'" In the 19th century, according to Mencken, to *yankee* meant to cheat; to *catch a Yankee*, to catch a tartar; and to *play Yankee*, to reply to a question by asking one. By a similar extension, *Yankee trick* (traced to 1776) came to mean "anything very smart, done in the way of trade, no matter in which of the states the doer was born" (Cornelius Mathews, *Writings*, 1846, II, p. 308). The association of Yankee tricks with tricks of the trade by way of the Yankee storekeeper and peddler was an inevitable concomitant of the Yankee genius and passion for trading and swapping.

Originally, the sharp Yankee was a development of the green Yankee or comic countryman, who, like his prototype, the English Yorkshire clown, was often more rogue than fool. (For the parallel proverbial meanings of Yorkshire, including "Yorkshire bite," a sharp, overreaching person, see Elizabeth Mary Wright, *Rustic Speech and Folk-Lore*, 1913, pp. 2-3.) In his general capacity of "practical wag" and good-natured rogue, the sharp Yankee fitted naturally into the traditional pattern of trickster and trickster-tricked stories.

The favorite haunt as well as school of the Yankee trickster was the village store and tavern, where, according to P. T. Barnum (himself a graduate of this school), "social, jolly, story-telling, joke-playing wags and wits, regular originals" foregathered to sharpen their wits and tongues upon one another. Favorite themes of village store and tavern humor were "skunking" and "skin-

ning" dodges and hoaxes in trading or raising a treat; the hazing of new clerks, city slickers, and loafers; curing pilferers and shop-lifters; the hypocritical greed of deacons (*deaconing* meaning "topping off a barrel of apples with the best specimens"); and the chicanery of horse-jockeys. While stories of the comic contest of wits between smart or close merchant and customer were largely regional in diffusion, national scope was given to the traditional feud between the backwoodsman and the Yankee peddler who sold the former things he didn't want. About the pawky, picaresque folk character of the Yankee peddler grew a saga of tricks and counter-tricks, involving worthless wooden clocks, wooden nutmegs, basswood hams, shoe-peg oats, pit-coal indigo, and pine-top gin.

In 1836 *The Clockmaker*, by a Nova Scotia judge, Thomas Chandler Haliburton, introduced the most famous of all Yankee peddlers, Sam Slick, who shares with Seba Smith's Jack Downing (1830) the homely wit and common sense of the cracker-box philosopher—a development of the sharp Yankee in the direction of humorous rustic sage and critic. In P. T. Barnum, the Yankee trickster turned showman and was enabled to indulge the "jocose element" in his character while capitalizing on the "perfect good nature with which the American public submit to a clever humbug."

The following stories illustrate typical Yankee trickster motifs. In "The Egg, the Darning Needle, and the Treat" a country bumpkin exchanges an egg for a darning needle and then asks for an egg to put into the storekeeper's treat of brandy, sugar, and water. When his own egg is handed back to him, he breaks it, discovers a double yolk, and claims a second needle to even the trade. In "Paying for the Stolen Butter" a Vermont storekeeper, having overseen a loafer hide a pound of butter under his hat, plants him in a seat next to the stove, builds up the fire, and plies him with stories and hot rum toddies while the melting butter trickles down the poor fellow's face and neck, soaks into his clothes, and trickles down his body into his very boots. "Turning Water into Grog" relates how a Yankee sea-captain obtains a drink without money. Having filled a gallon demijohn half full of water, he asks a bartender to give him two quarts of rum, saying that the demijohn is already half full. The bartender adds the rum, then, refusing to charge it, reclaims it. By repeating the process at the next five saloons, the sea-captain manages to obtain two quarts of excellent rum.

Typical of the slanders on deacons is the anecdote of the elder who said to his clerk, "John, have you wet down the tobacco?" "Yes, sir." "Have you sanded the sugar?" "Yes, sir." "Then come in to prayers!" Variants refer to watering the rum, dusting the pepper, chicorying the coffee, larding the butter, and flouring the ginger. A favorite clock-peddler story tells of the Yankee who sells each worthless clock with the guarantee that he will return in a few weeks and replace it if it doesn't go. Having sold all his clocks but one, he retraces his route, using his remaining clock to replace the first and then replacing each clock in turn with the one from the preceding house. A well-known horse-jockey anecdote concerns the man who sells a worthless horse admitting that the animal has two faults and agreeing to tell one fault before trading and the other after. The first fault is: "He is awful hard to catch," and the second fault: "He ain't

good for nothin' when you catch him." (See, B. A. Botkin, *A Treasury of New England Folklore*, pp. 2–102.)

B. A. BOTKIN

yanmena The girls' puberty rite of the Lengua Indians of the Gran Chaco in South America. It corresponds in form and purpose to the *káusima* of the Chodoti and Ashluslay. [GPK]

Yansan Yoruban Negro deity of the wind. This being is also worshipped in the New World, being a prominent member of the pantheon of the Ketu (Yoruba-derived) cult of Bahia. [MJH]

Ya-o-gah In Iroquois Indian (Seneca) mythology, the north wind, the Bear, leashed at the door of Ga-oh's cave. When Ga-oh unfastens the leash of Ya-o-gah, the Bear, winter hurricanes sweep across the earth, and the waters freeze from his icy breath. The Bear could crush the world in his storms or destroy it with cold, if bidden.

Yao Wang President of the Chinese ministry of medicine. Until very recent times the great healers of China were accorded official immortality in this pantheon. In very early times the three culture heroes, Fu Hsi, Shên Nung, and Huang Ti dominated the cult. Each of the nine or more divinities of Huang Ti's ministry of medicine was a specialist. The fields were diagnostics, surgery, dermatology, anatomy, yin-yang and the digestive system, medical properties of plants and minerals, veterinary science, the nervous system.

Yao Wang has numerous legends. While living as a hermit in the mountains he once saved the life of a snake. Later he met a messenger who took him on a magical journey to the magnificent water palace of a dragon king, Ching Yang. Here he met a young woman who thanked him for having saved the life of her child. Although the king offered a three-day feast in his honor, the physician refused because he lived on air and wine. At the request of the king he composed 30 chapters of his materia medica known as "The Secrets of the Dragon." On another occasion he removed a bone from the throat of a tiger. In recognition of this deed the tiger, eternally nodding its head, in thanks undertook to stand guard at the gate of the physician's house. An uncounted host of greater or lesser specialists is associated with Yao Wang in his several temples [RDJ]

yarrow or milfoil The healing powers of this plant were discovered by Achilles, who, in some versions of the story, included it in the ointment with which he cured the wounds of Telephus. See *ACHILLES' SPEAR*. It was called soldiers' woundwort in the Middle Ages and was part of the pharmacopeia of every monastery in Europe. *A. ptarmica* was called sneezewort because its roots were used to make snuff. Yarrow was also known to various Indian groups of North America, who used it in both capacities.

Yarrow was used for centuries by English witches in their multitudinous incantations and spells, though in Yorkshire today witches and demons are said to dislike the plant and it is worn as a protection against them. In the Hebrides a leaf held against the eyelids enables one to see the person in one's thoughts. In both England and North America yarrow is used in love divinations, either plucked from the grave of a young man and placed under the pillow, wrapped in wool and placed in the shoe, or put up the nose to draw blood; frequently

a rime accompanies these actions. Yarrow stalks are known to have been used in divination in China, but the method is unknown. In Europe it is quite generally hung up in the house on St. John's Eve to prevent sickness during the ensuing year.

Yarrow is another of the plants called all-heal from its many medicinal uses. From earliest times it has been known as a rheumatism remedy, and was usually used in compresses around the affected parts. The 17th century English physician Nicholas Culpeper called yarrow an herb of Venus and recommended it as a cure for gonorrhea in men and whites in women, for those who cannot hold their water, and to be chewed for toothache. The English herbalist Parkinson recommended it for "casual sighings" and said that mixed with salad oil it would prevent falling hair and promote the growth of the beard. Yarrow is also as potent for healing wounds caused by carpenters' tools as by swords and spears.

Various North American Indians made a snuff from yarrow roots and sometimes smoked the leaves in place of tobacco. The Chippewa Indians drank a decoction of the leaves for nervous disorders; the Mohegan-Pequot tribes drank yarrow tea for the liver and kidneys. The Gosiute of Utah recommended this tea for biliousness and headache and also for rheumatism. The Meskwaki used it for fevers and ague and to bathe aches and sprains. The Navaho call it "life medicine" and consider it a general panacea and tonic.

yātu In the *Avesta* and other Zoroastrian texts, the sorcerer, male counterpart of the *pairika*: classified among the *drujes*, the friends or spirits of evil. Chief of the *yātus* is Akhtya.

Yawo Bahian designation for an initiate of the African cults of the city. It is the equivalent of *vodunsi*, the "wife of the god" of the Dahomeans, its literal meaning in the Yoruban language from which it derives being "junior wife." A Bahian *yawo*, after seven years of worship of her deity, becomes a *vodunsi*, a term which, in Bahia, is reserved for the senior members of cult-groups. See VODUN. [MJH]

ya'yai The Koryak (northeastern Siberia) drum: a large, shallow, single-headed, oval instrument, with a skin of reindeer hide, or occasionally dog or seal hide, and a bunch of iron rattles at the top edge. It is beaten with a whalebone drumstick, and the skin is tightened by heating before the fire before playing.

The drum is a necessity for every household, being a guardian of the family as powerful as the sacred fire-board. The ritual of its care and use and the powers of the instrument are an important element in the family shamanism of the Koryaks. The drum is master of the room in which it is kept. It must never be taken out of the house without its special case; if this tabu is broken, a blizzard will follow. However, any member of the household may play the drum, for it is not the exclusive property of the shaman, as in so many other cultures. It is played for calling the spirits, for family ceremonies, for placating gods, for accompaniment to singing, for mourning ten days after death, and sometimes purely for entertainment.

Shamans have no personally owned drums; they use those of the families in whose homes rites are held. When the shaman sings and addresses the spirits, he begins by covering his face with the drum. Then he beats

it, singing in imitation of the howl of the wolf and the cries of various other animals.

The voice of the drum is the secret of its power. Its sound is capable of inciting strong emotional excitement in the listeners, and it is believed to command the attention and influence the behavior of spirits. It speaks through its tongue, the drumstick. See Waldemar Jochelson, *The Koryak: Religion and Myths*, vol. 6, part 1, publications of the Jesup North Pacific Expedition, MAMNH, New York, 1905.

yazata (New Persian *yazdān*) One of the Zoroastrian heavenly host. The yazatas rank third in the hierarchy of celestial beings since they are below Ahura Mazda and the Amesha Spentas. Their duties include the transmission of the divine will to mankind. In theory their number is legion but there are 24 who play important roles, among them Ātar, Apō, Hvarekshaēta, Māh, Tishtrya, Drvāspā, Mithra, Sraosha, and Rashnu. According to the *Avesta* there are two classes of yazatas, spiritual and material. They are the guardian spirits of heaven, the planets, stars, and the elements, and the personifications of such abstractions as uprightness, truth, and victory. In modern Persian belief the *yazdān* are good demons.

years seem days A folktale motif (D2011) in which a person who visits an otherworld returns to earth to discover that many years, sometimes centuries, have passed. Usually the correspondence is exact between the number of days he thinks he is absent and the number of years that actually have passed. Thomas Rymer (Child #37) tells how the poet followed the queen of Elfland and did not return until seven years had passed. Sometimes, in folktale, this story is told of a man who falls asleep on a fairy hill, sleeps what he thinks is one night, yet wakes up a year later, or a season later. In the *Two Friends in Life and Death* (Type 470), the man who travels to the otherworld finds on his return that many years have passed while he was gone. The lapse of time is common in tales of visits to fairyland, to the sun in the sky, or of travel on distant voyages. See A'IKREN; IMRAMA; MAGIC CALDRON; OISIN; RIP VAN WINKLE.

 In American Indian tales all over the continent years are often referred to or regarded as days, as for example when the Shawnee female creator speaks to the first couple whom she has created, and tells them she will return "in four days." Actually she returns after four years. Or a boy, in a California tale, thinks that he has been away from home for a number of days, when actually he has been absent the same number of years. Among the Zuñi Indians of the Southwest, it is told that at first people lived in the fourth underworld for four "days" (years); later, after their emergence, "they came to Slime Spring. They lived there four days (years)." Sometimes the point of a tale may hinge on this confusion of years with days; chiefly, however, it is incidental to the plot. See A'IKREN. [EWV]

yech or **yeksh** In Indian folklore, a humorous demon in the form of an animal smaller than a cat, dark-colored, wearing a white cap, who leads travelers astray. The yech has power to assume any shape, even that of a human being. The cap is shell-shaped and can render its wearer invisible. Any man who can seize the cap of a yech and secure it under a millstone will have the yech as a faithful servant. The yech is powerful and

can move mountains and towns, but he cannot lift a millstone without pinching his fingers.

yĖgbogba A gbo or magic charm of Dahomey Negroes: an iron toe-ring that protects against snakes. It is made of iron strands twisted or coiled to represent a snake, and is worn on the second toe of the left foot. Before use, it is steeped in snake venom, hence even if the wearer steps on a snake he will not be bitten. Its name is called as it is put on. (See Herskovits, *Dahomey* II, 278.)

Yehwe Zogbanu The thirty-horned forest-dwelling giant of Dahomean mythology. Like his Ashanti counterpart, the Sasabonsam, he is believed a constant threat to hunters. Many tales of hunters tell of their encounters with this creature. [MJH]

yeibichai or **yeibechi** Masked supernaturals of the Nightway Navaho curing ceremonial. The name is compounded from *ye'i*, the terrible one (though benevolent) and *bechi*, the name of the ceremony, or *shi-chai*, grand-uncle, referring to the leader, the Talking God. *Chi* is a mask or pouch. All of the *ye'i* are identified by bag-shaped buckskin masks. These deities are also referred to as *hashche* (*xašče*) or god (who is speechless).

Sand-paintings show the aspect of the prototypes, the colors and designs which are reproduced in the masks. The masks were derived, according to legend, from the skulls of two corn maidens killed by the Ute. They changed into a boy representing the west, the sun, and yellow; and into a girl representing the east, the moon, and white. The other two symbolical colors are black for the north, and blue for the south. The helmets are ornamented with eagle, turkey, bluebird, and owl feathers, spruce collars, the butt of a gourd, or a fluff of kitfox fur for the mouth, and lightning designs. They identify the 14 types of *ye'i*:

- 1) *xašče'lti'i* (*hashcheyalte*), Talking God who says *hu-hu*.
- 2) *hashche'oyan*, Calling God.
- 3) *hashche bakan*, the six male gods, drooping rain collar.
- 4) *hashche ba'ad*, the six female gods, dawn band, ear flaps.
- 5) *hashche shchini*, the Black God.
- 6) *naye nežyani*, the monster slayer.
- 7) *to'bachis'chini*, born-for-water.
- 8) *to' neinili*, the water sprinkler, or *libdhi*, the Gray God (compare the Apache).
- 9) *ya'askidi*, the humpback, derived from the Rocky Mountain sheep, with colored hump, horns, cane, and rainbow.
- 10) *žahadolchahi*, fringed mouth with divided masks, half red and half yellow.
- 11) *hashche hličhi*, the Red God.
- 12) *hadachishi*, the destroyer.
- 13) *hashche 'iditchonsi*, the Whistling God.
- 14) *hashche 'ohltohi*, the Shooting God.

They live in rocks, caves, mountains, canyons. After their departure they blow to drive evil away. They cure eye and throat trouble, paralysis, and distortion of the limbs. They can appear in any order, except for the first four types. They officiate at a number of curing ceremonies, the Windway, Shootingway, Beautyway, Coyoteway, Downway, Big-godway. Their most elaborate rituals and concluding dance fill the nine nights and eight days of the Nightway.

They take turns during the curative ceremonies of the first eight nights and days. 1, 4, and 8 press sacred hoops and prayersticks to the body of the patient. On the eighth night 5 treats the patient, and 12 breaks prayersticks over him to destroy sickness. The elaborate rites feature food consecration on the fourth night, and on the fifth night initiations, a swooning ceremony, and sand-paintings.

The final night is opened by 6, 7, 8, and 14 in the final cure. Then the dance begins. The *ye'i* file in, each with a gourd rattle in the right hand and two eagle plumes in the left. They chant an unearthly rising and falling melody which leaps up in sudden falsettos. At first only 1, 2, and the six male gods trot in a line, lean forward with a yell, face about and trot. Then the women maskers join in alternation with the males. They cross over and file down the center in longways figures.

For this climactic event visitors come from near and far and share in the curative effects and the beauty of the scene. The public is admitted only to the final dance.

Singing is an essential part of the dance and of the entire ceremony, as in all Navaho curing rites. This emphasis on song they share with desert tribes, the Mo-have and Yuma. The masks and rain symbols show strong Pueblo *kachina* influence. The *libdhi* mask recalls the Apache "gray one" associated with the *gahe*. Thus the Navaho ceremony connects with adjacent tribes, but it maintains a powerful individuality in the unique song and supernatural impersonations. See MASKS. [GPK]

Yemanja Yoruban Negro goddess of the sea. This being has been carried to the New World, where she is worshipped in Cuba, and in the African cults of Brazil, being identified with the siren. [MJH]

Yen Lo In Chinese Buddhist lore, Lord and judge of the Fifth Hell. He has many of the attributes of the Hindu god Yama. Punishment in the Fifth Hell is the memory of things past. Yen Lo's birthday is the 8th of the First Moon. [RBJ]

Yggdrasil or **Igdrasil** In Scandinavian mythology, the world tree, an evergreen ash which overshadows the whole world. Its roots and branches bind together heaven and hell. It is usually represented as being fed by three roots, one in Nifheim by the spring Hvergelmir, one in Midgard by Mimir's well, and one in Asgard which is daily watered by the Norns from Urd's fountain. Under this tree, the gods daily meet in judgment.

On the top of Yggdrasil sits the golden cock, Vithofnir, who watches every move of Surtr in Muspellheim. On the top of Lerad, the highest branch, which shades Valhalla (sometimes considered a separate tree), sits an eagle with the falcon Vedfolnir perched on his head. These two report all they see to the gods below. The squirrel Ratatosk scurries between the eagle and the serpent Nidhoggr, gnawing on the roots, and tries to stir up discord between them. The four stags, Dain, Dvalin, Duneyr, and Durathor, feed on the topmost twigs and from their antlers the dew drops on the world below. Odin's goat, Heidrun, who supplies the heavenly mead, browses on the branch Lerad. Odin's spear, Gungnir, is made from a branch of Yggdrasil. See BIFROST; HEL.

Yima (Pahlavi *Yim*, Persian *Jamshīd*) In Iranian mythology, the king of men during the golden age

and the possessor of the Glory (kuvarenanhs); later, a culture hero and ruler of the dead, corresponding to the Vedic Yama. He was the son of Vivanghvant, the first to offer haoma to Ahura Mazda and the brother of Takhma Urupa. His sister and spouse was Yimaha. According to the *Vendidad*, during the age of Yima the land of men was so beautiful and provident that men and flocks increased until there was no longer room for them. Yima made the earth stretch until it was a third larger. This he did three times in a vain attempt to keep up with the ever-increasing population. Finally Ahura Mazda told him to make an enclosure, choose the best and finest of men, plants, and all living creatures, take them into the enclosure so that they would be protected from the bitter winters which were to come and destroy the evil on the earth.

Yima lost his Glory by a lie. It departed in the form of a bird and Mithra seized it. It returned to Yima, but again departed and was seized by Thräetaona. The third time Keresäspa seized it and Yima was overcome by Azhi Dahäka. Later Yima was known as a builder and many ruins are ascribed to him. As a culture hero he taught men how to mold bricks and lay foundations.

Yimantuwingyai "The One Lost [to us] Across [the ocean]": Hupa Indian (Northwest California) culture hero and establisher of world order; also known as "Old Man Over Across." He was the leader of the preceding race of people and a sort of establisher of the order and condition of the world, combining trickiness and eroticism with heroic qualities. [EWV]

yin-yang The female (yin) and male (yang) principles of the universe in Chinese philosophy and religion: assumed to be in eternal opposition. When in this opposition they achieve a dynamic balance, i.e. harmony has been achieved. The lamaist sects present this opposition by depictions of human figures in sexual intercourse. The Taoists symbolize it with a circle bisected by a sine curve. See *Early Beliefs and Customs in CHINESE FOLKLORE*; also see the top row of the jacket of this book. [RDJ]

Ymir In Scandinavian mythology, the progenitor of the giants, and the first being in the universe. He was formed of ice blocks from the streams of Niflheim and sparks from Muspellheim which mingled in the great void Ginnungagap, and quickened into life. Audhumla, the giant cow, nourished him. He was killed by Odin with his two brothers, Vili and Ve. These three creators rolled his corpse back into Ginnungagap where they fashioned the earth from his body, the seas from his flesh, and the heavens from his skull. All of the frost giants except Bergelmir and his wife were drowned in his blood. See *ANIMAL NURSE*; *BURI*; *DVERGAR*.

Yo Non-animal trickster of Dahomean Negro folklore. It is somewhat difficult to determine the precise physical characteristics ascribed to this being, but there is no question of his personality, which is marked by gross appetite and unreliability in his relations with those with whom he comes into contact. [MJH]

yoga Literally, union: a Hindu system of mystical and ascetic philosophy which involves withdrawal from the world and abstract meditation upon any object, as the Supreme Spirit (Brahman), with the purpose of identifying one's self with the object, thus achieving

nirvāṇa, and of relieving the soul of the five errors of mind (error, knowledge, imagination, memory, and sleep). The date of the beginning of yoga has never been determined. The doctrine, however, was given its form by Patañjali, author of the *Yogasūtras*, according to which yoga consists of a series of stages which are traversed by means of *āsana* or various bodily attitudes, by holding the breath, and by concentration of the gaze on a particular point. Yoga can gain for a man the power of becoming invisible, of such size as to be able to touch the moon, or of being transported anywhere. By yoga a man can know the past and the future and talk with the dead. By inducing a hypnotic sleep, some yogis (practitioners of yoga) can be buried alive for periods of time without suffering injury.

In folk belief yogis are powerful magicians and sorcerers who have the power to protect from the evil eye. Some yogis live by singing religious songs, others by begging. The latter wear a waist-cloth, a woolen string around the neck attached to which is a whistle, a wallet hung from the left shoulder, a begging gourd, and heavy earrings which are the symbol of the faith.

The forms of yoga include *Hatha-yoga* in which mastery of the body is obtained by restraining the senses, *Bhakti-yoga* in which devotion to a personal god is the means to mastery of self, *Raja-yoga* which employs mental concentration, and, the highest form, *Jnana-yoga* in which union with the Supreme Spirit is obtained through concentration of the soul upon itself.

yoginī In Hindu mythology, one of the eight female demons created by and attendant upon Durgā: sometimes the yoginis are forms of that goddess, capable of being multiplied to as many as ten million.

yona Literally, bear: the Cherokee Indian bear dance. Men and women progress, in couples, in a counterclockwise arc, with a stomp step similar to that of the Iroquois bear dance, *nyagawioenp*. The Cherokee add more mimetic gestures, however, such as clawing. Their song is consistently antiphonal between the leader and the chorus of men. All finally wind into a spiral, typical of Cherokee dances.

Until recently the dance was propitiatory and therapeutic. Now it has become a social dance, purely secular in this Christianized tribe. As performed at Qualla Reservation in North Carolina, it concludes with the "bear hug," raillery, and obscenities between the sexes. It always forms part of the bugah dance sequence. (Collected at Qualla.) [GPK]

yoni In India and Tibet, the female organ, symbol since early times of the female principle or female creative energy; an object of worship either alone or, most often, in combination with the male symbol, the lingam. The yoni is associated with concepts of the mother goddess, the earth, and fertility. The combined symbol of lingam and yoni expresses the concept, paralleled in many cultures, of a union of opposites for the purpose of universal creation. In phallic worship, the yoni may be regarded as having evil influences which are counteracted by use of the male symbol, e.g., the bull. Representations of the yoni in art commonly take the form of a woman, the lotus, the cow, or the downward pointing triangle (*śakti*). See *LINGAM*; *LOTUS*. [MH]

yorka Surinam Negro term for ghost, probably derived from the Carib Indian word *yoroka*. The *yorka* are the ancestral beings; should they not be well treated, they become dangerous and much thought and effort is given to ward off their malevolence. [MJH]

Young Beichan A Scottish ballad (Child #53) with many analogs in Norwegian, Spanish, and Italian ballad and story, relating the love story of a young lord imprisoned in a foreign land and the beautiful daughter of his jailor or captor, who sets him free. They exchange vows to remain true to each other for seven years, but when the young man returns to his own country, he becomes engaged to another girl. The foreign lady, warned in some versions by a fairy or a Billy Blin that her lover is about to be married, crosses the sea to recall his vow to him and arrives on the wedding day. The young lord then casts off his bride and marries his first love whom he had never forgotten. The song is known in numerous versions in the British Isles and in America as *The Turkish Lady*, *Lord Bateman*, *The Jailer's Daughter*, etc. A Missouri version elaborates on the anger of the mother-in-law whose daughter is repudiated on her wedding day. "Don't you forget my only daughter," she says, "No matter who-all has crossed the sea."

Young Charlotte An American popular ballad dealing with a theme common in European balladry, but supposedly recounting an actual occurrence, the freezing to death of a young girl who was not wearing enough wraps to keep out the cold on a sleigh ride to a New Year's party. It was written by Seba Smith and first published in *The Rover* in 1843, with the title "A Corpse Going to a Ball." For many years the author was thought, on the basis of family tradition, to have been William Lorenzo Carter, known as the "blind Homer" of Benson, Vermont, and he is still believed to have influenced the diffusion of the song, which passed into oral tradition in Vermont, Pennsylvania, Ohio, and Missouri at spots where he or his family stayed in Mormon settlements.

Many versions of the song have been recorded, with at least eight differing melodies. The best known of the tunes is a set of the air for *Lady Isabel and the Elf Knight* (Child #4), which is a shorter form of the Irish *Fainne Geal an Lae* melody. Other common titles of the song include *Fair Charlotte* and *The Frozen Girl*.

youngest son The central figure of a widespread group of folktales about the victorious youngest child (L0-199). The youngest son (usually of three) performs a required, seemingly impossible task or quest (H1242) at which the elders fail or are caught and put to death during their efforts, or are rescued by the youngest (R155.1). The youngest son is often a simpleton, or seemingly a nitwit, really often the cleverest or most practical, always despised and ill-treated by the treacherous elder brothers. Sometimes he is the only one to endure successfully the terrors of a vigil (H1462.1). In some tales the elder brothers fail because they fall asleep, are rude or unkind to an animal or supernatural, while the youngest, though seemingly a fool, stays awake and keeps watch, is good-hearted and accedes to the requests of the animal or supernatural, and is miraculously aided. This is the theme of *The Poor Miller's Boy and the Cat* (Grimm

#106) and is a frequent element in the Bear's Son tales. See AMALA.

yuga In Hindu cosmogony, one of the four ages of the world. In order these are the Kṛita, Tretā, Dvāpara, and the Kali, which correspond roughly to the classical gold, silver, brass, and iron ages. The duration of each age is computed in years of the gods, that of the Kṛita being 4800, of the Tretā 3600, of the Dvāpara 2400, and of the Kali 1200. Multiply each of these by 360, or the years of men equal to one year of the gods, and the Kṛita is then 1,728,000 years in length, the Tretā, 1,296,000, the Dvāpara 864,000, and the Kali 432,000. The four yugas form a Mahāyuga or Manvantara. Two thousand Mahāyugas make a Kalpa or a day and a night of Brahmā. The night of Brahmā endures a thousand cycles of time, after which the god awakens and renews the day of Brahmā.

The Kṛita yuga was the age of righteousness in which there was neither malice nor deceit, hatred nor fear. There was one Veda, one rule, and one deity. The Tretā yuga was a fourth less righteous; men performed religious rites for a reward rather than out of a sense of duty. The Dvāpara yuga saw righteousness again decreased by one fourth and the Veda became fourfold. As men fell away from goodness they were assailed by calamities and diseases. In the Kali or present yuga righteousness has been reduced to one fourth and sacrifice has ceased. Hunger, fear, and calamities increase.

The names of the yugas are taken from the Sanskrit names for the sides of a die in the descending order of their value. The Kṛita is the side with four dots, the Kali the side with one. This is based on the idea that the proportions of virtue and the length of each yuga conform to the number on a side of the die. (See H. Jacobi, "Ages of the World," *ERE* i, pp. 200 ff.)

Yü Huang A supreme Taoist divinity in competition with Shang Ti and T'ien: the subject of much controversy. Some folklorists assert that he is "in fact" the Buddhist Indra. Others report that he is part of a Taoist trick to bolster up a theology threatened by the increasing popularity of Buddhism. An Occidental scholar reported that Yü Huang was created by a Sung Emperor of Taoist persuasion and "born of a fraud." However the unseemly wrangles of the schismatics are no proper part of these notes. See JADE EMPEROR. [RDJ]

yumari A communal ritual dance of the Tarahumara Indians of the Chihuahua mountains. It is their oldest dance, learned from the deer. It succeeds the *rutuburi* an hour or so before sunrise. Whereas *rutuburi* is serious and efficacious, yumari is often accompanied by intoxication and sexual license. Often it continues all day.

It consists of a crossing of the dance patio. Men march to the left of the chanter (*saweame*), the women progress to his right with a hopping step. All advance toward the center and retire three times. Then they advance and retire from the center to three crosses three times. Then they cross back and forth laterally, and finally around the patio in a counterclockwise arc three times. Thus it is fundamentally similar to the *rutuburi*, except for its faster tempo.

Just before dawn, food and drink libations are offered, similar to those preceding the *rutuburi*. "This was done in behalf of Nonuragami (the sun)," chants the

shaman, and the people answer, "Matretaba, matretaba, calahupo (Thank you, thank you, it is all right)."

There is a remarkable analogy between these rain and harvest dances of the Tarahumara and the rounds of another agricultural tribe far to the north, the Iroquois. [CPK]

yuñ-druñ or ryungdrung The Tibetan swastika; in the established Buddhist church of Tibet, the ordinary symbol with the end lines pointing to the right. That of the Bon religion has ends which turn to the left. One explanation for the yuñ-druñ is that it was invented to represent the sun as the creator of the four quarters of the world. It is used in native homes in both forms as an ornament.

yune'ha The Penobscot Indian Snake dance, named after the predominating song syllables. It was also called *pematagi'posi*, literally, coming twisting along the

ground, for a long line of dancers followed a leader with horn rattle in tortuous paths. They would wind into a spiral, unwind, and snap the whip. Meandering through the villages or in the dance hall, the last in line would drag bystanders into participation. According to one tradition, the pattern represented a serpent constellation. Antiphonal songs, serpentine paths, and a rapid trotting step or stomp show obvious resemblance to the Snake dances of the Cherokee and other Southeastern tribes and the adopted versions by the Winnebago, Sauk, Fox, and Oklahoma tribes. [CPK]

Yurupari A bush demon greatly feared by the coastal Tupi Indians of Brazil. Like Curupira, he figures prominently in the folklore of the caboclos (mestizos) of the Amazon who speak the *lingua geral*. His name is used to designate the spirits and demons of the Indian tribes of the Amazon, even those that speak other languages than Guarani. See TRUMPET. [AM]

Z

zapateado Literally, shoe work: in Spanish dancing, the footwork of heel, toe, and ball struck on the ground in emphatic rhythmic patterns. In the Andalusian man's dance of this name the emphasis is on the *taconeo* (heel work) and other displays of skill (with the hands usually in the pockets of the jacket). The zapateado is the fundamental step of many mestizo dances of Latin America, and of some ritual dances. Most commonly it consists of forward stamp right, step left, right, in place or back, then reverse. Thus the step follows the 6/8 measure of the typical music. There are many elaborations. The *jarabe Tarpatio* has a heel twist on the accented step; the *Negros of Puebla* use a *zapateado de onze tiempos* (of 11 counts) with three triple zapateados and two single steps. The *Viejitos* of Michoacán convert it into comical stumbling. The use of the zapateado is invariably a proof of Spanish influence. [CPK]

Zarathustra See ZOROASTER.

zasiali gorale A Lithuanian harvest dance. It is danced as a progressive round in sets of trios—a man between two women, or a woman between two men. A constant refrain precedes all figures—eight step-swings in waltz time forward and eight backward. Some of the figures are: 1) three polkas forward and three stamps; the same backward; 2) center man swings the right-hand girl with hooked elbows, then the left girl; 3) the man figure-eights around the girls; 4) each girl in turn (right one first) figure-eights in front of the man and behind the other girl; 5) the girls spin under the man's arms. That is, the movements are not mimetic, but simply a gay expression of harvest rejoicing. [CPK]

zbojecki Woodchoppers' dance of the Ukrainian Carpathians. Its fiery abandon and primitive wildness justifies the title of "bandit" dance. As a men's dance it mimes the wielding of an ax. As a counterclockwise round by men and women, its sharp and vigorous high knee-lifts, cross-step polkas, and stamps are characteristically Ukrainian. [CPK]

zèlì A pottery drum performing an important role in the funeral rites of Dahomey Negroes. Its mouth is uncovered and it is played with an instrument made of dried bullock hide, obtained from the *dokpwe* of the dead man or that of his sons-in-law and the fiancés of his daughters. Each of these is obligated to provide a zèlì and a group of singers for the day of the funeral, and the number of zèlì bands present is an indication of the social status of the departed. The drum plays day and night outside the house of mourning until the corpse is buried. When the zèlì bands arrive, each with its drum, they are met by the mourners. Gift money is tossed into the drum, and the children of the dead man tie colored handkerchiefs around the neck of the drum and around the head of the drummer. One after another the groups sing and wail to the beating of the drum. See M. J. Herskovits, *Dahomey*, vol. 1. See DRUM.

zemi Wooden or cotton idols formerly worshipped by the ancient Taino of the West Indies. These figures sometimes contained the skulls and bones of deceased relatives. Zemi is also the term for the enigmatic stone carvings of human and animal shapes found in the islands formerly occupied by the Taino. Ghosts and spirits were also referred to as zemi. The word *zombi* seems to be derived from it. [AM]

Zend-Avesta An erroneous name for the Zoroastrian sacred book, the *Avesta*. The name was derived from the use of the phrase *âpastâk va zand* when referring to the original text of the *Avesta* and to its Pāhlavī commentary. The term *zand*, which means commentary, was later inverted and used with the book title.

Zeus The chief of the Olympian gods of ancient Greece; the sky and weather god, similar to and doubtless identical with the sky gods of other Indo-European peoples, like Dyaus of ancient India, the Teutonic Tyr, Iuppiter of ancient Italy; the name comes from a root meaning bright. Zeus is god of mountain tops, eagles,

thunder storms, oaks, and all else that is high and connected with the upper air. He is chief of the gods, their king and ruler who makes decisions and sees that justice is done. He possesses the ægis, the storm- and fear-bringing goatskin shield. Zeus was worshipped everywhere in Greece, but his principal shrines were at Olympia and at Dodona. Zeus, son of Cronus and Rhea, was saved when Cronus swallowed his other children when a stone was substituted for him. (Contrary to the general tradition, Homer makes Zeus the eldest, not the youngest, of the children of Cronus.) Zeus was taken to a cave in Crete (or was born there) and was reared in secrecy by the Dictean nymphs and Curetes. (In Cretan mythology, Zeus never reaches adulthood but remains always a boy.) He dethroned his father, fought off the revolt of the giants, and assumed his seat as chief god. He, Hades, and Poseidon cast lots for various parts of creation: Poseidon got the sea, Hades the underworld, Zeus the heavens and the high places of earth; the earth itself was common to all three. Zeus had, according to mythographers, one wife, Hera his sister, but according to the myths themselves, she was a late choice, and Zeus did not take his marriage too seriously. In addition to his numerous infidelities, Zeus struck Hera and once even suspended her from a wall to punish her. The various marriages and amours attributed to Zeus may be the result of the consolidation of the Zeus cult with more ancient existing cults when the Zeus worshippers invaded the Greek peninsula and islands, and also to the desire of the various cities and cults to ally themselves with the chief god. His first wife was Metis, but it was foretold that if she bore a son, Zeus, like Cronus and Uranus before him, would be deposed by the son. When he discovered that Metis was to have a child, Zeus took the infant from her body and placed it in his forehead. Thus, when the child was born, it sprang from his forehead (Athena). By Themis, Zeus was father of the Horæ (Seasons) and Moiræ; by Eurynome, of the Charites (Graces); by Mnemosyne, of the Muses. Demeter and Zeus were the parents of Persephone, and Persephone was the mother of Zeus' son Zagreus, whom Zeus swallowed later to place the embryo in Semele's body, whence it was born as Dionysus (see DIONYSUS for the story of the god's birth from Zeus' thigh). By Leto, Zeus was father of Apollo and Artemis; Maia was the mother of Hermes. Zeus and Hera were the parents of Ares, Hebe, and Eileithyia; some add Hephestus to this trio, but usually it is said that Hephestus was born to Hera without the aid of any male. Obscurely, Zeus was the father of Aphrodite by Dione, who is really simply a counterpart of Zeus himself. Among the many affairs of Zeus, often disguised or transformed into some earthly shape, with human women were those with Alcmena (he appeared as her husband Amphitryon and sired Hercules), Danae (he entered her prison tower as a shower of gold and became father of Perseus), Io (he changed her into a heifer and fathered Epaphus with a touch of his hand), Europa (he abducted her while masquerading as a white bull, carried her off to Crete, and sired Minos, Rhadamanthus, and Sarpedon), Leda (he became a swan and impregnated her; from the eggs were hatched Castor and Pollux and Helen), Callisto (he disguised himself as Artemis and fathered Arcas as he played with her).

zeybek A harvest dance of Anatolia and the south-eastern Caucasus. It was originally performed by a group of men, who would jump vigorously, kneel, shout, and point their guns. It is now danced by men and women both, in two ways. In western Anatolia it contains mimetic motions of harvesting and threshing the wheat. In eastern Anatolia it is danced in a counter-clockwise circle, with a subtle step in 9/8 time, three forward steps (left, right, left) taking six counts, and a hesitating back point and lift of the left foot taking three. Or the step can end with a kneel. It is accompanied by a harvest song. [GPK]

Zinsu and Zinsi Twins with great supernatural powers who are characters in Dahomean Negro folklore: they are particularly noted for their exploits in magic. [MJH]

žiogelis Grasshopper: a Lithuanian folk dance for two sets of trios—a man between two women (or a woman between two men). The dance takes its name from the grasshopper step in duple time—two fast and a slow running step, kicking the free leg slightly in back during forward runs, and forward during backward runs. With a shoulder-hold the two trios, face to face, advance and retire with this step as a refrain before each new formation. These varying patterns include cross-over by corner women, an exchange of places by the women while the two men slide outward, and circling of the man by the women. The selection of the mimetic subject typifies the agricultural preoccupation of Lithuanian dances. [GPK]

Ziryen or Komi A Finno-Ugric people, about 302,000 in 1920, living in the districts of Perm, Vologda, Vjatka, and Archangelsk. The Ziryens and the Votjaks together form the so-called Permian group. The god of heaven of the Ziryen is Jen. He slings the lightnings during storms against the *kul*, or devil. The spirit of the water, *vasa* or *vais*, is believed to be female. She tries to entice men into falling in love with her, and then drowns them. The drowned live on the floor of the river as servants of the water spirit. [JB]

zither A stringed instrument having neither a neck, as in the lutes, nor a yoke, as in the lyres, but with strings fastened across the body from end to end. Zithers are primarily instruments of melody used to accompany both secular and religious song and dancing in many parts of the world. Members of the zither family are distinguished as plucked or struck, and as board, stick, or long zithers, according to their characteristic body forms.

Board zithers, with flat, boxlike bodies of varying shape, include the psalteries, which are generally plucked, and the dulcimers, which are generally struck with two sticks or hammers. The psaltery was known to the Jews and before them to the Phoenicians. To the early fathers of the Christian church it was surrounded with a halo of religious symbolism: to Saint Augustine, the stretched gut of the strings was a reminder of the crucifixion of the flesh. A letter ascribed to St. Jerome contains a representation of the instrument as a frame of four straight sides with ten strings, which are likened respectively to the four Gospels and the Ten Commandments. The historian Cassiodorus and others make the instrument a symbol of Christ.

The native psaltery of the Arab peoples, the *qanun*, is mentioned in one of the earliest tales in the *Arabian Nights*, that of the 169th night, in which it is broken as a sign of grief for death, because it was thought of as the instrument of joy and mirth, of song and dance, and unbearable in bereavement. The *qanun*, as still played widely among Arabs, is plucked with a plectrum and has 26 gut strings over a trapezoidal body. It was imported into Spain and thence throughout most of Europe during the Middle Ages. Its Arabic name became *caño* in Spanish, *canon* in French, *Kanon* in German, etc. It was one of the instruments of the jongleurs and is often praised by medieval poets. Zithers of similar type still surviving in Europe include the Finnish *kantele*, the *gusli* of Russian folk singers, and the zither of the Austrian and Bavarian folk, which accompanies singing and the dancing of such native dances as the Schuhplattler.

The hammer dulcimer, a Near Eastern instrument of Persian origin, was also carried by Arabs into Europe through North Africa and Spain at about the time of the Crusades. It found acceptance particularly in south-eastern Europe and, as the *tzimbal* or *cimbalon*, became one of the characteristic instruments of Hungarian Gypsy music. This type of dulcimer, with its trapezoidal or wing-shaped body and tinkling wire strings struck with two hammers, is quite unlike the plucked or feather-brushed "dulcimer" of the southern United States, which was a backwoods reconstruction or adaptation of some instrument imperfectly recalled from preemigration days in Europe. See DULCIMER.

The hammer dulcimer also spread to the Far East much later, at the beginning of the 19th century, where the Chinese named it the foreign zither (*yang ch'in*) to differentiate it from their own zithers (*ch'in*, *shē*, etc.), and became known far into the interior of Asia.

The indigenous Oriental zithers, oldest of the stringed instruments in that part of the world, are the long zithers, with slender, slightly curved bodies resembling the lengthwise half-section of bamboo from which they were originally made. Most important of many types of this family, varying in the use of frets, the number of strings, size, etc., are the *ch'in* of China and the *koto* of Japan. The long zithers are played by Buddhist and Shinto priests, by scholars, and some by popular singers; they are pleasing to the ears of ancestral spirits; and, in the Chinese cosmological system, are allied with south, summer, silk, and fire.

The stick zither reaches its most elaborate and evolved form in the sacred instrument of India, the *vina*, attribute of Sarasvatī, goddess of speech. Like all stick zithers, the long straight body of which has no resonance in itself, this instrument has added resonance chambers in the form of two gourds attached one near each end. The more modern development has altered this arrangement to make the lower gourd larger and more like a lute body. The mastery required to play the *vina* and the presumption of inept attempts to perform are exemplified in a story told of Hanumān, king of the apes. Hanumān was vain and boastful of his musical skill, and Rāma, to humble him, took him to see the Seven Notes in the form of seven beautiful maidens. Hanumān played his *vina* as the maidens passed before him, and one by one he saw them drop dead as he struck one wrong note

after another. Then the *vina* was taken from him and played correctly, and the maidens were revived, each as her note was played in tune.

More primitive stick zithers and tubular cane zithers are played in Zanzibar, Madagascar, etc., and a Dahomean zither, with split reeds for strings, is used to set a rhythm for songs. [TCB]

zizal-xiu Mayan Indian term for a common plant of Yucatán (*Bryophyllum pinnatum*), called in Spanish *Siempreviva* because of its almost immortal qualities. Even if kept in a dry press for six months it will grow buoyantly as soon as put in the earth and given water. Babies are prevented from touching the flowers, however, for the Maya believe, in strange contradiction, that the flowers will leave an invisible and indelible mark on the hands which will counteract fertility; for instance, a boy baby who had once touched the zizal-xiu flower could never raise chickens, for his handling of the eggs would blight them.

Zlotababa The Golden Old Woman, a famous idol which stood at the mouth of the Ob river and was worshipped by the Ugrian, Vogul, and other tribes of the region. It was first mentioned in 1517. The idol, probably covered with gold, represented a woman with a child on her lap (knee) and another child standing by her side. Offerings of precious furs were made to her. The name Zlotababa is Russian. [JB]

zombi The *zombi*, perhaps the best known element of the Haitian *vodun* cult outside Haiti, is essentially a part of the larger *vodun* complexes of belief concerning magic and the soul. A *zombi* is a human being whose soul, having been "stolen" by a worker of evil magic, becomes as though dead. The sorcerer digs up the body after its interment, using it as he wishes. It is believed that if the *zombi* is allowed to eat food flavored with salt, or, in some districts, if he is allowed to look on the sea, he will return to his grave. It is held that, if necessary, a *zombi* can be turned into an animal, slaughtered, and the meat sold in the market, whence derives the assertion often met with among Haitian peasants in documenting belief that they have not only seen *zombis* but have bought their flesh. This, it is thought, can be distinguished by the fact that such meat will spoil much more readily than ordinary meat. [MJH]

Zoroaster or Zarathustra The traditional founder of the ancient Persian religion, Zoroastrianism, a dualism teaching that a continuous warfare is waged between good (Ahura Mazda) and evil (Angra Mainyu). According to legend, Zoroaster's father ate the haoma containing the *fravashi* of Zoroaster. In the *Gāthās*, the portion of the *Avesta* regarded as the work of the prophet, he is represented as the son of Pourushaspa of the Spitama family. Traditionally, he came from western Iran and his birth was surrounded by marvels. He inherited the Glory of Yima and the *daēvas* repeatedly tried to kill him both before and after his birth. Ahura Mazda revealed the tenets of the faith to him. His only disciple for ten years was his cousin Maidhyōi-māongha. But finally he converted King Vishtaspa. There followed a series of battles between Vishtaspa and Arejataspa who, backed by the *karapans* or idolatrous priests, was de-

terminated to suppress Zoroastrianism. The prophet was slain during battle. He has left three germs in the world, however. They are in Lake Kāsu and once in each millennium a maiden bathing in the lake will be impregnated and will bear a prophet who will reveal himself in a period of evil and will put an end to it. The last of these prophets will appear just as Keresāspa kills Azhi Dahāka and will conquer Angra Mainyu and all that is evil in creation.

zutup Maya Indian term for a shrub of Yucatán (*Melicteres baruensis*) having red flowers and a woody, spiral-shaped fruit. The Mayas declare that this fruit,

twisted over the tongue of a child who is slow in learning to talk, is so beneficial that he will begin to talk almost immediately.

zya The Buriat term for the figure of a person drawn on cloth or paper for purposes of working magic against him. One who wishes to damage or kill an enemy draws such a picture, and with certain incantations hides it near (in, if possible) the dwelling of the victim. If this is done with the help of a shaman the spell is all the more potent. The subject of the image drawn will sicken and die. His only escape is to enlist the countermagic of a stronger shaman. See ENVOUTEMENT.

KEY TO COUNTRIES, REGIONS,
CULTURES, CULTURE AREAS,
PEOPLES, TRIBES, AND ETHNIC GROUPS

NOTES TO THE KEY

This key provides page references for 2,405 countries, regions, cultures, culture areas, peoples, tribes, and ethnic groups from five continents and many islands of the world whose folklore, mythology, legend, ethnology, and religion are discussed in the text. Even a few cities which have a special culture or folklore of their own are listed. These include Mohenjo-Daro, Ras Shamra and Ugarit, Babylon, Byzantium, Carthage, Thebes in Egypt, Thebes in Greece, Athens, and Rome, as well as New Orleans, New York, Chicago, Coventry, London, Nürnberg, and Tara.

The hundreds of names listed under the three big American cultures (Mexican and Central American Indians, North American Indians, South American Indians) have been omitted as main entries for reasons of space. The duplication of numerous other subentries as main entries and as cross-references does not affect the total count as given above.

The titles of survey articles in the text are identified here with the use of contributors' initials and page references set in bold type:

Basque folklore [MEL], 117c-119c

In a list of subentries the terms "above" and "below" are directions to titles within the same group of subentries, rather than main entries in the key.

Critical acclaim for
Funk & Wagnalls Standard Dictionary of

FOLKLORE, MYTHOLOGY, AND LEGEND

This work will long remain the standard reference book for the general reader and the specialist on folklore and mythology. Everyone connected with it, the editor, associate editor, the thirty-four contributors, and the publishers—and the lucky reader—is to be congratulated upon its appearance. Ashley Montagu, *The International House Quarterly*

This book . . . is for reading as well as reference. . . . It is perhaps the most useful single work on folklore in print today, and this reviewer finds it difficult to restrain his enthusiasm for both its authority and interest. Horace Reynolds, *Christian Science Monitor*

. . . notable for its contributors, its balance, its bibliography, and its format, . . . even the general reader will find fascinating this extremely valuable contribution to the growing literature in the field, and will enjoy clearly written articles which range in subject from "autograph album rimes" to "infanticide." Wilson Library Bulletin

This will become a standard and virtually indispensable reference work for students of the sciences of mankind, . . . a reference source of a kind long needed by inquirers into human belief, superstition and symbol.

The Psychiatric Quarterly

Absolutely essential for all libraries. Cannot sufficiently praise: 1) scope which covers world folklore as known to scholars; 2) lucidity of long articles, each in alphabetical place, on specific cultures and evasive subjects, . . . all in all an amazingly uniform, balanced and fascinating achievement. Elaine Lambert Lewis, *Library Journal*
