PREFACE TO THE ONE-VOLUME EDITION

This edition of *Funk & Wagnalls Standard Dictionary of Folklore, Mythology, and Legend* contains several hundred revisions, but it is complete and uncut, except for a few unimportant articles, or parts of articles, which have been replaced by more significant and useful material. The convenience gained by having the whole coverage in one book has long been needed and requested.

The significant feature of this one-volume edition is a key to the 2,405 countries, regions, cultures, culture areas, peoples, tribes, and ethnic groups presented or discussed in the book. Twelve major religions of the world, past and present, have been included in this supplement, because every religion creates its own culture, regardless of geographical place.

PREFACE

TO THE ORIGINAL EDITION

This book is an experiment: an attempt to cut a cross section into the spiritual content of the world, an attempt to gather together in one place several thousand things heretofore scattered in learned journals, memoirs, monographs, manuscripts, rare and out-of-print books, records transcribed by working anthropologists and folklorists in the field,—and in people's heads. Completeness was an end never contemplated. Sir George and Lady Alice Gomme gave up their idea of compiling a folklore dictionary when, at the end of four years, they had filled two large volumes with the children's games of two small islands in the world (Alice B. Gomme: *Traditional Games of England, Scotland, and Ireland*, London, 1894–98). A dictionary of pan-Germanic beliefs and customs, songs, tales, proverbs, riddles was 28 years in the making and runs to four volumes (H. F. Feilberg: *Bidrag til en Ordbog over Jyske Almuesmål*, Copenhagen, 1886–1914); just the superstitions of Germany fill ten volumes (Hans Bachtold-Staubi and Eduard von Hoffman-Krayer: *Handwörterbuch der deutschen Aberglaubens*, Berlin-Leipzig, 1928). The archives of the nations contain folktales, songs, proverbs, riddles that would mount into millions if all totals were added. Completeness can never be an end until there comes an end to spontaneous song and creative symbol, or an end to the grim or humorous “saw” with which the human mind meets its situation.

Here are, however, gathered together a representative sampling of the gods of the world, the folk heroes, culture heroes, tricksters, and numskulls, . . . of the folklore of animals, birds, plants, insects, stones, gems, minerals, stars, . . . dances, ballads, folk songs, . . . festivals and rituals, . . . food customs and their significances, . . . games and children's rimes, riddles, tongue twisters, . . . diviners and “lookmen,” witches, witchcraft, omens, magic charms and spells, . . . supernatural impregnations, . . . and the supernatural beings of folk belief and story, such as demons, ogres, fairies, and “little people,” guardian spirits, werewolves, vampires, zombies. Here are folktales—and motifs out of folktales, ballad, and song. Here are the kings asleep in the mountain, the belief in the hero, or savior, who will come again, and some hundred other instances of the inextinguishable hope that all that is wrong in the world can somehow be put right, and the ways (magic, prayer, or song) in which men try to put things right. In addition are the general covering regional articles and articles on specific folklore subjects (ballad, dance, riddles, etc.) by specialists in those respective fields.

The book is called a dictionary, in that, as stated above, it can not be exhaustive, and in that it deals with the terminology of a special branch of knowledge.

Many things are included because of their great diffusion, known importance, or fame, others for their uniqueness or obscurity. Often what looks like a nonce occurrence of a motif or practice turns out to be a clue to something huge or widespread but hitherto unguessed, or a touchstone to the philosophy of a culture.

The book belongs to no “school” of folklore, adheres to no “method,” advocates no “theory.” It has tried to represent all schools, all methods, all theories, and to state their findings and dilemmas. Each contributor has been free to hold

to his own convictions, enthusiasms, and skepticisms. All is valid that represents the state and scope of the folklore field today. The twenty-six definitions entered under FOLKLORE in the book represent the varying and controversial points of view of modern folklore scholarship.

The material is not divided into rigid percentages. Out of the many cultures touched upon, Greek and Roman myth and religion have probably been more sparingly treated than any other, because these are the best known, and most voluminously written. Those parts of Greek and Roman culture most inextricably involved in other folklores, however, have been treated with especial care (e.g. Cronus the swallower, the wonder-working Twins, Hercules the strong man, Perseus the dragon slayer). American Indian and Negro (Old and New World) have received somewhat fuller representation because of the new materials which keep piling up and pouring in, and because of the growing wave of interest in these peoples.

Statements of location throughout the book, such as those placing a belief in West Africa, a tale in central Europe, a practice among the Eskimos, etc., do not mean that *all* the people so named throughout the region are involved, but that the term is used *among* and *by* some of the people named, not necessarily a majority, and within the region named. *Hoodoo hand* is not a term common to *all* "southern United States Negroes," for instance, but since the term is used by southern United States Negroes it must be thus identified and located.

In the case of transliteration from non-Roman alphabets, the book has accepted the systems of its contributing specialists. Spellings of Hindu names follow those adopted in the Penzer-Tawney *Ocean of Story*. Irish spellings, for the most part throughout the book, follow the Irish system of showing aspiration of a consonant by the superior dot, rather than by adding *h* to the aspirated consonant (formerly a more common transliteration). In regard to the names from Greek mythology, however, the familiar spelling has been given preference, with the idea that such choice will not confuse the scholar, whereas such transliterations as *Iachkos* (instead of the more widely used *Iacchus*) would not be as acceptable to the general reader. The same preference has been followed with many words from Egyptian and the Semitic languages.

The editor wants to express the deepest gratitude to the four consultants in this work and to all the contributors. Everybody who has been asked to help has gone the second mile with enthusiasm and generosity. Above all I am indebted to my associate editor, Jerome Fried, for advice and knowledge, unfailing support, and persevering work.

CONTRIBUTORS

BALYS, JONAS (1909-)

[JB]

Lithuanian folklorist and ethnologist. Universities of Kaunas, Lithuania, and Graz and Vienna, Austria. Leader of newly founded Lithuanian Folklore Archives, 1935; Dozent of Folklore, University of Vilnius, Lithuania, 1942. Associate member, Lithuanian Academy of Sciences, 1941; later Director of the Institute of Ethnology at the Academy. Assistant for the *Deutsches Volksliedarchiv* (German Folksong Archives), Freiburg i. Br., 1944-45; Associate Professor for Folklore and Ethnology, Baltic or Displaced Persons University, Hamburg, Germany, 1946-47; since Oct. 1948, Instructor in the Eastern European Area, and Researches Assistant to the Dean of the Graduate School, Indiana University. Member, International Commission on Folk Arts and Folklore. Chief published works: *Motiv-Index of Lithuanian Narrative Folklore* (1935); *Donner und Teufel in den Volkserzählungen der baltischen und skandinavischen Völker* (1939); *Lithuanian Folk Legends*, Vol. I (1940); *Hundert Folk Ballads* (1941); *Lithuanian Folk Tales* (1945); "Litauische Hochzeitsbräuche," *Contributions of Baltic University*, No. 9 (1946); "Litauische Fastnachtsbräuche," *Schweizerisches Archiv für Volkskunde*, Bd. 45, pp. 40-69 (1948); *Handbook of Lithuanian Folklore*, 2 vols. (1948); "Die Sagen von den litauischen Feen," *Die Nachbarn*, I (1948).

BARBEAU, MARIUS (1883-1969)

[MB]

Anthropologist and folklorist for Canadian government, National Museum of Canada, 1911-1949. Specialist in ethnology and history of Huron-Iroquois, and tribes of northern Rockies and Pacific Coast. Student of French and Indian lore of the frontiers, in connection with American Folklore Society, 1915. President, American Folklore Society, 1917; co-editor, *Journal of American Folklore*, since 1917. Pioneer in French folklore collection. Held professorships at both the universities of Laval and Montreal. Bio-bibliography published by Clarisse Cardin (*Archives de Folklore*, II, 1947): 576 titles to end of 1946.

BASCOM, WILLIAM R. (1912-)

[WRB]

Anthropologist. B.A., University of Wisconsin, 1933; M.A., 1936; Ph.D., Northwestern University, 1939. Field work: summer 1935, among Kiowa Indians of Oklahoma; 1937-38, among Yoruba of Nigeria as Fellow of the Social Science Research Council of New York City; summer 1939, among New World Negroes in Georgia and South Carolina; 1942-45, three trips to West Africa as U.S. Government employee in Nigeria and the Gold Coast; 1946, Ponape, Eastern Caroline Islands; summer 1948, Cuba, on grant from The Viking Fund. Assistant Professor in Anthropology, Northwestern University, 1946-. Publications: *The Sociological Role of the Yoruba Cult Group*, Memoir 63, American Anthropological Association; "West and Central Africa," in *Most of the World* (edited by Ralph Linton); "The Sanctions of Ifa Divination," *Journal of the Royal Anthropological Institute*; "The Relationship of Yoruba Folklore to Divining" and "Literary Style in Yoruba Riddles," *Journal of American Folklore*; "The Principle of Seniority in the Social Structure of the Yoruba" and "West Africa and the Complexity of Primitive Culture," *American Anthropologist*; "Ponapean Prestige Economy," *Southwestern Journal of Anthropology*, and other articles.

BOGGS, RALPH STEELE (1901-)

[RSB]

Panamerican and Spanish folklore scholar. Ph.B., University of Chicago, 1926; Ph.D., 1930. Instructor, University of Puerto Rico, 1926-28; Professor of Spanish and Folklore, University of North Carolina, from 1929. Director, Folklore Americas, an association of folklorists of the New World; member of many organizations in the field. Bibliography: annual classified and commented Bibliography in the March number of *Southern Folklore Quarterly*; *Index of Spanish Folktales (FFC #90, 1930)*; *Folklore, an Outline for Individual and Group Study* (1929); *Spanish Folktales* (1932); *Leyendas épicas de España* (1935); *Three Golden Oranges and Other Spanish Folktales* (1936); *Outline History of Spanish Literature* (1937); *Bibliografía del folklore mexicano* (1939); *Bibliography of Latin American Folklore* (1940); *Clasificación del Folklore* (1954); *Folklore en los Estados Unidos* (1954); and many articles.

BOTKIN, BENJAMIN ALBERT (1901-)

[BAB]

American folklorist, A.B., Harvard University, 1920; A.M.,

Columbia University, 1921; Ph.D., University of Nebraska, 1931. University of Oklahoma faculty, 1921-40. Julius Rosenwald Fellow, 1937-38; resigned from University of Oklahoma to pursue government work, 1940. Folklore editor, Federal Writers' Project, 1938-39; chief editor, Writers' Unit, Library of Congress Project, 1940-41; Associate Fellow in folklore, Library of Congress, 1940-41; Fellow of Library of Congress in folklore since 1941. Chief, Archive of American Folk Song, Library of Congress, 1942-45; resigned to give full time to writing, 1945. President, Oklahoma Folklore Society, 1928-40; President, American Folklore Society, 1944. Co-founder and first chairman, Joint Committee on Folk Arts, WPA, 1938-39. Editor: *Folk-Say, A Regional Miscellany*, 4 vols. (1929-32); *The Southwest Scene* (1931); *A Treasury of American Folklore* (1944); *Lay My Burden Down: A Folk History of Slavery* (1945); *Folk Music of the United States from Records in the Archive of American Folk Song, Albums VII-X* (1945); *A Treasury of New England Folklore* (1947); *A Treasury of Southern Folklore* (1949). Author: *The American Play-Party Song, with a Collection of Oklahoma Texts and Tunes* (doctoral dissertation, University Studies, University of Nebraska) (1937).

BRACELEY, THERESA C.

[TCB]

Writer and editor. B.A., Radcliffe College, 1934. Formerly member of editorial staff, Funk & Wagnalls Company. Writer and editor in book, magazine, advertising fields. Member, American Folklore Society.

ESPINOSA, AURELIO MACEDONIO (1880-1959)

[AME]

American Spanish dialectologist and folklorist. B.A., University of Colorado, 1902; M.A., 1904; Ph.D., University of Chicago, 1909. Professor of Modern Languages, University of New Mexico, 1902-10. From 1910, Assistant Professor, Associate Professor, and Professor of Romanic Languages, Stanford University; retired, 1947. Investigator and productive scholar in Spanish dialectology, folklore, and metrics; over 100 articles published in philological and folklore journals in Europe and America in these fields; in addition, eight volumes in Spanish dialectology, folklore, and literature. Among these: *Estudios sobre el español de Nuevo Méjico*, 2 vols. (1930, 1945); *Cuentos populares españoles*, 3 vols. (1946-47); *Historia de la literatura española* (1939). In 1920, collected folklore materials in Spain under auspices of American Folklore Society. Editor, *Hispania*, 1917-26; Associate Editor, *Journal of American Folklore*, 1916-37, and *Language*, 1925-28. President, American Folklore Society, 1923, 1924. 1922, King Alfonso XIII conferred upon him the title of Knight Commander of the Royal Order of Isabel la Católica; 1946, Spanish government conferred the title of Knight of the Grand Cross of Alfonso el Sabio.

FOSTER, GEORGE M. (1913-)

[GMF]

American anthropologist. B.S., Northwestern University, 1935; Ph.D., University of California, 1941. Joined Institute of Social Anthropology of the Smithsonian Institution, 1943; taught anthropology at the National School of Anthropology, Mexico City; took students into the field for ethnological studies, primarily among the Tarascan Indians of Michoacan and neighboring mestizo peoples. Director of the Institute of Social Anthropology, Washington, 1946. Research among the Yuki Indians of northern California (1938), Popoloca Indians of Vera Cruz, Mexico (1940 and 1941). Articles on California Indians and folklore, Mexican and Latin American ethnology, linguistics, folklore, primitive economics, etc. Monographs: *A Primitive Mexican Economy* (1942); *A Summary of Yuki Culture* (1944); *Sierra Popoloca Folklore and Beliefs* (1944); *Empire's Children: The People of Tzintzuntzan* (1948); *Sierra Popoloca Speech* (with Mary L. Foster, 1948).

FUNK, CHARLES EARLE (1881-1957)

[CEF]

American lexicographer. B.S., University of Colorado, 1904. Co-editor, with Dr. Frank H. Vizetelly, *New Comprehensive Standard Dictionary*; associate editor, *New Standard Encyclopedia and New International Yearbooks*, 1931-38. Editor-in-chief of the Funk & Wagnalls Standard Dictionaries and New International Year Books, 1938-47; produced *Junior Standard Dictionary* (1940); *New Practical Standard Dictionary* (1946). *New College Standard Dictionary* (1947). Honorary degree of Doctor of Letters, Wittenberg College, Springfield, Ohio, 1936. Author: *What's the Name, Please* (1936); *25,000 Words, Accented, Spelled, and Divided* (with L. A. Leslie, 1932); *A Hog*

on *Ice*, and *Other Curious Expressions* (1948); various articles for magazine publication.

GASTER, THEODOR H. (1906–) [THG]
M.A., University of London, 1936; Ph.D., Columbia University, 1942. Professor of Comparative Religion and Folklore, Asia Institute, New York; Visiting Professor of Comparative Religion, Dropsie College, Philadelphia; Lecturer in Semitic Civilizations, New York University. Formerly: Chief, Hebraic Section, The Library of Congress, Washington, D.C.; Curator, Department of Semitic and Egyptian Antiquities, The Wellcome Museum, London. Hon. Lecturer in Old Testament Archaeology, New College, University of London, 1937. Member of Council, Folk-Lore Society of England, 1937–43. Fellow, Royal Asiatic Society. Visiting Professor of Old Testament, University of Chicago, 1948. Author of numerous studies in religions and civilizations of the Ancient Near East in: *Journal of the Royal Asiatic Society*; *Journal of the American Oriental Society*; *Journal of Near Eastern Studies*; *Folk-Lore*; *Religions*; *Review of Religion*; *Journal of Biblical Literature*; *Palestine Exploration Quarterly*; *Iraq*; *Archiv Orientalni*; *Studi e Materiali di Storia delle Religioni*; *Orientalia*; *Archiv fuer Orientforschung*; *Jewish Quarterly Review*; *Expository Times*, etc. Prominent in the interpretation of the recently discovered Canaanite literature of Ras Shamra-Ugarit. His major work, *Thepsis: Ritual, Myth and Drama in the Ancient Near East*, was published in 1950.

HARMON, MAMIE (1906–) [MH]
Artist and editor. B.A., Wesleyan College, 1926; M.A., University of Chicago, 1927. Studied art with Chinese tutors and in Paris, and at the Art Students' League of New York. Lived abroad, 1928–32, and observed at first hand the folk art of a number of countries. During the following decade, became associate editor, *The New International Year Books and the Standard Dictionaries*, writing on art and art terminology. Prepared a standard textbook in the fine arts, *The Natural Way to Draw* (1941), a posthumous resumé of the teaching methods of Kimon Nicolaides. Particularly interested in symbolism as a practicing artist; also active in graphic arts. Member, American Institute of Graphic Arts.

HERSKOVITS, MELVILLE JEAN (1895–1963) [MJH]
Anthropologist. Ph.B., University of Chicago, 1920; M.A., Columbia University, 1921; Ph.D., 1923. Professor of Anthropology, Northwestern University, 1935–. Guggenheim Memorial Fellow, 1937–38. Led field expeditions in Dutch Guiana, West Africa, Haiti, Trinidad, Brazil. Member and chairman of various committees on music and anthropology for the Department of State, National Research Council, American Council of Learned Societies. Member, permanent council, International Anthropological Congress. Officer of the Order of Honor and Merit, Haiti. Honorary Fellow, Royal Anthropological Institute; Fellow, American Association for the Advancement of Science (vice president, section H, 1934), Society for Research in Child Development. Member, American Anthropological Association (councilor; president, central section, 1939), American Association of Physical Anthropologists, American Folklore Society (president, 1945), Société des Africanistes de Paris, International African Institute (member, governing body), International Institute for Afro-American Studies. Editor, *American Anthropologist*, 1949–. Bibliography: *The American Negro—A Study in Racial Crossing* (1928); *The Anthropometry of the American Negro* (1930); *An Outline of Dahomean Religious Beliefs* (with Frances S. Herskovits, 1933); *Rebel Destiny, Among the Bush Negroes of Dutch Guiana* (with F. S. Herskovits, 1934); *Suriname Folklore* (with F. S. Herskovits) with transcription of *Suriname Songs and Musico-logical Analysis* by Dr. M. Kolinski (1937); *Dahomey, an Ancient West African Kingdom*, 2 vols. (1938); *Acculturation* (1938); *The Economic Life of Primitive Peoples* (1940); *The Myth of the Negro Past* (1941); *Backgrounds of African Art* (1946); *Trinidad Village* (with F. S. Herskovits, 1947); *Man and His Works* (1948); many articles in journals, reviews, collections, etc.

HERZOG, GEORGE (1901–) [GH]
Primitive and folk music and folklore scholar. Hungarian Academy of Music, Budapest, 1917–19; Hochschule fuer Musik, Berlin, 1920–22; University of Berlin, 1922–24; Columbia University, 1925–29; Ph.D., Columbia University, 1938. Assistant, Phonograph Archives, University of Berlin, 1922–24; Assistant Professor in Anthropology, 1932–35, Yale University, and 1936–48, Columbia University; Professor of Anthropology, Indiana University, 1948–. In charge, 1930–31, University of Chicago expedition to Liberia; 1939, Columbia University field party

for the study of Comanche language and culture. In charge, 1941–48, Archives of Primitive Music, Columbia University. See ARCHIVES OF FOLK AND PRIMITIVE MUSIC, INDIANA UNIVERSITY. His field work includes studies and surveys of Southwestern Indian music (1927), Dakota Indian poetry and music (1928), Maine folk songs (1929), Navaho Indian poetry and music (1929, 1931, 1932), Pima Indian poetry, language, and music (1929, 1933, 1936), Eastern Liberian music, language, poetry, and native cultures (1930–31), the music of the Indian tribes represented at the Chicago World's Fair (1933), Comanche Indian language and music (1939). He has also made various studies of American Indian, African, Micronesian, Siberian music; Hungarian and Yugoslav folk music; Yugoslav epic poetry; Jewish ritual music; American Indian poetry; African drum-signalling. He has collected and recorded some 3,000 primitive and folk melodies. His bibliography, in addition to many articles in journals, includes *Jabo Proverbs from Liberia* (with Charles G. Blooah, 1936); *The Cowtail Switch and Other West African Stories* (with Harold Courlander, 1947); transcriptions of melodies in P. Barry, F. Eckstorm, M. Smith, *British Ballads from Maine* (1929); "Die Musik auf Truk" in A. Kraemer, *Truk* (1933); "Die Musik der Karolinen-Inseln" in A. Eilers, *Westkarolinen*, vol. 2 (1936); "Research in Primitive and Folk Music in the United States—A Survey," *Bulletin 24, American Council of Learned Societies* (1936); transcriptions of melodies in John A. and Alan Lomax, *Negro Folk Songs as Sung by Lead Belly* (1936); "A Comparison of Pueblo and Pima Musical Styles," *JAFI* 49: 283–417; "Etats-Unis d'Amerique" in *Folklore Musical—Musique et Chansons Populaires* (1939); transcription and analysis of Tutelo music in F. G. Speck, *The Tutelo Spirit Adoption Ceremony* (1942).

JAKOBSON, ROMAN, (1896–) [RJ]
Slavic philologist and folklorist. Lazarev Institute of Oriental Languages, 1914; Universities of Moscow and Petersburg, 1914–16; organized Moscow Linguistic Circle, 1915, chairman to 1920; field work in Russian dialectology and folklore, sponsored by Russian Academy of Sciences, 1915–16; Buslaev Prize, Moscow University, for monograph on the language of northern Russian *byliny*, 1916; research associate to Chair of Russian Language and Literature, Moscow University, 1918; Charles University, Prague, 1920–21; created, with Professor V. Matheus, Cercle Linguistique de Prague, 1926, vice president to 1939; Prague University, Ph.D., 1930, dissertation: comparative study of Slavic epic decasyllables; created, with N. Trubetzkoy, International Phonological Association, 1930, secretary to World War II; professor, Russian philology and Old Czech literature, Masaryk University, Brno, 1933–39; lectured, Copenhagen, Oslo, Uppsala Universities, 1939–41; Professor, general linguistics and Czechoslovak studies, École Libre des Hautes Études, New York, since 1942; Professor (general linguistics, later Slavic philology), Columbia University, 1943–49; Samuel H. Cross Professor of Slavic Languages and Literatures, Harvard University, since 1949. Member, Norwegian Academy of Sciences; Danish Royal Academy of Sciences; Bohemian Royal Society of Sciences; Finno-Ugric Society (Helsinki). President, International Council of Acta Linguistica (Copenhagen). Principal publications: *Newest Russian Poetry* (1921); *Czech Verse as Compared with Russian* (1925); *Two Old Czech Poems on Death* (1927); *Remarques sur l'évolution phonologique du russe* (1929); *Characteristics of the Eurasian Linguistic Affinity* (1931); *Old Czech Verse* (1934); *Beitrag zur allgemeinen Kasuslehre* (1936); *Description of Mácha's Verse* (1938); *Kindersprache, Aphasie und allgemeine Lautgesetze* (1941); *Wisdom of Ancient Czechs* (1943); *La Geste d'Igor'* (with H. Grégoire and M. Szeftel, 1948); *Russian Epic Studies* (with E. Simmons, 1949).

JAKOBSON, SVĚTAVA PÍRKOVÁ [SPJ]
Slavic linguist and folklore scholar. Prague Classical Gymnasium; Collège d'Angoulême, France; Ph.D., Charles University, Prague, 1933. Research Fellow, Social Institute of the City of Prague, 1933–35. Fieldwork in folklore, 1931–33, in Czechoslovakia, and 1935–37, in Bulgaria. Study trips to Poland (1930), Yugoslavia (1930), Rumania (1935), Hungary (1937). Contributor to the folklore sections of *Sociální Problémy* and *Sociologická Revue*. Produced, with Prof. Ulehla, "The Vanishing World," 1932, an ethnographic sound film devoted to Moravian popular traditions, exhibited both in Europe and America. Studied Scandinavian literature and oral tradition and the organization of Scandinavian ethnographic museums, 1939–41, in Denmark, Norway, and Sweden. École Libre des

Hautes Études, New York, 1942-46, teaching Czech language and literature. Compiled anthology of folk songs of the United Nations for the State Department's world broadcasts, 1943-44. Lecturer in Czech and Slovak language, literature, and oral tradition, Columbia University, 1943-. Lecturer of Slavic Languages and Literatures (Oral and Written), Harvard University, 1949-. Lectured on Slavic folklore at Connecticut Academy, 1946; American Folklore Institute, Indiana University, 1946; American Folklore Society, Chicago, 1946; Brooklyn College, 1948. Member, American Folklore Society and Editorial Committee for the Handbook of this Society. After 6 years of intensive field work in Czech and Slovak folklore in America, she established an archive of American Slavic folklore, including manuscript records, wire recordings, a collection of original handwritten and printed song books, diaries, etc.; distributed a questionnaire among American immigrants and natives of Czech and Slovak background and published the results in the *New York Times*, 1943-45.

JAMESON, RAYMOND DELOY (1895-1959) [RDJ]

Scholar of Chinese folklore, history, and literature. Studied and lectured at Universities of Wisconsin, Chicago, Montpellier, Florence, Vienna, and London, 1913-25. Employed in several capacities by the Ministry of Education of the National Chinese Government, 1925-38. Administrator of Consultant Services, Library of Congress, Washington, D.C., 1938-42. American National Red Cross, Consulting Historian, 1942-48. Publications: *Three Lectures on Chinese Folklore*, 1932; other publications on social history, history of literature, etc.

JOFFE, NATALIE F. [NFF]

Cultural anthropologist. B.A., Barnard College, 1934; Ph.D., Columbia University, 1940. Studied acculturation among Fox Indians of Iowa, 1937; research on food habits of primitive peoples with V. Stefansson, 1938-41; with Committee on Food Habits, National Research Council, 1942-44; researching food habits of selected groups in the United States, in connection with problems of wartime emergency feeding; also worked on group reactions to concentrated emergency foods. Prepared material on food habits of seven cultures and culture areas for Common Council for American Unity. Work on cultural backgrounds of female puberty for seven Western culture groups, 1946; staff of Research in Contemporary Cultures, Columbia University, analyzing culture of East European Jews, 1947-. Author of articles and monographs on foods and food patterns in various magazines and journals.

JONES, LOUIS CLARK (1908-) [LCJ]

Folklorist, museum director; specialist in New York State folklore, American folk art, folklore of the supernatural. B.A., Hamilton College, 1930; M.A., 1931, Ph.D., Columbia University, 1941. Long Island University, Department of English, 1931-32; Syracuse University, 1933-34; New York State College for Teachers, Albany, 1934-46. Executive Director, New York State Historical Association since 1947, including directorship of The Farmers' Museum. Guggenheim Fellowship, 1946, analysis of folklore of supernatural collected by over 1000 students he had trained. Field work in various parts of New York State; organized Folklore Archive now at Farmers' Museum; a founder of New York Folklore Society; editor of its Quarterly 1945-50. Vice president, American Folklore Society, 1950. Editor, *New York History*; editorial board, *American Heritage*. Author: *Club of the Georgian Rakes* (1941); *Spooks of the Valley* (1948); *Cooperstown* (1949); various articles in folklore and historical publications.

KRAPPE, ALEXANDER HAGGERTY (1894-1947) [AHK]

International scholar, folklorist, and linguist. Early schooling in England, Holland, Germany; student of Romance languages and medieval history, University of Berlin. A.M., University of Iowa, 1917; Ph.D., University of Chicago, 1919. Assistant Professor, University of Minnesota, 1924-28; Graduate Lecturer, Columbia University, 1926, 1928; private scholar, 1928-1947. Member: (British) Folk-Lore Society (1922), American Folklore Society (1942), Delegate, Folk-Lore Congress, London, 1928. Hon. Fellow, American-Scandinavian Foundation (1930). Corresponding Member, Hispanic Society of America (1930); full Member (1934); awarded the Medal of Arts and Literature of the Society, 1945. Membre correspondant, Société de Correspondance Hispanique, Bordeaux (1940). Membre de l'Institut de Philologie et d'Histoire Orientales et Slaves et Professeur titulaire, Université Libre de Bruxelles (1944). His bibliography includes *The Legend of Roderick* (1923); *Balor with*

the Evil Eye (1927); *Études de mythologie et de folklore germaniques* (1928); *The Science of Folk-Lore* (1930); *Mythologie universelle* (1930); *La Genèse des Mythes* (1938). Articles and monographs have appeared in *Folk-Lore*, *Modern Language Review*, *Romania*, *Revue Hispanique*, *Bulletin Hispanique*, *Revue Celtique*, *Revue Archéologique*, *Revue des études anciennes*, *Revue des études grecques*, *Le Moyen Age*, *Revue des études slaves*, *Revue de l'histoire des religions*, *Mercur de France*, *Nuovi Studi Medievali*, *Studi e Materiali di Storia delle Religioni*, *Lares*, *Rheinisches Museum f. Philologie*, *Archiv f. d. Studium d. neueren Sprachen*, *Neuphilologische Mitteilungen*, *Mitteilungen d. Schlesischen Gesellschaft f. Volkskunde*, *Neophilologus*, *Journal of the American Oriental Society*, *Classical Philology*, *Speculum*, *Philological Quarterly*, *California Folklore Quarterly*, etc.

KURATH, GERTRUDE PROKOSCH (Tula) (1903-) [GPK]

Dancer and folk dance scholar. B.A., Bryn Mawr College, 1922; M.A., 1928; Yale School of Drama, 1929-30. Professional dance training in several systems: Wigman, Humphrey-Weidman, Mensendieck, Dalcroze, Shawn, Russian ballet, folk dance (particularly English and Morris dancing at Bryn Mawr). Special research in Medieval and Renaissance dance and music and American folk themes, 1932-46. Produced dance dramas to specially composed music: *Hurricane*, *Francis of Assisi*, *The Legend of Sleepy Hollow*, *The Marriage of the Moon*; research on American Indian dances for *Marriage of the Moon*, 1936, and continuously since 1942. Field work in Mexico, 1946; Sauk and Fox Indians, 1945, 1947; Iroquois Indians (Cayuga of Six Nations Reserve, Seneca of Allegany Reservation), 1948. Member, American Folklore Society (on Education Committee), American Anthropological Association, Archaeological Society of New Mexico. Treasurer, Michigan Folklore Society. Her bibliography includes numerous articles on dance theory and comparative study of the dance in journals and reviews.

LEACH, MACEDWARD (d. 1967) [MEL]

American ballad scholar and collector. B.A., University of Illinois, 1916; M.A., 1917; Ph.D., University of Pennsylvania, 1926. Associate Professor of English, University of Pennsylvania. Secretary-Treasurer since 1941 of American Folklore Society. Since 1948, Liaison Fellow, American Anthropological Association. Member, Medieval Academy of America; Council of Learned Societies. Publications: *Amis and Amiloun*, Early English Text Society (1937); articles in various journals.

LOOMIS, ROGER SHERMAN (1887-1966) [RSL]

Scholar in Celtic folklore and Arthurian romance. Williams College; Harvard University; B.Litt., New College, Oxford. Since 1920, at Columbia University; Professor of English, 1947-. Special interest in Celtic folklore and literature and their relation to Arthurian romance began in 1923; numerous articles in scholarly journals on the subject since then. Bibliography includes *Celtic Myth and Arthurian Romance* (1927); *Thomas of Britain*, *The Romance of Tristram and Ysolt*, revised edition (1931); *Arthurian Legends in Medieval Art* (with Laura Hibbard Loomis, 1938); *Arthurian Tradition and Chrétien de Troyes* (1949).

LUOMALA, KATHARINE [KL]

Anthropologist. B.A., 1931; M.A., 1933; Ph.D., 1936, University of California. Study at Bernice P. Bishop Museum and field work among the Diegueño, 1934; ethnographical summary of Navaho culture and history, 1936-37; research fellowship, American Association of University Women, for study of mythology, 1937-38; Lecturer in Anthropology, University of California, and assistant to A. L. Kroeber in research on art of North and South American Indians, 1941; Yale University Fellow, Bernice P. Bishop Museum, for research in Polynesian anthropology, especially mythology, 1938-40; Assistant Head, Community Analysis Section, War Relocation Authority, 1944-46. At present, Assistant Professor in Anthropology, University of Hawaii (from 1946); Associate in Anthropology, Bernice P. Bishop Museum (from 1941); Associate Editor, *Journal of American Folklore* (from 1947); Fellow and Council Member, American Anthropological Association; Member, Society for Applied Anthropology, Polynesian Society, American Folklore Society, American Anthropological Association, Anthropological Society of Hawaii, Anthropological Society of Washington, D.C., American Association of University Professors. Her bibliography includes *Maui-of-a-thousand-tricks*, *His Oceanic and European Biographers* (in press); *The Native Dog of Polynesia in Culture and Myth* (in press); *Maui, Tinirau, and Rupe*, *Variations on a Polynesian Mythological Theme* (in press), "Missionary Contributions to Polynesian Anthropology"

in *Specialized Studies in Polynesian Anthropology* (1947); *Oceanic, American Indian and African Myths of Snaring the Sun* (1940); "Documentary Research in Polynesian Mythology," *Polynesian Soc., Jour.*, 49: 175-95 (1940); "Notes on the Development of Polynesian Hero Cycles," *Polynesian Soc., Jour.*, 49: 367-374 (1940); "More Notes on Ra'a," *Polynesian Soc., Jour.*, 49 (1940); "A Hero Among Gods," *International Quarterly* (1940); "Ho'opa'apa'a," *California Monthly* (Nov. 1938); *Navaho Life of Yesterday and Today* (1938); "Dreams and Dream Interpretations of the Diegueño Indians of Southern California" (with G. Toffelmeier), *Psychoanalytic Quarterly* 5: 195-225 (1936); publications on applied anthropology relating to the program of the War Relocation Authority, Department of Interior, in regard to American citizens and aliens of Japanese descent; and restricted reports on attitudinal surveys on various subjects in the U.S. for Program Surveys Division, Bureau of Agricultural Economics, U.S. Department of Agriculture.

MACDOUGALD, DUNCAN, JR. (1915-) [DMD]
Philologist, musicologist, A.B., Princeton University, 1936; Universities of Berlin, Heidelberg, and Paris, Collège de France, Columbia University, 1936-39; former senior fellow (for sociological music research), Rockefeller Foundation. Member, American Anthropological Association, American Musicological Society, American Oriental Society. Bibliography includes: "The Popular Music Industry," *Radio Research* (1941); *The Languages and Press of Africa* (1944); "A Genealogical Classification of the World's Principal Languages" in *Funk & Wagnalls New Standard Dictionary* (1949); *The Kitchen and the Boudoir* (1950); volume one of *A Genealogical Classification of the World's Languages, Dialects and Systems of Writing* (ready for press). Editorial consultant, *The First Four Centuries of Organ Music* (1948), *Folk Dances of the Slavic Nations* (1950), *Songs to Grow On* (1950). Annotator, Program Notes, RCA Victor Red Seal Records, 1947-48; writer of several juvenile record albums.

MÉTRAUX, ALFRED (1902-1963) [AM]
Anthropologist, ethnologist, and folklorist. Studied in Lausanne, Paris, and Gothenburg, Sweden. Graduate, National School of Oriental Languages, Paris; École des Hautes Études (Sorbonne); Docteur ès lettres, Sorbonne, 1928. Director, Institute of Ethnology, National University of Tucuman, Argentina, 1928-34. Editor, *Revista del Instituto de la Universidad de Tucuman*, the first international anthropological journal in Latin America, 1929- . Headed the French expedition to Easter Island, 1934. Staff member, Bernice P. Bishop Museum, Honolulu, 1935-37; visiting professor, University of California (Berkeley and Los Angeles) and Yale University, 1937-39; in South America, Guggenheim Foundation fellowship, 1939-41. Staff member, Bureau of Ethnology, Smithsonian Institution, for *Handbook of South American Indians*, 1941-43. Assistant Director, Institute of Social Anthropology, Smithsonian Institution, 1943-45; Director of Section Studies and Research, Department of Social Affairs, United Nations, 1946; United Nations Educational, Scientific, and Cultural Organization (UNESCO), 1948. Various anthropological expeditions in South America, mainly in the Argentine, Bolivia, and Paraguay, and many South Seas islands. At present, engaged in a wide anthropological survey of a Haitian valley in connection with UNESCO's pilot project in fundamental education. Many articles in scholarly journals and reviews, e.g. a series on the Uru-Chipaya of the central Andes in the *Journal de la Société des Américanistes de Paris*, 1935-36. Other publications: *La civilisation matérielle des Tupi-Guarani* (1928); *The Ethnology of Easter Island* (1939); *L'île de Paques* (1942); *The Native Tribes of Eastern Bolivia and Western Matto Grosso* (1942); *Myths and Tales of the Pilaga Indians (Gran Chaco)* (1946).

MISH, JOHN LEON (1909-) [JLM]
Scholar in Eastern studies. Universities of Breslau (1926-30) and Berlin (1930-34). Ph.D., Berlin, 1934. Then went to Poland, where he was at first Professor of Chinese and Japanese, later Deputy Director, of the School for Oriental Studies, Warsaw; concurrently, Instructor in Japanese, Warsaw University. Chinese Liaison Officer in Bombay for Government of India, 1941; King's Medal for Service in the Cause of Freedom (1946). Acting Chief, Oriental Division, New York Public Library, 1946- . Associate Professor of Japanese Language and History, School for Asiatic Studies, Asia Institute, New York. Publications include *The Conditional Sentence in Classical Chinese* (1936): articles in various periodicals (in this country, the

Saturday Review of Literature and *New York Public Library Bulletin*).

PHILLIPS, WILLIAM JOHN (1895-) [WJP]
Educator, Pennsylvania Dutch folklorist, lecturer. B.A., 1920; M.A., 1924, Ph.D., 1930, University of Pennsylvania. Instructor, Assistant Professor of English, University of Pennsylvania, 1921-46; Associate Professor, Professor of English, Ursinus College, from 1946. Member, American Folklore Society, Modern Language Association of America.

POTTER, CHARLES FRANCIS (1885-1962) [CFP]
Lecturer, author, clergyman. B.A., Bucknell University, 1907; M.A., 1916; B.D., Newton Theological Institution, 1913; S.T.M., 1917; Hon. Litt.D., De Landas University, 1940. Minister, Baptist churches, 1908-14; Unitarian churches, 1914-25; Universalist Church of the Divine Paternity, New York, 1927-29. Professor of Comparative Religion, Antioch College, 1925-27. Founder and Leader, First Humanist Society of New York, 1929- ; Founder and First President, Euthanasia Society of America, 1938- . Author of many books and magazine articles on comparative religion, folklore, and folk rimes. Bibliography includes *The Story of Religion, with Special Reference to Atavistic Survivals and Parallel Customs in Ethnic Religions and Modern Cults* (1929); *Humanism, A New Religion; Humanizing Religion; Is That in the Bible? Technique of Happiness; Beyond The Senses; The Preacher and I; Treasury of American Folklore; Creative Personality*.

SEGER, CHARLES (LOUIS) (1886-) [CS]
Musician and musicologist. B.A., Harvard College, 1908. Professor of Music, University of California, 1912-19; lecturer and teacher, Institute of Musical Art and New School for Social Research, New York, 1921-35; Chief, Music Division, Pan American Union, 1941-48; Chief, Division of Music and Visual Arts, Pan American Union, 1948- . Member: Gesellschaft für Vergleichende Musikwissenschaft (vice president and acting president, 1934-35); New York Musicological Society (chairman, 1930-34); American Musicological Society (vice president, 1934-35; president, 1945-46); Société Internationale de Musicologie; American Folklore Society; Southeastern Folklore Society; Music Educators National Conference, Music Teachers National Association; Music Library Association; International Society for General Semantics. Miscellaneous musical compositions. Author: *Harmonic Structure and Elementary Composition* (with E. G. Strickler, 1916); *Folksong, U.S.A.* (with J. A. and Alan Lomax, and Ruth Seeger, 1947); many articles on music, special chapters, etc., in journals, surveys, encyclopedias.

SMITH, MARIAN W. (d. 1961) [MWS]
Anthropologist, B.A., Barnard College, 1929; M.A., Columbia University, 1934; Ph.D., 1938. Field work: 1935-36, 1938, 1945, among American Indians of Washington and British Columbia; 1941-43 and during trip to India 1948-49, among Sikhs of New York, British Columbia, etc.; 1944-45, during war work, on Japanese culture. Taught anthropology at Barnard College, City College, Brooklyn College, New York University, Vassar College, Columbia University. Editor, American Ethnological Society; Secretary, Section H (Anthropology), American Association for the Advancement of Science; 1st Vice President, American Folklore Society. Books: *The Puyallup-Nisqually; Indians of the Urban Northwest* (in press); *Archaeology of the Columbia-Fraser Region* (in press). Articles and reviews of subjects relating to India, articles, etc., on anthropological subjects, in various journals.

TAYLOR, ARCHER (1890-) [AT]
Germanic scholar and comparative folklorist. B.A., Swarthmore College, 1909; M.A., University of Pennsylvania, 1910; Ph.D., Harvard University, 1915. Instructor, Assistant Professor, Associate Professor, Washington University, 1915-25; Professor of German Literature, University of Chicago, 1925-39; Professor of Folklore, 1938-39; Professor of German, University of California, 1939- . Editor, *Journal of American Folklore* (1941); editor, *California Folklore Quarterly* (now *Western Folklore*), 1942- . Honorary member, Schweizerische Gesellschaft für Volkskunde; Gustav Adolfs Akademi för Folkliivsforskning; Norsk Videnskabers Selskab (Oslo); Finnish Literary Society; Finn-Ugric Society; Finnish Academy of Sciences; Sociedad Folklórica Argentina; Sociedad Folklórica Mejicana; Folklore of Ireland Society; Fellow of the Medieval Academy; Fellow of the Newberry Library. Author: *The Proverb* (1931); *Edward and Sven i Rosengård: a Study in the Dissemination of a Ballad*

(1931); contributor to the *Handwörterbuch des deutschen Aberglaubens* and the *Handwörterbuch des deutschen Märchens*; *A Collection of Welsh Riddles* (with Vernam E. Hull, 1942); *The Literary Riddle Before 1600* (1948).

THOMPSON, STITH (1885-1970)

[STT]

Educator, author, folktale scholar. B.A., University of Wisconsin, 1909; M.A., University of California, 1912; Ph.D., Harvard University, 1914; Litt.D., University of North Carolina, 1946. Bonnhheim Research Fellow from University of California to Harvard University, 1912-14; Professor of English, Colorado College, 1918-20; Associate Professor of English, University of Maine, 1920-21; Professor of English, Indiana University, 1929-39; Professor of English and Folklore, 1939-; Dean of the Graduate school, 1947-. United States delegate and member of executive committee, International Folklore Congress, Paris, 1937; vice president, International Association for European Ethnology and Folklore Congress, Edinburgh, 1937; technical advisor in folklore to Ministry of Education of Venezuela, 1947; lectures throughout South America; director, Folklore Institute of America, 1947-. Member, American Folklore Society (president 1937-40); Modern Language Association of America; Medieval Academy of America; American Philosophical Society; honorary member, Gustav Adolfs Akademi för Folkliivsforskning (Sweden); Société finno-ougrienne (Helsinki); Asociacion Folklorica Argentina; Sociedad Folklorica de Mexico; Folklore of Ireland Society; Sociedade Brasileira de Folklore; Instituto de Investigaciones Folkloricas de la Universidad de Chile; Servicio de Investigaciones Folkloricas Nacionales (Venezuela); Folklore of the Americas. Author: *European Tales among the North American Indians* (1919); *The Types of the Folktale* (1928); *Tales of the North American Indians* (1929); *British Poets of the Nineteenth Century* (with Curtis H. Page, 1929); *Our Heritage of World Literature* (1938); *English Literature and Its Backgrounds* (with B. D. N. Grebanier, 1939); *Motif-Index of Folk-Literature*, 6 vols. (1932-37); *The Folktale* (1946).

VOEGELIN, ERMINIE W. (1903-)

[EWV]

Anthropologist and folklorist. B.A., University of California (Berkeley), 1923; M.A., 1931; Ph.D., Yale University, 1939. Field work: Tubatulabal (California); Shawnee (Oklahoma); Ojibwa (Michigan and Ontario); Klamath, Modoc, Shasta, Achomawi, Wintun, Maidu (California). Indiana Fellow in

Anthropology, Yale University, 1933-35; Research Associate in Anthropology, University of California (Berkeley), 1935; instructor in anthropology, Indiana University (Folklore Institute), 1943, 1945, 1946, 1947. Review editor, *Journal of American Folklore*, 1940; editor, 1941-46. President, American Folklore Society, 1948; Guggenheim Fellow for study of unwritten literature of native North America, 1948. Executive secretary, American Anthropological Association, 1947-. Fellow, American Anthropological Association; member, American Folklore Society, Indiana Academy of Science, California Folklore Society. Major publications: "Kiowa-Crow Mythological Affiliations," *American Anthropologist* 38 (1931); *Tubatulabal Ethnography*, Anthropological Records 2 (1938); *Culture Element Survey; Northeastern California*, Anthropological Records 10 (1940); *Mortuary Customs of the Shawnee and Other Eastern Woodlands Tribes*, Prehistory Research Series, vol. 2, no. 4 (1944); *Linguistic Map of North American Indians*, American Ethnological Society, Publication No. 21 (with C. F. Voegelin, 1944).

WATERMAN, RICHARD A. (1914-)

[RAW]

Anthropologist. B.A., Santa Barbara College, 1937; M.A., Claremont College, 1941; Ph.D., Northwestern University, 1943. Faculty, Northwestern University, 1943-. His publications include *Folk Songs of Puerto Rico*, Archive of American Folk Song, Library of Congress (1946); "Afro-Bahian Cult Music," *Boletín Latino-Americano de Musica*, Vol. 6 (with M. J. Herskovits, 1947); *Bibliography of Asiatic Musics*, serially published by *Notes* (journal of the Music Library Association) beginning with 2nd Series, Vol. V, No. 1 (Dec., 1947); "Hot' Rhythm in Negro Music," *Journal of the American Musicological Society*, Vol. 1, No. 1 (1948).

EXPLANATIONS OF SYMBOLS AND

TOP FRONT

Triangular design, prehistoric, from Pueblo ruins in Arizona. Basic form of a design, in many variations, widely used by North American Indians to symbolize rain, tribe and chief, the bear, fish, etc.

Swastika, an almost universal symbol, of varying meanings and significances, from the Bronze Age to the present.

Hopi Indian rain symbol, with half-circles representing clouds.

Yin-yang, the basic Chinese symbol representing the male and female principles of the cosmos.

Barn symbol, contemporary Pennsylvania Dutch. Used as a "hex sign" and perhaps derived from the Rosicrucian cross.

Six-pointed star, a combination of two triangles. Most familiarly known as the Star of David, a graphic representation of God.

Gnostic wheel, one of the many symbols based on the significance of the number four (four basic elements, four directions, etc.) in conceptions of the cosmos.

MIDDLE FRONT

Fish from Nazca pottery (south coast of Peru, pre-Inca); polychrome painting on coiled pottery, polished.

Archaic Greek swan, Corinthian style (7th century B.C.); incised and painted on an alabastron.

Decoration from an earthenware chest, painted red (prehistoric Egyptian, 4th millennium B.C.).

Tree of life, adapted to the round shape of a dish.

Embroidery by Tarascan woman of Mexico (modern).

DESIGNS USED ON THE JACKET

Basilisk or cockatrice, a fabulous reptile hatched from a cock's egg; its breath and look were fatal.

~~~~~ BOTTOM FRONT ~~~~~

Maori hei-tiki, a grotesque amulet representing a fetus, carved from greenstone. These ornaments were kept in memory of dead friends and ancestors.

Figure in the dance, a Bushman rock painting from Cape Province in South Africa. Painting in this style dates from seventy-five to several thousand years ago.

Woman with conventionalized tulip, an early American appliqué design from a quilt.

Navaho sand painting, from the Shooting Chant. Such paintings are done under the direction of a medicine man and must be completed and destroyed in one day.

Baulé ancestral image, Ivory Coast, Africa.

Balinese tjili, silhouette of a girl with headdress of flowers. Presumably once associated with the "rice mother," now a feminine abstract motif used on temple offerings and altar ornaments.

~~~~~ BACK ~~~~~

Animal shape adapted to the geometric style of porcupine-quill embroidery; example of work of the Delaware tribe.

Animal painting on Tiahuanaco beaker (central coast of Peru, pre-Inca).

The eye that wards off evil, commonly introduced in designs of the Mediterranean area; from a piece of modern Egyptian appliqué work.

Alligator, silhouette, from Nicoya polychrome ware (Costa Rica-Nicaragua area, pre-conquest).

Ironwork inn sign, from the Fox Inn, Huntingdon, England (probably 18th century).

A

Aa In Assyrian and Babylonian religion, the consort of Shamash. Compare GULA.

Aalu or Aaru One conception of the underworld of ancient Egyptian religion. The fields of Aalu were reached through either 15 or 21 gates, each guarded by a host of evil demons armed with long knives: a concept of Osiris-worship, probably antedating the solar concept outlined in UNDERWORLD. Aalu was a kind of Elysium, where the fields were cultivated for food for the dead apart from the offerings made by their survivors.

Aarne, Antti (1867–1925) Finnish folklorist; docent at Helsingfors for Finnish and Comparative Folklore; specialist in folktale and fable. He was the chief exponent and developer of the geographical-historical approach to folklore research first presented by Kaarle Krohn, and became with him leader of the modern Finnish folklore-study movement. Chief works: *Vergleichende Märchenforschungen*, Helsingfors, 1907, and *Verzeichnis Märchentypen*, published in *FFC* #3, 1910, revised by Stith Thompson and published in #74, 1928, under the title *Types of the Folktale in World Literature*. This became the foundation stone for subsequent folklore scholarship in Europe and America. See FINNISH FOLKLORE.

Aaron The first high priest of the Hebrew people; elder brother of Moses and spokesman for him to his own people and later to Pharaoh (*Ex.* iv, 14 ff.): archetype of the high-priesthood. Aaron's rod was used by him to perform many feats of magic in the attempt to convince Pharaoh to release the Israelites: it was changed into a snake and swallowed the snake-rods of the Egyptian sorcerers; it remained a rod and engulfed the rods of the magicians. Three of the plagues were brought upon the Egyptians by Aaron's hand and rod: the rivers of blood, the frogs, and the lice. In Jewish tradition, Aaron was accompanied by his son Eleazar and by Moses to his last resting-place on Mt. Hor. There, in a cave, he lay down upon a divine couch and died, leaving his vestments and office to Eleazar. The cave entrance was obliterated by God, but when the people murmured that perhaps Moses had killed Aaron in jealousy for his popularity, Aaron was shown to them on the couch, floating in the air. In Moslem legend, Moses and Aaron went up the mountain together, not knowing which was to die. In the cave they found a coffin, which did not fit Moses, but was exactly Aaron's size. Another Moslem story says that the couch of death was found in a house atop the mountain. Moses, knowing that Aaron was to die, suggested that Aaron rest for a while. The couch and Aaron on it were then transported to heaven. In Jewish legend, Aaron is in Paradise, seated beneath the Tree of Life, instructing the priesthood in its duties.

Aaron's rod The rod cast by Aaron before Pharaoh, which became a serpent (*Ex.* vii, 9–15) and which later blossomed (*Num.* xvii, 8): typical of the magic wand of all magicians of all times and all peoples. With it Aaron brought the first three plagues on Egypt. When Pharaoh demanded a sign of Moses and Aaron standing before him, Aaron threw down his rod and it became a serpent. When the magicians of Egypt matched that one, Aaron's rod swallowed the rods of the Egyptians. Later Aaron's rod alone of the twelve rods of the 12 princes of Israel blossomed in the tabernacle and bore ripe almonds, in token of the validity of the priesthood of Aaron and his descendants. One legend states that it was made of sapphire and inscribed with the ten Hebrew initials of the ten plagues; another that it was one of twelve rods which Moses cut from the Tree of Knowledge. Rabbinical legend says this rod was a gift from God to Adam when he was driven out of Eden. It passed from father to son until it came to Joseph, on whose death it was stolen by Jethro, the Egyptian. Jethro planted it in his garden, but could never again pull it out of the earth, until Moses came to that place, read the name of God engraved thereon, and took it up in his hand. Moses received Jethro's daughter in marriage: the traditional reward for the miracle. There are many Christian and Mohammedan modifications of these stories, among them that the rod became part of Christ's cross. The story presents three typical elements of world folklore: the magic wand, the dry rod blossoms, and the sword in the rock.

Aarvak In Norse mythology, one of the horses of the sun; the dawn.

Ababinili The supreme being of the North American Chickasaw Indians: literally, Sitting-Above or Dwelling-Above, or Loak-Ishtö-hoollo-Aba, Great Holy Fire Above. His earthly manifestation is fire, especially the annual sacred fire of the Chickasaws. He is at the same time the sun, and the spirit of fire apart from the sun, giver of warmth, light, and of all plant and animal life.

abandoned children A motif (S300–399) occurring in folktales all over the world, in which one child, often two children, sometimes several, seven, or all the children of a tribe, are either abandoned or driven away. The reasons are either economic and social, such as unfitness to survive, illegitimacy, incestuous parentage, famine or destitution, disease, etc., or various other reasons common to folklore and legend, such as supernatural parentage or birth, fear of the fulfilment of a prophecy, jealousy of a relative, parent, or step-parent, alleged ungratefulness on the part of the child, as well as disobedience or stupidity.

Poverty and lack of food are the most frequent reasons; fear of the fulfilment of a prophecy is next. Invariably,

however, the abandoned children flourish and prosper. They are nursed by animals (Romulus and Remus) or fed by birds; animals provide them with magical aid; they are fostered by supernatural beings (Abraham), or picked up by kings and reared at court (Cyrus, Moses, Joseph, Oedipus, Orestes, etc.). And they frequently return to heap succoring coals of fire on the heads of their still starving parents. Perhaps the most popular of all abandoned children stories is *Hansel and Gretel*; the Filipino *Juan and Maria* is very similar.

Children abandoned in time of famine by one or both parents is a frequent motif in North American Indian tales, which almost invariably also include the supernatural animal helper and usually the return of the child or children with aid and forgiveness. In a Gros Ventre story all the children of a certain camp were deserted by the adults; they wandered off and were killed by an old woman, except for one girl and her little brother; a bird in the forest helped the girl perform the hag's tasks; a two-horned animal helped them cross a river and drowned the pursuing hag. When they caught up with their parents, they were deserted again and hung up in a tree. But the little scabby dog (also abandoned) cut them down, gave them the gift of fire, and the three lived together and prospered. The boy killed game for food by a glance, built tents, made clothes, etc., by a glance; the girl told him what to look at! Eventually the starving elders returned, were fed and forgiven, but unfortunately the boy happened to look at them and they all fell dead! The Lipan Apache abandoned children story varies, however, in the motive for abandonment and the tone of the ending. An old woman denies and abandons her own two children to marry a young man. They thrive in the forest, learning first to make and use bow and arrows, subsisting on grasshoppers, then birds, then rabbits, then deer, wearing deerskin clothes, living in deerskin tipis, etc. The story ends with the discovery of the prosperous children by the starving villagers, whom they generously feed. But the boy kills the mother with a club. The charming Cochiti story of the deer who found the abandoned baby and took him home riding on his antlers lacks the conventional ending: because of a broken tabu on the part of the over-eager mother, the little one had to remain a fawn among the deer's fawns forever. See ANIMAL NURSE; DEER BOY; REVERSAL OF FORTUNE.

abandoned wife The theme of a cycle of stories which almost invariably begin with the heroine's having her hands cut off and being abandoned by her family for any of several reasons. She may be abandoned in a boat (S431), left on an island (S433), driven into the forest (S143), thrown into the water (S432), or cast into a pit (S435), but she is always discovered by a king who perceives her true worth and marries her. When her child is born she is again abandoned or cast out, this time by her husband, usually because of the slanders or intrigues of jealous or evil sisters, rivals, in-laws, etc. The common accusation is that the wife has given birth to an animal or monster or that she has murdered her child. She wanders off into the world with or without the child. Here the water of life motif enters in; eventually she comes to a magic lake or well or is given a wonderful drink which restores her to wholeness and beauty. She wins back her husband and the evil ones are punished. In Kashmir and Bengal variants seven queens are blinded

by their husband on the whim of a jealous eighth and cast into a well. The water restores their sight and the usual justice ensues.

This story, most typically known as *The Maiden Without Hands*, is known all over Europe from Lapland to Sicily, Brittany to Russia, with minor variations. It turns up in the Near East, and in India; there are at least six African variants and two North American Indian versions; it is found also in Brazil and Chile. It appears in literary guise as early as 1200 A.D. in England; Chaucer used it in "The Man of Lawes Tale," Gower in *Confessio Amantis*. Variants occur in the *Arabian Nights* and the *Pentamerone*, and it is the theme of a number of South Slavic folk songs.

abandonment Desertion of the aged, the sick, the deformed or crippled, the helpless, or of infants and children by parents, family group, or community: a time-rooted practice among many peoples. Technically abandonment is desertion of the aged and helpless; abandonment of infants to perish is called exposure.

Basic causes for abandonment have always been economic: lack of food or fear of such lack, and the uselessness of the aged to the group, i.e. uselessness to the point of becoming burdensome or encumbering. This holds especially in nomadic cultures. The Arabs either abandoned the old and helpless or buried them alive. The ancient Persians and Armenians left them in the deserts to be devoured by wild beasts. The early Romans hurled everyone over 60 into the Tiber. Certain South African peoples, especially the Bushmen and Hottentots, take their old people into the wilderness and leave them inside a small enclosure with a little food. The enclosure is to protect them from wild beasts. Hunters often come upon human skeletons within these circles of stakes. Many North American Indians left the old, the sick, and the weak behind when the camp moved on (Hudson Bay Eskimos, the Hurons, the Iroquois). The Algonquians abandoned the sick whether old or young; certain California tribes either killed or abandoned the old; the prairie Indians left the old behind with a little food and water; the Utes continued to abandon their aged late into the 19th century. Even our own pioneers of the covered-wagon treks across the plains, as recently as 1849, left the weak or dying beside the trail with a little fire. Melanesians either burn or bury alive their aged parents, and abandon the very ill in haste through fear of the demons by which the delirious are believed to be possessed. Many South American Indian tribes also leave the sick to their fate through fear of the evil spirits which have caused the disease. In fact superstition is almost as potent a factor in abandonment as famine or destitution.

Abandonment and exposure of infants and small children stem from the same causes, plus other economic reasons, such as the dowry that must be paid on a daughter, which makes daughters a liability, as contrasted with the bride-price on marriageable daughters, which makes female infants desirable. In Sarawak where the son-in-law works for the bride's father, girl babies are cherished and boy babies are hung in baskets on a tree and left to die. Other reasons are shame for the deformity, illegitimacy, or incestuous origin of a child, and superstitious fears in regard to the abnormal. In some countries twins and triplets are invariably exposed because they are believed to be unlucky. The

strange phenomenon known as Siamese twins still dismays most human minds; *Life* (March 10, 1947) pictures a pair of abandoned Chinese Siamese twins picked up by a childless mother. In India, even until recently, parents were averse to raising a child born on an unlucky day. Concern for perfection of the race caused the ancient Spartans to expose misshapen or unfit infants. The Nilotic Negro mother who has lost one or more children believes that if she leaves the next one in the road at sunrise as an offering to hostile spirits the bad luck will be broken. The natives of central and southeastern Australia have such a prolonged suckling period that any child born before the preceding one is weaned is either killed or abandoned. And when food is scarce the Smith Sound Eskimos expose their newborn to the cold if they already have two children.

Only when the death of the child is definitely desired, as in cases of gripping superstition, is one abandoned or exposed in a place where it is unlikely to be found. The growth of foundling homes in China, France, Cuba, and other parts of the civilized world bears witness to the fact that most infants are abandoned in the hope they will be picked up. Babies left on seats in railroad stations or found in railroad station lockers are examples. Today it is illegal to abandon the aged, ill, helpless, infants, or children; and in some of the United States it is illegal even to abandon a disabled or helpless animal. See **ABANDONED CHILDREN; INFANTICIDE.**

abandonment on the island A motif (S145) occurring in various types of folktales all over the world, in which the abandoned person always outwits the abandoner and escapes. The motif turns up representatively in the Ojibwa (western Ontario) tale, *The Marooned Egg-hunter*, belonging to the widespread North American Indian cycle of son-in-law test stories. After having failed to outwit and kill his son-in-law by various ruses, one day Wemicus, the Trickster, proposed that they go to a certain rocky island for gulls' eggs. When the son-in-law was well ashore, the old man pulled off in his canoe and left him there. Undismayed, the young man filled his shirt with eggs and flew home across the lake by means of a pair of gull's wings he took from one of the island gulls. The wife was cooking the eggs and the children playing with the wings when Wemicus got back.

The motif occurs in the stupid ogre cycle. There are Finnish and Russian stories of a hero, about to be abandoned on an island by an ogre, who concealed himself in the ogre's clothing and the ogre himself unwittingly rescued his victim from the island. The type is the Norwegian story of a wife, falsely accused, abandoned by her husband on an island, from which she is rescued and catches up with him just in the nick of time to save him from some terrible fate.

Abbot of Unreason or Misrule Scottish term for the Lord of Misrule.

Abbots Bromley Antler or Horn dance A men's dance with reindeer horns held near the head, performed only at Abbots Bromley in Staffordshire. The traditional date for its performance, Twelfth Day, has been moved to the Monday after September 4 to coincide with Wakes week. There are six dancers, as in the Morris, three with the great antlers painted white and three with red. The other characters also resemble those of the Morris: there is a Maid Marian, a hobby horse, a fool, also an addi-

tional boy with a bow and arrow. The dance is preceded by a circuit of the farms to bring luck. Finally in one of the farmyards, to an accordion, they "deer"-circle, serpentine, then progress in loop patterns; then at a grunt from the leader, they meet and retire in two lines and cross over. Formerly there were also heys and other figures. The symbolic coloring, deer horns, and formerly ritual characters (man-woman and clown) point to an ancient ritual significance, marking this as one of the few surviving animal dances in Europe. [GPK]

abdominal dance A dance based on certain stylized swinging movements of the *rectus abdominis*, usually performed only by women. In its late development it is called the belly dance, or (in north Africa) *danse du ventre*, but in its most primitive form it involves not only the abdominal muscles, but movements of the entire pelvic region, which are typically known as the "pelvic roll." All over Asia this dance is performed and watched with reverence as symbolic of "the mystery and pain of motherhood." Asiatics maintain that only Occidental misinterpretation could transform it into the pure sex pantomime called the *danse du ventre* or the burlesque performance of circus side shows called the hootchie-kootchie. The ancient primitive type is performed in the Caroline Islands, in New Guinea, in the Celebes, in the Solomons, and in eastern Polynesia generally, and from coastal north Africa to Loango and Zanzibar. It is danced also among the Canella Indians of the Ge and of north-eastern Brazil. It is known to have been performed in certain districts in ancient Greece and was the fine art of the famous dancing girls in old Cadiz (the Gaditanas). Originally it was a fertility dance, with the stimulation of sexual excitement only a secondary object. In primitive cultures the miming of the sexual act and the accentuation of the child-bearing part of the body constitute a sympathetic magic to insure and promote prolificness and the life process.

abduction The capture, carrying off, or detention of a girl or woman with intent to marry or mate: one of the most primitive forms of marriage. The Old Testament book of *Judges* describes the abduction of 400 virgins of Jabesh-gilead for wives for the tribe of Benjamin, who later went to Shiloh during a feast and "took them wives according to their numbers of them that danced, whom they captured." The rape of the Sabine women by the Romans is one of the famous mass abductions of history. Abduction was also a custom among ancient Teutonic peoples; and among certain southern Slavic groups marriage by abduction was practiced well into the 19th century. So deeply rooted in the human mind is the psychology of marriage by capture that many marriage celebrations still include a mock capture of the bride with mock resistance on the part of her relatives. Abduction is the motif, for instance, of an old Scandinavian folk dance, the *Bort-dansingen*, in which both men and women dancers try to steal the bride from her female guardians.

The folktales of the world are full of abductions, especially abductions of a beautiful maiden by a supernatural lover. There are countless stories of gods, centaurs, ogres, giants, dwarfs, whirlwinds (Basuto), fairies, water-spirits, mermen, and animals, who have abducted lovely women through the ages and taken them to live a magical carefree life in their supernatural abodes. The

story of Europa and the bull, of Hades and Persephone, are famous and classical examples. The polar bears who abducted the blond Scandinavian maidens proved to be kind and wealthy husbands. Even the fearful Water-Monster of the Chiricahua Apache Indian stories, who caught the young girl when she came to the pool to fill her jug, turned out to be a beautiful young man in his own land and a son-in-law of great benevolence to the girl's people left behind.

Other abduction motifs describe how the Devil carries off faultfinders, scolding women, usurers, and other wicked people. The Hottentot story of the boy abducted by baboons has its modern parallel in the abduction of Mowgli by the Bander-log in Kipling's *Jungle Book*.

Abel The second son of Adam; the first man to die—the victim of the first murder (*Gen.* iv, 2–8). In both Hebrew and Moslem tradition, Cain and Abel had twin sisters, Cain's the prettier of the two. Adam and Eve planned to have the brothers marry each other's sister, but Cain balked. When, in addition, the offering of Abel, the best of his flock, was accepted by God, and the offering of Cain, a poor sheaf and the remainder of a meal, was refused, Cain decided to kill Abel. But since he did not know just what would cause Abel to die, he had to keep throwing stones at his brother, until one struck a fatal blow in the neck. Cain now tried to dispose of the body by hiding it in the earth; of course, God knew it was there and He cursed the earth for accepting the body of Abel. According to other tradition, Cain did not know how to get rid of the corpse and carried it about on his back until he saw one bird burying another.

abiku Evil spirits of the Yoruba of West Africa, especially dangerous to children: omnipresent, always hungry and thirsty, and always seeking to enter the body of some child in order to obtain food and drink. When one finds human habitation, he shares his food with other abiku still unembodied, with the result that the child dies. To rid a child of the abiku the parents offer it food in likely places, and, while it is eating, bell the child, for abiku dislike the sound of bells. Sometimes they rub pepper into small cuts in the child's skin and the abiku depart to escape the pain.

In Dahomean belief, among the people directly west of the Yoruba, an abiku is one of a group of forest spirits, permitted by Mawu, the creator, to enter the womb of a woman, to be born, dwell on earth for a time, die, and be reborn in the same family. When the parents of a child suspect or become convinced that their child is an abiku, they dedicate him to a Vodù (a god) with the intent that the Vodù will protect him from the spirits which will surely come to take him back to the forest. Sometimes they scarify the child's face, either to make him unrecognizable or so ugly that the spirits will not want him. Iron anklets hold such a child to earth; belled bracelets prevent his running away. Abiku is also a generic term for the spirit of all such children.

Abokas The afterworld or home of the dead in the Melanesian mythology of parts of the New Hebrides. It is always believed to be on a nearby island. See AFTER-WORLD; MELANESIAN MYTHOLOGY. [KL]

Above Old Man The Creator of the Wiyot Indian mythology, who thought things into existence. His name is Gudatri-Gakwitl, and he remains a living deity today among this almost extinct people. He more nearly ap-

proximates the creator of monotheistic thought than any other creator of northwestern California Indian religion.

abracadabra A magic word or formula used in incantations against fevers and inflammations and sometimes against misfortunes. The patient wore an amulet around his neck bearing the inscription

ABRACADABRA
ABRACADABR
ABRACADAB
ABRACADA
ABRACAD
ABRACA
ABRAC
ABRA
ABR
AB
A

The idea was that the disease would gradually disappear just as the inscription gradually dwindled to nothing. The word first occurs in the writings of Severus Sammonicus, a Gnostic physician of the 2nd century. Jewish scholars question that it is of cabalistic origin, but point to a striking parallel, the Talmudic spell against Shabriri, the demon of blindness. A person in danger of becoming blind must say: My mother hath told me to beware of

SHABRIRI
ABRIRI
RIRI
RI

and the demon disappears along with his name. By this token it may be that the word abracadabra was originally the name of some demon, now unrecognizable.

Belief in the magic word is rooted in the ancient belief not only in the identity of the self with its name, but also in the power inherent in names. To speak the name of a supernatural being, sometimes even to know it, gave one the power to invoke that being. In the evolution of magic, however, the manipulation of the words and formulas themselves gradually superseded the importance of the name or the meaning of the word, until the more incomprehensible or fantastic the word, the more power in it. See NAME TABU.

Abraham In the Old Testament, the first of the patriarchs, progenitor of the Hebrews: prototype of absolute and unquestioning faith, the "friend of God" to whom and his numberless seed was promised the land of Canaan. Faith in the face of misfortune and despair is the story. At God's bidding the shepherd Abram migrated from Haran, whence he and his father Teran had come from Ur in Babylonia to a strange land (Canaan) where the famous covenant took place, and he received from God the promise of a son in his old age and the new name Abraham, "father of many nations." At God's bidding too he would have sacrificed Isaac, that "son of promise," but because of his faith God showed him a ram in the bush to be sacrificed instead, and renewed the promise to multiply his seed "as the stars of heaven."

Rabbinical legend adds to this story many stories of Abraham's opposition to Chaldean astrology, stories of his smashing the idols in his father's house because they would neither partake of the sacrificial foods nor answer prayer, and his subsequent mission in the world as

spokesman for the one and living God. Rabbinical legend also ascribes to Abraham the towering size of the typical culture hero, along with the discovery of astronomy, invention of better modes of agriculture and seedling, invention of the alphabet, and knowledge of magic. He wore a precious stone around his neck with which he healed the sick.

In Mohammedan legend, the story of Abraham begins with a slaughter of 70,000 male infants to prevent the fulfilment of a prophecy that a boy would be born to rise against Nimrod, king of Babylon, and would break all the idols. Hence Abraham was born in a cave outside the town and on the tenth day abandoned. But the angel Gabriel put the baby's finger into its mouth, milk flowed from the finger, and when the sorrowing mother returned to the cave on the twentieth day, she found a sturdy youth already praising the God who created heaven and earth. The iconoclast stories are many and elaborate, culminating with Nimrod's order to cast Abraham first into prison, later into a fiery furnace. He was fed by Gabriel for one year in prison and drank from the spring which God caused to gush from the walls. He was catapulted into the fire which none could approach and live, but his faith in God caused the fire to cool and become a rose garden. Whereupon all the people believed in the God of Abraham from that moment on. This story is told by Thomas Moore in *Lalla Rookh*. Abraham figures as largely in Mohammedan legend as in Jewish, in that Mohammed claimed to preach, not a new faith, but the "restoration of the religion of Abraham." See ABANDONED CHILDREN; SLAUGHTER OF THE INNOCENTS; TOWER OF BABEL.

absurdity rebukes absurdity The motif (J1530) of an enormous group of stories belonging to the nonsense folklore of the world: usually the sole motif in the story containing it. Typical of these is the story of the man whose foal strayed into a field with two oxen belonging to a neighbor. When he went to bring home his foal, the neighbor claimed it. The case was taken to the king who adjudged the foal to the man who swore it belonged to his two oxen. The next day a man was seen fishing in the road with a huge fishnet. The king went out to question him. It was the rightful owner of the foal, who said, "As easy to catch fish on dry land as for two oxen to produce a foal." Of course justice was given. This story occurs in the German *märchen*, is well known in all Baltic folklore, and in Spain. Even more famous and ancient is the story (widely current in India, Tibet, Ceylon) of the man who went on a journey leaving a bag of gold dust in another's care. When he returned the friend handed him a bag of sand, saying, "It changed to sand in your absence." Some time later this friend too took a journey and left his small son in the other's keeping. When he returned and asked for his child he was given a lively ape. "He turned into this in your absence," said the friend. As usual the satisfactory exchange was made. This motif is closely related to the *reductio ad absurdum* motif (H952) and the rule must work both ways motif (J1511).

acacia *A. seyal* may be the shittah wood of which the Israelites built the ark of the covenant and the altar of the tabernacle. When Jacob went to Egypt, he planted "cedar trees," and the wood of these was carried into the desert in the exodus. Of the 24 varieties of "cedar,"

only shittim wood could be used, the Lord having foreseen the sin which the Israelites would commit at Shittim (*Num.* xxv), and the use of the wood in building the ark and the altar atoning for the crime. In later rabbinical tradition, it was ruled that this wood could be used only for this purpose and not for ordinary building and furniture making. The thorns of the acacia are supposed to have been in the crown that Christ wore to Golgotha. The wood of the acacia is burned on Buddhist altars, and Hindus use it in preparing their sacrificial fires. In India, it is believed that an evil spirit resides in the acacia, but that he will work evil only if a bed is made from or repaired by acacia wood: such a bed cannot be slept in. Frazer (*Magic Art II*) mentions an acacia in Patagonia in which a spirit abides, and to which the natives make offerings, even of clothing and horses. The ashes or the bark of the babul (*Acacia arabica*) are used in post-operative treatment by certain groups of eunuchs in India. In folktale, the "heart in the acacia flower," taking its name from an incident in the tale of *Anpu and Bata* (*The Two Brothers*), is a well-known variant of the separable soul motif.

acatlaxqui The dance of the reed-throwers: a primitive dance of the Otomí Indians of the municipality of Pahuatlán, Puebla, in Santa Catarina Nopochtla, around St. Catherine's Day, November 25, and also in Atla and Tlalacruz, México. The dancers (ten or more young men) dressed in white cotton coats, red knee-pants, wear red bandanas crossed over one shoulder and under the other, conical paper hats with paper ribbons streaming from the points, and sandals which patter on the stone floor. Each carries a strong reed, of about an arm's length, ornamented with feathers, and having about a dozen slender reeds attached to it, the whole so devised as to slide out and arch upwards when the dancers make their cast. The center figure is a boy dressed as a girl, called the *Maringuilla*, the little Mary. She carries a gourd containing a wooden snake. The dance begins inside the church with the dancers in two rows, changing to one row before the entrance, and later forming a circle around the *Maringuilla*, while one holds the snake over her head. Finally she is lifted onto a small platform while the dancers circle round her. The climax of the dance is the flinging up of the reeds into an arched dome over her head, and the simultaneous ringing of the church bell and bursting of rockets.

The Otomí Indians are noted for the persistence with which their primitive religious beliefs and observances survive under cover of Catholicism. This dance points not only to their ancient serpent-worship (the serpent god *Mixcoatl* was theirs), but the boy in girl's dress (always a phallic symbol), the reeds (another phallic symbol), and the centering of the dance around the boy-girl, all suggest some ancient fertility rite whose significance may (or may not be) lost, except for the tradition of pre-Columbian origin. [CPK]

acculturation Although the term has been defined in various ways, in essence acculturation is to be regarded as denoting the study of culture-change in process, where change is induced by contacts between peoples having different ways of life. First employed by J. W. Powell in 1880 in the sense of culture-borrowing, it was largely displaced by the word "diffusion" until the middle of the 1930's. Diffusion studies, which were in essence attempts

to reconstruct the unwritten history of peoples by drawing conclusions from the distribution of various cultural traits and complexes, reached their climax by 1925. At this time it became apparent to those engaged in studies among peoples in contact that the diffusionist approach revealed only hypothetical results at best, and could never yield precise conclusions as to the dynamic processes involved in cultural change.

Thus, in the United States especially, there arose the area of research that came to be known as "acculturation studies." In such research the contemporary state of the life of the people is stressed, and the historic facts of its contact with other groups are analyzed to ascertain not alone what had been borrowed, but under what circumstance and ultimately why they had been taken over. More important still, the question became paramount how, in the process of adoption, cultural elements have changed in form or meaning as they are integrated into their new setting. In England, some of the same problems were studied under the general designation of "culture contact research." In 1935, a committee of the Social Science Research Council drew up a *Memorandum for the Study of Acculturation*, influential in focusing research on the study of diffusion in process. The definition of the word acculturation given there, however, stressed the duration and intensity of contact as criteria, and these have been set aside as not being susceptible of satisfactory delimitation. Definition in terms of method—that is, of observation and the use of historic documents in the study of culture-change, rather than historical reconstruction—would seem to be more satisfactory.

It is evident that the concept of acculturation has much significance for the study of folklore; while, conversely, folklore can make important contributions to its study. Because of the manner in which the tale can be broken down into component elements of character, incident, and plot, and because, moreover, literary forms of a people reveal the basic sanctions of their way of life, these aspects of culture afford a uniquely precise instrument in the study of cultural change in process. We need but recall such a form as the nativity myth of the Zuñi Indians where Mary is impregnated by the Sun, Jesus is transmuted into twins, and the tale becomes an explanation of why the mule is sterile, to make the point. For folklorists, the concept acculturation can be used as an effective instrument in unraveling and understanding the way in which the literary kaleidoscope operates to produce the multitude of variations found on any given theme.

M. J. HERSKOVITS

Acephali A fabled nation, in Libya, of men without heads: mentioned by Herodotus and Josephus. They have been pictured with the face shown on the chest.

achachila The spirits and demons of the religion of the Aymara Indians of Bolivia. They are believed to live underground in the mountains and are said to send rain, hail, or frost. They appear to human beings in the guise of old men. [AM]

Achan In the Bible (*Josh.* vii), an Israelite of the tribe of Judah who took for himself a part of the spoils of Jericho dedicated to the Lord. His crime was unknown, but after the defeat at Ai, Joshua was instructed by God to discover the transgressor among the Israelites. By lot, Joshua chose the tribe, then the family, then the house-

hold, and finally the man, who confessed. Achan, for breaking the tabu on the "devoted thing," was stoned and burned to death, and a heap of stones was raised over his body.

acheri In Indian folklore, the disease-bringing ghost of a little girl which lives on mountain tops but descends to the valleys for nightly revels. The acheri will not molest those who wear red garments, so a scarlet thread is tied around the necks of children to protect them from disease. When children are ill, the acheri is said to have cast her shadow upon them.

Acheron In Greek mythology, the river of woe, one of the five rivers surrounding Hades: sometimes synonymous with Hades itself. In Jewish eschatology, the souls of the dead must cross it or bathe in it before entering paradise. In Christian legend, Acheron (or the Acherusian Lake) flows with waters white as milk and within it stands the City of God. Into it repentant sinners are cast by Michael and then brought by him to the City of God where the righteous dwell.

Achikar, Ahikar, Achiacarus, or Ahiqar The wise old counselor of Sennacherib, king of Assyria, who was falsely accused and condemned to death, escaped by hiding, and reappeared in the moment of his king's dire need to save the situation. When he was 60 years old Achikar had 60 wives but no son; he adopted his nephew Nadan, who ungratefully plotted against his uncle and succeeded in getting him condemned to death. No sooner was Achikar reported dead than Pharaoh, king of Egypt, proposed to Sennacherib that he build him a castle suspended between heaven and earth, for which Pharaoh would pay an extravagant tribute, but failing the castle, Sennacherib would pay the same to him. Consternation spread through the land until Achikar stepped out of hiding and revealed himself alive. Sennacherib sent him off at once to Pharaoh as official minister and magician. He easily built the castle in the air, turned out a few ropes of twisted sand, and returned home with Pharaoh's rich tribute for Sennacherib. This story, along with the moralizing precepts of Achikar, is preserved in ancient Syriac, Arabic, Ethiopic, Armenian, and Slavonic writings. It is extant in a 5th century B.C. papyrus manuscript, but is believed to be of Macedonian origin even more ancient. There are Jewish, Turkish, and Rumanian versions of the story. It is mentioned in the *Book of Tobit* and told in detail in *The Thousand and One Nights* (Burton *Supplemental Nights* as "The Say of Haykar the Sage"). It is easily the prototype of an almost world-wide folk motif relating how during a famine the king ordered all the old men in the country to be killed. But one youth hid his old father, who came forth when everything was going wrong, and by his wisdom saved the land.

Achillea The name of a large genus of plants of the thistle family, including yarrow and sneezewort: named for Achilles' spear, or in some traditions, for a plant used by Achilles in curing Telephus.

Achilles The greatest, strongest, most beautiful, and bravest of the Greek heroes in Homer's *Iliad*; son of Peleus and Thetis. While he was an infant his mother dipped him in the Styx, thus making him invulnerable, except in the heel by which she held him. He was educated by the centaur Chiron; and grew to manhood

dressed as a girl at the court of Lycomedes, king of Skyros. Here he was discovered by Ulysses and induced to join the Greeks against Troy. Later when Agamemnon was awarded Briseis, a slave-girl to whom Achilles was devoted, Achilles "sulked in his tent" and refused to fight again for Agamemnon. Things were going badly for the Greeks until Patroclus, Achilles' dearest friend, wearing Achilles' armor to terrify the enemy, went forth and routed the Trojans. But Patroclus himself was killed, whereupon the Greeks again fell back, until Achilles came raging out against the enemy to avenge the death of his friend. He rescued the body of Patroclus, killed Hector the next day, and completely defeated the Trojans. Later story says that Paris discovered the secret of his vulnerable heel and killed him with a poisoned arrow.

In pre-Homeric myth, Achilles often appears as a sea god whose temples were built on capes and cliffs along the coasts, where navigators could propitiate him for favorable winds, safe arrivals, etc.

In folklore Achilles is the prototype of the superhuman hero who preferred glory to long life. His story contains four typical world folk motifs: the hero disguised in women's clothes, the vital spot, the magic weapon, the talking horse. See SWORDS; VULNERABLE SPOT; XANTHOS AND BALIOS.

Achilles' spear The wonderful spear or lance of Achilles, which had the power to heal whatever wound it made. Telephus, king of Mysia, was wounded by it in a battle with the Greeks who landed on his shores en route to Troy. The wound would not heal until Telephus, heeding the words of Apollo, "He that wounds shall heal," sought out Achilles among the Greeks encamped before Troy. An ointment containing rust from the spear was applied to the wound and it was healed.

A Cholla mo Run Scottish musical legend of "the piper's warning," embodying the belief that the bagpipe had the power of speech. See BAGPIPE.

açon A type of rattle, usually a calabash containing pebbles or seeds, used in connection with drums and ogan in Haitian vodun rites. The rattle, played by an initiate who is an accomplished singer, establishes a ground rhythm against which the drums work out their more elaborate patterns and, when shaken in prolonged continuous sound, serves to break the beat of one song before the beginning of another. During the singing and dancing the player of the rattle joins the dancers, shaking his instrument high over their heads in short sharp notes, takes the lead in new refrains, and takes solo parts in the characteristic exchange of solo and chorus parts. The açon is prepared for its part in the ceremonies by a baptismal rite along with the drums and the ogan.

aconite Any of a genus (*Aconitum*) of plants of which monkshood is one well-known species. From ancient times in Europe and northern Asia the plant has been recognized as the source of a powerful poison. India especially is noted for its mountain aconites. The Nepal aconite of the Himalayas is probably the most deadly: source of the famous Bikh poison. The Nepalese have been known to use it generously in wells and springs to protect towns and stop advancing armies. Many species are as deadly in local application as when taken internally. All over northern Asia it was used on arrow heads to kill tigers and other game as well as against human

enemies. Aconite arrow poison among the Ainu and other peoples of the east Asiatic coast is well known. Aconite arrow, lance-tip, and harpoon poison is equally common among the Kamchadal hunters, especially whalers, to the north of this region, and came to America with the Asiatic culture drift across the Bering Strait from the Kamchatka region, to be widely practiced by the Aleutian and Kodiak whalers.

The Penzer notes to the *Kathā Sarit Sāgara* mention a Neapolitan story of two lovers tricked to their death with this poison. A young girl was persuaded by her unscrupulous father to rub her body with an ointment he had prepared, assuring her it was a love charm to bind her lover to her forever. The girl used the ointment (which contained aconite) and both she and her lover died of it that night. Various preparations from some species, however, are used locally to give relief from neuralgia, or internally as a tonic, febrifuge, or aphrodisiac. Compare POISON DAMSEL.

acorn The fruit of the oak (*Quercus*), a one-seeded nut fixed in a little woody cup. The tree is usually about 20 years old before the acorns appear and they themselves take one, two, or three years to mature. In many species they are edible. In folklore and proverb the acorn is the symbol of prolonged effort preceding perfect achievement. Great oaks from little acorns grow not only expresses the *de minimis maxime* idea, but also implies they were a long time a-growing. The famous German story of the man who said he would pay the devil when he harvested his first crop and then went out and planted acorns is in the tradition. The ancient Celtic druids ate the acorns of their sacred oaks in preparation for prophesying.

The acorn figures little beyond this symbolization among peoples where cereal grains or maize abound. But among peoples who have no corn and where acorns are plentiful, especially among tribes of California Indians, the stories are full of references: Sun's wife was cooking acorn mush for supper (Achomawi); two boys on a journey gathered, cooked, and ate acorns (Wappo); Coyote and his grandmother had a famous argument about how to prepare them (Yurok). The Natchez (southern Mississippi valley), who did have corn, had also a story telling how the animals once had a chief who let each one choose the food he wished to live on. And Squirrel chose acorns. But the Luisefños (southern California coastal tribe), who even as late as 1905 still subsisted largely on acorns and fish, have a myth giving authority for their diet. Wiyot, the first (or last) born of sky and earth, was the guardian of all earthly things and beloved by all of them. Only Frog hated him because she envied his beautiful legs. She spit in the spring from which he drank and in ten months he died. But before he left the earth he taught the people all he knew, gave them their laws and arts, and promised that from his ashes would come their most valuable possession. Out of the ashes grew the oak tree and the acorns were as big as apples. Then the people sent Crow to the big star to find Wiyot. Crow could not find him. Then Hummingbird went and came back with the message: "All birds and animals, eat the seeds of my tree. All men, make flour from the seeds and make cakes from the flour." So with gladness the people took the acorns and made the feast of the acorns. See COYOTE AND THE ACORNS.

acorn dance or feast The autumn feast of the Hupa Indians of California, the coast Yuki, and other north-west California tribes: a first-fruit ceremony of these people. A special group of women is appointed to gather, grind, and leach the acorns and make them into a mush. At noon on the feast day the people gather to await the coming of the priest. But they must not look at him as he approaches the feast-ground because he impersonates Yinukatsidai, the god of vegetation. He builds the ceremonial fire and heats the stones with which to cook the mush. When everyone has eaten, he then burns all the leftovers with prayers that the new crop may not be eaten by rodents. The stones are never used again, and never touched by anyone but the priest, who piles them up in order year by year.

Actæon In Greek mythology, a hunter who was turned into a stag because he saw Artemis bathing, and was killed by his own dogs. This is the prototype of many stories of punishment for breaking the tabu against seeing a goddess nude. Tiresias was blinded by Athena for the same reason. See TRANSFORMATION AS PUNISHMENT.

act of truth Any act or event which takes place immediately following and because of the absolute verity or falsity of a statement or declaration. As a motif the act of truth is widespread and important throughout Sanskrit story and is frequently identical with the chastity test. Typical is the tale of the chaste woman whose touch raised the fallen elephant, "King Rat-nadhipati and the White Elephant Svetarāsmi" in the *Kathā Sarit Sāgara*. The wounded elephant could neither rise nor eat. To the distressed king, in prayer, it was revealed that the elephant would rise if a chaste woman touched it with her hand "but not otherwise." The king called on all his 80,000 wives but the elephant never got up until a servant named Silavati placed her hand upon his side and he got up and began to eat. From the same source comes the story of Rāma and Sitā in which the pregnant Sitā, falsely accused and deserted by Rāma, sought to be tested in a certain lake. "Oh, Mother Earth," she said, "if my mind was never fixed upon anyone but my husband, may I reach the other side of the lake." Whereupon the goddess bore her to the other side. This overlapping of the act of truth with the chastity test turns up again in the Tibetan tale of *Two Brothers*, in the story of the elephant who could not bring forth until a pure woman touched her, and also in the Old Irish *Echtrae Cormaic*, the *Adventure of Cormac*. In this story the marvelous golden cup, which broke in three if three lies were told over it and became whole over three truths, proved to Cormac the chastity of his wife. The act of truth is as common to Irish legend as to Sanskrit.

The act of truth is not always a chastity test. It is invoked to prove the paternity of infants, to turn back forest fires, free captives, counteract poison, cure leprosy, heal wounds, etc. In local legends the imprint of a human hand in a rock is usually attributed to an act of truth. The famous rock near Welsholz, Saxony, still bears the imprint of Count Hoyer's head. Hoyer, a general of Kaiser Henry V, on the eve of the fatal battle of Feb. 11, 1115, boasted that he could not be defeated any more than that rock could show the imprint of his head. The rock softened and took the mark of the head; the battle was lost and Hoyer was killed.

The act of truth was too convenient a testimony for

the human mind to relinquish altogether. People cross their hearts and hope to die today if it is not the truth they speak; they swear on the Bible and fear disaster should they lie. "If I am not innocent may I choke on bread and cheese," many a colonial witch declared. See FENDA MARIA.

actionless, all-powerful old woman A supernatural being of the Chemehuevi Indian tribes of California; Hawichyepam Maapuch. She appears as a power rather than as a character in the origin myth of these people. Through her power the waters which first covered the world receded (or dried up) and allowed the two culture heroes (Coyote and Puma) to enisled on Charleston Peak to descend and populate the earth. Coyote married a louse from whose eggs the various tribes were born; but the Chemehuevi, the Mohave, and certain other favored southerly tribes were born from Coyote's excrement. The death of Puma at the hands of "eastern enemies" caused unbroken night to come upon the world. But Coyote recovered daylight, and, with the funeral rites which he performed for his brother, instituted the pattern for the funeral rites the Chemehuevi were to follow forever. The actionless, all-powerful old woman is an element also of the Mohave origin myth, as are also the elder brother's death and the establishment of his (and hence the tribal) funeral rites.

Adad or Hadad Ancient Assyrian and Babylonian god of storm, wind, and rain. Among the Assyrians he was Adad; among the Amorites he was Addu or Dadu (the same word minus the first syllable) or Adad (minus the last). Very early Amorite settlers took him to Babylonia where his name became synonymous with Ramman, the thunderer. As a storm and wind god he was greatly feared; but as a rain god, giver of waters, he was worshipped and propitiated and regarded as a protector of harvests. He early assumed the role of war god to be invoked as a destroyer of enemies with thunderbolts, whirlwinds, or drought. He plays an important role as a storm god in the Babylonian flood myth and is listed in the second divine triad along with Sin and Shamash, although he is sometimes replaced by Ishtar. His symbol is the thunderbolt; his sacred animal is the bull; his sacred number is 6. His first seat of worship in Babylonia was at Muru in the south. His consort was Sala or Shala.

Hadad was the most important of the ancient gods of northern Syria in the 8th century B.C. There he was worshipped as a god of rain and vegetation and harvest guardian. His name as Adad turns up in Syrian cuneiform about 3000 B.C. In Canaan he was the chief god, worshipped as Martu (the Amorite) and Kur-Gal (the Great Mountain), and probably was baal of Mt. Lebanon. His consort in Palestine was Asherah. In Roman times he was known either as Jupiter Optimus Maximus or Jupiter Damascenus, but in any guise the ancient Syrian Adad can always be identified because he is invariably represented with the bull.

Adam The Hebrew and Biblical word for *man*: name of the first man and progenitor of mankind. He was created in the country of Eden in Babylonia near the confluence of the Euphrates and Tigris rivers. *Adamah* is the Hebrew word for *ground*. *Genesis* i-iii tells the familiar story of the creation of Adam, of Eve from Adam's rib, her seduction by the serpent into tasting the forbidden fruit, Adam's eating of it also, and the

judgment of God upon them for their disobedience: pains of childbirth for the woman, labor and toil for the man, and expulsion from Eden for the two of them, to make their way in a less bountiful environment, where they became the parents of three sons, Cain, Abel, and Seth.

Apocryphal and rabbinical legend enlarge upon the details: Adam was made from red clay from the four regions of the earth (*adam* is the Hebrew word for red); his body reached from earth to heaven (before the fall), and "he was of extreme beauty and sunlike brightness." The *Slavonian Book of Enoch* tells how all the angels bowed before Adam except Satan who in punishment for his rebellion was hurled into the abyss and henceforth became the enemy of man; also, how the angels, full of wonder at Adam's beauty, were about to worship him until God put sleep upon him to show them he was mortal. Adam was meant for immortality but death became his lot when he ate the forbidden fruit, and the animals no longer obeyed him but feared and attacked him. The pseudepigraphic *Secrets of Enoch* contains the poetical description of the creation of Adam from seven (or eight) substances: his flesh from the earth, his bones from rocks, his veins from roots, his blood from water (or dew), his eyes from the light of the sun, his hair from grass, his thoughts from the wind, his spirit from the clouds. Another story says that Adam's soul was created 1000 years before his body. When the time came for the soul to enter the body he refused to exchange heaven for human flesh until Gabriel beguiled him into it with music in a moment of ecstasy. Ever since the soul has been as reluctant to leave the body as it was to enter it.

Mohammedan legend anticipates the evolutionary theory of creation with the story of how Allah sent rains upon the earth to prepare the slime from which to create Adam. Adam's body lay stretched out upon the ground for 160 years before it received the breath of life. When Allah put the breath of life in his nostrils, Adam sneezed and said, "Praise be to Allah."

An Arabian story remarks upon the cleverness of Adam at the moment of expulsion from Eden to remember to grab up an anvil, two hammers, a pair of tongs, and a needle to face the new world with. Adam was cast out of Eden from the Gate of Penitence, Eve from the Gate of Mercy, Iblis from the Gate of Malediction, and the serpent from the Gate of Calamity. Adam landed in Ceylon, Eve at Jiddah, Iblis at Ailah, and the serpent at Isfahan in Persia. Two hundred years went by before Adam and Eve met again at Jebel Arafat, the Mount of Recognition.

These stories are typical of Adam lore in the great body of Jewish and Mohammedan tradition; there are countless others, often identical in incident and import, but with a wealth of ramification. The story of the fall is found among other peoples too. The Prometheus-Pandora myth of the Greeks is built about the same elements; the motifs are almost identical. See LILITH.

Adam and Eve and Pinch Me A catch rime which goes as follows:

Adam and Eve and Pinch Me
Went down to the river to bathe.
Adam and Eve got drowned,
And who do you think was saved?

The unwary listener who answers as expected gets pinched.

Adam Bell, Clim of the Clough, and William of Cloudesly An English ballad (Child #116) telling the story of three famous outlaws, all marvels in archery, and how two of them shot up the town of Caerlel to save the third, William of Cloudesly, from being hanged. William had just slipped home from the forest to see his wife and had been caught. The three then forestalled higher justice by going to London and securing the king's grace before he could hear the news. William of Cloudesly is the English William Tell, who shot an apple from his son's head. But the English ballad differs from the European legend in that Cloudesly undertook the shot of his own free will; it was not imposed by the king. The first wonder, too, the splitting of the hazel-rod with "twenty score paces betwene," was done only to make the people marvel. But the two marvels won favor for Cloudesly and his family and his two fellow outlaws with the king forever.

Adam of China The first of China's legendary kings: Fu Hsi.

Adam's apple The prominence made by the thyroid cartilage in the front of the human throat, conspicuous in men: the morsel of forbidden fruit which stuck in Adam's throat (A1319.1).

Adam's Peak A mountain in Ceylon (native name *Samanala*): site of a rock bearing a depression resembling an enormous footprint, and goal of continuous Moslem, Hindu, and Buddhist pilgrimage. In Moslem legend, as the place where an angel showed Adam all the ills of the world, it bears the footprint of Adam. In Buddhist legend, it is the site of the Sripada or Sacred Footstep of Buddha, the imprint of Buddha's last contact with this world. The Hindu Saivite believes it to be the footprint of Siva, and a Tamil legend describes how rivers flow from Siva's foot upon the Peak. Christians worship the spot as the footprint of St. Thomas.

adaox The Tsimshian Indian word for myth, as distinguished from *malesk*, which is either a personal adventure or historical story. Among the Tsimshian a myth is always a story about the past; animals are the characters, speaking and behaving like human beings; many are origin stories (origin of the world, of man, the animals and their individual characteristics, of various features of the present world, etc.). The *malesk* may contain supernatural incidents and characters, for the supernatural is ever-present in Indian daily life; it may even be weighted with religious significance. But no story is an *adaox* or myth unless its setting is that early, marvelous period when the world was entirely different from the world of the present day. The Kwakiutl word for myth is *nuyam*; Chinook is *ik!anam*; Thompson Indian is *spetaki*. All three make the same distinction. The Salmon-Eater tribe of southern Alaska have the word *adaorh* which means myth or a true story. An *adaorh* is not only recounted orally, but is illustrated on totem poles and represented in other carvings. The great Haida and Tsimshian epic about Dzellarhons, revealing the migration to America via the Aleutians of the Salmon-Eater tribe is a typical *adaorh*.

Adapa A mythological Babylonian hero and fisherman of the city of Eridu on the Persian Gulf; son of Ea, god of wisdom, by whom he was given the gift of great knowledge and intelligence. One day while he was fish-

ing, Shutu, the South Wind, upset his boat, and Adapa found himself in "the house of the fish." Enraged, he turned on Shutu and broke her wings. For seven days there was no wind. "Why?" asked Anu, god of heaven, and when told the reason he summoned Adapa to his court. Ea warned his son not to partake of the bread or the water that would be offered to him, with the implication that, if he did so, he would never be permitted to return. Adapa appeared in penitence before Anu and on the intercession of Tammuz and Gishzide was forgiven. Then realizing that Adapa, having beheld the secret heart of heaven and earth, must be made worthy of this knowledge, the gods offered him the bread of life and the water of life, which would have made him immortal like themselves. But Adapa was afraid to take it, believing (as Ea had warned him) that it was the bread and water of death. Thus because of his fear he lost the chance of immortality.

Adapa is construed by some scholars as the hero of the Babylonian fall of man myth; he is likened to Adam, who, having received the gift of knowledge, was denied the gift of eternal life by a jealous god. See FOOD TABU IN THE LAND OF THE DEAD; SEMITIC MYTHOLOGY.

adaro The ghosts of the dead in San Cristoval, Ulawa, and southern Mala island: in Melanesian mythology distinguished from the *figona* or spirits which were never human. See MELANESIAN MYTHOLOGY. [KL]

adat Customary law, traditions, or traditional customs and practices handed down from generation to generation among Indonesian peoples. The Indonesian explanation for any deeply rooted custom is, "It's adat." [KL]

added equipment The motif of a story told among the Chiricahua, Lipan, and White Mountain Apache Indians, in which Coyote is challenged to tell a lie and get away with it. He admits he can tell a lie so as to be believed, but what he uses for a lie is at home. If some one will lend him a white horse (mule, burro) he will go and get it. He so handles the animal as to make it balk and refuse to budge until it is equipped with a fine saddle, saddle-blanket, then a bridle, then spurs. When all this equipment has been added to the animal, Coyote rides away, and either never returns, or else paints the horse black, returns and sells him to the owner, and escapes with the added equipment when the first rain reveals the trick. One version adds the owner's hat, coat, and boots to the collection before Coyote departs.

This story is of possible European origin, belonging to the widespread stolen goods sold to owner stories (K258), reflecting some variant of the ancient and widespread master thief cycle, or stemming from some one of the numerous tales of lying everywhere so popular. If this is true, the adaptation to Indian life, environment, and thinking, to the sense of humor inherent in Indian character, and to the Indian delight in the trickster has been complete.

Adeborsteine The stork-stones of Pomeranian folk belief, associated with the prevailing German myth that babies are either brought up out of the water by certain water birds (swans or storks) or found by them in rocky mountain caves. Various likely rocky places of this kind were called Adeborsteine, stork-stones; and the infant brought from such a place was a stork-child.

This is one more birth story pointing to the world-wide belief that children are born first of their mother, the earth.

Adibuddha The principal Buddha of Indian Mahāyāna Buddhism, which was developed in the 2nd century in northern India. This theistic form of Buddhism spread throughout central and southeastern Asia to Ceylon and survives today in China and Japan. It superimposes on the various Buddhas (five or six) another over-all Buddha, primary, self-existent, unoriginated, and many-named: an omniscient spiritual being from whom emanate all existing things. He is unseen, yet he is pure light. He is in Nirvāṇa. He is worshipped in temples, not to be invoked with prayer, yet regularly so invoked by Tibetan Buddhist lamas. In the 10th century a new concept was added: by his five acts of thought Adibuddha produced the five Buddhas of Contemplation (Vairocana, Akṣobhya, Ratnasambhava, Amitābha, Amoghasiddha and sometimes Vajrasattva), creators of the five Bodhisattvas of contemplation, creators in turn of the five worlds of the universe, of which we now inhabit the fourth. In the *Nāmasaṃgīti*, Mañjuśrī is called Adibuddha, as the personification of that knowledge from which all Buddhas spring. Icons represent him with the sword which destroys ignorance.

Adiri The Kiwai (Melanesian) land of the dead. Life in Adiri is similar to but easier than life on the earth. Originally Adiri was a barren place inhabited by a man (Adiri) and his daughter, Dirivo. Sido, the first man who died, opened the way to Adiri. He then married Dirivo and from his semen came all the different plants which grew in the afterworld. He made fire by rubbing his teeth with wood and then built a house several miles long, in which thenceforth the spirits of the dead resided.

Aditi In Hindu religion, infinity, boundless space, sometimes a purely abstract personification of immensity or infinity, sometimes the mythological personification of the female principle in creation, known variously in the Vedas as the mother of the world, mother of the gods, supporter of the sky, sustainer of the earth, and wife of Vishnu. In the *Mahābhārata* and *Rāmāyana*, however, she is the mother of Vishnu. The *Purāṇas* refer to her as the mother of both Vishnu and Indra. She is constantly identified with various other gods and with nature. In the *Rig-Veda*, Aditi bore eight sons but presented only seven of them to the gods. The eighth she cast away and this was Mārtt-aṇḍa (the sun), her son by the sun. The remaining seven are the Ādityas.

Ādityas In Vedic mythology, the seven sons of Aditi (eight counting Mārtt-aṇḍa): a group of divine abstractions or moral deities. Their names are Mitra (the light of day), Bhaga (good luck, wealth, bounty), Aryaman (comrade, bosom friend), Anśa (bounty), Dakṣa (dexterity, skill), Varuṇa, and probably Sūrya or Savitri (the sun). Sometimes Indra is substituted for Dakṣa; and sometimes Savitri and Dhātṛi are added to the list. Varuṇa, their chief, ruler of night, upholder of the moral order, is known as The Āditya. In later Sanskrit writings Āditya is one of the names of the sun, a not surprising development, considering that each name in the list has been that of a sun god at one time or another. In the *Brāhmaṇas*, their number is twelve, an adaptation

to interpret each as representing an aspect of the sun during each of the twelve months of the year. The most ancient concept of the Ādityas, however, is the literal one: sons of Aditi, inviolable, eternal beings sustaining and sustained by the eternal celestial light.

Adlet A terrible people believed by the Eskimos to be descended from a red dog. An Eskimo woman who married a red dog had ten children. Five of them were dogs, whom she set adrift in a boat, and five were monsters. The dogs drifted across the big sea, landed safely, and begot the white men. But the monsters begot worse monsters, a cruel, blood-drinking people, called Adlet by the Labrador Eskimos and Erqigdlit by the Eskimos west of Hudson Bay. The story is also known among the Greenland and Baffinland Eskimos.

Adlivun Literally, those beneath us: the underworld of Central Eskimo mythology, where Sedna rules in her big house with the big dog at the door. Sedna has no deerskins in her house because she dislikes the deer. All who disobey her during life must go to Adlivun for one year when they die. Murderers can never leave that place but the others (in Greenland tradition) eventually reach Adliparmiut (literally, those farthest below), a darker, remoter, but not quite so dreadful world, where hunters may still know the joys of hunting whale and walrus, though always enduring terrible storms, winds, snow, and ice. Davis Strait tribes believe that the spirit-dwellers of Adlivun, called tupilaq, return to their villages at times in shabby flapping clothes, as malevolent spirits who cause disease and death. But once the soul reaches Adliparmiut, it experiences comparative peace and need never return. See QUDLIVUN.

Admetus King of Pheres in Thessaly, husband of Alcestis, and once unwitting master of Apollo doing penance for bloodshed as thrall to a mortal. The kindness and the beauty of Admetus soon won the god's admiration and he did much to prosper the fortunes of his master. He discovered that Admetus had only a short span of life allotted to him, but secured the promise that a longer life would be granted if Admetus could find someone to die in his stead. No volunteers rushed forward as substitutes, not servants, comrades, or aged parents. Finally Alcestis offered herself for her husband, and at the appointed hour she died. But Hercules, an unexpected guest on the funeral day, wrestled with Thanatos at the tomb of Alcestis (or with Hades in the lower world) and brought her back to Admetus. This story is a classic example of the interweaving of common folk motifs: death evaded by substitution, and wife dying to postpone her husband's death. In a Japanese analog of the latter, the devoted wife drowns herself to appease the gods and thus prevents them from capsizing her husband's boat.

adolescence ceremonies Among nearly all primitive peoples (North and South American Indians, Australian, Polynesian, Melanesian, and Indonesian, the New Guinea tribes, all Arctic populations, and all African), various ceremonies, often severe and painful, performed for and by young boys and girls at the time of puberty to initiate them into adulthood and its rights, privileges, obligations, and responsibilities. All adolescence ceremonies are initiation rites. Initiation rites, however, are not limited to puberty rites; they usher the indi-

vidual not only into manhood but into all kinds of secret societies, priesthoods, magic powers and mysteries, and other holinesses, even into death.

Adolescence ceremonies are intended as safeguards against the evils and dangers which threaten a youth or young girl at this time of life. They are considered necessary, not only for the individual but also for the welfare of the tribe. Most ceremonies involve certain purification acts and instruction in or preparation for intercourse with the opposite sex. They usually include a preliminary period of seclusion, sometimes the imposition of complete silence for a period, no contact with the opposite sex, and fasting (total, or from certain foods). The importance of dreams and visions is stressed, for through them the youth discovers the guardian spirit which is to walk with him throughout his life. Severe tests (of pain or endeavor) are imposed to develop strength, hardihood, courage, or endurance. Mutilation, circumcision, sub-incision, flagellation, tooth-filing, knocking out a tooth, flesh-gashing, incision of tribal marks, etc., are regarded either as charms against future evils, as purifications, tests of endurance, or are willingly undergone to develop courage and endurance. Solitary confinement or other isolation, accompanied by terrorizing, also often precede final instruction of the youth by the old men in tribal lore, sexual knowledge, and religious or magical matters. The ritual of death and resurrection is also a common puberty initiation rite, especially among totemic peoples.

Among Malay tribes, the word for adolescence ceremonies is *masokjawi*, literally admission into the Malay people; but they also have another name for it, *chuchi tuboh*, which means purification. Tooth-filing and shaving off the characteristic top-knot of Malay boys are typical features of all Malay adolescence ceremonies. The complete ceremony involves purification rites, tooth-filing or tapping, head-shaving, appeasing certain gods, a huge banquet, and culminates with circumcision, which is performed with the ritual bamboo knife in a little hut. Girls undergo ear-boring, tooth-filing, and the staining of the teeth black. Incision is not common among the Malays except as a feature of Mohammedan conversion.

Among both North and South American Indians adolescence ceremonies for boys are often associated with the initiation rites which admit them to tribal membership or introduce them to the mysteries of various secret societies. North American Indian girls, however, step into womanhood through a complicated pattern of behavior involving seclusion or isolation, food and other tabus, looking and contact tabus, symbolic fertilizing, and symbolic hairdressing. Hopi girls go through a four-day corn-grinding task in the house of an aunt during their ritual which also includes fasting from meat and salt, never scratching the head or body with the hand but only with a certain stick, and remaining in a shaded room until the proper moment to emerge wearing the new hairdress which announces to the public that they are marriageable. The Taos girl also grinds corn for four days, always protected from the sun. Should the sun shine upon her during this period she might bear twins after marriage. This fear is possibly related to an almost world-wide belief in magical impregnation from the sun. She also fasts from salt and "Mexican" food, dons the traditional women's boots; both her dress and

hairdress are altered. After this she may join the spring-tide circle dances or join the pilgrimages to Blue Lake. Southern Athapaskan, Yuman, and Pima-Papago tribes all emphasize girls' adolescence ceremonies; but Zuni girls do little more than celebrate their first menstruation by grinding corn for a little feast and assuming the symbolic maturity hairdress. The adolescence ceremony for Chiricahua girls involves a four-night singing ceremony, the whole comprising a prayer for long life. At sunrise on the fifth day the last song is sung to White Painted Woman, the earth mother who symbolizes the female principle. The Mescalero Apaches have a similar adolescence rite for girls symbolizing creation and the seasons, and a long good life throughout all seasons, rooted in faith in the power of the song itself.

Girls among the Thompson Indians of British Columbia fast from bear meat lest they become barren; they pray daily to the Dawn, and record their ritual acts and offerings in paintings on rocks and boulders. Thompson Indian boys also execute rock paintings during their puberty observances to insure long life. Haida girls may not look at the sea lest the motion of the waves cause facial tic, or into fire lest their faces turn red. Their eyes might turn red too if they saw a red salmon.

Seclusion of girls at puberty is an almost world-wide practice among primitive peoples from the Zulus in Africa, who believe that if the sun touches a pubescent girl she will quickly shrivel into haghood or the skeleton state, throughout the Pacific cultures, where the seclusion lasts anywhere from several days to several years, to the Tsetsauts of British Columbia whose girls are made to wear huge fur hats for two years and live in huts apart from others, the Tlingits who confine their daughters at the first sign of menstruation in small huts or cages for a year, and the Alaskan Koniag Eskimos who caged their girls for six months on their hands and knees.

✍ A few of the simpler groups of Middle America, in contrast to the higher cultures of Mexico and Guatemala, observe puberty rites. Among the Cuna of Panama a girl is placed in a special hut at the time of her first menses, while older women pour water over her, bob her hair, and paint her black. Among the Chocó of Panama the girl is secluded, limited in diet, and required to use a special stick to scratch herself. Sumu (Nicaragua) boys undergo fasting, flogging, and scarification to prove that they are ready for marriage. The Lacandon father (Mexico) offers a set of bow and arrows to the gods, in behalf of his son, praying that the boy may become a good hunter. The boy is then allowed to wear a loin cloth and take part in adult rites. A girl's puberty is indicated by her wearing red feathers tied to the back of her hair. [GMF]

✍ The puberty hammocks of southern Brazil and Bolivia are well known. Young girls are sewed into them, suspended from the ceiling, and periodically beaten to discourage the evil believed to be inherent in them at this time. Periods of such suspension vary from four days to four months. Guiana Indian girls are not only suspended from the top of the hut for a month but are subjected to the painful bites of certain large ants.

Seclusion of girls at puberty, typical of world adolescence observances, points to the basic undercurrent fear of the menstruating woman. She is believed to emanate a power dangerous not only to all who might come in contact with her, but also to places, objects, and

to herself. The Ticunas of Brazil tear out the hair of young girls at puberty for no other reason than that it is a danger to the girl herself because it must surely contain all the infectious evils that surround her at this time. One remarkable exception to puberty fear, however, occurs among the East African Warundi. On the day of her first menstruation the Warundi girl is led through the house by her grandmother to touch every household object and thus endow it with the special holiness that has come upon her. The basic idea of emanation is here—emanation of mystery and power, feared as potential for evil by most peoples but evoking expectation of good among the Warundi. See BULL-ROARER; INITIATION; MAGICAL IMPREGNATION; PUBERTY DANCES; PUBERTY RITES.

Adon Literally, lord, master: title applied to certain Semitic gods. The root may be seen in Adonai, Adonis, etc. The Adon of Gebal, who became Adonis, may have been Tammuz.

Adonai The plural of Semitic *adon*, lord: in Hebrew religion the most usual substitute for the wonderful, the unutterable, the hidden name of God. In the Masoretic text the word occurs 315 times in juxtaposition with the tetragram YHWH. Originally an appellation of God, the word became a definite title. When the tetragram became too holy for utterance, Adonai was substituted for it, so that as a rule, the name written YHWH receives the points of Adonai and is read Adonai, except where Adonai precedes or succeeds it in the text, when it is read Elohim. The translation of YHWH by the word Lord in the King James and other versions of the Bible is due to this traditional reading aloud of the tetragram as Adonai. In the early period of the Second Temple the name was still in common use; in the beginning of the Hellenistic era the use of it was reserved for the Temple; elsewhere the priests were obliged to use Adonai. Josephus tells the story of how Moses besought God to impart to him the knowledge of His name so that he might be able to invoke Him at the sacred acts; whereupon God communicated his name, hitherto unknown to any man. And the name is not to be used by any man. See AARON'S ROD; NAME TABU.

Adonis The title (from Semitic *adon*, lord) of the Babylonian god Tammuz, misinterpreted, as his cult moved westward, as the name of the god. Thus Tammuz, the young lover of Ishtar (earth-mother goddess) became in Greek mythology Adonis, the beautiful youth beloved by Aphrodite. He was killed by a wild boar while hunting in the mountains. The red anemone sprang from his blood. So great was Aphrodite's grief that the gods arranged to let him spend half of each year on earth with her, and half of each year in the underworld. This story of the dying god and his resurrection, symbolizing the seasonal death and reappearance of vegetation, appears everywhere from western Asia and the Mediterranean regions throughout Europe to the British Isles.

The most ancient and eastern of the Adonis stories is the Syro-Phœnician version in which Myrrha (or Smyrna), daughter of Theias, a king of Assyria, was caused to conceive an incestuous love for her father by Aphrodite, whom she had either refused or neglected to honor. Myrrha contrived to satisfy her passion by taking advantage of the old man's drunkenness in the dark. But

he, in his sober anger, would have killed her if she had not fled and sought the protection of the gods. They turned her into a myrrh tree; and from the trunk of a myrrh tree Adonis was born. Most of the stories state that the bark was ripped open by a wild boar and the child came forth. Aphrodite found the infant and, charmed by his loveliness, put him in a little chest and gave him to Persephone to care for. Persephone too became enamored of his beauty and later refused to give him up. So Zeus decreed that Adonis should spend four months of the year with Aphrodite, four with Persephone in Hades, and four he might have for himself. Later he was killed by the boar while hunting. Another variant says that Adonis was brought up by the nymphs, that Aphrodite met him while out hunting and fell in love with him, and that he was killed by a wild boar either sent by, or embodying, the jealous Ares, Aphrodite's previous lover. The judgment of Zeus in allowing him to return to this world for part of every year is the Greek variant of the eastern Tammuz resurrection story.

The trail of the cult is easily followed from Babylonia and Syria through Phoenicia and Cyprus into Greece where Adonis-worship was well established in the 5th century B.C. His worshippers believed that every year Adonis was killed by the boar on the mountain and went to the underworld; every year his goddess-lover left this earth in search of him. While she was absent the earth lay scorched under the sun; no passion, no love existed between male and female; no living thing bloomed or was born. Every year the women of western Asia and Greece mourned the death of Adonis, cast his image into the sea along with the little Gardens of Adonis, sang the beautiful hymn of hope for his return, and seven days later rejoiced for his reappearance on the face of the earth when the red anemone bloomed. In Byblos in Phoenicia the celebration was timed to coincide with the mountain freshets which made the river of Byblos run blood-red into the sea. This was believed to be the blood of Adonis. The appearance of the red anemone in the woods of Syria about the time of Easter symbolized his return. Thus the whole story was dramatized and enacted within the space of about 10 days. Rites at Alexandria were similar. At Argos pigs were sacrificed to Aphrodite to signify her connection with Adonis.

The boar had special significance in the Adonis cult. The boar ripped open the bark of the tree from which Adonis was born; the boar killed the youth in the forest. All the most ancient cults identify the animal that killed the god with the god himself. In one of the most primitive forms of Adonis- (Tammuz-) worship, Adonis himself was the sacred boar, worshipped by a cult of women who believed themselves to be sows. Every year the boar was killed, torn to shreds, and eaten while the women bewailed his death, in a few days celebrating his resurrection with the deification of a new boar.

One 10th century Arabic writer and several more recent scholars have suggested that the Adonis-Tammuz of the eastern Mediterranean peoples is one with the Phoenician corn spirit, deliberately slain, his bones ground up in a mill and scattered to fertilize the fields. In place of the modern corn effigy of the corn spirit, the most ancient rites quite possibly represented the slaughtered god with a human victim whose body was divided into portions, buried at intervals in the field, and regarded as returned to life with the harvest. This

lifts the Adonis story out of the realm of pretty death and renewal of vegetation symbolism, and places it not only in the simpler and starker category of hunger and fear of hunger rituals, but pushes it still farther into that symbolism of the god killed by man for man with the resulting mystery of his resurrection promising life to man.

In addition to the fact that Adonis is identified with Tammuz, the death and resurrection motif, linking his myth with various primitive fertility and vegetation symbolisms, relates it also to the stories of Persephone, of Attis (Phrygian), Osiris (Egyptian), Dionysus-Zagreus (Thracian or Cretan), Jesus (Hebrew), Balder (Scandinavian), John Barleycorn (English). His story parallels also that of Old Irish Diarmud, who was beautiful, beloved by women, killed by a wild boar, and given immortality by a god; but the seasonal vegetation symbolism seems to be entirely lacking here. Adonis is associated with the Jesus story pattern in the motifs of god in human form, death and resurrection of the god, and the coincidence of Easter with both rituals, the long period of mourning and fasting, and the moment of joy. See EATING THE GOD; LINUS; MIDSUMMER EVE.

adoration A Haitian Creole song sung (a) after each animal sacrifice at vodun ceremonies, and (b) at the end of the novena in the ritual cycle of the cult of the dead, during the singing of which the officiating priest receives the offerings of money for his services.

adultery In Euro-American cultures, usually extra-marital heterosexual intercourse, though a more adequate statement would refer it to sexual intercourse outside of the permitted sexual group. Thus in group marriages as among some Australian tribes each person in the group is generally available to all others though local custom may impose restrictions. Among the Tungusic Manchus the wife of the oldest brother was available to all the younger brothers until the next brother married, when she was expected to restrict her attentions to her husband; but the second brother's wife became available to the other brothers. Among the aboriginal Lolos of China marriage to one sister is considered as giving access to all the others. In Islam and under the Roman Lex Julia intercourse was permitted between the master and slaves and servants, and under English common law a master had access to his female servants. Peoples who regard promiscuity as the proper way of life sometimes consider intercourse outside of certain recognized groups as adulterous though it is considered harmless within the recognized groups. Some African tribes do not consider intercourse with a white man as constituting adultery, though intercourse with other members of the group is so considered. The *jus primae noctis* which gave the lord of the manor the right to deflower young wives on his estate on the night of their marriage is another case of recognized latitude.

Christian cultures have surrounded adultery with religious, legal and social prohibitions which give it a character not generally known elsewhere. Occidental ethnographers have been affected by this bias, though no doubt unconsciously, and have hypothesized conditions in prehistoric cultures about which by definition nothing can be known with certainty. By starting with one of two opposed hypotheses they prove either that man began by living under conditions of absolute pro-

miscuity where adultery was impossible and "evolved" to a condition where adultery was recognized as horrid or that primitive man lived in a condition of sexual purity which has been contaminated by civilization. Reports about societies which, because they are not European-Christian are inferior, are adduced to support a number of conclusions and must be tabled until adequate testimony can be collected. For example, sexual jealousy, the basis of Euro-American views about adultery, is not a universal and therefore not a "natural"—in the sense of inevitable—component of human cultures. Adultery is of no great importance in many African tribes, among the Tupi of Brazil, the Conebo of the upper Amazon, among the Aleuts, Kamchadals, Gilyaks; peoples of Mongolia, Afghanistan, the Hindu-Kush, Baluchistan, the South Sea Islands, or Australia. Although the attempts of the cultural evolutionists have been discredited on theoretical and practical grounds, attempts to find the origins of European prejudices, superstitions, and beliefs in "primitive" cultures persist. In many communities outside of the restricted Euro-American culture circle wives are not the chattels of their husbands but have had in patriarchal cultures a considerable freedom. Among many communities marriage is so casual an institution that the protection of the family purity is a matter of indifference. Until communities are studied individually and objectively all statements which assert that the institution of the family is the first step in the growth of civilization must be questioned.

An examination of the extreme variations in custom and belief about adultery justifies only a few very general conclusions. Ethnic units living close to each other and having the same or related languages have strongly opposed views about adultery. The Reindeer Koryaks for example are said to be puritans. The virginity of girls must be intact at marriage and after marriage even the suspicion of adultery means death and couples found in adultery must be disemboweled. The consequence is that wives cultivate a sluttish appearance and filthy clothes lest they be thought impure. The Maritime Koryaks however regard the wife's adultery as an honor and, should a child result, thank the father. The Land Dyaks of Borneo are extremely strict. The husband who discovers his wife in adultery must cut off her and her lover's head and if he fails, his wife's brother must perform the execution. Among the Bukat tribes after the husband has executed his wife and her lover his wife's brother must execute him. Neighboring tribes however live in great promiscuity, lend wives, and are indifferent to the purity of the home.

In many communities the severity of laws about adultery is in marked contrast to the customary treatment of it. The crime consists in being found out, when punishments from a small fine to death are legally permissible. Although adultery is a crime against the state in many parts of the United States, the law is seldom invoked. Among many social strata in Europe, America, India, and elsewhere adultery is considered illegal and shameful but husbands even when they know they are cuckolds still stoutly deny the fact. Mohammed's wife 'A'isha was once separated from her husband when they were on an expedition. The next morning she returned to camp in the company of a man. Despite the great scandal the Prophet succumbed to 'A'isha's persuasiveness and announced that it had been revealed to him

that his wife was chaste. The old law that adulterers be stoned to death was changed and thereafter whores and pimps were to be scourged by 100 stripes but those who cast imputations and were unable to produce four witnesses were scourged with 80 stripes. In modern Islam the law permits the death penalty for wives caught *in flagrante* but if the wife swears she is innocent the marriage is dissolved without punishment. In communities where adultery is punished by fines paid to the wronged husband or the husband and wife separately, the institution is a source of profit.

The "unwritten law" which permits a husband to castrate, mutilate, or murder the wife's lover, or even both the wife and the lover is subject to a number of restrictions which seem to derive from the general feeling that sexual jealousy becomes violent if a man is deprived of his customary outlet. Communities such as those of pre-Islamic Java, Burma, Cambodia, Afghanistan, and others consider it bad form or dangerous for a husband to enter the room while the wife is committing adultery because he might do harm to the woman and her lover. In other communities mutilation is treated lightly if it is performed immediately upon discovery. Cutting off a woman's nose is one of the popular customs. The shaving of the heads of women of occupied territories who in the last war consorted with the enemy is a parallel custom if the enemy be considered as outside of the recognized group with whom intercourse is permissible. In some parts of the United States intercourse between white men and Negro women is not regarded as an adulterous union justifying homicide. In most communities which invoke the unwritten law to justify murder or violence, such an act must be impulsive and immediate, often before the avenger leaves the room.

Adultery with the wives of men of exalted rank frequently is treated more severely than adultery with the wives of commoners. In pre-Columbian America men who committed adultery with any of the many wives of the Inca were burned alive with the woman, their relatives executed, and the village was destroyed. In Africa the king of Dahomey had 1,000 wives who were guarded with extraordinary precautions. Another African king who received wives as customary tribute returned them to their people but insisted that they remain chaste. When the king sent agents to investigate, the women in order to maintain their standing denounced several men in each community. The men were fined and the royal income increased. Members of the upper classes in Euro-American culture tend to consider adultery as less reprehensible than members of the lower classes when it is committed with one of their own group. Widows of chiefs in New Caledonia may not remarry but may have lovers at will. Similar customs are reported from the Carolines and Samoa. Samoan chiefs often put their wives aside after a short period. These women are established in a separate building and entertain visiting guests. Though adultery is accepted as customary, elopement with one of these women is a very serious offense.

Many communities regard adultery as commendable or acceptable at special times or for special reasons. Some religious ceremonies which are prepared for by a period of continence are concluded by promiscuous orgies. Temple girls and religious prostitution have been

studied in detail. The nuns in medieval convents were at one time available to clerics and others who belonged to acceptable circles. A certain amount of promiscuity has been and in some communities still is connected with beliefs about general fertility. In at least one of the aboriginal tribes of China an itinerant priest is expected to have intercourse once a year with one of the women in each community. If the community prospers the act is thought to have been performed adequately. The community greets the arrival of the priest with festivities and there is no reason to assume that the community regards the priest as a god in disguise. Here folk theology like folk philosophy is less involved than anthropologists of the Occidental Christian tradition imply. Promiscuity in the spring seems to be a biological urge among the Eskimos and others and has been rationalized as necessary to assure the germination of the seeds.

Views and customs about adultery in Occidental Christian communities are complicated by Christian mysticism. Roman views were secular rather than religious. In 285 B.C. a temple was erected to Venus paid for by fines imposed on women for adultery. Cicero says that the cult of Vesta was fostered in order that woman-kind might feel that it is woman's nature to suffer all forms of chastity. Under the Republic sexual misconduct was brought before a domestic court or family council. The Lex Julia made adultery an offense against the state. After the marriage was dissolved the woman lost half of her dowry and a third of her estate. The wronged husband had 60 days to take action and if he failed to do so action could be taken by any one who wished to. Although the punishments of Lex Julia were considered severe they did not apply to men equally, a situation which Seneca, Plutarch, and others regretted.

Christ's concern was that men should attain a state of mind that made sin abhorrent or impossible. This, as developed by Saint Paul, introduced into the Christian Occident a mystic view of purity which explains such statements as "Adultery is unfaithfulness of a married person to the marriage bed," "defilement of the home," and the like. Customs in the early Christian communities were not uniform. The Law of Constantine condemned adulterous wives to banishment. Justinian abolished the death penalty and if the wife was not taken back within two years she was sent to a nunnery. The Code of Theodoric also decreed death for adultery and the death penalty was abolished in England under Canute. Caesar's reports on Anglo-Saxon promiscuity are of a general nature. In later England and parts of the United States adultery is the only grounds upon which a divorce can be obtained. Until very recently some Protestant churches would not perform the marriage ceremony for divorced persons. The lives of the troubadours make clear that in the chivalric as well as in both earlier and later periods the laws about adultery were regarded lightly. According to the chivalric code love was not possible between husband and wife and a wife's capacity to draw knights and poets to her husband's party was important in a young couple's ability to improve themselves. One evidence that Percival was an unmannered boor was his embarrassment at being bathed by the young women of the castle.

Current American views about adultery impose rituals and ceremonies as complex as any found among the most "primitive" of "primitive" races. Inasmuch as

adultery is prohibited by social, legal, and religious codes married persons impelled to have intercourse with those to whom they are not married must, if they take the codes seriously, find reason to have the marriage dissolved, and as their own adultery is often not an acceptable reason they must adduce the adultery of either the wife or husband who may be innocent or find other cause which courts will find acceptable. They are then permitted, usually after a considerable lapse of time, to marry again. The ritual divorce and remarriage is thought to give purity to an act which would otherwise be considered indecent.

The laws about adultery do not reflect the folk attitude toward it. The reports of anthropologists of the European-Christian tradition show bias, to the point that one recent study contains a warning that the views about adultery being punished with death at some unspecified former time must be accepted with caution and skepticism. Statistics on the incidence of adultery are unsatisfactory though a paging through of the literature on sexual folklore shows that it occurs in all parts of the world and though it is considered reprehensible by many cultures it has enjoyed a considerable popularity in all cultures and at all times. R. D. JAMESON

advice of helpful animal disregarded The motif (B341) of a group of stories which emphasize the misfortunes and disasters that inevitably befall the hero who does or leaves undone something the friendly animal has enjoined him either to do or not to do. The typical story is that a man meets up with an animal, who, either out of gratitude or admiration, helps him to a marvelous wife, palace, treasure, station in life, or the like. Usually the animal enjoins the hero not to go to a certain place, do or say a certain thing, etc., or asks to be provided with certain daily foods or attentions, etc. Always the hero forgets, wilfully disobeys, or offends by ingratitude, and loses everything, including friendship with the animal.

The advice disregarded motif belongs to the helpful animal cycle of folktales (B300-599). It is closely related to the name tabu motif, and also to the ingratitude punished motif which runs through the Puss-in-Boots cycle. This advice disregarded motif overlaps and fuses markedly with the ingratitude to the animal motif in the North American Indian Zufi story in which a little flock of turkeys pity a poor, neglected young girl and help her to attend the sacred dance, provide her with suitable garments, jewels, etc., requiring in return only that she not forget or neglect them. She is so popular at the dance that of course she forgets the turkeys. When she suddenly remembers and rushes home, her fine clothes disappear and she is in the same state she was in before. Even the turkeys have gone away.

adykh Among the Buriats, an animal dedicated to a god or ongon. The animal is purified with smoke of burning juniper, sprinkled with wine, and decorated with ribbons of the ongon's color. It is then returned to the herd, never again to be ridden or worked, but is associated with and sacred to the ongon either for a specified time or forever. Animals thus dedicated vary greatly. The adykh may be a horse, a gray ox, a red ox, a raven, a pigeon, even a fish, which of course is henceforth never to be caught. The Mongolian Buddhists took over the custom and the idea, dedicating the ani-

mals, not to the primitive ongons, but to their own Buddhist deities. Their word for adykh is *seterty*.

Ægir or **Hlér** A jötunn of Scandinavian mythology, friendly and sociable with the gods; a sea deity. His name is related to the old Gothic *ahwa*, water. He is often referred to as the Norse sea god, but is more properly associated with the sea in its calmer aspects as a stiller of storms. He is not to be blamed, evidently, for the destructions wrought by his terrible wife, Rán.

ægis In Greek mythology, an attribute or part of the accouterment of Zeus and Athena, symbolizing magic power. It protects the wearer, and when shaken terrorizes and puts to flight his enemies. In the *Iliad* it is described as having golden tassels. Zeus not only used it to raise a mighty storm, but loaned it to Apollo to put the Greeks to flight. In the *Odyssey* Athena used it to terrorize the wooers of Penelope. Literally the word means goat-skin. Herodotus describes Athena's ægis as a goat-skin; and as an attribute of Zeus it has been interpreted as the skin of the she-goat Amalthea. It is not surprising to find it also, in Zeus's hands, symbolizing the thundercloud, but this symbolization has deeper and more elemental ramifications, paralleling the ægis with the primitive weather-fleeces which were shaken by the early rain and fertility gods to produce rain. For proof that it was originally a fleece, many point to the fact that Athena wrapped it around her. In art, the ægis of Athena is represented as a kind of cloak fringed with serpents, bearing the Gorgon's head, and draped over her left arm. The shield or breastplate depiction is a much later development.

Æneas In Greek and Roman legend, a Trojan hero, son of Anchises and Aphrodite, founder of Lavinium, and ancestor of Romulus and Remus. While Troy burned Æneas left the city, bearing with him his father, "the wise Anchises," his household gods, and the sacred hearthfire which he kept going all through his seven years of wandering before the wrath of Juno. His voyages took in Thrace, Delos, Crete, Sicily (where his father died). He was swept by storm upon the coast of Africa, where Dido, queen of Carthage, loved him and sought to hold him back. But Æneas, full of that *pietas* which kept a man true to his fate, continued his wanderings until he landed at the mouth of the Tiber. There he was welcomed by Latinus, king of Latium, married Lavinia, the king's daughter, and founded the revered city named for her, Lavinium, about 17 miles down the river from modern Rome. The *Æneid* ends with the death of Turnus, Æneas's jealous rival for the hand of Lavinia, who waged war against him. Later writers report that he vanished from this earth in a thundercloud and was later worshipped as Jupiter Indiges.

The most significant adventures of Æneas from the point of view of the folklorist are his descent to the underworld to consult the shade of his father, and there being shown the glories of the Rome that was to rise and the Roman people he was destined to father; his plucking of "the pliant shoot of gold," the Golden Bough (evidently mistletoe) from the evergreen oak before the gates of the underworld, to be a potent sign for his entrée into the forbidden places of death; and the forging of his shield by the divine smith. The brief allusion to the well-known folk motif of the deceptive land purchase, "as much as a bull's hide would encircle," is also of note.

Æolus (1) In Greek legend, king of the floating island of Æolia, to whom Zeus entrusted the keeping of the winds. This island is believed perhaps to have been Pantelleria which looms high up in the windy strait between Sicily and Carthage; but is more generally believed to be (as in Homer) the island of Lipara in the Tyrrhenian Sea. When Odysseus landed there Æolus gave him all the winds tied up in a bag except the one wind favorable to his course. The ship was nearing Ithaca when the curiosity of the mariners about the contents of the bag got the better of them; they untied the bag and the winds came forth and drove the ships back to Æolia. But Æolus was provoked and irritated by this stupidity and refused to tie the winds up again. During the eight centuries between Homer and Vergil Æolus developed from guardian of the winds to god of the winds. The *Æneid* so designates him and describes how he kept them in a cave.

(2) A king of Thessaly, legendary ancestor of the Æolian people. He was the son of Hellen and grandson of Deucalion; father of Phrixus and Helle, and many others, including Sisyphus, Alcyone, etc., and the ancestor of Jason.

aeromancy Divination from the air, the winds, or atmospheric conditions: an ancient and widespread technique, still used for, among other things, primitive weather forecasting. In its most exact sense, aeromancy pertains only to divining by a current of air, for example, as it passes over a vessel of water which is uncovered at a proper moment. In medieval writings on divination the term (usually spelled aerimancy) was expanded to include almost all phenomena occurring in the air.

Æsculapius The Roman god of medicine: Latinization of Asklepios, Greek god of healing. Apollo (also a god of healing) was his father, his mother (in most versions) the nymph Coronis. One story says he was taken from his mother's womb upon her funeral pyre; another that he was abandoned and suckled by a she-goat. In either case he was given by Apollo into the care of Chiron, the centaur, under whose tutelage he became the most skilled of all physicians. At the peak of his career he restored the dead to life, either Hippolytus for the sake of the mourning Artemis (the commonest story) or some unknown deceased for the sake of the fee. Apollodorus names two men raised from the dead by Æsculapius, attributing the means to the Gorgon's blood which he received from Athena. Blood from the veins on the left side worked bane to men; from veins in the right, salvation. Hades, in alarm for the depopulation of Hades, complained to Zeus. Affronted by the physician's presuming to tamper with the laws of life and death, Zeus hurled Æsculapius into hell with a thunderbolt, but later admitted him among the gods.

Æsculapius had two sons, Podaleinius and Machaon, both surgeons, noticed in the *Iliad* as leaders before Troy; and three daughters, Hygeia (Health), Iaso (Healing), and Panacea (Cure-All), none of any great importance either in cult or story except Hygeia, whose cults were both associated with and existed independently of Æsculapius'.

The cult of Asklepios was widespread through Greece. His temples (Asklepia) were more than temples; they were houses of healing (prototypes of the modern hos-

pital) where the priests of the cult applied their secret knowledge plus religious rites to effect their cures. The most famous temple of Asklepios was in the ancient seaport of Epidauros. Here the sick came to sleep, to be cured by the priests or by the god directly in their dreams. Only the dying or women in childbirth were denied admittance.

To this temple at Epidauros the Romans came, seeking deliverance from the pestilence that was sweeping their city in 293 B.C. The serpent (that serpent in whom the god himself was known to abide, *anguem in quo ipsum numen esse constabat*) slipped from the image of the god and followed the Romans through the streets into their ship. At the mouth of the Tiber he left the ship, and the temple to Æsculapius was built on the little island where the serpent went ashore.

The serpent is the symbol of Æsculapius, representing, some say, rejuvenation in the sloughing of his skin; the staff too is his symbol, representing his wanderings from place to place dispensing cures. Both are combined in the caduceus, the staff entwined by the snake, still the symbol of medicine and the medical profession.

Aēshma (Pahlavi *Aēšm*, Persian *Xišm*) In Iranian mythology, a fiend or demon of lust and outrage: aide of Angra Mainyu. Aēshma is the most dreadful of Zoroastrian demons, contriving evil for the creatures of Ahura Mazda. When he is unsuccessful he stirs up strife among the demons themselves. He assails the souls of the dead when they near the Chinvat Bridge. Sraosha is assigned by Ahura Mazda to keep him under control until the final great conflict when Sraosha will destroy Aēshma.

æsir (singular *as*) The Teutonic gods. Odin was chief of them, known frequently as the father of the gods. His sons Thor, Balder, Tyr, Vali, Vidar, Hod, Bragi, and Hermod, and his brothers Vili and Ve were also æsir. Frigga, Odin's wife, and 18 other goddesses or *ásynjur*, among them Sif, wife of Thor, Nanna, wife of Balder, Iduna, wife of Bragi, etc., also belonged to the group. Loki, the evil one, the mischief-maker, is one of the æsir. Their habitat was Asgard, though each had his own home also. Odin's was the famous Valhalla. They were an organized, judicial community and the council met daily under Yggdrasil. Some sources mention among the æsir the names of Hœnir, Forseti, Oller or Ullr, and Ing, an interesting deity of the East Danes, who disappeared eastward over the sea. Compare VANIR.

Æsop The vague personage whose name is associated with the most famous group of fables in the world. He was born in the Greek island of Samos, in Sardis in Lydia, Mesembria in Thrace, or Cotiæum in Phrygia. His birth is thought to have been about 620 B.C., his death about 564 B.C. Herodotus identifies him in Samos about 570 B.C. Further legend says that he was the slave of two different masters in Samos: first Xanthos, then Iadmon, who freed him out of admiration for his wit. Æsop then visited Cræsus at Sardis and Pisistratus at Athens. Plutarch's *Symposium of the Seven Sages* reports that Æsop was a guest at the court of Cræsus along with the seven sages of Greece, and that Cræsus not only said, "The Phrygian has spoken better than all," but even persuaded Æsop to remain in Sardis and execute for him many difficult matters. Later Cræsus sent him to Delphi to distribute a great sum of money

among the citizens. Æsop was so disgusted and infuriated with the wrangling that arose among them that he refused to give it. "Unworthy," he called them, and they threw him over a high cliff. Such a plague subsequently swept through their city that they advertised a sum of money to atone for the murder of Æsop. Iadmon, grandson of Iadmon, his former master, went to receive it.

Perhaps the most famous of the many folktales about Æsop are how he told the story of *The Frogs Asking for a King* in the public place in Athens and thus saved Pisistratus from being overthrown by the populace; and how he went to a neighbor's house one day to borrow fire and carried it home in a lantern. The passer-by who asked him what he was looking for with a lantern in the daytime received the answer, "A man who will mind his own business."

Æsop's Fables The famous collection of fables ascribed to Æsop. Although they come to us now in literary form, they are generally conceded to be not only of folk origin, but to have been current among the folk in Greece during Æsop's lifetime. In answer to the theory advanced by Benfey and others that Æsop is innocent of responsibility for them, we have only the certainty that they were linked with his name in Athens, that Herodotus, less than a century after Æsop's death, mentions him with definiteness, that Aristophanes mentions both Æsop and his "drolleries," that Aristotle and Lucian cite Æsop's story of the wisdom of the bull in having horns upon his head instead of on his shoulders, that Socrates versified some of Æsop's fables, and that they were praised, as Æsop's, by Plato.

Concerning their oriental origin, out of the whole number extant (something between 231 and 256) only one fourth can be directly traced to India. Thirteen of them are identified with certain "Stories of the Past" in the *Jatakas*, among them The Wolf and the Lamb, The Ass in Lion's Skin, The Fox and the Raven, The Goose That Lays the Golden Eggs. Among a few obvious parallels to stories in the *Mahābhārata* are The Lion and the Mouse, The Belly and the Members, The Farmer and the Serpent, The Two Pots, and The Cat Turned into Maiden. All the rest are believed to have been folk fables of Greece and are associated with Æsop as preserver, adapter, and hander-on. That some clever mind used and adapted traditional material is strikingly shown in the religious and political applications of the stories.

Many anecdotes exist pointing up such application. The fable of The Wolf and the Crane is said to have been used by a Rabbi ben Hananiah to prevent the Jews from rising against the Romans. Kriloff used them to needle the Russian bureaucracy. And the first translation of Æsop into Chinese was immediately suppressed by sensitive officials who suspected them of local authorship.

Demetrius Phalereus made the first collection of *Æsop's Fables* and "put them in a book" about 300 B.C., which though lost, is said to be the basis for the famous collection by Phædrus, who translated 42 of them into Latin elegiacs in the 1st century A.D. This is usually considered the most celebrated of the collections. Babrius, a Roman poet, versified them in Greek no later than the 2nd century A.D. In the 9th century Ignatius

Diaconus put 53 of them into verse. Maximus Planudes, a 13th century monk, collected 144 of the fables, including certain oriental and Hebraic additions and a life of Æsop, which were published at Milan about 1480 along with Ranuzio's 100 *Fabulæ Æsopicae*. This was published again in Paris in 1546 with a few additional fables. There was a Heidelberg edition in 1610 containing 136 fables in imitation of the Babrius rendering. These were followed by various collections of more or fewer fables published in Oxford and Leipzig, 1718–1820. All of the fables, 231 to date, were arranged and published by J. G. Schneider at Breslau in 1810. The numbering system for the fables adopted here follows that of Joseph Jacobs' *The Fables of Æsop* (New York, 1894).

aes or aos síde People of the mounds, or "shee folk": the ancient Irish Tuatha Dé Danann, or people of the goddess Danu, the ancient Irish gods, who took up their abode in the hills and mounds (*síde*) of Ireland after their defeat by the Milesians: now the fairies of contemporary Irish folklore. Compare *DAOINE SÍDE*.

Afrekete A goddess of Dahomey religion; youngest child of Agbè and Naète of the Sea pantheon, and guardian of the treasures of the sea. She appears also in the role of clever, undisciplined trickster in some of the myths. Afrekete has the reputation of being a great gossip and teller of secrets; those who represent her in the dance hold a finger to their lips. The dance of her possession resembles that of Legba.

African and New World Negro folklore Negro folklore is told today throughout Negro Africa, south of the Sahara, as well as in the regions of North America, the West Indies, and South America where descendants of African slaves are found. Two striking characteristics of this body of tradition—its present wide distribution and its remarkable toughness—can be appreciated only in terms of its history. Surviving the drastic social changes that accompanied the forceful transplanting of African peoples into slavery on a strange continent, Negro folklore has persisted in the New World as a well-defined and basically homogeneous entity regardless of the folklore, culture, and language of the dominant groups, whether English, French, Spanish, Portuguese, Dutch, or American. Many elements from these European groups have been incorporated into the folklore told today by Negroes in the New World; however, as the term Negro folklore is used in this article, it indicates only those items which have African origin.

The wealth of Negro folklore is no less impressive than its persistence. Struck has estimated the number of African folktales at nearly a quarter of a million. Klipple estimates that five thousand different African myths and tales have actually been published, although her bibliography, prepared in 1938, contains references to nine thousand. If publications from the New World are included this number is considerably increased. Yet in reality only a beginning has been made at recording Negro folklore. Among the thousands of tribes in Africa, there is not a single one for which a complete collection of myths and tales has been published. Published collections of more than two hundred tales are almost unheard of, although the number of tales known to single tribes undoubtedly runs into thousands.

Numerically at least, the position is better with re-

spect to proverbs, but some of the largest African collections have not been translated and others are almost certainly incomplete. Doke explicitly denies any claim to the completeness of his well-known collection of 1,695 Lamba proverbs from Northern Rhodesia: "Lamba proverbs seem to be without number. Since putting together the present collection I have gathered another two hundred without any effort on my part; and a further number has been laid aside owing to lack of confirmation. Mulekelela, the Lamba story-teller, supplied me in the first place with more than half of these aphorisms: he has a wonderful mine of this lore, and one day reeled off as many as 250 at a single sitting." The largest collection from a single African tribe is still that of 3,600 Ashanti (Twi) proverbs from the Gold Coast, edited by Christaller in 1895, of which 830 have been translated by Rattray. For the New World, the largest collection is Beckwith's 972 proverbs from Jamaica.

In addition to myths, legends, folktales (*märchen*) and proverbs, which have received the most attention, there are several other forms of "unwritten literature" in Africa and the New World. The verses or lyrics of songs are, of course, found in great numbers in all Negro cultures, as are riddles. Tongue twisters and praise names also seem to have a wide distribution. A variety of other set verbal formulæ are also widely found in Africa, although they are seldom included in collections of folklore. The Yoruba, for example, distinguish between myths and legends (*itan*) which they regard as historically true, folktales (*alọ apagbe*), riddles (*alọ*), proverbs (*owe*), songs (*orin*), praise names (*orile*), curses or incantations (*ofọ*), and the Ifa divining verses (*ese*).

Folktales Of all Negro folklore, the Uncle Remus stories published by Joel Chandler Harris are probably the most widely known. Animal trickster tales of the same type are common in other parts of the New World and in Africa. In Uncle Remus, Bre'r Rabbit is the outstanding trickster while Hare or Little Hare appears in this role in East Africa and among the Jukun and Angass of Nigeria. Tortoise, who is the primary trickster among the Yoruba, Edo, and Ibo of Nigeria and is found as a trickster of secondary importance in many parts of West Africa and in East Africa, is the primary trickster in Cuba. Spider, the animal trickster in Liberia, Sierra Leone, and the Gold Coast, is known by his Twi name, Anansi, in Jamaica and Dutch Guiana and is referred to as Aunt Nancy by the Gullah of South Carolina.

Because of the fame of Uncle Remus, animal stories have come to be regarded as the typical Negro folktales. The larger published collections, however, indicate the importance of human-trickster, and divine-trickster, and other non-animal tales such as those about *Hiakanyana* among the Zulu. From West Africa a cycle of Dahomean tales collected by M. and F. Herskovits centers about *Yo*, described as a "trickster of gross undisciplined appetite." Among the Yoruba, the deity *Eshu* often appears in tales in a role similar to that of Tortoise, and the part played by *Orunmila* or *Ifa*, the deity associated with divination, does not differ markedly.

Tricksters Of the many incidents involving tricksters, several are widely distributed in both Africa and the New World. The trickster feigns illness or fatigue in order to ride a powerful and important animal as if it were his horse. He stations his relatives along the course so that he always appears ahead in a race with a

swifter animal. He challenges two giant animals to a tug-of-war, which he arranges so that they pull against each other without knowing it. He escapes death through counter-suggestion, as when Tortoise begs those about to kill him not to throw him in the water. One by one, he devours the children of a larger animal by posing as their nurse or governess. He borrows from a series of animals, arranging his payments so that each animal who comes to collect is killed in turn by a stronger creditor, and tricks the last one into canceling the debt. He pretends to cook himself to feed a guest; his guest dies in trying to imitate him. He induces another animal to throw his food into the water, smear his face with birdlime, jump into a fire, remain in a burning hut, kill his wife or mother, drive a red-hot nail into his head, or cut off his head or leg. The trickster himself, however, is by no means infallible or immune to tricks, as witness the most widely distributed story of this type, Tar Baby.

The difference between the European and African interpretations of the "Tortoise and the Hare" reveals the distinctive characteristics of the African trickster. Where the European Tortoise wins through dogged persistence while his rival sleeps, his African counterpart uses his wits. Clever, shrewd and unscrupulous, in common with tricksters all over the world, in Negro folktales he is invariably the underdog, apparently at the mercy of his larger and stronger associates. The triumph of brain over brawn and of brilliance over steadiness—the reverse of the European grasshopper-ant fable—is the consistent theme of the Negro trickster tale. Its prevalence in the New World has been interpreted as a psychological reaction to slavery, but this explanation does not account for its importance in African folklore.

To Spider, the Temne ascribe the qualities of "cunning, sleeplessness, almost immortality, an unlimited capacity for eating and an equal genius for procuring necessary supplies." Spider, who appears to be the Temne national hero, is shrewd, designing, selfish, and at times vindictive and cruel, while their secondary trickster, Cunnie Rabbit (actually a chevrotain) is intelligent and loveable. As foils for these two, Elephant is enormously strong but lacking in mental acuteness, while Deer is consistently stupid and helpless. It is not difficult to appreciate the psychological satisfaction to audience and narrator that comes from identification with a trickster who symbolizes freedom from physical limitations and moral restraints.

Tales in which the trickster escapes an impossible obligation by posing an equally impossible condition point up and illustrate a traditional right to contest an unjust display of authority, revealing a significant aspect of the attitudes of Africans toward their chiefs. Among the Kru, when Nymo is commanded by the king to weave a mat from rice grains, he asks for an old mat of the same kind to use as a pattern. Among the Ganda, a person ordered by the king to fashion a living human being, requests a thousand loads of charcoal made from human hair and a hundred pots of tears, to use for materials. In Zanzibar when Kibunwasi is challenged by the Sultan to build a very high house in one day, he invites the ruler to ascend a kite-string to see how the work is progressing. When the Sultan asks "How can a man climb a string?" he counters, "How can a man build a high house in a day?" Other examples are en-

countered in connection with the tests set for prospective sons-in-law. Among the Bulu of the Cameroons, when Tortoise is asked to fetch water in a basket, he asks his future father-in-law for a carrying-strap of smoke.

Non-trickster tales While trickster tales are common and widely known, many folktales do not involve tricksters. A common example is the story in which a vegetable or animal agrees to become the child of a barren woman on condition that its antecedents are never mentioned, and returns to its former shape when the bargain is broken. Similar is the theme of the metamorphosed wife or husband. A number of ogre tales, involving neither tricksters nor animals, conclude with the killing and opening of the ogre and the rescue of the victims he has eaten. In another tale, a person finds a pot that produces food whenever a certain magic password is given and then loses it; when he returns to the place where it was found, he receives a stick and, on pronouncing the password, is severely beaten. A deserving person obtains wealth from a supernatural source, while a jealous imitator receives snakes, wild beasts, and insects. A variant of this theme appears in the Hausa tale where a jealous woman, whose co-wife's dead child has been resurrected, kills her own daughter in the hope that she will be restored in a less ugly form, but gets only half a girl, with one eye, one arm and one leg.

A group of unfinished tales leaves the audience presented with dilemmas. A dilemma tale from the Bura of Nigeria, for example, describes a blind man whose mother, wife, and mother-in-law are also blind. When he finds seven eyes, should he leave his mother-in-law with only one eye and be "ashamed" before her and his wife all his life, or should he deprive his mother? As in the case of Stockton's "The Lady or the Tiger," no solution is suggested.

Tall tales are relatively rare in African literature, but several have been published by Frobenius and Fox, one of which contains the following incident: As a man shot an arrow at an antelope, his companion jumped up, ran to the animal, killed it, skinned it, butchered it, packed it away, caught the arrow in flight, and asked, "Are you trying to shoot a hole in my knapsack?"

In one Hausa tale, a combination of the two types is effected. A chief tells his three sons to mount their horses and prove their skill. The eldest charges at a baobab tree, thrusts his spear through it, and jumps through the hole with his horse. The second lifts his horse up by the bit and jumps over the top of the baobab. The youngest pulls up the baobab tree by the roots and rides up to his father, waving it aloft. The story-teller concludes with "Now I ask you who excelled among them? If you do not know, that is all."

Cycles Negro folktales often occur in cycles. For example, a narrator may begin his tale with a reference to a situation from which the trickster had just extricated himself. The cycles usually involve a central character, such as an animal-trickster, or the Dahomean Yo. Other cycles center about the adventures of twins, orphans, or precocious children.

The existence of cycles may explain the attempts of some students to read into African folktales a consistency and continuity there is no reason to expect. The appearance of one animal in the role of another, or the existence of several tales accounting for the death of the

same trickster in different ways, need cause no concern. Among the American Indians, where more variants have been recorded, it has become evident that even within a single tribe a search for the "correct" version of a particular tale is artificial and unrealistic. Junod has shown that this is also true for Africa in his discussion of the sequence of episodes in Thonga folktales, where, "although these form definite cycles, it is rare to hear two narratives follow exactly the same order," and "the tricks of the Hare are sometimes attributed to the Small Toad."

The manner in which a different twist may be given to a story by a slight alteration in a familiar plot comes as no surprise if the folktale is viewed as a form of verbal art, and if the story-teller is credited with something of the creative imagination of the novelist. Variation is disconcerting only if one assumes that the only well-told tale is one memorized and recited word for word. Studies of the art of story-telling that take into account the creative role of the raconteur, such as those which have shown such promise in the field of American Indian folklore, will not be possible for Africa until variants have been systematically recorded and published.

Collections of Negro folktales usually suffer from the suppression, deliberate or unintentional, of non-animal tales regarded as atypical or non-Negro, of variants considered inaccurate, and of "dirty stories." Cronise and Ward, for example, assert that "Evidence was occasionally found of the existence of another class of stories such as the missionary would not care to hear or to record."

Legends Many Negro stories fall into the categories of legend and myth, both of which differ from the folktale in that they are looked upon as historically true. Reminiscences and personal anecdotes often conform so closely to patterns of folklore that they may be considered legends. In the New World there are legends of life in "slavery time," of slave uprisings and suicides, of the emancipation, and of floods, cyclones, famines, and other disasters. In South Africa legends dealing with tribal migrations are numerous, while in West Africa the succession of chiefs, the establishment of ruling houses, the sequence of tribal wars, and accounts of other events are related at length.

Tribal histories of this type are valuable sources of information where written documents are inadequate, and in many cases they contain no more fantasy than our own elementary history textbooks. But while they may refer to actual historical events, these accounts are handed down in the same way as folktales and myths, and in the course of time have assumed the character of folklore. Traditions of this sort cannot be accepted unreservedly as accurate statements of fact. That caution is necessary should be evident from studies of the growth of legends about individuals in Europe or America where historical documentation is available, and from the comparison of American Indian accounts of tribal origin and migration with archeological evidence.

Myths Accounts of the activities of the gods and of the origins of natural phenomena appear to be especially important in West Africa where a large body of mythology has been recorded. There are no comparable collections of myths from the southeastern Bantu, but Werner has been able to demonstrate the existence of mythology throughout Africa, turning to analyses of African religion where the literature on folklore was

deficient. The gaps in the literature are understandable, since African myths are regarded as sacred and often esoteric. Frequently, atonement must be offered before a myth may be told. In some tribes the knowledge of a family's totemic myths is believed to give to the knower power of life or death over its members; in such cases an informant's refusal to tell myths to an outsider is not surprising.

In the New World informants may be reluctant to tell myths of African origin because of the fear of ridicule by "progressive" groups or because African cults are proscribed by law. Stories about African deities have survived in recognizable form in Brazil, Haiti, Cuba, and Dutch Guiana, where their African names have been retained. The identification of African deities with Catholic saints, such as the Yoruba thunder god, Shango, with Santa Barbara, is a common phenomenon. From the opposite point of view, the reinterpretation of Christian mythology can be seen in the Sea Island versions of Bible stories collected by Stoney and Shelby.

Explanatory Elements Explanatory elements are common in folktales, myths, and legends, although there is considerable variation from one group to another in their use. For example, etiological tales are common among the Ila but infrequent among the Lamba in East Africa; in West Africa the same is true of the Ashanti as compared to the Hausa. In some tribes it is not considered necessary to state the explanation as explicitly as "That is how the tortoise got his shell," or "Since then the leopard lives in the forest." Similarly, while many Negro tales illustrate the consequences of good and bad behavior, the moral is not always explicitly stated.

Proverbs When the moral precepts of folktales are pointed up, this is usually done by concluding the tale with a proverb which sums up its philosophical implications. The meaning of a proverb, in fact, may be derived from a folktale in which it occurs, and may be explained to a stranger by reciting the folktale at length. Moreover, proverbs may be quoted by characters in folktales in the course of dialog. This leads to proverbs of the following type: "Sandpiper says: An orphan does not have great desires," or "Chicken says: We follow the one who has something."

The foregoing Jabo proverbs illustrate a form of statement typical of Liberia, but found in other parts of Africa and the New World as well. Thus, the Dutch Guiana proverb, "Koni-Koni says: When there is no more land, there remain the holes in the trees." Koni-Koni is "a rabbitlike animal" to be compared with Cunnie Rabbit of Sierra Leone, although the name in both cases is undoubtedly derived from the English "coney." Other typical proverb forms include those which begin "One does not . . ." and "No matter how . . ." and the balanced forms "If . . . , then . . . ," "Where . . . , there . . . ," "We . . . , but we do not . . ." and their variants.

The piquancy of some proverbs can be appreciated without reference to their cultural context, as in the following Yoruba examples: "One does not set fire to the roof and then go to bed"; "The world is in a bad way when an egg falls and breaks the bowl"; "No matter how sweet the journey, the householder returns home"; "No matter how small the needle, a chicken cannot swallow it"; "The flood spoils the road; it thinks it is renewing

it"; "The chicken alights on a rope; the rope doesn't get any rest, and the chicken doesn't get any rest"; "He who runs and hides in the bush is not doing it for nothing; if he is not chasing something, we know that something is chasing him"; "One does not become so mad at his head that he wears his hat on his buttocks."

Riddles Negro riddles are commonly stated in the form of declarative sentences rather than questions; thus, a stranger sometimes does not realize what he is expected to guess. In the following Yoruba riddles, the implied question is "Who is he?": "They cut off his head; they cut off his waist; his stump says he will call the town together." "They tell him to sit beside the fire, he sits beside the fire; they tell him to sit in the sun, he sits in the sun; they tell him to wash, he says, 'Death comes'." In some Yoruba riddles a proper name with no meaning is given to the character whose identity is to be guessed. "I look here; I look there; I don't see my mother, Odere." "Elephant dies, Mangudu eats him; buffalo dies, Mangudu eats him; Mangudu dies, there is no one who wants to eat him." The answers to these four riddles, drum, salt, ear, and cooking pot, might be guessed by strangers. Some riddles, like some proverbs, however, assume a knowledge of Yoruba institutions or artifacts, while others are based on puns and cannot be answered without knowledge of the language.

Verbal formulae Negroes employ a variety of set verbal formulae including spells, curses, incantations, blessings, invocations, prayers, greetings, passwords, and the like, which are stable in form and recited verbatim. Some, such as the passwords of the Yoruba Ogboni society or the secret formulae taught to boys in the East African circumcision and initiation rites, are esoteric. All differ in form of expression from ordinary speech or conversation. They fall, no less than riddles or proverbs, within the more precise definition of folklore as verbal art, which would exclude the religious beliefs and social customs with which they are associated, except in so far as study of these is necessary to understand their meaning and to describe the situations in which they are employed.

Examples of set verbal formulae are more often to be found in descriptions of African religion and social life than in collections of folklore, and their analysis from a stylistic or literary point of view has been neglected in favor of the social or religious customs in which they are imbedded. A plausible explanation of their neglect by folklorists would seem to be that their translation is often extremely difficult, and that even when individual words or sentences are understood, no coherent meaning may be recognized and the idea expressed may still be obscure. For example, a magical incantation that has no meaning may still work and often, even when an archaic or esoteric meaning is involved in a formula, it need not be understood by the person who recites it. Neither comprehension nor communication of meaning is essential for these forms so long as they are recited accurately and at the appropriate times. By this characteristic the verbal formulae, like the tongue twisters and praise names, are set completely apart from proverbs, riddles, myths, legends, and folktales in all of which the desire to convey an idea is of primary importance. Tongue twisters are found throughout the area of Negro folklore, but few have been recorded, possibly because they lose effect in translation.

Praise names Praise names, which are known as *kirari* among the Hausa, *orile* among the Yoruba, and *isibongo* among the Zulu, are recited in honor of chiefs, important individuals, sibs, tribes, deities, animals, and inanimate objects. Personal characteristics or individual achievements are recounted in highly stylized form and often in archaic language. A person of exceptional importance among the Yoruba may have a series of praise names, one of which is played to him by the drummers and is referred to as his "drums" (*ilu*). Not infrequently proverbs are employed as Yoruba praise names, and among the Hausa the *kirari* of animals are sometimes encountered in dialog in the folktales. The butterfly is addressed in Hausa as "Oh Glistening One, Oh Book of God, Oh Learned One open your book." The lion is "Oh Strong One, Elder Brother of the Forest." The dog's *kirari* refers to the beatings he receives, to the belief that a prayer will not be heeded if his shadow falls on one who is praying, to his thinness and other characteristics: "Oh Dog, your breakfast is a club, your *fura* a stick, Oh Dog, you spoil a prayer, you are Hyena's perquisite, your ribs are like the plaits in a grass mat, your tail is like a roll of tobacco, your nose is always moist."

Songs Songs, of which words rather than music fall within the realm of folklore (considered as verbal art), are included in many African and New World Negro folktales. The verses of ceremonial songs, used to "call the gods" and for other ritual purposes, have much in common with spells and incantations, and what has been said about them also applies here. A third type of song of great importance in both sections of the Negro world is the topical song of current events used to spread news and gossip, and employed at times in a kind of black-mail. Composed in terms of African versification, these songs, even when created in European tongues as in the case of calypsos of Trinidad, the songs of allusion of Haiti, or the *Plenas* of Puerto Rico, frequently ignore rime in favor of prosodic rhythms. Many blues songs of the United States fall within the same general category.

Improvised sometimes by amateurs, sometimes by professionals, the topical songs have been known to persist for generations when they commemorate some historic event or when they treat with some incident of lasting interest. Thus, songs referring to battles of the 18th century are still current in Nigeria, just as calypsos were composed in Trinidad deriding certain slave overseers or commemorating the first visits of *The Graf Zeppelin* or *The Duke and Duchess of Kent*. Songs denouncing the infidelity of a sweetheart, or perhaps the injustice of a law-court, are composed constantly, following traditional patterns, and after brief periods of popularity are usually supplanted by others of the same variety.

Spirituals, a widely discussed but relatively unimportant form, are a blend of European and African motifs, deriving their distinctive features from the African musical phrasing they employ. Work songs of the Negro of the New World follow close on African patterns in both words and music. Ring-shouts, common to church parties in the South of the United States, also show African musical and verse structure, as do the Afro-Cuban popular songs.

Consideration of songs has been sketchy in most discussions of Negro folklore and documentary material has only recently become available on phonograph records, notable among which are the albums issued by the

Library of Congress. Yet, to mention only one form, the topical songs are no less important in Negro folklore than are the songs of the troubadours in European literature.

Setting and functions Folklore in published collections can be classified according to form, studied in terms of traditional stylistic devices, and analyzed in terms of the history and diffusion of specific incidents, proverbs, and the like. Recorded texts, however, are only the fleshless, bloodless skeletons of a form of art that is alive and warm. Since they are verbal rather than written, all forms of folklore except some of the secret spells used in black magic, involve both the reactions of the audience and the mode of expression of the speaker. The human, social situations in which folktales are told or in which proverbs are quoted are essential parts of folklore. Related to this is the problem of the functions of the various forms of folklore, the ends they serve, and the uses to which they are put.

Reading folktales is perhaps even less satisfactory than reading a play instead of seeing it. Equivalents of interpretive instructions to the actors are not indicated and stage directions are usually omitted. Moreover, the musical participation of the audience that adds so much to Negro folktales may be impossible to put into words, and is commonly not even indicated. Listeners may reply to direct questions from the story-teller or interject expressions of assent and approval to encourage him. More characteristic, and even more effective, is the response of the audience when they take up the chorus of a song, clapping their hands to beat out the rhythm. To many audiences the songs that stud Negro folktales in both Africa and the New World are more important than the tales themselves. If a Yoruba narrator attempts to cut short a favorite song his audience protests. Each time the song appears he must wait until his audience is ready before he can resume his story. Repetition in Negro folktales, which may strike Europeans or Americans as monotonous, is sometimes explained by the popularity of a melody rather than by any element of the story itself. A good story-teller creates additional occasions for well-liked songs. He lengthens or shortens his tales depending on the reaction of his audience, in the same way that he rearranges familiar plots and characters. For this reason tales heard in their actual setting may be considerably at variance with texts set down while working alone with an informant.

The Negro story-teller combines the art of actor with that of dramatist. From all parts of Africa and the New World have come descriptions of his dramatic timing, his expressiveness, and his virtuosity in acting out the various roles, altering his voice and employing pantomime to mimic each character in turn. In both Africa and the New World, folktales are told at night, heightening the fantasy and adding to the effectiveness of the dramatic techniques employed by the story-teller. Sessions of story-telling commonly begin with riddles before the younger children fall asleep, and on certain nights, when the moon is full or a wake is being held, they may last late into the night. It is widely felt that folktales are the special domain of the spirits of the dead, and that story-telling during the day will be punished.

Although it has long been recognized that folklore is a favorite form of amusement, its other functions have usually been disregarded. Praise names, passwords,

curses, incantations, and other set verbal formulae have nothing to do with amusement. Each has its own function and setting, indicated by its name. The same is true of certain types of songs, such as lullabies, love songs, work and war songs.

Songs, myths, and verbal formulae may be essential parts of social or religious ceremonies. Myths and legends, as sanctions of custom, are foundations of cultural stability. When a ritual, a social distinction, or an accepted behavior pattern is questioned, there is usually a familiar myth or legend to explain how it originated, a proverb to show its wisdom, or a moral tale which shows, for example, what happens to those who are greedy or who disregard their totemic taboos.

A special, but none the less revealing, example of this is found in the Ifa divining verses of Nigeria, Dahomey, and Cuba. These verses usually begin with phrases interpreted as diviners' praise names. Many of them recount how that individual prospered who made a sacrifice prescribed by the diviner, or how one who refused to sacrifice suffered. These accounts are in a form which, under other circumstances, would be recognized as folktales and myths; here, however, they are incorporated as integral parts of the verses and of the divining ritual itself. The Ifa verses demonstrate that folktales, no less than myths or sacred songs, may be essential parts of religious ceremonies, with a function quite distinct from amusement. Many of the tales, furthermore, are etiological, with explanatory elements of the usual "just so" types based on whether the sacrifices were or were not offered. By reciting tales, many of which have the same moral, the diviner strengthens his client's belief in the efficacy of sacrifice and divination, with well-known facts of nature often cited as proof of the truth of the verses.

Functions of proverbs Negro proverbs constitute one of the most potent factors for individual conformity and cultural continuity. In West Africa proverbs are cited in court trials in much the same way that European lawyers cite cases which serve as legal precedent. Where questions of equity rather than fact are concerned, quoting an especially apt proverb at the appropriate moment may be enough to decide the case.

Proverbs are constantly being used to influence the behavior of others and as instruments of self-control. The Chaga, who say that proverbs "strike like arrows into the heart," resist the suggestions of evil comrades and the temptations of their own desires when a proverb is called to mind. The same proverb that may be used to criticize the actions of an enemy or rival may be quoted by a friend as kindly advice. The proverb of the flood and road cited above can be used either in criticism or ridicule of someone who thinks he is helping but is only making matters worse, or quoted to him as friendly advice to leave the matter alone. That of the chicken and the rope is used to chide a person who has jumped "out of the frying pan into the fire," or as a friendly warning to "Look before you leap."

A typical use of Negro proverbs is for derision or defiance. The Yoruba proverb about the egg and the bowl is used as a warning to a smaller or weaker person who presumes to challenge or criticize those above him, while that of the needle and the chicken is used in defiance of a stronger or more influential person. So characteristic is this use of proverbs that in West Africa the songs of defiance and derision, which are commonly

based on similar proverbs, are known as "proverbial songs." The proverb of the needle and the chicken is the basis of a topical song sung by Yoruba women in defiance of senior or stronger co-wives.

A fundamental characteristic of proverbs is that they are almost never applied in their literal sense. Once the usage of a proverb is explained, the appropriateness of the interpretation is apparent, but it may be somewhat different from the association which first comes to the reader's mind. For this reason collections consisting only of lists of proverbs with translations and explanations of their literal meanings are inadequate; yet collections such as those of Herzog and Blooah (Jabo), of Herskovits and Tagbwe (Kru), and of Travélé (Bambara), which analyze the situations to which proverbs apply, have been exceptions.

Most Negro proverbs seem to be applicable to a number of different circumstances, yet each is regarded as most apt for one particular situation. An individual's skill in citing the proverb most appropriate to a particular occasion is recognized by the Yoruba. Their proverbs "An elder cannot see a rat but that it becomes a lizard next time" and "An elder does not finish washing his hands and then say that he will eat some more" are both applicable to a person who cannot make up his mind. Yet the former is regarded as more appropriate for this situation, while the latter is reserved for the person who is too greedy in his demands on younger people.

Unlike folktales and riddles, proverbs are seldom recited; they are quoted in the course of ordinary conversation. Almost never does a discussion lack the spice of proverbs. African college girls on the Gold Coast and in Nigeria are said to carry on metaphorical conversations for hours, using nothing but proverbs, but this may be considered atypical and ostentatious. As collections of folktales are devitalized by the absence of gesture, facial expression, vocal emphasis, and the reaction and participation of the audience, so lists of proverbs suffer by being torn from the context of speech in which they normally occur.

Folklore in education In operating to ensure cultural stability and continuity, folklore is important in the process of transmitting culture through the education of the individual. Myths, legends, and secret formulæ may be a part of the instructions given by a parent to a child or by a priest or chief to an initiate, while other forms of folklore may be learned informally in social situations not specifically directed toward education. Riddles, which are regarded as sharpening a child's wits, also teach lessons which must eventually be learned. In addition to the characteristics of animals, human beings, and other natural objects, they may refer to social distinctions and social etiquette, as the following: "Who drinks with the king?" (Fly). "Who goes down the street past the king's house and does not salute the king?" (Rain water).

The role of Negro folklore in education has been best analyzed by Raum among the Chaga. Stories about monsters are told to the youngest children, with implied threats to those who misbehave. Later, these are gradually replaced by moral tales which indicate such attitudes as diligence and filial piety, and show the consequences of laziness, snobbishness, and rebelliousness. When the Chaga child reaches fourteen, folktales and riddles give way to proverbs. These are employed by

parents to epitomize a lesson which they wish to teach their children, and they appear as a didactic device in the instructions given to Chaga boys during the initiation ceremonies. "When a child flies into a rage, when he lies or steals, when he is recalcitrant or violates the code of etiquette, when he makes an ass of himself, when he is cowardly, he hears his actions commented upon in the words of a proverb." The impression made upon the child is frequently so forceful that the conditions under which a particular proverb was first heard can be remembered in adulthood. The importance of folklore in African life, and of proverbs in particular, is perhaps best summarized in the words of one of Raum's informants: "The Chaga have four big possessions: land, cattle, water, and proverbs."

RICHARD A. WATERMAN and WILLIAM R. BASCOM

afrit, afreet, or ifrit In the Koran, an epithet applied to a demon: later construed as the designation of a particularly terrible and dangerous kind of demon, and prevailingly so accepted in Arabian mythology and among all Moslems.

afterbirth The placenta. In the folk belief of nearly all the peoples in the world (civilized and primitive) the afterbirth is closely associated with the soul, life, death, health, character, success, or failure of the person with whom it is born, and is therefore equally tied up with the deeply rooted human belief in the separable or external soul. What becomes of the afterbirth (and with it the umbilical cord and caul) either influences or determines the whole life-story of the child. It is variously believed to embody his own soul-substance or his guardian spirit, to be either his brother, twin, or actual double, or to be so mystically and inseparably connected with

him that its treatment or fate will shape his skills, luck, and fate. Among peoples and cultures from British Columbia to Tierra del Fuego, Iceland, Siberia, Europe, and South Africa, among the peoples of China, Indonesia, the south Pacific, and also among certain North American Indians, the afterbirth is regarded with awe and is either preserved or disposed of according to the belief of the group.

The Kwakiutl Indians of British Columbia present the afterbirth of a boy baby to the ravens, believing that this will endow him with the power to see the future; the afterbirth of a girl baby is buried at high-tide mark to insure her becoming a good clam digger. The Yukaghir peoples of northeastern Siberia have this same reliance on the sympathetic magic involved when they tie up the afterbirth in a reindeer skin and attach to it a miniature bow and arrow, a little wooden knife, and scraps of fur to make a boy a good hunter. A toy woman's knife, thimble, and needle attached to the afterbirth bundle of a girl will make her a skilful worker. A people as far removed from these two groups as the Aymara Indians of Bolivia cover the afterbirth with flowers and bury it along with tiny farm tools for a boy and cooking pots for a girl. All over Europe the people believe that one's fate is tied up with his afterbirth. Great care is taken to prevent its being found and eaten by an animal, or exposed to evil spirits. If an animal should find and eat it, the child would grow up with all the most unattractive qualities (physical or mental) of that animal.

The belief that the afterbirth contains part of the soul-substance of the child is found as far apart as Iceland and Zanzibar, Australia and Sumatra. The Swahilis of Zanzibar bury the afterbirth under the house in which a child is born to insure his loyalty to home. The Karo Bataks (Sumatra) also bury it under the house, believing that it contains the child's true soul. He has another soul for everyday life, but the true soul resides in the afterbirth and must be kept safe. The Bataks of Sumatra also bury their afterbirths under the house, believing they contain the souls of their children. Some of the tribes of Sumatra, however, carefully preserve them with salt and tamarinds and invoke the souls therein, a practice bordering on the guardian-spirit idea. This guardian-spirit idea is shared by the Sumatran Kooboos, who believe the afterbirth contains the guardian spirit that will protect an individual from evil all his life. Sumatran Bataks believe everyone has two guardian spirits: one contained in the germ of conception (called elder brother) and one in the afterbirth (called younger brother). Central Australian tribes also believe the afterbirth contains the child's spirit and hide it safely in the ground. Queensland, Australia, tribes believe that only a certain part of the soul, the cho-i, remains in the afterbirth. They never fail to bury it at once and mark the spot with a cone of twigs so that Anjea may easily find it to make another baby.

Among the Baganda of central Africa the afterbirth is the actual twin or double of the child that is born. It is put in a pot and buried under a plantain tree (evidently *Musa arnoldiana*). It becomes a ghost and goes into the tree, which is carefully guarded lest anyone not kin should make food or drink from it. If this should happen the ghost-twin would go away and the child in the house would follow its twin and die. The king's "twin" is kept in a little temple and a special

guardian is appointed, the kimbugwe, to take care of it. He takes it out of its wrappings once a month, allows the moon to shine upon it, rubs it with butter, shows it to the king to assure him of the welfare of his double, and returns it to the safety of the temple. Tribes south of the Uganda also believe the afterbirth is a human being. Certain North American Indians tell vivid stories revealing belief in the afterbirth as twin of the child. In the Creek Indian story of the *Bead-Spitter and Thrown-Away*, the father hides and watches for the secret playmate of his son, who has surprisingly asked for two toy bows with arrows. From his watching place the man sees another boy come from the afterbirth in the bushes (where he himself had thrown it) and play with the other. It is the child's own twin. This development of twin from afterbirth appears also in Wichita, Pawnee, and Cherokee tales. But in the Natchez Indian story, *Thrown-Away* developed from the discarded umbilical cord.

The Batanga belief of the little ghost in the tree ties up the folklore of the afterbirth with another widespread folk belief, i.e. the birth-tree and its identity with the child for whom it is planted. In Calabar, West Africa, a young palm tree is planted when a child is born and the afterbirth is buried under it. The afterbirth insures the growth of the tree as the growth of the tree insures the growth of the child. This belief and practice prevail in New Zealand and the Molucca Islands, in Pomerania in Prussia, and in other parts of Europe. It is paralleled by the Hupa Indians of California who split in two a young fir tree at the birth of a child, put the afterbirth and umbilical cord inside, and bind the tree together again. The welfare of the child depends thereafter on the fate of the tree.

In ancient Jewish practice various mysterious medicines and charms were made from the ashes of the afterbirth. Mixed with milk they would charm the wasting disease away from a small child; mixed with snapdragons and tied in a little bag around a child's neck, they proved a powerful charm against bewitchment. In China medicinal pills were often made from the placenta. The Peruvian Aymara Indians also value its ashes as a kind of cure for various ills.

The Javanese custom differs from all these. In Java the women place the afterbirth in a little vessel, bedeck it with fruits, flowers, and lighted candles, and set it adrift in the river at night to please the crocodiles. This is either because all afterbirths are crocodiles, brothers and sisters of their human counterparts, or because the crocodiles are inhabited by the ancestors of the people, and one twin is religiously returned to them.

afterworld The abode of the dead; the world after death: a concept of all human mythologies and religions. Sometimes it is situated in gloomy regions under the earth or under the sea, sometimes in a bright sky world; sometimes it is on a nearby, or distant, island, as the Abokas of New Hebrides (Melanesian) mythology, or it is thought to be far across the sea, or sometimes just "in the west."

Many mythologies contain the dual concept of a wonderful abode for the blessed and a grim underworld for the less fortunate. The Central Eskimo, for instance, have Qudlivun, a happy land in the sky full of games and pleasure, Adlivun, an undersea world of discom-

fort and punishment, and Adliparmiut, an even lower region, which is not quite so terrible as Adlivun, but from which there is no return. Other afterworlds typical of the dual (or multiple) concept are: the Greek Elysium, for heroes and the blessed, originally situated in the western ocean, and Hades, the underworld of shades; the Norse Valhalla, hall of the chosen slain, Bilskirnir, Thor's huge palace where the thralls were entertained as well as their masters in Valhalla, Fensalir, Frigga's palace, where happy married couples were invited to come and stay forever, and Hel, the underground realm of death; and the Christian system of heaven, hell, and purgatory. The Caroline Islands (Micronesian) afterworld includes a sky heaven for those souls who, in the shape of sea birds, manage to reach it, a special region set apart for warriors so that they may go on with their fighting, and a place where earth and heaven meet for women who die in childbirth. But men who hang themselves are shut out altogether, because the gods do not like to see their protruding tongues.

Nai Thombo Thombo is the afterworld of Fijian (Melanesian) belief. Life there follows the pattern of life on earth; but few souls ever reach it because the journey is so beset with perils and frustrations. The soul must carry a whale's tooth, for instance, which has been put into the dead hand. This he must hurl at a certain tree to which he will come. If he misses, he must return to his grave; if he hits it, he may proceed to another place where he awaits the souls of his strangled wives. He cannot continue his journey until they have all caught up with him. (Bachelors are always caught by demons.) The soul with his wives then advances on his journey, fighting demons on every side. If he does not overcome them, they eat him. If he wins, he eventually reaches a mountain place where he is questioned. After the questioning he is either sent back to earth to be deified by his descendants, or he is dumped into the sea: the path to the last place. Nai Thombo Thombo is not only a real place in Fijian belief, but a real road leads to it, through a real town. In this town the people take care to build all doors exactly opposite each other, to make easier the way for the bewildered souls. They are careful, too, to leave no sharp implements lying about which might injure the passing ones.

Tongan and Samoan (Polynesian) mythology has an afterworld named Pulotu, which is either on an island "to the northwest," or under the sea. Samoans believe that the entrance to it is through two round openings in certain rocks on the west end of Savaii island. The big opening is for chiefs, the smaller one for other people. Once through the openings, the souls drop into a pit; at the bottom of the pit runs a river which carries them to Pulotu. There they bathe in the water of life and are young again.

Society Islanders (also Polynesian) believe that the soul is met at death by other souls who conduct it to Po, an underworld of darkness, where it is fed to a god three times and, after the third reshaping, is deified. The people of the Marquesas believe in an upper pleasant world for gods and chiefs, and three lower worlds, one below the other, to which the souls of the dead are consigned according to the number of pigs sacrificed for them. The lowest of these regions is the pleasantest, the top the worst.

The shaman of the Caingang Indians (Brazil) sits

beside the body of one newly dead and instructs the soul how to face the dangers of the journey to the afterworld. The soul must be careful not to take a certain forking path which leads into the web of a giant spider; it must take care to avoid a certain trap which would hurl it into a boiling pot; it must walk warily on a slippery path beside a swamp where a huge crab is waiting. If the soul escape these dangers it will come at last to a western underworld where it is always day; here the aged become young and hunt joyfully in a forest teeming with deer, tapirs, and all kinds of game. Later comes a second death, after which the soul inhabits some insect, usually a mosquito or ant. The death of this insect is the end and obliteration of the soul. Hence the Cain-gang do not kill insects.

In North American Karok Indian belief, mortals who visit the world of the dead see their departed ones living and dancing just as they did on earth. But the earthly visitor discovers that he has been away from the world a year, when he thought it was a day. Among the Omaha the Milky Way is the path the spirits travel to a sevenfold spirit world. An old man sits by the Milky Way directing the souls of the blessed to a short cut. The souls of the Caribou Eskimo pass into the keeping of Pana, the Woman-Up-There, whose sky heaven is full of holes. The holes are stars; and when anything is spilled Up There it comes through the holes in the shape of rain, snow, hailstones, etc. The dead are re-born in the house of Pana, and brought back to earth with the help of the moon, to live again as human beings, or animals, birds, fish, etc. The nights no moon is visible are the nights the moon is busy helping Pana bring the souls to the world again.

The Dahomean Negro afterworld is said by some to be in the sky, by others to be beneath the earth. But the path to it is so well known that there is a map of it. In Bantu mythology the souls of the dead inhabit an underground region referred to by many of the tribes as Ku-zimu. Earthquakes are believed to be caused by agitation among these underground populations.

agaric A fungus of the mushroom group (order *Agaricales*). The agarics of folklore are the fly agaric (*Amanita muscaria*) whose deadly poison is often used in a decoction for killing flies, and an agaric found growing on birch trees which provides the spunk or touchwood of such sudden and magical combustibility.

The Siberian Koryaks endow this poisonous fungus (the fly agaric) with a spirit or personality. Wapaq they call it and believe the wapaq are powerful guiding spirits for anyone who dares to eat. The myth says Big Raven caught a whale, but could not send it home again because he could not lift the big grass-bag the whale would need for food en route. He cried out to Vahiynin (Existence) and Vahiynin said, "Eat the wapaq." Vahiynin spat upon the earth and there stood the little white plants with the foam of the spittle turning to spots upon their hats. So Big Raven ate the wapaq and suddenly felt so gay and mighty that he easily lifted the big grass-bag for the whale, and the whale went home to the sea. Then when Big Raven saw the whale swimming home he said, "O wapaq, grow on the earth forever," and to his children he said, "Learn whatever the wapaq shall teach." So the Koryak believe today that a person affected with agaric is guided by the wapaq. If

an old man should eat agaric and the wapaq within the agaric should whisper, "You have just been born," that old man would begin to cry like a baby. If the wapaq should say, "Go to the afterworld," then the old man would die.

In Europe, Scotland, Ireland, and various Celtic islands, another kind of agaric (probably *Polyporus officinalis*) which grows on trees is looked upon as having great mysterious powers and properties. The seeming magic of its sudden combustibility is probably the reason for its use in kindling the Beltane fires (the *teine éigin*, the fire from rubbing sticks). Not only is the flare so instantaneous and bright as to seem pure magic, but this wonderful substance is believed also to possess great potency as a charm against witchcraft and various diseases. It was also thought to be able to render poisons impotent.

Agastya or Agasti A famous Rishi of India, regarded as the author of certain Vedic hymns: in Hindu mythology, noted for his asceticism, his magical birth from a water-jar into which his two fathers, Mitra and Varuna, had dropped their seed on seeing the nymph, Urvashi, and his creation by magic of the beautiful Lopamudra, whom he married in order to have sons and save himself and his ancestors from destruction. He is celebrated for halting the growth of the Vindhya mountains and for drinking up the ocean. The *Mahabharata* describes how a certain group of asuras, who were at war with the gods, hid themselves in the ocean and decided to work from there against holy men and Brahmins and put an end to the world. The gods appealed to Agastya for help, so he drank up the ocean; the asuras were exposed in their hiding place, and killed by the gods. Perhaps the most famous feat of Agastya was his preventing the Vindhya mountains from stopping the course of the sun. Vindhya wanted to be higher than Mount Meru around whose peak the sun and moon revolved. So he began to grow up and up until the gods were afraid he would stop the sun in its course altogether. They begged Agastya to do something to stop the alarming growth. Agastya packed up his belongings and with his family started on a journey into the south. When he came to Vindhya, he asked a boon: that Vindhya cease growing until his return. So Vindhya stopped growing, and is waiting yet, the same height as on that day, for Agastya decided to stay in the south forever. Some stories say he came back; but most people believe he never did because the mountain has not grown an inch. How his miraculous digestion put an end to the indigestible demon ram who expected to kill Agastya from within, is another favorite Hindu story.

After his death Agastya was assigned a place in the heavens and is identified with Canopus. Popular mythology ascribes to him the power of staying monsoons, i.e. controlling the waters of the ocean and restoring the sun to man. He is still living (though invisible) on Agastya's hill in Travancore, and regarded as the patron saint of southern India who was instrumental in the introduction of Hindu literature and religion in that region. See MAHABHARATA.

agate A variegated quartz or chalcedony having the colors usually in bands, but existing also in solid white, brown, and red, as well as white and black, white and gray, white and red varieties: according to Theocritus

named for the river Achates in Sicily where it was first found. Agate relieves thirst if held in the mouth long enough; it reduces fever; and it was once believed to turn the sword of an enemy against himself. It is dedicated to June; symbolizes health and longevity. In Jewish lore the agate was believed to prevent one from stumbling or falling, and was especially prized by horsemen for that reason. In Arabia arrow-shaped amulets made of agate were worn as being good for the blood. The medieval belief that agate was a specific against the bites of scorpions and snakes was somewhat dispelled by Jacques Grevin, a physician of 16th century Paris. He published various writings casting doubt on the efficacy of toadstone and turquoise for detecting poisons, but could not deny that powdered agate *on the tongue* (not worn as an amulet) would cure a poisoned patient. The varieties of agate used by certain North American Indians to make implements and blades are loosely and popularly called *flint*.

agave A plant of the genus *Agave*; especially, the century plant (*Agave americana*), so called because it flowers when it reaches maturity (in ten to thirty years) and then dies, giving rise to the fable that it blooms once in a century. The plant is a native of arid regions in the southern United States and Central America and has long been cultivated in Mexico for its sap, which is fermented. The resulting thin, buttermilk-like liquid is called pulque and is widely consumed in Mexico. A very intoxicating liquor, mezcal or aguardiente de maguey, is distilled from pulque.

The goddess and discoverer of the plant, Mayauel, is represented with four hundred breasts and seated before or on the plant. The agave was regarded by the Nahua people as the Tree of Life and its milk was used by Xolotl to nurse the first man and woman created by the Aztec gods.

Agbe Chief god of the Thunder pantheon (Xevioso) of Dahomey religion. He was entrusted with full charge of world affairs by his mother Sogbo (in this pantheon, synonym for Mawu). In the Sky pantheon Agbe is the son of Mawu and Lisa, but the Xevioso cult identifies him with Lisa. Agbe has the whole sea for his dwelling, but to converse with his mother Agbe goes to that place where the sea and sky meet. Hence the round rising and setting suns are called the eyes of Agbe (Dahomey being so situated that the sun is seen both to rise from and sink into the sea). In spite of his powers in the world, Agbe was not shown how to send rain. He must send water up from the sea to his mother who causes it to fall from the sky as rain upon the earth. Hence when lightning strikes a ship at sea, Agbe has struck it; but lightning on the earth is sent by Mawu (Sogbo) (see Herskovits *Dahomey* II, 151, 156, 159).

The Dahomey Agbe survives in Haiti as Agwe or Agwe Woyo, a god of the Rada division or class of the vodun pantheon. Here too he is god of the sea and has a son and a daughter, Agweto and Agweta. His worship is strong only in coastal communities. In the overlapping of Catholicism in Haiti upon the basic vodun elements, St. Expeditius has been equated with Agwe.

Agdistis Offspring of the seed of Zeus dropped in sleep upon the earth, a hermaphrodite: identified with the Phrygian Earth-Mother, Cybele. The story as told by Pausanias states that the gods abhorred the ab-

normality and severed its male organs. From these grew the almond tree from whose blossom (or fruit) Nana conceived Attis. Later the sight of the beautiful Attis filled Agdistis with such passion, that at the moment of his marriage she drove Attis mad and he castrated himself. The father of the bride in like madness did the same. Attis died of the wound, and Agdistis, grief-stricken and repentant, implored Zeus never to allow the beautiful body of Attis to decompose. This Zeus promised. According to Hesychius, Strabo, Ovid, and many others, Agdistis and Cybele are one and the same. The story explains the practice of the self-emasculation of the priests of the original Attis cults during the orgiastic rituals. It is tied up with the symbolism of the joint male-female potencies in nature, with the motif of the uncorrupted body, and of course with the widespread Adonis-Aphrodite, Osiris-Isis vegetation myths.

ages of man The periods of time into which the life of an individual is considered to be divided. What walks on four legs at morning, two legs at noon, and three legs at evening? The answer to this riddle of the Sphinx: Man (who creeps on all fours in infancy, walks upright in manhood, uses a cane in old age). The division of the life of man into seven stages is said to have been first defined by Hippocrates: infancy, childhood, boyhood, youth, manhood, middle age, old age. This has been reworded by many writers as infancy, childhood, puberty, youth, prime, old age, senility. References to these seven periods are frequent in Midrashic writings. Probably the best known is the following: The child of a year is like a king, adored by all; at two or three he is like a swine, playing in the mire. In the third period he is likened to a kid "which capers hither and thither making glad the hearts of all who look upon it." This third period continues until the individual is about eighteen years old. At twenty he is like a horse, spirited and confiding in the strength of youth. Then comes the fifth stage when he is like an ass, burdened with wife and children, and having to travel backward and forward to bring home sustenance. The sixth stage is not attractive, being that time during which man snatches his bread wherever he finds it, caring for nothing but his own household. In the seventh stage he is like an ape, asking for food and drink and playing like a child, "but a learned man like David is a king, though old."

ages of the world Those periods of the earth's existence between cosmic cataclysms. Both the Jews and Babylonians record their history as before and after the flood. The idea of the deluge is found in most primitive cultures, either past or future, while many North American Indian mythologies derive creation out of a watery chaos. Most Indians of South America record two destructions, water and fire. The Aztecs record four: earth, air, fire, and water, i.e. famine, hurricane, fire, and flood, although the order is not certain.

The Golden, Silver, Bronze, and Iron ages of the ancient classical world are the most widely known. During the Golden Age, ruled by Saturn, man lived to a great age in an abundant Garden of Eden, free from restraint of law or necessity for work. The Silver Age or Age of Jupiter was characterized by licentiousness and voluptuous living. Men refused to worship the gods and were finally destroyed. The Bronze Age of Neptune was a violent period of warfare in which

everyone was destroyed by internal strife. And in the Iron Age of Pluto, there was neither justice, law, nor religion left in the world. Hesiod in his *Works and Days* gives a fifth age after the Bronze called the Heroic Age when men strove to do better, but failed.

The ancient Hindus divided their existence into four periods, or yugas, of declining morality. Duration of each successive period diminishes by one fourth, as does man's life span, stature, and virtue. In krita yuga, men were giants and lived in plenty. Neither gods nor demons existed and sacrifices were unknown. This period lasted 4,000 divine years (360 years each) plus dawn and twilight periods, or 1,728,000 years. In the treta yuga, which lasted 1,296,000 years, man's life span declined to 300 years. Vice crept in, but sacrifices were made devoutly. In dvapara yuga vice and disease were rife, ceremonies increased, marriage laws were needed for the first time, and sacrifices were made only with the hope of gain. In the kali yuga religion disappears altogether and the world is given over to sin and strife; and at the end the earth will be destroyed by fire and flood. The cycle, which lasts 4,320,000 years, will not be repeated for a thousand times this period.

The Buddhists also use the four yugas which were later elaborated. Their system consists of four imponderable periods made up of twenty intermediate parts of four yugas each. The first imponderable is a period of destruction, the second of nothingness, and the third of reconstruction. First come sun, moon, and gods; then, in nineteen successive stages, life is distributed, including man who lives to the age of 80,000. When demons appear, reconstruction is completed. In the imponderable of destruction, through increase of vice and disease, man's life declines to ten years by the end of the fourth yuga. In the second intermediate period the yugas are reversed and man improves until he is back at the beginning, and so on for twenty intermediates before the next destruction. Even destructions move in cycles of 64, seven by fire and one by water, etc., until the 64th which is by wind and the worst of the set.

St. Agnes' Eve The night before St. Agnes' festival day, January 21: a time of divination for young unmarried girls. In England and Scotland all kinds of charms, rimes, and special rituals are said and performed by which young girls expect to be shown whom they will marry. "Agnes sweet, Agnes fair / Hither, hither now repair / Bonny Agnes let me see / The lad who is to marry me," is a favorite incantation, said while sprinkling a little grain on the ground. A young girl about to fall asleep will say, "St. Agnes, that's to lovers kind / Come ease the trouble of my mind." But before getting in bed she has put a sprig of thyme in one shoe, a sprig of rosemary in the other, and placed one on each side of her bed. This is sure to bring the hoped-for revelation, i.e. her future husband's face in a dream.

Agni or Agnis In Hindu mythology, god or personification of fire: one of the three chief deities of the Vedas (others were the rain god, Vāyu or Indra, and the sun god, Sūrya). Agni represents lightning and the sun as well as earthly fire. In the latter he is always present in every household and is believed to be the giver of immortality who purges from sin, burns away the guilt of the body after death, and carries the immortal part

to heaven. As the altar fire he is the god of priests and the priest of gods, the mediator between gods and men.

He was born of the lotus, according to the earlier Vedas, created by Brahmā (*Mahābhārata*), kindled by Bhrigu for the diffusion of fire on earth (*Rig-Veda*) as the son of two pieces of wood which he immediately swallowed. He was one of the eight lokapālas, guardians of the cardinal and intermediate points. He is described as red, with two faces and seven tongues to lick up the butter used in sacrifices, or sometimes with three heads and seven rays, clothed in black, carrying a snake standard and a flaming javelin, and is shown in a chariot drawn by red horses.

In mythology, he betrayed Bhrigu's wife into the hands of a Rākshasa, was cursed by Bhrigu, and condemned forever after to consume everything. Agni rebelled against this and hid himself until both men and gods recognized his indispensability. Then Brahmā assured him that he would devour only in the sense of digesting. He exhausted his vigor by consuming too many oblations, and renewed it by burning the Khāṇḍava forest while Kṛishṇa and Arjuna guarded each end of it so that its inhabitants could not escape and Indra could not stop the proceeding.

In popular belief to poke a fire wounds Agni. He is invoked by lovers to intervene in their affairs, and by men for virility. His worship and ritual have degenerated in modern Hinduism and he has no professed sect, but Agnihotri Brāhmans still perform the fire sacrifice or *agnihotra*. Compare *Ātar*.

Agunua The principal figona of San Cristoval island: a Melanesian creator who, unlike most figona, is represented as a male snake. Agunua created the sea, the land, men, storms, and a woman. When the woman was old, she changed her skin and returned looking young and lovely. Her daughter did not recognize her and would have nothing to do with her. The woman went away again, put on her old skin, and so death came into the world, for men could thenceforth no longer change their skins when they were old.

Rain came to the earth because Agunua was thirsty. Food, too, was given to man when Agunua gave his twin man-brother a yam and told him to plant it in a big garden. The brother cut the yam, put the pieces in a basket, and began to plant them. The basket never emptied and from the crop came all kinds of yams, bananas, almond trees, coconuts, and fruit trees. Then Agunua gave him fire from his own staff and the man cooked the yams. From the burnt ones came the uneatable fruits, from the unbaked pieces came taro and bananas. Finally the figona bore a male child and then produced a girl who knew how to make fire and cook.

Sacrifices are made to Agunua in the form of shell money and by burning a pudding made of yams and almonds. See *MELANESIAN MYTHOLOGY*.

Ahasuerus (1) A shoemaker of Jerusalem: one of the personalities and names ascribed to the Wandering Jew. Ahasuerus was standing in his doorway to catch a sight of Jesus passing by, weighed down under the cross, on his way to Calvary. Jesus stopped to rest a moment, but the shoemaker in righteous zeal told him to move on. Jesus moved on, but turned to say, "Thou shalt wander without rest until the last day." Ahasuerus followed the crowd and watched the crucifixion. At that moment it

came upon him that he must go forth into all lands. He is said to be perpetually wandering over the face of the earth, repentant and longing for the release of death.

(2) In the *Book of Esther*, king of Persia; husband of Vashti and Esther. He has been identified with Xerxes. Ahasuerus was inclined to be swayed by his passion of the moment, or by whoever had his ear, as did Haman. He commanded Queen Vashti to appear before him and his nobles to show her beauty, but the king was drunk and Vashti refused. He therefore degraded her by making her no longer queen and sought among the virgins of his land for a new queen until he discovered Esther, whom he made queen. By Haman's connivance he ordered a slaughter of the Jews in his realm, and when he learned that the Jews were Esther's people, he reversed his orders.

Ahayuta achi The twin war gods of Zuñi mythology, culture heroes and inventors, hunters, protectors of gamblers, mischief-makers and benefactors, destroyers of monsters, great and adventurous travelers, and lusty rappers. They live inside the mountain and guard the towns, and in this capacity are called the Ones Who Hold The High Places. They are impersonated at the War Society ceremonies and also as kachinas. As kachinas they have to be killed as symbolic of how they themselves learned to be skilful killers. The War Chiefs pray to them at the winter solstice for good crops and long life for the people.

In story they figure usually as two little boys magically begotten by the Sun: sons of the Sun and Waterfall or Dripping Water. They always live with their grandmother, who is usually named Spider Woman. They are always mischievous, always teasing and disobeying the old lady, stealing salt from animals, stealing masks from the kachinas, and always going where the grandmother says not to. This gives rise to many stories of monster slaying, and specifically to the story of their journey to the sky to find their father the Sun.

As culture heroes they gave the people their whole way of life, and designated the directions of the four quarters of the earth. They founded the Curing societies at Zuñi and Sia. The Tewa Twins also made the mountains; among the Hopi they made the water courses, and dug the canyons to drain the water out of the earth that was so soft and muddy before that, that the people sank into it.

As travelers the Twins had many adventures. Masewi (one of them) of Laguna went to the four corners of the world on errands for the underground Mothers. On one escapade the two of them killed the dreaded Chakwena giantess, after Sun revealed to them that the monster kept her heart in her gourd rattle. They always returned triumphant from their journeyings, having killed a monster, saved a village from a man-eating ghost, etc., in justification of their disobedience in going to that place. The Acoma Twins stole the four magic staffs that bring snow, hail, frost, and lightning, from the Direction Chiefs while they were sleeping. When the Chiefs awoke they sent the Water Serpent after the brothers, and in the wake of the Serpent came destroying floods. The people ran up the mountain while the Twins killed the Serpent with arrows of the Sun and saved the village.

The War Twins are prominent through all Pueblo

mythology and folktale. At Zuñi they are the Ahayuta achi, War Brothers, War Twins, little war gods, sons of the Sun; at Taos they are the hayunu, the Stone Men, two brothers; at Tewa they are known as the Towae sendo, Little People; the Hopi call them Pü'ükonghoya, little Smiter, and Pa'lüngahoya; the Keres and Jemez call them Masewi and Uyuyewi. One of them is the Slayer-of-Monsters developed so elaborately in Apache and Navaho mythology. In Hopi story the Twins once kindly turned into stone two little children who had been whipped and had run away from home, with the result that the Hopi now never whip their children. The Twins punish inhospitality the same way. Many tales of the War Twins resemble very closely Taos stories of Echo Boy and the Hopi, Tewa, and Cochiti stories of Ash Boys, Fire Boys, Poker Boys, etc., but the Zuñi Ahayuta achi are not truly identified with any of these.

At Zuñi they are closely associated with lightning and with falling stars and comets. The myth of their search for their father in the sky merges into their identification with the Morning Star. When the Franciscans first told the Christ story in the pueblos the people identified Jesus with these two little boys and leaped to the charming analogy between God the Father and God the Son, and Sun and Morning Star. See TWINS.

Ahi Literally, the snake: another name for Vritra (although sometimes distinct), the cosmic dragon of Vedic mythology, who absorbed the cosmic waters and lay in coils upon the mountains. For this reason he was sometimes called the cloud demon. Indra killed this monster with his thunderbolt, and the precious waters flowed from its riven belly in streams across the land. Sap rose in the trees and warm blood flowed again in human veins. Ahi or Vritra is sometimes otherwise interpreted as the personification of winter (not just the hoarder of rain) whose slaying unlocks the frozen streams.

ahimsā The Indian doctrine of the sanctity of life, originally set forth in one of the *Upāṇishads* about the 7th century B.C.: common to all Indian sects ever since. The Brāhman may deprive no creature of its life, not man, beast, worm, nor ant. He may not even pour out water on the ground lest some aquatic organism perish in the dry sand. Jainism gave the idea first place in its tenets. Ahimsā is the first of the five Jainist ascetic vows, and the true Jainist carries its observance to minute and fanatic extremes. He will not kill body vermin; he sweeps the ground before him so as not to tread or sit on any tiny living thing. He will not eat at night lest inadvertently he swallow a gnat. Early Buddhists would not eat meat or fruit, since both contain worms. But present-day Buddhists do not go beyond reason in their observances or diet. Vegetarianism is widespread but not absolute among them. Discussion still goes on as to whether or not the root and strength of ahimsā is the doctrine of the transmigration of souls. Consensus seems to be pointing towards the negative answer. Decent human reaction against the callous non-concern with life of the early sacrifices gave impetus to the idea throughout much Brāhmanic writing.

Ahl at-trab Supernatural beings inhabiting a world just below the surface of the Sahara desert. In Moslem Tuareg folk belief, these spirits do great damage. They

trip camels and they drink the springs dry just before travelers arrive. They are sometimes seen in the shape of whirling pillars of sand during sandstorms.

Ah Puch The Maya god of death: represented in codices as a skeleton or bloated corpse. He was also known as Hunhau, in which manifestation he presided over Mitnal, the ninth and lowest underworld. The modern Maya believe in Yum Cimil, the modern form, who visits the houses of the sick looking for victims. See MULTIPLE HEAVENS, HELLS. [GMF]

Ahriman Pahlavi name for the principle of evil, Angra Mainyu.

Ahti or Ahto The Finnish god of water, conceived of in the shape of an old man: helpful to fishermen. His wife is Vellamo. The name Ahti is also used as one of the names of the hero Lemminkäinen. [JB]

ahuizotl In ancient Mexican (Aztec) folklore, a strange animal about the size of a dog that lived in the water. It had hands and feet like a monkey and another hand on the tip of its extraordinarily long tail. It lived in deep waters waiting for human beings to come to the edge, then it reached out the long tail with the hand on the end and dragged the unlucky one into the water. In three days the body was cast upon the shore without eyes, teeth, or nails. These were the only things the ahuizotl wanted. No one dared touch the body but a priest, who attended to having it carried to its final place, a small house surrounded by water. This was because the Tlalocs (rain gods) had chosen that soul for paradise. Flute music was played to him and his relatives were told to rejoice because of this choosing.

The ahuizotl had another ruse for catching people. Sometimes he caused frogs and fish to jump around near his hiding place, so that some hapless fisherman would be tempted to approach near enough to cast his net and so be caught. The ahuizotl would sometimes even sit on the bank and cry like a child to deceive passers-by, and then grab them with the hand on the end of his tail when pity made them curious. Once an old woman caught one in a jug, but the priests made her put it back in the water, because it was subject to the rain gods. It was said that if anyone ever saw the ahuizotl and was not either caught or scared to death, he would die soon anyway.

The creature appears often in the elaborate and intricate carvings of the Aztecs, but the hand on the end of the tail is never shown. The tail is always carefully coiled and the tip kept hidden. The conventional sign for water is always present, either on the back of the animal or in the base of the representation. The most famous carving of the ahuizotl yet known was taken to the Royal Ethnological Museum in Berlin.

Ahura Mazda (Pahlavi *Aūharmazd*, Persian *Ormazd* or *Ormuzd*) Literally, Lord Wisdom: in old Iranian mythology, supreme deity: the principle of good, law, and justice. Ahura Mazda is the spirit of wisdom living in eternal, endless light, the opponent of Angra Mainyu who lives in darkness. The six attributes of Ahura Mazda are the Amesha Spentas or Amshaspands: Vohu Manah (benevolence), Asha Vahishta (perfect order), Khshathra Vairya (good, power), Spentā Ārmaiti (devotion, wisdom), Haurvatāt (health, prosperity), Ameretāt (immortality), and Sraosha (obedience) sometimes included as

a seventh to complete the holy number when Ahura Mazda is not included with the group. These were frequently personified but never regarded as distinct persons in the *Gāthās*. In the later *Avesta* they were separated from Ahura Mazda as entities and referred to as gods or archangels who were to aid Ahura Mazda in guiding the world.

Ahura Mazda is constantly regarded as the opponent of Angra Mainyu. According to one myth both sprang from Eternity; according to another, Angra Mainyu was the product of a moment of doubt on the part of Ahura Mazda. Angra Mainyu in the *Gāthās* is pictured as opposing Spentā Mainyu, the Holy Spirit of Ahura Mazda. Later this distinction between the two phases is lost.

In mythology the first man, Gaya Maretan, was born from the sweat of Ahura Mazda who is pictured as a stately, bearded man enclosed in a winged circle, grasping a ring in one hand, the other uplifted as if blessing his followers. He is also depicted as putting on the solid heavens as a garment and covering himself with flames of fire. He has been identified with the Vedic Varuna, Greek Zeus, and Baal Merodach of Babylon. See AMESHA SPENTAS. Compare MARDUK.

Ai apaec The supreme deity of the Mochica people of northern coastal Peru: an anthropomorphized feline god carried over from the ancient cat god of Peru's north coast. He is usually represented in the shape of a wrinkle-faced old man with long fangs and cat whiskers. Many Mochica four-faced pottery vessels, however, verify his anthropomorphic nature in showing the human and feline faces back to back with the god eyes in the cat face. The rich ceramic art of the Mochicas depicts Ai apaec also as farmer, fisherman, hunter, musician, and physician. He presided over human copulation, seeing to it that the act bore fruit. He fought (and always won) against demons, vampires, fish-monsters, dragons, eared serpents. He is depicted also as holding court attended by a lizard for servant and a dog for friend.

Aido Hwedo The great rainbow serpent of Dahomey mythology, who transported Mawu from place to place as she went around creating the universe. Every morning in whatever place they spent the night mountains stood: the piles of excrement left by Aido Hwedo. When the world was finished, they realized that too many things were too big; the earth was too heavy; it was going to topple. So Mawu besought Aido Hwedo to coil himself and lie beneath the earth to bear its weight. Then because Aido Hwedo cannot bear the heat, she caused the sea to be around him for his dwelling place. If he gets uncomfortable and shifts a little, there is an earthquake. As soon as his diet of iron bars under the sea is depleted, Aido Hwedo will begin to swallow his own tail, and on that day the world will fall into the sea.

The rainbow serpent, Aido Wedo, survives in both Surinam and Haitian vodun belief, ritual, and songs of invocation. In Haiti great care is taken never to arouse the jealousy of this deity. When a young couple wish to get married, if either of them is a devotee of Aido Wedo, he or she makes special offerings to allay whatever jealousy or resentment the god might harbor. Parents and relatives also must "instruct" Aido Wedo not to harm or trouble the newlyweds.

Aigamuxa (singular *Aigamuxab*) In Hottentot mythology, a fabulous people with eyes in the back of their

feet: comparable to the ogres of European folklore. They eat human beings, ripping them apart with their extraordinarily long teeth. Jackal, the Hottentot trickster, found out where they kept their eyes, strewed tobacco dust where it would get into them, and thus escaped. Most of the Aigamuxa stories resemble ogre stories elsewhere, containing many of the familiar ruses by which clever victims escape the savage but stupid ogres.

A'ikren In the Karok Indian language, he who dwells above: in Karok mythology, the Duck Hawk who lives on top of Sugarloaf Mountain and is guardian spirit to the village of Katimin. It was A'ikren who came to comfort the two maidens weeping for the death of their lovers. He led them through the thick brush to that place where the two youths were; and there the two girls saw their lovers stepping around before the deerskin dance just as they used to do. A'ikren left them there for a year but it seemed like only a day to them. The maidens did not want to go back, but the people gave them a portion of the salmon backbone meat of that place, and showed them how to smear the mouths of the dead with it to revive them. When they returned to earth they showed the people this mystery, so that there was no more death among them for a time. But finally the salmon backbone meat gave out and now people die among the Karoks from time to time. But they do not grieve for their dead as they used to do, because of the knowledge revealed to the two maidens by A'ikren: how the people are dancing in that place just as they used to do on earth.

Ailill mac Matach In Old Irish legend, king of Connacht; husband of Medb; father of Findabair and the seven Manes. He emerges in the *Táin Bó Cuailgne* as the henpecked husband of Medb, who, however, praised him in the famous pillow-talk anecdote for being brave, without fear, without avarice, not churlish, and second to none in bounty. The pillow-talk quarrel ends with Ailill still stubbornly declaring that Medb has *not* more possessions than himself. In the *Táin Bó Fraeche* Ailill's role is that of the wily king and stern father who opposed the marriage of Findabair with Fraech to the point of tricking Fraech to his death, relenting only at the end of the story, when the restored Fraech promised to aid Connacht in the War for the Brown Bull.

Aíne In Old Irish mythology, a woman of the *síde* (*ban síde*) of Munster, daughter of Owel, foster son of Manannán and a druid. The ancient story that she was ravished by a king of Munster, whom she killed with magic, survived into the 14th century legend of the fairy Aíne and a mortal lover to whom she bore a famous son, Gerald, 4th Earl of Desmond. This Earl Gerald lives today deep in the waters of Loch Gur, reappearing every seven years to ride around the edge of it on a shining white horse. Munster families still claim descent from him. Knockainy, near Loch Gur in Munster, is literally *Cnoc Aíne*, the hill of Aíne. Reminiscent of Aíne in the role of minor earth goddess, associated with love, desire, and fertility, are local tales of how once she planted that whole hill with peas in one night. She is still associated with the fertility observances on the hill on Midsummer Eve. See CELTIC FOLKLORE.

Airāvata In Hindu mythology, Indra's elephant: guardian of one of the points of the compass. According

to the *Mātangaḷilā*, after the sun-bird, Garuda, came into existence, Brahmā sang seven holy melodies over the two halves of the eggshell which he held in his hands. The first divine elephant to emerge from the shell in his right hand was Airāvata. He was followed by seven more males and then by eight females which emerged from the other half of the shell which Brahmā held in his left hand. These 16 became the ancestors of all elephants and the caryatids of the universe, supporting the world at the four cardinal points and the four intermediate points.

According to the *Mahābhārata*, Airāvata, a milk-white elephant, arose from the Churning of the Ocean. The original elephants and their offspring had wings and roamed the sky, until they were cursed by an ascetic whose class they interrupted by settling on the limb of a tree under which he was teaching. From that time on they were doomed to remain on the ground and serve men. White elephants today are believed to be endowed with the magic virtue of producing clouds.

aire Literally, air. Fear of air as a cause of illness is general in Middle America. Evil spirits, unseen, may travel through the air, particularly cold air, and if it is inhaled a person may become sick. Hence, the stereotyped picture of the Mexican Indian on a frosty morning with his blanket drawn up to cover his mouth and nose. [GMF]

Airi In Indian folklore, a bhut of the hills: the ghost of a man killed in hunting, who travels about with a pack of hounds. To meet the Airi presages death. His saliva is so venomous that it wounds anyone on whom it falls. If a man sees an Airi face to face, he will die of fright, but, if he is fortunate enough to survive, he will be shown hidden treasures. Temples to the Airi are placed in solitary regions and he is worshipped for two weeks in the month of Chait (March–April).

Aïssâoua or **Aisāwa** An ecstatic frenzied dance of the Aisāwa (a Mohammedan saintly confraternity) of Biskra, Algeria. It is characterized by superhuman feats of whirling and self-mutilation on the part of the dervishes: cutting the flesh with knives, eating live coals, and other manifestations of the subjugation of the body and "loss of self" in religious ecstasy. [GPK]

Aitvaras The house spirit, in the shape of a flying dragon, of Lithuanian folk belief and legend. He was first mentioned in 1547 and is common throughout the country still today. He brings to his master stolen goods, mostly corn, milk, and coins, and when flying appears all fiery tail. In the house he is like a cock. He can be bought, or brooded from the eggs of a seven-year-old cock. Occasionally, he is just found, and because unrecognized, brought home, or he may be obtained from the devil for the price of one's soul. He must be fed with omelet, and once in the house it is difficult to drive him away. Nevertheless, it is possible to slay him. A young bride, says a well-known legend, who was obliged to grind grain with a hand-mill, found that the basket was always full. Following clever advice, she discovered by the light of a sacred candle a cock vomiting the grains, and she killed him. The mistress of the house became very sad because this "cock" was the cause of all her wealth. The origin and meaning of the word *aitvaras* is unexplained. See AJATAR; PUK. [JB]

aiza One of the most important spirits of Dahomey religion: protector of groups. Aiza differ in kind but never in function; every sib, village, region, compound, and market place has its aiza or guardian spirit and his mound or shrine; and aiza mounds stand also at many important crossroads. The sib aiza is believed to be the spirit of the founder of the sib, and his bones are buried in the mound. To'aiza, protector of a village or region, is the spirit of the founder of that place; xwe'aiza is the spirit of a compound; ax'aiza, of the market place.

Every aiza mound is built over certain specific objects to insure a specific guardianship. For the establishment of an important sib aiza, for instance, sometimes the king permits the sacrifice of one man and one woman, since it is the men and women of the sib the aiza is to protect; for a regional aiza, two men and two women are sacrificed, indicative of a larger group to be protected. A market aiza must be built with the earth from seven well-known markets, and buried in it must be a fragment of each thing bartered or sold in that place: food, crops, cloth, metal, animals, and formerly slaves. The human sacrifices for the establishment of a new market aiza, are sometimes of great number, for the market is a royal institution in Dahomey, and they are believed to be sacrificed for the king himself.

Prayers are made to the ax'aiza for good business and offerings of thanks for good business follow; verbal complaint or abuse and no offerings are given in return for bad business or no business. The mother of twins must bring them to market and "show" them to the ax'aiza with offerings, that they may be recognized as members of the group, and that she herself may become pregnant again. Various cult initiates also are taken to the market shrine when they come out of their prolonged training in the cult house.

Ajatar or Ajattara The dragon; an evil female spirit of the woods who suckles snakes and produces diseases; the Devil of the Woods of Finnish folklore. In southern Estonia she is Äi or Äijo or Äijätär, the mother or daughter of the devil. The word is used also as a curse. She is probably a borrowing from the Lithuanian (see *AITVARAS*). Any explanation connecting these two Finnish words with the Persian or Turkish ones is not convincing (see *FUF* XII, 1912, pp. 150-153). [JB]

Aka-Kanet, Akakanet, or Algue In the mythology of the Araucanian Indians of Chile, the power or deity enthroned in the Pleiades who sends fruits and flowers to the earth. Aka-Kanet is similar to Guecubu, the author of evil, perhaps the same deity in a dualistic system.

akalo Sa'a and Ulawa (Solomon Islands) friendly ghost of the dead; also, the soul of a living man. Every person becomes an akalo when he dies and as such is invoked by his own people. The ghosts of chiefs, valiant fighting men, and men who have spiritual power, however, become li'oa. The living catch the ghost of a dead man with a miniature rod and put it into a relic case in a corner of the house which contains the skull, jawbone, tooth, or lock of hair of the deceased. Offerings are placed in these cases when someone is ill and at the first-fruit offering of the yam harvest.

akbi'aruscariča Literally, woman impersonator: a term applied to the clowns of the Crow Indians. They are not organized and not ceremonial, despite certain of

their phallic actions. They use mud for their body paint; their cloth masks are smeared with charcoal. They ride the ugliest horses, with ridiculous caparison. They ridicule anything they wish, and perform ridiculous dances, fall down, pretend to die laughing. One of them, dressed as a pregnant woman, used to simulate copulation with a "male" clown. At times they would introduce merriment into the hot dance. [CPK]

Akhtya Chief of the yatus or sorcerers of Zoroastrianism. [MWS]

akonda Literally, I fight: a gbo or magic charm of the Dahomey people, worn around the upper left arm. It gives the wearer strength for work or conflict. It is a circlet of woven raffia to which are attached tough hairs from the neck of the ram known as agbô. These are included because the ram is a good fighter. As he fastens the akonda on his arm, the wearer must say, "Akonda, when the ram goes to fight, he does not die in his place." (Herskovits *Dahomey* II, 268)

akpoû Literally, near the pocket: a gbo or magic charm of the Dahomey, carried by travelers to protect them against ghosts. It consists of a slender rod of iron dressed in a skirt. It has one flat pointed end, the other having a cuplike opening. The point is painted with black and white stripes, symbolic of the inherent power of the akpoû to repel evil. This power resides in a certain leaf plastered onto the shaft with kaolin under the skirt. Strong drink is fed to the akpoû through the cup-shaped end to excite its functioning powers. The traveler by night carries an akpoû in one hand. If he meets a ghost he extends the akpoû towards it, and the ghost does him no harm. (Herskovits *Dahomey* II, 266)

Aküpāra In Hindu mythology, the tortoise upon which the earth rests.

āl In Armenian belief, one of a group of demons, half-animal, half-human, male or female, shaggy and bristly, who live in watery or damp places or in the corners of the stable or house: familiar figures in Armenian myths and folktales. Formerly the āl was a demon of disease, now it is a demon of childbirth who also steals seven-months children. It is fiery-eyed with snakelike hair, fingernails of brass, iron teeth, and it carries a pair of iron scissors. The āl is believed to blind unborn children and to cause miscarriage. To keep āls away, women are surrounded with iron weapons and instruments. The king of the āls is chained in an abyss and shrieks continually. Sometimes the devs take over the functions of the āls, stealing human children and leaving changelings in their place. In Afghanistan the āl is a woman about twenty years old with long teeth and nails and feet reversed who feeds on corpses, like the Hindu churel.

Aladdin The hero of the story "Aladdin and the Wonderful Lamp" which appears in most collections as a supplementary tale to the *Arabian Nights Entertainments*.

Aladdin, the ne'er-do-well son of a Chinese tailor, was enticed by a magician from Morocco to enter a cave and obtain a lamp. Before descending into the cave Aladdin was given the magician's signet ring to keep him from hurt and fear. Returning with the lamp Aladdin loaded his pockets with the jewels, which he found growing on trees in the cavern. The magician refused to

help him out of the cave, but demanded the lamp. Aladdin would not hand up the lamp, so the magician closed the entrance.

Aladdin, in despair at not being able to get out of his underground prison, chanced to rub the ring given to him by the magician. Immediately the ring's attendant spirit appeared and at Aladdin's request transported him to the earth's surface. He learned the secret of the lamp also by chance (i.e. that rubbing it called up the jinni of the lamp to do the bidding of the possessor of the lamp) and used it henceforth to keep himself and his mother supplied with everything they needed.

Aladdin fell in love with the Sultan's daughter, Lady Badr al-Budur, and won her after meeting (with the aid of the jinni) the excessive demands made by her father, which included building overnight a pavilion containing 24 windows made of precious stones. Meanwhile the Moroccan magician, having discovered that Aladdin had escaped from the cave and was the owner of the lamp, set out to retrieve it. He went up and down the streets crying, "Old lamps for new! who will exchange old lamps for new?" The princess gave him Aladdin's rusty lamp, not knowing its true value. The magician then commanded the jinni of the lamp to transport the pavilion and the princess to Africa. But Aladdin, aided by the jinni of the ring, soon retrieved the lamp through a ruse and killed the magician.

The motifs of a magic object found in an underground room (D845), of a magic wishing lamp (D1470.1.16), as well as of the lamp's loss and recovery and the loss and restoration of the palace (Type 560-568) appear in both Asiatic and European tales. The scene of the magician and Aladdin at the cave, and the transporting of the wazir's son and the princess to Aladdin's house on their wedding night, are believed to be Arabic. The Arabic and several Indian versions also differ from the usual one in that the talisman is recovered by the devices of the hero. In many tales it is obtained from and later recovered by grateful animals. In a Bohemian story the hero saves a dog, cat, and serpent. The father of the serpent gives him an enchanted watch which procures a palace for the hero and the king's daughter as a bride. She, disliking her husband, uses the watch to build herself a palace in the middle of the sea. The dog and cat recover the talisman but drop it into the sea. It is restored by a fish.

Alaghom Naom or Iztat Ix In the mythology of the Tzents of Chiapas, Mexico, the highest of goddesses, responsible for the mental and immaterial part of nature: the mother of wisdom.

alalá A song type of Spanish Galicia, expressing in emotional terms the dreams and longings of farmers, teamsters, herdsmen, mothers rocking their babies, etc., and generally making use of the typical Spanish ballad stanza. The name is derived from the characteristic nonsense syllables found in the early examples of the type.

alan Tinguian (Philippine Islands) spirits, half-human, half-bird, with toes and fingers reversed. They are sometimes mischievous or hostile, but are usually friendly. They are described as hanging, batlike, from trees and as living in the forests. In Tinguian mythology and folktales they appear as the foster mothers of the leading characters and are pictured frequently as living in houses of gold.

Alasita A popular fiesta of the Aymara Indians, held in honor of Ekeko, the good-luck fertility spirit. In Bolivia his image is kept in the people's houses, so that he may preside over all sex activity. Every year the Alasita festival is held in certain places where miniature houses for Ekeko have been built and kept in constant repair. Inside these little houses the people place miniature clay farm animals and implements, household utensils, clothing, etc., as a sign to Ekeko that they desire and need these things all the following year. A market is then pantomimed, during which these tiny objects are bought and sold for potsherds, stones, and other trifles, and given to the children for toys. *Alasita*, an Aymaran word meaning *Buy from me* is constantly uttered by the vendors. Sexual license among the young men and women is a feature. [AM]

albatross A large, web-footed sea bird (genus *Diomedea*) with very long narrow wings and extraordinary powers of flight. Albatrosses are seen great distances from the land, chiefly in the southern oceans and the northern Pacific. Tales about the bird include the belief that it sleeps in the air because its flight appears motionless, and that an albatross hovering about a ship brings continued bad weather. Coleridge's *Ancient Mariner* is based on the more common belief that to kill an albatross brings bad luck.

Alberich In Teutonic legend, the king of the dwarfs who lived in a magnificent subterranean palace studded with gems. Among his possessions were a belt of strength, an invincible sword, the Tarnkappe or cloak of invisibility, and a magic ring. His subjects, the dwarfs, were master craftsmen who produced Odin's ring, Draupnir, Sif's golden hair, and Freya's necklace. They also manufactured the sword Tyrting which fought by itself. In the *Nibelungenlied* Alberich was the guardian of the Nibelung hoard and gave Siegfried a cloak of invisibility and the sword called Balmung.

Alburz The sacred mountain of old Iranian mythology: the first of the mountains, around which the sun and moon revolved. Light shone out from it and light returned into it, but on the mountain itself there was no dark. Mithra's dwelling was upon it, from which he watched the world. Zoroastrian legend holds that all other mountains grew from the root of Alburz. Alburz was the mountain where dread came upon Tahmurath. Here he was overcome, because of fear only, by the demon Angra Mainyu.

alchemy The immature, empirical, and speculative chemistry characterized by the pursuit of the transmutation of base metals into gold, the search for the alkahest and the philosopher's stone. Alchemy developed from a secret science belonging to the goldsmith's craft into a mysterious science dealing with changes in the organic as well as the metallic world. Its history includes three distinct epochs: the Greek and Egyptian period, the Arabic period of the Middle Ages, and the modern period extending from the 16th century to the present.

In legend, alchemy was founded by Thoth (Hermes), by the fallen angels, or was revealed by God to Moses and Aaron. Historically it is believed to have originated in Egypt from where it spread to Greece and Rome and thence to Arabia. By the second century it had assumed a mystical and magical character; gods, patriarchs, and

prophets were pressed into its service, for greatness such as theirs implied a knowledge of all mysteries. Adam, Abraham, and Moses were described as the true authors of alchemistic treatises.

The Arabs carried alchemy to Spain. From there it spread to western Europe through the medium of Latin translations of Arabic-Greek treatises. The fundamental theories of alchemy, developed by the Greeks, were modified and elaborated by the Arabs.

Paracelsus in the 16th century gave alchemy a new goal by suggesting that its object was the preparation of medicines. The discovery in the 20th century of the transmutation of radioactive elements has not produced the gold or silver from base metals sought by the alchemists (except as a laboratory curiosity), but it has made it possible to break down elements or to produce new elements in the laboratory and factory—essentially the goal of the alchemists.

alchera or alcheringa The mythical past or “dream time” of Australian mythology; the ancestral totemic ancestors who lived in that time and established the world and customs as they are now; also, any object associated with the totem: a term used especially by the central Australian Aranda (or Arunta). The Murngin of Arnhem Land refer to the mythical past as Bamum when totemic ancestral spirits, the Wongar, lived. Great Western Desert tribes of West and South Australia called the period Tjukur. The Dieri call their ancestors Muramurra. Other tribes have comparable terms for the mythical past and their totemic ancestors who lived then. See AUSTRALIAN ABORIGINAL MYTHOLOGY. [KL]

Aldebaran (Arabic *Al Dabarān*, the Follower) Originally the name of the Hyades; now the reddish, brightest star, Alpha in the constellation Taurus: the Follower who forever follows the Pleiades. It is also called the Eye of the Bull or the Bull's Eye. The French astronomer, Camille Flammarion, designated it with the Hebrew Aleph and called it God's Eye. One of the most ancient indigenous Arabic names for this star is Al Fanik, the Stallion Camel; another is Al Muhdij, the Female Camel; and the adjacent Hyades were the Little Camels. Aldebaran was worshipped as a bringer of rain by the tribe Misām. The Hindu name, Rohini, Red Deer, is probably from the star's red coloring. Aldebaran, the “Broad Star,” is prayed to by Hopi Indian curers. In astrology Aldebaran is regarded as fortunate, and a portent of wealth for those born under it.

alder A tree or shrub (genus *Alnus*) characterized by short-stalked, roundish leaves and pendulous, reddish catkins: distributed throughout the north temperate zone and along the Andes in South America. In Norse mythology the first man and woman were made from an ash and an alder. In Brythonic mythology the alder was associated with Bran. Gwydion guessed Bran's name at the Battle of the Trees from the alder twigs in his hand: “Bran thou art, by the branch thou bearest”; and the answer to an old Taliesin riddle, “Why is the alder purple?” is, “Because Bran wore purple.” In the Irish Tree Alphabet the letter F (*fearn*) means alder, and in the Old Irish *Song of the Forest Trees* it is described as “the very battlewitch of woods.” In Ireland the felling of an alder was formerly punishable, and is still avoided. It is regarded with such awe probably because when

cut the wood turns from white to red. In the *Odyssey* the alder is one of the three trees of resurrection; and Bran's alder too was a symbol of resurrection. The alder is also one of the ancient Irish trees of divination, used especially for diagnosing diseases.

In Newfoundland an infusion of alder buds is recommended for the itch and for rheumatism; and a salve for burns is made with suet and alder bark. Newfoundlanders also hold that mosquitoes breed in young alder buds.

alectryomancy or electromancy Divination from the actions of a cock in a circle: an ancient practice. Grains were placed on the letters of the alphabet traced within the circle. From the order in which the cock picked up the grains, the required word, name, or message was read.

alekoki One of the first standing hulas or olopa of Hawaii. The Hindu influence is apparent in the fluid gestures of hands, wrists, and elbows, with definite expressive symbolism often identical with the mudras of India. The purpose of these hulas is not erotic, but is intended to refresh the grace of the gods. The alekoki is a women's dance. [GPK]

aleuromancy Divination from flour: an ancient practice still more or less in use. Messages, written on slips of paper, are enclosed in balls of flour paste which are distributed at random after being mixed together. One of the epithets of Apollo was Aleuromantes. A modern variant may be found in the “fortune cakes” of the metropolitan Chinese restaurants.

Alexander the Great Alexander III (356–323 B.C.), son of Philip I of Macedon, conqueror of the world from the Nile to the Indus, is the great king-hero of the world. Like all folk heroes from Sargon and Gilgamesh to Paul Bunyan and King Arthur, the Alexander of legend has drawn to himself tales and incidents originally quite independent of actual historical fact, the whole building into one of the great epic structures; in fact, however, Alexander's historical career is more amazing than any of the apocryphal stories about him. An intelligent youth, tutored by none other than Aristotle, Alexander ascended the throne at 20; by magnificent strategy and military tactics, he conquered first the West and then the East; and he was dead at 33.

He claimed descent from Hercules on his father's side, and from Æacus on his mother's. This is confused with his reputedly being the son of Zeus Ammon; Alexander, who fostered the popular belief in his divinity, made it a point to undertake a hazardous expedition to Ammon's temple in the desert when he was in Egypt. His mother, Olympias, was a devotee of the Dionysian mysteries, and thus arose the legend that Alexander was the son of a snake. It is said that the strained relations between Olympias and Philip began when the king found a snake in his wife's bed. A sophisticated version of the story claims the Egyptian magician king Nectanebus as Alexander's father. This Nectanebus had ruled Egypt, protecting his kingdom by means of wax figures of his enemies' forces, which he destroyed at need. Driven from Egypt, he set up as astrologer in Macedonia, and to him came the queen seeking information about an heir to the throne. Nectanebus told her to prepare for a visit from Zeus Ammon, donned a dragon costume to make

the nocturnal call himself, and thus sired the future conqueror. Philip, who could count, is said to have been suspicious of these events, and Nectanebus once more dressed as a dragon to allay the king's fears. He came to his end at the hands of Alexander. Once, as he explained astrology to the 12-year-old Alexander, Nectanebus was pushed into a pit, the youth at the same time demanding whether he had foreseen the event in the stars. Several other versions of the progenitors of Alexander are known: the Persians, for example, make him the son of Darius, whom he in fact conquered.

The legendary career of Alexander is filled with hundreds of familiar incidents of folklore. The taming of his black horse Bucephalus by leading him towards the sun when he alone recognized the animal's fear of its own shadow; the meeting with Diogenes, the acid-tongued philosopher, who asked the king of all the world to stand out of his light; the forcing of an involuntary, yet auspicious "Thou art invincible" from the Pythoness at Delphi are familiar anecdotes. Also connected with the Alexander story are the general motifs B552.1, hero carried aloft by two birds (he directed them by means of a bit of liver attached to a spear and held before them), and N135.3.1, he orders a feast, on his dying bed, for those who have not known sorrow, and none come to the feast. This is related to the motif of the cure with the shirt of the happy man (the only happy man that can be found is a beggar with no shirt) or the cure in the house where no death has ever occurred. In Arabic legend, Alexander is a spreader of the True Faith, an iconoclast. He carries a black flag and a white, with which he can make night or day. He wars against the race of Gog and Magog, horrible savage pygmies, and builds a wall of iron and brass to keep them confined. In Arabic legend he is Zu-l-Qarnain, He of the Two Horns, a figure generally conceded to be Alexander, although some say it is a contemporary of Abraham. This horned figure, the horns being those of Jupiter Ammon or of the he-goat or symbolical of the rule of the East and the West, is central in the story of Khidr, the Green One, who became immortal. While Alexander was seeking the Fountain of Life, Khidr, the cook of the expedition (or the king's vizier), went off from the rest of the group to prepare a dried fish for the meal. As he washed the fish in a pool, the fish came to life and swam off. Khidr then drank or bathed in the water and made himself immortal, turning green at the same time. Alexander became jealous when the pool could not be rediscovered and tried to kill the underling. In vain he attempted several methods, and finally threw Khidr into the sea with a stone tied about his neck. Khidr became a sea deity and still lives. This tale appears in a somewhat garbled version in the Koran (*Sura xviii—The Cave*). Familiar to folklore too is the City of Brass Alexander builds in a Persian tale, and so too is his method of obtaining diamonds by tossing meat down into a valley and having eagles carry out the meat with the diamonds adhering to it. In medieval Christian legends, the exploits of Alexander in India include battles with gigantic ants and female cannibals, with six-headed giants, with one-legged dwarfs, with horses with human faces, and with dog-faced people. Also in Christian legend, Alexander tries to storm Paradise, but fails. In a Jewish story, Alexander reaches Paradise and is there instructed in the futility of human endeavor: the eye tries to take

in all the universe and yet may be covered by a little bit of earth.

Stories of Alexander are found among nearly all the peoples from India to the Atlantic Ocean. Most of these stem from the *Secretum Secretorum*, a collection of writings said to have been sent from Aristotle to Alexander after the teacher became too old to travel with his pupil. It is here that the famous story of Alexander and the poison damsel appears. This work, coming from the writings of the pseudo-Callisthenes of the 3rd century A.D., was translated into practically every European language, and was the most widely read book of the Middle Ages. It has left its mark on every one of the European literatures; compare the name Alexandrine for the typical 12-syllabled French verse line, the popularity of Alexander (Sandy) as a Scottish name, etc. Throughout the Moslem world, the legends of Iskander are legion. The story of Alexander is used in the *Shāhnāma* of Firdausi. In the Ethiopic version of the story, the Greek gods become the prophets of the Bible, and Alexander is an ascetic saint. In the Syrian stories, Alexander is a Christian. In Moslem tales, he is one of the four great conquerors, with Nimrod, Solomon, and Nebuchadrezzar. In medieval Christian legend, he is not only Christian, but a believer in the Trinity, and one of the Nine Champions. Popularly, Alexander is one of the kings in the pack of cards. Alexander, in other words, from the time that he influenced the myth of Dionysus, by having that god and culture hero's itinerary extended to include India, down to the present day, has been the greatest of all folklore figures over a wider area than any other comparable personage. Remodeled in the shape of the hero desired by the various peoples who interpreted the legend, he remains today historically and traditionally without a peer.

alfar The elves of Teutonic mythology. The *Prose Edda* divides them into two classes: the Liosálfar, the light elves who live in Alfheim, and the Dökkálfar, the dark elves who live underground. Frey, the sun god, is lord of Alfheim. Wieland the Smith is often thought of as lord of the earth-dwelling ones, the Dökkálfar, because of their confusion with the dwarfs. They are quite distinct from the dwarfs, however. In medieval German legend Ælfrich or Alberich became king of the elves.

The alfar possess great supernatural powers and are often associated with the gods as aids and allies against their enemies. Especially are they associated with Thor and with Holde. Intimations of belief in their divinity are seen in the fact that in earliest times a bull was sometimes sacrificed for them, his blood let flow upon the elf-hill, and his flesh prepared for their feasting. See SVARTALFAR.

alferez In the modern Andean Indian and mestizo communities of Ecuador, Peru, and Bolivia, a person who assumes the financial responsibility for the religious feasts and ceremonies for one year. This heavy burden is taken on only by the wealthiest individuals and they are assisted by relatives and friends. As a symbol of his function the alferez carries a flag, hence his title, which in Spanish means *flag-bearer*. [AM]

Algol A bright white star, Beta in the constellation Perseus: called the Demon, or the Demon Star, from the Arabian Rās al Ghul, the Demon's Head. It was interpreted by Hipparchus and Pliny as the head of Medusa

hanging from the belt of the hero. Ptolemy called it "the bright one of those in the Gorgon's head." The ancient Hebrews knew it first as Rōsh ha Sātān, Satan's Head, later as Lilith, Adam's first wife, who has developed into a nocturnal evil spirit. The dark star that revolves around it, periodically dimming its brilliance, lends it the illusion of a baleful winking eye, and gives it the alternate name of Blinking Demon. In astrology Algol has always been interpreted as an evil star and a danger to any one born under it.

Ali Baba A poor wood-gatherer, hero of the story, "Ali Baba and the Forty Thieves," which appears as a supplementary tale to the *Arabian Nights Entertainments*.

Ali Baba, while gathering firewood, saw a band of horsemen stop near a large rock and unload their booty-filled saddlebags. Their leader approached the rock and said, "Open, O Simsim!" and a wide doorway appeared in the rock. After the men had entered, the door closed. Finally the bandits emerged and the leader said, "Shut, O Simsim!" and the door closed. After the men had departed, Ali Baba said the same words. The cave opened; and he discovered on entering a store of silks, brocades, carpets, and heaps of gold and silver coins. He loaded his asses with sacks of gold and returned to town. When Ali Baba's brother, Kasim, discovered Ali Baba's wealth (a gold piece had stuck to wax Kasim's wife hid in the scales that Ali Baba borrowed), he demanded to know where the wood dealer had obtained it, and threatened to report him to the Governor if he would not tell. So Ali Baba was forced to tell and immediately Kasim set out with ten mules. He found the rock and entered. After collecting enough gold and jewels to load his ten mules, he discovered that he had forgotten the words necessary to open the door.

When the robbers returned the next morning, Kasim ran out hoping to escape, but they seized and killed him, and hung his body on the inside of the door. There Ali Baba found it in his search for his missing brother.

After the disappearance of Kasim's body, the bandits realized that someone else knew the secret of the cave. They were able to trace Ali Baba and to enter his house through a ruse. The bandit captain posed as an oil merchant and asked to store his oil jars in the shed. In all the jars but one were hidden the robbers waiting for a signal to appear and kill Ali Baba.

The servant, Morgiana, needing oil to finish her work after the household had retired, went out to the jars. One of the men, hearing footsteps, whispered, "Is it now time for us to come forth?" Morgiana was frightened but replied, "Not yet." Surmising that these must be robbers, she filled a caldron with the oil from the single jar, boiled it, and poured it over the thieves, scalding them to death. In gratitude Ali Baba married Morgiana to his nephew.

The motif of the thieves hidden in oil casks (K 312) is found also in Indian, Arabian, Ekoi (African), Estonian, and Finnish stories. In the *Mabinogion*, warriors were concealed in leather sacks hung on pillars in the great house built for Bran when he crossed to Ireland to rescue Branwen. Other familiar motifs in the story are scales borrowed (J1141.6), mountain or rocks open to magic formula, or Open Sesame (D1552.2; N455.3), underground treasure chamber (F721.4), the marked culprit (K415).

alimagba Literally, road not crooked: a gbo or magic charm of the Dahomey people, worn to insure safety on a journey. It is a small carved figure made in the shape of a man, because it is safer for two to journey than for one to travel alone. It is infused with the power to protect by being washed with water containing certain leaves and by having the blood of a newly killed cock poured over it. It is worn on the belt by travelers. The verbal formula associated with alimagba reiterates that this place, that place is not crooked. (Herskovits *Dahomey* II, 280.) Compare AKPOU.

Aljoša Popović A Russian historical personage figuring in several byliny of the cycle of Vladimir: the unsuccessful aspirer to the hand of the absent Dobrynja's wife; conqueror of the dragon-hero Tugarin (thought to be Tugorhan, an 11th century chief of the Polovcy). He was one of seventy heroes who died at the battle of Kalka, 1224. See DOBRYNJA AND ALJOŠA.

Allah The name for God among Moslems, analogous to the Hebrew Jahweh. The pre-Mohammedan Arabic god Hobal had as his title Al-lahu, meaning "the god," related to the general Semitic term for god, El. As the patron of the Kaaba at Mecca, already supreme, he was maintained in Mohammedan theology as the one god; the others were banished to the realm of the demons. However, the Mohammedan Allah resembles the established monotheistic gods Jahweh and Ahura Mazda much more than he does the primitive Al-lahu. What Mohammed did was to codify, simplify, and establish Allah to his unassailable position. Mohammed's concern was to abolish all gods but Allah, establish his unity, and discourage the perversion of his attributes or "titles" into lesser deities. Mohammed's message was, "There exists no god except the one whom you already call Allah." Allah may be invoked by many titles—99 to be exact—but only by those authorized in the Koran or by Mohammed himself. Allah also has a secret name, the *Ism al-A'zam*, the "exalted name," said by some to be revealed in the Koran and by others to be known only to saints. Whoever calls upon Allah by this name will realize his dearest hopes. Hence dervishes spend protracted hours seeking it, and many a prospect is lured into joining dervish orders with the hope of discovering it.

all eight balance and all eight swing An American square dance term. Partners face each other and balance by taking four short steps backward and four forward; or they may balance by taking one step sidewise, bringing the feet together first to the right and then to the left, and repeating the same (eight counts). Very skilful dancers sometimes cut a pigeon wing, especially if the balance is followed by a swing. After the balance the gentleman swings his partner (four or eight counts). [GPK]

Allerleirauh Literally, of different kinds of fur: title and heroine of a well-known German version (Grimm #65) of the Catskin story. See CAP O' RUSHES; CINDERELLA.

All Fools' Day or April Fool's Day April 1: the day on which practical jokes of the salt-in-the-sugarbowl type are commonly practiced. Especially typical is the sending of people on fool's errands. The day is widely celebrated but of obscure origin. The alleged beginnings include the fruitless mission of the dove sent out

from the ark by Noah, the adoption of the Gregorian calendar, the Roman feast of Cerealia, the Indian festival of the Huli, the celebration of the vernal equinox, or the uncertainty of the weather at that time of year. Whatever its origin, the celebration of the day came into common custom in the 18th century in England. In Scotland it is called hunting the gowk (cuckoo). In France the person fooled is a *poisson d'avril*. The fooling includes "sleeveless" errands, April Fool candy, rubber mice, the pocketbook on a string, to fool the unsuspecting.

In Mexico All Fools' Day falls on December 28 and centers around the borrowing of objects, if any person is foolish enough to lend, since items borrowed on that day need not be returned. A box of sweets or miniature objects, usually with a poem reminding the lender that he has been fooled, are sent instead. The day is popular in Italy, Spain, Portugal, Sweden, Germany, and Norway. In the latter two it is celebrated on the first and last days of April.

allheal Any of a number of medicinal herbs, referred to also as heal-all in folk medicine. These names are given especially to valerian, self-heal, mistletoe, woundwort, and yarrow.

alligator A large reptile (order *Crocodylia*) found only in the southern United States and in the Yangtze River, China. It has a shorter, blunter snout than the crocodile, and is further differentiated by the fact that its lower molars clamp into pits in the upper, instead of into marginal notches. The reports of early travelers in this country constitute a mine of astonishing misinformation about alligators which might be classified as a whole folklore in itself. The alligator is soundless, for instance, or he roars habitually; he roars only in the spring; he makes a "hideous Noise against bad weather." Seeds from trees fall into the small crevices between his scales, germinate therein during his hibernation in the mud, and sprout in the spring, so that the alligator often resembles a small, wooded, swimming island. William Bartram's *Travels* (1791) describe the alligator thus: "Waters like a cataract descend from his opening jaws. Clouds of smoke issue from his nostrils. The earth trembles with his thunder."

Like the crocodile, the alligator is the object of dread or reverence, propitiation, and worship in those regions where it is found, and plays an important role in folk belief, folktale, and "conjure." An important god of the Chiriqui Indians of Panama is depicted in their ceramic and stone art with human body and legs and alligator head, or sometimes with human torso and an alligator head at each end. Typical are the bulging eyes of the god, mouth open to show the alligator teeth, and (in metal work) often a wire coil symbolizing the recurved snout. The Guaraní Indians of Paraguay have an alligator ferryman who carries souls to the afterworld. In these instances the reference is probably to the closely allied native caiman.

North American Choctaw Indians, especially the river tribes, also venerated the alligator and never killed it. The Chickasaw Indians have an alligator dance (*hat-cûntcûba' hila'*) a night dance with three songs. A Creek Indian folktale tells how Eagle pounced down and broke Alligator's nose in a ball game, Alligator opened his mouth, Turkey grabbed the ball out of it, and the birds won the game. Alligator retains a dent on his nose to

this day. An Alabama Indian story, *Rabbit Fools Alligator*, tells how Rabbit, the trickster, tricks Alligator into a field of dry grass and sets fire to it. Another Alabama Indian tale, *Benevolent Alligator*, narrates how Alligator grants a certain man two wishes in gratitude for being carried on the man's back and put in the water.

South Carolina Negro folktale attributes Alligator's scaly skin to his being trapped in a fire by Brer Rabbit. This is almost a direct retelling of a Rhodesian Negro crocodile story. It would be interesting to know if the Alabama Indian tale, *Rabbit Fools Alligator*, is of Negro provenience. An Alabama Negro folktale describes how Rabbit, wishing to cross a swamp, induced Alligator to line up his whole family, "one by one across the swamp," to be counted. On the pretext of counting, Rabbit walked across the swamp on their backs, but the last alligator bit his tail off. This same story is told of the Indonesian crocodile with mousedeer as trickster, and in Japan with the monkey as trickster. A Louisiana story explains why Alligator has no tongue. Alligator, who once could whistle, talk, and bark "just like a dog do now," loaned his tongue to Dog, who wanted to make an impression at a party. But Dog never returned the tongue to Alligator, and that is why Alligator goes for any dog that comes to the bank of the river. Gullah Negroes believe that when the alligator roars he is calling for rain and that rain will come.

alligator teeth In many folklores alligator teeth are believed to be especially efficacious against poison, pain, witches, etc., and are used as potent ingredients in magic and "conjure." Sea Island Negroes will sometimes tie a necklace of alligator teeth around the neck of a teething baby to alleviate the pain. Such a necklace is also a protection against witches. A visiting nocturnal witch, for instance, would have to stop and count every one of the teeth before she could proceed with her evil business, and day would surely come before she counted the last one. In many localities alligator teeth are believed to counteract poison; even the South American Abipon and Mocovi Indians would press a caiman tooth against a snake bite to heal the wound, or wear one (or many) around the neck to avoid being bitten. Alligator teeth are active ingredients also of many a charm, conjure bag, and hoodoo "hand" of southern United States Negroes; they are also known to be an important inclusion in the bags of New Guinea sorcerers.

Allison Gross A popular Scottish ballad (Child #35) in which Allison Gross, the ugliest witch "i the north country" endeavored to seduce a fine young man. Because he repulsed her, she turned him into an ugly worm "to toddle about the tree." But the queen of the fairies, riding by on Hallow-even, broke the spell and changed him back to his "ain proper shape." This is the only known instance, in English or Scottish folklore, of a fairy unspelling the spell of a witch, although numerous ballads are concerned with the spelling and unspelling of evil enchantments.

All Saints, All Saints' Day, All-hallows, or All hallowmas November 1: the festival commemorative of all saints and martyrs known or unknown, introduced by Pope Boniface IV in the 7th century probably to supplant the pagan festival of the dead. Originally it was observed on May 13 but was shifted to the November date by Gregory III and has been retained by the Church

of England and many Lutheran churches. In the Greek Church it is celebrated on the first Sunday after Pentecost. Most folk customs center around Allhallow Even or Halloween. Compare ALL SOULS.

All Souls or All Souls' Day November 2: a day of commemoration in the Roman Catholic Church on which special intercession is made for the souls of the dead in the belief that those not yet purified sufficiently will be aided by the prayers of the living. The day was instituted as a memorial in 998 by Odilo, Abbot of Cluny, after he was told by a pilgrim returning from the Holy Land about an island on which an opening to the infernal regions permitted travelers to hear the groans of the tormented. By the end of the 13th century the day was almost universally observed. During the Reformation it was abolished in the Church of England, but its tradition and customs survived among Continental Protestants.

Essentially, All Souls is the adaptation of an almost world-wide custom of setting aside a part of the year (usually the last part) for the dead. The Babylonians observed a monthly Feast of All Souls in which sacrifices were made by priests. The Greek commemorative feast of All Souls was held on the last day of the Anthesteria; the Romans celebrated theirs during the Parentalia which fell on Feb. 13–21, the end of the Roman year. The Buddhist Feast of the Dead is celebrated on April 15, the date of the death of Buddha and his attainment of Buddhahood. In China and Japan the festival in honor of the dead is known as the Feast of Lanterns.

In many Catholic countries the belief that the dead return on this day is so strong that food is left on the tables (Tyrol, Italy) and people (France, Italy, Germany) still decorate the graves of their dead.

almanacs These compilations of calendar and astronomical data (ephemerides) and miscellaneous information, wit, wisdom, and humor, originating in the 2nd century A.D., have taken a variety of forms, including prophetic, farmer's, Christian, patent-medicine, comic, *World* (statistical and encyclopedic) almanacs. The almanac's first link with folklore consisted of astrology, serving as the basis both of predictions and prognostications and of the doctrine of planetary influences in medicine and surgery. Long after people had ceased to take these superstitions seriously, the Man of the Signs (*homo signorum*), or Moon's Man, or the Anatomy—"a figure of a man surmounted by the twelve Signs of the Zodiac, each referred to some part of his body by means of a connecting line or a pointing dagger"—continued to adorn almanacs as a trademark or colophon.

This outmoded lore, however, was gradually replaced by the practical lore of weather, crops, health, cookery, manners, etc., with medical advice, agricultural hints, and recipes, supplementing the usual almanac data on rising and setting of the sun, phases of the moon, eclipses, tides, storms, and holidays. Out of the miscellaneous useful information on postage rates, values of coinage, courts, roads, post offices, military fines, population of towns and countries, etc., developed the almanac of the fact-book type. In another direction, the entertaining lore of popular poetry, anecdotes, jests, enigmas, riddles, maxims, etc., passed into the comic almanac and the keepsake.

Through interleaved jottings of family and local his-

tory, observations of weather, records of crops, expenditures, etc., the almanac became a valuable source of social history and "folk history." Through the medium of the allegory and proverb (the former seen especially in *The [Old] Farmer's Almanack* of Robert B. Thomas, established in 1793 and still published, and the latter in *Poor Richard's Almanack*, edited by Ben Franklin from 1732 to 1757) the almanac made important contributions to native American humor and proverbial lore.

Continuing in the jest-book tradition, with the addition of the oral tradition of the fireside and campfire yarn, the comic almanac (probably originating in the burlesque of the serious almanac and its prophetic absurdities) was an important link in the development of native American humor of tall talk and tall tale, as notably in the Crockett almanacs (1835–1856).

almond A small tree (*Prunus amygdalus*) native to western Asia, Barbary, and Morocco, but now cultivated widely in the warmer temperate regions.

In the Bible the almond is referred to as the *shaked* or *sheked* meaning "to waken" or "to watch," probably because it is the first tree to flower (January) in Palestine (Jer. i, 11, 12). Aaron's rod (*Num.* xvii, 10) was cut from an almond tree. In the story of Tannhäuser Pope Urban exclaimed after hearing the minnesinger's tale, "Guilt like yours can never be forgiven! Before God himself could pardon you, this staff that I hold would grow green and bloom!" Tannhäuser returned to the Hürselberg. Three days later the Pope's staff suddenly put forth almond flowers and leaves. The Pope sent messengers to search for Tannhäuser but he could not be found.

In Greek legend, Phyllis, daughter of the Thracian king Sithon, fell in love with Demophoön, son of Theus. Demophoön returned to Attica to settle his affairs before the wedding and was delayed so long (according to one story by interest in another maiden) that Phyllis put an end to her life. The gods, as a token of their admiration for her constancy, changed her into an almond tree. When Demophoön finally returned and learned what had happened he fell at the foot of the tree and watered its roots with his tears whereupon it burst into bloom.

In Phrygian cosmogony an almond figured as the father of all things, and in the myth of Attis, Nana conceived him by putting a ripe almond in her bosom, or by eating an almond.

Pliny's *Natural History* states that eating five almonds permits one to drink without experiencing intoxication, but that if foxes eat them they will die unless they find water nearby. In the 16th century pills compounded of almonds, liver, and oil of violet were recommended by Guglielmo Gratarolo to travelers in areas where food and drink were scarce.

The almond is used as a divining rod in Tuscany. Church legend assigns the tree to the Virgin. Moslems regard it as the hope of heaven and use almond paste, mixed with the milk of a mother who has a baby girl, to cure trachoma.

alo Yoruba term for folktales and also for riddles. The more or less general African synonymy of folktales and riddle carries over also into New World Negro dialect and tradition. In the Sea Islands off South Carolina a tale is a riddle, a riddle is a tale. "How you split de diffence between riddle an' story?" said one Sea Island narrator, when questioned. "Dere is singin' in a story." (E. C. Parsons: *Folklore of the Sea Islands*, *MAFLS*, vol. 16, p. xix.) Compare *ITAN*. See *AFRICAN AND NEW WORLD NEGRO FOLKLORE*.

Aloadæ In Greek mythology, the giants Ephialtes and Otus, twin sons of Poseidon and either Iphimedeia or the Earth-Mother, who imprisoned Ares in a bronze pot. When they were nine years old the twins, who measured nine cubits in breadth and nine fathoms in height, threatened to do battle with the Olympian gods, planning to pile Mount Pelion upon Mount Olympus and Mount Ossa upon Pelion so that they might reach the heavens. Apollo, however, killed them before they were able to carry out their plan. In the *Iliad* they sought Artemis and Hera in marriage, but Artemis tricked them into killing each other. In some legends the Aloadæ were beneficent beings, founders of cities and rescuers of their mother and sister.

'Alo'alo In the religion of the Tongans of western Polynesia, the god of wind, weather, vegetation, and harvest; son of the sun: the "fanner."

aloes The term as used in the Bible (*Num.* xxiv, 6; *Ps.* xiv, 8; *Prov.* vii, 17; *Cant.* iv, 14; *John* xix, 39) refers to the gum of the *Aloexylon*, *Aquilaria ovata*, and *Aquilaria agallochum* which are not true aloes. Aloes were used medicinally by the Romans. They were used in the Middle Ages in suffumigations and magic compounds. In the 16th century they were used in medicines. In India aloes are used in the treatment of eye infections, and modern Americans sometimes paint babies' fingers with an extract of aloes to stop finger-sucking or nail-biting. In Egypt an aloe plant is hung over the door of a newly built house to insure long life and success to the occupants and the house. The aloe will live thus for two or three years without water or earth.

alomancy (more properly *halomancy*) An ancient method of divination using salt. From the flames of a fire into which salt has been thrown, the diviner reads the message he seeks. The present-day custom of throwing a pinch of salt from an overturned saltcellar over the left shoulder may be connected with this.

alphabet rimes A mnemonic and usually acrostic device to assist children and other illiterates in learning letters of the alphabet. The idea is at least as old as the 119th Psalm, which consists of 22 eight-verse sections corresponding to the 22 letters of the Hebrew alphabet, with every verse in each section beginning with a word whose first letter is, for instance, in section one, "aleph," section two, "beth," and so on. There are several other acrostic alphabets in the Hebrew scriptures (See *Enc. Rel. & Ethics*, vol. I, p. 75) notably in the well-known description of a virtuous woman in *Proverbs* xxxi, 10-31, in memorizing which the Jewish girl learned both virtue and the alphabet.

Chaucer's "*A. B. C.*" (c. 1375), a poem in honor of the Virgin Mary, is the oldest extant alphabet rime in English, but it was taken from a French original, *Pèlerinage*

de la vie humaine, by Guillaume de Deguillville, written a half-century before.

Two very old alphabet rimes are still repeated by children today. The popular Tom Thumb's Alphabet contains the lines:

A was an Archer, who shot at a frog;
B was a Butcher, who had a great dog; . . .
I was an Innkeeper, who loved to bouse;
J was a Joiner, who built up a house; . .

Here the age of the rime is betrayed by the riming of "bouse" with "house," whereas we now pronounce and even spell it "booze." Later in the alphabet the use of Tinker, Usurer, and Vintner, to say nothing of "Zany, a poor harmless fool," confirm our suspicion that Tom Thumb's Alphabet is at least 300 years old. Perhaps not quite so old, but of respectable age and well worn by use is the Apple-pie Alphabet, beginning:

A was an Apple-pie.
B Bit it.
C Cut it.
D Dealt it.
E Eat it. . .

The use of "eat" (pron. ett) instead of "ate" for the past tense goes back to colonial days in New England, where they were then using in learning their "A. B. abs" another more pious rime from the *New England Primer* which began with:

In Adam's fall
We sinned All,

and ended with:

Zaccheus he
Climb up a tree
His Lord to see.

(And don't let anyone tell you it should be "Did climb a tree" with a long i in climb. It is *short* i for the past tense, for I got it by oral tradition through 12 generations from Elizabethan England.)

The "Peter Piper" who "Pick'd a Peck of Pickl'd Peppers" is the sole stanza now known to our children from a merry alphabet rime popular in England and America in the early 18th century, beginning:

"Andrew Airpump Ask'd his Aunt her Ailment," and running through such exciting adventures as that of "Matthew Mendlegs" who "Miss'd a Mangl'd Monkey," and "Needy Noodle" who "Nipp'd a Naybour's Nutmegs."

In 1833 Thackeray composed and illustrated one of these alphabet rimes for "Little Eddy" who until he died in 1915 at the age of 86 could still recite the whole poem beginning:

Great A; it is an Animal & called an Alligator.
Its countenance will shew you, that it's of a cruel Natur.

But Col. Edw. Fred'k Chadwick preferred to say the P:

P is a Pimple—'tis a thing which grows
Sometimes upon a luckless Parson's nose.
(*The Thackeray Alphabet*, Harper, 1930.)

Contemporary with Thackeray was Edward Lear, who composed for another little Eddy, who became the 15th Earl of Derby, some of the world's most famous children's rimes, including many alphabet verses. With Lear, A was sometimes an Ape who stole some white tape, or an Ant who seldom stood still, or even an "Absolutely

Abstemious Ass." (*The Complete Nonsense Book*, Dodd Mead, 1934.)

Of the flood of modern alphabet rimes the most interesting are the ones in Lois Lenski's *Alphabet People*, (Harper, 1928) where occupations are featured, as:

A for Artist in a smock
With brushes, paints galore;
She hangs her paintings on the wall
And then she paints some more.

With these I place the clever *The Jaw-Breaker's Alphabet* by Eunice and Janet Tietjens (A. & C. Boni, 1930) with its intriguing:

A's for Archaeopteryx
Of whom perhaps you've heard,
The up-and-coming reptile
Who first became a bird.

Nor can we well omit "A Moral Alphabet" in Hilaire Belloc's *Cautionary Verses* (A. A. Knopf, 1941) where:

A stands for Archibald who told no lies
And got this lovely volume for a prize.

CHARLES FRANCIS POTTER

Alphabet Song An occupational song of sailors, giving the names of the parts of a ship in abecedarian order, and forming a sort of catechism for the greenhorn. This is an example of an ancient type of song outlining facts or principles to be memorized, a similar one being sung by woodmen of the northeastern United States to the same air, cataloging the tools and tricks of the logger's trade.

alphorn A long wooden trumpet, four to 12 feet long, used in the Alps for centuries to call herds, for signal over long distances, and for sunset rites. The pitch is controlled by lips and breath, rather than by stops, and the few traditional tunes, also sung as *kuhreihen* or *ranz des vaches*, show signs of archaism. The word *lobe* used in some of the songs is of magical significance and probably imitative. The tone is strong, audible for miles, and is believed to prolong the light of day when twilight draws on. The period of dusk was thought to be dangerous for men and herds, and the sounding of the alphorn, or imitation of its tone with the voice, was protection against the dangers of transition. In some areas Christianity has added the singing of the evening prayer as the instrument sounds. Similar sunset practices are observed in Norway, Poland, Rumania, India, South America, and Australia.

alraun The German name for the mandrake root or for a similar root such as that of bryony used in magic as a substitute. Small good-luck images shaped from these roots are also alrauns; and so is the helpful elf or goblin associated with both. This goblin was one foot high, was kept in a cupboard, and fed on milk and biscuit.

Alsirat, al-Sirāt, or Al Sirat In Moslem religion and legend, the bridge and only way to paradise over the abyss of hell. It is sharper than a sword, narrower than a spider's thread, and beset on either side by briars and hooked thorns. The good traverse it with ease and swiftness; the wicked miss their footing and fall into hell. In later Moslem eschatology the bridge is described as the length of a journey of 3000 years. The righteous pass over it quickly, but less perfect Moslems take longer to

traverse it, the length of time required depending upon the degree of sin committed. In the Koran, it is the narrow path or correct way of religion.

Altjira In the religion and mythology of the Arunta of Australia, the sky-dweller or All-Father who is generally considered to be indifferent to mankind.

alum In modern Egypt, a charm against the evil eye. A piece about the size of a walnut is placed upon burning coals and left until it has ceased to bubble while the first and last three chapters of the Koran are repeated three times. When the alum is removed from the fire it will have assumed the shape of the person whose malice is feared. It is then pounded and mixed in food fed to a black dog. A piece of alum ornamented with tassels is sometimes attached to a child's cap as a protective amulet.

Negroes of the southern United States use alum to stop bleeding, to cure blindness, and to cure chickens of cholera. Used with bluestone it is believed to cure gonorrhea; boiled with poke root and salt it is used as a liniment for rheumatism. Sucking a ball of alum is believed to be effective in preventing harm from conjuration.

Alviss Literally, All-Wise: in the lay of Alviss in the *Elder Edda*, the underground dwarf who sued for the hand of Thrud, Thor's daughter. Thor was against the match, but said he would not refuse his daughter if Alviss could answer certain questions. Alviss, just having run through nine worlds, thought he would know all the answers and consented to answer the questions. So Thor put his 13 questions: what is the name of the world, the sky, the moon, sun, clouds, wind, calm, fire, sea, trees, night, wheat, beer, in all the worlds of the aesir, vanir, giants, elves, and gods. Alviss knew all this and easily answered. Then Thor revealed his trick: the questions and answers had occupied the night; the sun was already in the room; Alviss had to hurry off with the light of day or be petrified. This is one of the oldest of the world's riddling suitor-test stories, except in this case the successful riddler did not get the girl.

Amadán Literally, fool: the fool of the side, or the fairy fool of Irish folklore, whose touch is incurable. Those whom he touches forever after have a crooked jaw or twisted face (facial paralysis) or suffer crippling injury, or else die soon. For this reason the amadán is also often called the *stroke lad*. June is the time one is most in danger from him; June is the month when the Fool is most apt to give his stroke. Lady Gregory says "If you don't say 'The Lord between us and harm' when you meet him, you are done for, forever and always." A young girl who passed by his castle (*bruidean*) one night was crippled forever after. But it is equally well known that he often punishes wrong deeds with his stroke, for once he struck a miser who was mending shoes on Sunday. Amadán Mór is the Great Fool of the fairy host of Irish folktale and poetry. Amadán na bruidne, the fool of the fairy mounds or fairy palaces, is greatly feared.

Amaethon or Amathaon In Brythonic mythology, a son of Dôn mentioned in *Kilhwch and Olwen*, which tells the story of the field impossible to till, tilled by Amaethon. His name is basically Cymric *amaeth*, plowman, and for this reason he is often interpreted as an agricultural god or culture hero. This role is further

substantiated by a later story in which he brought back to this world a roebuck and a young dog belonging to Arawn, lord of Annwn, the Otherworld. See *BATTLE OF THE TREES*.

Amala In Tsimshian mythology, the supporter of the world. The world is flat and circular and turns continually on the end of a long pole which Amala supports on his chest. His predecessor was an old chief who lived on an island in the vast southwest sea. The old chief, ill and dying, heard of Amala's supernatural strength and sent for him to take over the task. Amala came, lay down beside the aged chief, and the old man transferred the pole-of-the-world to Amala's chest. Amala still holds the world on his chest, but when he dies the world will end.

This is the final incident in a long story about Amala or Very Dirty (literally the word means 'smoke hole'), involving, in addition to the Atlas motif, both the youngest son and Cinderella themes in varying degree. Amala or Very Dirty was the youngest of a number of brothers. He slept late, took no part in family activities, was ridiculed, named Dirty, thought weak and worthless, but secretly acquired supernatural strength, performed the impossible, such as pulling up trees and saving his relations from their enemies. He then conquered the big animals, the strong trees, the strong birds, and the big mountain, and was chosen to take care of the world. The story partakes of the Cinderella theme in that Amala slept in the ashes, wore only one ragged deerskin, was disregarded or ridiculed by the rest of the household, was unhappy about his lot, received supernatural aid, astounded one and all with his beauty and prowess, and was eventually chosen to fill a superior position.

There are eight variants of this story among the Tsimshian, Nass, Skidegate, Kaigani, Masset, and Tlingit tribes. The earth on the pole idea is limited to the Tsimshians, Tlingits, Skidegates, and Hares. The white man's influence is suspected, but not assumed, by J. R. Swanton, in the turning of the earth upon the pole idea; but no doubts are cast on the originality of Amala's having a big spoonful of grease for the pole to turn in, or his sustaining his own strength for the task with annual anointings of wild-duck oil.

Amalthæa or Amalthea In Greek mythology, the goat who provided milk for the infant Zeus while he was hidden in Crete. One of the horns of Amalthæa, reputedly broken off by Zeus, became the cornucopia or horn of plenty.

Amarāvati In Indian mythology, the capital of Svarga, Indra's Heaven, situated near Mount Meru. The city has a thousand gates, is decked with the fruits of desire (jewels, objects of vanity and pleasure), and adorned by the Apsarases. There is neither heat nor cold, grief nor despondency: to it come those who do penance or sacrifice, and the warriors who fall in battle.

amasiado A popular term for the type of extra-legal mating found among Brazilian Negroes, this word is derived from the verb *amasiar-se*, which is a synonym for *amancebar-se*, this giving the word *amancebido* the more literary designation for this kind of relationship.

The institution it designates is that found in the lower socio-economic strata of all Afroamerican groups whose patterns of family life have been studied from the ethnological point of view. Terms recorded for its coun-

terparts are as follows, the word in each case being that most often encountered, without indication as to whether it refers to the situation itself, or to the participant: arrimao, (arrimado)—Cuba; companyá—Curaçao; plaçage—Haiti; endamada—Honduras (Black Caribs); keepers—Trinidad; commonlaw (verb, to commonlaw)—United States. All these forms are socially sanctioned, even though, for the woman, they carry less prestige than marriage, as mating in accordance with legal formalities is always termed, in contradistinction to them.

To understand the significance of family groupings of this kind, it is essential that the economic and social position of women be taken fully into account, since this has struck all students of the New World Negro family. The woman's primacy, whether as grandmother, mother, or aunt, contrasts strikingly with patterns of the majority groups among whom the Negro lives. She is the focus of the family group, and, where there is no male head, its provider. She wields authority over its members, and is thus characteristically to be termed the significant parent.

This does not mean that matings of this kind are haphazard. They are always distinguished, by verbal symbol, from transient relationships in the same societies. They are entered into with an assumption of permanence, which they obtain to a degree surprising to outsiders. In Brazil, amasiado matings of lifetime duration are not uncommon, and numerous instances of twenty years' duration and upwards have been recorded. In such cases, the place of the father becomes of increasing importance; and even where a couple separate, his relations with his children may continue warm, and he will in many instances contribute to their support.

This institution is to be referred to the dominant family form of those parts of Africa from which New World Negroes were derived. The nucleus of this system is the woman's hut within the polygynous compound, headed by the common husband, who lives in his own hut where his wives cohabit with him in turn. The continuation of the polygynous household, like that of the wider social groupings of extended family and sib, all male-dominated, was rendered impossible by circumstances of slavery in the New World. This left the nuclear woman-dominated group as the one on which the Negroes could build, since in it were retained not only a traditional form, but the emotional focus that it manifested in Africa.

This would also explain why, though a deviant from legally sanctioned norms, this New World family type is in no way to be considered as an index of the demoralization of those societies where it is formed. No stigma attaches to children born of matings of this sort, nor to those party to it. It is thus to be considered as a mode of adjustment and as a means by which social stability has been retained despite the difficulties of life experienced by Negroes in adjusting to slavery and to various post-slavery regimes.

M. J. HERSKOVITS

Amaterasu Omikami The Japanese Sun Goddess: also called Tensho Daijan in Sino-Japanese pronunciation. See JAPANESE FOLKLORE. [JLM]

Ama-tsu-mara In the Shinto religion and mythology of Japan, the cyclopean blacksmith god who, with Ishi-Kori-dome, made the solar mirror which was used in enticing Amaterasu out of the cave in which she had taken refuge.

Amazon In Greek mythology, one of a race of female warriors who lived on the north coast of Asia Minor with their capital, according to Herodotus, at Themiscyra. From there they invaded at various times Thrace, the islands of the Aegean, Greece, Syria, Arabia, Egypt, and Libya. The Amazons were ruled by a queen. To prevent their race from dying out once a year they visited the neighboring Gargareans. Their girl children were brought up and trained in the pursuits of war, riding, hunting, and agriculture. According to some, each girl had her right breast cut off in order to handle arms more freely, from which custom arose the common ancient derivation of the name "a-mazos," without breast. However, since no work of art shows the Amazons without breasts, other etymologies, none quite satisfactory, have been suggested. The boys were sent to the Gargareans, put to death, blinded, or maimed.

Folktales and myths of women warriors are found among the people of India ("Story of King Vikramāditya," for example, in which the king dreams of the man-hating Princess Malayavati), in Arabia, England, Ireland, and among the Makurap of the upper Guaporé River, Brazil. The Makurap believed that a village not far from their territory, called Arapinjatschäküp, was inhabited only by warlike women who kept men at bay.

The Koniag Eskimos of Kodiak Island have several woman-warrior tales, among them one in which a girl was abandoned by parents who were too poor to feed her. An old man came and told her to drink from the river. When her strength had increased the old man (strength-giver) disappeared and the girl became a huntress. There are four footprints on a certain cape of that region which are said to be hers. Later she went to her family's camping place and outshone her brothers who became jealous. They attempted to trick her, took away her arrows, and left her. She gnawed the flippers of a seal until only the nails were left and then used these to shoot otters. She grew very handsome and finally married. While she was hunting at sea a storm came up, so she cut off her female parts and threw them into the sea, calming the waters. See **HERCULES**.

amber A cloudy or translucent yellowish to brownish fossilized resin of coniferous trees of the Oligocene epoch, found along the coasts of England, of the Baltic Sea, in Sicily, Rumania, Burma, and Yunnan, China. The greatest amber-producing region is in East Prussia.

Amber is second only to the pearl in the antiquity of its use. Strings of rough amber beads were worn even in prehistoric times. The resin was carried down the Elbe and Moldau trade route, through the Rhone valley to the Mediterranean, and to the British Isles. Such trade is believed to have flourished before 2000 B.C. Amber has been found in early Minoan strata in Crete; Homer mentions the flourishing Phœnician amber trade; and Pliny chides Sophocles for his falsehoods concerning it. According to Apollodorus its origin is in poplar trees. The Romans used it for throat infections and to prevent fever.

In Greek legend, amber was a concretion of the tears shed at the death of Meleager by his sisters. In Scandinavian mythology, it was the tears shed by Freya when Odin wandered out into the world. To the Chinese, amber was the soul of the tiger transformed into the mineral after death. They used it as a symbol of courage and attributed medicinal qualities to it. In the Buddhist

paradise pure beings have bright yellowish faces and their merit may grow in the shape of diamonds, flowers, amber, etc.

In the Middle Ages amber was worn to ward off croup; and amber necklaces for small children were sold as croup-preventatives throughout Europe as late as the 19th century. It was dissolved and used as a cordial. It prevented epilepsy if placed over the heart, checked paralysis if the spine were anointed with it, and acted as a restorative if one inhaled it. In the 15th and 16th centuries in India it was mixed with food as a medicament.

Moslems include amber beads on their talismanic chains and bracelets, believing them a cure for jaundice. They rub sore eyes with ashes of amber and take it in powdered form internally to strengthen a weak heart or to induce sweating. The Italians use amber amulets against witchcraft. The French of Louisiana still use it to cure croup.

Amber mountains and amber islands were the fore-runners of the glass mountains and islands in the folktales of Scandinavia, central and eastern Europe, and the British Isles. The Scandinavian Glaesisvellir was an amber valley-paradise and Glaesir an amber grove at the gates of Valhalla. The word glass, originally meaning "resin" or "amber," was applied to glass when that product was introduced into northern Europe.

Ambrogio and Lietta A popular ballad of northern Italy (from the Piedmont region) in which Ambrogio cruelly and heartlessly compels his wife, Lietta, heavy with child, to travel faster than she is able. This ballad closely parallels the theme of the English *Child Waters*.

ambrosia In Greek and Roman mythology, the food or drink of the gods which made all who partook of it immortal. In Homer, ambrosia was the food of immortality and its accompanying nectar the drink of the gods. Sappho and Anaxandrides spoke of ambrosia as the drink of the gods, nectar as the food. Compare **AMRITA**; **MEAD**; **SOMA**.

Amen or Amon An important god of ancient Egypt, almost always worshipped as identical with another god. Amen was probably originally a local god of Thebes and the neighboring Luxor and Karnak and may have been an air god. However, in later religion, he became a god of reproduction, was spoken of as one of the creators of the gods, of mankind, of the universe. As patron of Thebes he became, in the XVIII Dynasty and afterwards, the chief god of Egypt (Amen-Ra), and his priests wielded power greater than that of the pharaohs. He was depicted as a bearded man wearing a cap with two tall plumes, or as a ram. Both the ram and the goose were sacred to him, and at Thebes he was said to be embodied in the ram. As the national god of Egypt, he was incarnate in the Pharaoh. The ruins at Karnak are the remains of his temple. The Greeks identified him with Zeus, and his great oracle was the famous stone in the temple of Jupiter Ammon.

Amenti or Amentet In the Osiris cult of Egyptian religion and in mythology, the underworld; literally, the hidden land, located in the west where the sun sets. When the soul entered Amenti, Anubis conducted it into the hall of Osiris where it was judged by the 42 judges; then the heart was weighed against the feather of truth. Those souls which passed the test went on to the fields of Aalu while the others were consigned to torment. The four spirits of Amenti, the tutelaries of

the underworld and children of Horus, represented upon the four Canopic vases, were Amset, Hapi, Tuamatef, and Kebhsnauf. Compare BA.

American Anthropological Association Formal interest in anthropology is of long standing in the United States, but it was not until 1879 that an immediate progenitor of the American Anthropological Association was organized. In that year a group of men, mainly ethnologists and doctors of medicine, formed the Anthropological Society of Washington "to encourage the study of the natural history of man, especially with reference to America."

It was not long before the localized interests of this group and others such as the American Ethnological Society in New York (founded in 1842) and the Philadelphia Anthropological Society (later in origin) widened enough to require an organization of greater scope. Thus, in 1882 the American Association for the Advancement of Science created an anthropology section which brought together for the first time in a nationwide structure persons of anthropological interests. In 1899 this anthropology section of the American Association for the Advancement of Science took over the journal *American Anthropologist*, which had been the organ of the Anthropological Society of Washington since 1888, and reestablished it as the *American Anthropologist*, *New Series*.

The needs of anthropologists and the growing dignity and importance of the science were still in part unfulfilled, however, and as a consequence the first steps toward founding an independent, national organization were taken during the latter part of 1901. Subsequently, an Act of Incorporation for the American Anthropological Association was recorded on March 26, 1902, in the District of Columbia and a founding meeting was held in Pittsburgh on June 30, 1902.

The purposes of the Association, as quoted from the original constitution, were "to promote the science of Anthropology; to stimulate the efforts of American anthropologists; to coordinate Anthropology with other sciences; to foster local and other societies devoted to Anthropology; to serve a bond of union among American anthropologists and American anthropological organizations present and prospective; and to publish and encourage the publication of matter pertaining to Anthropology." The original constitution has been amended in 1916, 1941, and 1946. The last date saw the institution of major changes with an increased attention to the professional interests of the membership. Thus, to the original aims were added the provisions that the Association shall "take action on behalf of the entire profession and integrate the professional activities of anthropologists in the various special branches of the science; promote the wider recognition and constant improvement of professional standards in anthropology; and act to coordinate activities of members of the Association with those of other organizations concerned with anthropology, and maintain effective liaison with related sciences and their organizations." In the furtherance of these aims, the amended constitution gave increased authorities and discretion concerning professional matters to the executive board of the Association. One of the first acts of the executive board was the establishment in August, 1947, of an Executive Secretariat, with the aid of a grant of \$10,660.50 from the Carnegie Corporation

of New York, charged with general responsibilities concerning professional information and public relations. Another measure, designed to enhance the professional interests of the Association, was the creation of two classes of membership, Fellows and Members, with eligibility to the former status restricted to persons who meet certain professional standards. Early in 1948 two further statuses, Foreign Fellows and Liaison Fellows, became effective. At the end of 1970 the Association's membership was about 7,000, including 1,574 Fellows and 46 foreign Fellows.

With regard to the encouragement and organization of research the Association is unique among learned societies in having official representative membership on all three of the major research councils in the United States, i.e. the National Research Council, the Social Science Research Council, and the American Council of Learned Societies, and in addition provides two representatives to the American Association for the Advancement of Science.

Publications of the Association are: the *American Anthropologist*, published 6 times a year (volume 72 in 1970) and the *Memoirs* (101 volumes), superseded in 1969 by the *Anthropological Studies*. These contain many articles and monographs of milestone importance, which have affected the currents of anthropological thought not only in the United States but in other nations as well. A third publication, a mimeographed *News Bulletin*, established in 1947, now the *Newsletter*, reports matters of current interest and importance to the Fellows of the Association. The *American Anthropologist* is also the official organ of the American Ethnological Society, the Anthropological Society of Washington, the Philadelphia Anthropological Society, the Central States Branch of the American Anthropological Association, the Anthropological Society of Hawaii, and the Western States Branch of the American Anthropological Association, all of which are affiliate organizations. In addition, the Association maintains close relations variously through joint membership, reduced annual dues, and an editorial council with all of the above as well as with the Society for American Archaeology, the American Folklore Society, the Linguistic Society of America, the Society for Applied Anthropology, the American Association of Physical Anthropologists, the Inter-American Society for Anthropology and Geography. There are also three annual *Bulletins*: "Annual Report and Directory," "Guide to Departments of Anthropology" (museums added in 1971), and "Preliminary Program and Abstracts" of the annual meeting.

Annual business meetings have been held every year since the Association was founded, with a scientific meeting held in conjunction nearly every year as well. Whenever possible, these meetings are held jointly with various of the affiliated and kindred organizations.

Since 1946 the Association has, through the offices of a special committee, selected the annual recipient of the Viking Fund Medal and Prize in Cultural Anthropology.

American folklore Even without insisting on special American qualities in American folklore, we can now safely assume that there is such a thing as "American folklore" and not "only European (or African, or Far Eastern) folklore on the American continent."¹ The late Alexander Haggerty Krappe's objection to the term

"American folklore" as a "bad misnomer" must be judged in relation to his Old World conception of folklore as synonymous with "survivals" and of the folk as synonymous with the peasantry. In America it is no longer possible to accept his definition of the former as the "sum total of stories, songs, beliefs, and practices which belong to a bygone age and have ceased to have any direct and organic connection with actual life," or of the latter in terms of "purely agricultural regions."

The real trouble, however, lies in the ambiguity of the word folklore, which has the double meaning of the material and its study. It is true (and Krappe may have had this in mind) that there can be no scientific, historical study of American folklore apart from Old World sources. But equally important to the study of American folklore is what happened to the Old World heritage after it was transplanted and took root. Although Krappe rightly insists that the folklorist must be equipped with a "good history of the American 'land-taking,'" he still thinks of this largely in terms of the "ethnic provenance and age of each settlement" and the "shifts of populations." But provenance is only half the story. If folklore is universal in diffusion, it is local in setting. And the study of the local setting takes special importance from the fact that "it is upon the mass of the inarticulate in American society that effects of environment are likely to be most marked."²

There is, in other words, such a thing as an indigenous American folk, in terms, as the present writer stated in 1929, of "not one folk but many folk groups—as many as there are regional cultures or racial or occupational groups within a region."³ As basic to this conception the writer accepted J. Frank Dobie's definition of the folk as "any group of people not cosmopolitan who, independent of academic means, preserve a body of tradition peculiar to themselves." Or, as Martha Warren Beckwith put it in 1931: "The true folk group is one which has preserved a common culture in isolation long enough to allow emotion to color its forms of social expression."⁴ She names as isolating factors "geographical conditions," "common language and national heritage," and "occupation," found separately or in conjunction with one another.

From the cultural point of view, there is not only an American folk but also an American study of the folk and its lore. This involves, more than the provenance and distribution of folk songs and tales in the United States, the social and cultural history of folk groups. It is the study not simply of diffusion but of acculturation—"those phenomena which result when groups of individuals having different cultures come into continuous first-hand contact, with subsequent changes in the original cultural patterns of either or both groups."⁵ And folklore acculturation studies in turn involve not only local folklore collections, correlated with life histories of and interviews with informants and with field and historical studies of cultural areas and centers and routes of migration, as in the *Linguistic Atlas*, but the whole relation of local and regional history to American social and cultural history and of folklore to the "roots of American culture" in what Constance Rourke calls the "humble influences of place and kinship and common emotion that accumulate through generations to shape and condition a distinctive native consciousness."⁶

Recognition of the cultural diversity of the American

folk, as well as of the fact that, for the purposes of collection and study, American folklore is too big to be treated as a whole, led to the following division of the field by the American Folklore Society at the time of its organization in 1888: "(a) Relics of Old English Folklore (ballads, tales, superstitions, dialect, etc.); (b) Lore of Negroes in the Southern States of the Union; (c) Lore of the Indian tribes of North America (myths, tales, etc.); (d) Lore of French Canada, Mexico, etc."⁷ With the addition of later immigrant and other nationality groups, these categories still mark the main cultural divisions of American folklore and the division of labor among American folklorists.

Although the study of the lore of foreign-language groups, like that of the American Indian, has been delegated to specialists, it must not be thought that the folk culture of national minorities is entirely cut off from the main body of English-speaking groups. Ghettos, islands, and "pockets," it is true, make for partial or relative isolation; but linguistic barriers are no obstacle to the diffusion of folklore, which follows the principal cultural routes and areas, with resultant interchange and modification of the folkways and folklore of the various ethnic groups.

The nature and degree of separation and exchange between groups are further affected by social and economic influences, education, and mass communication. Although the forces that make for standardization are diffused through all groups and areas with apparent uniformity, the interplay of cultural norms and variations is complicated by group acceptances and resistances, local attachments and sectional loyalties, and traditional reliance on folk beliefs and practices as an alternate mode of procedure to scientific and institutional forms.

To the forces of survival and contra-acculturative reversion must also be added the forces of revival as intercultural and folk education, folk festivals, etc., seek to promote group self-respect and mutual understanding by showing the essential unity underlying differences, stressing participation in a common culture rather than "contributions," reconciling conflicts between old and new cultural patterns, and generally replacing stereotypes with cultural variations.

As part of this cultural dynamics, the following trends may be distinguished in the development of American folk groups and their lore. Where regional variations are coupled with a distinct ethnic and linguistic stock, in a state of partial or relative cultural isolation, a more or less homogeneous body of regional lore exists in much the same sense that regional lore and regional dialects are found in the Old World. This is true, for example, of the lore of the English-Scotch-Irish mountain whites; the Afro-American lore of the Deep South (Coast, Sea Islands, Delta), and the West Indies; and more particularly the lore of the Pennsylvania Germans, the Louisiana French, and the Spanish-American and Mexican-American groups of the Southwest. Again, where work is related to place, a distinctive occupational lore has grown up about such callings as deep-water sailing, whaling, fishing, canal-boating, steamboating, railroad-ing, lumbering, grazing, and coal- and metal-mining. Regional culture and folkways have further conditioned and fostered the growth of certain regional types of lore, such as the Southern Negro slave songs and prison work

songs, white spirituals of the Southern uplands, Shaker songs and dances, and Mormon lore, as well as regional styles of story-telling, singing, square-dancing, square-dance calling, and folk arts and crafts.

With the recent revival of interest in American folkways and regions, scholarly and popular attention has been focused on the lore of such colorful subregions as the Maine coast, the White and Green Mountains, Cape Cod, the Catskills, the Allegheny, Cumberland, Blue Ridge, Great Smoky, and Ozark Mountains, the Tidewater, Florida, the Gulf Coast, the Mississippi Delta, the Bayous of Louisiana, the Great Lakes, the Upper Peninsula of Michigan, the Rockies, and the various Southwest and Northwest areas.

Turning from folk groups to folklore, we note a two-fold effect of the twin forces of diffusion and acculturation. On the one hand, the same song or story, in slightly altered form (the product of localization), may turn up in different localities, attached to different individuals, each claiming to be the original. Such is the case with migratory legends and traditions of lovers' leaps, haunts of the devil, witches, ghosts, pirates, and buried treasure. On the other hand, a genuine body of place lore (inseparable and sometimes indistinguishable from regional culture) has grown up about local traditions connected with topographical features, landmarks, flora and fauna, artifacts, population, settlement, foods, architecture, speech, place names, and local attachments and loyalties of all kinds, from social, political, and economic feuds and rivalries to local pride and patriotism generally. Place lore, of course, is mixed with historical traditions, as in the South, where colonial, plantation, Civil War, and Reconstruction days have their respective legends, heroes, and symbols.

If American folklore is, on the whole, closer to history than to mythology, it is because America as a whole is closer to the beginnings of settlement and to the oral and written sources of local history. America is rich, not only in local history (much local historical writing, it is true, being amateurish, antiquarian, and local in spirit) but also in folk history—history from the bottom up, in which the people, as participants or eye-witnesses, are their own historians. And in so far as everyone has in his repertoire an articulate body of family and community tradition he is to that extent his own folklorist as well as a folklore informant.

The combination of history, folklore, and folk history is nowhere seen to better advantage than in old-timers' stories and reminiscences, which not only contain valuable folklore data but also throw valuable light on the backgrounds of folklore and folk groups. Through the combined efforts of old-timers, folklorists, and historians, an extensive literature (much of it in the vernacular) of pioneer folkways and customs has grown up in America. This tells us how people lived in the early days; how they fought wild animals, Indians, drought, fire, flood, cyclones, blizzards, sandstorms, pests, sickness, disease, crime; how they made their own entertainment and how many hands made light work in the social gatherings, merrymakings, and work bees of the frontier; what they ate and what they wore; how they educated themselves and how they worshipped. All this, if closer to folkways than to folklore, is still valid material for the folklorists' study, since folklore properly includes the life of the folk as well as its lore.

The relation of history to legend is also close in America. The mixture of the two has given rise to a large body of unhistorical "historical" traditions (corresponding to "unnatural" natural history) or apocryphal traditions of doubtful exploits of historical characters and "untrustworthy traditions of doubtful events." And in so far as history, with its legends and symbols, selects, transmits, and shapes traditional values and assumptions, it acquires folklore coloring and significance.

The lore of place names is particularly rich in local history and historical traditions. Factual place names arise "either from an immediate circumstance attending the giving of the name, a happening, an object present, a natural feature of the landscape, or from memory association with other places or names."⁸ Mythological names originate in assumed or folk etymology which may "sometimes furnish under the guise of fiction useful clues to the real facts."⁹ But there are historical and mythological elements in both kinds of place-name stories, as myth has some basis in history or history is touched with fantasy.

The somewhat overstressed predilection of the American folk for extravagant or ludicrous exaggeration, which would seem to be in contradiction to its historical impulse, is related to the proverbial traits of boasting and boosting and the burlesque thereof, and may be explained and reconciled on the ground that in America and American history nothing is usual. In the first place, Americans, living in a land of marvels and being born travelers, have always loved to hear and tell tales (especially travelers' tales) of the marvelous. In the second place, since Americans have always tried to improve on nature, American story-tellers are seldom averse to improving a tale. In this task of "making a good story a little better," folk story-tellers have had the example and assistance of professional historians, from the Mathers, with their habit of glorifying marvels (or "providences") as a means of improving religion, to the latest historian or pseudo-historian who uses legend to heighten the drama and color of history.

In spinning extravagant yarns and lying tales the folk has also had the cooperation of professional story-tellers in the reciprocity of oral and written tradition that exists in America. Thus a long line of Southern and Western humorists, culminating in Mark Twain, converted the yarn and tall tale from oral to literary use, emulating the matter and manner of the oral and natural story-teller. As a result (e.g. in New England), the line between folklore, local history, and local-color writing is sometimes hard to draw. On the one hand, almanacs, newspapers, magazines, chronicles, memoirs, travel accounts, and town and county histories have helped to circulate oral traditions and anecdotes of the smart sayings and doings, the jests and pranks of local characters and old-timers. On the other hand, poets, dramatists, and fiction-writers have made liberal artistic use of local anecdotes and legends.

The fact that American folklore grew up in an age of print has had still other effects on the aesthetics, culture, and science of this lore. It has, according to Paul Engle, resulted in a greater and more successful effort (on the part of untrained, and even unconscious, as well as trained folklorists) "to retain in print those often insubstantial folk sayings, folk customs, folk anecdotes, which are the rich substance of a country's life,"

It has also given American folklore more than a touch of the sophisticated and even synthetic. In the case of Paul Bunyan, for example, there is strong evidence of diffusion from above downward, and more than a suspicion that lumber advertising men had as much to do with inventing the logger hero as he had to do with inventing the lumber industry.

Paul Bunyan stories, originating fairly recently in separate anecdotes or jests of the Munchausen and joke-book variety, also illustrate the tendency of anecdotes to escape from print into oral tradition. Short, pithy, funny stories, learned from either source and both in and out of cycles, have always been popular among the folk because easily remembered and quickly told. But the anecdotal, fragmentary character of much American story-telling and the relative scarcity of long, involved tales may indicate that the more highly developed forms of folk story-telling have become a lost art. Certainly, under the influence of commercialized mass media of entertainment and with the general speeding up of modern living, shorter, snappier forms have displaced long-winded tales and ballads.

The anecdote also flourishes in America as a result of the separation of story-telling from mythology and ritual and its survival chiefly as a social pastime growing out of the chat or as a practical device for clinching an argument or illustrating a point. Hence the vogue of the anecdote as a rhetorical form popular with political, after-dinner, and other speakers and the large number of collections preserving oral anecdotes of master story-tellers like Lincoln and continuing in the tradition of *exempla* and *ana*.

The typical American form of story-telling, however, is not the anecdote but the yarn, which may be considered the parent type or an elaboration and expansion of the anecdote, depending upon whether one considers the anecdote a vestigial or germinal form. As a long, loose, rambling tale of personal experience, the yarn has its roots in "own stories" and reminiscences of thrilling or improbable adventures. Like the anecdote, the yarn is told "casually, in an offhand way, as if in reference to actual events of common knowledge," and with the utmost solemnity in the face of the most preposterous incidents. Unlike the anecdote, however, the yarn often substitutes anticlimax for climax, building up elaborately to a letdown instead of sacrificing everything to the punch line. The accumulation of circumstantial detail, often digressive and irrelevant, after the fashion of garrulous raconteurs, is also a device for establishing confidence and securing credence.

Although more involved than the anecdote, the yarn still falls short of the highly developed art of the Old World folktale. Two favorite devices of the yarn—the repeated obstacle and the retarded climax—are devices of the fairy or household tale, which survives in the United States chiefly on the childhood level. Thus one of Richard Chase's informants for *The Jack Tales* (1942) confessed that he didn't like to tell stories "unless there are a lot of kids around."

Underlying the art of stringing out the story in a yarn is often the purpose of stringing or taking in the listener. Even where the latter is not having his leg pulled, the favorite theme of anecdotes and yarns (in the universal and perennial folk tradition) is pranks and tricks, hoaxes and deceptions (also seen in animal tales of the trickster

type). The "scrapes and 'scapes" of yarns satisfy the taste for marvels and adventures once supplied by fairy tales and tales of ghosts and witches. At the same time they provide an outlet for the "individual competitive aggressiveness" of American society.

In the latter connection one is frequently struck by the antisocial character of much American lore and many American heroes. Just as the myth of the individualism of the pioneer has been revised in the direction of cooperation, as evidenced by neighborhood undertakings like the log-rolling and the barn-raising, so the socially useful folk rituals of cooperative work and play are partly offset by the rough, tough, antisocial humor of the frontier. This ranges from sells, pranks, and practical jokes in the hazing tradition of breaking in the tenderfoot and the greenhorn (snipe hunts and badger fights, fool's errands, circular stories, mythical monsters) to the grim hoaxing and persecution of minorities (Indians, Negroes, Mexicans, and Chinese) by frontier bullies and rogues like Mike Fink and Roy Bean. To the horse sense and cracker-barrel wit of the shrewd Yankee and the suspicious squatter (as in *The Arkansas Traveler*), with its characteristic "reluctant" eloquence, were added the raucous horseplay and horse laughter of the backwoods, where "pretty cute little stunts" and fool doings became crazier as the country became wilder and where the traditional form of expression was reckless and bamboozling tall talk and sky-painting oratory, or making a noise in language. In this way the pioneer let off steam and "laughed it off" or made "terrible faces playfully" at the hazards and hardships of the frontier.

The same raw buffoonery and the same distrust and manhandling of the stranger and the outsider produces, in the direction of verbal rather than practical jokes, the lore of popular reproaches, taunts, and gibes, and local cracks and slams—facetious place names, uncomplimentary nicknames, satirical repartee, and bywords, ribbing anecdotes and jests about Boston, Brooklyn, Arkansas, Missouri, "dam Yankees," Southern pride, California and Florida climate, the "big country" of Texas. Whether based on literary or social stereotypes and myths or on historical traits and rivalries, such as existed in neighborhood feuds, county wars, sectional conflicts, feuds between cattlemen and sheepmen, the parochial, invidious lore of hoax and libel (the seamy side of local tradition and the provincial or neighborhood spirit) reflects the geography of culture, the ruthlessness of frontier and industrial society, and the intolerance of clannishness and chauvinism.

In the folklore of pride and prejudice brags and lies go hand in hand with cracks and slams, since the desire to see what one wants to see, believe what one wants to believe, and make others see and believe as one wants them to leads to extravagant as well as to insulting representations and distortion. Boosting and booming, or exaggerating the advantages of a place, accompany the American myth of a paradise on earth, the dream of a land flowing with milk and honey, the search for God's country. The fairyland of guide books and official puffs is full of the same wonders that one encounters in countless yarns and tall tales—of a climate so healthful that people rarely die, except from accident or old age; of soil so fertile that a man has to cut his way out of cucumber vines that spring up as he plants the seed; of corn that grows so fast that a man who ties his team to

a corn stalk finds himself, team, and wagon pushed up into the air so that food has to be shot up to him to keep him from starving to death. On the adverse side, one hears complaints about a climate so dry that people sweat dust or so wet that the pores sprout watercress or a country so poor that it takes nine partridges to holler "Bob White" or that the dogs have to lean against the fence to bark.

The unnatural natural history of queer animal behavior, fearsome critters, and other freaks of nature is related partly to hoaxing and boasting and partly to superstitious awe and dread and the hallucinations inspired by the mysteries and terrors of the wilderness of sea and forest, mountains and deserts, and the violent extremes and contrasts of weather and climate. Here the anthropomorphism of shrewd, benevolent, or malevolent beasts is balanced by the theriomorphism and totemism of the half-horse, half-alligator and the ring-tailed roarer, of tall talk and strong language, with "many terms transferred from animals to men by the hunters of the West." In their brags and war cries, boasters like Davy Crockett refer to themselves as "an entire zoological institute," claiming various animal traits and features to prove their intestinal fortitude and savage destructiveness. In this rampant and raucous animalism is additional evidence of what Lucy Lockwood Hazard calls "the dwindling of the hero" from the godlike to the human and ultimately to the subhuman level under the picaresque, predatory influences of the frontier.

Real and mythical flora and fauna also enter into the symbolism of state flowers, seals, nicknames, emblems, flags, automobile license plates, and the totemism and fetishism of local legendry and mythology, politics, and business. "Look for a Thunderbird Tourist Service," writes Mary Austin of the "Land of Little Rain." "What more competent embodiment of the spirit of service, in a land where for ten thousand years it has been looked for from the corn rows, augury of a fruitful season, the dark-bodied, dun-feathered cloud of the summer rain, wing stretched from mountain to mountain, with arrows of the lightning in its claws." ¹⁰ Half-gargoyle, half-Phoenix, the legendary bird of Kansas, the Jayhawk, gives its name and likeness to things Kansan—the bird with the large yellow beak and bright yellow slippers that "flies backward and so doesn't care where he's going, 'but sure wants to know where he's been.'" ¹¹ And in the old hall of the Massachusetts House of Representatives the sacred codfish commemorates the maritime and fishing preeminence of the Bay State.

The same mingling of the primitive and the practical characterizes American folklore as a whole. American popular and legendary heroes are divided between the prosaic, plebeian Yankee virtues of hard work, perseverance, common sense, thrift, faculty or "know-how," and handiness, and the primitive virtues of red-blooded courage, muscle, brawn, brute force, and animal cunning. Because the New England ethos bred strong characters and eccentrics rather than heroic types, the typical American hero is the Western hero—the picaresque type of footloose adventurer, product and symbol of a "society cut loose from its roots" and of a "time of migrations." In the thin and shifting line that separates law-enforcement from law-breaking on the frontier, hero-worship glorifies the good bad man and the bad good man along with the poor boy who makes good.

Yet throughout the galaxy of American heroes—tricksters, showmen, conquerors, saviors—the familiar lineaments of the whittling, tinkering, scheming, prying comic Yankee are seen. As a culture hero he culminates in the comic demigod of the Paul Bunyan type—the superman and the work giant in a world of gadgets, who has the whole country to tinker and whittle with.

The logging fraternity of the generous camp boss and his loyal crew grew out of the fluid, mobile social relations of the frontier, before the tightening of class lines and the sharpening of the struggle between worker and boss. In the same way cowboy songs reflect a society in which the "boss rode with the hands" and "every cow-puncher was a prospective cowman; all that was needed to start a herd was a stout rope and a running iron." ¹²

Thus the frontier ideal of a free, resourceful, outdoor, migratory life, self-sufficient and individualistic, is perpetuated in American hero tales and songs, whose heroic age is the age of industrial pioneering and craftsmanship, before the days of mechanization and unionization of labor. The heroes are lusty, blustering strong men and champions, star performers, and master workmen, the "biggest, fastest, and bestest" men on the job. The ballads of the men who built America are the rousing, rhythmic, dramatic, humorous shanties, hollers, and gang work songs of the leader-and-chorus type—last encountered in the Negro prison camps of the South.

In the progression from the comic demigods and roughnecks of the Paul Bunyan-Davy Crockett-Mike Fink breed to the heroes of endurance and duty—Johnny Appleseed, John Henry, Casey Jones, and Joe Magarac—one notes a heightened sense of social responsibility and mission. A similar development of social consciousness results in the sharpened criticism and protest of campaign and revival songs, coal miners' songs of disasters and strikes, wobbly and union songs, and Negro spirituals and freedom songs.

As the folklore of a new, young, and big country, mirroring the rapid changes from rural to agricultural to urban and industrial society, American folklore is a mixture not only of the lore of peoples from all lands and all parts of the country, but of oral and written tradition, of the sophisticated and the primitive, the very new and the very old, the antisocial and the social. In such a country men become heroes within their own lifetime and living story-tellers may encompass within their memories the whole cycle of development of their community and region. And if the genius of this lore has been for realistic anecdote, extravagant yarn, and comic hero legend rather than for sacred hero tale, other worldly myth, and fairy tale, the reason is simple. Americans, like people the world over, sing, yarn, jest, brag, create heroes, and "whistle in the dark," not only about universal themes and motives and in age-old patterns, but also about the experiences that are closest to them and interest them most.

American Folklore Society The American Folklore Society was organized at Cambridge, Massachusetts on January 4, 1888. Its founders were the most important folklore scholars in America: Alcée Fortier, the first president, W. W. Newell, permanent secretary and editor, Franz Boas, F. J. Child, George A. Dorsey, J. Walter Fewkes, Alice Fletcher, Joseph Fortier, Daniel Brinton, T. F. Crane. The list of presidents of the society reads like a bead roll of the important folklorists of America: Alcée Fortier 1888, 1894; Francis James Child 1889; Daniel G. Brinton 1890; Otis T. Mason 1891; Frederick Ward Putnam 1892; Horatio Hale, 1893; Washington Matthews 1895; John G. Burke 1896; Stewart Culin 1897; Henry Wood 1898; Charles L. Edwards 1899; Franz Boas 1900, 1932, 1935; Frank Russell 1901; George A. Dorsey 1902; Livingston Farrand 1903; George Lyman Kittredge 1904; Alice C. Fletcher 1905; Alfred L. Kroeber 1906; Roland B. Dixon 1907-08; John R. Swanton 1909; H. M. Belden 1910-11; John A. Lomax 1912-13; Pliny Earle Goddard 1914-15; Robert H. Lowie 1916-17; C. Marius Barbeau 1918; Elsie Clews Parsons 1919-20; Frank G. Speck 1921-22; Aurelio M. Espinosa 1923-24; Louise Pound 1925-26; Alfred M. Tozzer 1927-29; Edward Sapir 1930-31; M. W. Beckwith 1933-34; Archer Taylor 1936-37; Stith Thompson 1938-39; I. A. Hallowell 1940-41; H. W. Thompson 1942; G. A. Reichard 1943-44; B. A. Botkin 1944-45; M. J. Herskovits 1945-46; J. M. Carrière 1946-47; E. W. Voegelin 1948-49; Thelma James, 1949-50.

The original proposal in which the object of the Society is stated is as follows: "It is proposed to form a society for the study of Folk-Lore, of which the principal object shall be to establish a Journal, of a scientific character, designed:—

(1) For the collection of the fast-vanishing remains of Folk-Lore in America, namely:

- (a) Relics of Old English Folk-Lore (ballads, tales, superstitions, dialect, etc.).
- (b) Lore of Negroes in the Southern States of the Union.

(c) Lore of the Indian Tribes of North America (myths, tales, etc.).

(d) Lore of French Canada, Mexico, etc.

(2) For the study of the general subject, and publication of the results of special studies in this department."

This proposal and the practices that grew out of it mark a major development in the study of folklore. Up to this time folklore as generally studied in Europe had consisted largely in investigation of the *relics* of culture: popular antiquities, and popular literature. The founders of the American Folklore Society, probably because they were in the New World, enlarged the study of folklore to include all categories of culture, not simply literary, and to include in addition the study of "living" folklore as found especially among the American Indians. The American Folklore Society from the beginning inspired the collection and investigation of Negro folklore: literature, music, songs, superstitions, and beliefs. With the American Anthropological Association it also pioneered studies in Indian folklore, considering it most promising, for here "the investigator has to deal with whole nations and as a result the harvest does not consist of scattered gleanings."

From the time of its origin, the American Folklore Society recognized that its function could not be insular, that only by a study of folklore in general could the folklore of any one people be understood and so from the beginning the papers in the Journal were open to general studies of folklore and to studies of the folklore of peoples everywhere in the world. As the Society has developed it has constantly broadened its functions until today a more accurate name would be the American Society of Folklore.

The first number of the Journal appeared in April, 1888, under the editorship of W. W. Newell. Its contents are representative of the publication through the years. T. F. Crane wrote of the diffusion of popular tales, William Newell on voodoo worship and child sacrifice in Haiti, H. Carrington Bolton on counting-out games of children, D. G. Brinton on Lenape conversations; W. M. Beauchamp published a collection of Onondaga tales; Franz Boas presented a detailed study of the songs and dances of the Kwakiutl.

The Journal is now (1971) in its 84th volume. These 84 volumes contain many very important collections and studies from the pens of the major folklorists of America. There exist, for example, in the Journal more than a hundred articles on the ballad in America—a body of material that constitutes a large appendix to the great Child collection. It is unfortunate that no adequate index of the contents of the Journal exists.

In 1906 the Society was incorporated in Massachusetts and a constitution embodying the original proposals was adopted. The Society operated under this constitution until 1946 when the present constitution was adopted.

Early in the history of the Society the Editor and Officers felt the need of a monograph series in addition to the Journal to contain book-length specialized studies in folklore. Accordingly, in 1894 the Memoir Series was inaugurated with the publication of Heli Chatelain's *Folk-Tales of Angola* as volume 1. Now (1971) the Memoir Series is in its 59th volume. These studies are highly diversified, concerning themselves with Japanese peasant songs, fiddle and fife tunes of Pennsylvania,

myths and tales of the Gran Chaco of Argentina, Spanish songs and tales, French folklore, studies in Negro and Indian folklore, collections of folklore from specific regions of America, such as Maryland, Iowa, Nova Scotia, plant and animal lore, Filipino folktales. For many years members paid additional dues to secure the *Memoirs*, but for a while after 1943 the Society followed the policy of giving both the *Journal* and the *Memoirs* to all regular dues-paying members.

Every year the Society holds a two- or three-day meeting for transaction of business and the reading and discussion of papers. These meetings are usually arranged to coincide alternately with those of the Modern Language Association and those of the American Anthropological Society.

Throughout its history the American Folklore Society has fostered the establishment of local folklore societies. Some fifty such societies over the United States and Canada have at one time or another been affiliated with the mother society. At the present time ten such societies are closely affiliated with the American Folklore Society through joint membership arrangements. The American Folklore Society is a constituent of the American Council of Learned Societies, and of the International Commission on Folk Arts and Folklore.

At present the Society has a membership of over 2,000, the largest in its history. Dues are \$10 a year for individuals, \$12 for institutions. All members may buy the *Memoirs* and the *Bibliographical Series* at 30% discount. The 1970-71 officers are: Daniel G. Cowley, President; Don Yoder and Edward D. Ives, Vice Presidents; Kenneth L. Goldstein (Box 13, Logan Hall, University of Pennsylvania, Philadelphia, Pennsylvania), Secretary-Treasurer; Américo Paredes, Editor.

Amesha Spentas (Persian *Amshasbands*) In Zoroastrianism, the attendant ministers of Ahura Mazda; archangels: literally, Immortal Holy Ones. The function of the Amesha Spentas is to aid Ahura Mazda who prefers to act through their ministering hands. They are invisible, immortal, and dwell in Paradise, sitting, according to the *Bundahishn*, before Ahura Mazda (Ormazd) on golden thrones. The guardianship of an element of the universe is assigned to each. Vohu Manah is responsible for the care of useful animals, Asha Vahishta for fire, Khshathra Vairya for metals, Spentā Armaiti for the earth, Haurvatāt for water, and Ameretāt for vegetation. These six are constantly opposed by the six archfiends, Aka Manah, Sauru, Indra, Nāonhaitya, Zairicha, and Taurvi, whom they will finally vanquish at the time of the resurrection.

Originally there were six Amesha Spentas in addition to their leader, Ahura Mazda, but some of the angels, among them Sraosha, Atar, and Gošurvan, were admitted to the group so that the number varied.

The Amesha Spentas receive special worship and are said to descend upon paths of light to the oblation. A special month and day are assigned to each in the pontifical calendar. According to the *Dinkart* they appeared before King Vishtāspa and helped Zoroaster convert him. Compare ADITYA; ARCHANGEL.

amethyst A purple or violet gem of the quartz family, known since early times: birthstone of February or Pisces. Its name derives from the Greek word *amethystos*, meaning non-intoxicating, and its principal attribute

throughout the ages has been to enable its wearer to drink his fill without becoming intoxicated. Wine drunk from an amethyst cup will not intoxicate. It is supposed to put a sobering check on the passions, control evil thoughts, quicken the intellect, and make a man shrewd in business matters. It protects soldiers, aids hunters, and is extensively worn by sailors, businessmen, lawyers, bishops, and medical men, especially on the third finger of the left hand. Curative powers are ascribed to it both when worn and when taken internally. It is especially effective against headache, toothache, and the gout, and protects its wearer from poison and the plague.

An 18th century French poem tells how Bacchus, angry at neglect, vowed the next mortal he met should be devoured by his lions. This was a maiden on her way to worship at the shrine of Diana who, hearing the maiden's cries, turned her into a beautiful transparent stone. Bacchus, in remorse, poured wine over the stone which accounts for its beautiful color. The Romans valued it as a preventive of intoxication, as a means for access to kings, and as a talisman against spells, hail, and locusts. Among the tribes of the Upper Nile, the rain-makers use the amethyst as a rain stone, plunging one into water and motioning with a cane when rain is desired. In ancient Egypt it was used in amulets and as a gemstone.

The amethyst is mentioned in *Exodus* as one of the stones in the High Priest's breastplate, and in *Revelation* as one of the foundations of the New Jerusalem. St. Valentine is said to have worn an amethyst ring engraved with a Cupid.

Amis and Amiloun A Middle English romance, French in origin, of two perfect friends. Amiloun fights instead of Amis at a combat trial; as punishment, he becomes a leper. Amis kills his two children after dreaming that their blood will cure Amiloun. The leprosy disappears and the children awake as from sleep.

Amitābha, Amita, or Amida In Mahāyāna Buddhism, one of the five Buddhas of Contemplation: Infinite Light. Amitābha has practically replaced śākya-muni, the historical Buddha; he is the embodiment of every divine grace; he is all-wise and all-powerful with the attributes of grace, mercy, and beneficence. The worship of Amitābha emphasizes devotion rather than emulation. As O-mi-to-fo he was the most revered and popular of the celestial Buddhas in China. The Jodo sect introduced the doctrine of Sukhāvātī, the Western Paradise of Amitābha, into Japanese Buddhism, where its patron was called Amida. In Sukhāvātī there is neither mental nor bodily pain but only perpetual bliss. With the aid of the Bodhisattvas Avalokita (Kuan-yin) and Mahāsthama (Ta-shih-chih) all who invoke Amitābha's name are brought to salvation. In legend, Amitābha was born spontaneously from a lotus.

Amleth or Hamlet In early Danish legend, the son of Horvendil, king of Jutland, and Gerutha. As Saxo Grammaticus tells the story, Horvendil was killed by his brother Feng (or Fengi) who took the throne and married Gerutha. Amleth (which means mad) escaped death at the hands of his uncle by feigning madness. He rode his horse facing the tail, called sand the meal of storms, etc. The young girl sent to test his sanity proved to be a friend and would not betray him. Feng's old counselor then suggested that Amleth be left alone

with his mother, while he would hide in the room and witness his conversation and his actions. But Amleth was not deceived; still playing mad he ran his sword through a pile of straw in the room and killed the old man hiding in it.

Feng's next move was to send Amleth to Britain with a letter to Britain's king, directing him to put the bearer to death. The wary Amleth, however, changed the message to read that the king give his daughter in marriage to the "wise youth" who brought this letter, and that the two courtiers with him be put to death. At the feast that night Amleth would not eat. When questioned he replied that the bread was bloody, the water tasted of iron, the meat smelled of human dead, and three times the queen had behaved like a bondwoman. These insults were reported to the king, who instead of being angry, investigated the source of the food. He discovered that the corn for the bread was grown on an old battlefield, that a rusty sword lay in the bottom of the well, that the pigs had broken loose and eaten the unburied corpse of a robber, and it was true that the queen had picked her teeth at table, lifted her skirts when she walked, etc. The king was impressed with the wisdom of this "wise youth," and carried out in full the details of the altered letter.

Amleth then returned to Denmark, killed Feng with Feng's own sword, and was received joyfully as king by his own people. Here is shown the ancient Teutonic (especially Danish) belief, the deep-rooted and almost religious conviction, that all perjurers and traitors must, and inevitably do, die by their own swords.

Later Amleth returned to Britain, where his father-in-law, the king, sworn to avenge the death of his friend Feng, sent Amleth on an errand to Hermutrude, queen of Scotland, again bearing a sealed message instructing his death. But after once seeing Amleth and learning his story, the lady herself altered the letter to read that she must marry the bearer. Amleth was easily convinced that he should take a second wife, and did so. He defeated the king of Britain in battle by the stratagem of placing dead men in upright positions to simulate a huge army. His first wife remained loyal to him, so Amleth, with two wives, returned to Denmark. Later he was killed fighting against Wigle of Denmark. Hermutrude had vowed she would die with him, but comforted herself by marrying Wigle.

There is a very old Norse version of this story in which two sons of the murdered king feign madness and avenge their father by setting fire to the hall. Through Saxo Grammaticus the Danish legend became widely known among Germanic peoples. It is, of course, the source of Shakespeare's *Hamlet*. [MEL]

Ammit or **Ammut** In Egyptian mythology, an underworld monster, compounded of the hippopotamus and lion and having a crocodile's jaws. Ammit was stationed at the scales of judgment in the hall of Osiris; those souls whose hearts were found heavy with sins were eaten by her. Compare CERBERUS.

Ammon or **Amon** The Greek and Roman name for the Egyptian god Amen, appearing as Zeus-Ammon and Jupiter-Ammon: when associated with Ra, **Ammon-Ra**, **Ammon Re**, **Amon-Ra**, or **Amon Re**.

amniomancy Divination from the caul occasionally found enveloping the head of a new-born child: gener-

ally European and believed to be originally from the East. The condition of the caul, lax, dry, etc., indicated the future general state of health of the owner.

amorous bite A folktale motif (T467) commonly found in the various poison damsel stories, in which the poison damsel bites her lover on the lip, thus causing her own poisonous saliva to enter his bloodstream, so that he dies. This seems to be associated with the very ancient (Babylonian) and very widespread belief that the spittle of witches is poisonous. See POISON DAMSEL.

amphidromia The festival, held on the fifth day after the birth of a child in Attica, Greece, during which the baby was carried at a running pace around the family hearth. During this celebration friends and relatives brought presents and the women who had assisted at the birth cleansed their hands. This custom has been variously explained as a purification rite, as an initiation rite, or as a rite to ensure fleet-footedness for the child.

amṛita, amṛta, or amṛit In Hindu mythology, the drink of immortality; the lost water of life produced at the Churning of the Ocean. The name is applied in the Vedas to various things sacrificed, but especially to the soma juice.

Rāhu, an asura, disguised himself as a god and obtained possession of some of the amrita which he drank in order to make himself immortal. Nārāyana (Vishnu) caught him and cut off his head. Rāhu's body became the progenitor of the comets and meteors; his head, immortal because of the amrita he had been able to gulp, chases the sun and moon which betrayed him to Vishnu, and sometimes swallows them (eclipse). Compare AMBROSIA; MEAD; SOMA.

Amsterdam The oldest of the capstan chanteys, mentioned, though not specifically as a sea song, in *The Rape of Lucrece*, by Thomas Heywood, which was seen in London early in the 17th century. The chanter celebrates the charms of a maid of Amsterdam who was "mistress of her trade," and has become popular as a glee-club song. It is also called *A-Rovin'*, from the words of its refrain.

amulet A material object, usually portable and durable, worn or carried on the person, placed in a house, or on or among one's possessions, to protect the owner from dangers such as death, shipwreck, lightning, attacks by thieves or animals, evil spirits, witchcraft, or the evil eye; to aid him in acquiring luck, wealth, physical strength, magical powers; and to bring success in hunting, trading, battle, or love. The use of amulets is world-wide among almost all peoples, and is familiar to almost all Americans in the form of horseshoes, lucky coins, watch-chain charms, and the rabbit's foot. Amulets are not only worn by men, women, and children, carried in bags or pockets or sewn to clothing, but they are attached to domestic animals, buildings, tools, weapons, placed in fields near growing crops, in storehouses, barns, henneries, and tied to dangerous rocks, bridges, or at the top of passes. They are sometimes used as containers for the soul. Eskimo medicine men, for instance, conjure the soul of a sick child into an amulet to keep it out of harm during the illness.

Amulets are primarily preventive and are to be distinguished from talismans which transmit qualities, from charms which are magic formulas to be sung or

recited (also loosely applied to amulets over which charms have been said).

Amulets of common stone chosen either for shape, color, or the importance of the place where found, are worn by the Mongols as a protection against thunder and lightning, by the Jews to prevent miscarriage, in Italy as a protection against witches (*madreporite*) and for the prevention and cure of snake-bite (*serpentine*). In the Torres Straits water-worn pebbles are regarded as love charms. In Ireland perforated stones of any kind are hung on cattle byres to prevent malicious fairies from stealing the milk. Stones are worn by the Blackfoot Indians as hunting charms. The Aymara use bezoar stones removed from the stomachs of llamas or vicuñas as amulets. Fragments of stone are carried by childless Japanese.

Amulets of animal parts or substances depend frequently for their efficacy on the sympathetic transference of the characteristics or qualities of the animal from which they are acquired. Greenland Eskimos sew a hawk's head or feet into a boy's clothing to make him a great hunter, the skin from the roof of a bear's mouth to give him strength, and a piece of a fox's head or dried fox dung to give him cunning. The Chickasaw Indians put the foot of a guinea deer into hunting pouches to make themselves successful hunters. Hidatsa girls wear beavers' teeth to make them industrious. The Dogribs carry antler points for success in luring deer or moose within rifle range. The Bororo wear breast ornaments of jaguar and monkey teeth to give them strength and skill.

Plants or parts of plants such as seeds, berries, pieces of wood, and leaves, are world-wide in amuletic use. Vegetable amulets far outnumber all other types in India, where one of the most potent is made of chips from ten different kinds of holy trees glued together and wrapped with gold wire. In Europe peas are thrown into the lap of a bride. Eating the fruit of a tree bearing for the first time, possessing mandrakes, or drinking birch-sap are all supposed to produce fertility. The Greeks used snapdragons and peony tea against sorcery and an olive leaf bearing the name of Athena or an herb grown on the head of a statue tied around the head to cure headache. The Romans used garlic to keep off witches and touched the doorway with a sprig of strawberry plant for the same purpose. The Japanese use fruits, flowers, and vegetables amulettically in their homes and hang garlic at the doors to keep out infectious diseases. Double walnuts and almonds are worn as amulets against the evil eye, witches, headache, and for good luck in Italy. A powerful Chinese amulet to ward off evil spirits is made of peach wood or peach stones; padlocks made from peach kernels are believed to bind children to life when attached to their feet. Many peoples believe that a potato carried in the pocket keeps off harm and cures diseases. The Shoshone Indians use powdered spruce needles to prevent illness. The Apache and Navaho filled and wore buckskin bags with pollen from the cat-tail and other plants to secure peace, prosperity, and happiness. Petrified wood is used in Hopi amulets.

Manufactured amulets are as widespread in use and almost as old as are natural objects. Figurines of gods were buried under the thresholds of Assyrian palaces. Egyptian uzas or sacred eyes made of lapis-lazuli, gold, pottery, or wood, and the uaz or green column usually made of feldspar, as well as the dad and buckle were

placed in tombs for amuletic reasons. The Greeks used images of gods and geometric figures as amulets. The Romans attached small metal rattles and bullæ to their children's clothing. In Vedic India rings were used as amulets. The Celts had figures of the horse, bull, and models of a wild boar's tooth; the Mayas used golden frogs arranged singly or in groups, images of lizards, crocodiles, crabs, eagles, gulls, parrots, or monkeys, each provided with a ring for suspension on a cord or chain. Certain Eskimos sometimes wear an image of the object for which they are named. The Lengua use wax images for good luck in hunting. The Iroquois carry miniature canoes to keep from drowning. The Hindus wear lockets containing the image of a god or goddess. And the Japanese use bells and images of deities in addition to the more common written amulets.

Whether or not all ornamental jewelry was originally amuletic is open to question, but jewelry is worn for amuletic purposes in many parts of the world. In India, rings of copper, silver, gold, or iron are worn to repel sorcery. In the Punjab copper rings or earrings are worn to frighten away the sciatric spirit. In southern India an important part of the marriage rite is the tying-on of the lucky thread which is a saffron-colored cord attached to a small pendantlike gold ornament. This is worn around the neck for the same reason the wedding ring is worn in Europe, and because it is believed to bring good luck. The Lapps attach a brass ring to the right arm while transferring a corpse to a coffin and then to the grave to prevent the ghost of the deceased from doing any harm. American Negroes believe a silver ring, a ring inscribed with Chinese characters, or a ring made from a horse-shoe nail to be good luck. Chinese children are protected from harm by jade bracelets or anklets, and Tibetan women wear chatelaines depending from a small silver casket which usually contains an amulet or charm.

The elements included in Jewish written amulets were the names of God and angels, Biblical expressions or phrases, a list of the functions of the amulet, and the name of the person for whom the amulet was designed and that of his mother. Another type of written amulet consisted of a series of figures made of curved and straight lines tipped with circles, interspersed with geometric forms. The *Zahlenquadrat* or magic square, formed by a series of numbers arranged so that the sum of the numbers in each row, whether added vertically, diagonally, or horizontally, would be the same, was popular among Christian cabalists and adapted by medieval Jews. The *mezuzah*, originally anti-demonic in character, was given a religious significance by the rabbis who had Bible verses (*Deut.* vi, 4-9; xi, 13-21) inscribed on it as a reminder of the principle of monotheism, but its amuletic properties have always outweighed its religious significance. The Chinese and Moslems use similar strips of paper. The former hang them over doors, on bed curtains, and even wear them in the hair.

Tibetan amulets are frequently pieces of paper inscribed with sentences to Buddha, while those of Ethiopia (which measure from 50 centimeters to two meters in length) contain legends, spells, secret signs, words of power, spells, and legends explaining how they originated. These scrolls are rolled and bound with cord, sewed in a leather case or inserted in a telescoping capsule. Japanese amulets against lightning, dangers while traveling, sickness, burns, and to better one's fortune,

are usually roughly printed sacred texts or rude woodcuts of the divinity appealed to, printed with words explaining the purpose of the amulet, folded, and enclosed in an envelope. These are sold at temples, are not taken out and read, but are renewed annually. Compare FETISH; GEO; GRIGRI; MAGIC OBJECT; TALISMAN. [SPH]

An or **Ana** The Sumerian god of the sky, to whom Nammu, the sea, gave birth. By Ki, the female earth-goddess, An was father of Enlil, god of the air. When earth and sky were separated, An carried off the heavens, Enlil the earth. Enlil superseded An as chief god of the Sumerian pantheon by the 3rd millennium B.C., though An nominally remained chief. The word *an* is ideographically represented by an eight-pointed star which is prefixed to the names of gods; it signifies high or heaven, and may also signify, as here, "god," dingir. Compare ANU; ANUNNAKI.

Anāhita The ancient Iranian Great Mother; the goddess of fertility, especially of fertilizing waters, and specifically of the spring among the stars from which flowed all the rivers of the earth: worshipped from Iran westward to the Aegean and identified with other Great Mothers of the region like Nina, Ishtar, Semiramis, Cybele, Aphrodite. She appears in the pantheon of Mazdaism after Zoroaster and is closely associated with Mithra or Mazda as one of the chief deities of the religion. An entire Yašt or hymn of praise, is given to her in the *Avesta*. She is called there Ardvī Surā Anāhita, the high, powerful, undefiled one. Anāhita was the goddess of reproduction and of the maintenance of good things; she "purified the seed of the male and the womb and the milk of the female." She was called upon by marriageable girls and by women in childbirth; she aided in time of great illness. She is described in the *Avesta* as a beautiful maiden, tall and powerful, wrapped in a gold-embroidered cloak, wearing earrings, necklace, and crown of gold, and adorned with thirty otter skins. Anāhita was also the goddess of war and drove a chariot with four white horses (wind, rain, cloud, hail); she gave victory to a contender. Through the influence of Chaldean star-worship, she became identified with the planet Venus.

In Armenia, as Anāhit, she was the most popular of all the gods. Here she was identified with neither the planet nor the waters of fertility. She had several temples, particularly the great sanctuary at Akilisene, where members of both sexes of the nobility entered her service as slaves, and where the female slaves practiced sacred prostitution.

In Pontus and Cappadocia, and perhaps in Cilicia, she became identified with the goddess Ma. She was probably brought to Sardis in Lydia by Artaxerxes II, and there merged with Cybele. Her noisy and licentious rites occurred in Armenia about the 15th of September.

The Greeks, who also called her Anaitis, the Athena of Ilium, and the Persian Artemis, confounded her with Aphrodite as a fertility goddess, and with Athena as a war goddess. Since the bull was sacred to Anāhita, she became confused with the Greek Artemis Tauropolos in Lydia, Armenia, and Cappadocia. Generally she was known as the mistress of the beasts; sacred herds of white heifers were branded with her mark, a torch, and sacrificed to her along with green branches in Armenia. After the 1st century A.D., her worship as Magna Mater spread

through the Latin world along with that of Mithra.

Anāhita is probably of Semitic origin, perhaps identical with Anath. The temple prostitution practiced by her worshippers and her identification with Nina and Ishtar give support to the view. Herodotus says that the Persians learned from the Assyrians to worship the heavenly Aphrodite "whom they call Mithra," which latter may be a misreading of Anāhita. In inscriptions of the Achaemenian kings of Persia, Mithra and Anāhita are united.

Ananga The bodiless: an epithet of Kāma, Hindu god of love: so called because he was consumed by the fire of Śiva's eye when he interrupted Śiva's devotions with thoughts of Pārvatī.

Anansem Literally, spider stories: generic title of a class of folktales told by the Akan-speaking peoples of the old Gold Coast, so called whether the spider takes part in the story or not. The Anansem are told for group entertainment and are definitely distinguished from the myths. They are also known as Nyankonsem, or "words of the sky god."

Once upon a time Kwaku Ananse, the Spider, went to buy the sky god's stories. The price to be paid was very great. Nyame, the sky god, demanded in exchange that Kwaku Ananse bring him the python, the leopard, the fairy, and the hornets. Spider promised all these things and returned home. One by one he tricked the prizes into his possession, and then added his mother to the lot for good measure. The sky god was so amazed that Kwaku Ananse, the Spider, could bring in the price of the stories when very great kings and chiefs had often failed, that he called his chiefs and leaders in for consultation. The verdict was that beginning that day the sky god's stories should henceforth belong to Kwaku Ananse and be called Anansem, Spider stories, forever. The Paramaribo Negroes of Surinam, South America, give the generic title of Anansi-tori to all their folktales. In Curaçao they are called *cuenta di nansi*.

Anansi The Spider: hero and trickster of an enormous body of West African folktales. Under various names he plays the same outrageous, cunning, and wily role in the folklore of the Gold Coast, the Ivory Coast, Sierra Leone, Liberia, Togo, Dahomean, Hausa, Yoruban, Warri, Fjort, Cameroons, Congo, and Angolan peoples. He is known everywhere in the West Indies and other parts of the New World, and has become almost as familiar to white children through their countless Mammies and Uncle Remuses, as to Negro children.

Among the Hausas the Spider is named Gizō; the Akan-speaking peoples call him Kwaku Ananse. In Curaçao Anansi has become Nansi. He turns up as Miss Nancy in South Carolina Sea Island folktales, and in Gullah, specifically, as Aunt Nancy. "Ti Malice is his name in Haiti. He survives as Anansi, however, among the Surinam Negroes, both Paramaribo and Bush, and in Jamaica. In Jamaica the Anansi stories are now told chiefly at wakes and other gatherings for the dead. The Negroes of Trinidad are said to have lost interest in them; but here too they are still told at wakes. The real Anansi perpetrators in Trinidad, however, are the children, who not only know the stories, but know them well, and tell and retell them to each other.

Anansi was originally a creator of the world in Gold Coast mythology, and still plays the role of culture hero

in such tales as those in which he steals the sun. In Bantu folklore Spider is definitely associated with the sun. His dominant role, however, throughout Negro folktale everywhere is that of the crafty and cunning trickster who prospers by his wits. He is always duping other animals, to his own profit, and sometimes man, in some modern versions sometimes missionaries. Tiger is frequently the butt of his jokes; but occasionally Anansi falls into his own pit or fails to outwit one or another of his intended victims. He is also somewhat of a magician, being able to appear sometimes as man, sometimes as spider. There are a number of stories in which Anansi turns into a spider at the moment of greatest danger, thus saving himself from some awful retribution, and thus sometimes explaining the origin of spiders. He figures in numerous versions of the tar-baby story, of which several variants account for his flattened body.

The character of the Spider of West African folktale is paralleled by that of Hare and Tortoise in the story cycles of certain Bantu tribes, and by Br'er Rabbit in the southern United States. B'Rabby in the Bahamas is the same folktale trickster hero. His name is a byword in West African proverb: "Woe to him who would put his trust in Anansi—a sly, selfish, and greedy fellow" and "The wisdom of the spider is greater than that of all the world put together." One of the most famous of the Anansi stories (Ashanti and Yoruba) is the one about the pot always full of food, found and broken by Anansi's children, and the whip which he got to punish them, which would not stop beating them when they investigated it as they had the pot. See ANANSESEM.

Anansi and the Gum Doll Anansi kept stealing the food out of a man's (or the king's, or another animal's) big field. But the man did not know who it was. So he put a big gum doll out there. When Anansi saw the gum doll he thought it was a real person. "Hello, there," he called out. But the gum doll made no answer. "Answer me or I'll kick you," cried Anansi. The gum doll did not answer. Then Anansi kicked him and his foot stuck. "Let loose or I'll hit you," he cried. The gum doll did not let loose. Then Anansi hit him and his hand stuck. He kicked with the other foot and that stuck; he hit with the other hand and that stuck. Then the man came out to find the thief. And the man beat Anansi until his body was flat as flat (until he got eight legs; until he had the mark of a cross on his back).

This story is especially interesting as being the bare bones of the Anansi-tar-baby combination as told in Africa, with a few of the Surinam variants indicated. The same story is told of Hare in Angola, of Jackal among the Hottentots. For the whole gamut of Anansi-Hare-Rabbit-Tortoise-Jackal substitutions and tar-baby variants, see each of these and also BRER RABBIT; STICK-FAST; TAR BABY.

Anansi Rides Tiger Anansi remarked to the king that he rode Tiger. The king doubted it, so he asked Tiger. Tiger said "No" and went to fetch Anansi to make him take back the words. But Anansi said he could not go now; he was too ill; he could not walk; he could not stand up. But Tiger would not wait; Anansi must come to the king at once and take back that lie—even if Tiger had to carry him there himself! So Anansi consented—just to prove to Tiger that he never said any such thing

in the first place. But Anansi needed a saddle, just to brace his feet, he was so weak, lest he fall off. Tiger was in a hurry; he consented with impatience. Then Anansi needed a bridle, just to hold on to!—and a whip, just to swish the flies away! Tiger did not care, as long as Anansi would come to the king right away and take back the lie. So they arrived at the king's house: Tiger galloping, Anansi in the saddle, plying the whip, pulling on the bridle, and crying to the king to come look—Anansi rides Tiger!

This is the story as told by the Surinam Negroes, both urban and bush. They have another version which ends with the spider living in the king's house forever, as reward for bringing him such a fine horse. In the parallel Sierra Leone story Turtle rides Leopard. Br'er Rabbit rides Br'er Fox or Br'er Wolf in southern U. S. Negro versions.

Anansi-tori The Anansi stories: generic term among the Surinam Negroes for the great body of spider stories transplanted from West Africa. They vary very little in urban and bush versions. These are the same spider trickster folktales known to the Ashanti as Anansem, and include also the same story of how they came to be so called.

The Paramaribo Negroes include the Anansi-tori as an important feature of their rites for the dead, especially on the eighth night after a death, when the evening begins with hymns and riddling and the stories last till dawn. They are never, never told in the daytime by anyone, lest the dead come and listen and their proximity cause the death of the narrator or his parents. The Saramacca Bush-Negroes tell these stories to the dead during the seven days a body lies in the village death house awaiting burial. Owing to the importance attached to them as entertainment for the dead, the term has become extended to include also the dances for the ancestors and the songs sung during these rites.

Anantā In Hindu mythology, an epithet meaning the infinite, applied to the serpent Śeṣha and sometimes to Hindu deities, especially to Viṣṇu.

Anapel Literally, in the Koryak language, Little Grandmother: the name for the divining stone whereby the Koryak father discovers the name of the dead relative whose soul has just been reborn in his newborn child, and whose name that child must bear. The divining stone is hung on a stick and allowed to swing to and fro of itself while the stick is suspended. The father calls the roll of all dead relations on both sides of the family. When Anapel quickens in her swinging, it is a sign that at that moment has just been mentioned the name of the dead relative whose soul has come to live in the newborn child. Thus the child is named, and the father carries it through the village announcing, "A relative has come," or to this one and that one, "Your father has come" or "Your uncle has come."

Anath or 'Anat A primitive Semitic (Canaanite) war goddess, the "queen of heaven, mistress of the gods," worshipped widely in the Semitic world, whose cult was in Egypt by the reign of Thothmes III (15th century B.C.) where she became daughter of Rā. She is represented with helmet, shield and spear in right hand, battle-ax or club in left; a late picture shows her seated on a lion. No connection of Anath with the Babylonian Antu has been proved; she may be identical with the

Syro-Phœnician Anthyt and the later Antæus, both Phœnician war goddesses. She was identified in the Hellenistic period with Athena. See SEMITIC MYTHOLOGY.

ancestor worship Veneration (only occasionally actual worship in the religious sense) of ancestral spirits: perhaps the most widespread of all religious forms, always implying animistic belief, and sometimes linked with totemism. The cult of the dead, those observances meant to dispose of the body and attend to the comfort of the spirit of the dead, is based in the belief in souls; ancestor worship considers the effect these not-quite-departed spirits may have on the world of the living and varies its cult observances accordingly. The dead may be malevolent or benevolent, feared or admired, given bribes to keep them from working mischief or gifts to make them happy. The tremendous mass of evidence of ancestor worship indicates that belief in the unfriendly dead is more prevalent than belief in well-wishing spirits, but no conclusion drawn from this, no generalization about the ways of the mind of primitive man, is completely valid. That ancient Greek and other religions seem based in propitiation of the ever-present evil spirits of the dead is balanced by an equally widely distributed belief that the spirits of dead parents and dead chiefs guard those who remain alive. The dead father or chief continues to guide his family or tribe; the stranger or the enemy, or the victim of an accident snatched from life suddenly, still may cause trouble through evilness or envy. Offerings are made, occasionally or at stated intervals, in either case: the evil spirit must be made to feel that he has something to gain by not molesting the people; the good spirit is deserving of the care a grateful people can give him.

Possession by an ancestral spirit may be oracular, or it may be through metempsychosis (or reincarnation). The newly born child may have the spirit of a departed ancestor, thus the naming of children for the revered dead. Thus also the feeling that a family has a larger bond, beyond its immediate descent, in the duty it owes to the dead. In a wider application, the clan, claiming descent from a common ancestor, may heroize or deify the ancestor; and if the clan or tribal myth is such, the ancestor may be the totem animal. There is no way of knowing into what form or shape the ancestral spirit will reappear on earth; it may be in a stone, a mountain, a scorpion, a cat, or any person whatever. See MANISM.

➤ In ancient China, ancestor worship was a well-developed cult in the Chou Dynasty, c. 1000 B.C. In modern China it has religious and civic aspects. Religious: The male head of the family or clan must make periodic sacrifices of ceremonies and food before the tablets and graves of his ancestors, though the more recently dead receive the greater homage. The two souls, the superior soul in heaven and the inferior soul informing the body, are thus nourished until disintegration occurs. If the souls of the ancestors are not sufficiently nourished they become ghosts and create mischief. Civic: The doctrine that proper respect must be paid ancestors, living or dead, was part of the Confucian attempt to restore seemliness in a decadent culture. Parents' natural desire that they be taken care of after death and tales of the wickedness of hungry ghosts are two facets of an attitude which has had such wide social acceptance that it is much more than a doctrine or creed. [RDJ]

ancestral tablets In Chinese and Japanese ancestor worship, wooden tablets inscribed with the names and birth and death dates of the deceased, kept in the ancestral hall of a clan or in a household shrine, to which offerings and prayers are made, and used when sacrifices are to be made at the shrine rather than at the tomb itself: probably derived from the burial of the deceased within the home plot. The tablets are believed to be occupied by the spirits of the deceased when the offerings are made, but after the offerings are completed the spirits depart. The Chinese tablets, traditionally originating during the Chou dynasty (1122-255 B.C.) but finding their source much earlier, are interlocking and fit into a wooden base. The last two characters of the inscription mean "spirit throne," and the very last is left uncompleted until a ceremonial "canonization," when a priest adds the finishing touches to the letter. The tablets are carried in the funeral procession and are kept, following the mourning period, in the ancestral shrine. Among the poorer classes, who cannot afford ancestral halls, the tablets are usually kept in the left rear corner of the living room in the household shrine, being placed there with invocation of Tso Sha Shen Chun, the God of Spirit-Tablet-to-Ancestors. Offerings are made before the tablets in certain days, such as the anniversary of death, and the Ch'ing Ming Festival, some three months after the winter solstice.

In Japanese Buddhism, the *ihai* is a rectangular tablet, rounded at the top and inscribed with name and dates. Offerings are made to it, especially at the Bon festival, when spirits are thought to come into the world. Similar tablets are found in parts of New Guinea. [RDJ]

Anchanchu A terrible demon in the folklore of the modern Aymara Indians. He deceives the unwary with his smiles and friendship and then afflicts them with deadly diseases. He also sucks the blood of his victims during their sleep. The Aymaras believe that his presence is accompanied by whirlwinds, and they avoid rivers and isolated places where he is supposed to reside. [AM]

anchunga Tapirape Indian (central Brazil) term for two kinds of spirits: true spirits (i.e. the disembodied souls of human beings), and malevolent demons. Tapirape shamans often see the true spirits in dreams. A famous shaman and culture hero of Tapirape legend, named Ware, destroyed all the evil anchunga in the south. He set fire to their hair, which was so long that it dragged on the ground behind them. The anchunga to the north, however, are still active.

Ancient Spider The creator of Nauru Island (Micronesian) mythology. See AREOP-ENAP.

Andersen, Hans Christian (1805-1875) Danish poet and story writer, second perhaps only to the Grimms in world-wide reputation as a teller of fairy tales. He was born in southern Denmark, the son of a shoemaker who died in 1816, leaving the boy more or less to his own devices in spending his time. He quit school and, becoming interested in the theater, built his own toy theater, dressed his own puppets, and read every play he could lay his hands on. In 1819, convinced that he had a good voice, he went to Copenhagen and haunted theatrical managers unsuccessfully, getting a reputation for being slightly crazy, and starving slowly. However, some

friends he had made, notably Jonas Collin, director of the Royal Theater saw to it that the king, Frederick VI, had the youth sent to grammar school, where he remained until 1827. In 1829 his first success, a satirical fantasy, *A Journey on Foot from Holman's Canal to the East Point of Amager*, was published. After some indifferent pieces, in 1835 *The Improvisor* became a great success, and Andersen an established author. In the same year he published the first of his *Fairy Tales* (*Eventyr*), and until 1872 they continued to appear, slowly gaining for their author a world-wide fame. He continued writing novels, plays, miscellanies, travel books, as well. In 1872 he injured himself severely, falling out of bed, and died three years later without ever having fully recovered from the effects of the fall. Among Andersen's best known fairy tales, somewhat literary and often tragic and moralizing renderings of well-known types and motifs in the folktale, are: *The Ugly Duckling*, *The Tinder Box*, *The Red Shoes*, *The Snow Queen*, *Big Claus and Little Claus*, *The Fir Tree*, *The Emperor's New Clothes*, *The Fellow Traveler*, *The Little Mermaid*, *The Tin Soldier*, *The Little Match Girl*, *The Ice Maiden*. His stories were first translated into English by Mary Howitt in 1846 and by Caroline Peachey also in 1846.

St. Andrew's cross The saltire or decussate cross, formed like the letter X, common in ancient sculpture, and still to be seen as a symbol (usually white on a blue field) as in the Union Jack of Great Britain. St. Andrew is said to have been crucified on such a cross, but the legend has not been traced back farther than the 14th century, and the cross in the convent of St. Victor at Marseilles, reputed to be his, is an ordinary upright cross exhibited resting on the cross beam and foot. Achaius, king of the Scots, and Hungus, king of the Picts, saw this cross in the heavens before their battle with Athelstan, which they won. They therefore adopted the cross as the national emblem of Scotland.

St. Andrew's Day November 30: the day of the martyrdom of St. Andrew, and the only Apostle's day said to be observed on such an anniversary. It is a day for reunion of Scotsmen residing abroad, and for banquets and feasting by Scotsmen everywhere. There are several local customs in the British Isles on this day, as the carrying of a sheep's head in procession before the Scots (London), a driving out of evil spirits with noise and a ringing back again of good ones with bells (Stratton in Cornwall). On the evening of St. Andrew's Day in Germany [Luther's *Table-Talk*], young maidens strip themselves naked, recite a prayer to St. Andrew, and hope to see "what manner of man it is that shall lead me to the altar." A form of divination is performed on St. Andrew's Day by young Germans, in which little cups of foil representing each of the young people present are floated in a vessel of water and, by their approach to each other and to cups representing priests, establish a sort of marriage and sweetheart divination.

Androcles and the Lion Designation for a type of folktale appearing all over the world and belonging to the great cycle of grateful animal tales. The type takes its name from a story appearing in the *Noctes Atticæ* of Aulus Gellius, but is undoubtedly much older. Androcles, a runaway slave, hides in a cave, into which comes a lion. Instead of attacking him, the lion holds up a paw in which a thorn is sticking. Androcles extracts

the thorn. He is recaptured and sentenced to fight a lion in the arena. The lion is the one he has aided and refuses to kill him, with the result that Androcles gains his freedom. The story appears in *Æsop*, in the *Gesta Romanorum*, etc. The moralizing turn of the tale, goodness for goodness, marks it as being probably of oriental origin. In the *Kathā Sarit Sāgara*, a Brāhman rescues a monkey and in return is given a fruit which makes him immune to old age and disease. A hunter abandoned by his companions, in a Wyandott story, draws a sharp object from a lion's paw and is given many hunting charms.

Andromeda In Greek legend, the daughter of Cepheus, king of Ethiopia. Cassiopeia, her mother, boasted that she was more beautiful than the Nereids, and Poseidon, at the nymphs' request, sent a monster to ravage the country. At the direction of the oracle of Amon, her parents had Andromeda chained to a rock, said to have been at Joppa, as a sacrifice to end the monster's ravages. Flying back from the slaying of the Gorgon, Perseus saw her, fell in love with her at sight, and after a bitter struggle with the monster slew it, either by means of Medusa's head, or with his sword. Cepheus then fulfilled his promise and gave Andromeda in marriage to Perseus. A disappointed suitor, Phineus, burst in on the marriage feast, but Perseus again raised the Gorgon's head and changed Phineus and his followers into stone. The couple later went to live on the island of Seriphos. They had many children, among them Electryon, the father of Alcmena; Alcæus, the father of Amphitryon, and Perses, the ruler after whom the Persians were named. Compare ANDROMEDA THEME.

The constellation Andromeda is hung just north of Cassiopeia, appropriately between Perseus and Pegasus, and safely out of reach of Cetus. The concept of this constellation as the Woman Chained is far older than the classical story. The Maiden Chained was known to the Chaldeans, for instance; and the Babylonian story of Marduk and Tiamat as told in the *Creation Epic* is perhaps the basis for the later Andromeda legend. Almost everywhere and in all times it has had the same designation. The Arabs too interpreted it as Al Mar'ah al Musalsalah (the Woman in Chains), but never showed the human form in their depictions, lest the image demand its soul on the Judgment Day. Instead they showed it as a Seal with a chain around its neck. Alternate names for it among classic Latin writers were Persea, an interpretation of Andromeda as the bride of Perseus, and Cepheis, for her father.

Andromeda theme A principal theme of the dragon-slayer type (# 300) of the folktale, in which a maiden about to be sacrificed to a monster is rescued by a hero: spread all over the world, and often combined with other themes of the dragon-slayer type. It is perhaps an elaboration of the very ancient concept of the fight between light and darkness found in the Babylonian Marduk-Tiamat combat, or a reflection of the ancient custom of making human sacrifices to the water gods. Tales containing the theme are found from Central Asia to the Americas. In a French-Canadian story, Ti-Jean kills the monster, cuts out its seven tongues, and confounds a would-be glory-stealer when the latter presents the seven heads as proof of his supposed prowess. A Gypsy tale from the Transylvanian region tells of a hero transformed into a woman who slays the

dragon and accepts the princess, forgetting the transformation. He manages, however, to get cursed back into proper form by an apple-guarding monster. Ideas found in close association with the Andromeda theme are the substituted sacrifice, the serpent (monster) guardian, and the helpful animals.

Andvari In Norse mythology, the dwarf from whom Loki stole the Nibelung treasure. Loki slew Otter, one of the sons of the king of the dwarfs, and with Odin and Hœnir was imprisoned by the king. Loki was permitted to go out to get ransom for the gods, as much gold as would cover both sides of Otter's skin, from Andvari. At the waterfall where Andvari dwelt, there was only a salmon, which Loki caught, and which was Andvari. Loki took all the gold, then ripped Andvari's ring from his finger. The dwarf cursed the gold and the ring, which from then brought only ill luck to their possessors. Sometimes Andvari is considered as the king of the dwarfs.

anecdotes Originally, things unpublished or "secret history"; biographical incidents, sayings, and extracts from unpublished writings, used to illustrate traits of character or customs; then illustrative stories generally; also, a universal and rudimentary type of folk and popular literature consisting of a single incident or motif, found separately, in cycles, or as components of longer narratives.

As short, pointed, pithy narratives, anecdotes were an early development of the literature of the people, whether gratifying the popular taste for gossip and scandal or employed for edification or entertainment. Since historical and literary anecdotes satisfy the curiosity of the many concerning the private affairs and thoughts of the few, the taste for ana, or collections of anecdotes relating to a particular person, grew with the vogue of memoirs and biography in the 17th and 18th centuries. Folk or traditional anecdotes appeal to the same taste, applied to fictitious or legendary characters, though, unlike myths and fairy tales, folk anecdotes are often told to be believed or as if they were true.

At the same time, even historical and literary anecdotes have a traditional aspect in that, as waifs and strays, attached to different individuals in different times and places, they are orphans that "glory in a numerous parentage by adoption." In folk and traditional anecdotes the historical and biographical interest is frankly subordinated to the apocryphal. With the loss of historical truth comes a corresponding gain in moral application, as in the great medieval collections of exempla or illustrative stories, such as the *Gesta Romanorum* (where the stories are arbitrarily referred to certain Roman emperors).

Then, as entertainment is substituted for moral instruction or edification, the serious anecdote gives way to the humorous anecdote, and the exemplum to the jest-book or collection of *facetiae*. But it is the same pointed or proverbial quality of the anecdote that makes it suitable for use either to edify or to amuse. The brevity of the anecdote (sometimes explained on the ground that "The people have less time to sit still and listen to a story than the nobles") is largely inherent in the fact that, in a story with a point, the purpose is to get to the point as quickly as possible. Moreover, as stock or staple incidents or motifs or key stories, which

are widely diffused in time and space, anecdotes are quintessential elements which remain more constant than the plots into which they may be fitted.

As social types and relationships, wise and unwise conduct, rewards and punishments (to use the headings in Stith Thompson's *Motif-Index of Folk-Literature*) constitute the subject matter of a large part of serious anecdotes, so ludicrous mistakes and escapes, eccentricities, lies and exaggerations, deceptions, tricks, and pranks, the smart doings and sayings of clever persons, and retorts and repartee of all kinds make up the bulk of humorous anecdotes and jests. As many literary anecdotes are based on bon mots, word-play, and table talk, so many humorous anecdotes or jests are based on quibbles and repartee; and anecdote generally is related to the riddle, the epigram, and the apothegm. In another direction, there is a close connection between the anecdote or illustrative story and the apologetic and parable.

In modern times the exemplum and parable have passed into the practical anecdote, whose purpose is to illustrate or make a point rather than to teach a lesson or adorn a moral. Numerous collections of such practical anecdotes and humorous illustrations have been compiled for the benefit of after-dinner and other speakers. The local anecdote, which is often a localized migratory anecdote, has also become popular in connection with the study of popular antiquities and local history. In the United States the "funny story" (by which, according to Bret Harte, "arguments were clinched, and political principles illustrated") developed, on the literary side, into the short story, and, on the folk and oral side, into the yarn and the tall tale. Almost every community has its local raconteurs and prize story-tellers (corresponding to the literary anecdote-mongers), who are masters of the folk anecdote and the local anecdote. Their repertoire is found in local histories and memoirs and is also the basis of many individual collections (e.g. the anecdotes of Lincoln) supplementing the literature of ana (e.g. the anecdotes about Lincoln). [BAB]

angakok or **angakoq** (plural *angakut*) The shaman, medicine-man, or magician of the Central Eskimo. He is the authority, judge, and teacher of all religious matters. He becomes an angakok by acquiring the protection of the tornait, especially of the tornaq of a bear, by means of a mysterious ceremony witnessed by no one but himself and the specific tornaq involved. The angakok's first and foremost duty is to discover the causes of sickness, death, or misfortune in the village, and by various acts, songs, and incantations to cure the ill and atone for broken tabus, or command how the offender shall atone. Every Eskimo believes in his heart that he must tell the truth when the angakok questions him. And the angakok never ceases to question until he secures the confession of some broken tabu that has undoubtedly caused the disease or disaster. He controls the weather and procures good hunting for the people by intercession with the tornait that control the animals. He has power over the souls of the dead, the dreaded tupilaq. The angakut know a sacred symbolic language used only in their songs and incantations and invocations of the tornait. They invoke the tornait with great shoutings and violence of motion. If a tornaq approaches in answer to the call, the hut shakes, all present believe that the roof is lifted off, and the soul of the angakok (who is now lying

motionless in a trance) flies away with it to unknown strange regions where he may propitiate the angry ones. Sometimes he is tied with ropes during this spirit-flight, but when he returns the ropes are always found to be untied. His hardest job of all is to drive away Sedna from the village. This is undertaken only by the most powerful of the angakut and is accomplished at the Feast of Sedna. The angakok is always paid for his services. He is always feared and obeyed; but if he is discovered using his powers to a bad end, he is killed.

Angang The ominousness of an encounter; a form of divination, usually limited to the first person or animal met in going on or returning from a journey, but sometimes including those encountered while journeying: a German term applied by folklorists specifically to this belief throughout northern Europe, although similar beliefs are world-wide. The omen may be lucky, as in encountering a man or a horse, or unlucky (old woman, priest, raven, etc.). There seems to be a relationship between the purpose of the journey and the role of the one encountered. For example, while any such meeting with an old woman, a symbol of barrenness, would be considered unlucky, an encounter with any woman in starting a specifically manly pursuit, like hunting, would be unpropitious. Meeting with an animal is ominous in so far as the animal itself is generally ominous; divination from such encounters sometimes takes on totemic overtones.

angel of death Azrael, the terrible angel of Jewish and Mohammedan belief, who takes the soul from the dying body. Related to belief in the angel of death is the concept of the psychopomp, a being who, like the Greek Hermes and the Araucanian Tempulcague, conducts the soul to its afterworld home or to the judgment place.

angels An order of spiritual beings attendant upon the Deity: the heavenly guardians, ministering spirits, or messengers, or their fallen counterparts. The term must be limited to such beings in monotheistic belief, the subordination in duty and in essence inherent in the definition not being present in polytheistic or animistic religions. Angels, as in Christianity, Judaism, and Islam, often seem to be almost polytheistic deities of natural phenomena and abstract qualities. There have been times, for example, when the cult of angels has become very strong within the framework of Christianity. However, where Zeus may be strong as father, ruler, and despot among his surrounding gods, clearly his rôle is not the supreme one of Jehovah amid the angels. It has been surmised that where some saints and similar personalities preserve local pagan deities in the changed context of a new religion, angels are the survival in a like attempt to satisfy a popular belief in animistic deities while preserving the monotheistic outline. The yazatas, fravashis, and Amesha Spentas of Zoroastrian belief are, most clearly of all angelic beings, simply deposed animistic gods.

In pre-Captivity Hebrew literature, angels, not much further differentiated, are the "sons of God" or the "messengers of God," "the messengers" or the "holy ones." Later, beginning with the book of *Daniel*, certain angels are named and take on distinct personalities, e.g. Michael, Gabriel. Some time previously, there had been attempts to differentiate and rank the various classes of

angels—cherubim, seraphim, hayyot, ofanim, arelim—but on the whole the Biblical writers accept and do not speculate on the angels. In the centuries between the completion of the Old Testament canon (about 100 B.C.) and that of the Talmud (4th to 6th centuries A.D.), a great angelology arose, diffuse and formless because of the variations in place and time in which the materials came into being, but strongly affecting written tradition. At about the same time as the writing of the Talmud, the supposed writings of Dionysius the Areopagite, who is mentioned (*Acts* xvii, 34) as hearing Paul preach at Mars Hill, set forth the basic structure of the angelology which was to be accepted in the Middle Ages and after [*The Celestial Hierarchy*, ch. 15].

According to the pseudo-Areopagite writings, there are three triads of the celestial hierarchy between God and man. The first and nearest to God includes Seraphim, Cherubim, and Thrones; the second, which receives the reflection of the Divine Presence from the first, comprises Dominions, Virtues, and Powers; the third, the angelic triad, ministering directly to man, includes Principalities, Archangels, and Angels. The term angel is applied to all, though specifically limited to the ninth and lowest class. The names themselves come from earlier writings: seraphim and cherubim from the Old Testament; archangel and angel from later Jewish texts; and the remainder from the New Testament (*Eph.* i, 21; *Col.* i, 16). On this structure there was later piled a mass of cabalistic magical terminology, the names of angels (and demons) to be invoked for personal reasons of gain, of health, etc., with the formulas for calling and controlling each.

The many theological questions concerning angels—their elementary composition, their existence before the Creation, the well-known cliché about their size (how many could stand on a needle point), their duties, aspect, etc.—do not fall within the scope of folklore. Nor properly is the question of their representation in heraldry and art a folkloric subject, except in so far as it is later reflected in popular belief, although the transformation of the angel to resemble the Greek winged victory, and the evolution of the cherubim from the terrible figures placed to guard Eden to the cupidlike winged babies, are inherently interesting. It is rather in their contacts with men that the angels enter the province of folklore. Many of the texts of the Bible, for example, have a later embroidery of angelology in the traditions of the people, although here too it is sometimes difficult to determine the boundary lines among theological, literary, and folk traditions. For example, in Jewish legend, Esther, wishing to accuse Ahasuerus of condemning her people, had her hand directed by an angel to point at Haman; when Haman tried to plead with her while the king walked in the garden, an angel tripped him so that he fell on her bed in an attitude that made Ahasuerus think he was trying to attack Esther (compare *Esther* vii, 5–8). The angel visitors to Abraham find parallels in the visits of the gods and other superhumans in other folktales, e.g. the visit of Zeus and Hermes to Philemon and Baucis in later Greek tradition, and the European story of the three wishes granted first to the good host and then to the bad one.

An Arab story concerns two fallen angels, Harut and Marut, who came to earth, were tempted, and fell. Offered the choice between punishment on earth and

punishment hereafter, they chose the former as having a limit. Thus, Harut and Marut hang in a well in Babel where they teach the secrets of magic to men, "Yet no man did these two teach until they had said, 'We are only a temptation. Be not then an unbeliever.'" (*Koran*, Sura ii, 96).

Perhaps the best known of all folktales in which an angel figures is the originally Indian story told in one form by Longfellow about Robert of Sicily (*Tales of a Wayside Inn*). The angel replaces the proud prince who is then thrust out by his own retainers, and who cannot gain recognition until he realizes true humility. With varied incidents, the story has been told of a number of princes, even of Solomon in Jewish tradition, Solomon being tricked by the demon Asmodeus who takes his place for three years, during which Solomon wanders. Finally the true king forces Asmodeus to flee by demanding that he show his foot. Compare AMESHA SPENTAS; ANIMISM; ARCHANGEL; FRAVASHI; POLYTHEISM.

angklung An ancient musical instrument of south-eastern Asia and Indonesia, consisting of bamboo pipes set loosely in a frame and tuned so as to produce a chord when shaken. Whole sets of such instruments have been found used together as an orchestra in old Balinese villages. The music accompanies marching. In Java it was used to signal the approach of the ruler and in time of war.

Angler and the Little Fish One of Æsop's fables (Jacobs #53). An Angler once caught a little fish who begged to be thrown back in the river. He was too small, he said, hardly a mouthful, but if the man would throw him back, he would then grow to full size so the man could catch him again to greater profit. "Oh, no," said the man, "I have got you now, and there is no certainty that you would not escape me in the future." Present possessions are preferable to future possibilities. A small thing surely possessed is better than a great thing in prospect. See BIRD IN THE HAND.

Angra Mainyu (Old Persian *Drauga*, Pahlavi *Ahriman*) In Iranian mythology: the devil or principle of evil: the opponent of Ahura Mazda. Angra Mainyu arose from the abyss of endless darkness or was the product of a moment of doubt on the part of Ahura Mazda. He is a demon of demons from the beginning, whose sole purpose and choice is to thwart good, and whose greatest satisfaction and victory is achieved when a human soul rebels against Ahura Mazda. He is the source of death, disease, and disorder, and the innovator of all imperfections. At his side is Druj, the female embodiment of evil.

In Zoroastrian mythology and legend, to destroy the faithful he formed the dragon Azhi Dahāka; to destroy the gaokerena, or tree of life, growing in the sea Vourukasha, he created a great lizard. In one myth he slew the primeval ox, Gēush Urvan.

Angra Mainyu is not eternal. At the resurrection he will be annihilated or imprisoned in the earth, since sin will be removed from the world. He does not know his fate, so is unable to devise means to guard himself against it. Compare SATAN.

Angur-boda or Angrboda In Norse mythology, a giantess of Utgard, the worker of calamity, whose name is literally "anguish-boding." She was the mother, by

Loki, of the Fenris wolf, the Midgard serpent, and Hel, and by Gymir, of Gerda.

Angus Og or Óc Literally, Angus, the Young. In Old Irish mythology one of the Tuatha Dé Danann, son of Dagda and Bóann, queen of the side (the divine race of Ireland) and father of Macha, ancestress of the Red Branch. He is regarded as the god of love and beauty, special deity of youths and maidens, and is sometimes referred to as the Irish Adonis. He was accompanied by four bright birds flying over his head, and seems to have traveled with the pure, cold wind. He was also called Angus of the Brú because he lived with his mother in the Brú na Bóinne, the famous city of the side on the River Boyne.

Angus Og and Caer A story in the Ulster cycle of Old Irish legend: one of the most famous swan-maiden stories in the world. Angus Og fell in love with a young girl who came to him every night for a year in his dreams, but whose name he never succeeded in asking. After her disappearance from the dreams, and a fruitless year's search, Bodb Derg discovered that she was Caer, daughter of Ethal Anbual, one of the side of Connacht. With the help of Ailill, king of Connacht, Ethal Anbual was brought before them. He disclosed that Caer was under a spell and lived year and year about in the shape of swan and maiden alternately. Angus sought Caer in her swan-shape on the lake and was transformed into a swan beside her. The two of them flew, singing unearthly music as they flew, to Angus's home in the Brú na Bóinne.

Anguta Literally, his father: the supreme being of the Central Eskimo, father of Sedna. He created the earth, the sea, and the heavenly bodies. He lives in Adlivun with his daughter, each occupying one side of the big house where no deerskins are, and where the big dog guards the door. He is the one who carries the dead to Adlivun, where the big dog moves aside just enough to let him through with the hapless soul. Here the souls must abide for a year and sleep side by side with Anguta, who pinches them.

Anhanga A forest spirit or demon of the modern Indians and caboclos of the Amazonian basin: formerly a bush spirit of the Tupi tribes of eastern Brazil. He was regarded as a mischievous being who played tricks on travelers and hunters. [AM]

Anher or Anhour A sun and sky god of ancient Egypt, "he who leads heaven." He was the god of several places, Thinis in Upper Egypt particularly claiming to possess his mummy. He appears in human form, carrying a scepter. As a sun god he became identified with Shu, son of Rā. See ANHUR.

Anhur, An-hôret, Anher, or Onouris A war god and god of the dead, local deity of Abydos in Egypt, sometimes shown as a man standing with spear poised. In the period of Greek influence, he became identified with Ares. He is probably identical with Anher.

animal as earth-anchor In the mythology of the Huchnom Indians of California, after the Creator, Taikomol, had made two unsuccessful attempts at creation, he at last was able to achieve a fairly stable earth stretching from the north to the east. But the world still swayed, and Taikomol sent a coyote, an elk, and a deer

to the northern end to steady it. That did not quite do it, for the animals too floated about. Finally Taikomol had them lie down and the earth thenceforth was still, except for the earthquakes which still occur when the animals stir.

animal children Children in the form of animals, either real animals, transformed human beings, or masquerading gods, born to human mothers: a concept found in the folklore, folktales, and mythology of many peoples all over the world. Often the animal children result from a beast marriage; the ideas are intimately connected. But the principal significance of the animal children theme is rather in the direction of etiology and totemism. Among the etiological stories is one of the Dyaks and Silakans in which a boy and a cobra are twins. The cobra goes off into the forest, advising the mother that if ever any of her children is bitten by a cobra, he must remain in the same place for twenty-four hours. Later the twin meets the cobra in the jungle and cuts off his tail, so all cobras since then have had blunted tails. There is a Belgian story of the origin of the first lizards, which says they are the offspring of a vain girl's intercourse with the devil. The Formosans account for the origin of crabs and fish as the result of a brother-sister marriage. These latter are, in addition to being etiological, part of the generally held belief that illegal intercourse can result only in the birth of monsters, etc. (Twins, for example, are in several cultures unmistakable evidence of adultery.) Such concepts as these reflect some of the feeling of horror or awe attendant on the birth of teratisms, twins, and the like. In the typical totemic legends, twins are born, one the ancestor of the tribe, clan, or group, the other the totemic animal. Thus, the Dogrib Indians tell of a woman who bore six puppies, three remaining dogs, three changing into the human ancestors of the tribe. Sometimes the child is an animal when born, and is transformed into the ancestor later. The tale, in Herodotus, of the lion born to one of Meles's concubines is illustrative. Meles was one of the Heraclid kings of Lydia, and Hercules, his ancestor, has been identified as a development of the lion god, often being pictured as wearing a lion-skin. Among the famous animal children of mythology are the Minotaur, born of Pasiphae's lust for the sacred bull sent by Poseidon; the Fenriswolf and the Midgard-Serpent, born to Angurboda and Loki; and the Celtic seal or fish twins, such as the trout born to Mugain before she gave birth to Aed Slane. Compare ADLET.

animal curers The animal or beast gods of Pueblo Indian religion; certain animals believed to possess great powers for curing disease. The prey animals especially are thus regarded. They are patrons of the curing societies and are impersonated by the shamans in the curing rituals. Among the Keres, for instance, bear, badger, mountain lion, wolf, eagle, shrew are all curing animals; but Bear is the most powerful doctor. Bear and Mountain Lion predominate ritually among the Hopi. At Zuñi Bear and Badger are both prominent. Weasel, rattlesnake, and gopher also occur. All the curing societies function through the animals they impersonate. Chiefs of the Zuñi curing societies have animal names: White Bear, Wildcat, Mountain Lion, etc. During a curing ceremony a thread from a blanket or shawl and a small portion of the prayer-meal offered to the

shaman are placed in a corn husk together and regarded as food and clothing for the animal being invoked.

That animals can both cause and cure disease, especially illnesses caused by fear, is common Zuñi belief. A woman in childbirth will wear a badger's paw, or place one on the bed, because badgers can dig themselves out quickly. Hopi women regard the fat, meat, or skin of the weasel as powerful delivery medicines. The Zuñi also believe that one can make a lifelong friend of an animal by giving it a compulsive gift, i.e. the receipt of the gift compels the animal to reciprocate with friendship or guardianship. In return, for instance, the animal will cure the donor's sores. See ANIMAL GUARDIANS; BADGER MEDICINE; BEAR MEDICINE; BEAST GODS.

animal guardians Certain prey animals regarded as guardians and protectors: a general Pueblo Indian concept. Figurines of animals are carried as guides and protectors in the hunt. Zuñi hunters "feed" their lion figurines just before undertaking a deer hunt; and the little lion image which the individual hunter carries with him is buried in the deer's heart, as reward for the hunter's success, or is dipped into the blood. Details of practice vary among the pueblos. Animal stone images are found on almost all pueblo altars. The family group also usually houses at least one such image as guardian (at Laguna, Hopi, Acoma, and San Juan). Among the Hopi, a traveler carries with him a small animal image and sleeps with it in his pillow so that it may warn him of danger in his dreams. Pueblo doctors also give their patients animal images to protect them against disease-sending witches, and are apt to leave one with a sick man to watch over him. See ANIMAL CURERS; BEAST GODS.

animal languages The languages spoken by animals among themselves: a recurrent motif (B215-217.8) of the folklore and mythology of Europe and Asia and thence in much of the rest of the world, in which the gift of understanding these languages is obtained by a human being who thereupon is able to use it to advantage. Underlying the almost universal use of the theme is the same primitive concept basic to augury: that animals in many ways are wiser than men. The ancient Arabs, for example, believed that eating the heart or liver of a serpent gave the power to read omens from birds.

Among their other accomplishments, animals, especially birds, have unlimited opportunities for discovering secrets simply by being unobserved at important meetings and by being able to travel to places inaccessible to men. The fortunate man who possesses the power of understanding their speech, whether that faculty is acquired as a gift from a god or a grateful animal, by magical means, or by his being born with the gift, has opened to him therefore a storehouse of knowledge not available to other men, and he is able to do extraordinary things.

By far the most common way of acquiring the gift is through a serpent or a dragon, perhaps stemming from the belief that the snake is intermediate between the birds and the beasts. A well-known story of the folktale tradition of Asia and Europe, told specifically of Melampus in Greek legend, attributes the knowledge of the language of the birds to the licking of his ears by snakes. Siegfried or Sigurd, tasting the dragon's blood, understands the language of the birds at once. In other

tales, it is the eating of the flesh of a snake, particularly the flesh of a white snake, that gives the power. But in Saxo Grammaticus, Rollo, by eating of a black serpent, learns everything, including the speech of both wild and tame animals. This belief is represented not only as folktale incident, however, for in northern Europe and through Germany and Bohemia, it was believed until fairly recently that partaking of serpents' flesh would bring such knowledge.

In combination with a tabu motif (C425), the animal languages story as it appears in one of the best known tales of Europe and Asia, is: A man, taught the languages by a snake, is forbidden to tell anyone of his gift. When he overhears two animals talking, he laughs. His wife will not desist in her attempts to learn why he has laughed, although he tells her he must not divulge his secret. He is about to tell her and die, when he hears a barnyard conversation about a man keeping order in his own house. He does not tell his wife. Several plants also are believed to give one the gift of understanding animal languages. An Irish belief is that a person wearing a four-leafed shamrock can understand barking dogs.

animal mime The impersonation of animals to obtain power and aid from their spirits for beneficial, life-sustaining effects on the community. Among primitive peoples, where animal mime is still functional, costumes and motions often show an overwhelming realism. The prime function of animal mime (or dance) is obviously to increase animal life and to lure game animals. Effects of the mime-magic are believed to extend also into vegetable and human life.

Hunting drama is mimed in the antelope dance of the African Yammassoukro, and during the hunting season (November through January) among the Rio Grande Pueblo Indians, as in the dance of the game animals performed at San Juan and San Felipe. This dance was also formerly performed among Plains Buffalo Societies. The Comanche buffalo-hunting dance, the *ta'one*, enacts the hunt with shooting and trapping. Among the Hopi costume and action are highly stylized. In the Yaqui deer dance the hunt-mime itself has become blurred.

Certain animals are associated with fertility and vegetation: the snake and turtle universally, the rain-bearing eagle in the American Southwest, the goat, bull, and horse in Europe and all Latin-American countries. The masks and shaggy "wild men" of European medieval carnival had their origin in pagan spring rites and survive today in the sheepskin-covered *Rautschegetten* of Switzerland and other clown-demons. The dance of the agricultural *tlacololeros* of Guerrero, Mexico, mimes a hunt of the fearful *tecuanes* (tigers, wild beasts). Beneficent influences are exerted by the animal spirits of the California Kuksu-hesi rites, but destructive powers are represented by various fantastic spirit- or demon-animals in certain puberty rites, such as the *Máuari* of the Venezuelan Maipure Indians. Animal spirits have curative effects on human beings, are curers, or "doctors," as in the old Plains Indian Bear, Buffalo, and other Animal Societies and Iroquois bear and buffalo dances.

Animal representations function as emblems of societies, as among the Plains War societies, or as totems, as in Africa among the Javara of the Upper Volta (stork, crocodile, antelope, etc.), and among the American Northwest Coast Haida and Kwakiutl Indians (raven, wolf, etc.)

Some animal dances have degenerated into mere entertainment, as the highly mimetic monkey dances of the African Ivory Coast (near Odienne) and the Shoshone pony and dog dances. Among some American Indians the mimetic character of the dances has been forgotten and they now survive only as social dances for couples, as the Iroquois fish and coon dances.

On the whole men predominate in animal mime enactments, but they are joined by the women among the Fox, Sauk, and Iroquois Indians. Women monopolized the Blackfoot and Mandan Buffalo Societies, and among the Pueblos, maidens serve as decoys.

Separate articles discuss specific animal dances more fully. See also DANCE: FOLK AND PRIMITIVE. [CPK]

animal nurse A character of the folklore and mythology of many peoples all over the world: the animal helper (B535) who is foster-parent and nurturer of an abandoned child (or twins), the child being fated to be a hero. The Roman legend of Romulus and Remus, suckled by a she-wolf, is perhaps the best known of the many stories in which an animal nurse appears. Similar tales, in which the animal either suckles or provides food or protection for the abandoned, lost, or kidnapped child, appear in as widespread places as China and Brazil, Ireland and Zanzibar, Canada and India, Greece and Indonesia.

The animal nurse may be one of those creatures, as cow, goat, or mare, which actually provide milk for human nourishment as domestic animals; it may be an animal which resembles these in its milk-giving habits and which might if tamed be used for such purpose, as doe, panther, or bear; it may on the other hand be completely fantastic as an animal nurse, as swan, snake, or buffalo bull, and yet in the tales these latter always manage to provide nourishment for the child. In the Gros Ventre story of the boy adopted by seven buffalo bulls, for example, the bulls confer, decide that since humans eat flesh they must kill buffalo for him, and doing this they keep the child alive. Iamus, abandoned by his mother Evadne, is fed with honey by two serpents, according to a Greek legend told by Pindar. The baby girl of a medieval (perhaps more ancient) story is placed in an egg shell and hatched by serpents. She inherits the serpents' venomousness and, when she strikes Alexander's fancy, is placed in a ring of venom by the suspicious Aristotle as a test, and chokes to death. Ptolemy I (Soter) was supposedly nurtured by an eagle.

There is perhaps in these stories and legends an inkling of underlying totemic meaning, to some extent strengthened by the resemblance of the names of the hero and the animal nurse. For example, Cynus is fed by a swan, Hippothoos by a mare, Telephus by a deer, Lugaid Mac Con by a dog. In addition, if a hero or king is brought up by an eagle, a lion, or similar "noble" animal, it would seem reasonable to expect that he will partake of that creature's qualities; if this happens to strengthen his claim to throne or worship, so much the better. Therefore, Cybele was nourished by panthers, Atalanta by a she-bear, the Deer Boy of the Tewa Indians by a deer.

The Norse giant Ymir drew milk from the cow Audhumla, whose name means nourisher. Cyrus too was suckled by a cow; Paris by a she-bear; Æsculapius by a bitch or a she-goat; and Ægisthus, Phylacides, and Phil-

andrus were nurtured by she-goats. That the idea has not completely disappeared today is apparent from the occasional Antelope-Boy or Wolf-Girl receiving publicity in the press, or from such as Mowgli or Tarzan in contemporary fiction.

animal paramour The animal lover of a woman or a man: a motif (B610-614) used from earliest times in the folklore and mythology of many peoples in every part of the world. While the idea is somewhat similar in theme to the beast marriage, in stories of animal paramours the transformation theme is not so prominent, or so essential to the sense of the story. Beast marriage tales as a rule are of the *märchen* type, and depend for their principal effect on the happy ending. Animal paramour stories on the other hand are as often as not etiological or moralistic. The beast husband or wife often turns out to be a prince or a princess; the animal lover usually is slain and the human paramour is punished, although in various totemistic or etiological stories these events may not occur. In the famous *aśvamedha*, or horse sacrifice, of India, the horse is dead before he copulates with the queen; and in a Lipan Apache story, the dog is killed by the woman's husband, and the woman is scratched to death by the puppies with which she is pregnant. Among the many animal paramours are birds, dogs, bears, horses, bulls, fishes, crocodiles, and snakes. Perhaps the most famous animal paramour is Europa's, Zeus in the form of a bull. A scurrilous tale still alive says that Catherine the Great of Russia kept a specially trained stallion in her stables to satisfy her abnormal sexual appetite. Medical records attest to actual and perhaps frequent cases of bestiality, but the popular tales of women and greyhounds or wolfhounds, and of pet cats and lapdogs, if taken at their frankly exaggerated face value, may be classed as animal paramour stories.

animals The dramatis personæ of folklore and folktale to such tremendous extent that almost *sine qua non*. From the moment man was aware of himself on the face of the earth he recognized his kinship with the animals and called them brothers. Only the so-called "higher" civilizations relegate them to separateness. To early man the animals were different only in shape, not in nature. He witnessed their acuteness and wisdom, in many cases also their superior strength and cunning. He sought to learn in their school; he mimed them in his dances; he admired, loved, feared, and worshipped them, both dead and alive.

To the primitive mind a living animal is open to argument and persuasion, a dead one's spirit to propitiation and appeal. Hand in hand with cognizance of the transience of all physical form goes belief in transformation, the separable soul, and reincarnation.

Thus throughout the folk belief and religions of the world, animals figure as reincarnated ancestors, creators or as aids to a creator, scouts, messengers, and earth-divers (in deluge stories), as guides of souls to after-worlds, messengers of gods, and as gods themselves and hence recipients of worship and objects of cults. They figure as supporters of the world and causers of earthquakes, as swallowers of suns and moons and thus causers of eclipses, as witches' and magicians' familiars and household familiars, weather prophets and weather-makers, as life tokens and doubles, and as such, habitats of individual separable souls. There are friendly and

helpful and grateful animals, animal guides (both individual and tribal), animal tricksters, animal culture heroes, tutelary animals, and animal field spirits. The animal or beast marriage, a commonplace of all folklores, gives us innumerable animal husbands, animal wives, animal lovers, animal children, and animal nurses. Animal ancestors are prominent in etiological and totemic myths.

There are animal kings and chiefs, kingdoms, and armies, and animal languages which human beings are sometimes allowed to learn. Animals as baby-bringers include not only the well-known and traditional stork, but the equally well-known and traditional (Malay) lizard who brings the baby and also causes its soul to enter into it.

Many a folktale begins with the statement that "these things happened" long ago when animals could speak like men. But contemporary primitive folk belief does not relegate speaking animals to the past. That animals can (and do) speak is a living and unquestioned fact among North and South American Indians, Australian aborigines, among various African peoples, and in other contemporary primitive societies. Agricultural folk in Europe and America still believe that on Christmas Eve the animals speak together in the barn, only no man dare listen.

animal tale A story having animals as its principal characters: one of the oldest forms, perhaps the oldest, of the folktale, and found everywhere on the globe at all levels of culture. Excluding the animal myth as being essentially religious, three classes of the animal folktale type should be distinguished: the etiological tale, the fable, and the beast epic. The animal tales current in western folklore stem from such sources as the literary fables of India, the *Jātaka*, the medieval and Renaissance embroiderings of collections like *Æsop's Fables* and the Reynard cycle, and the oral tradition of northern Europe (especially of the countries of the Baltic and Russia).

At its simplest, the animal tale is an attempt to explain the form and habits of the several animals, a fruitful source of material for the primitive storyteller. These stories underlie the mythologies of various peoples, as is evidenced by the animal attributes of many gods in their pantheons. In various instances, as with the Great Hare of the eastern North American Indians and the animal-headed gods of Egypt with their dual animals, it is comparatively easy to reconstruct an etiological animal story antedating the stated myth. In other cases, like the wolf attributes of Zeus and Apollo or the lion story behind the Hercules legend, the process may be more difficult. Other etiological tales, like the one telling how the bear lost his tail, have become attached to one or another of the beast epics. One curious explanatory motif is that of the exchange of parts, found in most parts of the world, telling of the trading or lending of eyes, fur, or the like, among animals, and purporting to explain such natural phenomena as the lack of eyes of the blindworm (he loaned his single eye to the nightingale who added it to hers and kept it).

The line between the literary and the folk fable is not easy to determine, since tales from collections like that attributed to *Æsop* have had wide popular circulation and have been taken from and gone back into the oral traditions of large groups of people. However, the area

of contact between the didactic, moralizing fable and folklore is slight, for the animal tale proper is meant essentially to entertain. The hearer is required to suspend belief and see the animal speaking, thinking, and acting like a human being. In fact, in many of the animal tales, like those of the North American Indians or the Anansi stories of Africa and the New World, one is never sure that Coyote (Anansi, Raven) is performing in an animal or a human role.

Those cycles of stories revolving about one central character, usually a trickster, in animal shape, but with a wily and lucidly logical mind, have been called the beast epics. It has been suggested by Krappe that the beast epic "presupposes" both the fable and the epic, and that the beast epic, the Reynard the Fox tales clearly in mind, is a bourgeois caricature of the aristocratic troubadourish epics themselves. The fable as fable, the short animal tale pointed with a stated moral, is not present among the American Indians; and the sophisticated epic type is likewise missing. The probable source of the beast epics is the agglutinative mind of the story-teller, the desire to respond to the "tell us more" of his audience. Where there may have been several tricksters, or a heterogeneous collection of tales about a number of animals, there evolves one long series of stories about the one central character that catches the imagination of teller and audience alike. The migrations of the Bear and Fox story into regions where the bear was not known, and the amusing pointlessness of substituting the wolf for the bear in the etiological story of the tail frozen into the ice (explaining why the bear has no tail in the one instance, explaining nothing about the wolf's tail in the other), show this process of accretion rather clearly. Such tickling tales as the "Well Begun, Half Done, All Gone" in which Reynard steals and eats the food while supposedly reporting on the progress of a christening have traveled to most of Asia, all of Africa, North America (Negro, Spanish, French, Portuguese), and the North American Indians, and in the process the hero of the tale is variously Anansi, Rabbit, Coyote, etc., whichever is the focal animal of the beast epic of the region. There are of course hundreds of such individual tale types, some very widespread, some with only a local circulation. The migration of the very popular Tar-Baby story from India to America, through Africa, through Europe and the Spanish peninsula, has been investigated by Espinosa and others. The relationship of the purely beast type and the ogre (demon) and man tales (northern Europe as against northern France) has been demonstrated by Gerber. The folktales in which animals figure along with human heroes, e.g. Puss in Boots, Dick Whittington, or the helpful animal tales, are either fairy tales or other types not properly animal tales.

animal thief A character of the folklore of many parts of the world, often the trickster: typified by the European Reynard the Fox, the transformer of the North Pacific Coast and eastern Siberia, and the raven and magpie. The thief may be an ant, a swallow, a raven, parrot, wolf, fox, wolverine, or even a cow. In the transformed trickster story told among many of the Indian tribes of British Columbia and Alaska, and the Koryak of Siberia, the trickster, changing himself into a salmon or the like, runs away with the coveted harpoon or fishhook. In a story found among the Lapps, Hottentots,

American Negroes, and the North American Indians, the fox shams death, is picked up and thrown into the fish cart, and tosses the fish off the wagon to his confederates. The trickster's animal is taught to feign death, in a Japanese story, and after the supposed carcass is sold, returns to his master. The trickster who reports to his fellows that the baby's name is Just Begun, Half Done, All Gone while he eats all the stored food is found in Europe, Africa, North America. Sometimes the animal is a professional thief; sometimes he merely seizes the chance to steal. The crow that loses the cheese to the fox is more scorned for not knowing with whom he dealt than pitied. The most familiar of the thieving animal stories is perhaps the tale, based on the penchant of certain species for shining or brightly colored objects, of the bird, often a jackdaw or a magpie, which weaves a ring or a necklace into its nest, causing great trouble to the victim of the theft.

animism The belief in souls; the attribution of spirit or personality to physical objects or phenomena; specifically, the religious philosophy found universally in mankind which peoples the physical universe with spirits found in animals, plants, stones, weapons, meteorological events, etc.: believed by many scholars to be a principal basis of religious thought, either the fundamental religious belief of mankind or a second phase in its development.

Three principal forms of belief are comprised in animism: a) Belief in and worship of the spirits or souls of men and animals, living or dead, especially necrolatry and ancestor worship, the worship of the souls of the dead; b) belief in spirits not definitely connected with physical objects; c) belief in and worship of spirits residing in objects. Objections have been made to the use of the term and the concept of animism. Substitute terms have been suggested for its various aspects: *animatism*, as relating to that phase having to do with spirits residing in objects; *polydemonism*, to contrast the unranked spirits of the animistic world with the hierarchy of the polytheistic beliefs. That it forms a phase of the "normal" development of religious belief has likewise been criticized. Some have claimed to find in animism traces of a degenerated monotheism. But while a direct chain from animism through theriomorphism, anthropomorphism, polytheism, and monotheism can be demonstrated by scholarly analysis, the existence of animism in such complex societies as the Polynesian seems to indicate that the evolution of one form from another is not a universal occurrence. Animism does not appear as a clear-cut religious system, but is rather a philosophical basis for many systems.

The belief in the "animation of the inanimate" is not limited to the simpler cultures. The man who calls his automobile "she" can be seen throwing his golf club to the ground forcibly because it interfered with his making a good shot. A child will be seen kicking a chair from which the child has fallen. Basically the distinction between what is lifeless and what contains life is never thoroughly made. As d'Alviella points out, science postulates certain unexplainable forces differing principally in context from the mana or orenda or manitou residing in objects. This force, possessed by spirits, good and bad, who reside in the various objects in the world, is something the primitive feels he must reckon with, just as he must reckon with the personality of those men

and women with whom he comes in contact. He must tread with care, propitiating where necessary, but if necessary chastising the object, or destroying it and the spirit living in it.

The complexity of the relationship between animism and fetishism, between animism and ancestor worship, between animism and the various other forms of elementary religious belief, cannot be easily unraveled, and leads to what is often confusion in the writings of the several students in the matter of religion. Animism, as used in this book, indicates a belief in the existence of personality in objects. These objects may be in natural form, or they may be manufactured forms.

anito Supernatural beings of Filipino religion: a general term including deities, lesser spirits both benevolent and malicious, and the souls of the dead, in fact, any incorporeal being. The meaning and application vary from tribe to tribe. The most prevailing concept, however, seems to be that the anito are the souls of the dead, with the result that ancestor worship is the prevailing cult. The Filipino fears the anito, but does not exactly worship them; to keep their good will is his chief aim. He will pay their debts and make sacrifices to them. Sacrifice, as practiced in Luzon and Mindanao, is of the most logical kind. If a man would sacrifice a jug of wine to his anito he takes the jug of wine to the spirit house, repeats his prayer of dedication, allows the jug to stand in the place for a certain time, then takes it back home for family consumption, leaving the soul of the wine to the soul of the ancestor. If a Bagobo man would sacrifice his spear, he leaves it in the presence of the anito only long enough for the soul of the spear to pass into the possession of the anito. He then takes the implement back for his own use. The only difference between a spear that has been sacrificed and one that has not been is that the man may never sell or give away or lose the spear whose soul is in the possession of his anito.

Anjea Among the natives of the Pennefeather region in Queensland, Australia, a being who fashions babies from mud and places them in the mother's womb. Anjea is also the guardian of souls, which he takes from buried afterbirths and preserves in various places until they are ready to be used for new persons. While the navel cord is being cut by the grandmother, Anjea's various retreats are recited. The one mentioned as the cord breaks will be the child's hunting grounds by right, and the child is known as being a baby of a pool, rock, etc.

ankh In Egyptian art and mythology, a tau cross having a looped top; the crux ansata: a keylike emblem held in the hand of a god (or of a king) as a symbol of generation or the power of life, and sometimes called the "key of life." Its origin has been variously conjectured to be the winged globe, the phallus, the Egyptian loin-cloth, the sandals painted on the mummy case, etc. The symbol is often depicted as being applied by a god to the nostrils of the dead to restore the breath of life. It is found from Sardinia to Persia, and in somewhat similar form in India and in Central America.

Ankou In the folklore of Brittany, the last person who has died in each parish or district during a year, driver of the spectral cart whose coming to a certain house or place means death. The Ankou is either a tall, haggard figure with long white hair or a skeleton with revolving head who sees everybody everywhere. Two other figures

walk beside the cart, one on each side, to open the gates or doors and lift the dead into it. See CELTIC FOLKLORE.

Anniebelle A work song of American Negroes, used in wood-chopping, spiking steel, loading lumber, and in mining: sung in short phrases punctuated by a grunted sound as the blow of the work falls.

anniversary, wedding See WEDDING ANNIVERSARY.

Annwn or Annwfn The Otherworld of Brythonic mythology: literally construed either as "abyss," or as *an*, not, and *dwfn*, the world. It was located either on the face of the earth, under the earth, or over or under the sea; it was a group of fortified islands out to sea, or a great revolving castle surrounded by the sea. It was called Land Over Sea, Land Under Wave, etc., or Caer Sidi (revolving castle). It was a land of delight and beauty without disease or death. Arawn was its lord or king. It shared with other Celtic Elysiums, along with its delights, a magic caldron (either inexhaustible or gifted with some mysterious power of discrimination such as would make it refuse to boil a coward's food), a well of sweet or miraculous water, and various marvelous animals greatly desired by men.

The old *Book of Taliesin* locates Annwn beneath the earth and again identifies it as an island fortress which Arthur visited in his ship Prydwen. In the *Mabinogion* Annwn is the next-door kingdom to the kingdom of Pwyll; and in *Kilhwch and Olwen* it could be reached via Scotland.

Anshar or Ansar In Babylonian mythology, the god of the upper world, son of Lachmu and Lachamu, consort of Kishar, and father of Anu, Ea, and Enlil: believed by some to be identical with the Assyrian Ashur. In the creation myth, Anshar commands Anu and Ea to fight Tiamat, but both turn in fear; finally, when Marduk is sent as the avenger of the gods to fight the mother of chaos and slays her, Anshar regains some of his lost power. Anshar was the god of the night sky, particularly personified as the pole star, which was the peak of the mountain of stars, where he danced as a goat, surrounded by his six assistants of the Dipper.

An Spailpin Fánach Literally, *The Itinerant Laborer*, an Irish folk melody which has been sung to countless sets of words, including *The Girl I Left Behind Me*, a vaudeville parody about a golfer's adventures with "the dirty little pill," a ribald drinking song, and a Vermont song *Old England Forty Years Ago*.

Antæus In Greek mythology, a giant living in Libya, the son of Poseidon and Ge. As a wrestler he was invincible as long as he remained in contact with his mother, the Earth, and he compelled all strangers to do battle on condition that, if conquered, they should be put to death. Hercules discovered the source of his power and strangled him while holding him off the earth. The strength received from the earth motif is also found in a Swiss story in which the strength of witches depends upon their touching the earth.

Ant and the Grasshopper (or *Cricket*) The title of one of Æsop's fables (Jacobs #36) in which a grasshopper who had sung happily throughout the summer, went to the ants in the winter and asked for a little of the food which they had put by. "What did you do all summer?" they asked her. When she replied that she had

sung all day long, they told her now she could dance for the winter, and turned her away. This fable (Type 249) is included in a group of motifs embodying the idea: in time of plenty provide for want (J711-711.3). Stith Thompson reports at least three North American Indian borrowings of this Asiatic-European story.

antelope In the Congo, antelope horns and skins are used as charms; among the southern U.S. Negroes antelope horns are a favorite place in which to confine spirits.

In the emergence myth of the Lipan Apache Indians, the antelope was one of three monsters, enemies of other animals and of the ancient people, finally overcome by Alligator or (in some versions) by Killer-of-Enemies. Among the Hopi Indians, the antelope is a medicine animal.

In India the wind god, Vayu, is pictured riding on the back of an antelope; in China powdered antelope horn (Ling-yang-koh) is given as a medicine in puerperal cases.

Antero Vipunen A primeval giant: wisest of the heroes of the Finns. He lay asleep under the earth, but was awakened by Väinänöinen, who came seeking to be taught magic words and creative spells, to build his boat. Antero Vipunen immediately swallowed Väinänöinen, who proceeded to prod, and hack, and torture the giant from within. At last Vipunen sang to Väinänöinen all his ancient wisdom (see *Kalevala*, song 17). The Christian-Catholic influence is obvious in the naming of this hero, as the name Antero is derived from St. Andreus and Vipunen means the cross of the same saint (see Harva in *FUF* XXIV, 1937, p. 59-79). [JB]

Anthesteria A three days' festival in honor of Dionysus held annually at Athens from the 11th to the 13th of the month of Anthesterion (February-March). Its object was to celebrate the maturing of the wine stored at the previous vintage and the beginning of spring. The first two days, the Pithoigia (opening of the casks) and Choes (feast of beakers), were considered as ill-omened and required expiatory libations; on those days the souls of the dead walked abroad. On the third day, called Chutroi (feast of pots), a festival of the dead was held.

ant-hill A mound of earth and humus heaped up, grain by grain, by ants while constructing their underground habitat: associated with the idea of fertility and sometimes prominent in snake-worship. In the myths of the Korkus of central India, Mahadeo (Śiva) fashioned two images in the likeness of man and woman from the red earth of an ant-hill; the Dhangars of the same region believe the first sheep and goats came out of an ant-hill, and to stop their destruction of the crops, Śiva created the Dhangars. The Susus of West Africa consider ants' nests the residence of demons. The aboriginal object of worship at Tiruvothyur and Melkote, Mysore, was an ant-hill, the abode of the cobra or naga-snake. The Alur tribe of the upper Nile buries men in ant-hills as regular treatment for insanity, and in South Africa the bodies of children are placed in ant-hills excavated by ant-eaters.

anthropological school Largely as a reaction against the mythological school, which sought to explain folktales as a detritus of Indo-European myth, the anthropological school saw in the folktale the fossil remains of

the cultures of the remote past. Folktales, they thought, are best explained in terms of the practices of primitive societies, since often the folktale preserves customs, rituals, beliefs that have long been discarded. The members of the anthropological school—Lang, MacCulloch, Gomme, von der Leyen in folklore, and Tylor and Frazer in general culture—saw proof of this in the fact that the folktales of medieval Europe have close analogs in the folktales of the savages. Andrew Lang, perhaps the most persuasive member of this school, saw the general pattern of development as follows: (1) The original tale, made up of several motifs and originating among "savages" evolves into (2) The popular tale of peasants, which in turn can develop into either (or both) (3) The tale of the semi-realistic hero (e.g. Perseus), or (4) The literary version, such as that of Andersen or Perrault.

While recognizing the fact that tales are frequently diffused from people to people, this school was inclined to explain general resemblances among folktales and especially among folktale motifs by polygenesis. They felt that all men pass through the same stages of development and that consequently they embody the details of their development in essentially the same stories. This group was consequently primarily interested in tracing every element and detail of story and culture back to sources in primitive life. And in this lies the weakness of the school, in failing to recognize differences in cultures and people, cross-influences, inventiveness—in short, in failing to recognize that each tale should be studied as an individual product and studied by the same methods that are used to study a story of conscious art. See COMPARATIVE METHOD; DIFFUSION; HISTORIC-GEOGRAPHIC METHOD; POLYGENESIS. [MEL]

anthropomancy Divination using the entrails of human sacrifices: one of the most ancient and perhaps still widespread means of divining. Most often the victim is a child or a virgin because of the implied purity, but one of the common types in ancient times was the sacrifice of prisoners to foretell the outcome of an imminent battle. The practice has existed only where human sacrifice has been common.

anthropomorphism The ascription of human form or qualities to divine beings, particularly to the gods; the ascription of human characteristics to the powers of nature or to a natural object, animate or inanimate, but especially to animals. The development of the concept of a god often follows a set pattern. The god is thought first to be an animal (theriomorphic state) as Zeus was an eagle, Artemis a deer, etc. Then man begins to endow the god with his physical attributes, so Zeus assumes the physical nature of man (physical anthropomorphic stage). Man also creates lower animals in his image when he endows animals with his attributes and form. Stories abound of animals who marry human beings, live in houses, eat human food, talk, shoot arrows, and exhibit in general the mental and moral traits of man. Anthropomorphism is also applied to the plant world, as the spirit of a tree becomes, by the process of anthropomorphism, a god, or a supernatural being endowed with human characteristics. Osiris, for example, was originally an immanent tree spirit. Man viewed the world through himself and consequently not only endowed the tangible with his qualities but built up the intangible in his own form and endowed it with his inner nature.

Goethe says it succinctly: "Man never knows how anthropomorphic he is."

Thus everywhere since the beginning of religious concept, man has projected himself into his gods. Even the animal gods *per se* possessed human reason, and purpose, and eventually acquired the ability to transform themselves into men temporarily. The animal-headed gods of Egypt are projections of this dual concept. The Greek gods in human form who walked and talked on earth typify the inevitable anthropomorphic trend. Xenophanes wrote, in the 6th century B.C., "The gods of the Ethiopians are swarthy and flat-nosed; the gods of the Thracians are fair-haired and blue-eyed." Prayer thus becomes basically a request, as of man to man; sacrifice partakes of the nature of a bargain (*do ut des*, I give that you may give), or a gift. The names of the gods everywhere mirror the man-concept: Father, King of Kings, Lord of Hosts, Above Old Man, Sky Woman, Our Grandmother, etc. Even the concept of an immaterial god, bodiless, completely spiritual, is conceived in terms of the human soul. [MEL]

Antichrist An opponent or enemy of Christ, originally probably the incarnate devil: the archetypal opponent of Christ, expected by early Christians to appear before the end of the world and the second coming of Christ (I *John* ii, 18, 22; II *John* vii). In the New Testament this concept is variously worded as the man of sin (II *Thess.* ii, 3), Belial (II *Cor.* vi, 15). In *Dan.* vii, the beast, the antimessiah of Jewish eschatology. It is believed that the idea of Antichrist had its origin in the Babylonian chaos myths in which Tiamat rebelled against and was defeated by Marduk. Thus the opponent of God often appeared in the form of a terrible dragon. The Antichrist of *Daniel* was a mighty ruler, the leader of huge armies, who would destroy three kings, persecute the saints, rule three and a half years, and devastate the temple of God. In Moslem literature the false messiah (masihu 'd-dajjal) was to overrun the earth mounted on an ass, and rule 40 days, leaving only Mecca and Medina safe.

The historical figure first attributed to Antichrist was the Syrian king Antiochus IV Epiphanes, the persecutor of the Jews. Gradually, the bitter feeling against Rome, that actuated the Jews from 30 to 130 A.D., permitted no other conception than that Rome's ruler would marshal the heathens for the final struggle. Nero filled the ideal of wickedness sufficiently to be considered a worthy Antichrist. This belief spread among the Christians as they suffered from the Roman power and gradually the figure of Antichrist became a type of God-opposing tyrant incarnate now in one and then another historical character.

By the 12th century people saw Antichrist in every national, political, social, or ecclesiastical opponent; the name sounded on all sides in the struggle between Emperor and Pope, between heretics and the church. Even the view that the Pope of Rome was the Antichrist, or his forerunner, was cultivated by the Franciscans, who held to the ideal of poverty, and by Martin Luther. As events in the history of the Middle Ages seemed to indicate the approach of Antichrist, myths concerning him became widespread. Some believed him a devil in a phantom body, others an incarnate demon, others a desperately wicked man acting upon diabolic inspiration. Myths, recorded by Rabanus Maurus, state that the

Man-fiend would heal the sick, raise the dead, restore sight to the blind, hearing to the deaf, speech to the dumb; he would raise storms and calm them, remove mountains and make trees flourish or wither at a word in an attempt to pervert and mislead men.

Rumors of the birth of Antichrist circulated so rapidly and caused so much agitation that Henry IV of France issued an edict in 1599 forbidding the mention of the subject. A witch under torture in 1600 acknowledged that she had rocked the infant Antichrist on her knees and that he had claws on his feet and spoke all languages. In an announcement of the birth of Antichrist in 1623 purporting to come from the brothers of the Order of St. John, he is described as a dusky child with ". . . pleasant mouth and eyes, teeth pointed like those of a cat, ears large . . . the said child, incontinent on his birth, walked and talked perfectly well."

Legends of Antichrist reached their height during the Middle Ages and then gradually died out. During World War II Hitler was sometimes referred to as the Antichrist. [SPH]

ants Small social insects found from the arctics to the tropics, in cities, deserts, fields, forests, beaches, and mountains. Because of their numbers and distribution, they play an important part in folklore and social ethnology. The Hebrews considered ants wise (*Prov.* xxx, 24-8); among Hindus black ants are sacred; in Bulgaria and Switzerland they are a bad omen, in Estonia a good omen; in France bad luck follows the destruction of an ant's nest. The Pueblo Indians of North America believe ants are vindictive and cause diseases; disturbing or urinating on an ant-hill will especially anger them. And the diseases caused by ants can be cured only by an Ant Doctor or Ant Society. The Zuñi believe that ants are helpful war insects because their activities obliterate tracks, and therefore the Ant Society has a ritual function in Zuñi war dances. The Hopi Indians believe the first people were ants; the Apaches call the Navahos the ant people, and Taos women are told that they will turn into red ants if they consort with white men. In a myth of the Kariri Indians (Chaco) the red ants cut the tree by which the first people climbed to the sky.

Ants play a part in the religious beliefs of people scattered over the globe. In Dahomey and Porto Novo, West Africa, ants are considered messengers of the serpent god, New Guinea natives believe that a second death after the first is possible, in which case the soul becomes an ant. (See AFTERWORLD.) The Aruntas of Australia believe that the bite of a bulldog ant will kill the power of a medicine man. The Hindus and Jains give food to ants on days associated with the souls of the blessed dead. The Aztecs believed that the black and red ants showed Quetzalcoatl the place of maize. The Shans believe the earth was brought from the depths by a species of white ant.

In China the ant is a symbol of patriotism and virtue as well as of self-interest. In American folklore ants know when it will rain and if there are many ants in summer there will be a cold winter; to dream of ants means prosperity. In Morocco patients are fed ants to overcome lethargy. A tea made from white ants is administered by some American Negroes to prevent whooping cough. Guiana Indians use ants as counter-irritants.

The sting of ants is explained in a Tagalog story in which the ant, hearing that the snake had received a

gift of poison from God, obtained the same power and then scurried back to earth so quickly that his speed enraged God. So he was deprived of part of his power lest he use it unreasonably. Among the Apalai (South America) the painful bite of black ants is used to drive away the demons brought into the village by strangers. Girls of the Guiana Indians are stung by ants at puberty to make them strong to bear the burden of maternity or as purification. The Mauhes of Brazil force the boys to thrust their arms into sleeves stuffed with ferocious ants again and again until they are able to endure the pain without a sign of emotion. When he has reached that point of endurance, a Mauhe boy is considered a man and can marry.

In Jewish and Mohammedan legend, the ants taught Solomon modesty and humility. In a German story ants carried silk threads to a prisoner who made a rope from them and escaped. In a Chinese transformation story a monkey was changed into an ant.

Anu or Ana In Babylonian mythology, the sky god, chief god of the great triad of Anu, Enlil, and Ea: city god of Uruk (Erech), creator of star spirits and the demons of cold, rain, and darkness. Anu was enthroned in heaven on the northern pole. He is the fount of the authority of the gods, the ruler of destiny, and with Bel one of the two great Mesopotamian gods. Compare AN; SEMITIC MYTHOLOGY.

Anubis or Anpu In Egyptian religion, the jackal-headed or jackal god, guardian of tombs and patron of embalming, who shared with Thôth the office of conductor of the dead. In the judgment hall of Amenti he weighed the hearts of the dead against the feather of truth and right. In the early Pyramid age Anubis was the god of the underworld, but was replaced in the V Dynasty by Osiris, becoming, with his brother Upuaut, "sons" and attendants. Anubis was identified by the Greeks with Hermes. In Egyptian mythology, Anubis is the son of Nephthys or Isis and Osiris. He embalmed the body of Osiris (in one myth he swallowed his father) until Isis resuscitated it.

Anunnaki or Ennuki (1) In Sumerian mythology, the children and followers of An: the dreaded judges of the netherworld.

(2) In Babylonian mythology, deities of the earth (underworld): the star gods who had sunk below the horizon and who pronounced judgment on men as they entered the underworld, determining the conditions of their sojourn there. Compare IGIGI.

ao In Polynesian mythology, the period of light in which man has existed, as contrasted with *po*, the dark time of the spirit world. Ao is also the personification of the daylight and of the world, i.e. the world of the living. The long *Kumulipo* genealogy of Hawaii is divided into two sections, the second of which deals with ao, with the coming of light, the creation of man, and the generations of men. Compare ATUA.

apacheta A cairn: found generally in the high passes of the Peruvian and Bolivian Andes. Native travelers add a stone to the heap, or offer as a sacrifice an eyelash, the coca which they chew, or an old sandal. This observance is supposed to relieve the traveler of his fatigue and to insure the success of his journey. [AM]

Apakura The heroine of a legend of the Marquesas, Samoa, and New Zealand. Apakura (Apekua in the Marquesas version that follows) is one of two children in human form of a chief. Her son is slain when he goes for his bride, the daughter of Hatea-motua, although he gives signs of who he is and the chief's priest warns against killing him. Seeking for revenge, Apakura enlists the aid of one of her brothers, who tries to build a canoe but is balked by the tree Aniani-te-ani, which refuses to be felled. The assistance of a long-armed brother is obtained; he tells where to get the adze to fell the tree, and snatches people, to be sacrificed at the dedication of the boat, from the house of Hatea-motua. Then the champions of Apakura slay the defenders of Hatea-motua, a vine that drags canoes down, seaweed that traps them, and an octopus that eats them. Hatea-motua is killed and Apakura has her revenge. The details of the story vary to some degree through the islands but in outline it is essentially the same story of revenge for lost child.

Apalala In Buddhist legend, a water dragon or serpent who lived at the source of the Swat River. His conversion by Buddha is often depicted in Buddhist art.

Apauk-kyit Lök In Kachin (Burma) mythology, an old man who was the cause of death. He lived at the time all men were immortal. Nine times he grew old and lost his teeth, but each time he was mysteriously rejuvenated. One day he found a sêkhai (squirrel?) sleeping. He covered it with clothes and placed it in a basket, then went and hid. Rumor spread that the old man was dead. When the Lord of the Sun heard, he examined the man's sumri (life essence) and found it unchanged. So he sent messengers to investigate the situation. They, while dancing at the funeral feast, covered their feet with honey and touched the clothes, thus drawing them away so that the fraud was discovered. The Lord of the Sun was so angry that he cut off Apauk-kyit Lök's life connection. Thus death entered the world.

Apepi, Aapep, or Apophis In Egyptian mythology and religion, the foe of the sun god: leader of the demons against the sun by whom they were overcome, and hence a symbol of storm and the struggle between light and darkness. He was represented as a crocodile with a hideous face, as a serpent with many coils, or a snake with a human head. The sun (Horus or Râ or Osiris) fought Apepi and his demons throughout the night in his journey from west to east, winning the battle every morning.

Aphrodite In Greek religion, the goddess of love, beauty, and marriage; an influence on the fertility of plants and animals; the epitome of feminine charm: sometimes the protectress of sailors; in Sparta a war goddess. Originally she may have been an oriental nature divinity similar to Ishtar. Under the title Aphrodite Urania, she was identified by the Greeks with the Semitic goddess of the heavens, Astarte, and with the Iranian goddess Anahita. In later Greek literature, influenced by Plato, she became the embodiment of spiritual love, the antithesis of the Athenian Aphrodite Pandemos (personification of earthly or common love). Her cult, in one form or another, was universal in the Mediterranean lands and Aphrodisia (festivals in her honor) were frequent. In Greco-Roman Egypt she was identi-

fied with and partially supplanted Hathor. The Romans identified her with Venus.

In Greek mythology she was pictured variously as the lover of Adonis, the mother of Æneas, the wife of Hephæstus, and the lover or consort of Ares. According to Homer she was the daughter of Zeus and Dione. According to Hesiod she arose from the foam of the sea and landed either at Cythera or at Paphos in Cyprus, hence she was sometimes called Cypris, Cytherea, or Aphrodite Anadyomene.

Apis or Hāp In Egyptian religion, a sacred bull worshipped from the IV Dynasty to the time of the Emperor Julian. See HAP.

apo A ceremony or rite of the Ashanti of the Gold Coast, West Africa. It is directed towards chiefs and rulers in the belief that those who wield power over others need protection against the resentment of those whom they may have injured. The performance consists of the voicing of all kinds of derision, reproach, and maledictions on the part of the subjects against their chiefs. This is believed to save the souls of the chiefs from the harm which would inevitably result from the ill-will or anger of their subjects. The Ashanti believe that the cumulative power of repressed resentment or anger will harm, even kill, the object of it, and that the ritual expression of it not only protects but saves all concerned. (Herskovits, *Man and His Works*, 59)

apocalypse In Jewish and Christian literature, a revelation of hidden things given by God to one of his chosen saints, or the written account of such a revelation. Characteristic features of apocalyptic literature include revelation of the mysteries and secrets of heaven, explanations of natural phenomena, predictions of impending events, and a picture of heaven and hell. These are often disclosed through a vision or dream, or brought by angels, and embellished with mythological material borrowed from both Jewish early eschatology (Old Testament mythical beings such as Leviathan, Behemoth, Gog and Magog) and the Hindu and Egyptian cosmogonies. Another characteristic of apocalyptic writings is the marked use of the elements of mystery and fantastic imagery—especially the beasts in which the properties of men, birds, reptiles, mammals, or purely imaginary beings are combined in startling and often grotesque manner (*Dan.* vii, 1–8; viii, 3–12).

Apocatequil The culture hero in the mythology of the region of Huamachuco: father of the twin heroes hatched from eggs. See TWINS. [AM]

Apollo One of the most important of the Greek Olympian gods, representing the most complex creation of polytheism; the god of youth and manly beauty, of poetry, music, and the wisdom of the oracles. In his earlier character (he is believed to have been introduced variously from the north, from Asia Minor, and from Egypt), he was the fosterer of flocks, guardian of colonies, villages, and streets. He was also the sovereign god of healing and ceremonial purification in association with Asklepios, who performed the actual healing functions. To Homer he was the sender as well as the stayer of plagues and the giver of sudden death. As Apollo Smintheus, or mouse god, he was either the protector or destroyer of mice (an image of a mouse stood beside the tripod in his temple in the Troad and white mice lived

under the altar). As Phœbus (Phœbus Apollo) he was god of radiance and light, later identified with Helios.

Numerous festivals to Apollo played a major role in Greek life. The most important were the Delphinia, held in May to celebrate the opening of navigation and the influence of the sun in restoring life and warmth to the creatures of the waves, especially the dolphins which were highly esteemed by seafarers; the Thargelia, held in May to propitiate the deity of the sun, to celebrate the ripening of vegetation, and to return thanks for the first-fruit; the Hyacinthia, celebrated in July in Sparta as a fast and feast corresponding to the Thargelia; the Carneia, held in August in Sparta to propitiate the god and as thanksgiving for the vintage; the Daphnephoria, held in the spring to celebrate the day of Apollo's coming and believed to have symbolized the year; the Pythia, celebrated every fourth summer to commemorate his victory over the Python.

The oracles of Apollo, particularly that of Delphi, were widely consulted, especially during the Peloponnesian War when the craze for knowledge of the future exceeded even that evidenced during modern wars. The universal recognition of the Apollo cult and the oracle of Apollo increased the importance of the Delphian amphictyony politically.

In Greek mythology, Apollo was the son of Zeus and Leto; twin of Artemis; lover of Psamathe of Argos, Coronis of Thessaly, Clymene, Calliope, and Cyrene; spurned by Daphne and Marpessa; wooed unsuccessfully by the nymph Clytie; and father of Orpheus, Asklepios, and Aristæus. Shortly after his birth he spent a year in the land of the Hyperboreans, then went to Delphi where he slew the Python, sang his song of victory, the Pæan (still synonymous with jubilation and victory), and instituted the Pythian games. He slew Tityus and the children of Niobe and, with Artemis, overthrew the Aloadae. Phaethon drove Helios' sun chariot on a wild ride across the sky and was killed by Zeus. Asklepios, Apollo's physician-son, restored the dead to life, and paid with his own. Apollo, indignant, killed the Cyclops who wrought the thunderbolt used by Zeus to kill Asklepios, and was sentenced to serve a mortal (King Admetus of Thessaly) as a shepherd for a year. The birth, wanderings, and battle with the Python are sometimes explained as symbolic of the diurnal and annual journeys of the sun. See DELPHIC ORACLE.

Apollodorus An Athenian grammarian of the 2nd century B.C. The *Library*, generally attributed to him, is a principal source of knowledge of Greek mythology and is said to be an abridgment of a lost larger work of the gods. Frazer, following Robert, in his introduction to the *Library*, doubts that the work is by Apollodorus the Grammarian and, from internal evidence, states that the work was written in the 1st or 2nd century A.D.

apotropaism The science and art of preventing or overcoming evils, usually by incantation or a ritual act. Such rituals and incantations are world-wide. Typical are the central European custom of naked women drawing a plowshare around a village at night to drive away an epidemic, and the Japanese custom of offering a white horse, pig, and cock during the seed-time ritual to save the crops from a curse.

Apotropaic remedies include human spittle, blood, human excrements, strong smells such as that of garlic used in southern Europe to combat witches, various

plants (vervain, dill, oreganum, rowan, juniper, flax, holly, shamrock, ringwort), noise (the bells of the Jewish high priest and Christian churches originally rung to drive away evil spirits before services, and church bells still rung in parts of Europe to dispel hailstorms), dances (to drive away evil spirits, diseases), miscellaneous objects (blue glass beads used today on camels, bells on horses and cattle, metal suns and moons used on harness, the hex signs on Pennsylvania Dutch barns, and the horseshoe found over many U.S. doors), various gestures, and incantations.

apple A pome fruit and the tree bearing this fruit, widely cultivated in the temperate regions, originally growing wild in Europe and western Asia. The apple tree and its fruit play an important role in classical, Arabian, Teutonic, and Celtic mythology and folklore. The apple as such is not mentioned in the Bible in conjunction with Adam and Eve. Despite the popular conception of the story, the cause of the trouble was the "fruit (unidentified) of the tree which is in the midst of the garden" (*Gen.* iii, 3). The apple mentioned in the *Song of Solomon* (ii, 3, 5; vii, 8; viii, 5) and in *Joel* (i, 12) may be the apricot or the orange (the apples of gold, *Prov.* xxv, 11) which flourished in Asia Minor.

In mythology and folklore the apple is celebrated in numerous functions: as a means to immortality, an emblem of fruitfulness, an offering or a distraction in suitor contests, a cure, a love charm, a test of chastity, a means of divination, a magic object, and according to Voltaire's story of Newton, it was responsible for the discovery of the law of gravity. In Greek mythology, the golden apples of the Hesperides were sought by Hercules for Eurystheus because of their immortality-giving quality. Scandinavian mythology includes the story of the apples of perpetual youth kept by Idhunn in Asgard. The wonderful apple thrown to Conle, son of Conn, by the woman from the Land of the Living, was food and drink to him for a month, and never diminished; but it made him long for the woman and beautiful country of women to which she was enticing him. Gna, messenger of the Scandinavian Frigga, dropped an apple (symbol of fruitfulness) to King Rerir. He and his wife ate it together, with the result that they had a child. In Greek myth the suitor of Atalanta, compelled to race with her, threw down golden apples to distract her, and so won the race and the girl. Frey sent eleven golden apples to Gerda as a marriage offer. The apple is the central tree of heaven in Iroquois Indian mythology. In a Wyandot myth, an apple tree shades the lodge of the Mighty Ruler.

The apple of Prince Ahmed in the *Arabian Nights* cured every disorder. In U.S. Negro folklore, apple-shaped birthmarks can be removed by rubbing them with apples and keeping the person on an apple diet. They are also used in voodoo love charms. The apple is a love charm also in Danish, German, and English folklore. In Danish folktale it serves as a chastity test, fading when the owner is unfaithful. In Ireland, Wales, Scotland, and the Isle of Man apples are used in divination. The custom of dipping for apples or catching one on a string on Halloween is a remnant of druidic divination. The apple is a magic object in Scandinavian, Irish, Icelandic, Teutonic, Breton, English, and Arabian folktales.

It is also the subject of numerous proverbs and sayings: Eat an apple going to bed, Make the doctor beg

his bread (now, An apple a day keeps the doctor away), There is small choice in rotten apples, and From the egg to apples (now, From soup to nuts).

April Fool's Day Same as ALL FOOLS' DAY.

Apsaras In Hindu mythology and religion, one of the celestial water nymphs or dancers of Indra's heaven. In the *Atharva-Veda*, the Apsarases were associated with the Gandharvas, and their sphere was extended to include the earth where they haunt several varieties of fig tree in which the music of their cymbals and lutes is heard. According to the *Rāmāyana* they were produced at the Churning of the Ocean (their name signifies "moving in the water"). When they first appeared, neither the gods nor the asuras would have them as wives, so they became promiscuous. They are pictured as beautiful and voluptuous and are offered as the reward for fallen heroes in Indra's paradise.

Apsu In Babylonian religion, the primeval fertile waters; the Deep, home of Ea; the origin of all things in the present orderly universe as opposed to Tiamat, the dragon of watery destruction and chaos. Apsu was slain by Ea-Enki and Mummu was imprisoned in a house built on his body. From the clay of Apsu man was fashioned: this seems to be Sumerian myth, for Kingu's blood serves this purpose in the *Enuma Elish*. In the Babylonian creation myth of the *Enuma Elish*, Apsu is the primeval father who existed before the heavens and earth were made; consort of Tiamat from whom sprang the gods; father of Mummu. See SEMITIC MYTHOLOGY.

ap thmòp (feminine *mī thmòp*) A Cambodian sorcerer: chiefly a practitioner of black magic. The ap thmòp foretells the future, sells amulets and charms, and causes illness by means of incantations or spells. In casting spells on people the sorcerer makes a wax figure and pricks it at the spot where the customer wishes the person to be affected. Compare KRU.

apuku Forest spirits worshipped by the Bush Negroes of Dutch Guiana and held to inhabit the natural clearings found in the bush. These small, powerful beings are much feared, and the places where they are believed to dwell are never used for cultivation or camping grounds. They are to be assigned to the general West African category of "little people," which includes the Ashanti *mmoatia*, the Dahomean *azizan*, and the Yoruban *ijimere*. Whether the Jamaican *pukkumerian* cult is comparable to the apuku cult of Surinam cannot be said, but this has been advanced as a hypothesis to explain the forms of worship found under this designation in Jamaica. [MJH]

Aqhat The central figure of a fragmentary Canaanite death-and-resurrection myth, told in the Ugaritic Ras Shamra texts. Aqhat is the perfect son bestowed upon Daniel by El; the father gives the son a bow made by the divine smith. Anath, the war goddess, covets the bow and tries to buy it from Aqhat. He refuses. She makes a second offer: "Ask for life and I will give thee; for not dying and I will bestow upon thee." He resists this offer too, for "How can a mortal acquire permanence?" She storms at him, runs off to complain to El, and finally conspires to have Yatpan, a killer for hire, murder Aqhat. The mother of vultures, Šamal, eats Aqhat's body while (this is conjectural) Anath considers

whether she will restore life. Daniel recovers the fat and bones of his son and buries them, while Paghat, Aqhat's sister, gets Yatpan drunk and kills him. The portions relating to Aqhat's resurrection, whether by Daniel from the recovered fat and bones or by Anath, have not yet been found (if the reconstruction of the myth is correct and if they exist). H. L. Ginsberg (*BASOR* 97) draws a parallel between this story and the Biblical tale of Naboth and the vineyard coveted by Jezebel and Ahab (*I Kings* xxi). See SEMITIC MYTHOLOGY.

Aquarius The Water-Carrier: the 11th constellation or sign of the Zodiac, anciently the location of the winter solstice. Astrologers equate Aquarius with cold, rain-storms, floods, and dark.

The ancient Egyptians equated this constellation with Khnum, god of water and creator of men, beneficent bringer of water to their arid land. They believed the Nile overflowed its banks when the Water-Carrier dipped his bucket into it. The Arabs too rejoiced with the rising of Aquarius who brought the warm rains. The Arabs thought of it as the source of all the rivers of the earth; but their representations of it show only the bucket, or sometimes a mule carrying two water jugs.

The Babylonians called it Gu, or Overflowing-Water-Jar, and associated it with their mythical Deluge and their 11th month Shabatu, Curse of Rain. The Akkadians called it Ku-ur-ku, Seat of Flowing Waters. Persians, Hebrews, Syrians, Turks, each had a word for it meaning Water-Bucket.

In Greek mythology, Aquarius was originally identified with Zeus, symbolizing creation and the life-giving power of water. Later, it was said to be Ganymede, cup-bearer of the gods. Other Greek myths identify it with Deucalion, survivor of the Greek Deluge, and with Aristæus, rain-giver to the people of Ceos.

This constellation was the first sign of the old Chinese Zodiac, the Rat, bringer of water. Jesuit influence changed it to Paon Ping, Precious Vase; but it is still the Rat in Central Asia, Cochinchina, and Japan. It is also the first sign of the Zodiac in India.

Aquila The Eagle: a constellation of the northern hemisphere, described as flying eastward across the Milky Way. It was interpreted as an eagle alike by the ancient Hebrews, Greeks, and Romans. The Hebrew name for it was Neshr (Eagle, Falcon, or Vulture). The Arabs called it Al 'Okâb, Black Eagle. To the early Turks it was Taushaugjil, or Hunting Eagle. Hindu mythology interprets the three bright stars of Aquila as the three huge footsteps of Vishnu in his stride across the heavens. Altair is the brightest of these three, situated exactly opposite Vega across the Milky Way. To the Chinese the constellation Aquila is thought of as the Draught Oxen, belonging to the Herdsman. For the Chinese story of the celestial Weaving Maid (Vega) and her Herdsman lover (Altair) see CHIH NÜ.

Ara (I) or Er In Armenian mythology, the beloved of the Semitic Semiramis who proposed to marry him or hold him as a lover. Ara rejected her and was killed by the forces of the goddess which she led against him. When she could not revive him, she dressed up one of her lovers and pretended that the gods had restored Ara to life. According to Plato Ara was revived when he was about to be laid on the funeral pyre.

(2) A southern constellation: interpreted by Ptolemy

and others as an Altar, a Censer, a Brazier. By the Romans it was variously thought to be the altar of Dionysus, an Incense Burner, a little altar on which incense was burned for the dead, a Hearth, and also occasionally as Vesta, the hearth goddess. In Arabian astronomy it is called Al Mijmarah, the Censer, an adoption from the Greeks. Medieval Biblical scholars and astronomers thought of it as one of the altars of Moses, or as the altar built by Noah after the Flood.

Arabian Nights' Entertainments or the *Thousand and One Nights* A collection of stories written in Arabic and first introduced into Europe in a French translation by Antoine Galland in 1704: literally the *Thousand Nights and a Night*, but generally referred to as *Arabian Nights*. The framework of the story is Persian, but the stories told by Sheherazade are believed to be Arabian, Indian, Egyptian, and Jewish. They include merry tales, fairy tales, rogue stories, stories of buried treasure, etc.

Arachne In Greek mythology, the most skilful weaver of Lydia who challenged Athena to a weaving contest. Athena wove into her web the stories of those who had aroused the anger of the gods, while Arachne chose stories of the errors of the gods. Enraged at the excellence of the work, Athena tore Arachne's web to tatters. Arachne hanged herself in grief and was transformed by Athena into a spider.

àràk In Cambodian belief, one of the good spirits or tutelary guardians of families. The àràk lives in a tree or in the house, and is invoked especially in cases of illness. It seems to be a human ancestor or friend of the family, long dead, who has become its protector. When someone is ill, a kru (shaman) is called in who is able to make the àràk incarnate in himself and with his aid discovers the evil spirit which is torturing the patient. The guilty spirit is then exorcised by the spraying of rice-wine over the patient and by gashing him. A festival is held each year between January and March in honor of the àràks.

Aralu or Arallu In Babylonian religion and mythology, the desolate land of no return in the underworld to which the soul descended after death. This was surrounded by seven walls pierced by as many gates and ruled by Nergal and Allatu. The souls "like birds with wings" lived in darkness amidst dust surrounded by evil spirits and demons. There the souls ate dust and clay, and unless they were provided with food and drink by the living, wandered in search of garbage and discarded food.

Aramazd The chief deity of ancient Armenia, who, although supreme, was not exclusive: a corruption of the Persian Ahura Mazda. Aramazd was the creator of heaven and earth, father of gods, especially of Anâhit, Mihr, and Nanê (no consort is named), and the peace-loving giver of prosperity and abundance. He presided over the Navasard (New Year's festival) and made the fields fertile and the vineyards fruitful.

Arawn Lord and king of Annwn, the Brythonic Otherworld. The *Mabinogion* tells the story of how Arawn one time out hunting in this world met up with Pwyll, king of Dyfed, with whom he struck up great friendship. They made a compact to exchange shapes and kingdoms for a year, in order that Pwyll might overcome Havgan, Arawn's rival for the kingship of

Annwn. At the end of that year Pwyll disposed of Havan with a single blow. Then Pwyll and Arawn met again, exchanged shapes once more, and each returned to his own kingdom, no one but the two of them knowing that either had been absent from his own country. Pwyll discovered that his kingdom had never been ruled with greater wisdom, generosity, and justice than in the year just gone by. Arawn discovered that for a year Pwyll had shown affection to the beautiful queen of Annwn only in public and had withheld himself from her at night. Such faithfulness and honor the two discovered in each other that they were strong friends forever.

Arawn was owner of the magic caldron that Arthur coveted, and all the various marvelous animals ascribed to Celtic Otherworlds. Certain marvelous swine are mentioned, given by Arawn to Pryderi, son of Pwyll. The *Triads* tell of a wonderful bitch and a white roebuck (and in some versions, a lapwing) stolen by Amaethon, son of Dôn, the theft of which caused the Battle of the Trees.

arbutus Any member of a genus (*Arbutus*) of evergreen trees or shrubs whose bark, leaves, and fruit are used in drugs: a common name for the trailing arbutus (*Epigaea repens*), the state flower of Massachusetts. The arbutus was sacred to the Romans and was an attribute of the goddess Cardea, who used it to drive away witches and to protect little children. Ovid speaks of its fruit as the food of man during the Golden Age. Water distilled from the leaves and blossoms of arbutus was considered powerful against the plague and various poisons. The Greeks believed that snakes which fed upon the berries ceased to be venomous.

The arbutus of Algonquian Indian legend is *Epigaea repens*. Peboan, the winter manitou, sat in his lodge, weak and weary, for he had found no game. He called for help and Segun, the summer manitou, clothed in grass and young leaves, walked into the lodge with a message that Peboan's time on earth was ended. The old man gradually disappeared. His furs turned to leaves and his tepee became a tree. Segun took some of these leaves and put them into the ground, breathing upon them. They freshened and changed into the trailing arbutus, the sign to children that summer has come and winter has gone away.

Arcadian hind In Greek legend, the hind (also known as the hind of Cerynea) chased by Hercules for a year and captured as his third labor. The hind, with antlers of gold and hoofs of bronze, was sacred to Artemis and could not be killed. Hercules tired it out by chasing it all over the Peloponnesus (or all over the world). He brought it back to Eurystheus and then released it.

arch A structural member rounded vertically to span an opening. In folk practices arches are used to purify, cure, and to form a barrier against evil spirits, enemies, and diseases. The most familiar use of the arch was that made by the Romans who marched under a triumphal arch after battle. This has been explained as a purificatory measure to rid them of the stain of bloodshed and to impose a barrier between the men and the ghosts of their enemies.

A cure for whooping-cough, boils, or rheumatism (England, Wales, France) was to crawl under an arch formed by a bramble. The popular cure for scrofula

(Bulgaria) was to make a patient crawl naked three times through an arch made of vine branches. The Bagandas transfer disease to a plantain tree, carry the tree out to wasteland, and then raise an arch of branches over the path taken, to prevent the return of the disease. A similar custom is practiced in the Cameroons where the spirit of smallpox is drummed out of a village and then the village is enclosed with creeper ropes and the paths arched with bent poles to which are suspended plants, nests of termite ants, and a freshly killed dog.

archangel An angel of highest rank: in Christian legend, one of the seven, in the Koran one of the four chief angels: in Roman Catholic theology a member of the eighth of nine divisions of angels. The names of the archangels vary, although the first four are generally Michael, Gabriel, Raphael, and Uriel. In the apocalyptic *Enoch* (xxi), they are listed as Uriel, Raphael, Raguel, Michael, Sariel, Gabriel, and Jerahmeel. In the Koran the list includes Gabriel, angel of revelations; Michael, the champion who fights the battles of faith; Azrael, the angel of death; and Israfil, who is to sound the trumpet of resurrection.

The dominant role of astrology during the medieval period led to the association of the archangels with the planets and constellations. Various archangels were assigned to the planets by Jewish astrologers, but the preponderance of references seem to assign Raphael to the Sun, Gabriel to the Moon, Aniel to Venus, Michael to Mercury, Kafziel to Saturn, Zadkiel to Jupiter, and Samael to Mars. In medieval Christian thought, derived from the Moslem philosopher Averroes, the Sun was associated with Michael, the Moon with Gabriel, Venus with Anael (Aniel), Mercury with Raphael, Saturn with Cassiel (Kafziel), Jupiter with Sachiel (Zadkiel), and Mars with Samael. The archangels were also bound up with the 12 signs of the Zodiac, new ones being borrowed or invented to make up the required number, and were used by conjurers who employed their names in effecting cures. There are close parallels between the archangels and the seven planetary spirits of Babylonia, the Amesha Spentas of Zoroastrianism, and the Hindu Adityas.

arch dances Dances which include as a dominant figure the procession of the coupled dancers through an arch formed by others. This arch is an ancient symbol of the green bough, and now survives in the Virginia Reel and London Bridge. Innumerable folk dances of Ireland, England, Scandinavia use this motif, forgetful of its meaning. As final figure of the Provençal farandoule some of its import shimmers through. In Spain and its colonies the arch dance survives as ceremonial in a special elaborated form, namely: each dancer holds a bent half-hoop decorated with flowers. Sometimes these dancers are Basque sword dancers, sometimes they are girls dressed as *pastoras* or shepherdesses. Mexican carnival celebrations feature these flowered arches in the danza de los arcos, danced by men of Tlapalita, Tlaxcala, and by the *pastorcitas* of Taxco, Guerrero. As commonly in Mexican ceremonial dances, it is difficult to assign either native or foreign origin, and only possible to suggest a blend of pagan customs. [GPK]

Archives of Folk and Primitive Music, Indiana University The Archives of Folk and Primitive Music at Indiana University, Department of Anthropology, in charge of Dr. George Herzog, established recently, com-

prise approximately 10,000 phonograph records with at least 20,000 recordings. Almost all this material consists of private, non-commercial recordings. The bulk is concerned with primitive music. The music of the North American Indian is represented by over 7,000 records; thus the Archives are, in this field, the largest depository in existence. Smaller collections illustrate the native music of South America, Africa, Asia, and the Pacific; the several branches of Oriental music, and the folk music of various nations. Over two thirds of the material was gathered during the era of the phonograph cylinder; much of it is of considerable historical and musicological value and is irreplaceable. The cylinder collections are being recorded on disks in order to improve their quality, to make their contents available for study, and to safeguard the fragile originals. This large collection includes deposits of many private individuals and of various scientific institutions, such as the American Museum of Natural History, the Chicago Museum of Natural History, Columbia University, Yale University, and the University of Chicago.

Especially efforts were made in connection with many of the collections to secure also an exact transcription and linguistic analysis of the song texts so that these can be studied together with the music. There is also extensive information on musical instruments, on the ethnological background, and very detailed bibliographic data.

The primary purpose of the Archives is to function as a study collection and as a depository for the safekeeping of materials pertaining to traditional music. The Archives cooperate with other institutions and with collectors. Publication of occasional albums of records is intended.

GEORGE HERZOG

Arcturus A golden yellow star, Alpha in the constellation Boötes, but described by Ptolemy as golden-red. It is brilliant and conspicuous in the summer evening sky, so brilliant as to be visible 15 or sometimes 20 minutes before sunset. Arcturus has been known and mentioned variously since earliest times; Hesiod (c. 800 B.C.) was the first to mention that it rises 50 days after the winter solstice. There are indications that it was identified as early as the 15th century B.C. in an Egyptian stellar calendar. It is known to have been the Chaldean Papsukal, Guardian Messenger, and deity of the 10th Chaldean month. The allusions to Arcturus in *Job* ix, 9 and xxxviii, 32 in the King James version are now regarded as mistranslations of references to the Bear. In India this star was called (among other names) Nishtya, or Outcast, perhaps because it lies so far north of the zodiac. To the Arabians it was the Keeper of Heaven, Al Hāris al Samā, probably because it dominated the early evening sky before the other stars were "let out." It has always been regarded as a stormy star, in its rising and setting, for both the sailor and the farmer; but astrologically it portends wealth and fame for anyone born under it. Hippocrates in 460 B.C. assigned to it various influences on the human body, and held that all diseases waxed more critical after the rising of Arcturus.

Ardhanārī In Hindu mythology, Śiva, represented as half-male and half-female, typifying the incarnation of the male and female principles of the world. See ŚAKTI.

Ardvi Surā Anāhita In Iranian mythology, the source of the celestial waters, deified as a goddess of prosperity

and fertility: literally, the wet, strong, and spotless one. Ardvi Surā Anāhita is personified as a handsome woman, stronger than horses, wearing shining gold footgear and golden raiment. See ANĀHITA.

areca One of the sacred plants of India. Its nuts are used to adorn the gods and with the betel leaf it enters into every important ceremony of the Brāhmans. Village deities of the Kurumo caste are represented by five areca nuts which are kept in a box. The Indian custom of presenting an areca nut to guests is traditional.

The areca is used by the Melanesians of the southeastern Solomon Islands in black magic, as propitiatory offerings to ghosts, in religious and betrothal ceremonies, and as a sign of mourning. Areca palms are cut down when a chief dies. A spray of areca is held in the hand of an orator at a feast as an emblem of peace. The nuts are given to women to enlist their affection.

The areca nut and betel-chewing are important in many Asiatic and South Pacific folktales. In the Solomon Islands there are many stories of a magic areca palm that lengthened out and carried the man climbing it into the sky.

Areop-Enap In the mythology of Nauru (Micronesia), the Ancient Spider, creator of the sun and the moon. At first only Areop-Enap and the sea existed, but one day Areop-Enap discovered a mussel shell. After much trouble he opened it and crept inside, but it was so dark he could see nothing. He crawled around, felt a small snail, then a larger one. He passed on to the small snail some of his power and made it the moon. By the faint light of the moon, he spied a worm which he set to work separating the upper and lower parts of the shell to make the sky and the earth. This the worm did, and died of exhaustion. The large snail became the sun. The worm-sweat, running into the lower shell, became the sea. From stones, Areop-Enap made men to support the sky, and then traveled about the newly created world. He discovered other beings and learned their names by creating a winged creature from the dirt under his nails. This flying "bird" annoyed the people and they called to each other to kill it. Thus Areop-Enap knew what they were called.

Ares In Greek religion, a god of war representing its brutal and barbaric aspects; the son of Zeus and Hera and the lover or consort of Aphrodite. In Greco-Egyptian religion he was identified with Onouris and, as Ares Mahrem, he was worshipped in Aksum (Ethiopia). The Romans identified him with Mars. He never became a god of great moral or theological importance and his name was used to represent the war power of the enemy which would be overcome by the Greeks with the aid of their gods of civilized warfare, Zeus, Apollo, and Athena. In Greek mythology, the Aloadæ bound and imprisoned him in a metal pot until Hermes was able to rescue him 13 months later. In a Homeric merry tale he was detected by Hephæstus in an amorous intrigue with Aphrodite, caught with her in a net, and exposed to the ridicule of the gods. Sophocles called him the "god unhonored among gods."

Argo or Argo Navis The ship Argo: a huge constellation of the southern hemisphere, east of Canis Major; interpreted as the ship in which Jason and his fifty companions sought the Golden Fleece in Colchis. It was placed in the sky by Athena, or Poseidon, to be a guide

forever across the southern seas. Another Greek myth identifies it with the first boat ever made, and the one in which Danaos and the Danaides traveled from Egypt to Rhodes. In relatively recent times it has been divided into three smaller constellations: Carina, the Keel; Puppis, the Stern; Vela, the Sail. To the Romans also it was Argo. The Arabian name was Al Sufinah, the Ship. Biblical astronomers called it Noah's Ark.

Canopus, the brilliant star in the rudder of Argo, is called Agastya for a famous Rishi of Hindu tradition, who was a stayer of storms and could control the ocean. See AGASTYA.

Argonauts In Greek mythology, the band of heroes who accompanied Jason on his quest for the Golden Fleece held by Æetes, king of Colchis. After many adventures, Jason and his men reached Colchis in the fifty-oared galley, the Argo. With the help of Medea, the king's daughter, he completed the tasks set by Æetes as the condition of surrendering the Fleece and then returned home to Iolcos taking the Fleece and Medea with him. The name is often applied to adventurous seekers after riches, as for example those taking part in the California gold rush of 1849.

Argus (1) called *Panoptes*. In Greek mythology, the giant with a hundred eyes set by Hera to guard Io during her disguise as a heifer. Hermes beguiled Argus into sleeping and slew him. Hera took his eyes and scattered them as ornaments on the tail of her peacock.

(2) In Greek legend, Odysseus's dog who recognized him on his return from his wanderings.

(3) The builder of the ship Argo, son of Phrixus or of Arestor.

Arianrhod Literally, silver wheel: a goddess of Brythonic mythology famed for her beauty, and assumed to be the daughter of Dôn. In the *Mabinogion*, she is the sister and mistress of Gwydion. She claimed to be a virgin in order to enter the service of Math, but her pretenses were given the lie by certain tests imposed on her by Math and by the birth of her twin boys, Llew Llaw Gyffes and Dylan. Dylan leapt into the sea, but Gwydion saved Llew and reared him carefully. Arianrhod so resented the boy's very existence that she endeavored to thwart his advancement in life at every turn. There is a reef off the Carnarvon coast still called Caer Arianrhod and believed to be the remains of Arianrhod's island castle where Gwydion tricked the relentless mother into bestowing on Llew the arms she intended to withhold.

In early religious belief possibly Arianrhod played the dual role of virgin plus fertility goddess. In late folklore the constellation Corona Borealis became known as Caer Arianrhod.

Aries The Ram: the first constellation or sign of the Zodiac. The very ancient eastern Mediterranean or Mesopotamian myth that the world was created when the sun entered the constellation of the Ram points to human knowledge of the Ram in those distant centuries during which the Ram held the stars of the winter solstice. By the time Hipparchus (2nd century B.C.) began to systematize astronomy and reckoned his year from the "first point of Aries," the Ram then contained the stars of the spring equinox. About 4000 years from now Aries will hold the stars of the summer solstice.

Early mythologies identify the Ram with Zeus, with

Amen, the ram god of Egypt, and later with the ram of the Golden Fleece who bore the mistreated children of King Athamas away from Thessaly. In fact Aries is usually depicted as a reclining ram with head turned to observe his golden fleece. The Hebrews, Syrians, Persians, and Turks all had words for this constellation which mean Ram. One of the early Arabic names was Al Kabah al 'Alif, the Tame Ram, later just Al Hamal, the Sheep. In China this constellation was originally the Dog (Heang Low) of the Chinese zodiac, and was later renamed White Sheep (Pih Yang). It is also part of a greater Chinese constellation (involving Taurus and the Gemini) known as the White Tiger. Early church writers (12th–16th centuries) likened Aries to the ram of Abraham found in the bush, or to St. Peter, or to the Lamb of God sacrificed for the world.

In astrology Aries is held to endow with violent temper those born under his sign, and to presage some physical harm that will come to them, sometimes death by hanging.

Arikute or Ariconte In the mythology of the Tupi Indians of Brazil, the twin of Tamendonar or Tamanduare. A quarrel between the brothers resulted in the great flood which covered the earth. The two climbed trees on the highest mountains and saved their wives and themselves while all other men perished. From these couples, after the flood, came the Tupinamba and the Tominu who perpetually feuded and warred with each other. See TWINS.

Arioi or Areoi Society A Polynesian (specifically Tahiti and the Society Islands) religious association of initiates—comedians and actors—performing traditional plays and dances, joking and satirizing on certain occasions, and having mysteries connected with the god 'Oro. The Arioi were considered divine; Tangaroa or Rongo was father of the first Arioi. The Arioi of the Society Islands were ranged in seven or eight orders, the higher grades partaking of the deference accorded to divinity. The sign of their initiation into the society was tattooing, which as the initiate rose higher in the scale became more and more complex, until in the higher orders, it is said, the tattooing covered nearly the entire body. The lower groups were not permitted to have children, any born to them being killed; an attempt to preserve the child resulted in expulsion from the society. (This custom must be read into the context of a highly overpopulated area in which some form of population control was necessary.)

Members of the Arioi were of both sexes (men seem to have outnumbered women in the proportion of five to one), and the highest rank of the association consisted of a chief of men and a chief of women. The one requirement for entry into the society was inspiration; anyone could become a member, chiefs more easily than commoners and into higher ranks. To the Arioi belonged the most intelligent and the most handsome inhabitants of the island group. After a period of training and learning word for word the traditional chants, the candidate exhibited publicly his achievements. When he was accepted into the society, he took a new name, by which he was thenceforth called.

The society had houses on the various islands of the group. The members of a lodge from one island often made mass voyages, carrying the god of the Paradise of

the Arioi, Romatane, in the canoes, to other islands or other places on the same island where they took up residence in these guest houses.

Their ceremonies, being associated with harvest festivals, and depicting such myths as the union of Tangaroa with matter, seem to have shocked the missionaries and other outside viewers, and, in connection with the infanticide they practiced, gave to the Arioi the reputation (reflected in related terms in several of the Polynesian languages) of great immorality. Performances of the society, by the lower grades, with the higher-ranking dignitaries of the society looking on, began with a religious chant or the telling of a myth; then a legend of some hero followed; a comic drama or an erotic word-play and a dance concluded the ceremony. The Arioi Society of the Society Islands died out with the conversion of the members to Christianity, practices such as infanticide being incompatible with the Christian religion. Similar groups existed in other Polynesian islands; unorganized but similar artists were known in the Marquesas, Cook Islands, etc. See 'ORO.

Aristæus In Greek and Roman mythology, the son of Apollo and the nymph Cyrene, guardian of herds, keeper of bees, and protector of the vine and olive. Aristæus desired Eurydice who, trying to escape him, trod on a snake and so met her death. Soon after this the bees died and Aristæus was sent by his mother to Proteus to ask for an explanation. Told that the nymphs were avenging the death of Eurydice, he sacrificed to them and paid funeral honors to Orpheus and Eurydice, and thus restored his bees to life.

Arjuna In Hindu religion and mythology, the third and most prominent of the five Pāṇḍava princes: a son of Indra. According to the *Mahābhārata*, Arjuna, a brave warrior and a famous archer, made a pilgrimage to the Himālayas to propitiate the gods and to obtain celestial weapons for use against the Kauravas. From there he went to Amarāvati, capital of Indra's heaven, where he improved his knowledge of arms. Indra sent him against the Daityas, whom he vanquished. In the struggle with the Kauravas, Kṛishṇa acted as his charioteer and before the great battle began, recited the *Bhagavad-Gītā* to him. In modern Hinduism Arjuna is of little importance.

ark (1) The cradle made of papyrus, daubed with slime and pitch, in which Moses was hidden by his mother (*Ex. ii, 2-3*).

(2) The vessel built by Noah and occupied by Noah and his family and the animals "two and two" during the Deluge (*Gen. vi, 14-22*). This was a boxlike, three-story structure built of gopher (pine) wood, made watertight with bitumen, and provided with cells or rooms. It was 300 cubits long, 50 cubits wide, and 30 cubits high. The ark came to rest on Mt. Ararat and after a year its occupants were able to leave it (*Gen. viii, 13-16*). Its fate is uncertain and legends concerning the finding of the ark or pieces of it have persisted throughout history.

In rabbinical literature and legend, the ark was lighted by precious stones which shone by night and were dull by day. The animals walked onto the ark of their own accord or were led on by angels, and Noah was so constantly employed in feeding them that he did not sleep during the year. The giant Og, king of Bashan, was too large to fit into the ark so he rode out the flood on its roof.

In Mohammedan literature and legend, there was a difference of opinion on the dimensions and plan of the ark. Baidawi gave the Biblical dimensions; Al-Tha'labi in his *Kisas al-Anbiyya* said it was built of teakwood and was 80 cubits by 50 cubits by 30 cubits. Each plank of the ark contained the name of a prophet and the body of Adam was carried in the middle to divide the men from the women. Three missing planks were brought from Egypt by Og, son of Anak, the only giant permitted to survive the flood. The ark came to rest on al-Judi and Noah locked it up, giving the key to Shem.

An ark appears in some Deluge legends outside the Bible. In the Babylonian *Epic of Gilgamesh* Ea commanded Utnapishtim to build a ship in the shape of a barge upon which was set a house 120 cubits high, divided into six stories, each with nine rooms. Ziusudra, the Sumerian Noah, built an ark on the advice of Enki, the Sumerian water god. A box or ark was used by the Banar of Cambodia and in some forms of the Greek Deucalion-Deluge legend.

(3) or ark of the covenant, ark of the testimony, or ark of the Lord In Jewish history, a chest of shittim-wood (*Ex. xxv, 10-22*), 2½ cubits long, 1½ cubits wide, and 1½ cubits high, overlaid inside and out with gold, which supported the mercy seat with its golden cherubs. It was equipped with a gold ring at each corner through which staves of gold-covered shittim wood were inserted to facilitate carrying. It was made by Bezaleel of the tribe of Judah (*Ex. xxx, 23-26*) or by Moses (*Deut. x, 1-5*). The two tables of stone containing the Ten Commandments were placed in it and it was deposited in the most sacred part of the sanctuary.

The ark of the covenant was probably a movable sanctuary and as such was carried when the people moved. In the crossing of the Jordan River the ark preceded the people and was the signal for their advance (*Num. x, 33; Josh. iii, 3, 6*). The ark was carried around Jericho before the battle (see CIRCUMAMBULATION) and later was placed in the Temple at Shiloh from which it was removed when the Israelites were defeated at Ebenezer. It was captured by the Philistines in the second battle (*I Sam. iv, 3-5, 10, 11*), but misfortune followed it and they finally returned it to the Israelites after seven months. David had the ark removed to Zion, danced before it, and placed it in a tabernacle (*II Sam. vi, 15-20; I Chron. xvi, 1-3*). Later it was placed in the Holy of Holies in Solomon's Temple.

In rabbinical literature and legend, the ark transcended the limitations of space. It leveled the hills before the army of the Israelites and when the Philistines returned it, in a cart drawn by two milch cows without a driver, the beasts took the ark to Bethshemesh and sang a song. When Solomon brought the ark into the Temple, the golden trees in the Temple were filled with moisture and produced abundant fruit. When an idol was placed there, the fruit immediately dried up. The ark was not only a receptacle for the Law, but a protection against the enemies of Israel. Two sparks came from between the two cherubim which killed serpents and scorpions and burned thorns. When the Temple was destroyed, the ark disappeared. Some believed it was taken to Babylonia, others that it was hidden.

In Mohammedan literature and legend, the ark was the sign that God had chosen Saul to be king. According to Al-Tha'labi, the ark was sent down by God from

Paradise with Adam when he fell. In it, cut from a ruby, were figures of all the prophets to come, especially of Mohammed and his first four califs. According to Ibn 'Abbas, a cousin of Mohammed, the ark and the rod of Moses are now lying in the Lake of Tiberias, to be brought forth at the last day. [SPH]

Arkansas Traveler A classic of native American humor and the best-known piece of folklore about the mythical state of "Arkansaw" (not to be confused with Arkansas). A lost and bewildered Traveler on horseback, in quest of lodgings, approaches the log cabin of a fiddling Squatter, who stubbornly evades or pretends to misunderstand his questions. The Traveler, tiring of the comic contest of wits, in which he is "straight man," resorts to the stratagem of offering to play the balance or "turn of the tune" that the Squatter is sawing on his fiddle, and so breaks down the other's resistance and is welcomed with open arms.

Whimsical, quizzical dialogs between a harassed traveler and a crotchety innkeeper are found elsewhere (e.g. "Whimsical Dialogue between an Irish Innkeeper and an Englishman," *Wit and Wisdom*, London, 1853, pp. 28-29). The theme of ingratiating by fiddling occurs also in "A Musical Tennessee Landlord," by "Dresbach" (*Spirit of the Times* XVI [February 13, 1847]: 603). In Yankee humor, as Walter Blair points out (*American Speech* XIV [February, 1939]: 11-22), the roles are usually reversed, the inquisitive native being the questioner. *The Arkansas Traveler* fits into the pattern of frontier hospitality where "strangers were under suspicion until their intentions and character became reasonably clear."

About the medley has grown up the legend of the "Original Arkansas Traveler." According to tradition, Colonel Sandford C. ("Sandy") Faulkner, of Little Rock, was touring the state with four prominent politicians during the campaign of 1840 and became lost in the Boston mountains. On his return the Colonel related the encounter with the Squatter as having taken place under the circumstances described and was thereafter much in demand for his rendition of the dialog and the tune, and was popularly credited with their authorship. This distinction has also been conferred upon the young Arkansas artist, Edward Payson Washbourne (Washburn), who in 1858 painted "The Arkansas Traveler," and in 1860 began the companion picture, "The Turn of the Tune," completed by an unknown artist after Washbourne's death at the age of 28. Both paintings have become almost as familiar as the dialog through the Currier & Ives lithographs (1870).

Two other rival claimants to authorship of the dialog and the tune are José ("Joe") Tosso, the eminent Western violinist, and Mose Case, a guitarist, whose version of the skit was printed in 1862 or 1863. Of the many published and manuscript versions, the one issued by B. S. Alford of Little Rock, in 1876, as "arranged and corrected by Colonel S. C. Faulkner," and based on a lost original printed between 1858 and 1860, is generally accepted as standard. The tune (a jig or hoe-down also known as "The Arkansas Traveler") was first published in 1847 under the title of "The Arkansas Traveler and Rackinsac Waltz," arranged by William Cumming.

Whatever its origin, the dialog is obviously a "synthesis of questions and answers already current" (James R. Masterson, *Tall Tales of Arkansaw*, Boston, 1942, pp.

240, 376). Parallels have been found for most of the jests included, such as the leaky roof which can't be repaired in wet weather and doesn't need repairing in dry weather (perhaps the most celebrated jest in the piece): the fair-and-square tapping of a barrel of whisky through spigots at both ends by husband and wife who pass a single coin back and forth between them in token payment; the assignment of nicknames to cutlery; and the presence of a good road several feet below the mud.

The many-sided entertainment value of "The Arkansas Traveler"—dramatic, musical, humorous—resulted in wide diffusion in print (jestbook, songster, broadside, sheet music) and oral tradition, often in paraphrase or garbled form. There is also evidence of its use as a folk play, such as Thomas Wilson recalls from his boyhood in Salem, Ohio, where it was acted out by wagoners in a tavern barroom (*Ohio Archaeological and Historical Quarterly* VIII [January, 1900]: 296-308). The popularity of the medley in vaudeville (and later on phonograph records) suggested a five-act melodrama, *Kit, the Arkansas Traveler* (originally entitled *Down the Mississippi*), written by Edward Spencer and revised by Thomas B. de Walden, popular for thirty years between 1869 and 1899, whose only relation to the skit, however, is in the title of the hero and the use of the tune. Other instances of the influence of the classic as a household word and as an artistic inspiration are the magazine, *The Arkansaw Traveler*, established in Little Rock, in 1883, by the Arkansas humorist, Opie Read, and P. D. Benham, and David Guion's symphonic composition based on the tune. [BAE]

Arkansas Traveler pattern A traditional American patchwork quilt pattern named for the *Arkansas Traveler*, song and story, probably dating from about the 1850's. Each large square of the design is made up of four smaller squares pieced from seven still smaller scraps. The units are simple, straight-edged, geometrical shapes which allow the thriftest use of miscellaneous scraps of material and are characteristic of the designs worked out in frontier homes.

armadillo Any burrowing nocturnal mammal of the family *Dasypodidae*, having an armorlike covering of bony plates. Armadillos are common in South and Central America and range as far north as Texas.

The armadillo appears in the folklore and folktale of South American Indian tribes of Bolivia, Brazil, and Guiana. The Mosekene (eastern Bolivia) attached pieces of armadillo liver to a dog as a hunting charm. The Mascoi (Brazil) believe a horned armadillo lives under the ground and the Chamacoco of the Gran Chaco say that this armadillo caused the Flood.

In the myths of the Toba and Pilagá Indians of the Gran Chaco, Armadillo gave the people fruit by planting tasi under an algarroho tree. The tasi wound around the tree and bore fruit. Since then the plants have spread everywhere, supplying men with fruit. These Indians identify two bright stars under Orion as the celestial armadillo who unearthed the first women who fell from the sky and were buried in the ground. He is master of all living armadillos.

arrieros Literally muleteers: a men's group dance of Acopilco and Tenancingo Indians of Mexico. It is an enactment of a native legend about the arrieros. At the end of a day of wandering through the mountains the

muleteers relax, dance, eat, play, and go to sleep. They are attacked by bandits, but are rescued by the Lord's miraculous answer to their prayers. The attack and the miracle do not feature in the dance, but the dancers bring their props on adorned burros, play dice, and sit down to a small feast. In white shirts and *calzones*, sashes, and *sombreros*, they two-step through a variety of longways figures, to an insipid fiddle tune. Two men pretend to sleep on a *petate*. The end is casual and anticlimactic. In Tenancingo the *arrieros* are flagellants, with sacks on their backs, and *alabanzas* (songs of praise to the Virgin) on their lips. [GPK]

arrimao or **arrimado** Name for extra-legal, socially sanctioned mating found among Negroes of the lower socio-economic groups in Cuba. See AMASIADO. [MJH]

arrow A weapon shot from a bow; usually a slender shaft with a sharp point or head of stone or metal and feathers or vanes fastened at the butt. The use of the bow and arrow, first appearing in late Paleolithic times, has become world-wide. It is absent only among the Polynesians, Micronesians, and a few African tribes, while the arrow and blowgun are used by the Malays, Melanesians, and South American Indians. Arrows are put to many uses other than warfare and hunting. They are employed in religious rites, in ordeals, as love charms, protective charms, amulets, lucky objects, touchstones, for divination and games, against witchcraft, as a preventive or cure for illness and the evil eye, and as symbols of deities, of lightning, rain, fertility, disease, famine, war, and death.

Cheyenne Indian worship centers in a set of four medicine arrows which the tribe claims to have possessed from the creation of the world. These are exhibited annually and whenever a Cheyenne Indian has been slain by a member of his own tribe in order to cleanse the slayer from his tribesman's blood. These arrows probably are relics of a period when the tribe worshipped a thunder god.

Many North American Indian tribes begin certain religious rituals by shooting an arrow to each of the six directions. The Mexican Quetzalcoatl, in his wind god aspect, carries a thunderbolt in the form of a flint arrowhead. Mixcoatl, as thunder god, carried a bundle of arrows (thunderbolts) in his hand.

South African Bushmen sacrifice arrows to the river or to ancestral spirits residing in rivers. The Ostyaks (Finland) never passed a sacred tree without shooting an arrow at it as a mark of reverence. Arrow offerings are made to the Bagobo (Philippine) god of the hunt, Abog.

Arrows are shot into the air during an eclipse by the Cayapo, Bororo, and Tapuyos (Brazil), and by the Caribs and Arawaks (Guiana) to frighten the sun into shining. The Ojibwas, believing that the sun was being extinguished, shot fire-tipped arrows to rekindle it. The Sencis (Peru) shot burning arrows to drive away the savage beast with which the sun was struggling, and the Indo-chinese shot arrows at the dragon trying to swallow the sun.

As amulets, arrows or arrow-shaped pendants are hung around the neck in Italy to keep away illness and the evil eye, in Arabia to protect the blood, in France to facilitate childbirth, in Ireland as a protection against elf-shooting, among the Acoma Indians as a protection for children. They are carried by the Malays as lucky ob-

jects on which to sharpen their crises and cockspurs and as touchstones for gold, by Zuni women when venturing out at night, and by Zuni racers (in their hair) for luck. In Ireland water poured over neolithic celts and arrowheads is given to children to cure the croup. Pliny mentions that sleeping on arrows extracted from a body act as love charms. Kwakiutl women desiring a male child place arrows on a bailer under their beds. A bow and arrow are placed on a baby's chest or an arrow is shot into the afterbirth to make the child a good marksman in the same tribe. Miniature bows and arrows have been introduced by missionaries on Easter Island as toys.

The arrow is associated with the moon, sun, and atmospheric deities in various mythologies. The Libyan goddess Neith, the Greek gods and goddesses of love (Eros), hunting (Artemis), the sun (Helios); and the Centaur Chiron, the Assyrian Ashur and Ishtar, the Etruscan sun god Usil, the Hindu gods of war (Kārttikeya) and love (Kāma) are all depicted with bow and arrow.

The Madras god of iron, Loha Penu, directs the arrows of his followers against the enemy, averting their countershafts; and Ten Geris, Siberian Buriat thunder god, fights evil spirits with a fiery arrow. Śiva destroyed Tripura with his mystic arrow. The Japanese god Susanoo possessed a life-bow and arrows and a humming arrow with a whistling attachment (known in China during the T'ang Dynasty and used to make birds rise or to frighten enemies).

Not only do arrows appear in the folktales and legends of all the peoples using them, but in many instances they play a major role. An island is created by shooting an arrow (Greek); an arrow speaks, revealing its hiding place (Hawaiian); a magic arrow indicates a lodging for the night (German), a place to build a city (German), a place to seek a bride (English, German, Hawaiian), a place to build a church (Danish), a burial place (English); a magic arrow shakes heaven (Chinese), summons a water spirit (Chinese), and affords transportation (Arabian); is visible to one person alone (numerous tribes of North American Indians, especially in the North Pacific, Mackenzie River, and Northeastern Woodland regions, Siberia, and Asia generally). Magic arrows play an important role in Arabian, Breton, Chinese, Greek, Hawaiian, Hindu, Icelandic, Jamaican, and North American Indian tales.

In a Koryak tale, when Ememqut's wife was abducted by a Kala, Ground Squirrel gave him an arrow which he threw into the fire. This opened a way to the lower world where he found his wife. They returned through the hearth; Ememqut removed the arrow, and the road closed. Ememqut's arrow was also responsible for the impregnation of Fox and Triton. The Koryak believe in arrows with eyes which fly anywhere they are sent without benefit of the bow. In a related Alaskan tale, Raven transforms a bird into an arrow which will fly wherever Raven points. In a Nez Percé Indian tale the trickster, Coyote, changed himself into an arrow.

A familiar feature in Hindu legend is the śabdabhēdī arrow which strikes what is heard. Prithirāj of Delhi, in the Ālhā folktales, uses an arrow to sew up a sword wound and thus enables the wounded man to continue fighting.

In folktales it is usually the culture hero who discovers and teaches the people how to make arrows. The

Cheyenne Mut-si-i-u-iv and the Cree Wisakedjak, typically, taught their people the art. [SPH]

arrow chain A motif (F53) appearing in folktales of the Plateau and North Pacific Coast Indians, the Tupi Indians of Brazil, the Guarayú (Bolivia), the Jibaro of Ecuador, the Koryak of Siberia, and numerous peoples of Oceania. Typically the hero shoots a large number of arrows into the sky, one after another, so rapidly that they form a chain up which he travels, usually to rescue a friend. In some stories there are descriptions of battles with the sky-people and references to the stealing of fire from the sky.

In the Coos Indian version, the brother of a canoe-maker who was killed by a man of the sky-people, made an arrow chain by which he ascended in order to avenge his brother's death. This he did and then returned to earth bringing his brother's head with him. He put the head back on the body and it became the red-headed woodpecker, the red being the blood of the slain man.

In a Guarayú story, Tamoi (Grandfather) had two sons who shot arrows upward, one into the butt of another, until the chain was formed. Then they climbed the arrow chain until they reached the sky where they became the sun and moon.

In a Banks Islands swan-maiden story, the wife of Qat, a sky-woman whom he had captured by taking her wings, was scolded by his mother. The sky-woman's tears uncovered her wings, which her husband had buried, and she quickly put them on and flew back to the sky. Qat shot arrows into the heavens forming a chain to which a banyan root attached itself. Then he climbed up and recovered his wife, but as he was descending, a man hoeing in the sky struck the banyan root. Qat fell dead and the woman flew back to heaven.

In a Koryak tale the arrow chain is reduced to one arrow sent up to heaven thus making a road leading upward. In an Athapascan version two brothers are carried to the sky by a single arrow. In the Vai tribe of West Africa the arrow chain becomes an arrow bridge.

Artavazd The unfilial son of King Artaxias: an evil power of old Armenian mythology. He resented the numerous sacrifices and suicides at his father's funeral as a depletion of the kingdom he was to inherit. Artaxias cursed him from the grave; and soon after, Artavazd fell from his horse over a precipice of Mount Massis. There he remains in a cave chained by iron fetters. When these are broken, he will emerge and rule over or destroy the world. The noise from a blacksmith's hammer is believed to strengthen his bonds, so smiths still strike their anvils a few blows every day, even on holidays and Sundays to prevent Artavazd from breaking loose.

Artemis In Greek religion, a virgin goddess of nature and the moon; originally a mother deity and goddess (non-Hellenic in character) of lakes, rivers, woods, and wildlife, especially of animals of the chase as the fawn, stag, and boar. From fosterer of wildlife she developed into a goddess of fertility, marriage, and childbirth. In Attica and Arcadia she was identified with Callisto, and honored as mother of the tribe with the name Artemis Calliste or Brauronia. At Sparta she was worshipped as Artemis Orthia, protector of women and children; as Artemis Lochia she was a goddess of childbed, as Artemis Curotrophus the nurse of youths. As Artemis Tauropolus and Treclaria she was an agricultural goddess. Homer

spoke of her as Agrotera, the huntress. Her early association with Hecate resulted in her rule of magic, night, and the moon. In Artemis Parthenos the conception of her virginity crystallized.

First-fruits of the hunter and fisherman were dedicated to her at her shrines or hung on trees; in the worship of Artemis Laphria bears were burnt. To Artemis Brauronia goats were sometimes sacrificed; on other occasions she was worshipped in ceremonies which were probably a survival of initiation customs. Maidens from five to ten years of age danced in saffron robes and were called bears. None could marry before undergoing this rite. Traces of human sacrifice to Artemis are preserved in the myth of Iphigenia.

Before the battle of Marathon the Athenians vowed to sacrifice to Artemis a number of she-goats equal to the number of enemy warriors killed. So many warriors were slain that the vow was necessarily compromised and only 500 were sacrificed every year.

Artemis is represented with a torch, possibly as a moon symbol or a symbol of vegetation. She dwelt on Mt. Taygetus where her herb, artemisia, grew, and her shrine at Lusi was famous as a healing center.

She was equated with Bast in Greco-Egyptian religion and identified with the local goddess, Diana, by the Romans. As Artemis Tauropolos she was confounded with Anāhita. She was the chief goddess of the amphictyony at Aetolia, associated with Apollo at Delphi, and one of the more important of the Olympian deities.

In Greek mythology, Artemis was the daughter of Zeus by Leto, twin of Apollo, and was associated with the nymphs Britomartis and Callisto, and with Iphigenia, Opis, Hecate, Echo, and the Naiads. She was born on the island of Delos to which her mother had fled to escape the wrath of Hera. She was associated with her brother in nearly all his adventures. With him she subdued Tityus and the Python, assisted in the punishment of Niobe, and reputedly transformed Callisto into a bear because she had deserted the huntress-band for Zeus. Her severity is celebrated. She visited the Greek army with a pestilence before the Trojan War and produced a calm to prevent their sailing because Agamemnon had killed a stag sacred to her. When he was about to sacrifice his daughter, Iphigenia, to placate the goddess, Artemis snatched the maiden away, leaving a hind in her place, and made Iphigenia a priestess at her temple in Tauris.

Artemis changed Arethusa into a stream to enable her to escape Alpheus, and Actæon into a stag because he spied her nude while she was bathing. Unknowingly, she shot the hunter Orion. Bewailing her error, she placed him among the stars with his dog Sirius, and with the Pleiades, whom he loved, always flying before him. Her non-Hellenic character is probably attested to by the grotesque part Homer gave her in the battle of the gods. In this contest she opposed Hera who whipped her with her own bow and sent her off the field weeping.

Arthur A British chieftain of the 5th-6th century: central figure of a great cycle of romance. Legend says that he was born at Tintagel Castle in Cornwall, lived at Caerleon, Wales, with his wife Guanhvura (Guinevere), was leader of the Round Table, hunted the fabulous boar Twrch Trwyth, and fought and slew the Demon Cat of Losanne, conquered many lands, was betrayed by his wife and dearest knight, was mortally

wounded at the battle of Camlan, and was taken to Avalon by three fairy queens, whence he will return in the hour of his country's need.

Historically, a victorious battle-leader of the Britons against the Saxons about 500 A.D., of whose life and death nothing more is known. The vast pseudo-historical and romantic literature which grew up about him from the 12th century on reflects folk traditions and mythological concepts.

Nennius, a Welsh cleric, writing about 826, furnishes, besides an untrustworthy account of Arthur's battles, a list of marvels. Two are localized in the neighborhood of the Wye: a stone in which Arthur's hound Cabal had left its footprint during the hunting of the boar Troit; and the grave of Arthur's son Anir, the length of which varied each time it was measured. The Welsh tale of *Kilhwch and Olwen*, composed about 1100, belongs to the general Jason and Medea type and contains much mythical and folktale material. Several personages (Mabon, Modron, Manawyddan, Llwh) are taken over from the Continental Celtic and the Irish pantheon; others are helpful companions, who assist the hero in his impossible tasks, as did the Argonauts and similar figures in modern folktales. There are giants to be slain, vessels of plenty to be sought, and the supernatural boar, mentioned by Nennius, to be hunted from Ireland across South Wales and Cornwall into the sea. The details of the chase show the characteristic interest of Welsh and Irish in accounting for place names. Arthur has become a king and shares in several quests and adventures, but seems to have acquired no supernatural attributes. The same may be said of him as he appears in *The Spoils of Annwn*, a poem probably of the 10th century, raiding the island fortress of the gods in his ship Prydwen, and returning with a magic caldron from which none but the brave could obtain food.

The most famous mythical concept attached to Arthur is that of his immortality and Messianic return to re-establish the Britons in their kingdom, but it is not attested before 1113. In that year certain French canons, having been shown Arthur's seat and oven (probably megaliths) on Dartmoor, came to Bodmin, and a fracas arose between their servants and a Cornishman who insisted that Arthur was still alive. From the same source we learn that Bretons and French quarreled over this question, and from then on the testimony is continuous that, especially in Brittany, the belief in Arthur's survival and return was firmly fixed. Alanus de Insulis (1174-79), in commenting on Merlin's prophecy that Arthur's end would be doubtful, says that anyone who proclaimed in Brittany that Arthur had shared the fate of mortals could not escape stoning. Malory, years later, testifies that some men in many parts of England believed that the king was "had by the will of our Lord Jesu into another place," and would come again and win the holy cross.

The "British hope" represents an old pagan belief that the hero is a god who cannot die, a belief revitalized and prolonged through the centuries by the simple human urge to optimism which in modern times refused to accept the death of Bonaparte and Kitchener. Certainly there was a strong mythological element in the tradition, for every account of Arthur's survival in medieval literature or modern folklore either places him in the world of the immortals or implies his superhuman nature.

Geoffrey of Monmouth in his *History of the Kings of Britain* (c. 1136), drawing on Breton sources, tells us that Arthur was borne to the isle of Avallon to be healed of his wound, and in the *Vita Merlini* (1150) informs us that Arthur lies on a golden bed in an ever-fruited Isle of Apples, where the inhabitants live to be over a hundred, and where he is tended by the fay Morgan and her sisters. Thus Arthur's abode is the mythical Isle of Women of the Celts, and Morgan le Fay (in many accounts Arthur's sister) is specifically called a goddess by three medieval writers.

The wandering Breton *conteurs* transmitted the legend of Arthur's survival to Sicily, for there we find him dwelling with Morgan according to *Floriant and Florete* and *Torrella's Faula*. The latter poem (1350-81) adds a mythical trait: Arthur remains young since he is fed yearly by the Grail. This equates him with the Maimed King, who is likewise fed by the Grail and whose vital forces are in sympathetic relation to the fertility of his land. Gervase of Tilbury (c. 1211) describes Arthur as living on in a Sicilian palace, his wounds annually reopening—another reflection of Arthur in the role of a vegetation spirit.

Gervase combines the motif of the island abode of Arthur with the widespread concept of the king in the hollow mountain, for it is in the dark depths of Mount Etna that the British king is discovered. The same concept was known to Caesarius of Heisterbach and the authors of the *Wartburgkrieg* and the *Dispute between a Christian and a Jew*. We find it again in the 19th century attached to many caves in Wales and England and to the Eildon Hills in Scotland. These folktales represent Arthur as lying asleep, surrounded by his knights, awaiting the day when he will issue forth to victory—a blend of the Messianic return motif and a belief in some chthonian deity.

The tradition of Arthur's subterranean dwelling had two strange developments. In Etienne de Rouen's *Draco Normannicus* (1167-68) Arthur is held up to ridicule as ruler over the lower hemisphere, threatening to return to his old domain with a host of antipodean subjects in order to overthrow Henry II. Moreover, since Walter Map (1181) reports a folktale in which the king of a subterranean realm was conceived as a dwarf riding on a goat, we can understand why a mosaic at Otranto (1165) depicts Arthur astride the same bizarre mount.

Long-lived was the belief in the British king as leader of the Wild Hunt, originally the personification of winter and its storms. Gervase and two other 13th century writers assign this role to Arthur, and tell how he and his company of riders may be seen by moonlight in the forests of Britain or Brittany or Savoy; we have a Scottish reference from the 16th century; and at Cadbury Castle, Somerset, and in several parts of France, the belief was still current in the 19th century.

Another folk tradition holds that Arthur lives on in the form of a bird. Cervantes tells us that the English believed that their ancient hero assumed the form of a crow, and an 18th century tourist in Cornwall was rebuked for shooting a raven, which might have been Arthur. The latest testimony from Cornwall takes the bird to be a cough or a puffin. One might surmise that this transformation is related to the fact that Bran, son of Llyr, the euhemerized sea god of the *Mabinogion* and the prototype of the Maimed King, bears a name

meaning "crow." Certainly in the *Mabinogion* and Irish sagas we have instances of divine figures taking the shape of birds.

Barring the modern folk traditions of Arthur's survival, the British battle-leader's name lives on almost entirely in association with places or natural objects. In Scotland there is the majestic hill called Arthur's Seat; in Wales there are a Craig Arthur near Llangollen and an Arthur's Stone near Swansea; Cornwall boasts Arthur's Hall, Hunting Lodge, and Grave, and Brittany Arthur's Camp. These are but a few of many such names. Well might Tennyson write of

that gray king whose name, a ghost,
Streams like a cloud, man-shaped, from mountain peak,
And cleaves to cairn and cromlech still.

ROGER S. LOOMIS

artificial whale A folktale motif (K922) especially popular among the American Indians of the North Pacific Coast. A hunter returns home and finds his wife and child crying. They have been mistreated by her brothers in his absence. The man proceeds to make many killer whales out of wood—alder wood, red-cedar wood, spruce, hemlock, etc., but all are mere logs when put in the water, until finally he makes some out of yellow-cedar wood (or yew), paints them with white stripes and white bellies, shouts to them to live and swim, and these live and swim, catch red cod, salmon, halibut, etc. So at last he is satisfied.

The next day when the wife's brothers go hunting, the man sends his killer whales to upset their canoes, but with instructions to save the youngest brother, because he alone was kind to the wife and child. The whales do this: the canoes of the brothers are broken, the brothers are drowned, but the canoe of the youngest is conducted safely home. After this satisfactory revenge the man (in a Skidegate version) then names his whales and tells them to depart and go live in various places.

In other versions, a group of animals make an artificial whale in order to kill Thunderbird. A Rivers Inlet variant tells of two culture heroes who make an artificial whale in order to kill Thunderbird, who carries away people. When the whale is finished the people enter it. There are many variants, giving details of how the whale gets stuck in the mud, or does not swim properly until the inmates are taught how to handle it. When the whale appears in front of Thunderbird's house, Thunderbird sends out his children to catch it. All are killed, drowned, have their feet cut off by the inmates near the blowhole, and Thunderbird himself is finally killed.

There is a Koryak story in which the two daughters of Big-Raven make a wooden whale as a means of escaping from the wilderness and finding human habitation. Big-

Raven and his wife took the two girls into the wilderness and left them there. At home the parents ate fat reindeer meat and sent the lean strips to the daughters. At last the two daughters made a wooden whale from a log and put it in a pail of water; in the morning the whale had outgrown the pail. They put it in a small lake; in the morning the whale had outgrown the lake. They put it in a big lake, and in the morning it was bigger than the big lake. So the sisters put the whale in the river, entered into it, and said, "O Spotted Whale, take us to a settlement." The whale swam down the river and out to sea. The story does not tell about their coming to another settlement.

This story contains parallels of two very well-known and widespread motifs: image comes to life (D435.1) and, in the case of the animal's expedition to kill Thunderbird, the Trojan horse motif (K754.1). Of especial interest, however, in North American Indian folklore, is the matter of trial and error in the making of the whale and the final discovery of the appropriate wood to use to insure success. This is but one of numerous stories of the North Pacific region in which the people try various kinds of wood to make canoes, animals, birds, children, etc. that will behave as desired for specific purposes.

arts and crafts The distinction between arts and crafts is one that critics are slow to attempt, particularly in the folk and primitive field where the esthetic is so often a byproduct of the utilitarian. For this reason the two are generally bracketed together, and together they include all those activities and skills where objects are created, produced, or adorned by non- or semi-mechanical methods. If a broader term is desired, covering all the work activities of a people, *arts and industries* may be used; the arts include the creative crafts, and industries cover those which are strictly useful and repetitive together with such other activities as gathering, cultivating, hunting, fishing, and manufacturing.

In this volume, arts and crafts are considered to be a part of folklore. Not all critics adhere to this point of view. However, folk art and folklore are so intertwined that separation is academic. Religion is intricately involved in the graphic and plastic concepts of supernatural beings, the dance with costume and mask, ritual with place of worship and many ritualistic objects, music with the creation and decoration of instruments, custom with the nature of shelter, utensils, implements, weapons, clothing, vehicles, and other possessions. Events and calculations involve pictograph and picture story. In fact, little would be known of extinct cultures but for surviving examples of arts and crafts. Among many peoples of the world these abilities were the gift of the culture hero, and a basic part of their mythology and legend. See PRIMITIVE AND FOLK ART. [MH]

aru In the belief of the people living on Bartle Bay (New Guinea), the shadow of a living human being or the spirit or soul of a dead one. The aru goes to Maraiya, the land of the dead in which there is plenty of food, no illness, but which otherwise resembles the world of the living.

Arunkulta Term for supernatural evil power or an object with such power of the Central Australian Aranda tribe. [KL]

Aruru In Babylonian religion and mythology, a mother goddess associated with Marduk as the creatrix of the seed of mankind; in the *Epic of Gilgamesh*, the creatrix of Eabani (Enkidu). See SEMITIC MYTHOLOGY.

arval, arvel, averil, arfal, arddel, or arthel In England and Wales, a funeral repast usually including bread or cakes with ale and wine; the sweet cake served at a funeral repast; also, the funeral ceremonies. The name is sometimes connected, on rather slim evidence, with the Roman *Fratres Arvales* (the Arval Brethren), a college of 12 priests who annually, at the Arvalia, a May festival, sacrificed to the Dea Dia, thought to be Ceres, the goddess of the fields. While the connection between the spirits of the dead and fertility is not uncommon, no specific evidence is available to show the descent of the British custom from the Roman.

Asa'ase Ashanti-Fanti earth deity, whose worship has been retained among the Negroes of Dutch Guiana, and is also known to the Maroons of Jamaica. In the Gold Coast, the name of the deity is Asase Ya, the female day-name for Thursday being added to the designation. Thursday is the day sacred to this deity. In West Africa, and in the Guiana bush as well, no cultivation is done on that day. [MJH]

asafetida A gum resin, red-brown in color, prepared from certain plants of the fennel family, especially *Ferula asafoetida*, an umbelliferous plant of Afghanistan and Persia. It is acrid, bitter, and strong in odor, due to the presence of organic sulphur compounds. Medically it is administered to stimulate the intestinal and respiratory tracts and the nervous system. It is used as a condiment in India and Persia and as a vegetable. The resin is used for "conjure" and as an amulet among the Negroes of the southern United States and West Indies. A favorite concoction of West Indian witch doctors is made by mixing bones, ashes, grave dirt, and nail parings, with asafetida. Worn around the neck, it is supposed to ward off witches, keep away the spirits of disease, or cure rheumatism. In parts of Europe it is carried in the pocket as a preventative of smallpox.

Asafoche The Ashanti-Fanti term for bands of young fighting men that comprised the units in the tribal armies of pre-conquest times. There is evidence that certain aspects of the *Asafo* groupings had to do with co-operative work-groups, such as are found in West Africa under the term *dokpwe* (Dahomey) or, in the New World, *combite* (Haiti), though in the Gold Coast these functions were subordinated to military ones. The Asafoche groups still exist, but their ancient authority to punish violators of community property is not recognized by the British. [MJH]

asagwe A type of Haitian vodun dancing, known as the salute to the gods. The manman, the largest of the three vodun drums, signals for this figure to start and sets the distinctive rhythm to which it is performed. The dance figure itself is characterized by sweeping circular movements, dips, and semiprostrations.

Āśāpūrnā, Āśāpūrā, or Āśāpūri In Hinduism, an earth or mother goddess: literally, she who fulfills desire. Āśāpūrnā is worshipped by the Chārāns and the Hinglāj and as a form of Gaurī by the Rājputs. Her image at Madh in Cutch is a red-painted rock to which an annual sacrifice of seven male buffalos is made.

Asbjørnsen, Peter Christen (1812–1885) A Norwegian author and folklorist; contributor to the study of comparative mythology. Chief works: *Norske Folkeeventyr*, Christiania, 1842, produced in collaboration with Jørgen Moe; *Norske Huldreeventyr og Folksagn*, Christiania, in 2 vols., 1845–48; and a second volume of the *Norske Folkeeventyr*, Christiania, 1871. These books have been translated into English in *Popular Tales from the Norse*, 1859; *Tales from the Fjeld*, 1874, by Sir George W. Dasent, and in *Round the Yule Log*, 1881, by H. L. Brækstad.

Ascension Day The fortieth day after Easter Sunday, on which is commemorated Christ's ascension after his resurrection (*Acts* i, 9). The institution of this celebration is attributed to the Apostles, and some of the customs observed are closely related to the Christian significance of the day while others are pagan in origin.

During the Middle Ages the day was celebrated with a religious procession which symbolized Christ's entry into heaven. In some Roman Catholic churches an image of Christ was raised from the altar through a hole in the roof and a burning straw figure representing Satan was thrown down through the same hole. In Munich until a hundred years ago the expulsion of the devil from the city was enacted on Ascension Day (ceremony of the human scapegoat). The night before, a man, disguised as a devil, was chased through the streets by people dressed as witches and wizards. When he was caught he was ducked in puddles and rolled in dunghills. Finally, the disguise was removed, stuffed, and hung in the tower of the Frauenkirche until the next day when it was burned. Similar ceremonies are said to be observed in Upper Bavaria. In Rouen, France, a prisoner (scapegoat) was released and pardoned on Ascension Day. He confessed his sins and received absolution in the city square. The next day, in the presence of a great assembly, he was reproved for his sins and admonished to give thanks to God, St. Romain, and the canons for his pardon.

In Roman Catholic churches on this day the paschal candle is removed from the altar and extinguished after the Gospel at High Mass, symbolizing Christ's departure from the Apostles.

On this day the English custom of beating the bounds is still performed in some parishes. School children, accompanied by clergymen and parish officers, walk through the parish and the boys are switched with willow wands along the boundary lines to teach them the bounds of their parish. In Exeter, the Lamb is hailed on Ascension morning, as a result of the belief that the figure of a lamb actually appears in the east. In the north of England a smock race is run by girls for the prize of a Holland chemise. Men in the slate quarries of northern Wales believe that if they work on Ascension Day a fatal accident will occur.

In Nottinghamshire, England, it is believed that an egg laid on this day, placed on the roof of a house, will ward off fire, lightning, and other calamities. In Swabia, Germany, wreaths of red and white flowers, hung over the stable doors, served the same purpose. In Denmark, a rowan tree cut on Ascension Day and placed over a door will prevent the entrance of witches.

In northern Germany it is still believed that melons planted on Ascension Day will thrive. In Hildesheim young girls ring the church bells while swinging on the ropes. The girl who is carried highest by the swing of

the bell will get the longest flax at harvest time. In Hesse, herbs collected on Ascension Day are considered especially powerful medicinally. The people of Sicily believe in miraculous cures effected on the stroke of midnight preceding Ascension Thursday.

ascent to sky on feather A folktale incident or motif (F61.2) in which the hero travels on a large feather to the sky: found especially in tales among North American Indians of the North Pacific Coast, the Plateau, and Plains areas. The hero either adheres magically to the feather, which draws him to the sky, or he is simply carried on it. In a certain Bella Coola Indian story a little boy watches the hero depart on a large feather which soars and swoops in large circles through the sky. [EWV]

ascent to upper world A world-wide folklore motif (F10-17, F50-68) in which the ascents are made by various means and for many reasons. Sometimes the hero goes to the sky to retrieve a wife or friend, to obtain fire, for revenge on the sky people, to obtain gifts which produce food and riches, because of curiosity, or to catch the sun.

The Indonesians and South American Indians use a vine as a sky rope. Ascents or descents are made in a basket in tales of the North American Indians and in Siberian stories. A ladder appears in the vision of Jacob in which he saw angels ascending and descending a ladder leading from earth to heaven. A Mazovian legend tells about a pilgrim to the Holy Sepulchre who saw a ladder made of bird's feathers. He climbed it for three months and reached the Garden of Paradise. Other instances of the use of a ladder are found in tales of the Cape Verde Islands, Egypt, Gold Coast, and Mongolia.

Ascents are made by a stretching tree in Indonesian, Ekoi, Congo, Cape Verde Islands, Charente (Brazil), and North American Indian tales. In the sun-snaring myth of the Wyandots a strong child climbed a tree which was too short, so he blew upon it and lengthened it until it carried him to the land above the sky. While there he set snares for game, but caught the sun instead. Until the sun was released by a mouse, there was no day on the earth. In the *Kalevala*, Väinämöinen made a fir tree grow till it touched the sky, then Ilmarinen climbed it to get the moon and Great Bear, but was blown off by a magic wind.

In some cases the plant grows to the sky overnight as in the typical Jack and the Beanstalk story. This is found in British, Tuscan, Breton, Flemish, Slavonic (via a giant cabbage), Jamaican, Philippine, and Fijian tales. In the latter a boy, son of the sky king, Tui Langa, stuck his walking stick into the ground and lay down to sleep. In the morning it had become a tree up which he climbed and introduced himself to his father. The arrow chain is another means of heavenly ascent, restricted in its recorded range to northwestern North America, Siberia, part of South America, and Oceania. Mountains reach or stretch to the sky in Australian, Egyptian, German, Ekoi, and Maidu and Ts'ets'at folktales.

In Chinese, Melanesian, Indonesian, Greenland Eskimo, Koryak, Mongol Turk, and North American Indian tales, a sky window gives admission to the upper world.

Ascent to heaven can also be made by a road (African), a narrow road (Burma, Indochina), a tower, by pursuit of game (Iroquois), or by stretching (Dionysus in a Greek

myth). Transportation to or from the upper world sometimes is supplied by a cloud (Greek, Chinese), by a feather or by adhering to a feather (North Pacific, Plateau, Plains Indians), by a bird (Arabian, Ekoi, Seneca), by a god (Rhodesia), on horseback (Siberia, Arabia), on a sheep (India), by thought (Thompson River Indians), on a rainbow, by a ladder of sunbeams (Egypt), by magic (African), by shooting with a magic bow (North American Indian).

Asgard, Asgardhr, or Asgarth In Scandinavian mythology, the sacred space reserved for the abode of the gods and goddesses, the *æsir* and *ásynjur*, reached only by the bridge Bifrost. In saga, Asgard usually included 12 realms: Valhalla, home of heroes slain in battle; Gladsheim, home of Odin and the chief gods; Valaskialf, the hall of Odin; Vingolf, home of Frigga and the *ásynjur*; Thrudheim, realm of Thor; Breidablik, home of Balder; Folkvang, the realm of Freya; Ydalir, Uller's damp region; Sokkvabekk, the home of Saga; Landvidi, home of Vidar; Himinbiorg, home of Heimdall; and Forseti's bright palace, Glitnir.

asgardsreid Literally, Asgard's ride or chase: in Teutonic mythology, the wild ride of Odin or Frigga. It is still spoken of as being especially active during the dark, stormy Yule nights.

ash In Scandinavian myth, the world tree was the ash, Yggdrasil; and an ash torn out of the earth by the gods was transformed into Ask, the first man. The ash was regarded with awe in Ireland. "Cruel the ash-tree" is in the Battle of Trees; and today the shadow of an ash is said to blast grass and crops.

In England, where the ash was considered especially potent, children were sometimes passed through a cleft in an ash tree as a cure for rupture or rickets; Scottish Highland children were given the astringent sap of the tree as a medicine and as a protection against witchcraft. In many parts of England warts were transferred to the ash, sometimes by rubbing them with a piece of bacon and then slipping the bacon under the bark of an ash tree, sometimes by saying a charm such as, "Ashen-tree, Ashen-tree, Pray buy these warts of me," while a pin was stuck first into the tree, then into the wart, finally into the tree where it remained.

Ash rods were used in some parts of England for the cure of diseased sheep, cows, and horses. The Shrew Ash, still standing in Richmond Park, is a reminder of the cure for cramp or lameness in cattle. By boring a hole in the ash, inserting a live shrew mouse in the hole and then plugging it up, the disease was transferred to the tree.

Belief in the efficacy of the ash tree against snakes was first mentioned by Pliny, who stated that a snake would not creep over ash leaves and that if a circle were drawn with an ash rod around a snake it would die of starvation. This belief persists in England and the United States and the snake's fear of ash leaves has been extended to a fear of the shadow of the tree.

asherah (plural *asherim*) A sacred pole which stood in close proximity to the massebah and the altar in early Semitic sanctuaries. Originally it was a sacred tree, later it was artificially constructed of wood (I *Kings* xiv, 14, 23; II *Kings* xvii, 10, 16), sometimes in imagelike form (I *Kings* xvi, 13). Such posts were a part of the cultus

equipment of the temple of Jahweh in Jerusalem down to the Deuteronomic reformation of Josiah (II *Kings* xxiii, 6).

The Phœnician asherim are represented variously as slender posts surmounted by a crescent moon, curved lines forming a kind of sun disk, or by two sun disks. They are often represented as conventionalized date palms in drawings. In the Hebrew cult the posts were sometimes carved into the semblance of a human form or of its reproductive organs and were often draped. From the asherah was developed the wooden idol.

The asherah was sometimes regarded as a symbol of a deity and gave its name to the god or goddess it symbolized. The Canaanites called their goddess of fertility and prosperity Asherah and the consort of the Syrian god Amurru was an Asherah. Among the Israelites there is some indication of the same transference (*Judges* iii, 7; II *Kings* xxiii, 4). The name also attached itself to the mother goddess in some areas. Krappe believes her to be the great goddess of the Syrians, and the posts either a survival of a dendromorphic stage or, on the analogy of the Roman Terminus, the boundary-markers of the sanctuary area. In Palestine, Asherah's consort was Adad; in Arabia, he was the Minean Wadd.

ashes The residue left after the combustion of a substance such as coal or wood or after the cremation of human or animal bodies or plants. Ashes are used in folk practices to control the weather, in religious rituals, in mourning customs, to fertilize fields, flocks, people, as a badge of humiliation, in divination and exorcism, to prevent sorrow, plague, vermin, lightning, fire, sore eyes, contagious diseases, skin eruptions, swollen glands, also to cure headache, nosebleed, colic, rheumatism, consumption, and in ablutions and amulets.

Because of the qualities attributed to ashes, probably stemming from a belief that they share in the mysterious nature of the fire which produces them, they are used for religious or semireligious purposes in many parts of the world. A purificatory bath of ashes is used by the Lingāyats (India). The Brāhmans rub the body with ashes in preparation for religious ceremonies. Lamas of Tibet model images of Buddha from a mixture of clay and the ashes of a holy man, put them in shrines and perform devotions before them. Hindus use the ashes taken from the fires in honor of Darma Rajah and Draupadi to drive away demons and devils. The Kachins (Burma) propitiate Trikurat, the forest spirit, after a hunt by treading on ashes taken from the house hearth. Aztec priests blackened their faces with ashes before celebrating religious ceremonies. In the Hebrew Red Heifer ritual for purification from defilement by contact with a corpse, ashes from an offering were put into water, and the contaminated person was sprinkled with the mixture. According to the Mishnah, during fast days proclaimed because of drought, the Ark of the Covenant, as well as the people participating in the procession, were sprinkled with ashes. Covering oneself with ashes either served as an expression of self-humiliation or in memory of Abraham who said, "I am but dust and ashes" (*Gen.* xviii, 27). Ashes are used as a symbol of penitence on the first day of Lent in the Catholic Church.

Ashes are scattered in the air to condense clouds and bring rain during droughts (Muyscas, New Granada), to disperse mist (Peru), and to clear the clouded evening

sky (Guarayú, Bolivia); they are thrown on the water to bring fair weather (Alacaluf, Tierra del Fuego), thrown into a whirlwind to calm it (Abipón, Chaco, South America), scattered in the fields to prevent hailstorms (Bavaria, Bohemia), used as a talisman against thunder and lightning (France, Bohemia).

In fertility rites the ashes of a sacrificed human being were scattered over the fields (Osiris rites, Egypt; Marimos, Bechuanaland; Khonds, Bengal); the ashes of animals were used to insure the fecundity of flocks and a plentiful milk supply (Romans); those of the Easter fires, frequently mixed with palm ashes in Catholic countries and those of the Midsummer fires (Germany, Switzerland, Ireland) were fed to animals or spread on the fields.

Ashes are used to prevent or cure all types of disease or illness in men and animals. They cure sore eyes (Salee, Morocco; Moslems, North Africa; Mikirs, Assam; Hopi, North America), are considered a remedy for consumption when taken daily by the spoonful moistened with water (Belgium); they prevent skin eruptions and itch (Bosnia, Herzegovina, India, Hopi), heal swollen glands (France), cure headache (Bombay), prevent hair from falling (Berbers, Morocco), stop fever (early England), cure stomach trouble (Miwok), stop nosebleed (Dakotas, Winnebago), counteract inflammation (Hopi). The ashes of a male infant can be used as a cure (Quechua, South America) for soccahuayra, an illness caused by malignant winds. Ashes are given to cattle to insure them against plague and other ills (Germany, Armenia) and to fatten them (China).

More familiar uses of ashes are those of mourning customs in which they are symbolic of affliction. Many peoples strew themselves with ashes during funerals. The widow of a deceased member of the Arunta tribe smears her torso with white clay and then coats the clay with ashes. The Nahua carry the ashes of honored chiefs as talismans. The Digger Indians mix the ashes of a dead man with pine-tree gum and smear the mixture on the heads of the mourners. To absorb the qualities of the dead a number of South American Indian tribes mixed their ground bones or ashes with food or drink. The Tarianas and Tucanos disinter and cremate a corpse a month after burial, mix the ashes in caxiri and drink the concoction. In Bengal ashes are used to determine into which animal the ghost of a dead man has migrated.

Ashes are used in divination, especially on Hallowe'en (Ireland, Isle of Man, Lancashire), to determine the guardian deity of children (Yucatan), to prevent the sight of ghosts or return of the spirit of a dead person (Mexico, Philippines, northern India), to make a bridegroom subservient to the bride (India). They are blown toward the new moon so that men's strength will increase as the moon increases (Gold Coast). The Kwakiutl Indians rub the ashes of lupin on a child to make it sleep, ashes of cedar to make it strong, ashes of a snail for strong eyes, and the ashes of sallal berries and feathers to keep it quiet.

In the cosmology of the Mocoví the Milky Way is believed to be the ashes of the celestial tree which was burned in early days. The Incas believed that at one time the moon was brighter than the sun and that the sun, in a jealous rage, threw ashes into the moon's face to obscure her brilliance.

In mythology and folktale man was created from ashes (Gilbert Islands, Aztecs), the Milky Way is made of ashes (Bushman), ashes speak (Jamaica), a trespasser (ghost, lover, fairy, etc.) is detected by strewing ashes (Denmark, Germany, Seneca Indians), resuscitation of a cremated man is effected by blowing on the ashes (Bakairi, South America) and by throwing ashes on the funeral pyre (India). People or objects are magically reduced to ashes in Indian, Arabic, and Danish folktale; ashes are used to mark a road or path (Germany, Jamaica, Benga, Ekoi, Gold Coast, American Negro).

Ashes appear in riddles and proverbs: If a stick of tobacco cost six cents and a half, how much would a pipelad come to? Answer, ashes (Barbados); Every man must eat a peck of ashes (or of dirt) before he dies. [SPH]

Ashmedai or Ashmadai In Hebrew mythology and legend, the king of the demons who visited heaven every day to learn the fate of human beings. According to the *Haggadah*, Solomon sent Benaiah ben Jehoiadah to capture Ashmedai who knew the whereabouts of the shamir, a worm whose mere touch would cleave rocks. Ashmedai was forced to reveal the worm's whereabouts and then to remain with Solomon until the Temple was completed. One day the king asked the demon wherein the greatness of the demons lay if their king could be kept within bonds by a mortal. Ashmedai replied that if Solomon would remove the chains and lend him the magic ring, he would prove his greatness. As soon as he was released, Ashmedai seized Solomon, flung him out of Jerusalem, and palmed himself off as king. After long wanderings and provided with another magic ring, Solomon regained his throne and the demon fled.

Ashtoreth or Ashtareth The name used in the Old Testament for the Semitic mother goddess, Astarte-Ishtar (*Judges* ii, 13; x, 6; I *Sam.* vii, 3; xii, 10).

Ashur (1) or Ashshur, Ashir, Asshur, or Assur In Assyrian religion and mythology, the chief god: a god of battle. Originally Ashur was the baal of the city of Ashur and probably was a solar deity. As Assyria grew more and more warlike, Ashur's attributes as a war god became more all-absorbing and his cult became the dominant worship of the entire country. His divine city depended upon the location of the royal residence and the king was the sole high priest.

Stories, feats, etc., attributed to Anu, Enlil, and Marduk were gradually transferred to Ashur as the Assyrians subdued the country, so that he came closest in the Assyro-Babylonian religion and mythology to crystallizing the principle of a central single god. He was pictured as an eagle-headed, winged deity, usually with a disk symbol surmounted by the figure of a warrior. He was chief of the Igigi, who fought for Ashur and the king. His consort was Ashuritu, Beltu, or Bēlit. Ishtar sometimes appears as his wife and sometimes as an independent queen united with Ashur in the leadership of the Assyrian people. The theory that he was identical with the Aryo-Indian Asura and the Persian Ahura has not been accepted, but he was almost identical in character with the Jahweh of the early Israelites.

Ashur (2) or Ashura In the Mohammedan lunar calendar, the 10th day of Moharram, the first month of the Mohammedan year: the Mohammedan New Year. Among the Berbers of North Africa, this is the day on which bonfires are built so that the people, by leaping

over the flames or driving their cattle through them, can purify themselves from evil or prevent their cattle from becoming diseased. Girls who wish to marry wash in water boiled over the bonfire which is sometimes built on the evening before Ashur. Compare BELTANE.

Ash Wednesday The first day of Lent: so called from the ceremonial use of ashes as a symbol of penitence in the Roman Catholic Church. Of the Protestant churches only the Episcopal or Anglican marks the day by a special service and the use of ashes has been discontinued as a "vain show" since shortly after the Reformation. The ashes, used on the heads of the faithful in the Roman Church and made by burning the palms used on the Palm Sunday of the previous year, are placed there with the words, *Memento, homo, quia cinis es; et in cinerem reverteris*. At first ashes were administered only to public penitents who appeared barefoot and in penitential garb before the church door. As the number of penitents grew larger, ashes were administered to the entire congregation.

Ash Wednesday and the three days following originally were not a part of the Lenten period, but were added about 700 A.D. to make the fast days 40 in number (since the Sundays in Lent are not included as fast days) to correspond to the number of days Christ fasted.

Ash Wednesday is the beginning of a period of abstinence, quiet, and penance, in strong contrast to the preceding period of carnival. In Germany the Jack-o'-Lent made its appearance on this day: a ragged, scarecrowlike effigy used to personify Lent. In rural France a personification of good cheer was carried around and money was collected for its funeral as a symbol of the burial of good living during Lent. In Italy, Spain, Germany, Austria, France, and Greece a personification of the carnival was sentenced to death and stoned, burned, or drowned by the peasants on Ash Wednesday or, occasionally, on Shrove Tuesday.

In Germany it is considered bad luck to tie up cattle or sell them on Ash Wednesday. In Hesse, Meinengen, and other districts, people eat pea soup with dried pig ribs on this day. The ribs are then collected and hung in a room until sowing time, when they are inserted in the fields or in the seedbag among the flaxseed as an infallible specific against earthfleas and moles, and to cause the flax to grow tall and well.

Asin In the folklore of the Toba Indians of the Chaco, a character sometimes regarded as a culture hero and creator of palm trees, Barbary figs, and bees, sometimes believed to be a great shaman who plays the role of a miserable and very homely man only displaying his true power after great abuse, and sometimes regarded as the symbol of the humble man who proves his mettle.

asisi or atiti In the belief of the Orokaivas of Papua (Melanesia) the shadow or reflection; also the immaterial entity not necessarily visible but identified (especially in dreams) with or substituting for some person. The asisi is not a soul but an immaterial substitute. Animals and inanimate objects also have asisi. The asisi is not synonymous with the sovai, which survives death.

Ask or Askr In the *Völuspá*, the first man, created from an ash tree or a block of ash. Odin gave him a soul, Hœnir gave him motion and the senses, Lodur gave him warm blood. In the *Prose Edda*, the three creators are Odin, Vili, and Ve. See EMBLA.

Asking Festival or Ai-yá-g'úk An Alaskan Eskimo festival in which an attempt is made to fulfill the wishes and desires of each member of the community. On a certain day a man chosen by the group carries from house to house a wand, named Ai-yá-g'úk, from which hang three hollow globe-shaped objects. In each house, when the Ai-yá-g'úk enters, the head of the house states his own wish, and on learning the wishes of others, gives something that another has asked for. It is wrong to refuse any request made with the Ai-yá-g'úk. In parts of the Lower Yukon, instead of verbal statement of the wishes being made, images of the things desired are hung on the wand and carried from one member of the community to another, for the fulfilment of individual desires.

Asmodeus or Asmodæus In Hebrew mythology and legend, an evil spirit or demon; son of Naamah, sister of Tubal-cain, and Shamdon; he appears first in the apocryphal *Book of Tobit*. Asmodeus fell in love with Sarah, the daughter of Raguel, and tried to prevent her from having a husband by killing each of her seven husbands successively on the nights of their marriage to her. He was rendered harmless when Tobias married her and, at the instance of the angel Raphael, burned the heart and liver of a fish. Asmodeus fled to Egypt where Raphael caught and bound him. In the *Testament of Solomon* he is pictured as the destroyer of matrimonial happiness. Solomon compelled Asmodeus to help in the building of the Temple. Asmodeus was the spirit of lust and anger; he was king, Lilith queen, of the demons.

Asmodeus is Persian in origin and may be identical with the demon *Æshma*, one of the seven archangels of Persian mythology, and the Zend *Æshmo daëva*. He is identified with *Ashmedai*, but the relationship of the two is in dispute. Asmodeus seems to be an evil, destructive spirit while *Ashmedai*, like the devil in medieval Christian folklore, is no longer the dreaded archfiend, but the degraded object of irony and humor.

asogwe The rattle of the chief priest of any Dahomean cult: used to summon the gods. It could be obtained only from the king, and is an absolute essential for the establishment of a cult-house, whatever the cult. In the days of the monarchy, at the time for the annual taxation of cult-houses, the rattle had to be presented at the ceremony, whether or not the priest himself was able to attend. Its main function, however, is religious; without the asogwe no god can be called. [MJH]

aspen Any of several poplars of Europe and North America with tremulous leaves, especially *Populus tremula* and *P. tremuloides*. The leaf is said in Brittany to tremble because Christ's cross was made of aspen wood, or because at the hour of the Passion the plants and trees of the world trembled and bowed their heads—all except the aspen which asked, "Why should we weep and tremble? We have not sinned!" Before the aspen had ceased speaking it began to tremble and will continue to do so until Judgment Day. In German tradition, during the flight into Egypt, the aspen was cursed by Jesus when it alone, of all the trees in the forest refused to acknowledge Him. At the sound of His voice the aspen began to tremble. Another belief is that the leaves of the aspen were made from women's tongues. According to the doctrine of signatures the aspen is a specific for the ague.

ass A long-eared equine quadruped, smaller than the horse and with shorter mane and tail-hair. The ass appears in folk beliefs and tales wherever it is domesticated, especially in the countries around the Mediterranean Sea. Egyptian tomb pictures of about 2500 B.C. show asses laden with huge saddle bags, others treading out grain on a threshing floor. Both the wild and domestic ass are mentioned in the Bible (*Job* xxiv, 5). The domestic ass was used for riding (*Num.* xxii, 21; *II Kings* iv, 24; *Judges* x, 4; xii, 14), for carrying burdens (*Gen.* xxii, 3; xlii, 26) and for plowing (*Isa.* xxx, 24; *Deut.* xxii, 10).

According to rabbinical literature the ass was created to carry burdens, its blood was a remedy for jaundice, and its bite more dangerous than that of a dog because it might break a bone. A strap made from ass or calf hide was used in judicial scourging. The ass of Abraham when he traveled to the sacrifice of Isaac was declared to be the same animal which later bore Moses' wife and her sons into Egypt (*Ex.* iv, 20) and which is to serve the Messiah (*Zech.* ix, 9). The mother of this ass is the one upon which Balaam rode and which was created at the close of the sixth day of creation.

Greek and Latin writers accused the Jews of ass-worship and later made the same accusation against the Christians. These accusations probably originated in the misconception that the Jews worshipped Dionysus to whom the ass was sacred. The ass was the religious symbol of the Gnostic sect of the Sethinai, and is a traditionally sacred animal because of Christ's entry into Jerusalem upon an ass. The dark stripe running down its back crossed by another at the shoulder was given to it because it carried Christ.

In Greek legend, Midas was asked to judge the better flute player in a contest between Pan and Apollo. He imprudently judged Pan the winner. Apollo, angered, changed the king's ears into those of an ass to indicate his stupidity. Midas and Marsyas were originally probably satyrs or sileni (ass-demons or horse-demons) among the Thracian-Phrygians where the ass was sanctified and sacrificed. The flaying of Marsyas in the story of the contest with Apollo, which paralleled the Pan-Apollo story, may be an etiological explanation of ass sacrifice. In Greco-Roman art Midas and Marsyas became human in form. In Macedonian legend Midas caught one of the sileni in his rose gardens and Apuleius adopted the story saying that eating roses would restore to human form a man changed into an ass.

In Vedic mythology an ass drew the chariot of the *Ásvins*. Armenians who have unsatisfied claim against someone sacrifice an ass at the grave of an ancestor of the debtor believing that the soul of the ancestor will be transferred to an ass if the claim is not satisfied.

The ass was associated during the Middle Ages with Palm Sunday and Saint Nicholas. An ass was also an essential feature of the Feast of Fools.

The ass was believed to have great curative powers. Early writers advised a man stung by a scorpion to sit on an ass facing the animal's tail or to whisper in its ear, "A scorpion has stung me," and the pain would be transferred to the animal. In England hairs taken from the cross on the animal's back were believed to cure whooping-cough if hung in a bag around the neck of the sufferer. In the Hebrides a child was passed three times over the back and under the belly of an ass in the name

of the Blessed Trinity to prevent the same disease. In the Middle Ages fresh asses' dung was squeezed and smeared over the eyes to cure various ailments, and asses' hoofs were bound to a patient's extremities, right on right, left on left, to cure gout. The congealed blood of the animal was used in suftumigations from which the future was foretold. A lotion made from an ass was sprinkled on insane people to cure them.

The ass appears as a leading character in numerous folktales, fairy tales, and fables in Arabia, Belgium, Brittany, Czechoslovakia, Denmark, Egypt, Estonia, Finland, France, French Canada, Germany, Greece, Holland, India, Ireland, Italy, Lapland, Norway, Persia, Philippine Islands, Russia, Spain, Sweden, and among the Hebrews and American Indians. Aesop has 27 fables about the ass, and ass fables appear also in the Talmud, Phædrus, and Bidpai. Many stories are designed to illustrate the stupidity of the animal. The Indian tale in *Kathā Sarit Sāgara* is a good example. A thin ass was covered with a panther's skin by its owner and let loose in a neighbor's corn. People were afraid to drive it away. One day a cultivator saw the animal and, bending down, started to creep away. The ass, thinking him another ass, brayed, giving himself away.

Few animals are referred to in proverbs as frequently as the ass. Among the most popular sayings and proverbs are: To make an ass of oneself (do something foolish); The ass waggeth his ears (applied to those who talk wisely but have little learning); Well, Well! honey is not for the ass's mouth (persuasion will not convince fools); Every ass loves to hear himself bray; *Asinus in unguento* (Latin, ass among perfumes—bull in a china shop); *Asinus ad lyram* (Latin, an ass at the lyre—an awkward fellow); *Asno con oro, alcanzalo todo* (Spanish, an ass laden with gold overtakes everything—a rich fool is thought wise); *Ane chargé de reliques* (French, an ass laden with relics, applied to a person who gives himself airs when he acquires a little authority). [SPH]

Ass, Feast of the A festival popular in northern France during the Middle Ages, held on Jan. 14 to commemorate the flight of Joseph, Mary, and Jesus into Egypt. Originally a girl carrying a baby and seated on an ass was led through the streets to a church where mass was said. The festival degenerated into a farce which in Beauvais fell so low that an ass was led to a table in the church and given food and drink while a burlesqued vesper service was conducted. The people and clergy then danced around the animal imitating its braying. A presentation of farces followed outside the church and the mad affair ended with a midnight mass at the conclusion of which the priest brayed three times. The feast was suppressed by the Church in the 15th century but did not entirely disappear until much later.

Assassin A member of an Oriental sect of fanatics whose religion was a mixture of Mohammedanism and Magianism. The order was founded in Persia at the end of the 11th century by Hasan-ben-Sabbah, and is still represented in India by the Khōjās. Assassins were skeptical of the existence of God and believed that the world of the mind came into existence first, then the soul, finally the rest of creation. At death, man's soul rejoins the universal soul. It is imprisoned in the body only to execute the orders of the imām and if it quits the body while obeying, it is carried to the upper world. If it disobeys, it falls into darkness.

This belief made the faithful disciples willing to perform any deed without question and without fear. The assassinations for which the sect was famous were committed at first to wipe out its persecutors. Later they were committed for anyone willing to pay for the service. Assassins were trained for assassination. They were taught foreign languages, the ceremonies of foreign religions, and how to adopt and maintain disguises in order to win the confidence of their intended victims. They were widely feared, especially because they struck when and where least expected. The name of the sect is derived from the Arabic *Hashshashin*, hashish-eaters, given to them because it was suspected that they intoxicated themselves with hashish before attacking an enemy. See OLD MAN OF THE MOUNTAIN.

Astarte, Ashtart, or Ashtoreth The mother goddess of Phœnicia; deity of sexual activity, fertility, maternity, and war, erroneously identified as a moon goddess. She is shown with horns in Phœnician art, but these horns were the horns of a cow (fertility) and not those of the moon. In Sumeria the mother goddess was called Inanna, in Armenia Anāhit, in Phrygia Cybele, in Babylonia Ishtar, in the Bible Ashtoreth, and in North Africa Tanith or Dido. In southern Arabia Athtar, a masculine deity, was the result of the bifurcation of Astarte, the feminine half being called Shams. The worship of the masculine Athtar spread to Abyssinia where he was known as Astar. The Biblical Ashtaroth is a plural, like Baalim, and refers to "goddesses" in general, as Baalim does to the heathen gods.

In primitive worship fruits of the earth, newborn animals, and first-born children were sacrificed in order to increase fertility. Astarte was worshipped by the Israelites after the conquest of Canaan (*Judg.* ii, 13; x, 6; I *Sam.* vii, 3; xii, 10). The Philistines also adopted the cult of Astarte. The cult spread from the Phœnicians to the Greeks and Romans, reached Malta and Sicily and the British Isles. This cult seems not to have spread into Syria because of the strength there of Atargatis, the Syrian aspect of the mother goddess. Astarte has been identified with the Egyptian Hathor, Greek Aphrodite, Norse Freya, Irish Danu, and Hindu Indrani—all fertility deities.

The gazelle (at Mecca) and dove (at Eryx) were sacred to her as was the myrtle. At Arbela she was represented as robed in flames, armed with sword and bow. In Assyrian-Babylonian art she is pictured caressing or blessing a child held in her left hand. See ISHTAR.

aster (from Greek *aster*, star) The flower has always been associated with the stars and with astrologers who class it as an herb of Venus.

In Greece the aster, when burnt, would drive away serpents. The Romans used wreaths of the flowers to deck the altars of the gods. In much of Europe and the United States, the aster, like the daisy, is used in love divination. In China a wine made from the fermented stems and leaves of the aster is a delicacy, drunk especially on the ninth day of the ninth moon. Once Fei Ch'ang-fang of the Han dynasty advised a follower to go to the hills to drink aster-scented wine and to fly kites on this day. Upon returning home he found his domestic animals dead and realized that he might have met a similar fate. According to the *Feng Su Chi* the people living in the Li district live to be 120 or 130 years old

because they drink water flavored by the asters growing on the surrounding hills.

The Chippewa Indians smoke the dried, powdered root of a variety of aster (*Aster puniceus* L.) to attract game. The smell of the smoke is believed to resemble that of a deer's hoof and deer come toward a hunter when the plant is smoked. See BEAR MEDICINE.

astragalomancy Divination by means of small bones, such as vertebræ: an ancient and almost universal custom. The bones are lettered and drawn from a mixed group haphazardly. The letters give the spelling, anagram, or general clue to the desired message. The use of more generalized forms, such as bone or wood cubes or bone cylinders, is believed by some to have given rise to games of chance.

astrology The science of the stars, anciently equivalent to astronomy, which was known as natural astrology, and used to predict such natural events as eclipses, the date of Easter, and meteorological phenomena. By the 17th century the term became limited to another branch of the study, judicial or mundane astrology, which purports to trace the influence of the heavenly bodies (stars, planets, sun, moon, etc.) on the course and events of human life. This star-divination, or astro-mancy, attempts to determine, usually by the configuration of the heavens at the time of a crucial event, like birth, the future destiny and general temperament of men. Astrology is one of the most ancient forms of divination, and prevailed among the nations of the East (Egypt, Chaldea, India, China) at the very dawn of history. The Jews became much addicted to it after the Captivity. It spread into the West and to Rome about the beginning of the Christian Era. Astrologers played an important part at Rome, where they were called Chaldeans and "mathematicians"; and though often banished by the Senate and emperors under pain of death and otherwise persecuted, they continued to hold their ground. In Europe, during the Middle Ages, especially in the 14th and 15th centuries, astrology became the master study to which practically all other fields of investigation were correlated and subordinated. With the rise and acceptance of modern astronomy after Galileo and Kepler, astrology fell more and more into discredit in the Western world. Belief in its findings still has many adherents in the West and almost every part of the world.

In its most primitive form, astrology may have arisen from the observable connection between the positions of the stars in the heavens and the seasonal changes on earth. From this to a belief in the causal influence of the stars, not only upon natural phenomena, but also upon man himself, is not a far step. One versed in the lore of stars then becomes helpful to the economic life of the community, and to the personal planning and well-being of the individual. Rulers, down to Hitler, have had their personal astrologers. The astrologer as a diviner eventually uses supplementary means of determination, and we find close connection between astrology on the one hand, and Chinese geomancy, Near Eastern hepatoscopy, Chinese and Japanese tortoise shell divination, and Gypsy palmistry on the other. For example, the names of the mounts of the hand in chiromancy retain their planetary significance, and their prominence is used by the palm-reader to ascertain the supposed temperament of the subject. Aside from the

Jewish and Arabic belief that every man has his own personal star in the heavens, astrology holds that the ascendancy of a specific planet at a critical moment determines the personality of the person, as for example the influence of Mercury giving a mercurial temperament; Jupiter, a jovial, etc. By the casting of an exact horoscope in genethliac astrology, the astrologer makes his determination. The methods of horoscope-casting are traditional and the interactions of the various planetary signs have become more or less fixed in meaning.

Belief in astrology is based on the geocentric idea of the universe, since the influence of the heavens is inward upon the earth. When the Copernican theory and modern astronomy took over what had been natural astrology, the basis and hence the validity of judicial astrology was destroyed. Nevertheless, popular magazines on astrology continue to thrive in the fifth decade of the twentieth century, one periodical alone in the United States having a monthly circulation of perhaps a quarter of a million copies. See LAPIDARIES.

asura In early Vedic mythology, the supreme spirit: an epithet meaning god, applied especially to Varuṇa. In the *Brāhmanas* and *Upanishads* it was used to mean the opposite of demons or enemies of the gods (but not of mankind). The asuras are the descendants of Prajāpati and for a time divided the world with their younger brothers, the gods or suras. But they waged war with the gods frequently until they were slain by Indra with the aid of Vishnu (or by another god). The asuras dwell in the caverns of Mount Meru, below the level of the sea, in the four towns of Shining, Startassel, Deep, and Golden, and they leave their abysses only to battle the inhabitants of Meru.

In the epics, the asuras (the name is here used interchangeably with Dānava and Daitya) are still regarded as foes of the gods, but some of them are spoken of as friends and protégés of the gods. Śukra, descendant of Bhṛigu, is their teacher and guide; their abode, Pātāla, is a magnificent dwelling surpassing heaven in its splendor. In popular story, the asuras are sometimes heroes. When they are pictured as contending with the gods, however, they revert to their Vedic character of demons able to become invisible and to commit deeds of violence. Compare ĀDITYA; NĀGA.

Āsvamedha or **Āśva-medha** The horse sacrifice, one of the most important and impressive Indian ceremonies of Vedic times. Two hymns for this ceremonial appear in the *Rig-Veda*. Horse sacrifices are principal events in both the *Rāmāyaṇa* and the *Mahābhārata*. Originally the sacrifice was perhaps a fertility ritual, in which the king's wives passed the night with the sacrificed horse, the chief wife performing certain specific and formal rites. Later, the ceremony was extended and became a ritual statement of the sovereignty and aspirations of great kings. In the spring, usually, a horse was chosen, symbolically tethered to the post of sacrifice, and then released to roam at will for a year. The horse was followed by a representation of nobles to guard it from harm or defilement. If the horse traveled into the territory of another king, the latter could submit to the invasion and thus tacitly acknowledge the owner of the horse as his superior, or he could fight, as many did.

During the period of the wandering of the horse, the population at home took part in ceremonies of celebration and preparation. At the end of the year, the horse

returned and was sacrificed in a three-day ceremony, along with a he-goat and, in later forms of the ceremony, with many other animals. The horse was first ornamentally dressed, anointed and adorned, by the three queens of highest rank. Then he was smothered with robes, before and after which act riddles were asked the priests by other priests and the women by the priests. The chief queen performed the ritual act under the robes, thus taking to herself the horse's power of fertility. The horse was then cut up, roasted, and offered to Prajāpati, after which came the ceremony to purify the sacrificer, accompanied by the giving of gifts to the priests.

While vestiges of the earlier fertility ceremony are found in the later ritual, especially in the deliberate obscenity of some of its verbiage, essentially the strength and quickness of the horse was transmitted to the king by this later form of the ceremonial. So virtuous did the king become through the rite that it was believed the completion of a hundred such sacrifices would enable him to overthrow Indra and become the ruler of the gods. There is the additional idea of expiation or atonement in the sacrifice: the Āsvamedha performed by Yudhisṭhira on the advice of Vyāsa in the *Mahābhārata* was meant to atone for the wars he had caused. Brahmā is said to have made ten such sacrifices at the Daśāśmedh Ghāt in Benares, one of the principal places of pilgrimage in that city.

Āsvins or Āsvins In Vedic mythology, twin cosmic gods variously deities of the dawn, of heaven and earth, of day and night, of the sun and moon, the morning and evening stars, twilight (one half light, the other half dark), or personifications of the two luminous rays supposed to precede the break of day. They are also divine physicians, the sons of Dyaus or of Sūrya (the sun) or Savitṛi (the activity of the sun), by the nymph Sañjñā. They are the horsemen whose golden chariot, drawn by horses, a bird, an ass, or a buffalo, precedes Ushās (the dawn) who is sometimes considered their sister, sometimes their wife. In other parts of the *Rig-Veda* their joint wife is Sūrya or they help Soma, the moon, to win Sūrya, and lose one chariot-wheel in the process.

In Brāhman mythology, they are no longer cosmic deities, but physician gods of great kindness and personal beauty, often given the epithets of Nāsatyā and Dasra. In the *Mahābhārata* they rejuvenated Chyavana for which they were given a share of soma. They restored the eyesight of Upamanyu and furnished Viśpalā with an iron leg. They were the fathers of the youngest Pāṇḍu princes, Sahadeva and Nakula. In the *Rāmāyaṇa* they fathered the monkeys Dvidiva and Mainda. See DIOSCURI; TWINS.

asylum Any place of shelter and refuge where the refugee is inviolate by virtue of the place itself. Among almost all peoples, ancient and contemporary, places sacred to them, and certain personages or objects regarded as sacred afford asylum to the hunted. The right of asylum is the right of a specific place, person, or object to afford such protection because of its inherent holiness. All over the world altars, temples, churches, tombs, the king's house, the king's person, the individual family hearth and home itself were (or are) sacred places where no blood can be spilled. The holy groves of many people protect plants, animals, and criminals alike.

Among some peoples just taking refuge with, or even touching, a woman affords asylum, because of the mysterious power believed to be inherent in the female sex.

Among the ancient Hebrews all altars afforded asylum to all fugitives except murderers. Later the right of asylum was transferred from the local altars to six certain cities, three on either side of Jordan. Even the wild birds were not driven from the altars. "The sparrow hath found her a house and the swallow a nest for herself where she may lay her young, even thine altars, O Lord of hosts" (Ps. 84). The Greeks and ancient Syrians also regarded birds nesting in holy places as untouchable. The sparrows of Æsculapius in Athens, for instance, and the pigeons of an early Syrian goddess in Hierapolis are often mentioned.

In ancient Greece all temples and altars were asylums; no person who put himself under the protection of a deity could be taken; no act of violence to remove him from the deity's presence could be enacted, in the belief that the deity would punish violators of the sacred place. Fugitives were usually runaway slaves or criminals fleeing either arrest or trial. Abuses of the privilege of sanctuary became so numerous and extreme that eventually the right of sanctuary was limited only to certain temples. The Romans (under Tiberius) reduced even this number; but statues of Roman emperors and eagles of the legions were asylums. With the Christian era right of asylum was transferred to the churches.

In medieval England a criminal could take refuge in a church, but after 40 days he was starved out. Usually he was given his choice between trial and exile. Henry VIII designated certain cities as places of permanent refuge, each harboring no more than 20 refugees, each of whom wore an identifying badge. Murderers, rapers, highway robbers, and committers of arson were denied sanctuary. In the reign of James I the right of asylum to fugitives from justice was legally abolished but the practice continued well into the reign of George I. In Spain it continued into the 19th century. Even today Portugal grants asylum to alien fugitives who would be killed if delivered up.

Typical of the observance of asylum and its ubiquity are the following: In New Guinea it is believed that the arms and legs will shrivel of anyone who lays hands on a fugitive within a temple. The big tree inhabited by the Samoan god Vave gives refuge even to murderers, although they have eventually to stand trial. In Hawaii, on the other hand, the criminal who takes refuge with the god Keave walks home safely in three days' time with the aura of divinity insuring his immunity from arrest. In Usambara a murderer is safe if he can touch the person of the king; in Madagascar, if he can but see the king. Hence in West Africa criminals are gagged lest they call on the king's name, or knives are pushed through their cheeks to hold down the tongue. The Ashanti slave goes free who flees to the temple and falls upon the fetish. Among the Marutse a criminal escapes punishment if he can evade his pursuers long enough to reach and throw himself upon the king's sacred drums.

Among many primitive peoples the house of a king or chief, priest or magician affords asylum. The coupling of the sanctity of the home with the idea of asylum is widespread in Europe.

The rights of asylum have dwindled in proportion to the spread of civic justice. International law controls the

rights of neutral powers to harbor belligerent armies. The time limit for the stay of belligerent ships in neutral harbors is usually 24 hours. In South America embassies, legations and consulates are still regarded as asylums.

ásynjur The goddesses collectively of the ancient Teutonic pantheon. They belong to the *æsir* and *Frigga* is the chief among them.

Ataensic Sky Woman, the First Mother of Huron mythology: called *Eagentci* by the Seneca. She fell to earth from heaven, but was caught on the wings of waterbirds and borne safely to the earth. While this was going on Muskrat dove through the waters to find *oeh-da* (earth); and this he placed on Turtle's back. Ataensic bore twins, the *Doyadano*, Good and Evil, and then died. *Hahgwehdiyu* (Good) shaped the sky with the palm of his hand, and created the sun from his mother's face. *Hahgwehdaetgah* (Evil) set darkness in the west. Then *Hahgwehdiyu* made the moon and stars from the breast of Ataensic, to lighten the dark, and gave her body back to the earth. From it sprang all the living ones. In some variants of this myth Ataensic gave birth to a daughter, who became impregnated by the wind and died giving birth to the twins, who were left to the care of their grandmother, Ataensic, or Sky Woman.

Atagaju The creator in the mythology of the *Huamachuco* Indians of Peru. [AM]

Atahen Literally, man: the first man, and culture hero of the coastal *Juanefio* Indians of California. See CHINICHNICH.

Atalanta In Greek (Arcadian) legend, the daughter of *Iasus* and *Clymene*, exposed by her father and suckled by a she-bear. She became a famous huntress. She slew the Centaurs who pursued her, participated in the Calydonian hunt, took part in the games in honor of *Pelias*, and may have gone along with the Argonautic expedition. Her father recognized her and urged her to marry. She agreed on condition that each suitor must contend with her in a foot race, death being the penalty for defeat, her hand the prize. *Meilanion* won by throwing out three golden apples given to him by *Aphrodite*. *Atalanta* stopped to pick them up, permitting her suitor to win. She was the mother of *Parthenopæus*. She and *Meilanion* were metamorphosed into lions after displeasing *Zeus*. In *Bœotian* legend, she was the daughter of *Schœnus*, her successful suitor was *Hippomenes*, and they were metamorphosed into lions by *Cybele*.

Ātar or **Ātarsh** (Persian *Ādar*) In Iranian mythology, the fire god, son of *Ahura Mazda* and conqueror of the dragon *Azhi Dahâka*; chief of the *yazatas* or Zoroastrian angels. *Atar*, who is sometimes classed as an archangel or *Amesha Spenta*, is a personification (imperfect) of fire. In the *Avesta*, five kinds of fire are recognized, the *Bahrâm*, the spark of life in the human body, the fire contained in wood, the fire of lightning, and the fire in heaven.

Atargatis or **Atar** A goddess of fertility worshipped by the Syrians. Fishes and doves were sacred to her, and her temple at Hierapolis, the largest and richest in Syria, included a pond of sacred fish. *Lucian*, in his treatise, *de Dea Syria*, describes her cult and calls her *Hera*. In the inner temple at Hierapolis were three

golden images, the first that of *Atargatis*, the others probably *Hadad* and *Attis*. The idol of *Atargatis* had attributes of *Hera*, *Athena*, *Aphrodite*, *Rhea*, *Artemis*, *Selene*, *Nemesis*, and the *Moiræ*.

Atargatis has been frequently identified as a local form of the Semitic goddess *Ishtar-Astarte*. Like *Astarte*, she was a goddess of fertility and water. Wherever the worship of *Astarte* went, that of *Atargatis* seemed to have followed. She is referred to in the *Apocrypha* (I *Macc.* v, 24; II *Macc.* xii, 26). Her chief temple in Palestine was at *Ascalon*. In her temple at *Carnaim*, *Judah Maccabeus* slew the inhabitants who had fled there for refuge and then burned the temple. *Ctesias* called her *Derceto* and the Romans knew her as *Dea Syria*.

Ate In early Greek mythology, the goddess of mischief, who incited men to crime. She was the daughter of *Zeus* and *Eris*, but was driven out of heaven for creating discord among the gods. In later mythology, she became an avenging spirit, somewhat akin to the *Erinives*.

Atea Literally, Vast-Expanse, sometimes translated Light: the atmosphere, sky god, and male parent of Polynesian mythology. In the great creation chants of Tahitian, Tuamotuan, Marquesan, and other Polynesian mythology, *Atea* is described as having been "extended" by means of the pillars which *Ta'aroa* placed under the vast expanse. At this time *Ta'aroa* also invoked a great spirit to pervade *Atea*. Then when *Ta'aroa* called out "Who is above?" *Atea* answered "I, *Atea*, the moving space, the sky-space." In Tuamotuan mythology, *Atea* was specifically a shapeless being molded into beauty by *Vahine Nautahu* (Enchantress Woman). His wife was named *Fakahotu* (in some islands, the *Marquesas*, for instance, *Atanua* or Dawn). From their union were born sons and daughters, the gods (handsome offspring), then birds, butterflies, and creeping things (common offspring).

The creation chants describe *Atea's* long struggle with *Tane*, in which he is finally killed; but *Atea's* power (*mana*) could not die. It still prevails in the islands. The creation chants also tell the circumstances of *Atea's* and *Fakahotu's* exchange of sex. All that was masculine in *Fakahotu* was transferred to *Atea*; all that was feminine in *Atea* was transferred to *Fakahotu*. By this strengthening of the male and female in each, more and mightier gods were born. In the story of the attempt to raise the sky, two gods equipped with wonderful adzes journeyed to *Atea*, thinking to chip him off and prop him up with rocks. But when they beheld the grandeur of *Atea* they were afraid; they put the adzes back in the basket and fled. So there are still no artisans who can raise *Atea*, separate sky from earth.

It is a common practice in the Society Islands to invoke *Atea* (along with *Tane* and *Ta'aroa*) during the first bathing of a newborn royal infant "to render sensitive the skin of the child."

New Zealanders call this deity *Rangi*, or Sky Father; among the Tuamotuans he is *Rangi-Atea*. In the Society Islands he is *Te Tumū*, the Source, and the alternate name of *Fakahotu* is *Papa*. In Hawaii *Atea* is known as *Wakea*, and his wife is *Papa*. See *VATEA*.

Atharva-Veda One of the four collections of hymns, prayers, and liturgical formulæ which constitute the Vedas, the most sacred literature of the Hindus. This is the latest of the Vedas and probably of popular rather

than priestly origin. It deals with the hostile powers which the sorcerer seeks to win over by flattery or to drive away by imprecations and has nothing to do with the sacrificial ceremony of the three other Vedas.

The *Atharva-Veda* consists of twenty books containing about 730 hymns. Of these the first six books probably formed the nucleus to which additions were gradually made. Many of its hostile spells are intended as remedies for a number of diseases and are to be used with various herbs. Others are charms invoking the dispellers of demons such as water, fire, and healing plants; charms for the prosperity of the fields and flocks, for harmony, for happiness in love and marriage. Among the hostile spells are imprecations against rivals and spells for the expiation of sins or moral transgressions. Some spells are for use in securing power, victory, or fame for the king.

The *Atharva-Veda*, in conjunction with the *Rig-Veda*, is the oldest source of information on early Aryan culture, mythology, and religion. See VEDA.

Athena, Athene, Athenaia, Athana, or Athenaie In Greek religion, the goddess of wisdom, of the arts and sciences, and of war; the virgin goddess. As a goddess of wisdom she was the protectress and preserver of the state, of social institutions and of everything which contributes to the strength and prosperity of the state such as agriculture, industry, and inventions. In this role she was the inventor of the plow and rake and the creator of the olive tree. She also taught men to yoke oxen to the plow and how to tame horses with the bridle. She is credited with the invention of numbers, the flute, the chariot, navigation, and nearly every kind of work in which women are employed as well as the arts of shipbuilding, goldsmithing, and shoemaking. She was celebrated with Hephæstus as the patron of the useful and elegant arts. As a war goddess Athena represented prudence and intelligence in contrast to Ares, the personification of brute force and rashness. As the patron goddess of the state she was the protectress of the phratries or clans and played an important part in the development of legal ideas. She was believed to have instituted the court of Areopagus.

Athena may have been a Minoan-Mycenæan goddess adopted by the Aryan invaders of Greece. Attempts have been made to identify her with the lightning and thunder but there is no proof that she was ever a cosmological goddess. In early Hellenic history she was the patron deity of cities, especially of Athens where she was one of the three most highly honored gods, the others being Zeus and Apollo. There as Athene Parthenos she represented the artistic and literary genius of the people. Her temple was the Parthenon on the Acropolis.

With the establishment of the Macedonian Empire, Athena lost her position as goddess of a civic empire but remained the Madonna to whose care Athenian boy-athletes and marriageable girls were dedicated. She was worshipped in all parts of Greece and in Rhodes.

In Greco-Egyptian religion she was worshipped at Sais and at Oxyrhynchus she was identified with the local goddess Thœris (Taurt). At Delphi as Athena Pronaia or Pronoia she was associated with the amphictyonic deities Apollo, Leto, and Artemis.

Her epithets are numerous and attest to the variety of her powers and interests. As Optiletis, Oxyderces, and Ophthalmitis she was gifted with keenness of sight and

a powerful intellect. As Athenaia she was the special patron of Athens; as Itonia she was the goddess of Coronea; while at Sparta she was Agoraia, presiding over the popular assemblies. She was also worshipped there as Athena Chalciæcus of the Brazen House. As Areia she was a goddess of war; as Agraulos, an agricultural deity. As Alea she was the light or warmth in Arcadia; while as Apaturia and Phratria she was the goddess of the Athenian clans. The epithets Chalinitis (the bridle), Damasippus (horse-taming), and Hippias refer to her as the goddess of war horses. As Ergane she was the goddess of industry; as Curotrophus, the nurturer of children; as Polias, the goddess of the city; and as Bulia, the goddess of the council. Athena Boarmia, the ox-yoker, was worshipped in Bœotia while Athena Hygieia, the health goddess, was associated with Asklepios at Athens. As Nikē or Nikēphoros Athena was the goddess of victory and was represented in statues as holding an image of Nikē in her outstretched hand. As Athena Mechanitis she was the discoverer of devices and as Athena Promachus, the goddess who fights in front. Her poetic epithet of Pallas or Pallas Athene may have resulted from the myth of her slaying the giant Pallas in the battle between the gods and giants.

A trace of totemism is seen in the name Glaukopis, or owl, which may have been worshipped earlier as a god and which, as so often happened, became the companion of the goddess who succeeded it. The epithets Coryphasia (head or summit), Acria (topmost) and Tritogenis (for the nymph of Lake Tritonis) may have been applied to her because of the myths explaining her birth.

Her most celebrated festival was the Panathenæa which featured a torch race and a regatta. Other festivals held in her honor included the Scirophoria with a procession from the Acropolis to the village of Sciron at the height of the summer to entreat the goddess to prevent great heat; the Chalceia or feast of smiths; the Plynteria and Callunteria, the feasts of washing and adorning during which her wooden image in the Erechtheum was cleaned and adorned; and the Arrhēphoria or Errēphoria during which two maidens began weaving the new peplos made each year for her statue.

Cows, bulls, and rams were usually sacrificed to Athena. She was represented as a woman of severe beauty carrying a lance, helmet, and shield on which was depicted the Gorgon's head. Her attributes were the owl, serpent, cock, crow, and ægis. The images of her which guarded the heights of Athens, called Palladia, represented her with shield uplifted, brandishing her spear to keep off the foe.

Athena was identified with the Egyptian Isis, the Vedic Ushās, with the Roman Minerva, and sometimes with the Persian Anāhita.

In Greek mythology, she was the daughter of Zeus, born from his forehead. According to Hesiod, Metis was her mother but Zeus, on the advice of Gaia and Uranus, fearing the birth of a son who would be greater than he, tricked Metis into changing herself into a fly and then swallowed her, afterwards giving birth to Athena himself. According to Pindar, Hephæstus split the head of Zeus with his ax and Athena sprang forth. Athena has also been regarded as the daughter of the winged giant Pallas whom she afterwards killed because he attempted to violate her chastity. Another tradition calls her the daughter of Poseidon and the nymph Triton or Tritonis

in Libya. She was said to have invented the flute in Libya when Perseus cut off the head of Medusa. Athena imitated on a reed the sound of the wailing of Medusa's sisters and the plaintive sounds of the serpents which surrounded their heads. In the Greek flood legend Zeus commanded Prometheus and Athena to repopulate the earth by fashioning images of mud. Then he bade the winds breathe into the images and make them live.

Athena was prominent in Attic legend as the promoter of agriculture. Her foster son was Erichthonius, the earth god with whom she was honored in the Erechtheum on the Acropolis. According to one story she gave the chest containing Erichthonius (seed-corn) to Agrauros, Herse, and Pandrosos (the dew sisters, signifying the fertilization of the earth by the dew, and sometimes identified with Athena) with instructions not to open it, but Agrauros and Herse opened it and in a maddened frenzy brought on by their deed cast themselves down from the Acropolis. Athena then took charge of the child who lived in her temple. In a contest with Poseidon for the land of Attica, the gods promised the preference to whichever gave the most useful present to the people. Poseidon gave the Athenians the horse (or a salt spring) while Athena produced the olive tree and was adjudged the victor. From her Athens took its name.

In the Trojan War the goddess sided with the Greeks. She was the companion of Odysseus and assisted him against the lawless conduct of the suitors. Despite her reputation as a virgin goddess, some traditions describe her as the mother of Apollo and Lychnus by Hephæstus.

Atlantis A legendary island in the Atlantic Ocean, beyond the Pillars of Hercules: first mentioned by Plato in the *Timæus*. Atlantis was a fabulously beautiful and prosperous land, the seat of an empire nine thousand years before Solon. Its inhabitants overran part of Europe and Africa, Athens alone being able to defy them. Because of the impiety of its people, the island was destroyed by an earthquake and inundation. The legend may have existed before Plato and may have sprung from the concept of Homer's Elysium. The possibility that such an island once existed has caused much speculation, resulting in a theory, whose chief exponent is Brasseur de Bourbourg, that pre-Columbian civilizations in America were established by colonists from the lost island.

Atlas In Greek mythology, the god assigned to keep the earth and heaven asunder. According to Hesiod he was the son of Iapetus and Clymene, brother of Menætiæus, Epimetheus, and Prometheus. He led the Titans in their contest with Zeus, and his punishment was the bearing of heaven on his head and hands or shoulders forever. In later tradition he was a man metamorphosed into a mountain because he refused Perseus rest and food after the hero had slain Medusa. Perseus held up the Gorgon's head and Atlas was changed into stone, his beard and hair became forests, his bones rocks, his head the summit, and each part increased in mass until he became the mountain which supported the heavens. This mountain was believed to lie on the boundary of the earth. As the world increased in size with each new geographical discovery, the name Atlas was applied to mountains in other places, but the general belief that the true Atlas was in northwestern Africa in the area of the Atlas mountains persisted. The Berbers

regarded these mountains with great reverence and the Libyans regarded Mount Atlas both as a temple and a god.

The idea of a man (or mountain) supporting the world or the heavens is found also in the mythology of Siberia, of the Aztecs who believed that four gods supported the sky at world-quarters, of the Chibcha (Colombia), and among the Mackenzie River, Tlingit, Haida, Wishosk, and Yuki Indians of North America.

Atlas motif A motif (A842) found in a number of ancient and contemporary mythologies in which the earth is supported by a human being. The Greek story of Atlas who bears the world on his shoulders is the classical example. The Tsimshian hero Amala supports the world, not on his shoulders, but on the end of a long pole which revolves in a spoonful of duck grease which he holds on his chest. The Tlingits and certain Athapascan tribes conceive of the earth as being held in place by Hayicanako, the Old Woman Underneath Us. Chibchachum, deity of the Colombian Chibcha Indians, like Atlas, supports the world on his shoulders. If he moves, the earth shakes.

Atli In the *Volsunga Saga*, the name of Attila, king of the Huns, and brother of Brynhild. As atonement for Brynhild's death, Gudrun, sister of the Nibelungs, was promised to Atli in marriage. Unwittingly, Gudrun excited Atli's greed by her descriptions of the life and wealth of the Nibelungs. He invited the Nibelung princes to visit his court and then treacherously killed them. Gunnar and Hogni, the sole survivors, were put to death when they refused to tell the secret hiding place of the Nibelung treasure. Gudrun avenged her brothers' deaths by killing her own and Atli's sons, Erp and Eitel, and then by killing Atli.

âtman In Hindu religion, the inner essence of the soul; also the inner essence of the whole world. According to the *Satapatha Brâhmaṇa*, "The âtman has for body, the life; for form, the light; for essence space . . . It permeates all the world." The âtman is all-comprehending, self-existent, the eternal thinker. Atman originally meant "body," then it came to denote Self or Soul, the principle on which the functions of an individual depends. Atman is the psychical phase of life; brahman, the cosmical. The two are considered identical in the Vedânta philosophical system of the Brâhmans.

Atmu or Atum, Tem or Tum In Egyptian mythology, one of the aspects of the sun god; the sun at evening. Atmu was the original god, self-created from nothing. In other myths, Atmu was created by the four frogs and four snakes which existed in the primeval chaos of waters. Shu and Tefnut, the first pair of the gods, were created by Atmu by himself, by spitting or by masturbation. He is pictured as a bearded man wearing the double crown of Upper and Lower Egypt.

Atnatu In the belief of the Australian Kaitish, the god who made and named himself and rose into the sky in the distant past; father and benefactor of men, interested in their ritual but not in the moral aspect of their conduct. Before creating the alcheringa, he drove his disobedient sons out of heaven and dropped after them everything now used by the people. Two churinga (bull-roarers) dropped by Atnatu became men who now make wooden bull-roarers, which imitate the sound of

Atnatu's celestial bull-roarer (thunder). Atnatu performs sacred services and punishes mortals who do not sound the bull-roarer at initiation ceremonies.

Aton or Aten An Egyptian god of the solar disk: symbolized by the disk with rays ending in human hands. During the reign of Amenhotep IV, this god became officially the one god of Egypt; Amenhotep took the name Ikhnaton, meaning "splendor of Aton"; great temples of the god existed at Thebes and Memphis. This attempt at reducing the power of the priests of Amen failed however, and after they recaptured their original hold on the state religion from Ikhnaton, the worship of Aton died out completely in the land and was never revived. One interesting conjecture holds that Moses was a priest of Aton who was forced to leave Egypt and carried the monotheistic belief into the Arabian desert where it became attached to Jahweh, the principal god of the desert region. Aton was a universal god, the source and embodiment of all, the friend of the oppressed, the comforter of the ailing, the fountain of good.

Atreus In Greek legend, the son of Pelops and Hippodamia; father of Agamemnon and Menelaus; king of Mycenæ. His wife Ærope was seduced by Thyestes, his younger brother, who was consequently banished. Thyestes sent Pleisthenes, Atreus' son, to kill his father by a ruse, but Atreus unwittingly slew his own son. For revenge he killed three sons of Thyestes and served them to their father at a banquet. Thyestes cursed his brother and departed. Later, Atreus was slain by Ægisthus, son of Thyestes.

Attis or Atys In Greek and Roman religion, a Phrygian god of vegetation, always worshipped in connection with the Great Mother. Attis was either of Semitic origin or was influenced by Semitic religion. His cult, centralized in Phrygia and Lydia, spread to Greece and finally throughout the Roman Empire.

His worship, characterized by frenzied orgies, was carried to Rome after the worship of Cybele had been adopted by the Romans in 204 B.C. Each year on March 22 a pine tree was cut and brought into the sanctuary of Cybele where it was swathed in woolen bands, decked with violets; an effigy of a young man (Attis) was tied to it. March 24 was known as the Day of Blood, for on this day the ceremonies reached their peak. They were characterized by blood-letting, the barbaric music of flutes and cymbals, and the whirling contortions of the lesser priesthood, who in a frenzy of excitement slashed themselves to bespatter the altar and the sacred tree with their blood. Probably it was on this day that they performed the act of self-emasculation which was an essential part of the cult. On the next day the resurrection of Attis was celebrated in the form of a licentious carnival.

March 26 was a day of repose, and the festival closed on March 27 with a procession bearing the image of the goddess Cybele to the Almo River where the wagon and image were bathed.

According to one legend Attis was the son of Cybele; in another he was the son of Nana, daughter of a river god, who was impregnated by an almond (pomegranate). Attis was loved by the hermaphroditic monster Agdistis, but planned to marry Ia, daughter of Midas. Agdistis struck the wedding party with madness, and

Attis castrated himself under a pine tree. Ia committed suicide. From the blood of Attis sprang the violet, and Zeus allowed the body to remain undecayed, the fingernails to grow, and the little finger to move.

In another legend Attis was put to death because of his love for Cybele, daughter of Meion, king of Phrygia and Lydia. The plague and famine which followed drove the Phrygians to institute the worship of Attis and Cybele. In a Lydian version of the story Attis was killed by a boar.

atua or otua In Polynesian belief, a spirit; any supernatural being, whether animistic, ancestral, or human. Some persons were recognized as atua while yet alive, for example priestesses of Pele in Hawaii who embodied the goddess and lived in seclusion on the volcanoes where she manifested herself. Atuas were of great sacredness; among the Maori, mention even of the name of some atuas required many precautions. As in all animistic belief, atuas resided in and displayed themselves in the various natural phenomena: animals, fish, wind, rain, mountains, forests, plants, even in war and songs and dances. The power of a chief derived from the atua of an ancestor of the tribe.

Audhumla or Audhumbla In Scandinavian mythology, the monstrous cow, formed in Ginnungagap by the cold from Niflheim and the heat from Muspellheim. She sustained the first giant, Ymir, with her four streams of milk and herself fed from the salty hoarfrost, licking it into the being, Buri, whose son Bor was the father of the gods Odin, Vili, and Ve.

Augean stables In Greek legend, the stables of Augeas, containing 3000 oxen, which had not been cleaned for 30 years. Hercules' fifth task, set by Eurystheus, was to clean these stables. This was accomplished in the required single day by turning two rivers through them. Augeas then reneged on the pledge of a tenth of his herds to Hercules, exiling his own son Phyleus who had witnessed the feat and sided against him. Later Hercules slew Augeas.

In a New Zealand legend, Rupe, one of the younger Mauis, performed a similar task, cleaning the debris-filled courtyard of Rehua's house.

augurs Members of a priestly class whose duty it is to read and interpret omens, particularly with ceremonial observances. There have been several such groups; the best known were in Mexico, Peru, and Rome. The Roman augurs belonged to one of the four great priestly colleges. They are first recorded in Numa's time, but were much more ancient. Their number varied from three or four in early times to 16 under Julius Caesar. The augurs had great political power, as they were able to suspend certain public affairs by the unchallengeable declaration of an unfavorable omen. The *lituus* (a bent staff without knots) and the *trabea* (toga with scarlet stripes and purple border) were the insignia of office. The augur, accompanied by a magistrate, marked with his staff a *templum* both on the ground and in the sky at midnight. He then sat in a tent within the templum and watched for signs. Signs in the east, usually on the left, were considered favorable; those on the other hand unfavorable.

augury Divination from the flight or song of birds (ornithomancy), or generally from omens such as light-

ning, thunder, or the movements of animals, usually under formal, ceremonial conditions (compare AUGURS): a practice both ancient and widespread, from Homeric Greece and ancient India to modern Melanesia and Africa. Strictly speaking, augury should be limited to the observation of auspices (Latin *avis*, bird, and *specia*, view) but commonly it is applied to divination in general, since the Roman augurs themselves used other omens than those from birds. The most usual omen birds are the crow or raven, and the hawk or eagle. Augury may have arisen from the belief that birds, inhabitants of the heavens, partake therefore of the divine; or it may spring from a totemistic linking between the bird or animal and the person affected. The eagle and serpent emblem in Mexico's coat of arms mirrors the legend of the founding of Mexico City in 1325, when a group of Nahuas saw the two on the shores of the lake and accepted this as a good omen for the establishing of the city there.

auki In the religion of the Quechua of Peru, a mountain spirit. It is believed in the Peruvian Andes that mountain peaks are inhabited by these spirits and contain concealed haciendas equipped with herds of livestock guarded by the servants of the aukis. These servants include the vicuñas which are the spirit's llamas, the condors (his chickens) and Ccoa (his cat, the most feared of his servants).

The aukis are called upon by sorcerers to help in curing, and the superior sorcerers (the *alto misayoc*) converse with the aukis while divining. In Kauri curing is performed by a brujo or curer who enters the sickroom which contains coca, sugar, a bottle of aguardiente, a whip, and 20 centavos. The brujo darkens the room and places a piece of white paper on the floor. He whistles three times and the auki enters through the roof and settles on the paper. Then follows a conversation conducted, with the aid of ventriloquism, between the auki and the brujo in which the cause and treatment of the malady are revealed. The auki then flies out by way of the roof, the brujo consumes the coca, etc., takes the 20 centavos, and leaves.

Auld Lang Syne A song with words set by Robert Burns to an old Scottish folk melody, also known as *The Miller's Wedding* and *The Miller's Daughter*. The Burns setting, widely popular in English-speaking countries, has been adopted as a toast of friendship to be sung as a closing song for social gatherings, and at midnight on New Year's Eve.

aunga In Melanesian belief, the good part or soul-substance of a man, which passes away after death, in contrast with the *adaro* which is the bad part and remains after death as a ghost.

Aunt Nancy The Spider: corruption of Anansi in Gullah (South Carolina) folktale. See AFRICAN AND NEW WORLD NEGRO FOLKLORE.

Auriga The Charioteer: a large constellation of the northern hemisphere, represented as a young man holding a whip in his right hand and carrying Capella, the Goat, with her Kids in his left arm. It is believed that this concept of the constellation is as old as the ancient peoples of the Euphrates. But the early Arabs thought of it as a Mule, as did also the Turks. Latin writers, Germanicus for instance, identified it with the lame

Erichthonius who needed a chariot to get around. Others identified it with the charioteer of Cnomaus, named Myrtilus, others with Hippolytus; others called it the Charioteer and Rein-holder. Biblical astronomers have likened it to St. Jerome, to the Good Shepherd, and to Jacob deceiving Isaac with "the savoury meat of two good kids."

Aurora Borealis The northern lights: a brilliant radiance visible only at night in the sky of high northern latitudes, usually appearing in streamers varying in color from pale yellow to blood red, sometimes as an arch of light across the heavens. The phenomenon is thought to be electrical but many explanations are given by the peoples of northern countries. The Eskimos and Tlingit Indians believe that it is the spirits of the dead at play and occurs after the death of many people; the Saulteaux Indians say that it is the spirits of the dead dancing. The Mandans explain the Aurora Borealis as an assembly of medicine men and warriors of northern nations boiling their prisoners and enemies in huge pots. The Makah Indians believe the phenomenon is caused by a race of small Indians cooking seal and walrus meat. The Kwakiutl Indians say it is the souls of deceased members of a family dancing for those living or about to die.

The Greeks and Romans were familiar with it: Pliny thought it due to natural causes but would not deny that it might have some connection with untoward events. The Norse explained it in terms of the light reflected from the shields of the Valkyries while gathering the heroes slain in battle. In an Estonian folktale the Aurora Borealis is explained as a wedding in the sky attended by guests whose sledges and horses emit the radiance. In Scotland the phenomenon is used in predicting weather. If it appears low on the horizon there will be no change; if it is high in the sky stormy weather will follow. The Finns believe it to be the souls of the dead and the Ostyaks say it is the fires kept burning by the god of fish, Yeman'gnyem, to show travelers the way in winter.

austerities In the social, moral, and religious life of primitive people austerities or acts of discipline, self-inflicted or willingly borne, replace the asceticism of more advanced peoples. Austerities may be undergone for magical purposes, to make life more tolerable, to placate the gods, as initiatory ceremonies, or during a period of mourning.

Austerities vary considerably in their extent and nature, ranging from sacrifice involving property or possessions to seclusion for a long or short period of time, exposure to the elements, flagellation, fasting, or abstinence from specific foods, gashing or cutting the body, mutilation of some member of the body, bloodletting, making of scars or cicatrices, amputation, circumcision, subincision, excision, knocking out or filing of teeth, tattooing, and the supreme sacrifice (widows of India) of death. These ordeals must be undergone, usually, without any show of pain, although many of them are so rigorous that death often results.

During adolescence initiation ceremonies, for example, an Indian boy of the Californina tribes of North America was stung with nettles until he could not move, then subjected to the stinging of ants. After this he fasted,

Initiation into the priesthood in early societies is characterized by a severe training involving many austerities. Since the medicine man usually performs his functions while in a state of trance, or ecstasy, it is necessary for him to learn how to induce such conditions. This is frequently done by undergoing austerities. The Greenland angakok trainee induces trances by excessive fasting. The Guiana novitiate fasts, wanders alone in the forest, and drinks tobacco-juice water, to attain a state of delirium. After training the abnormal state is more easily produced, sometimes spontaneously, sometimes by artificial means such as flagellation, fasting, or the use of narcotics.

Australian aboriginal mythology Since the 18th century when the English and Dutch first described Australia, it has seemed to the civilized world a natural history museum of "living fossils," primitive types of animals, plants, and human beings, preserved through isolation and lack of contact with more advanced types either to stimulate development or cause extinction. Smallest of the continents, Australia has less than three million square miles of desert, bush, and grass fringed on the northeast and east by forests of acacia and giant eucalyptus. Archaic types of animals include egg-laying mammals like the duckbill and spiny anteater; marsupials like the kangaroo, bandicoot, wallaby, and wombat; and flightless birds like the emu and cassowary. These and other creatures have leading roles in Australian mythology which describes the origin and nature of peculiarities of animals, plants, and physiographic features, together with their cultural and assumed biological affiliations with human beings. These explanatory tales, R. B. Dixon states (1914), are "as typical, on the whole, for Australia as are the Maui myths for Polynesia, the wise and foolish brothers for Melanesia, or the trickster stories for Indonesia."

Though lacking agriculture, pottery, metallurgy, writing, and domesticated animals (except for the half-domesticated dingo, a disputed member of the genus *Canis*), the aborigines had achieved an adjustment to the inhospitable environment by a seminomadic, food-gathering economy which in 1788, when the British annexed eastern Australia and Tasmania, supported an estimated 300,000 individuals divided into over 300 separate tribes, each with its own dialect, territory, and subdivisions into hordes (Elkin, 1938). The complex social organization and world view counteract the effect of cultural poverty given by the meager material culture. The close spiritual, temporal, and spatial continuity and cohesion of members of a local group with their ancestors and home territory are expressed intellectually in myths told at ceremonies, now popularly called corroborees, where discussion among the men leads to a form fixed as to sequence of events and important details.

Much of Australia, except the extreme south and parts of the east (Knowles, 1937), has a characteristic mythological pattern that concerns the careers of totemic ancestors. Sometimes the ancestors, while possessed of supernormal powers, are human; sometimes they combine human with botanical and zoological qualities. During the mythical past, the "dream time" (called *Alchera* by the Aranda of central Australia, whose terminology has become anthropological *lingua franca*),

they emerged from the ground or a remote direction, often northerly, to wander over the horde's land. At "story places," now sacred spots and totemic centers, near water holes or elsewhere along their "dream path," they created plant and animal species, modified the landscape, and established ceremonies and customs for their descendants to follow. They named places, species, and natural phenomena, and created songs and sacred objects like that called *Churinga* by the Aranda (Spencer and Gillen, 1927), which are used in *Intichiuma*, food-increase rites, or in boys' initiation ceremonies. Before disappearing into the earth or sky or transforming themselves into rocks or creatures, after having tried out different places to settle, they left either their own spirits or spirit children in various incarnations to enter women magically to be reborn.

Illustrating the pattern is the narrative of Great Western Desert tribes (Tindale, 1936; Berndt, 1941) who tell of the Wati Kutjara, "Two Men," of the eternal dream time, who came from the northwest. One was lazy, the other energetic. As each had a species of iguana as a totem they are sometimes called "Men Iguana"; occasionally they assumed iguana disguise and used iguana designs on objects they made. On their "walkabout," the route of which men today follow ceremonially to reenact ancestral deeds ("We must do the same as did Wati Kutjara"), they made water holes, physiographic features, and the ceremonial board comparable to the *Churinga*, which they hid. They went on, made a bull-roarer, and subincised each other. With a magic boomerang they killed a wanderer who tried to steal their women and turned him into stone (the first death). Later they made ritual headdresses before going out of the territory or into the sky. A sample of the narrative follows . . . "after making a waterhole at Kanba, they proceeded northeastwards to Windalda where they made rock shelters. From Windalda they travelled west to Pinmal where they built an enclosure of cliffs suitable for corralling and spearing kangaroos when they come to water. Then they went north along the low scarp-face to Tjawan where they made trees, the fruit of which they stacked in heaps and made into fruit cakes by pounding them on stone mills. They went back again to Kulardu and here they accidentally left their spears, from which trees, yielding wood fine for spears, sprang up."

Each individual authority knew only portions referring to his horde's land; the total history was assembled from different hordes and tribes in the region. Spiritual and economic factors bind an aborigine to well-defined and respected boundaries. When he goes anywhere that his totemic ancestors have not traveled, he feels himself a transient in dire danger. Mythology makes the land home and tells him how to live in it. To be reborn, he must die in familiar territory so that his spirit will know its path and not wander homeless in totemic form. Mythological history is ritually reenacted to the accompaniment of myths, songs, paintings, and dramatic representations that revitalize the religious and emotional bond between people, land, and ancestors.

Though excluded from many ceremonies women, at least in northwestern tribes (Kaberry, 1939), are specialists on myths sanctioning rites involving the increase of certain plants, and the laws of female totemic ancestors responsible for the origin of birth and related

matters. Besides serious myths associated with ritual, tales are told in everyday life for the fun of telling and listening to stories.

References to the mythical past constitute the final word on any debated matter. Adding authority is the name of the principal totemic ancestor, like Baiame of New South Wales, who by earlier writers was regarded as an All-Father, and the rainbow serpent associated with rain and fertility and known over much of the continent, being especially important in the northwest where he is called Kalseru. A moral tone dominates many myths. For example, the Wikmunkan tribe of Cape York Peninsula (McConnel, 1935) tells of the punishment of two male initiates who killed flying fox, tabu to them. The Murngin tribe of Arnhem Land (Warner, 1937) narrates how Bamapama, a trickster hero, committed many asocial acts including incest. His character and adventures recall Coyote of North American Indian mythology. Laughter and ridicule of his behavior express both vicarious enjoyment of tabooed acts and disapproval of "crazy men" like him.

One of the most valuable analyses of style, structure, and function of myth cycles is given by Warner (1937) for the Murngin tribe for the Wawilak and Djunkgao myths and rituals.

Existing regional differences in mythology have scarcely been analyzed; emphasis has been on description of function. The problems of analyzing mythic elements, tracing their distribution, noting their variations, and classifying them are rendered more difficult because mythological characters having the same name or dialectal variants of the same name are rare in Australia, unlike Polynesia. The prominence of certain names in discussions of Australian mythology is rarely due to their wide provenience but to their value as representative characters. For example, though the concept of a rainbow serpent is widely diffused, his name differs from one region to another.

Dixon's distinction, made in 1914, between two major mythological areas paralleling linguistic areas, is valuable now mainly as a springboard for further research which should include the numerous recent collections. Dixon distinguished between a southern and eastern area, on the one hand, and a northern and central, on the other; little had been recorded then in the west. Few tales or incidents are common to both areas, Dixon found, a view which further research would perhaps modify. Many hero myths in the central area are, he stated, known only to limited groups and not even to an entire tribe.

Australians, he pointed out, assume world pre-existence, but have much about the origin of, for example, mankind, fire, death, and natural phenomena. Explanatory myths, common throughout the continent, are obscured in the northern and central area by accounts, absent in the other area, about the careers of totemic ancestors. The south and east, unlike the north and central region, has more or less definite tales of a creator-being and creation together with myths about creation of man. The north either assumes man's pre-existence or narrates an explanation, widely known in Australia and present in Tasmania, about amorphous beings who were fashioned into human shape.

Tindale (1946) distinguished four different strata of myths: (1) simple tales of hunting and food-gathering

told in the extreme south and in Tasmania about characters who act like human beings; (2) "man hero" tales, including those about Baiame and Wati Kutjara, of southern Australia from east to west, transitional to (3) myths about totemic ancestors with plant or animal qualities, told in central, northern, and northwestern Australia, and finally, (4) Papuan myths lately diffused into Cape York Peninsula.

The view of Australian aborigines as "living fossils" stems, in part, from their physical type, which, while having some characteristics of each, is neither Caucasian, Mongolian, nor Negro. Though regarded by certain scholars as Neanderthaloid, or otherwise related to precursors of *Homo sapiens*, the aborigines are customarily grouped into a separate racial division, the Australoid, representative of protomodern man.

Comparative mythology has not, at least as yet, shed much light on Australian origins. In the assumed migration from Asia via Indonesia into Australia, Negroid Tasmanians probably preceded Australians, who replaced them on the continent, but not in Tasmania where European settlers have since exterminated them. One theory has Tasmanians by-passing Australia to reach their island. Neither Australians nor Tasmanians (except occasional tribes in Cape York Peninsula) have myths about ancestors and heroes traveling from other parts of Oceania into their present country. Mythology, reflecting the basically similar culture of Australia and Tasmania, includes common elements relating to the origin of fire, the dual heroes or twin myth, the revival of dead people by stinging ants, the belief that characters become stars or constellations, and the myth that two sky-beings, perhaps twins, shaped rudimentary creatures into human beings. Tasmanian fragments of myths recount that two strange men, dwellers in Castor and Pollux, threw fire to human beings. Later the two rescued the bodies of two women slain at a pool by a monster and revived them with stinging ants. Then the four disappeared to become stars.

Melanesian resemblances, to Dixon, are most marked in southern and eastern Australia where occur themes like swan-maiden, spear chain to the sky (continental counterpart of arrow chain), liberation of concealed water, and theft of fire kept in a creature's body. The latter theme, also known to Aranda who tell of a male euro keeping fire in his sexual parts, is familiar to Polynesians and Micronesians. An embryonic being shaped into human form appears in Indonesian and Polynesian myths, where, in Hawaii, Maui himself is the artist. Dixon finds only hints of typically Melanesian tales about wise and foolish brothers in southern Australia. Papuan resemblances to central and northern mythology, Dixon notes, are of a negative sort in the virtual absence of cosmogonic myths and the restriction of many tales to small groups.

To Thomson, certain Cape York hero myths associated with a cult are Papuan in origin but reinterpreted by Australians to fit their totemic-ancestor complex; McConnel's theory (1936) about them is almost exactly opposite. Warner (1932) finds no distinct Malay mythological themes among Murngin visited by Malay voyagers, though beliefs about Malays are incorporated into myths.

The mentality and mythology of the aborigines have been the subject of innumerable theories, including

those of Freud, Durkheim, and Lévy-Bruhl, based on the assumption, denied by many scholars, that the aborigines, having the most primitive culture known today, illustrate how early ancestors of all mankind lived and the nature of their intellectual and spiritual concepts.

KATHARINE LUOMALA

autograph album rimes Verses, preferably original, were written in personal blankbooks called albums by relatives, acquaintances, and schoolmates of the owners of the albums, asserting undying friendship, conveying good wishes, prophesying a bright future, or merely asking to be remembered forever. The rimes were signed, dated, often decorated elaborately with floral designs and calligraphic flourishes and paraphs, and the residence of the writer usually given.

There was great variety in the size, shape, decoration and binding of the albums, and the type of verse changed greatly with the decades. Every album was different, reflecting the taste and circumstances of the owners.

Autograph albums first appeared in any great numbers in America in the 1820's and 1830's, then increased in popularity slowly until the sentimental seventies and elegant eighties when they were quite the rage. Sporadic revivals of the craze have taken place since, and some stationers report it current now, but of late years it has been increasingly confined to teen-agers and rural

romantics. Modern writers of album verse are apt to apologize by tending toward burlesque. The echoes sound mocking.

But students of folklore know that album verse with its ancient and honorable history needs no defense or exculpation. The custom stems directly from the album amicorum and the German Stammbuch, and for four hundred years has been followed by both the mighty and the meek.

It was about the mid-16th century that there suddenly appeared and spread rapidly among university students throughout Europe, first in Germany but soon thereafter in Scotland and England, the custom of carrying about a little leatherbound book called an *album amicorum*. It was not merely a "book of friends" as a superficial translation would indicate. In the lingua franca or conversational Latin of that day, used by scholars of all countries, amicus meant not only a friend in our modern sense of the word, but also was practically synonymous with patronus and socius. That is, in the album amicorum the student would seek to have inscribed the names and approving sentiments of patrons and protectors, companions and comrades, as well as those of his intimate friends. Students traveled widely then, and a book full of recommendations was of great practical value as well as of sentimental and even literary importance. Some of the artistic alba amicorum containing names of note which have survived wear and worm are almost priceless today.

James F. K. Johnstone, F.S.A., Scot., in *The Alba Amicorum of George Strachan, George Craig, and Thomas Cumming* (printed for the Univ. of Aberdeen, 1924), throws some light on an otherwise neglected subject. At a time when Scotch students were traveling all over Europe these three lads' alba cover most of the years between 1599 and 1619. One gets the rare flavor of the times when Johnstone quotes some of the rimes. In 1602 Robert Stuart wrote in Strachan's album the quaint and rather touching couplet:

Ev'n so thocht fortoun force us to dissiver
I sall induer your faethfull frind for ever.

And in 1605 J. Hopkyns wrote in Craig's vade mecum:

Be as thou art my worthie friend,
A Rock that firm remains.
That in the end the Rock of rockes
May guerdon all thy paines.

Thus early we have a good example of a frequently occurring whimsy common to album writers unto this day who needs must bring in cunningly and usually punningly the name of the owner of the album. (Craig is Scotch for rock; cf. our crag.)

In Germany the album amicorum was more likely to be called a Stammbuch, for, as the name implies, it was more of a family affair. Even today in New York among families of German descent the folk custom persists that all accessible members of the family must be among the first to write in a new autograph album.

Thus we find a century and a half ago the great Goethe himself writing in his young son's Stammbuch the opening inscription which might be roughly translated into English:

Hand to the patron the book, and hand it to friend
and companion;
Hand to the traveler too, passing swift on his way;

He who with friendly gift, be it word or name,
thee enriches,
Stores up for thee a treasure of noble remembrance
for aye.

In this book Schiller wrote, but when the boy asked Madaine de Staël to autograph it, she flung it from her petulantly and said: "I do not like these mortuary tables!" Ladies with less foresight are doubtless responsible for the fact that hardly an album is to be found today without several pages missing.

The extent to which the circulation of these little books was carried may be inferred from the fact that Goethe owned one that had belonged to the Baron de Burkana who in his travels had collected 3,532 entries, expressions of esteem and friendship adorned with "compliments, maxims, epigrams, witticisms, and anecdotes" including contributions from Montesquieu and Voltaire.

The names of Charles Lamb and Leigh Hunt are definitely and often connected with the writing of romantic album verses in England in the first half of the 19th century. Both loudly deplored the vogue of young ladies chasing celebrities to secure not merely their signatures but an original sentimental poem as well, and gratis. Hunt might write for a damsel's album the protesting lines:

Albums are records kept by gentle dames
To show us that their friends can write their names,
and Lamb might growl about:

Those books kept by modern young ladies for show,
Of which their plain Grandmothers nothing did know,
but both poets knew as well as a Hollywood actor the publicity value of a crowd of autograph hunters. In fact, Lamb admitted as much in the preface of a volume of such verses, published in 1830: "I had on my hands sundry copies of verses written for albums . . . I feel little interest in their publication. They are simply advertisement verses."

Among these publicity poems were those written "In the Album of a Clergyman's Lady" in which he compares albums in turn to Gardens of wholesome herbs, Cabinets of curious porcelain, Chapels full of living friends, and Holy Rooms full of spirits of lost loved ones; "In the Album of a French Teacher"; "In the Album of a Very Young Lady"; and "In the Album of Lucy Barker."

Lucy was a young Quakeress, and Lamb took the opportunity to compare her innocence and purity with the spotlessness of her new album. Hundreds of writers since have rung the changes on the etymological derivation of the word album from the Latin adjective meaning "white," but none have matched the first and last stanzas of Lamb's ideal album poem:

Little book, surnamed of white,
Clean as yet, and fair to sight,
Keep thy attribution right . . .
Whitest thoughts in whitest dress,
Candid meanings, best express
Mind of quiet Quakeress.

By the time Lamb was writing in Lucy's album, the custom had spread to America and taken vigorous root. An old man, writing in *Chambers Journal* for Sat., Aug. 30, 1873, reminisced: "Those who can look back for half a century will remember the rage there was in their

youthful days for albums. . . . legion was not a name multitudinous enough for them; literary men crouched under their tyranny; young maidens wielded them as rods of iron . . . Splendid books they were in their day, bound in rich morocco and gold, and often contained contributions from Scott, Moore, Montgomery and Praed; whilst Prout's beautiful sketches adorned their pages side by side with other artists."

The album-writing fad suffered a sea-change in crossing the Atlantic, for while the Montgomery-Hunt-Lamb style florid did obtain for a period in young ladies' seminaries and similar circles, and we do have a Blenden writing in the album of Elizabeth her classmate in Homer Academy in 1834:

Enough has Heaven indulged of joy below
To tempt our tarriance in this loved retreat,
Enough has Heaven indulged of secret woe
To make us languish for a happier scene,

we also note a lighter touch appearing as early as 1836, when Mary wrote in the album of Augusta of Coxsackie, N. Y., the chaste but purposely ambiguous:

I wish you health and happiness
And heavenly grace beside
And if you have *another* wish
That it may be supplied.

Once well started, the album verse burgeoned into many varieties which would have shocked Goethe. Everybody began writing poetry, or verse, or doggerel, using sheer nerve or Yankee ingenuity when talent gave out. One can but admire the originality of the Tillie who in 1856 wrote in the album of Mary Tice of Newburgh, N. Y.,

Ma chere amie Marie
Until life's last sand has run
May thy days flow lightly on
Is wished by Tillie Stevenson.

The emphasis on originality drew protests, of which the following was the most often used:

You ask me for something original:
I scarcely know how to begin,
For there's nothing original in me
Unless it's original sin.

Brief verses became popular, especially among the young men who settled for one like:

If on this page you chance to look,
Just think of the writer and shut the book.

There were several tricky arrangements, such as turning the book upside down and writing merely:

I'm the girl who ruined your book
By writing upside down.

or revolving the book and writing spirally or in concentric circles:

Round is the ring that hath no end;
So is my love to you, my friend.

The last page of the album was much sought, with a mock humility, and was often crowded with several:

Way back here just out of spite
These two lines do I indite.
Way over here at this back end
I inscribe myself your sincere friend.

Faded leaves, usually rose geranium, scent old albums,
accompanied by the couplet:

On this leaf, in memory pressed,
May my name forever rest.

Pine needles were attached to album leaves and sub-
scribed with the ever popular:

I pine fir yew:
I also balsam.

In one century-old album I found a curl of human hair
glued gruesomely above this verse:

This lock of hair I once did ware
I now commit it to your care:
And when you view this lock I've braided
Then think of her whose brow it shaded
H.P.B.D. June 24, 1840

In other less literal ways the young ladies let down
their hair in these albums:

This is the girl that got a kiss
And ran to tell her mother:
That she may live to be an old maid
And never get another.

Pray do not be so fickle
As to love each man you see
Or you'll get into a pickle
Before you're twenty-three.

If you wish to be blessed with Heavenly Joys,
Think more of God and less of the boys.

Remember me when at the tub,
Remember me before you rub,
If the suds should be too hot,
Lather away, forget me not!

Boys did not like to write in these albums, but some-
times took the chance to retaliate thus:

When this you see, remember me,
And take a little catnip tea

(This is somewhat subtle, for the brew was consolation
for old maids.)

When you get married and have twins,
Don't come to my house for safety-pins.
Fall out of the cradle, fall into the river,
But never never never fall in love.

The masculine revolt revealed itself in another way—
writing answers opposite or below trite sayings. Where
a feminine hand had written:

Great oaks from little acorns grow,
there was likely to appear nearby a scrawled reply:

Great aches from little toe corns grow.

The second line of:

Remember well and bear in mind
That a true friend is hard to find

would be crossed out and this line substituted:

That a jaybird's tail sticks out behind.

I remember that one of my boy cousins hated the rime:

Early to bed and early to rise
Makes a man healthy wealthy and wise

and rephrased it in a girl cousin's album:

Makes a man mad and pulls out his eyes.

And a fellow who had been reproved for his mulish
obstinacy in refusing to write in a girl's album finally
seized the book and wrote:

On a mule you find two feet behind;
Two feet you find before:
You stand behind before you find
What the two behind be for.

Just as the valentine, the rimed expression of love,
when it became saccharine and stickily sentimental,
found its rebuke in the shocking comic valentine, so its
sister, the rimed expression of friendship in an album
verse, when it became too vulnerable, was sure to be
correctively treated by an observant realist.

When I arrange chronologically my collection of
several thousand American autograph album rimes, I
find I have a rather valuable means of insight into the
changing folk life and folk thought from 1820 up to
today. Recently I asked the proprietor of a large and
long-established New York stationery store if he thought
autograph albums were coming in again, and he replied
laconically: "They never went out, mister."

CHARLES FRANCIS POTTER

Autolycus In Greek mythology, the son of Hermes,
celebrated for his skill as a thief. He built up his flocks
by stealing his neighbors' sheep and mingling them with
his own, until Sisyphus outwitted him by secretly mark-
ing his sheep on the soles of their hooves.

automaton An automatic contrivance in human or
animal form which imitates the actions of living things.
The use of automata in folktales is almost world-wide.
One of the earliest automaton legends tells how the
mythical Dædalus invented the bronze man, slain by
the Argonauts.

In the Middle Ages the imagination was constantly
stirred by attempts to invent automata and perpetual
motion machines. In the 11th century Ibn Gabirol
created a mechanical servant who would do his bidding
when he placed the Divine name in its mouth or on its
forehead. The legendary Polish Rabbi, Elijah, created
an automaton that grew so big he was forced to destroy
it. In the 16th century, Rabbi Löw of Prague created
the Golem, who worked on all days of the week as long
as a plate inscribed with the Divine Name was kept
under its tongue. On Friday evening the plate was re-
moved so that the Sabbath would not be desecrated. One
Friday, however, this was forgotten and the automaton
fell to bits.

While automata most frequently have human form
in folktales, they are sometimes dolls (Hindu, Italian)
or animals (Italian, Jewish, Norse, American Indian,
Koryak). Human-shaped automata frequently are statues
or images able to render judgments (Arabian), indicate
a favor to a suppliant (German, English, Spanish, medie-
val), reveal a crime (Indian), weep (Swiss), or sew
(Spanish). They are frequently men wrought of iron in
Danish and Asiatic tales. See BRAZEN HEAD.

ava Literally, mother, in the language of the Mord-
vins: often used for the names of female protecting spir-
its. For example, *mastor-ava* is the mistress of the Earth;
kov-ava, the deity of the Moon, *varm-ava*, the mother
of wind, *vir-ava*, mistress of the forest, *ved-ava*, the
mother of water, *tol-ava*, the guardian of fire, and *kud-
ava* is the spirit of the house. The word *ava* is of Turkish-
Tartarian origin. Compare AWA. [JE]

Avalokita or **Avalokitesvara** In Mahāyāna Buddhism, the god of mercy or compassion, the Bodhisattva whose face is turned in every direction in order to save everyone; the son of the Buddha Amitābha. In his early development Avalokita was usually depicted with four or seven other bodhisattvas surrounding or below a Buddha. His dwelling place is in the paradise of Amitābha, Sukhāvati, and at the end of the present age he will appear as the thousandth and last Buddha.

In his later development Avalokita became the national god of Tibet, eclipsing Amitābha. As patron of the Tibetan Church, he is incarnated in the person of the Dalai Lāma. He is represented in icons as human in form with two arms and one head. In one hand he holds a lotus, with the other he makes the gesture of a blessing. When he is identified with Śiva his eyes, faces, and arms are multiplied. In one figure he is represented with 11 heads and 1000 arms.

In China, Avalokita was identified with the personification of the cosmic female energy and evolved into the feminine Kuan-yin.

Avalon In Arthurian legend, the island (first mentioned by Geoffrey of Monmouth, c. 1136) where Arthur's sword Caliburnus (Excalibur) was made and to which Arthur was conveyed for the curing of his wounds after his battle with Mordred. Geoffrey later described it in the *Vita Merlini* as the Isle of Apples, where vegetation flourished, men lived to be over a hundred, and the beautiful Morgan le Fay and her eight sisters dwelt, skilled in the healing arts and in flying through the air. The fullest account of Avalon as an elysian isle is given in the *Gesta Regum Britanniae* (c. 1235). The tradition goes back ultimately to the pagan Celtic concept of an island of fairy women, of which Old Irish voyage-sagas preserve a record. In Welsh we find mention of Ynis Avallach, which meant, somewhat confusingly, either Isle of an Apple-orchard or Isle of Avallach, father of the goddess Modron. The Breton *conteurs* took over the tradition from the Welsh and adopted the form Avalon, perhaps influenced by the name of the famous Burgundian town. Celebrated under this name by the wandering Bretons, the fairy isle became known to Geoffrey, Marie de France, and the French romancers. When the tradition of this mysterious land, whither Arthur had been conveyed, thus returned to Britain, there was speculation as to where Avalon was located. Now the Welsh seem to have equated their mythical Isle of Apples with an equally mythical elysian Isle of Glass, for this explains how Avalon came to be identified with Glastonbury. Before 1136 the Welsh monk Caradoc of Lancarvan asserted (mistakenly) that the name Glastonbury was a translation of Isle of Glass. Later some ingenious person must have argued that since the Isle of Apples was the Isle of Glass and since the Isle of Glass was Glastonbury, ergo Avalon was Glastonbury. This inference was supported by the fact that Glastonbury was almost surrounded by marshes and lay in apple-growing Somerset. But where was Arthur? Since he certainly was not to be found at Glastonbury in the flesh, he must have died, contrary to the belief of the Bretons and Welsh. This the realistic Anglo-Normans were willing enough to believe. So in 1190 or 1191 the monks of Glastonbury professed to have discovered in their cemetery the bones of Arthur and Guinevere, with an identifying inscription, and down to

the dissolution of the monasteries the tomb was to be seen. Thus the Celtic isle of women became firmly fixed among the green marshlands of Somerset, no longer the abode of immortals, but the burial place of a British hero. And so we find that Malory combines both versions of Arthur's end. In one chapter he is borne away in a barge by the weeping queens, presumably to their fairy isle; in the next we find him buried by the Archbishop of Canterbury in a chapel near Glastonbury. [rsl.]

avalou or **yanvalou** Literally, supplication: one of the vodun dances of Haiti, characterized by violent arm- and shoulder-muscle movements. [CPK]

avatar or **avatara** In Hindu religion and mythology, the incarnation of a deity as a man or animal, especially that of Vishnu who, according to the *Bhagavad-Gītā*, is reincarnated to defend his rule whenever there is a decline in the law and an increase in iniquity. Vishnu went through ten incarnations: 1) Matsya or Fish, 2) Kūrma or Tortoise, 3) Varāha or Boar, 4) Narasinha or Man-lion, 5) Vāmana or Dwarf, 6) Paraśurāma or Rāma with an ax, 7) Rāma, the gentle Rāma, hero of the *Rāmāyana*, 8) Kṛishṇa the black, 9) Buddha, and 10) Kalki, the white horse. The first five avatars were mythological, the next three heroic, the ninth religious, the tenth is yet to come. In the *Bhāgavata Purāna* the number of specified incarnations is extended to 22 with the statement that the incarnations of Vishnu are innumerable.

Avenger's Sword A Danish ballad (DGF25) celebrating the grim weapon of Scandinavian tradition which "leaps to kill" of itself and sometimes even turns upon its holder. In this ballad it says, "Now lust I for thine own heart's blood. Hadst thou not named me by my name, right now should I have been thy bane." Compare TYRFING. See BALLAD; NAME; SWORDS.

Avesta The sacred book containing the teachings of Zoroaster, now the holy scripture of the Gabars of Iran and the Parsis of India: also the dialect in which it is written. Originally the *Avesta*, according to the *Dinkart*, contained 21 books. These were divided into three groups, the *gāsān* or *Gāthā*, containing spiritual and moral teachings, the *dātik* containing the laws, and the *hātak-mānsarik* containing both spiritual and legal matter.

This material was carefully preserved until the invasion of Alexander when the two archetypic copies, one kept at Persepolis and the other at Samarkand, were destroyed. The invasion of Alexander almost destroyed the Zoroastrian faith as well as entailing the loss of many portions of the scriptures. The later invasion by the Moslems and the ensuing religious persecution forced Zoroastrians either to abandon their faith or go into exile, and the texts then extant were burned. A small part of the original text was remembered by the priests, however, and in written form, and this remnant forms the present *Avesta*.

This consists of the *Yasna*, the chief liturgical work which includes the *Gāthās*, the *Visparad* containing additions to the *Yasna*, the *Yashts* or hymns to angels and the heroes of ancient Iran, miscellaneous fragments and minor texts, and the *Vendīdād* which contains the account of the creation, a priestly code for purification, directions for treatment of the dog (reverenced by

Zoroastrians), a discussion of the character of the true and the false priest, and a revelation of the destiny of the soul after death.

The *Avesta* was first introduced to Europe when it was deciphered by Anquetil-Duperron and published in 1771 under the title *Zend-Avesta, Ouvrage de Zoroastre*.

Avya The sun and the moon in the cosmological mythology of the Cubeo Indians of southeastern Colombia. Avya is a man who walks across the sky. He makes daylight so that women may work, but gives less light at night (in his moon aspect) so that people may sleep. It is Avya who causes women to menstruate; copulating with Avya at night causes this. During an eclipse of the moon the people say, "Avya is dying." They believe that some evil shaman has caused this illness of Avya, and if ever they discover which shaman did it, the hapless fellow is put to death at once.

awa The word for mother of the Cheremis. It is often used in the names of specific deities; for example, *teleze-awa* is mother of the Moon, *melande-awa*, mother of the Earth, *ketše-awa*, mother of the Sun, *mardež-awa*, mother of the Wind, *wüt-awa* is mother of Water, and *tul-awa* is mother of Fire. Compare AVA. [JB]

awassa A social dance of the Surinam Bush Negroes, often performed as a preliminary to religious rites where spirit-possession occurs. It is danced by men and women, facing each other. In the Gold Coast, this dance is called *awisa*, and is said to have had greater vogue in earlier times. Its derivation is given by the present Ashanti as of Hausa origin. [MJH]

Awl Boy Title and hero of a Tewa Indian folktale in which, at the time of migration of a whole village to another place, a young mother gives birth to a baby boy, then rises and hurries away after her people. The abandoned baby grows miraculously in a number of days, runs around looking for food, and comes by chance into the house where his father lived. A voice calls to him from the rafters. It is Awl, who bids the child take him down and wrap him in cowhide, and promises to help him in the hunt. When the boy hunts, he carries Awl with him, henceforth has marvelous luck, kills many rabbits and deer, and has plenty of meat. From now on the boy is named Awl Boy. Eventually Awl Boy, guided by Awl, goes to seek his people. He finds them in bad circumstances, but easily provides them with an abundance of meat and parrot feathers. And they elect him their chief.

A variant of the story begins with the abandoned baby and his miraculous growth; but it is Corn Mother who speaks to him from the rafter of the house and tells him what to do. She bids him place her in the middle of a basket which is full of corn meal. Then she bids him bring the awl and place him too in a basket and to put a deerskin cover over that basket. In the night, she says, Awl will make him clothes. So the boy places the awl in the basket, covers the basket with deerskin, and then goes to sleep. In the morning he finds shirt and trousers and moccasins of deerskin beside him. He puts them on, and taking with him the Corn Mother and Awl Man, he goes forth into the world. Corn Mother and Awl Man direct him to a place where there are many people. After a series of adventures he eventually comes to his own people, who had nothing but greens to eat. They were thin and miserable and having hard times. The

boy orders that the people clean the town and sweep the houses, and when it is done, he walks through the town throwing seeds of corn into every open door. When the people see their houses full of corn, they make the boy their chief.

awl-elbow witches In the folktales of the Ojibwa, Micmac, Cree, and Menominee Indians (Algonquian) old women with sharp awls (sometimes knives) for elbows. The hero of tales in which these villainous characters appear usually avoids them by a ruse, causing them to kill each other by mistake.

Awl Man A spirit of Pueblo Indian religion: personification of the awl (the sharpened stick, bone, or stone used by North American Indians as a perforator in sewing). Awl Man is one of the many tutelary spirits of Pueblo culture who "gives of himself." Just as Corn Mother gives of her flesh for the people, as Clay Mother gives of herself to the potters, or Salt Woman, or the Flint Boys, or the game animals give of themselves, so Awl Man gives of himself to help those who need him. Hodge points to the human faces incised on certain old bone awls as illustrative of this personification. And the common role of Awl Man as benefactor in folktale bears witness to the fundamental animism of pueblo daily thought and act.

Awonawilona In the Zuni Indian origin myth, the All-Container, who existed before the beginning of being. He made himself into the form of the Sun, "who is our father" and who thus came to be. By his thinking he created the mists that promote growth. His light and warmth resolved the mists into the primeval sea, and the green scums grew and widened. From balls of his cuticle which he threw upon the waters came forth the Earth Mother (Awitelin Ts'ta, Fourfold-Containing Mother Earth) and Sky Father (Apoyan Tachi, All-Covering Father Sky). From these two came all life on the face of the earth. Mother Earth caused the clouds and rains to come; Father Sky showed the stars shining in the palm of his hand as he moved it across the bowl of the sky.

The myth continues in great detail with stories of the emergence of tribes from lower regions, and the distribution of tribes, the origin of death, the lizard hand, brother and sister incest, twin heroes who visit their father the Sun, and other incidents common to many other North American Indians. The parallel development of the details of the Zuni origin myth with Zuni ceremonialism is the outstanding point of interest.

ax or axe An edged tool for hewing. The history of the ax begins with the Stone Age; it was one of the first if not the first tool produced by man. Originally the head was of stone, then of bronze, and finally of iron and iron alloys. It has varied from a roughly chipped piece of stone to a beautifully ground blade, often half-moon in shape as the battle-axes of the Middle Ages, or double-edged as those found in the excavations of Knossos. It has also had a varied history as a weapon of war, as the symbol of a number of gods, among them the Mexican thunderer Tlaloc, the Semitic Ramman, the Cretan Dionysus, and the Greek Artemis, Apollo, and Athena, as the instrument used in sacrificial killings by early peoples such as the Hittites, as a unit of exchange, and in Crete as the object of a religious cult. The ax, as a symbol of Tlaloc, is a sky support in Mexican mythol-

ogy. A Mixtec story describes a copper ax on Mount Apoala with the sky resting on its edge. The ax figures in modern folk beliefs, proverbs, divination, and folktales.

The double-headed ax was a cult object in Aegean religion. In excavations at Haghia Triadha in southern Crete a chapel has been uncovered containing axes on pedestals. Two scenes on a sarcophagus found in the same area show the ax being adored. An ax worshipped by a priest in Chaldean garb also appears on an Assyrian agate cylinder. The ax was dedicated to Apollo at Delphi. Axes were found in the cave of Zeus on Mt. Dicte. Small axes or simulacra, often perforated, have been found in prehistoric sanctuaries of Malta, Cyprus, and other Mediterranean lands. On the Continent votive axes sometimes were made of sandstone which could have had no practical purpose. The ax used to slay the ox at the Athenian boupheonia was tried, condemned as guilty of the slaying of the ox, and thrown into the sea. The ax is still regarded as sacred in the Congo, is used as a ceremonial symbol in the Siouan sun dance, and by the Warramunga, Tjingilli, and Walpari tribes (Australia) to strike a tree or stone in order to release the spirit child of a Wingara ancestor into a woman's body.

Negroes of the southern United States believe that carrying an ax through the house on one's shoulder will bring calamity to the inmates, and that to dream of an ax is a sign of danger or death. An ax placed under the bed will cut the pains of an ill person. Both the southern Negroes and the people of Prussia believe the ax beneficial in bad weather. Prussians strike the doorsill with an ax to drive away bad weather, while the Negroes go into the yard and chop up the ground with an ax to "cut de storm in two." Axes are also a preventive of witchcraft. In Prussia, cows taken out for the first time in the spring are made to step over an ax to make them invulnerable to witchcraft and magic. Axiomancy, or ax divination, is performed by driving an ax into wood or casting it into water.

The ax plays a part in the folktales of Finland, Sweden, Denmark, Iceland, Holland, Germany, England, India, Rhodesia, French Canada, the Caribs of South America, and in the Paul Bunyan legends of the United States. [SPH]

Ayar Name of the four brothers who were ancestors of the Inca family and related lineages. They and their four sisters (known collectively as Mama) left their caves to find a fertile country in which to settle. During the journey Ayar-Cachi, who was endowed with supernatural strength, was walled into a cave by his brothers who feared his destructive power. Ayar-oco changed himself into the sacred stone at Huanacauri. Ayar-auca became a protector of the fields. Ayar-manco married his sister Mama occlo, and founded the city of Cuzco where his gold rod disappeared into the ground. He became the first Inca. See PACCARI TAMBO. [AM]

Aymuray Literally, the song of the harvest: name for the month of May in the Inca calendar. It is also the harvest song sung at the end of the Ayriwa.

ayotl A turtle shell used as a friction instrument by pre-Conquest Mexicans, and still played on the Isthmus of Tehuantepec. It was scraped with deer antlers to produce weird and mournful sounds at ceremonies for the death of kings, warriors, or sacrificial victims.

Ayriwa Literally, the dance of the young maize: name for the month of April in the Inca calendar. Under the mask of the Catholic rite for the Commemoration of the Cross on May 3, the Quechua Indians still observe their ancient festival for the beginning of the harvest. They erect a tree laden with fruits and gifts and around it dance the Ayriwa. At the end of the dance the gifts and fruits are shaken out of the tree and divided. The Aymuray, the triumphal song of the harvest, is then sung.

Azazel A supernatural being mentioned in connection with the ritual of the Day of Atonement (*Lev.* xvi, 21-28). On the tenth day of Tishri two goats were brought to the tabernacle, one for Yahweh, the other for Azazel. The goat for Yahweh was slain as a sin-offering for the people; the goat for Azazel (scapegoat) was laden with the sins of the people and led forth into the wilderness. The name Azazel has been interpreted by the Rabbis as the name of the mountain cliff from which the goat was cast down, but modern scholars have accepted the idea that Azazel belongs to the class of se'irim or goatlike demons haunting the desert, to which the Israelites offered sacrifice.

In the *Book of Enoch* Azazel is leader of the rebellious giants in the time preceding the Flood, who taught men the arts of warfare, of making swords, knives, shields, and coats of mail, and women the art of deception by dyeing the hair and painting the face and eyebrows. He also revealed the secrets of witchcraft and led men into wickedness until, at the Lord's command, he was bound by the archangel Raphael and chained to jagged rocks, where he is to remain in darkness until the Day of Judgment when he will be cast into the fire.

In the Cabala Azazel is one of the chief demons. In Mohammedan mythology, he is the chief of the sons of God who married the daughters of men. He may originally have been a Babylonian deity. See IBLIS.

azeman In Surinam Negro belief, a vampire: a woman who changes her human form for animal form at night and goes about drinking human blood. She can be beguiled from her purpose (or caught) by scattered grains and seeds or by a broom. If rice, pepper grains, etc., are scattered in a room, or a broom left in sight, by some inevitable compulsion she must stop and gather and count every grain or count all the straws in the broom, before she can proceed or leave. Thus morning will come before she can finish and she will have to depart, leaving her intended victim unharmed, or sometimes, still counting, she can be caught. Another way to catch the azeman is to sprinkle pepper on the sloughed off skin; it will be too painful to put on again. Still another belief is that vampires cannot cross over a broom, and therefore that a broom propped against or laid across the door will keep her out altogether. Anyone suspected of being an azeman is either killed or expelled from the community. In Haiti the vampire concept has become fused or identified with the legarou or werewolf belief. The Trinidad Negro term for vampire is sukuyan.

Azhi Dahāka or **Dahāk** (Pahlavi *Až-i Dahāk*, New Persian *Až Dahāk*) In the *Avesta*, a three-headed dragon or serpent who ruled the second millennium of human history, the eighth of creation. In the *Shāhnāmah* he is described as a man with two serpents growing from his shoulders. He was created by Angra Mainyu

to destroy the faithful. In the *Bündahishn* his lineage is traced to Angra Mainyu and he is said to have committed incest with the demon Aûtak, his mother. In legend Azhi Dahâka slew Yima and tried to seize his glory. He was conquered after a reign of a thousand years by Thrâetaona (or Âtâr) who bound him on Mount Demâvand. He will break his fetters before the coming of Keresâspa at the end of the world, will destroy a third of mankind as well as water, fire, and vegetation, but will be slain by Keresâspa. Azhi Dahâka seems to personify the thousand years of Iranian oppression by the Babylonian Empire.

aziza The Dahomean "little people" of the forest, conceived as spirits who gave magic and knowledge of the worship of the gods to man. As dwellers in the forest, they are believed to have transmitted the power of magic through the medium of hunters, whose magic the Dahomeans hold to be especially potent. [MJH]

Azrael or Azrail In Jewish and Mohammedan mythology, one of the archangels: the terrible angel of

death who receives from God the leaves upon which are written the names of those about to die. He is depicted sometimes as a formidable being whose feet rest on the edges of the world while his head reaches into heaven. He is also described as having as many eyes as there are men in the world and one of these closes whenever a being dies. At the end of the world only eight eyes will remain open, one for each of the four throne bearers and the four archangels. Azrael takes the soul from the dying body.

Azrael is said to gather the souls of believers into a white silk cloth and the souls of unbelievers into a rag. These are then sent to heaven or hell. In the folktales of the *Arabian Nights' Entertainments* he is a man of forbidding aspect and horrible presence clad in tattered clothes with an asker's wallet at his neck.

Azuma-uta Literally, songs of the East: popular love songs of the northeast coast of Japan, sung in the 8th century and collected in the *Manyôshû*, an anthology of the period.

B

ba In ancient Egyptian religion, the soul, an actual but invisible entity inhabiting the human body during life, leaving it at death, but not irrevocably: in later representations a bird with a human face and head and preceded by a lamp. It left the tomb and flitted about the cemetery at night, fed with cakes and cared for by the sycamore tree goddess of the cemetery, as contrasted with the ka, which subsisted on foods buried in the tomb, or the kas of buried food. The body had to remain intact so that the ba might return to it. The concept of the ba (still a living belief in Egypt) is thought to be very early, antedating all Osiris and Râ theologies, and is probably rooted in observation of the huge white owls so numerous among the tomb-pits. An ancient belief was that the stars were *bas* lit by their lamps. See *KA*.

baal or ba'al (feminine *baalat*; plural *baalim*) The generic name for numerous ancient Semitic gods, especially of Syria and Palestine, each usually the local agricultural deity bestowing fertility upon land and flocks. With later theological development we may speak of a god Baal (compare Babylonian Bel), but originally there were as many baalim as sacred places in which they dwelt. There is no direct evidence of baalim separate from physical surroundings, e.g. gods of abstract qualities, the theory being that the baalim developed about the sacred nature of places like springs and oases in the life of an agricultural desert people. The cult of Melkart, the baal of Tyre, reached prominence in Palestine under Ahab and Jezebel and brought forth denunciation from the prophets because of its license, human sacrifice, etc. The word baal has the basic meaning of "master, owner" and still survives, for example in several Yiddish words as "baalboos," "master of the house, home-owner." See *ASTARTE*; *BEL*; *SEMITIC MYTHOLOGY*.

babalawo Yoruban term for a diviner who utilizes the techniques of the Ifa cult. The methods employed by these specialists consist in manipulating palm kernels,

the resulting combinations being interpreted in terms of an extended series of verses, which give point and meaning to an appropriate tale or myth which is called upon for a given interpretation. These verses and associated stories, relevant to the system of throwing the kernels at hazard, number thousands, and their mastery calls for intensive training of seven years or more. The cult of Ifa divining spread to Dahomey, where its practitioners are known as bokonon. The word babalawo has persisted in the New World, simplified forms of Ifa divination being known especially well in Brazil and Cuba. [MJH]

Baba Yaga or Baba Yaga A female supernatural of Russian folklore. The Baba Yaga seems to be analogous to the South German Berchta. She is a cannibalistic ogress, who steals and cooks her victims; she prefers young children, though she often travels about with Death, who gives her souls to eat. Her abode is a little hut constantly spinning around on fowls' legs in a clearing in the distant forest; this is surrounded by a picket fence topped with skulls. The Baba Yaga rides through the air in an iron kettle stirring up tempests, or in a mortar which she moves by a pestle as she sweeps her traces from the air with a broom. She is a guardian of the fountains of the water of life. Her teeth and breasts of stone are used to tear her victims' flesh. She is often reduplicated in folktale, there being two or three sisters, all called Baba Yaga, all customarily lying in their huts, head to the door, a foot in either corner, and nose touching the ceiling.

Babe, the Blue Ox Paul Bunyan's wonderful ox, his companion and chief assistant in his logging operations. Babe was born white, but turned blue in the Winter of the Blue Snow. The spread between his eyes was 42 ax handles and a plug of chewing tobacco, and he was 93 hands (whether Paul's or not is not known) in height. When Babe ate hay, a crew of men was kept busy pick-

ing baling wire from his teeth. Babe loved hotcakes and met his end by swallowing a fresh batch, stove and all. The Blue Ox was so heavy that he sank knee-deep in solid rock when he took a step, thus causing among other things, the formation of the lakes of Michigan and Oregon. Babe hauled in one load entire 640-acre sections of timber. Among Babe's many exploits may be mentioned his pulling of the scoop, or glacier, with which Paul dug Puget Sound; his mighty tug that straightened the twisted river (some say it was a logging road); and his hauling from the ground the dry oil-well that was sawed into post-holes. Some people believe that the Black Hills of South Dakota were heaped by Paul to mark Babe's grave, but this is to be doubted.

babies from cabbages A well-known euphemism popularly used to answer children's premature questions about childbirth: perhaps rooted in the ancient acceptance of trees as immortal spirits capable of giving birth to human beings, as among the ancient Greeks and Irish and in South Africa and Indonesia.

babies from the earth, lakes, or wells In ancient Teutonic belief babies were born first of all from their mother, the earth, before coming to human parents. In token of this they were laid, the moment after birth, upon the ground. Many old German and Scandinavian stories tell of babies being found in hollow trees, which were perhaps regarded as exits from the earth. In southern Germany Frau Holle kept the souls of unborn children safe in the bottom of lakes and wells, which were called in consequence, *Kinderseen*, children's lakes, and *Kinderbrunnen*, children's wells. See ADEBORSTEINE.

Babylon Title of a Scottish ballad (Child #14: "Babylon; or, The Bonnie Banks o' Fordie") in which a robber kills two of three sisters for resisting him. The third threatens him with the vengeance of her brother Baby Lon and they thus discover that the robber has killed his own sisters. The theme is found in all branches of Scandinavian balladry.

baby taken from murdered (or dead) mother's womb A folktale motif (T584.2; T612) associated especially with the widespread North American Indian *Lodge-Boy and Thrown-Away* cycle. Five well-known Shoshonean stories contain it, among them *The Wolf and the Geese*, in which Wolf asks the geese to find him a dead woman with a baby. They find two. Wolf takes a baby boy from one and a baby girl from the other. The girl can walk immediately and travels about with Wolf. In the story *Wolf's Son*, Wolf acquires his son by beheading his wife, killing several babies he finds within her begotten by others, and saving his own. Similar is the story of the woman who went to visit Snake and did not return. Her sons went to look for her and found their mother dead and swollen. They opened her abdomen from which came forth two lizards and a snake and finally an Indian baby girl, whom they reared. Typical of the *Lodge-Boy and Thrown-Away* and *Bead-Spitter and Thrown-Away* stories is the pregnant mother murdered in her husband's absence by man or monster who takes living twins (or child and afterbirth) from her body, leaves one behind the curtain, and throws the other away. In the Micmac story of *Ketpusye'genau* the unborn child is taken from the murdered mother's womb and thrown in the brook.

Although this motif turns up in North American

Indian tales everywhere from the northern and southern Atlantic tribes to the northwest Pacific, it is especially associated with the Plains area. It is not limited to North America, however. The Greek Æsculapius was removed from his mother's womb on her funeral pyre; the Yuracare Indians of Bolivia have similar stories; and there is a Melanesian story from the New Hebrides in which a woman is murdered and thrown in a thicket, where her twin boys come forth of themselves.

Bacabs In the mythology of the Mayas of Yucatan, four brothers who were deities of the four directions; upholders of the earth or of the sky; guardians of the waters and bringers of rain: they were personified by animal- and human-headed water-jars. Las Casas describes a Yucatec story of the Trinity in which Bacab is equated with the Son, is scourged and crucified, and arises from the dead. The condensation of the four gods of direction into one person and the connection with the cross which points four ways is, as Alexander shows, an obvious and natural change. Compare TLALOC.

Bacchus Dionysus as the noisy and riotous god of wine: so called by both Greeks and Romans. The Bacchanalia, or orgies connected with the mysteries of Dionysus in Rome, where they were introduced in the 2nd century B.C., seem to have become within a very short period so extremely licentious that they were banned by the Senate in 186 B.C. At first the communicants were only women, but, claiming inspiration of the god himself, one matron transformed the festival into a public scandal: in place of the three days a year of observance, she proclaimed five days every month; men were admitted; the observance was to take place at night rather than in the daytime, etc. After the edict against the Bacchanalia, a milder form of Bacchus worship took place at the Liberalia, Liber being another form of the god. See DIONYSUS; SATYR.

bachelor's-button Any of certain plants (genus *Centaurea*) with button-shaped flowers or heads, such as the cornflower. In England it was customary for a young man to carry one of these flowers in his pocket for a time. If it lived, he would marry his current sweetheart; if it died, it was a sign that he would soon be seeking a new sweetheart.

Bachúe A fertility goddess of the ancient Chibcha Indians of Colombia. She emerged from a lake with a small boy who became her husband when he grew up. She populated the land with her children. After exhorting the people to live in peace, she and her husband were changed into snakes and disappeared into the lake. She is also called Fura-chogue (beneficent female). [AM]

backward speech or behavior Saying or doing something in reverse of its normal order: a custom or practice found throughout the world but adapted for different purposes by different peoples. Wherever it is found, imitative magic is probably at its base.

Talking backwards, or saying the opposite of what is meant, is used as a common form of humor among North American Indians, as by the Arapaho Crazy Dancers and several of the Pueblo societies, especially as a typical ceremonial custom. Despite the surface levity, Pueblo clowns are considered as powerful curers in that they recite certain medicinal formulas in reverse order. Among the medieval Jews, the reciting of the

opening of *Leviticus*, forwards, then each word backwards, then the whole passage reversed, was thought to be a counter to magic. Among the practices attributed to followers of the Devil in western Europe is the reciting of the Lord's Prayer backwards. The Mass of St. Secaire, in Gascony, features a backward recitation that brings death to the one against whom revenge is desired. Similar beliefs are found among the Arabs and Buddhists. In the *Kathā Sarit Sāgara*, the recitation of a given formula forwards makes a man invisible, while a backward reading permits him to assume whatever shape he desires.

Doing things backwards likewise has a certain power. Ringing the chime backwards as an alarm is such a custom, as is the flying of a flag in reverse as a sign of distress. These probably are based as much on the idea of reversal of fortune as on the noticeable incongruity of the action. In the United States some maintain that a garment accidentally put on in reverse must not be taken off and put on correctly or ill luck will follow. Medieval Jews deliberately reversed their clothing or walked backwards to reverse a suspected charm against them. Throwing things behind one likewise has a certain efficacy in preventing evil, or as in some folktales in slowing up pursuit.

Badb (böf) Literally, scald-crow: in Old Irish mythology, an evil spirit delighting in carnage. She incited armies against each other, filled warriors with fury, and is usually interpreted as a war goddess. She was one of three such beings (with Macha and Neman). Badb was the daughter of Ernmas, one of the Tuatha Dé Danann, and either the wife or granddaughter of Nét, as was also Morrigan (later Irish, Morrighu) who plays a parallel or identical role. The Gauls had an analogous figure called Bodua. Badb, the scald-crow, appeared on the battlefield in this form, presaging the death of heroes or appeared in still more hideous guise to warriors about to be defeated. Badb, along with the Morrighu, helped drive the Fomorians out of Ireland. A. H. Krappe interprets the valkyries of the *Njals Saga* as "a transposition in an Icelandic milieu of these Celtic furies."

In later Irish folklore, the word means, in addition to scald-crow, a scolding old hag or witch. Today Badb is sometimes identified with the banshee in function, presaging death to certain families, except that she appears always in the form of a scald-crow.

Badger The first animal sent up to earth through a hole in the sky by the ancestors of the Hopi Indians before their emergence from the underworld. Badger is often connected with doctoring by the Pueblo Indians. In a Tewa tale he is the doctor; at Isleta he is a powerful animal; at Zuñi, a south directional spirit. Among the Micmac Indians of the northeastern United States, Badger is a trickster. [EWV]

 In Japanese, badger is *tanuki*, one of several animals of Japanese folklore who possess extraordinary magical powers. He is usually depicted with an enormous bell. [JLM]

Badger medicine The curing power of the Badger: a concept of Hopi and other Pueblo Indian religion. Badger knows about certain plants and roots which he is always digging up out of the ground. Badger as curer originated as a *kachina* at Oraibi where he appeared

carrying his medicines and his buzzard feathers for exorcising. Ever since then the medicine chief of the curing society has always been a Badger clansman. Badger medicine is valued especially as a delivery medicine at Zuñi and Isleta. A badger paw (called Badger Old Woman) is either worn by the woman in childbirth, or it is placed on the bed, or on the ground nearby. This is because the badger digs himself out quickly. Badger fat and the sexual organs of the badger are good medicine for impotent men. See ANIMAL CURERS.

bad man Western "killer" or "gunman": so called because in his law-breaking or law-enforcing capacity he was a "bad man to fool with," or dangerous to oppose. The beginnings of the bad man era are traced to the wave of banditry and depredations after the Mexican War and the bloody Missouri-Kansas border conflict before the Civil War. Homicidal lawlessness reached its height during the feudal cattle wars and sheep and cattle wars of the Great Plains and the gold and silver mining boom of the Southwest and the Black Hills, as well as in the no-man's land of Indian Territory. Notorious haunts of the bad man included the wide-open cowboy capitals and trail-end terminus towns of Denison, Fort Worth, and El Paso, Texas; Albuquerque and Las Vegas, New Mexico; Abilene, Dodge City, and Ellsworth, Kansas; and the "Helldorado" mining towns of Denver, Leadville, and Central City, Colorado; Tombstone, Arizona; and Deadwood, South Dakota.

With popular sympathy on the side of the outlaw as the enemy of the rich, the folk imagination tended to blur and break down the distinction among the three main types of killer or gunman—the homicidal maniac or professional killer who killed in cold blood (Billy the Kid, John Wesley Hardin, the Apache Kid); the more civilized or chivalrous "good bad man" (Jesse James, Sam Bass, Pretty Boy Floyd); and the peace officer who was not above shooting on inadequate provocation and to settle a private feud (Wild Bill Hickok, Wyatt Earp, Luke Short, Bat Masterson). An attempt was made however to distinguish between the gun fighter, who fought fair, and the gunman, who didn't. More or less outside the "killer" class was a peaceable marshal like Bill Tilghman of Oklahoma, who never took a life unless he had to in order to save his own, only (in the end) to be the victim of his own generosity.

In his supreme daring and uncanny skill with weapons as well as in the fact that he killed to avenge a personal wrong, if not always in self-defense, the bad man satisfied the heroic requirements of challenge and ordeal by combat, an even break or a fighting chance. Moreover, he was generally the victim of society or circumstances or a dual personality, split (as in Billy the Kid's case) between a "good-humored, jovial imp" and a "cruel and blood-thirsty fiend." Death through treachery or by walking into a trap conferred martyrdom upon him. Jesse James was shot by "that dirty little coward," Robert Ford, brother of a former accomplice of his, in order to claim the reward. Billy the Kid was trailed to his sweetheart's home and shot in the dark by his erstwhile friend, Sheriff Pat Garrett. Sam Bass was double-crossed by one of his own gang and slain in ambush. Wild Bill was shot in the back, while playing poker in a Deadwood saloon, by Jack McCall—presumably to avenge the slaying of his brother by Wild Bill. (When Bill was picked up, two black aces and black eights fell

out of his hand—a combination known thereafter to superstitious gamblers as “The Dead Man’s Hand.”)

In the popular imagination the bad man was frequently identified with Robin Hood. Of William C. Quantrill (Quantrell), the guerrilla leader, the ballad sings:

Oh, Quantrell’s a fighter, a bold-hearted boy,
A brave man or woman he’d never annoy.
He’d take from the wealthy and give to the poor,
For brave men there’s never a bolt to his door.

And of Jesse James:

He stole from the rich and he gave to the poor,
He’d a hand and a heart and a brain.

Of Jesse James, Sam Bass, and Rube Burrow is told the story of how the outlaw paid off the poor widow’s mortgage and then stole the money back from the mortgage-owner. Pretty Boy Floyd has been described as a “nice, soft-spoken boy, good to his mother.”

As a deadshot the bad man added a touch of showmanship by his trick or fancy gunplay or “folklore shooting.” According to Frost Woodhull (*Southwestern Lore*, Austin, 1931, pp. 1-14) Henry Starr of Oklahoma liked to ride up and down country lanes cutting barbed wire with his .45, while Wild Bill was fond of shooting knotholes and the O’s in saloon signs. Perhaps the most sensational feat ever performed by the latter was his simultaneous killing of two assailants who had entered by opposite doors of a restaurant. Drawing both pistols, “with one he killed the man in front of him, and at the same time with the other gun resting on the opposite shoulder he killed the man behind him, looking through the mirror” over the front door (George D. Hendricks, *The Bad Man of the West*, 1941, p. 96).

The absurdly exaggerated legendary claims of the phenomenal records of gunmen include 30 men killed by Bat Masterson at Dodge City, 21 men by Billy the Kid in his 21 years (“not counting Indians”), and “ten men single-handed” by Wild Bill in the McCansless massacre. Wild Bill had more than his share of miracles. During the Civil War his horse Black Nell, with her “trick of dropping quick,” saved his life more than once. In Sam Bass’s case, horses figured prominently. Besides the Denton mare, which he matched in all races, he had a horse that carried him down cañon sides “where human foot could not find place, carrying on unfalteringly, and at last, when danger threatened, waking its sleeping master by shaking him”—an adaptation of Swift Nick and Dick Turpin (Charles J. Finger, *Frontier Ballads*, 1927, p. 71). Like the pirates of old, Sam Bass left behind him a folk heritage of buried treasure legends. But none of these miracles could compare with the final touch in the Wild Bill saga. His remains, on being exhumed for reburial, showed evidence of natural embalming.

Survival legends are another folklore attribute of the bad man. Rumors that Billy the Kid was still alive persisted as late as 1926. No less than seventeen persons, according to his granddaughter, have claimed to be the “original Jesse James.” From Texas comes the legend that Quantrell, badly wounded but not killed during the Civil War, was for many years a country school teacher in East Texas (akin to the Marshal Ney legend). In Wyoming, tradition has clung to the notion that Tom Horn was cut down alive from the gallows and spirited away.

The bad man lives on not only in folklore and legend but in the Western “thriller,” from the Beadle dime novel to the “Western story” magazine and comic book, and the horse opera of movies, radio, and television, where the Lone Ranger’s bandit mask symbolizes the enigma of the bad man’s personality and reputation.

B. A. BOTKIN

bagpipe A wind instrument important in folk and military music from the Middle Ages to the present, probably of Asiatic origin, but known in the western world since the time of Nero, who was reported to have played it. It consists of one or more reed pipes of either oboe (double reed) or clarinet (single reed) types, inserted into a bladder or windbag which is inflated by mouth or by a bellows attachment to supply air for sounding the pipes. Generally one pipe, the chanter, has finger holes for playing the melody, and the others are drones of fixed tones for accompaniment. Chiefly known now as the national instrument of Scotland, the variety of its types and names in many languages indicates the widespread popularity of the bagpipe (French *cornemuse*, *musette*, *chevrette*, *loure*, *bignou* or *biniou*, etc.; German *Dudelsack*, *Sackpfeife*; Italian *cornamusa*, *piva*, *piffero*, *zampogna* [also the name among many Gipsies]; Galician Spanish *gaita*; Russian *volynka*; Irish greatpipe, *piob mór*, *piob Uilleann*, union-pipes; Tamil *srutti*; Hindustani *masak*; etc.).

As a folk instrument in medieval Europe, the bagpipe served as accompaniment for religious observances, for weddings and funerals, for dances, May games, and impromptu festivities. It was thought to have a peculiar charm for animals, to be beloved by fairies, to be the Devil’s instrument, and to have the power of speech.

Processions of the early Irish Christian church moved to the sound of the bagpipe, and its wailing music supported the keen at funerals. Roman Catholic services in Edinburgh, especially outdoor rites, sometimes included bagpipe music as late as the 16th century. In Italy, where Calabrian pipers were noted for their skill, the bagpipe accompanied folk singing before statues of the Virgin and Child in pre-Christmas ceremonies. In Brussels, in 1529, a feast for the Virgin was observed with a masque in which wild beasts danced around a cage where two ape characters played the bagpipes. In England, in 1584, a piper named Cochrane played at the Coventry Mysteries.

For dancing, the bagpipes appeared along with the pibgorn and the pipe and tabor at country dances and Morris dances, the piper being a character in the dance. Lincolnshire or Lancashire pipers, both esteemed for virtuosity, were regularly hired by the great English houses to play for the dancing of the common people at Yuletide. Street dancing led by bagpipers became such a disturbance of the peace in 16th century Scotland that laws were passed forbidding the playing of pipes on Sunday and after supper. Wandering pipers of Germany gathered village groups to dance to the dudelsack, and Gipsies of eastern Europe played for weddings, dances, and feasts on the zampogna. The national dances of Hungarians, Bulgarians, and Serbians, as well as sword dances of the Scots and Irish, were traditionally footed to pipe tunes.

Bagpipes also entered into work activities. Hiring of pipers to set the pace for harvest hands in England is recorded, and the rat-catchers of continental European

towns, frequently Gypsies, pursued their trade to the drone of the pipes, even as the Pied Piper of Hamelin is supposed to have done in 1284. Shepherds of central Europe and the Near East were believed to be able to draw their flocks in by the alluring strains of their crude goatskin pipes.

The instrument was also thought to be especially attractive to bears, whose heavy dancing steps were directed by Gypsy pipers, and in India and Ceylon a primitive bagpipe has been used for centuries by snake charmers.

Animal players of the instrument are depicted in many medieval sculptures and woodcuts in churches, the favorites being bears, monkeys, and hogs. An Irish version of the song, *Frog Went a-Courting*, brings in a snail bagpiper as one of the wedding guests. Angels, too, are shown puffing gaily on the pipes, though it was more often associated with demons. A 15th century woodcut shows it in the hands of a skeleton figure in a dance of death.

As a military instrument, the pipes were played by the Romans during their colonization of Britain, by French regimental pipers up to the 19th century, and have made the battle music of the Irish and Scottish foot soldier since the Middle Ages. The *piob mòr*, war pipe of ancient Ireland, advanced at the head of the kerns against British, French, and Scottish enemies, its wild music bringing terror to the opposition as the pipers played in the thick of the battle. The great Highland pipe of Scotland has served to whip the fighting spirit of Scotsmen in clan feuds, in the Stuart cause, and even in the World War II battle of El Alamein. Scarcely a battle in which the pipes figured is without its legend of a heroic piper who, though wounded or cut off from his regiment, played to his death to hold off defeat.

The position of the piper has varied considerably in legend and history. Though generally not so esteemed by the aristocracy as the harper or minstrel, he often came in for marked royal favor. In ancient Ireland pipers and jugglers were admitted to the king's house and made free of his beer. Both English and Irish nobility often maintained bagpipers on their regular pay-rolls for the entertainment of their servants and guests. In the 15th century in Scotland, many towns supported hereditary town pipers, who were lodged at public expense and sometimes given a grant of land called "the piper's croft." Vienna, too, had its town pipers, selected from the musicians' guild. In France, during the 17th century, the bagpipe became fashionable at court, the *musette*, a highly decorated bellows pipe, being taken up by the ladies, and a royal piper, Destouches, becoming a court favorite.

So loyal were the household pipers of the Irish and Scots and so effective their music in battle that the English passed laws against them. In Ireland it was made illegal to harbor pipers, story-tellers, and rimers because they acted as spies, and Scottish pipers of the Jacobite period were put to death if captured, their pipes being considered instruments of war.

Stories about bagpipes and pipers are of several types. One type concerns ghosts, changelings, and other evil spirits. Seventeenth century popular belief often made the bagpipe Satan's favorite instrument, the Devil's bellows. Witches were executed on the accusation that they

had danced to the Devil's piping. There are Highland tales of ghostly pipes playing at dusk in the lonesome hill passes where some defeat or retreat of the Jacobites took place. One famous Scottish chanter was said to crack as a prophecy of the death of the clan's chief. Another was said to have carried magic powers in battle for the Grants and the MacPhersons.

A second Celtic story type concerns fairies. The green-coated ones in their mounds loved the music of the pipes, played and taught it, and gave special favors to pipers. Many of these stories are of the *Rip Van Winkle* variety, in which a piper is lured away with the fairies, plays for them for what seems a few moments, and returns home to find that years have passed. Sometimes he returns with a magic token, perhaps a new set of pipes, given to him by the fairies and proving the actuality of the experience. Other stories common in many lands tell of shepherds who frighten thieves or wild animals by the playing of their pipes.

On Skye and Mull particularly there is a traditional story pattern dealing with a piper who, with a dog or some friends, enters a cave inhabited by a demon or wild beast. The dog or the friends return without him and the last sound that is heard is the piper's lament for his own fate, often with the words, "Oh, that I had three hands; two for the pipes and one for the sword." On stormy nights the melancholy piping still comes from such caves, it is said.

The message of the pipes is characteristic of many Scottish tales. One such, crediting the instrument with the power of speech, is *A Cholla mo Run*. It tells of a piper who was captured during the absence of his chief from home and held prisoner while an ambush is plotted for the chief's return. When the chief is seen coming, the piper plays him a warning, which he hears and understands. However, the enemy also understands the language of the pipes and the piper is killed.

Bagpipe music includes reels, strathspeys, laments, marches, pibrochs (variations on a theme called the *urlar*), etc. The MacCrimmon "Lament for the McLeod," "The White Cockade," and "Flowers of the Forest" are among the most famous bagpipe tunes. [TCB]

Bahiana Literally, a Bahian woman, but by extension a term used to designate Bahian Negro women who are members of African cult groups. Their distinctive dress, popularized in the motion pictures by Carmen Miranda and others, is a more colorful counterpart of the dress of Negro women in many parts of the New World. The Bahiana of today appears on the street in her traditional dress, most often as a seller of cooked foods, or in processions on festival days; and she is likely to be a woman well into middle age. [MJH]

Bahrām fire or Berezisavanh The sacred fire of Iran, which represents the essence of all fires and is made from 16 different kinds of fire: the earthly representative of the divine essence. The Bahrām fire is maintained in the great temples and is fed sandalwood five times a day by a priest. The Bahrām is one of the five sacred fires of Iranian religion. It is the one which shoots up before Ahura Mazda. The other kinds recognized in Iran are Vohu Fryāna (literally, good friend) which keeps the bodies of men and animals warm, Urvāzishta (most delightful) the fire of plants which produces flame by friction, Vāzishta (best-carrying) the

lightning, and Spēnishta (most holy) which burns in Paradise. See NAIKYŌSANGHA.

Bahramgor or Bahram Gur Hero-prince of many adventures, probably a Sassanian king of Persia of the 5th century A.D. He is said to be the father of Persian poetry, and is often a character in Indian tales. [MWS]

Baïame The great totemic ancestor of the Kamilaroi and other tribes in New South Wales, who lived in the mythical past and originated totemism and other customs. He answers invocations for rain and figures in initiation and other ceremonies. He left mementos behind him which include a large stone fish trap on the Barwan River. He had two wives, Cunnebeillee, by whom he had children, and Birrahgnooloo, his favorite, who sends floods on request. The three are now in the sky. Women may not use Baïame's name but call him "Father." The theory of early writers that he was a kind of All-Father, a vague, otiose, spiritual being, now has many critics. See AUSTRALIAN ABORIGINAL MYTHOLOGY.

[KL]

baile de cintas or baile del cordon The Spanish ribbon or Maypole dance, still performed ceremonially by men at fiestas around a flower-decked pole, in Valencia, Castile, Huesca, and Teneriffe and elsewhere in the Canary Islands. In Catalonia it forms part of the Carnival celebrations by both men and girls. In Portugal it celebrates St. John's Day, June 24. The pole is called St. John's pole, and is surmounted by a puppet. The Basque *cinta dantza* is a furious course following the sword dance or *ezpata dantza*.

In Mexico the baile de cintas is often performed as part of a longer sequence, as by the Yaqui *matachini* and Pueblo *negritos* dancers and the *tocotines* of Papantla, Vera Cruz (*voladores*). In Ixmiquilpan, Hidalgo, both men and women participate in special costumes. In Yucatan it forms part of the Carnaval. Both in the Old and New World it is an ancient spring celebration around a sacred budding tree, but has been renamed and recostumed in Mexico. [CPK]

baile de la xisterna Literally, dance of the well: a Spanish dance of the Island of Majorca, performed especially for the fiesta of San Salvador, August 6. With arms upraised and little forward jumps, termed *mateixa*, the dancers approach the sacred well. They describe a zigzag path typical of many fertility rites. The dance retains much of this ritual significance in its worship of water, well, rain. [GPK]

Bailiff's Daughter of Islington An English ballad (Child #105) of separated lovers. The bailiff's daughter and the squire's son meet on the road after seven years. When she tells him that his lover is dead, he says he will go "into some far country," whereupon she makes herself known. The theme, with roles reversed, is found in Italian, Spanish, Portuguese, and Romaic ballads. The ballad is known in the United States, as for example *The Bailer's Daughter of Ireland Town* (reported from New Jersey) and *The Comely Youth* (Mississippi) where Islington becomes "Hazlingtown."

baingan, baigan, begun, or bhāntā Literally, eggplant: in the folktale, "Baingan Bādshāhzādī," told as "Princess Aubergine" in *Tales of the Punjab* collected by F. A. Steele, Baingan was a princess born from an eggplant and brought up by a poor Brāhman couple. A

neighboring queen jealous of her beauty decided to kill her by magic. In trying to discover Baingan's life token, the queen killed her own seven sons. Finally she discovered the token to be the nine-lakh necklace hidden in a box in a bee in a fish. The princess died as soon as the queen obtained the necklace, but she was laid out in the forest by the Brāhman couple who neither buried nor cremated her. There the king found her and daily watched beside the body which was as fresh and beautiful as if alive. After a year, the king found a child beside the body who told him that his mother was alive at night when the queen removed the necklace, but dead in the daytime while the queen wore it. The child got possession of the necklace and the king and princess were married. They buried the malicious queen in a ditch filled with serpents and scorpions.

bajang or badjang In Malay belief, a malignant spirit whose presence foretells disaster and is the cause of illness. The bajang is said to take the form of a polecat and is very dangerous to children. In some areas of the Malay peninsula the bajang is the enslaved spirit of a stillborn child, obtained at midnight by incantations said over the grave. As a familiar it is handed down in a family. It is kept in a bamboo vessel, fed eggs and milk, and sent forth to prey upon victims who are seized by unknown ailments when attacked.

bakemono Generic term for the goblins of Japanese folklore. [JLM]

bakru Surinam form of the West African "little people," who are brought into being by practitioners of evil magic. Belief in them is especially strong in Paramaribo, the capital of Dutch Guiana, and other parts of the coastal area. Bakru come in pairs, one male and one female. They are envisaged as the size of children, with large heads, and as half-flesh and half-wood. They are obtained by compact with a worker of evil magic, for the purpose of bringing the owner coveted wealth. The price paid for them is in meeting their exacting demands. In the end, it is believed, the family of the owner is destroyed by the gods and ancestors in punishment for these antisocial acts. [MJH]

Balaam The last and greatest of the heathen prophets of Biblical tradition (*Num.* xxii-xxiv). Balaam, son of the prophet Beor, was himself prophet of Pethor in Mesopotamia. As a prophet and diviner he was equal to Moses in everything but moral sense. Because he was cruel and tried to destroy a whole nation, God permitted no more heathen prophets. Balaam had, according to rabbinical tradition, one eye and was lame in one foot. By some he is held to have been identical with Laban.

When Balak, king of Moab, became uneasy about the spread of the Israelites into nearby territory, he sent for Balaam. Balaam, to whom as to all heathen prophets the Lord spoke only at night, kept the envoys, and then refused to go with them when forbidden to by God. A further embassy met with better luck, for God permitted the prophet to go if he would repeat God's words when the time came. A Mohammedan story says that the ambassadors bribed Balaam's wife, and that her nagging was the real cause of his going to Balak. On the way, in a narrow path, the Angel of Mercy, invisible to Balaam, descended and stood in the way of his ass.

The ass refused to go on, and Balaam whipped the beast. Three times this happened and the third time the ass spoke, reproaching his master, and then died, since animals could not be permitted to rival men in speech. Here for example the stupidest of beasts, the ass, outargued Balaam, the greatest of prophets. The speaking mouth of the ass was one of the traditional twelve miraculous things created on the sixth day.

balam In Quiché mythology, the *tigre* or jaguar; a supernatural; a magician. The mythical ancestors of the Quiché, associated with the four directions, bore the names Balam-Quitze (Smiling Tiger), Balam-Agab (Nocturnal Tiger), Iqi-Balam (Moon Tiger), and Mahucatah (Famous Name), probably a euphemism for a feared Tiger or Sorcerer name. Among the Mayans of present-day Mexico, the balams are magical beings whose special province is the protection of villages and their inhabitants and the cornfields.

balance and swing An American square-dance term. The gentleman places his right arm around the lady's waist and takes her right hand in his left, while she places her left hand on his arm below the shoulder. In this position he swings her to the right about. It is usual for couples to swing completely around twice, though they may swing once. If they are skilful and in the mood for it, they may swing three or four times. See ALL EIGHT BALANCE. [GPK]

Balder or Baldr Norse god of light and joy; son of Odin and Frigga, and twin brother of Hodur: one of the most important and the best loved of the *æsir*. The story of Balder's death from a spear of mistletoe, the only thing that had not promised not to harm him, and thrown by Hodur, the blind, at the instigation of Loki, and of the descents of Odin and of Hermod to the underworld, forms a prominent part of the Norse legend of the approach of Ragnarök. In the Scandinavian tradition, as told by Saxo Grammaticus, Balder is slain by Hodur, who wields a magic sword, in a fight over the beautiful Nanna. Compare ADONIS; DESCENTS TO THE UNDERWORLD; TWINS.

Bali In Hindu mythology, king of the Daityas, son of Virochana, Hiranyakaśipu, or Prahlāda. By his devotion he humbled the gods and obtained dominion over the three worlds. Vishnu appeared to him as Vāmana, the dwarf, and asked for as much land as he could cover in three strides. When the request was granted, Vishnu stepped over heaven and earth and, out of respect for Bali's goodness, then made a short stride, leaving Bali the underworld. He is also called Mahābali. Compare DECEPTIVE LAND MEASURE.

Bālī or Bālin In Hindu mythology, the monkey king of Kishkindhyā, the son of Indra, who was slain by Rāma. Bālī was supposed to have been born from his mother's hair.

balian The general Indonesian term for a medium. The balian communicates with the spirits while in a trance to learn how to protect individuals and the community. He also conducts purification rites, is a diviner, and knows the formulas and charms used to protect the rice granaries and property.

Balita A Philippine peasant dance in mazurka rhythm, descriptive of work movements, planting, reaping, and winnowing the rice. [GPK]

Balkis The Queen of Sheba: in Abyssinian, Jewish, Mohammedan, and European tradition. The Biblical story states simply that, hearing of Solomon's wisdom, she visited him, found his fame not so great as the fact of his wisdom, and departed (I Kings x, 1-13). The kings of Abyssinia, however, trace their line back to Menelik, supposedly the son of Solomon and the Queen of Sheba. In Mohammedan tradition, Solomon requires Balkis or Bilkis to submit to him as overlord and adopt his religion. After testing his wisdom, she accedes and becomes his wife. Both the Arabian and Jewish tradition are much embellished with stories of Solomon's control over birds, animals, and spirits and demons, with which he threatens her. Traditionally, she propounds a series of riddles which he answers without trouble (Ginzberg lists 22).

ballad A form of narrative folk song, developed in the Middle Ages in Europe, to which has been applied very ambiguously the name ballad (Danish *vis*, Spanish *romance*, Russian *bylina*, Ukrainian *dumi*, Serbian *junačke pesme*, etc.). This type of folk song varies considerably with time and place, but certain characteristics remain fairly constant and seemingly fundamental: 1) A ballad is narrative. 2) A ballad is sung. 3) A ballad belongs to the folk in content, style, and designation. 4) A ballad focuses on a single incident. 5) A ballad is impersonal, the action moving of itself by dialog and incident quickly to the end.

A ballad is story. Of the four elements common to all narrative—action, character, setting, and theme—the ballad emphasizes the first. Setting is casual; theme is often implied; characters are usually types and even when more individual are undeveloped, but action carries the interest. The action is usually highly dramatic, often startling and all the more impressive because it is unrelieved. The ballad practices a rigid economy in relating the action; incidents antecedent to the climax are often omitted, as are explanatory and motivating details. The action is usually of a plot sort and the plot often reduced to the moment of climax; that is, of the unstable situation and the resolution which constitutes plot, the ballad often concentrates on the resolution leaving the listener to supply details and antecedent material.

Almost without exception ballads were sung; often they were accompanied by instrumental music. The tunes are traditional and probably as old as the words, but of the two—story and melody—story is basic. Many ballads were sung to a variety of melodies. Unlike lyric songs in which the meaning is not so important and which are consequently subordinated to the music, ballads, in which the contrary situation obtains, always subordinate the melody to the words. More variety exists in ballad music than in ballad form and content, for it ranges from the modal types of the West, based on the Gregorian, to the more florid and ornamental types of Greece, the Balkans, and Russia owing much to Byzantine tradition. Here and there, as for example among the South Slavs, instead of melody the ballad is often accompanied by rhythmical chant, almost recitative. The point is, of course, that the ballad is not simply recited or told, but given interpretation and emotional power by the accompanying melody.

The ballad belongs to the folk, but it is by no means primitive or barbaric; rather it is the product of accomplished and often literary-conscious poets. The folk of

the ballad have behind them a long tradition, a tradition partly conditioned and shaped by conscious and lettered culture. The folk are unlettered, rather than illiterate. They are homogeneous, interested in one another, in the dramatic aspects of life. They have a great store of traditional story stuff—*märchen* and *folktale*, and a store of folklore, part of which is with them only conventional and half-believed in. So the ballad is likely to be a compound of folklore, legend, and local history. Through the years the folk have their way with the ballad, shaping it, varying it in theme, incident, and style, putting their unmistakable touch upon it.

The last two points may be discussed together. The ballad takes a single incident, as does the short story, brings that into sharp and economical focus. In this respect it is unlike the *folktale* or epic which develop their stories through a series of incidents episodically. This stripping the story of all excrescences of description, motivation, incidental material, and especially of editorializing, results not only in utter impersonality but in a "gapped" narrative in which the reader gets only the moments of most dramatic action.

The Danish ballad, *Sir Peter's Leman*, is typical. It is very short—twenty-one couplets—but it evokes a dramatic and complex story. Sir Peter and Kirsteen, his sweetheart, are "jesting" with one another as they sit over their meal. "When will you take a wife?" she asks. Sir Peter answers with a joke. Kirsteen comments that when he does take a wife, she will go to the bridal though it "were two hundred miles." (Stanza 6) With no transition, no explanation the ballad plunges into the events of the marriage feast, telling of Kirsteen pouring the wine. (Stanza 7) The bride asks who she is. A serving-maid tells her that Kirsteen is Sir Peter's love. Abruptly the ballad passes to the next scene, the bringing of the bride to bed, Kirsteen bearing the bridal torch.

"The sheets of silk o'er the bed she drew
There lies the swain I loved so true."

The next stanza tells of Kirsteen locking the door and setting the house on fire, so the "bride must burn on the bridegroom's arm."

These three scenes told largely through dialog give us the story. This technique is more common in the Western ballads than in the Eastern, but even in the Russian ballad the story is basically developed by a succession of scenes rather than by alternation of scene and panorama.

In addition to these primary characteristics one should note certain secondary characteristics. Sometimes the ballad was accompanied by dance. Frequently this was so in the Scandinavian countries, but it was rare in England and found only sporadically in other parts of Europe. We cannot think of the ballad as basically a dance song, but must realize that occasionally it was adapted to that purpose. Likewise many ballads contain a refrain—a word, phrase, line or several lines—repeated after each stanza, or sometimes interwoven with the stanza. But the refrain, though common in the English and Germanic ballad is not generally characteristic of ballad. Certain stylistic qualities are fairly constant, such as the use of stereotyped expressions so common to folk poetry in general, the use of repetition of line and incident, of incremental repetition, triad arrangement, climax of relations, and the testament device. These sec-

ondary characteristics partly account for the wide variety in the ballad as one passes from one country to another and from one time to another. The constant element in the ballad is the form and the manner of telling a story.

The problem of ballad origins has occupied the attention of folklorists and balladists from the beginning of ballad studies. Much confusion about the matter of origin comes from the failure of the first scholars, such as Herder, Grimm, Gummere, in not making clear the distinction between ballad and folk song in general. They saw in the ballad a continuing tradition from primitive times and consequently applied to ballad conclusions arrived at from a study of primitive folk song in general. And so was born the communal theory, that the folk made the ballads by a kind of communal improvisation, a kind of cooperative composition. Later critics (e.g. Kittredge) accepted this explanation but with modification. Feeling that the folk is too indefinite, too unorganized for such concerted effort, they suggested that ballads were composed by the folk under the direction of a leader who brought the necessary discipline into the composition and who functioned as organizer and selector. But they felt that the folk contributed much of the matter. At the present time, however, most scholars favor out-and-out individual authorship. They point out that the ballad is certainly the product of the late Middle Ages, that it is certainly not a product of a primitive society, that it is a highly artful and rather difficult form, that the music is intimately and fundamentally a part of it. All of this would argue for conscious trained authorship. Minstrels, clerks, clericals, wandering scholars have all been suggested as the professionals who originated and perfected the form. After an individual ballad was composed, then the folk came in. Ballads were oral. The folk took them over. Through the years of singing them the folk modified them, changed them, improved them sometimes, sometimes debased them, but the folk had their way with them, and over the years put their mark upon them. And it is a distinguishing mark and an unmistakable one.

The main body of English and Scottish ballads is to be found in the great collection of F. J. Child (1882–1898). This great work contains 305 separate ballads and many variants divided between England and Scotland. It is sometimes difficult to separate the English from the Scottish, for often some variants of the same ballad are Scottish, others English. One variant of *Edward*, for example, is English, the other Scottish. *The Three Ravens* is English; the *Twa Corbies*, Scottish. In general the English pieces seem more realistic and more sophisticated. Here are the Robin Hood ballads, the larger group of historical ballads, the romantic and sentimental love ballads. The Scottish, on the other hand, are more stark, shorter. Most of the fairy-lore and supernatural ballads are Scottish, as are the short tragic ballads and ballads of the Border. But the ballad passed freely not only between England and Scotland but between the British Isles and Germanic Europe.

The texts of most English and Scottish ballads are 16th, 17th, and 18th centuries. The actual date of composition is in many cases much earlier. The earliest ballad text extant is that of *Judas* found in a 13th century manuscript now in Trinity College, Cambridge. Some of the Robin Hood ballads certainly belong to the 14th century, but probably more of the extant English ballads

belong to periods after the 15th century, rather than before. Even though few ballads are as early as the Middle Ages, the ballad as a form of narrative poetry emerged in the medieval period. It is certainly not a part of primitive poetry and consequently is not to be compared with songs and stories of savages. Culturally the ballad everywhere is post-epic.

The best known of all English ballads are the Robin Hood ballads. It matters little whether Robin Hood actually lived or not. The Robin Hood we know is pure folk ballad creation and the only character in English balladry around whom a cycle of ballads has developed, for the English ballad with the exception of *A Gest of Robyn Hode* is short and non-cyclic; that is each ballad tells an individual story and there is no tendency to carry one hero from ballad to ballad, as is so common in other European countries. *A Gest of Robyn Hode* is certainly a literary product. Probably sometime before 1400 a ballad poet combined several ballads concerned with Robin Hood with transitional material of his own, weaving them into this long popular heroic poem of 456 four-line stanzas. Here Robin Hood appears characteristically as a popular hero though an outlaw, for he robs the rich to give to the poor and escapes apprehension by incredible feats of agility and daring. Many of the ballads of Robin Hood and his men of the Lincoln Green appear through the 15th, 16th, and 17th centuries. The best are the earliest; the later Robin Hood ballads show degeneration and even debasement of the character of Robin Hood himself. Late in the tradition Maid Marian drifts into the story from medieval pastoral poetry to add a romantic touch, foreign, of course, to the traditional story. Robin Hood is not the only outlaw in English ballad. Other ballads of this character are *Adam Bell* and *William of Cloudesly*, *Johnny o' Cockley's Well*, *The Outlaw Murry*, *Sir Andrew Barton* (Henry Martyn), *Johnie Cock*. This last, an extremely interesting ballad full of old folk belief and custom, relates the heroic death of an outlaw.

The finest of the English and Scottish ballads are the tragic ballads. Most of them are Scottish and most of them are early. Typical are *Sir Patrick Spens*, *The Two Sisters*, *The Cruel Brother*, *Lord Randal*, *Edward*, *Babylon*, *Leesome Brand*, *Twa Corbies*. Many of these are widely dispersed over Europe. *Edward*, for example, is found throughout the Scandinavian countries and in Finland; *Lord Randal* as far as Italy.

Particularly charming for their romantic and imaginative character are the fairy and enchantment ballads. Three of the finest are *Thomas Rymer*, *Tam Lin*, *Lady Isabel* and the *Elf-Knight*. The first tells of Thomas Rymer's visit to fairyland; the second of the rescue by his mortal sweetheart of Tam Lin, bespelled and captured by the fairy. *Lady Isabel* is a widely known European ballad; it recounts Lady Isabel's escape from an elf-knight by trickery. Other ballads of this type treat of the fairy mistress (lover) theme, of changelings, fairy nurses, fairy enchantment, fairy forest, fairy music and its bespelling power. Several ballads like *Kemp Owyne* and the *Laily Worm* are concerned with enchantment wrought by mortals, usually stepmothers, and the unspelling by kisses of someone intrepid enough to kiss the victim in her loathly form. Here and there among the ballads is found the semisupernatural character Billy Blin (Blind Barlow, Billy Blind, etc.). He functions as a

household familiar assisting the hero with advice and information. He is cunning and well-versed in counter magic. He seems to belong rather to the dwarf tradition than to the tradition of the fairy. Allied with the fairy and enchantment ballads are those concerned with the dead who return, revenants from the world of the grave. *The Unquiet Grave* is based on the belief that too much weeping over the dead disturbs their rest. *The Wife of Usher's Well* relates the visit of three dead sons to their sorrowing mother. *The Suffolk Miracle*, a widespread European ballad the original of which is probably Greek, is the dramatic story of the dead lover who returns to carry off his sweetheart. It is the source of Bürger's *Lenore*. (See DEAD RIDER.)

Justly famous among English and Scottish ballads are the Border Ballads. These are spirited recitals of border feuds, of cattle raids, and of conflicts between English and Scotch, suggestive of the stuff out of which in earlier culture the epic grew. The most famous are *The Hunting of the Cheviot*, *The Battle of Otterburn*, *Johnie Armstrong*. Most of these are realistic and generally literary.

It is interesting that the English ballads have little to do with old Germanic mythology and tradition, nor much concern with Christian legend and theme. There are some few of the latter like *Judas*, *St. Stephen* and *Herod*, *The Cherry Tree Carol*.

The old ballads were brought to America by the early settlers and even today can be found widespread among the folk of the outlying regions. Such ballads as *Barbara Allen*, *Lord Lovel*, *The Cruel Mother*, *Lord Randal*, *Lady Isabel*, *The Gypsy Laddie*, *The Golden Vanity* are widely found. About one third of the traditional ballads are still sung in America. A few narrative songs more or less in the old ballad form and in old ballad style have been composed in America. *Springfield Mountain*, *Frankie and Johnny* (or *Albert*), *John Henry*, *Jesse James*, *Casey Jones*, *The Little Brown Bulls* are typical.

A great stock of fine ballads exists in Danish dating from the 14th century. Like the English they show a variety of themes: historical, supernatural and magical, realistic, stories of the trials and joys of everyday life, love, and blood feuds. Many of them are analogs of the English. The historical ballads, like epic stories, glorify the virtues of bravery, loyalty, and honor in the lives and characters of the national heroes. Some of the best of these concern Stig Hvide who dies valiantly defending the king's standard; King Waldmar and his wife, Sophie, and his mistress, silken-clad Tove; Niels Ebbeson, who rid the country of a foreign oppressor; and the half-dozen ballads dealing with the conflict between Marsk Stig and King Erik. There is a general tendency toward cyclic development among these historical ballads, for they roughly group themselves into the following divisions: 1) Those concerned with Waldmar, his queen, and his mistress. 2) The exploits of Marsk Stig. 3) The cycle of Waldmar II and Dagmar. This is a tendency hardly found in English but common enough in the eastern ballad.

The Danish supernatural ballads generally lack the airiness and grace of the English; they are concerned mostly with trolls, mermaids, mermen, werewolves, magic runes, transformation. In *The Mermaid's Spaeing* a captured mermaid reads the future for the queen. *Agnes and the Merman* is the story of the love between

a merman and a mortal girl. *The Lady and the Dwarf King* tells of a mortal lady married to the dwarf king and forced to live with him under the hill (cf. English *Young Akin*). In *Sir Magnus and the Elf-Maid* Sir Magnus cuts the elf-maid to bits when she tempts him; whereupon she turns into "blazing fire." *The Maiden Hind* is the story of a son who forgot his mother's injunction not to kill the little hind; only after it was dead did he discover that he had killed his little sister transformed into a deer. *Young Svejdal* relates the story of Svipdag who released Menglad from the magic mountain. Sir Torré is bespelled in an elf cave, but escapes through the help of the elf queen. *The Lind Worm* (cf. English *Laily Worm*) is the usual transformation story. *The Knight in Bird Dress* gets to his sweetheart by transforming himself into a bird. An unusual ballad is *The Avenging Sword*; the story tells of a magic sword that fights of itself for its owner. Several Danish ballads deal with giants, dragons, and monsters. The best of these are *Vidrick Verland's Son and the Giant Langbane*, *King Diderick and the Dragon*, *Child Orm and the Berm Giant*, *St. George and the Dragon*. Many supernatural and magic elements appear through the whole body of the Danish ballads: tabu, power of runes, informing dreams, magical music, witchcraft, transformation, shape-shifting, werewolves.

The realistic ballads comprise a large and interesting group; in them one can trace the course of the life of the individual from birth to death, so detailed they are. Many of them are love ballads, and many of them tragic. *Ebbe Skammelsson* is full of realistic detail concerning wedding customs; it tells of a younger brother winning the older brother's betrothed and the murder of the two by the elder brother on their wedding night. *Svend of Vollerslov* is a story of revenge involving the son of a slain man.

The Danish and Scandinavian ballad in general was frequently accompanied by dance. Olrik states that the dances were originally accompanied by pure lyrics and that the ballads were sung in the hall, but that about 1200 the practice grew up of starting the dance in the accustomed manner with a lyric song and then continuing with a ballad whose substance marked the emotion expressed in the lyric. As time passed the ballad came to be regarded as the conventional accompaniment for dance.

The Danish ballads are generally somber in tone and intense in their recital of action. Their themes are overwhelmingly tragic, with tragic love and blood feuds most common. Only a very few are humorous; none have the light touch of the ballads of the south.

Folk song is richly represented in the West Germanic languages but it is rather lyric than narrative and more local than national. There is no body of general ballad poetry such as that of England and Denmark. Most of the folk poetry is satiric or allegorical; much of it is political. These special types of folk song are usually not in stanzaic form; the ballad pieces usually are. Many of the pure ballads are on historical themes, but they are likely to give general accounts of battle rather than to focus on the exploits of a single hero. The *Battle of Sempach* is typical. Outlaw ballads form another category; characteristic are *Epple von Gailingen*, *Lindenschmid*. Most of these are concerned with robber barons, a type peculiar to German balladry. The large number of folk songs on religious themes that sprang up after the Reformation

are hardly ballads though many use ballad techniques and story. Most are sung to hymn tunes. As in England some ballads are adapted from old story, epic, and romance. *King Ermanaric's Death* and the ballads celebrating Dietrich are examples. Several Biblical stories are reworked as ballads. The Dutch *Hallewijn* is probably the Holofernes story; the German *Judas* is rather lyrical than narrative (cf. English *Judas*). As usual in ballad collections, stories of the supernatural bulk large. The water sprite is common, as are mermaids and mermen, dwarfs with magical powers, ghosts, revenants, poltergeists, kobolds. The familiar *Pied Piper of Hamelin* is typically German. *The Fiddling Hunchback* is another ballad whose action turns on the theme of the magical power of music. Ballads of the type of the English-American *Froggie Went a-Courtin'* were popular in German. Some of these are parodies of human behavior; others allegories. By the 16th century German ballads had largely degenerated into accounts of horrible crimes, sensational adventure, tavern brawls.

So different are the Russian *byliny* from the ballads we have been discussing that it is a question whether or not they should be admitted into the category of ballad. Some critics (e.g. Entwistle) discuss them as ballads; others (e.g. Chadwick) look upon them rather as heroic literature and so more akin to the epic lay. They do have many ballad characteristics, being short, narrative, somewhat dramatic story songs. But the meter is casual and often determined by the music. Usually each line is marked by a metrical foot. They do not rime, nor are they divided into stanzas. Their subjects are usually the exploits of heroes. Each character or hero may be the central figure in a number of *byliny*; it is consequently possible to arrange them in cyclic order. Thousands of variants exist, since each singer is accustomed to combine, delete, and add elements at will.

Some organization of this mass of widely diverse material is got by grouping the stories concerned with a particular hero, period, or region. The earliest cycle centers around the heroes Svyatogor, Volga, Mikula; these are the "older" heroes. They are related to Russian history but in a very artificial way; most of their exploits come from folklore. For example, Svyatogor is a giant possessed of great strength. He rides a great omniscient horse which gives him on occasion valuable information. He seems to be basically a folktale hero; many of the stories told of him include general folklore motifs. The most dramatic is the account of his death. Crossing a plain one day, he and his friend Ilya see a coffin bearing the inscription: For the one who can lie in it. Ilya tries but is immediately expelled. When Svyatogor lies in the coffin, the lid clamps down and though Ilya attempts to pry it open with Svyatogor's magic sword, it will not move. Svyatogor's tears flow out forevermore forming a great river. This illustrates the general difference between the Russian ballad and the ballad of western Europe. Here are not realistic stories in which the emphasis is on the story element, but fantastic narratives with the emphasis on the hero, a fabulous and epiclike character. Mikula is a sort of Paul Bunyan of the peasants. His great strength enables him to plow more land, fell more trees than any other peasant. Volga is versed in the language of the birds and animals; he possesses great powers of magic and can transform himself at will into an animal or bird. He is head of a *druzhina* who help

him in his exploits against the Turks. In many of these stories the fabulous and supernatural are linked with the historical.

Another and larger cycle is that of Kiev. These stories, now found only in the north, were originally Ukrainian stories and were probably founded on fact. The central figure is Vladimir I (10th century). Most of the stories relate the exploits of his družina. Here are mostly stories of adventure, but now and then personal narratives like those more frequently found in ballad appear. The most important characters in this cycle are Dobrynya, Ilya of Murom, Nikitich, Aljoša Popovich, Nastasya, Dyuk Stepanovich, Mikhailo. The latter is the hero of a fantastic story involving many folklore motifs: swan maiden, water of life, petrification. It is impossible here to give more than a suggestion of this material so varied and extensive it is.

The *dumi* of the Ukraine are different, for the Ukraine was subject from the late Middle Ages on to much Western influence. Their ballads are more conventional in form and subject. They rime; many of them are stanzaic. The music is definitely melodic. Their subjects are of a more domestic sort—love, courtship, marriage, faithfulness or lack of it, death. They are more impersonal, less inclined to celebrate great heroes. A number of the *dumi* are based on historical themes, recounting battles against the Turks and Poles, raiding expeditions that suggest the English and Scottish border. Here too can be found a number of ballads general to all Europe.

The folk poetry of Yugoslavia falls into two somewhat arbitrary groups: the *junačke pesme*, men's songs, and the *ženske pesme*, women's songs. The *junačke pesme* are heroic and narrative, the *ženske pesme*, lyric, often love songs. Unlike the men's songs the women's songs were often danced to. The men's songs are distinctly heroic; in fact they represent really an epic urge working itself out in the shorter narrative form. Typical are the story poems telling of the exploits of Marko Kraljević, the famous Yugoslav hero, killed probably in the battle of Rovine, 1394. The ballad of *Marko and Andrija* shows analogical relation to *Edward* and to the *Two Brothers*. In a quarrel Marko drives his sword into his brother's heart. Dying, Andrija begs Marko not to let his mother know what happened. When she asks why the sword is bloody Marko is to say that he has just killed a stag. If she asks for Andrija, Marko is to say that he has been bespelled by a lady and lured to the land of no return. He then tells Marko to call on him by name whenever he needs aid in battle. In *The Marriage of Marko* Marko through the help of his faithful falcon secures as wife one of the *vile* (beautiful supernatural winged maidens). After living with him for several years and bearing him a child, the *vila* one day gets possession of her wings, which Marko had kept from her, and flies away. But the story, unlike the swan maiden stories, ends by Marko getting the lady back and their living happily ever after. *Marko Kraljević and the Arab King's Daughter* tells the story of Marko's escape from prison by aid of the jailer's daughter who loved him. These stories are the usual compound of physical adventure of an exaggerated sort and folklore. Some seem very like folktales translated into ballad form.

More dramatic and more poetic are the fine stories that form the cycle of Kosovo. These stories were inspired by the battle of Kosovo (1389) in which the Turks

defeated the Serbs. Characteristic is the ballad, *The Fall of the Serbian Kingdom*, which describes the battle as a whole, making the defeat of the Serbs inevitable and therefore dramatic and tragic. Many of the ballads in this cycle particularize events of the battle. In *The Death of Jugovici's Mother*, the mother receiving the severed hand of her son dead on the field of battle voices her lament and dies. Simple pathos is found in *The Maiden of Kosovo*. At daybreak the maiden goes out on the battlefield, turns over the bodies of the slain, wipes the blood from their faces, searching for her lover. In this cycle are some of the finest of European ballads.

In Yugoslavia are to be found a goodly number of ballads dealing with religious story, of which the largest group is hagiographic, often with a touch of didacticism. The stories of supernatural characters form a minor group, mostly concerned with dragons and vile. *The Walling of Skadar* has interesting European analogs. Three brothers try to build a wall around the town, but each night the wall is destroyed by a *vila*. Finally, the *vila* tells them that they must immure whichever wife brings their dinner on the next day. Two of the brothers warn their wives; consequently the wife of the third is walled up. For a year she suckles her child through a hole in the wall and ever after milk flows from that place.

In Bulgaria most of the ballads are concerned with supernatural characters and themes: samodiva, lamia, dragons, Charontes, fates, snakes, talking birds and animals, bespelling music, magic instruments—the whole of Bulgarian folklore crowds into ballad story. The sun and moon appear as supernatural characters in many of these ballads, as they do in Yugoslavia. Another important type is the love ballad—largely stories of seduction, trickery, and tragic love. *Latin Andro and Maid Marica* tells of the protracted grief of Marica at the death of Andro, and of her being murdered on his grave by her jealous husband. As she lies there, the hands of the two lovers meet beneath the sod. A rose grows from Marica and a stream of cool water flows forever from Andro's side.

The ballad in Yugoslavia and Bulgaria has had vigorous growth from the Middle Ages to the present. In Yugoslavia it is one of the most important of all types of literature. It has played a large part in keeping alive tradition, and solidifying the people against outside forces.

The folk songs of France are largely lyrical. What narrative folk songs do exist are reworked from lyric or borrowed from abroad. The *pastourelle* is typical of the lyric-narrative. It is far removed from the true narrative song like the ballad, for the narrative of the *pastourelle* is generalized, patterned, and subordinate. The best of the French narrative folk songs have drifted in from across the borders or have been simply adapted from literary sources. Typical are: *Belle Hélène*, *The Torch of Love*, *Renaud*, *The Woman Killer*, *King Loys' Daughter*, *La Belle Barbière*. There is no body of ballads like that of England and Denmark. The same remarks hold generally for Italy, where many of the French songs penetrated as well as those from other countries. *Donna Lombarda* is probably the most famous of Italian ballads. It is the story of Rosamund and her poisoning of her lover. It was first told in the *Historia Langobardorum* and from that became general folk legend. Italy develops more

historical ballads than France though most of them are late.

Though other Romance countries show little in the way of organized narrative song material, Spain developed a great body of such songs. They came to be known as *romancero* (a word that traveled to France and Germany to denote a body of short dramatic narrative). These songs, unlike the French and Italian, are basically narrative. They are impersonal and dramatic in the same way that the best of the English are. But unlike the English they tend to be tied to specific history. The Spanish ballad too developed a rigid form, highly conventionalized. There is evidence that they are more intense and less diffuse than they were originally; evidently the folk here as usual deleted excrescences and kept alive only the most dramatic elements. Most of the Spanish ballads are semihistorical. But it is rather the personalities of history that interest the balladists. For example, King Pedro the Cruel appears in several ballads but always personally and only incidentally as king and ruler. But ballads of raids, forays, and battles are also found. Many of these recount conflicts between Moors and Christians. Another category is made up of material from the old epics and epiclike chronicles. The most famous of these are the some 200 ballads of the Cid, and the *Infantes de Lara*. In the ballads the character of the Cid changes from that of a distinguished statesman and warrior as he appears in the old epics to that of a young dashing, devil-may-care hero, a great folk hero of Spain. Dozens of ballads work over the old Carolingian stories, the French *chansons de geste*, and even the romances, but all are made history and most of them Spanish history, for the very essence of the Spanish ballad is credibility and historical value. Even general fictional stories are forced into the pattern of history, like *Count Alarcos*, *Count Dirlos*, *Gaiferos*. Among the best ballads of a general sort are *Ramón Berenguer and the German Empress* (cf. English *Sir Aldinger*), *Count Sun* (cf. English *Young Beichan and Susie Pye*), *Doña Arbola* (cf. English *Child Waters*), *Moriana* (cf. Italian *Donna Lombarda*), *Rico Franco* (cf. Dutch *Hallewijn*), *Don Pedro and Doña Alda* (cf. Danish *Elveskud*). Typical of the few ballads that turn largely on folk themes are *Espinelo* which is based on the superstition that assigns multiple fathers to twins, and *Bovalias*, the central feature of which is a light-giving stone. All in all the Spanish ballads in number, forcefulness, and dramatic story are among the most important in Europe. See SPANISH BALLAD.

We have tried to make implicit throughout this article that from the point of view of folklore the ballad richly repays study, for it exhibits not only folk beliefs that are contemporary, but also the fossil remains of the lore of the folk reaching back to remote antiquity. Many of these fossil remains found in the ballad survive, of course, as mere conventions, carried from generation to generation, but valuable to the folklorist for all of that. Not the least interesting aspect of this is the fact that here in the ballad is to be found much material for a history of rationalization.

But the main importance of the ballad is not in furnishing material for folklorists. It is of great intrinsic importance. It is often magnificent poetry with beauty and definitiveness. The felicity of its lines, its moving stories, its suggestiveness and evocations are all of the

high order of poetry. It often gives a deep reading of life, concerned as it is so frequently with eternal matters, such as love and death, and presenting these matters with the simplicity and directness of Greek drama. Socially it is important. It is the expression of people when they were close to one another and to the community, a homogeneous and largely classless group living in close integration. It was an expression of their unity and likewise it was a force making for that unity. "Give me the making of the songs of a nation and I care not who makes its laws" has point when nation means such a society. The debt of the literature of record to the ballad is immense, but the extent of it can never be fully determined, for the ballad long ago became a permanent part of our general cultural inheritance.

MACEDWARD LEACH

ball de la teya Literally, torch dance: a serpentine processional dance performed on the eve of a religious festival, in mountain villages of the province of Lérida, Spain. A bonfire is lit on a neighboring mountain. The people run and leap carrying large branches on their shoulders. These they light and return to the village, dancing exultantly through the streets and around the church. Finally in the plaza the fiery serpent coils and uncoils, contracts and expands, and winds into a spiral—a fusion of fire purification and fertility magic. The most recent bridegroom is the leader. [CPK]

ball del ciri Literally, candle dance: a Catalan dance for couples of men and women, performed at religious festivals. Two couples dance at a time, the first group consisting of married couples, the succeeding ones of unmarried couples. The first two women carry branches of flowers, the others carry lighted candles. In Castellersol, on the second day of a fiesta, six couples circle with small skips, hand in hand. They execute various figures, as the hey, or a radiation of the women to the center, the men to the periphery. The candles are replaced by flowers in the left hands of the women and by *morratxes*, glass vessels, in their right. During a processional they sprinkle perfume from the *morratxes* on the spectators—possibly a vestige of ancient rain magic. Renewal symbolism is inherent in the group transference of the dance from married to unmarried dancers. [CPK]

Ballet of the Boll Weevil An American Negro plantation song dating from about 1900 when the boll weevil moved from Mexico into Texas to the destruction of the cotton crops. The field hand's sympathy is with the boll weevil against the white man and stanzas have multiplied as fast as the beetle itself. Since World War II it has been sung as a commentary on the housing shortage, in which the singer, like the boll weevil, is "a-lookin' fur a home."

ball pla A Catalan round dance for couples. The music, in triple time, is in two parts, corresponding to the dance: the *entrada* or entrance, a simple promenade, and the dance proper. A variation is the ballet de deu, literally, dance of God, in a slow austere tempo, with one section separating men and women into two lines which fluctuate forward and backward. Another variant, *bal cerda* from the old region of Cerdana, is in light, quick tempo. After a circular promenade, the couples dance singly with small steps and jumps, the man following the woman at a prescribed distance. Finally couples hold hands for another promenade or a mill. These and other variants of the ball pla are performed at religious festivals and pilgrimages, before the church, in city, or mountains. [CPK]

ball play A man's ball game played with racket and stuffed ball: found in all eastern North American Indian tribes and now adapted, without the original accompanying ritual, as in the modern Canadian lacrosse and Louisiana Creole raquette.

Ball the Jack A dance accompanied by hand-clapping and recitative, the head and feet remaining still and the rest of the body undulating, with a rotation of the hips called "snake hips." American Negroes originated this particular form, which was taken over into minstrel shows, but similar dances are done in the Bahamas and along the Congo. The recitative may be a rhythmic chant similar to children's game rimes, ending with "And I ball the jack on the railroad track." The term derives from railroad slang, meaning to go ahead, go fast, be reckless, risk all, etc. "Ball" is an abbreviation of "highball," the signal to go ahead, which in early railroad practice was a painted metal globe hoisted to the top of a tall pole, and the "jack" was the locomotive. Much of American Negro song and verse contains similar allusions to railroads and trains, which symbolized escape.

balm Any of various aromatic plants of the genus *Melissa*. Taken in wine, balm cured snake and rabid-dog bites and was recommended by Arabian physicians for hypochondria and heart trouble. In an English legend of the Wandering Jew, Ahasuerus knocked one evening at the door of an ill Staffordshire cottager who asked him in and offered him a glass of beer. After finishing the beer, the wanderer asked the cottager from what illness he was suffering. The doctors had given him up, he said. Ahasuerus told him to gather three balm leaves, put them into a cup of small beer and drink it, and to refill the cup as it was emptied and put in fresh balm leaves every fourth day. This he did and was cured within 12 days.

Balor In Old Irish mythology, a king of the giant Fomorians, son of Dot son of Net, and grandfather of Lug. He had only one eye, which killed whatever it

looked upon; but luckily it was nearly always closed except on the battlefield. Four men attended him to lift the lid with a handle that passed through the edge. He got such an eye as a child from peeking at his father's druids brewing charms. The fumes of the brew went into the eye and poisoned it, so that nothing forever after could survive its glance.

Balor was among the leaders of the Fomorians at the battle of Mag Tured. That day when Lug and Balor met in battle, Balor cried to the four men "Lift up mine eyelid," and just as the lid was raised, Lug cast a sling-stone into it that carried the eye out the back of Balor's head, and killed three times nine of Balor's men behind him.

Balor is among those grandfathers of world mythology whose death at the hand of a grandson was prophesied, who exposed to perish or otherwise disposed of the fatal infant, only to die at the hand of that grandson, always somehow miraculously saved to fulfil the prophecy. The Balor story exemplifies the strong Celtic belief in the evil eye. His story is classified also by Krappe and some others with the Old Year or Winter versus New Year, sun, and spring combats and rituals.

Bamapama The stupid, gay trickster hero of Murngin mythology (Arnhem Land) who is called "crazy man" because he violates many tabus, including those against clan incest. See AUSTRALIAN ABORIGINAL MYTHOLOGY. [KL]

bamboche Haitian term for a dance attended only for recreation: sometimes applied (in Mirebalais) to the vodun dances by those who go merely for social exchange, to watch the performance, or to join only in the huge singing dance-circle which never ceases to move around the tonnelle (the temporary brush construction that shelters the actual vodun performance) during the ceremony. [CPK]

bamboo In India a symbol of friendship and an emblem of the sacred fire, since it is believed that jungle fires are caused by the rubbing together of bamboo stems. Its origin is told in the tale of Murala, a Brāhman girl who, unknowingly was wed to a man of the Sudra caste. When she discovered the deception, she decided to end her life. She prayed to Vishnu and then mounted a funeral pyre. From her ashes grew the bamboo.

In all of southeastern Asia and the East Indies the belief is prevalent that the flowering of the bamboo (which rarely occurs) is the prognostication of approaching famine. In the Philippine Islands bamboo crosses are placed in the fields to aid the growth of crops. Among the Semang of Malaya and many Melanesian tribes bamboo is used in magic. The Aka-Bo of the Andaman Islands believe the first man, Jutpu, was born inside the joint of a big bamboo, came forth, and made his wife from clay of a white ants' nest. The bridge of death of the Kachins of Burma is a slender bamboo under which are rows upon rows of boiling cauldrons which bubble up and engulf the wicked.

The bamboo is connected with the moon, especially in Japan where one of the holy men cut down a bamboo, transformed it into a dragon, and rode to the lunar heaven on its back.

Bamboo Princess The title of a Malay legend. Khatib Malim Seleman, carrying a jungle knife, adze, chisel, and betel-nut scissors, went in pursuit of a beautiful

princess. While he was asleep the princess appeared and cooked him food, disappearing at dawn. In the morning Khatib tried to cut open the bamboo under which he had been sleeping and in which the princess had told him he would find her. Finally he succeeded in cutting off the top shoot with his betel-nut scissors and split the bamboo downwards. He took his princess to Bukit Peraja where both disappeared. There they still live, invisible, but if their aid is invoked they will perform anything asked of them and then disappear again.

banana A large plant (genus *Musa*) growing ten to twenty feet high, cultivated in tropical climates for its edible pulpy fruit, which grows in long, usually pendent, clusters. In regions where the banana is indigenous, the banana tree is often the birth tree or life tree of an individual. In the Solomon Islands it is believed that sometimes the soul of a dead man will enter the bananas, and no fruit is eaten from trees believed to be thus inhabited. In New Guinea young banana trees are sometimes whipped with a stick cut from an old and fruitful tree, so that the fruitfulness of the old may pass, via the stick, to the young tree. A Tahitian story explains why the fruit of the *meia* (lowland banana) hangs down instead of standing upright like the fruit of the *fei* (mountain and highland banana): long ago the *meia* were defeated in war by the *fei* and henceforth hung their heads. Polynesian mythology accounts for the origin of many plants as having sprung from the bodies of human beings who died at the time of the Sky-Raising. They recognize the trachea of man in the stem from which the banana flowers hang below the fruit. Trees with cracked bark grew from people with chapped skin; the tender under-bark grew from man's tender inner skin. Among certain Bantu people it is customary to bury the afterbirth of a child under a young banana tree. See AFTERBIRTH.

Banba In Old Irish mythology, a queen of the Tuatha Dé Danann, wife of Mac Cuill, one of the three kings from whom Ith received such a surly welcome in Ireland. The *Book of Invasions* tells how the advancing Milesians met Banba in Sliab Mis and asked her name. She told it, saying it was her name that was the name of that country, and she begged that it might remain the name of it forever. And the Milesians promised it. Later they met up with Fódla, sister of Banba, and had the same conversation and made the same promise. Still later they met Ériu, the third sister, who told the Milesians, "Yours will be this island forever," and she too begged that her name might remain the name of that island. The Milesians promised her that Ériu would be its chief name forever. It is believed that these three queens are fictions created to explain the three ancient poetic names for Ireland.

banjo A musical instrument of the guitar family imported into the United States by Negro slaves from West Africa, where one of its ancestors was called *bania*, and favored by Negro musicians for accompaniment to singing and dancing. It consists of an open drum, covered on one side with parchment, a long neck, and a varying number of strings, and probably derives from Arabian or European types of guitar. Legend says it was invented by Ham in the Ark and thus gives the Negro claim to recognition as a master musician.

Like certain other folk instruments—the bagpipe, the

fiddle, the guitar, etc.—the banjo is a favorite of the Devil, who is a virtuoso player and will teach you to play it if you meet him at the crossroads at midnight and give up your soul. This kind of belief was fostered by religious influences, because music and entertainment of the kind that centered around these instruments was not likely to be pious. It kept people out of the churches and led them into evil ways.

Played for dances, hoe-downs, and singing by Negroes, the banjo was taken straight over into minstrel shows and carried its rippling, strongly rhythmic music all over the United States. The five-string type, most popular of all, found special acceptance among the white mountaineers of the South, who developed with it a peculiarly American kind of music, combining Negro, minstrel, and old English dance and ballad elements. Such old-time favorites as *Cindy*, *Dinah Gal* (a nonsense ditty about a wooden leg), *Ida Red* (a bit of foolery about gin), and *Old Dan Tucker* are typical tunes of the banjo picker, and have been sung, danced in square sets, or spun out to shorten the journey by covered wagon, truck, or bus over the length and breadth of the United States. The material of the song could be anything. Even a mine calamity in Kentucky gave rise to a banjo piece, *The Cold Creek March*.

bannik A spirit living in the stove or under the seat in the bathroom: one of the Russian household spirits. A little water in the tub and a bit of soap on the bench are left after a bath for the use of the bannik or any other of the household spirits who might take it into their heads to bathe. Going to the bathroom alone at night or in the evening may be dangerous because of the bannik. Compare DOMOVIK; HOUSEHOLD SPIRITS.

banshee Literally and originally, a woman of the side or fairy folk, in Irish folklore usually appearing as a beautiful woman weeping (and thus foretelling) the death of someone, often a member of a specific family. She is usually associated with the primitive earth goddess of the district which she haunts. (See ÁINE.) The banshee appears either as a beautiful maiden weeping the coming death or as a gruesome hag foretelling it. She is often identified with the Washer Of The Ford, who is seen at a ford washing bloody garments by one about to die. She is also often associated with the White Ladies of other folklores, partly because of her function as a foreteller of death, and partly because of the etymological confusion between *bán*, meaning fair, white-haired, and *ban-*, a prefix meaning woman, or the actual *bean side*, woman of the side.

Banya A Gold Coast dance that has been retained by bush and town Negroes of Dutch Guiana. One Surinam form of the dance, the *bakafutu banya* (cross-foot banya) is associated with dancing for the ancestors. [MJH]

banyan An East Indian fig-bearing tree (*Ficus benghalensis*), epiphytic in its early life, which sends down from its branches roots that develop into new trunks, thus producing a thick and shady grove, sometimes of giant proportions. The tree is named from the use of the ground under it as a market place by native banyans or merchants. The singular character of the banyan's growth is represented by a Mindoro riddle, "When a tiny infant I was stolen by a night prowler who later dropped me into the arms of a kind woman who took

pity upon me, nurturing me from the milk of her own breast. When I became older I loved my foster mother so much that I smothered her with caresses." The prowler is the fruit bat which ate the banyan fruit and dropped the seeds in a tree, usually a palm, where they rooted. The roots eventually embrace and kill the palm.

Tahitian (Polynesian) mythology explains the shadows on the moon as the branches of a huge banyan tree from which Hina-i-aa-i-te-marama (Hina-who-stepped-into-the-moon) took bark to make cloth for the gods. Once while clambering around in the tree she broke off a branch accidentally with her foot. It flew through space to the earth, took root, and became the first banyan tree in the world. Hina's companion in the moon was a wild green parrot (*u'upa*) who lived in the tree and ate its figs. This little bird, at Hina's instigation, scattered a bunch of these little red figs across the earth and from them grew all the Polynesian banyans. Here is a folktale strangely contrary to the natural fact that the banyan propagates by its branches. The Polynesian peoples make a good cloth from the bark of the banyan, and thus Hina is still tutelary deity of the sacred cloth-beaters.

The Hindus call the tree Vaibadha, the breaker, and invoke it when they desire vengeance on their enemies. In Indian mythology, Vishnu was born under the shade of the banyan. The tree is confused with the Bo-tree and therefore shares its place in heaven. Like the latter it is the Tree of Knowledge. It is also the tree of Indian ascetics and seers. In Indian folklore the tree is a representation of Śiva and anyone who cuts one down will be punished by the annihilation of his family.

baptism Ceremonial purification by immersing, bathing, or sprinkling with water, usually symbolic of acceptance into the community, typically the religious community, and often accompanied, as in the instance of the newborn child, by name-giving: a practice originating in the pre-Christian era and found today among many cultures all over the world. While baptism as a sacrament is most common in Western culture, similar ceremonies without this religious background are widespread. Baptism, essentially, seems to be based on the concept of the removal of the ceremonial uncleanness of the mother and child, and of safeguarding them against the demons and evil spirits to which the ordeal of birth has made them especially susceptible. Water, as a pure, "living" material, is most used, but baptism by saliva, blood (human or sacrificial animal), milk, clay, dirt, and even rum is known. Adult baptism is usually an initiatory rite, as for candidates to the Eleusinian mysteries or for proselytes to Judaism, though sometimes the ceremony is a reaffirmation of faith.

Generally, in Europe, underlying the religious significance of the Christian rite of baptism are more ancient, indigenous beliefs. The idea is that the unbaptized, adult or child, is a pagan, hence subject to pagan influences. In Ireland of the 16th century, for example, the right arm of the male child was left pagan (unbaptized) so that it might strike harder blows. The general belief that the newborn child is endangered by fairies or demons gives rise to numerous customs for safeguarding the child and the mother until baptism and churching. In the Middle Ages it was thought that witches took a toll of unbaptized children on Walpurgis night. The Greeks and the Slavs believe that the Lamia has a cer-

tain power over the unbaptized. An obscure Coptic custom, adapted from Christian baptism but observed by many Copts and Moslems in the Middle Ages, was the baptismal river festival in the Nile on Epiphany Eve which cured all illnesses. Group baptism in rivers in the United States has been well publicized. No matter how cold the water or how raw the weather, United States Primitive Baptists believe baptizing never leads to a cold. Among the Lapps, a second or third or subsequent baptism, with renaming, may be gone through in case of illness to foil the malignant spirit causing the ailment.

Baptism accompanied by naming ceremonies is found in Africa, Malaya, Polynesia, India, and Iran, among the North American Indians, Teutons, Greeks, Lapps, and Celts. In Europe, the circumstances attendant on the naming of the child are accompanied by a number of customary observances and beliefs. The behavior and physical and moral perfection of the godparents, the actions and speech of the officiating clergyman, the occupation of the parents during the ceremony, all have influence on the future development of the child. The actions of the child himself during the baptism are important. Widespread in England is the belief that a child who cries is expelling the devil. On the other hand, in Germany a crying child will not live to grow old.

Among the ancient Teutons, the *vatni ausa* (sprinkling with water) of the infant by the father acknowledged it. After that the child was a member of the community and could not be exposed by the parent. The idea behind this is recognition of the infant as a new person in the social group. The formalized religious overtones and ceremonies, while significant, are perhaps subordinate in origin. It is the first bathing of the new child that is of community importance. In Fiji, the group holds a feast without the child being named at that time, although the name itself is significant in later community life.

baraka The word used by Mohammedans of Morocco for the supernatural energy, or holiness, attached to certain persons or objects. Baraka is a beneficent power, but it also has a distinct element of the perilous in it. It may be transferred, as from a holy person to a place or thing. Baraka is possessed by brides, plants, trees, mountains, the horse and saddle, camels, greyhounds, prayers, rainbows, and other natural phenomena, certain numbers (the odd having more baraka than the even), etc. Compare MANA; TABU.

Barashnūm A Zoroastrian ceremony of purification "the purification of the nine nights": conducted especially to restore purity to those contaminated by contact with the dead. Originally it was performed only for a woman who had given birth to a stillborn child or for a man who had had contact with a corpse; but it is now observed generally by the Parsis of India as a means of securing purity. Every member of the Parsi community must go through the ceremony, which is conducted by the local priest, before the age of 15, and perhaps again later, in order to prepare his soul for its entrance into heaven. If he does not, he cannot cross the Chinvat bridge after death. Trees are felled to prepare a special place suitable for the ceremony. Holes are dug, furrows marked; the one seeking purification walks to each hole,

says a prayer, and is sprinkled with water and *gomez* (cow's urine). The ceremony is performed also at the time of a priest's initiation into the priesthood, for the purification of the initiate and for the sake of some person (living or dead) in whose honor he is entering the priesthood. The whole elaborate ritual is described in detail in *Vendidad* ix. See BAPTISM; BARSOM.

Barbara Allen The beautiful and cruel maiden in the ballad *Bonny Barbara Allen* (Child #84) who shows no pity or kindness to the young man dying for her love. When she hears the dead-bell ring, she sickens and dies of remorse. Child has only three versions of the originally English and Scotch ballads on the subject, but in America it has become the most widespread of all the transplanted ballads, showing greater geographical range, more tunes, and more text variants than any other ballad. It was first printed in Great Britain in 1740, in the United States in 1830.

Barbarossa Frederick I (1123?-1190), Holy Roman emperor, called Barbarossa (Redbeard) by the Italians: a German national hero. Frederick is the best known of the kings and heroes thought to be asleep in a mountain and waiting to return in time of their country's need. The Kyffhäuser Mountain in Thuringia is Barbarossa's resting place. He sits there at a marble table in a cave with his beard growing either through the table or around it. In a late version, when the beard has encircled the table three times he will awaken. Compare BEARD; KING ASLEEP IN THE MOUNTAIN.

barber The hair-cutter and trimmer and remover of beards, formerly also the phlebotomist and tooth-puller, at all periods since Roman times (5th century B.C.): renowned as town gossip and retailer of news. The barber's reputation for being talkative is a popular stereotype in many parts of the world. Formerly the barber performed the offices of a surgeon, and his art was called a profession, but under Louis XIV in France and George II in England the hairdressers and surgeons were finally separated, although for some time bleeding and tooth extraction were still performed in the barber's shop. In northern England barbers for a time sold books. The row of shaving mugs, each with its owner's name, was a familiar sight in early 20th century barber shops in the United States. In India the barber is still a surgeon and a masseur, also a matchmaker and expert on marriages. The barber's wife is often a midwife. The Eastern barber appears in the *Kātha Sarit Sāgara* in the "Story of Kadaligarbha," and in "The Hunchback's Tale" of the *Thousand Nights and a Night*. The barber in the North European tale of the three skilful brothers manages to shave a running hare. Barbers like Monsieur Beaucaire and Figaro are familiar figures in modern fiction.

barber's pole The striped pole seen in front of barber shops. The red and white stripes on the barber's pole are a survival of the time when the barber was also a surgeon. The white stripe symbolizes the bandage used in the operation of bleeding; the pole itself, the wand grasped by the patient as the vein was opened. Formerly a basin topped the pole to indicate the basin in which the blood was caught. See BARBER.

barghest or barguest The specter-hound of Cornwall, known also in northern England. Literally, perhaps it

means bear-ghost (*bar geest*) but there is also some argument for its being derived from German *berggeist*, gnome. It appears to people in the form of a bear or a huge dog, and the sight of it usually precedes a death in the family. Traditionally it cannot cross water. In Lancashire it is sometimes called the Shriker, because of the shrieks it lets out when invisible, and sometimes called Trash because it walks with a splashing sound.

bariaua In Tubetube and Wagawaga (Melanesian) folklore, shy, harmless spirits inhabiting the trunks of old trees. They often borrow the sea-going craft of mortals, since they are unable to make them themselves. The bariaua are afraid of being seen by men and run away when approached.

barley A hardy bearded cereal grass or its grain, genus *Hordeum*, of temperate regions, with long leaves, stout awns, and triple spikelets at the joints which distinguish it from wheat. Barley has been cultivated since prehistoric times as a staple food and evidence exists that it was one of the first if not the first cereal cultivated by man. Grains of barley have been found in Egyptian remains dating from the pre-dynastic period and in the pile dwellings of Switzerland. It is mentioned in the Old and New Testaments (*Judges* vii, 13; *Ruth* ii, 17; *II Kings* iv, 42; *John* vi, 9, 13). The meal offering of jealousy (*Num.* v, 15) seems to have been the only use made of barley in the Hebrew ritual. Its use in bread is indicative, however, of poverty.

Indra is called "He who ripens Barley" and the Indians use this cereal when celebrating the birth of a child, at weddings, funerals, and during the rites of the *sraddha*. Pliny says a boil may be removed by rubbing nine grains of barley around it and then throwing them into the fire. To the herbalists barley was a plant of Saturn, more cooling than wheat, and efficacious in the treatment of fevers, agues, and heats in the stomach. A meal of barley boiled with fleaworts and made into a poultice with honey and oil of lilies, applied warm, will cure swellings under the ears, throat, and neck.

Barley is used in making malt for beer; a Babylonian recipe for beer dates from 2800 B.C. In rune II of the *Kalevala*, Väinämöinen fells the forest to let the barley grow.

Barmecide's feast In "The Barber's Tale of his Sixth Brother" in the *Thousand Nights and a Night*, an imaginary feast served to a beggar by a prince of the house of Barmak. The beggar, falling in with the jest, despite his hunger, pretends to eat the imaginary food from the imaginary dishes. Finally, he pretends to become very drunk from imaginary wine and gives the prince two very real buffets. The phrase has been applied to anything imaginary, illusory, or disappointing.

bar mizvah, bar mitzvah, or bar mizwah The Hebrew term for a boy entering his fourteenth year. Until the thirteenth birthday, responsibility in religious matters rests in the father, but after that the bar mizvah assumes the attributes of maturity and takes his own place in the religious community. The ceremony solemnizing the event occurs on the Sabbath following the thirteenth birthday, at which time the youth is called to read a portion of the Law. Customarily the boy then recites a learned oration, and receives presents from the guests. The rite has been a fixed custom only since the 14th century, but various indications, such as *Gen.*

xxxiv, 25, where Levi is called "man" at thirteen, suggest an origin in antiquity.

barnacle goose An Old World goose (*Branta leucopsis*) nesting in the Arctic. During the Middle Ages its then unknown breeding habits gave long life to the legend that the bird was in some way hatched from driftwood or that it originated in shells growing on a seaside tree in some obscure place. The story was repeated as late as 1668 despite its being disproved in the 15th century by Æneas Sylvius. Some disagreement existed among medieval rabbis about the bird, since several forbade eating it on the grounds that it was a shellfish, while others discussed the question of slaughtering it as fowl or eating it unslaughtered as fish. A similar Christian debate was concerned with the edibility of the fowl during Lent.

barn dance A social country dance, often held in a barn, at which square dances, quadrilles, etc., are danced, to the directions of a "caller" and the music of a small band or often of a fiddler. The dance music, forms, and calls are to a great degree traditional, even to the humor of the calls, and occur in all parts of the United States with regional variants.

Barnyard A cumulative song of the mountains of the southern U. S. which enumerates the barnyard animals with imitations of their cries in a manner similar to that of *Old MacDonald Had a Farm*. "I had a cat and the cat pleased me," it says. "Fed my cat under yonder tree. Cat went fiddle-i-fee." The hen went "shimmy-shack" and the duck, the goose, etc., made their particular noises in a long series, each verse adding another.

barrel house A cheap saloon of the period about 1900 during which jazz developed, in which the customers could fill their own glasses from a cask, the drip from the spigot falling into a "gut bucket" on the floor. The term is applied to the kind of music played in such places, and especially to the rough, "dirty" timbre of instrumental tone characteristic of this early jazz.

barrenness In folklore and folktale, barrenness is removed or prevented by the use of blood or charms, by eating or drinking certain substances, by bathing, or by sacrifice, often sacrifice of a child. Certain persons are considered unlucky because of their barrenness, and are an evil omen if encountered. Old women and priests in particular are so regarded in northern Europe. See BELTANE; BLOOD; PROMISED CHILD; TWINS.

Barry, Phillips (1880-1937) Scholar of comparative literature, philology, early Greek music, and the history and theology of New England; scholar and authority on ballads and folk music of New England. He became interested in ballad while studying under Leo Werrin at Harvard and began his collection of New England folk music in 1903. He had one of the earliest collections of recordings in the country. Together with Louise Pound, he advanced the theory that the ballad is originated by an individual, and is recreated and changed by each subsequent singer, rather than developed by a group and kept reasonably intact.

In 1930 he founded and edited the *Bulletin of the Folk Song Society of New England*. Besides articles in that publication, he contributed to *The Southern Folklore Quarterly*, *Journal of American Folklore* and the

Musical Quarterly. Many of these articles are reprinted in *Folk Music in America* (New York, Natl. Serv. Bu. Publ. 1939), put out in his name by the Federal Theater Project of the WPA. He also edited *The Maine Woods Songster* (Cambridge, Mass., 1939) and in collaboration with others, *British Ballads from Maine*; *The Development of Popular Songs* (New Haven, 1929) and *The New Green Mountain Songster* (New Haven, 1939).

barsom or **baresmān** Originally, a bundle of the cut stems of a plant which cannot now be identified, used in the chief Zoroastrian ceremonies; now, among the Parsis of India, a bundle of wire rods varying in number from 5 to 33, bound together with leaves, and used in sacrificial ceremonies. The Zoroastrians of Persia use bundles of pomegranate, tamarind, or date twigs bound with the bark of the mulberry tree. The barsom is powerful against demons, wizards, and witches. A single offering of barsom is so powerful that the *druj* is weakened when it is made. The bundle, however, must be removed from a house in which a person or a dog has died and it is a sin to prepare barsom improperly or point it toward the north (the region of demons).

Bartók, Béla (1881-1945) Hungarian composer and folk-music scholar. Educated at the Royal Academy of Music in Budapest, where he studied with Janós Koessler and István Thomán and where he became professor of piano in 1907, Bartók started his researches into the ancient folk music of Hungary and neighboring countries in 1905. He was particularly concerned with uncovering the indigenous music from the layer of Gipsy music regarded as typically Hungarian until that time, and in the course of collecting joined forces with Zoltán Kodály. Their studies resulted in the publication of *Hungarian Folk Songs for Voice and Piano*, in 1906, followed by Bartók's *Twenty Songs* and *Szekely Ballads*. In all he collected, transcribed, and scientifically classified more than 6,000 songs of Magyar, Rumanian, Slovak, and Transylvanian singers, and extended his field in 1913 to African-Arab music. His monumental work, *Hungarian Folk Music*, appeared in 1924. His investigations also included regional music of Bihar, 1913, Hunyad, 1914, Maramures, 1923; colinde, 1937; and folk instruments and instrumental music. With Kodály he founded the New Hungarian Music Society in 1911. His own compositions, numbering among others an opera, *Prince Bluebeard's Castle*, two ballets, six string quartets, many songs and piano pieces, concerti for piano, violin, and orchestra, make extensive and original use of both melodic and rhythmic material from the folk-music studies which were his signal contribution to comparative musicology.

basers Members of the chorus in American Negro spiritual singing who sing the response after a narrative line from the leader and "spell" him for a breath before his next line. They take up so quickly that the singing has a continuity that gives the effect of never stopping for breath.

basil Any of certain aromatic plants (genus *Ocimum*) of the mint family: so called because it was believed to be an antidote for the basilisk's poison, although its earlier Greek name, *basilikon*, probably derives from its use in some royal ceremony. Basil, paradoxically, in folk belief is both sacred and dedicated to the Evil One, is

dear to lovers (Italy) and an emblem of hatred (Greece), the propagator of scorpions and the antidote to their stings. Galen and Dioscorides believed it poisonous; Pliny and the Arabian physicians recommended it; Culpeper thought it poisonous because it would not grow with the poison antidote, rue; Gerard recommended smelling it for the heart and the head. It has been and still is used as a cooking herb.

In India holy basil or *tulasī* (*O. sanctum*) is sacred to Vishnu and Lakshmi. It is grown in pots near every Hindu dwelling and temple, is a protection for every part of the body, ensures children to those who desire them, and opens the gates of heaven to the pious.

In Greece and Rome the planting of basil is accompanied by cursing, without which the plant will not flourish. In Persia and Egypt the plant is found in cemeteries. In Moldavia its enchanted flowers will stop a wandering youth and make him love the girl who hands him a sprig. In Africa it is eaten so that one will not feel the sting of scorpions, but in some places smelling the plant breeds scorpions in the brain. Elsewhere the smell of the plant is beneficial to the heart and head and produces cheerfulness. See POT OF BASIL; TULASĪ.

basilisk or cockatrice A fabulous reptile of classical and medieval European legend and folktale whose breath and look were fatal. Physical descriptions of the creature differ, but generally the basilisk was thought to be hatched from a cock's egg on which a toad or serpent had sat and which preferably had matured in a dunghill or amidst poisonous materials; the glance of the basilisk was fatal whether it wished to kill or not; its breath was poisonous to all plants and animals; contact with its body split rocks, and killed men (even a horseman using a spear), animals, and plants; and its hissing drove away all other serpents. The basilisk usually had a spotted crest, indicating its kingship among the serpents, and a horrid face, either that of a cock or of a human being. It walked upright and, in some instances, was winged. In heraldry, the cockatrice is depicted as having the head of a cock, wings and feet of a fowl, and barbed serpent's tail. Such was the power of the glance that the basilisk could kill itself by looking in a mirror; human beings of course could not look at the basilisk directly but had to use a mirror. If a man saw the basilisk before it saw him, the basilisk would die. There was also a small weasel-like animal which could kill the basilisk, and from this and the fact that the more or less general words for snake in the Hebrew version of the Bible (e.g. *Isa. xi, 8*) have been translated as "basilisk" and "cockatrice," it is believed that the original of the reptile was either the horned adder of the Sinai peninsula or the hooded cobra of India, the latter fitting well with the common description. Compare DRAGON; POISON DAMSEL.

Basin Street A street in the French Quarter of New Orleans, one of twelve blocks comprising Storyville, the red light district marked off by an alderman named Story. Here jazz had its original hearing. One of the most popular of blues pieces was named for the street, *Basin Street Blues*.

basket dance A ceremonial dance centering the action around a basket carried in the left hand by the dancer. In all cases the bearer is a woman who may strew seeds from the basket, and in all cases it is a vegetation cere-

mony. In the medieval Nürnberg and modern Thracian carnival dances an old woman of the corn (meaning rye) carries a baby doll in a basket. The distant (in space and time) Tarascan *sembradora* sows meal or flower petals. In the basket dance of Cochiti, nine women kneel before nine men and symbolically grind corn on their inverted baskets. In these various instances the symbolism doubtless evolved independently. [GPK]

Basque folklore The Basques, "the oldest people in Europe," have preserved little of their ancient culture. The Romans, the French, and the Spanish have profoundly influenced them away from their old traditions, and Christianity since the 7th century directly and indirectly has forced them into the general pattern demanded by the church. Their language, too, so difficult that even the devil has never been able to learn it, has been a factor in keeping Basque culture from spreading and so surviving as, for example, elements of Breton culture were preserved. The language barrier may account for the fact that folklorists have long neglected these people. Even now records are few and often unscientifically compiled.

The Basques seem not to have had an elaborate mythology. They did believe in a universal god, the Yaun-Goicoa, lord of the universe. He created the three principles of life: Egia, the light of the spirit; Ekhia, the sun, the light of the world; Begia, the eye, the light of the body. There is no evidence of an extensive cosmogony such as that of the Indo-Europeans. In some conflict with the belief in the god creator is the evidence of belief in the mother goddess, the great mother of Pan-Mediterranean culture. The Basques called her Erditse, goddess of maternity. All we know of her in Basque culture comes from an inscription on an altar dedicated to her.

A few explanatory myths survive. The Basques account for themselves more easily than most scholars account for them. In the beginning a great fire-serpent lived under the world. Restless in its sleep, it threw up the Pyrenees mountains as it turned its heavy coils. From its seven gaping jaws flowed forth fire which destroyed all the world, purifying everything; then out of the fire the Basques were born. The Basque explanation of the constellation of the Dipper is somewhat different from the usual story. The first two stars in the cup of the dipper are two oxen stolen by two thieves from a laborer. The next two stars are the two thieves following the oxen. The first star in the handle is the son of the owner, sent to apprehend the thieves; the double star is the daughter and her little dog, sent to find the brother. Then following all is the laborer. God condemned them all to this endless journey because of the curses of the laborer at losing his oxen. Most of the myths have been Christianized with the introduction of the Christian god, of Jesus, and of the saints as characters. The moon is a man with a load of fagots, condemned by God to light the world because he cut the fagots on Sunday.

Though the Basques no longer have a pagan mythology, they do retain belief in a group of supernatural creatures and about them tell many stories. Tartaro is a Cyclops-like creature. He is usually described as a giant having one eye in the middle of his forehead. At other times he appears as a great hunter or shepherd

living in the mountains; in one or two stories he is simply a grotesque animal. In most stories he is outwitted by his human opponents and so beaten. The Herren-Surge is a great seven-headed snake. In some stories he must be appeased by offerings of human beings; in others he appears in the role of the conventional dragon. One long story in which he figures is the Basque version of the widespread folktale of the ransomed woman as it appears in the usual version of the *Two Brothers*. The Basa-Jaun and his wife, Basa-Andre, are wild creatures of mountain and wood. Their characters shift considerably from story to story. Often Basa-Jaun is a sort of faun or wood sprite (French *Homme de Bouc*); he is mischievous, not malignant. His wife is often depicted as a sorceress, sitting at the entrance of a mountain cave, combing her long hair, luring men to their doom. In other stories Basa-Jaun is an ogre, and his wife is a witch. And strangely enough she often helps her husband's captives to escape. The Laminak are fairies, probably related to the Celtic little people, for like them the Laminak live underground in beautiful castles. The Lamia in Basque story is a water sprite or mermaid, with none of the malignancy of the conventional lamia of classical mythology. In addition to these rather specific characters, one finds the usual assortment of witches (*astiya*), sorcerers, magicians, and the like. Stories of the witches' Sabbath (Basque *aque-larre*, goat-pasture) abound. Usually they tell of a human being who is an accidental witness to the Sabbath proceedings and who overhears some bit of information by which he can break the spell that the witches or their god, the Devil (in the form of a goat), has placed on their victim. In the religious folktales Christ, St. Peter, Mary appear as beneficent supernatural beings little different from the witches and fairies except that they always work for the good of men. A number of these religious tales are highly moralistic, their terseness and pithiness reminding one of the *Jātakas*. Like the *Jātakas* too are the animal stories. The usual characters are the fox, the wolf, and the ass. Each has his traditional role. Each story is well told by way of sprightly dialog.

One finds among the Basques a goodly store of folk songs. Almost all of the songs are lyrics rather than narratives; in fact, only a very few ballads have been recorded. The lyrics fall into five groups: hymns, carols, love songs, satiric and humorous songs, religious legends. The earliest of the songs, the hymns, are modal, and as one would expect, show close affiliation with church liturgy. The most original of all Basque music is that of the following period when the Basque folk singers began experimenting in the major and minor scales. Most of these songs are love songs of great beauty and charm. The third period of Basque musical development shows the influence of French and Spanish songs. To this period belong the long and tiresome religious legends. The Basques have long been fond of the satirical songs. These carry a weight of social and political protest, and were often as effective as the similar songs in Provençal.

Instrumental folk music was not developed to a degree comparable to that of the vocal. It is composed almost entirely as accompaniment for dance and procession. The instruments generally found are the three-holed flute, the tambourine, and the gaita. Until recent times the violin and accordion, so common in other parts of southern Europe, were not popular with the Basques.

The traditional Basque dances are the round and square figure dances. Among the most interesting are the sword and club dances. In these dances each man fences in intricate dance with his opponent and as the dance becomes faster and faster, the whole dissolves into a general *mêlée*. Both dances are very old; they memorialize, as some think, the old conflict with the Moors. The masquerades are part dance and part play. They are very elaborate with the participants in fantastic costumes, each representing characters from history and legend. Much of the music which accompanies them is old and traditional. All walks of life from shepherds to lords and ladies—not to mention animals like bears and horses—are represented. The whole is an elaborate Mardi Gras.

There is probably influence back and forth between the masquerades and the folk plays for the plays are widely popular. In spite of the fact that the written versions extend only from the beginning of the 18th century the Basque plays are as old as the Middle Ages in form and tradition, with many elements common to the miracle and mystery plays. Some scholars see a kinship or even influence of Greek drama. The subject-matter of these plays is varied though about half of them are drawn from the romances, chiefly from the cycle of Charlemagne; many are on Biblical subjects, some few on classical subjects (Œdipus, Bacchus); some retell the lives of the saints. The authors of a number of them are known; they are usually teachers, or local scribblers who adapt a chapbook story (most of the romances are still so printed even today) or a Biblical story to the conventional play form for the use of local groups. Once the play is composed successive groups of players are likely to modify and change it in the same way the folk modify and change a ballad. Though manuscript copies survive, the plays are most often carried locally from generation to generation in the memories of the players, father teaching his own part to son.

As we have said, the plays show similarity both to the medieval miracle and mystery plays and to the Greek dramas. Like the earlier plays they are highly stylized in the use of stock characters, in the acting, and in the methods of staging. Usually the play is furnished with a chorus, but the chorus functions differently from that in the Greek plays. Here it is a chorus of Satans whose function is to aid the villain and the forces of evil and to combat the good. This chorus of Satans is dressed in elaborate and colorful costumes and each member carries a ribbon-decorated wand with which the action is controlled. One touch of the wand restores the "dead" or strikes down the "living." The chorus is assigned elaborate songs and dances, and generally it plays a colorful and picturesque part. The "bad" characters are represented as Turks, infidels, demons, and less frequently, Englishmen. They are always garbed in red. The "good" characters are the French and the Christians. They are always in blue. The action of the play always depicts the struggle between the bad (aided and abetted by the Satans) and the good, always with the ultimate triumph of the good. The action is very lively, with dancing, singing, gesturing, posturing, and by-play. The lines are delivered in a semichant, completely conventional. The interlocutors advance and retreat on the stage in regular dance formation as they deliver their lines. The good characters move in a dignified and majestic manner al-

ways from the right side of the stage; the bad indulge in grotesque steps and gestures always appearing from the left.

The plays are performed on an elevated stage usually situated in the public square. At the four corners of the stage are stationed soldiers in colorful uniforms armed with guns which they fire at appropriate moments. Place is provided on the stage for certain local dignitaries, such as the mayor and priest. The orchestra is located on the stage. It is composed of a tambourine, flute, trumpet, and guitar. The highly conventionalized music marks the changes in action and introduces the characters; a rapid march, for example, indicates the appearance of the Satans, a slow, grave march the appearance of the good characters.

Although the costumes are elaborate with much head-dress and decoration, the stage props are few. The actors are drawn from the local folk, and many of the roles are hereditary. Women play some parts, but never are women and men on the stage at the same time. Usually, as in the medieval theater, the female parts are taken by boys. One other custom also common to the early theater is the procession of actors in costume through the village on the morning before the play is acted. These plays of the Basque have long been very popular; now they, like much of the traditional culture of the folk, are fast dying out.

The Basque have a great store of proverbs, conventional sayings, riddles. Many of these are common to most of the people of Europe, but a number are unique among the Basque. Familiar enough are such sayings as: There is no tree without shade; On hard bread the teeth will break; The puppy and the bitch are both dogs. Without fire there is no smoke. In the proverbs original with the Basque one is struck by the cynical tone (or is it just keen observation?). A golden key will unlock any door; Marriage of love, life of sadness; Two sisters make a full house. Mention of foxes, dogs, wolves, chickens, and mules occurs constantly in these proverbs. When you have a wolf for a companion keep a dog by your side; A cheap mule is expensive; The fox having a long tail thinks all animals are like him. As one might expect all aspects of the weather are caught up in proverbial sayings. Red morning, south wind and rain; Wet May, happy year; The year of much snow, happy year.

The riddles, like many riddles of the folk, are usually childish or far-fetched. What looks toward the house when going to the wood and toward the wood when going toward the house? The horns of the goat. A fellow with a neck but no head, arms but no hands? A shirt. These Basque riddles lack the subtlety and poetry of Old English riddles.

The Basques have many folk customs, such as telling the bees when death occurs, the bridal procession through the village at which all the presents are carried and along with them certain tools like the hoe and the spinning reel to symbolize marriage, but these customs are also found, with modifications, generally in Europe. Early accounts of the Basques assert that they practiced the couvade. This seems to have been a characteristic of the pre-Indo-European Pan-Mediterranean culture in general and consequently one would expect it among Basques. At present the custom seems to have died out completely. Modern research has failed to find any practice of it. Common still today though is the institution of

aizoa, the neighbor. A person who lives nearest another on the side of the rising sun is closely integrated with his family by very special ties and duties. He is godfather; he attends at births, marriages, and deaths, performing all necessary duties. It is he, for example, who climbs the roof when a member of the family is dying and removes the tiles so that the soul can escape more easily. He holds the candle over the body of the dead, letting the seven drops of hot wax fall on the naked flesh.

MacEDWARD LEACH

Bast, Bastet, Pasht In Egyptian mythology, goddess of Bubastis represented in two distinct forms: (1) as a lion-headed woman with the solar disk and uræus; (2) as a cat-headed goddess bearing a sistrum, in which form she was called *Pasht*. She was the personification of life and fruitfulness, and was essentially mild, although she has been identified as a war goddess. She is sometimes confounded with Sekhmet and often identified with Mut. The Greeks identified her with Artemis, but this seems to have been simply formal and unconnected with actual worship. People from all parts of Egypt attended her unruly festival. The chief center of the deity was at Bubastis, and the rise of the XXII Dynasty (the Bubastites) helped make her influence more widespread. There were two festivals, the greater and the lesser, Memphis rather than Bubastis perhaps being the scene of the latter.

Bastian, Adolf (1826–1905) German ethnologist. He was born in Bremen, and educated as a physician at Berlin, Heidelberg, Prague, Jena, and Würzburg. As ship's doctor, in 1851–66 he traveled to all continents, amassing a great volume of information. He was professor of ethnology at Berlin and head of the ethnological museum there from 1886. With Virchow and R. von Hartmann he edited the *Zeitschrift für Ethnologie* (1869). He published almost 60 works on various anthropological subjects, more than 80 volumes, among them: *Die Völker der östlichen Asien* (1866–71); *Ethnographische Forschungen* (1871–73); *Der Buddhismus in seiner Psychologie* (1882); *Amerikas Nordwestküste* (1883); *Indonesien* (1884–94); *Der Fetisch an der Küste Guineas* (1884); *Die mikronesischen Kolonien* (1899–1900). Bastian was proponent of the theory that mankind's common psychological basis explained the existence of common folklore materials like tales, games, beliefs, etc.

Bat A humorous character in some Southwestern and Basin North American Indian mythologies. Bat, in the person either of an old man or an old woman, successfully brings down a deity or human being(s) marooned at the top of a high cliff. Humor enters into the tale because of Bat's size, teasing by Bat of the stranded person, or the song sung while transporting the person to earth in a carrying net. See BATS. [EWV]

Batāra Guru or Bētara Guru The name for śiva used in the Malay peninsula, Bali, Java, and Sumatra: to the Malayan the all-powerful spirit who held the place of Allāh before the advent of Mohammedanism. Batāra Guru has been identified with Si Raya, the spirit of the sea from low-water mark to mid-ocean, and sometimes with Mambang Tali Harus, the Malay spirit of the mid-currents. In Sumatra belief Batāra Guru created the earth by sending a handful of earth down to his daughter who had leaped from the upper world into the limit-

less sea. When this was set upon the sea it grew larger. As it increased in size, it shut off the light from the Naga Padoha, a serpent which lived in the sea. The Naga was vexed and gave the land a shove. It floated off. When Batāra Guru saw what had happened, he sent down more earth and a hero who pinned the serpent in an iron block. His squirming, however, made the mountains and valleys and even now causes earthquakes. When the earth was finished Batāra Guru created the animals and plants. Then his daughter, Boru deak parudjar, and the hero begot the first people.

bats Nocturnal flying mammals (order *Chiroptera*), which, in various families comprising more than five hundred species, are of world-wide distribution. The furry body, leatherlike wings, and night-flying habits make of the bat (fluttermouse, night puck, bald mouse, leather wing, etc.) a bizarre creature; and when to these characteristics are added occasionally bright color, like tan, white, or orange, such strange features as are possessed by the leaf-nosed and mastiff bats, and the diet of blood of the vampire bats, there obviously exists a popular subject for the folklore of the world. Colloquial expressions like "as blind as a bat" and "bats in the belfry," indicate popular interest, if not a scientific accuracy of folk observation.

The bat's short legs, according to the Chiricahua Apache story of the rescue from the height, result from the inability of the boy who killed the eagles to keep from looking down. Bat, basket, and boy fell; Bat's legs were broken, and remained short. According to a Lipan Apache story, Bat advised Coyote to take the wife of the missing Hawk chief, which so angered the Hawk that he threw Bat into a juniper bush. Since then bats hang head downward, even when asleep, as did that first bat caught in the juniper by his long moccasins. The night-flying of the bat has been explained variously: as the avoidance of creditors (*Æsop*), as a search for wives who ran away when they saw Bat in the light (Yavapai Indians of Arizona), as dislike of the dazzling light (Philippine Islands). The Chinese say that the bat flies head downward because its brains are so heavy. Among more recent beliefs about the bat may be mentioned the "scientific" idea that the bat in flight was able to avoid obstacles by his sense of smell. As a corollary result of the development of radar, however, it has been discovered that the reflection of sounds above the range of the human ear enable the bat to navigate surely.

Among some tribes of Victoria, the bat is a man's brother, a male sexual totem, as the nightjar owl is of women, and sacred as a totemic animal. Tongans hold bats sacred, perhaps as containing the souls of the dead. In parts of Australia, in Bosnia, in Shropshire, England, bats are respected, probably for similar reasons, and never killed. On the Ivory Coast of West Africa, there is an island inhabited by many large bats which are sacred to the natives of the mainland because they embody the souls of the dead. A murderer among the Guayaki of eastern Brazil fears that the ghost of his victim will return in the shape of a bat. The bat belongs to the ghosts, according to the Kwakiutl of British Columbia, and hunters will not kill them for fear of becoming unlucky in the hunt. The Babylonians believed that ghosts in the form of bats flew through the evening, while a Finnish story pictures the soul as a bat. A great many of the haunted houses, castles, and caves of Europe and the

United States retain a strengthened reputation because of their high bat, hence ghost, populations.

In Ireland, the bat is a symbol of death, and one of its names is *bás dorca* (blind death). A Queensland variant of the Adam and Eve story says that when the first woman approached the forbidden sacred bat, it flew off, bringing death into the world. A bat coming into the house is an indicator of death in folk beliefs recorded in India, Alabama, and Salzburg.

Although the bat is almost always considered an evil omen, in China and Poland it is a good sign. The war god, Sepi Malosi, of Samoa, embodied in a large bat, flies before the war party when they are to be victorious, and towards the party if they are to meet defeat: a belief reminiscent of the eagle's ominousness in Rome.

It is considered lucky to catch a bat in one's hat, as the familiar popular rime beginning "Bat, bat, come under my hat," would indicate, but this good luck is canceled if the bat brings bedbugs with it. The association of bats with bedbugs sounds a bit improbable, but the belief that bats coming into a house means that the tenants will soon move out may be quite in harmony with it. On the other hand, in Sarajevo, bats coming into a house are a lucky sign, at variance with the common belief that bats bring ill luck or even death when they enter. To the Chinese, the bat signifies long life and happiness, and the symbol of the five bats indicates the five blessings: wealth, health, love of virtue, old age, and a natural death. Long life and excellent eyesight result from eating bat preparations. The Bantu of Natal will not touch the bat, and we find it spoken of in the Bible as one of the unclean birds and as an illustration of horrible things. The natives of Victoria will not eat the bat; and it is tabu as food on Strong Island in the Pacific. During the Middle Ages, it was thought that the bat's tongue and heart were poisons, and that bat's blood was a depilatory, or a preventive to the regrowth of plucked hair. In Macedonia, a bat's bone is carried as a charm, since the bat is considered there the luckiest of animals. A heart cut from a live bat and tied to the right wrist where it cannot be seen brings luck in gambling (Mississippi).

The bat's outstretched wings were used by Killer-of-Enemies, say the Lipan Apache, for the diaphragm of the horse when he made the first horse in the upper world. There is a common custom of nailing a bat up with wings outspread: as a charm to keep locusts away (Arabic), as an amulet (Pliny), as a form of the devil (Sicily). The Kwakiutl use a bat, or the intestines of a bat, as a charm in a child's cradle, believing that the child will then sleep all day like the bats. The Arabs of Iran think that a bat's eye will cure insomnia, but add that the bat should be spared because it is always reading the Koran's first *sura*. The same charm in Bohemia, a bat's eye, makes its carrier invisible. The wings of a bat placed on an anthill would prevent the ants from coming out, according to one medieval writer; the wings are an ingredient in certain gri-gris of more recent times.

Among the British some believe that the flight of the bat indicates fair weather; and in Kentucky, it is thought that a bat lighting on the head will cling there until it thunders. The clouds coming up from the mountains, after the rain, in keeping with an incident in a tale of the Southern Ute, are caused by Bat smoking his hidden tobacco.

The devil often takes the form of a bat, according to a widespread belief. In Sicily, where the bat is thought of as a form of the devil, they sing a song to the bat and either burn it to death or hang it up. In common with other "loathesome" creatures, the bat is thought to bring disease. The story is told of a French physician that he cured a patient suffering from melancholia by making a small incision and releasing a bat he had been holding in a bag. Somewhat along the same way of thought, bats (or frogs) are taken from the mouths of possessed persons in Nigeria. The Bongo of the Sudan call the bat by the same name they give to their witches or spirits, *bitabok*. Bats were thought to be the familiars of witches; the imps of one witch were seen to be intermediate between rats and bats by one 18th century observer. An Alabama Negro belief is that spirits can be spelled into a bat, and that they will then cease to be troublesome.

There is a belief of general European distribution that bats will become so entangled in women's hair that nothing but scissors and haircut can get them free, or, in Cornwall, a bat may so hold on to a person's face that a knife is needed to cut it off again. Almost as widespread is the belief that bats will eat bacon hung in the chimney flue.

The bat is specially invoked by the Lipan Apache to prevent the fall of a running horse, since the task of preventing such falls while the horse is running, as in a race, was given to Bat boy by Killer-of-Enemies when he made the first horse. Bat is a prominent character in Navaho ceremonials.

Chamalkan, the bat, is the chief god of the Cakchiquel Indians of the Pacific coast of Guatemala. The Mayan bat god was Camazotz, who was much dreaded. Sepo Malosi and Taisumale are Samoan bat gods connected with war.

There are many folktales, fables, and myths in which the bat is a principal character: in the Philippines, Africa, North and South America; among the Arabs, Europeans, and Polynesians. The European fable of the bat who joined both sides in a war between the animals and the birds has been shown to be literary and not truly of folk making. But the Creek and the Cherokee have a story in which bat is refused by both sides as being neither animal nor bird, but when tolerated by the animals (he has teeth) he wins the game for them. From a Philippine tale: the bat is the only survivor of the many creatures that went into the composition of the one man living; he flew away and became the ancestor of the bats. In two humorous Bulu stories, bat becomes the strongest of all the animals by getting into champion elephant's ear, flapping his wings, and making the elephant so dizzy that he falls down; and bat gets all the honey by waiting until the animals cut down a honey tree, then crawling into a hollow tree, flapping his wings, and scaring the group away. Och-do-ah, an evil spirit in bat form, who poisoned the spring he guarded from noon to dawn, is prominent in the legend of the origin of the death dance of the New York State Iroquois. Among the Plains, Plateau, and Southwestern Indians of the United States, Bat, sometimes as Old Woman Bat, is the animal rescuer who helps the hero stranded on the high rock or tree to get to the ground in the basket held by a strap of one thread of a spider's web. Another cycle of the Plains and Southwest pictures bat as a trickster-hunter whose two wives discover that he is bringing back parts

of himself as food. By a trick they see him, his teeth and pus-filled eyes, and run away. He spies them at a dance, there is a fight, and Bat is badly hurt. The story, with elaborations or omissions, is found among the Ute, Shoshone, Yavapai, Paiute, and other tribes of the region. See VAMPIRE.

Battle of Mag Tured or Moytura The most important story in the Old Irish Mythological Cycle: story of the victory of the Tuatha Dé Danann over the Fomorians. According to earliest accounts there was but one battle of Mag Tured in which the Tuatha Dé Danann overthrew both the Firbolgs and the Fomorians. Later narratives report two battles: the first in what is now county Mayo on the west coast of Connacht against the Firbolgs, the second seven years later in Sligo against the Fomorians.

When the Tuatha Dé Danann first arrived in Ireland on May 1 the first thing they did to make sure of victory was to burn their boats "in order that they themselves should not have them to flee therein from Ireland." When they demanded the kingship from the Firbolgs, they were a long time fighting that battle of Mag Tured, but they won at last and the Firbolgs were slain, 1100 of them, and lay on the plain from Mag Tured to the shore. A few survivors fled to islands in the sea: Aran, Islay, Mann, and Rathlin.

In that battle Nuada, king of the Tuatha Dé, had one arm cut off at the shoulder. A wonderful silver arm was made for him by the physician Diancécht and Credne, the brazier, which was a living arm with movement in every finger. But he could not be king with only one true arm, and the kingship was given to Bres, son of the Fomorian king, Elatha, and a woman of themselves. The minute Bres was king he laid tribute on Ireland and put menial tasks on the champions. Ogma had to carry firewood, for instance, and Dagda was set to digging ditches. The severe exactions and inhospitality of Bres caused great discontent among the Tuatha Dé Danann. When Cairbre, the poet, came to Bres's house and was given a small dark hut without fire or bed and three dry cakes on a small dish, he was not thankful and put a satire on Bres that caused his overthrow.

In seven years the chiefs asked back the kingdom from Bres. He gave it, but went at once to the Fomorians to ask their king, his father, for an army.

"What is the need?" said Elatha.

"My own injustice is the cause," said Bres. "I took their jewels and their food, and now I need an army to take back the kingdom."

"You should not gain it," said the father, "because of the injustice." But he sent Bres on to Balor and to Indech and these mustered a fearful army among the Fomorians to fall upon Ireland.

The second battle of Mag Tured was fought farther to the north in Connacht, in what is now county Sligo, on Samain (Nov. 1). Among the kings and chiefs of the Fomorians were Balor and Bres and Elatha, father of Bres, Goll and Irgoll Loscennlomm, Indech, son of the king, and Octriallach, son of Indech. It was a bad battle. Lúg was in front heartening the Tuatha Dé. The slaughter was terrible and dead heroes floated in the river Unseinn. Indech wounded Ogma. Balor killed Nuada, but Lúg killed Balor with a sling-stone into his one eye. It went through his head and killed three times nine men behind him. Seven hundred, seven score, and seven men of

the Fomorians were killed and counted, and as for the rest that were killed, it were easier to count the stars in the sky. And Lugh and Dagda and Ogma pursued the remnants back to their own place.

So the battle of Mag Tured was won. The dead were cleared from the ground. Badb and Morrigan proclaimed the battle and the victory of the Tuatha Dé Danann all over Ireland, to all its fairy hosts, and told the tale to the waters around Ireland and to all the river-mouths.

Battle of Otterburn A border ballad (Child #161) of the Scottish-English warfare of the 14th century. The battle took place on August 19, 1388, when an English force under Harry (Hotspur) and Ralph Percy attacked a Scottish force captained by the Earl of Douglas which was raiding Northumberland. Though outnumbered the Scots routed the English, captured both Percys, but lost the Douglas, who in some versions of the ballad was killed by Hotspur, in others by a boy. The extant tellings of the ballad are much later than the event, but are undoubtedly survivals of ballads composed about 1400. The main version given in Child has been told by an English apologist, and in that version the English among other things are outnumbered and keep the field after the battle. *The Hunting of the Cheviot* probably tells the story of the same battle.

Battle of the Trees *Cád Goddeu*: a battle of Brythonic mythology fought by Arawn against Amaethon, because of the white roebuck, the whelp, and the lapwing which Amaethon had taken out of Annwn. The *Triads* describe it as one of the "three frivolous battles" of Britain. The *Book of Taliesin* contains the long, disorganized poem, *Cád Goddeu*, which purposes to name the trees in the order of battle.

The battle is also called the Battle of Achren because there was a woman of that name in the battle on the side of Amaethon. Bran fought on the side of Arawn, and no one could overcome Bran without guessing his name; and the same thing was true of Achren. Gwydion, fighting on the side of his brother Amaethon, guessed Bran's name from the alder twigs he carried, and the victory went to Amaethon.

The usual interpretation of the Battle of the Trees is that Gwydion turned the trees into warriors. "Warriors were dismayed/ At renewal of conflicts/ Such as Gwydion made. . . . The alders in the front line/ Began the affray/ Willow and rowan tree . . ." are named next, then holly, oak, gorse, ivy, hazel, fir, "cruel the ash tree," birch, heath, "the long-enduring poplar," and elm. "Strong chieftains were the blackthorn." Whitethorn, broom (anciently used for staves of spears), furze, yew, and elder are also mentioned. The "courtly pine," being "inexperienced in warfare," was not in the battle.

Robert Graves in the *White Goddess* (New York, 1948) has undertaken to sort out and rearrange this long and disorganized and deliberately garbled poem, the *Cád Goddeu*, into a sequence which reveals its ancient meaning. He agrees with the assumption of the Rev. Edward Davies, stated in his *Celtic Researches*, that the Battle of the Trees was not a battle of warriors but a battle of letters of the learned. Graves ties up the Battle of the Trees with all the symbolism of the ancient Celtic Tree Alphabet and the mysteries of the druids (*derwydd* means oak-seer), and seeks to lay bare a complex magic centuries-old and centuries-hidden.

Batu Herem In the belief of the Menek Kaïen and Kintak Bong (Malay peninsula), the stone pillar which supports the sky. Part of the pillar (the Lambong) projects above the sky. This is loose and balanced at an angle on the lower part. Four cords run from this part of the pillar to the four quarters of the world and are weighted with stones which hang below the earth's surface. The Batu Herem is said to stand in Kedah which is therefore the center of the earth's surface.

bataque A native Brazilian courtship dance (of African origin) imported via Portugal to Spain in the 18th century. Some writers on the dance do not differentiate it from the lundu. It is described as originally an impassioned dance accompanied by finger-snaps, the girl fluttering on her toes, her partner circling around her with a winding and twisting pattern until the final embrace. It was popular among all classes, including Negroes and mulattoes. By the 20th century it had become modified into a ballroom dance. [CPK]

Bau A principal Sumerian goddess of fertility; the Great Mother; consort of Ningirsu, and with him chief deity of the city of Lagash. The Festival of Bau opened the new year in calendars preceding and contemporary with Sargon's era. As the creatrix she is identified with Gula, the Healer, and with Ma or the serpent goddess Nintu. She seems to be the beneficent aspect of Tiamat, the dragon. Later Bau was absorbed into the personality of the Semitic Ishtar. The Phoenician Baau, mother of the first man, may be a translated form.

Baubo In the Orphic tradition of Greek religion, one of the daughters of Celeus of Eleusis (elsewhere she is called Iambe), who by a jest and by obscene gestures made the grieving Demeter smile. The jesting and the gestures formed part of the Eleusinian rites, and probably the story was invented to explain these after the fact. Baubo is also considered by some the nurse of Demeter, or the nurse of Iacchus who in one of the common versions of the story himself made the gestures at Demeter's sorrow.

bay tree The Grecian laurel (*Laurus nobilis*). To the herbalists the bay was an herb of the sun, under the celestial sign of Leo, and a protection against witches, the devil, thunder and lightning. Its root was used to open obstructions of the liver, spleen, and other inward parts, while the berries were effective against the poison of venomous creatures and the pestilence and were an aid in treating consumption and coughs. According to Albertus Magnus a wolf's tooth wrapped in a bay leaf gathered in August will prevent anyone from speaking an angry word to the wearer. The Greeks made the bay sacred to Apollo who once loved Daphne the daughter of the river god, Peneus. She fled from the god and sought the protection of her father who changed her into a bay tree. Thenceforth Apollo wore bay leaves and a garland or crown of the leaves became the award for victory or excellence. The Romans believed also that a bay tree was never struck by lightning. The withering of a bay was an omen of death.

For pleasant dreams put bay leaves under your pillow. If burning bay leaves crack noisily, good luck will come; it is a bad sign for them to burn without snapping. In Britain the bay was long regarded as a symbol of resurrection, because a withered bay tree will revive from the roots.

Bead-Spitter and Thrown-Away A Creek Indian story. Two young women went in search of Bead-Spitter of whom they had heard, because they wanted some beads. They met up with Rabbit, who claimed to be Bead-Spitter. He tricked them into staying all night, raped one of them, and provided some beads. Upon discovering that the beads were stolen, however, the two girls traveled on and arrived at the house of Turkey-Killer. He was the one. He tested the chastity of the two with a sieve: water ran through the sieve of the one who had slept with Rabbit; the sieve of the other not only held water, but when she was told to sift, the water came through as beads. This one Turkey-Killer married.

One day in his absence the wife was devoured by a monster, who, however, left her abdomen in the house. Turkey-Killer opened it, found a living child inside, threw the afterbirth in the bushes, and reared his son as well as he was able.

Then follows the story of the little wild brother (Thrown-Away), who rose from the afterbirth in the bushes, how he was captured, taken into the house to be reared with his brother, and the sequence of disobediences, adventures, and escapes the two participated in until their mischief-making compelled the father to try to get rid of them. The brothers enlisted the help of various birds as warners of the father's approach and finally killed their father with a horde of bees and wasps. Then with an arrow they rubbed the dead man's buttocks and he flew off in the shape of a crow. "We must be bad boys," the two said and decided to separate. One went east and one west. There are also Alabama and Koasati versions of this story. Another Koasati story (*The Origin of Crow*) belongs to the group, but emphasizes not the miraculous saving of the live baby from the dead mother's womb and the afterbirth-as-twin idea, but only the disobedience of the two boys in spying on their father's activities, his turning against them, the killing by bees, and their transformation of him into Crow.

Bead-Spitter plays no spectacular bead-spitting role in any of these Muskogean tales. Hearsay about him is merely the starting point for a series of adventures of the two girls in search of him, or of the two boys born of one of them. But the whole bead-spitting idea is so common among certain North American Indians (the Algonquians, Iroquois, and Muskogean especially) that their bead-spitters should undoubtedly be numbered among the remarkable spitters of world folklore. Other well-known folk concepts and motifs in this story are dipping water with a sieve as a chastity test, a typical tar-baby trap in one of the brothers' escapades, enemy killed by bees, and the afterbirth as twin.

Bean-curd Gods In Chinese folk belief, three gods invoked by the bean-curd makers and sellers. The chief of these is Huai Nan Tzu because he invented the dish. The other two are Chiao Kuan, and Kuan Yü, the great war god who was a bean-curd seller in his youth.

bean dance An agricultural dance addressed to the spirit of the life-sustaining bean, with similar objectives as the corn dance, but of lesser importance. The Hopi Indian bean-sprouting rite, or *powamu*, is also a puberty rite. The Fox Indian bean dance is a contra for men and women who cross and recross. The Iroquois bean dance, *degondaneshonta*, or hand-in-hand dance, is a

slow processional ending with a fast trotting dance or *ga'dáshot*. The Iroquois also celebrate a one-day Green Bean Festival in August, with a typical succession of dances: among the Seneca of Tonawanda reservation, for instance, a women's dance, feather dance, *ga'dáshot*, hand-in-hand, and women's dance—a succession common to other festivals which supplicate and give thanks for crops. [GPK]

beans Beans are all colors and most shapes, according to Josh Billings, who was also impressed with the fact that a quart of them "biled two hours" come out a gallon and a half. They are at least as old as Esau, Josh adds, and "there ain't but phew things that can beat a bean climbing a pole."

Beans, of which there are 150 species and unnumbered varieties in the world, play a prominent part in the ritual and folklore of the world. In the ancient Aryan religion they held equal place with honey as food for the dead. Beans were used as ballots by the early Greeks and Romans: white beans signifying yes, black beans, no. The Romans had a festival on June 1 called the Bean Calends because at that time they offered beans to the dead. The Greek bean tabus, as articulated by the Orphics, Pythagoreans, and by Empedocles, probably stem from the doctrine of the immortality and transmigration of the soul through its long discipline of human, animal, and plant existence. A 4th century B.C. writer, however, testifies that Pythagoras himself observed no interdict on beans, but esteemed them highly for their laxative effect. Beans were on the list of those things so ritually sacred that they could not be touched or even named by the Roman *flamen Dialis*. In the old Roman midnight observance that closed the three-day Lemuria (annual entertainment of the dead) the head of the house walked barefoot through all the rooms throwing black beans behind him and saying nine times, "These I give and with these I redeem myself and my family." The ghosts followed close behind him, picked up the beans, and departed, not to return until their appointed time the following year. This ceremony greatly resembles the Japanese New Year's Eve ceremony for driving out demons. The head of the household puts on his richest garments and goes through all the rooms at midnight scattering roasted beans and saying "Out—demons! In—luck!" The association of beans with the dead or with the powers of the afterworld prevails in many ancient and contemporary societies.

The Seneca Indians believe that beans are the special gift of the creator to man and are under the guardianship of one of the De-o-ha-ko, the three daughters of the great Earth Mother. Among the pueblo peoples beans play an important part in the kachina rituals. Kachina initiations follow the color-order of the beans cooked for the kachinas by the families of the initiates. In the ceremony of Whipping the Children the little boys are whipped in the order that the beans have been cooked in their homes: the little boy with the yellow beans gets whipped first, etc. Beans are of such importance to the Hopis, both as foodstuff and symbol, that they speak of their great Powamu ceremony as the Bean Festival when speaking to outsiders. They plant beans in the kivas in preparation for the Powamu. If the beans grow high, it is a good omen; if they break before the night on which they are

to be cut, a very bad omen, and the kiva members are whipped by the Whipper for allowing this to happen. This February bean-planting in the kivas is a kind of compulsive magic that influences the summer crop. Every man must go into the kiva in preparation for the Powamu, and must sit up all night. If he falls asleep he is whipped, because his sleep will retard the growth of the beans. At Walpi beans are included with other seeds in the make-up of the Corn Spirit fetish. At Tewa meal ground from a small white bean is used as medicine for neuralgia. At Zufi a bean is given to a woman in childbirth to swallow, to hasten delivery, because "it slips down quickly."

The Kariaks of the Egyptian Sudan twice a year honor with a meal of beans the wagtail and the snake, in whom they believe dwells the spirit of the grandmother or Mother of Food.

Folktale is full of magic beans: speaking beans which reprove wrong-doers or save fugitives by speaking in their stead, beans that laugh till they split, thus acquiring their characteristic black stripes (very widespread), and the magic beans given to young boys that grow into towering stalks to marvelous upper worlds.

Half a white bean is one of the ingredients of certain New Orleans voodoo charms. Of unidentified but probably European origin are a number of bean beliefs and saws: It is good luck to plant beans on Good Friday. Beans should be planted in the light of the moon. If you dream of beans you have a rich and cruel unknown enemy. If you dream of beans you will have a quarrel. Beans cause bad dreams, and therefore presage misfortune.

bear Early explorers' and travelers' tales about bears of the New World are as tall and fabulous as any of the bear myths or folktales. The writings of various early voyagers maintain that bear cubs are born as unformed shapeless lumps which the mother licks into shape, that bears suck their paws for nourishment while hibernating, and sing *h-m-m-m-m* over the delicacy, thus betraying their hide-outs to hunters. John Bartram, honest Quaker, explains that when a bear catches a cow, he punctures the hide with his tooth, and blows into the hole until the cow swells and dies.

Hunters, woodsmen, and frontier settlers add their marvels to the bear stories. A fisherman in the Maine woods peeked through a knothole and watched a big bear steal his molasses from the cabin shelf, then saw him catch twelve trout and leave six in payment—and the woman who went to milk the cow in the dark and milked a she-bear instead (the woman's starving baby liked the milk)—and the village strong man walking home through the woods in the dark, full of joy and other spirits, "rassled with a big fellow in a fur coat" because he wouldn't get out of the road.

Louisiana Negroes say to dream of fighting a bear portends persecutions; to dream of a running bear means happiness. Ghostly bears have been seen by Georgia Negroes. In Maine when a dog sucked his paws it was said that he had a streak of bear in him. New Brunswick Indians held that a wounded bear would hasten to a boggy place and plug his wound with moss.

If bears hibernate early, it portends a hard winter. February 2 is the day for the bear's reemergence; if he comes out of his den and sees his shadow, he will go back to sleep for six more weeks. This weather portent

has been transferred from the bear to the groundhog generally throughout the United States. Years ago in Germany bear's gall applied to an aching tooth was said to cure it. If you meet a bear in the woods fall down and play dead and he will not bother you (see BEAR WHISPERED IN MAN'S EAR). In India bears are believed to be powerful against diseases; children are given a ride on a bear's back to ward off disease, or sometimes one hair from a bear is hung as an amulet around their necks. For why the bear has no tail or a short tail, see BEAR FISHES THROUGH ICE WITH TAIL.

In mythology, folktale, and folk belief the bear figures as god, ancestor, totem, sacred animal, dying god (in the role of food-giver), as guardian spirit, as bear lover, wife, husband, child, as tutelary bestower of medicines and as a curing supernatural spirit, soul-animal, and separable soul.

 The bear is a sacred animal among many of the Finno-Ugric peoples. Among the Ob-Ugrian he is the son of *Num-torem*, god of heaven. The ceremonies performed for hunting, slaughtering, and eating the sacred animal are very complicated, because they have to do with the sacrificing of a god. The bear's bones are kept unbroken, and are buried in the same position as in the living animal so that the slain bear may come to life again. The skull of the bear is hung on a tree or a stake. (Karjalainen in *FFC* 63, p. 193-235). See LEIB-OLMAL. [JB]

 Peculiarly respected, perhaps because of its resemblance to human beings, the bear enters into many North American Indian myths, ceremonies, and beliefs. The tales of *Bear-Woman* and *Deer-Woman* or *Bear-Woman and the Fawns*, and of *Bear-Woman (Wife or Paramour)*, are widely known. In several California Indian tribes shamans impersonated bears, or were transformed into bears according to popular belief. Bear was also considered a powerful spirit helper from whom vision seekers obtained supernatural power. Among all circumpolar peoples special rites are undertaken when a bear is killed; a speech of apology is made to the dead bear, who is often addressed as grandfather, and before the flesh is eaten the body, head, or hide is laid out, decorated with beads and cloth; special attention is given to the disposal of the bones. Some of these observances have diffused as far south as the Central Woodlands and Northeastern Algonquians of the United States. [ewv]

beard Sharing with hair much reverential attention, the beard has received plenty of its own. Through many years and in widely separated tribes it has been the sign and symbol of many attributes, including not only the obvious ones of masculinity and strength but also the rather illogically inferred qualities of wisdom, dignity, sanctity, responsibility, nobility, and royalty.

Races of men naturally beardless, like the Mongolians and American Indians, were sometimes erroneously deemed effeminate by their bearded neighbors. According to Herodotus (i, 105) the ancient Greeks decided the beardless Scythian men must be women, suffering this humiliating condition as a punishment by an avenging deity for having plundered the temple of Aphrodite. The Emperor Julian in the introductory paragraphs of his celebrated satire *Misopogon* (Beard-Hater) written in Antioch during the winter of 361-362 taunted the Antiochians about the smooth chins

which "so slightly revealed and barely indicated" their manhood. In some Eastern countries a smooth face is deemed to indicate effeminacy; consequently the clergy of the churches in those parts have found it advisable not to shave. By the same token missionaries from Western lands where beards are forbidden to the clergy are, by a special dispensation, permitted to wear them in the East.

Erasmus in his *Adagia* (1523), noting that several classic writers had connected beards with wisdom, such as Lucian's mention of the "learned beard," explains that "As the beard is not completely formed until the age of manhood, it has always been considered an emblem of wisdom." Rather more subtly the author of *Pappe With an Hatchet* wrote in the same century (1589), "Let me stroake my beard thrice like a Germin, before I speak a wise word."

Erasmus might have added that in classic times the philosophers of Greece had proudly worn the beard as a distinctive badge of their learned profession. Alexander the Great (356-323 B.C.) had introduced the custom of shaving, for the alleged reason of thus affording no opportunity for the enemy to seize his soldiers by their beards. The custom then spread from Macedonia throughout the whole Greek world. Aristotle, alone among the philosophers, conformed to his famous pupil's innovation. They retained their beards, rather defiantly, as a distinctive mark, and for centuries after the Macedonian period the Greek word *pogonotrophos*, "man with a beard," meant philosopher.

While the French have a proverb reminding their young men that "Il est temps d'être sage, quand on a la barbe au menton" (It is time to be wise now that you have a beard on your chin), they also have another "La barbe ne fait pas l'homme" (The beard does not make the man), recognizing that physical maturity does not necessarily bring sapience. Thomas D'Urfey was merely versifying the observations of several predecessors when he wrote (1690):

If Providence did beards devise,
To prove the wearers of them wise,
A fulsome Goat would then by Nature
Excel each other human creature.

In spite of ridicule the beard maintained its position as an emblem of dignity and any assault upon it was regarded as an indignity and highly dangerous, reflected in the common phrase "to beard the lion in his den," that is, to pull his beard. In April, 1587, Sir Francis Drake, returning from his bold raid on the Spanish fleet in the harbor of Cadiz, boasted, "I have singed the Spanish king's beard!" In ancient Israel, according to II *Samuel* x, 4 ff., compelling a man to cut off his beard was tantamount to insult and disgrace. The Israelite wore a full beard and it was never shaved except in case of leprosy (*Leviticus* xiv, 9) or for the deepest mourning (*Jeremiah* xli, 4-7). Even trimming the beard was forbidden (*Leviticus* xix, 27, xxi, 5). When the Ammonites shaved off one half of the beard of each of David's servants, "the men were greatly ashamed: and the king said, Tarry at Jericho until your beards be grown, and then return. And . . . the children of Ammon saw that they stank before David" (II *Samuel* x, 5-6). They knew that they had wounded the pride of the Israelites in the sorest spot, their

beards. The succeeding verses record the bloody vengeance which David wreaked on the Ammonites and their allies for this supreme indignity.

For among Orientals, especially those of certain Semitic strains, the beard is not only a sign of manhood, wisdom, and dignity: it is actually sacred to the point of sanctity. It was sacred enough to swear by, as the Semitic Moslems frequently did. Mohammed kept his beard unshorn and his followers kept theirs uncut in faithful discipleship. Indeed the most devout saved every hair that fell from their beards, adding it to the collection preserved in a small box they carried with them for the purpose. The box was buried with them. It was and still is considered, among orthodox Moslems, that to swear by the beard of the Prophet and their own is as if one swore in the presence of Allah himself.

Various reasons have been alleged for this over-anxiety to preserve the integrity of the beard. The *Jewish Encyclopedia* states that Jewish sages agree that the reason is "that God gave man a beard to distinguish him from woman and that it is therefore wrong to antagonize nature." A *Defence of the Beard*, published by James Ward (1769-1859), gave eighteen Scriptural "reasons why man was bound to grow a beard, unless he was indifferent to offending the Creator and good taste." Another (pseudonymous) defender of the beard called it a "Divinely provided chest protector."

These apologia are likely to be deemed more rationalizing when considered in the light of the well-known anthropological fact that all over the world, among not only primitive tribes but semicivilized as well, it is believed that black magic can work through and by the hair of the victim. Any part of the body, even a single captured hair, is vulnerable to sorcery. It embodies a part of the soul of the man from whose beard it came. He who possesses it has power over the original owner. Among some tribes a captive is kept prisoner by the simple process of the captor cutting off a lock of the captive's hair and keeping it safe. The prisoner is not bound or restrained in any other way.

Like the beard of Mohammed, that of a king was reckoned particularly sacred and important to the whole realm. When Philip V of Spain could not grow a beard, nor Louis XIII of France, their loyal subjects shaved off their own. And "there's such divinity doth hedge a king" that at one time it was thought that three hairs from a French king's beard secured under the wax seal on a document assured the fulfilment of the promises in it.

The ancient kings of Persia, Nineveh, Assyria, and Babylon are depicted with beards. For state occasions Egyptian kings, often naturally smooth-chinned, and at least one queen, Hatshepsut, put on false beards. So did the artists picture Abraham and Adam, and Zeus and Christ and Jehovah himself. It was part of their divinity, according to the belief of the artist. To draw God without a beard would still in some parts be deemed blatant blasphemy.

Legend and folklore have ever found beards of interest. A favorite tale in several versions tells of a sleeping king with a long beard in a mountain cavern. Frederick II (1194-1250), Holy Roman emperor, king of Sicily and Jerusalem, was for a long time after his death believed to be still alive, sitting in a cave in the Kyffhäuser mountain in Thuringia, asleep at a stone

table through which his beard had grown. When the fullness of time had come he would wake and restore the Golden Age of Peace to the Empire. The legend was later attached to his grandfather, Frederick I, probably because the elder king had a better beard for the story and was known by it as Frederick Barbarossa.

Even the nursery tales of children preserve the ancient idea of the oath upon the beard:

"Little pig, little pig, let me come in!"

"No, no, by the hair of my chinny, chin, chin!"

CHARLES FRANCIS POTTER

Bear Dance A mimetic dance impersonating the bear, usually performed for curative purposes: among the Indians of North America performed by ceremonial societies. Most realistic were the representations by the Plains-Cree in complete bearskins or masks. Despite the enactment of hunting, the dance was also a prayer for long life. In the Hesi cycle of California tribes the grizzly-bear impersonation is realistic in action and appearance (the Maidu *pamo-ng-kasi* and Miwok *uzu-mati*). Members of the Pawnee Bear Society received their curative powers from the sun and danced head down with their palms up to receive the rays. This gesture is also found in the Fox Grizzly-Bear Dance. Among the Fox and Iroquois, women participate as well as men, not in special costume but with a bearlike waddle. The former dance is performed in a straight line; the latter is a trotting progression in an anti-clockwise circle. The Cherokee *yona* progresses like the Iroquois *nyagwai'oeno*, with the same waddling shuffle and vocal antiphony, but it differs by winding into a spiral, and by adding clawing gestures, similar to those of the Fox Indian bear dancers, and by underscoring the antiphony with movement responses. Among the Cherokee this one-time ritual has become secularized to the point of obscene raillery; among the Iroquois and Fox it has preserved its curative aspects, though without healing tricks as in the Ponca *matcogahri*. Hunting functions have fallen by the way along with the loss of this pursuit for sustenance. The same is true among Plains tribes as the Ute, where the bear dance is an annual huge social celebration, with vague reference to the animal. [GPK]

bear fishes through ice with tail A general and very widespread European folktale motif (A2216.1; Type 2) explaining why the bear has no tail (or a short tail). Bear originally had a long tail like the other animals. One winter day he was persuaded by Fox to fish through a hole in the ice with his tail. The tail froze fast in the ice; and when he was attacked and jumped up to escape, it broke off.

This one motif comprises one of the most famous animal stories in Europe, especially in the Baltic countries, so popular as to have migrated into Africa and the Americas, even into some regions where the bear is unknown. It is included in a cycle of animal tales gathered together in the Middle Ages into the famous *Roman de Renart*. Kaarle Krohn's study of these stories, *Bär und Fuchs* (1886), puts their probable origin in northern Germany and holds that they were then (1886) at least 1000 years old. He attributes the transference of the tail-in-the-ice experience from bear (illogically) to wolf to the influence of *Reynard the Fox* (a sophisticated and satirical usage of the original folk material) in which

wolf's wife is tricked by the fox into fishing with her tail through the ice, and is raped by the fox when she cannot pull free.

There are three known African versions of this story and 13 North American Indian tellings. In the African version the tale adapts itself to an iceless portion of the world in that Fox fools Bear merely into using his tail to fish with, and it is bitten off. The story turns up among southern United States Negroes with Rabbit having his tail snapped off through the ice the same way.

Bear Foster Parent Title of a North American Indian myth very widespread among tribes of the Northeast Woodlands area, and known also among the Kutenai Indians of Montana and British Columbia. A lost child is discovered in the woods by a she-bear, adopted and reared with the cubs, taught to eat bear food, and taken into hibernation in the cave when cold weather comes.

One night the old bear wakes up and sings, "Come; the people wish us to help them." This happens at the time the Indians are smoking their pipes and praying for food and well-being. So the she-bear and the cubs leave the cave. When they return they bear arm-loads of pipestems, each representing a prayer. The old bear examines each stem: the true prayers are put in one pile, to be granted; the pipestems of those who mocked the bears are put in another pile. The names of these people are remembered, to be terrified by the bears in the Summer. In the Spring the bears and the boy come out of the cave and wander in warm places until the time comes again for the long winter sleep in the cave.

When the Indians again begin to perform the Bear Ceremony, the old bear hears them, and this time gives the young boy the power also to hear his people singing and dancing. Again the bears go forth and bring back the pipestems, and this time the boy too is taught to "read" them. In the Spring when the bears again emerge from the cave, the boy is sent back to his own people, with messages from the bears to pray only in earnest. The boy's father, who had thought his child was dead, receives him with joy. The boy tells the people how the bears can hear the prayers, can tell the difference between the true and insincere petitions, and "feel like" helping only persons of integrity.

Bear medicine The curing power of the bear: a concept of certain Pueblo and other North American Indian religions. Bear is the most powerful patron of Keresan, Tewan, and Zuñi curing societies. Shamans "call the bear" to come and attend the curing rituals, and Bear comes. When the shaman pulls on the bear-paws and impersonates the bear, he is Bear, and then possesses the curing power of Bear. He can transform himself into a real bear, just as bears can transform themselves into men. When he dies a shaman goes to live with the bears in the spirit world. Bear gave to mankind a particularly potent medicine, the aster root. It is named for Bear (bear root, bear medicine) and is regarded almost as a cure-all. During a curing ceremony the shaman chews the bear root, which induces in him a trance-like condition during which he can "see" the witch who has caused the illness of his patient.

All members of the Chippewa Indian Midewiwin (curing society) are said to "follow the bear path;" i.e. they use the wonderful medicines revealed to them by

the bear. The Sioux also value especially the medicines given to mankind by the bear. They regard him as the chief of all healing animals, partly because his claws are so well adapted to digging roots, partly because benevolence from an animal usually considered ill-tempered takes on particular significance. See *ANIMAL CURERS*; *BEAST GODS*.

Bear's Ear Title and hero of an Avar (Caucasian) story belonging to the ancient and widespread Eurasian Bear's Son cycle of folktales and also to the dragon-fight cycle. Bear's Ear is the typical Bear's Son by virtue of the bear's ears and superhuman strength inherited from his bear father. He saves the daughter of an underworld king from a water-hoarding dragon. One day out of every year a maiden is sacrificed to the dragon in return for a flow of waters on that day. Bear's Ear kills the monster and is offered the maiden in marriage. But he refuses the reward, desiring more to return to the upper world. This is one of the tales in the vast dragon-fight cycle in which the hero does not marry the sacrificial maiden.

bearskin quiver comes to life The motif of a story in the Apache Indian Coyote cycle: told by the Chiricahua, Mescalero, Jicarilla, and White Mountain Apaches. In the Chiricahua version Coyote killed a bear, dried the hide, and was going to make a quiver of it. Someone came along and advised him not to do that or misfortune would befall him. But Coyote went ahead and made the quiver, slung it over his back, and went along, went along. He came to a place where there were many walnuts on the ground. He leaned the quiver against the tree and began to pick up the walnuts. The quiver began to shake; it came to life; it was a bear again. The bear chased Coyote.

Coyote ran and ran. He met Gopher. "Why are you running?" said Gopher. "Bear is after me." "Jump in," said Gopher. So Coyote hid in Gopher's cheek pouch. Bear came along. "What have you got in your mouth?" said Bear. "Teeth," said Gopher. But Bear gave him a good kick and Coyote tumbled out. Bear chased him. Coyote ran and ran, and at last got away.

This story is of special interest for its embodiment of the Chiricahua Apache awe of the bear. They will not eat bear meat, touch or use the hide for fear of being visited with grave and mysterious ills.

Bear's Son Generic term for and hero of a cycle of folktales (Type 301) very widespread in Europe and Asia. F. Panzer's *Studien zur germanischen Sagengeschichte* reports some 200 variants of the tale in 20 languages, from all over Europe and some regions in Asia. In the most primitive form of the story Bear's Son is: 1) a youth of superhuman strength, son of a bear who has stolen the youth's mother (F611.1.1), or 2) the human son of a woman (abducted by or married to a bear while pregnant by a human husband), born in the bear's cave and having acquired bear characteristics (B635.1). In these versions mother and son usually return to the woman's home and the child is adopted by the human father; the youth often avenges his mother by killing the bear. As told in Germany and Croatia, the child is stolen by a she-bear, and acquires bear-strength and bear-nature from being suckled by the bear. In all instances, however, the boy has bear

characteristics: bear's teeth, or ears, or is hairy. He always possesses the superhuman strength of the bear, and he always performs superhuman feats. He kills monsters; he slays a dragon, always rescuing either a maiden who is being sacrificed to it or a whole city from its depredations.

There are a number of North American Indian stories of the Bear's Son in which a woman wanders too far from a settlement, usually while picking berries, and is lost. She marries a bear in the forest and gives birth to either one or two bear cubs. These she transforms into human shape. Then follows the long sequence of their adventures in which human wit plus bear-strength carries all to success.

In most European tellings, the hero (often a youngest son) acquires before starting on his adventures some wonderful or miraculous weapon, adds to himself a group of extraordinary companions (F601 ff.) with whom he comes to and enters an empty house (G475.1). The owner arrives (a supernatural being of some sort—dwarf, giant, ogre, demon) who maltreats one by one the hero's companions. The hero himself then fights the monster, wounds it, follows it to the underworld (F102.1) (often underwater) by its trail of blood; there he kills it and either rescues a maiden or a princess from a dragon or wins great treasure (N773; R111). By some treachery or desertion on the part of the companions (K1931.2) he is long delayed from returning home. The story often ends with the companions returning home with a number of liberated maidens, and the hero arriving at the last minute to stop the marriage of the youngest one and marry her himself. (N681; L161). This, in outline the German folktale *The Gnome* (Grimm #91), is the typical Bear's Son story.

The superhuman deeds of Beowulf, especially his struggle with Grendel in the mead hall, the pursuit by the trail of blood to the undersea cave, the nine-day underwater battle with Grendel's dam, and the final slaying of the treasure-guarding fire-drake, have led many scholars (F. Panzer and others) to fit the Beowulf story into the Bear's Son pattern. Dr. Rhys Carpenter has done the same for the Odysseus legend in Chapter VII of his *Folktale, Fiction and Saga in the Homeric Epics*.

The frequency with which Bear's Son slays dragons associates, inevitably, the Bear's Son with the dragon-slaying cycle, especially in so far as the dragon slayer is of miraculous birth. In later fairy tale many heroes have been identified as Bear's Sons by transference: they perform deeds identified with Bear's Son deeds, or the story pattern follows, or almost follows, the Bear's Son formula. The actual bear origin of the hero is either forgotten, over a period of time and retellings which enhance the adventures *per se*, or as has been suggested by O. L. Olsen in his *Relation of the Hrolfs-saga Krake and Biarkarimur to Beowulf*, Chicago, 1916, sophisticated fairy tale has purposely substituted the dragon-slaying for the original (bear) patricide. Grimm's *The Gnome*, classified as belonging to the Bear's Son cycle, excellently illustrates the whole transmorphosis.

bear taken for a cat The motif (K1728; Type 1161) of a popular European folktale in which a troublesome ogre, bogle, etc., is gotten rid of by the bear of an itinerant bear trainer. The ogre (or bogle) always

returns, asking if the big cat is still there, and on being told yes, and that it has three kittens, gives up haunting that place forever. See *BOGLE IN THE MILL*.

Bear Went Over the Mountain An American humorous song about a bear who went to see what he could see and found nothing but the other side of the mountain. It is one of many texts set to an air dating from the time of the Crusades. See *MALBROUGH S'EN VA T'EN GUERRE*.

bear whispered in man's ear A general European folktale motif (J1488) found typically in *Aesop's fable of The Travelers and the Bear* or *The Bear in the Wood*. A traveler and his companion (or paid guide) met a bear in the forest. One of them was terrified and climbed a tree, regardless of what might happen to the other. The other traveler fell down, held his breath, and played dead. The bear approached, sniffed his face and ears, and walked away. When the one in the tree climbed down, he said, "What did the bear whisper to you?" "He said never trust a coward." This motif embodies the old belief that a bear will not touch a dead man, and that to lie still and play dead is a sure way to avoid being molested.

Bear Wife or Bear Woman Title of a number of North American Indian stories in which a man has a bear for a wife. These are known all over the continent, among the northeastern Algonquians, the Plains tribes, and the Carrier Indians of British Columbia. In a Fort Fraser Carrier Indian tale a young man hunting in the woods meets a young woman who turns out to be a black bear. He kills a grizzly for her who is an enemy to her people, and lives happily with her until salmon-fishing time. Then he takes his wife and returns to his own village. The Bear Wife refuses to help with the communal drying of fish and also refuses to gather berries. When the winter supply of food is all gone, however, she reveals a miraculous underground store of dried salmon and dried berries, so that no one in the village lacks for food all winter.

In the summer when all the families go to the fishing places; there the young husband chances to meet and flirt with a former sweetheart. The Bear Wife knows this and weeps all night. In the morning she and her child change into bears and go away. Sorrowfully the young man follows their tracks, looking for them, but they have disappeared. This story contains the typical disappearance of the offended supernatural wife (or husband).

Bear Woman Title of a North American Indian folktale known to the tribes of the North Pacific Coast, California, the Plateau, Plains, Central Woodlands, and the Southwest. In the typical *Bear Woman* stories a young woman commits adultery with a bear or has a bear lover. Her family discover this and kill the bear, whereupon the girl instantly changes into a bear and attacks the slayers of her lover. Her family (usually a little sister, a little brother, and a number of older brothers) escape by means of the magic obstacle flight. The angry Bear Woman follows them; they discover that she is invulnerable; the one vulnerable spot is revealed to them by a bird; one of the brothers shoots the bear, and she falls dead. In some versions the children are unwilling to return home because all their relatives are dead, so they decide to live in the sky. Thus they become the

Seven Stars (Ursa Major): the little brother is the pole star, the sister is nearest him, and the five brothers follow in order of age.

 On the North Pacific Coast the Bear-Woman is a young Indian woman who changes into a bear and has twin cubs. Argillite carvings of the Bear-Woman myth have been produced in recent times on the North Pacific Coast. For a description of these, and discussion of the myth, see Marius Barbeau, "Bear Mother" *JAF* 59, p. 231 ff. [EWV]

 The Chinese give a Bear Woman explanation for the non-Chinese Gold tribe custom (Lower Sungari) of always offering a girl in marriage first to a maternal uncle. The story is the usual one of a young girl abducted by a bear. The child born to them was a daughter. After a number of years the girl's brother discovered her whereabouts, killed the bear, took the woman and her young daughter back home, and married the daughter. Ever since then a marriageable girl is first offered to her maternal uncle. Only if he does not want her can she be married to anyone else. The Chinese say this is because only on the mother's side are the Gold people human; the ancestors of the fathers were bears. The Gold themselves deny this.

Bear-Woman and the Fawns Title of a very widespread California Indian story telling how two fawns escaped from Bear-Woman, who had killed their mother. The Lassik version is more or less representative. Grizzly Bear and Deer were the wives of Chickenhawk. One day by the river Grizzly Bear, pretending to delouse Deer, killed her instead and took the head home to roast. Deer's two children cried out when they recognized their mother's head roasting in the fire, but were told to go and play. As they went, the Deer-mother's hair cried out to them in warning that their lives were in danger. Deer's children and Bear's children were playing together, and the two fawns made a fire and smothered Bear's children with the smoke in a hollow log. They took the meat home and gave it to Bear-Woman. She cooked it and while she was eating it the two fawns taunted her with eating her own children, and ran off. Bear-Woman chased them. The fawns ran and ran; Bear-Woman was after them. They were almost caught. But when they came to a river old Grandfather Crane stretched out his neck and made a bridge for them to cross. The two deer children crossed over and were safe. When Bear-Woman came along and tried to cross over the crane bridge, old Grandfather Crane gave a twist to his neck; she fell off and was carried away by the river.

This story, very prominent among the California Indians, is known also with variations among certain Indians of the Plateau area and the North Pacific tribes. The Shoshoni of the Plains also have a version.

beast epic A cycle of tales having an animal, e.g. Reynard the Fox, as its central character. Compare ANIMAL TALES.

beast gods The animal curers, intercessors, guardians, and companions of Zuñi and other Pueblo Indian religion. Certain birds, in the role of messengers and scouts, are associated with them. They are also regarded as spirits, and they dwell "in the east" in Shipap, or (Zuñi) Shipapolima, the spirit land of the dead; all curing rituals are performed to the east. Specific ani-

imals are specifically associated with the six ritual directions, however, differing in the different pueblos: North, mountain lion, oriole; West, bear, bluebird, weasel; South, badger, wildcat, parrot; East, gray wolf, magpie; Zenith, eagle; Nadir, mole, gopher. See *ANIMAL CURERS*; *BADGER MEDICINE*; *BEAR MEDICINE*.

beast marriage A common motif of folktale and ballad found all over the world, in which a human being is married to a beast, in very primitive tales to an actual animal, in later elaborations to a human being doomed to exist in beast form until some woman will love him in the beast-shape. Often the human lover must also burn the sloughed skin of the animal spouse in order to clinch the disenchantment. The stories fall into certain types: those in which the bewitched lover cannot return to human form until some woman's devotion proves stronger than the spell; those in which the lover takes on animal form himself to go a-wooing; those in which a deity assumes animal form and carries off a human bride, and those in which some animal by union with a human being becomes the ancestor of a tribe. There are stories of marriage to a person in animal form, in which one or the other spouse is a beast by day and human by night, involving either a formula for disenchantment or tabus against discovery; and there are stories of marriages to animals in human form, involving tabus against naming or mentioning lest they vanish or depart. The list is endless: marriage to a god in bull form (Greek), to a human being in dog form (Chinese, North American Indian), to a deer (Irish, North American Indian), a seal (Celtic), snake or serpent (Hindu, Indochinese, Basuto, Kaffir, Zulu), fox (Indonesian, North American Indian, Chinese, Japanese), lion (Angolian), bee (Indonesian), crane (Japanese), elephant (Hottentot), vulture (South American Indian), fish or whale (North American Indian). The Eskimo story of Sedna who married a gull (or a dog) is very well known, and is closely related to the Dog Husband stories. The story of the two girls who wished for an eagle and a whale for husbands, got them, and had a hard time escaping is common among the Greenland, Labrador, and West Hudson Bay tribes.

The motif turns up in every country in Europe. Some scholars claim Indian origin for it; others hold that it is too widespread and too scattered for this theory to be reasonable. Mme. de Beaumont's *Beauty and the Beast* and Grimm's *Frog Prince* are famous European versions. A more modern treatment is Keats' *Lamia*. See *ANIMAL PARAMOUR*; *NAME TABU*; *SWAN MAIDEN*.

 Tales of beast marriages between men or women and animals are of frequent occurrence in North American Indian mythology. Some of the most widespread are the Fox-wife story of the Eskimo, the Piqued Buffalo Wife story of the Plains and Eastern Woodlands, Splinter-Foot-Girl of the Plains (in which the heroine marries a buffalo bull), Eagle and Whale Husband stories of the Eskimo, Snake Husband and Bear Husband tales of the Plains, Dog Husband of the North Pacific Coast, and Deer Wife of the Plateau. [EWV]

beating the bounds A ceremonial procession about the boundaries of the community with stops at the several landmarks. It was a spring festival, at Easter or on May Day, and in recent times combined religious ceremonies with feasting, drinking and merrymaking. At

the landmarks young people were ceremonially whipped "to help them remember" or thrown into the boundary streams for the same purpose. In Cork, Ireland, in the last century, the mayor in robes of ceremony threw a dart into the harbor. The place where it fell marked the limit of municipal authority. The custom is also known from ancient Greece and Rome and also in England, Russia, Norway, and elsewhere in Europe. Similar ceremonies which give people an excuse to get out of doors in the spring are known in most parts of the world. Phallic boundary-markers (the two-headed Janus), together with suggestions advanced by Granet in his studies of ancient China, lead to the possibility that this segment of the complex of spring festivals was at one time connected with fertility rites. Other names for the ceremony are "riding the marches," "riding the fringes," "common riding." [RDJ]

Beauty and the Beast Generic title of a world-wide beast-marriage story of which Mme. Leprince de Beaumont's version is the renowned example. *Beauty and the Beast* belongs to that cycle of beast-marriage stories in which the prince, magically transformed into beast or monster, can be delivered or unspelled only by the love and devotion of a woman.

The heroine is the youngest daughter of a merchant who has lost his fortune. Before setting out on a journey to retrieve his losses, the merchant asks each of his three daughters what he shall bring home. The two elder ask for sumptuous presents; Beauty asks for a rose. The merchant fails to regain his wealth, but on the way home picks a rose in the garden of a wonderful palace where he finds himself mysteriously entertained. The minute he plucks the rose the Beast appears, threatening him with death for the theft, unless he will send back one of his daughters in his stead. Beauty volunteers to go to the Beast. There in his palace, surrounded by luxury and kindness, she realizes that the hideous creature with whom she lives is of a generous and noble nature. Admiration for his character and pity for his plight gradually turn to genuine affection. A number of stock incidents follow: permission to go home to see her dying father, the visit overstayed beyond the promised moment, the mirror as life-token of the Beast which reveals that he is dying, and the magic journey back to the Beast's garden. There Beauty finds him almost dead, but her grief for him and her avowal of love suddenly unspell the terrible enchantment. The beautiful prince is thus liberated from his beast form, and Beauty becomes his queen. The good old father is benefited; the jealous sisters are punished.

There are Basque, Swiss, German, English, Italian, Portuguese, Lithuanian, Magyar, Indian, and Kaffir versions of this story. In the Basque story the beast is a huge serpent, his life-token a ring instead of a mirror. In the Lithuanian story the beast is a white wolf, in the Magyar version, a pig. Perrault's *Riquet à la Houppe* is almost this identical Beauty and the Beast story, but with the sophisticated, unfolkloristic moral attached. Grimm's *Frog Prince* (#1) and the British *The Well At the World's End* both follow the true Beauty and the Beast pattern of disenchantment through love and devotion, as does also the unique Kaffir tale in which the young girl consents to lick the crocodile's face and is rewarded by having a handsome prince slowly emerge.

The Scottish ballad *Kemp Owyne* (Child #34) elaborates the same theme in reverse: it is the lady who is transformed into a thing of horror and released by the kisses of her lover. Compare LOATHLY LADY.

Beaver Among several North Pacific Coast, Plateau, and Northern Athabaskan American Indian groups, Beaver is the companion of Porcupine, who tricks his friend and is in turn tricked. Tales of beaver-husband or beaver-wife are popular animal-marriage tales of the Ojibwa and other Central Algonquian Indians. [ewv]

Bédier, (Charles Marie) Joseph (1864–1938) French author and medievalist. He was appointed professor of medieval French language and literature at the Collège de France in 1893 and in the same year won his doctorate with *Les fabliaux*. This work constituted a strong refutation of Theodor Benfey's famous Indianist theory for the origin of the folktale. Bédier's attack did not at once wean away the Indianist disciples, but stimulated stricter scientific approach on the part of such scholars as G. Paris and E. Cosquin. His prose adaptation of *Roman de Tristan et Yseult* was published in 1900; a study, *La formation des légendes épiques*, in 1908; *Les chansons des croisades* in 1909; and a critical edition of *Chanson de Roland* in 1921. In *Les fabliaux* Bédier attacked the intuitive method of Benfey as falling short of ultimate analysis. He said merry tales, particularly, have such simple plots that comparison and analysis of great numbers of variants can have no worthwhile result. Bédier advocated the theory that medieval epic cycles found their development along the routes of pilgrimages.

beech (from Old English *bēce*, *bōc*, beech or book, from the fact that the early Saxons and other Teutonic peoples wrote their runes on thin beech boards.) The beech, like the ash, is instantly deadly to snakes when they touch its bark.

Jason's Argo was built largely of beech timber; Bacchus drank his wine from beechen bowls, and, according to Lucian, the oracles of Zeus at Dodona were delivered through the medium of the sacred beeches and oaks.

The herbalists held that the hard beech wood, if brought into the house, caused hard travail in childbirth and miserable deaths. The leaves, however, are cool, binding, and were applied to blisters or chewed for chapped lips and painful gums. The water found in the hollow places of decaying beeches will cure scurf, scab, and running tetters. The Catawba Indians make a beech tea from the bark to cure weak back. Mixed with lard the beech tea is used to relieve rheumatism.

bees The ancient belief that bees originate in the dead bodies of cattle (B713) springs from the fact that the skeleton cage of the ribs provides a good natural framework for a wild beehive. "The swarm of bees and honey in the carcass of the lion" (*Judges* xiv, 8) is a case in point, of which Samson made the riddle, "Out of the eater came forth meat, and out of the strong came forth sweetness," which the men of the city could not guess without help. In a German folktale bees were created to provide wax for church candles; in a Breton story they sprang from the tears shed by Christ on the Cross. In Egyptian mythology they came from the tears of the sun god, Râ. In South American Caingang Indian

myth they were given to man by their culture hero, Kayurukre.

A bee was the symbol of the Hindu gods Indra, Krishna, and Vishnu, who were called *Madhava*, the nectar-born. The bow-string of Kāma, the Indian god of love, was a string of bees. A bee was the symbol of Artemis at Ephesus; and Melissa (bee) was a title of the priestesses of Demeter, Persephone, and the Great Mother (perhaps Rhea). Bee stings have been regarded as medicinal through the ages. Sufferers from rheumatism, arthritis, and neuritis from early times used to visit beekeepers for treatment: two stings were given as a first dose; later a few more per visit until the patient reported some relief. This belief is more widespread today than ever. An extract from bee stings, called bee venom, was on sale in Europe before World War II, and is now available in the United States (see B. F. Beck, *Bee Venom Therapy*, New York, 1935).

Almost everywhere in Europe and quite generally in rural sections of the United States, people still *tell the Bees* when somebody dies in the house. If this is not done they will either leave or die or stop making honey. This is possibly a remnant of an old European belief that bees were messengers to the gods and notified them of mortal deaths. In Ireland not only are the bees told of a death in the family, but crepe is hung on the hive. The Irish tell their secrets to the bees; any new project is also told them in the hopes the bees will prosper it. Bees won't thrive if they are quarreled over. They must not be bought on a Friday. Some people say they must not be bought at all, but bartered for. This is especially true for the first swarm.

It is bad luck to have a swarm of bees come to you of themselves. Even to dream of a swarm lighting on a building portends misfortune. Mississippi Negroes say that to dream of bees in a swarm is a death omen; to dream of being stung means a friend will betray you. If you see them making honey in a dream, you are in for some money. From ancient Greece to modern New England a bee flying into the house means a stranger is coming. It is very lucky to have one fly in and then out; but if one dies in the house, that's bad luck. If you hold a bee in your hand, it won't sting you as long as you hold your breath. In New England and the Maritimes it is said that bees lay by unusually large stores of honey before a hard winter.

The bee in folktale plays the role of God's spy (A33); there are helpful bees (B482), and bees as familiars (G225.1). There are marriages to bees (B655.1), separable souls in bees (E715.3.1), reincarnations as bee (E616.1), and souls in the form of bee (E734.2). A bee identifies a lost princess by alighting on her (H162).

"The old wisdom of the bees"—"the secret knowledge of the bees"—"ask the wild bee for what the druids knew" are frequent phrases of Scottish Highland and island story (see Fiona Macleod, *Winged Destiny*, New York, 1910, p. 38 ff.) See ARISTÆUS; LEMMINKAINEN.

bees produced to rout enemies A motif found in the Koasati Indian *Story of Crow* and the Creek tale of *Bead-Spitter and Thrown-Away*, in which two young boys collect a great quantity of bees, wasps, and hornets and turn them loose upon the warriors whom their father has mustered to punish the pair for their disobediences. The warriors are stung to death.

The idea is far from being limited to North American

Indian folktale. A similar motif (B524.2.1) in which helpful bees sting an approaching army occurs in both Jewish and Japanese legend. The Irish St. Gobnait (6th century) went out to save her district from being invaded by a neighboring chief with a small hive of bees in her hand. The bees swarmed upon the invaders and blinded their eyes. The idea of routing enemies with bees also occurs in Danish, English, and German tales.

beetle Any insect of the order *Coleoptera*, having biting mouth parts and hard horny anterior wings serving as covers for the membranous posterior pair when at rest. The *Coleoptera* are the true beetles, and there are 250,000 known species in the world. Many insects resembling them are so designated, however: the cockroach is often called a "black beetle," for instance.

In general European and United States folk belief, beetles are both deaf and blind, and to kill one brings rain. It is lucky to turn one over on its feet that has fallen on its back. In the Palatinate it is said that this kind deed cures or prevents toothache. If a beetle flies through the house it is an omen of unexpected news. To hear the death-watch beetle (a small wood-boring beetle) in your house means a death in the family. United States southern Negroes say that when its ticking stops whoever is in sickbed will die. Southern Negroes also cure earache by taking the head off of a certain species of wood beetle and dropping into the ear the one drop of blood the insect exudes. Beetles are often included in Negro mojo hands for good luck. In Silesia it is believed that the first cockchafer of the season, caught and sewed up in a little cloth bag, is effective as an amulet against fever.

In Ireland the *darbhdaol* is a species of long black beetle often called the devil's coach horse. Some say that the devil in the form of *darbhdaol* eats the bodies of sinners, and the insect is therefore sometimes construed as the symbol of corruption. If you see one raise its tail it is putting a curse on you. If you accept money from the devil you will find a *darbhdaol* in your hand. Reapers sometimes enclose one in the handle of their tools to give them speed and skill in the work. The *druib* is a large chafer found in Irish bogs and dried pools; if a white or spotted cow happens to swallow one all her hair will fall off the white parts. The *druib* affects no other color.

A huge Beetle is the creator of the world in Lengua (South American Chaco Indian) mythology. From the grains of earth he had left over, Beetle then created man and woman. At first they were joined together, but Beetle separated them, as they are now. Among the modern Toba Indians black beetles are always *pa'yak*, i.e. supernatural spirits.

The Sia Indians of North America have a myth in which Utset, Mother of Indians, gave to Beetle (Ishits) a sack of stars to carry from the underworld to the world above. He made the journey with success, but had become so tired with his load that he bit a tiny hole in the sack to see what was in it. The stars flew out and scattered across the sky. When Utset came up with Beetle she made him blind forever for his disobedience. This is why the Sia say that Beetle has no eyes. There were a few stars left in the bag and these Utset arranged herself: seven in one place (for the Great Bear), three bright ones in a row (in Orion's belt), and seven others in a group (the Pleiades).

In Zuni Indian mythology it is told that when Coyote (culture hero) marked off certain strips of restricted land between the clans and villages, he buried in each strip a beetle and a poisonous spider, so that whoever disobeyed and tried to cultivate for himself the restricted land would go blind, like beetle, or die of poison. If a Zuni Indian is struck by lightning he is given a drink of rainwater from that very storm containing black beetle and suet. If he fails to drink it he will "dry up." Or he is given black beetle in a piece of bread. Among the Hopi Indians Beetle is a helpful war spirit; he covers up tracks. Beetles are also brewed in the emetic drink of the Snake war society. See COCKROACH; LADYBUG; SCARAB.

Befana or St. Befana, la Strega, or la Vecchia An ugly but good-natured old hag who leaves presents in the stockings of children on the eve of the Epiphany, or Twelfth Night, in parts of Italy and Sicily. In Rome and many other Italian cities and towns young and old assemble and make a great noise in her honor with trumpets, tambourines, drums, and tin horns. In other places singers and musicians serenade the houses and rag-doll effigies of Befana are displayed in the windows.

In Christian legend, when the three kings passed on their way to adore the Christ Child, they invited a certain old woman to accompany them, but she said she was too busy cleaning her house. Later, she attempted to follow, but became lost and never saw the Holy Child. Every year she comes looking for him. She visits the children while they sleep and fills their stockings, giving to the good candy and sweetmeats; stones and charcoal are left for the naughty ones.

The name Befana is said to be a corruption of Epiphany, although parts of the legend date from pre-Christian times. In addition to obvious Santa Claus and Ahasuerus analogies, the legend contains also some elements of the practice of expelling demons with noise. Compare BERCHTA; SAINT NICHOLAS.

Béfind In Celtic folklore and mythology, one of the three fairies who are present at the birth of every child, who predict its future and endow it with good or doubtful gifts: literally, white woman. They are cognate with the Roman Parcae, and in Brittany, as in ancient Rome, a table was spread for them in the birth-room. They are definitely Celtic survivals, however, survivals of ancient Celtic goddess triads, earth mothers or goddesses associated with fertility and love.

In Old Irish mythology, Béfind was specifically a woman of the side, married to a mortal, Idath, and mother of Fraech. She was sister to Bóann, queen of the side of all Ireland.

Beg The undersea afterworld of Papuan (New Guinea) mythology: a temporary abode for the soul on its way to the blissful final place named Boigu.

Bego Tanutanu Bego the Maker, the younger of two brothers of Mono-Alu (Melanesian) mythology, of whom the older is lazy. Bego shaped the landscape, made the food plants, and otherwise contributed to the life and culture of the Mono-Alu islanders. His wife impounded the sea, but when her grandsons spied on her, she released it, causing a flood. (See G. C. Wheeler, *Mono-Alu Folklore*, London, 1926.) [KL]

begyina ba (plural *begyina mma*) Literally, in Ashanti, a come-and-stay child: the child (born to parents all of whose former children have died) for whose survival special magical precautions are observed. The loss of all previous children is believed by the Ashantis to be caused by evil spirits, who must now either be outwitted or overcome if the next child is to live. Sometimes the begyina ba is given a deceptive name-suffix, usually a slave designation, to lead malicious spirits into believing that this one is not particularly desirable; or sometimes it is even tattooed with the markings of a slave class, for the same reason. Frequently, however, the begyina ba is dedicated to some specific god who is then obliged to protect it. Its hair is not cut short like other children's, but allowed to grow long, and all kinds of protective amulets, bells, etc., are fastened into it. Compare ABIKU; NAME TABU.

beheading bargain A motif (M221) in which a giant or other supernatural challenger bargains to allow himself to be beheaded tonight providing he be allowed to behead his opponent tomorrow night (or one year from tonight). Many a hero agrees to the bargain, beheads the challenger (who immediately resumes his head), and shirks presenting himself for decapitation at the appointed time. Only the bravest, truest, most honorable of heroes keep faith, the result always being, of course, that the challenger spares him because of his fearless honor. It usually follows also that the challenger has been in disguise, and reveals his true identity to proclaim the virtue of the hero. Probably the two most famous beheading bargains recorded are the one between Cuchulain and the bachlach and that between Gawain and the Green Knight, the former now considered the source of the latter. See BRICRIU'S FEAST.

behemoth A huge animal described in *Job* xl, 15, usually thought to be the hippopotamus but by some believed to be the elephant: the plural of *behemoth*, beast. According to early and medieval Jewish tradition, as the leviathan was king of the fishes and the ziz the greatest of the birds, so behemoth was the king of the animals. Two of the monsters were created (or only one, a male); however, since a thousand mountains' produce made but one day's food for behemoth (a gloss on *Ps.* i, 10), and since all the waters of Jordan served the monster for only one swallow, he was provided with no sexual desire lest he and his offspring devour the world; he was given a barren tract of land to live in. Behemoth and leviathan will be hunted by, or their fight will serve as a spectacle for, the blessed after the Messiah comes and their flesh will serve as a feast for the chosen at the great banquet. In Moslem tradition, Behemoth is a great fish upon which stood the bull supporting the ruby underlying the world. Compare HADHAYOSH.

bēisaē In Cambodian belief, the souls of those who have died a violent death. The bēisaē return from the hells (Buddhist) to demand food from the living. They take revenge on those who refuse to appease them by afflicting them with all kinds of evils. Food is left among the brushwood for them. Compare PRĀY.

Bel The Babylonian form of the title *baal*, lord or master; at first generally applicable to the gods of places, later an appellation of the principal gods, and finally the title, or the name, of the chief god—Enlil or Mar-

duk or Ashur. The Bel of the Old Testament was Marduk. Bel, the god of the earth, was a member of the supreme triad with Anu and Ea. As Bel, he brought on the flood, wishing to destroy the human race: Marduk is not mentioned in the Deluge story. The consort of Bel is Belit, the lady, a general title paralleling that of Bel.

bēla kampong An annual ceremony of the Malays of Endau, performed to keep the local spirits happy and to gain their aid in averting misfortune and disease. During the celebration a village is under a tabu. No strangers may enter it nor may the villagers leave, dig, made a loud noise, shoot animals, or pick coconuts.

Bele A Trinidad Negro social dance and its associated rites for the dead, wherein the ancestors are feted to assure that they will exercise a benevolent surveillance over their descendants. These dances have been held clandestinely in modern times because of official and clerical disapproval, and only upon the insistence of the ancestors, who manifest their desires in dreams, and their displeasure with the failure to hold this ceremony by harassing the family with ill health, or bad harvests, or loss of employment. [MJH]

Belet The Menek Kaien (Malay Peninsula) abode of the dead: an island to the northwest of the Malay Peninsula. A soul leaves the body through the big toe and journeys to the sea. After seven days, during which time the soul can revisit its old home, it is escorted (if good) by Mampes across Balan Bacham, the switchbacked bridge which spans the sea. When the soul arrives in Belet it sees the Mapik tree where it meets the souls of those who have died previously. These souls break the limbs of the newcomer and turn his pupils inwards, making him a kemoit or real ghost, after which he can wear the flowers of the Mapik tree and pluck its fruit. The Mapik tree bears all things desirable such as food. At its base are breasts from which the ghosts of little children get their milk.

The wicked are doomed to watch from another place the good enjoying the life in Belet. According to I. Evans the Menek Kaien and Kintak Bong are the only groups among the Semang who have any conception of an existence after death. Compare PULAU BAH.

Belial or Beliar One of the synonyms for Satan or one of the minor devils; principally, the Antichrist: as used in the Old Testament, a modifying genitive signifying worthlessness or recklessness, e.g. "sons of Belial" as in the story of the Benjamite war (*Judg.* xix). Hence, the underworld (Sheol) and the personification of wickedness. Belial may perhaps be a modification of the Babylonian Belili, a deity connected with the underworld in the Ishtar-Tammuz story.

Belit The feminine form of the Babylonian title Bel; hence, the lady, the mistress: an appellation of rank construed as the proper name of the consort of the chief god Bel (or Enlil, Marduk, or Ashur). Hence, Belit is identifiable with Ninlil. Belit was worshipped in Assyria both as the consort of Ashur and as the ancient goddess of Nippur.

bell A hollow vessel, usually of metal, sounded by being struck by a clapper suspended within or by a separate stick or hammer, and serving among almost all

peoples for thousands of years as amulet, fertility charm, summons to a god, prophetic voice, curative agent, or purely musical instrument.

The practice of wearing bells on the person is worldwide and originally had the same purpose everywhere—protection from evil spirits and from bodily harm. Bells of gold were prescribed by God for the hem of the high priest's garment in Israel (*Ex. xxviii, 35*). The sound was to protect him as he came and went from the holy place against the demons that frequent the threshold of sanctuaries. Siberian shamans wear bells for incantations and prophecies, and South American Indians protect themselves in the same way. In medieval Europe, warriors and joustors wore bells on their belts or hems in combat. In Ashanti, mothers tie iron rings and bells on the ankles of an ailing child or a child born after the death of several others to drive off the unfriendly spirits who cause sickness and death. (See BEGYINA BA.) These spirits are believed to dislike both iron and the tinkling of bells and can be lured out of the child's body with food while the amulets are put on. Yaqui Deer Dancers of Mexico also wear belts hung with bells. As the original purpose began to be forgotten in Europe, bells appeared on the dress of fops and on fools' motley.

Animal bells, though now largely thought of as utilitarian devices for finding strayed animals, were also first used to drive off harmful spirits. The most useful creatures of each region—goats, camels, elephants, donkeys, cows, horses, etc.—were guarded by neck bells or bell-strung trappings.

As fertility charms bells have been significant for many agricultural peoples. In China, bells were rung as a call for rain, the largest bell of the country serving for one occasion only—the emperor's prayer for rain. The decoration of the bell consisted of fertility symbols such as the sown field, nipples, and the number 9, identified with renewal. The Nilotic Bari people used bells to bring rain by filling the bowl of the bell with water and sprinkling the earth with it. In Europe, Tyrolean farmers insured a good harvest by ringing bells while circling their fields; and at Brunnen on Lake Lucerne, a Twelfth Night ceremony for ringing out witches also carried a potency for making a full fruit crop. Church bells were appealed to in some European countries at harvest time for the safe gathering of the crops.

Ceremonial bells have rung for religious rites of widely varying beliefs. A large bell from the Assyrian period, about 600 B.C., bears the symbols of the gods Ea, Nergal, and Ninurta. Chinese temple bells are sounded between verses of the Confucian hymn and are equated in a complete cosmological system of harmony with autumn, with the west, with dampness, and with metal. (The Babylonians also correlated pitch and season.) Peruvian aborigines used bells and jingles in addressing their gods. In Egypt, the feast of Osiris opened with bell-ringing, and in India, Java, etc., a hand bell decorated with Shiva's trident, Vishnu's eagle, and other religious symbols was used by Hindu priests during prayer. African Negro priests, as well as Haitian vodun hangers, invoke gods and loa with bells and dancing. Hand bells, considered effective for keeping away the evil ones, are beaten to accompany the Coptic chant. In the Mohammedan paradise, it is said, bells will hang on all the trees to make music for the blessed.

Since the 5th century bells have been associated with

sacred rites in Christian churches, and have often been inscribed with religious lines. The passing bell called the faithful to pray for the departing soul and warded off evil spirits who might pounce on the soul; the excommunication proceedings called for "bell, book, and candle," the bell tolling as if the sinner were dead; the "pardon bell" of pre-Reformation England rang before and after services; processions of the church were accompanied by bell-ringing to scare off demons, etc. Saints Patrick, Gall, and Dunstan are all linked with special bells.

Customs and legends surrounding Christian church bells are common to all Europe. Bells were publicly baptized, named, and dedicated to a saint in many communities, with sponsors, baptismal dress, gifts, and sprinkling of holy water. In Lithuania it was the belief that bells would not sound until baptized, that unbaptized bells would give trouble by falling from their steeples or other mischief. After baptism the bells would frighten away sorcerers, witches, and the Devil himself. The souls of the dead were supposed to rise to heaven on bell sounds.

Certain bells were thought to ring of their own accord on occasions of great import. An Aragonese legend tells of a bell in which one of Judas's thirty pieces of silver was cast, which sounded without human assistance before national calamities. The ballad of *Sir Hugh of Lincoln* embodies this belief, relating the unprompted tolling of the bells of Lincoln for his fate.

Bells which have sunk to the bottom of ponds or lakes or have been buried underground (of which every European country traditionally has examples) also ring at solemn times, such as midnight on Christmas Eve. Such bells were generally engulfed as a punishment for some human impiety. One Dutch bell was sunk after being stolen by the Devil.

Some of the self-ringing bells say actual words. Some gratefully sound the names of their donors. One in Denmark tells of its mate, sunk in the Schliemunde on its way to the bell tower. One rings out words of pity for a lad cruelly slain by the king.

Apart from ringing on their own initiative and talking, other activities and individual properties have been ascribed to bells. All church bells were believed in medieval Europe to make a pilgrimage to Rome to keep Good Friday, and the townspeople stayed indoors so as not to see their flight. No bells rang until they had returned to their steeples. If the local bell missed the excursion, bad luck, poor harvests, etc., might follow. Bells might grow indignant at insults or injuries and take revenge. One bell of singularly sweet tone was ordered by the king to be removed from Sens to Paris. It refused to ring in its new site in spite of all efforts, but on being returned at last to Sens, it burst into joyous sound in the cart that was hauling it. A bell in Zweibrücken was about to be destroyed in 1677 by invaders when it sweated blood.

For centuries all over Europe bells were rung to break the power of advancing thunderstorms, which were believed to be the work of evil spirits of the air. English church records show the payment of fees to bell-ringers for services during tempests, and many bells bear such inscriptions as "Fulgura frango, dissipato ventos," or "Lightning and thunder, I break asunder." The wicked spirits were shamed by the bell-ringing and fled. Norse

bells were also often marked with the bent cross, the hammer of Thor, the Thunderer.

It was church bells and hymn-singing, according to legend, that frightened the mountain dwarfs, giants, and trolls away from Sweden, Denmark, and Germany. A ferryman of Holstein got a hatful of gold for ferrying a boatload of emigrating dwarfs across a river when they couldn't endure the bells any longer.

Church bells also overcame witches and were regularly used to drive them out in certain especially witch-troubled seasons. The practice was about the same in various parts of Europe—Germany, France, Switzerland, etc.—whether the occasion was May Day, Twelfth Night, St. Agatha's Eve, or every Friday in March—all the people rang bells and beat pots and pans, the church bells rang, and fires or torches were lighted; with shouting and screaming the witches were routed. A similar custom also held on the coast of Guinea to expel ghosts and witches, and an equivalent ceremony took place when the Emperor Justin II sent ambassadors to the Turks. The shamans chased whatever powers of evil might be attending the meeting with bells and tambourines.

As a curative agent, bells have served in many ways. In time of pestilence they cleared the air of corruption, and were prescribed for that purpose by an English doctor in 1625. St. Mura's bell, in Ireland, could cure any ailment if liquid were drunk from it. An American Negro belief holds that a child can be cured of stuttering by drinking from a bell. In England it was thought that childbirth could be eased by tying the bell rope to the woman's girdle. One particular bell could cure insanity by being placed over the head of the afflicted person.

The prophetic implications of bell-ringing are usually for ill-luck. The Grimm collection has a tale of a household bell which rang to foretell a death in the family. American Negro stories connect bells with death or misfortune; even a ringing in the ear points to death from the direction of the noise.

The use of bells for warnings or summons is more modern, generally, than these other purposes, though the Greeks used their *koda* in this way in military groups; the Romans sounded the *tintinnabulum* for the hours of bathing and of business; and the curfew, signaling the hour for extinguishing fires and lights, was probably introduced into England by William the Conqueror. Bells have also rung for victory, to celebrate Christmas, to warn of the approach of a leper, etc. But for public announcements, heralds or criers were used earlier. Shop bells, now used to bring the proprietor out to his customers, originally guarded the entrance against threshold demons.

Much lore centers around the casting of bells and the mixture of metals required for good tone. Blood was sometimes used, probably deriving from sacrificial customs. For casting the Great Bell of China, it is traditional that the bell-maker's daughter, who had heard of the efficiency of maidens' blood in creating fine bells, threw herself into the metal to save her father from failure with his important commission. There are also many European stories of wicked bell-makers who stole the precious metal contributed for bells and substituted lead. They all met hard fates,

Purely as musical instruments, bells have been used chiefly in the Orient, but English bell-ringers have developed a music of their own, change-ringing, which consists of a progression through the tones of a set of bells. In the Javanese gamelan, the *trompong*, a set of metal bells arranged in scale in a frame, takes the leading melody. Military bands of the Chou dynasty in China used bells. Malayan and Indian musicians play on sets of resting bells (not suspended or swung in the hand, but set rim upwards on the floor) made of metal or porcelain and struck with a stick. This type of bell has also been used in China and Greece.

Classes of bells and bell-like instruments differing from the definition given here are as follows: *chimes*, sets of tuned bells; *carillons*, sets of bells mechanized with clock works, first made in Flanders in the 13th century; *jingles*, hollow metal balls containing loose beads, pebbles, etc., which are more like rattles. Gongs, which have a dead rim and sounding center, are struck plates, as distinguished from bells, with their sounding rim and dead center.

The origin of bells is not known and even the comparative age of various types is uncertain. Bells of shell, wood, etc., of certain primitive peoples may be imitative of the cast or shaped metal bells of other civilizations.

THERESA C. BRAKELEY

belladonna The deadly nightshade (*Atropa belladonna*), a European poisonous plant with reddish, bell-shaped flowers and shining black berries. The plant, according to Plutarch, is the one which produced fatal effects upon the Roman soldiers during their retreat from the Parthians under Mark Antony. Belladonna is used in small doses to allay pain and spasm and is smeared on the eyes to dilate the pupils during medical examinations.

The origin of its name, which is Italian for beautiful lady, is uncertain, but one explanation is its use as an eye beautifier, another that it was used by Leucota, the Italian, to poison beautiful women.

Belle Hélène A folk ballad of France telling the story of a dancing girl who was drowned. She was dancing on a bridge and taken by the water spirits. This ballad is of Scandinavian origin and has Icelandic, German, Lusatian, and Hungarian parallels. See BALLAD; FRENCH FOLKLORE.

Bellerophon or Bellerophontes In Greek legend, a Corinthian hero; son of Glaucus (or Poseidon) and Eurymede; grandson of Sisyphus; the master of Pegasus; the slayer of the Chimera; a local Corinthian demigod, perhaps originally identical with the Argive Perseus, perhaps not Greek in origin though adopted as early as the time of Homer. Bellerophon was first named Hipponous, but he slew either his brother or the Corinthian Bellerus and was forced to flee to Tiryns. There he lived for a time at the court of Proetus, king of Argos. Antea (or Sthenobia), the queen, attempted to seduce him and, when he refused her, accused him of making advances himself. Proetus dispatched Bellerophon to Iobates of Lycia, his father-in-law, with a tablet or letter containing secret instructions that Bellerophon was to be killed. Iobates, like Proetus, unwilling to slay a guest out of hand, sent Bellerophon against the Chimera. (See CHIMERA; PEGASUS.) This failing and Bellerophon returning alive, the hero was sent on expeditions against

the Solymi and then the Amazons; Bellerophon conquered in both. After slaying the pick of Iobates' warriors who lay in ambush for him, Bellerophon was accepted by Iobates as somewhat more than human, given the king's daughter (Philonoe, Anticlea, or Cassandra) for wife, and presented with a large part of the Lycian kingdom. Bellerophon accomplished his revenge on Antea by taking her for a ride on Pegasus and pitching her off the flying horse to her death. At last, however, his pride led to his downfall, probably when he attempted to fly to the gods on Pegasus. Zeus sent a gadfly to sting the horse and Bellerophon was thrown off to fall to earth, which left him blinded and crippled. The gods' vengeance reached Bellerophon's children, Isandrus, Laodamia, and Hippolochus, all of whom succumbed to an evil fate. Embittered by this turn of fortune, the hero wandered alone through the Aleian plain for the rest of his life, and came to an obscure death. A sanctuary of Bellerophon stood in a cypress grove near Corinth. Compare LETTER OF DEATH; POTIPHAR'S WIFE.

bellling the cat A folktale motif (J671.1) in which the mice take counsel together as to how they may get rid of the cat. A clever one among them points out that if a bell were tied to the cat's neck, they all would forever after be forewarned of her approach and whereabouts. A wonderful idea! But, as one grizzled and experienced old mouse adds, Who will put the bell on the cat? This is Æsop's fable (Jacobs #67) in toto, one of the few known to be of true folk origin, and occurring in the folklore of various peoples as far apart as the Estonians, Finns, Italians, and southern United States Negroes. How can mice rid themselves of cats? is also one of the traditional questions asked of travelers on specific quests to other worlds (H1292.10) and the answer is always, Tie a bell on its neck. Belling the cat has long since been synonymous with the proposal of some impossible remedy, or synonymous with the predicament of one who hesitates to risk his own life for the salvation of many.

Bellona (1) The Roman goddess of war; companion (either sister, wife, daughter, or nurse) of Mars. Bellona acted as Mars' charioteer, preparing and driving his chariot, and appearing herself in battle with disheveled hair, a bloody whip in one hand and a torch in the other, to spur the warriors on. She is equated with the Sabine war goddess Nerio. Her temple stood in the Campus Martius and there the senators received foreign ambassadors and Roman generals claiming victories. There too the fetiales declared war for the Roman people, throwing a spear over the pillar (*columna bellica*) before the temple, the precinct being considered foreign territory. Human sacrifices were offered only to her and to Mars.

(2) An Asiatic goddess of war, the Cappadocian Ma, perhaps identical with the Greek Enya of Pontus and Cappadocia, brought to Rome by Sulla to whom she appeared: often confused with the native Italic Bellona. Her priests, the Bellonarii, dressed completely in black, pierced their limbs and either drank the blood or sprinkled it on the assemblage. By confusion, this offering came to be made on March 24, the day of the original Bellona, and the day became known as the *dies sanguinis*. Her day originally was June 3.

Belly and the Members One of Æsop's fables (Jacobs #29). The Members of the Body once complained that they were tired of serving the Belly, who did no work. The Hands thenceforth refused to carry food to the Mouth; the Mouth refused to chew the food for the Belly; the Legs refused to carry the big fat Belly around. It was not long, however, before the Members began to weaken and fail without the sustaining nourishment the Belly provided. And they soon realized that all were mutually and essentially useful. This story belongs to a group of folktales embodying the motif (J461) known as the senseless debate of the mutually useful. The belly and the members (J461.1) is the generic classification for the various tales involving debate between various parts of the body, animal or human, found in Indian folktale, Jewish, Roman as well as Greek, and Italian popular tradition. There is an analogous Nigerian Bantu story.

belly dance A late development of the primitive abdominal dance, limited to movements of the *rectus abdominis*: known as *danse du ventre* in North Africa.

belomancy Divination by the use of arrows: an ancient method used by the Babylonians, Scythians, Slavs, Germans, Arabs, etc. Arrows bearing inscriptions were shot, the distance covered by the arrow determining which inscription was to be read. (Cf. *Ezek.* xxi, 21). One form was like astragalomancy, with lettered arrows. Another technique used three arrows, one marked yes, one no, and one blank. The Gold Coast ordeal with poisoned arrows is another type of belomancy. The casting of arrows in groups so that certain markings appeared face upwards—notches for example, or colored bands—is believed to have developed in course of time into divining sticks and thence into divining cards which were the forerunners of our playing cards.

Beltane (Irish *Bealtaine*) The Celtic May Day (May 1), and the great festival observed on that day; also, the word for the month of May. Beltane begins officially at moonrise on May Day Eve and marks the beginning of the third quarter or second half of the ancient Celtic year. It is believed to be a survival of an early pastoral festival accompanying the first turning of the herds out to wild pasture, all the ritual observances being intended to increase fertility (as also in the Midsummer, or St. John's Eve agricultural celebration). Witches and fairies are said to be abroad in great numbers. Frazer suggests that the prevalence of witches and fairies on Beltane Eve points to a very early female fertility cult. It is bad to be out late on May Eve; it is worse luck to sleep out; and it is said in Ireland yet that whoever is foolhardy enough to join a fairy dance on Beltane Eve will not be set free till Beltane next year. Beltane is still observed in Ireland, the Scottish Highlands, Wales, Brittany, and the Isle of Man, with more or less varying survivals of the ancient practices.

The Beltane rites were intended to increase fertility in the herds, fields, and homes. The one great ritual of the day was the building of the Beltane bonfire. It was kindled either by a spark from flint, or by friction; in fact the Irish term *teine éigin* (fire from rubbing sticks), is sometimes synonymous with the Beltane fire. The people used to dance sunwise around it (see DEISEAL); the cattle were driven through it, or between two fires, to protect them from murrain and other ills; the

people crept through it also, to prevent disease, to forestall bad and invite good luck, and to cure barrenness. Contact with the fire was interpreted as symbolic of contact with the life-giving sun. In the Isle of Man rowan branches or twigs were carried deiseal three times round the fire and then taken into the homes and hung over byre doors to avert evil from family and animals alike. In Ireland today the rowan branch is still hung over the house fire on May Day to preserve the fire itself from bewitchment (the house fire being symbolic of the luck of the house). *Idir dá teine lae Bealtaine*, between two Beltane fires, is an Irish saw today meaning "in a dilemma." In early Celtic times the druids kindled the Beltane fires with specific incantations. Later the Christian church took over the Beltane observances; a service was held in the church, followed by a procession to the fields or hills, where the priest kindled the fire.

In the Scottish Highlands the kindling of Beltane fires on the hills and the practice of "burning the witches" continued into the 18th century. The young men would take bits of the fire on their pitchforks and run through the fields yelling "Fire! Fire! Burn the witches!" The fire was scattered through the fields to increase fertility (which it did). The ritual drama of the combat between King Winter and Queen May is still enacted in some parts of the Isle of Man. In some rituals, however, a King and Queen May symbolize the male and female principles of productivity.

Beltane cakes Large round oatmeal or barley cakes made for the Beltane festival. They figure variously in the celebration, but are usually divided into portions, which are drawn by lot and eaten as part of the ritual. Whoever draws the "black bit" (a portion previously blackened with charcoal) is then the devoted person, the sacrificial victim. The sacrifice is now usually mimed by the victim's running or jumping through the fire three times; but the selecting of a victim for sacrifice is believed to be the original object of the Beltane cake and its division by lot.

In the Scottish Highlands the cakes were specially prepared, sprinkled with milk and eggs, and made with a pattern of raised (usually square) lumps or knobs. Each of these was dedicated to some elemental being or animal believed to be the preserver or destroyer of domestic animals. As the group faced the fire, each person broke off one of these knobs, flung it over his shoulder, saying (to the protective elements), "This I give to thee. Preserve my horses." "This I give to thee. Preserve my sheep."—or (to the predatory animals) "This I give to thee, O fox. Spare my lambs." "This I give to thee, O hooded crow. Spare my chicks."

Sometimes the Beltane cakes were rolled down hill (evidently in imitation of the sun's motion, whose continuance thus would be insured). If the cake broke it was a sign that the owner would die within the year; if it arrived whole it was a sign of good luck.

Beltane carline The Beltane hag or old woman: term applied to the person who gets the blackened fragment of the Beltane cake when the pieces are drawn by lot. This person is then said to be devoted or dedicated. The people mime throwing him into the Beltane fire; in some localities they even throw him on the ground and go through the play of quartering him. After he

has been through the fire, the people not only mention him as one dead, but for one year he is treated as if he were not living among them. The whole idea evidently stems from an ancient Celtic human-sacrifice ritual. The primitive victim, however, was a woman, as the epithet *carline* indicates, pointing perhaps to a primitive female fertility cult.

Benfey, Theodor (1809–1881) German Sanskrit scholar and philologist; born at Noerlen, Hanover, and studied at Göttingen, Munich, Frankfurt, and Heidelberg. From 1848 he was a professor at Göttingen, and from 1862 he occupied the chair of Sanskrit and comparative philology there, until the time of his death. Following early essays into the field of literature, he gave himself almost entirely to comparative philology, Sanskrit, and other Oriental languages, and to mythology. Benfey's principal contribution to comparative folklore was a translation of the *Panchatantra* (1859), in whose introductory volume he traces the course of the Indian stories in both Eastern and Western literatures. He was the propounder of the famous Indianist theory, postulating the Indian origin of folktales and their westward migration into Europe. This theory was accepted by folklore scholars until later scholarship pointed up the scientific invalidity of ascribing Indian origin to all tales. Benfey wrote a dictionary of Greek roots (1839–1842), a complete grammar of the Sanskrit language (1852), and a Sanskrit-English dictionary (1850).

Benten The only woman among the Seven Gods of Luck of Japanese mythology: patroness of music, eloquence, fine arts, and female beauty. See JAPANESE FOLKLORE. [JLM]

Beowulf The hero and title of an epic poem in the West Saxon dialect of Old English. It was composed c. 700 A.D., and is preserved in a manuscript of c. 1000. The subject matter of the poem is Scandinavian and the setting in and around what is modern Jutland. The hero is a Geat who crosses the sea to help his kinsman Hrothgar, a Dane, against the monsters who are attacking his people. The poem contains three main episodes: Beowulf's fight with Grendel, in which Beowulf in a mighty wrestling match overcomes Grendel by pulling his arm from his body; the fight under the sea between Beowulf and Grendel's mother, in which Beowulf kills the water-troll by use of a magic sword found in her cave; Beowulf's fight with a dragon, in which Beowulf, helped by the young warrior, Wiglaf, kills the marauding dragon, but is mortally wounded.

The story is a compound of folktales and historical legend. There is good evidence that the first two episodes belong to the general Eurasian folktale cycle *The Bear's Son*; the fight with the dragon likewise has many analogs in general folklore. Stories similar to those in *Beowulf* occur in Scandinavian saga. Especially close are the accounts in the *Grettis saga* of Grettir's fight with the troll-wife, and Grettir's fight with the giant in an undersea cave. The *Samsonsaga* contains another analog, the story of the hero, Samson, fighting a troll-wife in a cave behind a waterfall. The general story pattern of the *Hrolfssaga* suggests kinship with *Beowulf* though probably not direct. In this saga Bothvar Biarki performs the same kind of service for Hrolf that Beowulf performs for Hrothgar, i.e. frees the country from a devastating monster. These tales

were probably part of the stock of story of all north Germanic peoples, to be used at will. *Beowulf*, like the sagas mentioned above, is the product of folktales deftly fused with historical chronicle. [MEL]

Berchta, Frau Berchta, Berkta, Bertha, or Brechta, also **Precht, Percht, or Perchta** In German folklore, a little, ragged, disheveled, old woman with stringy hair, bright, beady eyes, a long, hooked nose, and one foot large and flat from working the treadle. Whether as hobgoblin or minor goddess, she is still used as a threat to naughty children and lazy youths in parts of Austria, southern Germany, Switzerland, and Alsace. Unkempt herself, she demands cleanliness and industry in others, especially between Christmas and her feast day, Twelfth Night. She is particularly concerned with the condition of the barns and the women's spinning. Fresh straw should be sprinkled on the thresholds and there should be no flax or wool left on the distaff. She will put a plague on the cattle or do bodily harm to the lazy if all is not to her liking. Yet she is fond of little children and will often steal into a room to rock the cradle if a child is left alone. Sometimes she is seen traveling with a trail of little children following her like a flock of chickens.

On Twelfth Night everyone must eat pancakes for supper (in some sections herring and dumplings). They must leave the remains on the table for Berchta or she will cut open their stomachs, remove the food, and then sew them up again, using a plowshare threaded with chains. In many sections dancers, or berchten, are chosen who go about dancing and jumping up and down. Farmers are careful to provide refreshment for the dancers to insure that they will jump in their fields to drive out evil spirits and insure fertility. The dancers are divided into beautiful and ugly berchten and wear elaborate costumes in some places. This rite is observed on Shrove Tuesday in a few localities. See PERCHTEN.

Berchta, whose north German counterpart is Holde, has been combined and confused with many other mythical and legendary figures in various parts of south Germany, ranging from the benevolent White Lady to a savage witch who carries off her victims and eats them, from a hobgoblin frightening naughty children to the earth goddess Erda. Some say she rides the storm followed by a howling pack like the Wild Huntsman; others claim that she was the mother of Charlemagne. Her children are variously either the souls of dead children or the spirits of the unborn. See EPIPHANY.

Ber Rabbit Rides Ber Wolf Title of a South Carolina Sea Island Negro folktale. There was a big dance-party to which all the animals were invited. Ber Rabbit and Ber Wolf wanted to take the same girl. So Ber Rabbit told the girl Ber Wolf couldn't go because Ber Wolf was his riding-horse. When Ber Wolf heard that he went straight to Ber Rabbit and wanted to know why he had said such a thing. Ber Wolf demanded that Ber Rabbit come along right now and tell the girl it wasn't so. "I'm sick," said Ber Rabbit. "I'll carry you half way," said Ber Wolf. Ber Rabbit thought he couldn't go unless he had a saddle. "Put it on," said Ber Wolf. So Ber Rabbit took the spurs along too; and just as they were about half way, he "lick his spur in Ber Wolf's side" and rode up to the girl's house in style. "Didn't I tell you this was my ridin'-horse?" said Ber Rabbit.

A variant tells how Ber Rabbit tricked Ber Wolf into carrying him to the dance on his back, and how, after the dance, Ber Rabbit tricked Ber Wolf into looking up into a tree, threw dust in his eyes, and rode him home again. See ANANSI RIDES TIGER; BRER RABBIT.

berries in winter A folktale motif (H1023.3) in which the hero or heroine is sent by a jealous and cruel relative to pick berries (fruit, roses) in winter, with the hope and intent that he or she will die on the impossible quest. Probably the best known representative (Type 403) is Grimm's story #13, *The Three Little Men in the Wood*, in which a cruel stepmother one winter day gave her stepdaughter a paper frock and ordered her to go into the woods and pick strawberries, with the injunction not to come back without them. The child wandered through the snow until she came to a little house in the forest where three little men bade her come in and get warm. She shared her meager crust with them, and was handed a broom to sweep the snow from the back door. Under the snow she found the beautiful red berries, and hurried home with her basket full to her stepmother.

This motif is very widespread in Europe, belonging to a larger group of motifs (H1020-1029) comprising tasks contrary to the laws of nature.

The search for berries in winter is also common in the test stories of certain American Indian tribes of the North Pacific coast (Kwakiutl, Comox, Squamish); it has also been found among certain Plateau and Plains tribes. The motif here is generally conceded to be indigenous, and not of European provenience. A jealous father, uncle, or brother of a girl subjects the youth who has married her to a series of tests, among which being sent to pick berries in winter is one. The youth always returns with a wonderful supply to confound the ill-wishing sender. In the Kwakiutl version the son-in-law brings back a basketful of salmonberries, which turns out to be an inexhaustible supply. In the Comox version, a supernatural grandfather helps the young man by whistling the cranberries onto the bare and empty vines. These too prove to be inexhaustible; the father-in-law cannot empty the dish. The Squamish version differs in that the youth produces the salmonberries by magic himself, and Hummingbird, Bumblebee, and Wren fly around them singing, to ripen them. This last incident is closely related to another idea prominent in that region, i.e. that the singing of certain birds (usually the thrush) will sprout and ripen fruit.

There is another group of folktales in which a berries in winter variant (H1023.3.1) appears as one of the innumerable stories containing the *reductio ad absurdum* motif. A young man given the task of gathering berries in winter finds it impossible to leave home to go in search of them because his father is ill from snake-bite (another impossibility in winter). This is closely related also to the absurdity rebukes absurdity tales.

berserker or berserkr Literally, in Old Norse, bear-shirt: savage warriors of Norse mythology capable of assuming, at will, the shape and attributes of bears or wolves. Ordinarily they appear as human beings and are no stronger than other men, but in battle only their eyes are human. They go into savage frenzy, howling, barking, foaming at the mouth and, invul-

nerable to fire and steel, they sweep their enemies before them.

beryl A mineral family of gems including the sea-green aquamarine and emerald, here used to denote the aquamarine. Known since early times, it was usually designated the birthstone of October or Scorpio. It is a defense against foes in battle and litigation, and is used to detect thieves. It quickens the intellect, cures laziness, yet leaves a man amiable but unconquerable. It promotes the love of married couples. Medicinally it is used extensively for diseases of the eyes and disorders of the throat, jaws, and head, and against spasms and convulsions. Kunz, in *The Curious Lore of Precious Stones*, mentions that engraved with a hoopoe holding a tarragon herb before it, it conferred power to invoke water spirits and to call up the mighty dead for questioning. Engraved with a frog, it promoted friendship and reconciled enemies, and engraved with Poseidon it protected sailors. Some authorities on the Bible claim it was one of the stones of the High Priest's breastplate and one of the foundation stones of the New Jerusalem. It was sometimes used to make crystal balls.

Bes In Egyptian religion, a shaggy-haired dwarf god wearing a lion's skin and having a tail: a foreign god probably imported from Punt or Nubia to the south and east of Egypt. Although an ancient god, the large-headed, short-legged figure did not attain his greatest popularity until the XXVI Dynasty (c. 650 B.C.) and after. The image of Bes was a talisman against evil, whether evil omen or witchcraft, and it appeared more often in the Egyptian home than that of any other god. Bes was a god of dual aspect: he was a sensual god, patron of dance, music, and joyfulness, protector of children and of women in childbirth; and he was also a warlike avenging god. The latter was perhaps his original character, but his quaint physical features gained him such popularity that he acquired the genial aspect that became the more common.

Bessy, Bess, or Besom-Bet In northern England, the name of the female impersonator in the Fool Plough ceremonies and processions: a man dressed grotesquely as an old woman. The Bessy is a stock character also in pantomime, mummers' parades, and sword dances, but is especially associated with the Fool Plough.

bestiaries Western European handbooks of natural history with articles on numerous real or imagined animals moralistically interpreted. Although the earliest may have been put together about 200 B.C. they owe much to St. Ambrose's (c. 340-397) *Hexameron* and St. Isidore's (c. 560-636) *Etymology*. In the Middle Ages and later, bestiaries were enormously popular. Copies have been preserved in the Armenian, Syriac, and Ethiopian languages as well as in the languages of western Europe. They have influenced ecclesiastical art and folk speech and have been influenced by them. [RDJ]

betel chewing A widespread and ancient custom of eastern Asia, the East Indies, and Melanesia, of chewing the seed of the areca palm (popularly called the betel nut), wrapped in leaves of the vine *Piper betle* together with a bit of lime and other flavoring ingredients: the "chew" is called in modern India *pān-supāri*.

So prevalent is the habit that it, and the materials chewed, form part of many important ceremonies of the region. For example, throughout the area, betel nuts or leaves are used in puberty ceremonies, marriage ceremonies, and death ceremonies, in courtship, bride bargains, and birth divination, etc. There are more or less rigid tabus connected with the nuts and leaves, their growth, sale, and use. The equipment used by the betel chewers (areca-nut cutters, lime boxes and spatulas, betel bags, spittoons, etc.) is often highly elaborated with native art work. Habitual betel chewing makes the teeth black and eventually rots them, and it stains the saliva red. The Shans say that beasts have white teeth, seemingly differentiating beasts from betel chewers. For a comprehensive survey of the literature and customs of the area connected with betel chewing, see Penzer's "The Romance of Betel Chewing" in Tawney's *The Ocean of Story*, vol. VIII, pp. 237-319.

betony A European herb (genus *Stachys*, formerly *Betonica*) of the mint family. According to Pliny betony was an amulet for houses (xxv, 46) and so antipathetic to snakes that they lash themselves to death when surrounded by it (xxv, 55). Antonius Musa, physician to Augustus Caesar, wrote a book on the virtues of betony as a preserver of the liver and protector from epidemic diseases and witchcraft.

To the herbalists the betony was an herb of Jupiter, under the sign Aries, which helped jaundice, palsy, gout, and convulsions. Taken in wine it killed worms; mixed with honey it aided childbirth. Dry and hot, it was used for infirmities of the head and eyes, the breast and lungs.

bezoar A concretion, often of lime and magnesium phosphate, formed around foreign substances in the stomach, liver, or intestines of ruminants; occasionally, similar stones found in other parts of the bodies of hedgehogs, porcupines, monkeys, and human beings. It was considered a gem by the ancients of both the Old and New World. Bezoars were first mentioned as a medicine by the Arabs and Persians, and it was not until the end of the 12th century that they were introduced into Europe, where they soon gained high repute. They are universally considered an antidote for poison, whether used internally, placed on the wound, or merely worn as an amulet. The Chinese wear them set in rings which they suck whenever they believe they have been subjected to poison. The Sioux Indian tribes believe that blowing powdered bezoar into the eyes strengthens the sight and the brain. Used with a laxative the bezoar is good for chronic and painful diseases. The Hindus and Persians use it in this manner as a periodic tonic. In Germany and Bohemia it is used internally for toothache. Unlike many medieval remedies, it evidently had some effect, as it caused profuse perspiration, and care had to be exercised in administering it or it would blacken the teeth. Stones from different animals found particular favor with various authorities, but those from the porcupine, monkey, and man are generally considered best. Those of the New World, although often rough on the outside and of drab color, are equally effective, as is a mineral stone of similar composition found in Sicily. By the middle of the 18th century it had become so popular that medicinal bezoar sold for fifty times the price of

emerald and a piece the size of a pigeon egg sold for \$1,200. The Mongolians claim that it will produce rain. [JWH]

✍ In the New World, bezoar stones, particularly those found in deer, were believed to possess great magical powers to aid hunters, sorcerers, and medicine men. The medicinal properties believed by the Spaniards to be inherent in these stones made them a valued object of search. Some of the New World stones were believed to be superior to those of the Old World. Because of this intense interest, and the resulting monetary exchange value of the stones to Indian finders, this Old World belief seems to have become incorporated into the folklore of nearly all Middle American Indian tribes. [CMF]

bhagat Priests, medicine men, and exorcists of India. [MWS]

Bhagavad-Gītā Literally, the song of the Divine One: a dialog inserted in the sixth book of the Hindu epic, the *Mahābhārata*, in which Kṛishṇa, as an incarnation of Nārāyaṇa Viṣṇu, expounds his philosophical doctrines to Arjuna and reveals himself as the one and only God. One of the most loved and used of Hindu scriptures, the poem is believed to date from the 2nd or 3rd century A.D. It is divided into three sections each containing six chapters. During the war between the Kauravas and the Pāṇḍavas, Kṛishṇa agreed to act as charioteer for Arjuna, leader of the Pāṇḍava princes. The latter, disliking the coming slaughter of friends and relatives, asked Kṛishṇa for guidance. This beautiful and lofty dialog followed, in which the doctrine of bhakti (faith) and Karma yoga (action), and the duties of caste are exalted above all other obligations.

Bhairava In Hindu mythology and religion, any one of the eight (or twelve) fearful forms of Śiva: worshipped especially by outcaste groups of India. In this fearful aspect Śiva often rides upon a dog. In his modern character, Bhairava has been identified with the local village deity Bhairon and the characteristics of the two have been merged. Bhairava is worshipped in the agricultural districts of northern and central India as a black dog, a snake-girded drummer, or a red stone.

Bhairon In Indian belief, a local village god, personification of the field-spirit, whose identification with Bhairava has given him the attributes of Śiva. In Benares he serves as the guardian of the temples of Śiva. In Bombay he is represented in a terrifying aspect as Kala Bhairava or Bhairoba armed with a sword or club and carrying a bowl of blood. See GRĀMA-DEVATĀ.

bhangas In Hindu dance, the bends or deviations of the body from the plumb line: abhanga (slightly bent), samabhanga (equally bent) or in equilibrium, atibhanga (greatly bent), and tribhanga (thrice bent). [CPK]

Bhīma or Bhīma-sena In the *Mahābhārata*, second of the five Pāṇḍava princes; son of the wind god Vāyu. Bhīma was burly, prodigiously strong, courageous, coarse, and brutal. His appetite was such that he ate half the food of the family. During the first exile of the brothers, Bhīma subdued the asuras and they promised to cease molesting mankind. In the great battle between the Kauravas and the Pāṇḍavas he engaged in combat with Duryodhana. When Bhīma was losing, he struck an unfair blow, smashing Duryod-

hana's thigh. Balarāma was so incensed by the foul attack that he declared Bhīma henceforth should be called Jihma-yodhin, the unfair fighter.

Bhīma is a nationally worshipped hero who may originally have been a Rākshasa. Like Arjuna, Sītā, and many other epic heroes and heroines, he has the marks of an originally divine nature. He is now the chief rain god of the Central Provinces. The Gonds celebrate a festival in his honor close to the time of the monsoon.

Bhīshma Literally, the terrible: in Hindu mythology, the son of King Śāntanu by Gangā. When his father wished to marry the young and beautiful Satyawatī, her parents objected because Bhīshma was heir to the throne and her sons could not inherit the kingdom. Bhīshma agreed never to accept the throne nor to marry and Satyawatī's parents then agreed to the marriage. Her sons by Śāntanu, however, died without children and the children of her son, Pāṇḍu and Dhritarāshṭra, born before her marriage to the king, were brought up by Bhīshma who acted as regent of Hastināpura for them and directed the training of their children, the Kauravas and Pāṇḍavas. In the battle between the two groups he sided with the Kauravas and was mortally wounded. His body was so covered with the arrows shot by Arjuna that they held him up when he fell from his chariot. He is the model for modern ascetics who lie on beds studded with nails. He is also revered in India for his filial devotion and a festival is held in his honor during Karttik (November-December).

Bhrīgu In Vedic mythology, one of the rishis or seers: the founder of the race of bhrīgus and bhargavas. Bhrīgu was generated from the heart of Brahmā or from the seed of Prajāpati which had been cast into the fire by the gods. He was, according to the *Āitareya Brāhmaṇa* and the *Mahābhārata*, adopted by Varuṇa. According to the *Purāṇas*, the rishis were undecided about which god to worship, so they sent Bhrīgu to test the characters of the gods. Bhrīgu found Śiva so much engrossed in his wife and Brahmā in himself that neither would receive the seer. Viṣṇu was asleep, so the sage angrily kicked him. Viṣṇu, awakening, stroked the sage's foot and expressed the honor he felt at this method of arousing him. Bhrīgu reported Viṣṇu the most worthy of worship. See AGNI; CHYAVANA.

Bhūmiya or Khetppal (feminine *Bhūmiyā Rānī*) In Northern Indian belief, a local earth god or goddess. The god is worshipped when a marriage takes place, when a child is born, or during the harvest. He sometimes changes sex, becoming identified with the earth mother and, like her, has a malignant aspect, bringing sickness to those who are disrespectful. He is worshipped as a snake by the Dāngīs of the United Provinces. When the Jats establish a new village the first man to die in the community is buried in a special mound, a shrine named for him is erected, and he is deified under his name as the local earth god or Bhūmiya. Local Bhūmiyas are gradually being absorbed into both the Vaishnava and Śaiva systems.

bhūt or bhūta In Hindu belief, the general name for a malignant ghost of the dead; the spirit of a man who has died by accident, suicide, or capital punishment. To

avoid them people lie on the ground, since bhûts never rest on the earth. They have no shadow, speak with a nasal twang, and are afraid of burning turmeric. [MWS]

bia Songs sung by the Australian Buin people as laments for the dead. The words are the mourning exclamations and cries of relatives at the cremation.

bibliomancy Divination by means of books, or by use of the Bible. This is generally a method in which any book composed of verses may be used as an oracle. In the Middle Ages, the *Aeneid* was used in the *sortes Vergilianae*; throughout Europe, the Bible, often opened with a golden needle, was employed; and in Moslem countries, the Koran. In essence, the method takes force from the sacred nature of the book employed, and it is allied to sortilegium in its acceptance of the chance factor. A Western European variant was to weigh a suspected person against the Great Bible; a guilty person weighed more than the Book.

biersal In German folklore (Saxony), a kobold who lives down in the cellar and will clean all the jugs and bottles as long as he receives his own jug of beer daily for his trouble.

Bifrost or Asbru In Teutonic mythology, the rainbow bridge made of fire, air, and water for the gods' use, arching from the world-tree, Yggdrasil, on earth, Midgard, to Asgard. It was forbidden to Thor because of his heavy tread. It will be destroyed at Ragnarök by the weight of the giant Surtr and his sons.

Big House ceremony A twelve-night ceremony of the Delaware Indians held, at least in modern times, in a rectangular structure known as the Big House. It is held to propitiate the Master of Life (supreme deity) and to ensure for the tribe good health, well-being, and the blessings of the supernatural. Esoteric songs obtained in visions are sung by their owners during the several nights of the ceremony; speeches and prayers are made by ceremonial leaders, and feasting concludes the rites. The interior center and side posts supporting the Big House have carved wooden faces on them. For a detailed account of the construction of the Big House and the ceremony held therein, see F. G. Speck, "A Study of the Delaware Big House Ceremony" (*Publications of the Pennsylvania Historical Commission*, Vol. II, pp. 5-192, 1931). [EWV]

Big Owl A destructive, cannibalistic monster, usually having the form of a large owl, in Apache Indian mythology. The White Mountain Apache picture Big Owl as the evil, blundering son of Sun, who killed all the people and was in turn killed by his brother, the culture hero. Among the Mescalero and Chiricahua Apache he is a wicked giant; in Lipan mythology Big Owl induces the culture hero to marry his daughter, so that he can kill him; in Jicarilla Apache tales Big Owl transfixes his victims with his glance, carries them home in a basket, and eats them. [EWV]

Big-Raven The creator in Koryak mythology: Quikin-naqu.

Big Sea Day An old coastal celebration of New Jersey, formerly celebrated every year on the second Saturday in August. People came to the shore in wagons and buggies prepared to spend the day—whole families out of the woods and pines of southern Jersey. Everyone went

in bathing in the sea, wearing whatever they happened to have on for the day, and dried in the sun. It was also called Farmers' Wash Day, with the tongue-in-cheek implication that New Jersey farmers bathed only once a year. Seagirt was honored with the special celebration of Little Sea Day, the third Saturday in August. This celebration was for those who had to stay home the week before to do the chores. Both celebrations have vanished with the "commercial invasion" of the Jersey coast resorts.

Bile In Old Irish mythology, one of the Milesians, a king of Spain. His name is listed with the 41 Spanish chiefs who accompanied the sons of Mil to Ireland to avenge the death of Ith. Bile's name is listed also with those who were drowned in the druid storm sent by the Tuatha Dé Danann to prevent their landing.

Bile as a king of Spain is interpreted by some scholars as a god of darkness and death, Spain being an overseas Otherworld (specifically, a land of the dead). Recent students, however, prefer to interpret both Bile and Spain more literally. Reinach assumes both a racial and commercial relationship between Ireland and Spain, even in earliest times, either by sea or via Gaul. In fact, botanists and zoologists alike can advance evidence that there was once an unbroken European coastline from Ireland to Spain. Old geographers and chartists assumed the two countries were much closer than they are; and that Ith glimpsed Ireland from his father's tower in Spain bears testimony to this concept.

bili (singular *bile*) The sacred trees of the ancient Celts: early believed to be the habitation of gods or elemental spirits, later associated with kings and belief in the sanctity or godhood of kings. The king's scepter was made from a branch of his own tree, and a branch of his tree was symbolic of the king. It was sacrilege to pluck or fell the king's tree. Evidently the life token or separable soul idea was here involved. In later Celtic romance one often reads of some hero, giant, knight, etc., defending a certain tree from having fruit or a bough taken from it or from being felled. In Ireland today any sacred or historical tree is called a bile, especially one within a fort or growing beside a holy well. Any unusually big or very aged tree, or one oddly shaped is a bile and regarded as sacred. People will pray near it, and sometimes even still make offerings to it.

Biliku, Bilik, or Puluga A prominent deity of the Andaman Islands, associated with monsoons, usually the northeast, while Tarai (another deity who may be wife or brother) is associated with the southwest. Both are associated with weather in general and natural phenomena. The term *biliku* among the northern Andamese means "spider." Lowie (*Primitive Religion*, p. 129 ff.) discusses data collected by Man and Radcliffe-Brown, and denies that evidence points, as Father Schmidt believes, to Biliku as being a "High God." [KL]

Billy Blin A semisupernatural being, a sort of household familiar of English and Scottish popular ballad: also known as Billy Blind, Belly Blin, and Blind Barlow. See FAIRY.

Billy Boy A question-and-answer song detailing the housewifely merits of a possible bride, known in many variants all over Great Britain and widely popular in America. There are many differing versions, which

were probably introduced separately by colonists from various sections.

bilwis or pilwiz In medieval German literature, an evil, soul-like being with a sickle on his big toe who devastated fields, teased men, and tangled their hair. He was especially active on Walpurgis Night. He was believed to live in trees; and offerings were sometimes left for him to protect children from disease.

bina The name given in the Guianas to the plants used by the Indians as hunting and fishing talismans. Many Indians cultivate them near their huts to have a ready store of them. The binas generally bear some resemblance to a distinctive feature of the animal species on which they are supposed to have an influence. Thus, for instance, the armadillo bina typifies the shape of the small projecting ears of this animal. [AM]

Binnorie One of the variants of *The Two Sisters* (Child #10), named from its refrain. This ballad embodies the motif of the singing bone: the young girl who was drowned by a jealous older sister tells of her murder through the harp (or occasionally fiddle) made from her bones. Some of the variants of *Binnorie* go into lengthy detail about exactly which parts of her anatomy were used for the parts of the magical instrument which sang her story. The story is repeated half across the world in tales or ballads and may be of Danish or Norwegian origin. It is also known as *The Berkshire Tragedy*, *The Milldams of Binnorie*, *Bow Down*, etc. and is one of the few songs found in America which preserves this motif.

birch Any tree or shrub of the genus *Betula* with hard, close-grained wood and outer bark separable in thin layers, common in northern Europe and North America. The birch is widely used in folk medicine and is regarded as a safeguard against wounds, gout, barrenness, caterpillars, the evil eye, and lightning. The Catawba Indians boil the buds of the yellow birch to a syrup, add sulfur, and make a salve for ringworm or sores. In Newfoundland the inside bark of a birch is applied with cod oil to cure frostbite. Culpeper recommended the juice or a distillation of the leaves to break kidney stones and to wash sore mouths.

The Roman fasces with which the lictors cleared the way for the magistrates were made of birch. The books of Numa Pompilius, according to Pliny, were written on birch bark. In Scandinavian mythology the tree was consecrated to Thor and symbolized the return of spring. The birch is especially esteemed by the Russians for whom it is the source of light (torches). It stifles cries (oil of birch is used to lubricate cart wheels), it cleanses (in the Russian steam baths birch branches are used to scourge the body), and it cures, for its sap is used as a cordial in cases of consumption.

Birch branches were used generally in Europe for beating the bounds, and for beating evil spirits out of lunatics. Birch is especially efficacious against evil spirits and for that reason is used in the English country "besom brooms" used for getting rid of witches. The letter B, beth (meaning birch), begins the ancient Irish Tree Alphabet and thus begins the year. In the Scottish ballad *The Wife of Usher's Well* (Child #79) the dead sons return to their mother in the winter time with hats of birch. These were taken from the tree beside the

gates of Paradise: a sign (as suggested by Robert Graves in *The White Goddess*) to the living that these ghosts will not haunt the world but wear the birch in token that they will return to their heavenly abode.

The birch is the personification of Estonia to that country's people. The Swedes believe the dwarf birch was once a full-sized tree, but when a rod of it was used to scourge Christ, the tree was doomed to hide its stunted head. In Finland the origin of the birch is attributed to a maiden's tear. In Newfoundland it is unlucky to make birch brooms in May, for they will sweep the family away. The Canadian Dakota burn small pieces of birch bark to keep the Thunders away. When the Thunders see this, they are restrained in their violence.

a bird in the hand is worth two in the bush A familiar proverb, well known, in various wordings, throughout Europe, common in folktale and literature. John Heywood's version, "Better one byrde in hand than ten in the wood," is almost as frequently heard. Better a fowl in the hand nor two flying (Scottish): One bird in the net is better than a hundred flying (Hebrew): Better one 'I have' than two 'I shall have' (French): A sparrow in the hand is better than a pheasant that fieth by (German): Better one 'take this' than two 'will gives' (Spanish) are all common property. "He is a fool who lets slip a bird in the hand for a bird in the bush," said Plutarch in *Of Garrulity* (1st century A.D.). The most common wording, "A bird in the hand is worth two in the bush," quoted and used so widely (John Bunyan, Cervantes, others) can be traced back to one of the *Idylls* of Theocritus (3rd century B.C.) who thus expressed the quintessence of Aesop's fables of *The Hawk and the Nightingale* and *The Angler and the Little Fish* (6th century B.C.). In one the angler wisely keeps the little fish already caught rather than throw him back in the uncertain hope of catching a bigger fish later. In the other the hungry hawk refuses to release the little nightingale, on the grounds that the little bird he has is worth more to his empty belly than a big bird not yet caught. The bird in the hand occurs also in folktale motif, appearing variously as the bird in the hand, the little fish on the hook, and the sleeping hare which the lion foregoes to follow a shepherd (J321.1; J321.2; J321.3).

bird languages The languages spoken by birds among themselves: prominent in folktale as a medium of warning, advice, prophecy, or aid to those human beings endowed with the gift of understanding them. The gift is variously acquired: either as a reward for befriending some animal or bird, as the gift of a god, or by eating some magical herb. Occasionally the hero is born with the ability to understand the languages of birds, but often it comes suddenly upon one who has eaten of a snake. In Icelandic belief one could acquire the understanding of bird languages by carrying a hawk's tongue under the tongue. Usually overhearing the conversation of a bird with its mate or friends gives the hero the information needed for his successful outcome in the story. The bird languages motif (B215.1) is common in Celtic and in European folktales from Iceland to Arabia, and is equally frequent in Slavic, Hindu, and Hebrew story. Familiar and typical instances of its use occur in Grimm's stories *The White Snake* (#17), *The Three*

Languages (#33), and *Faithful John* (#6). See *ANIMAL LANGUAGES*; *MELAMPUS*.

bird-man The most familiar and least complicated of these composite beings are the medieval angels and demons, the fairies, and the Greek Keres (represented as tiny human figures with butterfly wings). Many representations of Egyptian gods embody combinations of human and bird anatomy, for the gods were first birds and animals and only gradually evolved into men. Perhaps the most complicated and fearsome of these creatures is the Gorgon, which had serpent hair, the hideous face of a woman, the wings of a bird, and the body of a lioness with bronze claws. The most frightful of these was Medusa. The important feature of the Hindu Garuda bird is that it is one of the few combinations with the head of a bird. Other features vary with locale (it is known in India, Indochina, China, Japan, etc.). It ranges from a simple bird-headed man on wings to a Japanese variety which has the wings and head of a bird on the torso of a woman and the legs of a crane. She has a white face, red wings, golden body, and the tail of a phoenix. The Egyptian soul was sometimes depicted as a bird with a human head, as was also the Greek Harpy, which befouled everything it touched. The Sirens were similar in form, but had beautiful voices and lured men to their downfall. The Welsh Washer of the Ford (Gwrach y Rhibyn) is a spectral female in black with the wings of a bat. The Furies are another of these combinations.

The Sphinx is a combination of man-bird-beast, that is, the head and chest of a man, wings of a bird, and the body of an animal. In Egypt sphinxes were always male, and had the body of a lion. The Greek female sphinx also had a lioness's body. The Babylonian shedu, the Hebrew shedim, and the Sumerian alad were similar to the Egyptian, and male. They had the bodies of bulls, neatly curled beards, and often wore hats. The female counterpart of the sedu was called lamma or lamassu and could fly. The Syrian female sphinx had wings and resembled the Egyptian. She was probably a representation of Astarte.

bird of truth A bird which reveals the truth and often identifies murderers, traitors, and other wrong-doers: one of the most widespread of folktale motifs (B131-131.6). In one of the typical stick-fast or tar-baby stories of the Fjorts of the French Congo, it is a bird who reveals to Antelope that Rabbit, forbidden by Antelope to drink from his well, has nevertheless been drinking from it every day. In an Angola tale Turtle-dove plays the role of truth-finder in helping Blacksmith discover which of many identical Blackbirds owe him for his woes.

The famous parrot story, in which a man enjoins his parrot to watch and spy upon his wife's virtue in his absence, is told twice in the *Arabian Nights Entertainments*: on the 5th night in "The Husband and the Parrot," on the 579th night in "The Confectioner, His Wife, and the Parrot." When the man comes home the parrot tells all that she has seen: that the wife has made merry and had a lover night after night. The man righteously punishes the wife. No one can imagine how the man found out, but eventually the woman discovers it was the parrot who told. During the husband's next absence she and her maids counterfeited the noise of

a storm so successfully, that the parrot's report of the storm discredits her previous report about the wife. The man now believes both stories were lies and kills the parrot. Later, of course, he discovers that the parrot was a bird of truth. The Scottish ballad of *The Bonny Birdy* (Child #82) partakes of both the bird of truth and speaking bird motifs.

One of the most familiar birds of truth occurs in Grimm's story (#96), *The Three Little Birds*, in which three marvelous children of a king are exposed to perish by the jealous sisters of the queen. They are found and reared by a fisherman and their true identity is eventually revealed to the king by the bird of truth. The bird also reveals that the innocent queen is in prison and that the jealous sisters were the intentional murderers. The story ends with all the satisfactory restorations and punishments.

birds If a bird flies into the house, it is a forerunner of important news. Some people say that it is a sign of death, especially if it cannot get out again; and if it is a white bird it is a sure sign of death. In Alabama, however, a bird flying into the house is considered good luck. If a woodpecker taps on the house, he brings bad news, often news of a death in the family. It is very good luck if a wren builds near the house. When you first hear the whip-poor-will in the spring, you may know that you will be in the same place, doing the same thing, the same day the following year. If you can make a wish when you hear him calling for the first time, that wish will come true.

A rooster crowing in front of the house is announcing company. In Nova Scotia it is said that a rooster crowing at the wrong time of night is announcing a death. Southern Negroes interpret a flock of crows around a house as a bad sign. It is generally believed throughout the United States that to hear an owl hooting is a sign bad luck is coming; to hear a hoot owl is a sign of death. The hoot owl says "Who-o, who-o, who are you?" Barn swallows nesting on a barn bring prosperity, but to destroy their nests brings calamity. Some say it will make the cows give bloody milk.

Peacock feathers are very unlucky; they prevent girls from marrying and babies from being born. It is also a general U.S. folk belief that it is bad to have designs of birds or bird decorations on wedding presents: the happiness of the newlyweds will all the sooner take wing. It is not a good thing to have stuffed birds in the house either. They will fly off with your luck.

In Ireland it is said that the crossbill's beak got twisted from pulling out the nails from the cross during the Crucifixion; and the robin is held sacred because it is believed that its breast is stained with the blood of Christ. Irish fishermen believe that sea gulls embody the souls of the drowned. If the rooks desert a farm bad luck will surely follow. The wagtail is said to have three drops of the devil's blood on his tail, which he cannot shake off. And no Irishman will kill a swan because of the Children of Lir.

bird seizes jewel A folktale motif in which a jewel is carried off by a bird, occurring especially in a group of stories involving the loss and recovery of various magic objects (Types 560-568). The motif in which a bird seizes some jewel (ring, necklace, etc.) or a turban or other headdress containing a jewel, and flies off with

it, is found in the *Pañchatantra*, several times in the *Arabian Nights Entertainments*, and also in Hebrew legend. Frequently the theft results in the accusation of some innocent person, who is eventually pardoned when the truth is revealed; or the loser of the jewel follows the bird and is led to distant lands, undergoing many adventures before the jewel is at last brought to light and the story to a happy ending.

Typical of the former is the story of "The Stolen Necklace" told on the 596–597th nights of the famous Thousand and One. A certain woman who had devoted herself to religion was keeper of the bath in the king's palace. One day the queen handed her a precious necklace to keep safe while she went into the bath. The pious woman laid the necklace on the prayer-rug while she prayed. A magpie caught sight of the bright thing, and, unseen by the woman, seized it, and flew off with it, to hide it in a cranny in the palace wall. When the queen came out of the bath and asked for the necklace, it was gone. Neither of them could find it. The king had the woman beaten and questioned over fire, but she continued to deny the theft; at last she was thrown into prison. Some time later the king himself saw the magpie flitting about the corner of the wall and was amazed to see it pulling at a necklace. The bird was caught and the necklace retrieved; the woman was pardoned and set free. The second is represented by motif N352, in which a bird carries off the ring which a young man has removed from the finger of his lover in her sleep. This is related to the accidental separations group of motifs (N310–319) in that the pair are separated in a long series of adventures in their search for it and for each other.

The bird seizes jewel motif occurs also in a medieval French legend, reused with humorous adaptation in "The Jackdaw of Rheims" ballad (in Barham's *Ingoldsby Legends*). A jackdaw flew off with the ring of the archbishop of Rheims. The archbishop cursed the thief, whoever he might be, with such a blasting curse that the jackdaw drooped and failed into a lame, unsightly, bald, and sickly bird. At last the jackdaw revealed the hiding place of the ring; the curse was lifted; he regained his health and fine feathers, and became a devout Christian.

bird-soul The soul in the form of a bird: distinguished from *soul-bird*, a co-existent double of an individual. The bats of Babylonia, flitting in the dusk, were the bird-souls of the dead; when Gormw shot Llew Llaw Gyffes, the latter's soul flew away as an eagle, or bird-soul. But the parrot in the forest, born at the same time as the boy in the hut, whose life is bound up with the life of the boy, is a soul-bird. The distinction is often not clearly drawn by students of folktales and folk belief, and the term is often further confused by being used synonymously with separable or external soul in a bird. See BUSH-SOUL; SEPARABLE SOUL; SOUL-ANIMAL.

Birds' Wedding Title and motif of a very widespread European folk song (B282 ff.; Type 224) describing the marriage of certain birds to other birds and occasionally to other animals; widely known in French, German, Lettish, Wendish, English, Russian, French Canadian, Danish, Czech, Estonian, Walloon, etc., and even in Japanese. Eagles, larks, nightingales, pigeons, woodpeckers intermarry with owls, wrens, robins, sparrows,

magpies, wagtails, ravens, quails, cuckoos. In Germany cocks and hens are typical brides and bridegrooms. The nursery story of the wedding of the owl and the cat (B282.4.2) is an example in English. The form is often cumulative, as in the related type of animal marriage of *Frog Went a-Courting*.

Bird That Made Milk An African Negro folktale existing in several variants among the Basuto, Kaffir, Zulu, and Sechuana peoples. In the Basuto version a woman comes into the possession of a wonderful bird that provides the family with milk. She conceals it carefully in the hut, and every evening it fills as many day vessels with milk as the family requires. The children discover it, however, play with it, fill themselves with milk, and finally lose it in the forest. They try to recover it but fail. Suddenly a violent storm comes upon them, so violent that the trees are uprooted. But an enormous bird comes and covers the children with its wings so that they are not harmed. When the storm is over the bird carries them off, nurtures them carefully, at the proper time even putting them through their puberty rites, and returns them safe and beautiful to their parents after that. The joyful villagers then reward the bird with gifts of cattle. After that there is much visiting back and forth between the bird and the people.

The Kaffir version is especially famous in that it contains the incident of the crocodile who takes one of the runaway children to his underwater home, presses gifts upon him, and bids him bring his sister also. When the girl arrives he beseeches her to lick his face, and as she does so, a handsome man emerges. This is one of the most famous of all Beauty and the Beast variants. Other motifs involved in this story are the animal nurse (B535), speaking bird (B211.9), bird gives shelter with its wings (B538.1).

Bird Whose Wings Made The Wind A Micmac Indian story relating how the people along the shore could not go fishing because of the high winds and fierce storms upon the sea. They became so hungry that they walked along the shores hoping to pick up a fish here and there that might have been cast to land by the waves. One day Gluskabe, the culture hero, looking for fish came upon the cause of their troubles. A big bird stood on a point of land which jutted into the sea flapping his wings and causing all the storms. He called out to the big bird, "O, Grandfather," he called him. He then proceeded to convince the bird that he was cold and took him ashore on his back. Carefully the man stepped from rock to rock until he came to the last one. Then he pretended to stumble, fell, and broke the bird's wing. The kind man immediately set the bone, bound up the wing, and told the old bird to lie still and he would bring him food. Dead calm fell upon the waters. Day in and day out it was calm, until the salt water was covered with scum, and stank. No longer could the fishermen see through the water to spear fish or eels, and were as bad off as before. So they set free the bird, whose wing was now healed, but they explained to him that he must flap his wings gently. They have not had so much trouble since.

This idea of the big bird whose wings made the wind is common to Micmac, Malecite, and Passamaquoddy tribes; it is known among Georgia Negroes, turns up in

Norse and Icelandic mythology, and is one of the motifs in the Babylonian Adapa story. See GLUSKABE.

birthdays Among people with well developed sense of time, birthdays mark the transition from one stage of being to another. Because any change is dangerous, birthdays are the times when good and evil spirits and influences have the opportunity to attack the celebrants who at these times are in peril. The couvade and all the rites of the threshold are two of the many examples of this almost universal tendency in folk thinking. The presence of friends and the expression of good wishes help to protect the celebrant against the unknown pervasive peril. Ceremonies and games at birthdays frequently are a symbolic wiping out of the past and starting anew. The American child who at his birthday blows out all the candles on his cake with one puff is eager to demonstrate his prowess, but the secret wish he makes will be granted only if all the candles can be extinguished at once. Trials of strength and skill on birthdays are demonstrations of progress. Among some tribes puberty ceremonies are initiated on the birthday. Some of the tribes of the Congo and, in North America, the Hupas and Omahas believed that counting was wicked and kept no record of time. Among these groups, birthdays were not marked. This is also true of some of the aboriginal tribes of Australia who have names indicating the generation but no actual reckoning. The exchange of presents and communal eating, except in communities where eating together is dangerous or bad manners, strengthen communal bonds and this is associated with the importance of ingratiating good and evil fairies, godmothers, and wealthy relatives, on their or our birthdays. The Tshi of West Africa sacrifice to their protective spirits on their birthdays by smearing themselves with egg and asking for good luck. The ceremonial observance of weekly or monthly birthdays has been reported from West Africa, Burma, ancient Syria, and elsewhere. The social importance of birthdays increases with the importance of the celebrant: kings, heroes, saints, gods. Because kings are endowed in folk thinking with magical functions in that a good king or president can bring among other things good fortune to the people, that is peace and good crops, the birth of a royal heir is the occasion for great social and mild sexual excitement. In Christian communities the birthdays of martyrs are their death days, when they are born into eternal life.

The date, hour, and place of birth may be the clues to good or bad fortune as determined by the complex computations of astrologers, numerologists, and geomancers. Prudential ceremonies either at birth or at stated anniversaries, depending on the system of computation, are good insurance. Memorial services, or sacrifices at tombs or before ancestral tablets, are in some places customary on the birthdays of the deceased. The function is a mixture of natural affection, the desire to keep the deceased at peace and therefore to keep his ghost from troubling the living.

The birthdays which mark the transition from childhood to adolescence, from adolescence to adulthood, the acceptance of the individual into the tribe, community, or church (confirmation day) have ceremonies which are more or less impressive depending on the ethnic complex. In China the birthdays which mark the transition

from one stage of being to another have each special ceremonies. The 60th birthday is an example. Noodles which, being long and numerous, symbolize long life and many years, are part of all birthday ceremonies and a necessary dish on the 60th. Filial sons present gifts and garments with the longevity symbol, and put themselves into debt to buy magnificent coffins for their respected parents, and the parents themselves at this date become members of the older generation. On this 60th birthday and for the next ten years, men are advised to put women from their beds though on their 70th birthday filial sons may present their fathers with a new concubine. Christ's birthday on December 25 was, in the Julian calendar, the date of the winter solstice. Egyptians exhibited images of infants on that day and Syrians and Egyptians who had retired into caves emerged at midnight crying, "The Virgin has brought forth. The light is waxing." [RDJ]

Birth of Cormac or Geineahain Cormaic Title of an ancient Irish story of the cycle of Conn of the Hundred Battles, contained in the *Book of Ballymote* and the *Yellow Book of Lecan*. When Art son of Conn of the Hundred Battles traveled westward to fight the battle of Mag Mucrama he spent the eve of the battle in the house of a smith, and begot a son on the smith's daughter, Étain. Art told Étain that her son would be king of Ireland, and said to bring the child for fosterage to Lugna Fer Trí. Art was killed in that battle and Étain set out before the child was born so that it might be born in the house of its fosterer. The birth-pains overtook her on the way and she lay in a bed of ferns and gave birth to a boy. The moment the child was born a clap of thunder announced to Lugna that Cormac son of Art was in the world, and he set out to find him.

Étain slept after the birth and her maidservant kept watch. Finally the maid also slept and a she-wolf came and carried off the infant. So when Lugna found Étain she could only weep and say the child was gone, she knew not where or how. One day a man brought news to Lugna of having seen a human child in a wolf's cave crawling among the whelps. They brought the child home and the wolf whelps with him, and he was raised with Lugna's sons. At length Lugna took Cormac to Tara to live in the house of Mac Con, successor to Art. Immediately Cormac proved his true birth with a true judgment. The sheep of a certain woman had eaten the king's woad and Mac Con had taken the sheep as compensation for the woad. "No," said Cormac. "Take the wool of the sheep for the eating of the woad, because both will grow again." And the side of the king's house from which the crooked judgment had been made collapsed. Legend says the Crooked Mound of Tara is named for this.

The people unthroned Mac Con and Cormac was made king. He kept his wolves by him, and Tara prospered while Cormac was king.

birth omen Any unusual happening during the delivery of a child: considered portentous by many peoples. Mesopotamian records contain many statements like: "If a woman has brought forth, and its right ear is small, the house of the man will be destroyed" and "If a woman has brought forth twins for the second time, the country will be destroyed." In general, multiple births are considered to be unlucky; but exceptions are

widespread. Marks on the baby's body have significance; on the island of Karpathos near Crete, such marks, however tiny, are called "the fating of the Fates." The month, day of the week, etc., of the birth have significance, being important for the horoscope, and also because certain days are *per se* lucky or unlucky. A difficult delivery is widely taken to be a sign of the mother's infidelity, as were twins in Teutonic belief. Although no direct evidence exists of actual belief or practice, the presence of Roman names like Dentatus and Agrippa, Sextus and Decimus, indicate the importance of birth omens in Europe. Various customs have existed to foretell the future occupation of the newborn; the infant, for example, is shown two objects (e.g. a violin and a purse) and reaches for one. See AFTERBIRTH; ASTROLOGY; CAUL; DIVINATION; TWINS.

birthstone A jewel identified with a particular month of the year (or, more rarely, with a day of the week or a sign of the zodiac): thought to bring good luck when worn by a person whose birthday falls in that month. Lists of these stones vary greatly in detail, from country to country and through the centuries. The tabulation below places the currently accepted stone for each month first, with some of the principal variants following in parentheses:

January—garnet

February—amethyst

March—aquamarine or bloodstone (jasper)

April—diamond (sapphire)

May—emerald (agate, chalcedony, carnelian)

June—pearl or moonstone (chalcedony, agate, emerald)

July—ruby (onyx, carnelian, turquoise)

August—sardonyx or chrysolite (carnelian)

September—sapphire (chrysolite)

October—opal or tourmaline (aquamarine, beryl)

November—topaz

December—turquoise or lapis lazuli (ruby)

birth tree A tree planted at the birth of a child in the belief that its welfare has some mysterious connection with the welfare of the child all its life. If the tree thrives, the child will grow strong and prosper. If the tree withers, is felled, or damaged, the person will sicken, die, or be injured. The planting of birth trees is still widely practiced and believed in by European peasantry, especially in Germany. In certain districts in Switzerland an apple tree is planted for the birth of a boy, a pear tree for the birth of a girl. Sometimes a tree already grown is acclaimed the child's tree at birth, and to establish his union with it, the afterbirth and the umbilical cord are either buried beneath it or bound into a cleft that has been made to receive them. The birth tree is a living practice and belief among the Ainu, the Papuans, the Dyaks of Borneo, the Balinese, the Maoris of New Zealand, in various parts of Africa, and also among certain North American Indians. It occurs as a motif in the folktales of England, France, Germany, Italy, and Russia. There is so indistinguishable a line between birth tree and life token that the birth tree is often called life tree. See AFTERBIRTH; LIFE TOKEN.

birthwort Any plant (genus *Aristolochia*) with stimulant tonic roots, now used principally in aromatic bitters. Hippocrates (5th century B.C.) recommends birthwort in the treatment of women, for pains in the side, and ulcers. Dioscorides (1st century A.D.) first

recommended this plant as an aid in birthing and described three species: round-rooted or female with bitter leaves and white flowers; long-rooted or male with heavily scented purple flowers; and *A. clematitis*. Pliny said if taken with beef immediately after conception it assures birth of a male child. Fishermen of Campania used it to kill fish so that they might scoop them from the surface of the water. The property for which it was named, both in Greek and English, that of facilitating birth, was least often mentioned; its principal use was on wounds and as an antidote for poison. It was also believed to drive out demons. This explains its use in hiccough, convulsion, epilepsy, melancholy, and paralysis. Besides being useful in treatment of female ills, it was recommended for all manner of complaints of the teeth, liver, spleen, loins, lungs, and for diseases of the skin.

Bisan (Toba Boru ni Hapur) In Malay belief, the spirit of the camphor: a female spirit which assumes the form of a cicada. Not only do the camphor hunters speak a special language, *bahasa kapor*, while in the jungle, but they propitiate the camphor spirit. On the first night of the expedition a white cock is sacrificed and a conversation with the Bisan is recited by the pēnghulu (leader). When seeking camphor men always throw a portion of their food into the jungle for Bisan, who if not properly propitiated, will send the hunters home empty-handed.

Bishamonten The Japanese God of Riches; one of the Seven Gods of Luck. See JAPANESE FOLKLORE. [JLM]

biter bit The motif of a number of folktales in which a cruelty or other misdeed boomerangs back to the originator. Sometimes even an unthinking remark or wish is revisited on the sayer. Typical is a story from the *Jātaka* in which a quail beseeches a wonderful and mighty elephant not to trample on her young. The elephant happens to be the Buddha incarnate, at the head of a herd of 80,000 elephants. He stands over the fledglings and protects them while the herd passes by. But the quail's next encounter is not so fortunate. As a certain single elephant approaches, again she beseeches the mighty one not to trample on her young. This elephant, however, deliberately crushes the young birds with his foot, saying, "What can you do to me?" Whereupon the little mother quail in sequence befriends a crow, a fly, and a frog, who in return for her kindnesses, attack the elephant. The crow picks out his two eyes; the fly lays eggs in the eye-sockets and the maggots feed upon the sore flesh. Then in pain and thirst, the elephant hears the frog croak upon the mountain top. Following the sound he climbs the mountain seeking water; the frog croaks again at the foot of the mountain and the elephant falls over the precipice and is killed. Thus was the biter bit.

Biter Bit is the title of a Serbian folktale which begins with an old man's remark that he wished it would please God to send him a hundred sons!—with the result that he eventually finds himself the father of no fewer. It is a long story recounting the old man's search for a hundred wives for his hundred sons, his promise to a giant obstructing the wedding-party to give him what he has forgotten at home, only to discover that this is his eldest son. The next biter bit, however, is the giant. He teaches the young man, thus fallen into his

power, many magical skills and transformations, only to be outdone by his pupil in the end, caught, and destroyed.

bitter water Holy water, mixed with dust from the floor of the tabernacle, used to blot out a curse written by the priest after being spoken, and finally swallowed by a woman accused of adultery: a chastity ordeal (*Num.* v, 11–31) of the Hebrews, the only judicial ordeal mentioned in detail in the Bible. The bitter water, containing both the dust of the holy place and the ink of the words of the curse, would, if the woman were guilty of adultery, cause her thigh and her belly, the guilty parts, to rot. In fact, however, the ordeal served as a means of obtaining circumstantial evidence, where the husband had only a jealous suspicion, the guilty woman fearing to go through with the ordeal, the innocent victim of jealousy being absolved by the ritual. The ordeal of bitter water would have no result if the husband too were guilty of adultery; Johanan ben Zakkai (c. 60–70 A.D.) suspended the rite because the number of adulterous husbands had become so great as to make the ordeal pointless. Similar chastity tests are known elsewhere in the world. The Gold Coast ordeal in like circumstances makes use, however, of a really poisonous substance; the threatened results are the same, and women often confess to avoid the consequences of swallowing the drink. See ORDEAL.

Bitter Withy An English carol based on a legend of the childhood of Jesus, in which he goes out to play ball, meets three young aristocrats who refuse to play with the stable-born son of a simple maid, leads them across a bridge of sunbeams from which they fall and are drowned, and is whipped by his mother with a willow switch when he goes home. He curses the willow, saying, "The bitter withy that causes me to smart shall be the very first tree to perish at the heart." Fragments of the tale and of the song have survived in the United States.

black and white sails A folktale motif (Z130.1) in which the color of the sails on an approaching ship indicates good or bad news: one of a group of motifs (Z130–133) involving color symbolism. The classic example occurs in the Greek story of Ægeus. Theseus, returning from the Minotaur adventure, forgot the promise to his father to change the black sails of mourning which carried the young victims to Crete to white sails if he were returning safe; and when the watching father saw the ship returning with black sails still spread, he took the sign to mean his son was dead and threw himself into the sea in sorrow and despair. Another famous use of the black and white sails motif is found in a late version of the Tristram and Iseult story. Tristram, dying in Brittany of a poisoned arrow wound, sent for his old love, Iseult of Ireland. The sign of her coming was to be a white sail on the ship. His wife, Iseult of Brittany, kept watch for the ship, and jealous and fearful of her famous rival, told Tristram that the sail was black. He died of shock and grief.

Black Bear One of the guardian spirits and supernatural powers of Osage Indian religion; also one of certain animals who symbolize strength and courage to the Osage. His name is Wacabe. And he is also their specific symbol of old age and longevity. Black Bear is

the subject of many Osage ceremonial songs and wígies connected with the Rite of Vigil. (The wígies are the recited parts of the rituals which relate the traditions of the people.) Certain of the wígies narrate how Black Bear first performed all the symbolic acts used by the Osage in preparation for their supplications to the invisible powers for aid in overcoming their enemies.

These first acts were performed when "The male black bear, he that is without blemish/ Fell to meditating upon himself." He then performed the six sacred acts: plucked and gathered the grasses together into a pile, tore down and broke up branches of the redbud trees and gathered the pieces into a pile, also the gray arrow-shaft tree and the never-dying willow, tore open the hummock with his paws, disclosing the holy soil, and gathered together seven stones in a little pile. Then Black Bear sought and found a cave in which to rest, "the mysterious house of the bear" that excludes the light of day, and there "He put down his haunches/ To rest for a period of seven moons."

The wígie continues with the Black Bear's bestowal of old age and long life upon the little ones (i.e. the people). When the seven moons had passed and Black Bear once again beheld his own body, he said, "Lo, my flesh has sunken to nothing... / I am a person of whom the little ones should make their bodies/ They should make of me an emblem of old age... / These my toes that are folded together/ I have made to be the sign of old age/ When the little ones make of me their bodies/ They shall live to see their toes folded together with age, . . . / They shall be free from all causes of death/ They shall cause themselves to be difficult to overcome by death." The reference to the people making their bodies of the black bear probably means acceptance by them of the black bear as life symbol. The wígie continues with pointing out the wrinkled ankles of the bear as he emerges from his hibernation, the loosened muscles of thigh, abdomen, arm, and chin, the prominent ribs, the scanty hair. It concludes with the poetic description of how the bear moved to the door of his cave and saw the whole land covered with mist, how he heard the sound of the birds and stepped out onto the earth, leaving seven footprints in the soft spring mud. These seven footprints too symbolize certain valorous war deeds of the people. Then the Black Bear came to a place where the sun was warm and "the grass rustled to the tread of his feet," and he stood on the bank of a river where Beaver was already at work. The rest of the wígie is devoted to Beaver's symbolic acts.

Black, Black, Black or Black Is the Color of My True Love's Hair A traditional love song of the southern mountains of the United States, sung to several tunes, and characterized by the farewell fidelity theme.

I love the ground whereon she stands . . .
I love my love and well she knows
I love the grass whereon she goes
If she on earth no more I see
My life will quickly fade away.

The original has been rearranged by J. Niles in the fashion of a typical Elizabethan love song, but no English original is known. The one line "Black is the color of my true love's hair," found in an old sea song, seems to be unrelated to this American mountain love song.

black drink A decoction made from *Ilex vomitoria*: drunk as an emetic by the Creeks, Chickasaw, and other southeastern Indian tribes of the United States for ceremonial purification. It is also used as a stimulant, and to induce visions. [ewv].

Black Hactcin One of the most powerful of the hactcin or supernaturals of the Jicarilla Apache Indians of the Southwest. Black Hactcin is identified with the East, or with darkness and night. He is the leader of the hactcin in the underworld, the creator of man, birds, and water-beings, who gave animals and birds their way of life. [ewv]

Black Jack David A ballad from southern Illinois, also called *Gypsy Davy*, resembling (and probably a corrupt version of) *The Gypsy Laddie* (Child #200). The Illinois ballad has been confounded to some extent with the game-song *Weevily Wheat*.

Black Tamanous The cannibal spirit who inspired the Cannibal Society of the North Pacific Coast Indians: one of the monsters the Transformer did not kill when ridding the earth of evil beings. [ewv]

blanket divided A European folktale motif (J121) in which a man gives his aging father half of an old blanket (quilt, rug, carpet) to keep him warm. The man's small son appropriates the other half and puts it away. When questioned, the child tells his father that he is saving it for him when he too becomes old. The man, thus unwittingly reproved by his child, is ashamed of his ingratitude.

blarney Cajolery; the gift of a cajoling tongue; also, in verb usage, to cajole, wheedle, flatter: from the Blarney Stone in Blarney Castle in the village of Blarney, County Cork, Ireland, about 4½ miles west of Cork. Whoever kisses this stone will "never want for words;" forever after he possesses the cajoling tongue and the gift of skilful lying without detection. The stone is set in the parapet of Blarney Castle, built by Cormac MacCarthy in the 15th century. The magic in the stone was revealed to Cormac by Clíodna herself. Cormac was worried about a lawsuit. But Clíodna told him, "Kiss the stone you come face to face with in the morning, and the words will pour out of you." So when Cormac woke, he walked forth and kissed the stone; the words came out; he won the lawsuit. Then for fear all Ireland would be kissing it and be troubled with easy speech, he carried it up to the parapet and set it where it is today. To kiss it now, one must climb to the top of the castle and lower himself head down over the edge to reach it. An iron grating safeguards the visitors, but most of them feel safer if someone holds onto each foot while he hangs upside down for the kissing.

Blessing Way A religious ceremony, held for purposes of curing, by the Navaho Indians of the southwestern United States. The Blessing Way is the procedure which the Holy People first followed when they met to create human beings. [ewv]

blind dupe A folktale motif (K333.1; K863; K1081.1; K1081.2; K1081.3) associated especially with North American Indian stories, but prominent also in European, Semitic, and Oceanic legend and mythology. Isaac, blind in his old age, duped by Jacob into bestowing on him the blessing intended for the first-born

Esau, is probably one of the best known blind dupes in the legends of the world. The blind Hoder of Teutonic mythology, tricked into killing Balder, is another. This incident of the Balder myth (K863) is in the series of fatal deception motifs (K800-999). Another European usage of the idea is represented in motif K1081.1, in which someone tells a group of blind men that he is giving some money to one of them which he wants divided among them all. He gives it to none. Each one, then, receiving nothing, believes that he is being cheated by one or more of the others and they fight.

The blind dupe occurs in North American Indian tales of the North Pacific Coast, Plateau, MacKenzie, Plains, and Woodlands areas. The Menomini tale of the *Deceived Blind Men* (K1081.2; K1081.3) and the Smith Sound Eskimo story of the *Deceived Blind Man* (K333.1) are both typical.

blinding In both early and advanced stages of culture down to the Middle Ages, infringement of law was punished, at times, by blinding the criminal, putting out one or both eyes. This particular state was indeed a symbol of death. The laws of England at an early period prescribed blinding as a punishment for rape; in Uganda, putting out the eyes of a person is common; among the Iroquois, the adulterer was so treated. Examples of blinding in Biblical times may be mentioned: *Gen.* xix, 11 (the vicious Sodomites stricken); *Jer.* xxxix, 7 (Nebuchadnezzar puts out the eyes of Zedekiah, King of Judah); *Jud.* xvi, 21 (the Philistines blind Samson). In the first case, the plight of the Sodomites appears to be a judgment.

Blinding has been carried out not only as a punishment but from motives of revenge, reprisal, ambition, or jealousy. We find instances of blinding in Greek and Roman mythology: the one-eyed giant, Polyphemus was blinded by Odysseus; Orion was blinded for rape, and Œdipus put out his own eyes in horror at having committed both murder and incest. Blinding is found in the *Arabian Nights* and in other Eastern narratives. It occurs also in the folktale, an example of which may be found in Grimm's *The Two Travelers* (#107). Variants of this type (Type 613) are widespread and are found in Scandinavian countries, Russia, Greece, France, Italy, as well as among Negroes and American Indians. [cfs]

blinding the guard A folktale motif (K621) in which the prisoner or victim by some clever ruse blinds his guard or watcher and escapes. The classical example is Odysseus blinding the one-eyed Cyclops, Polyphemus, and escaping from the cave with his companions under the bellies of the sheep.

The motif occurs in European folktale and among the North American Indians; but its most prevalent occurrence is in the American Negro *Watcher Tricked* stories, versions of which are known in Virginia, North and South Carolina, Georgia, and Jamaica. There are African versions, and a Louisiana Creole version. The St. Helena, S.C., version is typical, in which Bu Wolf is chased by Bu Eagle into a hollow tree; Bu Frog is left to watch the tree while Bu Eagle goes home for his ax; Bu Wolf tricks Bu Frog into looking up, spits tobacco juice in his eyes, and, while Bu Frog runs to the pond to wash his eyes, escapes.

blind man carries lame man A general European folk motif (N886) occurring especially in the strong woman as bride (Type 519) cycle of stories. Typically the bridegroom, unable to cope with the bride on the bridal night (she has sworn to marry no one but her equal in strength) makes an excuse to go outside and sends back in his stead his strong friend and helper, who subdues the bride. Later the woman (usually a princess) discovers the hoax, cuts off the feet of the helper, and drives out her weakling husband. The helper joins up with a blind man. The blind man carries the footless one, and the footless one directs his steps. They journey together until they find the healing water, and are both restored. The helper then returns to his master and reinstates him in his true place. Compare LEGLESS AND BLIND BOYS CURED.

Blind Old Man In the mythology of the Yuma Indians of southern California, the quarreling companion of Kwikumut, the creator. He is not the creator's brother, as in the myths of most Yuman tribes; but he was born at the bottom of the ocean, and was blinded with the salt water as he emerged. See CREATOR BORN AT BOTTOM OF OCEAN.

blind trickster The North American Indian trickster blinded, usually by some trick or blunder of his own. The incident often follows his climbing a tree to stop the creaking of the limbs, getting caught between the limbs, and having to sit in the tree while strangers come along and eat his feast on the ground below. When he finally gets loose there is no food left. So he turns himself into an ant, enters a buffalo skull which he has found, and eats the brains. He transforms himself back into a man, but has forgotten to come out of the skull. His head is stuck in the buffalo skull and he cannot see. In his blindness he feels his way among the trees, asking them how to go, and they direct him. Trickster stories involving the buffalo skull motif (J2131.5.1) and guidance by trees (D1313.4) are common to North American Indians of the Central Woodland, Plains, and Plateau areas.

The Chiricahua Apache Indians have a story about their trickster, Coyote, who got himself a wife without revealing that he was blind, and lost the girl because of his blindness. With her help to guide his aim he had shot a cow; they butchered it; and the girl had put the meat over the fire to cook. She told Coyote to turn the meat over. He could hear it sizzling but he could not find the pieces to turn them. He kept picking up burning coals and dropping them. The girl looked into his face, saw the worms dropping out of the eye-sockets; then she knew that he was blind and ran away. There are also Mescalero and White Mountain Apache and Navaho versions of this story.

Blodenwedd The dawn goddess of Welsh mythology. In the *Mabinogion*, the flower-wife of Llew, created for him by Gwydion and Math, son of Mathonwy, the magician, to circumvent the curse of Arianrhod, who said that Llew should have no wife from any race that peoples the earth. So Gwydion and Math devised for him a wife made from the flowers of the oak and broom and meadowsweet. She was very beautiful, and they named her Blodenwedd, or Flower-Face. But Blodenwedd brought little joy to Llew. She fell in love with a passing hunter (Gronw Pebyr) in Llew's absence, with

whom she planned to kill Llew. Llew was invulnerable, but Blodenwedd schemed to discover the one secret means by which his life could be taken. She inveigled Llew into the position which exposed him to her lover, and Gronw killed him. For thus contriving the murder of Llew, Blodenwedd was transformed into an owl to fly by night.

blood Primitive men generally look on blood as being life itself. They see blood flow and the body die and therefore assume that life flows out of the body in a literal sense. Closely allied to this is the belief that the soul or spirit of the being is in his blood, and that when blood escapes the blood-soul escapes too. For these reasons, tabus, superstitions, magical practices, and rituals have grown up in great number in connection with blood. Blood accidentally spilled must be carefully and completely disposed of lest a sorcerer use it to work magic against its owner. It is burned or, when the owner is a king or man of importance, swallowed by underlings kept for that purpose. Malignant spirits, witches, devils, werewolves can be rendered harmless by securing a drop or two of their blood. The blood of human beings and of many animals must not fall on the ground, for it will impregnate the earth with the soul or spirit of the owner, thus making the ground on which it falls dangerous ground. It is believed that the soul of the owner will forever afterwards be there ready to work harm on intruders. For these reasons many people abstain from eating or drinking the blood of animals, lest the spirit of the animal enter into them. The Estonians, some American Indians, and Jews carefully bled food animals so that the eaters would not be contaminated by the animal spirits.

But more commonly the reverse is the practice. Since the blood contains the soul and animus of the owner, and since by the drinking of the blood his spirit and animus becomes a part of the drinker, many people have practiced blood-eating and -drinking to enrich themselves. The blood of a courageous father will be fed to his son to make him courageous too; the blood of a healthy and strong child will be given to a weak and sick one. Men in battle will drink the blood of fallen heroes, friends or foes, to add the store of courage and might of the hero to their own. Some of the Australian aborigines regularly drink the blood of certain of their warriors noted for bravery before they go into battle. And likewise the blood (and flesh) of certain animals is eaten so that the special qualities of those animals may pass to the human beings partaking of it. Norwegian hunters drank of the blood of bears to secure strength; Hottentots drink the blood of lions to ensure bravery, and conversely avoid that of hares lest they acquire timidity. In the Germanic *Kudrun* Hagen slew a fierce animal and drank its blood to become "exceeding strong."

Blood being life can likewise, according to primitive thought, protect or restore life. Blood is consequently widely used by the folk as medicine. Leprosy was generally treated by bathing the person afflicted in blood. Stories of this practice abound from early Egyptian times through the Middle Ages, the most famous of which is the often-told story of Constantine the Great. In folktales generally, blood appears almost as frequently as the Water of Life as the means of restoring

the dead. The widespread tales of the *Two Brothers* and *Faithful John* contain accounts of the blood bath used to reanimate men turned to stone and to restore the dead to life. Sigurd became invulnerable by bathing in the dragon's blood. In the Middle Ages blood was also given as a treatment for epilepsy. A 12th century legend describes how the blood of Thomas à Becket, placed on the eyes of a blind woman, restored her sight. Such beliefs in the efficacy of blood are behind European practices of pouring blood into holes bored in graves "to feed the dead" and of revenants slipping in at night to suck the blood of the living.

Since blood contains the life and soul of its owner, it is often an instrument of vengeance. A dead body bleeds in the presence of its murderer, for instance. According to a well-known medieval legend Richard Lion Heart came upon the dead body of his father on the battlefield of Le Mans. As he stood looking at it, it began to bleed. Richard, conscience-stricken and feeling that he had caused his father's death, fled from the place and then organized a crusade to free him from the sin of murder. Stories abound of murderers trying in vain to wash the blood of their victims from their hands, or from their clothes. One of the most dramatic stories of the indelible blood stains is often connected with the Devil. The Devil is cut by broken glass as he escapes from the cathedral at the elevation of the host. His blood drops on the stone windowsill leaving stains that no one can eradicate.

Special fears and consequently tabus have to do with menstrual blood. The belief is general that such blood is caused by the bite of a snake, or lizard, or some other such animal, or by the bite of a malignant spirit. To the primitive mind it is abnormal, and therefore to be doubly feared since it is both abnormal blood and the blood of a woman. It is a common practice to isolate women at these times. Some tribes suspend menstruating women in a cage away from contact with the earth, so that they can contaminate nothing. The calamities that would result from a menstruating woman breaking her seclusion are enough to disrupt the courses of nature itself. Compare the list in Pliny's *Natural History*.

Blood has played a large part in the rituals of most religions. The ritual of drinking the blood of the god is based on the belief that the qualities of the god are so transmitted to the worshipper. The sacredness of the Grail in many of the Grail stories comes from the belief that it once contained the blood of Christ. It is consequently a life-giving vessel.

The most common of all religious rituals is that of sacrifice to the gods and basically every sacrifice is a blood (not flesh) sacrifice. One propitiates the gods by giving the best—the blood of one's first-born. In later stages of society animals are substituted, their blood poured in libations, or allowed to run over the altar of the god. It is significant that often the flesh is eaten by those making the sacrifice. Likewise in many religions the god gives the blood of his son in sacrifice to mankind. And so the blood sacrifice becomes a covenant.

Since blood is so powerful an agent, it is natural that man should use it as a positive instrument in securing closer ties among his kind and in sealing compacts. Broadly speaking, blood covenant is a term applied to any agreement ratified by the use of blood

of the contracting parties. This blood may be drunk, eaten mingled with food, smoked, bathed in, mingled together and let flow in the earth. Essential to the covenant is an exchange of blood, so that one party to the contract comes into contact with the blood of the other. In later stages of culture an actual contract may be written in blood or signed in blood. The blood covenant is a much more binding agreement than such temporary covenants as food or salt covenants, for it merges the souls of the contracting parties. To primitive man its validity comes from the fact that neither party can work harm on the other without its reacting on the doer since each through his blood is fused with the other. A common form of blood covenant is that between two or more persons entered into to seal a compact or to bind them in a common cause. The ritual consists in partaking of each other's blood by the contracting parties, or of sharing the blood of a neutral person or animal. The Boumali, for example, seal a peace between two villages by assembling all the inhabitants of each, then killing a slave, dividing the body into two halves, one half for each village, and then each person present eating a bit of the flesh and drinking a bit of the blood. Tertullian records that Catiline and his fellow conspirators mingled their bloods in a cup of wine and drank it as a mutual pledge of unity.

The most common type of blood covenant is blood brotherhood, practiced by virtually all people in some form or other. It owes its necessity to the fact that tribal blood ties (actual kinship) are very strong and that members of a family are bound to protect, and if necessary, avenge one another. One who had no brothers was at a disadvantage. He, therefore, entered into a blood covenant, blood brotherhood, with another like himself needing protection. This covenant made them legal brothers, brothers-in-fact; one married the "brother's" widow (if the tribe had such a custom), inherited his "brother's" property, etc. The rite varies among peoples of the world, but it always involves the exchange of blood. A common Germanic ritual will illustrate. Two men who are to perform the rite make an arch of turf, leaving the ends attached to the earth; then, crawling under the arch, they open the veins in their wrists allowing the bloods to mingle and flow to the earth under the arch; then they crawl out through the arch, born anew from mother earth, forever brothers. Chiefs and leaders took advantage of this rite to secure the utmost in loyalty and service from their followers by entering into a blood covenant with each of them. Such a group had not only a bond with the leader but a common tie among themselves. Out of such groups develop the organized bands of warriors, such as the *comitatus* in Germanic society, and ultimately the Irish Red Branch, the Peers of Charlemagne, the Knights of Prussia, and the Knights of the Round Table.

MACEDWARD LEACH

 The folklore of hereditary transmission through the blood is based essentially in the concept of blood-brotherhood, which is extended to include family, nation, and race, with their actual or supposed characteristics. The "Joe Miller" about the Englishman who received a transfusion of blood from a Scotchman and then (and therefore) refused to pay for the transfusion illustrates this common belief that "blood will tell." From such verbal concepts as "blue blood" and "bad blood" a popular belief, influenced by the figurative language, has developed and burgeoned into pseudo-scientific sociological and anthropological theory. The idea that blood transmits skin color, nose shape, hair form, or any other physical characteristic that may be used as a racial determinant has been proved to be pure myth. Yet so deeply is it ingrained in some groups that during World War II the American Red Cross, to avoid the possible psychic injury a wounded white soldier from the South might sustain from getting a transfusion of "Negro blood," segregated the blood obtained from white and Negro donors.

Blood-Clot-Boy A Plains Indian popular tale of a boy miraculously born from a clot of blood that is deposited in a pot or other receptacle. In the numerous versions collected from the Plains tribes the clot of blood is often brought into the lodge by an old man who has been ill-treated by his son-in-law. The boy grows rapidly and, despite the warnings of his aged grandparent, sets out on a series of adventures to avenge the latter. Blood-Clot-Boy is also known among some California Indian tribes; in California versions a boy is born from a clot of blood found by an old woman after her daughter has been killed by a bear. When he grows to manhood Blood-Clot-Boy disobeys his grandmother, goes adventuring and avenges his mother's (or parents') untimely death. [EWV]

blood horns Elk horns in the velvet: eaten as a medicine and tonic by men among the Wulakai of Manchuria. Elk horn in the velvet is believed to be especially potent in cases of weakness, impotence, and sterility. The idea is that the blood of the elk rises into the new young horns at this time, which therefore contain the strength and life-power of the stag (see *JAF* 46: 283).

blood on the moon An evil omen: the moon's color during a lunar eclipse, when the moon is in the earth's shadow and shining dully by refracted light. Omens such as this are of great import; any celestial phenomenon so extraordinary as an eclipse or a comet is thought to have bearing on many lives. The belief is mirrored often in literature: Horatio speaks in *Hamlet* of "stars with trains of fire and dews of blood" among the other portents of "fierce events" before Caesar's fall.

bloodstone A stone of green chalcedony containing red spots. It is the birthstone of March or Aries. Its name derives from the color of its spots and hence it is a potent remedy for hemorrhage. An early Christian legend says the spots were caused by the blood of Christ falling on a piece of jasper at the foot of the cross. It is credited with many magical properties. It guards a man from deception, yet whatever he says will be believed. It is a calming influence, removes discord, and assuages the wrath of kings. Before it all bonds

will be broken, all doors opened, and, if necessary, walls will be rent asunder. It will foretell the future, cause rain, thunder, lightning, tempest, and earthquake, and turn the sun red. It preserves the general health of the wearer, cures inflammatory illnesses, and, mixed with a little honey, removes tumors.

Blow the Man Down A halyard chantey known to British and American sailors in two main versions: one chiefly devoted to experiences on ships of the Black Ball Line, the most famous of the packet lines between New York and Liverpool; the other, to adventure ashore on Paradise Street in Liverpool. Negro seamen and dock workers also sang the song, sometimes substituting the phrase "knock a man down," for the words of the title and refrain. In the Bahamas it is still sung by Negro fishermen for "launching" their boats, by which they mean hauling them up on shore in the fall. See CHANTEY.

Bluebeard Title and villain of a very widespread European folktale in which Bluebeard (a king, wealthy merchant, or sorcerer) marries, one after the other, three (or seven) beautiful sisters. He hands his young wife the keys to the castle and departs, saying that she may unlock any door in the place except one certain one. She disobeys, opens the forbidden door, beholds a number of corpses (or a basin of blood). The egg she holds in her hand, which she was told to keep intact, breaks and betrays her disobedience, or the key becomes indelibly bloody. Bluebeard appears and kills her (or chains her in a dungeon to eat only human flesh). The same sequence of events befalls the next sister (or sisters). But the youngest and last, who also disobeys and unlocks the forbidden door, either kills Bluebeard herself with a saber (Basque version), or is saved by a page who kills Bluebeard and marries her (Estonian), or by her cleverness prevents Bluebeard from discovering she has looked into the room, resuscitates the sisters or delivers them from the dungeon, hides them in a sack of "gold" which Bluebeard must carry to her father, then herself dons feathers and escapes, while the brothers sent to rescue her arrive suddenly and murder the murderer. This is Grimm's story *Feather-bird* or *Fitch's Bird*. In the Norwegian version, the murderous husband is a troll; in the Italian, the Devil himself. In a very ancient Greek story he is Death, who devours corpses, and kills the living girls who refuse to eat his fare. In several northern versions, the brothers rescue the sisters with the aid of animals.

The prominent feature of the tale is the tabu motif and the presentation of the horrible fate of those who break a tabu. The happy ending is said by many scholars to be a comparatively recent fairy tale accretion. More specifically, however, it is the forbidden chamber (C611), forbidden door (C611.1) motifs which are important here. Bluebeard motif (S62.1) is the common name given to traditional murderous husband incidents.

Bluejay Creator-Transformer-Trickster of the coastal North American Indian tribes of Washington and Oregon and several inland Plateau groups. Many of the creative deeds and misdeeds credited to Raven by the northern North Pacific coast tribes, and to Mink by British Columbia coastal peoples, are assigned to Bluejay by the tribes farther south. Bluejay's adven-

tures are recounted in long tale-cycles that depict the hero as always anxious to outdo his rivals. Bluejay is also an important character in the winter ceremonies of the Plateau peoples. Among the Jicarilla Apache of the southwestern United States, Bluejay is the hero of a long cycle in which various of his adventures are recounted, and in which he is given the power to ordain a way of life for all the birds and animals. [ewv]

blues A type of sorrow song of the American Negroes ("the po' man's heart disease") which emerged in the South shortly after the Civil War, growing out of the work songs, hollers, and spirituals, and popularized about 1912 by the publication of some of the songs by W. C. Handy. First essentially a vocal music, the blues have spread over into instrumental types, such as boogie-woogie, and into jazz forms far removed from the folk, but are also still being created in a folk manner as songs.

Musically, the blues are distinguished by an 8 or 12 bar structure (16 and 20 bars in later stages), by a strongly antiphonal quality, by the syncopation and polyrhythm characteristic of Negro music, by simple harmonic progressions, and by a slight flattening of the third and seventh intervals of the scale. These latter are the "blue notes." Singers make use of subtle variations of pitch and rhythm, portamento, and a wide range of tone coloration. Certain passages may be hummed or rendered in nonsense syllables called "scat." Instrumental accompaniment (by guitar, piano, or various combinations) improvises melodic and rhythmic patterns to the singer's lead or around a solo instrument, and achieves enormous tonal variety by the use of vibrato, mutes, and ordinarily non-musical instruments such as washboards, jugs, etc.

The poetry of the blues—the tender, ironic, bitter, humorous, or topical expression of a deprived people—tells of "careless love," of the woman who has lost her man or the no-good woman a man can't forget, of the train whistle in the night and the longing to go with it, of floods and cyclones, of jails and chain gangs and levee camps, of lonesome roads, river boats, back alleys, and barrel houses, of hard times and hard work.

The stanza consists typically of a statement repeated one or more times, sometimes with slight variations, and a gnomic comment or response. This construction, both in the words and in the music that is molded to them, relates to the earlier Negro styles of religious and work singing, with their narrative or call lines and responses, and on back to African singing. The "punch" lines, in their frequently proverbial form, hark back to the widespread African use of proverbs in song and story, and the whole song may be of a double-meaning, allusive character close to the African songs of allusion and derision.

The images are graphic ("The gal I love is chocolate to the bone," "You got a handful of gimme, a mouthful of much obliged," "I've got the world in a jug, the stopper's in my hand") and folk beliefs and animal fables enter into the conceptions.

Singing the blues is one way to say what would not be tolerated in speech. Chain-gang bosses, for instance, will ignore comment in song about the work, the food, the misery of prisoners, that would bring swift reprisal if spoken. So long as the picks and hammers keep

swinging to the music, the words of the song don't matter, except to those who sing them.

You have to feel blue to sing the blues, Negroes say. "The blues is nothing but a good man feeling bad." "Got dem blues but too damn mean to cry." The blues will help you when you're down in trouble. You sing about what you have on your mind, about what happens to you, or what you wish would happen.

The earliest and simplest of the blues songs were country blues sung by anonymous singers with regional variations in different parts of the South. The best of the singers gradually found larger audiences in the large cities, where the songs began to deal with more sophisticated themes. Then the blues and the singers moved northward, chiefly up the Mississippi River from New Orleans to Chicago, and east and west, the music winning advocates among young white musicians en route, and eventually, with growing acceptance, wide recording and imitation, losing its folk character in some aspects.

The great blues singers have been mostly women—Ma Rainey, "the mother of the blues," Bessie Smith, "the empress of the blues," Trixie Smith, Victoria Spivey, and numerous others—whose singing was accompanied by the instrumental virtuosity of the great jazz players. Among the songs they made popular are *Careless Love*, *Levee Camp Moan*, *Empty Bed Blues*, *Young Woman Blues*, *Pallet on the Floor*, *Moonshine Blues*, *See See Rider*, etc. See JAZZ. [TCB]

Blue-Tail Fly An American Negro minstrel song dating from the 1840's and combining a refrain that is probably authentic Negro folk song ("Jimmie crack corn and I don't care") with ballad verses of a hack song writer of the period. Its theme, behind the gay tune, is the slave's carefree reaction to the death of his master as a "victim of the blue-tail fly."

Blunderbore In English folklore, a giant tricked into killing himself by Jack the Giant-Killer. Jack hid a bag under his vest and stuffed into it so much that the giant was hard put to keep up with his "eating." Then Jack relieved himself by plunging a knife into the bag, releasing the contents. The stupid giant did likewise and died.

Bóann In Old Irish mythology, queen of the Tuatha Dé Danann, the divine race of Ireland, known also as the *side* or people of the hills; wife of Dagda, the Good, and mother of Angus Og. She lived in the great city of the *side*, Brú na Bóinne, the City of Bóann. Once Bóann went to look into the marvelous well of water that was in Sid Nechtan. This well had the reputation that no one could look into it (except Nechtan himself or one of his water-carriers) or the two eyes would burst out of his head. Bóann boasted that the well could have no power over her, and she went to it, and not only looked into it but walked round it three times *tuatal*, i.e. counter-sunwise. Three waves rose out of the well and took one eye, one hand, and one thigh from Bóann. In shame she ran toward the sea. But the waters followed her and drowned her at last in the mouth of the river that now bears her name, the river Boyne.

Boar's Head Carol One of various English feasting carols of the 15th century, sung as the festive dish with

the boar's head was borne to the banquet. A boar's head carol in the Bodleian Library is the only surviving page of the collection printed in 1521 by Wynkyn de Worde. The form is macaronic, the burden in Latin. See CAROL.

Boas, Franz (1858–1942) German-American anthropologist and ethnologist, who together with his many eminent pupils made a monumental contribution to the study of the North American aborigines, including voluminous folktale collections. He was born in Westphalia, educated at Heidelberg, Bonn, and Kiel (1877–1881), and in 1883–1884, made a scientific journey through Baffin Land. From 1899 until his retirement in 1937, he was professor of anthropology at Columbia University; and from 1901–1905, curator of ethnology at the American Museum of Natural History. The most important of his many journeys of investigation to Mexico, Puerto Rico, and North America, was the Jesup North Pacific Expedition which he planned and whose reports he edited. This expedition revealed interesting connections between north Asiatic and north-west American cultures. Boas' *Indianische Sagen* (1895), one of his most important works, takes up the question whether folklore similarities were due to "psychic unity" or to diffusion. In a brilliant analysis he proves that only the latter theory could explain his British Columbian material. In *Tsimshian Mythology* (1916) he reconstructed the history of the tribe from its lore and created a virtual "tribal autobiography." Boas had an exhaustive knowledge of the tales of the Kwakiutl Indians and another of his notable works was the *Social Organization and Secret Societies of the Kwakiutl Indians* (1897). Other works include *Baffin Land* (1885), *The Central Eskimo* (1888), *Indians of British Columbia* (1888–1892), *The Mind of Primitive Man* (1911), *Kultur und Rasse* (1913), *Anthropology and Modern Life* (1928), and *Race, Language and Culture* (1940).

Boastful Deerslayer Title of one of a distinctive group of moralistic folktales found especially in Estonia, Lithuania, Finland, and other Baltic localities. A man kills a stag. When he is reminded that God was his helper, he denies that the stag is God's gift. He killed it himself, he says, with no help from anyone. While he is making this boastful declaration, the wounded deer gets up and runs off. This story (Type 830) is representative of a number of other Baltic tales based on punishments for scoffing at church teachings (Q225). Analogs are found in Nigerian Bantu folktale in which the tabu against refusing credit to the god is always punished by the god (C53).

Bochica The great culture hero of the ancient Chibcha Indians of Colombia, who came from the east and wandered across their country in the guise of an old bearded man. He instructed their ancestors in the moral laws and taught them the most essential manual arts. Many caves and natural "footprints" are associated with his passing. He has become one of the major gods of the Chibcha pantheon. [AM]

bocor or bokor The Haitian Negro term for a practitioner of magic, who is distinguished from other workers with the supernatural by the fact that he has acquired his powers by the purchase of spirits rather than by having had the gods come to him of their own accord or through inheritance. The bocor is outside the vodun

hierarchy; unlike vodun priests, his power come primarily from the spirits of the dead he controls as his "messengers." Like the vodun priest, however, he is also a diviner. [MJH]

Bodhb (pronounced bōv) In Old Irish mythology, one of the Tuatha Dé Danann, eldest son of the Dagda, and a king of the side, with his headquarters at Síð al Femen in county Tipperary, Munster. He plays an active part throughout the Mythological Cycle. After the battle of Tailtiu, when the Milesians defeated the Tuatha Dé Danann, Bodhb was chosen king of the Tuatha Dé for his own great virtues and his sonship to Dagda. It was he who discovered for Angus Og that the sweetheart of his dreams was the swan maiden Caer, and changed Aoife into a demon for her treachery to the children of Lir.

bodhisattva, bodhisat, or bodhisattwa In Buddhism, one whose essence is perfect knowledge; title given to those who are believed to be the future Buddhas; one who by the practice of virtues and meditation has arrived at the Bōdhi. The bodhisattvas are usually represented in Indian art as youthful or feminine figures.

body marks Blemishes, moles, dimples, freckles, as distinguished from tattooing, painting, mutilation, are subjects of study by persons learned in astrology, in chiromancy, and in physiognomy. Chaucer, a master of the astrology of his day, reported of the lusty Wife of Bath who was Martial and Venerian, that she was gattoothed, bore the print of St. Venus seal, and the mark of Mars upon her face and in another private place. Christian saints who are very holy have at times been honored by the stigmata, marks identical with the marks of Christ when crucified. In India the interpretation of body marks is known as samudrika. Buddha had 32 lucky and 80 minor marks. The virtuous minister Gunaśarman decided that because the beautiful Sundarī had a mole on her nose, she must also have one on her breast, and therefore would have rival wives. Vararuchi got into trouble because from his knowledge of the arrangement of the auspicious marks in the portrait of the queen he decided she must also have one on her waist and painted it there. English women who have a mole on the upper side of the right temple above the eye will have a good and happy future in marriage. Persians, Arabs, and Western Europeans have thought that moles were signs of great beauty in women. Artificial beauty marks are still popular in some communities. If a man in India have two lines on his forehead he will live for 40 years, if three lines, 75 years, and if four lines, 100 years.

A dimple while smiling means a loose character; a double or broad chin means a strong character; a thin rounded chin or long ears indicate a licentious character or mark a man who wants the love of women. A man with a deep horizontal line at the top of his nose wants to be authoritative. A woman whose little toe overlaps the next or does not touch the ground is morally bad and sexually promiscuous. Among some of the tribes of southern India a curl on the head is lucky, unless it is on the back of the head or near the right temple. Tamil farmers are said to believe that a woman will become a widow if the curl is on her forehead and that the oldest brother of her husband will die if the curl is on the back of her head.

The erotologists of China, India, Peru, and ancient and modern Europe have collected large quantities of lore which is sometimes reduced to a system. In India a woman with a chakrá, flag, umbrella, or lotus on her hand, or with moles on her left breast, is auspicious. Communities which hide the sexual parts are generally agreed that a long nose in a man means a long organ, and that fat men have small organs. In some places a woman with small feet is thought to have small organs, in others small mouths mean small organs. Physical anthropologists have drawn interesting conclusions from their study of the proportions between the several parts of the body, and psychiatrists have studied not only the physical types but also the psychological effects of stigmata, real or imagined. The lore of body marks is contained in many popular rimes such as "Mole on the arm, have a rich farm; mole on the neck, money by the peck." [RDJ]

Bogarodicza One of the earliest of European folk songs, a war song of Poland, recorded in a manuscript dating from the 13th century.

bogey, bogie, or boggy A terrifying spirit of English folklore, of uncertain, but probably hobgoblinish, nature: invoked especially to frighten children. It is usually thought of as "it," and as being black. "The Bogey Man will get you," is a common saying. Bogey itself is a 19th century word, but like all analogous terms—bogle, boggart, pooka, puck, etc.—is probably derived from ME. *bogge* or *bugge*, meaning terror and bugbear, and cognate with the Welsh *bwg* (*bug*) meaning ghost or hobgoblin. Analogous beings in other folklores are the German Bumann or Boggelmann, the Irish bocán or púca (pooka), the Bohemian bubák, etc.

boggart A hobgoblin or ghost; a supernatural being of English folklore, especially of Lancashire and Yorkshire, very mischievous, sly, and annoying: often invoked to frighten children. Threats of being thrown into some black "boggart-hole" are usually enough to silence the expression of any childish woe. The Lancashire and Yorkshire boggart is equivalent to the Scottish bogle and the puck of general English folklore. There is a typical old Lancashire verse which runs: "Stars is shining/ Moon is breët/ Boggard woánt cum oot tonet."

The boggart is full of tricks and devilment, but seldom works serious harm. Sometimes he walks through the rooms at night, twitches the covers off sleeping people, or raps loudly on the door and never comes in or answers. Sometimes he rearranges the furniture so that people who have to get up in the dark bump into it; or sometimes he lays the baby gently on the floor, just to astonish its parents who find it safely sleeping there in the morning. The boggart is often a helpful kind of spirit to have around the house. He has been known to wash the dishes, milk the cows, feed the horses, or even harness them on occasion. But if he is angered in any way, he will break the cups, upset the cream that has been set for butter, or unfasten the cow or horse to let it wander in the night. Nearly every old English house had its own boggart, variously regarded either as a ghost or as the mischievous trick-playing spirit just described. The boggart of Staining Hall (near Blackford) was the uneasy ghost of a murdered Scotchman; the boggart of Hackensall Hall lived

in the shape of a horse who was a willing worker as long as he was catered to. The people even built him a fire to lie by on cold nights, and if he did not get it he complained loudly, or refused to work. But boggarts are less and less frequently seen and heard today; that is because they are afraid of automobiles.

Boggart's Flitting Title of a Lancashire folktale, also well known all over Europe. It is the story of a farmer who was so annoyed and tormented by a boggart who had taken abode in his house, that he decided to pack up his belongings and move with his wife and children to another place. As they were about to drive off, the man explained to a neighbor, Yes, they were flitting because of the boggart who was making life unendurable, only to hear a voice say, from the top of the loaded wagon, "So you see, Georgey, we're flitting." The man gave up; he decided to remain in his old home rather than undergo the old annoyances in a new place.

Colonel Bogie or Bogey An imaginary opponent against whom one competes in games and contests in which a score is made. Colonel Bogie always makes what is considered an average or a good score. The Colonel's original game was golf, where his score, as opposed to par (the score made by perfect play of the hole), was a not-impossible mark for players to aim at.

bogle A hobgoblin or ghost; a supernatural being of Scottish folklore: equivalent to the Lancashire and Yorkshire boggart and the puck of general English folklore, and no doubt a close relative of the Icelandic evil spirit, the puki.

Bogle in the Mill Title of a well-known European folktale in which a bogle took abode in a mill, to the great despair of the miller. He poked holes in the bags of grain so that the grain trickled out, and performed numerous other annoying and troublesome tricks. One day a traveling juggler left his bear in the miller's keeping and the miller put the bear in the mill. The bear didn't like the bogle either and treated him so badly that he left the place. Every year the bogle came back and asked the miller, "Is the big brown cat still here?" The answer was always yes and after the miller said the big brown cat had kittens, the bogle disappeared forever.

This story is said to be originally a Scandinavian story—told everywhere in Norway, Sweden, Finland, Estonia, etc.—introduced to the rest of Europe about 1060 along with a white polar bear which was sent as a present from Iceland to King Svein of Denmark. The story is known also as *The Bear Trainer and His Bear* (K1728; Type 1161) a story in which the bear chases the ogre out of the room, and a year later on learning that "the big white cat" is still there, the ogre goes away forever.

bog-myrtle The Irish *roideog* or *roilleog*; also called sweet willow. An infusion from its branch tips makes a yellow dye, and is also used in tanning. It is the "palm" carried on Palm Sunday in many parts of rural Ireland. It must not be used as a switch for cattle because it is said to have been used as a scourge for Jesus.

Bohinaville Literally, the Nail of the North: the Lappish name for the North Star. This nail is regarded as supporting the sky. The Samoyeds also call the North Star "The nail of the sky," around which the heavens revolve. [JB]

Boigu The afterworld of the Melanesian people of certain eastern islands of Torres Strait, situated on an island; a happy land of feasting and plenty, where no work has to be done. To reach it the soul must travel under the sea to a place named Beg, and from Beg it is led to Boigu by Terer, the first man.

bolero A famous Spanish couple dance from the province of Castile. It is performed in either 2/4 or 3/4 time to the accompaniment of castanets, guitar, and tambourine. The step is slow and gliding; the woman's steps more varied than the man's, both characterized by sideward leg extension. The common pattern is as follows: *paseo* (promenade), *diferencia* (step changed), *travesía* (cross-over), *finale*, and *bien parado*. The bolero is a tender but intoxicating love-making dance, more dignified, less impassioned than the fandango. The boleros have wide distribution in Spain, and are especial favorites in Majorca. [CPK]

Bolte, Johannes (1858–1937) the greatest of all students of the folktale in Germany, and perhaps of the world. His early years were spent largely in making comparative notes of 16th century jestbooks of Germany and in collecting the learned articles of Reinhold Köhler, librarian of the Ducal Library at Weimar, together with his own additions, in a work of three volumes, *Kleinere Schriften* (1898–1900). His principal contribution was five volumes of notes on the Grimms' *Household Tales*, *Anmerkungen zu den Kinder- und Hausmärchen der Brüder Grimm* (1913–1931). These volumes were issued with the cooperation of George Polivka of Prague, but the work was nearly all Bolte's, Polivka contributing the part on the Slavic lands only. Bolte edited the *Zeitschrift des Vereins für Volkskunde* during the latter half of his life and was a great stimulus to German folklore scholarship, being largely responsible for the development of a group of noted folklorists.

bomor A Malay medicine man usually called in to cure human diseases. The name bomor is used interchangeably with pawang, but the latter is the name usually applied to the class of medicine men which practices magic to ensure good crops, locate ore, and for successful jungle clearing. The bomor determines the treatment of ill patients by means of divination. He makes propitiatory offerings of food to the spirits, uses counter-charms, or strokes the patient to drive out the 190 (or 193) evil influences. He also recalls the patient's soul (*sēmangat*) which is wandering when a man is ill.

Bon (1) The pre-Buddhist, shamanistic, devil-charming cult of Tibet which persists with Buddhist externals. It has been suppressed since the introduction of Buddhism, but it still openly professed in much of eastern and southeastern Tibet where the Chinese administration (brought in to protect the people and their religion from Lāmaism) kept out the influence of the lāmas.

In Bon belief there are 18 chief deities of which the most popular are the red and black demons, the snake devil, and the fiery Tiger god. The chief god is gShen-rabs Mi-bo, reputedly a deified priest. The Bon priest's attire during special celebrations is a coat of mail armor decorated with flags and a high hat ornamented with flags, tufts of wool, and effigies of human skulls. Ordinarily, he wears red robes. Sacrifices, substituted for the

sacrificial animal of earlier times, include wool and yak hair and images of men and animals made of dough. The sacred symbol is the swastika with the hooks of the cross reversed.

(2) or **Obon** A Japanese festival of Buddhist origin, celebrated in July, in honor of the spirits of the dead, which return on the days of the festival for entertainment, food, etc. In country areas, only the New Year's feast is more important. The festival is sometimes called the Feast of Lanterns. See JAPANESE FOLKLORE.

Bona Dea The ancient Roman goddess of fertility and of chastity; the prophetic sister, wife, or daughter of Faunus and often called Fauna. She was also known as Fatua, Oma, Damia, and identified with Cybele, Maia, Ge, Ops, Semele, Hecate, and others. Her worship was restricted to women, knowledge even of her name being withheld from men. Yearly on May 1 her festival was held at a ruling magistrate's house and was conducted by vestals. The profanation of this ceremony by P. Clodius in 62 B.C. at Cæsar's home was a *cause célèbre* and led eventually to Cicero's exile. Myrtle, men, and wine were forbidden at the ceremony, the wine actually used being called milk and the wine vessel a honey jar. Later etiological tales explain the circumstances of the ceremony. Her father, Faunus, failing to seduce her even after getting her drunk, whipped her with myrtle rods. He finally had his will of her when he transformed himself into a serpent. According to another story, Fauna became so much the drunkard that her husband, Faunus, beat her to death with myrtle, and then deified her. Her ceremony was held at night. There was a grotto in the Aventine dedicated to her. She usually appears as an old woman with pointed ears, holding a serpent. The Marsian Angitia seems to have been the same goddess in a different locale.

bonang Gong chimes characteristic of Javanese orchestras, tuned in octaves and set in a low horizontal frame, the higher octave designated as male, the lower as female. See CHIMES; GONG.

bones (1) The corpse, particularly the bones, which decay last, is the residence of the physical or animal soul as distinguished from the spiritual soul which enters the body either at the moment of birth or at the moment of baptism. The Chinese have elaborate ceremonies to keep the physical soul out of their houses and contentedly in the tomb or sealed up in it. If the animal soul has sufficient vitality, it will animate the skeleton or skull and commit horrid and revolting crimes—cannibalism, rape, etc.—in the countryside. Bones are thus involved in the systems of beliefs about life tokens, separable souls, and the like.

The bone in the European folktale of the *Singing Bone* (Grimm #28) was taken from the corpse of a murdered brother and fashioned into a flute. When played it accused the murderer. When one of the Indian Yakshini played on a lute made of bones and recited a charm, ascetics who heard her grew horns and fell into the fire. The Yakshini then devoured them. Some of the Australian aborigines are said to bury their dead in trees. When only the skeleton remains they take it down, being careful not to touch the bones, and bury it except for the arm bone which after certain ceremonies is broken and buried separately. Australian "bone pointing" probably has other connections. The Ogowe

in Africa beat their corpses until all bones are broken and thus make it impossible for the spirit to return and make trouble for the tribe. The driving of a stake through the body of a criminal or witch buried at the crossroads is part of this system of belief.

Cardinal Newman explained that the bones of saints retain a part of the virtue which was once immanent in the saints' bodies. Saints' bones thus become objects of veneration and are thought to possess great power to cure physical and spiritual ills. South Slav burglars are said to throw the bone of a dead man over the roof to put the inmates to sleep. Blackfoot Indians carried a skull to make themselves invisible. The "hand of glory," a dead or hanged man's hand holding a candle made of human fat, insured invisibility in many parts of the world. Ruthenian burglars remove the marrow from a human shinbone, pour tallow in it, light it, and march three times around the house to put the people to sleep or make themselves invisible; or they may make a flute of the human leg bone and play on it. (Earth from a grave sprinkled around the house has the same effect.) An Indian ascetic, protected by a circle made of the yellow powder of bones did magic on a corpse. Similar beliefs are found in many parts of the world. The widows of the Carrier Indians carried the charred bones of their husbands with them. The bone used by the Sicilian girl to make a hole in the wall so that she may become pregnant by exposing herself to the sun is possibly incidental, though some Indian tribes used bone instruments on girls during puberty ceremonies. The fashioning of olisboi out of bone or ivory in China, Japan, Greece, and Rome may be convenience rather than superstition. The communal bonfire ("bone fire"), originally built for destroying corpses and bones by fire, is now usually an expression of general high spirits after victory or delivery from danger and is connected with folklore about bones only by its name. [RØJ]

 The use of bones in divination is world-wide. Astragalomancy, divining by means of small bones, like the vertebræ, has given rise to several series of games: board games like pachisi, dice games, jacks, etc. The cracks in or the formation of the shoulderbone of a sacrificed animal (scapulomancy) give Mohammedan diviners clues with which to read the future.

A common belief, going far back into prehistory and perhaps older than modern man (species *Homo sapiens*), is that preservation of the bones is necessary for the resurrection of man. Bones colored with ocher and preserved in their natural order have been found in the remains of prehistoric man. The *Talmud* says that the bone of Luz, one of the bones of the spine, is indestructible, and that from it the body can be recreated at the resurrection. The skeleton is still figured as the ghostly symbol of spirits; the rattle of bones and chains is heard in many haunted places. The skull and crossbones, symbol of piracy and death, is used to indicate poisonous drugs, poisonous wells, and the like. [JF]

(2) A musical instrument consisting of two long, slightly curved sticks of locust wood, held between fingers and shaken so as to strike together with rhythmical clicking sound like that of castanets: used especially among mountain men of the southern United States. Originally two actual bones, of birds or animals, were used in the same way by plantation Negroes in their music-making. [TCB]

bone-throwing An ancient custom, especially in northern Europe, of hurling gnawed bones during a feast. The trick was to catch them in mid-air and throw them back, so that no one was injured. In medieval Icelandic literature, bone-throwing is referred to as the sport of trolls and giants. In Scandinavia it was a custom more ancient than the literature, and functioned both as sport, punishment, and insult. A lawbreaker was seated lowest at the feast, for instance, and all present were allowed to throw bones at him. And the youngest or weakest of the company was always fair target for the bone-throwers. Bothvar biarki in the *Hrólfs saga* not only saves the boy Hott (later Hialti) from beneath a pile of bones, but catches a bone thrown at the youth and hurls it back with such force that it kills the thrower.

bonga The Santal (India) name for an evil spirit who lives in the hills, trees, or rivers. Bongas are usually female and may be married to or have intercourse with human beings. All dead people become bongas except uninitiated children who become bhûts, and women who die in childbirth and are not cremated. These become churels.

The bonga figures in numerous Santal folktales. In one a prince, imprisoned by his father because he refused to marry, found a bonga maiden beside him when he awoke, agreed to marry her, and was released. In another, a bonga rewarded the good deed of a cowherd by giving him the ability to see bongas and to understand the speech of ants as long as he told no one about the gift. His wife cost him the gift by insisting that he tell her.

Bongo A Trinidad Negro dance for the dead. It is performed at wakes, and also at the "forty days" observation after a death. The rhythms are beaten with sticks on a small wooden bench, or against a short pole held by two men, and played by a third. Bongo songs are principally topical; dancers are both men and women, though the dance is performed by no more than two persons at a time. [MJH]

bonito maidens In the belief of the people of Sa'a (Solomon Islands), maidens who live in pools with the bonito fish and bring them out during the bonito fishing season. These maidens are beautiful, adorned with porpoise teeth, shell money, and shell ornaments. They forewarn the shaman of the appearance of the bonito by giving him a bunch of arca nuts while he is asleep. An altar is built for them and the first bonito caught is laid upon it and is ceremonially washed. Then it is carried to the canoe house, incantations are said over it, and it is baked and eaten by the shaman alone. In folktales sons who have lost their father's prized ivory bonito hooks go to the maidens to retrieve them. See MALAOHU BOYS.

Bonny Bee Hom A Scottish ballad (Child #92) involving the separation of lovers. When the ruby-stone his love has given him turns dark and gray in a foreign land, the lover knows that she is dead and he too dies. See LIFE TOKEN. [MEL]

bon-odori-uta Songs of Japanese peasants sung with dancing for the Obon Festival, or Feast of Lanterns. Many are preserved in *Yamagachōju-ka*, a collection of songs compiled in 1771.

boobrie A fabulous water-bird of Scottish Highland folk belief, which haunts lakes and salt wells.

boogie-woogie (1) A type of piano blues first played by the Negro pianist Jimmy Yancey at Chicago rent parties in the early 1920's; popularized about 1936, and later played in various instrumental combinations. It is characterized by a rhythmic ostinato bass, free rhapsodizing of the right hand, and numerous short figures in varied rhythms, and is frequently made up of 12-measure sections. The various patterns are sometimes described as "traveling," "climbing," "walking," etc. The parties were held to enable the tenants of the house or apartment to pay back rent, and guests were expected to make contributions of money, food, or drinks, or to participate in the impromptu entertainment. The sessions often lasted throughout the night, ending with *Five O'Clock Blues*.

(2) A dance to this music, often of a slow, tensed, attitudinized, and despairing character. See **BLUES**; **JAZZ**.

book fetishism Belief in the magical qualities of books or written matter: bibliolatriy. The connection of books with the wise men of all ages gives them a share of reverence sometimes approximating superstition. The reverential act of kissing or touching a book such as the Bible, for example, suggests the idea of contagious magic. After that act the mouth can speak only truth. Miniature books, written scrolls, or sentences inscribed on strips of paper are also used as amulets.

Book of Ballymote A late 14th century manuscript of the west of Ireland, containing for the most part historical material. It contains one version of the famous story of the *Birth of Cormac* and also the "Adventures of the Sons of Eochu Muigmedón." This last is of especial folkloristic interest in that it contains the motif of the loathly hag transformed to a beautiful woman by the kiss of the courteous young Niall.

Book of Changes or *I Ching* An ancient Chinese classic: one of the nine books included in the Confucian canon. It contains the Eight Trigrams allegedly copied by the legendary ruler of China, Fu Hsi, from the back of a creature which emerged from the Yellow River. These diagrams correspond to the powers of nature. Supplementary material including definitions, observations, and a commentary by Confucius were added. The book is a mixture of speculation and a system of divination.

Book of Death In Hebrew and Christian legend and belief, the book in which are listed the names of the unrighteous together with their evil deeds. Those so listed will be cast into a lake of fire after death.

Book of Destinies or **Tablet of Destinies** The Babylonian book of life in which Marduk's scribe recorded the fate of the living and the decrees of the ruler of the underworld. Compare **BOOK OF LIFE**.

Book of Leinster or *Lebor Laigen* A 12th century Irish manuscript containing early histories (especially of Leinster), genealogies, sagas, and poetry. It contains a version (probably 8th century) of the great *Táin Bó Cúailgne* or *Cattle Raid of Cooley*, also the *Exile of the Sons of Usnech*, *Melodies of Buchet's House*, *Destruction of Dinn Ríg*, the *Bórama*, and the grim tale of the fifty captives buried alive around the grave of a son, killed in battle, of Eochu Muigmedón, king of Leinster, 358-366. It contains also, among other things, a 6th

century *Dinnshenchas*, or history of places (i.e. legends explaining place-names) which mentions Cromm Crúach, the great idol on the plain of Mag Sleacht to which the ancient Irish sacrificed their children on Samain.

Book of Life The book or muster roll of God in Hebrew and Christian legend which contains the names of His followers. From it the names may be blotted out either to signify death (*Ex.* xxxii, 32, 33) or because of unrighteousness (*Ps.* lxix, 28). This thus becomes the list of those who will be admitted to future blessedness. According to the *Book of Jubilees*, there are two heavenly tablets: a Book of Life for the righteous and a Book of Death for the adversaries of God. According to the Pharisees, God sits in judgment on the first day of each year (Rosh ha-Shanah) with three books open. In one is recorded the fate of the wicked, in another that of the righteous, and in the third that of an intermediate class. This middle class is allowed a respite of ten days till Yom Kippur to repent and become righteous. Hindus, Moslems, and Buddhists share this belief in registers holding the fate of men.

Book of the Dead or *Books of Thoth* In Egyptian religion, the guide for the dead containing formulas, hymns, incantations, and prayers which were believed to secure eternal life for deceased persons, to enable them to escape the dangers and snares besetting their journey to Amenti, to answer the 42 judges, and to secure a triumphant vindication before Osiris. The book was believed to have been transcribed originally in the handwriting of the god Thoth; it was written actually over a period of centuries. Copies of the entire book or of sections of it were inscribed on the sarcophagus or tomb, on the inside of the mummy cases, or on papyrus which was rolled up and placed in the mummy case.

The title, *Book of the Dead*, is erroneous, for Egyptians called the collection the *Chapters of Pert em Hru* or *The Coming Forth By Day*. Many versions of the book have survived. The size and content varied with the wealth of the dead man or of his friends, and papyri varied from a few feet to a hundred-foot roll. Included in the material was information on how to preserve the body from decay or the ravages of certain animals (cockroaches or beetles?), charms against the serpent Apepi and the crocodile which takes the charm from the deceased, and the ritual of the judgment of the dead.

Book of the Dun Cow or *Lebor na hUídre* An early Irish manuscript compiled in part by a monk of Clonmacnoise before 1106. It contains, in addition to the Mythological Cycle and *The Voyage of Maelduin*, for the most part the stories of the Ulster cycle, among them the long humorous story of *Bricriu's Feast* and the famous prose epic *Táin Bó Cúailgne* or *Cattle Raid of Cooley*, the oldest heroic epic of ancient Europe. This is the story which gives the manuscript its name, for the *Táin Bó Cúailgne* is said to have been recited by Fergus Mac Róich (summoned from his grave for the purpose) to Ciarán of Clonmacnoise who wrote it down upon the hide of a dun cow.

book rimes Two distinct sorts of rimes appear on front fly leaves: versified warnings to book-borrowers and thieves, as:

If this book you steal away,
What will you say
On Judgment Day?

or mere identification rimes, often closing with a pious sentiment:

Marlboro is my dwelling-place;
America's my nation;
Henry Dudley is my name,
And Christ is my salvation.
or And heaven my expectation.

Book rimes were common in the United States in the 18th and 19th centuries but have lately largely disappeared or been superseded by engraved or printed book plates. [CFP]

Boötes A conspicuous northern constellation, containing the important bright star Arcturus; the Oxdriver, or driver of the Wain; the Herdsman; the Bear Warden, etc.: named wherever it is recognized for its following the constellation of the Great Bear as if guarding or driving it. It has been called for example, the Barking Dog (Arabic) or the Shouter (as of the driver to his oxen or the huntsman of the Bear to his dogs). The stars of Boötes form a long, kite-shaped figure resembling a man, the two faint triangles of stars on either side of Arcturus forming the legs, the wider triangle north of Arcturus being the head and shoulders. In China, the cho-t'i, or attendants of Arcturus (the small triangles), were indicators of the approach of the Spring season and were important in figuring the calendar.

borage An herb (*Borago officinalis*) with bright blue flowers and hairy leaves and stem, used in salads, in making claret-cup, and believed valuable as a febrifuge, demulcent, and diaphoretic. The flowers figured in Tudor and Stuart needlework. In medieval times the leaves and flowers were put into wine to drive away sadness. The plant was also believed to revive the hypochondriac and to inspire courage; according to the old couplet, "I, Borage,/ Bring alwaies courage."

bordón-danza The Basque religious sword dance of Guipuzcoa and Tolosa, performed by a group of men in two facing lines. They wear white shirts and breeches, red sashes and berets. They run through various longways interweavings. They meet, and cross long sticks (which have replaced swords). The accompaniment is usually in the 5/8 time of the zortzico. The dance is most commonly performed on St. John's Day, June 24, thus suggesting a former connection with solstice rites. [CPK]

Boreas In Greek mythology and religion, the north wind; son of Æolus, ruler of the winds, or of Astræus and Eos, the starry night and the dawn. In early Attic legend, Boreas carried off Oreithyia, daughter of Erechtheus after trying unsuccessfully to woo her. Their children were Cleopatra, Calais, and Zetes. The latter two accompanied the Argonautic expedition. Boreas assisted the Athenians in the Persian war by destroying their enemies' ships and aided the Megalopolitans against the Spartans. The Athenians held the Boreas-moi in his honor; a festival was celebrated with sacrifices in Megalopolis; and the Thurians also sacrificed to him as the destroyer of the fleet of Dionysius of Syracuse. He was depicted as a winged, bearded man blowing a conch shell and identified by the Romans with Aquilo.

bori A class of spirits of the Hausas of Nigeria, each one of whom is credited with causing a specific disease,

and each of whom has its own name. The cult which centers in the bori involves the summoning of specific ones with drumming and particularized song, and possession by the bori of the summoners during the ritual dances. The dances are intended both to drive out and avert disease. Whenever an individual is stricken with a disease, a summoner of the bori (i.e. medium) is consulted, who puts himself or herself into relation with the spirit (i.e. becomes possessed), and appeases it with offerings or otherwise rids the sick one of it. Sixty-five dancers participate in the communal possession dances, also called bori, which are now absolutely forbidden in northern Nigeria. (See A. J. N. Tremearne, *Ban of the Bori*, London, 1914.)

Born-from-Water Identical with CHILD-OF-THE-WATER.

born with teeth An occurrence variously interpreted as good or bad among the peoples of the world. That a child born with one tooth (occasionally two teeth) will have a wonderful future is the general folk belief in France, Italy, and other Latin countries, and is known to have prevailed from Roman times. The tribune Lucius Sicinius (450 B.C.) carried the epithet Dentatus from the fact that he was born with one or more teeth.

Slavic and Finno-Ugric peoples believe that children born with a tooth will become sorcerers or vampires. Bohemians and Moravians call such a child a *drud*, or (fem.) *drude* or witch. Certain groups of Wends call them *murava*; Kasubians refer to them as *ohyns* or vampires. Often the tooth is immediately pulled out and the child is thus rendered normal and harmless. Hungarian peasants believe that infants born with teeth are *táltos*, changelings, and such children are cruelly mistreated. English babies born with teeth are said to be "hard-bitten" and are always suspect. Most Asiatic peoples regard dentate births as events of evil omen. A number of African peoples are said to destroy at birth any infant born with one tooth or more already formed. Alabama Negroes believe that a child born with teeth will have bad luck all his life.

borrowed feathers A folktale motif (K1041) in which a dupe lets himself be carried aloft by a bird and then is dropped. The motif is found in Danish, Greek, Spanish, Indonesian, Rhodesian, American Negro, and American Indian tales. In a Micmac story the cranes, jealous of Badger, carried him into the air and dropped him, but Badger called himself back, part by part, until he was whole and alive again. In a Nez Percé tale, Coyote was not so fortunate. On a hunting expedition with his brothers-in-law (geese) he was carried on their backs over the river until they reached the middle. There the geese let him go and he had fallen almost to the river when he wished himself a feather and immediately went up again. He was afraid of going too high so wished himself an arrow and dropped down almost to the river. Then he made a mistake, said "To be an arrow," and plummeted into the river.

boträd The abode-tree: an elm or lime tree growing in front of a Swedish homestead and regarded as the abode of the guardian spirit of the family. Not even a splinter was cut from this tree and sacrifices and prayers were offered beside it to ward off evil. Pregnant women embraced it to make deli æry easy.

Bo tree, Bodhi tree, or Bodhidruma The sacred tree (pipal or *Ficus religiosa*) under which Gautama sat on a couch of grass facing the east until he obtained knowledge and the perfect state. This tree, located in Bodhi Gayā, Bihar, has been sacred to Buddhists for nearly 2400 years. Pilgrims flock to it from all parts of Asia to present their offerings and to pour libations at the foot of it. The tree now standing is regarded as identical with the tree of Buddha. The present tree, however, is probably a direct descendant of the original tree, propagated by seed. King Asoka is supposed to have cut and burned the tree in the 3rd century B.C., but it was miraculously restored from its ashes. He was so overwhelmed that he did not return home. The queen then had it cut down, but it was again restored.

According to one tradition Gautama spent seven weeks under the Bo tree; according to another he spent seven days under this tree, seven days under the Goat-herd's Banyan, seven days under the Rājāyatana tree, and then returned to the Banyan. The Bo did not shed its leaves in summer or autumn, but denuded itself and developed an entire new set of leaves on the anniversary of the day Buddha achieved nirvāṇa. The Bo tree is worshipped by Buddhists and Hindus. Today a mud platform is built around the largest pipal in each North India village and there discussions and meetings are held.

A Bo tree in Amirādhapura, Ceylon, grown from a slip of the original sacred tree, is also revered by Buddhists and is believed to be a parable of the universe. Its trunk represents the connection between the invisible and the visible worlds and its vertical branches and roots represent man's striving for perfection.

bottle imp An imp or spirit shut up in a bottle, the bottle or other container often serving as the medium whereby the presence of the confined spirit may be invoked. The bottle imp is common in Arabian folktales and appears also in Estonian, Finnish, Swedish, Swiss, Hebrew, and Philippine tales.

Bought a Cow W. G. Pitts reported (1909) (*JAF* 26: 128 #18) a folk rime from country whites in Mississippi as:

Bought a cow of farmer Jones,
She wasn't nothing but skin and bones;
Kept her till she was as fine as silk;
Jumped the fence, and strained her milk.

This is a sort of "pore relation", a deteriorated descendant of an English 17th century rime which had for its second line:

She was nowt but skin and bones,

which had a concealed double meaning, for the word "nowt" formerly meant cattle (cf. neat's-foot oil) as well as "nought."

It is also obviously related to one of the many old "If I had a . . ." rimes:

If I had a cow 'n' she give good milk,
I'd dress her in the finest silk;
I'd feed her on corn oats and hay
And milk her forty times a day.

[CFP]

Bouki or Uncle Bouki The dupe of the Haitian trickster cycle, who is the foil for the quick, clever 'Ti Malice. The relation between the two characters is essentially

that between Brer Wolf and Brer Rabbit in the Uncle Remus tales, both of which series form part of the widespread African and New World Negro series of trickster stories. [MJH]

boundary A limiting or dividing line or mark; also, any object serving to indicate a limit or confine. Boundaries between nations, tribes, or the holdings of individuals are frequently the subject of dispute. To prevent the encroachment of neighbors or neighboring peoples, folk customs have developed and laws have been passed. Natural landmarks such as rivers, trees, boulders, seas, and mountains, and artificial landmarks such as boundary stones, pillars, posts, hedges, walls, or fences have been employed throughout the world. Trespass was and is usually considered a crime. Trespassers were often killed when caught, or punished by mutilation (India), and quarrels were frequently settled at the boundary stones.

Boundary markers or stones were regarded as sacred by many peoples (New Zealand, Brazil, India). Those of the Khonds were sacred to the god of boundaries, Sundi Pennu; those of the Semites were sacred to Nabu, Papu, Ninib, Nusku, and Shamash. Zeus and Hermes were the protectors of Greek boundaries, Jupiter Terminus of Roman landmarks. Thor, Frigga, and Holde were Teutonic boundary deities. Cruel and severe punishments were meted out to those who removed landmarks. Punishments varied from death (New Zealand, early Rome, Aztec Mexico), a curse (Etruria, Babylonia, New Britain, South America), to large fines (late Roman Empire, Wales).

In Scandinavian and Teutonic folk belief, the Jack o'Lantern was the ghost of someone who had violated a landmark. Local legends are full of men condemned to carry the boundary stones which they had moved to increase their holdings in their lifetime. The water from a boundary stream was used with silver to remove the curse of the evil eye.

Bouphonia or Buphonia In Greek (Athenian) religion, the sacrifice of an ox at the altar of Zeus on the Acropolis. Oxen were driven around the altar during the festival of Diipoleia, and that ox which nibbled at the cereals on the altar was killed with an ax which was then condemned and thrown into the sea. Meanwhile the flesh was eaten and the hide stuffed with grass, sewn together, and yoked to a plow.

The origin of this sacrifice was the killing of an ox by Sopatrus after the ox had eaten the cereal he was offering as a sacrifice. Seized by remorse, Sopatrus buried the ox and fled to Crete but a famine followed and so the Bouphonia was instituted. The custom, according to Frazer, points to a belief in the ox as a form of the corn spirit or, according to Robertson Smith, to totemism.

bourrée A peasant dance of Auvergne, France: a double file choral dance performed by men and women facing each other. The two lines advance and retreat from each other, and one by one, beginning with the leader and his partner, the dancers exchange places. The bourrée is also danced as a lively couple dance in 3/8 tempo, men with arms raised, women holding their skirts. In Limousin it is a lusty, stamping, jumping, finger-snapping performance. The Languedoc bourrée is in 4/8 time. It was introduced at a court

festival for Catherine de Medici in 1565 but was not performed except as a peasant dance until much later. Finally, as a court dance, the *bourrée* appears as a ballet form. The ballet *pas de bourrée* is a brief grapevine with tiny steps (r. back, l. side, r. forward, reverse) producing a kind of rocking in place; or the grapevine can also be prolonged to a progression from side to side. [GPK]

Bow bells The bells of St. Mary-le-Bow, in Cheapside, London, within sound of which cockneys are born; hence, the region within London called cockneydom. In the legend of Dick Whittington, it was the Bow bells which he heard say, "Turn again Whittington, Lord Mayor of London."

box A slow-growing evergreen tree or shrub (genus *Buxus*) highly valued for hedges and for its tough close-grained wood. The use of the wood for musical instruments was mentioned by Pliny, Vergil, and Ovid. *Isaiah* (1x, 13) mentions box as one of the three trees to beautify his place of sanctuary. Box attains exceptional old age.

Why does the box retain its leaves longer than most other trees was one of the wise questions put by the ancient Jewish physician and philosopher, Isaac Israeli, in his Arabic *Universal Diets*, and re-asked by Petrus Hispanus in the 13th century in his inquiry into the occult properties of various plants and animal parts.

In the north of England a basin filled with sprigs of box used to be placed outside the door of a house in which there was a funeral. As the mourners left the house, each would take a sprig of box and later drop it into the grave after the coffin was lowered. In parts of France crosses and wreaths were made of box for Palm Sunday, and kept from year to year, long after they were withered. If an animal sickened during the year, the byre was cleansed and one of these old wreaths or crosses was burned inside the place. This fumigation drove out the disease.

In a Breton folktale the separable soul of a giant is hidden in an ancient box tree in his garden. To kill the giant the hero must cut the root of the tree with one blow of the ax.

Boxwood combs are used in crossroads divination in Japan; running the fingers along the teeth of the comb invites the gods to speak.

box dropping from sky A motif occurring in the Coeur d'Alene Indian Coyote's-son cycle in which the Spider Women in the sky help Coyote's son drop back to earth in a box. The motif occurs in the typically northwestern Indian story *Coyote Steals His Daughter-in-law*. Coyote coveted one of the wives of his son. He managed to send the son into the sky, and then took for himself the wife named Tern. Coyote's son had many adventures in the sky; he had the beaver girls for his wives, and he had children by the beaver girls. But he was homesick for his earthly wife, Black Swan, and her child. He went to the Spider Women and asked them to help him get back. They put him in a box with a lid and told him how to go. They said the box would stop four times before it got to earth; each time it stopped he must roll around and it would continue to drop; but he must not get out until he heard the wind blowing in the grass. Coyote's son got into the box and all happened as he was told. When he heard

the wind blowing in the grass he got out. He found Black Swan and his child outcasts from the camp. So he returned to the camp and killed everybody. The story ends with the closing formula, "That is the end of the road."

In many variants Coyote's son is marooned on a high rock from which he escapes, or he drops from the sky in a spoon (Sahaptin), or he causes a flood which destroys the faithless wife (Columbia River). But the usual medium for his return is the spiders' rope. And the four pauses of the box in its descent is vivid description of any spider's descent from a high place.

boxi moni The British Guiana equivalent of the Trinidad cooperative savings device known as 'susu. [MJH]

Boy and the Mantle An English minstrel ballad (Child #29) with the chastity test motif and in which the Arthurian material is prominent. A boy arrives at the court of King Arthur with a mantle which, he says, will never become a wife who has "done amisse." Only Craddocke's lady could wear it, to the embarrassment of the other court ladies. Then the boy killed a boar and invited each of the knights to carve it, saying that a cuckold's knife could not cut it. Finally he produced a horn of red gold from which a cuckold could not drink. Only Craddocke could carve the boar's head and drink from the horn.

boy judge The hero of a number of folktales of clever decisions: related to the Solomon cycle, the group of tales of the clever peasant girl, the king and the bishop, the maiden who confounds the king's wisest counselors, and the like. In the type tale of the boy judge, the king overhears the decision of a boy acting as judge in a children's game based on an actual problem the king faces. He summons the boy to court and has him decide the real case. In the *Arabian Nights* the tale of Ali Cogia (Burton, Supp., III: "Ali Khwajah and the Merchant of Baghdad") the problem of the jar of olives and the gold pieces hidden therein is solved by the boy's calling, as judges of the age of the olives, experts who can say that they are fresh olives and not seven-year-old olives. Another Eastern story tells of the deposed vizier who hears children playing a game closely paralleling his own misfortunes. Repeating what he has heard the boy say, he tells the sultan that in return for the goods taken from him he wants back the years sacrificed for them. Cyrus, in a story told by Herodotus, and Jesus, Mohammed, and Charlemagne are all heroes of stories telling of their precocious wisdom in the face of adult dilemmas. The tales are of course related to the game children play, like School or Play House. The game of the boy-Kazi is a favorite of Arab children. The story of the boy judge, along with other tales of so-called "enfants terribles," is known from Mongolia to Arabia and in Europe. Perhaps the best known of all folktales of the boy judge is that of Daniel and Susannah: how the young Daniel questioned each of the two accusers of the innocent but convicted woman and how their testimony, when taken separately, did not agree. Related to this are other stories of adultery exposed or refuted by the cleverness of a child. In a Persian story, the boy discovers that the illness of the king is caused by the adultery of one of his wives. The

Three-Year-Old Child in the *Arabian Nights* who cries prevents, by his explanation, the libertine from having his will of the woman.

božaloshtsh In the belief of the Wends (eastern Germany), the messenger of death: literally, God's plaint. She is a little woman with long hair who cries beneath the window of a person about to die. Compare BANSHEE.

bracken Any large, coarse fern, especially the common brake (*Pteridium quelinum*) common in Europe and North America. It is often called "poor man's soap" because its root stocks will make a lather in water. In Biblical legend Christ was born on a bed of bedstraw and bracken. The bedstraw, proud of the honor, burst into flower and was rewarded with golden instead of white blossoms. The bracken, however, refused to honor Christ and so has been flowerless ever since. In Shropshire, however, it is said that the brake flowers once a year, at midnight on Michaelmas Eve, but that the flower is gone by daybreak.

To the herbalists the plant is under the dominion of Mercury, and is drunk, when boiled in mead, to kill broad and long worms. In Ireland the bracken is a symbol of fecundity. "As prolific as the bracken" is a common saying. A beverage made from the roots is considered good for worms. Tea from the leaves is a soothing application for burns and scalds.

Braes o Yarrow A Scottish Border ballad (Child #214), in which a young man leaves his young wife to go to meet her brother John "upon the braes o Yarrow." There nine armed men awaited him. "Four he killed and five did wound," but a "coward loon came him behind" and pierced him to the heart. The young wife found her true-love lying dead and took her own life beside him. In another, and probably earlier, version, *The Dowy Houms o Yarrow*, she drank the dead man's blood and cursed her old father (who had disapproved of the match) for causing her young lord's death.

Bragi or Brage In Norse mythology, the god of poetry and music: one of the original Æsir. Son of Odin and Gunlod, he was born in a stalactite-hung cave, put on board a vessel belonging to the dwarfs, and presented with a magic golden harp. As the boat floated out of the subterranean darkness, Bragi seized the harp and began to sing the song of life. When the vessel reached the shore, he leaped ashore and walked through the forest playing his harp. The flowers bloomed and the trees budded as he played. There he met and wed Ithunn and the two hastened to Asgard where Odin traced runes on Bragi's tongue and decreed that he should compose songs in honor of the heroes received in Valhalla.

Bragi is often pictured as an old man with a long white beard. At Scandinavian feasts a horn consecrated to him was used for drinking while each man made a vow to perform a deed during the succeeding year worthy of immortalization in verse or saga.

Brahmā or Brahman The first of the Hindu trinity; the deity of the later Brāhmaṇas who assumes the creator role of the Vedic Prajāpati and Hiranyagarbha: the personification of the supreme brahman. Brahmā, in mythology, sprang from the egg created by the supreme first cause. According to the *Rāmāyaṇa* he arose self-existent and, becoming a boar, created the

world and raised the earth. According to the *Mahābhārata* he sprang from the navel of Vishnu or from a lotus growing from the navel of Vishnu. The Śaivites believe Rudra to be the creator of Brahmā.

Brahmā probably had his origin in speculation rather than in popular cult. The world of Brahmā will endure for 2,160,000,000 years (a day and night of Brahmā) after which the world will be consumed by fire, to be recreated by the god again and again until a hundred years of such days have passed, when the whole universe and the gods themselves will be resolved into the primeval substance.

Brahmā is represented as red in color with four heads (a fifth was burnt off by Śiva when he spoke disrespectfully to the latter) and four arms. He controls a quarter of the universe with each face. He holds in his hands a scepter, or string of beads, or spoon, bow, water-jug, and the Veda. His vehicle is a swan or goose. His consort is Sarasvatī with whom, as the father of men, he had incestuous intercourse. He was the father of Daksha and the four Kumāras, the mind-born sons who remained forever boys. Brahmā is rarely worshipped and is of secondary importance. In a mythological argument between Vishnu and Brahmā as to who was the creator, Śiva settled the argument by proving himself the supreme force.

Brāhmanor Brāhmin [masculine, accented on the last syllable] A member of the first of the four castes of Hindus; usually, but not necessarily, a priest. The chief duties of the Brāhman are the study and teaching of the Vedas, the performance of religious ceremonies, and the making of sacrifices. His life is divided into four stages: Brahmachārī, in which he is a religious student; Grihastha, in which he is a householder, married and teaching the Vedas; Vānaprastha, in which he lives as an anchorite after having discharged his duties as a man of the world; Sannyāsī, during which he is a religious mendicant subsisting on alms, heedless of joys or sorrows in his desire for final absorption in the essential principle of the world. The Brāhmins were and still are privileged. They claim divinity on the basis that there are two kinds of gods—the gods and the Brāhmins who have learned the Vedas. Many modern Brāhmins neglect their religious duties and engage in secular occupations. The Brāhman is a popular character in Indian folktales.

Brahmāpura In Hindu mythology, the heaven and city of Brahmā, situated on the summit of Mount Meru.

Bran (1) In Brythonic mythology, a son of Llyr, brother of Manawyddan and Branwen, and legendary king of Britain. He was a huge being, likened in some versions of his story to a kind of sea giant. Traditionally it was Bran who waded across the strait between Great Britain and Ireland and (like Orion in the Ægean) caused the great tides.

The story, as told in the *Mabinogion*, is that Bran was sitting on a great rock on the shore at Harlech, when he saw 13 ships sailing toward Britain from Ireland. It was Matholwch, king of Ireland, coming to ask for the hand of Branwen in marriage. Branwen was given to Matholwch for his wife. The feast was held in tents because no house could contain Bran. One day soon after this Evnissyen (a half-brother to Bran, noted for his envious nature and desire to stir

up strife) was walking among the horses and trappings of the Irish, and suddenly in rage he turned and cut off the lips and eyelids and tails of the Irish horses. The creatures were maimed and useless. Matholwch could not understand this insult.

Bran did what he could: he explained that the deed was no one's will but the whim of an ill-natured half-brother; he made up the loss, horse for horse, and added a silver staff as tall as himself and a gold plate as wide as his face. Then lest it seem not enough, Bran gave to Matholwch a caldron of such a nature that if a man be slain today and cast into it, he will come out alive tomorrow, though speechless. This was the caldron of regeneration, given to Bran by a man and woman who came out of a lake in Ireland.

The first year that Branwen was queen in Ireland she was loved and acclaimed, and a son was born to her named Gwern. But in the second year, the minds of the men of Ireland remembered the old insult they had received in her country, and they took vengeance by driving Branwen from Matholwch's bed, turning her to do the cooking, and causing her to receive a blow every day. No man that came to Ireland from Britain was ever allowed to return lest he tell the story. But Branwen took a young starling and reared it in the kneading trough. She taught it to speak and obey her, and explained to the bird how to recognize Bran. At last she wrote "a letter of her woes," fastened it to the starling, and sent the bird to find Bran.

When Bran read the letter he embarked with his hosts and sailed towards Ireland. But Bran's ship lay deep in the water with his weight and could not reach the shores. So he got out and walked on towards Ireland beside the fleet. Watchers were dismayed, and when they described that a mountain was seen coming to Ireland beside the ships, Branwen knew it was her brother Bran.

Messengers from Matholwch met Bran, proposing to build a house for him, who had never had a house, in compensation for the wrongs done to Branwen. Bran accepted the offer and the house was built. It had a hundred pillars in it and on each pillar were hung two long leather bags, with an armed man in each one. Ebnissyen saw the bags, felt of each one, and crushed with one hand the head of every man in every bag.

At the feast that was given, the sovereignty of Ireland was conferred on Branwen's son, who passed among the visitors one by one, greeting his uncles, Bran and Manawyddan and many others. All loved him, except Ebnissyen, who grabbed him up and threw him in the Ære. A terrible fight took place then and many were killed. The Irish renewed their slain by casting them into the caldron of regeneration. And when Ebnissyen saw that he threw himself among the dead, was cast into the caldron with them, stretched himself, and cracked it. Only seven of Bran's people escaped from the place, and Branwen went with them.

Bran bade his companions cut off his head and bury it in the White Hill in London, facing France, so that it might protect the country forever from invasion. So they cut off the head, and the head, the Urdawl Ben, or Noble Head, entertained its guardians for 87 years before it was buried in the White Hill. In its presence time passed in merriment and jest and feasting. But at last it was buried where Bran had said; and it pro-

tected Britain from invasion until Arthur dug it up, preferring rather that the valor of its defenders protect the land. (Belief in the power of a buried head to turn back invaders was a strong and ancient belief. The heads, sometimes the bodies, sometimes sculptured heads of warriors, were buried in certain places for this purpose.)

Bran later became known as a Christian saint, Bendegeit Vran, the Blessed Bran, one of the three kings of Prydain who brought Christianity to the Cymric people, after he had been seven years in Rome as hostage for his son Caradawc (probably the historical Caractacus).

There is a riddle of Taliesin's to which the answer is Bran, embodying both the mythological and legendary aspects of Bran's story, along with the uncertain implication of his position as a sea god: "I was at the court of Dôn before the birth of Gwydion; my head was at the White Hill in the Hall of Cymbeline: it is not known whether my body is flesh or fish."

(2) One of Fionn mac Cumal's wonderful dogs: one of two whelps born of Tuiren, wife of Iollan, a chief of the Fianna. Tuiren was transformed into a bitch by a former sweetheart of Iollan's, a woman of the síde, and given as a present to Fergus Fionnliat, who did not like dogs. Later, after Tuiren was restored to Iollan, Fionn took the two beautiful whelps and named them Bran and Sceolan. They were famous for their wonderful intelligence. Bran was especially beloved by Fionn; she was so swift that she could overtake the flight of wild geese. Bran and Sceolan were the two dogs who conducted the young doe safely through the forest into Fionn's dún, where she was safe from her enchantment and became, in her own shape, Fionn's beloved wife, Sadb. Later she was tricked out of the dún and became a deer again. After that Fionn would allow no dogs to hunt except Bran and Sceolan, who would know her. And it was Bran and Sceolan again who discovered the boy Oisín naked in the forest, and brought him to Fionn, who knew him for his own son, child of Sadb, the deer.

It was Fionn himself who gave Bran her death and never got over grieving it. One day Fionn was hunting and Bran was following a fawn. Fionn heard the fawn cry out in despair that nothing could save her from Bran. "Run through my legs," said Fionn. So the fawn ran through his legs, and as Bran followed Fionn crushed her with his knees. Fionn's grief was terrible because of this. It is believed he could never have done it, except that the quarry must have been his own mother or Oisín's.

brando An Italian folk dance of moderate tempo: originally a 15th century peasant dance and still performed as such in the province of Bologna. It developed into the court spectacle. It was a chain round, retaining much that was typically primitive choral dance; but in the late 16th century, it became a square, executed in 14 varying figures, by two diagonally facing couples. [GPK]

branle A French 16th and 17th century mimetic couple dance, danced in groups, either in open file or closed circle, and characterized by a typical balancing movement. There were many variants: a different branle for each province, the branle of Poitou, of

Champagne, of Burgundy, etc. The branle of Brittany was a passepied. There was a branle for all ages: *branle gai*, very fast and lively (in sextuple rhythm) for the young; *branle simple*, rather lively, for married couples; *branle double*, with a slow rhythm for the old. There were mimetic branles, such as *branle des hermites*, *du sabot*, *des lavandières*, etc. Most of them were in quadruple time. The *branle des oficios*, also mimetic, is claimed to have developed into the volte, which later became the waltz. [GPK]

Bran, son of Febal Hero of the 8th century Irish *The Voyage of Bran and His Adventure*.

Branstock In Teutonic mythology, a mighty oak in the great hall of Volsung's palace which pierced the roof and shaded the building. One day Odin thrust the sword, Gram, into the trunk of the tree, up to the hilt. Only Sigmund was able to withdraw it.

brazen head An oracular head of brass: said to have been made by several of the medieval magicians. The giant Ferragus of Portugal had one which told of the past, present, and future. That of Friar Bacon, which spoke to Bacon's assistant while the master magician slept, and was shattered before he awoke, is the best-known brazen head in English tradition. See SPEAKING HEAD.

Brazen Serpent An image set up by Moses at the command of God, which is said to have healed those who looked upon it. When the weary Israelites, near the close of the desert wanderings, were forced to march around Edom, thus prolonging the journey, they murmured against God and Moses. As a punishment, fiery serpents were sent against them. When they repented, Moses was told to put upon a lofty pole a bronze image of a serpent, so that those who had been bitten might look upon it and live. When he hurled the image on high, it remained floating in the air, so that those who raised their eyes and thought about God were healed. Gradually the people forgot the symbolical meaning and came to worship the snake itself, so Hezekiah found it necessary to destroy it (II Kings, xviii, 4). In rabbinical belief, the serpents were considered a punishment for sins of the evil tongue (*Num.* xxi, 5).

bread Many peoples believe bread the gift of the supernatural, and will not eat bread unless an offering has been made. The Jews must sacrifice a portion of the dough as *chalah*. In ancient times it was given to the priest who was ritually clean, who consumed it, but now this is impossible, so instead a portion the size of an olive is removed and burned. On the New Year, the ritual loaf is shaped like a ladder to symbolize man's ascent to heaven. On the Sabbath, the oldest male of the house blesses the Sabbath loaf and the wine, cuts the loaf, and each person present must partake before the Sabbath meal can begin. On Passover, the Jews eat unleavened bread, *matzo*, to commemorate the expulsion of the Jews from Egypt when they did not have time to let the bread rise.

In Northwest India, the first of the grain reaped is mixed with milk and sugar to be eaten by a member of the family, while among the Ainu, the new crop of millet was baked, and worshipped by the old men before anyone else could eat it. Among the Natchez Indians the first sheaves of maize were made into loaves,

and offered to the setting sun before they could be eaten. In Peru, the first of the harvest had to be consumed by the Inca and the nobles, who were descendants of the Sun, before they could be eaten by the common people. In Silesia, only the family may eat of a loaf made from the last sheaf. In the Volga River region, when the first bread from a new harvest is baked, the entire village assembles in the house of the oldest inhabitant. They open the eastern door, face it, and pray. Then the bread is cut, each person is given a morsel by the old man, and then all pray. In Lithuania all types of grains were mixed and baked into sacrificial loaves, one for each member of the family.

Bread may also be regarded as the body of the supernatural. In Yorkshire, the clergyman cut the first corn from which he made the communion bread. In Hermland, in Sweden, the last sheaf was ground and baked into a loaf shaped like a little girl which the entire household ate, for it embodied the corn spirit. The Aztecs ate the body of Huitzilopochtli, twice a year, in May and December, in the form of cakes baked in the idol's image. In Spain to avert a storm which threatens the crops, bread is placed in a napkin, and placed on the window ledge facing the direction whence the storm is coming. One says three times: "Lord, let not harm come to thy body." In Rumania long, wheaten loaves, "beautiful like the face of Christ," are baked for weddings, baptisms, festivals, and funerals.

Bread also can cure disease or act as an amulet. In Holland stale bread is placed in the baby's cradle to ward off disease, and in Morocco it is thought that stale bread cures stuttering; in Egypt just licking it cures indigestion. In Belgium, crumbs blessed in church on St. Hubert's Day, November 3rd, were sewn into the pockets of garments to avert rabies. This bread was first eaten by the family, and then fed to the dogs. (St. Hubert is the patron of hunting).

It is sinful to waste bread in many parts of Europe. After her death a wasteful Polish housewife may be heard scrambling around for every crumb of bread that she has dropped in her lifetime, and her soul knows no peace until she has picked it all up. Among other Slavs it is believed that these wasted fragments are weighed against the soul of the culprit, and if they are heavier than he, his soul belongs to Satan. In Transylvania, if bread falls to the ground it is picked up and kissed, for it is sinful to throw it away or step on it. However, it can be thrown into the fire as an offering to the dead. The Russian uses bread and salt as a symbol of friendship, and among the Poles the bride is greeted in her new home by her mother-in-law with bread and salt. The Greeks believe that it is sinful to take two bites of any food in succession without a mouthful of bread between.

Bread symbolizes the home and family in other ways. A Rumanian proverb has it: "The bread of my land though to others hard and bitter, to me is sweet." A Slavic proverb says: "Without bread, even a palace is sad, but with it a pine tree is paradise." To the Italian, bread is all food, the rest is merely accompaniment, and such is his regard for bread, his superlative simile is "as good as bread." To the Spaniard: "All sorrows are less with bread," and for the Dane: "Bread is better than the song of the birds." In many parts of Europe bread baked on Good Friday would never stale. If a woman

baked on Good Friday and the five Fridays following, she was particularly blessed. However to the Russians, baking on any Friday was unlucky, and on Good Friday particularly so. To them Good Friday was a vengeful old hag, so jealous that if a woman baked, her hands would be turned to wood. In Scandinavia, if a boy and girl ate from the same loaf, they were bound to fall in love.

Menstruating women were dangerous to the bread for their touch would prevent it from rising. Therefore, they were enjoined from baking it or kneading the dough in eastern Germany, Italy, and southern France.

It is a common belief in England and America that a loaf of bread, weighted with quicksilver, will locate the body of a drowned person. Such a loaf set in the water travels towards the lost body and remains motionless over it. [NFJ]

bread dance A term applied to various Amerindian dances for sustenance: to the Iroquois Spirit-of-the-Food dances, to the Shawnee spring and fall dances, respectively a plea for crops and for plentiful hunting. The Shawnee female deity, Kokumthena, Our Grandmother, is sometimes present and her voice is sometimes heard above the women. The three Iroquois life-sustaining sisters, corn, beans, and squash, are also conceived of as feminine, because the raising and preparation of crops is primarily a woman's occupation. The Shawnee follow the two bread dances with all-night social dances. The Iroquois have a definite sequence, varying with each reservation. [GPK]

break An American square dance term: all drop hands, followed by swing (joint pivot in place). [GPK]

Breathmaker The Seminole Indian culture hero, Hisagita misi, who taught the Indians how to fish and dig wells. He made the Milky Way and the kooniti (pumpkin) plant. He is equated with Jesus by modern Seminoles.

Brennan on the Moor or Bold Brennan An Irish come-all-ye based on the story of the outlaw, Willie Brennan, who was betrayed by a false-hearted woman and hanged for highway robbery in County Cork, 1804.

Brer Rabbit The rabbit (or hare) has played a role in folklore quite out of proportion to its diminutive size and timorousness. Among the traditions that have helped to establish it in the folk mind as a charmed creature may be mentioned the lunar hare (the Eastern equivalent of the Western Man in the Moon), the *Osterhase* or Easter bunny, and the belief in the rabbit's foot as a lucky charm or countercharm against witchcraft. The divinity assigned to the hare in the *Jatakas* or birth-stories of Buddha is somewhat approximated by the role of the Great White Hare as a culture hero among the Algonquians.

The rabbit's trickster role in Negro folklore is anticipated in the *Panchatantra* and the *Hitopadesa* of India, where the hare outwits the elephant and the lion, and in Burma and Tibet, where it outwits the tiger. In Africa, from which the slave brought Brer Rabbit, the rabbit trickster is general, except on the Slave Coast, where it is replaced by the tortoise, and the Gold Coast, where it is replaced by the spider. See ANANSI; AUNT NANCY. Among the Kaffirs of South Africa the rabbit finds its counterpart in the Tom-Thumb-like Hlakanyana. In

Liberia its place is occupied by the chevrotain, a nimble, graceful, fawn-colored creature about eighteen inches long, whose elusiveness and cunning have made it an object of veneration. The confusion of Brer Rabbit with Cunnie (Cunning) Rabbit, another name for the chevrotain, is often cited as reason for the Negro's transference of the cunning of the latter to the former.

The popularity of rabbit trickster tales (including the "Tar Baby" story) among the American Indians, points to Negro-Indian exchange. J. W. Powell and James Mooney lean toward the view that the Indian would have been less likely to accept and transmit Negro tales than the Negro would be to take over Indian tales. Joel Chandler Harris (*Nights with Uncle Remus*, Boston and New York, 1881, p. xxv) supports the opposite theory, and Stith Thompson states (*Tales of the North American Indian*, Cambridge, 1929, p. xxii) that the animal tales so popular among the Southeast Indians have "become so greatly influenced by the 'Uncle Remus' tales as to be at least as Negro as Indian." By the same token, Mary A. Owen's rabbit tales (*Voodoo Tales*, New York, 1893) seem to be as much Indian as they are Negro.

In American Negro folklore the assignment of the trickster role to the rabbit is associated with the Negro's own role in slavery, where cunning and deception ("hitting a straight lick with a crooked stick") were often his only weapons against oppression. This, however, according to M. J. Herskovits, is an "adaptation and reinforcement of the African ways of thoughts," and is in line with the universal tendency on the part of oppressed people to identify themselves with the weaker and triumphant animal in the pitting of brains against brute force and superior strength.

In Harris's versions the tales of Brer Rabbit are closer to literature than to folklore, though it is a tribute to his artistry and his folk-art that they have established themselves as American classics. In this way Uncle Remus has fulfilled the social function of the Negro nurse or house servant as story-teller to his master's children—a role which made possible the slave's retention of African animal tales but which at the same time has conditioned whites to look upon Negroes as mere happy-go-lucky entertainers. While many plantation stereotypes linger in the nostalgic versions of Brer Rabbit and other Negro folktales by Harris and others, including Louise Clark Pyrmelle and Virginia Frazer Boyle, more authentic (and more painfully accurate in their Gullah dialect) versions are to be found in the work of Mrs. A. M. H. Christensen, Ambrose E. Gonzales, and Charles C. Jones, Jr. More recently, as the hero of bedtime stories and animal comics (under such designations as Peter Rabbit), the rabbit has degenerated into a purely comical or whimsical character, along with a host of other small animals, some of whom have taken over the rabbit's role as good-natured rogue and trickster tricked. [BAB]

Bres In Old Irish mythology, the son of Elatha, a king of the Fomorians, and Eri, a woman of the Tuatha Dé Danann; brother to Ogma, and husband of Brigit. He was called Eochaid Bres, Bres the Beautiful, because nothing was more beautiful than he. By the time he was born, he had attained a two weeks' growth; when he was seven, he was as big as a boy fourteen; and so he continued. To Bres the Tuatha Dé Danann gave the kingship of Ireland in the hope that his reign would

ensure peace and good will between the Fomorians and the Tuatha Dé Danann. But Bres was unworthy, and only trouble followed. See *BATTLE OF MAG TURED*.

Brethren Culture heroes of Torres Straits Islands and Papuan New Guinea mythology: unrelated to the brothers of the cycles of eastern Melanesia (Haddon, *Reports of the Cambridge Anthropol. Exped. to Torres Straits*, vol. 1, Cambridge, 1935). See *MELANESIAN MYTHOLOGY*. [KL]

Bricriu Nemienga Bricriu of the Bitter Tongue; in Old Irish legend, a warrior and trouble-maker in Ulster. It was he who incited the first three champions of Ulster (Loegaire, Conall, and Cuchulain) to quarrel over the champion's portion at his famous feast, and instigated the rivalry of the champions of Ireland for the carving of MacDatho's pig, which resulted in such wholesale bloodshed. In the *Táin Bó Flidais* (The Driving of the Cows of Flidais), however, Bricriu appears in quite different character. Here he plays the role of poet and ollam, satirist of bitter but not venomous tongue; he satirizes Fergus for his broken promises and his seduction of Medb, acts as ambassador of Ailill, king of Connacht, to Ailill, husband of Flidais, and is honored in every place.

Bricriu's Feast Title of one of the oldest and longest stories in the Ulster cycle of Old Irish legend and romance. Bricriu Nemienga made a great feast for Conchobar, king of Ulster, and the Ulster warriors. He built a huge special house for it, and then traveled to Emain Macha to invite the king and his chiefs. The chiefs were unwilling to go, saying the dead would outnumber the living because of Bricriu's setting one man against another. But Bricriu said he would do that sooner if they did not come. So Conchobar and the chiefs of Ulster went, but they would not let Bricriu himself into the hall. Bricriu had foreseen that they would take this precaution, and had already secretly led each of the three best champions of Ulster (Loegaire, Conall, and Cuchulain) to expect the champion's portion. Likewise he incited the wife of each one to expect precedence over the others. Tests of valor and prowess among the three heroes followed, but no satisfactory decision could be made that anyone would abide by, neither the decision of the Ulstermen themselves, nor of Bricriu, nor of Medb and Ailill whose verdict they sought, until at last the three went to Cú Roi mac Dairi for judgment. All three heroes had opportunity to show great courage, keeping watch and guard on Cú Roi's castle. Cú Roi's judgment was as follows: the champion's portion always to be Cuchulain's for he was first in valor, and to his wife precedence before the women of Ulster. But when the three got back to Emain Macha Cuchulain did not want the champion's portion, for he loved more the good will of his companions. Not until another time was the champion's portion definitely assigned to him—after the great beheading bargain proposed by the bachlach who visited Emain Macha nightly. Munremur, Loegaire, Conall, all accepted the challenge and beheaded the bachlach, but shirked the appointment to allow themselves to be beheaded each following night, when the bachlach returned, whole and headed, each time. Only Cuchulain kept faith. He beheaded the bachlach one night and stretched his own neck across the block to be slain in the next. But the bachlach-

brought the great ax down blunt side first beside him, proclaiming him not only fearless but true. "The sovereignty of the heroes of Erin to thee from this hour forth and the champion's portion undisputed," the bachlach cried and vanished. But later it turned out it was Cú Roi mac Dairi in disguise, keeping his promise to give judgment on the heroes of Ulster.

bride A newly married woman, or a woman about to be married. The state here discussed is from the time of betrothal up to the time the bride becomes a participant in the wedding ceremony. The bride-elect of today participates in certain customs which were unknown to primitive brides. Some of these usages, known at present in America and in other countries, are to a certain degree similar to those of long ago; but in Africa, Asia, and Indonesia, and elsewhere, marriage was a business devoid of romance, and so probably was the interim between betrothal and wedding.

In England and on the Continent, the bride looks forward to the day of the wedding; certain days are more favorable than others, Wednesday being the favorite day. Especially important is the weather for the great day. The belief in this respect is summed up:

Blest be the bride the sun shines on,
Curst be the bride the rain falls on.

If married on a rainy day, as many drops, so many tears; but snow foretells happiness. Another thing that concerns the bride is the initial letter of her future husband's name:

Change the name and not the letter,
Change for worse and not for better.

In preparation for the wedding ceremonies, dress is important. Its color appears to be of first importance and there are many jingles which prescribe for this occasion. The bride will be unhappy if married in *black*; bad luck will attend her if married in *green*. "Married in *white*, you've chosen right." Further, the bride is supposed to wear

Something old and something new,
Something borrowed and something blue.

She must not wear pearls as they symbolize tears. She may decide on the material for her dress by divination, that is, by skipping a rope and saying, "silk, satin, calico, . . ." until there is a miss on the name of the goods her dress will be made of. She may count buttons for the same purpose. The veil is an indispensable item. Some symbolism is attached to the veiling of the bride, but it is generally thought that the veil is to protect the bride from the evil eye. The bridal wreath is composed of different flowers, or vines. In Germany the myrtle wreath is usual and it has its special symbolism.

Tabus for the bride include the following: the ring must not be worn before the ceremony, nor must the wedding dress be put on, and on no account must the bride make the wedding cake herself or assist in its making. Lovers may not meet on their wedding day until the hour and place of the ceremony, nor may the prospective bride and groom be photographed together. When leaving the house for the wedding ceremony, she must be careful to step out with her right foot first and she must also weep and groan.

Bride favors were tokens given out at certain festivities either before or after the ceremony; they consisted

of topknots or garters, sometimes of other articles, such as small baskets to hang in the house. Loveknots were conspicuous in these favors and the colors used were significant: blue (for constancy), and so on. [GRS]

bride cakes In ancient Rome, *confarreatio*, a round cake of salted meal was baked by the Vestal Virgins for the wedding ceremony. It was carried before the bride as she went to her new home, broken over her head, and she and the groom ate of it as a sacrifice to Jupiter. Then it was given to the guests. In Macedonia an elaborate cake was begun on the Monday before the ceremony, when the bride and her friends sifted the grain; it was kneaded on Wednesday, when a boy with a sword stood at one end of the trough, while a little girl dropped a ring and a coin into it. The dough was left overnight and then divided up among the guests. The person finding the ring returned it to the groom, who ransomed it with a gift. The dough was then baked, was sung and danced to, then broken up and thrown over the heads of the couple. In Norway, coins are placed on a cake, by each guest in the bride's new home, for the couple. In Spain they used a pie instead for collecting the coins—each guest made a slit in the crust, those who danced with the bride paid more. The cake was eaten daily, and when finished another party was held for the same guests. *Karavai* was the Ukrainian wedding cake, in which all present shared, but the older were served before the younger. To avert the evil eye, in Germany, a cake with a silver coin in it was given to the oldest man in the village on the day before a wedding.

Cakes are distributed at weddings for luck or for the poor, as in China where the groom sends meat-filled cakes to his bride's family, who in turn give them to their friends. In Czechoslovakia, the invited guests get cakes before the wedding, and they send food to the couple. In England, the bride's cake used to be a type of cracknel, which were thrown at her and then given to the poor. In later times they were buns, which were piled up, and the couple kissed over them. Tradition has it that a French chef introduced the idea of icing the buns together, and thus when the cake was broken over her head, it fell apart. In England and America it is believed that if an unmarried girl sleeps with a piece of wedding cake under her pillow she will dream of her future husband. Bride cakes in the United States are usually light in color, rather than dark fruit wedding cake, and are cut at the wedding, the bride and groom holding the knife together to make the initial cut. [NFI]

Brigit Ancient Irish goddess of fire, culture goddess associated with fertility, cattle, and crops, all household arts and smithcraft, poetry, and wisdom; daughter of Dagda. She appears in Gaulish and British inscriptions as Brigindo, Brigantia, Brig. Her personality passed over to the 6th-century SAINT BRIGIT. See BRES; DANU.

Brihaspati or Brahmanaspati In Vedic mythology, an abstract deity, the Purohita (family priest) of the gods; the Lord of Prayer; the heavenly Brāhman, prototype of the earthly Brāhman, and sometimes also of the god Brahmā. In Brāhman mythology he is a divine sage, the son of Angiras, progenitor of the family of Agni, with whom he is identified in the *Rig-Veda*. He helped the gods vanquish the asuras. To teach Indra how to

rule the world, Brihaspati, as wisdom incarnate, wrote a treatise on government; to teach him the virtues of secular life, he wrote a treatise on married love. An ancient Indian law code bears his name. Brihaspati's wife, Tārā, was carried off by Soma but restored at the command of Brahmā. Brihaspati is represented with seven mouths, sharp horns, a hundred wings, and armed with an ax and a bow. His chariot or car is called Nitighosha and is drawn by eight horses.

Brisingamen In Scandinavian mythology, the magic necklace, emblem of the stars or fruitfulness of the earth, fashioned by the dwarfs in Svartalfheim and given to Freya on the condition that she would be unfaithful to her husband, Odin. Freya wore the necklace day and night but occasionally was persuaded to lend it. Loki tried to steal it by entering Freya's palace as a fly. Heimdall saw the robbery with his eagle eyes and pursued the thief. As he was about to strike off Loki's head, the god transformed himself into a flame. Heimdall changed himself into a cloud and sent down rain; Loki changed himself into a polar bear; Heimdall also became a bear and a fight ensued. Loki, however, fearful of disaster, changed himself into a seal. He was vanquished by Heimdall in the same guise and forced to surrender the necklace.

broadside ballads Ballads printed in broadside form and hawked by pedlars in the 17th century. These include both traditional (often in debased versions) and non-traditional ballads.

Brocken The highest peak of the Harz mountains, Germany; in North German folklore, the rendezvous for the Sabbat, the festival of witches and the Devil on Walpurgis Night.

Broomfield Hill A Scottish ballad (Child #43) in which a maiden keeps tryst with her lover but preserves her virginity by putting a sleep-spell on him. [MEL]

Broom Goddess In Chinese folk belief, the Goddess of Fine Weather; "the girl who sweeps the weather clear," named Sao Ch'ing Niang. She has her residence on the Broom Star, Sao Chou. During the great rains little girls cut a human figure representing her out of paper and hang it near the gate. In times of great drought she is also invoked to send the rains. [RDJ]

Brother Jonathan or Jonathan Personification of the people of the United States collectively. The origin of the name is uncertain but it is often attributed to Washington's frequent references to Jonathan Trumbull (1710-1785), governor of Connecticut, whose aid and counsel he often sought. Compare JOHN BULL.

brother-sister incest Sexual intercourse between persons having the relationship of brother and sister (i.e. in certain societies between cousins considered to be of such consanguinity as to make them brother and sister in that society's rules of relationship, as well as between children of the same parent or parents): a custom usually considered criminal but in special instances highly desirable. The complex systems of relationship obtaining in many cultures, for example matrilineal predominance over patrilineal, makes determining of permissible spouses a matter of almost as much confusion and tracing of genealogies to the member of the society as to the stranger-investigator. The motif of involuntary

incest, brother and sister not knowing of their relationship, met with in widespread folktales, may be a development of this kind of complexity.

The marriage of brother and sister among the royalty and the higher nobility (a custom noted in Egypt, Persia, Peru, Siam, Ceylon, Wales, Burma, Hawaii, Uganda) is not a primitive one, but the result of a highly developed system of caste relationships. So that a member of exalted royalty or aristocracy might find a mate of suitable high estate, it is necessary for the marriage to occur with a brother or sister. In Hawaii, the most sacred of all persons was the child of such parents who in turn were children of a brother-sister marriage. This child was so sacred that a subject might be killed if his shadow crossed the threshold of the hut of the royal child. It is suggested, as well, that marriage of this kind in societies where possessions were inherited in the female line was the only kind calculated to retain the goods of the father in the hands of the brother. The custom of brother-sister marriage is said also to have been a usual one among the people of Egypt, commoners as well as those of higher rank, disappearing only with the appearance of Christianity.

Much more general than the belief that brother-sister marriage is a good thing is the idea that such a relationship is evil or calamitous. From the earlier belief, reflected in *Genesis* xx, where the marriage of Abraham with Sarah, his half-sister, was not frowned upon (in a polygynous patrilineal society where the children of the various wives were brought up separately), Hebrew thought developed to the statements in *Leviticus* xx, 17 and *Deuteronomy* xxvii, 22: "Cursed be he that lieth with his sister, the daughter of his father, or the daughter of his mother." Death or banishment is often required to allay the wrath of the gods and turn it from the society in which the crime has occurred. The Toradjas of Celebes can raise a rainstorm by causing animals to have incestuous relations. But they refrain from human incest because a storm so induced would be a disaster and because the people performing the act would have to be executed. In addition, droughts and other manifestations of the fertilizing deities are ascribed to such conduct, possibly in the belief that a deed like incest is counter to nature and therefore necessarily infertile. This belief is reflected in folktales, where, as in a Chinese tale, the child of brother-sister incest is misshapen (T550.3).

Mythology and folktales repeat these beliefs and customs. The marriages of Zeus and Hera, of Isis and Osiris, of the moon and the sun—all marriages of brother and sister—are not in any way reprehensible, for these are marriages in the upper strata of beings. But similar incest, when it occurs in nondivine pairs, brings trouble. A Persian tale is climaxed by the loss of Paradise by the unhappy couple; it is possible that Adam and Eve may originally have had something of the same background. In the *Kalevala* (runos 35–36), Kullervo seduces his sister without realizing who she is. When he discovers that she is his sister, he is thunder-struck and cannot prevent her from leaping into a stream and drowning herself. He, returning later to the place of the crime, and discovering the grass and flowers withering on the spot, is overcome with remorse and runs upon his sword. Similarly, in the Scottish ballad

Babylon and its Danish parallel *Herr Truels' Daughters*, the death-or-rape of sisters by their brothers is the basis of tragedy.

The motif of brother-sister incest (T415 and its subdivisions) has several variants and embroideries in folk-tale. In some stories, the lovers renounce their passion when they discover their kinship; in others, a brother and sister discover to their joy that they really are not related. There are tales of the trickster type in which the lecherous brother manages to have intercourse with his sister by one or another subterfuge; others exist where the brother refuses the lecherous sister. Related to the unwitting ravishing of the sister as in the *Kalevala* (T471.1) is the Welsh tale of the brother and sister who commit incest without realizing it (N365.3). The tale of Gregory on the Stone (Type 933; Q541.1) is a European story: The child of incestuous parents becomes pope and receives the confession of his parents. In a Koryak tale, the child is told by the ducks that his parents are brother and sister; in a variant from British Columbia, the son infers the relationship from the fact that the parents look alike. Folktales of brother and sister incest are world-wide, from Germany and Ireland, Persia, Egypt, China, the Philippines, North America.

It is a principal motif of the Philippine myths of the origin of mankind. A brother and a sister are the only people left; they must commit incest if the human race is to survive. The action is condoned. In a Sanpoil story (*JAF* 46:133) brother and sister are found out by their parents. The father kills the boy; the girl commits suicide on his body. When the father wants to restore them to life, the other chiefs refuse. He in turn refuses when their children die, and thus permanent death comes into the world. An incident in this story, the discovery of the deed by paint transferred from the girl to the boy, is important in a widely told myth of the Pacific Coast Indians of the origin of the sun and the moon. To discover who the lover is who visits her at night, the girl paints her hands. She sees the paint on her brother's back and flees to the sky. He chases her. They become the sun and the moon. This motif of the sun sister and the moon brother (A736.1) occurs in Norse, Lapp, Rumanian, and German stories too.

Among the Eskimo, and a few Mackenzie area and southeastern United States North American Indian groups, brother-sister incest is portrayed in the tale known among the Eskimo as *Sun Sister and Moon Brother*. As an incident in other tales, however, brother-sister incest is mentioned in tales from almost all parts of native North America. [ewv]

Brown, Frank Clyde (1870–1943) American educator and folksong scholar: born in Virginia, educated at the University of Nashville and the University of Chicago, from which he received his Ph.D. degree. He began teaching in 1893 and became professor of English at Trinity College, Durham, N. C. He organized the North Carolina Folklore Society in 1913 and became its treasurer. He was a member of the Folklore Societies of the United States and of England. In 1915 he became editor of *North Carolina Folklore*. Among his writings is *Elkanah Dettle—His Life and Works* (1910).

Brown Girl An Illinois variant of the ballad, *Lord Thomas and Fair Annet* (Child #73), appearing in a MS. belonging to Mrs. Clara Walpert, Belleville, Ill.

(*JAFI* 52:75). This version has nine stanzas, less than half of the D variant of Child's collection which it most closely resembles. It has changed considerably in transmission, since Elender (Elinor) is now the possessor of house and land, and Lord Thomas is her father.

brownie A household spirit of English and Scottish Highland folklore, also of the Shetland and Western Isles, usually thought of as wearing a brown hood and cloak. He attaches himself to families; especially he frequents farmhouses, barns, and byres, and does the chores at night while the people sleep. He helps with the churning or brewing, sweeps the rooms, saves the corn. Some brownies have even been known to assist at childbirth, or to help their masters win at draughts. But if ever they are criticized they will break dishes, spill milk, turn the cows astray, spoil the crops, and work all kinds of small revenges. Special cakes and bowls of milk are set aside for them, but never, never any wages or reward. A kindly woman once made a little cap and coat for the brownie who so faithfully cleaned her pans. He put them on and then was gone forever. In fact to get rid of a troublesome brownie all you have to do is make a new little hood and cloak for him; he will put them on, chanting, "A new cloak, a new hood/ Brownie will do no more good" or "Gie brownie coat, gie brownie sark/ Ye'll get nae mair o' brownie's wark." Compare *AITVARAS*, *BOGGART*; *BOGLE*; *DOMOVIK*; *KAUKAS*; *NISSE*; *PARA*.

Brú na Bóinne The city of the Boyne; the great city of the Dagda of the Tuatha Dé Danann, the round underground fort (*sid*) on the river Boyne near Stackallen Bridge in Leinster, Ireland. This was the dwelling place of Dagda, of Bóann, his queen, and of their people: later taken over by Angus Og, his son. See *side*.

Bruin The bear in *Reynard the Fox*; hence (not capitalized) a bear, in popular allusion.

Brunhild In the *Nibelungenlied*, a legendary queen who vows that he who wins her must first defeat her in hurling a spear and other feats. By the magical aid of Siegfried, King Gunther is successful, but, finding her unmanageable, he again appeals to Siegfried, who beats her and, by taking away her ring and girdle, effectually tames her. Discovering the deceit and trickery of her conquest, she persuades Hagen to avenge her by murdering Siegfried.

Brut, Brute, or Brutus Legendary king of Britain and founder of the British race; great-grandson of Æneas of Troy. After inadvertently killing his father, Sylvius, Brut led a remnant of the Trojans to England which was inhabited then only by a few giants. He founded New Troy or Trinovantum (now London) and was the progenitor of the legendary line of kings which included Bladud, Gorboduc, Ferrex, Lud, Porrex, Cymbeline, Vortigern, and Arthur. The legend is told in Nennius's *Historia Britonum* (9th century), in Geoffrey of Monmouth's *Historia Regum Britanniae* (c. 1135), in Wace's *French Roman de Brut* (c. 1155), and in Layamon's English *Brut* (c. 1200).

Brynhild In the *Volsunga Saga*, a Valkyrie who is thrown into an enchanted sleep by Odin because she had given victory to a younger, handsomer king than

the one Odin designated. She is awakened by Sigurd who falls in love with her, but, through the power of a magic drink, he forgets her and marries Gudrun. Later he woos and wins Brynhild for Gunnar, Gudrun's brother. Brynhild learns of the substitution of Sigurd for Gunnar and, enraged, provokes Gunnar to have Sigurd killed, after which she kills herself.

bucca A supernatural being of the folklore of Cornwall: related to the Irish *puca*, Welsh *pwca*, English puck. See *CELTIC FOLKLORE*.

Bucephalus Literally, ox-head; the war-horse of Alexander the Great. Untamed and never before ridden by man, the horse was refused by Philip, Alexander's father, as being too wild; Alexander then mounted, the horse permitted itself to be managed, and an oracle was fulfilled whereby Alexander would inherit the crown of Macedonia.

Buddha Literally, the Enlightened: a deified religious teacher; specifically, Gautama Siddhartha (563?-483? B.C.), the founder of the Buddhist faith; Gautama was born in the Lumbini Grove (Nepál) near the ancient town of Kapilavastu. His father was a prince of the Sákya clan who ruled a small kingdom in what is now the northeastern part of the United Provinces and the southern part of Nepál. His mother, Māyā, is said to have conceived him after a dream in which she saw him descending from heaven and entering her womb in the form of a white elephant.

Buddha had many earlier existences which are described in the *Jātaka*. As the time approached for his final birth, earthquakes and miracles occurred and the water of the ocean became sweet. It was prophesied that he would become either a universal monarch (*chakravartin*) or a Buddha enlightened for the salvation of mankind. When the time came, Buddha, while still in the Tūṣita heaven, made the five observations to determine the right family, continent, district, time, and mother in which to be born. At birth his body bore 32 primary and 80 secondary marks; he had a marvelous tongue which could read forth to the world of Brahmā, indicating his greatness; he uttered the shout of victory and took seven steps. At the same moment were born the Bo tree, his future wife, his horse, elephant, and charioteer.

He was raised in luxury and was prevented by his father, who wished him to become a ruler, from seeing the three (or four) sights—a decrepit old man, a diseased man, a dead man, and a religious ascetic. Despite his father's guards, Gautama did see the four sights and, realizing the impermanence of earthly things, at 29 he made the "Great Renunciation." He gave up his kingdom, left his wife and child and departed from the city. The gods made his exit possible in the dead of night by preventing his horse's hoofs from touching the ground and by opening the city gates noiselessly.

In the company of five ascetics, Buddha entered upon a course of discipline under a Bel tree near Gayā. After six years, however, he was convinced that asceticism was not the road to truth, and became a beggar. His companions then deserted him. Later, while he was sitting under the tree of knowledge, the prince of evil, Māra, and his daughters, tried to dissuade him from his purpose, but the stones and darts he and his cohorts threw

changed to flowers when they reached Gautama. At sunset the period of temptation was over and Māra was vanquished. The following night Gautama attained Buddhahood, became enlightened, and the serpent-king Mucalinda celebrated his victory by covering him with his hood during the storm which followed.

While Buddha was debating whether or not to teach men the truths he had learned, i.e. that existence involves suffering which is the result of desire, and thus the "suppression of desire will lead to extinction of suffering," Brahmā appeared and reminded him that, unless men were told, they could not obtain salvation. His first converts were two merchants who brought him rice and honey-cakes, and later the five ascetics who had earlier deserted him. He then wandered from place to place for 45 years preaching to all who would listen.

When Buddha realized that he was going to die, he lay down under two Sāla trees which bloomed out of season. He made his last convert, Subhadra, and asked of the assembled monks whether they had any doubts concerning his teaching. Hearing none, he went into a series of trances from which he entered the realm of the infinity of space, then of consciousness, of nothingness, of neither perception or non-perception and non-sensation, finally reaching nirvana. His death was accompanied by signs and portents. His funeral pyre could not be lighted until Kaśyapa had arrived and paid reverence, whereupon the pyre burst into flame spontaneously. Buddha prophesied the decline and disappearance of the religion. When it is no longer honored, the relics will gather under the Bo tree and teach the doctrine to the gods from all the worlds and then will put forth flames and burn up.

There is more than one Buddha and each may have an earthly life, but there is never more than one in the world at any one time. Buddhas come into being at irregular intervals and only when there is a special need for their presence. In the Mahāyāna system of Buddhism there are 300 million śākyamunis (Buddhas).

Buddha is usually represented in art with cropped curly locks seated on or in a lotus symbolizing the essence of enlightenment. The chief Buddhist symbol is the stūpa which is a relic shrine believed to contain a bone or some relic of the Buddha and thus symbolizes him. His shadow and footsteps (Sripada) are found in many parts of Asia. See ADAM'S PEAK.

Buffalo An animal character of many Plains, South-western, and Central Woodlands North American Indian tales, an animal being for whom many ceremonies, feasts, and dances are given by Plains and Woodlands tribes: often associated with rain. Tales of visits of human beings to a land under the earth where the buffalo live, tales of buffalo-human marriages and the experiences of the offspring of such, are frequent. Among the Kiowa, Apache, and other tribes, Buffalo and Buffalo Old Woman are well-known myth characters. Several Plains and Woodland tribes have Buffalo-head ceremonies; the Hidatsa of North Dakota offer food and prayers to buffalo skulls placed on an altar when they need rain; the Shawnee dip a buffalo tail in water and shake it gently to produce rain. [ewv]

Buffalo Dance A North American Indian mimetic group dance addressed to the spirit of the buffalo: danced to procure success in the hunt, or good health.

It is confined to American Indian tribes dependent on the buffalo for sustenance. The performers, ornamented with fantastic body-painting, wear also a horned furry headdress, often also the tail. Among the Plains Indian men's societies, the Mandan Buffalo Dance was the most terrifyingly realistic mime of milling herds, whereas the women's White Buffalo Cow society merely stamped in upright posture. The function of this dance, and of the Blackfoot women's Ma'toki (a realistic drama of the hunt) was to lure the herds. Both were associated with the sun dance. From November to January, Rio Grande pueblos still mime the buffalo; at San Felipe and San Ildefonso the buffalo are lured by Buffalo Maidens. The Fox and Iroquois Buffalo societies effect cures, the Fox partly by fire association and charcoal marking. They jump, whirl, butt, bellow, progressing in a circle, the Fox with the sun, the Iroquois contrary. Plains Buffalo societies are mostly extinct. [CPK]

Buffalo Gals One of the favorite American play-party and square-dance songs: a fiddle, fife, and banjo tune, sung in 1844 as a minstrel song, *Lubly Fan*, and changed from town to town to suit the local ladies as *Louisiana Gals*, *Bowery Gals*, *Pittsburgh Gals*, etc. A copyrighted swing version appeared in the 1940's and was popular on the radio and juke boxes.

bug or bog The word for "god" in all Slavic languages, occurring in numerous compounds, such as Biel-Bog (white or good god), Chernobog (black or bad god), Stribog (god of winds), etc., and used also for the Christian "God."

bugah or booger dance Clowning mimicry of the Cherokee Indians. Seven bogeys wear masks of gourd, wood, or pasteboard and shawls and sweaters which are collected from the women. They enact any ludicrous characters they fancy, including white traders, Negroes, or joking relatives; one by one they portray their character with appropriate gestures by a uniform step similar to that of the Iroquois False Face (gagósä)—a heavy jump on both feet. They do everything in a topsy-turvy manner and tease relatives and scare children. In the end everyone joins in the *yona*, the bear round dance.

The name, booger dance (*tsunagadali* in Cherokee), suggests origin in impersonation of the spirits of the dead. At present its chief function appears an outlet for suppressed aversions. [CPK]

bugbear A sort of hobgoblin of English folklore, thought of as being in the form of a bear; literally, a goblin bear: invoked to come and eat naughty children. The meaning has become extended to apply to anything dreaded and feared, especially when needlessly feared. See BOGEY.

Bugios Literally monkeys: clowns or demonic buffoon dancers in grotesque animal masks, associated with the Portuguese *Mouriscada* at Sobrado on St. John's Day. The leader rides into town backwards, sowing flax (which he calls maize); he harrows, then plows with an upside-down yoke. He is not masked and wears gorgeous church vestments. The wild, uncouth Bugios do battle with the sedate Mouriscos until the Bugio leader is captured and led off amid lament. With a *serpe*, or dragon, they recapture him and join the Mouriscos in a final Christian Dança do Santo. Vestiges of fertility

and vegetation magic are apparent in the preliminary entry and in the symbolic battle between the destructive (winter) powers and the radiant (summer) powers. As in other Moriscas this is more significant than the Christian veneer. [CPK]

building castle between heaven and earth A folktale motif (H1036) in which the impossible task of building a castle suspended between heaven and earth is imposed either as an alternative for the death of the hero, to secure tribute from the hero's king, or for some other reason beneficial to the imposer of the task. Probably the most famous compliance with this request was that of Achikar, minister and magician to Sennacherib, king of Assyria. He evidently turned the trick with no trouble at all, thus saving his sovereign from having to pay the enormous tribute demanded in lieu of the castle.

Often throughout European folktale the answer of the victim to such a request is, "I will, indeed, if you will supply the materials." That is what Dom Jean said. Dom Jean (hero of a French folktale) was servitor to a king who had incurred the wrath of a neighboring king. Dom Jean not only countered with the poser of demanding the materials but went up the mountain and caught four young eagles, which he secretly trained to fly above his head, each holding one corner of a paper house. When the day came for Dom Jean to produce the castle in the air, he threatened to cut off the head of the demander of the miracle, if the king did not produce the materials for building the castle "in the morning." The materials were not forthcoming, and the frightened king offered Dom Jean his daughter in marriage instead. Dom Jean refused the daughter, but let the old king off for a tribute of gold to his own monarch. Once this was given Dom Jean produced the four young eagles bearing the paper castle in the air. Great was the wonderment at the cleverness of young Dom Jean, who of course went home with the tribute of gold and received as reward the hand of his own king's daughter.

building ceremonies Usage today in the construction of domestic, civil, or religious buildings has little in common with that in ancient and medieval times throughout the world. Our building rites and ceremonies at present are but "pale and attenuated survivals." Phases of the lore on various steps in building construction through many centuries may here be considered briefly:

1 *Site* Early peoples selected sites favorable to their occupation; in medieval times and among backward people of modern Europe, sites were selected by divination of various types among which animal omens were the most common.

2 *Survey and consecration of the land* Marking off the land was a ceremony with domestic, religious, and agricultural connotations. Dido's ruse for the site of Carthage (cutting a bull's hide into slender thongs wherewith to measure the area) finds similarities in legends for the same purpose in Britain, Scandinavia, Siberia, China, Holland, and elsewhere. The land was consecrated after survey by prayers, blessings, and holy water through the medium of priests, medicine-men, and others.

3 *Laying the foundation* Both the day and the hour had to be lucky; local spirits and the earth spirits

had to be propitiated; evil spirits had to be driven away and witches' spells had to be averted or destroyed. Ancestral spirits must be placated and new guardian spirits arranged for. Omens of luck must be put in the foundations, such as bread, salt, plants and herbs of a health-giving nature, gold and silver and money. The pot of coins used in the foundation stone is explained by J. Rendel Harris as "ransom money" for the "person that ought to be there." (*Folk-Lore* XV: 441).

4 *Foundation sacrifice* Building sacrifice was practiced in Denmark, Germany, Siam, Japan, Australia, and elsewhere. It was generally believed that no edifice could stand firmly unless it was laid in blood, such was the magical virtue ascribed to this vital fluid (See BLOOD). Accordingly, there existed in both pagan and Christian times the practice of placing in the wall of a house, castle, fortress, or church a human being, frequently a child sold by its mother for this purpose. There exist many affecting legends about such sacrifices. This belief of mural inhumation for stability existed down to the mid-1800's. An earlier method of gaining the desired blood-bath for foundations was that of crushing victims in a pit, used in Borneo and Siam. These practices, it should be mentioned are not merely legendary but are attested by authentic records. Mass hysteria has prevailed in some cases, recorded in Europe as well as elsewhere, from fear of mural burial.

5 *Substitutions for human sacrifice* There was the actual mural sacrifice of animals and the symbolic sacrifice, whereby a fowl—most generally a cock—or animal was killed and its blood let drip into the foundation pit. In England and on the Continent, workmen have found, when dismantling walls of homes and churches, the bones of animals, dolls, coffins, images, and other items which seem to have acted as substitutes for human sacrifice at the foundation rites.

6 *Other ceremonies and customs* Dances were held in Mexico and Central America after raising a building. During or after the construction workmen in Scotland were sometimes given ale, whiskey, bread, and cheese. In early days it was customary to feast workers or to give them some entertainment to which they looked forward. Building in Africa, Asia Minor, in Georgia (United States) was carried on to the accompaniment of music or song. Some of these customs, especially those of dancing and feasting, have been noted in United States pioneer communities. [CPS]

bula The smallest of the trio of vodun ceremonial drums, approximately 18 inches high and 8 inches in diameter. Like the other drums of this group, it must be baptized after it is made. It begins the drum rhythm in the rites, following the ogan and the rattles, and is played with two sticks. Sometimes known also as *bébé* in Haiti, its name in Surinam is *babula*.

Bulfinch, Thomas (1796–1867) American compiler of myths. Son of Charles Bulfinch, eminent architect, he was born at Newton, Mass., and educated at Boston Latin School, Phillips Exeter Academy, and Harvard, where he was graduated in 1814. He held a job as clerk in a bank from 1837 until his death, a position which gave him a living and leisure time to study and write. Among his books were *Hebrew Lyrical History* (1853), *The Age of Fable* (1855), *The Age of Chivalry* (1858), *Legends of Charlemagne* (1863), and *Poetry of the Age*

of *Fable* (1863). His best known work is *The Age of Fable*, which attempts with some success to make mythology interesting, and deals with Greek, Roman, Scandinavian, Celtic, and Oriental mythologies. *The Age of Chivalry* tries, but with less success, to do the same thing for Arthurian and early Welsh legends.

bull The cult of the bull is best known from references to it in the Near, Middle, and Far East. The ancient Persians worshipped the Supreme Bull who caused grass to grow and was pure and uncreated. In India, Nandi, Śiva's bull, was the leader of Śiva's attendants. Although ethnographers exaggerate when they assert that there "is not a god in Semitic religions who is not assimilated to, and represented as, a bull," the bull cult competed with Yahweh who at one time was worshipped in the form of a bull. The bull was prominent as an incarnation or attribute of Egyptian gods and kings. In ancient Greece, young men, made temporary kings, sacrificed bulls to Poseidon. The bull is also associated with Dionysus. The Achaian priestesses of earth drank bull's blood before entering their caves to prophesy and Pausanias mentions bull's blood as a test of chastity. The blood and perhaps testicles of bulls were used in the mysteries of Attis and Cybele. Peoples have variously associated the sun, the moon, and the constellation Taurus with the bull; the Hittites associated the bull with thunder, and a similar reference is found in the *Rig-Veda*. The Zulu warriors drank the gall of bulls killed by their warriors with bare hands and the boys ate the flesh.

The use of bulls as draft animals has been associated by ethnographers with the cultural transformation from the stage when women did all the agricultural work to the time when men did it. The best known European references to the sexual prowess of the bull are in the stories of Europa who was seduced by one, and of Pasiphae who herself did the seduction with the help of Dædalus and produced the Minotaur with man's body and bull's head. Attempts have been made to find in this a vestigial sun myth. The ceremonies performed by the king and queen of Knossos masked as bull and cow, and the crane dance, have been adduced in support of this. As will have been noted most of the evidence—except the Zulu ceremony which belongs to a different order of folk-thinking—comes from a period when professional theologians of the era worked popular belief into some sort of religious system. Consequently conclusions drawn by folklorists who did not distinguish the theology of the "we-group" from the theology of the "they-group" are open to question. The word "bull" in the term "Irish bull" is a linguistic accident as it derives from a word probably related to Old French *boule* meaning to trick or confuse. [RØJ]

bull dance An impersonation of the bull: in Europe of the native cattle, in the American Great Plains of the buffalo. In Europe, anciently, from Egypt to Scotland, the blood of the sacrificed bull was believed to imbue the earth with life, and the practice of shedding the bull's blood was preserved in the British Isles as bull-baiting into the 19th century. In Crete the monstrous Minotaur was deified and sacrificed to, and his slaying was reenacted in the Athenian Theseus plays. In Egypt the bull Apis and corn god Osiris, after their

death and dismemberment, were resurrected as Osiris-Apis. Such bullfight and resurrection rites have found their way through Spain to Mexico and New Mexico, in the huehuenches of Villa Alta, Oaxaca, in the toreadores of the Sierra de Puebla, in the toro-abuelo (bull-grandfather) fight connected with the San Ildefonso and San Juan matachina. Of independent origin, the bull dance of the Plains Buffalo societies mimed the hunt to insure success. See BUFFALO DANCE. [GPK]

Bullkater Literally, tom-cat: a field spirit of Silesian peasant belief. The reaper who cuts the last sheaf of rye is himself called the Tom-Cat. He is dressed in rye stalks and equipped with a long braided green tail. His function is to chase onlookers with a long stick and beat them when caught. This is to chase away the *old* Bullkater, by whom they are believed to have become possessed while watching the reaping. Compare CAIL-LEAC; KORNWOLF.

bull-roarer A noise-making instrument of almost world-wide distribution, used by primitive peoples as an important element in magic ceremonies, puberty and initiation rites since Paleolithic times, and still significant in certain tribal rituals of Australia and New Guinea. It consists of a flat oval slab of bone, stone, or wood, tapered toward each end, with a cord or thong threaded through a hole near one end, by which it is whirled over the head to produce a harsh roaring or wailing sound. The magic symbolism of the bull-roarer derives partly from its shape and decoration, partly from its weird and terrifying sound, partly from the variations in size of the instruments.

The shape, interpreted in various ways, represents potency, procreation, fertility. When construed as a fish (often further identified as such by serrated edges and painted or incised scale patterns) it bears the double fertility meaning of the teeming roe and of water. Sometimes it is painted red, the blood color, hence the color of life itself, which may be used on instruments for men only. Among the Diegueños of California, it represented an arrow and carried three notches, denoting the three feathers of the arrow and the practice of swinging it three times to the east as a summons to religious rites. In New Guinea, the bull-roarer is often covered with magic symbols of warning.

The sound of the bull-roarer is the voice of a ghost, an ancestor, a monster, or some powerful spirit, who has power to frighten enemies, to summon the gods and the elements, to convey supernatural warnings, to ward off evil, to insure the wielder's own procreative powers. Sometimes the voice is associated with the wind, which may, by its invocation, be forced to bring rain. In any case, the harsh and strident sound is characteristic of instruments sacred to civilizations and ceremonies in which the men are dominant.

The significance of the size of the instrument has to do with the common conception that greater size is a sign of greater importance and is a male attribute, and with the difference in the sound produced by difference in size. The smaller the oval slab and the faster the swing of the cord, the higher the pitch. The Bukaua and Yabim (or Jabim) tribes of New Guinea think of the small, shrill-voiced bull-roarers as female, the wives of the larger and deeper-toned ones. Large ones are divided into "ruling" and "serving" categories,

each named for a respected man of the past, according to their standing in the tribe. These are handed down from generation to generation and the names are used as battle cries. Miniature bull-roarers are worn by the chiefs at certain feasts, and all prominent Yabim tribesmen take bull-roarers with them to the grave.

Throughout Australia and New Guinea, the use of the bull-roarer, wherever it is found, is well defined. Its terror-inspiring roar is heard almost exclusively as an accompaniment to puberty and initiation rites. The details of the ceremonies, the regulation of the conduct of women, and the explanation of the noise differ somewhat from tribe to tribe, but the general pattern is this: The boys are led from the village to shelters in the forest where their circumcision, subincision, and other initiation procedures take place. Women must remain at home, where the voices of the swinging bull-roarers carry to them the sense of unimaginable horror of the events they have been told will go on.

The Bibinga tell women and children that what they hear is the voice of Katajalina, a spirit who lives in an anthill, eats up the novices, and then brings them back to life. The story of a monster who swallows and then disgorges the boys is common to many tribes of this area, including the Yabim, Bukaua, Kai, and Tami of New Guinea, and the name of the instrument is either the word for monster or for ghost ("grandfather" among the Kai). One tribe actually builds a monster-hut for the initiates to stay in, and the bull-roarers are swung in its belly to make it roar.

The Urabunna of central Australia tell the uninitiated that the bull-roarer's sound is the voice of a spirit who changes the lads into initiated men by taking them away, replacing their insides with new material, and returning them. If a woman should see the bull-roarers, the boy related to her would die, along with his mother and sisters.

Boys of the Unmatjera (also central Australia) must sound the bull-roarer after circumcision and subincision until they recover from the operation, lest an evil spirit swoop out of the sky upon them and carry them off.

The secret of the bull-roarer, which is ordinarily hidden from women in men's club houses, in stream beds forbidden to women, or other safe hiding places, is revealed to the initiates under strict vows of silence. One ceremony of this kind involves striking each boy on the forehead and under the chin with the bull-roarer. Others threaten him with his own death as well as that of any woman or child to whom he reveals the secret. The might of the bull-roarer is such that if it should break and a chip strike any one, he would be wounded wherever the bull-roarer had touched him in his next fight. Among some tribes, the touch of the bull-roarer, or even the sight of it, brings instant death to the uninitiated.

The Wonghi, or Wonghibon, tribe of New South Wales, explains the sound of the bull-roarers as that of Thuremlin, or Daramulun, a supernatural being who knocks out one tooth of each novice as a part of his initiation. They allow no uninitiated person to see the bull-roarer under pain of death.

Similar customs prevail through Melanesia and even in Africa, among the Ekoi of South Nigeria and the Nandi of East Africa. The Yoruba, however, permit

women to see and handle bull-roarers with impunity, but not to know the source of their sound.

In central Brazil, the Bororo whirl the bull-roarer at mortuary rites, from which women are excluded. The noise is the signal for women to hide to escape the death which would surely overtake them, should they see it.

North American Indian ceremonies making use of the bull-roarer were religious, but most tribes no longer remember the purpose or importance of the instrument, which survives occasionally as a toy. However, the size of the ceremonial bull-roarers indicate that they were used outdoors. Diegueño chiefs used them to summon the people to religious rites and occasionally might use them as a warning in time of danger. The Tusayan Indians used the bull-roarer in their Flute Observance, anointing it with honey; and the Hopi Flute Fraternity whirl it on solemn occasions, from which women are not excluded. The Pomo Indians of California used it during the Thunder Rites at the end of summer rituals.

The origin of the instrument is unknown and it may or may not come from a common source to the widely separated cultures in which it figures. Any device so simple could have been invented many times over. Schoolboys have developed its principle for themselves by slipping a string through the hole in a ruler and swinging it with noisy results. Even infants delight themselves by similar combinations of available objects. The elementary mechanical impulse to put a string through a hole is almost universal.

However that may be, in recent times, like many other magic devices, the bull-roarer has descended in many places, as it has among American Indians of the west coast, to the level of a toy, and in the Malay Peninsula to the practical function of scaring elephants away from plantations.

THERESA C. BRAKELEY

Bumba The name for the Bush Negro love amulet; also (as Ma Bumba), a deity of the winti cult of Negroes of Paramaribo, Dutch Guiana: probably of Congo origin. [MJH]

bundling An old courting custom of Holland, Ireland, Scotland, Wales, etc., which survived in certain parts of the United States, notoriously in New England and especially in Connecticut, and in which lovers or engaged couples, dressed or partly dressed, lay on or in the same bed. It is also said that belated visitors or travelers were sometimes invited to share the bed of the daughter of the house. The custom was naturally the subject of much moralizing and satire; but (to quote *The Rev. Samuel Peters' LL.D. General History of Connecticut*) "I am no advocate of temptation; yet must say, that *bundling* has prevailed 160 years in New England, and, I verily believe, with ten times more chastity than the sitting on a sofa. I had daughters, and speak from near forty years' experience." Although in theory and practice simply a convenience to save fuel or to keep the courting couple from freezing in the intimacy of their single possible private interviewing place, the girl's bedroom—only the principal rooms of the house being heated—, the practice of bundling led occasionally to "natural consequences." Bundling died out in the United States in the early decades of the 19th century, having attained a peak of notoriety dur-

ing and just before the American Revolution (c. 1750-1780). Bundling probably derived from the older common bed, in which everyone in the household, and the visitors who stayed the night, slept under the same cover. The custom of wife-lending, as for example among the Eskimos, is not the same, despite parallels which have been drawn, but the American traveling-salesman stories are probably related in origin.

bungling host A widespread North American Indian tale of the failure by Trickster to imitate magic methods of procuring food: told in many versions in all of North America except the Arctic, and especially popular on the North Pacific Coast. The tale is also known in Siberia. After seeing his host produce food in various ways (host lets oil drip from his hands; birds produce food by song; animal cuts its hand or feet; animals stab or shoot themselves; wood is transformed into meat; host kills his children for food, etc.), Trickster, when he is host, attempts to do likewise, but fails and often barely escapes death. For detailed analysis of this tale see Franz Boas, *Tsimshian Mythology* (RBAE 31, 1916). [EWV]

Bunyip A bellowing water monster of Australian native mythology who lives at the bottom of lakes and water holes into which he draws his human victims.

[KL]

al-Buraq or Al-Borak Literally, the bright one; the white animal on which Mohammed rode during the mi'raj, or night journey to the seven heavens. Some say it was a horse, some say an ass, but Mohammed said "something in-between." Hence al-Buraq is generally mentioned as a mule, although he had wings and is often pictured as a kind of griffin. See MI'RAJ.

burdock Burdock leaves are used as a fever remedy in New England: the leaves are bandaged, point down, to the patient's wrists and ankles. They thus absorb the fever, which will run out at the points. Missouri Negroes cure colic by hanging a string of burdock around the baby's neck. In Ireland the roots of the great common burdock (*meacan an tataba*) are pounded, boiled, and made into a poultice for ringworm. The poultice is usually prepared on the opposite side of a river from the patient, lest the worm get a whiff of the root and shift to another place.

Buri or Bure In Teutonic mythology, the progenitor of the gods. While Ymir slept, his cow, Audhumla, licking the briny ice, uncovered a head. Buri stepped out and immediately produced a son, Borr. The giants, becoming aware of his existence, started a war which lasted until the marriage of Borr and Bestla.

burial From early and primitive efforts to keep the spirit of relative or friend from returning to trouble his survivors the burial customs of mankind show a fairly steady evolution toward the current civilized type of ritual which emphasizes quite the opposite concern—the sorrow of the bereaved that their loved one has left them. It is difficult for modern folk to understand the point of view of the ancients and the remaining primitives, so far have we come from them psychologically and theologically. Yet anthropology and archeology have by now evaluated the evidence of old burial sites and remains, and comparative religion has added its logical inferences, with the result that we

now know that the big idea of burials was to defend the survivors from the very dangerous discontented souls or ghosts of the recently dead.

Suddenly unemployed and quite ill at ease the only partly departed spirits were supposed to sit around, muttering and gibbering, watching the living and wishing they were back among them again. The most unhappy and therefore the most dangerous ghosts are those sulking around because they died young and did not have a chance to enjoy life or because they died childless. These spirits are so envious that they chase the living at night, cause disease and other disturbances, and make it necessary for the medicine man to conduct elaborate and expensive exercises of exorcism.

Some tribes went so far as to anticipate the ghost's release from the living body. Beginning with the moment when it became apparent that a member of the tribe must soon die of his disease or wound, measures were taken to protect the tribe itself from his soon-to-be-released spirit, which, if not properly exorcised by correct burial rites, would come back to wander uneasily about his old "haunts" and trouble the living. So strong and deep-seated was the primitive fear of a corpse and its nearby ghost that the dying person was, among tribes as far apart as Ceylon, Russia, the Philippines, South Africa, and Samaria, removed from the house lest he pollute it by dying within and make necessary its burning.

In certain country parts of Europe where the dying are taken from their beds and laid upon straw or the bare ground, one rationalized explanation is that a man cannot die upon feathers for that is unlucky. Another is that by coming into direct contact with the earth the dying man may more quickly enter the underground realm of the dead. Doubtless, in many cases, he did die sooner, from the exposure. The custom has been defended on that very basis, that by shortening the man's sufferings a favor is done him, a sort of involuntary euthanasia.

But there is no such mercy in the widespread practices of abandonment of the dying and even their burial before death. Tribes in Australia, Central America, Burma, and the Sudan are reliably reported to practice the former, while the latter custom prevails, or did until very recently, in parts of Paraguay, Fiji, and among the Hottentot and Bantu peoples. Among the Yakuts of Siberia, so great was the dread of a corpse in the hut or even in the village that the very old and diseased were given the best seat and the best food at their own funeral feast, then taken out into the forest and buried alive surrounded by food and possessions, including even horses for their trip to the next world—to make sure the ghosts had no excuse for remaining in the vicinity of the village.

Fear of the corpse is reflected in the ceremonial uncleanness acquired by contact with one. The Jews, their scriptures reveal, regarded a corpse as particularly defiling, and whoever touched one was "unclean" for seven days (*Haggai* ii, 13; *Numbers* xix, 11 ff.). On the third and seventh days, purification was required, and on the seventh day, bathing and clothes-washing as well. The purification was an elaborate process and evidently of ancient, perhaps animistic, origin, as the detailed description in *Numbers* xix suggests.

A spotless unblemished red heifer which had never

borne the yoke was killed outside the camp and the blood sprinkled by the priest with his finger before the tabernacle seven times. The heifer was then burned, skin, flesh, blood, and even dung. Cedar wood, hyssop (probably caper bush), and scarlet (cochineal pigment) were flung into the burning. The resultant ash was mixed with running water and then sprinkled from a hyssop switch by a "clean" person upon the defiled one who had touched the corpse. Thus the ghost was driven away by the triply effective combination of fire, water, and aromatic woods and herbs. The hyssop was reckoned a particularly effective agent in exorcising evil spirits and its aspergent properties are recognized even today in the celebration of the mass when the sprinkling of the holy water is accompanied by the Anthem "Purge me with hyssop and I shall be clean" based on Psalm li, 7 (l, 9 in the Vulgate). The same mixture used to purify ceremonially the person who has touched a corpse must also be sprinkled upon the tent in which the man had died, upon all vessels within it and all persons present at the death.

The aspergent solution was also used to purify anyone who had touched a grave, which is why grave-markers should be white, to warn the living. "Whited sepulchres," to which Jesus compared the Pharisees, "which indeed appear beautiful outward, but are within full of dead men's bones, and of all uncleanness," (*Matthew* xxiii, 27) were whited, not to make them appear beautiful, but to warn passers-by not to touch the grave, lest they too become full of uncleanness and require seven days' purification.

The relatives of the dead man were sometimes considered unclean, and, according to *Hosea* ix, 4, the very food of mourners defiled all who ate it. In fact the custom of wearing distinctive mourning garb probably originated as a warning against contamination by contact with the close relatives of the newly deceased.

The preparation of the body for its final disposition has varied greatly, dependent somewhat upon the method chosen to dispose of it, which in turn depends upon where and how far the soul is supposed to be going. If the journey to the next world is to be long, or if the body is expected to be reanimated after a considerable period of time, or periodically, by the return of the soul or by resurrection to some heaven, it is likely that an attempt at preservation of the body will be made. Oiling, salting, pickling, smoking, drying, stuffing the removed skin, and mummifying by filling the eviscerated body with bitumen and spices, all these methods have been used, the last mentioned with more success than the others, particularly in Egypt, Peru, and the Canary Islands. Howells, in *The Heathens*, in his informative chapter on Souls, Ghosts and Death, reports on several instances of chance mummification, including the accidental tanning of a cellarful of cadavers in the crypt of St. Michan's church in Dublin.

For the preservation of the body for a short period of time, less attention is necessary and is more apt to be expended on beautifying the corpse. Painting the body has occurred frequently, and varies from the masterpieces of the Congo corpse-painters, who are quite uninhibited in their art with rather startling results, to the present-day professional embalmers, who use every cosmetic artifice to restore the bloom of youth to even the elderly face, with results sometimes equally

startling to those who knew the deceased. The murmured admiration by chronic funeral-attenders is in the same class with the louder expressions of the dwellers on the Congo who pay admission to see the art exhibit.

An interesting survival of the ancient anxiety to get rid of the body as soon as possible lest the ghost be encouraged to remain is seen in the quick burials customary among Jews even today—within a few hours if possible, preferably before sundown. Other reasons for the hasty interment are often offered, and few Jews today are aware of the origin of the custom, but the Mosaic code itself is explicit concerning the ceremonial uncleanness of a corpse.

The subject of funerals is covered in another article, but the interment service at the grave falls properly under the subject of burials. And the getting of the body out of the house and safely into the grave or burned has important folklore connotations, for the object is to prevent the ghost from finding the way back to haunt the house. Of course, the safest way is to burn the house, and that was often done in primitive communities. Sometimes the rest of the houses in the village were torn down and the house of the deceased left standing, leaving the ghost in solitary splendor, where he could not hurt anyone. The people of some cultures still take the corpse out of the house through the roof, or a window, or a hole in the wall. The same idea, to fool the ghost, is in mind among the Menomini Indians when the nearest relative sneaks away home from the cemetery "while the soul is still absorbed in its own funeral." (*Howells, op. cit.*, p. 163.) Chinese set off firecrackers on the way back from the grave. In New England, the writer remembers being shocked as a young minister by the race home from the grave which he was assured was an old and honored custom, "no disrespect intended." He thought then that the mourners were in a very unmannerly hurry to get back to the bounteous repast always served at the home after the burying, but he now suspects that, whether they knew it or not, these devout mourners were hastening from as much as to.

The methods of disposing of the body, the act which is after all and from the beginning the main purpose of the burial, have been many. Cremation is treated in another article, but the other ways, not so rapid nor so final, had their reasons for being, and included interment in graves which might be in consecrated ground or not, interment in huts, tombs, vaults, caves, and catacombs, or in canoes, boats, ships, on rafts, or in rivers or the sea itself. Then there is suspension in the air on burial platforms or in trees as practiced by some American Indians. The Parsees of India, who consider both fire and the earth too sacred to be polluted by a corpse, expose their dead inside towers of silence to which come the birds of the air to leave nothing after an hour or two but the bones, which are gathered twice a year and put into a central dry well where they soon crumble from exposure to the elements. Still a different, though related, form of burial is the secondary or bundle burial practiced by North American Indians in Maine and Wisconsin, and also in parts of Polynesia and Asia, and long ago in Bronze Age Europe. This method varies in the way the flesh is removed from the bones, either by scraping or burying

in the earth. The cleaned bones are tied up in a skin, then buried in a pot or in a pile. Frequently when exhumed by scientists they are found to have been smeared with red ocher.

Various incidental practices deserve mention. As to the question of determining who has the right to decide where, when, and how the body shall be buried, the decision was originally left to the tribe through the chief or medicine man. It is now widely accepted in the United States "that the bodies of the dead belong to the surviving relations, in the order of inheritance as property, and that they have the right to dispose of them as such . . ." This would mean that the decisions referred to belong first to husband or wife, children next, and then according to the "nearest relative" order. The wishes of the deceased, if known through a will or otherwise, and the customary practice of the deceased's church or fraternal order, are usually respected. Reburials however are under the court's jurisdiction.

Notice should be taken of the recent great changes in the general attitude of the American public toward burials, which are now commonly conducted with less deep mourning and rather more dignity. Black crape has largely given way to flowers: the mourners are less lugubriously costumed, and the dirt formerly cast at the descending casket to the accompaniment of "Ashes to ashes: dust to dust" has been superseded by flowers. See BARASHNŪM; CREMATION; FUNERAL CUSTOMS; GRAVE; MUMMY. [CFP]

Among most South American Indians, with the exception of those tribes which observe a death vigil, burials take place immediately. The haste shown by most Indians on such occasions is prompted by the fear of the ghost of the deceased. The corpse is usually placed in the grave in a fetal position (i.e. with the arms flexed against the chest and the legs raised against the abdomen).

Many tropical tribes bury their dead in huge jars (Tupinamba, Guarayú, Tucuna, Katawishi, Yumana, Caripuna, etc.), a custom which is also followed by some people of the Andes (northwest of the Argentine, the Manabí, and occasionally by the ancient Peruvians). Among the natives of the Guianas and the Upper Amazon, the corpse is often deposited in a canoe or in an excavated tree-trunk. The Araucanians of Chile placed their dead chiefs in dug-out tree-trunks which rested on heavy forked poles or were wedged in trees.

Funeral chambers in which the corpse was left with his goods are characteristic of the ancient people of Colombia, Ecuador, and Peru. Crude vaults are also prepared for the dead by some tropical tribes (Guahibo, Aruaca, Achagua, Tupinamba, etc.). Burial under cairns is typical for the ancient populations of the southern tip of the continent, particularly for the Tehuelche and Puelche Indians.

Secondary burial, that is, the transfer of the bones of a dead person after an interval of time to a second place of interment was wide-spread east of the Andes. The bones were either placed in a basket or an urn (Guahibo, Carib, Rukuyén, Indians of Marajo, Camacan, Caraja, Otomac, Saliva, Ature, etc.), or were exhumed and reburied (Bororo, Apinaye, Nambikuara), or destroyed by fire or thrown into a river (Piapoco, Omagua, Carib of Venezuela).

Most tribes from the West Indies to the Gran Chaco bury the dead in their own huts, which are then abandoned or set on fire. In many tribes (Witoto, Yagua, Coroado, Iquito, etc.) the family continued to live in the funerary hut and deserted it only when it was overcrowded with graves. When a member of a tribe that practiced house burial died on a journey, a miniature hut or shelter was often built over his grave. [AM]

buried alive Burying a person alive was an ancient punishment. In some cases it was walling-in; in others, it was actual burial in earth. The walling-in method was reserved for monks, nuns, wives of knights, and girls of noble blood to enable them to avoid the shame of a public execution. In Rome, Vestal Virgins who were convicted of immorality were walled up in a subterranean chamber. In Peru, wives of the Sun were buried alive if they were unfaithful; in Mexico and Central America when a great man died, his best loved wives and sometimes his servants were appointed by him or self-elected to be buried alive with him. In China, the custom was of great antiquity, continuing down to comparatively modern times; it was also common in Germany in the 15th century. The usage gradually died out.

In this connection, mention should be made of the lore clustering about persons buried alive while in a cataleptic trance. The legend of "the living dead" appears in ballad, romance, and drama. (Cf. Henri Hauvette *La Morte Vivante*, Paris, 1933.) Folk stories are common on the European continent of persons buried alive while in the cataleptic state and awakened by robbers attempting to open the coffin to steal gems, and the like. Some of these tales are quite recent. [CPS]

burkan Gods or holy ones: an approximate translation of this word of the Gold tribe of the Lower Sungari, Manchuria. It is the collective designation for a number of small human-shaped "god-figures" made of wood and of brass and pewter, strung together on a cord, which shamans of the Gold tribe wear around their necks for specific ceremonies. One of the burkan is called *échihié*, and perhaps means ancestor; other of the figures are designated as *sarka*, *ganki*, *kirinh*, *bukchunh*. (See O. Lattimore, *The Gold Tribe*, "Fish-skin Tatars" of the Lower Sungari, *MAAA* 40, 1933.)

Burr-Woman An old woman whom the hero of certain North American Indian folktales takes upon his back and who he discovers cannot be dislodged. The motif (G311) turns up among several Plains, Central Woodland, and Iroquois tribes. In a Southern Paiute story told among the Shivwits of southern Utah, the idea takes another turn: Wolf retaliates on Coyote for various tricks and deceptions by causing a load of wood to remain in his arms. Coyote is unable to lay it down; neither can he remove the loaded basket from his back. Compare OLD MAN OF THE SEA.

burying the dead horse A shipboard custom of British sailors celebrating the working-out of the first month's pay. See DEAD HORSE CHANTEY.

bury league A cooperative savings organization of Negroes of United States, whereby sufficient funds are set aside to assure members (and often members of their families as well) adequate burial. Operating in the lower socio-economic levels of Negro society, the

popularity of these groupings is evidence of the vitality of the African cult of the dead, wherein the need for proper burial is paramount no matter what sacrifices this entails. [MJH]

Bury Me Not on the Lone Prairie An American cowboy song about a dying boy whose last request was not to be buried in the lonely emptiness of the prairie: remade somewhere in the American West from a favorite song of the East written by a Universalist clergyman in 1839, called *The Burial at Sea* or *The Ocean Burial*. This expressed the same wish in connection with the deep, deep sea. The song is also known as *The Dying Cowboy*, and is often sung to the old ballad air of *Hind Horn*.

Bushido The way of the samurai, or the way of the ideal warrior: the code of the medieval Japanese samurai, epitomized by the Emperor Meiji as "the perpetual code of human relations." It was a strict code of chivalry and honor, physical training, mental and spiritual discipline, and daily behavior. Its precepts stressed loyalty to country, lord, and parents; personal courage, with the fine line drawn between what is brave or merely foolhardy; self-control and self-discipline, to the point of serene endurance of hardship, privation, or death; honor, a vital sense of personal honor, fair play and truthfulness, and passionate fidelity to a promise. Bushido required rigorous training in the military arts, and simplicity, almost severity, of life. Politeness, kindness, benevolence, sympathy were fostered; nothing brutal or underhand was countenanced. "The tenderness of the warrior" was a common phrase. A kind of gaiety grew from this, gaiety as the symbol of spiritual strength, in that any display of sorrow or discontent was both a sign of weakness and selfish inconsiderateness. Alertness of perception was stressed from many angles, not the least being sensitivity and appreciation. To train the young in sensitivity children were told stories or habituated to pictures of the warrior who halted his army so as not to trample a path strewn with the blown petals of the cherry.

bush soul The soul of a human being dwelling in a wild animal in the bush: a West African Negro concept. The Efik (southern Nigeria) word for bush soul is *ukpong*. The ukpong is both the soul within the man, his life, separable but returnable, the soul of the man within the animal, and also the animal itself: leopard, crocodile, hippopotamus, wild pig, etc. If the animal prospers, is lucky, or sickens or dies, the man will undergo the same fate. And if the man dies, his bush-soul animal becomes insensible to danger and is easily caught and killed. Chiefs sometimes have more than one bush soul.

Bush souls can also be inherited and even purchased. The custom of purchase sometimes leads to community trouble, for any man who envies his neighbor's flocks may acquire by purchase from the magician a leopard bush soul to prey upon the sheep and goats of the herder. A bush soul acquired by purchase is usually considered more powerful than one inherited.

If a man's bush soul has been trapped or wounded, the man falls ill. He goes at once to the magician to discover who the offender is. Anyone suspected of wilfully trapping or harming another's bush soul is put to

a severe test and tried by tribal law. Conjectures about any development of the hereditary bush soul into totemism are not yet substantiated.

Būshyāstā In Zoroastrian mythology, the yellow demon of lethargy and sloth; the evil genius which causes men to oversleep and to neglect their religious duties.

Bushy Bride Title of a Norwegian folktale in which the false or substituted bride is the principal motif (K1911). A king fell in love with the portrait of a beautiful young girl, and sent her brother (possessor of the portrait) to bring the girl to him, intending to make her his wife. The girl's hideous stepsister managed to put herself in the true bride's place, with the result that the king, when he saw her, was so enraged with her ugliness that he had the brother punished. Three times after this the true bride came to the king's palace and reproached the Bushy Bride for usurping her place. The third time she was held and questioned by the king, who, when he learned the truth, killed the impostor, restored the brother, and married the beautiful young girl. Compare FALSE BRIDE.

busk The Anglicized name for *púskita* (fast) of the Creek Indians of the southeastern United States: an annual, 4-8 day religious ceremony, held during July or August when the crops mature, in an open square ground or dance ground near each Creek town. A new fire is kindled in the middle of the square, and during the course of the busk the male participants drink the *passa* or black drink for ceremonial purification. There is a series of named dances which are performed by men and women on different days of the busk, and a feast is prepared by the women from the newly ripened corn. The women also kindle new fires in their homes, from fire taken from the square ground. Both men and women cleanse themselves during the ceremonies by rubbing ashes on their bodies and plunging into water. Besides the black drink, men also take a decoction made from 15 different plants, which has been prepared by a shaman, and acts as a physic. The busk concludes, on the final night, with the so-called "mad dance." [EWV]

Buso A class of demons greatly feared by the Bagobo, a Malay people of southeastern Mindanao, P.I. They have long bodies, feet, and necks, curly hair, a flat nose and one big yellow or red eye, and two long, pointed teeth. They live in the branches of graveyard trees, or haunt forests and rocks. They never eat living flesh but dig up the buried dead and devour all but the bones. In the beginning of time the Buso were friendly and helpful to men, but since "the great quarrel" they have been man's deadly enemies. The Tigbanua are the worst of the Buso; they crave human flesh all the time, and never rest from trying to change living people into dead ones. The Tagamaling are the best, for they are Buso only half the time, month and month about. In spite of, or perhaps because of, the ever-present fear which the Buso inspire, Bagobo folklore is full of stories in which these evil creatures lose or miss their victims through some clever trick. They are always being made fools of, lied to, or embarrassed. Many of the stories involve the family cat. "The cat is the best animal," they say. "She keeps us from the

Buso." One favorite story tells how the cat consented to let the Buso kill and eat her mistress if only first he would count the hairs on her tail. The Buso started to count, but the tail kept twitching so that the Buso had to start over and over again, and could not finish before morning. When daylight came he had to rush off.

Butcher Boy An English folk song, probably dating from the 17th century, about a girl who hanged herself for the love of a faithless butcher boy. It is, in its variants, extended with many of the wandering stanzas of folk song and has links to numerous other songs. For example, the final stanza is generally the one about "Dig my grave both wide and deep," and "on my breast inscribe a turtle dove," etc., which is also found in *The Alehouse* (known as a student song in this country under the title of *There Is a Tavern in the Town*) and the stanza about the dance-hall or alehouse, etc., in the town where the true love takes another girl on his knee, which also appears in the song *I Know My Love*. It also is sung with stanzas such as "Now I wear my apron high," which are found in the early blues song *Careless Love*. The town in which the tragedy occurred is named as London town, Dublin City, Jersey City, Boston City, Johnson City, etc., to suit the geographical fancy of the singers. Early versions are known as *The Squire's Daughter*, *The Cruel Father or the Deceived Maid*, *Deep in Love*, *Must I Be Bound or Must I Go Free*, *The Brisk Young Lover* (who may have been a sailor), etc.

buttercup One of the various species of crowfoot, (genus *Ranunculus*) with yellow cup-shaped flowers: natives of the north temperate zone in the Old World which have been introduced into America. The common name was given to the flowers either because they were believed to increase the amount of butter given by cows feeding upon them, or because the yellow color of butter was due to them. Irish farmers rub the *cam an ime*, literally, cup of butter, on the udders of their cows on May Day to encourage richness in the milk.

The buttercup, according to the herbalist Culpeper, is an herb of Mars, fiery and hot-spirited, used externally in an ointment to draw a blister. Hung in a linen cloth around the neck of a lunatic, it would cure lunacy. According to Gerard, when mixed with salt and hung on any of the fingers, it would cure toothache. Children hold a buttercup under the chin of a playmate. If the color is reflected, they say, "You like butter."

butterfly It is not surprising that a creature as beautiful as the butterfly should become the object of a mass of folklore and superstition. Belief in the butterfly as the soul of man is general in Europe, Japan, many of the Pacific islands, and among many North American Indian tribes. Some peoples, like the Maori, believe that this butterfly soul returns to earth after death, while others, such as the Finno-Ugric peoples, believe the soul can leave the body while the person is asleep, and in this way they account for dreams. The Serbians look on the butterfly as the soul of a witch, and believe that if they can find her body and turn it around while she is asleep, the soul will not be able to find her mouth to reenter, and the witch will die. Probably this concept of the soul explains why many medieval angels have butterfly wings rather than those of a bird.

The early Greeks sometimes portrayed the soul as a diminutive person with butterfly wings, and later as a butterfly. In south Germany some say the dead are reborn as children who fly about as butterflies (hence the belief that they bring children). In the Solomon Islands the dying man has a choice as to what he will become at death and often chooses a butterfly. Among the Nagas of Assam the dead are believed to go through a series of transformations in the underworld, and are finally reborn as butterflies. When the butterfly dies, that is the end of the soul forever. In Burma, rice has a butterfly-soul, and a trail of husks and unthreshed rice is very carefully laid from the field to the granary so that the soul may find the grain, otherwise none will grow the following year.

Among some peoples the butterfly is worshipped as a god, often as Creator. One of the tribes of Sumatra claims to be descended from three brothers hatched from eggs laid by a butterfly (their wives were sent down from above fully grown), and in Madagascar and among the Naga tribes of Manipur, some trace their ancestry to a butterfly. A North American Pima Indian myth says that the creator, Chiowotmahki, took the form of a butterfly and flew over the world until he found a suitable place for man. Among some tribes of Mexico it is the symbol of the fertility of the earth. The spirit of Nyikang, the first Shilluk king, who led his people into Egypt, appears to his people as a creature of great beauty, often a butterfly. Samoans believe that if they caught one it would strike them dead.

Not all butterflies are looked on as good. In much of Europe they are tabu. In parts of Scotland, Friesland, and Bosnia, moths are regarded as witches; in Serbia and Westphalia, butterflies are so regarded. In the latter place St. Peter's Day, February 22, is set aside for their expulsion. Children go about knocking on the houses with hammers, reciting rimes and incantations to drive them out of the houses. Elsewhere they are thought to be fairies in disguise, who steal butter and milk.

In the matter of capturing and killing butterflies there is a good bit of disagreement. Among the Magyars it is lucky to catch the first one of the season. In Oldenburg the first one should be caught and allowed to fly through your coat sleeve; in Devon it should be killed; but elsewhere in the west of England it is unlucky to kill it. In Essex the first white one should be caught and its head bitten off, but it should be allowed to fly away. In Somerset and Dorset they kill the moths; in the north of England, the red butterflies; in Pitsligo, the tortoise-shell ones; in Llanidloes, the colored ones; and in the Vosges region of France they should all be caught. In Scotland it is unlucky to kill or keep them, while in Suffolk they should be tenderly entreated, and in the west of Scotland the white ones are fed.

There are many superstitions regarding specific butterflies. Among the Bulgarians a dark one presages sickness. In Brunswick if the first one of the season is white it is an omen of death, if yellow, of birth, and if variegated, of marriage. In Ruthenia, the first one, if white, announces sickness, and health if red. Some say that if the first butterfly is white it will be a rainy summer, if dark, a season of thunderstorms, and if yellow, sunny weather. Among the Celts, to see one fly by night

means death, and in North Hampshire to see three together is a bad omen. Some say that if a butterfly is put in a gun it is impossible to miss the target. To get a new dress all a girl need do is to catch a butterfly of the desired color and crush it between her teeth while muttering a magic formula.

buttocks watcher In nearly all tales of the hoodwinked dancers Trickster commands his buttocks to act as watchman for him while he sleeps. His buttocks speak and warn him that his food is being stolen, but Trickster ignores the warning. Closely related incidents to this motif (D1317.1) are those of talking privates, in which a man is given advice by his genitals, talking privates which betray unchastity (H451), and Mentula loquens (D998; D1610.3; H451) in which a man's penis speaks and can only be silenced by his mother-in-law. See *FECES*. [EWV]

buzzard If you wear a buzzard feather behind your ear, you will never have rheumatism. If you see a lone buzzard, you will soon see someone unexpected. Make a wish before the sailing buzzard moves his wings and it will come true. If you see a buzzard's shadow and not the buzzard, that is an omen of death. In fact, it is dangerous to let a buzzard's shadow touch you. Death, illness, or evil fortune will soon follow.

Kentucky Negroes say that if you look up at a buzzard overhead, or speak to him, he will vomit on you. But Georgia Negroes throw a kiss to him, make a wish, and expect it to come true. If a buzzard catches a child he will pick its eyes out. Georgia Negroes believe that witches sometimes take the form of buzzards. Maryland Negroes say

O, Mr. Buzzard, don' fly so high
Yo can't make a livin' aflyin' in de sky.

Many southern Negroes also believe that the buzzard is a thief-finder. This is the folklore of fact, stemming from slavery days when a Negro would sometimes cache a piece of pig meat in his loft. Pork plus heat makes for such rapid putrefaction that it would be a poor buzzard who couldn't detect it. Thus the presence of a buzzard on the roof was a sure giveaway.

Buzzards, because they eat carrion, are associated with the dead, and are regarded with particular awe by the Negroes of the southern United States, and vested with unknowable mystery and power. Buzzard's grease will cure smallpox, for instance. A little bag containing buzzard feathers is sometimes tied around a baby's neck to ease the pains of teething. For fainting or an epileptic fit two wingfeathers from a buzzard are burned under the nose of the patient. Buzzard feathers are also effective in charms. To drive someone crazy, Mississippi Negroes pick up the victim's footprints, put them in a gourd along with two buzzard feathers, and throw the gourd into running water at midnight. The person will go insane the next day.

Among many of the North American Pueblo Indians Buzzard, because he is a scavenger, is regarded as a purifying and cleansing power. Buzzard feathers are used in exorcism by all the curers. (See *BADGER MEDICINE*.) In a Hopi ritual performed to induce the clouds to send water to the people, a buzzard feather is used to dip the water from the six directions from the sacred

spring into the gourd which is to be carried to the altar. Buzzard is the cleanser. Whenever the word "cleanser" occurs in the ritual songs accompanying the Hopi cleansing rite, the exorciser scatters the purifying ashes with his buzzard feather. In the various Pueblo brushing rites, the shaman brushes away the evil with a buzzard feather. Buzzard droppings are burned at Taos to smoke one who has fainted.

The Hopi myth of raising the sun explains how Buzzard got his bald head. At first when the sun stopped half-way up the sky, two children were sacrificed, whose spirits helped it along its way somewhat. But it was still too near and the earth was too hot. Turkey flew up to raise the sun. The heat burned his head red and all the feathers fell off; so he came back. Then Buzzard tried. Buzzard pushed the sun up a little farther. The sun burned all the feathers off his head but he kept on trying. Now Buzzard is bald. In southern U.S. Negro folktale, Brer Rabbit gave a feast. During grace, while all eyes were shut, he suddenly reached out and ducked Buzzard's head into a dish of hot hominy. Since then Buzzard is bald.

Bwebweso In Dobu (Melanesian) belief, the afterworld; the hill of the dead on neighboring Normanby Island: literally, extinguished. Some spirits do not go to Bwebweso; for example, the spirits of those slain in war go to another afterworld, bodies disfigured by disease live in a swamp at the foot of the mountain as fish with human heads, and some spirits wander off to the hill of lice, Koiakutu. The spirit leaves the body after a few days and arrives at Bwebweso carrying the betel-nut fee for the warder, Sinebomatu, the Woman of the Northeast Wind, or Kekewage, her husband. The fee is paid and, if free from disease scars and sufficiently rotted (a "fresh" spirit cannot pass), the spirit goes to Bwebweso. The spirits of children whose parents still are living are cared for by Sinebomatu and Kekewage until one of the parents dies, else the child will have no guardian in the afterworld. Sometimes, in sleep or voluntarily (some magicians can do this), the spirit of a living person visits Bwebweso and talks with the spirits of the dead. But the visiting spirit must not eat of the *Dokanikani* banana in Bwebweso, for if it does it can never get back to the living world. (Fortune, *Sorcerers of Dobu*.) Compare *FOOD TABU IN THE LAND OF THE DEAD*.

byliny (singular *bylina*) The narrative poems of Russian oral tradition: also called *stariny* or old songs. The term *bylina* probably means "past happenings," and since about 1860 has been applied to the special genre. Byliny are slow-moving, descriptive, free in their verse-forms, unrimed, unstanzaed, the rhythm of the chant determining the length of line which, though irregular, tends to even out. They are chanted without accompaniment, but seem at one time to have been sung to the music of the *gusli*, a one-stringed, bowed instrument. Prose versions of some of the byliny exist, recited rather than sung, preserving the language and figures of the poems, but without their meter. The subject-matter is secular; religious poems in similar style are called *stikhi*. There has been some influence on the byliny from the West and from the Balkans, but the byliny remain apart from the general stream of European balladry.

The matter of the Russian byliny is both historical

and legendary, often, and usually, so confused that it is impossible to differentiate between fact and invention. For, rather than being the comparatively bald narrative of the Western ballad, the byliny permit elaboration by the reciter with stock phrases and situations, motifs being transferred from one setting to another regardless of the person or event under discussion. The matter groups itself into cycles (e.g. the Older Heroes, the Kiev cycle, the Novgorod cycle) more or

less related to the epic poetry of the Russians; the borderline between the two types is not clear.

The byliny seem to have reached their peak in about the 16th or 17th century after a period of dormancy under the rule of the Tatars (12th–16th centuries). In the time since then the older ballads have gradually disappeared from the centers of their origin in Great Russia and are found today for the most part in the northern fringes of Russia, the Urals, and the Caucasus.

Cabeiri or Cabiri In Greek mythology, mysterious deities, worshipped in many parts of the ancient world, of whom little is definitely known. They were perhaps Phoenician in origin, and were worshipped particularly in Samothrace, but also in Asia Minor, Macedonia, and northern and central Greece. The cult became early identified with that of Demeter and Cora, and with Hermes (Cadmilus) and Hephæstus or Hades. The Cabeiri seem to have been guardians against peril, especially that of the sea (like the Dioscuri), and also fertility deities of some kind. Little of the mythology connected with them has survived, although their cult enjoyed its greatest expansion in the period from the peak of the Athenian hegemony to some time after the death of Alexander (5th and 4th centuries B.C.). Cabeiros and his son Casmilos are the principal Cabeiri; the names Axieros, Axiokersos, and Axiokersa were noted as belonging to the Cabeiri by Mnaseas in the 3rd century B.C.

caboclo In the northeastern part of Brazil, this term is applied to cult-groups that worship both African and autochthonous Indian deities, principally Tupi and Guarani. The African worship tends to be preponderantly of the Congo-Angola type, with African deities predominating, but also including certain categories of deified ancestral dead. These caboclo sects may be regarded as related to that aspect of non-Christian New World Negro religion which pays respect to the spirits of the aboriginal inhabitants of the land in which the group lives. In this category of religious life would be the *Ingi winti* of Dutch Guiana, and the *loa créole* of Haiti. [MJH]

Cachimé A deity of the Arecuna and other Indian tribes of the Venezuelan Alto Orinoco: the focus of a strange dance orgy for the well-being of the tribe. His image is kept in a cave and held in fearful veneration. At certain seasons men and women prepare themselves in retreats by complete inebriation. Four priests disguise themselves in animal pelts, feathers, and face paint, and bring the image from the cave. The people perform a circular dance around them. After the ritual return of the image, the priests remove the disguise and bathe ritually. The dance and its deity resemble the more spectacular Mauari of the Maipure Indians which celebrates puberty rites. [GPK]

cachucha A lively dance of Cadiz and Jerez, Andalusia, characterized by acceleration and intensified ex-

citement. The rapid $\frac{3}{4}$ time is accented by castanets. Leg-swings embellish the footwork. Strictly speaking, it is a couple dance, but can be danced by a woman alone, as on the stage by the once famous Fanny Elssler. This apparently completely secular dance has nevertheless been included as part of the ball de gitanes, a dramatic Carnival dance of Catalonia. Literally, a cachucha is a kind of cap. [GPK]

cactus Any plant of the family Cactaceæ, green, fleshy, with typically leafless joints, very spiny and remarkably drought-resisting. There are more than 100 genera and some 1300 species, including the edible prickly pear, night-blooming cereus, the mescal, etc. Certain ones are usable as forage; some contain powerful narcotics used as stimulants and for ceremonial intoxication among certain Mexican Indians. Cactus in China is called the fairy's hand and is considered unlucky for pregnant women.

The cactus is of special religious significance among American Pueblo Indians. It is one of the plants that "give of themselves" to the people. The Zuñi Cactus Society is a war society functioning also for the control of game and the curing of wounds; it approaches the cactus with a special beaded prayer feather. In the ritual whipping of chiefs being installed, the Cactus Societies of Zuñi and Jemez both use cacti. This gives those who are whipped great power and luck in hunting and gambling. Members of the Hano Cactus Society also whipped each other with cacti to induce bravery and endurance, and to make the ground freeze so their warriors would leave no tracks. At Tewa, Cactus Grandmother is passed from hand to hand with song within the Winter kiva. If she is dropped it portends bad luck. During this "journey" thrice round the circle she becomes smaller and smaller and in the fourth round she finally vanishes and has returned to her own people. When the people go to look, there she is growing in her own place as fresh as ever.

Pieces of cactus are put in the corners of each new Hopi house "to give the house roots." At Acoma during certain kachina activities, men rub themselves against the cactus (carried by others) to attain manliness.

Among the exploits of the Lipan Apache culture hero Killer-of-Enemies and his brother is the incident of making the prickly pear cactus safe to approach and gather. The Chiricahua, Mescalero, and Jicarilla Apache, and also the Navaho, have stories describing the sexual use of cactus.

Cacus A robber giant, son of Vulcan, three-headed and flame-breathing, who lived in a cave on the Aventine where Rome now stands. When Hercules passed that way with the cattle of Geryon, Cacus stole several, dragging them into his cave by their tails backwards. Hercules, thus unable to trace the cattle, was about to go on his way when the lowing of cattle in the cave before which he was driving the remainder of the herd caused him to realize what had happened. He entered the cave and slew Cacus. The legend was an important local story of Rome, Hercules being reputed to have established, with the consent of the then ruler Evander, the ara maxims, or ox market. The Scalæ Caci, however, are on the Palatine. It is thought that Cacus, with his sister Caca, who was worshipped somewhat like Vesta, form a pair of very ancient Roman deities to whom has become attached an originally Greek story. Because Vergil calls Cacus *semi-homo*, Dante made him a centaur, though he placed him apart from the Greek Centaurs.

Cacy taperere or **Sasy-perere** A popular supernatural being in the folklore of the Indians and mestizos of southern Brazil. He is a one-legged dwarf with fiery eyes, a red cap, and a pipe. He enjoys playing tricks on people, such as disturbing, misplacing, or hiding their belongings. [AM]

Cadmus One of the famous culture heroes of ancient Greece; the founder of Bœotian Thebes; introducer of the alphabet from Phœnicia to Greece; inventor of agriculture and bronze work. He was the son of Agenor, king of Phœnicia, and Telephassa, and brother of Europa. When Zeus abducted his sister, Cadmus went in search of her, with instructions from Agenor not to return without her. His quest was futile, and at last he went to the oracle at Delphi, where he was told to abandon the search, to follow a cow marked with a crescent on each side, and to found the city Thebes wherever the cow stopped. When in Bœotia the cow lay down, Cadmus built the Cadmea, later the citadel of Thebes. Preparing to sacrifice the animal, he sent his companions to a spring for water. There they were attacked and slain by a guardian dragon, a son of Ares. Cadmus killed the creature and on Athena's advice sowed the dragon's teeth in the ground. Fully armed warriors sprang up, and Cadmus either threw stones among them to cause them to fight or was warned away by one of them. In any event, they fought until only five were left alive. Because he had slain the dragon, Cadmus had to serve Ares for a long year (eight years) in expiation, at the end of which time he was given the daughter of Ares and Aphrodite, Harmonia, as wife. All the gods of Olympus came to the wedding, and Harmonia received as gifts a peplos worked by Athena and the fatal necklace made by Hephæstus. The children of Cadmus and Harmonia were Semele, Ino, Autonoe, Agave, and Polydorus (Illyrius was born much later); the vengeance of Ares followed these children and their descendants down to the destruction of the line after Œdipus. The ill fortune they met with in Thebes caused Cadmus and Harmonia to leave. He later served as general and king of the Enchelians. At last he and Harmonia were changed into serpents and taken by Zeus to Elysium. Cadmus is reported to have cast mother and child adrift in a chest when he discov-

ered the birth of Dionysus to his daughter Semele. The entire legend of Cadmus has been overlaid with later explanatory incidents and characters, such as Cadmus' brothers Phœnix and Cilix, the founders of Phœnicia and Cilicia when they gave up the search for Europa, herself a similar ancestral character. Cadmus was worshipped in several parts of Greece. Compare CECROPS.

caduceus The magic herald's wand, a sacred rod having power over wealth, prosperity, happiness, and dreams, carried by the messengers of the Greek gods, especially by Hermes in his role as psychopomp. In its earliest form the caduceus appears as a forked rod, the prongs knotted or crossing to form a loop; later, the rod is twined about by two serpents with their heads meeting at the top. The legend states that Hermes discovered two serpents fighting and thrust his rod between them. The caduceus was thus a sign of the settlement of quarrels, carried by heralds and ambassadors (who were immune to attack). It became the symbol of commerce much later. Another legend states that Hermes and Apollo exchanged lyre for wand. Sometimes the caduceus appears winged as the symbol of Hermes. A modified drawing of the caduceus was used in alchemy for the metal mercury, and the same symbol is still used for the planet. The winged caduceus is the insignia of the U.S. Army Medical Corps. Compare ÆSCULAPIUS.

Cæneus In Greek mythology, a Lapith slain by the Centaurs. Originally Cæneus was a woman called Cænis, and was raped by Poseidon. As recompense, she asked that she be changed into a man, for in that form such indignity might not occur, and that she be made invulnerable to wounds: these requests the god granted. The man Cæneus took part in the Argonautic expedition and in the Calydonian boar hunt. Cæneus however set up his spear as a god, would worship only the spear, and ordered the people to worship it. Zeus became angered, and in the fight between the Lapithæ and Centaurs, when Cæneus daringly fought in the open, unafraid of wounds, Zeus caused the Centaurs to drive him into the earth and bury him with fir trees. When he died, he was changed back into a woman, although, in Ovid, Mopsus, the seer, declared a yellow-winged bird seen on the heap of logs to be Cæneus. Compare CHANGE OF SEX.

Cæsarean birth The delivery of a child by section of the abdominal wall and womb of the mother when natural delivery is impossible: so called because Julius Cæsar is said to have been born in this way. The child of a Cæsarean birth is said to possess great strength, and the power to find hidden treasure, and to see spirits. Miraculous birth from a slit under the arm, in the side, or in the thigh is a concept as ancient as the mythologies of the world. See BABY TAKEN FROM MURDERED MOTHER'S WOMB.

Cagn or **Kang** The Creator of Bushman mythology; believed to be manifested sometimes in the form of the mantis (*!kaggen*), sometimes in the form of the caterpillar (*ngo*). He is called Cagn or Kang by the northern Bushmen, Thora by the southern Bushmen. All Bushmen reverence the mantis; all are loath to kill it. Cagn created all things, but he met with so much opposition in this world that he went away. Now the people pray

to him for food, saying, "O Cagn, O Cagn, do you not see the hunger of your children?"

Cagn had a wife named Coti, and two sons named Cogaz and Gcwi, who became chiefs and made digging-sticks with sharp stone points and showed the people how to dig with them for roots. But how Cagn himself came into the world no one knows, except the initiated. Cagn had a tooth in which his powers and vital force resided; sometimes he would lend it to a friend who needed extra strength for some exploit. Birds were Cagn's messengers. His daughter married a snake, and the snakes henceforth were called Cagn's people. Cagn himself could take animal form at will, usually that of an eland bull. His wife once gave birth to an eland fawn. Anyone who displeased him had bad luck: baboons were once men, for instance, but were doomed to their present shape for once sneering at Cagn's cleverness. Once the thorns killed Cagn and the ants ate him, but he came to life again. Today no man knows where he is; only the elands know. When Cagn calls in the forest, all the elands run to him. Men have seen this happen.

cailleac Literally, old woman, hag; in Celtic folklore, the last sheaf of harvest regarded as the embodiment of the corn or field spirit. Personification of the last sheaf as the spirit of the growing grain itself is world-wide, and the treatment of this material representation everywhere testifies to the deep human belief that its safekeeping insures fertility for the following harvest, provided that some portion of it is given to the cattle and horses to eat, and some portion of it strewn in the field or mixed with the seeds for the next crop.

In the neighborhood of Belfast, Ireland, the last sheaf is called the Granny and its personification is achieved not only by thus naming it, but by a special ceremony of cutting it. In certain sections of Scotland it is called the carlin (old woman). In the Scottish Isle of Lewis the old hag or cailleac is dressed up in clothes, her apron turned and tied up and filled with bread, cheese, and a sickle. In Pembrokeshire in Wales, she is carried home by one of the reapers, whose fellows noisily accompany him, drench him with water, and endeavor to snatch the cailleac away. If he gets home safe, he keeps the hag on his farm till the following year. On the day of the first spring plowing, he takes whatever grain remains intact on the hag and feeds it to his plow horse or mixes it with the seed to be planted, both acts serving to insure fertility. In some Scottish districts the reapers hold reaping races; the man who finishes first calls his last sheaf the corn maiden; he who finishes last makes his last sheaf into the cailleac, the hag, or "old corn wife." In some localities, however, the cailleac is passed from farm to farm. The man who finishes his reaping first makes the cailleac and passes her on to his neighbor, who hastens to finish and pass her on to the next. The cailleac thus automatically remains for the year with the farmer who was last to finish his harvesting. Nobody wants the old hag, who in this aspect takes on an added symbolism of reproach for procrastination. In the Hebrides the cailleac is still taken at night and placed in the fields of dilatory or lazy farmers.

Cain The first-born son of Adam and Eve; the first murderer; builder of the first city, whose evil offspring invented boundaries, measures, and walls and destroyed

the freedom of men: thought to be a later Hebrew addition to the Biblical narrative to explain the more primitive way of life of the Kenites of the Sinai peninsula. The Biblical story is incomplete (e.g. in what way did God accept and reject the offerings of the brothers) and contradictory (e.g. Cain is condemned to wander, yet founds a city). The essence of the tale seems to be blood: Cain's was not an acceptable sacrifice because it was bloodless; the earth becomes infertile because Abel's blood is spilled upon it. There are two principal versions of the story: one, following the Biblical tale, explains the jealousy as that of land-tiller for shepherd. This ancient argument appears in several Mesopotamian tales—Kramer (*Sumerian Mythology*) discusses three. The other, an apocryphal story of Jewish and Moslem lore, bases the quarrel in sexual jealousy. Cain and Abel each had a twin sister, and Adam planned to marry the boys to each other's sister. But Cain's was the prettier and he objected. Not knowing how to kill Abel, he threw stones at him until he hit a vital spot. Then, ignorant of what to do with the body, he watched two ravens fight and saw the victor scratch a hole in the earth to bury the other. God cursed the earth for permitting Abel's body to be hidden. Cain and his sister then were banished to the land of Nod. But first, because of Cain's spoken repentance, God marked the sinner to protect him. What mark it was, and whether it was a warning sign or a protective one, etc., are subjects of speculation: some authorities hold that the tribe of Kenites wore a distinguishing mark. Cain was killed by Lamech, whose son, Tubal-Cain, saw Cain from afar, thought that the horned being (the horn was either the mark, or a natural consequence of Cain's father being Sammael-Satan) was an animal, and told his blind father to shoot. The Dioscuric implications of the story of Cain and Abel have been remarked upon by Krappe. Compare the founding of Rome by Romulus and the building of the first city by Cain.

Cain and Abel Title of an American Negro song relating the story of the first murder. "Some folks say that Cain killed Abel/ Yes, my Lord!/ He hit him in the head with the leg of a table/ Yes, my Lord!" Similar words are found in the tall-tale song *I Was Born Ten Thousand Years Ago*.

cairn A mound or heap of stones as a marker or memorial. Cairns are used in many parts of the world as place markers. In the passes of the Himalayas, a cairn marks the top of the pass, and offerings are put on the pile by travelers. In Tibet, the traveler adds another stone. The herms, or road-marking busts of Hermes, of Greece probably developed from a similar cairn-as-marker custom. Stones, said to have been placed there by Hermes, protector of travelers, when he cleared the roads, stood at the roadside. The custom was to mark roads by such stones and piles of stone. Offerings of food were placed on these cairns (or later on the herms), ostensibly for the use of travelers, but probably as sacrifices. In medieval Lithuania, scattered among the towns, cairns, or perhaps groups of larger stones, were sacrificial places, altars at which offerings were made and sacrificial blood sprinkled, and the sacrifices distributed among the people.

The use of cairns as burial places is very ancient and world-wide. It is, for example, the typical form of burial

of the southernmost Indian tribes of South America. The stones protect both the dead and the living; they guard the corpse against mutilation or desecration, they prevent the spirit from rising and exercising its malignancy against the living. Cairns are thus associated with barrows, dolmens, cromlechs, and the like, as early graves. At such cairns, too, the universal practice is to place another stone on the heap. The custom is still carried on by several peoples, even where the cairn has disappeared and the gravestone has taken its place.

cake customs Certain acts of propitiation, sacrifice, divination, etc.: frequently associated with the annual cycle and taking into account phases of the solar year. Cakes are used in critical aspects of the life cycle and thus are intimately connected with baptisms, weddings, funerals, and rituals for the dead. Often cakes molded into the shape of human beings or animals are conceived of as substitutes for their prototypes. In extreme cases artificial objects may take the place of the food offering.

In ancient Greece, cakes of dough were thrown into a chasm as an offering to Demeter and Persephone, the deities of the harvest. Some of the cakes were eaten by serpents who lived in the abyss. The remnants were removed by women who had been purified ritually, and what was left were taken to the altars of the goddesses. In Egypt often there were images made of dough, in the shape of pigs and other animals, which were sacrificed to Osiris and to the moon. For the dead, often those who were poor used real cakes or those made of stoneware, to be placed in the tomb as food for the dead. In Rome, matrons sacrificed millet cakes to Liber, to Ceres, and to Mater Matuta. To feed the dead, the Hindus placed cakes beside the corpses upon which were piled boiled rice, sugar, and ghi (melted butter). In order to avoid taking life, these people also made models of the persons to be sacrificed in the shape of cakes made of meal and butter. The Veddas of Ceylon also fed the deity *šiva* by means of rice cakes, while in Japan, on New Year's Day, two flattened spherical cakes were laid on the shrine—a male cake to the sun, and a female cake to the moon.

Cakes of various shapes were used in Greece as sacrificial and propitiatory offerings, such as those offered to Helios at Delos and Delphi, in the form of arrows or of girls; to Artemis cakes and honey were placed as an offering, and to Zeus in Athens they offered barley cakes in the Eleusinian mysteries. In Athens a twelve-knobbed cake was offered to Cronus every spring (compare BELTANE CAKES), and in a ritual called the "Supper of Hecate," circular cakes, topped with candles were placed at crossroads by the rich at the time of the new or the full moon. In Sweden a cake in the form of a woman was made from the last sheaf to be harvested which was shared by all members of the family. In Estonia, Sweden, and Denmark, the meal from the first sheaf was made into a cake in the form of a boar.

Cakes were given away at the New Year, or used as magical means to drive evil away. In Scotland, on Hogmanay (last day of year), children sang carols from house to house and were given oat cakes. In France, pancakes were made, tossed on a griddle, on New Year's Day to assure good luck and riches. On Candlemas Day, in France, pancakes were also made to assure the rising of the dough in the oven during the rest of the year.

The Lenten season was ushered in by feasting. In Hungary, before King Fat was chased out by King Lean, fat foods and well-shortened cakes were eaten, for King Lean began to reign on Ash Wednesday. On Collop Monday, the day before Shrove Tuesday, in England, one feasted on meats, fats, eggs, and rich cakes. Boys would beg for food on this day and, if refused by a stingy housewife, they could pelt her with broken crockery.

Shrove Tuesday or Mardi Gras is celebrated by eating pancakes, throughout the Christian world. In France, it was said that eating pancakes would preserve the grain from rot. In Bulgaria, on Plow Monday, the day preceding Shrove Tuesday, there was a special ceremony: a man, clad in a goatskin, baked a cake with a coin; he then divided up the cake, and he who received the coin, would prosper—only then could the plowing begin. In Russia, bread or cake, which had been blessed in the church, was placed near or mixed with the seed corn to assure a prosperous harvest.

Begging for materials for Easter cakes takes place during the latter weeks of Lent. In Czechoslovakia, on Caroling Sunday, the Sunday preceding Palm Sunday, the girls would beg for eggs, flour, and spices to be baked into Easter cakes, while in Bulgaria on Palm Sunday a cake called "kula" or "kolack" was made: this cake was decorated with flowers and human features. Bits of these were cast into the water, and she whose morsel floated the furthest would be luckiest during the year. After this all would feast on the loaves.

On Good Friday, Hot Cross buns, a bun which was marked with a cross cut into the dough, or more recently marked with a cross of icing, would be eaten. Eating of these brings good fortune.

In Russia and Poland, a tall cake, rich with eggs, butter, spices and fruit is made. In Russia it is a tall cylinder, called *kulich*, while in Poland it is ring-shaped and called *babka*. In Russia this was topped with a mixture of sweetened cheese and sour cream, which was blessed in the church by the priest. The Rumanian Easter cake was studded with cloves to represent the nails of the cross. In Kent, cakes with the figures of twins stamped on them were given to the poor.

Beltane, the Celtic May Day, was celebrated with Beltane cakes, which are considered by some to have been used in selecting a human sacrifice.

Cakes were offered to the dead, or to beggars in the name of the dead. Arval cakes were given to the poor at a wake or a funeral. Halloween cakes often contained a ring and a coin—he who got the coin would prosper. On All Saints' Day, children begged for cakes in the name of the dead or for souls in Purgatory. In Shropshire such cakes were leavened flat buns, while in the Tyrol, godparents would give cakes shaped like animals to their godchildren. These were in the form of horses and hares for the boys, and hens for the girls. They were left overnight on the table for the souls to eat. In Belgium, soul cakes were eaten hot, while saying a prayer for the departed. In Antwerp, this cake was decorated with saffron to symbolize flames. In Saint Kilda, soul cakes were triangular. In Ireland and Scotland they were griddle cakes. The Scottish "dumb bannock" was made by a group of girls: each one traced her initials on the dough, and it was baked

before the fire between eleven and midnight on Halloween. While it was baking each girl kept complete silence, and turned the cakes once. At midnight a man was supposed to appear and lay his hands upon the initials of the chosen one.

Cakes used at Christmas time are varied. In Shropshire they ate cakes embellished with caraway seeds which were dipped in ale. In Yorkshire, spice cakes or plum cakes or gingerbread and cheese were served at this season: "For every Yuletide cake and every cheese tasted at a neighbor's house, a happy month will be added to one's life." In Serbia a special cake was broken over the Yule log; these cakes were theriomorphic, in the shape of lambs, pigs, and hens. For all members of the extended family, a cake was baked by a girl, which had a coin in it for luck. Everybody partook of this at the Christmas dinner, and portions were kept for absent members. In Estonia a cake was baked on Christmas Eve, which stood on the table on New Year's Day, when some of it was given to the cattle, and the rest was kept for them until spring. In Slavic countries, on the dawn of Christmas Day, the maidens go to the river to get water for *chernitza*, a loaf which is flat and wheel-shaped. Good luck tokens are placed in it. At noon it is cut by the head of the house, or tossed over the horn of the oldest ox, and if it breaks, it means good luck. In some parts of France it is believed that Christmas cakes will cure illness throughout the year.

In many places the Christmas season was celebrated until the 6th of January (Epiphany). In Hertfordshire, a ring-shaped cake was tossed over the horn of the oldest ox; then he was toasted in ale, and tickled so that he would toss the cake for luck. In Silesia, there is a guardian of spinning, called Frau Perchta. On the eve of Epiphany she goes about inspecting the distaffs and spinning wheels and, if she finds flax, she splits open the bellies of the lazy girls and stuffs them with flax. In order to have the knife glance off the bellies, the girls eat pancakes at the evening meal.

In France and in Germany Twelfth Night was celebrated by a feast in which a cake was featured. This cake contained a bean or a kernel of corn, and he who got it was the king. Each member present got a slice, and a part, usually the first slice was dedicated to God, to the Virgin, or to charity.

Cakes were also used in exterminating fiends for, in Macedonia, they were scalded by the frizzling fat in which pancakes were cooked. NATALIE F. JOFFE

cakewalk A form of social entertainment, originating among the Negroes of the southern United States, at which a cake is given as prize for the very best walking. Originally, the walk was performed stiff and erect, with a bucket of water on the head. Whoever walked "straightest and proudest" and spilled not a drop got the cake. Later, various fancy and original variations were introduced. The dance which developed from these expressive grotesqueries of walking consists usually of a high prance performed with the arms folded across the chest, the head thrown well back, and sometimes the whole body arched back.

Calabar bean The ordeal bean of Calabar, Africa: the highly poisonous seed of an African twining climber (*Physostigma venenosum*) of the bean family. An

extract from it is used for contracting the pupil of the eye, occasionally for tetanus, epilepsy, and other nervous disorders. Among the people of Calabar it was used in a poison ordeal to test for crime, witchcraft, etc. It contains certain poisonous alkaloids. An infusion of the bean was made, called ordeal water, and given to the accused to drink. Sometimes the uncooked bean was given to him to be swallowed. If he vomited and survived the ordeal unharmed, he was innocent; if he was poisoned, he was guilty. The Calabar bean was also used in what was termed "wager law": each of the litigants ate half a bean. Whichever one survived, or was the least affected, was in the right.

calabash tree A tall tropical American tree (*Crescentia cujute*) the hard rind of whose gourdlike fruit is used for dishes, bowls, drinking vessels, containers, and other utensils, and also musical instruments. Many of these artifacts are painted both inside and out; many are gorgeously and elaborately decorated with plant and animal and symbolic patterns. The Indians of Matto Grosso, Brazil, use dried calabashes for keeping records; incidents are inscribed on them in pictographs. Even demons flee from the unmistakable pictographic charms inscribed thereon against them. In Hawaii sorcerers use calabashes to confine the wandering souls of living people which they have caught. In regions where Catholicism has superimposed its saints' days observations upon earlier indigenous practices, the calabash tree itself must be planted on St. John's Day, June 24. If this precaution is not taken the fruit will fall off before it ripens. If the tree fails to bear, it is beaten, also on St. John's Day.

caldron of regeneration In the *Mabinogion*, the wonderful caldron given to Bran by a monstrous man and woman who came out of a lake in Ireland. This pair lived first with Matholwch, a king of Ireland, for a year, but were hated by the people because of their outrages and molestings. An attempt was made to roast them alive in an iron house, but they escaped and fled to Britain, where Bran received them. They gave to Bran this caldron which restored the slain to life; and it was this caldron that Bran gave in turn to Matholwch as a gift of atonement for an insult. It parallels the miraculous healing spring of the Irish physician, Diancécht, which also restored the mortally wounded. It is numbered with the numerous magic caldrons of Celtic myth and legend: Dagda's (inexhaustible), the caldron of Annwn which would not boil a coward's food, the caldron of inspiration prepared by Cerridwen for her son, and others. See BRAN; MAGIC CALDRON.

calinda, calenda, caleinda, etc. The stick dance or mock-battle dance of the New World Negroes: adopted to some extent by the whites of the area. The calenda songs of Trinidad are also sung at communal labor, with improvised, topical verses, often sharply and personally satirical, often more seemingly innocent than they are. There are a variety of traditional refrains. Lafcadio Hearn, reporting the caleinda from Martinique, stressed the improvisational character of the verse. Imported into Louisiana from the Antilles, the calinda originally was a battle dance, performed by men only, armed with sticks. Stripped to the waist, the dancers performed their mock fight with bottles of

water balanced on their heads; as soon as the water spilled the dancer was disqualified. The development of the calinda in Louisiana became so orgiastic that it was banned by state law in 1843. Compare CAKEWALK.

Calling the Deer Title of a story in the Coyote cycle of the Coeur d'Alene Indian mythology. Coyote lay starving and wished for food. Suddenly he saw a deer foot lying by the fire. He ate it. This happened four times: first a deer foot appeared, then a shoulder, half a deer, etc. Coyote wondered where this meat came from. The next morning he watched with the blanket half over his eyes. Half a deer dropped beside him. And he saw Woodtick. She begged him not to look; but Coyote said "So it's you—without even a neck!" Woodtick was insulted and went away.

After a while Coyote was starving again. He went to look for Woodtick. After a while he found her, old woman Woodtick in her house. She set the table for two but did not bid Coyote eat; so Coyote could not break the code and eat. Woodtick had wanted him for her husband until he said she had no neck. Finally she let him stay there, so Coyote lived with Woodtick. Woodtick would call out "Deer, come!" and the deer would come running into the house. Woodtick would take two and pierce their ears and the rest would run out. This happened often and they had plenty of meat.

Coyote thought he would be the one to call the deer. So he killed Woodtick. Then Coyote called the deer, and the deer came. But when he tried to pierce their ears, as Woodtick had done, he hurt himself instead. Woodtick's spirit called to the deer to run away. So the deer ran away. The meat that was laid on the rock turned into a deer and ran away; the meat in Coyote's quiver turned into a deer and ran away; the meat he was cooking on the fire ran away; and even the bones he was saving in an old sack ran away in the shape of living deer. Then Coyote threw Woodtick out of the house, because it was all her fault. She went far off and her spirit called away all the deer, and Coyote starved.

This story, especially well known to the Coeur d'Alene, is also of very wide distribution over other areas. It is of especial interest in that it points up Coyote's characteristic greediness, ingratitude, and discourtesy, and develops the unsuccessful imitation motif found also in the widespread bungling host tales.

calling the wind A singing call of the American Negroes of slave times: "Co' win'," repeated three times, followed by a long whistle. This call was used when rice was to be fanned, when a sail hung idle, or when a field was to be burned. It closely resembles a rain invocation of Togoland.

Callisto In Greek mythology, the Arcadian nymph, companion of Artemis, who became the constellation Ursa Major. In the oldest extant version, Callisto was seduced by Zeus masquerading as Artemis. The goddess, discovering Callisto's pregnancy, changed her into a bear. Later, Arcas, Callisto's son, hunted her for violating a place sacred to Zeus, and mother and son were transformed into the asterisms Ursa Major and either Boötes or Ursa Minor. In various other tellings of the myth, it was Zeus himself who changed Callisto into a bear to avoid Hera's suspicions, or Hera caused the change as punishment; Artemis shot Callisto; Zeus disguised himself as Apollo and not as Artemis, etc.

The myth appears to have developed from an Arcadian aspect of Artemis Calliste (Fairest) whose symbolic animal was a she-bear. See URSA MAJOR.

calumet dance A widespread North American Indian ceremony focused in elaborate smoke-offering to the Great Spirit. The particular sacredness of tobacco and the pipe to the American Indian becomes evident in the light of native symbolism. Fire, ashes, smoke are endowed with purifying and life-giving powers; furthermore, the smoke in its ascent may communicate with the Creator and carry messages to Him. By inhaling and then exhaling this smoke, the breath of life, the soul of the smoker arises with it. Similar qualities of communication are attributed to the soaring eagle, who has power over weather, the sun, lightning, rain, and thus over the earth and its bounty. These natural associations must be born in mind in the following summary of the various forms of the calumet dance.

Its cult was most intensive and variegated in the Great Plains, became attenuated in its travel eastward, and is absent in the Southwest. The stem of the calumet is commonly of ashwood, the bowl of Dakota catlinite. The tobacco was originally cultivated as *palani* among the agricultural Pawnee, who also developed the most elaborate ceremonial, the *hako*.

1) The calumet functions most commonly in ceremonial invocations to the six directions, in introducing peace and friendship pacts, welcoming important personages, rejoicing over a victory. Many tribes, as the Iowa and Plains Cree, featured a smoking ceremony for peace, a circulation of the pipe from warrior to warrior, and a petition for success in war, abundance of fruit and buffalo, and long life. This ceremony often culminated in a dance. Ordinarily there were two pipes, decorated with feathers and hair. These were handed to the dancers by the greatest warrior, who boasted of his great deeds (Iowa, Illinois). Most Plains Military Societies had two special pipe-bearers, who also danced exclusively with the pipes, thus the Oglala *tokala*, *kagi-yuha*, *ihoka*, *sotha*, *wic'iska*, the Blackfoot *Catchers* with their black-covered pipes, the Pawnee *Two Lance Society* with their black-banded pipe representing the trachea.

2) The highly sacred and elaborate *hako* type of ceremony originated among the Pawnee, and was accepted practically in its original form by the Omaha and Kansa (as *mocu watci*), in somewhat altered form by the Ponca (as *wawa watci*), and by the Crow as their Medicine Pipe dance. *Hakkow* means a breathing mouth of wood, and applies collectively to the sacred paraphernalia used in the *hako*: the two calumet stems, *raka'katittu*, with dark eagle feathers, representing the female principle, and *rahak'takaru* with white feathers representing the male principle, also a blue-painted ear of corn with eagle down, two squash rattles representing the gift of the earth mother, an oriole nest, etc. The perforated stems were tipped with duck bills and decorated with owl and woodpecker feathers, uniting the birds of the day, night, water, and trees. The *hako*, which could take place at any season except winter, was a prayer for offspring, plentiful crops, and long life. In the 13th ritual the ceremonial leader, or *ku'rahkus*, attached a bowl to the female stem and sent up a smoke invocation for peace and plenty. A child

was painted and anointed: a symbolic connection between the ceremonial groups of "fathers" and "children" and a symbol of progeny. In the 19th ritual two dancers simulated bird flight in concentric circles, waving the calumet in their left hands and the rattle in their right. Thereupon followed gifts and thanksgiving. In the similar ritual of the Iowa the pipes are both considered as male.

3) Eastern derivatives—the Cherokee calumet and Iroquois eagle dance (*gane'gwa'e*) combine, in highly condensed version, elements of the peace pipe ceremony, the hako, and Grass Dance. The pipe stem is simply a wand with an attached eagle-feather fan. Pairs of dancers vibrate these in the left hand and shake a rattle in the right hand, then hop, as eagles feeding on the ground. The dance is for well-being and cure. As in the Grass Dance, the dance is interrupted by interludes of boasting. Give-away features, the gifts, common to all of these dances, have shrunk from horses to small cakes. Possibly the Iroquois received the dance from the Cherokee, who used catlinite pipe-bowls, or directly from the Plains, or possibly by way of the Meskwakie (Fox). The Meskwakie pipe dance is a challenge dance for pairs of dancers with similar choreography to that of the Iroquois. The Iroquois claim its bestowal from a giant eagle, *Ha'guks*, with power over wilting things. Possibly we have here an amalgamation of an aboriginal eagle dance with the hako concept.

All forms of the calumet dance are doubtless of great antiquity. It was well established in the Great Lakes in the 17th century, as testified by Father Marquette, and in a form then already declined from the great hako. This most complex Pawnee ritual was probably the high point in the development of the calumet dance, rather than its original form, for the obvious function of a pipe, the smoking of it, had already become subsidiary. The Plains smoking ceremonies would appear the most logical inception, with a purpose transcending sociability and brotherhood, a symbolism akin to the incense offering of the Orient. [CPK]

calușar The Rumanian hobby-horse dance, so pagan that the hobby is excluded from the church. He associates with an assembly resembling the English Morris dancers: a fool, a man-woman, a goat, and a troop of dancers. These are a sworn brotherhood and precede the dance with an initiation which features a horse's head and the sacred number nine. Their round dance and their battle is fiercer than the Morris, formerly even bloody: a realistic enactment of the battle of the seasons. The dance takes place in the midwinter season and on All Souls' Day. [CPK]

Calydonian boar hunt A famous tale of Greek antiquity in which the names of Meleager and Atalanta are most prominent. Ceneus of Calydon having omitted a sacrifice to Artemis, the goddess sent a huge boar to ravage his country. His son Meleager invited the great heroes of Greece to join him in hunting the animal—Idas, Castor and Pollux, Admetus, Theseus, Jason, Pelaeus, Telamon, Nestor, and Atalanta, among others. Atalanta was the first to wound the boar; Meleager killed it and presented the head and hide to Atalanta, with whom he was in love. Traditions vary as to the sequel. According to some, Althea, Meleager's mother,

revenged the slaying of her brothers (killed by Meleager when they tried to take the spoils from Atalanta) by throwing Meleager's life token, an unconsumed brand, on the fire, thus killing him. Another version tells of a battle between the Calydonians and the Curetes over the spoils, with Meleager sulking apart because he was cursed by his mother for killing her brother.

calypso The best-known of the Negro song types of Trinidad, a witty, improvised song in English, dealing with social criticism, personal comment and ridicule, topical subject-matter, etc., sung to tunes derived from European folk or popular sources. Developed originally in connection with carnival dancing (*calipso* or *caliso*) and preserving the African pattern of songs of personal allusion and comment, calypso singing sometimes takes on the aspect of a duel or contest, or "calypso war," with an exchange of such improvised jokes and derisive musical remarks. Titles well-known through recordings are: *Bad Woman*, *Matilda*, and *Hitler Demands*. Two Tin-Pan-Alley versions of songs of the calypso type which achieved wide popularity in the United States through radio, records, night-club singers, and juke boxes were *Stone Cold Dead in the Market*, first composed about a murder in Port-of-Spain in 1939, and *Rum and Coca Cola*. A distinctive element of the type is the false accent given to the words to make them fit the meter.

Camazotz The Ruler of the Bats or the Death Bat: a Mayan deity greatly feared, powerful and malignant, and worshipped in vampire form. In the *Popol Vuh*, Hunahpu and Xbalanque, on a quest for flowers for the Xibalbans, stop for the night at the house of Camazotz. They are forced to lie prone, and when, during the long night, Hunahpu raises his head, Camazotz tears it off. A turtle takes the place of the head, the real head being stuck up on the ball court by the Xibalbans. The twins however beat the Xibalbans in the last part of the game and recover Hunahpu's head.

Cambric Shirt One of the American ballad versions of *The Elf in Knight* (Child #2), collected both in New England and in the southern mountains, and showing linguistic characteristics of the 17th century. It embodies the theme of the test of love, in which the suitor sets impossible tasks for his true love and she answers with equally impossible tasks for him to fulfil. The refrain, "Parsley, sage, rosemary and thyme," is almost the same as that of the English ballad, *Scarborough Fair*.

camel Among caravan men the slyness, stubbornness, salacity, and wrong-mindedness of camels are accepted facts. In the German language the word is used to designate a large, lumbering, stupid person. In Arabia, however, racing camels are so highly valued that the word "camel" is a term of endearment. The most valued sacrifices the Bedouins can make are camels. Camels with ten offspring were thought of as sacred, could not be mounted or milked, and the tenth offspring was sacrificed and eaten at a feast from which women were excluded. When given to a sanctuary in recognition of success, camels were sacred. Camels were sacrificial animals among the Iranians and were considered unclean by the Hebrews. In India a Vid-

yādhara, having attempted to rape a beautiful maiden, was punished by being changed into an "ugly" camel. In the animal fables the camel is tricked and eaten by other beasts: crow, lion, panther, jackal. Ghosts in India will not cross the threshold of a house if camel bones are buried under it. [RDJ]

Camelot In Arthurian legend, the seat of Arthur's court and Round Table; variously identified with Caerleon-upon-Usk, Monmouthshire; with Queen's Camel, Somersetshire; Camelford in Cornwall; and said by Malory to be Winchester.

cám kham In Annam, the prohibition post, made of bamboo, placed before the door of a house in which a woman has just borne a child. On top of the post is placed a lighted coal with the burning side turned outward if the child is a girl, inward if it is a boy. The *cám kham* is put up to prevent women who have borne *Con lôn* or who have had accidents after a confinement from entering and bringing evil to mother or child.

Camlan In Arthurian legend, the battlefield where King Arthur was killed. The *Annales Cambriæ* for the year 537 mention a battle of Camlan where Arthur and Mordred both were killed. It is thought to be situated perhaps near Camelford in Cornwall; Malory puts it "upon a down beside Salisbury, and not far from the seaside."

camomile A strongly scented bitter herb (genus *Anthemis*) especially the European perennial (*A. nobilis*) whose bitter, aromatic flowers and leaves are used in medicine. The Egyptians so revered the camomile as a remedy that they consecrated it to their gods. The Greeks called it *chamaimēlon* or earth-apple because of its smell. The Romans used it to cure snake bites. Culpeper says a decoction of camomile will remove pains and stitches in the side. The flowers, if boiled and drunk, will help to expel aches, pains, and colds. It is still used in many parts of Europe and North America in the form of a tea for a weak stomach or to stop vomiting. In Germany the flowers are called *Heermännchen* and are said to have been soldiers who died accursed for their sins. In Germany camomile is widely used for toothache: roasted and administered in small cloth bags, brewed in vinegar and used as a mouthwash, or the flowers are boiled in milk which is then filtered through saltpeter in a towel, and the liquid held in the mouth so as to submerge the tooth. In Bohemia hot oil of camomile is dropped into the ear beside the painful tooth. In Ireland a tonic tea is made from camomile leaves which is regarded as a remedy for pleurisy.

caña A Spanish couple dance considered to be of Arabic origin: named from the Arabic *gaunia*, song. In Andalusia it has been traditionally accompanied by songs of Moorish quality. In Argentina, the gauchos dance it under the name of *media caña*. An alternate interpretation of this name is the formation of a half circle (called *caña* by Argentine natives) at the end of the dance. [GPK]

canario An exotic couple dance introduced from the Canary Islands to Spain and Portugal, thence to the French court. In the early 16th century it had the reputation of lascivious vitality, and was at times per-

formed at funerals—a function retained from the island of its origin. As a court dance it was still characterized by difficult and rapid footwork, alternating heel-and-toe stamps as in the zapateados. Each couple enacted a pantomime of courtship: after dancing together, the lady stood still while the gentleman retreated from her, approached and retreated again; the same was repeated by the lady. The music was in dotted 3/8 time. The dance continued in fashion until late in the 18th century. [GPK]

cancellation A mild form of youthful fortune-telling whereby a boy will cross out letters in a girl's name identical with those in his own and apply the "she loves me—she loves me not" formula to the remaining letters, to discover if his affection is returned. [CFP]

Cancer The Crab, Lobster, Crayfish, Scarab, etc.: a faint ecliptical constellation, having no star brighter than the fourth magnitude, yet important from ancient times as one of the signs of the zodiac. It contains a nebulous cluster, the Beehive (Manger, Crib, *Præsepe*), which the Chaldeans called the Gate of Men, the entrance-way for souls coming from Heaven to inhabit their human bodies (the exit lay in Capricorn, the opposite sign in the zodiac). Cancer was the name given to the constellation because it was here that the summer solstice formerly occurred (now in Gemini), the sun seemingly stopping and then beginning a backwards sidling motion downward through the sky towards the south.

In Greek mythology, the crab nipped Hercules as he fought the Lernean Hydra; Hercules paused only long enough to crush his annoyner and then resumed his fight. Hera, Hercules' enemy, rewarded the crab by placing it among the stars, but it remained crushed and inconspicuous. Another name given the region in the heavens is the Asses: these were the animals which Bacchus and Silenus rode and which frightened the giants away with their braying.

The Beehive, several other stars in Cancer, and one of the stars in Gemini make up the Chinese Shun Show, a zodiacal sign, the Quail's Head, Pheasant, Phoenix, or Red Bird (modern *Keu Hea*, the Crab), which with Leo and Virgo is the residence of the Southern (Red) Emperor. In astrology, Cancer is one of the watery signs, the House in which the moon was at the creation, the sign governing the breast and stomach and unlucky as such. When the sun is in Cancer, storms are catastrophic and bring famine and locusts. According to Berossus, the end of the world by water will occur when all the planets are in Cancer.

candle Candles have been used from ancient times in rituals, ceremonies, festivals, and processions in both domestic and religious life. In the family, they were used on such occasions as weddings and funerals; in the Church—Roman, Greek, and Anglican—in various ceremonials, especially in those designed to celebrate a particular day. Wax lights had to be used in the Church, for it was the tradition that bees came from Paradise.

There was and is now much figurative and symbolic thought connected with candle usage in the Church. Among the folk, candles and their ways are ominous: they may presage a happy or unhappy marriage by the way they burn; death in the family is forecast if they

gutter. Candles are used in divination and in charms, by girls to determine their future husband, and in very many other customs and beliefs current today as well as in the past in the British Isles and various sections of the Continent. [GFS]

✍ If a candle burns blue there is a ghost in the house. If a candle burns dim there is a ghost in the house. If a candle burns blue there will be frost. When the candle flames irregularly, melts a lot of tallow, and burns up too fast, there is said to be a thief in the candle. When a candle gives forth a spark into the air, it means a letter is coming to the one sitting nearest it. It is a general European folk belief that it is unlucky to burn three candles in the same room at once. If a candlewick divides and burns with two flames, it is taken as an omen of death in Germany, but as the sign of a letter in Austria. To dream of a bright-burning candle means you will receive a letter from your love. In Arkansas, a lighted candle placed under a person's house is an aid to the conjurer; likewise a lighted candle is regarded as a protection against spells. In Ireland it is customary to keep twelve candles burning around a dead body before burial. This keeps evil spirits, who cannot enter a circle of fire, from carrying away the dead man's soul.

candle dance A dance in which the performers bear lighted candles. The ball del ciri of Catalonia and the baile de la candela of the Venezuelan Guayuncomo tribe both involve a group of men and women; in the former, the group performs in couples in a consecratory Christian ceremony; in the latter, in separate groups in an orgiastic jumping and circling. The candles are shrunken descendants of the great beeswax candles and torches of the pagan (and contemporary) torch processions. These were (and are) commonly performed for three occasions: most anciently, in a torchlight circling of the fields, when the vitality of the flame was believed to be communicated to the crops; secondly, in candle-bearing wedding processions (reminiscent of the flame-bearing Eros); thirdly, in honorific processions. The Catalan ball de la teya exemplifies the first function, the Hungarian gyertyás tánc, the second. The Philippine candle dance serves as a dance of selection: a girl chooses a mate while waltzing and manipulating a candle. The Christian Candlemas processions on February 2 now honor the Virgin, but actually date back to pre-Christian worship. [GPK]

Candlemas A Church festival celebrated on February 2: in the Eastern Church, commemorating the Presentation of Christ in the Temple, in the Western, the Purification of the Virgin Mary. The Armenian Church calls it the Coming of the Son of God into the Temple. The blessing of candles for the altar, for which the day is named, was not an observance associated with this feast until the 11th century A.D.

✍ It is observed generally with candlelight processions. In Europe the custom probably goes back to the ancient torchlight processions for purifying and invigorating fields previous to the sowing season, and to honor or propitiate the various associated spirits, beneficent or harmful. In Mexico, February 2 corresponds to the Aztec New Year, observed with renewed fires and celebration, especially at the end of the periodic *nemontemi*, the five days of inactivity and sorrow-

ing terminating a cycle of 52 years. The largest festivals are those celebrated at San Juan de los Lagos, Jalisco, for the Virgin, and in Tzintzuntzan, Michoacán, featuring the *moros* and *sebradoras*, or sowers. Both festivals retain features of agricultural spring ritual. See CANDLE DANCE. [GPK]

candomblés Religious societies of the Negroes of Bahía, Brazil, originating in Africa, especially among the Yoruba and Ewe peoples. The candomblés still reflect the old mythologies and the original African dances, music, and ritual. They are identified by "nation" and the members speak the old language of the tribe they represent. The *candomblés de caboclo* are the "new" societies, characterized by indigenous Indian gods, dances, and magic. Each candomblé is headed either by a *pae-de-santo* or *mãe-de-santo*, i.e. a father or mother in sainthood. Women predominate in the cults, in that the functions of the cult belong to the women, such as preparing the sacred foods, making ritual garments, tending altars, etc. The men have more often certain honorary or temporary authorities, such as for instance the *alabé*, who directs the drummers. Edson Carneiro's discussion of the candomblés (*JAF* 53: 217 ff.) reports, however, 37 fathers and 30 mothers in sainthood in Bahía, 1933-39. These fathers and mothers in sainthood are the spiritual parents of those initiated into the specific groups, each of whom has "made" his saint, i.e. has learned to receive (become possessed by) a specific deity. The drumming is important; it is a means of communication between the gods and the people. See CABOCLO.

cane of breath and spittle In the Mohave Indian cosmogonic "dream tale" about the beginning of the world, the cane belonging to Mastamho, the younger of two brothers born to Sky and Earth. The cane consisted of Mastamho's own breath and spittle. He thrust the cane into the earth and a great river flowed out of that place. Mastamho then entered into a boat with mankind and traveled from there to the sea. The way Mastamho twisted and tilted and turned the boat or let it go straight caused the shape of the bottom lands and canyons along the river. Then he turned and took the people up the river to the northern part of what became the Mohave country.

cannibalism Man-eating, also known as anthropophagy; the eating of the human body or parts of it, or the drinking of human blood, by human beings. The emotions which cannibalism arouses are powerful. Consequently the cannibal feast needs to be examined both as a social event and as a fact of the imagination. Although no census of the number of persons who are currently cannibals is available, reports from casual observers who are not always disinterested indicate that Christianity and Mother Hubbards are not considered appropriate to cannibal feasts. The social and psychological mechanisms involved in apostasy among the fringe cultures are unexplored areas in a very rich field. Though a large number of people in many parts of the world know of cannibalism as a social event, many more people know of it as a fact of the imagination.

Because it is difficult to observe this custom over a long period of time under controlled circumstances, field studies leave many questions unanswered. People

who accept cannibalism as part of their normal way of life are not inclined to discuss it frankly with white ethnographers who disapprove of it and are, or think they are, in hazard. Experience has shown cannibals that outsiders are likely to make more trouble about this dietary habit than about any other tribal or religious custom. Even when cannibals are persuaded that they can speak without fear of reprisal or ridicule, they tend to regard this as part of their own way of life which they have no need to make clear to outsiders, and the outsiders themselves conduct their interviews with a notable and understandable delicacy. Cannibals who have been converted formally or wholly or partly to other customs introduce into the discussion of their past errors, tones and attitudes which distort history and motive. (Discussions between monogamists and polygamists, homo- and heterosexuals, and accounts by reformed drunkards recently returned to respectability display both types of distortion.) Observers who make use of the direct question, however carefully prepared for, and ask "Why do you eat human flesh?" receive a variety of answers of more interest in illuminating the mental processes of the cannibal than in explaining the custom. When, as is frequently the case, they have no clear idea of why they eat human flesh or why the subject should be of any interest to anybody, they courteously present specious answers, tell the outsider whatever comes into their heads, or give free play to a sly sense of humor which, when it appears in the field notes, is difficult to identify. Consequently attempts during the last half century to organize travelers' tales into a systematic account of cannibalism must be taken with reserve: many of the reports are inadequately documented; reports which are otherwise acceptable are insufficient in number and distribution to permit general conclusions; others are distorted by the reporters' own views about primitive society, evolution of culture, totemism, and the like, which, invaluable in their place, have been expanded with imprudent generosity.

Cannibalism has been reported as an accepted or as an occasional custom from all parts of the world. Attempts to confine it to 10° north or south of the equator are misleading. Arctic travelers, ship-wrecked sailors, hunters, and immigrant pioneers, forced to choose between eating a starved comrade and starvation themselves, have preferred to eat the comrade. Human flesh often appears on the markets of famine areas of China. One British merchant was unable to decide whether or not in a famine area he had unwittingly eaten human flesh disguised as stew, though under the circumstances it was possible that he did. This occasional cannibalism must be distinguished from the cannibalism in Chinese *exempla* of filial piety in which children serve their own flesh to starving parents to keep the parents from death. In these instances the starving sailor and the filial son both violate rigid social prohibitions but both find social justification for their transgression.

This occasional cannibalism is not centrally part of folklore. The literature on customary cannibalism is ably reviewed in J. A. MacCulloch's article, "Cannibalism," in Hastings' *Encyclopaedia of Religion and Ethics*. Because the explanations which MacCulloch's sources reported cover most of the reasons imaginable

for eating anything, together with some that are hard to grasp, the article may be taken as comprehensive, though before the conclusions can be accepted the sources need reexamination in the light of more recent reports. In his discussion of prehistoric cannibalism, MacCulloch, at times influenced by the views of the cultural evolutionists, was trapped by a premise. He assumed that as hominids became omnivorous they included meat on their diet and that meant human flesh. He therefore concluded, in opposition to H. Schurtz, that cannibalism was not pathological, a "disease of childhood," but was once universal. He was unwilling to distinguish in primitive society, despite the appeal of the word "omnivorous," between endo- and exo-cannibalism, that is, the eating of relatives as opposed to the eating of outsiders; but because of the inconveniences which would appear if the family systematically ate itself up, MacCulloch conceded that endo-cannibalism might have occurred after the individual was dead anyway or had outlived his usefulness. Anthropologists are not in agreement about the cannibalistic significance of the bones found in the early caves. Openings in the skulls of *Sinanthropus pekinensis* together with some evidence of formal burial, may indicate that these anthropoid brutes liked the taste of human brains, or that they removed the brains for magical purposes, or that they wanted to quiet a ghost, etc. Similarly the custom which is occasionally reported of eating the aged and useless members of the community may or may not be a "survival" from prehuman cultures.

Accounts of cannibalism among prehistoric men are speculative. Accounts of cannibalism in societies which are assumed to be similar to those of prehistoric man are frequently infused with the technical folklore created by the anthropologists themselves. Some students reasonably aver that the prohibition against eating kinsmen, when it occurs, could come only with a growing sense of kinship, on the ground that if the person eaten was not, according to local law or custom, accepted as a "relative" he was obviously not a "relative." Evidence is insufficient to justify the conclusion that a sense of kinship grew from a time when prehistoric men were rugged and lonely individuals. Recent studies in the sociology of contemporary apes are ambiguous and analogies between apes and almost-human brutes are dangerous. Ethnographers commonly accept totemism as a type of social organization which defines, among other things, exact lines of kinship. The former objection in western Europe to marriage with the deceased brother's wife on the grounds of "incest" is an example of the complexity of kinship. MacCulloch observed that "one result of totemism was the tabu against eating the totem animal." Brenda Seligman's discussion of endogamy and exogamy did much to clarify ideas about totemic and other forms of kinship and raised new questions; but the fact about cannibalism which normally had to be accounted for is that some totemic groups do eat their totem animal, which is variously regarded as father or creator of the clan or as part of it, and some do eat their own kin. The reports show great variety in custom. Some tribes eat only enemies, and never eat their totem or kinsmen; others do eat only relatives (Dieri) or fathers do not eat their own children but mothers do. Ethnographers

meet the problem with an ingenuity which is refreshing and plausible. For example an exogamic husband can eat his wife without violating the totemic prohibition, because the wife is of a different totem. His daughter who is of his totem is prohibited food. Other relatives, brothers- and sisters-in-law, for example, may be eaten when, according to the complex rules of the particular totemic organization, they are not totem-kin, that is for dietary purposes are not regarded as members of the clan and therefore related. The assumption that all members of the social group are equally subject to its privileges and prohibitions is here dangerous. A final and convenient explanation is that relatives are eaten when the totemic prohibitions have lost their force and totemism is in decline.

The distinction between killing for food (the term "gluttony" sometimes used of this situation has implications which are somewhat more than descriptive) and eating men for other reasons is useful. Cannibal hunts and cannibal murder are reported from Australia, New Caledonia, the Marquesas, Samoa, Luzon, among the Ostyaks and Samoyeds, from northern Japan, Burma, Africa, and North and South America, though reports are vague about the conditions of social tension and need which precede the hunts. Scattered tribes have reported that they began eating human flesh during famines and later developed the taste. Others (New Guinea) have said that their women introduced them to cannibalism. Still other reports indicate that cannibalism occurs when, as after a battle, large quantities of human meat are available which might otherwise spoil or when the group works itself into the mood for eating human flesh. The mood of battle which is known to relax other social prohibitions might well be conducive. Two still unpublished reports (Luzon and New Guinea) indicate that the proposed victims were able to divert the mood of the group into other objectives. That singing was in both cases the device used may not have been incidental. Even when cannibalism for food purposes is customary, it is not entirely casual. Communities which are normally undernourished or have a very monotonous diet regard any unusual food as a feast and meat as a special treat to be consumed with ceremony. Thus the etiquette of a cannibal feast is as worthy of study as the etiquette of a British or American Christmas dinner, though the relevance is to the customs of the banquet rather than the proper way of carving and serving a human carcass.

Other explanations of cannibalism may be listed briefly. Thus because food gives strength one can assimilate the strength of a person or animal by eating it or by eating only parts of it: heart, liver, lips, etc. Or one can assimilate the qualities of the person eaten: his courage, skill, or "magical" powers. We still feed red meat to athletes to develop "stamina." These personal qualities, according to some reports, can be acquired by eating only a part of the carcass as symbolic of the whole. The complex symbolism of the Eucharist is here relevant. Another motive favored by those who are impressed by "animism" is that the cannibal acquires power over the soul of the person eaten. The soul of the person consumed becomes bound to the consumer and thus subservient to him and his clan. Some of the ritual connected with blood covenants which involve the drinking of blood—before battle, at times of ethnic

crisis, or in initiation ceremonies—have the object of assimilating the individual by consuming part of him. Chinese physicians of the old school teach that each of the parts of the human body has specific therapeutic values (human blood, gall); human semen has been prescribed as a tonic for old men as animal ovarian extract has been prescribed in the Occident.

A philanthropic explanation of cannibalism appears too frequently in literature to be ignored. In this group of explanations, mentioned in Herodotus and reported from all continents, the bodies of the aged are eaten to keep their souls from becoming weak or to be sure that they have proper burial. Other related reasons are to keep the souls and qualities of the aged in the clan or to keep their remains from being desecrated by enemies who might use them for magical purposes. Something similar to this is the cannibalism which derives from what MacCulloch calls morbid affection. When a female member of one of the coast tribes of north-central Australia died, her body was eaten by the male "kin" and by all the other males who had had sexual intercourse with her. Some of the South Australian tribes are said to have eaten the body of the dear departed in order to assuage their grief. At moments when they were overwhelmed by sorrow they comforted themselves by chewing on a juicy piece of the dead body. Deirdre lapped the blood of Naoise after he was slain. The cannibalistic phrases used to children ("Good enough to eat," "I'm going to eat you") and similar phrases used among lovers lead into the unexplored obscurities of oral erotism.

Religious cannibalism, which involves the eating of human beings who were sacrificed to the god, involves another set of explanations which is supported by evidence and logic of sufficient force to be examined with care. One of these is that human beings are sacrificed to the god because human flesh is the best possible food and therefore suitable for the feast of a god. Another motif (ancient Greece, Crete, and elsewhere) is that the human sacrifice is eaten as a representative of the god in order that the congregation might become literally "one with god." Accounts of gods who consume their own worshippers have been devised by theologians and need not be examined at this point.

The eating of criminals is and has been customary in a number of societies, though here the word "criminal" needs careful definition. When the criminal as a member of the "they-group" is potentially dangerous, his spirit is absorbed when his body is eaten. The qualities required to become an enemy of society awaken in some clansmen a deplorable admiration. These qualities can be made a part of the group if the person having them is eaten. Religious motifs are involved when the stranger, who is possibly an enemy or a god in disguise, is sacrificed and eaten in order to assure the prosperity or salvation of the group.

Social and political cannibalism appeared in the coronation ceremonies in Africa and the Sandwich Islands or in the blood-drinking ceremonies of initiation and brotherhood rites. This sort of cannibalism may be total or symbolic in that only a part of the body may be eaten as a symbol of the whole, or only a part may be eaten to acquire desired characteristics. The breakfast of champions in the Sandwich Islands was the eye of an enemy, which the king ate on the morning of his coro-

nation. Several of the motifs already cited are involved in social and political cannibalism.

Cannibalistic magic is part of the witch cult in many parts of the world: India, Africa, South Australia, Christian Europe, and elsewhere. The eating of human flesh is part of the initiation of witches, who after eating are thrown into frenzy and are incapable of normal human emotions. Participants in the Greek mysteries became "enthused," in the sense of infused with divinity, when they ate the body of Dionysus. The theological accounts of the Christian Eucharist deserve special study in this connection. The generally reliable account of the Cambridge expedition to the Torres Straits reported that sorcerers ate the flesh of corpses or mixed the flesh of corpses with their food when they were about to practice their art. The consequence was that they became violent and, when angered, committed murder. Too little is known of the steps taken to induce the shamanist trance except to note that cannibalism in this instance promoted the consumer to an unhuman or superhuman state.

Cannibalism is a motif in many myths, legends, and folktales: Odysseus and the Cyclops, Tantalus and Pelops. In such folktales as *Hänsel und Gretel* and *Jack the Giant-Killer* and their many analogs, the hero outwits a cannibalistic witch or ogre. In *Van den Machandelboom* and *Die Kinder in Hungersnot*, a parent either eats the children or threatens to. Other tales are about a parent who sent the child to be killed, but must have the heart or liver returned, or about the mother who sent a child prepared as a stew to its father, or about husbands and wives who trick each other into eating their lovers similarly disguised. Students who sought to find in folktales remnants of forgotten history and custom saw in these cannibalistic motifs "survivals" from early stages of culture.

A few other aspects of cannibalism need to be mentioned. In some Australian tribes only special parts of the body were served to the women, either because these were the least tasty or because women and men were not supposed to eat the same foods. In 1920 Detzner reported that among the inland tribes of New Guinea, women left alone with prisoners whom the men had decided to spare often killed and ate them, and a less trustworthy source reported that Fiji women during battle rushed upon fallen enemies and drank their blood. The elements of sexual distrust and satire found in folktales and folk belief about cannibal wives, dentate vagina, poison damsel are not entirely unknown in the fantasies of the modern Occidentals.

If the available literature on cannibalism makes anything clear, it is that the evidence is insufficient to support a single and simple explanation of a custom, which is known either by direct experience or through imagination to the peoples of all parts of the world. If one could demonstrate the major premise it would be logical to concur that cannibalism became universal when the later hominids became omnivorous. The further assumption that an early cannibalistic *Homo sapiens* evolved from cannibalism into dietary specialization is weak, particularly in view of the comment by a cultural evolutionist that the "worst forms of cannibalism do not occur among the lowest races." When evolutionists, survivalists, and originists assert that cannibalism in folktales and märchen is a survival from primitive

times, one may well inquire whether the grave historians in the nursery are interested in these episodes because of their interest in the past of the race, or whether they interpret the episodes in terms of other interests. When better field studies are available and when our knowledge of the processes of human imagination has been greatly extended, the place of cannibalism as an event in society and an event in the mind will be better understood. For the present, although no explanation can be accepted as entirely satisfactory, all must be examined as suggestive, partial, or possible. R. D. JAMESON

Cannibals Cannibal deities, monsters, giants, human beings, birds, or animals are frequently characters in North American Indian and Eskimo mythology and belief. Tales of the Cannibal Bird occur throughout the Basin. The giant with a basket who packs off children to eat is well known in the Southwest (see *BIG OWL*), as are other cannibal monsters and deities—giant eagles, buffalo, and the antelope who kills with his eyes. In the Northeast persons who eat human flesh become cannibal giants (windigo); in the Central Woodlands cannibal boys are associated with the Shawnee female creator. The Eskimo have many tales of weird cannibal monsters. Among the Southern Okanagon of Washington a cannibal is the guardian of flint. On the North Pacific Coast the belief in cannibals still persists; although the world was rid of many of them soon after it was formed, some still survive. The Kwakiutl of Vancouver Island had a cannibal society (see *BLACK TAMANOUS*) which met each year during the winter ceremonial season. Initiates and members of the society were required to eat human flesh as part of the rites. Tales of man-eating cannibals are also prevalent among the northeastern North American Indian tribes. In an Ojibwa myth, Trickster is captured by a cannibal, but saved by a weasel whom he persuades to jump into the cannibal's body and bite the heart string. In other cannibal tales of the Micmac, Passamaquoddy, Malecite, Montagnais-Naskapi, Cree, Ojibwa and Menomini, cannibal giants are tamed by a woman who calls the giant "father" and treats him with kindness; they are beguiled by shamans; or they are easily overcome by reason of their stupidity, by any one of several actors.

[EWV]

cante fable A narrative form in which a story is told partly in song; common in folktales of many languages and many countries. The song sections, usually in dialogue, are the most important or emotionally charged elements of the story, containing magical utterances, witty or wise replies to questions, riddles, sayings of poets, musicians, birds, or animals, wishes or calls, etc. The prose narrative explains or sets the scene for the song, which may be repeated, with or without change, in the course of the tale. Examples are found in the Grimm collections, in *The Thousand and One Nights*, in the *Panchatantra*, in old Irish romances and Scandinavian sagas, in British folktales, among the Negroes of Africa, the West Indies, and the United States, in scattered and fragmentary form among the white population of the United States, etc.

Traditional English ballads, as found among Negroes of the West Indies and the United States, tend to fall into the cante fable form. Several such versions of *The Maid Freed from the Gallows* (Child #95) and *Little*

Musgrave (Child #81) are known. Occasionally the English material has been so reworked as to fit into the pattern of Anansi stories. American Negro singers, such as Leadbelly, will even cast a fairly recent Negro ballad, *Frankie and Albert*, or an early jazz piece, *The Rock Island Line*, in the form of a running narrative with snatches of song interwoven.

Survivals among white singers of the United States show a special fondness for the humorous tale, especially of the deceived husband variety, *Our Good Man* (Child #274) having been preserved in cante fable style among soldiers, sailors, hillbilly singers, etc.

Some scholars have put forth the hypothesis that the cante fable is the ancient forerunner of both the ballad and the folktale, pointing out the elliptical quality of the narrative thread in ballads as possibly resulting from the omission of the spoken part of the story. This controversial suggestion has not met with wide acceptance. However, the survival of many puzzling bits of song and of many tales with interspersed rimes is noted as the vestige of cante fables whose stories or tunes have been forgotten.

cante hondo or jondo Literally, deep song: a type of sorrow song of Andalusia, preserved and developed by Gipsy singers and somewhat similar in mood and subject matter to the blues. It includes tragic love songs and complaints, prison songs, and forge songs, sung in long undulating notes, possibly related to the cantillation of Sephardic Jews, and is accompanied by guitar-playing of a dramatic and intense character. See **FLAMENCO**.

Canute or Cnut (994?-1035) A Danish king; king also of England from 1017. Holinshed's *Chronicles* tells the story of his sitting on the shore and commanding the rising tide to come no farther. The tide continued to roll in and the king was soaked. He did this, it is said, to reproach certain flattering adherents, to whom he pointed out that Canute, the Great, could not even prevent the little waves from advancing up the beach.

Cá ông or Cá voi (feminine *bà ngu*) The Annamese name for the dolphin, which is revered especially by the maritime population: in English, Mister Fish. The Cá ông is believed to rescue shipwrecked sailors by carrying them on his back and the discovery of the body of a dolphin at sea is considered good luck. The body is hauled ashore and buried with a special ceremony. After three months and ten days the body is exhumed and the bones are laid in a sanctuary, thus ensuring the prosperity of the village. The dolphin has a real cult among these fishing villages, and communities without a dolphin tomb are considered unfortunate. Sometimes they are given one by a village possessing several. Usually, after a dolphin has been buried, there is a supernatural manifestation in the village. The spirit of the dolphin declares, through a possessed inhabitant, whether it is male or female, so that it may be properly addressed.

Capac raimi The initiation ceremony of adolescents belonging to the royal lineages of the Inca. This feast was held every year in December near Huanacauri. It combined magico-religious features and virility tests. Dances and sacrifices were accompanied by ritual flagellations and races. The young men were given their first weapons and breechcloths. The climax of the feast

was the perforation of their ears to receive the heavy earplugs distinctive of the Inca family. Some of the rites observed, such as the eating of sacred bread, were directly connected with worship of the Sun God. [AM]

Capella The Little She-Goat; a white star, Alpha in the constellation Auriga. The three small stars just beneath it are called the Kids, usually pictured as two kids resting on the arm of the Charioteer. Capella and the Kids are called the Shepherd's Stars alike by the early Arabs and the South American Quechua Indians. In fact Arabian shepherds prayed to this "rainy star" to fertilize their pastures. The Arabs also called it Al Râkib, the Driver, because it was conspicuous in their northern sky and followed the rising of the Pleiades, which they thought of as herds being driven ahead of it. Temples of Ptah in ancient Egypt were oriented to the setting of this star, named Ptah, for this god. To the Akkadians Capella was the Messenger of Light, herald of spring and a new year. In Assyria it was called I-ku, the Leader, for the same reason. In India it was named Brahmâ Ridaya, the Heart of Brahmâ. Capella was sometimes also designated by Latin writers as Amalthea, for the she-goat who fostered the infant Zeus in Crete, and sometimes Cornu copiae, the Horn of Plenty, which the child broke off. In astrology Capella is the bringer of wealth or military fame to one born under it.

caper A dance term suggested by the grotesque, playful leap of the goat or *cabra*. It is a term used for the hitchkick in morris dancing. In the 16th century this jump was called *capriol*. The fictitious pupil of Arbeau's *Orchésographie* goes by that name. In ballet terminology it is a *cabriole*. [GPK]

cap of invisibility One of the magic objects of folktale, conferring upon its wearer the power of seeing and not being seen: a motif found in myth and folktale in many parts of the world. In Greek legend, it is the cap of Hades forged for him by Cyclops, and worn by Hermes and Perseus. In the mythology of northern Europe, it is the Tarnhut, confounded to some degree with the Tarnkappe or cloak of invisibility, which belonged to Alberich and was worn by Siegfried. The cap of invisibility, in *märchen*, is often stolen or "borrowed" by the hero from giants, or brothers who have inherited it, who are quarreling over the division of a group of magic objects: the hat of invisibility, the seven-league boots, the inexhaustible pot, or other similar things. The motif is found in North American Indian tales of the Plains, Woodlands, and Southwest.

Cap o' Rushes Title of an English version of a very widespread European folktale in which the heroine, banished by her father for protesting that she loves him as dearly as bread (or meat) loves salt, goes through a series of hardships, serves as a nameless scullion clad in a cloak and hood of rushes, attends a dance three times in her own fine clothes and escapes unrecognized, finally reveals herself to the young son of her master (pining for love of her since the dance) by means of a ring which she drops in his gruel, marries him, and serves a wedding feast at which every dish is unsalted. The father is present at this feast and recognizes at last the true value of his daughter's love.

This story is known in Europe from Greece, Italy, and Spain to Germany, Belgium, Scandinavia, and the British Isles. *Loving Like Salt*, *Value of Salt*, and *Blear-Eye* are variant Italian titles, the last from the heroine's disguise as an old woman. It is known as *Ass-Skin* in Corsica, as *Little Dirty-Skin* and *Slut-Sweeps-the-Oven* in Belgium; in France it appears as *The Turkey Girl* (from the heroine's menial task); it is called *Salt and Bread* in Sweden. There are innumerable others. There are also Arabian and Indian variants.

Cap o' Rushes belongs to a large group of folktales based on the value of salt. The love like salt motif (H592.1), the humble (or rough) disguise (K1815), the disguise as menial (K1816) motifs are usually prominent. The flight of the heroine in humble or rough disguise and her menial position link the Cap o' Rushes story with the Catskin cycle; the motif involving the three-fold flight from the ball (R221) links it with the Cinderella cycle. The identification by ring (H94) or other token is fairly frequent. Grimm #179, entitled *The Goose-Girl at the Well*, is a well-known German version.

Capricorn The Horned Goat or Ibex, the Sea Goat: a zodiacal constellation recognized at least as early as the 2nd millennium B.C. and probably much earlier, although it is second in faintness only to Cancer among the constellations of the zodiac. The Persian, Turkish, Syrian, Arabic, Hindu names all mean goat. Chaldean astronomy placed it in the "Sea," that group of constellations said to represent the warriors of Tiamat; the goat has the tail of a fish. In Greek myth, this is explained as the result of the fright of either Pan or Bacchus at the appearance of Typhon: he leaped into the water as he transformed himself into animal shape; the upper part of the body became a goat, the lower a fish. The Egyptians connected the constellation with the yearly Nile inundation, and figured it as a fish or a mirror. The Aztecs pictured it as a horned fish, connected with Cipactli.

It was the Chaldean Gate of the Gods, the entrance through which souls passed into heaven, as they had come to earth through the Gate of Men in Cancer. In astrology, Capricorn is part of the earthly triad; it is the place of the creation of Saturn (with Aquarius); it governed the thighs and knees; it was generally unpropitious but, under certain conditions, sometimes of good influence. The sun enters the astrological sign on December 22. Roman legend said that Numa Pompilius began the calendar when the sun was midway in Capricorn after the winter solstice.

Captain Kidd A long forecastle song of the come-all-ye type, relating in the first person the misdeeds of William Kidd of piratical fame, known to sailor singers for unknown reasons as Robert. There is a homiletic turn to the narrative, with a warning to all those who see him die not to follow his example and fall in with bad companions. In style and form the song closely resembles the drinking song *Samuel Hall*, the confession of a more unregenerate sinner.

Captain Wedderburn's Courtship A Scottish popular ballad (Child #46) in which the suitor test of out-riddling the maiden is the main motif. Captain Wedderburn, "a servant to the king," meets the laird of Bristol's (or Earl of Rosslyn's) daughter walking alone

in the woods. The minute he lays eyes on her he is determined to take her "to his ain bed and lay her next the wall." He lifts her to his horse and takes her home. But the lady will not consent to get into the bed until the ardent suitor has answered first three, then six, then four more riddles. Among these are the famous cherry without a stone, chicken without a bone riddles, the sparrow's horn riddle, and "the priest unborn" to marry them. Captain Wedderburn answers all 13 posers without batting an eye. The cherry in blossom has no stone, the chicken in the shell has no bone, the sparrow has a horn in every claw and two for his beak, the priest waiting at the door was never born "for a wild boar bored his mother's side, he out of it did fa'." So the maiden "maun lye in his bed" but she refused to lie next the wall in one version, while another indicates that she did. Compare *Alvíss*.

capturing the moon An observance performed at midnight during the Chinese Moon Festival, Chung Chiu. It consists in catching the full moon's reflection in a basin of water.

Caragabi The culture hero of the Choco Indians of western Colombia, born from the saliva of the high god Tatzitzete. He created the ancestors of the Choco and established sibs and families to prevent incest. He placed the sun, the moon, the light and stars in the sky and caused the tree of life to be felled. He wandered through the world giving food plants to mankind; and after transforming many men into animals he retired to the sky. But he is expected to return after the destruction of the world by fire. Many stories deal with the continuous mutual challenge and conflict between Caragabi and his powerful rival Tutruica to prove their power. [AM]

carbuncle A red garnet cut *en cabochon* (i.e. convex but not faceted); anciently, any gem of brilliant fire and deep red color, usually a garnet or ruby. The Bible mentions it among the stones of the High Priest's breastplate and in Christian tradition it was symbolic of Christ's sacrifice. According to the Koran it illuminates the fourth heaven. An early tale claims it also lighted Noah's Ark. In early Spanish astrology it represented the sun. Among the Arabs and in India it was believed to protect a soldier in battle, and in Greece it guarded children from drowning. As an amulet it is a potent force against poison, plague, bad dreams, evil thoughts, and incontinence. It stimulates the heart, but care must be exercised lest it arouse anger or passion and cause apoplexy, and while it cures melancholy and sadness, it leads to sleeplessness. Loss of luster is a sign of impending disaster. See *RUBY*.

Cardea The ancient Roman goddess of the door-hinges, protectress of little children against the attacks of vampire-witches. She obtained the office from Janus in exchange for her personal favors.

careado A longways couple dance of the Asturias region in northwest Spain. During the first part the torso sways from side to side, while the arms are relaxed at the sides; during the second part the arms are raised to play castanets and the feet execute simple cross-steps. The dancers accompany themselves by song. *Careat* means to place face to face. [CPR]

Careless Love One of the earliest of the blues songs, a lonesome tune set to a favorite blues theme, tragic love. Perhaps originated by white singers of the American south, but equally popular among Negroes, it has acquired many stanzas and developed many variants. See **BLUES**; **BUTCHER BOY**.

Carmenta or Carmentis The ancient Italian goddess of prophecy, singing the future and the past, and of healing; protectress of women in childbirth: said to have been called originally, in Arcadia, Nicostrate, but also named as chief of the Camenæ. By Hermes she became the mother of Evander, and following him to Italy changed the Greek alphabet into that used by the Romans. Her Roman temple stood between Tiber and the Capitoline. The Carmentalia, in her honor, was celebrated on January 11th and 15th, at which time her protection was asked for children born during the year. One of the gates of Rome bore her name.

Carna or Carnea The ancient Roman goddess of physical health: sometimes confused, as by Ovid, with Cardea. She presided over the vital internal organs. Her festival on June 1st was instituted by Brutus and was called *fabriaræ calendæ* from the beans and bacon then offered to the goddess. Carnea seems to have been an underworld goddess originally.

carnation The perennial, herbaceous, fragrant flower of any of the many cultivated varieties of the pink family (genus *Dianthus*), especially the clove pink or scarlet carnation (*D. caryophyllus*). The carnation has been cultivated for more than 2000 years and is mentioned frequently in folktale and legends. It first appeared on earth when Christ was born, or it sprang from the tears of Mary, the mother of Jesus, shed on her way to Calvary.

The carnation was used as a substitute for the expensive cloves of India to spice wine and ale in Elizabethan times, hence its name Sop-in-wine. The early name Gilliflower (Gyllofer, Gilofre) is a corruption of the Latin *Caryophyllum* or clove. The flower, which is under the dominion of Jupiter, was said to have medicinal properties, especially effective against pestilential fevers. A well-known remedy for toothache all over Europe and the United States is oil of cloves (*oleum caryophylli*). It is reported that the seeds are used to fill cavities in Bohemia, Croatia, Dalmatia, and Slovakia.

In Korea the *Dianthus sinensis* is used in divination. A cluster of three flowers on a single stem is worn in the hair. If the top flower dries first the last years of one's life will be difficult. If the bottom pink dries, the wearer will have misfortunes in youth. If all dry together the wearer's lot will be sad indeed.

Carnea One of the important festivals of ancient Sparta, observed in many parts of the Peloponnesus, in Cyrene, Magna Græcia, etc.: held in honor of Apollo Carneus, the ram god of flocks and herds and of fertility in general. It was also a military festival. The ceremony may have been an older festival in honor of a supposed Carneus, taken over and identified with Apollo by the Dorians. It was held in the month of Carneus (August), and traditionally was instituted in 676 B.C. No military operations were held during the period, and it is said that the main army of the Spartans would have been at Thermopylæ rather than the small guard

of Leonidas' men had not the festival prevented their movement.

carnelian A transparent red chalcedony, known since early times, and often used for seals because it left a clean impression. In Egypt it was called "blood of Isis" and was placed on the throats of the dead as a buckle or tie. It is also found in Iron Age burial mounds in Japan. In Burma it parallels the Chinese use of jade. Mohammed wore a carnelian ring, and among Moslems it preserves tranquillity in the midst of turmoil and keeps the wearer happy and blessed. Among the Arabs it is a remedy for loose teeth. In Australia it is a potent charm of the medicine man against all disease. It cures tumors and respiratory diseases, strengthens the voice, and stops bleeding. It restrains anger and imparts dignity, but also gives courage in battle. It counteracts the effects of sorcery and drives away evil spirits and dreams. It is even proof against injury from falling houses and walls. It was probably one of the stones in the High Priest's breastplate mentioned in *Exodus* and was formerly much used as a birthstone for August. It was sometimes confused with the ruby.

Carnival A boisterous communal celebration dating back to the Middle Ages and still observed in most of Europe and in the Americas. It features masquerades, floats, torch processions, dances, fireworks, noise-making, and tomfoolery which often reaches a point of nuisance and licentiousness. The festival season formerly began at the winter solstice or on Twelfth Night, that is (in far northern countries) at the first signs of returning spring; it now comes to a climax on the last three days before Ash Wednesday.

The etymology is uncertain. Carnival is explained as being derived from *carne vale*, or flesh farewell (Latin *caro*, *carnis*, flesh, and *vale*, farewell), a name befitting the last days of fleshly unrestraint before Lent; or as derived from *carrus navalis*, cart of the sea, a boat-shaped vehicle on wheels used in the processions of Dionysus (later in other festival processions) and from which all kinds of satirical songs were sung.

Carnival may have had its source in the Roman *Bacchanalia*, *Lupercalia*, or *Saturnalia*, or in the ship-cart pageant for the Germanic Nerthus or Hertha, earth mother and goddess of fertility. Often the cart carried a plow instead of an image of the Earth Mother. In the 14th and 15th centuries the Carnival attained its full glory in Europe, especially in the Nürnberg *Fastnacht* and *Fastnachtsspiele*, and in Italy, in Nice, Venice, Naples, Florence. Obscene songs, *cante carnascialeschi*, were developed into an art by Lorenzo de Medici.

Carnival is identified with the primitive ceremonies for the expulsion of death, winter, and demons harmful to the coming crops. That was the purpose of the noise-making, the *Lärmumzüge*, noisy processions with songs, bull-roarers, drums, bells, fools' whips. The fool's whip or slapstick is the direct descendant of the *Lebensrute* (life-rod), the rod of life, which transfers fertility. Vegetation magic also lies behind the ducking, sprinkling, fire-throwing, charcoal-blackening, leaping, in the obscenities above all, and in all the special disguises and enactments. Elaborate medieval ceremonies married the shaggy wild men to the wild women, who were accompanied by a train of animal masks, the *maînéte herlekin* (originally troop of the dead), the *Holzleut*,

wood folk, dressed in foliage or moss, and the old woman of the corn with baby and basket. The *Metzger-sprung* of Nürnberg was a leaping serpentine dance of the butchers' guild, perhaps dating back to animal sacrifice. Their associated *Schembartläufer* (runners with bearded masks), with lances and male and female masks, also ran in a serpentine and threw fire and ashes. *Scheme* is a Middle High German word for mask or apparition.

The Schemen still run in Innsbruck during *Fasching* or Carnival: a mad train of *Scheller*, female *Roller Spritzer* (sprinklers), *Kübele Maien* (water squirts), *Hexen* (witches), and other demons. In Switzerland the *Rautschegetten* cavort in black sheepskins. These demons have their counterpart in the *kalogheroi* of the Thracian Carnival, which obviously dates back to the *orgia* of Dionysus Dithyrambus. The elegant faction had its counterpart in the Munich *Schäfflertanz*, a traditional longways dance with hoops, discontinued in 1928. The battle of the forces of summer and winter, preserved in its original meaning in the Isle of Man, became confused with Christian symbols in the battles of the Moors and Christians elsewhere. Matrimonial and resurrection dramas were enacted by the Morris groups, the English Mummers, the Basque *masacaradas*, the Majorcan *cociés*. Later on these performances were frequently advanced from their original pre-Lenten date to May Day, Corpus Christi, or other festivals.

However, in Spain and its colonies, particularly in Mexico, these battle mimes remain a gala feature of Carnival. In Spain was added the interment of the King of Evil (*el entierro del Rey del Mal Humor*), also quadrilles or solos performed by *diablos* and *muertes* (impersonations of death). Catalonians have a Maypole dance for both sexes.

In Mexico the Carnival flourishes with a dazzling array of dances: not only *moros*, *diablos*, and *muertes* taken over from Spanish Carnival, and dances transferred from Corpus Christi and Saint's Days, such as the *arcos* and *pastoras*, danced with flowered arches, but above all innumerable native dance survivals and native post-Columbian inventions. In the pueblos of central Mexico, Carnival is a religious fiesta, an objective for votive pilgrimages. The European importations, so interwoven with native qualities, suggest amalgamation with existing rites. Carnival corresponds to the second month of the Aztec calendar, Tlacaxipchualiztli, dedicated to the worship of Xipe Totec, god of agriculture. The costumes, whether embroidered silk or shabby cottons, the masks, whether of wood or buckram, are always distinctive and original. The *teponaztle* (Aztec drum) accompanies a European type of flute and tabor. Native and European steps, Christian and pagan verbal allusions all blend. Dialog usually accompanies the *moros y cristianos* plays and their related *Santiagos* of Mexico, Guerrero, Puebla, and Vera Cruz Sierras, and the similar *tastoanes* of Jalisco. Medieval morality plays live on in a new form in *Las Tres Potencias* of Guerrero. An original drama is enacted for five days in Huexotzingo, Puebla, showing how the bandit, Augustin Lorenzo, was captured by magnificent bands of soldiers—*zapadores*, Apaches, *zacapoaxtles*, Zouavos, and *serranos* (clowns). The Tlaxcalans and distant Huichols each enact a bull fight; the natives of Zaachila, Oaxaca, put on a burlesque battle between the priests and devils.

The Tlaxcalans have invented *los catrines*, *los paraguas* (a quadrille of French type), *los casquetes* (helmets)—all dances in medieval garb—and *los cihuames* (from Aztec *cihuatl*, woman), the only woman's dance, which uses a kerchief for mask.

Native survivals are the *huehuenches* of Mexico, *chinelos* of Morelos, *tecuanes* of Guerrero. The great concheros dances, though not confined to Carnival, are most numerous at that time.

Carnival has not found its way into the more primitive northern tribes. But elsewhere, on the two coasts to the south, the big cities celebrate Carnival sometimes for weeks in advance, with fantastic masked parades and with *carros alegóricos* (fancy balls with a queen or *reina*), notably in Oaxaca City, Vera Cruz, Guadalajara, Tepic, Mazatlán, Cuilacán. Here the ceremonials are replaced by *zapateados* and *jarabes*, ballroom dances, and the flute and tabor by *mariachi*, *marimba*, and brass band.

Yucatan's capital, Mérida, celebrates Carnival with a certain ceremonialism, in *cintas*, *paulitos*, *negritos*, and native *xtoles*. Trinidad combines ostentation with *moros* dances, and native calypso singing. A semiceremonial longways dance is called *carnevalesca* in Argentina.

The famous Carnival of Rio de Janeiro, the Mardi Gras of New Orleans, and the Cuban *comparsas* are modernized, in subject matter for the floats, in the dances (*frevo*, *maxixe*, *conga*, etc.), and are more rowdy and meaningless than the corresponding survivals in large cities of Europe. See FASTNACHT; RODS OF LIFE. [GPK]

carol A traditional song type in English, originally unrestricted in subject matter, composed in a fixed stanza form throughout, and having a burden, but for centuries associated with the Christian celebration of Christmas and including almost any kind of Christmas song. To a lesser extent it also includes songs to the Virgin and various saints, stories of the Epiphany, the Annunciation, the baptism of Christ, the Eucharist, the Passion, and the round of the seasons. In the popular sense, the carol corresponds approximately to the French *noël*, the German *Weihnachtslied*, the Greek *kálanta*, the Rumanian *colinde*, certain examples of the Spanish *villancico*, etc., though the international influences are obscure. Like *ballad*, the word has its source in dancing (Old French *carole*, Latin *choraula*, Greek *choraules*, *choros*) and in its earliest forms the song probably accompanied a round dance, the burden being sung by the dancers as they circled, the stanzas by a leader.

Developing contemporaneously with the dramatic spectacles of the mystery plays, the religious carol marks the passage of devotional observance from the formality of the Church and the Latin tongue into the marketplace and the vernacular. This change, however, was not, in all likelihood "by popular request," nor because of any desire on the part of the masses to usurp the functions of the churchmen, but the result of a deliberate popularization by the clergy to combat the "licentiousness" of the pre-Christian song-and-dance festivals that had survived to upset the decorum of their parishes. The mendicant friars all over Europe, and particularly the Franciscans, campaigned with religious songs in the vernacular and humanized the stories of the saints, turning to their own uses the tunes that pleased the public ear. Their success is demon-

strated by the way in which carol-singing took hold and went its way among the people.

Carols, in the popular acceptance of the term, are cast in many forms: ballads (*The Cherry Tree Carol*, for example); lullabies of the women of Bethlehem (*The Coventry Carol*); macaronics, with lines of Latin interwoven (*In Dulce Jubilo*); cumulative and numeral songs (*The Twelve Days of Christmas* and *The Joys of Mary*); wassails, or toasts, and feasting songs (*The Boar's Head*); question-and-answer songs (*The Seven Virgins*); celebrations of nature, etc.

One type common all over Europe is the call to the neighbors to wake and visit the lovely baby born in a cow's stall. In these carols the Holy Family have been made in the image of the people who sang—Mary crying out in labor, the Infant shivering on his pallet of straw, old Joseph, tired, anxious, bewildered, and a bit grumpy. Overflowing with solicitude and neighborly good-will, each visitor, according to his trade and his lot, brings the gift most suitable to the situation of the three destitute strangers stranded in a barn. Shepherds in a Besançon bagpipe carol offer sheep-milk and water heated in a pan and a lambskin to wrap the baby. A carol from Holland, the dairy land, provides new milk, butter, and junket. A Czech contribution is a fur coat for the baby to cut the chill of a December night. Others list a lamb to play with, a ball, a shepherd's pipe, cheese, eggs, stumps of vines to warm and soften the makeshift cradle. The spirit of all such carols is caught in an American Negro lament, *Po' Little Jesus*: "Didn't have no cradle./ Wasn't that a pity and a shame!"

Many of the songs detail the hardships of the pilgrimage to visit the Child, and, in doing so, reveal the people who sang almost as clearly as their selection of gifts. *The Gouty Carol*, from Provence, for instance, tells of an old man with the gout who hobbles painfully in the rear of the train of visitors. A Burgundian song mentions among the pilgrims, taxers and lenders and poor men in the rich men's grip.

As compared with the number of these poems of peasant interest, there are few carols bearing the marks of royal and courtly tradition, though here and there the images and symbols of chivalry appear. Mary is likened to a rose, a queen, a bird. She and Joseph are titled "Sir Joseph and his fair lady." The absence of the trappings appropriate for a newborn king and god is carefully explained.

The ballad group of carols draws its narrative material from a number of sources outside of Holy Writ, notably the Apocrypha. The *Gospel of Pseudo-Matthew* furnishes the story of the crop sown and reaped the same day in *King Pharaoh*, a carol widely spread by Gypsies, in which also appears the legend of the cooked cock that crowed. This cock crows also in *The Carol of St. Stephen* and *The Carnal and the Crane*. *The Cherry Tree Carol*, in which the tree bows to allow Mary to pick cherries, is also drawn from *Pseudo-Matthew*; though it also bears a near relationship to a story in the *Kalevala*.

The wassails are of pre-Christian origin, taking their name from the words of the toast (Old English *waes hael*, be whole) and preserving a secular, if not pagan character. One of them carries a line which may refer to the Danish invasions of England. Another is said to have been sung not only during the Christmas and New

Year's festivities, but also in the custom of "wassailing the apple trees" on Epiphany Eve to assure good crops. This procedure was ended with a lusty blast on a cow's horn. Traditionally the wassail songs were sung by merry-makers carrying a huge bowl bedecked with wreaths and ribbons, or by waits begging for a handout from the holiday feasts at the great houses. Generally they closed with good luck wishes for the house, the master thereof, and all his herds and crops in the coming year.

The Greek *kálanta* (compare Latin *kalenda*, and Rumanian *colinde*) have been sung into the 20th century in much the same way on New Year's Eve. Caroling children carried lanterns and a paper ship in a house-to-house procession singing good wishes for the New Year and begging for money. The ship custom seems to be connected with a ship full of fruitful objects traditionally carried through Athens and Smyrna on the feast of Dionysus.

The subject of a large group of Greek carols is St. Basil, especially in relation to four themes: 1) the staff that budded, an Apocryphal story of the saint's boyhood; 2) love songs interwoven with the above; 3) the golden tree, the legend that where Christ trod a tree of gold grows (an idea ancient in Greek literature), and 4) the miraculous crop, in which the saint's oxen were blessed by Christ and his land brought forth an amazing abundance. The Greek equivalent of waits cry the blessings of St. Basil on the wheat, barley, and children of the house, saying, "May your kids and lambs be female, your children, boys."

The nature carols in English, though many took on various Christian aspects, also preserved pagan greetings to the change of seasons and pre-Christian symbolism. The numerous "holly and ivy" carols, possibly first sung to dancing by men and women, embody ancient fertility rites, holly representing the male and dominant principle, ivy, the female. Yet some versions of these songs mingle the Christian and pagan elements in such carefree style as this: "The holly bears a prickly/ As sharp as any thorn/ and Mary bore sweet Jesus Christ/ On Christmas Day in the morn."

The characteristic burden of strict English carol form stands at the head of the song and is repeated after each stanza, though it is usually completely separate from the sense of the song as conveyed by the stanzas, a fact which explains why many carols have lost their original burdens and why some burdens serve for several carols. The most common type of burden is a couplet, though quatrains and even longer forms occur. The link with the stanza is generally a rime with the tail rime of the stanza. Most of the burdens are older than the verses they accompany, having been adopted without change from the old folk-dance carols and applied to the religious songs, even when the clergy composed the latter. Some are Latin maxims and tags from various church services. The lullabies have a string of soothing sounds, such as "lully, lullay," as burdens. Some burdens exhort the singers, as formerly the round dancers, to sing, rejoice, be merry. Some (though few in English) imitate instrumental sounds, as "tyrly, tyrlow." Others are moralizing proverbs.

The great period of folk-carol composition in England was the 15th century, coinciding to a great extent with ballad-making, but carol-singing flourished until

the Puritan Parliament abolished Christmas observance in 1647 and forbade any form of celebration. English carols went underground to be preserved only in folk memory, in manuscripts such as the *Commonplace Book* of Richard Hill (a grocer's apprentice whose jottings of records, recipes, poems, and romances from the early 16th century proved a gold mine to later researchers) and by the fly-by-night printers of broadsides. When new carols were composed after this hiatus, the beef and pudding and groaning board provided a good deal of the inspiration. Many of the early carols were not recovered until 19th century research, coupled with the uninterrupted popularity of similar songs on the continent of Europe, restored them to sufficient respectability for church use. Some of the early ones, infrequently recovered in England, have been found in the woods of New England and the mountains of the American South. See individual titles and song types.

THERESA C. BRAKELEY

carole or **carola** (from *carolla*, crown or wreath) A round dance and song for couples, which spread in the 12th century from Spain to Norway. It was a kind of processional march, turning right to left and beating one foot against the other. Originally it was a dance-song particular to May; later it was a feature of fairs, saints' day festivals, midnight vigils, Christmas. The symbol of fertility was retained in the object carried by the choral leader: a May branch, a bunch of flowers, a torch. The term is now associated specifically with choral Christmas songs. Compare **CAROL**. [GPK]

carrizo A social couple dance of the Maipure Indians of Venezuela. Three musicians play six-reed pan-pipes of native timbre, but the quasi-waltz step suggests mestizo origin. The couples, arms entwined, circle the musicians two by two. They follow the changes in the music, plaintive or vivacious. In the end the circle breaks up into a confusion equal to that of ballroom dances. [GPK]

carrot A long reddish-yellow edible root of the plant *Daucus carota*. In New Hampshire it is said that if a carrot is allowed to go to seed, someone in the family will die before the year is over. Formerly it was a common saying in England and the United States that carrots would relieve asthma if eaten in large enough quantities. This fact and the belief that carrots aid eyesight has now been substantiated by the discovery that certain forms of carotene, the pigment principle of carrots (and certain other plant and animal substances) promote the formation in the body of vitamin A, beneficial in cases of night blindness and lowered resistance to infections.

carrying water in a sieve A folktale motif (H1023.2), used as task, punishment, or means of escape: found in folktales of ancient Greece, modern Africa, Polynesia, Indonesia, Europe, and North America. The classical example is the story of the Danaides' punishment. They were doomed in the afterworld to attempt to fill a leaky vessel with broken jars. Similar is the incident in *Master Pfreim* (Grimm #178; Type 801) in which the complaining cobbler sees the angels drawing water into a leaky bucket and causing the rain. *The Grave-Mound* (Grimm #195) tells how the Devil fails to fill the sole-less shoe of the soldier, a task very similar to

that of filling the sieve. Not everyone entrusted with the task fails, however; in ballad this is one of the things a chaste woman does; a pious child can accomplish the same thing. Sometimes the intended victim thinks a bit: the vessel is repaired or the holes in the sieve are stopped—with moss, with gum, with clay.

Monkey, in an Angola tale, refuses to try to dip water with a fish-trap and thus gets the better of Leopard. He is therefore able to avenge the death of Antelope, who was tricked by Leopard into trying. In an Indonesian tale from Halmahera, the husband of Sunrise sends his sister-in-law to bring water in a punctured bamboo. While she is delayed at the stream, he and Sunrise escape from her unwanted company. The delaying action occurs also in a Tahitian story; Tuture runs away from his cannibal mother while she tries to fill the pierced gourds. Compare **BEAD-SPITTER AND THROWN-AWAY**.

cartomancy Divination, or fortune-telling, by means of cards, especially playing cards: popularly one of the methods preferred by the Gipsy fortune-tellers, and the basis of the belief that the Gipsies imported playing cards into Europe. The suits and individual cards have traditional meanings and values, e.g. the ace of spades means death. Special cards and packs of cards are occasionally used.

Casey Jones John Luther Jones, American railroad hero, engineer of the Illinois Central's famous "Cannonball," noted for his skill, daring, and resourcefulness. He died in a train wreck in 1900, and was found with one hand still on the whistle and the other on the airbrake lever. Wallace Saunders, his Negro engine-wiper and close friend, created the original of the famous American ballad, *Casey Jones*. Later, the words and music, given a chorus and framed in the style of a vaudeville song by Siebert and Newton, attained wide popularity.

Cassandra (1) or **Alexandra** The most beautiful of the daughters of Priam and Hecuba; the prophetess of the Trojan legend whose foresight was doomed to go unheeded. She and her brother Heleus slept as children in the temple of Apollo; they were found there in the morning, wound about with snakes which by licking their ears gave them the gift of prophecy and of understanding the languages of the animals. Cassandra again slept in the temple when she was a young woman. Apollo tried to ravish her and was repulsed. Unable to revoke his gift of prophecy, he caused her sayings to go unbelieved. According to another story she reneged on the bargain she had made with him and he thus punished her. It was Cassandra who recognized in the shepherd Paris the princely son of Priam; she recognized the wooden horse for what it was: again and again she predicted what later happened, yet no one believed her. She was in fact considered demented by the Trojans, Priam even confining her for a time. At the fall of Troy, she was torn from the sanctuary of Athena by Ajax the Lesser, perhaps even raped on the spot, and in the division of prisoners fell to the lot of Agamemnon. She was killed with him by Clytemnestra, and their children, Teledamus and Pelops, were slain by Ægisthus. Her tomb was either at Amyclæ or at Mycenæ. Compare **ANIMAL LANGUAGES**.

(2) The daughter of Iobates. See **BELLEROPHON**.

cassava or **manioc** An edible tuber from which bread is made by the Indians of South America. See **MANIOC**.

cassia A bark similar to cinnamon, and thought by the ancients to be an inferior grade. Chinese religious legend describes a cassia tree as the world-tree or tree of life, growing to incredible height in Paradise, far up the Hoang-Ho river. Whoever ate of its fruit lived forever. Compare **MOON TREE**; **PEACH**.

Cassiopeia, Cassiope, or Cassiopeia (1) In Greek mythology, the wife of Cepheus, mother of Andromeda. She praised her own or her daughter's beauty as being greater than that of the Nereids and brought upon her country the sea monster slain by Perseus. A constellation in the northern sky is named for her. See **ANDROMEDA**.

(2) A W-shaped, five-star constellation lying in the Milky Way exactly opposite the Great Bear, the north star lying equidistant between them. It is often called Cassiopeia's Chair and sometimes the Celestial W. Greek astronomers of the 5th century B.C. spoke of this constellation as She of the Throne. The ancient Egyptian *Book of the Dead* calls it the Leg. To the Arabians it looked like a Hand, each of the five stars representing a bright finger-tip stained with henna. They also called it Al Dhât al Kursiyy, the Lady in the Chair. Latin writers knew it both as Cassiopeia and as Mulier Sedis, Woman of the Chair. To the early Celts it was Llys Dôn, Don's House. Religious astronomers of the 17th century identified the constellation with Mary Magdalene or with Bathsheba on her throne.

castanets Paired hollow clappers of wood clicked together rhythmically between thumb and forefinger of dancers. Known in ancient Egypt, but probably Greek imports there, in Rome, and in Greece, where they were used by Dionysian dancers, castanets may be a Phœnician contribution, for they are still used in the sections colonized by Phœnicians in Spain, southern Italy, and the Balearic Islands. Castanets have been used to provide rhythm for many dances of strong excitation—the tarantella dance mania of the 18th century, the moresque choral dance, the sarabande, and the fandango. The term is derived from Latin *castanea*, chestnut, from the appearance of the instrument.

cast down A country dance term: the dancer or dancers turn outward and move backward along the set. [GPK]

cast off A country dance term: the dancer or dancers turn outward and dance outside the set. [GPK]

Castores Roman name of the Dioscuri: from Castor, who seems to have been the first of the twins to be worshipped by the Romans.

Castrén, Matthias Alexander (1813–1852?) Swedish-Finnish ethnologist and philologist, and collector of Finnish ballads and legends. He was born in Finland, but all his books are in Swedish. In 1838 he and a fellow student, Dr. Ehrström, traveled in Lapland; then he alone traveled in Karelia; in 1841, with Elias Lönnrot he made a three-year journey to Obdorsk, Siberia; later he explored the entire Government of Siberia adding to the store of folklore knowledge. In 1850 he was appointed to the new chair of Finnish Language and Literature at the University of Helsing-

fors and the following year became the chancellor of the University. The first outline of a Finno-Ugrian mythology was made by Castrén in a lecture in Finnish and published in Swedish and German (the latter called *Nordische Reisen und Forschungen*, 1853). Castrén is considered to be the founder of Ural-Altaic philology. Among his books are *Reseminnen från åren 1845–44* (sic), *Föreläsningar i Finsk mytologi, Reseberättelser och bref åren 1845–49*, *Ethnologiska föreläsningar över altaiska folken*, and *Smärre avhandlingar och akademiska dissertationer*. He translated the great Finnish epic *Kalevala* into Swedish.

cast up A country dance term: the dancer or dancers turn outward and move forward along the set. [GPK]

Caswallan In the *Mabinogion*, a son of Beli. He conquered Britain while Bran was in Ireland righting the wrongs of Branwen. Caswallan threw around Caradawc, Bran's son, the Veil of Illusion, so that all Caradawc could see was the sword slaying his people right and left, but never the wielder of the sword. In the *Triads* Caswallan is mentioned as a war king, and historically he is uncertainly associated with a certain chief named Cassivellaunus, who opposed Cæsar. J. A. MacCulloch's study of their legends reports them confusedly mingled.

catching a man's breath A folktale motif (H1023.13; Type 1176) occurring in a huge group of stories centering around the impossible or absurd task: especially popular in Baltic countries. Catching a man's breath and tying a knot in it belongs specifically in the category of tasks contrary to the nature of the objects involved (H1023). These often occur in that widespread group of tales about the man who sells his soul to the devil but eventually saves himself by some ruse, such as imposing the impossible task on the devil. Bringing berries in winter, carrying water in a sieve, mending the jug, skinning the stone, etc., all belong to the group.

catch tale A story told in such a manner as to trick the listener into asking a certain question or making a certain remark to which the teller gives such a ridiculous or obvious answer as to make the listener the butt of the joke. The "Just Like Me" formula is a fair example. The story-teller enjoins the listener to say "Just like me" after every statement of his story. The story ends with the words, "And I saw a little monkey," to which the listener either inadvertently says, "Just like me" or is quick-witted enough to reply, "Just like you." Most catch tales and catch rimes are primarily children's joke pastimes. But no complete study of the type and no extensive collection has yet been made. See **ADAM AND EVE AND PINCH ME**; **TONGUE TWISTERS**.

caterpillar The larva of the butterfly or moth: of widespread occurrence. The caterpillar's origin, in Rumania, is thought to be from the Devil's tears; the Bantu believe the souls of the dead take this form. In Switzerland and elsewhere, it is said tree spirits are responsible for the caterpillar and that they send them to creep into man's brain to make him mad or ill-humored, or that they send them to the fields to annoy the folk. The appearance of these wormlike creatures may well have suggested the superstition that they were made by witches with the Devil's help. One name applied to them in Germany and thereabouts is *Teufelskatze* (Devil's cat). In Pennsylvania, a black cater-

pillar indicates a hard winter; in France, the temperature is judged by its ways. Folk medicine attributes some virtue to the caterpillar: in antiquity, the cabbage caterpillar was used with oil for rubbing after the bite of a venomous serpent; in England, to carry a caterpillar about was an aid in fevers; it was also prescribed for toothache. [CPS]

Cathbad In Old Irish legend, the chief druid of Ulster in the reign of Conchobar: in some legends the father of Conchobar. Cathbad was one of the tutors of Cuchulain. It was Cathbad who prophesied at the birth of Deirdre that because of her "more blood will be shed than ever was shed in Ireland since time began. Great heroes will lose their lives because of her."

St. Catherine's Day November 25, anniversary of the martyrdom of St. Catherine of Alexandria about 307. From medieval times to the 18th century it was observed in England and Europe as a holiday by wheelwrights, haberdashers, and lace-makers, of whom she is the patron saint: still observed by spinsters, milliners, and dressmakers especially in France.

One of the ancient trade guilds of London, the Guild of Haberdashers, was referred to as the guild of St. Catherine the Virgin. The members of this guild celebrated the day by closing up shop and marching in processions.

Girls were wont to fast on St. Catherine's Day, hoping thus to obtain a good husband. On this day virgins went to church to offer up a special prayer:

A husband, St. Catherine;
A handsome husband, St. Catherine;
A rich one, St. Catherine;
A nice one, St. Catherine;
And soon, St. Catherine.

Merrymaking was engaged in on that day, particularly in the textile districts. This included processions and begging for apples and beer, chiefly by roistering children. Such merrymaking was called Catherning or Caterning, and the bowl used for begging was called a Catherine bowl. Children employed at spinning in the workhouses of Northampton and elsewhere paraded in the streets, dressed in white, headed by one of the tallest girls designated by them as Queen and wearing a crown.

In Paris and throughout France, St. Catherine's Day is still observed by unmarried women under 25 years old, especially by those employed in the millinery and dressmaking establishments, which close for the day. The merrymaking takes the form of gay processions in the streets, the girls walking arm in arm, wearing "Catherine bonnets"—fantastic confections of paper and ribbon which they themselves have made. Before the merrymaking, they have attended church, and have renewed the crown on the head of the saint's statue there.

"*Coiffer Sainte Catherine*," to wear St. Catherine's bonnet, is a common saying in France, and signifies, for a woman, to live and die in celibacy. The saying is that at 25 an unmarried girl puts the first pin into her St. Catherine bonnet; at 30 she puts in the second; at 35 the bonnet is finished.

Miraculous wells exist in the environs of Edinburgh and Aberdeen, called St. Katherine's wells, to which resort people afflicted with tumors, skin trouble, and

stone in the bladder, which illnesses the waters are reputed to cure.

The Catalans have a weather rime for Catherine's Day:

Santa Catarina	Saint Catherine's Day
o molt freda	expect much cold
o molt humida	or much dampness

The olive growers have another rime:

Avans det Santa Catarina	Before St. Catherine's,
no cullos la uliva	don't harvest olives

An old English euphemism refers to the menopause as "turning St. Catherine's corner."

Ios Catrines A burlesque on the bourgeois (catrines) during Carnival festivities at Santa Ana Chiautempan, Tlaxcala, Mexico. Some of the men dress as women, covering their faces with a kerchief. Others wear double-breasted or swallowtail suits, neckties, and grotesque pink masks. They carry umbrellas throughout their cavortings. [CPK]

cats Never kick a cat, or you'll get rheumatism. Never drown one or the Devil will get you. Cats have nine lives, but if you take even one, the cat will haunt you, send bad luck, or work some other vengeance. These three adjurations, gleaned by N. N. Puckett (*Folk Beliefs of the Southern Negro*, Chapel Hill, 1926) represent in Negro belief the very widespread European and African belief that it is bad luck to kill or mistreat a cat. The concept is rooted perhaps in those ancient religions in which the cat was a sacred animal: retribution always befalls anyone who harms the sacred animal. Belief in the benefits to be acquired from eating the sacred animal survive in such old-wives' remedies (Alabama Negro) as black-cat broth to cure consumption.

Seeing a black cat is usually a bad omen in Germany, the British Isles, and the United States. It is especially bad for a black cat to cross one's path. But it is lucky to own one. Southern U. S. Negroes believe that black cats are powerful hoodoo; they cause bad luck, misery, disease, and death. A black cat is a witch; it is a witch's familiar; it is the Devil; it is a "haunt" from the dead: all beliefs of European origin enhanced with Negro intensity and flavor. Cats can see ghosts. Cats' eyes are used in certain southern Negro voodoo charms; so is cat hair, especially the whiskers.

When the cat washes her face, it is a sign of rain, or a sign of good weather, or that company is coming; especially if she washes her face in the parlor, company is coming. That cats always wash themselves facing the wind is keen folk observation, not necessarily a wind-direction omen. In Maine they say if a cat looks out the window it is looking for rain. A common New England saying is that you can tell the time of day from the size of a cat's pupils. In the Maritimes a cat's pupils are nearly closed at low tide, wide open at high tide.

Welsh sailors say if the ship's cat mews constantly it portends a difficult voyage. If the ship's cat is playful, sailors expect a gale of wind astern. Any uncooperative person can raise adverse winds by confining the ship's cat under a pot. In rural England they say that a kitten born in May will never make a mouser; instead it is apt to bring home glow-worms! In Sussex they

say a May kitten is apt to grow up melancholy. Some people say it is good luck to sleep with a cat; others that cats suck the breath of sleepers. In some parts of Europe it is thought that cats prey on corpses. If a cat jumps over a corpse, that corpse will become a vampire, and the funeral is stopped until the cat is caught and killed. In some parts of France where the cat was believed to be the Devil, cats were burned in Shrove Tuesday and Easter bonfires.

Beliefs in the cat as fertility charm are indicated in such practices as those of Transylvania farmers: about a month after a wedding a cat is brought into the house in a cradle and rocked in the presence of the newlyweds. In Bohemia a cat is sometimes buried in a field of grain: a practice related to the belief in the cat as field spirit. See BULLKATER.

In Indonesia among the various Malay peoples it is believed that bathing a cat will bring rain. See *AI APAEC*; *BAST*; *BELLING THE CAT*; *CCOA*; *KING OF THE CATS*; *PUSH IN BOOTS*.

cat's cradle The European and American form of string figures: a two-player, four-handed game, played with a loop of string, and consisting of a very few figures which evolve one from the other: perhaps a slim remainder of a once greater number. Cat's cradle has none of the ritual connotations of string figures elsewhere, as for example among the Eskimos, and compared from the elaborate and varied figures reported from some peoples, e.g. the Australian aborigines, it is simply a childish diversion with a meager repertoire of figures. See STRING FIGURES.

catseye A gemstone, usually chrysoberyl or quartz, which shows a line of light across the dome when cut *en cabochon*. On the theory that like affects like, it was universally used for diseases of the eyes and to ward off the evil eye. The Assyrians carried this theory a step further and claimed that it made the wearer invisible to his enemies. In Ceylon it is a charm against witchcraft and considered to be the abode of genii. It is reputed to relieve croup and asthma, to cure chronic diseases and to put color into the cheeks. It gives pleasure to the mind, relieves the soul of melancholy, and protects its wearer from financial ruin. It is held in high esteem in China and India.

Catskin Designation of a cycle of European folktales partaking of many Cinderella and Cap o' Rushes elements. The story usually begins with the flight of the heroine from marriage with an incestuous father. She wanders in disguise in a mantle made of many kinds of fur (*Allerleirauh*, Grimm #65), or a cloak of mouse-skin or louse-skin (Russian, Slavonic), of catskin (Irish, English), pigskin (Italian, Sicilian, Finnish), ass-skin (French, Spanish, Basque), wooden dress or sheath, (Greek, Italian, Portuguese, Swedish), crow-skin (Swedish), old-woman skin, boy's clothes, rags and tatters (various), bear transformation (in the *Pentamerone*) etc., etc. She takes a menial position in the ménage of a king: goose-girl, turkey-girl, kitchen or scullery maid, swineherd, shepherdess, stable-boy. She is always discovered by the young prince, sometimes at a ball which she attends clad in her own original (or magic) garments. But she escapes unrecognized, only to reveal herself, when he sickens with love for the unknown one, by a recognition token in his food (her ring, or

presents which he has given her at the ball). The story ends with a happy marriage, and sometimes with the punishment of the father.

This story is known everywhere in Europe and in Asia Minor. It turns up in Dizon's *Ancient Poems, Ballads, and Songs of the Peasantry of England* (1857) entitled "The Wandering Young Gentlewoman, or Catskin."

cat's only trick Climbing a tree: a folktale motif (J1662; Type 105). Aesop's fable about the cat and the fox (Jacobs #38) tells the story. The Fox remarked to the Cat that no matter what the danger, he had 100 tricks by which to save himself. The Cat said she had only one; if that should fail she would be lost. Just then a pack of hounds burst upon them. The Cat dashed up a tree. The Fox tried one after another of his tricks but was caught by the hounds at last.

This story is well known all over Europe from Greece and Sicily to Lapland. There are Arabian variants. There is an analogous Angola folktale about Partridge and Turtle who were discussing how to escape when fire should come across the land. Partridge said Turtle would be burnt because he could not fly away. When the fire was coming Turtle crawled into a big anthill. Partridge ran and began to fly; but the fire was faster and Partridge was burnt. When the fire passed on Turtle crawled out of the anthill. "Partridge is burnt," said Turtle.

cattle The veneration of cattle belongs to a pastoral stage of society. In ancient times they were revered in Egypt as well as in India and this attitude toward cattle is characteristic of the modern Hindu and most of the pastoral tribes of Africa. Wherever people depended upon cattle to furnish them sustenance, the animals were carefully guarded to promote their health and fertility. In sickness they were well tended, and great grief was expressed at the death or theft of one. Not only was the herd as a group venerated, but individual cattle were treated in some cases like divinities. In early times, special attention was bestowed on the leader of the herd.

In comparatively modern times—in Germany, Spain, central and eastern Europe, Greece, Scotland, and elsewhere—special customs were carried out to make the cattle fruitful: they were frequently driven through fire, sometimes beaten for health and good luck as well as to promote fertility and the multiplication of the herd.

Various means have been used to protect cattle from disease (sprigs of mullein), from wolves, witches, evil spirits, and the like (charms, such as boughs of mountain ash hung in the cow-house or at the stable door). Zulus use charms to recover strayed cattle.

Portions of the body of cattle were early used in folk medicine, a practice not yet outmoded. Cattle figure in sagas, folktales, and sayings of Rome, Finland, Russia, Greece, and other countries. One of the most interesting beliefs about cattle is that they acquire the gift of speech on Christmas Eve. Cattle "calls" are of interest. None appear to be recorded from early pastoral society, but modern ones may be mentioned, viz.: "Sukey, Sukey!" "Co-boss, Co-boss!" (common in the United States) and "Co-o-o-pl!" (Come up!) in dialectal English. There are many others. [crs]

Cattle Raid of Cooley The War for the Brown Bull of Cuailgne: Táin Bó Cuailgne.

cat washes face before eating A European folktale motif (K562; Type 122B), existing usually as a single anecdote. A captured rat persuades the cat to wash her face before eating. While she is busily washing it, the rat escapes. This anecdote, especially familiar in the Baltic regions is known to have five variants in African Negro folktale. It belongs to a vast group of stories in which escape by subterfuge is the main motif (K500-699); and explains why today the cat eats first and washes afterwards. The sheep who persuades the wolf to sing, thus summoning the dogs is a type parallel (Type 122C).

caul A covering or membrane; specifically, the membrane sometimes enveloping the head and face of a newly born child, or, occasionally, the fatty tissues around the liver.

In Biblical usage, the word means most often, in connection with sacrificial regulations, "the caul that is above the liver" (*Ex.* xxix, 13), i.e. the diaphragm. Compare *Lev.* iii, iv, vii, viii, ix.

Generally, in folklore, the caul or "veil" is part of the amnion which, for any of several reasons, remains attached to the child when it is born. This is distinctly an omen of good luck, and has been so considered since at least the time of the Romans. The caul, preserved as a talisman, is a protective against drowning. The French proverbial expression "être né coiffé" is used to characterize those having persistent good fortune. The possessor of a caul obtains from it several magical and medicinal virtues. He can see ghosts and talk to them; even if deaf, he can hear the spirits talk. The caul itself is an amulet partaking of the ideas of the genius and life token. Among the Negroes of Louisiana, it is believed that the owner dies if the caul is torn. As a corollary, a limp caul indicates that the owner is ill, while a firm, crisp caul means that he is in good health. Another American Negro belief, adopted from the English, is that the person born with a caul can tell fortunes. The caul itself is a magic instrument quite apart from its connection with the original possessor. It is widely believed to be a protection against demons, particularly (in Jewish tradition) against storm demons. Hence, the caul is among sailors a valuable protection against drowning. Cauls could be and were bought and sold for high prices. "I was born with a caul, which was advertised for sale, in the newspapers, at the low price," says David Copperfield, ch. i, "of fifteen guineas." Compare AMNOMANCY.

cave painting Painting on the walls of caves: a term used primarily in reference to the prehistoric mural art found in the caves of southern France (Dordogne), and northern and western Spain (in the Pyrenees), although paintings are found in caves and rock shelters in other parts of the world, notably Australia and North Africa. Rock pictures, both painted and engraved, have a world-wide distribution.

Probably the most exciting moment in art history occurred in 1879 when a lawyer, Marcelino de Sautuola, exploring a little-known cave near Santander, Spain, came upon the first prehistoric paintings known to modern man: a magnificent panorama of animals of 20,000 years ago, some long extinct. Other explora-

tions and discoveries followed, but the Altamira cave remained the outstanding example, until two school-boys hunting rabbits stumbled upon the French cave of Lascaux near Montignac in 1940.

This art began in Upper Paleolithic times and extended presumably from 20,000 to 10,000 B.C. later work often being superimposed on that which preceded. (Two epochs, Aurignacian and Magdalenian, are distinguished.) It is remarkable for its portrayal of animals (bison, mammoth, rhinoceros, deer, wild boar, ancient cow, horse, ibex, bear, elephant) vividly realized with regard to both line, bulk, and movement. Some are as much as 18 feet long. The colors, in some cases perfectly preserved in the dry sealed caves, include earth red and yellow, a green from oxide of manganese, black from charred bone or carbon. Incised line is used, or sometimes later imposed. Human figures occur, but less frequently and with far less realism or conviction. The sticklike male with conspicuous penis appears, as in other rock pictures.

The artists were hunters and the scenes depicted are those of the hunt; to what extent they were real scenes and to what extent designed to bring good hunting is a matter of conjecture. One figure in the Cave of the Three Brothers is interpreted as a sorcerer in a dance, wearing a mask. In a scene from the Lascaux cave showing a fallen hunter and wounded bison, the hunter has the head of a bird, a similar bird on a stick beside him might have totemic significance. The animals are so accurate as to be readily identifiable. One however—a spotted beast with two rectilinear horns like the single horn of the mythical unicorn—is the only candidate, so far, for the category of "mythical beast."

Cave art includes some sculpture, though not so much. Two clay bisons from a cavern in the Arière, the Tuc d'Audoubert, are beautiful examples. [MH]

Ccoa The evil cat spirit of the Quechua Indians of South America who fear him intensely. The Ccoa is the servant of the aukis, perhaps following their orders, perhaps acting on his own initiative. He is cat-like in form, about two feet long with a foot-long tail, and gray with darker stripes lengthwise on his body. The head is larger in proportion than an ordinary cat's head; the eyes are phosphorescent, and from eyes and ears there runs a stream of hail.

 He is responsible for hail and lightning, which he uses to ruin crops and kill people. Sorcerers derive their power from him and are his devoted servants. This cat demon must be propitiated with offerings of magical products to keep his anger from constantly being aroused. Many of the attributes of Ccoa are those of Santiago, who in modern folklore has taken the place of the ancient thunder and lightning god, Illapa. [AM]

Cecrops The snake-tailed, autochthonous founder of Athens: a misty figure about whom little is known, whose cult centered on the Acropolis and was early replaced by that of Erechtheus. He may have been of Thracian origin. When Poseidon and Athena disputed for possession of Attica, the sea god made a well but Athena called Cecrops to witness her planting of an olive tree. Cecrops could give evidence only of what he had seen done and the verdict was for Athena. He is a culture hero, having instituted marriage, a new form of bloodless sacrifice, the burial of the dead, the division

of Attica into twelve communities, writing, etc. Later tradition gave him three daughters—Agrauros, Herse, Pandrosus—the goddesses of the Acropolis, but originally he had neither parents nor offspring.

Celtic folklore The regions which for the purposes of this article are called Celtic may be divided into three groups: 1) The Goidelic, including Ireland, the Isle of Man, and the western highlands and islands of Scotland. In language, race, and tradition these form a homogeneous block. 2) The insular Brythonic, including Wales and Cornwall, where also we find kindred peoples with a somewhat similar history. 3) The Continental Brythonic, that is, Brittany. Though racially akin to the Welsh and Cornish, the Bretons have had a very different history and enjoy a distinct culture.

In all these regions the collecting of folktales and the recording of customs and beliefs have been carried on from the second half of the 19th century down to the present day. Far and away the most scientific work has been done in Ireland under the guidance of the Folklore of Ireland Society, the Irish Folklore Institute, and the Irish Folklore Commission. In Wales the beginnings of an exhaustive study have been undertaken by the Commission on Welsh Calendar Customs of the National Museum of Wales.

It was natural that among the peoples of the so-called Celtic fringe, remote from great urban centers and also remote (except in the South Wales coal fields and in the neighborhood of Belfast) from industrial concentrations, the lore of the folk should have persisted from generation to generation with great tenacity. In regions where urban forms of entertainment were unavailable, scientific agriculture was unknown, scientific knowledge unattainable, and books were scarce, the people inevitably retained their old seasonal festivals, explained the phenomena of nature as did their ancestors of a millennium ago, retold the timeless stories, and lived and died by a creed which blended relics of paganism with Christianity. Needless to say, much of Celtic folklore is of a piece with the folklore of the rest of Europe.

The most remarkable distinction to be found in the study of this body of material is the amazing abundance and variety of Irish folktales. Over half a million pages of story taken down from the lips of peasants and their entertainers in the last two decades or so are in the files of the Irish Folklore Commission. This peculiar state of affairs is attributable to two factors: first, the bringing down of the culture of the Irish noble and scholarly classes to the common people as a result of the confiscation of estates by the English; and second, the persistence of the professional story-teller, the shanachie (*seancaide*, *seanchaidhthe*), to this very day in western Ireland.¹ Sagas which had been told in medieval times in the palaces of kings were now heard in whitewashed cottages; and hedge schoolmasters passed on what they had read in books. The shanachie of the present day preserves and embellishes this traditional lore; he may have a stock of fifty to two hundred tales; he takes a pride in his art, and has a social position of prestige. These conditions have not been matched elsewhere in the Celtic fringe, though in Cornwall as late as 1829 there were professional "droll-tellers," who enjoyed the hospitality of the cottages and taverns,

and fiddled, sang ballads, purveyed news, and related brief tales of hauntings, piskies, giants, and so forth.² It may justly be claimed that Ireland has the finest body of folklore in the world.

The subject of Celtic folklore will be treated under two main heads: 1) Folktales; 2) Beliefs and Customs.

FOLKTALES

Goidelic Several of the tales still current in Ireland are descended from the oldest strata of mythological and heroic fiction. The story of Balor and his prophesied death at the hands of his grandson Lug (essentially the same as that of Acrisius and Perseus) must go back to a pagan Ireland.³ Another saga of undoubted antiquity tells of the rivalry of Curoi and Cuchulain over the captive maiden Blathnat, Curoi's abduction of the maiden, her betrayal of Curoi, either by revealing the secret of his external soul to Cuchulain, or by giving the latter the sword by which alone Curoi could be slain. Both methods are combined in *The Barestripping Hangman* from Argyllshire,⁴ but simpler variants have been recorded in Mayo as the tale of *Donald Doolwee and his Delilah*,⁵ in Donegal as *The Hung-up Naked Man*,⁶ and in South Uist (Hebrides) as *The Lay of Melodious Sorrow*.⁷ Old sagas relating how Cuchulain got his name (Hound of Culann), was trained by the woman warrior Scathach, killed his own son incognito in combat, and surpassed his rivals Conall and Loegaire for the champion's portion, are (or were recently) reflected in oral tradition, though one may suspect some bookish influence. The tragic story of Deirdre and the sons of Usnach, and the uncanny adventures of Nera in the Cave of Cruachan⁸ also survive to this day.

More common than these narratives of the Mythological and Ulster cycles throughout Ireland and Gaelic Scotland are tales of the Fenian or Ossianic cycle. Noteworthy are versions of the birth and boyhood of Finn, his thumb of knowledge, the elopement of his wife Grainne with Diarmaid, the love of Oisín (Ossian), Finn's son, for the fairy princess from the Land of Youth, and of his Rip Van Winkle return. There are also many conglomerate tales, made of stock motifs, which have been attached to Finn and his heroes. Moreover, in the course of centuries the old native traditions have been contaminated. For instance, the Great Fool story, repeatedly collected in Goidelic territory since the early 18th century, is evidently based on the ancient sagas of Finn and the Clan Morna, but the episode of the *gruagach* (wizard-warrior) and his white, red-eared hound seems to have been caught up from an Arthurian romance.⁹

Definitely medieval in origin but not indigenous to Ireland are certain tales: an analog to Chaucer's *Friar's Tale* of the Devil and the summoner; the hermit and the angel; the wolf's tail frozen in the ice; the cooked cock's crowing as a token of Christ's resurrection.¹⁰ Of still later derivation are stories inspired by the witch mania of the 17th century, and in modern times a number of international plots, such as Puss in Boots and Rumpelstiltskin, seem to have passed from print into oral circulation.

There is a vast quantity of long yarns of which no account can be given except that they are strung together out of familiar motifs: the male Cinderella; the widow's youngest son; the grateful dead; the quest

for magic swords or inexhaustible vessels or the giant's daughter; impossible tasks; helpful animals and skilful companions; journeys to lands under springs and lakes, or beyond the seas, and so forth. There are also shorter anecdotic narratives, related usually of specific persons and places. An inebriate peasant finds himself in a palace of the fairies; a husband rescues his lost wife from a cavalcade of the dead.¹¹ In many places throughout the British Isles we find a local legend of a chief and his warriors, sleeping in a cave or hollow hill and awaiting the day when they will wake and come forth in the hour of need. In Ireland it is Earl Gerald who sleeps with his troopers in a cavern under the castle of Mullaghmast; in Argyllshire it is Finn and his men; in Wales it is either King Arthur, as at Craig-y-Ddinas in Glamorgan, or Owen Lawgoch, one of the last chieftains to fight the English, as in Cardiganshire.¹² In several instances this theme is combined with that of the robbery from fairyland, the visitor to the cave attempting to carry off treasure and being badly beaten.

Insular Brythonic Wales, though possessing a rich fairy-lore (of which more will be said under the heading of Beliefs and Customs), has preserved few elaborate stories. One, a special form of the fairy mistress theme, is found in Map's *De Nugis Curialium* (1182 A.D.) and is still attached to many lakes throughout the principality.¹³ A peasant lad woos a coy lake-maiden and induces her to wed him, but she imposes the condition that he must never strike her with iron. She brings with her many cattle from her watery home, and her husband prospers exceedingly, until by accident he breaks the tabu. She promptly returns to the lake, calling her cows after her. A number of Welsh families claim descent from one or another of these Undines. The most famous version of the romance localizes it at Llyn y Fan Fach in Brecknockshire, and says that the fairy after her departure used to revisit her sons and teach them the lore of healing herbs, so that they and their descendants achieved renown as physicians. Moreover, the belief persisted well into the 19th century that the water fay herself used to appear on the first Sunday in August, and thousands of country folk used to flock up to the mountain on that day to see what they could see.

Cornwall possesses little but the anecdotic tale of belated travelers who find themselves in fairy palaces, see there departed friends or sweethearts, are warned not to eat the food, and so forth. Stories of changelings and of human midwives who attend on fairy mothers are also known. We learn of a farmer's boy who joined a throng of tiny men one night, and was whisked with them through the air successively to Portallow Green, to Seaton Beach, to the King of France's cellar, and back again. When the boy's story was challenged, he was able to produce a rich silver goblet from the King of France's cellar as proof of his veracity.

Continental Brythonic Brittany has its share of these anecdotic types of fairy tale, but also a rich body of more ancient and varied narratives. An analog of the Irish story of Blathnat's betraying the secret of her husband's external soul is attached to the Breton Bluebeard, Comorre. In other tales we find motifs familiar to the Arthurian scholar: the serpent maiden disenchanted by a kiss; the black and white sails; an empty castle where a table is spread with viands, or

where the hero is served by invisible attendants; taking a piece of a shroud from a cemetery; a hermit uncle who counsels the hero; the dragon-slayer and the false claimant. The precise significance of these Arthurian parallels, though some are doubtless fortuitous, has been recently studied.¹⁴ Certain traditions regarding the amorous sirens known as Morgan or Morganes or the cave fairies called Margot la Fée seem quite definitely to be survivals of medieval legends of Morgain le Fée. To the same early period must go back a not uncommon tale of a peasant girl wedded to a splendid stranger, who was both the Sun and Death personified, and taken by him through a cavern to his shining castle; for the same concepts and roughly the same pattern are found (contaminated by the Orpheus myth) in the Breton lai of *Sir Orfeo*.¹⁵

A legend circulating as early as the 16th century and variously localized is that of the submerged city of Ker-Ys. The beautiful and lascivious daughter of King Gralon, named Ahes or Dahut, stole from her father the keys of the sluice-gates and gave them to her lover, who let in the waters of the sea. Her father then sought to escape the flood on horseback, with Ahes on the crupper behind him. St. Guénolé, the king's confessor accompanied them, and finally, when the waters threatened to engulf them, bade the king cast off the she-devil who had caused the mischief. At these words Ahes fell with a shriek into the waves and disappeared. Her father reached dry land, but Ahes still haunts the seas in the form of a lovely siren, luring fishermen to their doom.

A people as piously Catholic as the Bretons recount many legends of the saints. St. Anne was a Breton duchess who, turned out of doors by a cruel husband, was wafted in an angel-guided vessel to Jerusalem, there gave birth to the Virgin Mary, brought her up in the ways of piety, and then returned to her native soil. Of St. Eloi the widespread legend is told that he was working at his forge when a stranger, seemingly a blacksmith, entered. The saint grew suddenly weary and gladly accepted the stranger's offer to shoe a horse. One after another the substitute smith cut off the horses' legs, affixed a horseshoe to each, and replaced the legs, while the animal stood quietly during the operation. Astounded at this miracle, St. Eloi questioned the stranger and learned that He was Christ himself. Another familiar hagiological pattern occurs in the story of the wolf which devoured the ox used by St. Hervé in plowing. The saint preached so eloquent a sermon that the wild beast, in atonement for its crime, begged to be allowed to serve in the ox's stead and thereafter faithfully drew the plow.

FOLK BELIEFS AND CUSTOMS

Goidelic Until modern times Ireland kept many practices which were rooted in heathenism. In the 5th century St. Patrick alluded to the adoration of the sun as prevalent among his contemporaries, and as late as 1844 flowers used to be deposited at the altar of the sun on Mount Callan (County Clare) the first Sunday in August. In the 18th century it appears that bulls and rams were slaughtered on this spot.¹⁶ The date was called Crom Dubh's Sunday, and was observed not only here but in many parts of the country with pilgrimages and games. In 1844 Crom was said to be a god, and later tradition from Mayo declared that "bad as he was,

it was he that was giving the people the light of day, the darkness of night, and the change of seasons." Presumably then Crom Dubh, venerated in the 19th century, is identical with Crom Cruach, the chief idol of Erin, which was overthrown by St. Patrick 1400 years before.¹⁷

The pagan festival of Lughnasadh, which seems to mean the wedding of Lug, the sun god, and to commemorate his marriage with Eriu, the incarnation of Ireland, was held also on the first Sunday in August.¹⁸ The place was Teltown in Meath, and even in modern times young men and women used to resort thither to arrange trial marriages, which, if they turned out badly, could be broken by the pair's resorting to the same spot a year later, turning back to back, and walking away from each other. The ceremonies were brought to an end by the clergy, but the phrase, "a Teltown marriage," is still applied to irregular unions.

The celebration of May Day or May Eve with bonfires in which a horse's skull was burned or by the decoration of a May bush with candles seems to be a relic of the pagan feast of Beltaine, which ushered in the summer. Six months later on November Eve, the beginning of winter (Samhain) was the occasion for the lighting of bonfires and for processions from house to house to solicit contributions of coin and food. In County Cork the procession was led by a man called the "White Mare" (*Lair Bhan*), wearing a white robe and carrying a rude representation of a horse's head.¹⁹ On this same eve the peat fires in the cottages were put out, to be lighted afresh the following morning. The fairies and the spirits of the dead were supposed to be abroad, food was set out to propitiate them, and churchyards were carefully avoided.

Another practice linked to the immemorial past is the cult of springs throughout Ireland. In many places the peasants still resort to these holy wells, pass round them sunwise (*deiseal*) on their hands and knees, and leave pins or buttons in the water or hang rags on thornbushes nearby. Doubtless these rites and offerings reflect an ancient cult of the divinities of the spring, but they have been adapted to the Christian faith by naming the wells after the saints and addressing prayers to them. The waters are generally credited with healing virtues.

The belief in fairies is by no means extinct. They dwell under the hills, in prehistoric barrows or earthen forts, or near some solitary thornbush. To cut down such a bush was sure to bring some calamity. The association with barrows (*side*) has given the fairies the name of *daoine side* or in English "shee folk," and their size is responsible for the name *daoine beaga*, "little folk." They may ride to hunt, or stir up an eddy of dust, or engage in battles, or steal babies, or milk cows, or prevent butter from forming in the churn.

In Connaught the king of the fairies is Finbheara (pronounced Finvarra), while in Munster there are three fairy queens. Clíodna (pronounced Cleena) used to lead the revels within a great rock near Mallow on May Eve, and was reputed to carry off good-looking young men from fairs held in the neighborhood. Aine and her fays throng the slopes of Knockainy (County Limerick) on Midsummer Eve. The country folk of the neighborhood at this same time used to go round the hill, carrying lighted wisps, to a certain little mound, and then

proceed down to the village to visit the meadows and cattle. Once, when some girls lingered behind, Aine appeared to them and asked them to leave the hill to the fairy folk. She is said to be the mother of Earl Gerald, who sleeps under the castle of Mullaghmast. The third of these fairy queens was Aoibhíll (pronounced Eevíl), and all three were regarded as beneficent beings who warded off disease from the sick.

But these and other female fairies also assume the uncanny role of a banshee (*bean síde*, fairy woman), whose warning wails are heard on the approach of calamity to the chief of some clan. Aoibhíll is the banshee of the Dalcassians of North Munster, Clíodna of the MacCarthys and other families of South Munster. Though rarely visible, the banshee may appear as a beautiful, pale young woman, with floating hair. The warning fairy may also take the gruesome form of the Washer of the Ford, a woman usually seen washing the bloody clothing and armor of those who spy her and who are about to be killed.²⁰ The antiquity of this concept is vouched for by the fact that the Irish goddess, the Morrigan, is described, in a poem ascribed to the 8th century, as washing spoils and entrails. There was current recently in County Clare the belief that Richard de Clare, the Norman leader of the 12th century, had met a horrible beldame, washing armor and rich robes "till the red gore churned in her hands," and had been warned by her of the destruction of his host.

There are several other types of supernatural creature familiar to the Irish peasant. There is the leprechaun (probably *luchorpan*, little body), a solitary dwarfish shoemaker, gaily dressed in old-fashioned clothes. If a person can catch him, he can be forced to give up his treasure, but he will vanish if one takes one's eyes off him for an instant.

There are mermaids who, like the Welsh lake ladies, marry mortal husbands, bear them children, but return to their subaqueous homes. The *puca* is a sprite of the most variable forms and functions. He may appear as a bull, a horse, a goat, an ass, or a combination of several animal shapes. He may, like Milton's "drudging goblin," good-naturedly do the housework while the family sleeps, or he may snatch the nocturnal wayfarer, take him for an involuntary ride on his back, and at cockcrow throw him off into a pool. This latter prank seems to relate him to the water horse, which is supposed to emerge from a lake and which, if set to a menial task, will drag a mortal back into and under the waters. Still another supernatural animal of popular tradition is the Glas Ghaibhneach (pronounced Gainach) or Glas Ghaibhleann (pronounced Gavlen), that is, the gray cow of Goibniu, who was the Wayland or Vulcan of the Irish pantheon, and also the provider of an inexhaustible feast. The animal is said to have presented herself before every house in Ireland, giving to each a plentiful supply of milk gratis, but, offended by the avarice of a woman who kept some of the milk for sale, she plunged into the sea and made for Scotland or Wales.

It is impossible to list the infinite number of Irish beliefs about ghosts, corpses, days and seasons, natural phenomena, animals and plants, as well as the countless minor rituals, customs, and games, and we will turn to the Isle of Man.

The Manx preserved into the 19th century not only

the usual beliefs about fairies but also two remarkable relics of the cult of Manannan, the Irish sea god. On Midsummer eve the people of the neighborhood used to carry green meadow grass to the top of Barule in payment of rent to Mannan-beg-mac-y-Leir. The grandfather of a woman living in 1910 used to pray to the same divinity for a blessing on his boat and a good catch;²¹ and he could hardly have been the only one to do so. There was a belief that Mannan was a great magician who could create an illusory fleet out of peashells and sticks, to discourage an invasion of the island. As in Ireland there was also a cult of springs, with the usual accompaniment of offerings and reported cures. The Manx counterpart of the water horse was called *glashlyn*, and that of the *puca* was well known as *fenodyree*. The latter, too, was sometimes a faithful drudge and, if rewarded with clothing, was ungrateful enough to depart.

May Day was called *Laa Boaldyn* (Day of Beltaine) and was elaborately celebrated. The evening before, people climbed the mountains to set fire to the gorse and scare away the fairies; on May morning there was a great blowing of horns for the same purpose, and flowers were placed over the doors to ward off malignant influences. In the 18th century most of the parishes witnessed a procession to the common, and a sham battle, in which the May Queen's forces of young men engaged those of the Queen of Winter, represented by a man in woman's clothes, loaded with furs and woolen wraps. After the fray the men and maids of the winter party repaired to a barn to divert themselves, while the May Queen's party remained to dance and feast on the green. This was, of course, a seasonal rite whose origin is lost in the mists of time. Ancient also was another custom—the hunting of the wren on the day before or the day after Christmas. Every wren that could be found was killed, and the corpse of one was carried from door to door, its feathers were exchanged for coins, and finally the carcass was solemnly buried. This hostility to wrens was accounted for by a legend that a malign fairy, who enticed men into the sea, had assumed this disguise.

In the highlands and islands of Scotland vestiges of animal and human sacrifice persisted into the 19th century. In South Uist about 1875 an old Gael was observed furtively killing a lamb on a knoll at sunrise.²² Near Callander on May Day boys used to cut a round trench in the turf, make a fire in the midst, draw bits of cake, which they had baked, out of a bonnet blindfolded, and whoever got a piece which had been blackened was supposed to be sacrificed and had to leap through the flames three times. In the Hebrides St. Michael's Eve was the occasion for circuiting the graveyard sunwise and for a dance in which the death and resurrection of the year were symbolized by a woman.

The Washer of the Ford of Celtic Scotland is sometimes known under the generic name of *ban nighechain* (little washerwoman) or *nigheag na h-ath* (little washer of the ford), and is described as a little woman with red webbed feet, washing clothes of battle after dark at a ford. Or she may bear the name of the Irish goddess Badb. The banshee is known as the *caoineag* (wailing woman), is seldom seen, but often heard in the hills and glens, by lakes or running water. Other supernatural beings are the *tarbh uisge* (water bull) and the

each uisge (water horse). The latter assumes human shape, woos maidens, and can be recognized only by the water weeds in his hair.

Insular Brythonic In Wales visiting of springs for healing, throwing pins into them, and tying rags on adjacent bushes were rites practiced in modern times but are now extinct. We have record from the 19th century of a ritual combat between the forces of Summer and Winter, very similar to that observed on the Isle of Man. The congregating of the country folk at the Llyn y Fan Fach on the first Sunday in August has already been mentioned. A most curious custom, observed mainly in South Wales, bears a marked resemblance to that of the White Mare in County Cork.²³ It belongs to the Christmas and New Year season and goes under the name of *Y March* (the horse) or *Y Warsel* (the Wassail) or *Mari Lwyd*, which may mean either "Gray Mare" or "Holy Mary." The principal figure of the party was a man carrying a horse's skull (or a wooden imitation) and draped with a sheet. The celebrants went from house to house, sometimes engaging in a poetic contest with the inmates, and receiving from them money-gifts or drink in a wassail bowl.

The belief in fairies was strong throughout the principality. The general name was *tylwyth teg* (fair people); sometimes the diminutive ones are called *ellyllon*, and the females *y mamau* (the mothers), a title which links them to the pagan Celtic deities, the *Matres*. These people live in lakes or streams or in hollows of the hills. Associated with them are the usual traditions of moonlight dance, the supernatural passage of time, the stealing of children, and the substitution of changelings.

There are special varieties of the fairy folk. An invisible island off the coast of Pembrokeshire is inhabited by the *Plant Rhys Ddwfn* (children of Deep Rhys), who are midgets in size but assume human form to visit the market towns on the mainland and do their shopping. There is a *coblyn* or Knocker, whoseappings are heard in the mines. The Washer of the Ford seems to be represented by the *Gwrach y Rhibyn* (Hag of the ?),²⁴ a spectral female in black with batlike wings, who was to be seen plashing the water of a pool and whose shriek foretold misfortune or death. The *puca* is obviously the same being as the Irish *puca*; he may be a willing drudge or a mischievous poltergeist or a will-o'-the-wisp.

Until recent times belief in the Wild Hunt flourished throughout the principality, though with marked variation in detail. Sometimes the master of the hunt is robed in gray and rides a gray horse; sometimes he is the Devil and his mount is black with fiery eyes. The hounds are called *Cwn Annwn* (hounds of fairyland or hell) or *Cwn Mamau* (hounds of the mothers). Sometimes they are described as white with red ears; sometimes they are followed by a cavalcade of doomed souls. The phantom chase is usually heard or seen in mid-winter and is accompanied by a howling wind. It seems to be, as elsewhere in Europe, a storm myth and its antiquity is suggested by its appearance in the mabinogi of *Pwyll* (c. 1060).

Two of the supernatural animals of Irish folklore are known also to the Welsh. There is the *ceffyl-dwr* (water horse), which rises above pools and waterfalls and may be caught and mounted, but, after a wild flight through the air, throws its rider to the earth. There is also the

Fuwch Frech (brindled cow). When anyone was in want of milk, she would fill the biggest pails; but once a wicked hag milked her dry, and the animal left the country. According to another version, an avaricious farmer was about to slaughter the marvelous cow, when his arm was paralyzed and a fairy figure appeared, calling the cow and all her progeny; and the fairy and cow all disappeared into a lake.

Cornwall, a generation or more ago, retained many of its old beliefs and practices. The fairies were generally called the little people or piskies, dwelt among megalithic monuments on the moors, danced in rings, thrashed the grain by night, employed human midwives, exchanged their own for human babies, led belated travelers astray. The sea strand near Newlyn was haunted by a dangerous sprite called *Bucca* (evidently the same as the Welsh *pwca*), who had to be propitiated by an offering of fish; and the mines were haunted by knockers, who warned the miners of danger. Boulders and other rock formations were attributed to the giants.

The Wild Hunt went under the name of the Devil and his Dandy Dogs. A wayfarer on the moors on a windy night might be pursued and overtaken by the yelping, fire-snorting pack and their horned and tailed master, which could only be put to flight by prayer. The demon hounds are also said to pursue a certain steward named Tregeagle, who died in 1655, after acquiring a wicked reputation for all manner of crimes. Tregeagle himself can also be heard moaning and cursing, as he tries to empty Dosmary Pool with a leaking limpet shell or to bind a truss of sand. The soul of King Arthur enjoys a happier fate, for it inhabits the body of a cough or puffin, and bad luck would follow the Cornishman who killed a cough.

Cornwall could boast many holy wells with curative virtues, chief of them St. Madron's well near Penzance. It was resorted to particularly in May when its oracular waters were supposed to indicate by bubbles the number of years before a maiden's marriage. Sickly children and invalids were plunged into it; others drank the water and then lay on the ground all night; pieces torn from the patients' clothing were hung on a thorn tree overhanging the spring. At several towns Furry Day was observed early in May with the gathering of hawthorn branches and with dancing in the streets and in and out of the houses. At Helston, on May 8 the Furry festival has been held in very recent years; and the story goes that it was instituted to celebrate a fight between St. Michael and Satan.

Continental Brythonic In Brittany belief in fairies of various kinds, though moribund, is still feebly alive. Along the coast of eastern Brittany the female fairies go by the name of *bonnes dames* or *nos bonnes mères les fées*, recalling the ancient Celtic cult of *Matres* and the Welsh *mamau*. The sirens of the western seaboard and islands were known as Morgan or Mari Morgan, and had male counterparts. There were also the ghostly *cannered noz* (washerwomen of the night), who were supposed to be washing their shrouds as a penance and could be heard about midnight beating their linen on the banks of pools or streams. The male dwarfs were usually called *corrigan*s and were the subject of the usual superstitions: they guarded treasure, helped in the housework, danced on moonlight nights among the menhirs and dolmens, led travelers astray with a torch,

could transform themselves into black horses or goats. A mortal who found himself in the midst of a *corrigan* dance was likely to hear them repeating in chorus "Monday, Tuesday, Wednesday," and if he could complete the list would win their favor. A child suspected of being a changeling was called "Little Corrigan."

More powerful and persistent is the group of Breton beliefs about death and the dead. The hoot of an owl, the croak of a raven, or even the chatter of a magpie is an omen of death. The sight of a phantom funeral prognosticates a real one. When the soul leaves the body, it may be seen issuing from the mouth in the form of a gnat or fly. Its destination, according to one witness, is the land of the Setting Sun²⁵—a concept which parallels the identification of the personified Sun with personified Death in the folktale mentioned above. But the home of the dead may also be underground, inside a hollow hill, or under the sea. At any rate, the dead constantly return to their earthly haunts, and stories of revenants seen in broad daylight are common. Especially on Hallowe'en are the spirits abroad, and the living are expected to prepare a feast for them. As evidence of their ghostly presence stools and plates have been heard to move.

The personification of Death, known as the Ankou, is a living reality to the Breton peasant. He is a gaunt or skeletonlike figure bearing a sword, scythe, or lance with which he strikes down his victims. The creaking of the cart in which he rides may be heard in the dead of night, even though the rider and the cart may be invisible. According to one tradition, the home where Ankou rests after his nightly labors is a palace, brilliantly lighted by candles, of which the entrance is a pit in the Bois de Huëlgoat.

Megaliths abound throughout the country and are naturally responsible for many rites and etiological tales. Aphrodisiac rites were enacted at certain menhirs. Girls would rub their naked bodies against one of these stones, and then pick a husband from among the eligible young men who congregated in the neighborhood. If a wife was sterile, she and her husband at the full of the moon would strip naked beside a menhir; he would chase the woman around it until he caught her and then cohabit with her at its foot. Pregnant women used to rub themselves against a statue called the Venus of Quinipily in order to ease their labor. The imposing stone alignments of Carnac are explained as pagan soldiers miraculously turned to stone by St. Cornély, while another legend attributes their erection to dwarfs. Elsewhere we find a petrified hunting party and a marriage procession. Near Trébuerden is a dolmen reputed to be the tomb of King Arthur.

One of the most remarkable of Breton practices is one reported from the year 1845. After a prolonged drought all the inhabitants of Concoret formed a procession with banners and a crucifix at the head, marched to the spring of Baranton, and prayed for rain. This is palpably a Christianized form of the custom reported by Wace in his *Roman de Rou* (c. 1170) that huntsmen in the forest of Brecheliand were able to produce rain by pouring water from this spring on a stone block nearby.

The folklore of the Celtic fringe naturally contains much that belongs to the common heritage of the Indo-European peoples. Indeed, a little may have been bor-

rowed from or influenced by the Scandinavian settlers in Ireland and the coasts of Scotland. The Bretons may have preserved traces of an older Armorican culture. Then there has been the impact of the English and the French. But the comparative (though far from complete) isolation of the humbler Celtic-speaking classes from the races from the East has left them with a distinctive tradition, so that even today it is possible to point to customs and tales which have survived a millennium and more on Celtic ground.

ROGER S. LOOMIS

Centaurs In Greek mythology, a race of Thessalian monsters, half man, half horse: originally perhaps simply the wild horsemen of Thessaly, noted for their riding ability. The Centaurs seem to have been of two kinds: the wise and friendly companions of the Greek heroes, like Chiron and Pholus; and the wild, lawless, violent beasts who were conquered and destroyed by Hercules and the Lapithæ. The latter species were the

offspring of Ixion and Nephele, Nephele being a cloud substituted when Ixion attacked Hera, or the children of Centaurus, the offspring of this union, and mares. Another myth says that the Centaurs arose from the semen of Zeus spilled in his passion for Aphrodite. The Centaurs had names suggestive of trees or mountains and are somewhat similar, as forest and mountain spirits, to the Sileni and the Satyrs. They have been compared to the Hindu Gandharvas, but as there is correlation neither in characteristics nor in name the connection is now discredited. The Centaurs in later times were pictured as being ridden by Eros or as drawing the car of Dionysus. Their earliest form is that of a man's full body with the body and hind legs of a horse attached at the waist; later, the horse's body, with all four legs, was surmounted by the head and torso of a man. The Babylonian sign for the constellation Sagittarius was, as early as the 11th century B.C., a Centaur. Compare KIMPURUSHAS; LAPITHÆ.

centipede In China the immortal or shape-shifting centipede is one of the protagonists in a battle between shape-shifters. During combat one of the warriors changed into a centipede in a black cloud and vomited forth a stupefying fog. He was overcome by the hero in the shape of a five-colored cock who flew into the cloud and pecked the centipede to pieces. With the scorpion, snake, lizard, and toad, the centipede is one of the "five venoms" in China, and is painted on cakes on the Double Fifth (fifth day of the Fifth Moon). A mixture of spirits of wine and phosphorus rubbed on the heads of infants on this day will protect them against the five venoms. In an Indian tale a king who suffered from "centipedes in his head" was given similar treatment.

There is a West African folktale which features a helpful centipede. The word centipede is said to be tabu in Java and among Malayan tin-miners. In Tahiti the two indigenous centipedes are regarded as shadows of the medicine gods, and are never disturbed or killed. If one can be induced to crawl over a sick person, that person will surely recover. [RDJ]

Cephalus In Greek mythology, the name of two men almost inextricably confused: one, the son of Hermes and Herse, became father of Phaethon by Eos; the other, son of Deion of Phocis and Diomedes, was grandfather of Laertes, and husband of Procris (Procne), the daughter of Cecrops or Erechtheus. Eos was attracted to the latter, and when he rejected her advances revenged herself by causing him to doubt the fidelity of Procris. Cephalus disguised himself and with the aid of gifts managed to seduce his wife, then disclosed his identity. Procris fled to Crete, where she was received by Minos. There she obtained from Minos the perfect hunting dog and the spear that never missed, after drugging him when they slept in the same bed, to avoid being poisoned by the loathsome insects and reptiles that bit and killed the women with whom Minos had intercourse. Dressed as a youth, she returned to Cephalus and in turn was able to confound him when he accepted her love in return for the dog and the spear. The two then became reconciled, but Procris remained jealous of the attentions of Eos and often spied upon Cephalus as he hunted. One day, hearing him call on the evening breeze (*aura*) to cool him and

thinking he called another woman, she moved in the bushes from which she was spying, and quickly Cephalus hurled the infallible spear, killing her. The hound was lost in Thebes when, assisting Amphitryon, Cephalus loosed it at an uncatchable fox. Zeus solved the dilemma by turning fox and dog into stone. Cephalus, to atone for the killing of Procris, exiled himself to the island later called Cephalonia, and there threw himself into the sea.

Among the motifs woven into this story are K1813 and K1814—the disguised husband (disguised wife) wooing and winning the love of the spouse; K675—sleeping potion given to man who is to pass the night with a girl; D1653.1.2—the unerring spear, or D1084—the magic spear; N322.2—husband unwittingly kills eaves-dropping wife; and Q301—jealousy punished. For several of these motifs, the tale of Cephalus and Procris is the type tale in which the motif appears.

Cerberus In classical mythology, the doglike monster who served as guardian of the portals of Hades; the janitor of the underworld home. Cerberus was the offspring of Typhon and Echidna and lived in a den on the infernal side of Styx, where he prevented the shades from leaving the underworld and greeted, sometimes in friendly manner, sometimes snarling, the souls ferried by Charon. The dead were therefore provided with honey-cakes to feed Cerberus as they passed, the traditional "sop to Cerberus." His form and name, not described in Homer where he is simply the dog of Hades, are gradual developments: Hesiod, first to use his name, described him as having fifty heads. The three-headed form, with dragon's tail and neck and back bristling with serpents' heads, was not fixed until the time of the Roman poets. Cerberus figures in the many classical stories of descents to the underworld, principally in the harrowing of hell performed as the twelfth and most daring of the labors of Hercules. Granted permission to take the monster if he could without weapons, Hercules seized the dog's heads and though bitten by its tail carried it to Eurystheus. This is the only exploit of Hercules specifically mentioned in Homer, who adds that Hercules threatened even the god of the underworld with his arrow.

Other watchdogs of hell or of death have been compared to Cerberus. The Vedic dogs of Yama, Syama the black and Sabala the spotted, were either guardians of Yama's realm against those who tried to enter or psychopomps sent to find and guide the dead. The wolves of Odin, Geri and Freki, ran through the land when war raged. The Egyptian Ammit was a monster guarding the underworld which had the trunk and legs of a hippopotamus and the head of a crocodile.

Cercopes In Greek legend, a race of apelike but human pigmies. Following their thievish bent, they tried to steal the weapons of Hercules. He caught them and tied them upside down on a pole, whereupon they discovered that he was the black-rumped man their mother had warned them of. Their jesting at his hairiness, however, pleased Hercules so that he released them. They were finally transformed to apes or stones by Zeus for trying to trick him.

ceremonial drinking A recent observance, with many elements borrowed from Catholic ritual, of various Southwestern North American Indian groups. In native

North America north of Mexico fermented beverages of any sort were unknown to all tribes in aboriginal times, but ceremonial drinking of *sahuaro* and maize wine, to induce rain and for the general good of the crops, is now a practice among various Yuman tribes, the Pima, and the Yaqui, all of whom live near the Mexico-United States border. The *sahuaro* ceremony is held before the rainy season; *sahuaro* syrup is mixed with water in large ollas or clay pots in a ceremonial house; the ollas are set in a circle, and while the syrup ferments the watchers smoke ritually, perform rain-making rites, and dance a circle dance each night. If no rites such as these are held, men sing during the ritual drinking of the wine by the shaman, singers, and people in general. When maize wine is made the drink is carried about the village during a procession and various Mexican dances, *pascolla*, deer, and *matachin*, are performed during the ceremony. Catholic and native elements of ritual are curiously blended in these recently adopted drinking ceremonies.

For the drinking of a non-intoxicating drink, as an emetic, see **BLACK DRINK**. Various tribes in central and southern California also drank a decoction made from the pounded roots of jimsonweed (*Datura meteloides*) in order to induce visions in which they received supernatural power. This drink was administered to youths by elderly persons, more or less ceremonially; emphasis was laid, however, on the dangerous nature of the drink. Persons taking it fell into a stupor and had to be carefully watched; they were obliged to abstain from food and water for a certain number of days before and after drinking jimsonweed. [EWV]

Ceres The ancient Italian goddess of growing grain and of harvests: identified with Demeter. In her honor the spring Cerealia was held at Rome. Her cult was one of the oldest plebeian cults of Rome.

Chac The Maya rain god, the equivalent of the Aztec Tlaloc. By extension he was also a god of the wind, thunder, lightning, of fertility, and of agriculture. He was at the same time one god and four gods in one, each of whom was associated with the four cardinal directions, and each of whom had his distinctive color: red, east; black, west; white, north; yellow, south. Chac was benevolent, the friend of man. To the Maya farmer he was even more important than Itzamna, for through him, one had food, and hence, life. [GMF]

cha-cha A gourd rattle used to accompany Haitian vodun dancing. The name is onomatopoeic and is also occasionally given as *kwa-kwa*.

chacóna A Spanish couple dance of the 16th century: the musical form is in slow triple time—a basso ostinato with variations. Of nebulous heritage, it was formerly an exotic, sensuous, theatrical dance much like the sarabanda. It was transformed by the French into a social dance to conclude a ball, with a characteristic multiple form in contrast with the binary or ternary form of other dances. All took part in the first figure, then a couple danced between the lines, next came the ensemble, then another couple variation, and so on up to eight variations or couplets. This intrinsically rondo form later became, in the hands of musicians, the highly developed theme with variations that resembles the equally notable passacaglia. [CPK]

chacs or chaacs In Mayan mythology, minor gods of rain and plenty: probably subordinate to Chac, the rain god, as the Aztec tlaloacs were subordinate to Tlaloc. Like the bacabs, the chacs were associated with the four directions. A spring festival was held in which the bacabs and the chacs were jointly worshipped. Also, in March, the hearts of the different species of wild animals were sacrificed to the chacs and to Itzamna at a festival designed to bring the rain for good crops. The four men chosen to assist the priests at the festivals were called chacs.

Modern Mayan mythology, under the influence of Christianity, makes of the chacs (one of the kinds of *yuntzilob* or lords) little bearded men, some of whom live in the sixth of the seven heavens, smoking and tossing away their cigarette butts, which become the shooting stars. The chacs are of varying rank, each kind with specific rain duties, e.g. those causing steady rain and those causing quick, heavy storms. They act under orders from Jesucristo, riding on horses through the air and scattering rain from their calabash containers.

chain tale A folktale based on a characteristic series of numbers, objects, characters, days of the week, events, etc., in specific relation. Cumulative tales are chain tales, but there are many distinctive chain tales which are not cumulative. Typical is the story of the origin of chess (Z21.1): a chain tale involving numbers in geometric progression. The inventor of chess asked in payment one grain of wheat for the first square, two for the second square, four for the third, eight for the fourth, etc., etc. But the king could not pay the great amount. The *Carol of the Twelve Numbers* belongs in this category also. Another story (Z21.3), similar to the children's game *The Farmer Takes a Wife*, tells how the rich farmer paid his servant: the first year he gave him a hen, the second year a cock, the third a goose; goat, cow, horse, etc., continued the series until finally the young man was given the farmer's daughter for wife and inherited the farm. Still others are the familiar nursery rime: Solomon Grundy/ Born on a Monday/ Christened on Tuesday/ Married on Wednesday/—Buried on Sunday (Z21.4.1.3). and the exasperating story about the house that burned (Z23.1). The house is burned down.—That is bad.—That is not bad at all; my wife burned it down.—That is good.—That is not good,—etc., etc. The listener never hits on the right answer. Very famous is the possibilities chain:—I hope I am not called to go to war.—Do not be alarmed. There are two possibilities: either war will break out, or it won't. If it doesn't, no cause for alarm; if it does, there are two possibilities: either they take you or they don't. If they don't, no cause for alarm; if they do, there are two possibilities: either you get combatant or noncombatant duty. If noncombatant, no cause for alarm; if combatant, there are two possibilities: etc.

The chain tale is always amusing and often childish, but the device is also occasionally used for a more pretentious narrative. One such is the story of the "The Ambitious Chaṇḍāla Maiden" in the *Kathā Sarit Sāgara*. A certain young Chaṇḍāla maiden had decided to marry the highest of all sovereigns. So one day she followed the procession of the king, intending to attract

his notice and marry him. A hermit stood by the way. The king got down from his elephant and bowed at the holy man's feet. So the hermit is greater than the king, she thought, and followed the hermit. The hermit entered the temple and bowed before Śiva, so the maiden decided to marry the god. Just then a dog ran in and lifted his leg against the pedestal of the image. So the dog is greater than Śiva, thought the girl, and followed the dog. The dog ran into the house of a young Chaṇḍāla and rolled with joy and love at the young man's feet. So the Chaṇḍāla maiden married the Chaṇḍāla youth, convinced that her caste was the best of all.

Chakal Lele A primitive dance of Papua miming the swift actions of a hunter after his prey. [GPK]

chalcedony A translucent waxy gem of the quartz family but never found in crystalline form; it is usually a smoky blue, but may be cloudy white or yellowish. Blue chalcedony is sometimes confused with sapphire in ancient works and under the name of leucachate it was sacred to Diana. California Indians picked up bits of this stone for amulets. The Egyptians used it for their scarab seals. It was credited with driving away phantoms and visions in the night and banishing sadness. It secures public favor, gives victory, and protects the wearer from shipwreck and at times of political revolution. It is mentioned as one of the foundation stones of the new Jerusalem in the Apocalypse. White chalcedony is worn by Italian mothers to increase the supply of milk. See CARNELIAN.

Chalchihuitlicue The lady of the jade green skirts; the Aztec underworld goddess of flowing water; wife or sister of Tlaloc, the rain god, with whom she jointly held rule over the waters. She was worshipped in connection with the tlalocs, the assistant rain gods, whose sister she was sometimes said to be. Maize and serpents were associated with her. She was both a cleansing goddess and an angry wrecker who drowned sailors; at the first bath of the newborn child Chalchihuitlicue was invoked. She presided over the sun of one of the mythological cosmogonic periods, and it was during this period that maize first was used on earth. Later, the son of Quetzalcoatl and Chalchihuitlicue was immolated in the making of the sun we now see in the heavens. The goddess is depicted bearing a tasseled white and blue headband and a blue neckband.

Chameleon A sacred character of West African mythology. In Dahomey, he is associated with Lisa, the sun god, since in the tales, it is recounted how this animal brought fire to man from the sun. [MJH]

↪ **Chameleon** is also a prominent character in the origin of death stories of East African mythology. In a Duruma myth, when man first appeared on the earth, the animals consulted together in regard to his fate. Lizard wished all men would die. Chameleon said he wished they could live forever. They ran a race: whoever won would make the decision. Lizard won, so the fate of man is to die. Now Chameleon goes slowly and silently on his way, wishing he could have prevented death.

In a Yao (Mozambique) myth it was Chameleon who first discovered man (a man and a woman) in his fish-trap. Everybody was greatly puzzled over the new

creatures; but when Chameleon showed his catch to Mulungu (a sky deity), Mulungu said, "Put them down on the earth and they will grow." This was done. All the animals watched to see what man would do. Man made fire; he killed the animals and ate them; at last the bush caught fire and all the creatures had to run. Mulungu went into the sky to live. Thus the gods were driven off the face of the earth by the cruelty of man.

In the Nyasaland death myth, God gave messages to Lizard and Chameleon to take to man. Chameleon was to tell the people that when they died, they would return. Lizard was to tell them that when they died it was the end. Lizard got there first and said, "When men die, that is the end." In a little while came Chameleon. He said, "When men die, they will return." The people did not know which one to believe. But today they kill Chameleon with tobacco juice whenever they see him, because he came too late with good news. Lizard is also hated, because of the news he brought, and he runs for his life whenever he sees a man.

champion's light The light of battle seen over the heads or radiating from the faces of warriors during battle. The ancient Irish *lón láit*, literally, light of battle, was customarily seen blazing from Cuchulain's forehead and face during the rage and frenzy of the fight. The classic example is the light over the head of Achilles, which Athena kindled and caused to blaze fiercely during the retrieve of the body of Patroclus from the Trojans. Compare ILLUMINATING BEAUTY.

champion's portion In early Celtic times, the choicest portion of a feast, assigned to the bravest warrior there. Often it was given without question to the hero of the moment, unanimously beloved and acclaimed; often it was contested instantly, and the assignment decided by a fight in the feast hall. The story of *Bricriu's Feast* recounts the famous and prolonged contest between Loegaire, Conall, and Cuchulain for the champion's portion at the feasts of Ulster.

chanques, chanekos, or chanes Dwarflike peoples of supernatural qualities: believed in throughout Mexico and Central America. In parts of Mexico they are known by the term chanèque, or its variants. Sometimes good, sometimes bad, they frequently steal the souls of human beings, thus causing illness or death. In Guerrero, Mexico, they can be frightened away by tobacco smoke. Among the Popoluca (Veracruz, Mexico) they are "masters" of game to whom hunters make offerings and burn incense to obtain supernatural approval of their expedition. See MEXICAN AND CENTRAL AMERICAN INDIAN FOLKLORE; SOUL LOSS. [GMF]

changeling An ill-favored, deformed, huge-headed, or imbecilic child, believed to be the offspring of fairies (in the British Isles, France, Italy), of underground dwarfs or gnomes (in Germany, Scandinavia, and among Slavic peoples), or of a witch or demon (in various parts of the world), and supposed to have been substituted by them for a normal or beautiful one stolen away in infancy while unguarded or before baptism. The changeling belief stems from one still more ancient: that infants are peculiarly liable to demoniacal attack until after certain purificatory rites.

The best way to get rid of a changeling is to make it laugh if possible (in the British Isles, Brittany,

France, Germany). The mother who broke an egg in two and set water to boil in each half had great success. The watching changeling said, "I'm fifteen hundred years in this world and never saw that before"; he burst out laughing, and instantly the true child was in its place. This story of the eggshells (either boiling water in the two halves or brewing the shells of twelve eggs in a pot) is told from Germany, France, Brittany, Ireland, and Wales, to Japan. There are occasional other stories (English) of how exceeding loving care bestowed upon a changeling will so gratify the supernatural mother that she will bring the human baby back to the human mother and give both good luck forever. In Brittany, Wales, and France, there are stories of a human mother who was advised to whip the changeling child in order to get her own child back. She did so; the changeling wailed; and "one came crying, 'Do not beat him. I have not done yours any harm,'" and the exchange was made.

change of sex A folktale motif (D10), appearing in stories all over the world, in which a man becomes a woman, or a woman becomes a man. The most famous tale of the change of sex is that of Tiresias who saw snakes coupling and not only was changed into a woman but afterwards was transformed back into a man. The motif appears often in Greek myth and legend, for example in the story of Cæneus. The myth of Callisto seduced by Zeus in the shape of Artemis is akin to this theme. Related also are other transformation motifs, principally those of the beast marriage, the disguised suitor, and the use of magical objects. Change of sex occurs often in Persian and Indian tales and is accomplished through the medium of magic pills or plants, or by exchange with some supernatural being. For example, in the *Mahābhārata*, the girl Śikhandī is brought up as a boy, marries as a man, and is contemplating suicide when a Yaksha offers to trade sexes with her and leave her a man. This she does, and is overjoyed to discover that the Yaksha has been condemned to remain a woman until the death of the transformed man. The magic well or magic caldron which changes the sex of one entering it appears in Arabic stories. In a Koryak myth, Big Raven, the ancestor of the Koryaks, transforms himself into a woman by cutting off his sexual organs. After a while his wife, Miti, comes to the camp where he is living. She is masquerading as a man and eventually wins Big Raven as her bride. When they lie down together, however, they are at a loss. But by and by Big Raven's organs, which he has kept, migrate to their rightful place, and in the morning wife and husband leave the hut as they formerly were. Apparent change of sex, by dressing as man or woman, is likewise a widespread motif. The change of clothes of the sexes still occurs at certain holidays in European culture, as for example the Halloween, Christmas, and (in the United States) Thanksgiving Day masquerades. This switching of roles was formerly resorted to as a counter to the evil eye and may have developed the concept utilized in the folktale. Certain instances in medical records, however, indicate that an actual change of sex occasionally takes place, and given an occurrence as abnormal as this, in a simpler society the story-telling mind would naturally incorporate the example into the folktales.

Chang Fei One of the Gods of Butchers in Chinese folklore and legend: a composite god (i.e. represented by parts of two animals into which he was transformed). He is eight feet tall with a panther's head, a swallow's chin, and voice of thunder. Originally he was a butcher: butcher to Kuan Kung, with whom he got into a fight, and to Liu Pei, who separated them. The date of the oath of friendship and brotherhood taken by these three is given as 191 A.D. They are often referred to as China's "Three Musketeers," three military heroes who swore allegiance in an effort to unify their land. Later Chang Fei again became a meat-seller. But in the temple of Kuan Kung, Chang Fei is numbered among the 24 assessors of that deity, one of 24 heroes deserving gratitude for service to their country. [RDJ]

Chang-hko In Káchin (Burma) mythology, the woman who was saved (alone or with her brother Pawpaw) in a boat during the great flood. She and Pawpaw took nine cocks and nine needles with them. After days of storm they threw overboard one cock and one needle but the cock did not crow and the needle was not heard striking the bottom. This was repeated until the ninth day when the cock crowed and the needle could be heard, a sign that the flood had subsided.

After leaving the boat the two wandered around until they came to the cave of two nats (all nats survived the flood) who invited them to stay. Chang-hko soon had a child which the she-nat watched while the parents worked. Whenever the baby cried, the nat threatened to cut it to pieces at a place where nine roads met. Finally she did just that, scattering the pieces over the country but reserving some which she made into a curry. Then she put a block of wood into the cradle. When Chang-hko discovered what had happened, she ran out to the crossroads crying for her child. The great nat offered to make her the mother of all the nations of men. Immediately from each road sprang men—all the races—and Chang-hko claimed them all as her children. But they scoffed at her. In her anger she cried, "If you will not own me as your mother, then I will live upon you." And even today men must "eat to the nats" by giving them offerings.

Chang Hsien In Chinese folk belief, one of the patrons of child-bearing women: invoked especially for male issue and easy childbirth. He is depicted as a white-faced, long-bearded man with a small boy by his side. He holds a bow and arrow and shoots at the Heavenly Dog, T'ien Kou Hsing, the Dog Star, who is greatly feared by pregnant women. [RDJ]

Changing Woman The beneficent, ever-beautiful female deity of the Navaho and closely related Apache Indian tribes of the southwestern United States. Changing Woman is the mother of the two Apache culture heroes, Killer-of-Enemies and Child-of-the-Water. Her name derives from the fact that she can change at will from baby to girl to woman to old woman, and back again; also, she is the changing moon. [EJW]

Chang Kuo or Chang Kuo Lao (*Lao*, old) One of the Eight Immortals of Taoist lore, said to have lived in the 7th and 8th centuries: the typical old man. It is reported that he died about 746, but when his followers opened the tomb, it was empty. He was born old and is a great traveler. He rides thousands of miles a day

on his white donkey, which, the journey finished, he folds up like a piece of paper. He rides facing the tail and carries sometimes a phoenix feather, sometimes a peach of immortality, and sometimes a cylindrical musical instrument. He was always an expert conjurer, everywhere noted for necromancy. His image offering a child to a newly married couple is often placed in bridal chambers. [RDJ]

Chanukkah The Jewish Festival of Lights. See HANUKKAH.

chanson de geste Literally, song of deeds; Old French epic, usually consisting of thousands of lines, dealing with history and legend, for example the heroic feats of great men such as Roland, Charlemagne, Huon de Bordeaux, etc., written in *assonant* verse divided into thought sequences of varying length, called *laisses*, and sung to a brief, litanylike melody repeated for each line. The most famous example is the 11th century *Chanson de Roland*. Some, such as *Gormond et Isembard* and the *Chanson de Willame*, had burdens of a ballad type. *Chansons de geste* formed a part of the repertoire of the wandering jongleurs of the 10th and 11th centuries.

chanson de la mal mariée A type of French and Provençal song devoted to the faithless young wife of a cruel or impotent old man. Often with the connivance of servants or neighbors, she takes a series of lovers and defies the old man's wrath.

chanson de romance A love song; specifically such a song sung by a girl in payment of a forfeit at a Haitian Negro wake, when games are played to amuse the dead.

chant A monophonic style of singing or recitative in free rhythm, used as a heightened speech form or speech-song for the delivery of sacred texts, ritual formulas, or magical incantations in many cultures. The term is applied to such widely differing styles as the liturgical music of the Christian, Buddhist and Confucian religions; the cantillation of the Jews; the Indian cantillation or Vedic chant; the battle songs of various tribes; the complex ceremonial song cycles of such American Indian tribes as the Navahos; the incantations of shamans or special singers of numerous primitive peoples for curing, placating the supernatural, accompanying birth, puberty, and funeral rites; the singsong of children's counting-out rimes, jeering songs, jump-rope and ball-bouncing rimes, etc.

The Christian chants include the four great Western divisions, Ambrosian, Mozarabic, Gallican, and Gregorian, the Eastern forms, Byzantine, Syrian, and Armenian, and the Coptic and Ethiopian chants of northern Africa. Both Greek and Jewish influences are preserved in the melodies, but local folk elements distinguish each type. From the tropes and sequences of the Gregorian chant, originally devised to aid in memorizing complicated melismatas by suiting a syllable to each note, grew religious folk song in the vernacular and religious folk drama. Formulas of the Byzantine chant, which made use of free poetry for its texts rather than the psalm texts of the Western chants, are still preserved in the *colinde* of Rumania. The Coptic chant is sung chiefly by blind singers, who are considered the only people of sufficient spiritual and un-

worldly character to sing the sacred melodies, and the transmission of the form is thus entirely oral. It has developed, beyond the liturgy, a body of religious folk songs for festivals and other public occasions. The Ethiopian chant is sung by priests who maintain a strong volume to the point of exhaustion; dancing, hand-clapping, and drum-beating on the part of the congregation contribute to the attainment of an ecstatic state. This procedure is similar to that of the shout of American Negroes.

Jewish cantillation consists of melodic formulas intoned with Biblical texts, the musical elements having been transmitted orally until the 16th century. Oriental Jews sing without instrumental accompaniment, though in ancient times, accompaniment was always used. The unfixed melodies of their style are believed to have some part in the development of *cante flamenco*.

The Vedic chant is developed around a three-tone melody with high-pitched stresses on vowel sounds. High, middle, and low tones are accompanied by raising, leveling, and lowering of the head as an aid to correct placing of the tones, and notes are located by a system of finger-counting.

Julius Caesar recorded his observation of the battle chants of the Gauls, which were sung to the brandishing and clashing of weapons, as they invoked the help of their gods for champions at single combat and raised the cry of victory. Unrimed, alliterative chants were sung by the Milesians as they approached Ireland, calling on the magic of nature to assist them.

It is a common belief among primitive peoples that a special chant is taught to the singer by a supernatural being and that the song is then his inalienable property until passed on to successor or heir. Cosmogonic, genealogical, and mythological subjects form a considerable body of primitive chant, aside from the spells and curing formulas of the medicine men. Dancing may accompany the singing. [TCB]

 The popular English name for the curing rituals of the Navaho Indians of the American Southwest is chants. Elaborate origin myths, in which it is narrated how a deity or supernatural being performed the chant for the first time, are attached to the many Navaho chants which exist; during the course of a chant the famous earth- or sand-paintings of the Navaho are made as part of the curing ceremony. Chants last several days and nights; the chanter and his helpers must be paid, and oftentimes large groups of Navaho assemble from far and wide to witness the ceremony; food must be provided for these visitors. Certain Navaho are well known for their knowledge of the long texts of various Navaho chants. These texts or songs, which are chanted rather than sung must be repeated letter-perfect, else the entire chant is invalidated. No man should sing a chant more than three times a year; if he sings it oftener he will be stricken with the same disease which is cured by the chant. Grave errors in the singing of a chant may also be followed by disease; of Washington Matthews, who early learned and recorded the Night Chant, used for curing paralysis, it was said by the Navaho after Matthews was himself stricken with paralysis, that he must have learned the chant badly, and gotten its songs mixed up. [ewv]

chantey or shanty A strongly rhythmical work song of sailors, generally with a solo passage sung by the leader, or chanteyman, and a refrain roared in chorus by all hands to coincide with the concerted effort of the task. To the hard-fisted officers who mastered the square-riggers on which chanteying reached its peak, as well as to the singing men on the deck, these songs were as important in the working of the vessels as the straining ropes and the belling canvases at the masts. For every kind of back-breaking job aboard ship there was a song to pace the work. Three main types of chanteys became traditional for the three main kinds of labor: (1) Short-haul or short-drag chanteys, used when only a few lusty pulls were required, as in boarding tacks and sheets or "sweating up" a halyard. These were the earliest and simplest songs, barely removed from the shouted work cries commonly heard as long ago as the 15th century on the Venetian galleys. The oldest short-drag chantey known is *Haul on the Bowline*, dating from the time of Henry VIII. (2) Halyard chanteys, timed to the massed pull and relaxed interval of long hauls, such as hoisting sail, catting the anchor, and occasionally pumping. In this class are *Whiskey, Johnny, Blow, Boys, Blow, Blow the Man Down*, and *Reuben Ranzo*. (3) Windlass or capstan chanteys, sung to the heavy processional beat of sea boots around the capstan when hoisting anchor or warping the ship into the dock, and the type generally carried over into the most gruelling toil of the seaman's life, pumping ship. The first and last duty of the voyage required the strength of every man's back at the capstan bars, and some of the finest of the chanteys grew up around its turn-post. Favorite capstan chanties were *Sally Brown, Shenandoah, Rio Grande, Amsterdam* or *A-Rovin'*, the oldest of them all, and *Stormalong*.

The chanteyman, selected or self-appointed, not for his musical talent but for his seamanship, stood erect at the leading part of the rope, while the rest "tailed on" in crouching position behind him. It was his responsibility to choose the right song for the job, to set the pitch and tempo, and to improvise stanzas, if the usual ones were finished before the work was done. He might sing through the chorus once at the beginning to be sure that the men knew his version. Choruses were fairly well standardized and known to fore-castle hands everywhere, but the chanteyman exercised considerable freedom in his rendition of the solo parts, altering names and places to fit the circumstances. Irishmen were especially esteemed as chanteymen, but in the late days of sail American Negroes became famous as the greatest ever to throw a song to the gale. (Harmonizing in the chorus was never heard except among Negro crews.) It was a moment of relief for many a hard-pressed mate when the first strong voice lifted a working song to whip a sullen, drunken, disorganized crew of polyglots into action at the beginning of a voyage.

Sung without accompaniment to airs borrowed from ancient ballads, music-hall ditties, or any contagious melody heard on shore, these frequently ribald songs of unknown date and authorship followed sailors all over the world, gathering stanzas and new tunes and losing their roots as they went. They celebrated the sprees ashore, the girls and drinks of every port and every continent. They giped at the harsh mates and masters of every well-known packet line in a way that

would not have been tolerated in speech. They lauded the proud and beautiful ships and damned the "hard case" ones, deriding the food and the quarters and bemoaning the hard life of the sailor. Men of every race serenaded certain salt-water heroes and heroines, notably Sally Brown, the lady of easy virtue, Reuben Ranzo, the inept seaman who became a captain, and Storm-along, the sailor's sailor.

British seafarers were responsible for the bulk of the chantey repertoire up until the 19th century, when the American clippers challenged the merchant fleets of the world, driving their lean, full-sailed ships to unbroken speed records. Then American chanteys, drawing their inspiration from pioneer songs, railroad and wagon-train songs, lumbermen's come-all-ye's, and Negro work chants with an early touch of the blues, were heard in the China tea ports, the Alaska fur anchorages, on the Liverpool packet runs, and howling around the Horn to California gold-rush towns.

The competition of steam at first only contributed to the richness of the chantey, because the sailing skippers drove their crews to the point of exhaustion to save the trade for the square-riggers, and only with singing could the last effort be exacted.

The latest chanteys of all came from the nitrate ports of Peru and Chile, where, even up to World War I, ships of all nations swapped songs, creating hybrids such as *Slav Ho*, and *Bangidero*, in which a tune from one country was matched to meaningless sounds in imitation of the poorly understood language of another.

The origin of the word is disputed. First mention of it occurred in 1869, under the spelling *shanty*. *Chantey* first appeared in 1884. Some authorities argue that the derivation is from shanty, a shack, and was due to the lumbermen who often left their shanties to ship for a voyage in off seasons. However, it seems most probable that the word comes from the French imperative, *chantez*, sing. Compare FORECASTLE SONG. [TCB]

Chanticleer A name for the cock and chiefly used as a proper name, but often without the capital. Chanticleer is the name of the cock in the *Roman de Reynart*, a medieval beast epic or fable. [cgs]

chaos In Hesiodic mythology, the pre-existing empty space, filled with clouds and darkness, which evolved Erebus, Night, Tartarus, and Eros. All things, men, and gods arose from this goddess, Chaos. In the later Orphic belief, Chaos, Night, and Erebus existed at the beginning. By the time of Ovid, Chaos had evolved from the Hesiodic nothingness into a confused mass from which all things were created by harmonizing the various parts. The word was applied also to the underworld. Compare TIAMAT.

Chao San Niang Goddess of the Wig Makers in Chinese folk belief. Chao San Niang was the wife of a scholar, one of the first members of the Academy. While he was away receiving honors and performing his duties at court, she and his parents suffered great hardship and want. Chao San gave the parents whatever food she could get and she herself lived on chaff and husks. When the old people saw this, they insisted that the three of them share equally whatever food there was, but they died as a result. Chao San Niang had no money to buy coffins, so she sold her long, beautiful hair, her only wealth. When the time came for the hus-

band to return home, Chao San was in great distress, because she could not face him with a shaven head. But she managed to find enough hair to make herself a wig. Today she is regarded as the patroness of the wig trade. [RBJ]

Chapayekas Literally, long slender noses; the ritual clowns of the Mayo-Yaqui of Sonora, Mexico, carried over into Yaqui settlements of Arizona. During Lent they form a masked police group and rule absolutely from Ash Wednesday to Easter Saturday. Membership in the group is by vow taken because of a sickness. Together with the unmasked "soldiers of Rome" they constitute the Fariseo society, with Pilato as their head.

They wear plaid shawls, deer-hoof belts, and often cocoon rattles (*teneboim*) like the Mazo and Pascolas. They strike an ornate machete in their left hand against a lance (Mayo) or stick (Yaqui) in their right, as they caper. The name-giving masks are of goat or wild pig skin with patches of hair remaining as beards, and with long ears and noses or snouts, and among the Mayo, with huge horns, which among the Yaqui have dwindled to crescent stubs. Some clowns, called *viejos*, wear old coats and canes. Masked, ritual silence is preserved, and communication is by sign language only.

The Chapayekas are supposedly incarnations of the Devil; yet they police the people, guard the image of Christ, bury the dead, and carry rosaries in their mouths. All action is in reverse, ludicrous, and often obscene. During Easter processions and church services they cavort to weird music of fiddle, fife, and drum. A typical step consists of three stamp-brushes and a stamp. At noon on Easter Saturday they shed all evil by rushing out of the church and burning all paraphernalia except masks and deer-hoof belts. Members of the Chapayekas group are buried in their masks. These vestiges of primitive ritual are probably related to the Tarahumara *chapeones*, and to pueblo clowns such as the Taos *k'apio*, mingling fertility, animal, and death ritual. [GPK]

Charites (Latin *Gratiae*) In Greek mythology, daughters of Zeus and Eurynome (though the several authors and various religious rites give them differing parentage); personifications of grace, loveliness, and charm: originally goddesses of vegetation who developed into deities attendant upon and subordinate to the principal gods of the pantheon. Traditionally, they are three: Euphrosyne (mirth), Thalia (abundance), and Aglaia (splendor). They symbolize the Greek ideal of the mean between license and restraint. Charis (the singular form of the word) is mentioned in Homer as the wife of Hephaestus, but so is Aphrodite, and perhaps the two are identical; the Charites often appear as attendants of Aphrodite. Originally the Charites may have been two: Cleta and Phaenna were the Spartan Charites; Auxo and Hegemone the Athenian. The Athenian youth made his oath to defend the city by Auxo, Hegemone, and Agraalos (daughter of Cecrops). Their rites at Orchomenos (the Charitiesia) were best known, and they were worshipped at Messene, Athens, and in other places. They formed no part of the Roman religion. Earlier representations show the Charities clothed; later they appear naked and with arms linked in a graceful circle, two facing forwards and one backwards. Their attributes are the myrtle, the rose, and musical instruments.

charivari (American *shivaree*) A French marriage-baiting custom dating from the Middle Ages. Originally common after all weddings, then directed at unpopular or unequal matches as a form of public censure, the charivari became so licentious and violent as to be prohibited by the Church, surviving only in rural districts. Similar customs have existed all over Europe under different names. Introduced into America by the French of Canada and Louisiana, where the name was corrupted into shivaree, the custom fitted into the frontier and backwoods pattern of rough horseplay and wild sports, especially in the South and the Middle West.

The constant element in the shivaree has been the noisy mock-serenade produced by a discordant din of noise-making instruments and rustic and domestic implements—horns, cowbells, kettles, dishpans, boilers, tin plates—tick-tacks on screens and windows, rattling of sticks on picket fences, and firing of guns (a Colonial custom preserved in the Southern "running up" of the bridegroom). After the privacy of the bridal chamber has been invaded and while the couple's attention is distracted, they are subjected to all kinds of annoying pranks, such as hiding their clothes, tying the bedclothes in knots, and placing cracker crumbs, hair clippings, and even live toads in the bed. More recently the couple may be captured and separated and driven about town in a hilarious procession of honking cars, with tin cans tied behind. Other pranks include handcuffing the groom, tying him to a tree, forcing the couple to dress in "tacky" clothes, and trundling them in a wheelbarrow.

Certain survivals may be noted in the customs of the shivaree, e.g. the noise may once have been intended to drive away evil spirits, and Old World customs of consecration and divination, such as sewing the bride up in a sheet or hanging a bell under the bed, may be preserved in the bedroom pranks. The treat exacted from the bridal couple in the form of drinks, cigars, candy, ice-cream, etc., may be a survival of the practice of purchasing peace by ransom.

The convivial and social features of the shivaree have gradually been taken over by more agreeable and harmless functions, such as parties, bridal showers, and "open house," while the honeymoon and the motor car together have provided first a convenient escape and then a substitute. [BAB]

Charlemagne (742?-814) Charles the Great, or Charles I, king of the Franks, who reestablished the "Roman" Empire. Some 200 years after his death he became the central figure in a cycle of chansons de geste or popular romances about the adventures of one or more of his 12 peers, the "matter of France." Best known of these, and possibly the first, is the *Chanson de Roland* which tells of a disastrous rear-guard action led by Roland and his best friend Oliver against the Moors at Roncesvalles. These metrical novels, produced for the entertainment of a sophisticated court and as social and political propaganda, were rewritten frequently between the 11th and 16th centuries. Though the Carolingian cycle contains a number of motifs from popular folklore, that, for example, the king will rise from the dead when his people need help, it is less dependent on this sort of episode than is the Arthurian cycle which influenced it. Research in the 20th century has gone far to

invalidate the romantic hope that in the Carolingian cycle one might observe the operations of the memory of "ein dichtendes Volk" which made men into myths because they were historically important. [RDJ]

Charleston An angular ballroom dance for partners who dance face to face but not in a ballroom embrace. The feet fly alternately forward and back; at each step the toes and knees turn in and the arms swing in opposition. It is named after Charleston, South Carolina, where Negroes working on the docks invented these step combinations and entertained the passengers of the steamers. In 1925 it was crystallized into a ballroom dance, and in 1926 became popular in Europe. [GPK]

Charlie Chaplin rimes It was inevitable that the children should adopt into their lore the quaint figure of the movie comedian. There are many verses about him, especially among the skipping-rope rimes, of which the most popular is:

Charlie Chaplin sat on a pin.
How many inches did it go in?
One, two, three,—(until the jumper misses)

But a close rival, with many variants, is:

Charlie Chaplin went to France
To teach the ladies how to dance,
And this is what he taught them,—
First the heel, and then the toe,
Skip and a hop and away you go.
Salute to the king, bow to the queen,
And turn your back on the Kaiserine.

Sometimes the rime begins:

One, two, three, four,
Charlie Chaplin went to war,

and then it is the nurses whom he teaches to dance. Sometimes he teaches elephants to dance: he can do anything. Once:

He pulled the trigger,
And shot a nigger,
And that was the end of the war.

In World War II the ending of the France-dance rime became:

Salute to the captain, bow to the queen,
And turn your back on the old submarine,

and, strangely, in Utah, the last line became:

Stick up your nose to the crippled old king.

[CFP]

charming of game Among North American Indians, the recitation of charms and short formulas by persons gifted with supernatural power, to attract game: a fairly widespread practice. Intensive use of this method of securing game has been noted for several Paiute groups of Nevada. [EWV]

charms Practically every magical rite is accompanied in South America by chants to which the Indians assign great powers. No man can claim the title of shaman unless he knows a great many charms. The importance of magical chants as a means of averting impending dangers may be exemplified by the behavior of the Apapocuva-Guarani who, at the slightest difficulty or just because they feel tired or depressed, resort to chanting. According to the Ona of Tierra del Fuego, the magic chants known to their ancestors had

the power of bringing whales to the shore. The Shipaya Indians of the Xingu River believe that a charm could assume a human form in order to accomplish the wish that caused its expression. Certain charms could go in the guise of a man to an enemy village and kill every one they met.

Shamans use charms and incantations to combat evil influences, to expel diseases, destroy their enemies, summon spirits, and endow objects with supernatural powers. Ordinary people, as a rule, also know charms to ensure good luck and ward off dangers. The Taulipang, a Carib tribe of the Guianas, classify charms into two categories: those which ensure the success of a cure or of an enterprise, and those intended to cause damage. Each charm is validated by a myth explaining its origin, and by reciting its past successes. See AMULETS; FETISH; GBO; TALISMAN; WITCHCRAFT. [AM]

Charon In Greek mythology, the son of Erebus and Nox; an old, dirty man who ferried the shades of the dead over the Styx to the realm of Hades. He would carry only the properly buried dead, and these paid him with a coin placed in their mouths at their burial. This custom of putting a coin in the corpse's mouth still existed in Greece until recent times. Charon is probably a later figure formed from an earlier popular god of death. See COIN OF THE DEAD.

Charos or Charontas In modern Greek folklore, the Angel of Death, a figure of terror who rides a horse and carries off the dead. He is probably a modernized survival of a very ancient god of death whose literary development led to the Stygian ferryman Charon.

Charun An ancient Etruscan god of death who carried a hammer with which he finished off his victims. He was a companion of Mars on the battlefield.

Charybdis In Greek legend, a monster, the whirlpool she formed, and the rock cliff under which she lived, facing Scylla from the Sicilian side of the Straits of Messina. The rock was lower than Scylla's cliff and was topped by a fig tree. Three times a day Charybdis sucked in the sea water, and three times a day she vomited it forth as a whirlpool. Both Ulysses and the Argonauts sailed through the straits safely. In later literature, Charybdis was supposed to have robbed Hercules and then to have been cast into the sea by Zeus. The expression "to fall into Scylla while avoiding Charybdis" seems first to have been used in the 12th century A.D. Compare SYMPLEGADES.

chastity In primitive societies wide variation exists in sex customs. In many societies, e.g. the Bahuana, Kafir, Maori, Nagas, sexual intercourse is common and unrestrained among children up to the age of puberty. At puberty boys and girls are segregated, initiated into adulthood, and prepared for marriage. After marriage strict chastity is required of the wife with severe penalties, such as death or slavery, for violation. In many other societies chastity means virginity from birth until the time of marriage; this is invariably true when a bride price is paid by the husband. But in no early society is chastity required for moral reasons. Rather it is based on practical considerations, such as the necessity of having a recognized provider for children. Chastity does not, therefore, mean refraining from sexual inter-

course outside the marriage tie, but rather refraining from sexual intercourse with another without the husband's wish, permission, or sanction. The wife is the husband's property. If she surreptitiously takes a lover, she and the lover are violating a property right and for this reason both are severely punished. Many societies practice wife hospitality, exchange of wives, priest rights, and other such customs in which the husband willingly gives his wife to another. The point to be emphasized is that primitive peoples do not look on sexual intercourse as immoral or "bad" in itself; it is the circumstances attending it that are important. Among certain native tribes of Australia and many other peoples a girl at puberty must submit to the perforation of the hymen by a man appointed for that purpose. Then for several days she freely has intercourse with many men of the tribe. The purpose seems to be to make her "safe" for the husband-to-be. Yet the same girl, should she seek out a man, would be universally condemned and punished. See ADULTERY. [MEL]

chastity sword The two-edged sword, or the "naked sword" laid between a man and a woman sleeping together to preserve their chastity. See SEPARATING SWORD.

chastity test A test applied to women to ascertain whether or not they have been faithful to husbands or lovers. Many forms of testing are found in folklore and legend; they are generally connected with the ordeal. The test by fire is the most common. The suspected woman was forced to thrust her arm into boiling water, or boiling lead (Isolde), or in a flame, or forced to walk barefoot over red-hot plowshares (Queen Matilda), etc. If she was burned, she was believed to be guilty; if unscathed, innocent. In the test by water she was thrown into a body of water; if she sank, she was guilty; if she floated, innocent. According to legend, Vergil, in his role as necromancer, constructed a huge brass serpent as a sort of mechanical chastity-tester. A suspected woman could be tested by forcing her to place her arm in the creature's mouth. If she was guilty, the animal would close its jaws and hold her arm fast. Other tests are associated with personal objects usually given to the person tested by the spouse or lover. Typical of these chastity tokens are a shirt which remains white as long as its wearer is faithful (King Horn), a ring that will pinch or even cut off the finger of the faithless wearer, a sword that will rust if the owner's fidelity is blemished. The chastity token is certainly a development of the life token. See ACT OF TRUTH; LIFE TOKEN. [MEL]

Chelm A town near Lublin, Poland, the inhabitants of which were the traditional superlative fools of European Jewish lore. Compare GOTHAM.

Ch'èng Huang In Chinese folklore, god of the Ramparts, City Walls, Moats, and Ditches; also known as a Spiritual Magistrate of the People. This god and his attendants exercise in the spiritual world functions similar to those exercised by the civil governors in the terrestrial world. They are in constant communication with Yen Lo, Judge of Hell, and report evil deeds to him. They also communicate with Shang Ti, the Supreme Being, from whom their power derives. They are also believed to have power over diseases and evil spirits.

The worship of Ch'èng Huang dates from the ancient days when all towns were surrounded with mud walls or ramparts, which in turn were surrounded by the water-filled excavations from which the earth for them had been dug. The *Book of Rites* reports that one of the successors of the legendary Huang Ti instituted sacrifices in honor of certain "Eight Spirits," among them inventors of dikes and mud walls, and Ch'èng Huang, and of whom one may have been god of the city or community. Another sacrifice, dated 513 B.C., shows that the gods of the city gates also received honor.

Ch'èng Huang's cult has maintained the great popularity it achieved in the Sung dynasty (960-1127 A.D.) during the dominance of the Taoists. Consequently the lore is shot through with rationalizations, borrowings, euhemerisms, and the like. In large cities the temple is an imposing edifice containing quarters for Ch'èng Huang, his Lady, and his attendants. It also contains depictions of the courts of Hell and the tortures which are to be met in each. Chief among Ch'èng Huang's attendants are two secretaries, Ox-Head and Horse-Face, and two constables, Mr. White and Mr. Black. A whole system of Ch'èng Huangs developed and many of them bear the names of persons important in local legend. Ceremonies and iconography show great local variation. In former times there were periodic celebrations and splendid processions during which Ch'èng Huang was brought out of the temple and carried through the streets to inspect the city. [ROJ]

Cheng Wu Guardian of the North: a Taoist Worthy representing a mixed cult. His temple is visited during the Lantern Festival, the middle of the First Moon. Here scenes from his life are painted on colored transparencies. After his conversion to The Way, Cheng Wu left the court. During a mood of discouragement with the difficulties of The Way, he decided to return to the world. He met an old woman grinding an iron bar into a needle and decided that persistence will accomplish anything. Because his body tormented him, he cut himself open and removed his five vital organs, which became savage beasts and created unhappiness among the people. He then turned them all into musical instruments. The knife and scabbard Cheng Wu used to disembowel himself became a youth and a maiden. The maiden, Cheng Wu's daughter, hates marriage and tries to spoil young brides. In this she is assisted by the spirit, Hsiung Shen, who is so ugly that when he sees himself in a mirror he runs ten thousand li. This group, which contains other unpleasant creatures, of whom one helps people into the noose when they hang themselves, and another is helpful in crawling into small holes, is involved in the festivals of life and death. The Supreme Lord of Heaven appointed Cheng Wu Guardian of the North, with residence at the North Pole. [ROJ]

Cheremissian or Marian folklore The Cheremis are a Finno-Ugric group (about 413,000 in 1920) living between the central Volga and Vyatka, in the Governments of Vyatka, Kazan, N. Novgorod, and Kostroma. The highest God of the Cheremis is *Kugo-jumo* (compare JUMALA), a manlike being, living in the sky. Like the people on the earth, he practices agriculture and has many excellent cattle; he even keeps bees. In the prayers he appears as a worldly ruler with a large train of lesser deities, to whom sacrifices are also made. The

word *jumo* means the heaven, sky, or the weather. *Kürdertše-jumo* is Thundergod, and *Wolgendže-jumo* is Lightning-god. The word for soul is *ört*. Not only man has a soul, but also objects and all manifestations of nature. The evil spirit of the Cheremis is *wodež*; and there are many of them: *wüt-wodež*—the spirit of the water; *kude-wodež*—the spirit of the house; *tul-wodež*—the spirit of fire. The creator of all the evil on the earth is *Šajtan* (derived from Satan), a demon common also to the Mordvins. Other spirits are *ia* or *ija*—devil. The water spirit is usually called *wüt-ia* or *wüt-oza*. His daughter is called *wüt-ian üder*; she is a beautiful sea maiden and can be married to a man. The water spirits are very dangerous at noon; this time is forbidden for bathing or fishing. *Kugo-jen*, the tall man, is an evil spirit. In case of disease a sacrifice must be made to him. The good one is *Puirše*, Creator and protecting spirit. Many deities of nature are named in combination with the word for mother (see AWA).

The Cheremis have many feasts. The great feast in the month of May is *Šürem*. It takes three days, and the Devil is driven out with noise and blowing on horns (MSFO 59: 29–30). Another great feast, *Küso*, involving numerous sacrifices, is celebrated at the end of June (MSFO 78: 185 ff.) Important feasts are consecrated to the dead. *Nelle parjam* or *nelleše* is the feast for the dead, observed 40 days after burial. Till this day the dead one is fed at home, but after this feast he definitely leaves the living relatives. Another feast of the dead is *tošte-mari*. This is a general feast observed the week before Easter and Whitsuntide, for all the dead. At this time all the dead leave their graves and walk in the villages. It is also called *sorta ket' še*—the day of the candle—or *sorta pairam*—the feast of the candle (FFC 61: 37).

The sacrificial priest is *kart*. The oldest or most capable is "great kart," the others being "small kart." *Kudo* is a separated corner within a Cheremisian hut, the dwelling of the "kudo-spirit" (Compare KUALA of the Votjaks).-

The most important works on Cheremissian folklore and mythology are:

Beke, Ö., *Tscheremissische Texte zur Religion und Volkskunde*. Oslo, 1931. (Folk beliefs and customs, superstitions, proverbs, riddles, etc.)

—, *Tscheremissische Märchen, Sagen und Erzählungen*. Helsinki, 1938. MSFO 76.

—, "Texte zur Religion der Osttscheremissen," *Anthropos* 29, 1939.

JONAS BALYS

cherkesska A saber dance of the northern Caucasus, performed by men. It is fierce and virile, with leaps and turns. At present it is an exhibition dance, but may formerly have shared the vegetation symbolism of all

leap and sword dances. It does not, however, enact a battle; similar to the Arabian *danse du sabre*, it is a solo display of dexterity in manipulating the weapons.

[GPK]

cherry The fruit of any of certain trees (genus *Prunus*) of the rose family; a small round or heart-shaped drupe enclosing a small pit. All parts of the tree have been used in folk medicine. Negroes of the southern United States give a cold tea made from cherry bark (in some localities taken from the north side of the tree) to stop post-natal and menstrual hemorrhage. It is general U.S. folksay that a cherry tree will sprout in the stomach of a child who swallows a cherry stone, or that it is unlucky to dream of a cherry branch. In Ontario it is said that a strict cherry diet will cure allergies. A lock of a child's hair is sometimes put in the trunk of a cherry tree to cure his asthma. In Newfoundland a tonic drink is made from cherry bark. Certain North American Indians used cherry roots to decoct a remedy for syphilis. Cherry gum dissolved in wine is still used to relieve coughs, and is also considered an excellent tonic. In Switzerland the first fruit of a cherry tree is given to a young mother to eat, preferably one who has just had her first child. This insures an abundance of fruit in the orchard. In some parts of France the cherry orchards are assailed as the apple orchards are in England.

Cherry Tree Carol An English ballad carol (Child #54) based on Apocryphal material from the *Gospel of Pseudo-Matthew* xx, and other sources, telling the story of a miracle performed by Christ before his birth. Mary and Joseph walked through an orchard or garden where cherry trees grew. Mary asked Joseph to pick her a cherry and, when he refused roughly, the unborn Child in her womb bade the tree bow down to give his mother fruit. The tree obeyed, to Joseph's chagrin. The first mention of the story in English was in the Coventry Mystery of the 15th century, though it was not a carol in that reference. The varying sets of words that have survived, both in England and in the United States, are of later date. In a number of American versions the Child goes on to foretell the date of his birth: "On the 6th of January/ My birthday will be/ When the stars in the elements/ Shall tremble with glee." This day, Old Christmas, has been celebrated even in recent years in mountain sections of Kentucky. Other European songs on the same story vary as to the fruit concerned, according to the favorite fruits of the country—date, fig, apple, etc. The last runo of the *Kalevala* relates a similar tale of Marjatta, a maiden who went to milk the cows and passed a tree with a scarlet berry. The tree invited her to gather the fruit, which was so far out of reach that she had to knock it down with a stick. At her command the berry jumped into her lap and then into her mouth. She became the mother of Ilmori, the Air. See CAROL.

chestnut In many places chestnuts are believed to have curative powers. In Germany they are carried in the pocket as a charm against backache, in the United States against rheumatism, but in England they must be begged or borrowed to be effective in these ways. They were formerly considered good for the blood, but eating too many would thicken it and cause headaches. Chestnut leaves boiled in water, with honey and glycerine added, will cure asthma and chest complaints. In

Tuscany they are the appointed food for St. Simon's Day, in Piedmont for All Saints' Eve, and some are always left on the table for the souls of the poor dead.

Chhalla A ritual libation of the Aymara Indians of Bolivia. Small cups (always in ritual number) are lined up on a blanket; in each of them the priest (yatiri) places different substances: mica, feathers, silver and golden paper, flour, incense, alcohol, and maize beer. The proper combining of these substances is part of the traditional ritual of the popular religion. The contents of the cups are thrown to the wind as offerings to the spirits and deities. [AM]

Chiang Tzŭ-ya The God of Fishermen of Chinese folk belief: another name is Chiang T'ai Kung. His legend says that he lived from about 1210–1120 B.C., began life as a humble fisherman, and became a general and adviser of generals during the establishment of the Chou Dynasty. He is worshipped as the god of fishermen and is said to have fished with a "straight hook and a grain of rice for bait" until he was 80 years old, at which ripe age he became Prime Minister under Wu Wang. [RDJ]

Chiapanecas Literally, girls of Chiapas; a mestizo dance of the state of Chiapas, Mexico, usually performed by women. Alternating Austrian waltz and Indian shuffle steps, the dancers swirl their full skirts and clap their hands at a given moment in the music. Thus it is also called the "handclapping dance," and the audience joins in the clapping. Two lines of girls, or girls and boys, form a V after their entrance, cross over and circle. As a couple performance in Mexico City, it has been elaborated with pirouettes and leg swings. The gay Ländler tune to which it is danced probably dates from the brief rule of Maximilian and Carlotta. [GPK]

Chibcha-chum An ancient tutelary deity of the Bacatá region of Colombia: referred to as god of earthquakes in Chibcha mythology. Once he tried to flood the valley of Bogotá, but was thwarted by Bochica, who created the big waterfall of Funza Bacatá to divert the waters. Chibcha-chum either fled or was driven underground, where he still supports the world on his shoulders. [AM]

Chicomcoatl Literally, seven snakes; Aztec goddess, sometimes called the "goddess of nourishment"; the female counterpart of the maize god Cinteotl, their symbol being an ear of corn. She is occasionally called Xilonen.

Chie The goddess of sensual pleasure in the Chibcha religion. Bochica is said to have turned her into an owl or the moon. [AM]

Chief In many North American Indian mythologies it is assumed that each animal species has a chief who speaks for the species, and to whom animals and human beings are accountable. This belief is especially strong among the Eastern Woodlands and Southeastern groups. [EJV]

Chih Nü The celestial Weaving Maid of Chinese mythology and legend; heroine of a star myth that occurs in many versions, e.g. in China, Korea, Japan. Chih Nü is generally identified with the constellation called Lyra in the West or with Vega, its principal star; her lover, the Cowherd, is Aquila, or Capricorn, or the star

Altair. The Weaving Maid was an immortal who was banished to earth. She fell in love with an oxherd. When, her banishment having come to an end, she returned to Heaven, her herd-boy lover tried to follow her but was stopped at the Milky Way.

Another form of the story belongs to the world-wide swan-maiden type: The Weaving Maid spent her time in Heaven weaving clothes for the gods. Once she and her sister descended to earth to bathe in an earthly stream. A cowherd was told by a magic cow to steal the garments of the loveliest maiden. This he did. Consequently the Weaving Maid was not able to return to Heaven and the looms of the gods were idle while she was living happily on earth with her lover. She was recalled to Heaven. The cowherd, wrapped in the skin of his magic cow, followed but was stopped at the Milky Way. The Jade Emperor of Heaven decreed that the two might meet once a year if the night is clear and the magpies make a bridge with their wings.

The festival is observed on the Seventh Night of the Seventh Moon, when the lovers meet. The legend has obvious connections with the spider legends, Arachne, etc.

chikuli A Mexican cactus worn in the belt for luck by the Indians of the regions where it is found, and sometimes for aid in hunting.

Child, Francis James (1825–1896) American philologist and distinguished ballad scholar. His first collection of *English and Scottish Ballads* appeared in eight volumes (1857–1858). His final collection, *The English and Scottish Popular Ballads*, first appeared in ten parts (1882–1898), later in five volumes, and is still the standard ballad authority and reference. Graduated at Harvard in 1846, he was professor there from 1851 to the year of his death, holding the chair of English Literature from 1876. He accumulated at the University one of the largest folklore collections in the world and by his influence made Harvard the main center of folklore study in the United States. The famous *English and Scottish Popular Ballads* (1882–1898 ed.) was reissued in facsimile reprint (5 volumes in 3) in 1956.

child abducted by cannibal A folktale motif (G400ff.) especially popular among the Indians of the North Pacific Coast. Typical is the story of a group of children beguiled by chewing gum into the basket of a giantess, who made off with them. Several escaped from the basket but not all (sometimes all but one). The hero is a young boy suddenly born from the mucus of his mother's nose (T542.1) who grew to miraculous wit and strength in four days. He went forth to search for his brothers and sisters (or sister), found the Cannibal giantess's cave, and the dried bodies of children in it. He hid in a tree by the river but was discovered by the Cannibal by his reflection in the water (R351). She asked him how he became so beautiful. The boy explained that he had had to endure great pain to become so beautiful. The Cannibal giantess besought him to give her the same treatment, but the boy taunted her with being unable to endure it. She agreed to submit to the treatment (i.e. have her head pressed between two stones [K1013], or be beheaded, etc.). She came back to life at once, but he killed her again and this time broke the spell. He then resuscitated the children (or child) in the cave and led them all safely home. [EJV]

childbirth The many peculiar practices incidental to the birth of a child, various and widespread as they are, arise, for the most part, from only three main fears: 1) fear of blood-tabu contamination, 2) fear of the unknown spirit-sources of life, and 3) fear for the child's welfare, immediate and future. These three overlap greatly at times.

The primitive tabus associated with woman, particularly throughout the reproductive period of her life, become temporarily attached to the infant and also to all persons and objects intimately connected with the birth.

It would seem that the respect for and fear of blood which is so general in early cultures is increased and magnified when the blood is that of childbirth or menstruation, perhaps because the reason for these natural biological processes was so vaguely if at all understood. Blood plus mystery was of old and still is an unbeatable combination for arousing human curiosity and interest. From the dawn of history until today there have been whole races and religions asserting that there is some mysterious wonder-working power in the blood.

The documents included in the Hebrew scriptures bear ample evidence of the fear of contact with menstrual and parturient blood (*Isaiah* xxx, 22; *Leviticus* xv, 19-33 and xii, 2-8) and the persistence of those same birth tabus is to be seen today in civilized Christian countries where in some orthodox communions women must still be "churched" to purify them after childbirth (see CHURCHING OF WOMEN).

The tabu atmosphere surrounding the arrival of the baby accounts for the various required actions of the father of the infant, including not only the widespread custom of couvade but also in many cultures his expected absence from the scene, and usually that of all other men as well. The preference of many women, especially in rural districts, for the attendance of a female midwife instead of a male obstetrical expert is probably a survival of this custom, as is the traditional vigorous shooing of all men from the vicinity by the women. On the other hand, among some tribes all relatives, including the men, flock to the birth; and in other tribes the husband is expected to assist or even acts as midwife.

In the Marquesas Islands the husband is even required to have sexual relations with his wife as she bathes immediately after the birth. This might seem to be the very antithesis of respect for the birth-blood tabu, but is probably also inspired by a recognition of the terrible power of the tabu and the desire to counteract and terminate it by heroic measures, antidotal in character, like the couvade.

Correlative with the absence of the husband is a similar device, the return of the pregnant woman to her mother's house until after the delivery of the child. The custom is common in Africa and India, especially for the birth of the first child, which, among the Basuto, traditionally belongs to the maternal grandparents. According to very old accounts, Gautama Siddhartha the Buddha was born in the Lumbini Grove when his mother was overtaken by her pains on the way to her mother's house. It may be that the custom of the husband's absenting himself is a substitute for and a survival of the presumably older matriarchal culture.

Still further evidence of the birth tabu is the usage in widely separated regions where the woman gives birth in seclusion. It may be behind the maternal grandmother-to-be's hut (South African Herero), in the forest (British Columbia), on the shore of a river (la Plata), or in a little shed, as formerly in Japan. In Russian Smolensk the birth is in the barn. Where circumstances, such as severe winter cold, make birth in the house necessary, it must be behind a screen or curtain. On the west coast of India one tribe secures the needed seclusion for the woman in the hut by having the other inmates leave for five days.

These various methods may be explained by all concerned as due to the woman's desire for privacy, but the original motivation was undoubtedly the protection of the relatives and neighbors, especially the men, from the dangerous powers of the life force infesting the place of birth at the time—powers resident and manifest particularly in the blood.

The contamination of birth, like that of death, extended to objects in the house. Fishing-nets and gamecocks in the Philippines, bows and arrows in Brazil, and the cuttings of plants in New Britain are removed from the house because otherwise they would all be unlucky. In New South Wales among certain tribes every dish used by the pregnant and parturient woman is carefully destroyed.

It would appear that the newborn child is dangerous even to himself, for if he looks in a mirror, he is said in some country sections to be very likely to contract rickets.

The birth practices inspired by fear for the child's welfare begin long before its arrival. Parsons reports (*Pueblo Indian Religion* i, 91) that a Sia woman would not run a sewing machine during her pregnancy lest the umbilical cord get sympathetically tangled, and the Isletan women avoided the flickering moving-pictures lest their children become bewitched. Likewise, on the positive side, ancient Mexican women are reported to have worn shells of the sea-snail that their expected children might creep forth from the womb as easily as the snail from his shell.

Women with more pretense of civilization have been known to indulge during pregnancy in similar sympathetic magic, either positive or negative, much to the irritation of the attending scientific-minded obstetrician and the disturbance of his program of prenatal care. Belief is common that looking upon a rabbit as it eats will cause a woman's child to have a harelip, and a trip to the zoo is likely to have untold consequences.

In some parts of China great care is taken to have everything auspicious as the birth-pains start. Incense is burned before the ancestral tablets; red candles for joy are lighted in the birth-chamber; all conversation must be cheerful, all, ill-omened words carefully avoided. See section *Birth* in CHINESE FOLKLORE. When the child does arrive, the precautions taken all over the world to ensure good luck are multitudinous and varied enough to occupy several volumes. See AFTERBIRTH; AMULETS; CAUL; BAPTISM; CIRCUMCISION; UMBILICAL CORD; etc.

In *Ezekiel* xvi, 4 we have, by negation, a good description of the Hebrew birth practices in the 6th century B.C.: "And as for thy nativity, in the day thou wast born thy navel was not cut, neither wast thou

washed in water to supple thee; thou wast not salted at all, nor swaddled at all."

In other countries newborn infants were rubbed with oil, or raw eggs, or alum, or sulfur, or a mixture of other substances. In every instance, some practical hygienic, sanitary, or therapeutic purpose is today alleged, by very ingenious rationalizations, but the origin of the custom is either obviously or inferentially to be found in the desire to protect the child from evil influences and spirits (supposed to be particularly apt to haunt the vicinity of births) by some beneficent insulation through the use of evil-repelling sacred emulsions or powders. The oil is "sacred oil" as in modern Greece, or the water is "holy water" as in many Christian lands.

The first clothing of the infant is important. In parts of China the newborn is dressed in robes resembling those of a Buddhist monk, to fool the evil spirits. The cumbersome and otherwise unexplainable long gowns in which helpless infants were nearly smothered until a generation ago in England and the United States probably had their origin in some such idea of disguising the child as an adult. The custom in Kent of putting a boy's nightshirt on a baby girl, and vice versa, is supposed to be in order to make her or him attractive to the opposite sex when grown, but appears to be another disguise mechanism.

The day of the week on which the child is born was once thought to be of importance, especially in Scotland, England, and parts of the United States. But the popular rimes disagreed sadly as to which days were auspicious. While all versions said:

Monday's child is fair of face; and
Tuesday's child is full of grace,

there, for a while, the unanimity ended. Wednesday's child was full of woe in England, sour and sad in Georgia, but loving and giving in New England. Thursday's, in the same regions respectively, had far to go, was merry and glad, or must work for his living, while Friday's was loving and giving, full of sin, or full of woe. Saturday's had to work hard for his living in England, was pure within in Georgia, and had far to go in New England. But Sunday's child, how favored! The old jingle must have started in Scotland, where a bairn born on a Sabbath was deemed most highly lucky and, significantly, safe from the malice of evil spirits. So we find the rimes in England and New England chiming together:

But the child that is born on the Sabbath-day
Is blithe and bonny and good and gay.

Georgia's version is even more pious, ending:

To heaven its steps shall tend away.

In parts of rural England many quaint and evidently very old customs survive, such as laying the newborn first in the arms of a maiden, covering a boy with his mother's petticoat or a girl with her father's pants, and taking the child to the top of the house before it is carried out of doors.

The various fears connected with childbirth and the customs deriving therefrom disappear suddenly in a few weeks, after the mother, father, child, and house have been ceremonially cleaned and accepted back again into the community. CHARLES FRANCIS POTTER

 Certain post-natal observances and tabus among the Indians of Middle America should be mentioned. Usually the mother rests for a week or ten days after a birth. In areas where the temescal sweat bath is used, she bathes on successive days and is cleansed. In parts of central and southern Mexico the *NAGUAL* or *TONAL* is discovered by placing ashes around the cradle of the child to note the tracks of the animal which comes to visit its new charge. Newborn babes may have the *mollera* "set," i.e. the midwife pushes up on the hard palate to prevent illness. Copal incense, perhaps mixed with tobacco, may be placed in a tiny bag around the neck or wrist of the infant as an amulet to prevent illness. A seed, *ojo de venado* (deer's eye) is also widely used in this way.

Most Indian children eventually are baptized by a priest. Among the Tarahumara (northwest Mexico) a curing ceremony takes place, three days after the birth of a boy, and four after the birth of a girl, at which the officiating medicine man burns incense and describes crosses with burning pine-pitch torches. Friends of the family avoid admiring the new child unrestrainedly lest they be accused of involuntarily exercising the evil eye.

Food tabus for some time for the mother are common, though there is little unity from one tribe to another. To illustrate, the Tarahumara mother does not eat squash or apples for several weeks. No explanation for this practice is given. See *COUVADE; MEXICAN and CENTRAL AMERICAN INDIAN FOLKLORE; UMBILICAL CORD*. [GMF]

Child-Born-in-Jug (Pot) A miraculous-birth tale, occurring among some Great Basin and Southwestern North American Indian groups. [EWV]

Childermas The name in England of Holy Innocents' Day, commemorating Herod's slaughter of the children; observed on December 28 (December 29, Old Style, in the Greek Church). The day is considered unlucky; any undertaking begun on this day is doomed to failure. Among its many local names is Cross Day in Ireland, and there are several local legends emphasizing the day's unpropitiousness. In the British Isles it was the custom in various places for parents to whip their children before the children got out of bed, that they might better remember the significance of the day. This later degenerated into a widespread custom of the early risers beating the lie-abeds.

Child-of-the-Water Culture hero of Apache and Navaho mythology. Among some Apache groups Child-of-the-Water is the chief culture hero who slew monsters and other enemies of mankind; he is attended by a subordinate, a younger brother, relative, or friend, known as Killer-of-Enemies. In other Apache groups the positions of these two are reversed, with Child-of-the-Water a lesser character than his companion. In several Apache mythologies the two heroes are sons of Changing Woman. Child-of-the-Water has become identified by the Apache with Jesus. [EWV]

Children of Lir One of the Three Sorrows of Storytelling of Old Irish mythology and legend: *Oídead Clainne Lir*, the Tragedy (or Sorrowful Fate) of the Children of Lir. Lir, lord of the sea, one of the ancient gods (see *LEAR*), had four children by his first wife, Aeb, daughter of BoDb: Fionguala, a daughter, Aed or Hugh, and Conn and Fiachra (twin sons).

These children were turned into swans by their jealous stepmother, Aoife, also a daughter of Boðb. Fionguala begged Aoife for a limit on the curse and Aoife said "till a woman of the south be joined to a man of the north." Because Fionguala had asked for the limit to be said, and Aoife had said it, neither Lir nor Boðb nor any magic of the Tuatha Dé Danann could undo the curse, until the children of Lir had spent 300 years on Lake Derryvaragh, and 300 years on the Mull of Cantyre (the Straits of Moyle, between Ireland and Scotland), and 300 years in the open Atlantic near Erris and Inishglory, off the stormy western shores of Mayo. But Boðb changed Aoife into a demon forever because of the evil thing she had done. Lir and Boðb came to see them on Lake Derryvaragh and discovered that the beautiful swans still had their human speech and possessed the wonderful gift of music which only the Tuatha Dé Danann knew.

The swans lived in peace on Lake Derryvaragh for 300 years. The next 300 years on the Straits of Moyle were bitter cold and stormy, and the swans were granted no respite of land or shelter. Off the coasts of Erris too, in the last 300 years, they suffered cruel hardships. The night the sea froze solid from Erris to Achil was the most terrible of all.

They remained in Inishglory till the time the hermit Mo Caemóc came to that place; and for the first time the swans heard matin bells. They then sang their own unearthly lovely song. Mo Caemóc heard it and sought them, and found them and cherished them, and they were happy while they stayed with him.

Soon Deoć, daughter of Munster's king, was married to Lairgrén, king of Connacht. Thus a woman of the south was joined to a man of the north. The enchantment on the children of Lir was ended when Lairgrén grabbed the swans to take them for a gift to Deoć. The swan-shape fell off them under his violent hands, and all he saw was four ancient withered human beings, about to die. Mo Caemóc baptized them as fast as he could, and buried the four in one grave.

For centuries in Ireland no man would kill a swan because of the sorrowful story of the children of Lir; and the people of Ireland are loath to kill swans to this day for the same reason.

children's songs The oldest and most widely diffused of folk songs, showing great similarity both as to melody and to subject-matter all over the world and preserving the vestiges of ancient ceremonies and beliefs. They include the game songs, counting-out rimes, mocking songs, begging songs, divinations, historical verse, and mnemonic rimes sung or chanted by children themselves, and the lullabies, chin-choppers, finger and toe enumerations, kneec-dandling rimes, etc., sung to children by adults.

Game songs still played and sung today carry survivals of foundation sacrifice, the belief of the Devil's enmity to bridges, the war between saints and devils, as in *London Bridge*, which has counterparts in many languages. They preserve the May-Day courting customs and the Druid's tree, as in *The Mulberry Bush*; the washing and burial of the dead, as in *Green Gravel* and *We've Come to See Miss Jenny Jones*; the handkerchief morris, as in various drop-the-handkerchief games, and many other beliefs and practices. They also vicariously put the child into a place in the adult world by

dramatizing the work and social functions of men and women—washing, ironing, planting, selecting a mate, etc., as in *The Farmer in the Dell*, *Go In and Out the Windows*, *Oats, Peas, Beans and Barley Grow*, and *Here Come Three Dukes A-Riding*.

Many songs or chanted rimes accompany ball-bouncing, rope-skipping, etc. These tend, while preserving from generation to generation a basic pattern, to adjust themselves to the times. For example, a rope-skipping chant of World War I vintage said, "Cinderella/ Dressed in yellow/ Went down town to buy an umbrella/ She walked so slow/ She met her beau/ And he took her to a ten-cent show." Ten-cent shows having become unknown in 1949, the rime now goes, "Cinderella/ Dressed in yellow/ Went down town to buy some mustard/ On the way her girdle busted/ How many people were disgusted?" Derivative chants once devoted to Kaiser Bill easily made the shift to Hitler. Shipyard strikes, comic-book characters, and movie heroes have entered the picture; and a consciousness of race prejudice has eradicated some of the phrases known to earlier generations, possibly with the censorship of parents and teachers. *Eeeny, meeny, miny, mo*, for instance, now often says "Catch a bunny (or baby or monkey) by the toe," instead of "nigger."

Begging songs (*chansons de quête*) are those sung at Christmas, New Year's, etc., in a house to house canvass for a handout in return for good wishes. Some, such as *Here We Come A-Wassailing* are still sung by carollers.

It has been observed that the one- and two-tone babble songs of infants repeat the patterns of the earliest known and most primitive forms of music. Such jeering tunes as are sung to words of the character of "I know a secret," or "Cry, baby, cry/ Put your finger in your eye," etc., are almost identical the world over. See CAROL; CHANT; COUNTING-OUT RIMES; GAMES; LULLABIES; SKIP-ROPE RIMES. [TCB]

Child Waters A popular English ballad (Child #63) found in the Percy manuscript, in which the test of endurance of a woman's love is the main theme. Faire Ellen, pregnant with Child Waters' child, runs barefoot as a page beside the horse of her heartless lover. Child Waters will not ease the pace, compels her to swim a river, humiliates her in the feast-hall where they arrive, sends her into the town to hire the fairest lady she can find to be his bedfellow, and compels her to rise before dawn to feed the horse. In the stable Faire Ellen gives birth to her child. When Child Waters comes to the stable door he overhears her singing a lullaby to the baby and wishing she were dead. His heart softens at last, and he promises Faire Ellen marriage and churching both in one day. *Burd Ellen* is the title of the Scottish version of this ballad. The Piedmontese ballad, *Ambrogio and Lietta*, closely parallels the theme.

chilena A Mexican mestizo couple dance of Guerro and coastal Oaxaca: derived from the Chilean cueca, and characterized by kerchief play. [CPK]

Chi Lung Wang The Fire-Engine Dragon King: in Chinese popular belief, a carry-over from the worship of Lung Wang, the Dragon King who beneficently supplies the earth with water and rains. Chi Lung Wang is invoked to facilitate the use of the hand-pumps of Chinese town and village fire-fighting mechanisms,

Chimera In Greek legend, a fire-breathing monster with the head of a lion, the body of a goat, and the tail of a serpent, or, according to Hesiod, with the heads of these three animals. The Chimera was the daughter of Typhon and Echidna. When she ravaged the Lycian country, Iobates sent Bellerophon against her. That hero, from the back of Pegasus, slew the monster. The name has come to be applied to any fantastic or horrible creation of the imagination, and also to a grafted hybrid plant of mixed characteristics.

chimerat A term proposed by the famous Swedish folklorist, C. W. von Sydow, as an international term for the type of folktale variously called *märchen*, *conte populaire*, fairy tale, household tale. The term was approved by the Premier Congrès International de Folklore which met in Paris in 1938, but has not yet received wide usage or acclaim.

chimes Tuned sets of bells, gongs, or stones struck with a stick or hammer. Known in the Far East from earliest sources, suspended, L-shaped stone chimes (Chinese *pien ching*) were played for formal public and religious occasions, and for private entertainment. Similar sonorous stones are also found in Annamese temples, in Venezuela, on Chios, and in the Christian churches in Ethiopia. Sounding stones are also used in the ceremonial rite of preparing kava, a drink, in Polynesia, where maidens chop the ingredients on tuned stones. Metal chimes, used both in the East and the West, for musical purposes, for religious accompaniments, and on down to dinner chimes, are a development from these stones. See BELL; GONG.

ch'in One of the two main types of long zither, the original stringed instrument of China, distinguished from the other type, the *shē*, by having frets and by its smaller size: played exclusively by scholars and sages for small, select audiences. It is integrated in the cosmic system with south, summer, and silk. The player washed his hands and burned incense before taking up his instrument, and the ancestral spirits were believed to attend the delicate wailing music of its silk strings. It is often erroneously described as a lute. The Japanese name for it is *koto*.

Chin Chia One of several patrons of Chinese literature, known as the "Gentleman in Golden Armor." He punishes wicked scholars, and waves a flag before the homes of families whose descendants will attain high honor in the Imperial Examinations. See WĒN CHIANG.

[RDJ]

Chinelos Carnival dancers of Morelos, Mexico, especially famed in Tepoztlan. Formerly they were disguised as Negroes. Nowadays they wear long loose embroidered satin gowns, fantastic hats topped with ostrich plumes, and amazing masks with horn-shaped black beards. Despite their encumbrances, they jump, skip, and clown. In Cuautla they are modernized to the point of wearing their regular trousers, which show in telltale fashion, and of concealing, in the ornaments of their crowns, flashlights which they blink on and off. Their ceremonial origin is lost in obscurity. [GPK]

Chinese folklore Folklore in China is a vital and living force. Whereas elsewhere the student of folklore is frequently embarrassed by lack of data, in China he

meets a richness of custom, belief, and ritual which is made more complex by geographical variations and an extraordinarily long and complete written record. Any observations of Chinese folklore in one area can be contradicted by observations in other regions; and conclusions about the folklore of one period of Chinese history need to be checked against conclusions of other periods. In view of the incomplete state of our present knowledge, all conclusions must be tentative.

In general characteristics Chinese folklore is identical with the folklore of other peoples. Before the 5th century B.C. it had stratified into the lore of the aristocrats and the lore of the populace although social revolution and the passing of feudalism tended to confuse these distinctions. Chinese folklore has been modified by the rise of philosophical schools, the migration of religious systems, and the tides of politics, but its essential outlines come generally from the large, complex, and as yet only partially known corpus of beliefs and practices characteristic of all eastern Asia. This corpus with its modifications is very clearly preserved in China today (1949). It can therefore be referred to as "Chinese folklore." Because the Chinese nation is composed of several cultures and many racial strains, the separate contributions made by the predecessors and ancestors of the present inhabitants of China cannot be identified; because the record is continuous it frequently anticipates the western records in its accounts of practices and beliefs. This sort of anticipation has no connections with the "origins" of the practices. Similarly, Occidental students preoccupied with stellar myths, diffusionism, or other attempts to codify imagination have tried to force Chinese beliefs into patterns they prefer. Attempts to explain Chinese folklore, like attempts to explain its origins, are no part of these notes. The capacity of the Chinese to absorb alien customs and beliefs and the ubiquity of folkloristic habits of thought serve as warnings against hasty generalization at the same time that they call for further collection and study of a comparative nature.

Difficulties in the study of Chinese folklore are created by: (a) the long period through which it extends; (b) the size and indefiniteness of the territory in which it exists; (c) the mixture of cultures constituting the Chinese nation and (d) borrowing and lending as between these races; (e) the existence of a scholarly class with great power and prestige; (f) the priestly class which has reworked and rationalized the material. Two further difficulties are: (g) the Chinese written language (the medium through which the history of folklore must be approached) is the property of scholars and thus may be taken as distorting the material it has recorded. Finally, (h) the extensive collections made by missionaries eager to demonstrate the evil effects of the superstitions of others or by ardent ethnographers attempting to impose European systems on Chinese data, though enormously valuable, are incomplete and fail to demonstrate the remarkable variation of custom and belief in the several parts of China.

Pre-History and Early History The Chinese nation as it is known today seems to have had its beginnings in the provinces west of the Shantung peninsula, the regions drained by the Yellow river. Here a belt of early culture stretched from a point several hundred miles inland from the sea through the modern provinces

of Shantung, Hopei, Honan, Shansi, Shensi, and Kansu toward the indefinite western border of modern China. In this territory, the Shang Dynasty (c. 1500 to 1100 B.C.) reached a high degree of sophistication. Their bronzes are of a "late" type—no early bronzes have as yet been found in China; their divination was by means of ideographs scratched on bone or tortoise shell; their religious system did not differ greatly from systems today still current among the peasant class. Their arts and crafts and manners were highly developed to a point which compares favorably with the more degenerate moments in our classical renaissance or our contemporary civilization. Though early references to "aboriginals" or non-Chinese tribes which still exist in isolated cultural pockets must be treated carefully, scholars are generally agreed that the peoples of the Shang as well as those of some later dynasties were immigrants into the rich and fruitful valley of the Yellow River.

Sources of information for these early periods are not satisfactory. The first classical Chinese histories produced in the Chou Dynasty (c. 1100 to 221 B.C.) were mostly if not entirely destroyed in the Ch'in Dynasty (221–206 B.C.). They were rewritten from various sources by the reformers of the Han Dynasty (206 B.C. to 221 A.D.) with such additions and deletions as seemed useful. Consequently the validity of these histories is subject to serious debate unless confirmed by archeological findings.

The most useful of these early accounts was compiled by the learned and critical Han historian, Ssu-ma Ch'ien. According to this scholar the first rulers of the universe were the 12 Emperors of Heaven who reigned 198,000 years; the 11 Emperors of Earth who reigned 198,000 years (18,000 years each); the 9 Emperors of Mankind, 45,000 years, and the 16 Sovereigns about whom nothing is known. These were followed by the culture heroes, inventors of the arts and crafts, Fu Hsi and Shên Nung, who had serpent bodies and human heads. Shên Nung was the first tiller of the soil, Huang Ti was human. He taught the savage peoples under him the forms of government, crafts, manners, and the proper sacrifices to the gods, mountains, and streams. Yü founded the Hsia Dynasty (c. 2205 to c. 1557 B.C.) which, though recognized by Ssu-ma Ch'ien, is possibly pre-Chinese. Yü spent 13 years regulating the floods which covered the entire country. Because his devotion to duty was so great that during this time he never entered his house, though he passed close enough to hear the cries of his children, he has been revered as the perfect civil servant.

Early Beliefs and Customs Because of the capacity in China for folkloristic agglutination which has preserved very early beliefs into modern times, comments on primitive customs must be taken as highly generalized accounts. The following elements were undoubtedly early in origin: "yin-yang," divination, *wu* cults, the priest kings with their cults of heaven, earth, soil, and grain, and ancestor worship.

Yin-yang, though later elaborated by the Taoists, derives from the basic concept in Chinese culture that balance is the law of existence. The symbol of this belief is a circle bisected by a sine curve. However this symbol may have been interpreted in primitive times, it came at an early date to represent the opposition in balance of the positive and negative forces of the

universe; male-female; heaven-earth. The principles thus symbolized became an important part of Lamaism in which the portrayal of sexual union represented the highest balance of which mankind was capable, opposition in unity. The attribution of male (yang) and female (yin) characters not only to heaven and earth but to the parts of the human body is important in Taoism, geomancy, and folk medicine. The maintenance of balance and harmony is found also in divination of auspicious or inauspicious days for new undertakings in that any new act which deviates from the customary on the yang side or the yin side must be undertaken only when the forces of nature are favorable to the restoration of the balance. The maintenance of balance induces serenity and has had much to do with the preservation of the rites and sacrifices.

Divination in the Shang Dynasty was part of the aristocratic cult. Ideographs were scratched on bones and tortoise shell and treated with heat. Priests interpreted the cracks which subsequently appeared. The questions put had to do most frequently with the proper days for sacrifices, journeys, wars. The ideographs were similar to the current "characters," though of a much earlier form, and in many cases were sufficiently removed from the primitive "pictographs" to justify the conclusion that the peoples who used them had a culture requiring the use of non-pictorial abstractions. The fact that millions of Chinese still consider the written character as sacred and to be preserved from all defilement, and the traditional and present position in China of the learned scholars suggests that knowledge of the written character and knowledge of how to interpret the oracle bones were the secret lore of the priests.

The *wu* priests undoubtedly operated in both the aristocratic and the popular cults. Their learning was transmitted through their colleges. Their ritual which included trance states, singing, and dancing is thought by some Chinese scholars to have contributed to the development of the Chinese theater. Mediumistic practices were important. Many of their rites were similar to those of the shamans recently observed in Mongolia, Siberia, and elsewhere.

Yin-yang, divination, and the professional *wu* priests were part of the agrarian Shang culture. The patriarchal Chous (c. 1000 B.C.) introduced king-priests, worship of the male ancestors, and an astral religion.

The priest kings had as their most important duty the pacification of T'ien or Heaven, personified as Shang Ti, of Earth or Ti, a flat surface opposed to T'ien. T'ien was yang (male) and Ti was yin (female). Hou T'u was the God of the Fields, Shê the God of Soil, and Hou Chi the God of Millet. Only the Emperor as Son of Heaven could perform the ceremonies to Heaven. At various times he also sacrificed to the Lords of Earth and Millet—possibly an example of the agglutination of Shang (agrarian) and Chou (nomadic) traditions; the lesser kings and aristocrats performed the lesser ceremonies for their specific areas. The sacrifice to Heaven was performed on the first day of the agricultural year which in the lunar calendar and in the basin of the Yellow River marks the coming of Spring. At this time Imperial calendars were issued which for the next year controlled the days of planting, harvest, and other domestic activities. Grain from the imperial granaries

was distributed. The green and yellow garments worn at this time by the Emperor, the Son of Heaven, are interesting though insufficient evidence that he represented an earlier "corn king."

Ancestor worship, of great importance in modern times and connected with the fertility cults, was highly developed in the earliest records. The cult generally maintains that man has two souls: the animal soul, *p'o*, is created at the moment of conception; the spirit soul, *hun*, enters the body when a child is born. The physical soul, *p'o*, follows the dead body to its tomb, is nourished by the sacrifices of descendants, and is dissipated as the body disintegrates. If the *p'o* should escape and find other means of nourishing itself it becomes a *kuei* (ghost or demon) and creates untold mischief. The spiritual soul, *hun*, if it escape the earth spirit which devours it and the Heavenly Wolf which guards the gate of Shang Ti, ascends to the palace of Heaven Himself and is there sustained by the sacrifices of descendants, replies to their divinations, and intercedes for them. If, because of the extinction of a clan, the sacrifices cease, both the *p'o* and the *hun* become hungry, miserable, and malicious demons. The attempts made by some scholars to identify these cults, which exercise considerable authority among contemporary Chinese, with primitive fertility cults are incomplete. Nevertheless it is possible that the tablets before which the sacrifices are placed in the ancestral temples have a phallic origin which has since been forgotten.

Sacrifices followed patterns known in other cultures. In early times the soul of the aristocrat was probably followed by the souls of his wives and retainers sacrificed for that purpose. In modern times papier-mâché figures are burned at the grave to perform the same function. The God of the Yellow River in ancient times claimed each year a beautiful maiden as his bride. After a period of feasting the girl was dressed in ceremonial clothes, put on a marriage bed in a boat, and launched in the river. In modern times the hesitation in some provinces to rescue drowning persons is attributed to an unwillingness to deprive the River of his sacrifice.

Homage was also paid to the spirits of rivers and mountains. Any action which might upset the rhythm of balanced living, the crossing of rivers or mountains, the formation of great or small alliances, the taking of journeys, the transition from one age to another, requires rituals. The mass of these rituals transmitted from antiquity is very great. The weight which modern Chinese give them varies with the character of the individual and the society in which he lives.

The Rationalists Instead of destroying ancient beliefs and customs the rationalists—philosophers, historians, and theologians—of the Chou Dynasty preserved and reinterpreted them. During the Chou Dynasty, scholars who inherited that part of the learning of the professional priests of the Shang Dynasty that had to do with reading and writing attained power at the courts of emperors and kings. With the disintegration of the Empire, the dissolution of manners and morals, and the rise of the "hundreds schools" many opposing tendencies appeared.

One was represented by Confucian philosophers, another by Taoists. The Confucianists maintained that the Chinese must return to the practices of the wise rulers of earlier times. The consequence was research

into the past and codification of legends and rituals in the Five Classics of the Confucian canon. These are: *I Ching*, the Book of Changes, largely devoted to the arts of divination, particularly the "P'a Kua," eight trigrams; *Shu Ching*, Book of History; *Li Chi* and *Chou Li*, Books of Rites; *Shih Chin*, Book of Poetry; and *History of Lu*. The first four of these were at one time thought to have been written by Confucius but now authorship of only one, *History of Lu*, is tentatively ascribed to him. All four of these repositories of early Chinese folklore have two characteristics in common, in addition to the fact that the restorations of the Han scholars have preserved texts of dubious authenticity. First, having been compiled originally in a period of rationalization induced by rapid and disconcerting social changes, they represent at best the views of Chinese antiquarians of the 5th century B.C. who were concerned with the regeneration of their people. Second, though the Confucian school has enjoyed great popularity in China during the last 2000 years, the authority ascribed to the ancient beliefs has been subject to the sorts of distortion seen in other countries. Allegorization, moralization, euhemerism, and the like have modified the beliefs. Among 450,000,000 Chinese the tendency to behave as though in accordance with Confucian teaching cannot be ascribed entirely to the influence of the Great Master. The Confucian doctrines seem to have been an answer to an ethnic need, the formulation of a doctrine which crystallized an important quality in the ethos of the peoples of that part of the world. For the folklorist who has the patience to interpret them and for the comparatist who can free himself from preconceptions, the Five Classics are a rich and untended field.

A second philosophical school made more important contributions to the preservation of Chinese folklore than the Confucianism to which it is opposed. The Taoists representing an antinomianism opposed to the rationalism of the Confucianists are thought to have derived from a philosopher who, if he had much influence on them, lived more than a century before Confucius. The Taoist cult as it has existed with many ups and downs during the last 2000 years is a huge repository of popular belief and superstition. Though the Taoist canon has been catalogued it still awaits systematic study. The Taoists sought the Tao (pronounced Dow) or Way. This is the balance between the individual and the complex and ever-changing forces of the external world, physical, human, and supernatural, to the end that having attained complete harmony, immortality will result. Taoists studied physiology with the thought that proper exercises at proper times would correct an excess of the yin element over the yang or vice versa. Elaborate physical exercises became rituals to conserve energy and induce serenity. In chemistry while searching for the philosopher's stone of immortality they discovered or exploited gunpowder and other inventions. Divination was important in anticipating factors in the universe which were favorable or unfavorable, and talismans attracted good and warded off evil. The rites associated with the passage from one phase of life to another, birth, adolescence, marriage, death, were collected and performed with many variations in the several parts of China.

Several distinctions must be made when thinking about Chinese Taoism and Confucianism. These two philosophical systems must be distinguished from the popular cults which bear their names. Though the Confucian cult is somewhat battered by the impact of Occidental ideas along the coast and by the great revolutions through which China is passing, its rituals are still preserved in the interior, and Confucian proverbs and legends are known to all Chinese. Though Chinese scholars now have to devote to their own study of Occidental science the time their fathers spent in the study of the Confucian classics, they are Confucian by principle. Similarly the organization of the Taoists with a central "pope" and thousands of convents of priests and nuns who devoted their lives to the attainment of The Way has disintegrated. The temples now are likely to be filled with priests ignorant of the complex lore of their discipline, mumbling words and performing rituals to forgotten gods.

A third powerful influence in Chinese folklore is Buddhism. Though Confucianism and Taoism can be seen to have derived from customs and beliefs generally characteristic of eastern Asia, Buddhism, which in its popular form had a line of descent alien to China, was an importation which the peoples of China accepted. The Bodhisattvas became Pusas (Gods) and the Chinese peasant neither knows nor cares whether the god to whom he brings sacrifices of incense or gifts is Buddhist or Taoist. He is interested only in whether that god is able to avert the evil or achieve the good which for that moment is needed.

A reading of Chinese folklore shows evidence of many other importations which have become part of the corpus of belief and practice. Important contributions came from the lamaist north and the Tantrist south, as well as from hundreds of tribes which have wandered in and out of the territory now known as China, and have been absorbed in whole or in part to contribute to the complex phenomena known as Chinese culture. It is not without significance that Marco Polo's image is found in many temples and that Chinese students coming to modern universities in China have been known to "pacify the god of the machine" before beginning their experiments.

General Structure of Chinese Folklore An examination of the customs and beliefs of any region of China in any period is apt to find implicit in them one or more parts of a general structure. Although in our present state of ignorance the quantity of material is imposing and parts of the data contradict each other, the general structure does tend to emerge.

The universe is governed by Shang Ti, thought of as the Supreme Ruler or Heaven, or Yü Huang, the Jade Emperor, the highest of all things, physical or spiritual. The Taoists teach that government is carried on through an elaborate bureaucracy of Spirits and Powers who report to the Supreme Being and carry out his mandates. In some regions the attributes of Yü Huang are similar to those of the Buddhist divinity Indra, and some authorities assert that Yü Huang was invented by Taoists who were competing with the Buddhists during periods of Buddhist popularity.

Government by the Supreme Power is carried on through many bureaus of which three groups may be taken as typical. The gods of the cities control life in

the villages and towns; the gods of place control life in the country; and the Kitchen God controls life in the home. The many Ch'eng Huang, Gods of the Cities and Villages, report to Shang Ti on the problems and trouble-makers of their administration much as the mandarins and village elders report to their own higher administrative offices. The Gods of Place or Locality, the T'u Ti, whose temples are scattered in the fields, are for the peasant a direct approach to Heaven. Acknowledgment is made to them in moments of crisis, fear, hope, gratification. Events in the household are noted by Tsao Chün or Tsao Wang, the Kitchen God, who reports once a year on the behavior of each family.

The nether world contains 10 courts, each ruled by a king and subdivided into 16 wards. Most important of these courts is the Fifth, controlled by King Yen Lo. The 10 courts of Hell and their wards together with the tortures inflicted in each are depicted in the temples of the City Gods, the Ch'eng Huang. Heaven punishes serious crimes by the Thunder God, Lei Kung. Lei Kung has a bird's head and claws and holds a hammer and drum, or a string of drums and a chisel. Although some authorities assert that there is only one Thunder God and explain the tardiness of divine punishment by the fact that one god cannot be in every place at once, others report that Lei Kung is President of a Ministry of Thunder with emissaries to carry out his orders which are frequently received through official channels. If the person whom Lei Kung is to destroy dies before he arrives, he will destroy the tomb with thunder. It is significant that persons guilty of great crimes can be protected by persons of great virtue.

Heaven decrees the moment of death. At this moment Yen Lo, Prince of the Fifth Court of Hell and judge of the lower regions dispatches his officers. The soul is judged according to the Book of Destiny which contains a record of his acts in this and in all previous existences. Buddhist ideas dominate the traditions of those who are concerned about these matters. The 128 hot hells, the 8 cold hells, the 8 dark hells, and the 84,000 other hells of Buddhist lore are modified and improved upon in several parts of China. The rationalist Confucian tradition has little to do with this aspect of folklore and the Taoists have attempted to introduce some simplification. The judges of Hell who are instructed by the government officials of the human world treat them, their human colleagues, with considerable respect. All power, whether in Hell, on Earth, or in Heaven derives from the Supreme Power.

At the moment of death one or more officers from Hell display their warrant and make the arrest. Several roads lead to Hell. One of them passes through a cave in the western province of Szechuan. Another route is through a dust cloud which blinds the soul. In any case, the journey is painless and often the soul is astonished at its whereabouts. The souls of persons who come to a premature death or souls which for one reason or another are not able to follow the normal course become malicious demons. The souls of persons who commit suicide haunt the place where the deed was done and attempt to make others commit suicide. If they are successful they will reincarnate themselves in the suicide's body. When people are murdered, their souls, too, haunt the place of the crime and inflict punishment.

Demons, spirits, ghosts constitute an important part of the population of China. In addition to errant souls one may meet other demons, spirits, fairies, gods. Until adequate comparative studies have been made, Chinese terminology translated into Occidental terminology will continue to cause confusion. It is clear that all things are informed by one or more spirits, *hsien*. The lore of the *hsien* is particularly complex. The ideograph is a combination of the symbol for "man" and the symbol for "mountain." The term is variously translated as "spirit," "demon," "fairy." These ubiquitous spirits can become invisible or can manifest themselves in the form of friends or relatives. It is frequently difficult to know whether the woman in the house who has begun to act strangely is the wife of one's bosom as one had supposed or a *hsien* who has taken her place. Thus the beggar at the door, the prostitute, the stranger in the street may be simple human beings or they may be demons in human form plotting schemes which are certainly malicious and probably wicked.

The two souls of man may mingle with the throng of demons, spirits, ghosts, and at times can be distinguished only by specialists. The rational Confucianists assert that the superior soul is dissipated after death; some Taoists teach that it resides in Hell, and the Buddhists that it is reincarnated. Despite differences in dogma, belief in reincarnation is common. The superior "hun" sometimes takes possession of the body of a human being or animal recently deceased. A soul which has left its body may return to it if the body has not decomposed and if another soul has not already taken possession. Thus among the Chinese the idea of the resurrection of the dead is not particularly extraordinary, a fact which, according to a Jesuit deeply learned in these matters, "ne prouve pas grand'chose." A "hun" may take possession of the body of any creature whose own "hun" is for one reason or another elsewhere. In these cases it speaks through the man's mouth and is difficult to identify except that the individual is seen to behave in extraordinary ways. The inferior "p'o" informs the physical body and after death, i.e. the final departure of the "hun," preserves it until, its strength having been exhausted, the body decays. When the inferior soul is very strong it makes the body commit terrible crimes, kill and devour others, violate women. If these physical souls have great physical stamina they may cling to skeletons and commit the most horrible outrages. In addition to these superior and inferior souls, each part of the body has its own spirit or coterie of spirits.

During sleep the superior soul leaves the body and goes about its own affairs which become the substance of dreams. Sometimes on its wanderings the superior soul is frightened or captured and is not able to find its body again. Sometimes the inferior souls appear to behave rationally and because the superior souls seem to have the same appearance as the human creature in costume and feature, the individual seems to be in two places at once. Some people are able to send their souls out to report events in distant places.

The souls of men, animals, and things enjoy the pleasures and vices enjoyed by living human beings. At times these pleasures are innocent, though the fox spirits, the *hu hsien*, are libidinous and great drunk-

ards. At times the spirits show kindnesses to human beings to reward them for kindnesses rendered the spirits—when, for example, they were hiding from the Thunder God. At other times they make use of human beings to increase their own power.

Geomancy, divination, fortune-telling, astrology are complex sciences. The purpose of each is to discover fortunate and unfortunate influences. Houses, tombs, and palaces should face the south and should be located properly near the veins of strength so that they may absorb the yang (male) influences which produce strength. They should be protected at the back by high mounds or trees which screen off the yin (female) influences from the north. By attracting errant spirits, pagodas in the neighborhood protect the household from evil or discomfort. In houses haunted by ghosts and other spirits shrines must be built in the proper places to pacify and nourish and keep the haunts generally good-natured. The diviners and fortune-tellers make use of the devices common in other places: trances, cards, dice, and the random choice of symbolic objects. They and the astrologers who study destiny in terms of the year, day, and hour of birth are much concerned about maintaining the balance of forces. Thus the great movable feasts of birth, marriage, and burial, together with many other activities, sowing and harvesting, the eating of certain foods at certain times, even sexual intercourse, will have good or evil consequences if performed at the right time and place.

The Chinese Calendar A brief review of the Chinese calendar may illustrate the scope of Chinese folklore. Although the Chinese year is frequently referred to as the moon year and the calendar as the lunar calendar, it is in fact a combination of lunar and solar calendars. It has 12 months, "moons," the solar cycle; and each moon has 28 days, the lunar cycle. Intercalation of extra moons makes the cycle come out right. The years are grouped in cycles of 12 each and each of them has the name of an animal. These are similar to the symbols on the Greco-Chaldean zodiac. The 28 days of the lunar month also have names and each is auspicious or inauspicious for human action. In Chinese reckoning the year is further divided into 24 two-week periods of 15 days each. These are the joints and breaths of the year and serve as accurate dividers of the seasons. Finally the days are divided into twelve periods, each two hours long. These periods also have the names of animals and each is either yin or yang. Thus before undertaking any action it is important to know the influences which govern the hour, the day, and the year.

The festivals of the seasons are observed in China with many regional variations. The First Moon, the beginning of Spring, is everywhere filled with ceremony. All work is supposed to cease during the first days of this moon and the period is generally one of renewing relations with family, friends, and deceased ancestors and of taking precautions that the new year will bring good fortune, i.e. money and babies. During this time the household gods and the spirits of the ancestors return to the home and are received with ceremonious offerings of food and drink. On the Third Day of the First Moon, the Chinese sacrifice to Tsai Shên, the God of Wealth. The early part of the month is a period of friendship, rejoicing, and new resolutions.

The mistress of the house purifies it by carrying a pan filled with steaming vinegar into each room. Exorcists break the spell of bad luck if the family has been unfortunate. Each of the first ten days has a special significance. The first is the birthday of fowls, the second of dogs, the third of pigs, and so forth. The public bath houses reopen on the fourth, the day of ducks. On the sixth, the day of horses, one should visit relations; and on the seventh, the birthday of mankind, one should remain at home and eat red beans, 7 for the man and 14 for the woman, to protect oneself against sickness. Li Ch'un, the beginning of Spring, is a movable feast which usually falls about the seventh to the tenth days of the First Moon. It once was celebrated with processions and the sacrifice of an ox or water buffalo. The Feast of the Lanterns, on the 15th day of the First Moon is vaguely associated with prosperity and longevity. Offerings are made to all the stars on the 18th day, and on the 19th the household should retire early because that is the rats' wedding night. This is also the day the Gods visit the Supreme Being, married daughters visit their parents. Near the end of the month the great fairs open in the large towns.

The Second Moon is a period of homage to the Sun God and the Earth Gods. The 19th is the birthday of one of the most popular of all Chinese divinities, Kuan Yin, who in Buddhist lore was Avalokitesvara, Lord of Love and Compassion, born of Buddha's tears of pity for the suffering world. As the cult moved into China, Avalokitesvara became transformed from a male into a female deity. In China Kuan Yin is the compassionate goddess. Although many theories have been advanced to explain the place of Kuan Yin in Chinese folklore, it is possible that this comparatively recent divinity has usurped the functions of the other matriarchal cults. The birthdays of Confucius and Lao Tze also occur in the Second Moon.

The Spring festival, Ch'ing Ming, is movable and occurs 106 days after the winter solstice. This usually is near the beginning of the Third Moon. Granet has given reason to believe that in early times this was the occasion of orgiastic fertility ceremonies. At this time too homage is paid at the graves of ancestors, an assurance that the line of descent is unbroken. Other festivals of the Third Moon are the birthday of Hsi Wang Mu, the Mother of the Western Heavens, pilgrimages to several of the temples, and reverence to the literary worthies.

The Fourth Moon is the Summer moon and the eighth day is the birthday of Gautama, the historical founder of Buddhism. In this month too ceremonies honor the Eight Immortals or saints of the Taoist cults. These, once human beings, achieved immortality through disciplines discovered by the Taoists. The Eight Immortals are a happy, fun-loving crew whose antics are the subject of many tales. They travel on clouds, set fire to the ocean, get disgustingly drunk in low dives, and dance over the fields of China and into the gates of Heaven itself.

The Dragon Boat Festival is the principal festival of the Fifth Moon. It is connected with the propitiation of the water spirits. In this, the pestilential moon, rites are performed in honor of the Gods of Medicine and of Exorcism. The 13th day is sacred to Kuan Ti, the God of War.

The rainy season in central China appears in the Sixth Moon when homage is paid to Lung Wang, the King of Dragons. A paper or cloth effigy of the dragon is carried through the streets with a dozen or more coolies acting as bearers. When the rains are late, various expedients are tried to bring them on. The Great Bell near Peking booms all the day. Elsewhere the image of Lung Wang is brought from the temple to view the parched fields. This is also the moon of Ma Wang, Protector of Horses, Niu Wang, Guardian of Cattle, Lu Pan, Patron of Carpenters.

The Seventh, the Moon of the Hungry Ghosts, is the Autumn moon. The festival is similar to the Occidental festival of All Souls' Day and lasts from the 15th to the 30th of the month. On this day food is prepared for the ghosts who have no descendants to care for them, and therefore are always hungry. Lotus-flower lamps are carried through the streets, or at dusk candles are stuck into tiny boats and floated down the streams.

The harvest occurs in the Eighth Moon and is celebrated by theatricals, troupes of entertainers, and stilt-walkers. The Harvest Festival on the 15th of the Eighth Moon is the Moon's Birthday. The 9th Day of the Ninth Moon is the day for mounting the hills and flying kites. The 25th of the Ninth is the birthday of one of the famous City Gods, the Cheng Huang.

The Tenth or "Kindly Moon" opens with the festival of the dead. The Eleventh, the "White Moon," the month of the Winter solstice, is the appropriate time for sacrifices to the ancestors and for weddings. The Twelfth or "Bitter Moon" marks the beginning of preparations for the New Year. On the 20th the houses are cleaned. On the 23rd the Kitchen God, his lips smeared with honey so that he will speak no evil, is burned and begins his ascent to Heaven where he will report on the behavior of the family during the year. By midnight of the last day of the year all debts must be paid. The Gate Gods who protect the house against evil spirits are pasted on the doors.

The Festivals of Life The ceremonies attendant on the transition from one state of being to another have, like most folkloristic data, a dual significance: some of them are obviously superstitious, sometimes admittedly so and sometimes denied; at other times they are social ceremonies which relieve emotional strain and give the participants a sense of increased social security. In China the use of posters and pious maxims pasted on the walls are at the same time the expression of hope and the substitute for prayer. It may be noted in passing that students of Occidental lore face a similar problem with the "God Bless our Home" captions in many American houses. Similarly social gatherings at moments of transition, such as birthdays, confirmations, engagement parties, are in one sense clearly social and in another a realization that danger attends these moments when an accustomed phase of being is exchanged for a new one.

Birth Most of China is patrilocal. Not only is the line carried through the male, but the head of the house performs as priest the ceremonies for the ancestors of the group. Male offspring are therefore necessary to assure peace for the ancestral manes and, it may be, their success in the political intrigues they undertake in Heaven. Conversely a powerful ancestor can be of great assistance to those of his descendants still living on the

earth. Many sorts of ceremonies are thought to help in getting a male heir. Kuan Yin, whose cult resembles in some respects that of the Great Mother, is potent. In some temples the hopeful parent puts gifts of baby shoes before her image; in others a shoe is stolen from the temple and replaced by a better one when the child is born. Elsewhere images of male infants are stolen and taken to bed. The Daughter of the God of the Sacred Mountain, T'ai Shan, and her attendants are invoked. The attendants are the Lady of Posterity, the Lady of Fecundity, the Lady who Activates Birth, the Lady who Brings the Child. Kuei Hsing, one of the Gods of Literature, receives attention perhaps because scholarship is the road to success in China, although Kuei Hsing's iconography indicates that he was at one time master of other powers. Images of the Unicorn and other beneficent forces receive honor. Pilgrimages to the shrines of local deities, some of them with phallic significance, are useful in producing male offspring. The act of procreation may be attended by ceremonies and precautions. The Taoists have examined not only the year, the moon, the day, and the hours favorable to the procreation of male infants, but have also described the coital positions and other details of procedure most likely to be rewarded by success. These computations are complicated by the year, day, moon, hour when each parent was born. Households which produce only females can break the spell by giving a boy's name to the next girl to be born, or the mother may carry on her chest a small gold knife to frighten the female spirit about to enter her body. The knife will also frighten mischievous demons who plague pregnant women. Attempts to divine the sex of the unborn child differ little from those practiced elsewhere. Talismans to hasten delivery are sometimes pasted on the body of the pregnant woman or burned, mixed with tea, and swallowed. A small mirror is carried as a protection because demons are frightened at the sight of their own faces. When several male children have died in infancy, the next to be born receives a girl's name and is dressed in girl's clothes. This will deceive the evil spirits. On the 15th day of the Eighth Moon, the Moon Goddess' birthday, friends may steal a melon from a neighbor, dress it in baby clothes, and present it to the couple. The theft must be secret. The gift is followed by a feast. The many seeds in the melon are associated with potency. On this same night women do not empty their chamber pots. Neighbors steal them in the hope of having children.

Before delivery a red candle lighted in the bedroom frightens away homeless ghosts who may attempt to dispute possession of the child's body with its own proper spirit. In order not to offend the Lady who Brings the Child, dirty water must be disposed of carefully, poured into a pit, and covered. Persons known to be evil must be kept at a distance during childbirth. On the third day after birth, a cock, here as elsewhere potent in frightening devils and ghosts, is brought into the room. The mother or, if she is too ill, the midwife pays homage. The cock is then sacrificed. On this day the infant is ceremonially bathed, thanks are given to the Lady who Brings Children, and the child's horoscope is cast. During the first month the mother may not enter the houses of neighbors. At the end of the month the child's head is shaved and he is carried in

ceremonial processions in order, according to some authorities, to protect him against fear but more likely for the pleasure of showing him off to the village. The child's cap is decorated with many amulets. In some places earrings are attached, one for a male and two for a female, or nose rings are used to tie the child to life. Circles of cinnabar, the magic drug, are painted on the child's face to deter evil spirits.

From birth through maturity to death men pass through many dangerous ages. Each period of growth is attended by ceremonies which show a realization that the process of growing up and dying is beset with difficulties. Study of the remedies for the diseases of childhood leads into a fascinating field too complex even to be surveyed at this point. In central China children who keep their parents awake all night are pacified when a notice is tacked to the wall asking passers-by to read it and help the parents get a good night's sleep. One of the most pathetic customs in a country of pathos is "calling back the soul." When an infant has died the mother frequently wanders through the streets holding out its clothes and calling gently, "Where are you playing? Come back home," or "What has frightened you? Come back home," or simply, "Small son, come home."

Marriage After the marriage broker has made tentative arrangements between the families of two young people, the families exchange pieces of paper containing eight characters: two for the year, two for the month, two for the day, and two for the hour of birth. The fortune-teller then decides whether the marriage is possible. Women born under the sign of the Tiger for example are always dangerous though men born under this sign have special qualities. Gifts are exchanged. If after three days no inauspicious event has occurred, the contract is sealed and the ceremonies continue. The choice of wedding gifts is important. Fruits containing many seeds are propitious. Several days before the wedding the costumes are purified by being passed over flames (the male element). After this they may not be touched by woman (the female element), particularly a pregnant woman or one in mourning, as these conditions strengthen the female influence. The day of the marriage is chosen by persons deeply learned in the complex lore of divination, but must always be during the waxing, never during the waning moon. If the bride dies before the ceremony the groom may be given a pair of her slippers. He burns incense before them, not because they contain her soul, as the Jesuits assert, but because they have an obscure phallicism. The bride is well supplied with amulets. One of them is a purse in the form of a lotus which is sometimes thought to protect her against the slanders of her mother-in-law. The bride makes the trip from her father's to her husband's home in a sealed sedan chair. At this moment she is imbued with female (yin) force and this powerful virginity must be protected against any male (yang) influence. The bride is carried over the threshold. After many ceremonies, now mostly regarded as merely social, the couple prostrate themselves before the tablets of the groom's ancestors. This act fixes the marriage. They then enter the nuptial chamber where the bride remains for an entire day. The male members of the family and close friends are permitted to come into this room and to subject the young woman to the most

indecent conversation imaginable. The girl's behavior during this ordeal is carefully noted by the groom, his mother, and friends.

Death and Burial The disposition, the repose, and the happy journey of the soul are matters of great importance to the family. The dying man is placed on another bed and carried outside so that the household bed will not be haunted. His pillow is taken away from him and destroyed and his burial costume is put on. This is as formal and ceremonial a costume as the family can afford. After death the family takes a lantern, a papier-mâché sedan chair, symbolic money, and symbolic food, and accompanies the soul to the shrine of the local God of Place, T'u Ti. After three days and more ceremonies the soul is accompanied by the family and T'u Ti from this shrine to the shrine of the local God of the District, who in turn will accompany it to the shrine of the City God, who will introduce it to the Judge of Hell. The good offices of each of these gods are assured by the offering of gifts, known to the Occident as "bribes." The tablet of the deceased is set up in the ancestral temple, and the date of burial is chosen by the fortune-tellers as the place is chosen by the geomancers. Before the body is taken for burial crowds of priests and professional mourners create a terrific uproar. The funeral processions are often very elaborate and are designed both to keep the physical soul attached to the body, for an errant soul is a great nuisance, and to make the journey of the superior soul pleasant and profitable. Paper concubines, servants, money, food, sedan chairs are provided for his comfort. In modern China paper automobiles and airplanes replace the sedan chairs. A white rooster rides on the catafalque. At the tomb the gifts for the soul are protected from thieving spirits by circles marked with chalk. Ceremonies for the repose of the soul, sometimes very elaborate, may be continued for years. The oldest son as the family priest, must at regular intervals perform ceremonies before the ancestral tablets.

General No general outline of a folklore as alive and protean today as it was a thousand years ago can give an adequate sense of the quality of Chinese popular beliefs and customs. The attempts of the Taoists, deeply learned in the popular beliefs of their part of the world, to sort them out into systems have been baffled by the capacity of the Chinese to create new gods, to accept strange gods as Westerners accept patent medicines because they are supposed to be helpful in this or that situation, and to create legends. The myths and legends of the Greeks and Romans can be studied because so few have been preserved for us; the myths and legends of the Chinese have not been studied in a systematic sense because there are too many of them. The thousands of major and minor deities who constitute the bureaucracies of Heaven and Hell, the hundreds of stellar deities, the Bodhisattvas, the arhats, the lohans, and the many others referred to by the populace as spirits or gods or Pusas, not to mention the tens of thousands of shape-shifting foxes, and other shape-shifting animals, plants, and stones, constitute an enormous population of which no census has been taken. In Chinese legends the localization of a floating tale on the person of a known historical figure for reasons which are obscure is a common practice which distorts the folkloristic meanings of the legend itself. The Chi-

nese folktale follows the little known laws of that type of imagination as seen in other countries. All of the themes listed in the current directories are to be found in China and some of them were recorded several hundred years before they appeared in writing in Europe.

A final difficulty in accounting for Chinese folklore is the difficulty which besets all students of folklore, namely these traditions, beliefs, and practices are created and preserved to assure the mental health of communities and individuals and thus are projections of human fears and aspirations. They therefore involve social mechanisms which Western scientists, preoccupied with physical nature and indifferent to human nature, have had little time to study.

Bibliographical notes: Doré, le Père Henri, *Recherches sur les Superstitions en Chine*, 14 vols., Shanghai, 1911-1919, is the great treasury from which all Western students of Chinese folklore draw shamelessly. Doré's attempt to learn all he could about Chinese folklore in order to demonstrate that Chinese religious beliefs were inferior to his own frequently got him into tight spots. His wide reading of Chinese sources and his scholarly conscience compensate for lack of objectivity. The volumes need an index; but because the pagination is erratic and the structure of the volumes is *ad hoc* rather than logical, indexing is difficult. Doré's one volume conspectus, *Manuel des Superstitions Chinoises*, Chang-Hai, 1926, is useful. E. T. C. Werner's *A Dictionary of Chinese Mythology*, Shanghai, 1932, is for the most part an alphabetical list of the data contained in Doré, though Werner added much from his own wide reading. His *Myths and Legends of China*, London, 1922, is verbose and opinionated. J. J. M. de Groot, *The Religious System of China*, 6 vols., Leyden, 1892-1910, does for the Protestants what Doré did for the Catholics. De Groot was a very distinguished Sinologist and his book contains valuable material. Because China has no "religious system" and its many cults are complex and interrelated, de Groot's initial confusion is often communicated to the reader. Juliet Bredon and Igor Mitrophanov's *The Moon Year*, Shanghai, 1927, and Bredon's *Peking*, Shanghai, 1931, contain much sound material though in the "pretty-pretty, quaint-quiet" style. In Le Père L. Wieger's *Folk-lore Chinois Moderne*, Hsien hsien, 1909, literal translations of Chinese texts for all periods enable the reader to form his own conclusions. As the Chinese text is included, the unlearned Westerner can decide what sort of "god," "demon," "spirit," "fairy," "immortal," the Chinese character "hsien" may be referring to in any given context. (De Groot's *Religious Systems* also contains the Chinese texts.) R. D. Jameson's *Three Lectures on Chinese Folklore*, Peking, 1932, though centrally concerned with popular narrative contains a bibliography. Western Sinologists working in the Confucian tradition have been more concerned with the Classics, the Official Histories, and with the application of "Western historical method" to Chinese data than with folklore. Thus the several thousand volumes which Chinese scholars of the last 2000 years have written about their own folklore cry for attention. These contain dictionaries, summaries, treatises. Until the data in these have been summarized and organized all discussions of Chinese folklore must remain on the unsatisfactory level of broad generalization found in these notes.

R. D. JAMESON

Chinese folktales Chinese folktales deserve special mention because the collections are so much more rich in variety and extensive in historical time than the collections of other peoples. In China all fiction is regarded as merely popular and not worthy the attention of serious men. Consequently until recently the distinction has not been made between popular and other tales and all collections of stories are rich in folktale material. All of the themes and most of the variants listed in the handbooks of the *Märchenforscher* are known in China. At times complete versions were published in China hundreds of years before they were published in Europe. Thus Des Perrier's story of Pernette in *Nouvelles Créations*, 1558, the first European version of one of the complete Cinderellas, was anticipated in China by 700 years in Tuan Ch'eng Shih's *Yu Yang Tsa Tsa*, published in the middle of the T'ang Dynasty. In other instances it is possible to observe in China the transformation of an historical episode through successive tales, novels, and plays into one of the popular themes of Occidental folktale. Thus an incident in the history of the Sung Dynasty was changed through successive tellings until it became a clear example of the Occidental theme of the persecuted queen. In another series of tales Chinese versions and Occidental versions exist together and though the Chinese tell one version more frequently than the other, both versions are known. In the story of the shape-shifting fox most common in China, a student retires to a secluded temple to prepare for his official examinations. He meets and loves a beautiful strange girl who by her sexual prowess reduces him to the point of death. Sometimes she leaves because she feels compassion for him. Sometimes she is unmasked and driven away. Most frequently she leaves because having exhausted his vital essence she has no more to gain from him. In another series of tales a farmer finds his house cleaned and his dinner on the stove each night when he returns from the fields. One day he hides and sees a fox enter his house, shed its skin, and become a beautiful woman. He steals the skin and makes the woman his wife. Many years later she finds her fox skin, becomes a fox again, and deserts the farmer. An "Index of Chinese Folk-Themes" still in manuscript contains several thousand variants of this sort. The following contributions by Wolfram Eberhard are invaluable: *Chinese Fairy Tales and Folk Tales*, 1937; *Typen Chinesischer Volksmärchen*, FFC, 1937; *Volksmärchen aus Südost China*, 1941. [RDJ]

Chingichnich A deity of the American Indian tribes of southern California (Juaneño, Luiseño, Gabrieleño, Chumash, Diegueño): known as Kwawar among the Juaneño, and as the Creator of the Gabrieleño. Among the Luiseño Chingichnich is the god who ordained the sacred practices of the initiation rites, and who dictates the conduct of daily life. He is the chief figure in a pantheon which includes four brothers who are connected with the earthquake. The chief ceremony which Chingichnich instituted was the initiation ceremony of jimsonweed-drinking; among tribes to the north of those mentioned above, Chingichnich is not recognized as a deity, but it is said that jimsonweed was once a man who told the people he would die and be changed into a plant, and that they must drink a decoction made from his roots, for health and to obtain visions. [ewv]

Ch'ing Ming Pure Brightness: a Chinese Spring festival which falls 106 days after the Winter solstice, usually early in April. It has obvious though somewhat obscure connections with fertility in the home and in the field. On this day people visit the graves of their ancestors in the fields and tidy them up. Willow wands and chaplets are customary. Ch'ing Ming is also the official day for planting trees, Arbor Day, and is one of the few customs carried over from Imperial China and sponsored by the Republic. In the T'ang Dynasty the children of courtiers made fires on this day by rubbing willow sticks together in the Imperial courtyard. Marcel Granet's stimulating study of the Spring festival in ancient China (*Fêtes et Chansons Anciennes de la Chine*, Paris, 1919) has not been followed by competent examinations of this seasonal festival in later periods. [RDJ]

Ch'in-Kuang Lord of the first of the ten Taoist hells. He receives all souls and decides what body the soul must next inhabit in order to atone for its sins and acquire merit. Ch'in-Kuang thus controls the span of human life. Souls are dispatched quickly if their good deeds balance their evil ones. Wicked souls are forced to see in a mirror all the evil they have done. Persons who have taken their own lives to bring grief to an enemy, rather than because of loyalty to a prince, filial piety, or preservation of chastity, are returned to earth where they wander as hungry and homeless ghosts until the person they have harmed has recovered. Lazy priests, who have taken money but have not read the prayers they promised, are put into a dark room lighted only by a tiny lamp which is always going out, and are forced to read the prayers they have omitted. [RDJ]

Chinūn Way Shun In Kachin (Burma) belief, the nat who existed before the formation of the world and who created the other important nats (Chitōn, Mu, Sinlap, Ponphyoi, Mbōn, Wāwn, Jān, and Shitta). After their creation Chinūn Way Shun made a pumpkin and called upon these nats. Each added something to it. Chitōn gave legs, Mu eyes, etc., and thus the first man, Shingrawa or Ningkwawnwa, came into existence. Under the name Ka, Chinūn is the spirit of tilth or the nat of the earth.

Chinvatperetu or Chinvat Bridge The Parsi bridge of death which stretches from the Peak of Judgment to Alburz; the Bridge of the Decider. This is a many-sided beam with edges which vary from the thinness of a razor blade to the thickness of 27 reeds. When souls of the righteous arrive, the beam turns to a wide side; when the souls of the wicked appear, the bridge becomes thin and sharp, to make their passing painful or impossible. This bridge is the prototype of the Moslem bridge, al-Sirāt.

Chiotikos A modern Greek dance for two girls or a couple: so named for the island of its origin, Chios. The steps are similar to the balances and grapevine of the Greek open rounds; but the two dancers are either face to face with hand-hold, or they pass each other, or turn under each others' upraised arms. The arch motif suggests that the dance may have the same significance as the traditional Greek arch dances, i.e. vernal rite. [GRK]

Chiron or Cheiron In Greek mythology, a Centaur, son of Cronus and Philyra, the Oceanid; the wisest of the Centaurs and friend and tutor of many of the Greek

heroes. Cronus, to escape Rhea's jealousy, transformed Philyra or himself into a horse. The nymph's labor in bringing forth Chiron proved so terrible that she was changed into a linden tree. The young Chiron was tutored by Apollo and Artemis, and had great knowledge of music and medicine. Among his pupils were Hercules, Esculapius, Jason, Peleus, Achilles, Theseus, Nestor, Meleager, and the Dioscuri. Chiron was immortal, but in the fight at the cave of Pholus he was accidentally wounded in the knee by one of the poisoned arrows of Hercules. Knowing by his medicine that the wound was incurable, Chiron tried to die and could not. Prometheus however offered to take upon himself Chiron's immortality and the Centaur was transformed into the constellation Centaurus.

Chisholm Trail An American cowboy song running to some hundreds of stanzas with varying refrains, sung to any of five or six tunes, to tell the story of the hardships met on the long cattle drive from San Antonio, Texas, to the grasslands of Montana and the Dakotas, and the celebrations at the end of the journey. One of the most widely sung of cowboy songs, this has had improvised additions to suit the complaints of nearly every man who ever rode the trail. The refrains are mostly imitative of the Indian war whoops used when driving cattle.

Chitragupta In Hindu belief, the recorder of the vices and the virtues of men; the judge who sends men to heaven or hell. Compare ТЮТН.

Ch'iu Shê The Autumn-Snake Charm of the Chinese Taoist cult: a magical charm used by Taoist priests and nuns for exorcising certain very serious illnesses.

The paper charm represents him as a twice-coiled, banded and spotted snake with a human hatted head. There are also Spring-, Summer-, and Winter-Snake charms, the Female-Snake charm, the One- to Five-Colored-Snake charms, and the One- to Nine-Headed-Snake charms, each a powerful exorcising charm for a specific disease, and each represented by its own paper image.

chlevnik In Russia, a spirit of the cattle shed; one of the species of domovik or household spirit. The chlevnik's good will is necessary for successful cattle-raising, and the owner must select the right location for the shed and accede to the chlevnik's preferences in the color of the cattle. An offering is made to the spirit when a new animal is brought to the farm, else the chlevnik may harm the beast. In some regions, they try to drive the chlevnik out by beating on the walls or making other attempts to frighten it, or the chlevnik may be asked to leave more quietly.

cho-i In the folklore of primitive Queensland peoples, that part of a child's spirit or soul-substance which remains in the afterbirth and from which Anjea makes another baby.

Ch'o-je or **Ch'o-kyon** A group of chief sorcerers of Tibet, believed to be incarnations of the rGyal-po or king fiends, one of the eight classes of indigenous gods. The necromancer-in-ordinary to the Tibetan government (Nä-ch'un) is the highest of these sorcerers.

chorten or **mch'od-r-ten** Literally, receptacle for offerings; a Tibetan funeral monument, usually a solid con-

ical masonry structure similar to the Indian stūpa, erected over the remains of Grand Lāmas and in memory of canonized saints: the Tibetan name for the funeral monument erected over the relics of Buddha or his saints. Chortens are favorite objects of pilgrimage and worship by circumambulation. Miniature chortens are carried by itinerant priests from village to village for exhibition, and others, inscribed with sacred sentences, are consecrated by priests and sold as amulets or as votive objects. Compare stūpa.

Christmas The Mass of Christ; the Christian festival of the Nativity, the physical birth of Jesus Christ, occurring on December 25: in some places, e.g. Armenia, celebrated on January 6, which elsewhere is the festival of Epiphany, the baptism or spiritual birth of Jesus. The festival of Christ's birth was in the early days of Christianity celebrated on various days in December, January, and March, but in the 5th century it became set, in the Western Church, at its present day. Correspondence of the Christian festival with the close of the Roman observances of the Saturnalia (December 17-24) and the *natalis invicti solis*, the Mithraic observance of the birth of the sun, has often been remarked upon and is not an accidental phenomenon. The members of the early church were recruited from among the pagans, and by the establishment of a festival at this time the energy and attention of the proselytes could be focused thus in a Christian festival. There were, within the Church, criticisms of the observance on the grounds of its resembling pagan rites, of its being sun-worship (the Armenians called the Roman Church members idolaters as well, because of the identification of Christmas with the date of the birth of the sun), and, as late as 1644, during the Puritan ascendancy, the English Parliament forbade observance of the festival. The date of the birth of Christ was said to be December 25, A.D. 1, variously called a Wednesday or a Friday, but actually a Sunday.

December 25 is close enough to the winter solstice for other pagan winter festivals besides the Saturnalia which celebrate the turn of the year to have become absorbed in it. The Yule feast of northern Europe, a solstice observance celebrating the lengthening of the day with the return of the sun and concerning itself principally with the spirits of the dead, became adapted to Christmas, and many Christmas customs of today and of the past are those of the Yule season. The Angli, according to Bede, observed December 25 as their New Year's festival; the eve, *modranecht* or mother night, seems to have been a vigil connected with fertility rites. The Wild Hunt (Asgardsreid) was heard in the storms of the winter season, and Frey especially, the god of fertility, was worshipped then.

There are thus two separate traditions meeting with the Christian story of the Christ child. One, more serious than the other, comes from the Yule celebration, which was essentially a feast of the dark ancestral spirits; the second, in happier and lighter mood, stems from the Saturnalia, with its freedom, its leveling of rank and age, its making light of tradition.

Principal popular custom centers in Christmas Eve, the night before Christmas, but most of the observances are not official; they are custom, outside the Church, and "holy" only by association. Then it is that the Midnight Mass is attended. Specifically only the adoration of

the Child in the crib is peculiar to the Christmas ceremony; all other parts of Christmas service and observances, the fasting, the vigil, etc., are common to the other festivals of the Catholic Church in so far as ritual observance is concerned. The crèche, or representation of the birth of Christ, with the Holy Family and the ox and the ass, is said to have been brought into the church itself by St. Francis. The Christmas story of the travelers overtaken by night and forced to stay among the animals in the stable, the Child in the manger, the worship of the Child by the Three Magi led to Bethlehem by the light of the star, is represented in this crèche, a model often fashioned in great detail.

Christmas Eve is the night when St. Nicholas comes; Santa Claus, with his reindeer and sleigh, carries his bag of gifts down the chimney and fills the stockings of good children with toys and sweets; the Bonhomme Noël leaves gifts for French children on the hearth, or his companion Père Fouettard leaves bundles of switches for the bad ones. Sometimes it is the child Jesus, le petit Noël, who brings the gifts. However, the giving of gifts on Christmas is primarily a northern custom; elsewhere the gifts (French *étrennes*, Latin *strenæ*) are made on New Year's Day.

The Christmas tree seems a comparatively recent development, a German custom spreading elsewhere in the past century and a half, and is perhaps a parallel to the May-tree, which is of much older tradition. On Christmas Eve the tree is decorated with tinsel and lights; beneath or on the branches of the tree are the gifts for the children and the rest of the family; atop the tree is the star of Bethlehem or a heralding angel. The lights on the tree are perhaps a reflection of the Jewish Hanukkah (the Feast of Lights) which occurs at this season, for the houses of the Holy Land must have been lit with them when Jesus was born. However, the general import of winter solstice festivals everywhere is that of light and lights, and correspondence of the Christmas tree and the Hanukkah menorah is probably incidental. The evergreen tree (sometimes a branch only) is kept through the festival season and is not discarded until after Twelfth Night. The Yule log too is burned, and the mistletoe hung up during the Christmas season. The Yule log, a huge piece of wood, is in some places burned a little during each of the twelve days of the season. Elsewhere some of it is kept to light the fire of the next Yule log the following Christmas. In parts of France it is believed that a piece of the Yule log, if kept safe during the year, will protect the house against fire and lightning, will insure bountiful crops, and enable the cattle to bear their young easily. The mistletoe, connected with the magic oak of the Celtic lands, is suspended. Traditionally the girl who stands under it may be kissed by a boy of the company willy-nilly, usually the former.

There are countless other traditional Christmas games and amusements. Christmastide is the time of the costumed mummers and carolers, of the snapdragons and the apples and nuts on strings or at the end of swinging beams, of the waits, of Hogmanay, and of the Lord of Misrule. This latter (called in his Scottish version the Abbot of Unreason until the office was abolished in 1555) was the master of the revels during the whole season from All Hallows to Twelfth Night. He arranged the entertainments, he inflicted the penalties he ad-

judged fit, he was the spirit of anarchy. In him was embodied the spirit of the Feast of Fools that prevailed at the Saturnalia, when all were equals, servants and masters, slaves and freemen, the spirit of the revolution that comes with the changing of the year.

Christmas was the time for gifts from tradesmen to their patrons, the time when servants and underlings partook of the good things their masters had during the year. In Russia, the peasants, singing outside the houses of the lords, were given gifts. The overturning of the usual course of nature extends to the animals as well. On Christmas Eve the cattle spoke and knelt in honor of the Saviour. But listening to them, or attempting to overhear what was said, was dangerous and oftentimes fatal.

Christmas food is in keeping with the festivity of the occasion. Special Christmas dishes are as many as the various localities. The roast pig with the apple or lemon or orange in its mouth is related to the *jugalti*, the pig offered to Frey to induce the fertility of the coming year. In Bohemia, as early as the 15th century, the distributing of apple slices and the baking of white bread were Christmas customs having some relationship to the fertility of the coming year.

In keeping with the northern observance of the season as a period when the spirits of the dead returned, many of the Christmas customs have to do with receiving those guests. The house is cleaned and everything is prepared for Christmas before the family leaves for church. Then, while the house is unoccupied, the spirits come and inspect what has been done. They partake of the meal; in northern Sweden, a special table is spread for them. In northern Germany, it is the Virgin Mary and her attendant angels who come to eat of the food. This careful maintenance of good relations with the ancestral and other spirits is necessary for obtaining a good year.

Many legends center about Christmas, the great happy holiday of Christianity. The story of the Glastonbury thorn, brought by Joseph of Arimathea to England, where it flowered every Christmas, is among the most famous. The revelry of the period is pictured in the story, told of the court of Charles VI of France, of the king and his courtiers who dressed in tow and tar to make believe that they were bears. They were chained together, and in the drunken rout someone applied a torch to discover who the masqueraders were. The king escaped alive, but some of the nobles were burned to death.

Special popular beliefs are widely connected with the season. A white Christmas presages a prosperous year to follow; a green, or hot, or cloudy Christmas will fill the churchyard. An English belief is that the sun shining through the fruit trees on Christmas Day will bring much fruit. The sound of angels singing will be heard by one sitting under a pine tree on Christmas Eve, but death will soon follow, as it will to the one overhearing the cattle speak at midnight or before dawn. The person born on Christmas Day is able to see spirits, according to a widespread belief.

Christ's thorn A shrub of Palestine of the buckthorn family (*Paliurus spina-christi*) with long, sharp thorns: so called from the belief that Christ's crown of thorns was made of it. It is so common a shrub throughout Judea

that certain Biblical botanists have said no other similar plant would have been so available. In Ireland the white-thorn is said to be the thorn from which Christ's crown was made.

chrysanthemum From the Greek, golden flower. In Japan the 16-petaled chrysanthemum was the emblem of the Mikado. It has been the national flower of Japan since the 14th century and there is a national festival to the golden variety. In the Far East it is the symbol of purity, perfection, and long life. In Korea the roots are boiled and used for a headache remedy. In Nai Myang, China, there is a spring in a bank of chrysanthemums and this water will enable one to live for a hundred years. Legend says that Keu Tze Tung fled to the Valley of the Chrysanthemum when he accidentally offended the emperor. Here he drank the dew from the petals of this flower and became immortal. The Buddhists, expanding this story, claim he was given a text to write on the petals, and this text gave the dew its power.

chthonic deities The underworld deities, as contrasted with the heavenly deities. Worship of the chthonic deities was an important part of Greek religion, based on propitiation, and requiring, for example, that the entire sacrifice be offered to the god. It is believed that the chthonic gods were originally the ancestral spirits, and that they represented the ghosts of the departed. The correspondence between the form of many chthonic deities, who appeared as snakes in one aspect or another, and the form of the ancestral spirits, which were often conceived of as being tomb-snakes, makes this identification likely. Many of the Olympic gods had their chthonic aspects, e.g. Hermes Chthonius, Zeus Chthonius, and while these Olympic gods were not worshipped with the same trepidation as the wholly chthonic deities, these aspects were combined with other forms of their worship. One example of the fear in which these spirits were held lies in the fact that they usually were nameless, and were called by some euphemism.

Ch'uang Kung and Ch'uang Mu or P'o Gods of the Bed in Chinese folk belief; specifically, the Lord of the Bed and the Mother of the Bed. They are propitiated to preserve the bedchamber from quarrels, but their particular function is to insure pregnancy. The Lady of the Bed is fond of wine; the Lord of the Bed prefers tea. They are propitiated with wine, tea, and cakes before the images, and the images are turned to face the bed, while the couple, with clasped hands kowtow three times before the bed. [RDJ]

Chuan Lun King of the tenth of the Taoist hells. Here souls who have expiated their crimes and are to be reincarnated pass over one of six bridges. The Spirit of the Wind then takes them to the Tower of Forgetfulness and gives them a drink which makes them forget their previous existence. [RDJ]

Ch'u Chiang King of the second of the Taoist hells, the hell of thieves and murderers. It consists of a large lake of ice. Ch'u Chiang is honored on the first day of the Third Moon. [RDJ]

Ch'ü Hsieh Yüan The Ministry of Exorcism of the Taoist cult, whose function is to expel demons from houses and otherwise control them. The lore of this ministry has been rationalized by its practitioners until

the ministry has developed into a complicated bureau with seven chief ministers, each entitled Great Heavenly Prince. The most important of these is Chung K'uei, the Great Spiritual Chaser of Demons for the Whole Empire. [RDJ]

Chuku The supreme deity of the Ibo of the Calabar District, eastern Nigeria. *Chi-uku*, literally the great Chi, is the best-known variant of a number of variants of Chi, of which *Chineke* (*chi-na-eke*, the creator) may be taken as an example. [MJH]

chullpas The mummified corpses of the ancestors of the Aymara Indians of South America, about which they tell many fabulous stories. The rectangular funerary structures in which the ancient Aymara buried their dead are also called chullpas. [AM]

Chung Ch'iu The Chinese Harvest or Mid-Autumn Festival; the Festival of the Moon, celebrated on the 15th day of the Eighth Moon by feasts and theatrical performances. The moon represents the female principle, as the sun represents the male; consequently men never make obeisance to the moon. But women and children especially make offerings. Moon cakes, circular in shape, are offered. In some places they are eaten immediately after the festival; elsewhere they are kept until the New Year. Watermelons cut in lotus shape are also appropriate. Effigies of the rabbit and the three-legged toad who can be seen in the moon are common. The rabbit spends his time with mortar and pestle preparing the pill of immortality. Although sufficient evidence exists in the rich records of China to warrant a full-dress study of the seasonal festivals (Spring, Summer, and Autumn) the data has not been brought together in practicable form. [RDJ]

Chung K'uei In Chinese Taoist lore, the "Great Spiritual Chaser of Demons for the Whole Empire": a beneficent and powerful expeller of demons. He is worshipped on the 15th of every month with offerings, and his *ma-chung*, or paper image, is also burned at this time. His legend is that he was canonized by one of the T'ang Emperors (618-907 A.D.) for freeing the emperor from the red demon of emptiness and desolation. Chung K'uei is one of the seven officials in the Taoist Ministry of Exorcisms. He is especially honored in the Fifth Moon, known as the pestilential, the evil, or the wicked moon. Compare CH'Ü HSIEH YÜAN. [RDJ]

Chu'ngu In Annamese belief, the original owners of the land whose descendants are no longer living; autochthones. The Chu'ngu are jealous of those who now possess their land, so during the first three months of every year each landowner must make a sacrifice to them. Whenever evil befalls a farmer's cattle or crops, it is attributed to the Chu'ngu who are then appeased by sacrifices. To insure protection from them the land is bought from the spirits by the payment of imitation money.

Chu-nhà In Annamese belief, the house guardian who resides in the lime jug. Every household possesses such a jug in which the lime used in preparing betel pellets is stored. If it is broken, it forbodes the death of a member of the family and the broken pieces are carefully placed on or under the trees near a pagoda in order to propitiate its resident, who then takes up residence in the new jug.

churaching of women The custom of reading an appointed service when a woman comes to church after a confinement to render thanks to God for her safe delivery and return to health. In England, a mother never crosses the threshold until she has been "churched"; in Scotland, she never sets to work until she has been "kirked." There are certain other tabus for mothers after childbirth in the British Isles but once they have been churched these are removed and women are then free to go about, make visits, and so on. Purification ceremonies for women on this particular occasion were carried out by priest or mediator with lustrations, prayers, or blessings in France, Germany, Italy, Austria; among Negroes and American Indians. Churaching is a remnant of the old Mosaic Law (*Lev. xii*) which prescribed purification after any so-called defilement; it is also an echo of the release from more primitive tabus after childbirth with their strenuous requirements. [CRS]

churel In modern Indian belief, the malignant ghost of a woman who dies in childbirth or in a state of ceremonial impurity: originally the ghost of a low-caste person. The churel usually has reversed feet, no mouth and haunts filthy places. Sometimes, in the form of a beautiful young woman, she captures young men and keeps them in her power until they are gray-haired, old men. Spells, propitiation, and exorcism are used to rid an area of such a spirit and the body of a low-caste person is buried face downward to hinder its escape.

churinga or tjuringa The Australian Aranda (or Arunta) term for a ceremonial object of much sacredness used in rites of many tribes, where, however, it has different names. A churinga may be a polished stone or piece of wood engraved with the group totem design. When it has a hole in it through which a string is passed, it is called a bull-roarer. Women are told the whizzing sound made by swinging it is the voice of spirits. Sacred objects are kept in caves or rock shelters dangerous for women and the uninitiated boys to come near. A churinga has marvelous properties for healing wounds, especially those caused during circumcision and subincision, and for giving courage and power. [KL]

churning The process by which butter is made, i.e. beating or otherwise agitating cream until the oily globules separate from the other parts. In general European folk belief, sometimes the butter will not come because it is bewitched or because it has been stolen by witches or fairies. In some parts of rural England when the butter refuses to come, a hot horse-shoe is dropped into the churn. This is believed to unspell the bewitchment. In some places a horseshoe (or ass shoe) is nailed to the bottom of the churn. In Ireland it is said that a bit of burning turf placed under the churn will keep the fairies from stealing the butter. Even more potent against supernatural theft is a churn handle or crosspiece made of quicken wood, or rowan. But if no rowan went into the manufacture of the churn, women will tie a branch of it around the churn or on the handle for the same reason. In some parts of Ireland it is said that this branch must be cut on May Eve. If a stranger enters the house while the churning is going on, he (or she) must lend a hand to the dash for a moment or the butter will be "abstracted." It is

especially good luck to churn before sunrise on a May morning.

Churning of the Ocean In later Hindu mythology, a joint project on the part of the gods and asuras (demons) to recover the Elixir of Immortality, *amrita*, lost at the time of the Deluge. When the gods appealed to Vishnu for renewal of strength he told them to cease temporarily from their eternal war with the asuras for dominion of the world, to join forces with them, collect all plants of all kinds in the world, throw them into the cosmic Milky Ocean, and churn the ocean to recover the precious drink. For this work they were to use Mt. Mandara for a churning-stick and coil the serpent Vāsuki around it for a rope. All this the gods and asuras did, and churned together for a thousand years. Out of the waters rose a number of things of diverse personification and symbolism: first, the Cow, Surabhi, the cow of plenty; then Varuṇī, goddess of wine; Pārijāta, the wonderful coral tree that perfumed the world; then the Apsarases, celestial nymphs a thousand-fold, next rose from the churning; then the moon (see SOMA), and the powerful and terrible poison, said to be twin-liquor to *amrita*; next emerged Śrī or Lakshmi, goddess of beauty, bearing a lotus. Last of all came Dhanwantari, physician to the gods, bearing the *amrita* in a milk-white bowl. Among other things mentioned as emerging at the Churning of the Ocean are *kaustubha*, the marvelous jewel worn by Vishnu (or Krishna), and Airāvata, the milk-white elephant taken by Indra. The story of the Churning of the Ocean is told in the *Mahābhārata*, the *Rāmāyana*, and the *Purāṇas*.

Chu Yi One of the patrons of Chinese literature: popularly known as Mr. Redcoat. An immortal princess fell in love with him and took him to heaven to live with her. He returned to earth because he preferred studying the classics and becoming an imperial minister to a life of connubial bliss in heaven. [RBJ]

Chyavana In Hindu mythology, a sage who was shriveled with age, the son of Bhṛigu. The Āsvin tried to seduce his young wife, Sukanyā, who remained faithful to her husband and taunted the two horsemen with being incomplete. She promised to explain the taunt if they would make her husband young. This they did by telling him to bathe in a certain pond. She in turn explained that they were incomplete because they were excluded from the gods' sacrifice. Chyavana compelled the gods to permit the Āsvin's participation in the soma ceremonial by creating a fearful demon, Mada, who threatened to devour Indra unless he agreed.

CIAP The International Commission on Folk Arts and Folklore is an international institute for ethnological and folklore research. It was founded in 1928 under the auspices of the League of Nations on the occasion of the first International Congress of Folk Arts and Folklore held in Prague. Its statutes were revised during the 3rd General Assembly which CIAP held in Paris in 1947. Its aim is the comparative study of the life and customs of peoples and its field extends to ethnology and folklore. It proposes to promote studies and coordinate research on a world scale. Its principal object is to bring out the concordance of the essential aspirations of Man, in spite of the peculiar features of each culture.

CIAP is composed of members and associates elected by the General Assembly by co-option in view of their competence in the relevant field of CIAP's activity. National committees or societies contribute in each country to the accomplishment of CIAP's program. CIAP has at the present moment some thousand members.

The governing bodies of the CIAP are the General Assembly, the Governing Board, the Secretary-General. The Governing Board meets, in principle, every year, and the General Assembly every three years. The Governing Board of the CIAP is composed as far as possible of representatives of every nationality. At the present moment (March, 1949) 62 nationalities are represented. The CIAP has one President, and six Vice-Presidents, who are, to some extent, the representatives of the different continents.

The CIAP is a foundation member of the International Council for Philosophy and Humanistic Studies, created in 1948 under the auspices of UNESCO, which contributes to the financing of this work. The fact of belonging to this Council in no way diminishes its autonomy or scientific independence. Within the Council CIAP represents ethnology and folklore studies.

CIAP's scientific work is divided into ten Sections: 1) Bibliography. 2) Theory, Methodology, Terminology. 3) Museums, Collections, Archives, Libraries, Information centers. 4) Habitation, Work, Technology. 5) Society, Religion, Law. 6) Literature. 7) Dramatic arts and games. 8) Plastic and decorative arts, Costume. 9) Music and Dance. 10) Exhibitions, public performances and festivals, workers' spare time. This division has been made purely for convenience in work and is not intended to be rigid and watertight.

Beside the work of the Sections the CIAP organizes international studies conferences or small expert meetings for the study of particular points on its program. For the year 1949-50, for example, the following meetings are on the program: Expert Conference on the methods and techniques to be applied in folklore and ethnological research. An international study course on methodology and the drawing up of a textbook. A meeting to draw up a dictionary in several languages of ethnological and folklore terminology. An expert committee to make a series of films based on ethnology and folklore and intended to stress the concordance of the essential aspirations of Man. These films will be of a scientific nature but will also be designed to interest the general public. An International Studies Conference on Rural Architecture and the Role of Peasant Tradition in the Reconstruction of War-Devastated Countries. An expert committee on the publication of a collection of textbooks of different national folklores, having the same tables of contents in order to stress the relationship of the traditional cultures of different peoples. Etc. etc. The 4th General Assembly and the 15th Session of the Governing Board.

CIAP's organs of expression are: *CIAP Information* which comes out according to the needs of the moment, sometimes several times a month. *LAOS*, a journal not appearing at regular intervals, devoted to comparative ethnology and folklore. The first number will appear in the course of 1949. *LAOS* replaces the reviews *Recherche* and *Museion* (with the latter's monthly supplement) which were both published until the end of 1946 in collaboration with the former International Museums

Office. The last volume of *Recherche* (1946) was devoted to a comparative study on Primitivism and Classicism. The collection of *Museion* includes 58 volumes. In this publication are to be found more particularly descriptions of collections dealing with ethnology and folk art. CIAP has taken over the publication of the *Volkshundliche Bibliographie*; three volumes, dealing with the years 1939, 1940 and 1941 will appear during 1949. This publication will in future contain a translation in English or French of the titles of works which hitherto were given only in German. Among CIAP's scientific works we further indicate the following: Folk Arts, 2 vols.; Musical Folklore, 2 vols.; Folk Arts and Workers' Leisure; The Museology of Ethnological Collections; The Significance, Aims and Museum Technique of Collections of Musical Instruments; Why and How is Folk Music Collected; Manual of Museology; International Museums Directory; Chilean Folklore; Peruvian Traditions; Art, Life and Nature in Japan, etc. In *CIAP Information* for 1948 there have been a series of studies on ethnological and folklore research in different countries.

The title of the CIAP is an abbreviation of the French title: Commission Internationale des Arts et Traditions Populaires. The temporary headquarters of the CIAP is: Palais de Chaillot, Paris XVIe, France. The Secretary General is E. Foundoukidis.

E. FOUNDOKIDIS, Secretary General

Çifte tel An abdominal dance of Turkey, the old Caucasian Turkish provinces, Azerbaijan, Anatolia, Baku: also known in Persia. It is ordinarily danced by one woman in a circle of women, or by a single man for a group of men. The abdominal muscles are not stressed as much as in the *danse du ventre*. The quivering motion extends to the shoulders and upraised arms and horizontal jerking of the head (the Hindu *sundari*). Footwork is subordinate. Members of the upper classes have become reluctant to perform this dance, even though it is not performed in the nude as is the *danse du ventre*. The name means literally "curls of the bangs of the forehead." [GPK]

Cin-an-ev Wolf culture-hero and trickster of the Ute Indians. [EWV]

Cinderella Title of the best known folktale in the world (Type 510A), found nearly everywhere in the world from Alaska to South Africa, from Europe to Indonesia and South America; more than 500 versions of the tale are known in Europe alone. Its place of origin is unknown, but probably it is an originally Oriental story. It has been carried by Europeans to Indonesia and the Philippines, and to North and South America. The earliest known version happens to be Chinese, from the 9th century A.D.; its European history begins some time before its appearance in Perrault and Basile. The story as told by Perrault has had very wide circulation, yet it contains many familiar elements not basically essential to the Cinderella story and it omits several important motifs (e.g. the help of the dead mother, Cinderella as turkey or goose girl) found in variants of the tale elsewhere in the world.

Essentially the Cinderella story, as differentiated from its sister tales *Catskin*, *Cap o'Rushes*, and *One Eye, Two Eyes, Three Eyes*, is that of the ash-girl (German Aschenputtel and Aschenbrödl, French Cendrillon, Italian Cenerentola, etc.) who, with the aid of an animal or her

dead mother, appears at the dance, festival, or in later versions at church, disguised as a grand lady, wins the admiration of the prince, is discovered by the ring or slipper test, and marries the prince.

Perrault's telling of the story begins with the cruel stepmother and the wicked stepsisters, contrasting with them the meek and good Cinderella, forced to do the drudgery of the household and to wait upon the women. Cinderella is so good she does not fail to do her best in dressing her stepsisters when they go off to the grand ball. But when they leave, she begins to weep in despair. Her godmother, who is a fairy, appears in order to help her. Perrault here does not follow the more common incident of the world story, for elsewhere it is Cinderella's mother, as a domestic animal—cow, goat, etc. (Kaffir, Finnish, Celtic, Portuguese, French, etc.)—, as a tree growing from the mother's grave, or by means of an animal sent by the mother, who helps the girl. The fairy godmother is rarely found in the story. Cinderella then, in Perrault's version, goes to the ball in the pumpkin-coach, with mouse-horses, rat-coachmen, and lizard-footmen. Her fine dress and beauty strike the prince to such a degree that he cannot leave her side. At a quarter of twelve she departs hurriedly, for when midnight strikes her finery will disappear. The next night she comes back to the ball, and this time she forgets. The clock strikes twelve as she flees, and only a little ash-girl is seen to leave the palace grounds. But, she has dropped her slipper. Other versions introduce a threefold visit to the ball or festival or church. The use of the witching hour of midnight is Perrault's; so too is the glass slipper. In the Chinese version above mentioned, it is a golden slipper; sometimes it is a ring (compare *Cap o'Rushes* and *Catskin*). Whether Perrault's "pantoufle de verre" was originally a "pantoufle de vair" (fur) is a question that has aroused some interest, but it is quite unessential to the basic elements of the story. The prince, determined to find her, sends throughout the kingdom for the one whom the glass slipper will fit; Cinderella's is the only foot it will go on; she produces the slipper's mate, forgives her sisters, and marries the prince. There are numerous versions in which the dénouement is not as happy for the stepsisters and the stepmother.

Cinderella was the subject of the first detailed study of a folktale ever made, that by Marian Cox in 1892. Miss Cox's work shows the story appearing in combination with other tale types, disguised, often distorted, with elements omitted, yet clearly still the Cinderella story. The Zufii tale (outlined by Stith Thompson in *The Folktale*, pp. 127–128), for example, has been completely adapted to Zufii culture. The heroine is an abused turkey girl who gets her fine clothes from the turkeys. But she stays too long at the dance and the turkeys take the finery away. See AMALA; DIRTY BOY; UNPROMISING HERO.

Cindy American folk song and banjo or fiddle tune played for square dances and reels. It has a rollicking chorus and numerous stanzas devoted to the charms and complexities of a backwoods girl.

cinnamon The aromatic inner bark of a tree of the laurel family, used as a spice. It was first mentioned in the writings of the Chinese in 2700 B.C. Used by the Jews and Arabs as a perfume it was one of the earliest

items of trade in the East. The Jews used it in the anointing oil in their temples. The Arabian priests had the sole right to gather the bark, and the first bundle was dedicated to the Sun. In early times it ranked in value with gold and frankincense. It was said to make an excellent tonic for the system and developed immunity to disease. In early times cassia was thought to be an inferior quality of cinnamon, and they were used interchangeably. Cassia was used in the embalming fluid of the Egyptians.

Cirapé "Younger brother" and companion of Old Man Coyote, the trickster of the Crow Indians of Montana. Cirapé accompanies Old Man Coyote on his wanderings and shares in many of his adventures. [EWV]

Circe In Greek mythology, a sorceress, usually the daughter of Helios and the Oceanid Perse, and sister of Æetes, king of Colchis. She murdered her husband and was exiled to the island of *Ææa* where she delved into the secrets of magic, surrounding herself with wild beasts which she transformed from men. Ulysses' crew, when they were cast up on her island, were likewise transformed by her magic cup into swine, but the hero himself, protected by the herb moly from the effects of the drink, and informed of her actions by Eurylochus who had escaped the change, forced her to return his men to their proper shapes. Her wiles nevertheless caused him to remain with her a year, during which time he became the father of Telegonus. Before he left, she advised him how to interview Tiresias in Hades, and on his return from the underworld pointed out the dangers he would meet in his journey. Homer calls Circe the fair-haired goddess. Either Circe or the Witch of Endor may claim the distinction of being the most famous of all witches.

Circe motif A motif (G263.1), related to the large group of transformation motifs, in which the lovers of a sorceress are turned by her into swine or other animals: the tales embodying this idea are found from western Europe to Mongolia. Krappe states that the motif spread from the Near East, originating in the Babylonian myth of Ishtar who slew her lovers when she was sated with them (like many another goddess or god or king of myth or history). The dulling of the point of the original myth (actual death to transformation into beasts) is typical of the change to popular tale from myth.

circular tale A variety of the endless tale: also called *prose round*. It is characterized by suddenly beginning again as it reaches the climax. See ENDLESS TALE.

circumambulation The ceremonial walking around an object, site, or person with the right hand towards it, either as a religious ceremony, act of reverence, or magical practice: also called the sunwise turn, holy round, etc., the Brāhman *pradakṣiṇa*. It brings good luck, fends off evil, cures diseases, blots out sins, and is also sometimes regarded as a kind of cosmic magic to insure the continuation of the sun in its course and with it the benefits of the solar cycle: crops, animals, human progeny, warmth, life itself. It is an ancient and widespread practice occurring and functioning variously in a number of cultures.

In India, Tibet, China, Japan, galleries or walls are

still found around Buddhist shrines so that pilgrims may make the holy rounds. Hindus and Mohammedans circumambulate the tombs of saints, believing that the act wipes out sins. The Kaaba at Mecca is an object of circumambulation; so is the Holy Sepulchre at Jerusalem for Oriental Christians. The Roman Catholic Stations of the Cross are also always done sunwise. Circumambulation of religious objects, shrines, etc., propitiates the god or other spirit associated with it, or imparts to the circumambulator some aura of its sanctity or power, and protects both from evil. Many North American Indians perform their rituals sunwise. The Navaho and others associate anti-sunwise motion with curses and witchcraft. The circuits of the great Midewin ceremony are performed sunwise. Eskimos, Lapps, and the peoples of northern Siberia all possess sunwise ceremonials. And certain Carib Indians perform their initiation ceremony dances sunwise.

Circumambulation of the dead or of the grave is an ancient practice found from the Central Eskimo, Lapps, Buriats, to India, throughout Europe and the British Isles, and in British Guiana. Achilles made the war chariots circle the body of Patroclus three times (*Iliad*, xxiii). The Argonauts circled the body of Mopsus, the seer, three times when they buried him. In Ireland a corpse is still carried sunwise around the graveyard before burial; the graveyard is always approached sunwise (see DEISEAL). The Koryaks speed the souls of slain bears into the sun by carrying the stuffed bearskin in ceremonial sunwise circuit.

The magical power for good inherent in the act of circumambulation is seen in such practices as the turning of boats sunwise by fisherman of the Orkneys and Shetlands, Iceland, and Ireland before undertaking a trip, and the encircling of the sacred pipul tree by barren Brāhman women to induce pregnancy. The famous fire charm of northern Europe was the sunwise circumambulation performed with the proper incantations. European balladry celebrates many a brave "fire-rider" who was burned to death with his horse before he could complete the required number of circuits.

Brāhman and Buddhist marriage ceremonies include the circumambulation by the couple of hearth or house-pole. In early Roman marriage ceremonies they circled the family altar. In rural Europe and the British Isles they circumambulate the house or the church. In some parts of Scotland today family and friends will circle sunwise around someone who is going on a journey, to give him luck. Opler, in *Dirty Boy* (MAAA 52: 36) notes that Jicarilla Apache on the raid customarily skirt enemy camps sunwise. The Japanese believe that to advance against an enemy anti-sunwise is defying heaven. In all Celtic countries the ill encircle holy wells to be cured. The Estonian father will run around the church while his child is being baptized to make it a good runner. Moslems stir their food and pass their dishes sunwise. In China and Japan a cup of tea is given one complete sunwise turn, sip by sip, between the first sip and the last.

Circumambulation occurs in folktale for the undoing of evil spells (D787), for transformation by encircling three (or four) times (D563), the acquiring of magic power by circumambulation (D1791). See AMPHIDROMIA; DEISEAL; JERICHO; ROUND DANCES; SWASTIKA; TUATAL; WITHERSHINS.

circumcision The operation removing all or some portion of the prepuce or foreskin, the skin covering the glans of the penis: an almost universal custom all over the world except in Europe and non-Semitic Asia. An analogous operation is often performed on women, the clitoris and sometimes the labia being removed. Male circumcision is sometimes attended in Australia by the companion operation of subincision, the slitting of the urethra the length of the penis; and in Jewish ritual circumcision by the tearing of the mucous membrane covering the glans. The knife used is often of stone, leading some to believe that the custom originated in the stone age, before metal was worked and used by man.

The cutting of the prepuce may be only symbolic, as among the Chams of Indo-China; it may be simply a gash or cut in the prepuce, as in the Americas and parts of the Pacific; or it may be the total excision of the prepuce, the common meaning of the word. Literally, the word means "a cutting around," and perhaps it should be limited to the complete operation, but the sacrifice or test implied in the cutting of the organ of generation is so widespread that any similar operation on penis or vulva must be included in a discussion of circumcision.

Wherever it occurs, circumcision is a form of initiation. Most commonly it takes place at or before puberty; universally it precedes marriage. Many theories have been advanced explaining the reason for circumcision: it is a sacrifice to the goddess of fertility; it is a test of the ability to withstand pain; it is a mark of social distinction, setting the circumcised apart from and above the uncircumcised; it avoids the danger inherent in sexual intercourse by sacrificing a part for the whole; it is a sanitary measure; it has even been said, without evidence, that it is meant to increase sexual pleasure by making the penis less sensitive. While many of these theories hold true for one or a limited number of peoples, none answers the question fully.

However, the ritual which surrounds circumcision (e.g. Jewish, Australian, African) and its inclusion in initiation rites of some sort; the rejection of the uncircumcised from the (circumcised) group (e.g. the Masai will not permit the uncircumcised to handle iron, the term "uncircumcised" is an insult among the Arabs, etc.); the insistence that circumcision makes a man of a child, intercourse and marriage not being safe before circumcision; the inclusion of the naming rite in the circumcision ceremony—these, while of scattered occurrence, all indicate that circumcision is basically an initiation ceremony.

Who is circumcised (males, females, both; the higher classes, as among the Aztecs, or everyone but the highest class, as in Tonga), the timing of the operation (from the age of a week or so to an age immediately preceding marriage), the identity of the operator (father, uncle, father-in-law; priest, doctor, special official), what instruments are used and what they are made of, and other similar questions are too complex to be entered into here, and are of more interest to the anthropologist or the student of sociologic institutions than to the folklorist. Even the universality of several of the statements may be dubious: within recorded times the custom has been seen to be adopted and discarded by several peoples; the Zulu king, Chaka,

abolished it in the 19th century, and though of recent introduction among the central Bantu it is dying out among them.

It is of interest to the folklorist to note that myths or tales about circumcision are rare, so rare that even origin tales do not often occur. The Arunta creation myth does relate in detail the story of the origin of circumcision and subincision, which forms an important part of the Alcheringa myth. The Biblical reference to circumcision as the mark of the covenant between the Israelites and Yahweh is well known. Members of the same age group, circumcised together, are sometimes as close as blood brothers among the Kaffirs, the Bechuana, the Papuans. A seat is left for Elijah at the Jewish circumcision. Some legendary persons (Adam, Moses, Zerubbabel) were born circumcised. But apart from the types which these myths, customs, and beliefs represent—and they are few in number—the folklore of circumcision does not exist, perhaps because it has been absorbed in religious ritual, perhaps because of the tremendous tabu that must lie over a subject so closely related to the generative power and the mysterious sacrifice of manhood to attain manhood. Students of psychoanalysis applying their techniques to anthropology have professed to see in circumcision a reflection of the unconscious castration-fear complex, but this too is only tangentially related to folklore.

Cirein Cróin In Scottish Highland folklore, the sea serpent, believed to be the largest of all living creatures. Seven whales were an easy meal for him.

ciriwanu A self-accompanied dance of the Aymara Indian men of Bolivia: probably so named for the Chiriguano tribe. Dressed in a white skirt and ostrich-feather crown, each dancer holds in his left hand an enormous pan-pipe and a drum; in his right hand he manipulates a drum stick. [GPK]

Cuateteo or Cuapipiltin In Aztec belief, certain female spirits (literally "noble women") who had died in childbirth (or in their first childbirth) or who had been warriors. Their patroness was Cihuacoatl, the serpent woman, probably an aspect of Coatlicue. The Cuateteo lived in the western sky, through which, from the time it reached the meridian, they carried the sun to deliver it to the lords of the underworld. From this connection with the underworld they probably derived their dangerous character. Sometimes they flew out of the west as eagles, bringing epilepsy to children and lust to men. At certain times they scared people on the roads. From the corpse of such a woman, the stupefying thieves' candle (hand of glory) might be made, hence great precautions, in the form of armed guards and the like, had to be taken against the body being stolen or mutilated. Under Spanish influence, the cuateteo has developed into La Llorona, the weeping woman of folktales, who wanders through the streets seeking her lost children.

cláirseac An Irish harp, especially a festival harp of ancient times.

Clementine A late popular American ballad dealing with the drowning of a forty-niner's daughter.

Clerk Saunders A Scottish popular ballad (Child #69) in which Clerk Saunders induces his true love,

May Margaret, to take him to her bed, to his undoing. She opens the latch with Clerk Saunders' sword, so that she may swear her hand did not let him in; she blindfolds her eyes in order to say she has not seen him; she carries him to the bed, in order to say he has not crossed her floor. But after the true lovers are sound asleep, May Margaret's seven brothers appear at the foot of the bed, discussing whether or not to kill Clerk Saunders. The consensus is not to part the beautiful and loving pair. Only the seventh brother (sometimes the eldest) is unmoved; he draws his sword and runs it through Clerk Saunders. The ballad ends with May Margaret's grief and refusal to be comforted for the man she was going to marry. There is a version in the David Herd manuscript running to 41 stanzas: the story as here told plus the incident in *Sweet William's Ghost* (Child #77), i.e. May Margaret is not left to live on uncomfited; she follows her lover's ghost to the graveside and dies with grief beside it. Sir Walter Scott first presented *Clerk Saunders* to the reading public in his *Minstrelsy of the Scottish Border*.

cliff-ogre The incident of a monster kicking people over a cliff so that they may be eaten by her brood, occurs in many North American Indian tales over the continent, as also in early Greek story (G321). [Ewv]

climax of relations In folklore, ballad, and legend, the introducing of the relatives of the protagonist in the order of their importance to him and to the resolution of the action. This is a familiar motif in a number of ballads and folk songs stressing the fact that the condemned one's sweetheart (or wife or husband) is more merciful than blood relations. The English ballad *The Maid Freed from the Gallows* (Child #95) typically illustrates the sequence of refusals to ransom the condemned girl: father, mother, brother, sister, all arrive in this sequence; all refuse ransom—"For I am come to see you hanged"—until the girl's true-love arrives, who has come to see her saved. The American Negro version of this ballad, *The Gallows Pole*, names papa, brother, sister, sweetheart.

Many Negro jail songs also follow the climax of relations: "My mama don't write to me, poor me"—working up to the sweetheart's line, which is always the punch line, whether the sweetheart has written or not. A number of Negro spirituals also use the device—"My mama has gone to the Other Side," etc.—working up to the singer himself.

In the English ballad *Lord Randal* (Child #12) a sequence of bequests is the vehicle for the climax of relations: "What do you leave to your mother, Lord Randal, my son?"—then to sister, brother, and true-love, who, in sharp contrast with the first three affectionate bequests, is consigned to hell-fire for poisoning her lover. In the English and Scottish versions of *Edward* (Child #13) it is the mother who caps the climax of relations and is left with the bitter curse of the son to whom she has given murderous counsel.

Clíodna (pronounced *Cleena*) In Old Irish mythology, daughter of Gebann, chief druid to Manannán mac Lir, lord of the sea. Clíodna of the Fair Hair had still not given her love to any man when Ciaban (pronounced Keewan) came to Manannán's house. The way Ciaban came was this: he was sent away from Fionn's

country because of his charm for women and the jealousy of the men of the Fianna. He left Ireland in a curragh with two strange men; and a storm rose around them of such mountainous waves and din that Ciabán wished himself on land. A rider on a gray horse rose out of the sea and brought him out of danger. Ciabán was carried with the rider to Tir Tairngaire, the Land of Promise, where stood the city of Manannán.

A great feast was going on there at the time and the famous entertainers were doing their tricks. One of the tricks was to throw nine straight willow rods into the rafters of the house and catch them coming down, but standing on one leg and with one hand behind the back. The tricksters used to persuade strangers to try the trick just to see them fail. So one of them handed Ciabán the nine rods and Ciabán did the trick. Clíodna loved Ciabán from that moment and went away with him the next morning. They went in a curragh to a place on the south shore of Ireland. Ciabán pulled up the curragh on the strand and went on shore, seeking a deer in the thicket for their food. He left Clíodna waiting in the curragh with Iuchna, a musician of Manannán's who was with them. Iuchna played such music that Clíodna slept, and a huge wave rolled over the curragh and drowned her and swept her away. The surge of that place is still called Tonn Clíodna, Clíodna's Wave.

In later folklore, Clíodna is regarded as one of the three fairy queens of Munster, active in May Day celebrations and seducer of young men at fairs. She is also believed to be the special banshee of certain families in the south of Munster.

Clootie A Scottish name for the devil: from *cloot*, meaning one division of a cleft hoof. *Old Cloots* is a variant of the epithet. *Clootie's Croft* is a piece of land left untilled (or found untillable) by the villagers, as a gift to the devil.

Cloud People or **Shiwan** Among the Pueblo Indians, spirits with whom the dead are associated. The Cloud beings live in the four or six regions of the universe and are associated with the colors of these regions; or, they may live in towns on the shores of the encircling ocean, or in the mountains, below a spring or lake. Clouds, and the dead as clouds, are represented as kachina and impersonated by masked dancers in Pueblo kachina ceremonies. [EWV]

Clouston, William Alexander (1843–1896) Scotch journalist and writer born in the Orkneys of an old Norse family. Most of his writing was devoted to Oriental fiction and to folklore, and his principal work from the folklore point of view was *The Book of Noodles: Stories of Simpletons, or Fools and Their Follies*, which was published in London in 1880, and appeared in a popular edition in 1903. Among his other works are an edition of *Arabian Poetry for English Readers* (1881); *A Persian Romance* (1883); *The Book of Sindibad, From the Persian and Arabic*, edited by Clouston (1884); *Popular Tales and Fictions: Their Migrations and Transformations* (1887); *A Group of Eastern Romances and Stories from the Persian, Tamil and Urdu* (1889); *Book of Wise Sayings, Selected Largely from Eastern Sources* (1893); *Flowers from a Persian Garden* (1894); and *Hieroglyphic Bibles, Their Origin and History*.

clover Any of several species of plants (genus *Trifolium*). Farmers consider clover a sign of good soil. Because of its triple leaf it is regarded as a symbol of the Trinity, and a proof against spells and witchcraft. The druids also had a high regard for clover as a charm against evil. Pliny mentioned that when the leaves of the clover tremble and stand up it is a sign of a coming storm, a belief still held today. Also it is said that the leaves are rough before a storm. In Newfoundland an infusion of clover is used for bathing skin diseases.

Four-leafed clovers are generally considered lucky in Europe and North America, but they must not be given away. Some believe they give clairvoyance and the ability to see things as they are, or to see the fairies, elves, trolls, etc. They are protection against the Devil and his minions. Some say that one possessing a four-leafed clover will see his or her love within a short time. This is especially true of girls: they will marry the next man they see. They say in Newfoundland that wherever you see a four-leafed clover, a foal was born. Some believe the possession of one should be kept secret for it to be effective, others that it should be placed in the left shoe; in Silesia it should be sewn inside the clothes. Five-leafed clovers are bad luck if found and kept, but it is good luck to both parties to give them away. In some places to find a five-leafed clover indicates that you will soon be sick.

clown medicine The curing power of the clown: a religious concept among many North American Indians, especially among the Pueblo and Iroquois and certain California Indians. In the pueblos clowns are believed to have great powers of eyesight. San Juan and Hano pueblo clowns can even see the kachina in their distant places. For this reason clown medicine is believed to sharpen eyesight. The Jicarilla Apache clown wears a bandoleer of bread. From this he tears off a piece, chews it, and then transfers it to the mouth of his patient. The Jicarilla Apache believe that contact with human or animal excrement will cause sieges of vomiting. To cure vomiting the Jicarilla clown administers a herbal medicine mixed into white clay with the excrement of a dog or child. Thus public clowning with voidings is probably basically related to this curing magic. Ashes of dog voidings constitute a good stomach medicine. Many diverse clown groups possess medications for sick stomach. The Black Eyes (clowns of Taos) are regarded as especially good baby doctors. Zufi clowns, the Ne'wekwe, or Gluttons, will eat anything (green fruit, peach stones, sticks, pebbles, ashes, urine, voidings, small live animals, etc.) in token of their power to cure anything. Hano clowns also possess this "medicine."

clowns Ludicrous characters, who commonly use backward speech or indulge in contrary behavior and scatological practices are, quite generally, among the actors in many Plains, Southwestern, Great Basin, and California Indian ceremonies. In the Plains and Southwest clowns are often organized into societies; they are frequently masked when they perform, and wear elaborate costumes. A great deal of license in ridiculing the sacred and vested authority is allowed the clown; in at least one California tribe it was he who could talk against and depose a chief. Notable among Pueblo clowns are the Koshare or Delight Makers of the Hopi,

and the Koyemshi, the masked kachina clowns of the Zúñi. Clowning in the pueblos consists of gluttony, eating or drinking filth, drenching or being drenched with urine or water, begging, burlesquing, satirizing, distributing prizes or food, playing games, and so forth. Members of Pueblo clowning societies inspire a certain amount of fear among the people; since they are licensed to do what they please they can be punitive. Furthermore, they are generally supposed to practice witchcraft. In the Eastern Woodlands and especially among the Iroquois and neighboring tribes, the Shuck Faces who accompanied the False Faces on their rounds to rid villages of sickness, acted somewhat as clowns, amusing and frightening the people. [EWV]

Among various North American Indians, clowns are impersonators of chthonic beings with identical farcical attributes, which in the course of time have become their distinguishing features. By identification with the spirits of the dead, animals, fire, and other natural forces, clowns possess magical powers for curing, for weather control, and fertility, and have complete license of action. Their reversed action and speech are characteristic of the contrary behavior associated with ceremonies for the dead, but are specifically the mark of clown humor. Fire ordeals (*heyoka*) and ash scattering (by the *gagósä* of the Iroquois and the *no-hahluigah* of the California Pomo) exhibit their supernatural curative powers; female impersonations and obscene mime serve phallic purposes (see AKBÍ'ARUSCARIČA; KOSHARE). They also may police or completely control dances at certain times (*chapayekas*, *chapeones*).

They impersonate the supernatural by means of various types of disguise: wooden, hide, or cloth masks, or paint, or female clothes. The Iroquois False Faces, or *gagósä*, as wind and disease spirits, wear black or red wooden masks with distorted features. Wooden masks representing goats or old men are worn by the Mayo-Yaqui *pascola*, the Tarahumara *chapeones*, the Isleta *k'apio*, and the Acoma and Laguna *chapio*. Hide masks with long ears, horns, and long thin noses cover the heads of the Mayo-Yaqui *chapayekas*, the Papago *djidjur*, Apache *P'ibáhi*, and the *tsabiyo* of San Juan, Alcalde, Cochiti, Santa Ana, and Jemez. Again, the Búñgi *windigokan* cut eyeholes in sack masks; the *koshare* and Yahgan kina clowns paint their faces with black and white stripes and tie their hair in a poke; the Zúñi mudheads use mud. The Iroquois Husk Faces (*gadjisa*), dressed as women, possess fertility magic for increase of crops and babies.

These North American clown types find their counterparts throughout the world in the totemic animals of the African Javara, in the theriomorphic Carnival *kalogheroi* of Thrace, descended from the Dionysian *daimones*; in the Portuguese *bugios*, the Swiss *Rautscheggetten* and Ueberlingen *Zottler*, descended from the wild men of the medieval Carnival; in the horned sooty devil; and in the female *Schemen* and the Bessy of the English Morris and Fool Plough. The ancient costume of shaggy fur may today be represented only by tatters (as worn by the *Zottler* and Mexican *viejo*), or may be replaced by foliage (Leafy Fool, or Jack-in-the-Green of medieval England). Various other paraphernalia have life-giving properties: furry caps and tails, swords or sticks, whips (serpents), agricultural implements, water

sprinklers, flowers, gourd rattles, bells, and other demon-frightening noise-makers.

Today the ghostly origin of the clown tends to fade into obscurity. The South German *Perchten*, though still ceremonial demons, have lost their ancient meaning as the followers of Berchta or Frau Holle, custodian of the dead. The European Carnival train of animal masks, following the medieval wild men—the *mainée Herlekin*—no longer represents *das wilde Heer*, the wild horde of the dead, but has ended on the stage as Harlequin, a semipathetic entertainer. And the springtime expulsion of death and resurrection of the ancestors have degenerated into Carnival and Halloween pranks. See DANCE: FOLK AND PRIMITIVE. [CPK]

clúracán A diminutive old-man fairy of Ireland, traditionally believed to inhabit wine cellars. He takes care that the beer barrels or wine casks are not left running, and for reward he is always given his supper. In County Cork the *clúracán* is often associated with the leprechaun, but this is because of his dwarfish, aged appearance, and the fact that he too knows the whereabouts of hidden treasure.

coal This fuel which we take for granted as a part of our civilization today has been in use in the Western world for a relatively short time. The mention of coal in such early works as the Bible usually refers to wood charcoal. Coal was known to the Chinese as early as 1000 B.C. as ice charcoal, but was still in limited use at the time of Marco Polo. Aristotle's pupil, Theophrastus, mentions it in his work on stones as being occasionally used by smiths. There are indications that it was used in scattered places in Britain by the Roman soldiers, but although there were exposed seams of coal in existence in Italy at that time, its use was not carried back with the legions on their return. In England and parts of Germany, hard coal has been used to make trinkets since medieval times. There is record of crystal balls and a "Devil's mirror" made of polished cannel coal. This coal was used occasionally in England for architectural carvings and panels and for a church floor.

Its use as a fuel did not begin until the 12th century and then only by a few industries and by the very poor who could not afford any other fuel. People disliked the smoke which it made (and still makes) in English fireplaces and for a time its use was banned by law. It was known to the alchemists of the Middle Ages who were familiar with some of its many byproducts.

The Venerable Bede mentions that when burned coal drove out snakes, but in this instance it was burned as a fumigant rather than a fuel. In parts of England today it is carried in the pocket for luck and it is often carried by burglars, perhaps originally to give invisibility. Irish prisoners sometimes carry it at their trials to give them luck "with the authorities." In Knollingly, Yorkshire, it is the first thing brought into the house in the New Year. In some places Jews put a piece in a child's pocket to ward off the evil eye.

Coaticue Literally, the lady of the serpent skirt; in Aztec mythology, the magically impregnated mother of Huitzilopochtli; an earth-serpent deity; one of the wives of Mixcoatl, the Cloud Serpent of the Milky Way. She is of especially horrible aspect: her skirt is of snakes, her necklace of hearts and hands supports a skull pendant; her hands and feet are clawed; her

breasts are flabby. She feeds on the corpses of human beings; and she is called Tonantzin, our mother, or Tlazolteotl, the devourer of filth. In the myth, as Coatlicue swept one day, she picked up on her broom a ball of feathers and put it in her bodice. From this she became impregnated. Her daughter egged on her sons to kill their mother for her supposed crime, but the child within her womb told Coatlicue to have no fear. When the brothers arrived, the child, Huitzilopochtli, the Aztec war god, sprang into the world fully armed and slew the sister and most of the brothers.

cobra Any of several venomous snakes (genus *Naja*) of India and Africa which can dilate their necks into a hood. The cobra, as a symbol of the life force that motivates birth and rebirth, is adored in northern India and it is never knowingly killed. If one is accidentally slain its body is cremated with the same rites as those used for a man. Childless women worship the snake on the fifth of each month for a period of a year or of three years with offerings of flowers, water, and milk. In Coorg it is believed that the cobra lives a thousand years. In its middle life its body begins to shrink and to brighten until it shines like silver. When it is only a foot long it shines like gold, and finally it shrinks to the size of a finger. Then it dies and a serpent stone is left. Anyone stepping on the spot where the cobra died will be the victim of an incurable skin disease.

The cobra, as a supernatural being, plays an important part in Indian folktales and mythology. The marking on its hood is believed to be the footprint of Krishna, and Devī is frequently represented with the serpent.

cobzar An itinerant musician of Rumanian villages, who sings and improvises to his fiddle or guitar. Many of the songs of the cobzar are legends of ancient times or apocryphal stories of Old and New Testament.

cociés or cosiers A Majorcan ceremonial dance centered around a hobby horse. The actors consist of a *dama*, a man-woman with fan and kerchief, two demons with horns and cloven feet, and six boys in white with ribbons and elaborate floral hats. They dance figures similar to the English Morris, cross-overs and heys, periodically during the processions of Corpus Christi and the Assumption. All except the devils also dance in the church at Alaró and Montiuirí. The accompanying instruments are a *chirimía* or bagpipe, *tamborino*, and *flaviol*. The dance is considered of the same type as the *Moriscas* in the rest of Europe, a pagan vegetation rite in Christian garb. [GPK]

cock The cock's origin was probably India, although the Greeks called it "the Persian bird." In these countries it was venerated and it was a desecration to put such fowls to death, both in India and in Russia. As announcer of the dawn, the cock was sacred to Helios, the sun god; it was sometimes called the "son of Mars," on account of its fighting abilities and its pugnacity; it was also dedicated to Mercury and often associated with the chthonic gods. The Romans offered the comb of the bird to the Lares. The cock was a bird *par excellence* for sacrifice; it was offered to the sun in Mexico and it was conspicuous for its substitution for human sacrifice in building ceremonies and for other symbolic uses of its blood.

In Rome, the cock was used in auguries; in Germany and Hungary, it was a weather prophet; "hence," says an authority, "its effigy on buildings, but its place on church-spires is said to owe its place because of Peter's denial of Christ and as a reminder to Christians not to do likewise." In the mantic capacity of this bird, its crowing frequently forecast victory in war.

As a symbol of fertility, the cock played a part in marriage ceremonies among the southern Slavs and in Hungary when the bridegroom carried a cock or its image in the marriage procession. Cock-decoration of the roof of a house is another example of the bird as life-bringer.

Many omens are referred to the cock: in Wales, it is lucky to own a white cock; its crowing in the daytime announces the visit of a friend; if it crows about midnight, it is a death omen. If the cock is black, it becomes a bird of evil; an offering of a black cock appeases the devil (Hungary). It is used in black magic and in folk medicine: it is used in cases of tuberculosis (Morocco); applied to the skin to take the poison from a snake bite; a stone from the cock's stomach was supposed to inspire the one who swallowed it with strength and courage (Scotland).

The cock appears as a character in the folktale. An outstanding example may be cited in Grimm's *The Bremen Town-Musicians* (#27), versions of which are widespread—from Scandinavian countries to the Old World in India and elsewhere. He is the principal in the story, "The Cock that Wished to Become Pope" (Thomas Frederick Crane, *Italian Popular Tales* (New York, 1885), pp. 272-274, after Gonzenbach). Further examples are in the simpler cumulative tales where the cock is one in a "chain." (Cf. Benjamin Thorpe, *Yule-Tide Stories* (London 1892), "The Cock and the Hen in the Nut Wood," pp. 333-335, after Asbjørnsen). The 12th century *Roman de Renart*, built on still earlier models, has served as pattern for stories of the wiles of the fox in many countries toward various creatures, including the cock. [GPK]

Cockaigne A land of pleasure, wealth, and luxury: wholly imaginary. The name has been applied to London ("cockneydom") and also to Paris. In this fabled land, all sorts of strange things happen; roast pigs run along the street with knife and fork stuck in their backs, streets are paved with pastry, houses made of barley sugar, a kettle on a mountain of cheese is boiling macaroni and dumplings which later roll down to the waiting gourmands. This topsy-turvy land is celebrated in poem and story, especially in the Middle Ages. Grimm's tale, *The Story of Schlauraffenland* (#158) and *The Ditmars Tale of Wonders* (#159) give some idea of the extravaganzas of the "lying tale." [GPK]

cockcrow The shrill crow of the cock which announces the rising of the sun is one of this bird's characteristics. It has been variously referred to in literature as "trumpet of the morn" (Shakespeare), "shrill clarion" (Gray), and in other similar descriptive phrases. When the cock ceases to crow, it is believed that the Day of Judgment will be at hand.

Fairly universal is the superstition that ghosts, witches, evil spirits, or whatever roams abroad at night are obliged to vanish at cockcrow; even the Devil takes flight. In this connection, the colors ascribed to the cock

are significant. When the *white* cock crows, little attention is paid to it; the crow of the *red* cock is a warning; but at the *black* cock's crow all frequenters of the night quickly disappear. Many tales and ballads illustrate such beliefs. Sometimes the *white* cock is lacking and sometimes a *gray* cock is substituted for the *red*.

It is pointed out that memorable incidents which have happened at cockcrow in the past tend to stimulate superstitions of this hour. The Nativity and the Resurrection occurred near this time and it was at cockcrow that Jesus said that Peter would deny him (*Mat.* xxvi, 34; *Mark* xiv, 30; *Luke* xxii, 34). [CPS]

cockroach This representative of the family Blattidae has an ancient tradition, since it existed in great numbers and varieties in the Carboniferous epoch and earlier. Fossils have been found in Silurian sandstone. Folktale puts its origin in Finland (*FFC* VIII:122, #125). But it is indigenous to all parts of the world except the polar regions, and there are 2250 species on the face of the earth. In general it thrives in a warm, humid environment. Many of the tropical species are brilliant green, yellow, orange, or variegated. The flying Malaysian roach, often called the Australian cockroach, has traveled the world in ships and often turns up unexpectedly in urban kitchens. The death's-head roach, named for its markings, of Florida, Mexico, the West Indies, and Central America, attains a length of 2½ inches. With its nocturnal habits and its appetite for both animal and vegetable food, nothing is safe from it. People of the Chaco keep their cotton garments in pottery jars sealed with clay to avoid their being devoured by the native cockroaches. Names given to the cockroach in Germany and France, such as *Bäcker*, *bête à pain*, suggest some of its habits.

In Russia and in France the cockroach is looked upon as a protecting spirit; its presence in the house is lucky. It portends bad luck if "the roach" leaves. In many sections of Europe and the United States methods are various for getting rid of roaches, such as sweeping them out on Good Friday or impaling one on a pin as warning for the lot. Enclosing one in a box and presenting it to a corpse, or taking one to a neighbor's house are other Continental methods.

The name "black beetle" often applied to the cockroach is incorrect entomologically, but is in keeping with many associations of the cockroach with the devil or witches. In Ireland it is thought sometimes that witches in the shape of cockroaches come to plague farmers. The Irish always kill a cockroach because it is said to have revealed the hiding place of Jesus.

The cockroach has entered folktale, although instances are infrequent compared with stories about other insects. Four cockroach stories have been reported from Jamaica in Martha Beckwith's *Jamaica Anansi Stories*, *MAFLS* 17. A story from Antigua, entitled *Why Fowl Catch Cockroach*, tells how Cockroach, who is always playing and singing, meets a tragic end suggestive of the fable of the *Ant* and the *Grasshopper*.

In folk medicine the cockroach was used in the treatment of urinary disorders, for worms in children, for epilepsy, and various other ills. To catch a witch Mississippi Negroes lay a large jar or bottle in the hearth ashes overnight. If there is a cockroach in it in the morning, that's the witch. She will die whatever death is meted out to the cockroach.

cock's step In Ireland, *coiscéim coilig*, a cock's step, is a term used to mean a short or imperceptible interval. The increase in the length of a day, when the days first begin to lengthen, for instance, is but a cock's step.

coco macaque A magic stick found among Haitian Negroes that walks by itself. The owner can send it on errands, especially punitive errands. If he hits an enemy with it, the man will die before morning.

coconut One of the most widely cultivated trees in the world: said to have originated in Ceylon. One story says that it sprang from the head of a slain monster, another that the king's astrologer named a certain day as auspicious for planting, and that anything planted on that day would grow into a tree beneficial to mankind. The king planted the astrologer's head. The Chinese say that when the prince of Yue was beheaded, his head caught in the branch of a palm, and became a coconut. In India it is said to have been created by the sage Sisvāmītra, who was a great thinker.

In some parts of India, coconut palms must be planted by Brāhmins because they are free from evil. In other parts there is a belief, when a tree is planted, that one of the family will die when it puts forth leaves again, and another when the first blossoms appear. In Malabar when a boy is born, his parents plant five coconut trees, enough to support him. In Mindoro if you look up when you are planting, the tree will grow very tall before it will bear, but if you comb your hair, the tree will be full of nuts. If a tree is not fruitful, it may be made so by planting a certain vine at its base.

In Nariyal in western India there is a Coconut Day. When coconuts and flowers are thrown into the sea to propitiate the sea and as a thank offering. The Parsees break a coconut on the threshold as an act of welcome to a near relative, or a bride and groom.

Among the Fijians, if a coconut is spun near a sick man, he will die if it falls to the west, but if it falls to the east he will recover. Among the Sengalese they say that a coconut will not fall on anyone unless he has displeased the divine powers. On Mindoro they claim that the nuts will yield more oil if the oil-making takes place at high tide.

Cocoyomes An unknown ancient people: said by the Tarahumare Indians of Mexico to have been (1) their ancient enemies, (2) their ancestors, (3) the first people in the world. The Cocoyomes lived in caves, were cannibals, and supplemented their diet with agave. Because of their wickedness, the sun came down and burned them up. The few survivors who fled and took refuge in caves at Zapuri were exterminated by the Tarahumare.

Codrus In Greek legend, the last king of Athens. In a war between the Dorians and the Athenians, the Delphic oracle declared that that side would win whose king died. Codrus then disguised himself as a peasant, entered the Dorian camp, and picked a quarrel with some soldiers. The Dorians gave up the hopeless war when they found who it was that had been killed, and returned home. Since this action on the part of Codrus could never be surpassed by any future king, the Athenians abolished the kingship and appointed Medon, the son of Codrus, archon for life.

Cô-hon In Annamese belief, the souls of those who have died a violent death on land or at sea and who have not had proper burial. There are millions of Cô-hon which hide in the shade of shrubs and trees, attacking passers-by at night or causing misfortunes to those who forget them. Businessmen, especially, try to gain their favor. Small wooden temples or stone altars at the feet of trees are erected for them, and offerings of imitation gold or silver, paper shoes, and rice are made to them.

coin of the dead The custom of placing "a penny piece on each eye" of the newly deceased was not confined to Dickens' England (*Martin Chuzzlewit*, ch. xix). Today in New England, where the half-dollar is the proper coin, the purpose is alleged to be to keep the eyelids closed as rigor mortis sets in, lest the open eyes become fixed in an unseemly stare. Judging from many parallel examples, however, the practice is a partial or token survival of the ancient custom of burying all a man's valuables with him in order that he might not return as a ghost and haunt his home vicinity.

By classical times that custom had already been simplified by placing a coin under the corpse's tongue or between the teeth, and rationalized by calling it "Charon's obol," the fee to the underworld deity for ferrying the soul of the deceased over the Acheron or the Styx to the realm of the dead. The custom was supposed (because of a passage in Diodorus Siculus) to have been borrowed from the Egyptians, but the Egyptians probably had no coinage at the indicated time, and Charon himself is very likely a revised and refined edition of the earlier Etruscan deity Charun, depicted on sarcophagi as a half-human, half-animal monster, holding high a threatening hammer as he tears the dead man from the bosom of his family.

The convention of using corpse coins is widespread. The Juma River tribesmen of South America think of the rainbow as the mouth of a great snake through which the soul enters heaven. To pay the toll a coin is placed in the mouth of the cadaver or, if the family is poor, a fig may be substituted. The substitution idea is general. The Pahari people of North India use either coins or other small articles of value. The Japanese, for ferry fee across the Sandzunogawa River, formerly put six pieces of money in the dead man's little traveling bag, but now thriftily substitute a paper with a picture of even more than six coins. The European Franks of the Middle Ages used thin silver imitation money; the Chinese permit pearls and other valuables in place of coins; the Balinese sometimes put a gold ring on the tongue.

Special sympathetic magic inheres in corpse coins. Frazer (*Golden Bough* i, 149) reports that a Serb or Bulgarian woman, looking for variety in love, will wash in wine or water the copper coins from a dead man's eyes and give her husband the solution to drink that he may be rendered as blind to her adventures as the corpse.

[CFF]

colinde The Christmas carol of Rumania and Macedonia, chiefly in blank verse. The best known is *White Flowers*. See BARTÓK; CAROL.

collahualla or **collahuaya**; sometimes **kollawallas** Hereditary herbalists and magicians of the provinces of Taupolican and Munecas in Bolivia. They represent a

special subgroup within the Aymara nation. For many centuries medical arts have passed from father to child in most families of this tribe. The collahuaya were already known as ambulant and skilful practitioners at the time of the Conquest, and they seem to have formed a specialized caste by the time of the Inca empire and perhaps earlier.

The collahuaya constantly travel in the Andean region from Colombia to Argentina. Not many years ago they went as far as Buenos Aires. They may be recognized by their special costume and by the bags in which they carry their herbs. With the money received for their drugs, they bought mules which they resold at a high profit in Bolivia. The collahuaya also trade in various kinds of amulets and talismans. Most of their drugs come from the Yunga region where they go to supply themselves before starting on their long journeys. [AM]

collasiri Specialized magicians and medicine men among modern Aymara Indians. They are bone-setters and expert diagnosticians. One of their favorite methods of identifying the origin of an ailment is to examine the viscera of an animal which has been put into contact with the patient. They also practice various other forms of divination to ascertain the nature of the diseases. One of their usual cures consists in transferring magically the disease to an animal or object. [AM]

colors Everyday speech is full of color, from such expressions as "Was my face red!" to the metaphoric "That's white of you" and the symbolic "He's got a yellow streak down his back." Similar to this colloquial form of expression is the color cliché of literature, well established in folk forms like the ballad and folktale: hair black as raven's plumage, lips red as rubies, skin white as milk or ivory or snow. Not only the catalog of the charms of fair ladies but many other things have typical colors: the violent red-headed person, the black (or red) Devil or imp, the black-cat or black-dog familiar of the witch, the white ghost, pink elephants, purple patches in literature, and red hazes swimming before the eyes. The symbolism of color directs traffic on the highways—red to stop, green to go—and signals approaching storms to shipping.

Among the Pueblo Indians of the United States, color symbolism has been systematized perhaps to a greater degree than anywhere else in the world. Each of the six directions has its color: east is white, north is yellow (sometimes blue or black), west is blue (or yellow), south is red (or blue or buff), above and below are variegated or black. These colors vary from tribe to tribe, but ascription of color to compass direction appears everywhere in the pueblos. The colors and compass points have their specific gods and animals and birds. The Zuni name for Dr. Kroeber, says Parsons, is Oriole, because he came to Zuni from the north wearing khaki clothes; and yellow is the color of north, oriole the bird of north. The many-colored kinds of corn too are associated with the directions of the compass; in the mythology, the Corn Girls are of the specified colors.

It is not alone in the pueblos of the Southwest that this type of color symbolism is found. The Cherokee associate abstract qualities as well as direction to the colors: red is east and success, blue is north and trouble, black is west and death, white is south and happiness.

Cherokee places of refuge were called white towns, peaceful islands in time of trouble. In Mexico and Ireland, in China and Vedic India colors were assigned to the directions. Modern Europe too has its symbolism of color for qualities: white is purity, black is death, red is passion, green is life. The Western Church uses colors as symbols not only of qualities but also of days and periods. Violet is the color of the Lenten season; black of Good Friday, etc.

Color in costume is also significant. Mourning dress in Europe is generally black; but in imperial Rome and in modern China white symbolizes mourning. It has been suggested that black is worn to echo the emptiness of death; and that white, the color of purity, will ward off the jealous spirit attempting to return to its former place in the world. Similar theory equates red with the blood of war, anger, and passion; blue with the sky and the sacredness of the heavens; green with growth, etc. But so many exceptions may be noted that any such generalization is dangerous. In India black and red and yellow are all protective against spirits, which do not like these colors. Red and purple are potent in Japanese magic. The Yezidis of the Caucasus and Armenia cannot stand blue and their worst imprecation is "May you die in blue garments." Green is disliked by some peoples, perhaps because it is the color of pus and corruption, but in Islam it is the color borne by the descendants of Mohammed. The "blue-blooded" aristocracy of Europe is born to wear the purple. But in Malaya the blood of kings is white, and the purple of the ancient world was more often a shade of crimson than it was a purple (thus the fame of the Tyrian purple dye).

Flags and coats of arms have symbolic colors. The flags of Moslem countries show green; the flag of revolution is red with the dawn of a new day; the pirate's flag was black as death. The colors of the Stars and Stripes were early officially defined: white for purity and innocence; red for hardiness and valor; blue for vigilance, perseverance, and justice. Colors also have their significance in games. White and black always vie in chess, and in chess problems white always is "to move and win." The White Sox, the Red Sox, the Browns, and the Reds play major-league baseball; the Crimson of Harvard and the Blue of Yale meet on the football field, as the Blue and Light Blue of Oxford and Cambridge row against each other.

Color plays an important part in the relationship of men socially. Race, color, or previous condition of servitude are singled out in the 15th amendment to the Constitution of the United States. The "black" race is no more black than the "white" race is white, yet those are the color terms commonly in use, though the one is brown rather than black and the other pink rather than white. Colors, a striking feature of what we see, are often not discriminated clearly. Not because they are color-blind, but because they have no use for a finer distinction, some primitive peoples see no more than three or four colors in the world around them. They have no terms for many of the colors other peoples see. But the artist sees many more than the average person does, and beyond the limits of the range of human sight lie the many rich colors of dreams and fairyland.

 Ancient Maya and Aztec legends are replete with references to the symbolism of color. Colors most fre-

quently mentioned are yellow, red, white, and black, the colors of the main types of maize grown. Each cardinal direction was associated with a particular deity who helped support the sky, and who was also symbolized by one of these colors. This basic theme of color symbolism seems to have pervaded all of Middle America. Modern myths from as far south as the Cuna Indians of Panama speak of colored mists, winds, or directions. [GME]

coltsfoot A low perennial herb of the composite family (*Tussilago farfara*) bearing yellow flowers. The dried leaves of this plant, burnt and inhaled for lung infections, is a remedy so old as to have been known to Pliny; it still bears the popular name "coughwort." In Ireland the coltsfoot, *sponnc*, is used for tinder, sometimes as a substitute for tobacco, and is said to be "good for many ills." Soldiers in Europe during World War II are known to have smoked it as a substitute for tobacco. In Bavaria a soothing poultice is made of coltsfoot leaves to relieve toothache; the white-ribbed surface of the leaves is placed against the cheek.

columbine A herbaceous plant (genus *Aquilegia*) with flowers of five petals: named from Latin *columba*, dove, from the remembrance of the flowers to a group of doves. It was once called lion's herb from the belief that lions fed on it, and merely rubbing the hands with the leaves imparted courage and daring. It was an herb of Venus, and also an emblem of folly and the deserted lover. A concoction made from the leaves was considered a cure for jaundice, sore mouth, and sore throat.

combite A cooperative agricultural work organization of Haiti: the Mirebalais form of the more general Société Congo. Whenever anyone needs help in the fields, he calls a combite, any day but a Tuesday or a Sunday. Tuesdays are reserved for work in one's own fields; Sundays are rest days. Combite gatherings are occasions of great fun and social merriment. The hard work involved is offset by the emotional stimulus of the rhythmical working together, the social contacts, the gossipy combite songs, and the big feast when the work is over.

The workers line up in long lines with their hoes, with the drummer in front of them. The work is accompanied by drum and lambi (conch-shell horns) which set the rhythm, and the songs of the simidor (song leader) who is among the workers. The rhythm of the drum is the rhythm of the work, and the rhythm first set is maintained throughout, with the result that an enormous amount of work is accomplished with marvelous speed. The women of the household that called the combite prepare the food for the evening feast. Shirkers are ridiculed, i.e. those who came late, ostensibly for the feast, or those who dawdled and fell out of the rhythm of the work. Etiquette demands that they too be fed at the feast, but they always receive small portions. Those who worked hardest are given heaping dishes, and sometimes a hard worker will discover that he has bitten down on a piece of money hidden in his food. See DOKPWE.

combite songs Songs sung by Haitian agricultural work groups, or combites, to set a rhythm for the hoes. They are strongly melodic in character and generally follow the pattern of a theme stated by the leader, the

simidor, with a chorus in unison by the rest of the workers. The simidor improvises on any subject of current interest, often gossip about a neighbor, sly digs at the hospitality of the household for which the work is being done, ridicule of a slacker, or the juicy details of the latest scandal. Songs of ridicule and derision are dreaded, and with reason, for the simidor is a wit and often a cruel one. Though the words are in the mixed French and Negro dialect of Haiti, the custom of such singing is rooted in Africa, where for centuries the ancestors of these work groups have used their songs to pace their labor and to keep every person in his place.

come-all-ye A type of narrative song, street ballad, or "vulgar" ballad, beloved of English, Irish, and American singers, so called from the characteristic opening phrase ("Come all ye loyal Union men," it may say, or "all you sons of freedom," or "all you jolly sailors," etc.) and devoted to the careers, loves, and adventures of working people—lumbermen, sailors, carpenters, miners, maid-servants. It differs from the earlier classic ballad in metric pattern and rime scheme, being in double common meter, often with syllables crowded between accents (the "accordion line"). "You have to mash some of the words together to make it come out," singers explain. It also differs from the classic ballad in narrative technique, running as a continuous, journalistic account, sometimes in the first person, with names, places, dates, weather conditions carefully detailed, with very little dialogue, and often with a pointed moral. The singing style, too, is unlike ballad-singing. The singer identifies himself emotionally with his story, and especially in the northeastern United States makes use of the dramatic *rubato-parlando* recitative manner, with the final word spoken rather than sung.

Such songs appeared widely in England in the late 17th century, peddled in the streets and country byways by itinerant broadside venders, singers and beggars, and in Ireland in the 18th and 19th centuries, when the English language was taking hold among the people. *Van Dieman's Land* and *The Girl I Left Behind Me* are examples of the type. Many of them have refrains from the Gaelic ("shule aroon," for instance) some so corrupted as to appear to be nonsense.

In America this ballad style, especially as sung to old Irish airs by Irish immigrant workingmen, became the most popular and was the model for the native balladry of the shanty boys, the railroaders, the miners and cowboys, etc. A typical career ballad such as *The Sailors' Come-All-Ye* builds up the heroism, cleverness, and stamina required for the particular calling and warns the girls against the men of any other rival trade. Other types tell of the death of heroes of the group (*The Jam on Gerry's Rocks*), of bold bad men (*Sam Bass* and the Irish *Brennan on the Moor*), of jamborees, and practical jokes, and the drinking capacity of the men.

The term "come-all-ye" is applied indiscriminately by the singers to all sorts of folk song, including survivals of ancient ballads such as *Lady Isabel and the Elf Knight*, *Lord Randal*, and *Our Good Man*, several of which have been recast by Irish and American singers to a style more like the street songs. [rcb]

comet Not only in antiquity, but through the centuries among all people, comets have aroused in man a feeling of terror and foreboding. These mysterious visi-

tors in the heavens have been thought to be connected with war, famine, the plague, the downfall of kings and monarchs, the end of the world, universal suffering, ill-luck, and sickness. Outstanding examples of the fear excited in the minds of the people are the incidents connected with the appearance and reappearance of Halley's comet. In 218 this comet preceded the death of Emperor Macrinus, in 451 that of Attila. In 1066 it was regarded as a "warning" against the Norman Conquest and is depicted in the Bayeux tapestry.

In the Tyrol, the comet, if white, may bring luck and peace and a change in the affairs of men. The comet may herald a divinity; the Star of Bethlehem is sometimes said to have been a comet. Early conceptions of the comet saw in it a dragon or a serpent. Throughout the world when these heavenly visitants appeared, the rites of protection against them were prayers, bell-ringing, fasting, and so on. [cps]

comics Cartoons or illustrations in a panel or a series of boxes arranged in a single strip or block, with speech generally enclosed in a balloon pointing to the speaker's mouth, used to tell a complete story or part of a story, amusing or exciting, about a continuing cast of characters. As a form of mass entertainment and mass communication developed in the 1890s by yellow journalism under the guise of "giving the public what it wants" and to build circulation, the comics have become a profitable and powerful American institution and industry that has spread throughout the world. By dealing with non-controversial subjects, stressing humor, sentiment, and action, and building up a strong, attractive, central personality, the comics appeal to the widest possible audience. Like other subliterate forms, the dime novel and the pulps, the comics depict a world of adventure, mystery, and love, in which, however, fun, fantasy, and action take the place of success.

The comics use familiar folk themes and motifs (e.g. the bad boy, the henpecked husband, the helpless clown, the bungler, the feuding cat and mouse, Cinderella, the little man who is always kicked around but gets his in the end), draw upon the folklore of American life (the he-man, the racing fan, the hill-billy), and transmute these universal and local elements into a gallery of folk characters that take their place beside the heroes of fairy tale, mythology, and fable.

Beginning as "funnies" (the Sunday color comics or "funny papers" antedating the daily across-the-page strip in black and white), with a strong appeal to children, the comics at first largely employed child and animal characters: James Swinnerton's *Little Bears and Tigers* (1892), R. F. Outcault's *Yellow Kid* (1896) and *Buster Brown* (1902), Rudolph Dirks' *Katzenjammer Kids* (1897), Swinnerton's *Little Jimmy* (1905), and George Herriman's *Krazy Kat* (1910). Turning to sports, business, and family life in such strips as Bud Fisher's *Mutt and Jeff* (1907), *Hall Room Boys* (1910), Harry Hershfield's *Abie the Agent*, and George McManus' *Bringing Up Father* (1913), the comics gradually became more adult, serious, and "straight" in content. In 1929, with the advent of Tarzan and Buck Rogers, cartoon gave way to illustration and humor to suspense—a change confirmed with the coming of the comic book in 1933. (See Coulton Waugh, *The Comics*, New York, 1947).

Many later strips—*Moon Mullins*, *Smoky Stover*, *Silly*

Milly, *Peter Piltown*, *Oaky Doaks*, and *Sad Sack*—continue in the slapstick and clowning tradition of earlier successes, from F. Opper's *Happy Hooligan* (1899) to Segar's *Popeye* (1929). But recent successes tend away from gags and laughs toward action-packed adventure and romance of the illustrated story type, from the more realistic Joe Palooka, Mickey Finn, Don Winslow, and Terry, to the romantic Tarzan and Prince Valiant, the interplanetary Buck Rogers and Flash Gordon, and the supernatural Superman, Mandrake the Magician, Phantom, Wonder Woman, and Batman. In the same illustrated-story genre are the westerns (King of the Royal Mounted, The Lone Ranger, and Red Ryder), the detectives (Dick Tracy). Two strips competing for first place, *Blondie* and *Li'l Abner*, are in the earlier tradition of humor and sentiment, while Barnaby, Henry, Smitty, Nancy, and Little Lulu inherit the mantle of Skippy, Skeeze, Skinnay, Dotty Dimples, and Little Mary Mixup.

The same division of labor between humor and adventure, cartoon and illustration, is also seen in the comic book, where the favorite animal screen characters (Mickey Mouse, Donald Duck, Bugs Bunny, Porky Pig, Woody Woodpecker, and Andy Panda) still delight tiny tots and appease solicitous mothers, while crime, teenage problems, love, westerns, and interplanetary adventure compete with the pulps, true confession magazines, and soap opera for the adolescent and adult audience. On the screen the animated cartoon (especially in the hands of Walt Disney) adheres more closely to the original "funnies" formula, recreates fairy tales (*Three Little Pigs*, *Snow White and the Seven Dwarfs*), and draws upon American folklore (Uncle Remus, Johnny Appleseed, Pecos Bill).

At the same time the powerful potentialities of the comic books (which have created an entirely separate industry with its own problems of editorial policy and public criticism and control) for educational and propaganda purposes have enlisted the attention of educators and psychiatrists (both as advisers and critics) as well as of advertising agencies and promotion departments of the great industrial corporations. The cultural impact of the comics may be gauged by the fact that in Crystal City, Texas, in the heart of the spinach-growing section, a monument has been erected to Popeye; and Sadie Hawkins Day is celebrated by some 40,000 groups over the country.

To American folk humor and speech the comics have contributed a wealth of gags, slang, and proverbial expressions—Mutt and Jeff's fall guy, good thing, piker; Popeye's goon, I yam what I yam; Rube Goldberg's I'm the guy, Ike and Mike they look alike; Barney Google's heebie-jeebies; Tad Dorgan's applesauce, 23 skidoo, cake-eater, dumb Dora, dumbbell, nobody home, you said it, the cat's pajamas, Quick Watson, the needle—and the vocabulary of violence, pow, zowie, socko, bam. To folklore too belong the "changeling personality" or transformations of Clark Kent to Superman, with the magic amulet that enables Tiny Tim to assume minute or normal size, and the magic formula, "Schazam," that changes a crippled newsboy into Captain Marvel, Jr. Alley Oop's time-machine and Buck Rogers' space ship are typical of the comics' inventions, in the Jules Verne-H. G. Wells tradition. In 1939 Buck Rogers mentioned

"atomic bombs." Even more miraculous is the ham-shaped creature, the Shmoo, which lays eggs, gives creamery butter and Grade-A milk, dies of sheer joy when looked at hungrily, tastes like chicken when fried, like steak when broiled, like pork chops when roasted, and multiplies so fast that it always keeps a half dozen ahead of you. In prolificness, versatility, and inexhaustible abundance the Shmoo is a true symbol of the comics.

B. A. BOTKIN

commonlaw A term used in the United States, especially in verb form (*to commonlaw*), by Negroes of lower socio-economic strata to denote the act of living in an extra-legal, but socially sanctioned mating of the type found in various New World Negro societies. See AMASIADO. [MJH]

Common Mother In a few South American Indian tribes, the highest deity. The Kaggaba Indians of Colombia describe her as the "mother of all human races, of the world, of the animals, fruits, trees, rivers, thunders, the Milky Way, songs, demons, sacred objects, and sanctuaries." Her sons were the ancestors of mankind. The most powerful spirit of the Chamacoco Indians was also a woman who controlled the world and sent rain. The Yaruro have a goddess from whom "everything sprang." [AM]

compadrazgo Throughout Middle America, the reciprocal relationships which arise through the taking of godparents: Spanish in origin. However, its importance is so great as to suggest that it takes the place of some type of pre-Conquest formalized friendship organization. It is found equally among the most remote Indians and in large cities among mestizos. Two types of relationships are set up: (1) between godparents and godchildren, and (2) between godparents and the parents of their godchildren. The latter address each other as *compadre* or *comadre*, "co-father" or "co-mother," or by Indian equivalents. Godparents are taken particularly at baptism, confirmation, and marriage, but they may be taken on many other occasions, such as fiestas and the like. One can have *compadres* and *comadres* without having godchildren. Sometimes, for example, at the completion of a new home, a housewarming ceremony is held in which the owner and his wife take *compadres* of the house, which in a sense functions itself in the place of a godchild. [CMF]

Compair Bouki Comrade Bouki: Louisiana Negro designation for the Bouki of Haitian folktale. What animal Bouki represents in the Louisiana stories is not indicated. The name seems to have been accepted without question or knowledge of its meaning. Dr. Alcée Fortier in *Louisiana Folk-Tales*, *MAFLS* 2, p. 94, says that Bouki is a Wolof word for hyena. Charles L. Edwards in *Bahama Songs and Stories*, *MAFLS* 3, suggests that if the B'Bouki of Bahama Negro folktale is from *bouc*, goat, the story-tellers do not know it, an assumption entirely borne out by a Bahama story in which B'Goat, B'Bouki, and B'Rabby all start out together to go fishing. See BOUKI.

Compair Lapin Comrade Rabbit: Louisiana Negro name for Brer Rabbit.

companyá A type of extra-legal mating found among the Negroes of Curaçao. See AMASIADO.

comparative method A system of study of folklore material used generally by the anthropological school, based on the general observation that culture develops evolutionarily and that consequently each people passes through the same general stages of development, but not at the same rate. It is valid, the proponents of this method hold, to study a backward culture to explain the more puzzling elements in a more advanced culture. For example, they hold that the common uncle-nephew relation in the stories of the Middle Ages can be explained by the belief that these people once had a matriarchial system of society in which, of course, a man's nearest relative was his sister's son. See ANTHROPOLOGICAL SCHOOL. [MEL]

Comparetti, Domenico Pietro Antonio (1835–1927?) Italian philologist, known especially for his studies in epigraphy, papyrology, and dialect, and as a student of Romance philology and of medieval culture. He was born in Rome and died in Florence. In 1859 he was appointed professor of Greek at the University in Pisa. With Alessandro d'Ancona he edited a collection of Italian national songs and stories, *Conti e racconti del popolo italiano* (nine volumes, 1870–1891?). Many of these were collected and written down for the first time, by Comparetti. In *Il Kalevala o la poesia tradizionale dei Finni* (1891), translated in English in 1898 by I. M. Anderton, Comparetti discusses whether an epic can be composed by the interweaving of national songs, as in the *Kalevala*. Comparetti decides against it and applies his conclusion to the problem of Homer. The same question is dealt with in his treatise *La commissione omerica di Pisistrato* (1881). Comparetti's researches concerning the Book of Sindibad have been translated and printed in the *Proceedings* of the Folklore Society.

complaint An old type of folk poem or song arising from funeral customs in which the dead were propitiated by eulogies and lamentations. The Scottish coronach and Irish keen are survivals.

complainte A term favored by many scholars for the come-all-ye type of ballad in French and for the women's chanson de toile, including pastourelles, chansons de mal mariées, reverdies, etc.

compressible objects A folktale motif (D491 ff.) in which objects become large or small according to the need, convenience, or will of the hero. Giants and ogres (or the Devil) contract to normal size; pigmies and dwarfs become giants (as the ocean thumbing in the *Kalevala* who shot to hero stature and felled the oak for Väinämöinen), or diminish in order to enter bottles (or the nostrils of ogres or cannibals, as in a Zulu folktale). There are compressible canoes in Iroquois folktale, compressible ships in old Scandinavian legend, reducible and expandable animals, game, food, kettles, etc., throughout general Eurasian and American folktale, to say nothing of the white mule of Chang-kuo Lao, which could be folded up like paper and put in his wallet.

Comus In late Roman mythology, the god of revelry, drunkenness, and mirth: a winged youth, overflowing with health, a companion of Dionysus. He and Momus had charge of entertaining the Olympians. He is represented crowned with roses, dressed in white, and bearing a torch.

Con A major deity of the coastal people of ancient Peru. He was conceived of as a boneless being that moved swiftly across the air. In his rapid and sinuous wanderings, he changed the surface of the earth, leveling some mountains and turning plains into summits. He created men and women and gave them all kinds of food plants. Because of some offense on the part of his creatures, he dried up the land and prevented the fall of rain. Then came Pachacamac who, like Con, was the Sun's son. He changed Con's men into wild cats and created new people to whom he gave all the things owned by their descendants. [AM]

Conall Cárneac Conall the Victorious; in Old Irish legend one of the three first champions of Ulster (with Cuchulain and Loegaire Buadač), and cousin of Cuchulain. Conall with Loegaire Buadač was one of the companions of Cuchulain on his journey to the land of Scáthac, until they were turned back by enchantments and Cuchulain went on alone. Conall was also one of the three champions of Ulster who contended for the champion's portion at Bricriu's feast.

concha A primitive lutelike instrument of Mexico, having five double strings and a body of armadillo shell: literally, shell. It is played in simple chords of self-accompaniment by the dancers during the concheros' ceremonies and is regarded not as background but as an integral part of the dance. Its origin is obscure. The dance which it accompanies is partly of pre-Columbian origin. The way of playing differs from the European, but since lutes were unknown on the American continent before the Conquest, the concha may be a later adaptation of some ancient Aztec instrument.

los Concheros Literally, the concha players; members of votive dance societies, especially widespread among the Aztec Indians, the Otomí, Matlacinco, and Chichimeca of the Mexican states of México, Querétaro, and Guanajuato. Both primitive and Christian elements are fused in their specific dance, a Danza de Promesa, whose function is the fulfilling of a vow. There is no explanation of any other meaning. The huge multi-colored, beaded, feather headdresses (typically Aztec) and fringed costumes follow pre-Columbian tradition; the banners which lead the preliminary processions depict Christian symbols, usually Christ Crucified between two sorrowing Marys. The Holy Cross is worshipped in the recurring step of the dance, called *la cruz*, the cross. But in secret rites the cross is worshipped as the four winds. In San Miguel de Allende, very ancient personifications accompany the dancers: Oxomoco and Xipactonatl, the Nahuatl ancestors of the gods and creators of mankind, also a pair of sortilegos (masked sorcerers), a ragged viejo (old man), a horned clown-devil, and two transvestite Malinches.

The Concheros march to the church in a group with their banner-bearer. An alabanza (religious praise-song) begins the performance. The leader starts the first tune on his concha; the others join. They punctuate with native stampings their phrases of springy European jigs, skips, rockings, pas de basques. The incisive beat of the hard-soled sandals (huaraches) keeps perfect time with the typical rhythmic chords of their self-accompaniment on the conchas. Each dancer dances for himself, in his own place, to his own accom-

paniment. The strenuous performance continues at intervals all day.

At Carnival the Concheros share fiestas with other ceremonial groups. In San Miguel de Allende, on St. Michael's day (September 29), they commemorate in spectacular array the raising of the Holy Cross on Sangremal. The memorable battle of Sangremal is enacted by los Rayados, taking the parts of both the Chichimecas and the conquering Christians. The ancient indigenous symbols and this battle mime suggest an original function similar to that of the European Moriscas, i.e. vegetation rites. But the missionaries have instilled into the minds of the Indians a confused notion that the dance represents the joy of the Indians at being conquered for the realm of Christ. Although transferred to a newer Deity the ancient ritualism survives in the dance in an intense, aloof fervor of mien and gesture. [GRK]

Conchobar mac Nessa In Old Irish legend, king of Ulster about the beginning of the Christian era; uncle and fosterer of Cuchulain. Fergus was king before him, whose wife Nessa persuaded him to give up the throne to her son Conchobar. Some say Conchobar was the son of Cathbad the druid. His seat was at Emain Macha; the ruins of the great fort can still be seen near Armagh. It was Conchobar who spared Deirdre at her birth against the advice of Cathbad, and said he would have her for wife himself when she was grown. Conchobar did have her for wife himself for one year, after his betrayal of the three sons of Usnech. But Deirdre killed herself. For this betrayal Conchobar was doomed to see all of his sons die ahead of him. A later legend says that Conchobar died the day that Christ was crucified, in a fit of overexertion in proof of what he would do to save Christ if he were near that place.

Concordia The Roman goddess of peace and harmony; identified with the Greek Aphrodite Pandemos and with the deified Harmonia. Concordia had several temples in Rome, one on the Capitoline dating from the reestablishment of concord between the patricians and plebs and erected by Camillus in 367 B.C. As Concordia Augusta, she presided over the peace of the imperial household. Offerings were made to her on the birthdays of the emperors. Her symbols were the herald's staff entwined by serpents, and two clasped hands. She was represented as a matronly figure, bearing the cornucopia in her left hand, and an olive branch in her right.

confession Catharsis by the recital of some transgression involving an uncleanness affecting an individual or his group: a religious custom found all over the world from the Eskimos to the Bechuana in Africa, from the Tupinamba in South America to the Bataks of Sumatra, and from the most ancient times in Babylonia and Egypt to the present day. Confession is sometimes direct, as by a worshipper to his god; sometimes the confessor must have the mediation of a priest (shaman, etc.); sometimes confession is made before the group assembled. Penance or sacrifice is often entailed, though sometimes simple admission of guilt effects the purification or salvation. As contrasted with positive confession of sins committed, the ancient Egyptians had a Negative Confession denying specific sins,

those sins not in the canon being ignored. Among the Eskimos, as reported by Rasmussen, a public confession takes place after a certain degree of inspiration has occurred; revival meetings in the United States are reminiscent of this "intoxication of delight" of the Eskimos. The transgression of moral or divine law is sometimes manifested by storms, earthquakes, or the like, and requires the guilty person to stand forth and confess. Personal damnation such as that undergone by the unconfessed sinner of Christianity may infect those with whom he comes in contact. Confession is therefore a necessity to the community lest it suffer blight or other disaster through divine anger, just as confession is necessary to the man ill and like to die because of his sin.

The confessional and its secrets are favorite themes of medieval European folktale. Since sincere repentance, even at the moment of death, might save the soul of the sinner from eternal damnation, tales of miraculous opportunities for the dying to confess occur: the unshriven are brought back from death that they may confess (V23.1); death is held back that a soul may be saved (V251); the dumb obtain the power of speech that they may confess (V23.2). The anticlerical motifs of the priest who hears the confession of and gives absolution to his own paramour and of the priest who discloses confessional secrets appear in various tales. Confession runs like a theme through a collection like Boccaccio's *Decameron*. Typical is the tale of the clever woman (3rd day, 3rd story) who informs her lover when and how to come to her by "confessing" to the friar that he has made advances to her. The friar in turn chides the young man, who has done nothing of the sort, and thus acts unwittingly as the go-between until his services are no longer required.

 The confession of "sins," that is to say of ritual and magical transgressions, was widely practiced among the ancient Peruvians. It was compulsory in case of illness and before certain feasts. At first confessions were made in public, but later they became secret. Certain hideous crimes were reported only to the supreme priest or to his immediate assistants. After enumerating his sins, the penitent bathed in a river to purify himself. To placate the offended supernaturals, he observed several penances, such as continence, fasts, or periods of complete isolation. Confession still plays an important part in the religious life of the Kaggaba and Ijca Indians of Colombia. It is also reported among a few tribes of the Amazonian lowlands, in particular among the ancient Tupinamba. Tabu violations were confided to shamans in order to avert greater evils. [AM]

conflicting brothers One of the major recurrent themes of Melanesian mythology, in which the culture hero is hampered in his beneficent, creative, or tutelary activities by one or more lazy, stupid, or sometimes antagonistic brothers. Qat in the Banks Islands, Tagaro in the Banks and New Hebrides, Warohunuga in the Solomons, To Karuvu and To Kabinana in New Britain are popular examples. R. B. Dixon in the *Mythology of All Races*, vol. 9, "Oceanic," discusses these at length. See MELANESIAN MYTHOLOGY. [KL]

Confucius (551-478 B.C.) Chinese sage, philosopher, and moralist. See KUNG FU TZE.

confusion of tongues A widespread motif of mythology and folktale (A1333) explaining why the peoples of the world speak different languages. In practically all mythologies all the people once spoke but one language and all could understand each other. Usually in punishment either for some impudence, disobedience, or broken tabu the separation of languages is visited upon them and they cannot understand each other.

The story is very widespread among North American Indians of the West and is also known among the northeastern Algonquians and among the Iroquois. Entirely apart from the Tower of Babel idea (which has found its way into North American Indian folktale) the separation of languages occurs variously. Sometimes it occurs casually without specific reason: the Chemetunne (Oregon) creator, for instance, merely "told the man" that he, his wife, and their children would speak different languages and be progenitors of the different tribes. In a Shoshonean myth Coyote did the wrong thing by opening the creator's sack in his absence; the people rushed out of the sack all shouting in different languages, and were therefore destined to fight and kill one another. Another Shoshonean story says that Cōtsipamāpot, the old woman who made the earth, caused all the tribes to speak different languages.

From Siberia to Indochina, in the Pacific, and in Africa there are explanatory myths for the difference of languages. Frazer's study of the Tower of Babel turns up a number of world myths unconnected with the Biblical story. Diversity of language is accounted for among the East African WaSamia, for instance, by the fact that once the people, crazed with famine, wandered jabbering in all directions. A hill tribe of Assam tells how the people once attacked a huge python to rescue the king's daughter, but as they struck the first blows, they were suddenly beset with confusion of tongues, and separated, each to become ancestor of a different tribe. Another Assam tale describes how three grandsons of a certain chief suddenly began to speak different languages while chasing a rat, and so great was their misunderstanding that the rat got away. The three boys parted and founded different tribes. A South Australian people were punished with confusion of tongues by an old woman named Wurruri, who used to walk among them and scatter their night fires with her stick. When she died the people rejoiced, divided, and devoured her body. Those who ate the different parts henceforth spoke different languages. (See Frazer, *Folklore in the Old Testament*, vol. 1, pp. 384 ff.)

The actual instability of some tribal languages from generation to generation is explained by a number of scholars as resulting from strict adherence to specific tabus, not from broken tabus. Among many primitive peoples, for instance, tabus against speaking the names of the dead cause many words to be dropped from a language, especially as innumerable personal names are also common nouns. See TOWER OF BABEL.

Conga A category of Haitian vodun deities, associated with the rada group in the organization of the vodun pantheon. [MJH]

Congo Among New World Negroes, the word Congo has been preserved as one of the most distinctive cultural retentions contributed by the many natives of this large area of Africa who were brought to the New

World. Cult-groups termed Congo-Angola are found in Brazil; there are Congo spirits (*loa Congo*) among the vodun deities of Haiti; and the Place Congo in New Orleans was the center of African dancing. In such context, the name derives as much from the Kingdom of Kongo, near the mouth of the Congo River, as it does from the river itself (called until the mid-18th century the Zaire) or from the present African territory of that name. [MJH]

conjunction, conjurer, conjah, etc. Terms used by Negroes of the United States for the process of working magic, the worker of magic, and magic itself. In its varied forms, conjunction, like magic practices among New World Negroes everywhere, shows a high degree of purity of retention of Africanisms that indicate it to have been one of the most tenacious of African carry-overs. This is to be accounted for by the personal, uninstitutionalized forms taken by magic, and the ease with which it can be done even under the most repressive circumstances. Also of significance here is the conviction which the African magic carried to those who came into contact with it, often to whites as well as Negroes. [MJH]

Conla In Old Irish legend, the son of Cuchulain and Aoife. When the boy was grown she sent him to Ireland to find his father, but under *geis* not to tell his name to a single warrior. When he arrived he met and bested every warrior who went to meet him. His request to be met by two warriors, so that he could tell his name, was refused "for the honor of Ulster," because in Ulster two warriors never went out against one. He was killed by Cuchulain, his own father, before Cuchulain knew his name.

Con lôn In Annamese belief, spirits which appear in short successive incarnations; literally, entering life. The Con lôn are premature or stillborn children and a series of miscarriages occurring to one woman are believed to be reincarnations of the same spirit. A woman who has produced one or more Con lôn is believed contagious. No one will touch her or mention her. To prevent a reappearance of the Con lôn a dog is killed and buried under the bed of a woman who is about to be confined. See CÂM KHAM.

Con ma dâu In Annamese belief, the spirits of people who have died of smallpox: the cause of all serious cases of this disease. Victims are isolated by the Annamese, not for hygienic reasons but for fear of the Con ma dâu which are residing in their bodies.

Connla's Well In Old Irish mythology, a well under the sea (in the Land of Youth or Promise). Over it hung nine hazel trees, which leaved, flowered, and bore fruit all at once. These were the hazels of wisdom and knowledge and inspiration, the wisdom being concentrated in the nuts. The nuts dropped into the well and the salmon swimming in it ate the nuts. One could tell how many nuts a salmon had eaten by counting the spots on its body. Whoever drank of the water of this well, or ate of the nuts, or of those salmon would be endowed with miraculous wisdom and poetic inspiration. It is told how Sineld, a granddaughter of Lir, went to this well seeking wisdom, but the waters were unwilling to give it and rose up and drowned her, and washed her body to the shores of the river

Shannon. The Shannon is named for her: Irish, *Sionnain*. One of the *Dinnshenchas* mentions a beautiful fountain near Tipperary which is called Connla's Well.

Magic wisdom acquired from drinking of a certain well (D1811.1.2) is a common motif in Irish story, as is also the inevitable punishment following on a woman's disrespect of or intrusion on a magical or sacred well.

Conquista Literally, the Conquest; a mimetic battle dance of Mexico and Ecuador, related to the Morisca. In Mexico it enacts the conquest and conversion of Moctezuma by Cortes, aided by his mistress, Malinche. It is performed on saints' days from Nayarit to Chiapas, especially in Jalisco, Guerrero, and Oaxaca. Usually the native dialog, which alternates with the dance, is in Spanish; sometimes it is in obsolete and unintelligible Náhuatl, as the manuscript of San Cristobal. Here as in Oaxaca, the drama is entitled *un Cuarno* or *Cuaderno*. The elaborate version in Culiacán, Oaxaca, is called *Danza de las Plumas*. The Indians perform waltz, mazurka, and polka steps in quadrille formations. Their gorgeous high feathered headdresses contrast vividly with the drab blue soldier suits of Cortes' followers. In Jalisco the Spaniards are often represented as selfless soldiers of the Cross. [gpk]

Consentes Dii The twelve major Etruscan (and Roman) gods, six male and six female, who formed the council of Jupiter: often confounded with the twelve principal gods of Greece. Only Juno, Minerva, Sumanus, Vulcan, Saturn, and Mars are known to have been among them; there is no agreement concerning the names of the others.

Constantine and Arete or **The Dead Brother's Return** A Greek traditional ballad, stemming from the ancient balladry of Asia Minor current when Hellenic civilization reached as far as the Euphrates. It features the dead rider motif: the demands of his mother compelled Constantine to return from the grave and fetch home his sister, Arete, from a distant land. Arete had married a foreign lover against her mother's will; the mother had finally consented to the match only because of Constantine's promise that he would go and bring her back when necessary, whatever the circumstances. Plague fell on the city; Arete's nine brothers all died; the mother sickened and called for her daughter. The dead Constantine, true to his promise, rode to the foreign country and brought his sister to the mother's bedside. But the girl and mother both died from the terror of the experience.

The Albanian *Constantine, the Dead Voyager*, the Rumanian *Voichita*, Bulgarian *Lazar and Petkana*, and the Serbian *Jovo and His Sister* are all separate (from each other) developments of this ballad. The English *Suffolk Miracle* (Child #272) is also a direct descendant from the Greek ballad, having been brought in by seafarers in the 18th century. See DEAD RIDER.

Consus An ancient Roman god, originally an agricultural deity, variously conceived of as the god of good counsel, of secret deliberations, of the stored harvest, of the underworld. There were two Consualia, festivals of Consus, one on August 21, another on December 15. At the August festival, among other countrylike amusements, there were horse-racing and racing of chariots drawn by mules. This connection with horses made

later writers identify Consus with Neptune (Poseidon Hippios), but there is no real parallel between the two. Ops was the consort of Consus.

The altar of Consus stood in the Circus Maximus and it was from the races at the Consualia that the horse-racing at the Circus arose. The games were believed founded by Romulus, and the famous rape of the Sabine women occurred at the first of these celebrations.

Contes de ma Mère l'Oye "Tales of Mother Goose," a collection of fairy tales by Charles Perrault published in 1697 as *Histoires ou Contes du Temps Passé avec des Moralités*, and then credited to Perrault d'Armancoeur, Perrault's ten-year-old son. These tales, written by Perrault, were collected from his contributions to the *Recueil de piéces curieuses et nouvelles*, a periodical published at The Hague from 1694 on. Among the prose tales thus reprinted in the *Histoires* were: The Sleeping Beauty (La Belle au Bois Dormant), Little Red Riding Hood (Le Petit Chaperon Rouge), Bluebeard (La Barbe Bleue), Puss in Boots (Le Maître Chat ou Le Chat Botté), and Cinderella (Cendrillon, ou la petite pantoufle de verre). The popular name *Contes de ma Mère l'Oye* appears on a placard in the frontispiece of the *Histoires* as a subtitle. Perrault's stories are considered the telling *par excellence* of the French fairy tale.

contests Contests of many varieties are repeatedly mentioned in North American Indian myths, and serve either as self-contained incidents in tales, or as the central element and *raison d'être* for a tale. This plethora of contest material reflects, in a general way, the popularity of games of skill and chance among American Indians. The contests mentioned in tales may however be of quite a different order from those indulged in for stakes by actual men and women. Some of the contests described in tales which coincide with actual practices are: shooting, jumping, and wrestling matches, climbing a smooth pole, racing, ball games, diving, gambling, shinny, and sweating contests. More imaginative ones are: backscratching contest, contest for daylight, contests to keep awake, to spit up more fat than one's opponent, to eat more than one's opponent, to walk on water, and contests between heat and cold, sun and wind, etc. Many of the contests which reflect actual practices are won by deception in the tales, and the winner is often Trickster. Contests which involve the use of magical power are less likely to contain any elements of deception. [ewv]

Con-tinh In Annamese belief, the malevolent spirits of maidens who have died prematurely. The Con-tinh hide in old trees and laugh weirdly, rob passers-by of their souls and drive them insane. They also take vengeance on those who cut their trees, so the Annamese often persuade Christians to strike the first blow when they are forced to cut such a tree.

contradance Literally, dance of opposition; a dance performed by many couples face to face, line facing line, in square or longways. It developed in the 17th century and reached its height of popularity in the 18th century, only to give way to the waltz in the romantic era. The principle of this dance form is, however, by no means an innovation of the 17th century,

but involves the principle of sexual attraction, approach, separation, and uniting, multiplied into communal participation. Such dances are very ancient and still exist among primitive peoples.

European peasantry and bourgeois society developed the contradance to its highest possible complexity. The corresponding country dances of England, numbering some 900 in 1728, and intensely popular to this day, explore every form of crossover and interweaving, with numbers of participants varying from four to an indefinite number. Sometimes each couple in succession leads through the figures, sometimes alternate couples, sometimes the whole group performs simultaneously.

The elaborate Spanish *contradanza* includes quadrille and longways types. The Italian *contradanza* is usually danced in longways form. There are variants in every province, as the *contradanza muntanaera* of Bologna, which ends with a grand right and left. The German and Scandinavian *Kontra* is usually a quadrille, often having unique figures. The *Föhringer Kontra* contains circling, swinging of partners, and a wheelbarrow step of the boy pushing the girl backwards. Offsprings of the French *contredanse* were the *cotillon* and quadrille, which developed into the American square dance. [GPK]

contradanza In Spain and Latin America, a figure dance for eight, sixteen, or thirty-two couples, corresponding to the French *contredanse* and the English country dance. The *contradanza* includes almost every possible kind of group pattern: *cruz* (crossover), *esquinas* (corners), *cadenas* (heys), *latigazos* (whips), *molinos* (mills), *caracol* (snails), etc.

The *contradanza cuadrada* is performed by four couples in square formation, as indicated by the name. The *contradanza de dos parejas* involves two couples face to face. The *contradanza larga* (long) is performed in longways formation.

These same formations occur in less complete array in ritual dances for men, especially in sword dances. But the *contradanza* proper is a social dance, which displaced the minuet in the 18th century. The music is in duple time, in phrases of eight regular measures.

[GPK]

Con trâm nu'óc In Annamese belief, a fabulous water buffalo. Anyone who possesses a hair of the *Con trâm nu'óc* and holds it in his hand can cross a river dryshod.

contrapás A Catalan round dance for men and young women, holding hands in alternation, the woman to the right of her partner. It is related to the Greek *sirtos*, Rumanian *sarba*, and Serbian *kolo*, and particularly resembles the Catalan national dance, the *sardana*. It is as popular in the streets and plazas of the cities as in rural districts. In the province of Gerona the progression of the *empurdanés* (named after Ampurdán) is predominantly to the left; that of the *selvatá* (after Selva), to the right. At times the *cap* and *cua* (head and tail), who direct the steps, break their hold and convert the closed round into an open round. The grapevine-type steps, called *punts*, are of two kinds. The first part of the dance consists of *curts* (shorts) with two steps to each side, the second part of *llarcs* (longs) with four steps each way, usually dwindling to combinations of two and three at the end of a section,

to fit the irregular phrasing of the music. The *trencacs* are rapid, bouncing elaborations. The *camadas* and *girats* are high kicks and turns by men at the end of a phrase. As a climax the men may hoist the ladies into the air, a figure called *lo salt*, the leap.

The music of the special ensemble, the *cobla*, was originally scored for a *cornemusa* or bagpipe, also called *criatura verde* (green creature) because of its green color, a one-man drum and flaviol, and a cornet. Nowadays the ten musicians play the drum-flaviol, four woodwinds, four brass winds, and a double bass. The tunes, new and old, are original and in a Mixolydian mode. The tunes for the *llarcs* are livelier than for the *curts*.

A chant precedes the dance, commemorating the Passion of Our Lord, possibly at one time a joyful *pæan*. A century ago the *contrapás* was still part of the liturgical drama enacted in the church or atrium; today, though secularized, it retains much of its ceremonial absorption. Its origin is probably a pre-Christian rite adapted to ecclesiastical purposes. [GPK]

controversies Controversial arguments between two characters usually revolve, in North American Indian tales, around such questions as whether people shall stay dead after they die; whether life shall be easy or difficult; whether childbirth shall be easy or hard; how long day and night, or the seasons will last. Generally two animals, one of them Trickster, argue these matters out; usually the proponent for the negative or more disagreeable side wins. Occasionally a certain poetic justice manifests itself when the winner of the controversy is himself distressed, as in the tale of the origin of death, in which Coyote argues that people shall die and stay dead, but later when his own child dies regrets his decision. [EWW]

conundrums The petty and more trifling riddles, especially those containing puns, are commonly termed conundrums. They are usually based upon a single point of fanciful resemblance, often forced, between objects or persons, or upon a play on words, stated in brief question and answer form; whereas riddles *per se* are apt to be longer, more complex in imagery, and more pretentiously literary in structure, frequently in rime.

Punning questions were widely known, of course, long before the word conundrum was used to designate them, and have always been common, particularly in the folklore of the illiterate and semi-literate. Many of them depend upon oral presentation for their force, and lose it when written.

Radio and video programs today repeat "wheezes," "gags," and "screams" (so named colloquially from the effect supposedly induced in the listener) which are merely revamped conundrums from the minstrel and vaudeville shows of the 19th century, conundrums which had already suffered several previous incarnations. A few samples are sufficient:

Why is the letter K like a pig's tail?
Because it is the end of pork.

Why is it easier to read in October?
Because then the leaves turn themselves.

Why is no one hungry in the Sahara Desert?
Because of the sand which is there.

The fact that for centuries many people had no book but the Bible led to the growth and wide circulation of a number of Biblical conundrums. (The writer has collected 155 from correspondents who got them by word of mouth from older folk and had usually never seen them written.) Some of these Biblical conundrums are atrocious puns, and several must needs abide in the oral tradition. There was evidently seldom if ever any conscious irreverence in their use, however, but rather an attitude of friendly familiarity with the Bible characters. The following are representative:

At what time of day was Adam created?
A little before Eve.

When was salt meat introduced into the navy?
When Noah took Ham into the ark.

Who was the best wrestler in the Bible?
Jonah, because even the whale couldn't hold him after he got him down.

How do we know Moses wore a wig?
Because sometimes he was seen with Aaron, and sometimes without.

It may be noted that this last conundrum and the previously given Sahara Desert one illustrate the essentially oral character of these trick questions. See RIDDLES. [CFP]

cooked cock crows The motif (E528.2.1) of a Christian legend very widespread in western Ireland. A group of soldiers, set to guard the tomb of Christ, were sitting on the ground around their fire. They were boiling a cock in the pot for their morning meal. And they were troubled in their minds, for it was said that Christ would rise from the dead and walk out of the tomb. One of them, however, believed no foolish tales; he declared Christ would not rise, "no more than the cock in the pot." Whereupon the cock jumped out of the pot and crowed, and at daybreak Christ rose and came out to them. Certain variants put the fatal words in the mouth of Judas's wife, to comfort her husband who was worried lest Christ should rise. The incident occurs also in European, English, and Scottish balladry and carol. See CAROL.

copal The native Middle American incense, used in pre-Conquest times, and widely used today in many ceremonies, both Christian and pagan. It is a gum secreted from trees of the genus *Elaphrium*. [GME]

copeo A popular couple dance from the island of Majorca, performed by one couple alone or by many. The woman leads, dictating the various vigorous movements, jumps, turns, etc. The man may imitate her or improvise. [GPK]

Cophetua Hero of an English ballad, *Cophetua and the Beggar Maid*, found in the Percy manuscript; a traditional African king and misogynist, who fell in love with a beggar maid whom he happened to see. They were married and lived uneventfully. The girl's name was Penelophon. The story is referred to by both Shakespeare and Jonson, and it is the subject of Tennyson's poem, *The Beggar Maid*.

copper This metal, which is sometimes found in pure state, has been known to man since a very early age. Unlike pure gold, copper was suitable for use as a tool or weapon, and so among early peoples it was

often more highly prized. It was in use in the world long before the discovery of iron. In Asia it was the metal of the Queen of Heaven (Astarte, etc.); astrologers and alchemists assigned it to Venus; it was sacred to the Fire God and the Seven Gods of Babylonia and Assyria; North Pacific Coast Indians and several other groups assigned it to the Sun; in India and parts of North America it was a sacred metal used principally for ornaments and sacrificial instruments; the Indians of the Lake Superior region regarded the lumps of copper they found as divinities or as the gift of gods that dwelt beneath the water.

In India, especially in the Punjab, copper earrings were worn to ward off the demons of sciatica, and in Europe in the Middle Ages it was believed that copper wire bound about the waist would relieve rheumatism. In some places there is a custom of placing copper on a corpse (in Ireland, pennies on the eyes; in Dharwar, 21 engraved pieces). Among the Swahili a Balderlike myth tells of a chief who could be killed only by a copper needle driven through his navel. Pliny mentions that in Arcadia the yew tree is fatal to anyone sleeping under it unless a copper nail is driven into the tree. As late as the middle of the 18th century the Spaniards believed that copper grew in the ground, and that if a mine was left alone, it would become productive again.

Coquena The supernatural protector of the vicuñas in the Quechua folklore of the Puna de Atacama. He is a little man dressed in white who travels at night driving large herds of vicuña. He punishes those who wantonly destroy these animals. [AM]

Cora The Maiden, a name of Persephone. In some variants of the Persephone legend, Cora becomes mother, without there being a father, of Corybas, the ancestor of the Corybantes. See PERSEPHONE.

coral A calcareous treelike structure formed by colonies of marine skeletons, and used as a gem. While usually red in color, it may be white, pink, yellow, blue, brown, or black. It has been highly valued as an amulet everywhere it occurs and a list of its properties reads like a catalog of the ills suffered by mankind from the mind, the body, and the elements. It is so desirable that in Africa human sacrifice is offered to induce it to remain and reproduce. The Chinese and Hindus use it to adorn their gods. It guards those who wear it from fascination, bewitchment, and lunacy. Pure red coral is effective against evil eye, demons, and furies; in Italy where conditions are worse, witches, wizards, incubi, succubi, and phantasmata were added to the list. Brown coral is not so used, however; the evil spirits like that. Hung in the house coral prevents discord, disharmony, envy, and evil influences; hung on the bedpost it prevents nightmare, terror in the night, and night sweats; carried about the person it guards against feuds, guile, scorn, etc. In the Middle Ages it was a must in every pharmacy, and moreover care had to be used in its preparation. Coral ground in a brass mortar was very dangerous to the patient, only marble could be used. It was used medicinally in various forms as a charm, amulet, or talisman; by rubbing the affected part, internally as a powder, in solution, or as a tincture in alcohol. In any event, administered according to the whim of the doctor, it checks hemorrhages, cures diseases of the eyes, stomach

complaint, plague, poison, teething troubles, disorders of the spleen, whooping cough, sore feet, diseased gums, gout, blood-spitting, epilepsy; it also fortifies the heart, and relieves indigestion. Sewed up in a dog-collar with a flint arrowhead, it cures rabies (in the dog). Bound with a seal skin to the masthead of a vessel, it averts wind and tempest, and is generally effective against thunder, lightning, storm, whirlwind, and hail. In India it is supposed to ward off the evil effects of the strong sun. The ancient Persians thought that genuine coral smelled of seawater; the Hindus claimed that it tasted both sweet and sour. It is tied on fruit trees to insure fruitfulness. Yellow coral is the gem of everlasting life in Arabia. White coral is used in Italy to increase the supply of milk. Dancers, especially in the ballet, still carry it for luck.

Cordão A Brazilian carnival dancing group. The cordões of Rio de Janeiro, Bahia, and Recife are famous for the elaborateness of their costuming and the excellence of their singing and dancing. The name derives from the fact that, in the crowded streets of carnival time, it was necessary for some members of the group to keep onlookers away from their fellows by a rope held taut, thus affording room for the performance. [MJH]

Cormac Connlonges In Old Irish legend, son of Conchobar, king of Ulster. He went into voluntary exile in Connacht in protest against the treacherous killing of the sons of Usnech, because he had been one of the sureties. Conchobar, on his deathbed, sent for Cormac to come and take the kingship of Ulster after him. Cormac started on the journey; but one night on the way he was murdered by a band of Connachtmen on their way home from raiding Ulster. This fulfilled the curse that Cathbad, the druid, put on Conchobar after the slaying of Usnech's three sons: that none of Conchobar's line should have the kingship after him forever.

Cormac Mac Airt Cormac, son of Art son of Conn of the Hundred Battles: most famous of the ancient Irish kings, now thought to be an authentic historical king. He ruled in Tara for forty years (probably 227-266) and Tara prospered under his hand. Cormac is famous for his true and generous judgments and has been likened to Solomon for wisdom. It was during the reign of Cormac that Fionn Mac Cumal and the Fianna walked and talked and intermarried with the ancient gods and performed the marvels that made them famous. See BIRTH OF CORMAC.

Cormac's cup The wonderful golden cup given to Cormac Mac Airt by Manannán Mac Lir in the Land of the Living. If three lies were spoken over it, it would break in three; three truths told made it whole again. Cormac used it during his kingship to distinguish falsehood from truth in Ireland. But when Cormac died the cup vanished, just as Manannán Mac Lir had said. See ACT OF TRUTH; ECHTRA E CORMAIC.

corn or maize A pre-Columbian staple cultivated food plant of the American Indians of the Southwest, Southeast, and Eastern Woodlands, and of the village tribes of the Plains, including the Mandan, Hidatsa, and Arikara on the upper Missouri River. Corn enters widely into the mythology and religious practices of all these tribes. The plant is usually personified either as

Corn Mother(s) or Corn Maidens. The Hopi corn god of the underworld is however a male personage, Muy-'ingwa; the Keresan underworld corn deity is Iyatiku, Corn Mother. Among the Iroquois of New York state, Corn, Beans, and Squash are referred to as the three sisters, always mentioned together. Origin myths concerned with the disappearance of Corn person and her return, are told among all the maize-growing tribes. Various parts of the plant are used ritually, especially in the Southwest: corn husks, pollen, silk, smut, etc., as well as whole ears, kernels, and prepared corn meal. Major ceremonies are often held prior to corn-planting and after the harvest, especially among the tribes of the eastern United States. [EWW]

✍ On Mindoro (P. I.) if you laugh while planting corn there will be space between the kernels. Corn should be planted as soon as the hardwood leaves are as large as a squirrel's (or mouse's) ear, or when you see the first bobolink or oriole. The Negroes of South Carolina say that it should be planted during the light of the moon. Others say that if it is planted when the sign of the zodiac points to the bowels, it will rot, and if planted when the sign is at the head, it will grow tall and slender, with few ears. One of the traditional corn-planting rimes goes, as each kernel is planted,

One for the cut worm
One for the crow
One for the blackbird
And three to grow.

Warts will go away if you take a kernel for each wart and throw them over the left shoulder into a river or bayou, or if you bury them too deep for them to sprout. [JWH]

corn dance An American Indian ceremonial dance series addressed to the powers which control the germination and growth of maize; thus it includes prayers for rain, and thanks for harvest. It is naturally confined to those American Indians dependent on maize for sustenance; it is performed from the Andean tribes to the Iroquois, and has reached a most elaborate development in the desert country of the Rio Grande pueblos.

The Aztecs performed innumerable seasonal rites with human sacrifice, serpentine dances, and skirmishes by priestesses, for the agricultural deities, for the corn deities, the male Cinteotl (son of Xipe Totec), Chicomecoatl (seven serpent), Xilonen (goddess of young corn), and Tonantzin (mother of gods, now identified with the Virgin Mary but formerly conceived of in three aspects: Coatlicue, Cihuacoatl, and Tlazolteotl). The spring festivals for Xipe, during Tlacaxipehualtli, approximately coincide with Carnival. They featured the *ayacachpixolo* or rattle-strewing ceremony, a mimetic seed strewing with a stick rattle or *chicahuaztli*. The festivals for Cinteotl and Chicomecoatl, during the month of Huey Tozoztli (in April), correspond to Easter. These corn rites survive in the Mexican Carnival and Easter fiestas, but without the ancient features. Only the Tarascans preserve a corn-sowing dance in the now mestizo *sebradora* or sowing dance.

The Tarahumara and Huichols still carry on their ancient rain ceremonies for the sprouting seeds. As the Huichol equate corn, deer, and *hikuli*, their hikuli dances are also addressed to agricultural powers.

The famous Green Corn Dance of the Pueblo Indians has fragments of major ceremonies, now enacted secretly in the kivas. They perform many beautiful dances for the crops, rainbow, rain cloud, basket, snake, yellow corn, the corn maidens, harvest; but the *tabiitas*, or saints' day dances, are the most spectacular. These are so called because of the high tablet crowns worn by the women. The *tabiitas* in San Felipe (May 1) and Santo Domingo (August 4) are the best preserved; in marginal Taos these festivals are degenerating. They are apparently addressed to the image of the patron saint, but this is a purely superficial concession to Catholicism. The traditional dance begins with the entrance of the *koshare*, the impersonators of ancestral spirits (clowns outside the dance). Then follows a defense of the crops from invaders. Finally the men and women of the summer and winter kivas alternate until sundown in a mass dance. An impressive men's chorus drums and chants in shifting rhythms. The shuffling women tag slightly behind the trotting men in a huge double circle, long double lines, or small circlings for one or two couples.

The Corn Dance is built on similar patterns among the Shawnee, Cherokee, Creek, Yuchi, and Iroquois Indians. Among the Cherokee-Shawnee in Oklahoma the Green Corn Dance is still celebrated as one of the bread dances, a thanksgiving for crops, and is a form of worship of Our Grandmother. Among the eastern Cherokee and the Creek it has died out as a vegetation rite, and survives among the former as a curative ceremony, including animal and "social" dances and divination. These follow the peculiar serpentine and spiral course of typical Cherokee dance with planting gestures.

The Iroquois Green Corn Festival (*ahdake'wāo*) lasts four days in early September and includes various rites of thanksgiving: the Great Feather Dance (*ostowégowa*), women's *tpwisas*, and many social dances, including the corn dance proper (*onéontóeng*). This is addressed to the spirit of corn, the most important of the three life-sustaining sisters, corn, beans, and squash. It progresses in a circle or serpentine. In contrast with the male-dominated dances of hunting cultures, these corn dances feature women as prominent actors, both in the dance and in the underlying mythology. [CPK]

cornflower Any flower growing in grainfields; especially the bachelor's-button or bluebottle (*Centaurea cyanus*). In Greek legend the youth Cyanus worshipped Chloris (Flora) and spent his time gathering flowers for her altars. When he died the goddess gave his name to this plant or transformed him into it. The Centaur Chiron cured the wound made with an arrow dipped in the blood of the Hydra by covering it with the flowers of the *Centaurea* and thus gave it its name and its reputation for great healing properties.

The cornflower was burned to drive away serpents according to Lucian. In Russian legend the plant is known as Basilek. A young man of this name was enticed by the nymph Russalka into the fields and there transformed into the cornflower. In Jamaica the flower is boiled with the leaves of the "Gungo pea" and used as a gargle or with alum to cure toothache. The cornflower is also called bluecap, bluebonnet, bluet, and hurtsickle. The last name is used because it turns the edges of the reapers' sickles,

corn from body of slain person A folktale motif (A2611.1) explaining the origin of corn, especially typical of North American Indian mythology. The Abnaki myth is representative, in which a beautiful golden-haired woman appeared to a lonely and hungry man.

She would not let him approach her, but instructed him to burn a patch of ground and drag her body across the burned patch, promising that if he would do this, she would be with him forever. The man did as he was told. When he saw the lovely hair of the woman shining between the leaves of the plant that grew up where her body had touched the ground, he understood that she was keeping her promise in the gift of the corn. The Cherokees have a version of this story in which Sélu (Corn) instructs her child and his little "wild brother" (who intend to kill her) to drag her body over the ground and corn will come up. Further details of this tale explain why corn grows in spots instead of all over, and why the Cherokees work their corn crops only twice. In the Huron origin myth corn sprang from the breast of the dead mother of the twin culture heroes. The story varies little in the many eastern Indian versions. Longfellow's *Hiawatha* tells the tale with little change. It is also known in many variants in the West and among certain South American Indians where maize is known. The gift of food to the people from the body of a slain food-goddess occurs also in Babylonian and Japanese mythology (A1420.1).

corns Aching corns are a sign of rain in all countries. In Ireland applications of hot ivy-leaves or houseleek are said to relieve painful corns. An early English folk device for extracting corns was to steep a pearl button in lemon juice until dissolved, then to place a piece of lemon soaked in this liquor upon the corn every day until the corn could be easily extracted. Another English prescription says to steal a small piece of beef and bury it. As the meat rots, the corn will diminish. Both of these remedies have traveled as far as Mississippi where they are recommended by the Negroes of that section. Another southern U.S. Negro corn cure is to rub a kernel of corn on the toe-corn and feed it to an old rooster.

cornucopia or cornu copiae In classical mythology, the horn of abundance, always filled with fruit and self-replenishing according to the wishes of its possessor. It is an attribute of many deities, such as Flora, Concordia, Plutus. The horn itself was broken from the goat Amalthea which nourished the infant Zeus; or, by some accounts, was torn from Achelous by Hercules. The never-empty horn is related to the self-setting table of folktale.

Corona Borealis The Northern Crown: a bright circle of stars lying between Boötes and Hercules: variously interpreted in different mythologies as the Wreath (early Greek), the Crown of Ariadne (later Greek), al Fakkah, the dish (Arabian), the Woomera or boomerang (Australian), Caer Arianrhod, the House of Arianrhod (Brythonic), twelve dancing star maidens, of whom one was the wife of White Hawk or Arcturus (North American Shawnee Indian), the cave into which the Great Bear entered in his flight from the world up the northern sky (also North American Indian), the Crown of Thorns (Christian).

coronach A type of song of lamentation composed by Scottish bards and sung or chanted at funeral ceremonies of clan heads or other important persons. The words eulogized the dead and brought forth bursts of wailing from the women of the clan. See COMPLAINT.

corpse bleeds in presence of murderer A very old folk belief, especially in England, Ireland, and Scotland, occurring as motif (D1318.5;2) in the popular ballads of Scandinavia, England, and Scotland. The motif appears typically in *Young Riedan*, a variant of *Young Hunting* (Child #68):

White, white waur his wounds washen,
As white as ony lawn;
But sune's the traitor stude afore,
Then oot the red blude sprang.

The belief that the wound of a dead man would open and bleed at the approach of or at the touch of his murderer was often put to the test in ordeals to detect the criminal. The belief is also fairly general in the United States, especially among some groups of southern Negroes, who claim that blood will flow even from the dry bones of a dead man in the presence of his murderer. Alabama Negroes say that the intestines of the dead will grumble and be heard when the murderer approaches the corpse. In Mississippi it is said that dried bloodstains at the scene of a murder will moisten and stain the murderer's feet if he walks in the place.

corpse light A phosphorescent light seen over marshes, etc.: called variously *ignis fatuus*, jack o' lantern, *corposant*, and by other names. The mysterious phenomenon of strange lights seen at different places and at different times in the British Isles and elsewhere has been explained as caused by, possibly, an atmospheric condition or gaseous emanation from the ground. These lights are seen in the air and near the earth, in the house and out-of-doors, on the lake or on the sea, sometimes white, red, or blue. They are fickle and erratic; they recede if a person approaches them, then reappear behind.

A light of this sort betokens death. Sometimes the light goes from the churchyard to the house of a person sick or near death; sometimes one is seen on the breast of a dying person; often, it appears on the rooftop signifying a death in the family of the house over which it hovers. Many stories are related of the appearance of these lights in connection with the death omen. In this capacity and in their elusive wanderings they parallel the *ignis fatuus*. Compare FETCH CANDLE. [CPS]

Corpus Christi Literally, body of Christ (in German, *Fronleichnam*); a Catholic holiday dedicated to the body of Christ in the form of the Host. It is a movable feast occurring on the Thursday after Trinity Sunday and commemorating the institution of the Eucharist. In 1246 it was officially instituted following a vision of the nun Juliana in the diocese of Liège. Juliana saw in her vision a full moon representing the Church, and one black spot on the moon which represented the lack of a feast honoring the Eucharist. The feast was extended to the entire world in 1264. Though of such recent origin, it has become one of the most splendid of Catholic celebrations, especially in Spain, Portugal, and Provence. Its stupendous processions follow the Host-bearing clergy; yet they include figures that date back

to paganism. There are fantastic cardboard masks of *gigantes*, giants, *enanos*, dwarfs, *águilas*, eagles, *serpes*, dragons, *tarascos*, or floats, on a great water serpent. Formerly, as at Penafiel and Oporto, Portugal, there were processions, dances of professional guilds, and mystery and miracle plays performed by the various guilds. A Provençal celebration of the feast of Corpus Christi features a parade of the saints, with St. Simeon carrying a basket of eggs.

Special traditional features were the symbolic battles of the Moors and Christians, and the sacred plays called *autos sacramentales* representing Biblical and allegorical subjects. Some of these survive. In Seville Cathedral, and until recently in Toledo, the famous dance of the *seises* is performed on Corpus Christi as well as on other holidays. In Majorca the related *cociés* dance in the processional as well as before and in the church, at Alaró and Montuiri. Mexico also has splendid processions in the cities. In the remote pueblos of the Sierras de Puebla and Veracruz, the *Moros* battle with the *Cristianos* or *Santiagos*. The most elaborate celebration of the indigenous *voladores* or Flying Pole dance at Papantla, Veracruz, takes place on Corpus Christi. Native *quetzales* and imported *moros* and *negritos* participate. The Tarascans of Michoacán celebrate with mock markets and a harvest processional.

In Europe and the New World Corpus Christi probably corresponded with and was grafted onto an old harvest festival. It coincides with the Inca winter solstice, *Inti raimi*, and with the Aztec seventh month, *Tecuilhuitontli*, for Huixtocihuatl, older sister of the *tlalocs* or rain gods. [GPK]

corranda A North Catalan couple dance, popular on both slopes of the Pyrenees. In the *corrandas bajas* (low *corrandas*), the couples, arm in arm, skip and jump through the streets. In the *corrandas altas* (high *corrandas*), two or four couples dance in a square. The men jump with a high hitchkick, the *camada rodona*. Sometimes they enact a pursuit of their lady. Sometimes all join in a kind of *contrapas*. As a finale the four men lift the four ladies to form a human pyramid; sometimes the man sustains his lady, sitting on his hand, in the air above his head. The name derives from the running steps, advancing and retreating. The term *corranda* is also applied to a song of four verses. See COUPLE DANCE; LIFT DANCE. [GPK]

corri-corri A Spanish dance from the province of Asturias, danced especially on St. John's Day by six women with one man in pursuit. This running dance with its flight and pursuit motif of sexual mating is reminiscent of the fertility rites associated with St. John's Day. [GPK]

corrido A characteristic ballad type of Mexico, derived from the Spanish *romance*, but set in quatrains and sung to melodies which repeat certain phrases over and over. The narrative deals with tragedies of love, with calamities, fights, revolution, with heroes, strong men, and outlaws. Even ballads from literary sources are often quickly taken over and reshaped into *corridos* by illiterate singers.

corrigan In the folklore of Brittany, a female fairy: said to have been one of the ancient druidesses, and therefore malicious towards Christian priests. She is

fond of pretty human children, and usually gets the blame for all changeling substitutions.

corroboree The Australian East Coast native term for ceremonies: now applied by Australian whites to any native ceremony, dance, or gathering. See AUSTRALIAN ABORIGINAL MYTHOLOGY. [KL]

Cosquin, Emmanuel (1841–1921) French scholar and follower of Benfey. The Grimms encouraged him to collect folktales, and his principal work, *Contes populaires de Lorraine*, is generally considered to be the representative French collection, holding a similar position in France to that of the Grimms' *Household Tales* in Germany. Like Benfey he considered India the reservoir of old tales, but he qualified that theory in two respects: he disagreed with Benfey as to the importance of the Mongols as disseminators of the Indian stories over Europe, and he did not believe that every folktale everywhere was of Indian provenience, though many were. He admitted that the Egyptian tales antedated those of India. Cosquin, Gaston Paris, and Gédéon Huet were the three principal representatives in France of the literary school of folklorists, originated by Benfey. Cosquin's numerous special studies have been gathered into two volumes, *Études folkloriques* (1922) and *Les contes indiens et l'occident* (1922).

cotton It was grown and used for cloth in India in early times, and spread from there to the East. After the conquests of Alexander it began to be known in Greece and the West. Now it is grown principally in the United States, India, and Egypt. The Khonds always plant cotton immediately on moving to a new settlement. In the Punjab, just as the bolls begin to burst, they select the largest plant in the field and sprinkle buttermilk and rice-water on it and offer prayers that the others may be as large and strong. Before the women begin to pick, they circle the field eating rice-milk. The first mouthful they spit on the field from the west. They exchange the first cotton picked for its weight in salt, which they keep in the house during the picking and pray over it. The Negroes of South Carolina claim dew on the cotton produces plant lice. A piece of cotton stuck to a dress indicates a letter, and the shape of the cotton shows the initial of the person from whom the letter will come. The bark of the cotton root was used by the American slaves as a stimulant, and was credited with causing abortion.

Cotys or Cotytto The Thracian Great Mother goddess, whose festival, the Cotyttia, was notorious in later classical times for its licentiousness, being like that of the Phrygian Cybele. The worship of Cotys spread throughout Greece and Italy, among other places to Athens and Corinth. Her worship was celebrated at night on hills.

coulin Ancient folk tunes and airs of Ireland, said to be *ceol side*, fairy music, learned by Irish harpers who overheard the playing of the harpers of the side.

counting-out rimes To determine who shall be "It" and chase the rest or take some other unwanted part in a game, children have universally and from time immemorial used various sortilegic devices usually requiring the recitation of magic rimes. When rimes are used the process generally begins with a self-appointed leader standing in front of the other children and reciting the

verse, during which he points to each player in turn, one child to a word or syllable, until the end.

The player upon whom the last word (usually "buck" or "out") falls is out of the counting, which is continued until but one player is left, who is automatically and undeniably "It." Adult observers have noted that the dictum is obeyed with more alacrity than the average child obeys a parent's command. If any child refuses, or is even reluctant, he is ostracized by the others until he learns to accept his fate when the lot falls on him.

The practice is called counting-out or telling-out in America and England, and chapping-out or titting-out in Scotland. On the Continent, the child who is It is called in Germany the Wolf, and, correspondingly, in France, the Loup, a nomenclature which may derive from the deep racial fear of the animal. In Japan the child chosen by counting out is called Oni, that is, the devil or evil spirit; in the Malagasy tribe of Madagascar he is the Boka or leper; and in Hawaii the Pupule or crazy one.

There is a rich field for research in anthropology, lexicography, comparative religion, and folklore in the rather neglected game-rimes of children of the world. At this moment millions of children in playgrounds and farmyards, schoolyards and alleys are saying these verses. The writer in a brief period has collected over 2000 different counting-out rimes from forty states and thirty foreign lands in many different languages. You can tell them at a glance from other kinds of child-rimes, for they have a characteristic rhythm and are full of quaint word-fossils worn smooth by much repetition. They are strangely alike and practically interchangeable, forming a sort of international language of their own. Say one in any tongue to an American playgroup and they will adopt it and adapt it to their vocal organs immediately, as they have already done to many rimes brought here by immigrants.

Counting-out rimes resemble another favorite of children, the tongue twisters, for both seem at first hearing to be mere gibberish, but the very real difference between them is that the latter are deliberately contrived or accidentally discovered to be difficult to say, whereas the former have been smoothed down by frequent and rapid repetition until they almost say themselves. In such a rime, for instance, as the twenty-one type, which ends with the word "twenty-one" and originally contained that number of stressed syllables, we find that an early form:

One-ery, two-ery, six and seven,
Holy bone, crack-a-bone, ten and eleven;
Spit, spot, it must be done,
Twiddle-um, twaddle-um, twenty-one,

is so changed by use that six and seven becomes ziggery, zan; Holy bone is known in such variants as Hollow-bone, Hallabone, Arrabone, Halibo, Halibut, Alibo, and even Alibi; and the third line becomes Spin, span, muskidan.

In other counting-out rimes, or to use the old oral tradition word for them, rimbles (see EENY, MEENY, MINY, MO), we have interesting changes from

One is all, two is all, six is all, seven,
Bobtail dominicker, little poll ram;
Harum, squarum, Virgin Marum,
Sinctum, sanctum, buck!

to the obviously related but distant cousin:

One erzoll, two erzoll, zickerzoll zan,
Bobtail vinegar, tickle and tan;
Harum, scarum, merchant marum,
Stingelum, stangelum, stuck!

The dominicker is in variants from Georgia, Tennessee, and Colorado, and the vinegar from Delaware, Indiana, New York, and several other northern states, while the second line became in Philadelphia:

Baptist minister, good Irish man.

Considering the many words with Latin endings and religious connotations in these variants, it is likely that the Georgia dominicker rooster was probably originally nearer the old prayer form so frequently occurring in such rimes as this one from North Carolina:

Haley, maley, tipsy tee,
Harley, barley, Dominee;
Hotchy, potchy, cotchy, notchy,
Hom, pom, tuskee.

This rible serves well to illustrate how in changed but recognizable sounds the children have unconsciously preserved old church chants and holy phrases, for we know from other variants of this particular jingle that not only is Dominee obviously of church origin, but also that Haley Maley is Hail, Mary, and that Hotchy potchy, which also occurs as Ochre, poker; Oka, poka; Hocca, proach; and Otcha, potcha; is definitely from Hocus pocus, which in turn is from the *hoc est corpus* phrase of the mass.

The age of these rimes which have come down by the schoolyard grapevine is discussed in the article on Eeny, meeny, miny, mo, the best known one. Let it be added here, just to show the rich fossil bed which awaits folklore explorers in this particular field, that the writer has identified in these rimbles such fascinating old word relics as:

Passwords of the wide-roaming freemasons of the Middle Ages,

"Juggles" from the jongleurs of Provence,
Sanskrit sacred syllables and mantras,
Secret magic formulas for telling fortunes,
Irish filid (poet-wizard) death-rimes and druid exorcisms,

Bible characters and popular saints' names,
Prayers, paternosters black and white,
Cymric shepherd's score numerals,
Romany charms and patter.

Following are a few representative rimbles:

Onery, twoery, tickery, tabery,
Alabo, cackabo, tennery, labery,
Hustadang, bangalang,
Humpty Dumpty is ninety-nine,
And one's a hundred.

Onery, oery, ickery Ann,
Phillisy, phollisy, Nicholas John,
Quevy, quavy, English Navy,
Stinkelum, stankelum, buck!

The two above were, according to a correspondent, current in Indiana about 1910. The Phillisy, phollisy, Nicholas John line occurs in many variants, and sounds suspiciously like the Pharos and Colossus at Rhodes, always of considerable interest to freemasons. It is worth noting that Masons from six different states sent versions

of this particular rime to a collector of children's rimes in the 80's, although Masons of today appear to know nothing about its ever having been in the Masonic ritual.

An old English rible, popular in many similar forms in Nova Scotia and New England, runs musically:

Intra, mintra, cutra, corn,
Apple-seed and apple-thorn;
Wire, brier, limber lock,
Three geese in a flock
Sit and sing by a spring,
One flew east and one flew west,
And one flew over the cuckoo's nest,
Crying, one, two, three,
Out goes he.

In their wanderings these three geese become Three wires in a clock (Yorkshire, England) and even Five mice on a rock (Florida).

A more modern counting-out rime which has been sent the writer from all English-speaking countries and is apparently quite popular is:

A bee, a bee, a Bumble bee
Stung a man upon the knee,
Stung a pig upon the snout,
I'll be dogged if you ain't out!

But, more popular and rivalling even Eeny, meeny, is:

Monkey, monkey, bottle of beer,
How many monkeys are there here?
One, two, three, Out goes he!

See TONGUE TWISTERS.

CHARLES FRANCIS POTTER

Country Maid and Her Milk Pail One of Æsop's fables (Jacobs #77) in which a Country Maid planned to turn the proceeds of her can of milk first into eggs, then chickens, and finally into a new gown in which she would flirt at the next year's fair. Carried away by her thoughts she tossed her head and dropped the pail. Moral: Don't count your chickens until they are hatched.

couple dance Any mimetic courtship dance: performed usually by a man and a woman, sometimes by two men, one in women's clothes. The usual pattern is the wooing dance of the man around his lady. The most ancient form, still performed in Asia, even into the Caucasus, and in Mexico, in which the woman dances in one place while the man dances or dances and sings around her, has gradually developed everywhere into the traditional courtship pantomime in which both partners perform the steps and enact the sequence of flirtation or enticement, pursuit, retreat, and final love embrace or conquest.

A few of the most famous contemporary couple dances of this pattern are: the *cueca* of Chile and its Peruvian analog, the *marinera*, the Mexican *chilena*, the Spanish *bolero*, *fandango*, and *jota*, the Venetian *furlana*, the Hungarian *friss*, the Russian *lezghinka*, the Moravian *rozěk*, the Colombian *cumbia* and *guabina*, and the Balinese *djoged*.

The original function and intent of the couple dance was not mere representation of sexual mating, however, but through the pantomime of sexual mating to invoke fertility upon crops, animals, and the tribe or community. The appearance of a man dressed as a woman

is always a phallic symbol in primitive and folk dance, and for this reason the couple (or fertility) dance performed by two men, one in woman's clothes, is often prominent among many primitive peoples. [GPK]

couvade A birth custom, found in many parts of the world, requiring certain abstentions by the father of a newly born child, and typically observed by the lying-in of the father. Protection of the child from injurious acts of the father seems to be the underlying reason for the couvade; certain food and drink, hunting or working, may be too much for the child to survive, and since the child is part of the father, the father must guard against certain customary actions which might prove injurious. Since so much of his activity is circumscribed, the father repairs to the couch or hammock as the safest place under the circumstances. The mother, on the other hand, returns to her daily round as soon as possible. The custom is widespread in South America, from the tropical tribes to the Yahgan in the far south; it is found among the Ainus, in Assam and Borneo, in Africa, India, and China. It is mentioned among the Celts and the Basques, but the only reliable reports of it in Europe are from among the Corsicans and the Albanians. According to Tylor, the custom is found among peoples whose matrilineal system is changing to patrilineal. During the period of transition, the father, by means of the couvade, asserts his rights in the child. Another theory holds that the child has been separated from the father and that both are weak and in need of care and nursing. Whatever be the reasoning, the couvade period stretches sometimes for weeks, as among the Indians of Guiana; sometimes it lasts only until the mother is ceremoniously purified after birth, a week, as among the Ainus, more or less. The couvade may also be suspected in less striking action on the part of the father than the going to bed: abstentions from certain foods or actions may be considered milder forms of the birth tabu so bizarrely exemplified by the couvade.

 The word couvade has been applied in South America to customs which are somewhat different from the European couvade, which is a symbolic lying-in of the father after childbirth. In practically all South American tribes, with the exception of the people of the Andean region, both parents refrain from performing certain activities and eating certain foods before and after the birth of a child.

The avoidance of food is based on the belief that some unfavorable characteristics of an animal or a plant may be transmitted magically to the infant. The activities which are tabooed are those which may render childbirth difficult.

There exists also a strong belief in the mystic relationship between a newly born baby and his father. The father must therefore give up for a short period all violent activities which can endanger the life of his offspring. He must refrain from hunting, fishing, swimming, handling cutting instruments, etc. The fact that most fathers in the tropical area spend this idle time in their hammocks should not be construed as a mock confinement. It is the normal behavior of any Indian who has nothing to do. These tabus end generally when the baby's navel cord falls off. Among the Guiana Indians, if the father of a newly born child has to travel, he is obliged to take great precautions lest the soul of

the child that follows him suffer any harm. For instance, he will clearly mark the path for the child and avoid getting near rivers where bad spirits lurk.

The couvade is still observed by most Indian tribes of the Guianas and by many members of the Tupi Guarani family. [AM]

 This custom is not widespread in Middle America, and where it is found, it probably represents a survival from earlier cultural strata. Among the Tarahumara of northern Mexico and the Cuna of Panama, the father does not work for three days following the birth of a child. Among the Sumu and Mosquito of Nicaragua the father refrains from hard work for several days following the birth of a child, and avoids certain foods, especially salt and chiles. [GMF]

Coventry Carol An English lullaby carol originally sung in the Pageant of the Shearmen and Tailors at Coventry. In the play, it was sung by the women of Bethlehem to their children just before the troops of Herod appeared on the scene to kill them. The melody as sung in 1591 has been preserved, and the text survives as reworked and written down by Robert Croo in 1534. The song has been recovered from folk singers in both England and the United States. It has the characteristic crooning burden, "lully, lulla," of numerous lullaby carols. See CAROL.

cow Although cows are still sacred in India these animals were once of considerable importance in the theology of the Egyptian and Greco-Roman peoples. Ethnologists have found traces of this importance in some customs of comparatively recent times. Authorities differ as to whether the worship of the cow in India originated in historic or in prehistoric times.

The Indian myth is that Prithu, a culture hero, wished to recover edible plants for his subjects. He attacked the earth which assumed the shape of a cow and fled through the heavenly regions. Finally she yielded and promised to fecundate the earth with milk. "Having made Svâyambhuva Manu, the calf, he milked the Earth and received the milk in his own hands." The antecedents of this myth are obscure. N. M. Penzer's summary is in brief that the Vedic Indians ate the flesh of the ox, sheep, and goat, though because of their value oxen were slaughtered only on festival occasions such as great entertainments and wedding festivals. The *Rig-Veda* has several allusions to the mystic relation between the cow and the earth. The prohibition against killing or molesting cows became general only after the general views of transmigration had been formulated. Though the offer in some of the early sutras to kill a cow for an honored guest is thought to have been merely a polite formula and the guest was supposed to refuse in formal language, it may be a survival from an earlier period. By the time of the *Mahābhārata* the sacredness of the cow was fully recognized: its great purity, the merit acquired by gifts of cows. The five products of the cow, milk, curds, clarified butter, urine, and cow dung, are also pure and are used in the purification ceremonies.

The cow cult of Egypt is possibly older than the cow cult of India. Egyptian princesses were assimilated to cows and when one died her body was buried in a cow-shaped sarcophagus. Apis, the bull, represented Osiris. During the first days after a new bull had been installed

in the temple the women stood before him and according to Greek reporters lifted their clothes to expose their sexual parts, a fact which in view of the general visibility afforded by the costume of the Egyptian upper classes may be of some ritualistic importance. In Thebes, Hathor was the cow-form of Isis and was served by Egyptian princesses who were buried with sacred bulls, a custom which some have interpreted as a symbolic marriage. The discovery of a mummified bull's phallus in one of the tombs might strengthen this view, particularly if the object is correctly described or it might lead to other explanations.

Pausanias, the Greek archeologist of the 2nd century A.D., did little to clarify the confusions about cow-worship and the symbolism of cows which have been transmitted by sophisticated writers of highly civilized periods of Greece and Rome. Thus Pausanias identified an image in Io's temple at Thalamai with the cow goddess Pasiphae. Io who aroused the desires of Zeus was transformed into a heifer. She is said to be one of the components or aliases of Demeter and is scarcely distinguished from the cow goddess Europa, who according to Moschus was seduced by Zeus after Zeus had transformed himself into a bull. Pasiphae by entering an artificial cow had intercourse with the bull of Minoan.

The words of the bride at Roman weddings have been rendered, "Where thou art the Bull, I am the Cow." A similar formula has been reported from the heroic literature of the Celts, and Briffault quotes authorities about fertility ceremonies among the Kurds. Here the priest announced to the congregation that he was the Great Bull and a woman recently married replied that she was the Young Cow. At this point lights were lowered and the congregation indulged in promiscuous sexual intercourse. [RDJ]

Cowboy's Lament An American cowboy ballad of the fate of a "young cowboy who done wrong" on the trail of wine, women, and cards, and who is dying of a shot in the breast. A favorite of the cowpunchers, and set in almost any town of the West, according to the loyalty of the singer, it is drawn from an Irish song, *The Unfortunate Rake*, current about 1790, which was the lament of a dissolute soldier dying of syphilis and requesting a military funeral. The drums and the fifes were preserved in the cowboy version. Another song from the same source, *The Maiden's Lament*, was sung in both England and the United States.

cowboy songs Work and recreational songs of the American cowhand, made up of bits and scraps of older ballads and come-all-ye's, music-hall and minstrel ditties, and mingling the lyric singing style of the South (from which many cowboys came) with the true-speaking workmen's songs of the Northwest, and a touch of Spanish influence from over the southwestern border as well as a trace of Indian warwhoops in the refrains. They deal with the hard and dangerous life on the cattle range (*The Horse Wrangler*, *The Night Herding Song*, etc.), with violent death in cattle stampedes (*When the Work's All Done Next Fall*) or from "lead poisoning" or gunshot (*The Cowboy's Lament*), with the heroes of their kind who generally died saving someone in a stampede, with their unrequited love and their faithless sweethearts back home, with tall tales and

boasting and practical jokes on the greenhorns, and occasionally with religion (*The Great Round-up*).

cowslip A wildflower of the primrose family sometimes called palsy- or Peter-wort. It was used in all manner of folk remedies, especially for palsy. It was recommended that the leaves be put in wounds. The roots if crushed and strained, made excellent nose-drops for purifying the brain and curing migraine. The odor of the flowers calmed the heart and nerves and strengthened the brain. Either wine made from the flowers or an infusion in milk at bedtime cured insomnia. The flowers mixed with linseed oil are good for burns. This plant is also good for skin blemishes and wrinkles, and for cramps, convulsions, and muscular disorders. It is sometimes made into tea, or used as a pot herb.

Cox, John Harrington (1863-1945) American educator, philologist, and folklorist. After studying under Kittredge at Harvard, he became, in 1902, professor of English philology at West Virginia University, where he fostered an interest in early narrative poetry, among other things founding the Beowulf Club. In 1925, he published *Folk-Songs of the South*, a development of his dissertation at Harvard. This work, edited by Cox, was a collection made under the auspices of the West Virginia Folklore Society of which he was the organizer. Among the other works of Professor Cox are *Traditional Ballads, Mainly from West Virginia* (1939); *Folk-Songs, Mainly from West Virginia* (1939).

Cox, Marian Emily Roalfe (1860-1916) Folklore scholar. Her *Cinderella*, published in London in 1893, is a massive study of a single folktale cycle. It is a detailed, comparative and analytical presentation of 318 *Cinderella* variants, with reference also to their diffusion.

Coyote Trickster par excellence of the Great Basin, Plains, central Californian, and some Plateau and Southwestern North American Indian groups; also, for the majority of these tribes, creator or culture hero. Usually, as a trickster, Coyote is accompanied by a companion—very often by Wolf, less frequently by Wildcat, Fox, Rabbit, Porcupine, Badger, or some other animal. Both Coyote and his companion are presented as behaving and talking like human beings; sometimes they are represented as looking like men, at other times, like animals. Coyote's activities as a trickster-culture hero almost always belong to the pre-human mythical age, when animals lived and talked as people. Some groups, however, depict Coyote as a trickster whose existence and foolhardy escapades continue to the present time. The dual character of Coyote—as the culture hero who releases impounded game, imparts knowledge of arts and crafts, secures fire or daylight or the sun, etc., and as a bullying, licentious, greedy, erotic, fumbling dupe,—is hard for Indian narrators of tales to resolve, and is frequently commented upon by them. Trickster Coyote stories may form the bulk of some groups' repertory of tales (as in the Basin), or only a small part of the total repertory (as among some Southwestern groups). Among the Navaho of the Southwest, Coyote as a Holy Being is referred to by one name; as Trickster by another, "Trotting Coyote." Many Coyote trickster stories are of the short, single-incident variety; such short discrete tales may however be strung together into what amounts to loosely knit cycles. In longer Coyote trickster tales

the action in one incident often depends on previous action, and furthers that of succeeding incidents. Trickster stories are often erotic or obscene. They can be counted upon to arouse general amusement, but they are also often told to point a moral. Children, or human beings in general, should *not* behave as Coyote behaves in the stories. Some of the most widespread Coyote trickster stories, which may also be told of different tricksters of other regions of North America, are: *Coyote Steals or Marries his Mother-in-Law (Daughter, or Daughter-in-Law)*, *Coyote and Porcupine*, *Coyote and Wildcat*, *Dancing Ducks*, *Dancing Bulrushes*. [EWV]

Coyote and the Acorns One day Coyote went visiting and the people fed him sour acorns. He liked them so much that he asked how they were prepared. The people answered, "Put water on them, press them down hard, and in two days, look." That sounded so easy that Coyote would not believe them. "There must be another way," he said. And he pestered them with questions until in anger they said, "All right! You load a canoe with acorns, tip it over and drown them. Then walk along the river bank and pick them up." Coyote was gleeful. He had the secret at last.

So he ran home to tell his grandmother. Sour acorns? Of course! "You damp them and press them," she said. "Oh, no! You drown them!" said Coyote. He took all his grandmother's acorns to the river and dumped them. That was certainly an angry old woman. Then Coyote walked along the river bank, but of course he never found a one. He got hungrier and hungrier because his grandmother would not feed him. "Go eat all those acorns of yours," she would say. Of course one day he smelled and found the acorns his grandmother was boiling. She declared it was excrement, but he knew the difference and ate them, so of course he did not starve.

In addition to having significance as a story of Yurok acorn culture, this story also belongs to the extensive Coyote Trickster cycle with Coyote as numskull.

coyote dance A ceremonial dance of the Yaqui and Mayo Indians (Cáhtas) of southern Arizona and Mexico; the go'imye'e: performed for the death of all soldiers, pueblo officials, and matachini chiefs, and at certain specific fiestas. Although definitely a soldiers' dance, performed by soldiers for soldiers, it does not seem to have any significance of war. It is a feature of the special soldiers' fiestas: Guadalupe, Dec. 12, and the Fiesta de la Cruz, and the great Yaqui national fiesta, Santa Isobel, on July 4. It is also danced in the churches on the day before Easter.

It is performed by three men to the accompaniment of a kind of water drum. Each wears the head and hide of a coyote, the head held in place on the dancer's head by a headband crested with eagle, hawk, or buzzard feathers, the hide swinging loosely down his back. Cocoon rattles are also worn. He holds a bow in his left hand which he strikes with a piece of incised cane of a certain length. The step is slow, stamped with the flat of the foot, and performed in crouching position. The dancers advance and retreat from the drum, hour after hour, all night, and finish just at dawn. An irregular, very complicated rhythm-beat signifies the retreat; a rapid, regular rhythm-beat signifies the advance. All the motions of the dancers mime the coyote; they toss their heads, look swiftly over their shoulders, etc. The

drum, which he holds in his hands. The dance is always watched from beginning to end by the pueblo officials. Just as dawn is about to break a plate of meat is placed in front of each of the three dancers, halfway between him and the drum. Each man picks it up in his teeth and delivers it to the drum.

Coyote and Porcupine Title of a North American Indian folktale popular among the Plains, Plateau, and some California and Southwestern groups. The tale falls usually into two parts: (1) Porcupine kills a buffalo by climbing into his paunch (or killing him with a knife) as he is being carried across a stream by the buffalo (K952.1); (2) Coyote cheats Porcupine out of the buffalo meat in a jumping contest (K17). They agree that whichever one jumps over the buffalo carcass shall have all the meat, the other none. Coyote jumps over; Porcupine cannot. Porcupine gets even for this by killing Coyote's child (or children) and in some versions by killing the whole family. [EWV]

crab The natives of the island of Nias have a myth of origin in which the first men, having descended from the moon, became mortal because they ate bananas instead of crabs which shed their skins and hence would have made them immortal. In Manipur crabs in a pot of water can make rain. In New Caledonia a goddess in the form of a giant land crab hates married people, and causes elephantiasis; little crabs are her messengers. She lives in a tree in a special grove, and offerings of food are hung on the tree for her. In Tahiti crabs are regarded as the shadows of local gods. The sea hermit-crab is a god himself, and to eat him under the wrong circumstances causes swollen glands, or even death. A Tahitian legendary hero once escaped from his pursuers on the back of a fresh-water crab; hence the fresh-water crab is held to be the shadow of the god of fugitives.

Bahama Negroes pour water from the claw of a crab into the earhole to cure earache. The famous Gullah Jack (conjure-man of the 1882 South Carolina Vesey Insurrection) made himself and others invulnerable by means of a crab claw held in the mouth. It is no good to go crabbing on a moonlight night: that is the one time when crabs are "poor," i.e. not meaty. [KDJ]

cracks and slams Popular reproaches, traditional taunts and insults, local witticisms, and wisecracks belonging to the general class of aggressive humor and social criticism in folklore. In folk speech, terms of disparagement outnumber terms of approbation and deal most frequently with such subjects as personal appearance, mental gifts or capacities (or their lack), intoxication, and the countryman or rustic (Marie Gladys Hayden, *Dialect Notes*, Vol. IV, Pt. III, 1915, pp. 194-223). Even more interesting to the folklorist than terms applied to individuals are those applied to a group, place, class, occupation, etc., which are expressive of group attitudes and regional folkways. For slurs and insults aimed at ethnic groups A. A. Roback (*Dictionary of International Slurs*, 1944) coined the term *ethnophaulism*. Earlier terms for proverbial local witticisms and reproaches are *blason populaire* and *Ortsneckereien*.

As the American equivalent of the latter terms, the term "local cracks and slams" was first employed by B. A. Botkin in *A Treasury of American Folklore* (1944).

p. 317) to denote "terms, phrases, sayings, allusions, rhymes, songs, and jokes that poke fun at a particular locality or group." Local gibes and taunts in the United States are related to the "geography of culture" or ethnocentrism as reflected in provincialism, sectionalism, and localism, and are an integral part of place lore and local-color humor. They range from uncompimentary or derisive nicknames for cities, states, and regions and their inhabitants (e.g. Beaneater for Bostonian, Puke for Missourian, Sucker for Illinoian, Bluenose for Nova Scotian or New Brunswicker) to legends (Nantucket was known as "The Devil's Ash Heap" from the Indian tradition that it was formed by the giant Maushope's emptying his pipe after smoking), jingles ("Cohasset for beauty, Hingham for pride; If not for its herring, Weymouth had died"), and bywords ("A rib was taken off Billerica to make Bedford").

As applied to extreme types of country (dry, wet, hilly, flat), cracks and slams are the product of "boosting in reverse" and "laughing it off." Although many local cracks and slams have their origin in actual economic and political feuds and rivalries, such as divide North and South, East and West, others are associated with regional and ethnic stereotypes (the close-mouthed or scheming Yankee, the feuding, moon-shining Kentucky mountaineer, the wild and woolly Westerner, the "dumb" Irishman, the frugal Scotchman). In still other cases, the popular reproach is simply a localization of an old joke or migratory tradition, as in drolleries of the Gothamite type, which regard the inhabitants of a certain village or region as outrageous fools.

B. A. BOTKIN

crane In China the crane, much used in decorative art, is a symbol of longevity, though fragmentary reports from Confucian historians indicate that members of what appears to have been a crane cult came to a bad end (in the Chou and later Han Dynasties). Greek farmers began their autumn plowing with the southern migrations of the cranes. The crane dance, which Plutarch reported as associated with the Cretan labyrinth, is thought by some to have been part of a solar mythology. In folktales from Russia, Sicily, India, a crane is the animal guide who leads a younger brother into many adventures. In another series of tales the sly crane tricks the fish in a pond by offering to transport them to a spot where there are no fishermen, and eats them while pretending to save them. Not only is the slyness of cranes featured in North American Indian tales, but Old Grandfather Crane can usually be depended upon to help fugitives across rivers (by stretching out his long leg for a bridge) and to dump their pursuers into the water. Alabama Negroes believe that if a crane circles three times over the house, some one in the family will die soon. [RBJ]

Crane, Thomas Frederick (1844-1927) Teacher, scholar, and author, pioneer in the United States in folk-lore study as well as in that of medieval literature. He pointed out to Americans the work of European scholars in these fields. Crane was born in New York City, was graduated at Princeton University in 1864 and received his degrees of Doctor of Philosophy and Doctor of Letters there. He was admitted to the bar in 1866, but became assistant professor of Spanish and German at Cornell University when it was opened in 1868, was

Professor of Romance languages from 1882 to his retirement in 1909. He was a member of the board of editors of *Journal of American Folklore* at its beginning. Among Crane's works are *The Exempla, or Illustrative Stories from the Sermones Vulgares of Jacques de Vitry* (1890); *Medieval Sermons—Books and Stories* (1883); *Medieval Sermons—Books and Stories and Their Study since 1883* (1917); *Italian Popular Tales* (1885); and a carefully edited edition of *Liber Miraculis Sanctæ Dei Genitricis Mariæ, Published at Vienna, 1731, by B. Pez* (1925).

cranes of Ibycus A motif of legend and folktale (N271.3) of ancient Greece based on the idea that "murder will out" and "the sun brings all to light." Ibycus, a poet of Rhegium, who lived about 550 B.C., was waylaid and slain by robbers near Corinth. As he died, he called on some cranes flying overhead for vengeance. Soon after, one of the murderers, at the theater in Corinth, saw the cranes flying by, and cried involuntarily, "Behold the avengers of Ibycus!" Immediate investigation brought the crime to light and the killers were punished. The exclamation of the murderer became a proverbial expression. Similar stories are common in the oral tradition of Europe from Spain to Russia.

creaking limbs In the North American trickster tales of the Central Woodland, Plains, and Plateau areas, the cause of one of the absurd predicaments into which the trickster gets himself. He hears two trees scraping their branches together in the wind. Out of sympathy he climbs the tree to see if he can help them and gets caught between them, while passers-by eat his food on the ground below. See BLIND TRICKSTER.

creation True creation myths in which something is created out of nothing are rare among the North American Indians and non-existent among the Eskimo. Only among the Zuñi, a Pueblo group of the Southwest, among certain southern California tribes and perhaps one or two of northern California, and in the Eastern Woodlands, are anything like true creation stories recorded. For an outline of the Zuñi myth see AWONAWILONA. References to a "Master of Life" (Delaware), "Great God" (Shawnee), or "Great Spirit" in the Eastern Woodlands are to a supreme deity or high god who is assigned the role of creator; however this being is usually an otiose deity and does not enter into the mythology. There is always doubt whether such a being represents a native concept or a borrowing from Christianity in post-Columbian times. Origin myths do however abound among the North American Indians and to a much lesser degree among the Eskimo; such myths explain the origin of the world, of people, of animals, of death, of social groups, customs, arts and crafts.

Interest in origins varies however, from very little interest among the Eskimo, the Mackenzie, and the Great Basin tribes, to great interest in the Plains and Eastern Woodlands; evidence of this interest is shown in the number of features accounted for. The Eskimo, for example, account only for the origin of sea animals (see SEDNA), and the Great Basin tribes only for the origin of the earth, human beings, a few customs; whereas the Plains and Eastern Woodlands tribes have origin myths not only for the earth, people, animals,

but also for tribal divisions, for clans, for ceremonies, cultivated plants, religious bundles, and so forth.

The most widely distributed of all North American Indian origin myths is that accounting for the creation of the world from a few grains of sand or a bit of mud which an animal brings up from the primeval waters or after a world flood, and which the culture hero then enlarges into the earth. This particular tale of earth-diving is told from California through the Great Basin, Plains, and Eastern Woodlands to the Atlantic Coast, either in simple or elaborated form. On the North Pacific Coast and among the present-day western Eskimo, the transformation of the earth to its present state commands more interest than the actual creation of the world. The origin of human beings is not so widely accounted for; when explained at all, they are said to have been made from sticks, mud, feathers, cuticle, but in many North American Indian mythologies people are simply existent, or appear, their origin being left unexplained. The origin of tribal divisions or of clans and gentes is of concern in the Southwest, and in the Eastern Woodlands; in the Plains where sacred bundles were so numerous, each bundle had an origin myth attached to it and when the bundle was sold the myth was considered part of the sale.

The culture hero is responsible for the origin of many phenomena, for the fact that death must be final, for menstruation. Origins of celestial phenomena, the sun, moon, certain constellations receive considerable attention, especially among certain Plains tribes. The Star Husband tale, however, is not restricted to this region. Explanatory elements within tales or attached to the end of tales point out the origin of animal characteristics. Quite restricted in distribution are such origin stories as those of wailing (Apache), or of the division of labor between the sexes (Tübatulabal). For creation myths of other areas of the world, see specific entries. [EWV]

creator In North American Indian mythology, creation of the earth and mankind is generally attributed to a character who combines the attributes of creator with those of a culture-hero-trickster-transformer. In a few tribes, however, such as some Pacific Coast, California, and Pueblo groups, and among certain Eastern Woodlands Algonquians a creator, or supreme being, is referred to in the mythology. Such a creator or high god is generally an otiose deity, and many of the details involved in bringing the world to its present order are relegated to more active subordinate deities. The presence of a "high god concept" among some of the most primitive North American tribes has been used to support the thesis that monotheism is a primary concept in the history of religion. [EWV]

creator born at bottom of ocean A concept typical of the origin myth of the Yuman tribes of southern California. In the beginning two brothers were born at the bottom of the ocean: one the creator of life and mankind, Tuchaipa (Chakumat, Chaipa-Komat, or Mayoha among the Diegueño; Kwikumut among the Yuma; Matavilya among the Mohave); the other his opponent and causer of death, Kokomat or Yokomatis (Blind Old Man among the Yuma). The younger brother was blinded by the salt water as he emerged.

The creator fashioned mankind out of clay; the

brother imitated him, but his creatures turned out web-footed, and from them are descended all the web-footed birds of the earth. The creator offended his daughter, Frog, and she killed him by swallowing his excrement. The consequent mourning of the people for his death and the whole dying god concept is one of the most dominant (and probably indigenous) themes in all Yuman mythology.

Creator's Grandmother The grandmother of the creator or culture hero, casually mentioned and taken for granted in certain North American Indian mythologies, especially in Micmac and other Eastern Woodland Indian tales. When Glooscap first appeared among the Micmacs, for instance, his grandmother was with him. Among the Shawnee of this region the grandmother assumes a leading role in the mythology as well as in the religious observances, overshadowing her grandson, Habotchkilawetha. The culture hero's grandmother also figures in the myths of the northern California Shasta (she helps Coyote make the first snowshoes, directs the packing and storing of meat, etc.) and also in the tales of northern California Hupa and Wintun Indians. [EWV]

cremation The burning of the dead. Cremation, which destroys the corpse, may be contrasted with disposal of the dead by burial and its more or less elaborate techniques of preserving the body as long as possible. When they can be shown to have developed successively in the same culture they may be evidence that views of death and afterlife have undergone a profound revolution, or they may have been diffusions from immigrant cultures. Funerary evidence in the form of funeral mounds and bone-fires (bonfires) from south Russia to the Scandinavian peninsula shows the spread of the custom. The Greeks of the Homeric period are thought by some to have introduced the custom into the eastern Mediterranean. Cremation is customary among the Hindus. Some tribes in Siberia and North America, northern tribes of South America, and in the Bismarck Archipelago. Tribes with no fixed abode sometimes cremate their dead to protect the corpses from molestation by enemies who might work magic on them. This is an explanation given by the Mexican Cocopa Indians. Natives of East Africa cremate their dead to free the ghosts and enable them to enter the society of spirits. A potent reason for cremation is to get quit of the ghost, at times thought of as the animal spirit and distinguished from the spiritual soul. The burning of witches with consequent destruction of their powers is common in many communities. Elsewhere, as among the natives near Tanganyika, cremation kept the bones from coming to life after the bodies had decomposed. Fire worshippers have special views about entering the new life through fire. [RdJ]

Cretan bull In Greek legend, the bull, thought to be Pasiphae's, sent by Poseidon as a sacrifice but kept by Minos for its beauty and captured by Hercules as the seventh of his labors. After the hero released the bull, it settled at Marathon, first wandering over all of Greece.

cricket The cricket was much esteemed in antiquity and it is said that our modern superstition concerning it and our attitudes toward it have probably been trans-

mitted to us from ancient times. The common house-cricket has a very wide distribution in the Old World, but nothing is known as to its original habitat. Some of the widespread beliefs about this representative of the *Gryllidae* may be mentioned:

1. *As bringer of good or bad luck* It is good to have a cricket in the house; if it leaves the chimney it is a fatal sign; if you kill it, it is a breach of hospitality; it is dangerous to imitate the chirp of the cricket; it will eat your clothes if you kill it; in Silesia, the cricket's cry indicates ill-luck, the presence of a dead person in the house, or a theft committed. In Ireland, if a cricket is heard chirping on Christmas Eve, he is called "the king of all luck."

2. *As prognosticator* The cricket forecasts rain, death, or the approach of an absent lover.

3. *As a nostrum in folk medicine* In antiquity, the cricket was used as a cure for asthma (Pliny, *Hist. Nat.* XXX: 49: the prescription was 20 insects in sweet wine); powdered crickets were used in certain ills. The Cherokee Indians believed that a tea brewed from crickets would make them good singers like that insect.

4. *As personification of the house-spirit* It is in this capacity that the cricket is usually thought of in the United States and in England. The well-known story by Charles Dickens, *The Cricket on the Hearth*, expresses this relation of cricket to hearth and home in a simple but effective pattern. [CPS]

St. Crispin's Day October 25, anniversary of the translation of the relics of St. Crispin and St. Crispinian from Soissons to Rome in the 9th century. In Westphalia, the festival day is June 20, anniversary of an earlier translation of the brother saints' relics there by Charlemagne.

In both France and England, until the end of the 18th century, the day was an occasion for processions, feasting, and merrymaking on the part of the shoemakers' guilds. In England, the day coincides with the anniversary of the Battle of Agincourt, and has therefore a double significance.

At Soissons, at Rogations, the St. Crispin processions are still held and still pause before a certain house in the Rue de la Congrégation, the site of a chapel, St. Crépin-le-Petit, which once stood there. At Bourges similar celebrations took place in olden times, and master-cobblers who absented themselves from the ceremonies were fined a pound of wax to be delivered to the chapel. At Moncontour the day was celebrated until 1870 by a procession of shoemakers who walked two by two from the tavern to the church, where holy bread was distributed to them. The bread was used at the banquet at the tavern subsequently.

A song is still sung by French children which recalls these processions and celebrations, and which runs something as follows:

Aujourd'hui
les cordonniers, bien mises,
vont visiter le Saint-Crépin
qui, lui,
travaillait en bras-de-chemise.

Today the shoemakers, all dressed up, pay a visit to Saint Crispin, who himself worked in his shirt sleeves!

A Provençal legend accounts for the number of cripples and hunchbacks practicing the craft of shoe-

making. St. Crispin was so pleased by the first celebrations in his honor that he asked God to reward the shoemakers by giving them a glimpse of Heaven. The request was granted; St. Crispin lowered a long ladder; but only the prideful dared to climb it. When they reached Paradise, the festival of St. Peter was being celebrated, and the *Sursum corda* was being sung. St. Paul, in charge of the heavenly gates, being deaf, mistook the words for a command to cut the cord—in Provençal, *Zou sus la cordo!*—which he did. The shoemakers tumbled to earth, and many of them were crippled.

In Tanby, Wales, on St. Crispin's Eve the saint's effigy was suspended from a steeple by the carpenters. Next day it was cut down and carried through the streets by the shoemakers. They stopped at the door of each guild member, where a mock will and testament of St. Crispin was read aloud, and a portion of the effigy's dress, bequeathed to the inmate, was cut off and left behind. When nothing was left but the stuffing, that was rolled into a ball and thrown to the crowd to be kicked around. On St. Clement's Day the shoemakers avenged St. Crispin by making an effigy of a carpenter, which was given the same treatment.

Crockett, Davy Backwoods hero of history, legend, and folktale. With the motto, "Be always sure you're right, then go ahead," David Crockett (1786–1836), Tennessee born and bred, rose to fame as hunter and Indian fighter, "coonskin congressman" and backwoods humorist. In Congress he was determined to "wear no man's collar" (that is, Jackson's) and to represent the interests of small farmers and new settlers (having been one of them himself) when they were threatened by speculators. In 1835, having stood defeat in two elections, this irrepressible champion of lost causes went to Texas and was one of six survivors of the Alamo to be shot at the command of Santa Ana, March 6, 1836.

Crockett's personal popularity rested not only on his good sense and courage but also on his backwoods picturesqueness of action and speech, uncouth and salty, half natural, half assumed—qualities that lent themselves easily to ridicule and to exploitation by the Jackson and anti-Jackson forces. Provoked by the inaccuracies and gibes in the anonymous *Sketches and Eccentricities of Col. David Crockett of West Tennessee* (1833), some of the best stories in which were his own, he wrote, or had a hand in writing, *Narrative of the Life of David Crockett, of the State of Tennessee* (1834) and *An Account of Col. Crockett's Tour to the North and Down East* (1835).

The legend that he himself thus helped to create and perpetuate—of the homespun oracle and the rustic clown—soon passed into myth. He himself boasted that he was so ugly that his grin could bring a coon down from a tree (once he grinned the bark off a knot which he had mistaken for a coon), and claimed that in less than a year he killed 105 bears. And in 1835, when the people fearfully awaited Halley's Comet, they said that Crockett was going to mount the highest peak in the Allegheny mountains and wring the fiery trail off the comet to save the world from death and destruction.

After his death he continued to grow in legendary stature until the comic backwoodsman had won out over the homely statesman, and horseplay triumphed

over horse sense. In the "Crockett" almanacs (1835–1856) he became a giant and a superman performing impossible feats in a "backwoods fairyland," along with other bullies and boasters, such as Mike Fink and Ben Hardin (named for the Kentucky congressman).

As in the case of Paul Bunyan, Crockett's character merged with that of other heroes, some of the same stories being told about John Sevier and Andrew Jackson. He and his tall tales, tall talk, and practical jokes, real, legendary, or fictional, served as the inspiration of much of the humor of the old Southwest in the 1830's and '40's, including the character of Col. Nimrod Wildfire in James K. Paulding's play *The Lion of the West* (1831). Folk memories of Crockett linger in hunting yarns told in Tennessee and Arkansas. And he started a long line of politicians who tell stories to get votes.

Perhaps he will be remembered most for his coonskin trick, his encounter with a sensible coon, and his morning hunt. During the campaign of 1827, finding himself without cash or credit and obliged to stand treat to his thirsty constituents at a stump-speaking, he went out and shot a coon and traded the skin for a quart of rum. Every time the Yankee rum vendor threw the skin under the bar, Crockett surreptitiously pulled it through the cracks between the supporting logs, so that before the day was over he had managed to buy ten quarts of rum with the same coonskin. The joke won him the election.

The sensible coon, recognizing Crockett, gave himself up without a struggle, for he considered himself shot. And when Crockett, charmed by the compliment, patted him on the head, saying, "I hope I may be shot myself before I hurt a hair of your head," the coon calmly walked off—"not doubting your word a bit, d'ye see, but lest you should kinder happen to change your mind."

One cold January morning, when the daybreak froze fast as it was trying to dawn, the earth froze fast in its axis, and the sun got jammed between two cakes of ice, Crockett unfroze them with hot oil squeezed from a fresh twenty-pound bear that he had picked up on the road. Then, as the sun came up, "I lit my pipe by the blaze o' his topknot, shouldered my bear, an' walked home, introducin' the people to fresh daylight with a piece of sunrise in my pocket, with which I cooked my bear steaks, an' enjoyed one o' the best breakfasts I had tasted for some time." [BAB]

crocodile The Egyptians regularly fed the crocodiles of the god Souchos who was a crocodile himself. At one period in Egypt crocodiles were thought of as oracles and were embalmed when dead. The custom of ordeal by crocodiles has been used as a motif (H224) in Arabian folktale (i.e. judgment depended upon whether the accused was eaten or rejected by the crocodiles). In some parts of Africa crocodiles are the homes of dead ancestors. In West Africa a person attacked by a crocodile is believed to be the victim of the vengeance of someone he has harmed, now incarnate in the crocodile. He who kills a crocodile becomes a crocodile. The Basutos believe that crocodiles can sieze a man's shadow and drag him into their pool. The regular feeding of crocodiles in some parts of West Africa may be for religious reasons, though

one observer has remarked that a well-fed crocodile is a better neighbor than a hungry one. "The strength of the crocodile is in the water," says a South African Vandau proverb. Some Bantu tribes banish a man who has been splashed by a crocodile. The peoples of Borneo, Sumatra, and the Philippines treat crocodiles with great respect. The numerous popular tales from the Pacific about women who have had crocodiles as lovers belong to the large cycle of tales about women with serpent lovers to be examined elsewhere. See AFTERBIRTH; ALLIGATOR; NAME TABU. [RDJ]

Crocodile The villain of a folktale told by the Vandau people of Portuguese South Africa. One day a big crocodile arrived in the river; it killed sheep, cattle, herders, travelers. The people feared it greatly, but did not know how to kill it. One day the king called a meeting of his chiefs and people to discuss how they might rid themselves of Crocodile. Fox came to the meeting. Fox jumped up on a log and said to the king, "O King, I am small, but wisdom surpasses bravery. Why do you wait for your enemy to grow strong? What do I do? I eat crocodiles while they are still in the eggs. Get rid of your enemy before he is stronger than you."

Crocodile and Hen Title of a Fjort Negro folktale: classified as a legal story. A little fat hen went daily to the river bank to pick up food. Crocodile saw her, was about to eat her, when the little hen cried out, "O brother, don't." Crocodile was troubled in his mind. Why did she call him brother? But he gave up puzzling, and decided to eat the hen. Next day little fat Hen was on the river bank picking up food. Crocodile was going to eat her. Hen cried out, "O brother, don't." And Crocodile turned away. Was he her brother? Crocodile decided to go ask Nzambi (Mother Earth, the creator). On the way, he met Mbambi, the big lizard, and told him his dilemma. "Don't you know," said the lizard, "that all who lay eggs are brothers?—Duck, Hen, you, me?"

crocodile tears Simulated or pretended weeping; hypocritical grief: from the tale of ancient travelers that the crocodile weeps over those he devours.

Cræsus The last king of Lydia, 6th century B.C.: proverbial as the richest of all men, superseding in this the mythical Tantalus. Solon the wise came to Cræsus' court and told the king that no man might be considered happy until he finished his life happily. When Sardis, the capital of Lydia, fell to Cyrus, and Cræsus was condemned to be burned to death, he remembered Solon's words and repeated his name three times. Cyrus overheard and was told the story by Cræsus. He ordered the fire put out, but no one could extinguish it. Cræsus, already in pain from the heat of the blaze, prayed in tears to Apollo, and a rainstorm arose to quench the pyre. The two kings became friends, and after the death of Cyrus, Cræsus remained at the court of Cambyses, the son and successor of Cyrus. For the wanton shooting of the son of Prexaspes, Cræsus rebuked Cambyses, then fled from his anger and was hidden by some of the courtiers. Cambyses recovered from his rage and when Cræsus made his reappearance greeted him warmly. At the same time, however, he ordered those courtiers who had aided Cræsus killed,

Cromm Crúac A huge idol which stood on the plain of Mag Sleacht (the plain of adoration or prostrations) in County Cavan, in Ulster, near the present village of Ballymagauran; also called *rig-iodal h-Eireann*, the king idol of Ireland. "Around him were twelve idols made of stone but he was of gold" and to him the early Irish sacrificed one third of their children on Samain (Nov. 1) in return for "milk and corn" and the good weather which insured the fertility of cattle and crops. The idol and the sacrifices are mentioned in the 6th century *Dinnsenchas* in the *Book of Leinster*. Cromm Crúac was held in horror for his terrible exactions; it was dangerous even to worship him, for the worshippers themselves often perished in the act of worship. A pre-Christian king named Tigernmus is said to have introduced the worship of Cromm Crúac to Ireland and to have been destroyed himself with three fourths of his people one Samain night during the prostrations.

The twelve lesser idols encircling the golden image have led to the assumption that Cromm Crúac was a solar deity; certainly he was a fertility god. But he has not been identified with any ancient Irish god. Dagda, in his agricultural aspect, has been suggested for this role, but no identity can be substantiated.

The *Dinnsenchas* names the idol Cromm Crúac (bloody crescent or bloody bent one); it is referred to as Cenn Crúaich (bloody head) in the *Tripartite Life of Patrick*. Legend says that Patrick cursed and destroyed it. The *Dinnsenchas* story tells how Patrick preached to the people on Mag Sleacht against the burning of milk-cows and their first-born progeny.

Cromm Duib's Sunday In Irish folklore, the first Sunday in August: anniversary of the destruction of the famous idol known as Cromm Duib. On this date flowers were still offered, at his place on Mt. Callan in County Clare, as late as the mid-19th century. For this reason the day is also called Garland Sunday. The flower offerings were reminiscent of a time when more bloody sacrifices were prepared. Compare CROMM CRÚAC. See CELTIC FOLKLORE.

crónán Literally, humming; in Irish folk song, a kind of humming, often a chorus, probably imitative of the drone of a bagpipe. Crónán is the Irish word for the drone of the bagpipe, and also for the purring of a cat. The song *Ballinderry* has a crónán burden of three notes running throughout. This kind of singing is often done for children, for cows at milking, and for plow horses. It demands considerable stamina to produce the long, continuous sound.

Crónán snagač was the difficult slow humming demanded of the poet Senchán by Marbán, Guaire's swineherd, during the great visitation of the poets to Guaire. Senchán had promised any form of minstrelsy desired. But the crónán snagač was so exhausting (and Marbán would not let them stop) that the 27 hummers in the group fell prostrate. Senchán himself "raised his beard in the air" and hummed the crónán snagač till one of his eyes burst out. Not till then would Marbán give him respite.

Cronus In Greek mythology, the youngest of the Titans, son of Uranus and Ge, and father by Rhea of Hestia, Demeter, Hera, Hades, Poseidon, and Zeus:

probably a pre-Hellenic diety, superseded, as outlined in the myth, by the cult of Zeus and the Olympians. Cronus, together with the other children of Uranus, was imprisoned in the body of his mother, the earth. She induced him to repay this jealousy by dethroning his father; and after castrating Uranus with a sickle and tossing the severed member into the sea, Cronus became ruler of the universe. During his reign, happiness and peace made the time a Golden Age. But Cronus was warned by his parents that one of his own children would supplant him and as his sons were born he swallowed them. At the time Zeus, his youngest, was born, he was given a stone to swallow instead of the infant, and Zeus was taken away to be reared by the Curetes in secret. At last, with the aid of the Titans (excepting Themis and Prometheus), Zeus overthrew Cronus and obtained the regency. Some commentators say Cronus was imprisoned in Tartarus; Plutarch places him on a far-western island, near Britain, where he sleeps with his followers, the Cyclopes and the Hecatoncheires, guarded by Briareus.

The only important festival of Cronus in classical times was the Cronia, celebrated as a typical harvest festival with class distinctions abolished, in Athens, Rhodes, and Thebes. Cronus was represented holding a curved object, perhaps the reaping-hook, the castration of Uranus being an explanatory story. The Greeks identified him with such foreign gods as Moloch; the Romans with their own Saturn. The name was in later times etymologically linked to Chronos, time, but there is no justification for this linkage.

The swallow story so prominent in the myth is not mentioned in Homer and may be a later addition. A youngest son theme may be traced in the succession of Cronus and Zeus to the rule of the universe, the same sort of sequence found in the mythology of other lands of the Mediterranean ancient world.

cross The term "cross" has been applied to many symbols. The *Encyclopaedia Heraldica* is said to list 385 different varieties. Although specialists are not in agreement on the terms used to designate them, the following list may be found useful: In the Greek cross a vertical line is bisected by a horizontal line of equal length. In the Latin cross the lower part of the vertical is longer than the upper part and the two lines are often not of equal length. In the tau cross the horizontal line runs across, not through, the top of the vertical. The looped or handled cross has a circle above the horizontal line. St. Andrew's cross is in the form of an X. The Maltese cross has four triangles joined at their apex. The gammate or swastika has lines running at right angles to and at the ends of the four lines of the Greek cross. The archiepiscopal cross is a Latin cross with two horizontal lines; the papal cross has three horizontals. These general types have many subtypes, each with a different name. Thus if in the swastika the horizontal line runs toward the left of the top of the vertical it is called by some a "sauvastika." The swastika has also been called the "gammate" cross because it is formed by joining four gammas together, or the "fylfot," presumably because it was used to fill the foot or base of a figured window. Crosses are further distinguished by their functions in ritual, such as the altar cross, the processional cross. For the last

thousand years Christians have designated the Latin cross with the image of Christ on it, the crucifix.

The importance of the cross in Christian cultures and the lore which Christians attach to it as a symbol of death and resurrection have led many people to investigate crosses in non-Christian cultures and to formulate views about them. The central questions in this as in other inquiries about the habits of thought and feeling of human beings living in social groups in many parts of the world are: What, in fact, is the symbol to be studied? Which groups know or use the symbol? What meanings do they attach to it? What is its value, function, and importance in their community?

The statement that "the use of the cross as a religious symbol in pre-Christian times and among many non-Christian peoples may probably be regarded as almost universal and in many cases was connected with some form of nature worship," though both obscure and misleading, is representative of the sorts of confusion to be guarded against. Confusion is increased by the statement of another authority that the "swastika or gammate cross is the most primitive form of the symbol and always had a symbolico-religious sense." Definitions are in order. Although the swastika is a complex symbol of which the cross is a part, it may, for purposes of analysis, be included in the group of symbols designated by the term "cross." The author of the statement does not make it clear whether the word "primitive" is to mean that the swastika is the first form of the cross to appear on the surface of the earth, i.e. first in time, or whether, though different cultures began their use of crosses at different times, the first cross they made was the swastika which they later simplified into a simple cross. In this case the word "primitive" would refer to something about "first in terms of 'cultural evolution'" and subtly commit the reader to views about the nature of social groups. Speculation on these questions of origin which has occupied many excellent scholars is diverting but inasmuch as the answers are lost in the miasmas of prehistory the speculation is futile.

The symbolico-religious meanings which cultures in the several parts of the world have attached to crosses in their 385 or more complex forms have been elaborated further by modern students of crosses. Thus ethnologists have suggested that the form of cross, the looped cross (see ANKH), found frequently on ancient Egyptian artifacts symbolized variously, and depending on the ethnologist, a nilometer, a key to a canal lock, a loin cloth, a phallus, a uterus, etc., and thus from the things symbolized derived a religious or magic value. Clearly accounts of the cross and its meaning present semantic problems of considerable complexity.

The simplicity of a symbol formed by the intersection of two lines makes it useful for a number of separate purposes and thus gives it a number of separate meanings. Thus the cross in the margin of an American husband's shopping list may mean either that the article must under no circumstances be forgotten, and thus has a symbolico-social meaning, or that the article has been purchased, and thus has a symbolico-historical meaning. Crosses used by newspapers to mark the spot where an event occurred, usually of the Maltese, Greek, or St. Andrew's variety, have an adverbial function indicating position where. Geographers use lines formed

by crosses to indicate boundaries and economists to compare one set of values with others. The cross an illiterate John Doe uses as his mark has a socio-legal meaning. When the point of intersection is important the cross is useful to indicate exact location. When the direction in which the arms point is important, the cross is used to indicate directions, particularly directions of the winds, as in weather-vanes. To this practical meaning of a cross as wind-pointer other meanings have been added. It then becomes a "wind-symbol" and may be used to call up winds when they are needed. Lines radiating from the point of intersection may symbolize the sun. Thus students of the cross in non-Christian cultures have seen in it symbols of the wind, the storm, therefore the rains, the sun, and fertility. That these values have been associated with the cross in some cultures is incontestable; but the exact relation to each other of these symbolic values must be determined by an examination of each culture and ritual.

The crosses used by meteorologists to determine the speed of the winds might be called wind symbols but have practical values far removed from Christian dogma. The market crosses in European towns are probably of Christian origin and legends have been attached to them as the places where miracles were performed or saints martyred but they are principally useful as place-markers: the social center of community life, the geographical center of the village, the center of municipal authority. The use of crosses as decorations on Bronze Age artifacts and elsewhere raises similar questions and leads to the confused problem of the relations between esthetic and religious values and functions.

Crosses have been found on the artifacts of most known cultures. The difficulties of interpreting the Egyptian cross have been mentioned. The Phœnicians and other Semitic peoples are said to have added magical powers and associated this cross with Astarte as the Greeks associated crosses with Aphrodite, the Ephesian Artemis, and others. The Elamite and Sumerian cultures used crosses. The Assyrian kings wore crosses as pendants.

In the Near East Schliemann turned up crosses in his excavations on the site of Troy. A cross on the pubic region of a female figure from this site, like crosses painted or tattooed on the pubic regions of women of other cultures, may be decoration, a defense against the entry of devils into the vagina, or it may serve other purposes. Plato in a somewhat Pythagorean mood says the soul of the world was created in the form of a cross, and Saint Jerome in a platonic mood says the cross is the form of the world in its four directions. Pre-Christian crosses have been found in Europe as far north as Sweden and the Irish crosses may well have the combination of Christian and pagan meanings characteristic of peripheral cultures. The hammer of the Gaulish Thor was a cross which destroyed by storm, and after storm produced fecundity. Phallic symbols in Greece, Rome, and Japan are sometimes in the form of inverted tau crosses though some students of sexual folklore tend to draw from this fact the extreme view that inverted tau crosses are always sexual symbols.

In India the swastika, which was one of the body marks of the Lord Buddha, is thought to be a good

symbol as the *sauvastika* is bad, but it has other associations such as an apparatus for making fire, "a symbol for the living flame whose mother is the Goddess *Mâyā*, personification of the productive power," as well as the sun, the lightning, the storm. The spread of Buddhism is said to have brought this form of cross into many parts of Asia. In China long before Buddhism, crosses of one sort or another were radicals which either alone or combined with other strokes formed the pictograms which later became the Chinese ideographs. From the earliest times Chinese etymologists have used great ingenuity in rationalizing these and some have thought them connected with the directions, the soil, fertility, etc.

The cross is known in Africa. The women of the Hottentots keep wooden crosses above them during confinement, and because moon ceremonies are important among these peoples such crosses are thought to be moon symbols. The Maori of New Zealand wore greenstone crosses as amulets or decorations. Crosses are on the statues of Easter Island and on the sacred stones of eastern New Guinea. Crosses were widely used in North and South America, Mexico, and Central America. In North America on trees, crosses marked the limits of camps. The Athapascans used crosses in their sacrifices to the new moon. Certain Indians of California showed the Great Mother with her limbs extended on the form of a cross.

Early explorers of Mexico were astonished to find that there the cross had an unquestionable religious significance. In one form the cross is surmounted by a large bird (turkey? parrot?) and on another in the form of a tree the worshipper seems to be offering sacrifice. By anticipating the diffusionist theory of cultural growth these adventurers decided that it had been introduced by Saint Thomas or by Spaniards driven across the sea by the Moors. The Mexican cross carried by the Aztec goddess of the rains is now thought to have been associated with the sun or wind. When in the form of a tree with its roots in the water it is called the "tree of life." Crosses have been found in the shell mounds of New Mexico and among the pictographs of the Dakotas.

The history of the cross as a religious symbol among Christians is obscure. It became important as a symbol for Christianity in the 4th or 5th century; the crucifix bearing the image of the crucified Christ appeared in the 8th, and the cult of the cross was epidemic in the 13th century. Each of these moments in the movements of Christian thought and feeling should be taken as approximate. Each occurred at a time when the complex of Christianity was undergoing rapid change and for each the antecedents whether immediate or remote are obscure.

Punishment by crucifixion was a Roman custom applied usually to slaves or to non-Romans and is associated with the custom of tying victims to a stake or tree and allowing them to die of hunger and thirst. Though this punishment is known to savages of all cultures including the modern Euro-American, the term "arbor infelix" was a useful foil to the term "arbor vitæ" after the cross had become a symbol of resurrection and human salvation. In the 3rd century Saint Clement of Alexandria called the cross the sign of Christ, and Tertullian at about the same time

referred to Christians as *crucis religiosi*. In this century too the monogram of Christ was devised. It was the first two letters of *Iesus Xristi* and was written . The author of the article in the *Catholic Encyclopedia* asserts without further explanation that the early Christians did not openly worship the cross because the pagans worshipped cruciform objects, and that the sign of the cross, first made over the forehead and later over the whole body, was a secret sign by which Christians identified themselves to each other.

The vision of Christ and the cross attributed to Saint Constantine, the first Christian Roman emperor, in the beginning of the 4th century together with the command to conquer with this sign marks the beginning of another moment in the thought and feeling about the cross. St. Helena, Constantine's 80-year-old mother, undertook to excavate Christ's tomb near which it was later said the Jews had buried the true cross in order to keep relic-hunters from defacing it and profiting from the miracles it could produce. Only a few Jews knew the site. One of them, Judas, later called Cyriacus, identified it. Three crosses were found and none knew which was the true cross until, when taken to the bedside of a dying old woman, one of them restored her to health. Fragments of this object, thought to be the true cross, produced miracles. Even nails from it had great power. It was housed in the Basilica Saint Constantinus over the site of "Christ's tomb," was destroyed by the infidels, and in Christian legend is said to have reappeared in many places. Large numbers of chips of wood thought to be taken from the true cross and reverently worshipped in many places has led to the assertion that the cross can miraculously reproduce itself. Eusebius, a contemporary of St. Helena, does not mention her discovery of the true cross. The feasts of special adoration of the cross are on Good Friday and on September 18, anniversary of the date when the Basilica Saint Constantinus was dedicated. At this period people began to build churches in the form of crosses.

The crucifix or the Roman cross containing the image of the crucified Christ became popular in the 7th and 8th centuries when it took its place with other images as an object of worship. This worship is explained by the view that veneration paid to a symbol is transferred to the thing symbolized.

Although Bede in the 7th century reported that Saint Augustine of England carried a processional cross, the altar cross appeared in the 13th century, a period of considerable religious tension when Jacobus de Voragine by his *Golden Legend* greatly stimulated the growth of Christian folklore. In this period too, an elaborate account of the history of the cross reported that Seth got the Tree of Life from the Garden of Eden and planted it over Adam's grave. Wood from this tree served many purposes until finally it was made into the cross on which Christ was crucified.

The miracles attributed to the cross are innumerable but generally have to do with physical or spiritual salvation. Thus the cross will frighten away devils and protect against evil. A cross surreptitiously introduced into contracts with Satan will make the contract void. A cross grasped or venerated at the moment of damnation may save the soul or at the moment of death may restore life and health.

R. D. JAMESON

☞ The cross is sometimes the symbol of the four heavenly directions. The Tarahumara Indians of Sonora and Chihuahua, Mexico, in whom the ancient religion is strong, still use the traditional directional crosses in their ceremonial patios. The Concheros pray to the four directions. The sorcerer in the Negritos dance of the Sierra de Puebla invokes the four winds. This already deep-rooted religious significance of the cross facilitated adoption of the Christian symbol. [GPK]

cross-eyes It is bad luck to meet a cross-eyed person. It is good luck to meet a cross-eyed person of the opposite sex. To avert the bad luck in wait for you from meeting a cross-eyed person, spit through your fingers, but do not let him see you do it. If you are a fisherman you must spit in your hat. One way to keep a cross-eyed person from injuring you, is to outstare him. This is quite easy to do. You will lose at cards if you play with a cross-eyed partner. There is no available information as to whether a cross-eyed person ever wins.

Negroes in some sections of the southern United States say it is bad luck to meet a cross-eyed woman. If you meet one in the morning, things will "get crossed" all day. If you meet one on a Monday morning, you can expect a bad week. Never look one in the eye, they advise. They also warn against letting a baby look into a mirror before he is a year old, lest he become cross-eyed. If he does, however, the bad result can be averted by rubbing blood from a black chicken on the back of his neck. For a rabbit foot to be really effective as a luck charm, it must be the left hind foot of a graveyard rabbit killed by a cross-eyed Negro at midnight.

crossroads The place where two or more roads intersect. Something sinister about crossroads has made such conjunction of highways a matter of interest for superstitions, beliefs, and customs connected with this particular spot. Crossroads superstition was prevalent generally through Europe, in India, Japan, Greece, among the Mongols and the American Indians. Here were to be found demons, evil spirits, ghosts and witches, sprites, kobolds, and fairies. It was the burial place of suicides and murderers, a dump-heap for parricides, and a rendezvous for witches who frequently used this uncanny place for their Sabbat revels. Anything might plainly happen here. People feared and avoided this meeting of the ways.

Divinities were sometimes associated with the crossroads, perhaps to repel or neutralize the evil influences attached to the locality. In Greek mythology, both Hermes and Hecate were connected with the crossroads. Such ceremonies were practiced at this spot as sacrifice, offerings, divination, and many magic rites. [GPK]

Crow The crow enters into the mythology of North American Indians to some extent, but is by no means mentioned as frequently as is Eagle, and has not the definite character of the greedy and voracious Raven, trickster of the northern North Pacific Coast tribes. Among the Chipewyan of eastern Canada, Crow is the trickster, and references to Crow as a character occur in various Southwestern, Plains Indian, and other tales. Originally white, Crow turned black when he ate snakes' eyes (Kiowa and other tribes). Pueblo groups refer to crows as chickens. The Crow-Water society of

the northern Plains Blackfoot was a ceremonial organization for men and women, membership in which enabled persons to become wealthy and to cure the sick. Another northern Plains group, a Siouan-speaking tribe, is now known as the Crow Indians; this is a translation through French *gens des corbeaux* for their own name for themselves, *Absa'roke*, which means crow, sparrow hawk, or bird people. Among the Navaho of the Southwest, missionaries are humorously referred to as crows, because of their black garments. [EWW]

Cruel Brother A Scottish popular ballad (Child #11) in which the main theme is the revenge of a brother whose consent has not been asked to his sister's marriage. The young suitor asked the consent of parents and sisters, but forgot to ask brother John. It was the brother, however, who set the bride on her horse to go to her new home, and as she leaned to kiss him goodbye he stabbed her to the heart. As the journey progressed the lady grew paler and weaker, until she could go no further. The ballad ends with the incremental repetition of bequests, to mother, sisters, brother John, brother John's wife, and sometimes brother John's bairns. This hardly seems like the climax of relations motif, with brother John's wife and bairns following as anticlimax to the gallows-tree bequeathed to brother John. But Phillips Barry has made a suggestion (*JAF* 28:300) that ill-will on the part of John's wife toward the young bride motivated the murder.

Some of the Scottish manuscripts give the title of this ballad as *The Bride's Testament*. It was extremely popular both in Scotland and the west of England, and is known to have been current in Ireland in 1860. Compare EDWARD; LORD RANDAL.

cruit Irish word for harp, especially the ancient bardic instrument. *Stod'cruit* is the fairy harp, the harp of the side.

csárdás or **czárdás** A Hungarian couple dance, consisting of a slow and a quick part. In the peasant version the slow *lassan* consists of two-steps with heel-click in ballroom position, and of turns shoulder to shoulder; the fast *gyors* consists of vertical jumps and jump-hops. The cified version has acquired technical labels. In the slow *lassú* the two-step and click are called *andalgó*; the turn, *páros forgó*; the *bokázó* is a triple heel-click for the man and a twisting heel-change for the woman. The fast *friss* introduces the *ingó*, a side-to-side balance, the *kis harang*, a coupé or cutting step, two varieties of forward leaps (the *cifra* and *tétovázó*), a toe-heel hop (the *csillag*), and a number of more complex steps. The style is characterized by flexibility in the knees, emphatic stamping, heel-clicking, in-and-out foot twists, a proud bearing, elegant in the women, martial in the men. [GPK]

Cuailgne (pronounced Cooley) An ancient hilly district in County Louth in Ulster, Ireland; scene of the famous táin, or cattle raid, led by Medb and Ailill of Connacht to steal the famous Brown Bull of Cuailgne. The district was defended by Cuchulain alone while the Ulstermen were in their weakness. See TÁIN BÓ CUAILGNE.

Cucaracha, La The Cockroach; a Mexican revolutionary song with innumerable stanzas, some devoted to Villa, Zapata, and Carranza, some consisting of pro-

verbal or epigrammatic statements about women, love, etc., which are older than the song. The chorus, from which the title is derived, says that the cockroach can't go on his way because he has no marihuana to smoke. Various explanations have been offered for the significance of the cockroach: that it may also be an old maid, a pet name for a dancer, a nickname for Carranza, etc. The song has achieved considerable popularity across the border in the United States, becoming a radio and juke-box favorite in the early 1940's.

Cuchulain Hero of the Ulster cycle of Old Irish epic and romance: said to have lived about the first century A.D. He was the son of Dechtire, sister of Conchobar, king of Ulster, by whom he was fostered. Lúg of the Tuatha Dé Danann was his father. Cuchulain was of extraordinary beauty, growth, and achievement. At the age of seven he ran away and sought training with Conchobar at Emain Macha, and was tutored by Ulster's seven greatest heroes and poets. He was called Setanta until he was 12, when he earned the name Cuchulain, the Hound of Culann. The boy was attacked by the fierce hound of Culann, the smith, killed it, and then served as watch and guard for Culann until a pup "just as good" could be reared to take its place. Among other boyhood deeds, he killed the three sons of Nechtan before their own dún: three huge brothers whom no Ulsterman had ever challenged and come away alive. He wooed and won Emer, daughter of Forgall the Wily, who contrived to send Cuchulain alone to the Isle of Skye to take training under Scathač. Forgall believed that Cuchulain would either perish on the journey or be killed by Scathač herself, who hated strangers. But Cuchulain won his way to the woman warrior's presence, took her training, and endeared himself to her by his skill and courage.

Cuchulain is hero of the *Táin bó Cuailgne*, the *Cattle Raid of Cuailgne*, called the War for the Brown Bull. Queen Medb of Connacht coveted the famous Brown Bull of Cuailgne, and while the Ulstermen were in their weakness (see EMAIN MACHA) raided Ulster with her hosts to take it. Cuchulain alone was immune to the curse of Macha, because his parentage was half supernatural. Single-handed he held off Medb's forces, killing them from ambush, sometimes at the rate of twenty a day, and finally, by agreement with Medb, meeting one warrior a day in single combat, during which time Medb agreed to halt her advance. (See FERDIAD; FINDABAIR.) Medb finally captured the bull, but in the end Conchobar and the Ulster warriors rallied to Cuchulain's aid and drove the forces of Connacht out of Ulster.

Some years later Cuchulain met his death in one famous battle against all Ireland. In vengeance Medb had gathered together the sons of three kings whom Cuchulain had killed. Three satirists among the hosts tricked Cuchulain out of the three spears he carried; and when he gave up the famous Gae Bulg, he was killed himself. Cuchulain's charioteer, Loeg, was killed in that battle; so was the Gray of Macha, the wonderful horse that loved Cuchulain and fought off his enemies with his hooves. The story of this last fight against odds, Cuchulain's last stand tied to a pillar-post so that he would die standing up, the fear of each king's son to approach him, until finally a raven lighted on his head to take the eyes, thus proving he was dead, is

probably the most stirring story in all west European literature. See BRICRIU'S FEAST; CONLA; SATIRE; TÁIN BÓ CUAILGNE.

cucking-stool A chair in which disorderly, and especially scolding, women or cheating shopkeepers were exposed and sometimes immersed for punishment by public derision: often confused with ducking-stool and sometimes called choking-stool. The original idea was evidently to punish by the embarrassment of being seen publicly on a stool intended for private use, since the cucking-stool was made to resemble a close-stool and since, more particularly, the word "cuck" meant to defecate. The ducking of the prisoner, chair and all, in a stagnant pond, was a later refinement. The "coking-stole" was in use in Cornwall in the 13th century and is frequently referred to in English literature thereafter until the 18th. The latest recorded punishment thereby was in Leominster in 1809. The practice was confined largely to England until, in the 17th century, in the form of the ducking-stool, it was adopted by the American colonies, where it seems to have served more as a warning than as an engine of punishment. [CFP]

cuckoo Any member of the family *Cuculidae* of birds. The *Cuculus canorus*, "messenger of Spring," is familiar in Britain and in nearly all the Old World; one American species ranges roughly from Canada and the Great Plains to Argentina.

The cry of the cuckoo as it returns every year about the same time is greeted everywhere with excitement. In Germany, peasants roll on the grass for joy and their greeting is not "*Wie geht's!*" but "*Der Kuckuck hat gerufen!*" It is then that if they have money in their pocket, they turn it over for this will ensure them plenty in the future and general good luck. In the British Isles on this occasion, workmen stop work for a time to enjoy "cuckoo-ale."

No bird is ascribed more oracular ability; it prophesies the hour of the day, the number of years of life, how long a maid will remain unmarried, and so on. It is looked to as a love-oracle, the sight and sound of the cuckoo being a good omen for marriage. It will be recalled that the Indian god, Indra, took the form of a cuckoo in his love adventures as did the Greek Zeus. From its well-known habits, e.g. laying its eggs in other birds' nests for them to hatch, it is in ill repute as an adulterer (the English word "cuckold" is derived from *cuculus*) and is connected with phallic symbolism. Further, it is said that ghosts and the Devil can assume the form of the cuckoo. An insane person, one who is "batty" or has "bats in his belfry," is also "cuckoo," perhaps in reference to the traditional cuckoo clock which always is out of order and tweets at the wrong time, etc.

In folk-literature, the apolog, "The Cockoo and the Nightingale" is well-known; tales of the stupid ogre in which the cuckoo appears are found in Norway, Finland, Sweden, Greece and the Cape Verde Islands (Type 1029). An amusing English tale recounts the effort of the Wise Men of Gotham to enjoy perpetual spring by "hedging in" the cuckoo (William A. Clouston, *The Book of Noodles*, London, 1888, pp. 26-27).

cueca or zamacueca A courting dance of the Chilean Indians and mestizos, more individualistic and violent than many analogous European couple dances. There

is much coquettish play with kerchiefs, approach, flight, beckoning, pursuit, escape, and final love conquest. This dance is distinctive in that the man whose lady retreats from him must be quick enough to turn his back on her at the same moment. If he is not as quick as she, he is ridiculed by the audience. The music for this dance (guitar, tambourine, and harp) begins softly and tenderly, and increases to passionate intensity. [GPK]

Cult of the Friendly Dead One of the oldest strata of belief among Ceylon Veddas. It includes a cult of the spirits of recent ancestors (Nae Yaku) who, if well treated, will care for their survivors with kindness, and of spirits (yaku) of certain heroic Veddas, long dead, of whom the most important is Kande Yake. Kande before death was Kande Wanniya, the great hunter. Associated with his spirit, which is invoked for hunting success, is that of his younger brother, Bilindi, whom Kande killed in a fit of temper. Both are now invoked with other Nae Yaku by a shaman through whom they accept food offerings and communicate hunting advice.

Later strata of belief, originating among the Tamils and Sinhalese, concern foreign spirits naturalized among the Veddas. Some of these have been made into friendly spirits like the Nae Yaku while others have remained hostile and occasionally influence adversely the interpretation of the Friendly Dead. See YAKA. [KL]

culture hero In the mythology, folklore, and legend of any people, a character (human or animal, prehistoric or not) regarded as the giver of a culture to its people. All good and useful things are either given by him, invented, originated, or taught by him: the foods, arts, devices, and usages of a people. The typical culture hero steals or liberates the sun, fire, or summer for his people, regulates the winds, originates corn, acorns, beans, and other foods, marks the animals and plants with their characteristic marks, determines the courses of rivers, teaches men to plant and plow, hunt, hold their ceremonies with efficacious songs and dances, invents alphabets, gives to men their medicines and magic, and usually sometime before the world becomes as it is now, he goes away into the west to await a certain time appointed for his return.

 The culture hero is a familiar figure in nearly all North American Indian mythologies, often identical with the trickster (also Coyote) and transformer, and also with the creator. In the majority of cases the culture-hero-transformer-trickster is an animal or bird (Raven, Mink, or Bluejay: North Pacific Coast; Coyote: California, Great Basin, Southwest, Plains; Hare: Eastern Woodlands; Rabbit: Southeast); in a few instances he is apparently human in form (Gluskabe: northeastern United States; Child-of-the-Water, and Killer-of-Enemies: Apache groups of the Southwest; White Man: Blackfoot; and Sendeh: Kiowa of the Plains). Among the deeds beneficial to mankind which the culture hero performs are: securing daylight for the people, releasing impounded water and game, teaching useful arts and crafts, instituting ceremonies, ridding the world of dangerous monsters. The culture hero is pictured as living on earth during the mythical age, or before the advent of human beings, and retiring to a region above the earth after humans appear; sometimes this region is located in the west. He will return at need. The culture hero generally has a companion who travels

about with him and shares in his beneficent deeds, as well as in his antics as trickster. [EWV]

 The prominent character of South American Indian mythology is the culture hero who is often also the Creator or the first Ancestor. His great deeds and adventures follow, in the Fuegian Indian myth, almost the identical pattern of those of the highly civilized Indians of the Andes.

After creating the world and man, the culture hero wanders up and down the tribal territory performing great miracles. He is a transformer *par excellence* and takes special delight in changing the shape of things and in turning people into animals or vice versa. Many features of the landscape are explained by some of the metamorphoses he performed. He is always regarded as a benefactor of mankind, to whom he often gave food plants, the basic arts and crafts, and the religious and social laws. The culture hero is also father of the Twins, who, like him, are great transformers and benefactors of mankind. Therefore it is not always easy to distinguish between the role of the Twins and that of their father.

Once he has performed his task the culture hero departs toward the west, to the end of the world where he takes his abode among the dead. He waits there for the time when he will return to destroy the universe he has made.

The culture hero of the Toba was a hawk (*Polyborus plancus*) a wise and generous being who helped them in their struggle against cruel monsters. One of the best known South American culture heroes is Bochica who was worshipped by the ancient Chibcha of Colombia.

[AM]

cumin A plant of the carrot family whose seeds are used as a condiment in the East. It symbolized meanness and cupidity in Greece. In Germany and Italy it is put in the bread to keep the wood spirits from stealing it. In Italy it is fed to fowl to tame them and make them content with their homes. It was believed good for stopping hemorrhage. As a poultice it is effective against boils, swellings, pleurisy, and the stitch. In a broth it is good for chest colds. Pliny mentions that it makes the countenance pallid, and that if it is fed to lovers, they will remain faithful.

cumulative song A type of folk song common in many languages, both ancient and modern, and in many parts of the world, consisting generally of a statement to which each stanza adds a new element and every refrain is the enumeration of all the elements from the last to the first. Most of these songs are sung purely for fun and go to rollicking tunes. An example is the familiar carol, *The Twelve Days of Christmas*, which lists day by day the gifts "my true love sent to me," ending in the twelfth refrain with "Twelve drummers drumming/ Eleven pipers piping/ Ten lords a-leaping/ Nine ladies dancing/ Eight maids a-milking/ Seven swans a-swimming/ Six geese a-laying/ Five gold rings/ Four calling birds/ Three French hens/ Two turtle doves/ And a partridge in a pear tree." Others well-known in English are *The Tree in the Valley*, or *The Green Grass Growing All Around* ("The nest was on the twig/ And the twig was on the branch/ And the branch was on the tree/ And the tree was away down in the valley, oh") and the very similar song *There's a Hole in the Bottom*

of the Sea. One of the most widely distributed songs of this type is *The Twelve Apostles* (also called *The Ten Commandments* and *The Dilly Song*) which has been sung in many tongues, including Hebrew. *Alouette*, a French example, turns up in group-singing almost anywhere to this day. In Mexico they sing *La Rana*, a ditty about a frog singing under the water, which runs somewhat like the nursery tale about the pig that wouldn't get over the stile, involving bull, water, fire, stick, dog, cat, mouse, etc., all to quiet the frog.

cumulative story A type of folktale found among all peoples, primitive and sophisticated, ancient and modern, having many forms and variations, but everywhere usually evincing an animistic attitude. Most of the tales take for granted that all things (human, animal, vegetable, and inanimate) are equally possessed of intelligence, emotion, and reason. The more sophisticated the group, however, the nearer the story has degenerated into nursery tale or trivial jingle.

The action, characters, names, speeches, or whatever is the feature of the accumulation, builds up to an impasse or a climax, and often, but not always goes through the list again in reverse in order to resolve the plot. This is the pattern of the well-known *Old Woman and her Pig* (Z41). The pig would not go under the fence (or over the stile). In despair of getting home before dark, the old woman appealed to a dog to bite the pig; but "dog won't bite pig, stick won't beat dog, fire won't burn stick, water won't quench fire, ox won't drink water, butcher won't kill ox, rope won't hang butcher, rat won't gnaw rope, cat won't kill rat," until finally the cat is given some milk and attacks the rat, "the rat begins to gnaw the rope, the rope begins to hang the butcher, the butcher begins to kill the ox, the ox begins to drink the water, etc., each object doing as requested until the dog bites the pig, the pig goes under the fence, and the old woman gets home before dark.

Among cumulative stories which do not reverse the accumulation are found the general European tale of the pancake which runs away as soon as it is made (Z31.3.1). A series of animals try to stop its flight, but cannot, until at last the fox catches and eats it. See CHAIN TALE; FORMULA TALE; HORSESHOE NAIL.

čunča or chuncho A longways dance of the Aymara Indians of Bolivia, performed by men and women in long lines, dancing in unison. They wear huge feather headdresses and carry bows and arrows. The men's trousers are decorated with many feathers, and their jackets with festoons of gray-black beans called *čunča* or *čunču*. Their faces are masked by strings of beads, beans, and ancient silver coins. Three flutes and three drums accompany the dance. The dance is said to imitate the Chunchu Indians of the Montaña. [CPK]

Cupid and Psyche A classical beast-marriage folktale (Type 425A) told by Apuleius in the *Metamorphoses* (*The Golden Ass*), and perhaps the only example in Latin literature of such only slightly embellished folktale telling: undoubtedly a much earlier Greek story retold in Latin. The story of Cupid and Psyche is very similar to the tales of Melusina, Beauty and the Beast, *Urvaši* and *Purūravas*, and other familiar examples of the beast marriage, nuptial tabu tale. In *Cupid and Psyche*, however, the emphasis is distinctly on the breaking of the tabu, whereas emphasis in the others

is on the beast form and the transformation from beast into human being; *Cupid and Psyche* is relatively uncomplicated with other great folktale themes, as for example the swan maiden incident in *Urvaši* and *Purūravas*.

In Apuleius, this "pleasant old wives' tale" is recited by an old woman in the thieves' den. Psyche's beauty had aroused such adoration that the worship of Venus all but disappeared. The goddess asked Cupid, her son, to cause Psyche to fall in love with some loathsome old man, but Cupid fell in love with the girl himself. Since Psyche's two sisters had married well, although they were not so beautiful as she, the anger of the gods against her was suspected. Her father sent to the oracle of Apollo at Miletus, which replied that her destined husband was a dragon (serpent) who would receive her corpse from a high hill. From the hill Psyche was carried by zephyrs to a secluded valley containing a wonderful palace. There, at night, her husband came, and eventually she grew to love this unseen being. She contradicted herself in describing her husband to her sisters, and they, jealous, aroused her fear that he was really a monster. One night, in disobedience to the tabu, she lit a lamp. But nervously, she spilled a drop of hot oil on the sleeping Cupid, no dragon but a handsome youth, and he awoke. The tabu broken, he flew off. Psyche realized how great was her loss and searched through the world for him. But neither Ceres nor Juno, at whose temples she made offerings, dared help, knowing of Venus' wrath. At last Psyche approached the temple of Venus and was seized by one of the servants of the goddess. Venus arrived and struck and reviled the girl, though Psyche was pregnant with Cupid's child. Venus set her three tasks: to separate a mixed heap of grain (the ants did this for Psyche); to gather fleece from a flock of wild sheep (she picked it from reeds the flock went through); and to collect some water from the waterfall source of the Styx (an eagle dipped some up while flying above it). Finally Venus sent Psyche to Hades to bring back a container with some of Proserpina's beauty in it. Psyche made the perilous journey, giving Charon and Cerberus their due, but when she returned above ground curiosity again got the better of her and she opened the container. Inside had been sleep, which spread over Psyche. Cupid in the meanwhile had escaped from the imprisonment in which Venus had been keeping him, and he discovered Psyche sleeping. He wiped the sleep from her, replaced it in the container, and sent her on to Venus. Then he obtained Jupiter's consent to the marriage, Psyche was made immortal, and the wrath of Venus was appeased, since Psyche was now her son's equal and no longer a mortal being.

Familiar motifs abound in this tale. Central to the story is C32.1, the tabu against looking at the supernatural husband. C32, offending the supernatural husband in some way, is found in such tales as Grimm's #88, *The Singing, Soaring Lark*, where the wife permits light to fall on her husband. Parallel are the broken tabu against looking at the wife in the tale of Melusina, and the broken tabu against being seen unclothed by the supernatural wife in *Urvaši* and *Purūravas*. Examples can be multiplied. The search for the lost husband and the tasks assigned by Venus are both in threes: she goes to three goddesses, and she

accomplishes three tasks successfully. The sorting of the grain by ants (H1091.1) is found for example in many stories of the grateful animals and, in the form of gathering scattered grain, in widespread tales (e.g. the British North Borneo [Indonesia] story of Serungal, in which the grateful ants refill the basket with rice spilled from it all over the field). The incident of the dripping lamp (C916.1) is repeated in *The Three Black Princesses* (Grimm #137), where the hero deliberately drops wax from a holy candle on the faces of the sleeping princesses.

In the Aarne-Thompson study of folktale types, *Cupid and Psyche* is a specific form of the more general tale of the search for the lost husband, containing most of the incidents (in its widespread occurrence if not in Apuleius' version) of the latter story. Sometimes the monster is monster by day and man by night. The girl (or her father) promises herself to the monster in return for a favor. The bride removes the enchantment by a kiss and destroys the animal skin. But this is done too soon, or she tells her sisters or otherwise breaks the nuptial tabu (here by looking at him), and is forced to search for him until she wears out a pair of iron shoes. She gets help from various agencies—an old woman, the wind and the stars. Finally she climbs the glass mountain and, in exchange for jewels that she has, is permitted to sit for three nights in her husband's bedroom. On the last night he awakens and they are joyfully reunited.

Such a tale is *Bull-of-all-the-Land* of Jamaica. King Henry is bull by day, but man at night. His wife burns his bull clothes and he leaves her. She accomplishes the task of washing his shirt, is cheated of recognition of the feat by another woman, and at last calls King Henry Bull-of-all-the-Land, a name of his that only she knows.

curandero. Literally, one who cures; a Spanish term generally used in Middle America to designate the medicine man. The feminine form, *curandera*, is used for women. [GMF]

cures The lore of cures leads into the complexities of folk medicine, a science which is the personal property of witch doctors, barbers, shamans, priests, physicians, and surgeons, who in each *Kulturkreis* tend to form corporations which compete with each other and establish conditions under which new members are to be admitted. Folk medicine and folk pharmacopeia are centrally concerned with cures. Their structures are determined by the social, economic, and theological structures of the communities which evolve them. The people of the United States, for example, accept many superstitions about cures and healing if they are disguised. The specific which is "nature" spelled backwards is not presented as something opposed to "nature" but makes use of a device, well known in most of the popular *materia medica*, which involves the reversal of natural (in the sense of customary) acts. This is connected with another set of appeals for specifics that contain "no harsh chemicals" and work the easy, that is to say the natural and good, way. Another set of specifics in folk medicine is made acceptable by the phrases "statistics show . . ." or "science has proved . . ." or "prescribed by many . . ." doctors or hospitals.

The folklore of vitamins is another rich field for the

study of American superstitions about cures and healing. Among communities which are not scientific in the American sense, cures consist in transferring the illness to inanimate objects. An example of this is that warts can be transferred to a stone, to animals, to other human beings, sometimes even to the doctor himself, or in ritualistic performances at times and places which are usually inconvenient, the eating of substances which are not commonly part of the community diet and are often disgusting, distasteful, or hard to get.

Folk ideas about healing, cures, and health are contained in innumerable proverbs and saws: One should eat spinach for iron; sulfur will cleanse the blood in the spring; health will be acquired by going to bed early and getting up early. Sometimes these proverbial instructions work in two directions at the same time. Thus it is argued that "Feed a cold and starve a fever" means that it is proper to feed a cold and proper to starve a fever, or conversely that if you feed a cold you will have a fever to starve. Cures for jaundice touch on a number of salient beliefs in "unscientific" communities. The ancient Hindus are said to have banished yellow jaundice to the yellow sun. Plutarch cured it by looking at a stone curlew with yellow eyes. The modern Greeks are said to put a piece of yellow gold into a jug of wine, expose the wine to the stars for three nights, and then drink the wine at the rate of three glasses a day. Reports from all parts of the world indicate that cures have been effected by the intervention of saints or gods or by faith, prayer, or meditation. [RØJ]

 The cures performed by shamans from the Guianas to Tierra del Fuego consist essentially in massaging, blowing, and sucking the patients. These operations are often preceded, north of the Amazon, by consultations with spirits. The shaman puts himself into a state of trance and then flies to the land of the spirits to ask their advice or to fight against the witch who caused the illness.

The climax of each cure is however the energetic and often brutal sucking of that region of the body in which the dart or the stone causing the disease is supposed to have lodged. After a while the shaman extracts the pathogenic object and destroys it. This treatment is usually followed by strict fasting on the part of the patient and his family, and by the administration of various drugs. If the patient's soul has been kidnapped, the shaman sends his own soul to discover its whereabouts and to fight against the spirit or the witch who keeps it in captivity. [AM]

Curetes In Greek mythology, a group of demigods associated with the Cretan Zeus Cuiros, the boy-Zeus, and sometimes confused with the Corybantes. The infant Zeus was brought to them to care for and to hide from the jealous Cronus. With the clashing of arms in their war dance, they drowned the infant's cries so that Cronus could not hear him. They may originally have been Cretan youths associated with the celebration of the infant Zeus in a cult manifestation.

Cú Roi In Old Irish legend a great wizard of the south of Ireland to whom the three champions of Ulster (Conall, Loegaire, and Cuchulain) went seeking judgment between them. Cú Roi gave the judgment to Cuchulain as first of the heroes of Ireland but the cause was not settled until after the famous beheading

bargain between the *bachlach* (Cú Roi in disguise) and *Cuchulain*, in which the latter was proved to be the greatest in bravery and integrity of the heroes of Ireland. See *BRICRIU'S FEAST*; *CHAMPION'S PORTION*.

curse A malediction; the wishing of evil upon a person; also, the effect of such wishing, and, loosely, any persistent evil. Cursing is practiced by almost every people in the world. A curse invokes a power—divine, demonic, or magical—against which the person cursed has no defense, unless he in some manner propitiates the power or brings to bear against it a stronger power. The curse is dangerous; it must alight, even if after seven years (Irish); it may affect later generations (Greek, Hebrew), or, if laid upon an ancestor, all the relations of the person cursed (Maori). It may however return on the head of the curser, or if sufficiently strong injure both curser and victim, or anyone who hears it. Some curses, a father's or the curse of the dying, are more potent than others; some are intended to affect only the belongings of the accursed, or they may make him ill, or kill him and perhaps damn him to hell forever, depending not only on the strength of the formula used but also on the counterspells of the one cursed. The curse may be a formula with symbol or image accompanying it, and be part of a ritual to secure the death or illness of someone or some group. Curses are thus a kind of spoken magic, spells of evil wished upon others. With the loss of belief in the efficacy of magic, curses become either blasphemy—the fruitless and irreverent invocation of the gods—or a meaningless ritual unless performed by the divine being himself, since man cannot force his will upon the gods.

Curupira A famous demon in the mythology of the Tupi-Guarani tribes of the Brazilian coast, who has become very important in the folklore of the caboclos (mestizos) of modern Brazil. Curupira is a small demon who walks with upturned feet. As the protector of game animals he is often generous toward those who propitiate him with gifts, but he punishes severely those who show disrespect. Strange noises in the forest are attributed to him. [AM]

Cwn Annwn The dogs or hounds of Annwn; in Brythonic mythology, a pack of snow-white, red-eared spectral hounds which sometimes took part in the kidnappings and raids occasionally made on this world by the inhabitants of Annwn. They are associated in Wales with the sound of migrating wild geese, and are said to be leading the souls of the damned to hell. In England, they are called the Gabriel Hounds or Ratchets, sometimes the Yell Hounds. The hunter who rides with them is Gwyn, or Bran, or Arthur, sometimes Gabriel, sometimes Herne the Hunter.

Cybele The Great Mother of Phrygia; the Anatolian name of the ancient Mediterranean mother goddess; goddess of mountains and forests, of the earth, of reproduction. (Compare *ISHTAR*; *ISIS*; *MA*.) Cybele was identified by the Greeks with Rhea as the wife of Cronus and mother of Zeus; the Romans equated her with Ops. Her cult was brought to Rome in 204 B.C. during the wars against Carthage; it spread throughout the Empire as one of the more important Oriental cults, and existed in Gaul as late as the time of Martin of Tours, the goddess there being known as Berecynthia. Cybele, Magna

Mater, appeared in Rome as a black meteoric stone (set as the face of a silver statue); her temple was on the Palatine. Attis, her lover or son, was the human being linked with her, as Tammuz was with Ishtar, etc. The myth of the self-castration of Attis explained the eunuchized priests of the goddess. A wild orgiastic celebration marked the Cybele festival at the Spring equinox. Among the attributes of Cybele were the diadem of towers (she was the founder of cities), the cypress or pine, the lion, and cymbals. See *EUNUCH*.

Cyclops (plural *Cyclops* or *Cyclopes*) In Greek mythology, one of a race of giants with one eye in the middle of their foreheads. In Homer, they are wild cannibalistic shepherds, uncivilized, caring nothing for the gods or for men. Their chief is Polyphemus, in whose cave Ulysses and his men were imprisoned. In Hesiod, the Cyclopes are Titanic sons of Uranus and Ge, storm gods, three in number—Arges (the Shiner), Steropes (the Lightning), Brontes (the Thunder)—who were thrown into Tartarus by both Uranus and Cronus and released by Zeus to help him in the battle against Cronus. In gratitude they gave him his thunderbolts and the lightning. They were killed by Apollo for giving Zeus the thunderbolt with which he killed Æsculapius. In later tradition, the Cyclopes were the assistants of Hephæstus at his forges under Etna and other volcanoes, helping him make the arms, armor, and metal ornaments of the gods. Their number was increased, new names were added to the old, e.g. Pyracmon, Acamas. Later still, the full circle from Homeric savagery was completed and they were said to have been the builders of the great fortifications of Argos, Tiryns, Mycenæ, who lived in Thrace under their king Cyclops.

The Cyclopes are thought to have been a development of certain Pelasgian quarriers who wore a lantern on the forehead, but this euhemeristic explanation is not quite satisfactory. One-eyed giants are no rarity in folklore. In myths of Bulgaria, Croatia, and Slovenia, there is a variety of div which has only one eye and dwells in caves. The one-eyed giant is found in Welsh and Irish folktale; for example, the Surly One of Lachlann who guards the quicken-tree and is slain by Diarmuid in his flight with Grainne has one eye; the Ainu also have a one-eyed giant. The ascription of prehistoric walls to the Cyclopes finds parallels in the Riesenmauer or Teufelsmauer of Germany, which perhaps are the remnants of Roman walls, but huge ruins in many parts of the world are always "built by giants."

Cygnus The Swan; a spectacular constellation "in full flight" in the Milky Way: also called the Northern Cross. It is named from the Greek myth of the boy Cynus, friend of Phaethon, who dove and dove into the river Po trying to retrieve the remnants of his comrade's body. He was transformed by the gods into a celestial swan (Cygnus) as a reward for his devotion. Cygnus is also associated with the myth of Zeus incarnate as the swan who visited and wooed Leda.

But the designation of this constellation is much more ancient than the Greek myths. Possibly our Cygnus, it is thought, is the constellation known as *Urakhga* among the Arabs, prototype of Sindbad the Sailor's Roc. Early Christians saw it as the cross of Christ, *Christi Crux*. Today it is as often called the Northern Cross as Cygnus. In China it is sometimes interpreted as one

of the magpies which form the bridge across the Celestial River so that Chih Nü may make her annual visit to her lover.

cymbals Paired concave metal plates, with or without rims, sounded by being struck together: used to accompany dancing, dramatic performances, religious ceremonies, prophecy, military processions, etc. They may be held one in each hand, or, in small sizes, clapped together by two fingers of one hand in the manner of castanets. Probably originating in central or western Asia, they were carried east and west by Turkic peoples, noted for their metalworking skill.

Two different sounds are distinguished in many cultures: tinkling and clashing, the former associated with indoor religious or chamber music or dancing, the latter generally with more exciting outdoor rites and processions. There are also two main methods of striking the cymbals with special significance. In Tibet, for example, one type of cymbals is held horizontally and clashed together with a vertical motion in the worship of celestial gods; a second type is held vertically and clapped together with a horizontal motion for earthly divinities. Similar distinctions in playing are noted in ancient Assyria and in kinds of cymbals used in Java and in medieval Europe.

In Israel of the time of David and Solomon, cymbals were a part of the ritual accompaniment for such occasions as the installation of the ark of the covenant, the consecration of the Temple, daily services in the Temple, and prophecies of the priests.

Cymbals were introduced into Greece along with the worship of various western Asiatic goddesses, such as the Phrygian Cybele, whose cult included rites of self-emasculation as a sacrifice for fertility. The clashing metallic music of these ceremonies whipped the participants into an ecstatic state. The feasts of Dionysus took on a similar orgiastic character, and cymbals played a part in the Cretan ceremony of the death and resurrection of this god. Cymbals were also adopted for use in the Greek theater, where they were regarded as effeminate, as are many other types of clappers elsewhere traditionally used by women.

In Rome, cymbals played an important part in the spring festival of Attis, the lover or son of Cybele, and in the march of the eunuch priests of the cult. The self-emasculation, death, and resurrection of Attis were dramatized by a wholesale castration of priests and by a secret sacrament in which the novice ate from a drum and drank from a cymbal, instruments associated with Attis.

China adopted cymbals, probably from Turkestan, early in the Middle Ages, and for centuries they have served in temples there. Examples found in Mongolian temples are unusually large.

Invading Huns may have carried cymbals to India about the 5th century A.D. The instrument has become associated in Hindu mythology with the sirenlike Kinaras, with Rāvaṇa, king of the demons of night, and

even with Vishṇu, who clashes cymbals to the dance of the death goddess, Bhadrakālī, and Īśvara the Destroyer.

The marionette or shadow plays of Burma are performed to tinkling music in which cymbals figure prominently, and Balinese orchestras include a number of cymbalists, whose instruments, onomatopoeically named *tjeng-tjeng*, produce an elaborate polyrhythm.

Both Ethiopian and Coptic churches use cymbals, blind singers of the Coptic chant accompanying themselves. The instrument was used by dancers in ancient Egypt also, where it was imported from Greece.

Origen, a father of the early Christian Church, gave symbolic interpretations to the instruments used in the services of his time (3rd century A.D.), and to him the cymbals represented "the eager soul enamored of Christ." In England, a 12th century writer, Ailred, complained of the noise of cymbals in church, where, he said, the simple folk stood bewildered.

Europe first saw cymbals in the hands of invading Avars and Huns, and later associated them with the battle music of Turkish janissaries, so that even now cymbals are used in musical composition to give a barbaric, oriental, or "Turkish" atmosphere. [TCB]

Cynthia In classical mythology, a name of Artemis, from Mount Cynthus on the island of Delos, where she was born; hence, the moon. Apollo who also was born there is sometimes called Cynthius. There are on Mount Cynthus the remains of a temple to Zeus Cynthus and Athena Cynthia.

cypress An evergreen tree of southern Europe, western Asia, and the southern United States. It is the emblem of generation, death, the immortal soul, and woe. The island of Cyprus was named for this tree and the early inhabitants worshipped it as a personification of the goddess Beroth. The Greeks and Romans assigned it to the god of the underworld, the Fates, and the Furies. In the *Zend-Avesta* it was sacred because Ormazd's word was first carved on it. According to Parsi tradition Zoroaster planted a cypress, so they are planted at the gates of Zoroastrian temples. According to Ovid it was sacred to Apollo. It is revered by the Chinese because its roots grow in the form of a seated man.

The Athenians used cypress wood for the coffins of heroes and it was used by the Egyptians for mummy cases. From it were made Cupid's darts, Jove's scepter, the club of Hercules, the pillars of Solomon's temple, and the cross of Christ.

If a man ate the seeds for a long time he was sure to become strong, healthy, and young, and it sharpened his senses. The fruit is good for dysentery, diarrhea, and will stop blood-spitting, bleeding of the gums, and will tighten loose teeth.

There are many stories as to its origin: it is one of the three seeds given to Seth by an angel to plant under Adam's tongue after he had died; Zoroaster brought a shoot from Heaven; in other places it is believed to be any one of various people who were turned into trees by the gods.

D

Dā The serpent deity of Dahomey, West Africa: symbol of all that is *dā*, i.e. living and sinuous, and thus by extension, of fortune, which is conceptualized as sinuous, in the sense that it slips away and is, therefore, treacherous. Everything that has life has the quality of *dā*, the roots of a tree, the umbilical cord of animal and human forms being examples of this. Compare DAM-BALLA; DANGBÈ. [MJH]

Da or Dab-lha The enemy-defeating god who sits on the right shoulder of every Tibetan: the greatest of the familiars by whose worship enemies are overcome. The Da is clothed in golden mail, flies through the clouds on a white horse, and carries in his left hand a blue-bladed, flame-bordered spear with two eyes. He is accompanied by a black dog, a black bear, and a man-monkey. From his shoulders spring a lion and a tiger.

da-cha or dar-ich'og The Tibetan luck or prayer flag: inscribed with pious sentences, prayers, and charms, and flown above every Lāmaist settlement as a luck-commanding talisman. The prayer flags are printed on unglazed, tough paper and sold by the lāmas. The planting of such flags confers merit on the planter and benefits the entire countryside. There are four types of flags: the Lung-rta or airy horse, the Chō-pén, the Gyal-tsan dsemo, and the gLān-po stob-rgyas.

The airy horse or Lung-rta is four to six inches long with the figure of a horse in the center surrounded by text. It is hung on ridges of houses and near dwellings. One for each member of a household is flown on the third day of each lunar month. The Lung-rta is also sometimes hung on the branch of a tree or on a bridge, and a little flour, grain, flesh, and beer are offered to the local god at the same time. The Chō-pén is eight to ten inches long and narrow in width. It contains only texts and is fastened to twigs or bridges or planted on sticks on the tops of hills. The Gyal-tsan dsemo is similar to the Lung-rta, but contains more holy texts and usually includes the eight glorious symbols (the Golden Fish, Umbrella, Conch-shell Trumpet, Lucky Diagram, Victorious Banner, Vase, Lotus, and Wheel). It promotes power, health, and wealth. The gLān-po stob-rgyas is the vast flag pasted to the walls of houses or worn folded up as a charm and is planted at specified times whenever anyone is unhappy or troubled by demons.

Dactyls In Greek mythology, fabulous smiths who dwelt on Mount Ida in Phrygia or in Crete: often confused with the Curetes, Corybantes, Cabeiri, Telchines. Their number is indefinite: five, ten, fifty-two, one hundred; six giants and their five sisters, or 32 magicians and 20 counter-magicians; their names are just as vague. Perhaps originally there were three: Celmus, Damnameneus, Acmon. They were connected with the worship of Rhea in Phrygia. The Dactyls discovered iron and the means of working it; they were magicians, the inventors of the Ephesian incantations. Their names

had a certain potency, being uttered as magical words when people were suddenly frightened.

daddy-long-legs or granddaddy-long-legs A long and slender-legged, insect-eating arachnid of the order Phalangidæ: in some sections of America, called straddlebug, in England called harvestman. In England harvesters take care not to injure one. If one is killed, there will be a poor harvest, or one of the reapers will be injured. In England and America generally, the belief is that killing a daddy-long-legs causes the cows to go dry. It is also quite general folk belief that a daddy-long-legs will point out lost cattle. They say "Granddaddy, granddaddy, which way did my old cows go?" at the same time holding it by one or more legs. In answer Granddaddy lifts up one or more legs and that is the direction to go to find the cattle. Another rime goes: Grandfather gray/ tell me right away/ Where the cows are/ Or I'll kill you./ In New England children wish on a daddy-long-legs for good luck. In the Ozarks, they say the daddy-long-legs deposits its eggs on bats which hatch out into bedbugs. Some say that the odor of the Granddaddy when trodden upon is similar to that of a bedbug. [GRS]

Dædala The name of certain festivals in ancient Bœotia. The explanatory myth says that Hera and Zeus once quarreled and Hera fled in a huff to Eubœa. Zeus was unable to get her to come back and decided to trick her. He dressed a carved oak-trunk as a bride and had the news spread that he would remarry. As the procession with the mock bride passed Mt. Cithæron, Hera descended in fury, ripping the clothes from the statue. She was so pleased at the deception that the two were reconciled.

Every six years or so, the people of Plataea went to an ancient oak grove where, by means of food snatched by ravens, they would decide which trees to fell for images. These dædala were then carried in a cart to the river Asopus and back to Plataea. This Little Dædala was succeeded every sixty years by the Great Dædala. Then all Bœotia joined in the celebration; all fourteen images collected during the minor festivals were apportioned to the different cities; the images were transported to the top of Mt. Cithæron where they were burned on a carefully constructed altar along with sacrifices to Zeus and Hera.

Dædalus The cunning great craftsman of the mythology of Greece, especially that of Athens and Crete, the first artist and sculptor, a descendant of Hephæstus. His nephew Talus (sometimes called Calos or Perdix) was his first pupil, and in time surpassed his master, inventing the saw and the potter's wheel. The jealous Dædalus threw him from the Acropolis, or tossed him into the sea. Condemned to death for the crime by the Areopagus, Dædalus fled to the court of Minos in Crete. There he constructed the cow-disguise for Pasiphae and built the Labyrinth for the Minotaur. Because of his

complicity in this affair, or because he helped Theseus escape from the maze, he was imprisoned in it with his son Icarus. Escaping, perhaps with Pasiphae's aid, he found all shipping barred to him by Minos' order. With wax, he fashioned wings for himself and the boy, and although Icarus fell to his death Dædalus escaped to Italy and then to Sicily, where he was entertained by Cocalus. The pursuing Minos was killed by Cocalus and his daughters.

Throughout the Mediterranean lands, many buildings and works of art were attributed to Dædalus. The name Dædala was given to a type of gilded wooden statuary, colored and draped; his name was applied to a whole period of early Greek art. Compare JEALOUS CRAFTSMAN AND HIS APPRENTICE.

Daemon Lover A variant title, e.g. used by Scott, for the ballad *James Harris*.

dāēva (1) In Hinduism and Buddhism, a dēva; a divine being.

(2) In Zoroastrianism, a demon, personification of sin, distress, and disease: etymologically identical with the Sanskrit *dēva* but diametrically opposite in meaning. The dāēvas are the seed of darkness created by Angra Mainyu from evil thought to war against mankind and good. They are usually bodiless but can appear in human form and lurk about ready to pounce upon anyone who comes under their power. The dāēvas abound in the vicinity of dakhmahs and haunt foul places. They are especially numerous in the Alburz chain and south of the Caspian Sea. Their number is infinite but they equal the number of divine forces created by Ahura Mazda. Zoroaster's mission was to banish the dāēvas. They hid beneath the earth at his birth, but later returned. Their leader is Angra Mainyu whose six archfiends command the legions of dāēvas. The modern Persian name for them is *div*.

daffodil, Lent lily, or goose leek A plant (genus *Narcissus*) having solitary yellow flowers. Pliny and others wrote that the asphodel, whose name has been corrupted into daffodil, grew on the banks of Acheron, delighting the spirits of the dead. It was also said to cover the Elysian Fields which may account for the practice of planting daffodils on graves. There is the childhood jingle common to English-speaking countries:

Daffadowndilly has come to town
In a yellow petticoat and a green gown.

In Maine they say that if you point at a daffodil it will not bloom. On the Isle of Man daffodils are called goose leeks, and it is considered unlucky to bring them into the house until the goslings are hatched. In Wales they say that if you find the first bloom of the season, you will have more gold than silver that year.

dagä'öenq The chicken dance of the Iroquois Indians; a social dance. At the end of each song the singer crows like a cock. The step formation and music are as for the *gedjōenq*, the fish dance, with a few added special features. The women line up in the beginning, join in the singing, and each chooses a male partner. They dance in single, not in double couples. [GPK]

Dagda The "good god" of Old Irish mythology; chief of the Tuatha Dé Danann; father of Angus Og and Brigit. He possessed an inexhaustible caldron, which came from the mythical city of Murias and was counted

as one of the treasures of the Tuatha Dé Danann. He also had two marvelous swine (one always cooking, one always living), and ever-laden fruit trees.

He is said to be named for his prowess: he boasted that he alone would perform all the wonders which the druids were promising that the Tuatha Dé were to work against the Fomorians. "Thou art *dag dae*, the good hand," they said to him. But J. A. MacCulloch states that the name more likely means good god. He is also referred to as creator and great father.

In the Battle of Mag Tured the Dagda killed uncountable numbers of the Fomorians. Wherever his spear trailed on the ground a deep ditch was marked. After the Battle of Mag Tured the Fomorians took captive the harper of the Dagda. Luǵ, Dagda, and Ogma went after them into their camp. When they entered the building, Dagda saw his harp hanging on the wall, invoked it, and it flew into his hand and killed nine Fomorians as it passed. He then played "the three strains," i.e. the strain of Sorrowing, the strain of Laughter, and of Sleep. The last put the Fomorians to sleep, and the Dagda, with Luǵ and Ogma, passed out unchallenged. After this he divided up the hills and mounds (*side*) of Ireland among the Tuatha Dé Danann. His own *síd* was the Bruǵ na Boinne, later taken over by his son Angus Og. Later myth says that the Dagda died, that Boǵb Dearg divided the *side* among them, and that Manannán gave them immortality.

MacCulloch states that Dagda is probably an early agricultural deity, since he is known to have had power over corn and milk, and suggests that possibly he was some local form of Cromm Crúač, to whom sacrifices were made in return for corn and milk.

Dagon The so-called "fish god" of the Philistines and Phœnicians. Dagan of Babylonia and Assyria, although no definite connection with Dagon has been shown, is believed to be the same god of agriculture, brought to both areas by the Amorites. Popularly Dagon is thought to have been human in form from the waist up, and fish from the waist down; the tradition stems from the derivation of the name from the word for *fish* by St. Jerome and medieval Jewish scholars. Little or no evidence supports this conception; no early representation of a fish god carries Dagon's name, and those merman-like figures which have been preserved are probably depictions of Ea, the water god. More probable is the derivation of Dagon from the word for *corn*, making of him an earth god more or less identifiable with Bel; his name occurs in context where Bel's often appears, e.g. in connection with Anu.

Dagowe The variant of Dangbe heard in coastal Dahomey, West Africa and, in the New World, in Dutch Guiana and certain localities of Haiti. [MJH]

Dähnhardt, Oskar (1870–1915) German teacher and mythologist. His *Natursagen* (four volumes, 1907–1912) is a very complete collection of animal tales with commentary and discussion. It contains a good treatment of legends based on the Old Testament, some of which may still be heard in contemporary oral tales. Dähnhardt was rector of the Nikolaischule in Leipzig from 1910. Among his books are *Heimatklänge aus deutschen Gauen* (1910), *Deutsches Märchenbuch* (1914), *Naturgeschichtliche Volksmärchen* (1912), and *Schwänke aus aller Welt* (1908).

dahut A traditional hunting quarry in France—sometimes a bird, sometimes an animal—in either case the medium for a practical joke played on an unsuspecting person. The practice is also observed in North Africa. Dahut hunting is comparable to our American snipe hunt, in which the tenderfoot is primed with wonderful tales of the hunt, given a sack to gather in the game while his companions beat the bush, and then left literally holding the bag until he finally sees he has been tricked after hours of waiting. In the standard version of the hunt, the butt of the joke is told that the snipe is attracted by light, and is stationed with bag and lantern in a lonely place at night. His companions then go off to beat the bush, they say, and frighten the snipe towards the light. Instead they go home quietly to bed, while the “sucker” waits in momentary expectation of bagging a snipe.

daina (plural: Latvian *dainas*; Lithuanian *dainos*) The word for “song” to the Latvians and Lithuanians. The word is probably cognate with Vedic Sanskrit *dhēnā* or Celtic *daena*; “to sing” is in Sanskrit *diyati*, and in Lithuanian *dainuoti*. (Compare S.G. Oliphant in *JAOS* 32 (1912): 393–413.) Another name for every serious song was *dziesma* (Latvian) or *giesmė* (Lithuanian), plural *dziesmas* and *giesmės* respectively. By *giesmė* the Lithuanians meant the rare old contrapuntal secular dancing and work songs. Among the Dzūkai of southern Lithuania all serious singing is still called *giesmė*. In modern Lithuanian literature the secular song is always called *daina*, and the term *giesmė* is used for religious hymns. The new, long Latvian folk songs of balladic or epic nature are called *singes* (compare German *singen*, to sing).

The *daina*, Lithuanian and Latvian folk song, is the most important creation of their folklore. The songs of each country are, however, distinct in their form and content and also melody; therefore they must be treated separately. Only the mythological songs and ballads show any considerable similarity; the great mass of other songs are quite different. [JB]

Daire mac Fiachna In Old Irish legend, a chief of Ulster; owner of the Brown Bull of Cuailgne. Daire really caused the War for the Brown Bull. After promising to lend the bull to Queen Medb of Connacht for a year, he refused him to the messengers who came to lead him to Medb. The reason was that one of them, drunk at the feast, had been overheard to say that Daire was a fool to lend Medb the bull since Medb would take it by force if he refused her. So Daire refused, and Medb and her hosts advanced into Ulster to take it. See CUCHULAIN.

daisy Either of two plants, the ox-eye daisy (*Chrysanthemum leucanthemum*) which grows wild in America and parts of Europe, and the smaller English daisy (*Bellis perennis*) which grows wild in Europe: from Old English *dæges ege*, day's eye, because it closes at night.

The ox-eye daisy is sacred to St. John and is used in decoration for Midsummer's Night ceremonies. It is also sacred to Mary Magdalene and is said to have sprung from her tears. It was used as a cure for ulcers, lunacy, and wounds of the chest. The Slovaks used them as a cure for toothache. The North American

Mohegan Indians made a wine of the flowers for a spring tonic.

The English daisy is sacred to St. Margaret of Antioch, probably by association with the name of the flower in French, marguerite. It was used as a cure for severe pains such as gout and rheumatism. The juice of the leaves and roots was taken through the nose to cure migraine and to clear the head.

An emblem of fidelity, the daisy is often used in love divination. Children pluck the petals from the daisy, repeating, “She loves me, she loves me not,” or “This year, next year, sometime, never,” which tells when marriage will come. In England a girl plucks a handful of grass with her eyes closed. The number of daisies in the bunch tells when she will be married. It is considered lucky to step on the first one of the season, but it is unlucky to uproot them, or the children in the house will not prosper. It was believed that if daisies were fed to a puppy in milk, it would not grow large, and a nursing child should not touch one lest it stunt his growth.

Daitya In Hindu mythology, an asura descended from Diti and Kaśyapa, the grandson of Brahmā. The name is used interchangeably with asura. Compare DĀNAVA.

Dajoji In Iroquois Indian mythology, Panther, the west wind. He was called by Ga-oh into the sky to fight the storms. Dajoji the Panther is strong enough to fell forests, support the whirlwind, whip up the waves of the sea, and control tempests. Even the sun hides his face when he hears the snarl of Dajoji in the night.

Daksha In Vedic mythology, an Āditya: as both the son and father of Aditi, the male principle or creative force. In the *Brāhmaṇas*, Daksha is identified with the creator Prajāpati: according to the *Mahābhārata*, he sprang from the right thumb of Brahmā. His daughters numbered 24, 50, or 60. Ten of these he gave to Dharma, 13 to Kaśyapa, 27 to Soma, and one married Śiva. The wives of Kaśyapa and Dharma became the mothers of gods, men, demons, and all living things; the wives of Soma became the Nakṣatras.

The story of Daksha's sacrifice appears frequently in Hindu literature. In the *Mahābhārata*, the gods decided to perform a sacrifice and Daksha undertook the duty. The gods apportioned the sacrifice but, not knowing Śiva, omitted a share for him. Śiva, enraged, shot through the sacrifice which then took refuge in heaven. Then he broke the teeth of Pūshan and the arms of Savitṛi, and tore out Bhaga's eyes. The rishis and gods propitiated him and gave him a share of the sacrifice, whereupon he restored the three whom he had injured in his wrath. According to the *Purāṇas*, the sacrifice was instituted by the gods to Vishṇu, but Śiva was not invited. Śiva's wife, Umā, urged her husband to show his power. A catastrophe followed in which the gods and demigods were struck with arrows or run through with swords. Only when Daksha propitiated the deity was peace restored.

Dalai Lāma (Tibetan *rGya-mtsho*) The highest ranking monk of Tibet, believed to be an incarnation of Bodhisattva Padmapāṇi (Avalokita) whose spirit passes into a child at the death of each Dalai Lāma. The identity of the child, who must be born at least 49 days after the demise of the former chief monk, is deter-

mined by divination. The child thus chosen is made a novice at the age of four, and when he is seven or eight he becomes a monk and the titular head of Lāmaism.

The first Dalai Lāma was Ṇag-dbañ-blo-bzañ rGya-mts'o who was given his title by the emperor of China. He made his counselor, the abbot of Tāshi-lhunpo monastery, second in power as the Tāshi Lāma who is the incarnation of Amitābha.

dalang The Balinese story-teller: narrator of the story, impersonator of the characters, and manipulator of the puppets in the famous shadow plays. He also chants the stories enacted in the legong.

Damballa or Damballa Wedo The powerful serpent deity of the Rada pantheon of Haitian vodun gods. This being is much beloved by the Haitians, but is held greatly in awe. He is identified, by the process of syncretism, with St. Patrick, and is especially worshipped on Thursdays. He forms the rainbow which is regarded as an *arc d'alliance* between him and Aida Wedo, his wife. [MJH]

Dame Lombarde A French-Canadian *complainte* with a historical basis: almost unique for antiquity in folk song. It is the story of Rosmonde, wife of a Lombard king, and later of one of his officers. She attempted to poison her second husband at Ravenna in 573, but was forced to share with him the wine she had poisoned with snake venom. The song followed an unusual route in its travels, going from Italy up through France, and finally reaching French Canada in two separate versions brought by the early settlers.

Damon and Pythias In classical folktale, two friends of Syracuse. When the tyrant Dionysius I condemned Pythias (or Phintias) to death, Damon offered himself as hostage while his friend went to his home to settle his affairs before death. Just as the time expired, Pythias returned and released his friend from the pledge. Dionysius, struck by this loyalty, pardoned Pythias and asked to be made one of their friendship. There are retellings of the story in which the roles of the friends are reversed.

Danae In Greek mythology, the mother of Perseus; a daughter of Acrisius of Argos, to whom an oracle foretold that his daughter would give birth to a son who would kill Acrisius. The king shut her up in a brazen tower where Zeus, who took a fancy to the maiden, visited her as or in a shower of gold. When Acrisius discovered Danae and the newborn Perseus, he had them placed in a chest and cast out to sea. The chest floated to Seriphos where its occupants were rescued by Dictys, the brother of Polydectes, king of the island. Later, Polydectes became so pressing in his suit to Danae that she fled to a sacred altar, where he besieged her until Perseus turned him to stone with Medusa's head. In Latin legend, Danae came to Latium and was one of the ancestors of Turnus. See PERSEUS.

Danaus In Greek mythology, the father of the fifty Danaides. Danaus was a son of Belus, king of Egypt, and Anchinoe, and twin of Ægyptus. He fled to Argos, the home of his ancestress Io, with his daughters and became king there. But the fifty sons of Ægyptus followed and Danaus was forced to permit his daughters

to marry them. However, he gave each of his daughters a knife and told them to kill their husbands on the wedding night. All obeyed except one, Hypermnestra, who spared her lover Lynceus. (Amymone and Berbyce are, in other tradition, said to have refrained also.) Lynceus then slew Danaus and his daughters and became king of Argos: this is the more common story; but Pindar says that Danaus offered the girls as wives to those winning in the races. Amymone was the mother of Nauplius by Poseidon, so that others besides Hypermnestra must have been spared by Lynceus. The daughters were condemned in Hades to fill a sieve or bottomless jar with water from broken pitchers, probably in an effort to obtain sufficient water for a purifying bath.

Dānava In Hindu mythology, an asura descended from Dānu and Kaśyapa, the grandson of Brahmā. The name is used interchangeably with asura.

dança do Genebrés A Portuguese ceremonial dance for men, performed at the *romaria* or pilgrimage of Na. Sra. dos Altos Ceus at Louisa (Beira Baixa). It resembles the dança do Rei David in the self-accompaniment on stringed instruments, but retains more characteristics of the Mouriscada, in the tall mauresque shakos, and the unsheathing of a sword by the leader. Two men dressed as girls dance between the two lines of dancers (evidence of ancient fertility symbolism).

[GPK]

dance: folk and primitive Folk dance is communal reaction in movement patterns to life's crucial cycles. Its true magico-religious function concerns preservation of the individual and the race. Natural cultures dance from the cradle to the grave; mechanized society, for sociability and diversion.

Ritual tends towards crystallization and secularization. Yet even European peasant dances retain vestiges of their symbolism. In Iberia and Latin America dance remains a vital festal expression; the American Indian clings to many of his traditional rituals. In Africa and Haiti life and dance are integrated. Native tribes throughout the world celebrate in dance the cycles of man's life and of the seasons.

The same dance may serve all occasions, as the *Rutuburi* of the Tarahumara Indians in Chihuahua, Mexico. Or a special dance may have a circumscribed function, as the *Deer Dance* of the Pueblo Indians of New Mexico. Rarely are purposes in special compartments. Fecundity of human, animal, and plant, impersonations, demon exorcism, cure, and death, all blend into one concept. The conflict of the seasons becomes a battle mime, identified with the resurrection of all things living and divine. Enigmatic ymbol of this fusion is the sacred clown, priestlike among aborigines, but banished to the circus in the modern world.

These universal functions of folk dance vary according to climate, geographical conditions, and temperament. Despite identity of certain steps and formations, every continent, nation, tribe has its distinctive style. Trade and conquest transfer small elements or entire rites which often blend with native practices, thus uniting distant cultures.

The following bald statements list examples of 1)

Universality of Purpose, 2) Racial Personality, 3) Acculturation, 4) Comparative Choreography. Detailed descriptions are distributed through the dictionary.

I. Purposes of Dance Rites Puberty Initiation

South Seas—Samoa, Formosa, Andaman Islands, New Guinea; Fiji Islanders *Ruku-Ruku*.
Africa—Dapangos, Bagos: circumcision, men's and boys' secret societies.
South America—Incas: *huarachicoy* rites.
Bolivia: Aymara maturity rites.
Argentina: Puelche and Tehuelche girls' puberty.
East Brazil: Fulnio girls' puberty.
Archipelago: Yahgan boys and girls.
Chaco: Mataco, Toba, Lengua, Choroti *Kausima* rite—women and boys dramatize attack and defeat of evil spirits.
Chamacoco *Anapösö*—resembles *Kina* and *Klóketen* rites.
Venezuela: Maipure *Máuari*—similar to Mataco, etc.
Arizona—Papago *Wakita*.
Apache *Crown Dance*—*gahe*.
California—all tribes.

Courtship

The innumerable dances of sexual selection and attraction will be listed according to countries. Though commonly regarded as the folk dance, actually they form only one category.

The drama of love varies from pursuit and capture to rejection; from Hungary's emphatic arrogance to Scandinavia's demureness; from the frank obscenities of primitive tribes to the cool proximity of square dances. Sometimes men or women display prowess and allurements separately. Usually both sexes mingle in simple rounds, complex figure dances, or embrace.

Children's games retain courtship play—*Here Come Three Dukes a-Riding, Here We Come Up the Green Grass*. Fan and kerchief feature skilfully, the former in Japan, Burma, Spain, the latter in Algiers, the Philippines, Malay Peninsula, Russia, Spain, Bohemia, England, Peru, Chile, Mexico.

Friendship

Australia—aborigines—*Molonga* corroboree.
Polynesia—Maori *Haka*, welcoming dance to visitors.
Denmark—*Dance of Fellowship*.
Sweden—*Nigarepolskan*.
Bohemia—*Minet*.
Mexico—Canacuas—welcome to guest.
American Indian—Sauk and Fox *Friendship Dance*, Chippewa and Menominee *Drum Presentation Ceremony*. *Give Away Dances*.

Weddings

General social dancing at weddings is a common practice.

Special dances are: Jewish *Broyges Tanz*, Yugoslav *Scatovač*, Polish *Wesele U Witosa*, Swiss *Lauterbach*, Valencian *Ball de Casament*, Basque *Purrusalda*, Norwegian *Kyndeldans* (Torch Dance), Mexican *Xochipit-zahua* (a Huastec Huapango).

Hungary's many wedding dances include: *Bride's Dance* (Mennyasszony Tánc), *Cook's Dance* (Szakacass-

zonyok Tánc), *Turks' Dance* (Törökös Tánc), *Dawnjire Dance* (Hajnaltűz Tánc).

German bride and groom mime farm labors.

The Oraons of India precede a wedding by a *Wedding of the Dead*, a *Wedding of Earth Mother and Sun God*, and a *War Dance*.

Occupations

Work dances are functional, magico-mimetic, or recreative. The African Dahomean Dokpwe achieves efficient rhythmic unison in cooperative work, as also its descendants, the Haitian Combite and Société Congo, and similar work to drum and song in the Virgin Islands, Jamaica, and some of the Sea Islands off the Georgia coast. Among the Colombian Paéz-Moqueux work is ceremonially performed.

Many mimetic work dances portray cultivation of the fields, sowing, harvesting. Medieval guilds mimed each of their professions in festive processions, some still preserved in European folk dances.

Japan, Philippines, Madagascar—rice-planting (Philippine *Balitao*).

South America—Colonial Quechua of Arequipa—wool-cutters with shears.

Europe—Spain: *La Filada* (women spinning).

Portugal: *Dança dos alfaiates* (tailors), *dos ferreiros* (smiths), *Llaço dos ofícios* from *Dança dos Paulitos*.

Germany: *Webertanz* (weavers), Nürnberg *Metzgertanz* (butchers), Munich *Schäfflertanz* (coopers), *Schneidertanz* (tailors).

France: old *Branle des Hermites*, *Branle des Lavan-dières* (laundresses).

Hungary: *Szénagyűjtés* (hay-making).

Denmark: *Shoemaker's Dance*, *Linen*, *Tinker's Dance*, *Washing the Clothes*.

Sweden: singing games—*Vafna Vadna* (weaving), *Skorda Linet* (Reap Flax).

England: *Cobbler's Jig*, *Sailor's Hornpipe*.

Mexico—Tlaxcala: *Jarabe Tlaxcalteco* (making of atole).

Jalisco: *Las Espuelas* (horseback-riding).

Vegetation

The growth of crops, mainstay of life, is furthered by invoking benevolent powers and warding off spirits of destruction. The orgiastic festivals often attending these rites also serve the propagation of the race.

Planting and Growth

Africa—Nilotic Lango: *Bell Dance* for rain.

Ecuador—Inca: *Wayara* to influence Frost, Air, Water, Sun.

Mexico: Festivals for Xilonen, Cinteotl, etc., of ancient Aztecs.

Voladores, *Quetzales* of Puebla, Veracruz, Hidalgo, Guatemala.

Tlacololeros of Guerrero.

Las Sembradoras (with baskets) of Michoacán.

Rain Dances of Huichol and Tarahumara Indians.

U. S. Indians—Papago *Wiikita*.

All Pueblos: *Kachina* for health of crops and tribe.

Hopi: *Powamu* (Bean Planting). Alternate *Flute* and *Snake-Antelope Ceremonies*

Zuñi: Ceremonial *Kokochi*.

San Felipe, Santo Domingo, Acoma, Taos, etc.: *Green Corn* or *Saint's Day*, alias *Tablita Dance*.

Cochiti: *Basket Dance*.

Santa Clara: *Rainbow Dance, Race of the Rain Clouds*.
 Santo Domingo: *K'aiyak'ayet*.
 Shawnee: *Bread Dance*.
 Iroquois: *Planting Festival, Thunder rite*.
 Europe—Poland: *Zasiali Gorale* (sowing of rye and oats).
 Germany: *Springtanzen*. Games—*Alle Vögel Sind schon da; Dornröschen; Im Sommer, im Sommer*.
 France: medieval *Carole, Espringale*; modern *Les Saisons* of Dauphiné; *La Chouade* of Gascony (oats).
 England: *Bean Setting* of Morris. Games—*Oranges and Lemons, Oats and Beans and Barley Grow*.
Harvest
 India—Mundas: *Sohorai Festival*, after *Lashua* or *Karam* dances.
 Palestine: wine-treading dances, *Lag B'Omer* for harvest, ancient *Feast of Tabernacles*.
 Europe
 Russia: *Polyanka, Moldavanetz, Bulba Dance* (potato).
 Lithuania: *Ruguciai* (rye), *Kubilas* (The Tub), *Ague-nele* (poppy).
 Finland: *Harvest Dance* with scythes and rakes.
 Ireland: *Port an Fógmair* (harvest jig).
 Greece, Hungary, Italy, Portugal, France: wine-treading dances.
 South America—Peru: *Ayriwa* of Quechua.
 Venezuela: *Tura* of Churuguara.
 U. S. Indians
 Iroquois: *Strawberry, Raspberry, Green Bean Festivals*.
 Fox, Delaware: *Bean Dance*.
 Creek: *Busk Festival*.
 Shawnee, Delaware, Cherokee, Yuchi, Iroquois: *Green Corn Festival*.

Astronomical Dances

Sun, moon, stars are objects of worship both among agricultural and nomadic races, as in the *Moon Dance* at the North African Feast of Ramadan, the *Astronomical Dance* of the Egyptians, the *Sun Dance* of the Incas, still performed in Bolivia, the Arizona Papago *Ciwiltkona*, the Plains Indians *Sun Dance*, with its curative and heroic aspects, the *Sun Dance* of the Dené and Salish of Canada.
 In their *Eclipse Dance* the Dené tried to restore the light of the sun. The sun's course, by determining the seasons, influences human activity: hunting in the winter, agriculture in the summer. Many rites celebrate solstice and equinox. For instance:

Solstice

<i>Winter</i> (return of sun)	<i>Summer</i> (sun turns north again)
Inca <i>Inti raimi</i> (June 21).	<i>Capac raimi</i> (December 21).
Keres <i>Hanyiko</i> (December 21).	<i>Hanyikikya</i> (June 21).
Scandinavian <i>Jul</i> .	<i>Midsomervaka</i>
	Pagan vestige— <i>Johannisfeuer, Foguerinha de São João, St. Ivan's Fire</i> (Hungary), <i>Bonfire Dance</i> (Ireland).
Christian <i>Christmas, Epiphany Pastorales, Mummer's Plays</i>	Christian <i>Corpus Christi</i> .

Other ecclesiastical festivals have been identified with pagan ones—Carnival coincides with the pagan expulsion of Winter; Easter and May Day, with further rituals of seasonal resurrection, corresponding to the Egyptian *Osiris rite* and Greek *Orgia* of Dionysus Dithyrambus. Holy Cross, May 3, corresponds with the Quechua *Ayriwa*, harvest fiesta.

Voladores fly most often at Corpus Christi and around the Autumn equinox.

Moriscas take place most frequently at Carnival and Corpus Christi.

Hunting

Hunting dances achieve hypnotic power and propitiate the spirit of the animal by 1) imitation; 2) hunting mime—usually both.

India—*Jadura* Festivals of Mundas; *Arrow Dance* of Veddas of Ceylon.

Africa—Yammasoukro *Antelope Dance*, with two sacred hunters.

South America—Aymara fertility rite with mime of vicuña hunt.

Mexico—Tantoyuca, Veracruz *Hunters' Dance*.

Huichol, Mayo-Yaqui *Deer Dance*, the latter (*Maso*) with *Coyote* and *Pascalas*.

Indians of United States—Yuma *Deer Dance*.

Pueblos of New Mexico, Plains *Buffalo, Deer Dance, Bow and Arrow Dance*.

Onondaga *Da Ga Yah*.

Miwok *Kalea* (Bow and Arrow Dance).

Yurok *White Deerskin*.

Eskimos—Baffin Land, and Chukchee women and shaman release seals.

Alaska Tigara *Nalukutuk* (whale hunt feast).

Animal Mime

In addition to their function in hunting, animal impersonations have a demonic role:

1) in fertility and vegetation rites:

Africa—Ongaladougou *Thunder Dance*.

South America—Puberty Rites.

California—*Kuksu-Hesi* rites: Maidu, Pomo, etc.

Europe—*Bugios*, associated with Portuguese *Mouriscada*.

Schiechenperchten associated with Salzburg *Schönerperchten* (ugly and beautiful Perchten, respectively).

Carnavalesque *Wild Men*.

Mexico—Guerrero *Tecuanes* (tigers) associated with Tlacololeros (planters).

Visionudos of Huixquilucan, Mexico, Carnival: snake symbol carried by *Malinche*, man-woman.

U.S.—*Snake Dance* of Shoshonean Hopi, Comanche, and Ottawa with live snakes; of Fox, Sauk, Cherokee in figuration (now social).

Eagle: Zuñi, Tesuque (and other pueblos), Comanche, Fox, Cherokee; Iroquois *Ganegwa'e*.

Turtle: Isleta, Maidu.

Goat, Cock, Bull are fertility symbols from the Greek ancient *Komos* to Yaqui *Pascola*, from Santal *Cock Dance* to Portuguese and Keresan *Rooster Pull*, from the horned *Dionysus Zagreus* to the Mexican Mixtec *Pachecos* (cowboys) with two men-women, Puebla *Toreadores*, and Tewa *Matachines*.

The horse as hobby horse has appeared since the

Middle Ages in May Day and Carnival festivities, and still in connection with *Moriscas*.

- 2) In totemic worship—Australian aboriginal emu, kangaroo, frog, opossum; Kwakiutl wolf, etc.
- 3) For cure—Fox, Iroquois *Bear*, *Buffalo*; Plains *Buffalo*; Huichol *Deer*. The Bear has power from the sun and transfers it to the Plains shaman.
- 4) As emblem of Indian war society (not always mimetic)—notably Kit Fox, Badger, Little Dogs, Big Dogs; less often Bear, Buffalo.
- 5) As symbol of divine spirit—Haiti.
Damballa Wedo (snake), *Chebo* (tiger), *Agasu* (panther); Haitian *loa* of vodun cults; Mashacali *parrot dance* and *Apinayé*, Sherente, Northern Cayapó *great anteater masquerades* (eastern Brazil).

Their nature depends on habitat: Nigerian ogorodo bird; Tibetan tiger, lion, roc, monkey, stag; Siberian Chukchee raven, seal, wolf, fox; Mexican tiger (jaguar), quetzal bird; San Felipe Pueblo elk, antelope, mountain sheep; Plains buffalo, prairie chicken, bear, crow, coyote; Miwok, Meskwakie grizzly bear; Kiowa, Sauk, Menominee owl; Makah (Neah Bay, Wash.) elk, goose, raven, wolf, snipe, raccoon; Iroquois, Cherokee, Creek, Yuchi duck, pigeon, coon, bear, buffalo, otter; Onondaga partridge.

Many American Indian animal dances have become social dances. See these.

Battle Mime and Moriscas

The war dance in preparation for battle and in celebration of victory serves to

- 1) strengthen communal bonds;
- 2) aid sexual selection by display of prowess;
- 3) symbolically connect with agricultural rites. Primitive tribes still perform them with spear, shield, and sword, or bow and arrow; the American Indian until recently functionally, now mostly as social dance. European sword and stick dances mingle Christian and pagan symbolism with a heredity from the Greek pyrrhic and the Roman Salii. Sometimes swords are bent into hoops and form bowers, or are interplaited, or grasped hilt and point.

Men or matured boys—mimetic—

Massed effect of multiple lines—

Africa—*War Dances* of Johannesburg, KonKumba, Dapangos.

Bali—*Baris Dance* with spears.

Two opposing lines—

Eastern Archipelago—Headhunters.

Formosa—Nagas in Assam.

Africa—Shilluks of the White Nile, Nessoué near Abomey.

Venezuela—Pariagoto (comic).

Amazon River—Parintintins, Itogapuks.

Peru—Inca *Cachua*.

Two opponents

Borneo—Dyak *War Dance*.

Philippines—Bontoc and Igorot *War Dance*.

Solo

Borneo—Dusun youth in war mimicry.

African Baloki.

American Indian mimed feats in

War Dances—Navaho *N'Dah*, Iroquois *Wasáse*, Kiowa *Shield and War Dance*, Chippewa *Toma-*

hawk Dance, Sauk, Fox *War Dance*, Osage *Charcoal Dance* (obsolete).

Men and Women—not mimetic—

Polynesia—Maori *Peru Peru*.

Indian Scalp Dances—Paraguay Chaco: Toba

U.S. Papago, Zuni, Mandan, Plains Cree, Teton-Sioux, Blackfoot, Chippewa, etc.

Victory Dance—Bûngi, Fox (Meskwakie), Sauk.

Women only—

Hindu, Kush, Kaffirs; Sioux, formerly, during men's absence.

Borneo Dusun priestess' *Victory Dance*.

Kwakiutl solo *War Dance*, British Columbia; Pawnee *Scalp Dance*.

African Bassari girls' *Stick Dance*.

Non-functional brandishing of weapons

India—Coorg *Sword and Stick Dances*.

Arabia, Turkey—*Danse du Sabre*.

Russia—*Lezginka*, Georgian *Dagger Dance*, Ukrainian *Zaporotchez* for four men.

Denmark—*Stick Dance*.

Isle of Man—*Dirk Dance*.

Stick duel dances

Spain—*Paloteo*, Torneo, Basque *Stick Dance*.

Italy—*Bal de Baston*.

Portugal—*Dança dos Paulitos*.

Lithuania—*Mikita*.

Hungary—*Kun Verbunkos* (no weapons).

Dance between two crossed swords or sticks on ground

Hungary—*Kanász Tánc*.

Catalonia—*L'Hereu Riera*.

Finland—*Skin Kompass*.

England—*Bacca Pipes*; *Broadswords*.

Scotland—*Gilly Calum* (sword and scabbard): Argyllshire and Lochaber.

Moriscas and sword dances

Dalmatia—*Moreška*.

Rumania—*Joc de Călușari* (literally horse play).

Austria—*Perchtentanz*.

} pagan vestiges

Italy—*Mattacino* and *Moresche*.

France—Renaissance *Matichins* or

Bouffons, *Bacchu Ber*.

} developed into
entremets and
court masques

England—*Morris*, *Sword Dance*;
Shetland Island *Sword Dance*.

Germany—Renaissance *Maruschkatanz*; Überlingen *Schwertlestanz*.

Basque Provinces—*Zamalzain*, *Bordon Dantza*, *Ezpata Dantza*.

} with interplaiting

Portugal—*Mouriscadas*, *Dança do Rei David*.

Spain—*Matachini*, *Los Moros y Cristianos*, *Los Seises* of Seville Cathedral (related).

Majorca—*Els Cosiers*, *Ball de Cavalets*.

Trinidad and Guatemala—*Baile de los Moros*.

Mexico—Plateau: *Santiagos*, *Moros y Cristianos*.

Puebla and Veracruz: *Moros*, *Santiaguitos*, *Negritos*, *Zacapoaxtles*; related *Acatlaxqui* and *Toreadores*.

Oaxaca, Jalisco: *Las Plumas*, *La Conquista*.

Michoacán, Jalisco: *Moros*, *Negros*, *Morisma*, *Los Machetes*, *Conquista*.

Cora, Tarahumara, Mayo-Yaqui: *Matachini*.
 New Mexico Pueblos—
 Santo Domingo, San Ildefonso, San Juan, Alcalde,
 Bernalillo *Matachines*.
 Santo Domingo *Santiago* and *Bocayanyi* and *Sandaro*.
 Santa Ana *Konyisats*.
 Texas and California—*Matachines*.

These enigmatic *Sword Dances* are often performed by men's sworn societies. Their actions and accessories point to an ancient fertility rite attended by sacrifice. The *Perchtentanz* is an obvious vestige of a pagan Germanic cult of Perchta and her wild horde (*Wildes Heer*), related to the Herlequin or Arlequino of the theater. In *Los Moros* the Christians, headed by Santiago on a hobby horse, vanquish the Moors—symbol of victory of Summer over Winter, Good over Evil. In England Santiago was St. George, the Dragon Killer, later on Robin Hood. True *Morisca*s are accompanied by a fool, a man dressed as woman, an animal (dragon or bull) which is killed and resurrected. In the *Txon-kórinka* of the Basque *Sword Dance* the Captain is hoisted up inert in a sublimation of Death. Mexican *Moros* enact a battle, but the *Matachini* have no battle mime, except in the oppositional choreography and the plumed trident (former sword). They have a *Malinche*. Pueblo *Matachines* retain the bullfight. Dialog in native dialect often accompanies the drama. **Survivals in children's games**

Roman Soldiers, The Rovers, King of the Barbarees, Le Roi de France, Marlborough.

Morisca survivals

In Spain, Portugal, and the Balkans the *Morisca* has retained its ceremonial function, though its precise meaning is forgotten. In Germany, Austria, Rumania, even its pagan originals are preserved. In the New World this importation by Spanish friars fused for a second time with native ritual into solemn, ambiguous observances.

On the other hand, the Renaissance *Matachin* of France was a buffoon; the *Morris* of England, the *Mattacino* of Italy developed into secular entertainment and court masque. The *Morris* has become an exhibition for solo or group. Since its discovery in remote villages it has been featured in gymnasium classes and Elizabethan pageants without an inkling of its import.

Cure

1) By exorcism or frightening away of demons and evil spirits—

Sacred Clown-Demons (see chart).

South America—Incas *Sitowa*; Mataco, Toba (Chaco) *Jumping Dance*.

U.S. Indians—Navaho *yeibichai* night ceremony; Shoshoni *Naroya*; Yurok *Jumping Dance*.

Shamanistic trance dances of Siberia, especially Yakuts, and of American Indians.

2) Psychotherapy by artificial hysteria or gymnastics—
 Africa—Yoruba *Bori*, possession cult of 'iskoki spirit-worship; India—Bathinga, Kalamthullal, Nayars of Malabar self-curing dances.

China—*Cong Fu Cult*.

Europe—*Dance Mania* of Middle Ages; *St. Vitus' Dance*; *Dance against Plague*; Italian *Tarantella* against the bite of the tarantula.

American Indian visionary cults—Huichol, Plains Indians *Peyote*; Potawatomi, Menominee, Winnebago, etc., *Midewiwin Medicine Society*.

3) Cure derived from animals—

American Indian—*Deer*: Huichol, Zúñi, Yuma, Maidu. *Buffalo*: Pawnee, Iowa, Fox, Iroquois.

Bear: Pawnee (power derived from sun), Iroquois.

4) With the purifying aid of fire or charcoal—

American Indian—Osage *Charcoal Dance*; Pawnee *Iruska*; Fox *Buffalo Head Dance*, *Thunder Dance*; Iroquois *False Face Dance*.

Games *Everywhere merrymaking to please or appease spirit, or dispel fear.*

Memorials to dispatch ghost thoroughly into other-world.

Ecstatic Dance

- 1) Mystic trance, curative or sadistic, induced by drumming or whirling; magic powers, immunity to pain of self-mutilation by fire or swords—
Siberia—Shaman's *Epileptic Dance*, especially Chukchee, Yakuts, Ostiak, Koryak; *Hysterical Dance* by Kam of Altai-Iran; *Angakok* of Eskimo.
Gilbert Islands—*Epileptic Dances*.
Bali—*Sanghyang* and *Kris Dances*.
Moslem World, China through Turkey and Syrian Tripoli—Whirling Dervishes of 30 Islamic sects; Bektashi (Beggars); Rufai (Howling); Sadi (Fire Eaters); Mevlevi (Mystics).
Africa—North: Algeria *Aïssdoua*.
Ivory and Gold Coast: *M'Deup*, sorcerer-spotting dance.
Always superhuman acrobatic feats, whirling, leaping, distortion, climbing, crawling, writhing, falling; at times rigidity at climax.
- 2) Mystic communion with divine forces, induced by narcotic or intoxicant; spirit leaves body, which is entered by demon, spirit of ancestor, or animal; often sublime visions and escape to better existence—
Ancient Greece—*Orgia* by Mænads in worship of Dionysus.
Aztec and South Mexican—*Teonanacatl* Cult.
Huichol, Tarahumara: *Hikuli Dance* (Peyote).
U.S. Indian—*Peyote Dance* (not acrobatic, but rigidity), especially Quapaw, Kiowa, Arapaho, Cheyenne, Ute, Pawnee, Kickapoo, Sioux, Caddo, Iowa, Winnebago, Menominee: brought from Mexico.
Without narcotic—
Hausa—Bori cult.
Haiti, Brazil—Vodun cult, mounting by loa (Legba, Gedé, Damballa, etc.).
U.S. Indian—*Sun Dance*: Great Plains, e.g. Arapaho, Gros Ventre, Crow, Ute, Bûngi, etc.
Ghost Dance: Arapaho, Cheyenne, Shoshone, Pawnee, Dakota, Iowa.
Dream Dance: Potawatomi, Menominee, Chippewa, etc. (variant of *Grass Dance*).
Crazy Dance: Omaha, Arapaho.
American religious sects—Jumpers of New England (origin in Wales); Shakers of New Lebanon, N. Y. (origin in Manchester, England)—shake evil out of

hands; Church of Holy Spirit and Holy Rollers of Southern states.

Clowns

Enact supernaturals or spirits of dead. Antinatural and obscene action, speech in reverse, often falsetto. Usually wear demon or animal masks of wood or leather, with long noses, beards, horns or hair pokes; or smear faces with soot, mud, or black and white stripes. Often wear shaggy coat or tatters, or carry desiccated animal or tail; or dress like women. Bells, rattles, whips, bull bladders, often wooden lances and swords, or sticks.
Sometimes enact battles or mock travesties. May police or scout. Associated with fire, black magic, weather control. Powers to promote rain, cure, fertility.
Medieval Carnival Clowns suggest origin in pagan evil spirits, shaggy Dionysiac *Daimones*, unruly phallic *Kómos*, the *Wildes Heer*; and developments such as:

Wild Men became
Altwater Überlingen *Hänsele*, Zottler
Tyrol *Huttlerläufer*
Pinzgau *Tresterer*

became Mexican *Mal Viejo*
Abuelo

Schemen became *Casquetes* of Ocotoxco, Mexico
Schiechenperchten related to French *Harlequin*
Bugios *maisnée Herlekin* Italian *Arlequino*
Devil of Middle Ages obviously became Mexican
Diablo

Basque Noirs are related to *Arap* and other *Fools* with black faces, Mexican *Negros*

Certain Indian Clowns are probably indigenous and interrelated: Yaqui *Pascolas* and *Chapayekas*; Papago *Novico*; Pueblo *Koshare*, *Black Eye K'apio*; Hopi *Natacka*, Iroquois *gagpsä*, etc.
Non-sacred Clowns: Wolof *Griots*, Burma *Loobyets*, Persia *Mutrub* and *Batcha*, Quechua *Sijilla*, medieval Court *Buffoon*, Tlaxcala (Mexico) *Catrines*.
Semi-profane Clowns of ritual origin: Mayo-Yaqui *Pascolas*, Crow *Akbi'aruscarica* of Grass Dance. Animal mime: Japanese *Heron Dance*, Borneo *Macaque monkey* and *hornbill*, Africa *monkey mime* near Odienné, South America *Macusi tiger*.

II. Areas of Racial Dance

Africa

African Negro dance, particularly of the Gold Coast and Ivory Coast, is the dancer's dance, incredibly acrobatic and rhythmically infallible. It has no temporal structure, but often fine group counterpoint and solo virtuosity. It serves a religious purpose for many occasions—circumcision, hunt, burial, war.

The Dahomean vodun are the antecedents of the

Haitian vaudou cult. The most beautiful dances are:

- Xevioso, of Thunder pantheon: 1) *Dance of Legba*, 2) the *Gobahun*, 3) the *Adahun*, Thunder Dance.

Nessoué, the River, highly descriptive and complex. *Sagbata*, epileptic dance.

Dã, the Snake.

Lisa, chief deity.

The *Vegetation Dance* of Ongaladougou combines communal circular dance; grotesque Old Men's Dance; a sowing mime by four young girls; realistic mime of

animals' copulation. Animal masks and *Animal Mime*, especially that of the Javara, simulate every detailed trait of Monkey, Antelope being hunted, and every conceivable native beast.

Acrobatic Dances include: 1) groups of men flinging about young girls or boys; 2) sacred jumping dances, e.g. of Yammasoukro; 3) women professionals, e.g. of the Dioula; 4) men's savage, yet controlled solos—leaps, spins, somersaults, back bends—in perfect time with the music.

Despite the obscenity of certain symbolic dances, there are no erotic couple dances, and few social dances, like those of the Wolofs, similar to our ballroom dances, notably the *Goumbé*.

African Dance Colonies

African slave trade has colored the dance the full length of the East Coast Americas, in the *vodun* cults of Haiti, Cuba, Brazil, and in the ballroom.

Haiti is dominated by deities descended from the theology and ceremonialism of West Africa, especially from that of Dahomey and Yorubas of Nigeria. In the *vodun* rites, spirits or *loas* mount "servants" and goad them to frantic dances of possession, which take on characteristic patterns. Meanwhile onlookers circle a central pole or *po'teau* in the *Bamboche*.

Social dances of African descent include *Pinyique*, *Pastorelle*, *Ciyé*, *Chica*, *Ti Crip*, *Mangouline*, *Zesse*, *Raboto*, *Martinique*, *Mascaron*, *Mal'fni*, *Huba*; the stiff *Méringue* is of European descent.

Haitian movements are forthright, strong, sweeping, and acrobatic.

Ballroom dances from Cuba: *Rumba*, *Conga*, *Danzón*.

Brazil: *Maxixe*, *Zamba*, *Batuque*, etc.

U. S.: *Jitterbug* and *Boogie Woogie*, *Juba*, *Cakewalk*.

Despite their syncopated rhythms, certain aspects of these dances are not African—the idea of the couple dance, the often infinitesimal movements. *Juba* and acrobatic *Boogie* are more truly African.

Other aspects: Work songs and dances of Haiti and the southern United States; religious revivals and ecstatic dances of Church of the Holy Spirit and Holy Rollers.

Asia

The dance culture of Asia, while distinctive as compared with other continents, exhibits great contrasts—

- 1) between the upper sophisticated castes of India and China and the primitive tribes of the mountains and islands.

- 2) between the vast, sparsely populated areas of Siberia with their paucity of dances and the wealth and variety of the Archipelago and tiny Pacific Islands.

It is nonetheless possible to distinguish large areas, all of them except Siberia under the influence of India.

Siberia

The shamanistic trance dances of the Chukchee, Yakuts, Ostyaks, and Koryaks, near the Bering Straits, aim at communion with demonic spirits, animals, and ancestors, for cure, rain, and in celebration of a successful hunt, seal or whale catch. To insure good hunting women may circle around the frenzied shaman, and the whole community join in orgiastic celebration. The shaman corresponds to the Eskimo *Angakok*, the *Kam* of Altai-Iran, the *Dervish* of Islam, and the American *Indian Medicine Man*, with similar powers.

Central Asia (Iran—Turkestan) combines the Siberian shaman complex with the fierce courtship and sword dances of the Caucasus and the technique of arm gesture and neck motion (*sundari*) of India.

India

At its apex the Hindu *Temple Dance* was one of the noblest and most gracious of rituals, by priestesses or Devadasis. In the *Alarippu* and the still extant *Tillana*, for instance, intricate footbeats, *Laghu*, accompany bends, *Bhangas*, and symbolic sinuous hand movements, *Mudras*. Dances represent the five incarnations of Siva, the love of Krishna and Radha. Today the religious dance is decadent, the Devadasis are lasciviously graceful courtesans.

The secular entertainers on streets and in palaces—the *Nautch* dancers—are obese and vulgar, though boy performers exhibit more vitality than women.

The little explored rites of aboriginal tribes continue to exist alongside the folk and religious dances of the Aryan upper castes: hunting dances of the Veddas of Ceylon, totemic mimes of the southern Dravidians, wedding celebrations of the southern Todas, and agricultural festivals of the eastern Mongoloid Mundas, Santals, Oraons, and northern agricultural Aryan peasantry. These last, as well as the *Kummi* and *Kolattam* folk dances of the south, have the elegance of gesture and foot-beat so characteristic of the famous temple and theater dances.

The Badagas still dance on live coals as a ritualistic trick. The Coorgs skip in circular *Sword Dances* and tremble in possession by Kālī. Brahmin priests dance the *Kathak*.

Southern India has witnessed a recent renaissance in the Kathakālī School of Dance. Within ancient traditions new dances are created, such as the *Lasyanatana*. Competent exponents tour the Occident in exotic and eloquent programs.

Tibet and Ceylon: Devil Dances

These powerful and original demon impersonations retain much of their aboriginal function of exorcism. In Tibet they are enacted by the Lāmas of Buddhist monasteries. Frightful animal masks represent evil spirits. All are grotesquely virtuoso, the legendary *Black Hat Dance* of Tibet consisting of highly controlled turning leaps in ingenious choreography. The *Acharyas* are dwarfs in a travesty of a weird old man and woman. Function is ritualistic.

China

Chinese dance is dying of old age, even in the theater, though this was revitalized by Mei Lan-Fang. The Cong Fu Cult, founded perhaps in the 3rd millennium B.C., is still being taught by priest physicians; it is a mystic healing cult of gymnastics. Twice a year priests dance in Confucian temples.

The Yao peoples of Yao province celebrate weddings, funerals, and other events with dance and ceremony. The Nau people of Kwangsi province have some folk dances, such as *The Mute and the Cripple*. The Lolos of southwest Yunnan skip in circles in their native villages. There is no true social dancing.

Yet the role of China is important as source of the *Bugaku*, the Japanese religious dance, introduced some 2000 years ago.

Japan

Japan represents one of the high points of Oriental dance in:

1) The religious *Kâgura* of Shinto priestesses, derived from the divine dance of Ume-no-utsame to recall the Sun Goddess Amaterasu. The popularization of the *Kâgura* founded the Kabuki, popular theater.

2) The classic *Nô* drama blended 800 years ago the existing popular songs with original dances, and is now mimed in the old tradition. It is derived from the trivial *Saru-gaku* or monkey mime and the *Den-gaku* or acrobatic dance developed by Buddhist priests. As in ancient Greece and in Burma, only men perform this aristocratic form of theater. A comic interlude between the melancholy *Nô* episodes is the *Kyôgen*.

3) The popular *Odori* is as old as the race. Outstanding are the *Uta-gaki*, *Genroku Hanani* (Cherry Blossom), *Honen-odori*, *Saibara*; the *Bon-odori*, a welcome to the dead by peasants; the *Tanabata-odori* by children; the *Gebon-odori* by merchants of Wakayama. The professional *Odori* dancer is the Geisha.

The *Ondo*, derived from the *Odori*, is danced as a social dance in the Japanese street festivals of San Francisco and Salt Lake City. The highly mimetic Japanese dance has a wide range of expression in stylized gestures, with a back-tilted posture and turned-up toes. As in all Oriental dance its precision results from long, arduous training.

Burma

The *Pwe* is a gay, rhythmically exciting festival. Professional girls and Loobyets or clowns dance the ordinary *Pwe* with acrobatic crouches and extreme arm curvatures. Village boys and girls dance the spectacular *Yein Pwe* at country and religious festivals.

Cambodia

Women mime fragile and aristocratic dance dramas, with a filigree of intricate steps and stylized gestures.

Malay Peninsula

Indonesia, from Malaya to Java, superimposes a cosmopolitan culture on an aboriginal substratum. Primitive puberty rites, the "gamber," tiger worship, and other animal dances of the Jakun and Sakai of Semang, recall similar rites of Madagascar and the South American Chaco. Shamanistic magic and cure dances relate to Siberia, the *main dabus* or fanatical sword dance to Islamic and North African exhibitions. There are Chinese and native operas and womens' dances of Japanese quality, and finally special Malayan-Balinese trance and *djoged* dances.

Bali

The *Djojeo* and *Legong*—curiously jerky and precise social dances—are for children. The *Kabyar* is a series of angular arm gestures for men in a seated position. The *Redjang* is a slow religious procession; the *Kris*, Dagger Dance, and *Sanghyang*, Trance Dance, are inspired by mystic possession.

Java

In the Javanese *Slendang* the sinuous arm movements are derived from India. The *Wayang Wong* is derived from the Javanese shadow-puppet play; human actors portray legends from the Hindu *Mahâbhârata*. Men portray women. True folk types include *Nautch* by boys at fairs; *folk dances* of western Dutch Java; the

Bodjeje of religious origin, slow and controlled, or acrobatic, by boys and girls.

South Pacific

The expressive, symbolic arm and hand movements of the Gilbert Islands, Tahiti, Samoa, Hawaii are largely offspring of the *Mudras* of India. The Samoan *Marara*, Tahitian *Orare*, Hawaiian *Noho* or seated *Hula* by the Ho'o-pa group, and standing *Hulas*, *Alekoki* and *Ho'ohenokeia*, by the Olopa group are sublimations of courtship and mystic sensuousness.

Elaborate gestures prevail throughout the South Pacific. In Hawaii they serve as a symbolic code; in the rest of Polynesia and Melanesia they usually imitate daily actions realistically, with elegance on Easter Island, with violence in the Tuamotos, the Marquesas, and in the Maori and Samoan war dances. Both the seated and standing dances are usually stationary, with emphasis on hip, arm, and hand jerking or undulating; but war dancers of Samoa, Uvea, and Futuna leap about in drill-like maneuvers, and boys and girls of Rarotonga pair up in a round dance.

Australia

The declining aboriginal dances of Australia show several cultural levels of the most primitive nomadic hunters' dances: phallic, puberty, totemic, and hunting animal dances. There are the phallic *Caaro* dance of Wachandi men in the west, the totemic circle dances of the central Aranda, the realistic animal dances of the north and the southeastern Kurnai, the Kurnai boys' initiations, and the individual pan-Australian *Corroboree* for hunt, war, or greeting.

Philippine Islands

Despite the proximity of Japan, Indonesia, and the South Pacific islands, the Philippines resemble none. The war, wedding, courtship, head-hunting ensembles of the Igorots, Bontocs, Ifugaos, Kalinga, and Apayaos have a virile elegance. The Mohammedans, or Moros, have developed an excellent manly standard of mimetic performance, as the bee-hunting dance. The mestizo couple *bailes* of the Christian Filipinos derive mostly from Spain; only a few, as the *Balitao*, are reminiscent of native harvest festivals.

North Africa and Arabia

Outposts of Indian style to the west are the degenerate Arabian dances of the café, the *Chethat-al-Maharma*, and the related woman's *Danse du Ventre* of Tunis, Algiers, Egypt. Most Arabian dances extol feminine charm. Their posture stories are not set by tradition as in India, but are subject to individual creation.

Spain

Indirectly, by way of the Moors, Spain owes much of its eloquent though not symbolic gestures to India, as well as to the equally Asiatic Gipsies. In Latin-American dances of Spanish heritage this sinuousness is lost and only footwork retained. Otherwise India might be said to extend its influence around the world.

Asia Minor and the Balkans

These form an intermediate culture area between East and West.

Turkey ties up with the Orient in the vibrating head, arm, and torso movements of the women's *Çifte Tel*,

with the wild Caucasian men's dance in the *Zeybek*, and with Palestine, the Balkans, and the coast of the Mediterranean in the open round for men and women, the *Yalli* (for girls alone, the *Trata*).

In the popular *Horra* of Palestine men and women similarly hold hands in a circle. Individualistic ancient dances have been recently revived: the *Sher*, *Siuchu*, *Pam Achat*.

The peasants of Armenia, Greece, the Balkans progress in closed circles, more often in semicircles or serpentine, with elegant steps and small, rhythmic jerks of head and shoulders. Men and women, placed *ad lib.*, hold hands, sometimes with kerchiefs, or link elbows or place arms on shoulders. The leader crouches, leaps, pirouettes, very like the famous Cossack dancer. The Rumanian *Hora* is more languorous than the emphatic Hebrew *Horra* or precise Serbian *Kolo* (circle).

These open rounds, or *Link Dances*, perhaps originated in Greece, from the *Choros*. The varied steps include hops, heelbrushes, grapevine on a foundation of a "double" right, a "simple" left. A special version is the *Chiotikos* for two women with intertwined arms, and the *Zabakelos* for one man with castanets. The traditional *Romaika* (*Zyganos* and *Choros*) commemorates the suicidal Suliot women.

In the geographically arranged chart below, it will be seen that these dances extend horizontally across southern Europe to Catalonia. On the other hand, in a northerly direction, Asia Minor blends with the Caucasus.

European National Dances

Russia

This vast assembly of contrasting tribes, with its expanding boundaries, possesses the wild couple dances and fierce sword dances of Caucasian tribes; the acrobatically vigorous Cossack dances of Don and Ukraine; on its outskirts, the Carpathian, Lithuanian, Latvian, and Polish dances.

Ukrainian and Carpathian couples lift their knees high in cross polka and *pas de basque*, crouch, leap, stamp, fling their arms wide. Lithuanian, Latvian, Polish couples combine Slavic stamp and arm swing with ballroom steps and with the circular progression of the ancient round.

A new creation, *Yablochko*, the Russian Sailor's dance, follows the peasant tradition of solo interpolated into group activity; the *Orlitza* and other city products follow the ballroom trend.

Central Europe

Such fairly recent semi-peasant couples' rounds extend into central Europe, side by side with the vestiges of old religious rites. Each country displays a special kind of vigor. In Hungary the women are aloof and the men impetuous as in the Caucasus. Magyar and Czech dancers click their heels, twist their feet, the Bohemians with more leaning of the body and head.

Peasants of Germany and Austria shake the ground in boisterous gaiety, clap and leap in the famous *Schuhplattler*. Several Austrian country dances resemble west Slavic rounds: *Schwefelhölzl*, *Buamaschlag*, *Der Paschade Flugsummi*. But there is no grouping in the lusty *Drehtanz*, ancestor of the sentimental *Waltz*.

There is much variety in the relationship of partners.

In Czechoslovakia, for instance, partners can progress in anti-clockwise circle:

1) Face to face in double circle: *Malení*, *Paterka*, *Javorník*, *Tancuj*.

2) Parallel, hands joined: *Černa Venka*, *Káčá*.

3) Girls backwards in single circle: *Trojky*, *Sáteček*, *Kdyš Jsem*, with kerchief.

4) One circles round the other: *Vrtěná*.

Holds are particularly varied in Bohemia, Scandinavia, above all Finland.

The Bohemian *Tancuj* is a closed face-to-face position, left shoulders touching, elbows horizontal.

Finland has hand grasps, single and double; arm grasps, hand above elbow; arm hooks; cross grasps, in back or front; holds at waist level or above the head; the Wormsö grasp with right hand round partner's waist, left hand on right shoulder.

The waist-shoulder grasp (man holds girl's waist, she his shoulders) is Hungarian. Partners are swapped in the *Strašak*, *Greifpolka*, *Wechselbayrische*, and Finnish *Old One from Laucka*.

Scandinavia

Scandinavia has preserved a few ceremonials, but observes festivals mostly with native versions of central European folk dances. The *Rounds* of the Norwegian Faroe Islands still enact interminable 11th century ballads, with a step resembling the *Branle*. Norway has revived them. Finland has adopted the *Sigurdsvalket* and others.

The special legacy of Sweden are its singing games. In general, Scandinavians favor gay and harmless pantomime, of flirtation (*Firtur*), rivalry (*Vingakersdans*), or mock fight (*Oxdansen*, *Degnedansen*). There has been much give-and-take in quadrille formations between Denmark, the British Isles, and France.

British Isles

English *Country Dances*, Irish and Scotch *Reels* (2/4) and *Jigs* (6/8) are the most ingenious group dances of Europe, numerically and geometrically, particularly in the Irish "cross overs" and "loops" and the English "heys." The floor patterns are executed with simple, though not monotonous, steps, an easy, erect carriage, light hand hold, arm movements motivated by the joining of hands. The solo *Jigs* and *Hornpipes*, on the other hand, exhibit dazzling footwork on one spot, toe-touchings, beats, turns, arms raised, or one hand on hip. The Scottish *Highland Fling* excels in concise energy and crispness.

There is little pantomime. The picturesque English titles are only song titles: "The Catching of Flees," "The Friar and the Nun." The Scottish *Cailleach an Dundain* does enact resurrection of a woman by a man. The *Sailor's Hornpipe* is a chantey in movement. The *Irish Waves of Tory* suggests the motion of waves. *Sword and Morris Dances* suggest their original combat mime.

The *Country Dance* has found its way to Holland in *Anna van Duinen* and *Drickusman*, to Sweden in the *Klapptans*, Bohemia in the *Judentans*, Portugal in *O Pretinho* (*Strip the Willow*). Its fate in America will receive special discussion.

Southwest Europe: France, Iberia, Italy

France is the home country of the *Contre Danse* and *Cotillon*, which merged into the *Quadrille*. France and

England both claim the origin of this art form. Spain and Italy have taken them over. In fact, the *Seguidillas* are quadrilles.

Court dances of the Middle Ages and Renaissance originated in all of these countries, and were interchanged and propagated. Taken from the peasantry or from foreign lands, they have returned to their point of origin. Most of the regional dances of France descended from the old *Ronde*, *Branle*, *Bourrée*, *Gavotte*.

Italy dances these as well as borrowings from Spain. It is devoted to sentimental fragments of pantomime, with sighs and coquetry (*Bal d'Ahi*) and much exaggeration. These regional dances, as well as those of Spain, require special listing.

Besides its national dances, Spain shows great variety of style—from the simple folk type with sharp footwork of Aragon to the arrogant voluptuousness, hand and arm allurements of Andalusia, but with rhythmic complexity throughout. Portugal has the same equality of sexes in its gay folk dances. But Basque men overshadow the modest women with their tremendous leaps.

Court Dances

France	France	Italy	Germany
Estampie	(cont.)	Paduana	Medieval Firlfanz,
Carole	Gavotte	Saltarello	Hoppelvogel,
Baleries	Passepied	Triori	Krummereihen

(from Italy)	Pavana	Corrente	became
Rondeau	Sarabanda		Waltz
Volte	Chacona		
Bourrée	Passacalle		
Minuet	Villanesca		

Exotic Dances

Spain: Zambra, Zarabanda, Leyla from Arabia; Furlana from Friul; Canario, Tajaraste, Serinoque from Canary Islands; Rigodon from Martinique; Zambapalo from West Indies; Habañera from Africa by way of Cuba; Guaracha from Cuba; Tango from Argentina.

Portugal: Guineo from Guinea; Batuque, Machicha, Lundum, Frevo from Africa through Brazil.

Italian Regional Dances

Various provinces have a typical dance: Lombardina of Lombardy, Bergamesca of Bergamo, Romana of Rome, Siciliana of Sicily, etc. Of special interest are: Bologna: Ruggir, Baraban, Bal d'Ahi, Vetta d'Or, Girometta, Ballo della Catena.

Campagna: La Ciociara, Tarantella, Saltarello Neapolitano.

Sardinia: Douro Douro.

Spanish Regional Dances

Basque Provinces: Guipúzcoanas (S.), Auresku, Atzesku, Zortziko, Muchikuok, Pasamanos, Arin Arin, Biribilketa, Carriça Dantz,

Asturias: Pasiegas (S.), Giraldilla, Pollos, Perlindango, Pandero, Careado, Saltón, Pericote, Corri Corri, Danza Prima.

Castile: Seguidillas, Bolero, Fandango, Zangano.

Galicia: Gallegada (S.), Muiniera, Serranilla.

Aragon-Navarra: Jota.

Catalonia: Sardana, Farandola, Filada, Contrapás, Ball Pla, Bolangera, Nyacras, Corrandá, Eixada, Pila, Morata, Ball de la Teya.

Valencia: Valenciana (S.), Xaquera Vella, Paradetes, Tarara, Jota.

Mallorca: Seguidillas, Copeo, Baile de la Xisterna.

Murcia: Murciana (F.), Parranda, Zangano.

Andalusia: Seguiriyas (S.), Sevillanas (S.), Malagueña (F.), Rondeña (F.), Granadina (F.), Jaleo, Panderos, Polo, Zapateado, Zorongo, Cachucha, Jarabe Gitano, Vito, Paso Doble.

Cuadro Flamenco: Por Soleares (women), Farruca (men), Bulerias, Alegrías.

Many provinces have a classic *Seguidillas* (S.), but only southern Spain has the Flamenco tradition, *Fandango* (F.), and *Gitano* from the gipsy.

III. Dance Acculturation in the New World

For religious dance acculturation in the New World, see RITUAL DANCES.

Regional Dances (Bailes Regionales)

South America

Venezuela—*Joropo*.

Brazil—Gaucho *Chacarera*; ballroom *Batuque*; *Machicha*, *Frevo*, *Samba*; Negro influence: vodun *Macumba*. Uruguay—Gaucho *Pericón*.

Paraguay—*Guatú*.

Argentina—*Gato*, *Palito*, *Huella*, *Firmeza*, *Zamba*; *Media Cana*; ballroom *Tango*; English *Country Dance*.

Chile—*Cueca* or *Zamacueca*.

Peru—*Cashua*, *Huaynu* of Inca origin.

Ecuador—*Huaino*, *Sanjuanito* of Inca origin; *Fandango*, *Pasacalle* of Spanish origin; *Marinera*, similar to *Cueca*.

Colombia—Coast: *Porro*, *Cumbia*, *Gaita*, *Bullerengue*, *Paseo Vallenato*. Interior: *Bambuco*, *Pasillo*, *Guabina*, *Torbellino*, *Fandango*, *Pasacalle*.

Panama—*Tamborito*.

All these are uniformly a love play of meeting and pursuit, coquetry, and conquest, varying from the sombre *Sanjuanito*, headstrong *Cueca*, to lusty *Pericón*. Much use of the kerchief, like a lasso in *Pericón*, in joint grasp in *Guabina*. Occasionally in ballroom position, as in the stamping waltzlike *Joropo*.

Mexico

Yucatán—*Tunkul*, *Jarana Yucateca*, *Bomba Yucateca*.

Chiapas—*Las Chiapanescas*, *Jarabe Chiapas*, *Cachito*.

Oaxaca—*Chande*, *Pandera*, *Chilena* (*Cueca*), *Son* (Cuba), "*Djezz hawt*," *Polka*; *Zandunga*, *Tortuga*, *Llorona* of Tehuantepec, *Juchitán*, *Salina Cruz*; *Jarabe Mixteco*, *Jarabe Yalalteco*.

Veracruz—*Huapangos*, especially *La Bamba*; *Danzón* (Cuba); "*Djezz hawt*."

Puebla—*Huapangos*.

Tlaxcala—*Jarabe Tlaxcalteco*.

Michoacán—*Jarabe Michoacano*, *Jarabe de la Botella*, *Las Sembradoras*, *Canacuas*, *Iguirís*.

European Social Folk Dances: Geographical Distribution

Jalisco—*Jarabe Tapatio*, *Jarabe de la Botella*, *Las Espuelas*.

Nayarit—*Mitote* of Cora, Tepehuanes, Aztecs.

Chihuahua—*Jarabe Chihuahuano*.

Metropolitan—*Paso Doble* and other Spanish forms; *La Cucaracha*, *Jesucita*, *La Raspa*.

Southwestern United States

Mexican origin—*Jarabe Tapatio*, *Michoacano*, *Zandunga*, *Las Espuelas*, *El Vaquero*, *Chiapanecas*, *La Cucaracha*, *Jesucita*, *La Raspa*.

Colonial Spanish—*La Mestiza*, *El Palomo y la Paloma*, *El Jilote*, *La Camila*, *El Taledn*.

South American origin—*La Chilena* (Chilean, from Cueva), *La Cuna* (Argentina).

European origin—*Las Cuadrillas*, *Polka Cruzada*, *Galope*, *Varsoviana*, *Vals de la Escoba* (Broom), *Vals de los Paños* (Kerchiefs), *El Chote* (Schottische).

Philippines

Native with Spanish veneer—*Balitao*, *Tinikling*, *Candle Dance*; *Kakawati*, *Bulaklahan* (Flower Dances), *Boa* (Coconut).

Spanish Mestizo—*Surtida*, *Cariñosa* (Waltzes); *Rigaudon*; *Salacot* (Hat Dance).

Ballroom Dances from Latin America

Tango Argentine (by way of Paris), *Machicha* (Tango Brasilienne, also much expurgated) *Conga*, *Danzón*, *Son*, *Rumba*, *Zamba*, *Frevo*.

In the *Bailes Regionales* (regional couple dances) identification of native and foreign traits is fairly simple:

Native: Posture: straight back or stooped, man's hand cupped behind his back in Mexico; bent knees; impassive face; lowered eyes; shuffle, back pull; reticence. No castanets.

Spanish: *Zapateado* steps and variants, much of the music and costume, olé shouts.

Austrian: *Waltz* step and tunes (Chiapanecas, *Candle Dance*).

Polish: *Mazurka* step and music (*Jarabe Tapatio*).

Bohemian: *Polka* step (*Jarabe Michoacano*).

Russian: *Komarinskaia* step and music (*Jarabe Tapatio*), possibly crouches (Concheros).

Proportions vary from the thoroughly European *Jarabe Tapatio* of the charro and ranchero, and the haughty mestizo *Zandunga*, to the native *Canacuas*.

Negro influence is slight except on the Atlantic sea border: in the *Huapangos* of Veracruz and Tamaulipas, Mexico. In the West Indies and Brazil it outweighs the native Indian constituents.

In the cities the same partner dances are popular as in Europe and the United States (*Polka*, *Waltz*, etc.), and even in the villages a stiff version of jazz and the *Beer Barrel Polka* are making inroads: commonly called "piezas." These embrace-dances contrast with the aloof contactless partner dances. Occasionally a perfect hybrid results. Few *bailes* are clearly indigenous: *Mitote*, *Huaino*.

American Indian Social Dances

The United States Indian has with one exception adopted only dances from other tribes. These he clearly recognizes as imported. *Squaw Dances* were always social. *Animal*, *War*, *Victory Dances*, and the *Grass Dance* have recently become secularized.

Native

Blackfoot *Horseback*, *Kissing*, *Begging*.

Shoshone *Peqowa Noqan*, *Banda Noqai*, *Biepingo Noqai* (Lame), *Waípe Noqa* (women).

Ute *Bear*, *Turkey*, *Lame*, *Dragging Feet*, *Round*.

Comanche *Horse*, *Dog*, *Love*.

Sioux *Hoop*, *Kahomini*, *Hatka*, *Hahepi Wačipi*, *Begging*.

Kansa *Heluk Watci*, *Dali Watci* (women).

Kiowa *Snake*, *Rabbit*, *Owl*, *Brush*.

Shawnee *Deer*, *Quail*, *Fish*, *Leaf*, *Alligator*, *Drunken*, *Stomp*.

Sauk *Owl*, *Rabbit*, *Snake*, *Grapevine*, *Gourd*, *War*, *Victory*, *Two-step*, *Stomp*.

Fox *Swan*, *Snake*, *Mesquakie*, *War*, *Victory*, *Friendship*, *Stomp*.

Menominee *Rabbit*, *Partridge*, *Frog*, *Owl*, *Crawfish*, *Sunfish*, *Begging*, *Friendship*, *Forty-nine*.

Winnebago *Swan*, *Fish*, *Snake*.

Iroquois *Fish*, *Coon*, *Robin*, *Pigeon*, *Duck*, *Garters*, *Fishing*, *Marriage*, *Stomp*.

Cherokee *Ant*, *Raccoon*, *Partridge*, *Pheasant*, *Pigeon*, *Snake*, *Friendship*, *Stomp*, *Wood Gathering*.

Yuchi *Horse*, *Buffalo*, *Rabbit*, *Chicken*, *Duck*, *Buzzard*, *Leaf*, *Fish*, *Drunken*.

Creek *Buffalo, Horse, Rabbit, Duck, Chicken, Buzzard, Screech Owl, Alligator.*

Adopted

Fox *Snake* (from Shawnee).
Iroquois *Snake* (from Cherokee).
Yuchi *Leaf* (from Shawnee).

Widespread: Sioux *Grass Dance*: Blackfoot, Piegan, Gros Ventre, Crow, Omaha, Yankton to Chippewa, Winnebago.

Naslo'han *Wacipi*: *Shuffling Feet*: Teton Sioux, Assiniboin, Oglala, Cheyenne, etc.

Squaw Dance: Plains and Eastern Woodlands, including Wampanoag.

Feather Dance: Plains and Eastern Woodlands (still ritualistic among Navahos and Iroquois).

Social Dances of the United States

Ballroom dances are based largely on the One Step and Two Step.

From Europe—*Cancan, Chahut, Galop, Mazurek, Polka, Schottische, Varsouvienne, Waltz, Yale.*

Original—*Cakewalk, Fox Trot, Turkey Trot, Bunny Hug, Grizzly Bear, Shimmy, Boston* (from Waltz), *Charleston, Black Bottom, Castle Walk, Eight Step, Hoosier Hop, Lindy Hop, Big Apple, Trucking, Susie Q., Jitterbug, Jersey Bounce*: man swings and pivots woman.

Boogie Woogie: *Mooch, Sand, Duck Walk, Camel Walk, Rochester, Fish Tail*: partners dance separate.

Jitterbug and *Boogie* have from the Negro their flatfooted, grotesque abandon, hip and shoulder movement, and frequent acrobatics.

Rounds and Longways

In the West, *rounds* and *longways* are virtually nonexistent, except for old-fashioned ballroom dances loosely termed "rounds." In New England, however, the hybrid *Sicilian Circle* type is popular, and so are "*Contrys*" in two lines. Some of these are direct borrowings: *Petronella* from Scotland; *Pop Goes the Weasel* from England. Some are descendants: the *Virginia Reel* from Sir Roger de Coverley and *Kinkkaliepakko*. *Lancers* and *Virginia Reel* are now confined to formal social affairs. "*Contrys*" and *squares* feature in the increasingly popular barn dances of summer resorter and New England rustic; circular *Kentucky Running Sets* pervade the South.

Square Dances

The development of the Square Dance is probably as follows:

Contre Danse } Cotillon }	Quadrille } Country } Dance }	Kentucky } Running } Set }	New England Quadrille Cowboy Square Dance

The Middle West partakes of qualities of both East and West.

Following are some distinctions between countries: England: Formations set to music; couples numbered clockwise.

Walking, running, skipping, sliding, "simple," "double," "turn single."

Five parts, no visiting all round, at most adjacent couple.

Usually start with "double" forward to center and back; many forms of "hey," often as finish.

Longways preferred.

Great decorum.

Ireland: More steps, including jig and reel.

All formations found in America, including mill (wheel), crossovers.

Usually four parts, starting and ending with promenade.

Wealth of "heys"—half, whole, single, double, by couples, for three, in line, in circle, square chain.

Denmark: Honors, circle, swing, mill.

Gaiety.

Various grasps; boys lift girls.

Kentucky: Gliding, shuffling run or clog, hand-clapping.

Start circle, swing. Birdie in the cage, Ladies in the center, Lady round the lady, figure eight. End promenade, Grand right and left.

New England: Set formations, couples numbered crosswise.

Shuffling run and *chassé* (sashay).

Start honors, circle, swing. Includes ladies' chain.

End promenade or grand right and left and swing.

Lately the freer Cowboy dance has reinfluenced New England, which now has calls and looser coordination of figures and music.

The "Singing Quadrille" may be the origin of the prompter's calls.

West: Steps correspond only to musical phrasing.

Waltz and polka sometimes replace shuffling run.

Couples and figures counted anticlockwise.

Three parts, everybody being visited all around.

Honors, balance and swing, circle. All formations, including mill.

Ladies' chain only for four. Many forms of grapevine twist.

Picturesque calls—"Dive for the oyster," etc.

Gaiety, Spanish swagger.

Boys lift girls off ground.

IV. Comparative Choreography

Patterns

Circle and straight line constitute the fundamental elements of floor patterns. The figures all doubtless have their origin in vegetation symbolism, now forgotten in the elaborate quadrille.

Circle—round a sacred pole or object, following or opposing the sun's course. Interpretation of direction needs further evidence. Rites of death and penitence reverse into "widdershins" circuit, but so do social rounds at times.

Open Round (*Serpentine, Zigzag, Spiral*)—One released pair of hands converts the *Closed Round* (*Ronde Fermée*) into an *Open Round* (*Ronde Ouverte*) or *Link Dance*. Yet the former grows into the *Quadrille* by way of the *Branle Carré* and *Tambourin*; the latter opens into an arc or serpentine, or rolls into a spiral. Serpentine and zigzag mime the serpent, emblem of fertility.

Serpentine: Aztec *Dance for Chicomecoatl* (Seven Serpent); Arikara *Women's Dance*; Pyrrhic *Dance* of

^a Divide: a couple walks across and separates, passing between either the opposite or side couples.

^b Hook: a pivot with linked elbows.

American Soldiers' Joy and Sicilian Circle combine a four-hand reel with a round.

America, Denmark, and Ireland also have, respectively, the grapevine twist, knot, and loop.

Greek Klephts; Catalan *Ball de la Teya* (flame). Link dances of Mediterranean (see EUROPEAN NATIONAL DANCES above). Sauk and Fox *Sauk Snake Dance*; Sauk *Grapevine*; Cherokee *Snake*, *Pigeon*, *Ant*; Kwakiutl *Children's Dance*. Mexican children's *A la Vibora*. Zigzag: Imerina of Madagascar *Puberty Dance*; Gran Chaco *Ghost Dance*; Chippewa *Bean Dance*; Santa Ana Pueblo *Histiyaní Aiyadots*; Italy *Lo Zigo Zago*; France *Villanelle*, *Beaujoyeux*; Majorca *Ball de la Xisterna* (girls).

Stationary Line or Lines—Yurok *Jumping Dance*, Maidu *Turtle*, Pueblo *Kachina*, Fox *Thunder*, Bohemia *Kačer*.

Múltiple Lines—African *War Dances*, Maori *Peru Peru*; massed effects: Plains *Buffalo*; Irish *Harvest Time Jig* (three lines), *Siege of Ennis* (many lines of four, very spectacular).

Two Opposing Lines—Joining or conflict of two forces, male and female, summer and winter, light and dark, etc. Characteristic of battle dances, especially when associated with vegetation. Play of sexes in longways.

Hey—Combination of two lines and serpentine, fructifying interplaiting of natural forces, also in plaited swords. English *Maypole Dances* are vestiges of double circuits around a sacred tree, as also the Spanish *Baile de Cintas* or *del Cordón*, spread to Venezuela and to Mexico, where, however, it may also be indigenous. The Basque *Ezpata Dantza* and Yaqui *Matachini* often wind a maypole, as part of the Pyrrhic *Morisca* rite.

Arch—The green bough or leafy bower. Spain, Portugal, Mexico *Arcos*. Basque *Arkuxtixikiak*. German *Schäfflertanz* (whole hoops).

Games: Hungary *Green Branch*, *Green Leaf*; Germany *Die Goldene Brücke*; England *Oranges and Lemons*, *London Bridge*, *Needle's Eye*; Mexico *Santo Domingo*, *Amadrus Señores*, *Melón y Sandía*.

Numerical Variety

The couple and the eight person quadrille or longways are the most common forms. But numbers are varied, up to the "as many as will" formation.

Three: Moravia *Trojky*; France *Écossaise Triolet*; Italy *Galleita*; Denmark *Crested Hen*, *Peat Dance*, *Three Men's Reel*; Sweden *Vingakersdans*; Norway *Krossardans*, *Mountain March*; Scotland *Reel of Three*; Ireland *Galway Reel*, *Cor na Gaillimhe*; Argentina *Palito*.

Four: (Two Couples): Denmark *Kydholm Dance*, *Little Man in a Fix*; Scotland *Reel O'Tulloch*, *Foursome Reel*; Ireland *Fourhand Reel*, *Fionala*, *Humors of Brandon*; England *Parson's Farewell*, *Saint Martin's*, *Althea*, *Heartsease*.

Five: Denmark *Five Dance*.

Six: Denmark *Six Dance*, *Figure Eight*, *Pear Waltz*, *Triangle*, *Seksril*; England (best) *Black Nag*, *Grimstock*, *Adson's Saraband*, *Morris*; Ireland *Spinning Wheel*, *Cor Seisir* (Fairy Reel).

Nine (Three one sex, six other): Denmark *Tinker's Dance*; Finland *Holola Polka*, *Nine Persons' Post*.

Ten: Finland *Ten Persons' Polka*.

Twelve (eight boys, four girls): Finland *Post Dance* (six couples), *Harvest Dance*; Ireland *Piper's Dance* (ingenious), *Twelve Hand Reel*.

Sixteen (double quadrille): Finland *Pellinge Quadrille*, *Kontra*, *Osterbinsk Four Corners*; Ireland *Cor Seisir Dheag* (break up into four small circles).

Variation in Style

Despite the universality of certain choreographic elements, each people has its own technique, expressive of its character and way of life. Japan and Java use arms and hands with a turned-out stance; North Africa, vibration of the breast and flanks; Negro Africa, sweeping acrobatics, with swayed back; Europe and the American Indian, a straight back, much use of feet and legs with knees forward; India and its sphere of influence, the entire body, knees out in Asia, in Spain, forward, with a swayed back.

Beyond such generalization, the bounding aboriginal Santal of India contrasts with the hip-swaying Nautch girl; the erect and straight-kneed Morris dancer with the stealthily advancing, relaxed yet pulsating Plains Indian. The gentle horizontal glide of the Otomí Indian is very different from the powerful impact and rebound of the dynamic Yaqui.

Equally varying is the role of the woman, on an equal footing with the man in northern Europe, even eclipsing him in Andalusia; but in the Caucasus, Bavaria, Catalonia, the island of Ibiza, among American Indians, slowly revolving, retreating, shuffling, during the vehement gyrations of the man.

These contrasts differentiate dances which on analysis may have the same patterns, steps, and structural devices.

Steps

Human imagination has devised in the folk dance every step within physical possibility. Virtually no step is universal property—even the common stamp step does not occur among the Kwakiutl. The two step spreads through Europe and the Americas, but Mexicans accent it with a heelbrush. Again, few steps are unique—the Spanish "vuelta quebrada" (*renversé*), the Magyar heel-click practically (except for the Mexican *toreadores*). Many steps are typical of certain nationalities, but do not occur in others.

"Double to side": *Branle*, *Faroe Islands Rounds*, *Otomí Santiaguitos*.

Pas de Basque: Basque, Russia, Hungary, Scotland *Sword*, Mexico *Concheros*.

Heel-toe Rock: Hungary *Bokázó*, Scotland *Highland Fling*, Mexico *Concheros*, *Jarabe Tapatio*.

Pat-step: American Indian, *Boogie* (the latter with hip action).

Step-heel-toe-heel: India, Yaqui *Deer*, *Boogie*.

Toe-touching: *Hornpipe*, *Jig*, *Concheros*, *Jarabe Tapatio*.

Turning Leap: *Santals*, Tibetan *Devil Dance*, *Slavic Dances*.

Skip: Impulse down and up among Coorgs of India, up and forward in England, with forward pull in Russia, with back pull among American Indians.

Acrobatics

Some feats of strength serve to exhibit prowess; others, as the leap, to further the growth of crops. Or they result from trance-induced loss of inhibitions.

Crouch: Borneo *Kayans*; Persians, Burma *Pwe*; Tibet *Skeleton Dance*; Russian *Cossack*; Serbian *Kolo*

(leader); Greece leader; Spain *Charrada*; Scotland *Hornpipe*; Switzerland *Hocketanz*; Gran Chaco girls of Pilaga; Mexican Aztecs, modern *Concheros*; Apache *gahe*; Kiowa *Squat Dance*.

Leap: Maori *Peru Peru*; Africa *War Dances*; Eastern Archipelago *War Dance*; Russia "Prisjadka"; Hungary *Szolo*; leader of *Link Dances*; *Seven Jumps* (Germany, Holland, Denmark); Basque *Zaspi Jausiak* (seven jumps), *Aurresku*; Bavaria *Schuhplattler*; Norway *Halling*, Midsummer Fire Leaps.

Kick: *Aurresku*; *Sardana*; *Halling*; Brittany *Triori* (women); Catalonia *Camada Redona* (man's leg over girl's head), also Sweden *Daldans*; Mexico *Jarabe Tapatio*.

Lift Girl: Moravia *Rozek*, *Kanafaska*; Naples *Saltarella*; Spain *Jota al Aire*, *Sardana* (Corranda Alta); France *Branle de l'Official*; Denmark *Firtur*; American *Cowboy Dances*. African dancers also throw girls about.

Special Feats: Stilt-dancing of Cameroon; Oaxaca (*Zanco*), formerly Aztecs.

Hammock Dance, Sierra Leone, Africa.

Blanket Tossing Dance, Eskimos of Baffin Bay.

Human Pyramids of Spanish *Mojiganga* and ancient Aztecs.

Spiral descent from pole of Mexican *Volador*.

Structure

Rhythmic Patterns

Rarely do steps follow musical rhythms to the letter, the self-accompanied *Concheros* being an exception. A regular beat is the rule. The Negro dance and Boogie may syncopate. Spanish heels, castanets, finger-snapping, handclapping form complex counter-rhythms. The accent may recur every second, third, or fourth beat, rarely at irregular intervals; on the second beat of the measure (*Sarabanda*, *Mazurka*); the last beat of a phrase (Russia); or be absent (*Square Dance*). Counter-accents occur in 2/4 against 3/4 of *Guabina* and *Llorona*, and in the Yaqui *Matachini*, with a 15-measure phrase against 16 of the music. Spaniard and American Indian often suddenly change tempo and meter.

Common rhythmic units are two short and a long (*Two Step*, *Zamba*, *Rumba*), three steps and a skip (*Polka*) or tap ("double") or brush (*Quetzales*) or kick (*Conga*); iambic long and short (*jig*, *slide*, *galop*).

Form

1) Crescendo: Increase of intensity to the saturation point is typical of "primitive" dancing: Africa, often the American Indian. This is the most rudimentary form.

2) The development of dominant themes into a structure is a sophisticated device, as in the Tibetan *Black Hat Dance*.

3) Stretto (the contraction of rhythmic units): *Siebenschritt* of central Europe: 7 steps forward and back, 3 each side, turn.

4) Two-part phrase: Finland *Ålands Flicka*; Sweden *Bleking*, *Tantoli*; Germany *Herr Schmidt*; Austria *Strohschneider*; Bohemia *Komarno*; Lithuania *Noriu Miego*; Mexico *La Raspa*: forward alternation of heels, then hook and swing.

5) Binary form of slow and fast: *Zyganos* and *Chords*, *Mazurek* and *Obertas*, *Lassu* and *Gyors* (Hungary), *Schwabentanz* and *Dreher*, *Pavana* and *Gaillarda*, *Gan-gar* and *Springar*.

6) Thematic alternation: *Minuet*, *Rondeau*, Fox Indian *Bean Dance*.

7) Medley of figures: *Jarabe Tapatio*, *Jarabe Michoacano*.

8) Logical succession of figures: Three part *Square Dance*, Four part *Irish Reel* (Opening, Body, Figures, Finish), Five part *Country Dance*, *Lanciers* (La Dorset, Victoria, Les Moulinets, Les Visites, Les Lanciers).

9) Grouping of dances into a kind of suite, involving dramatic climax:

Surtida (Birgoire, Camantugol, Tambururay, Haplin, Liguí, Voluntario, Incoy, Estrella, Salpumpati): courtship drama.

Morris (Laudnum Bunches, Bean Setting, Rigs o'Marrow, Shepherd's Hey, Constant Billy): vegetation conflict.

Ezpata Dantza (Yoakundia, Zortzikoa, Ezpata Zokua, Makil Aundiak, Banakoa, Binakoa, Txonkórinka): apotheosis of combat.

Such elaboration leads on the one hand to the orchestral suite, on the other into the mimed drama.

Survival and Revival

In many parts of the world traditional rustic dances are being accepted whole-heartedly in urban areas. Folk dance societies have sprung up like mushrooms, starting with the English Esperance Girls' Working Club. Valuable collecting and teaching has been accomplished by the Danish Society for the Promotion of Folk Dancing, the National School of Irish Dancing, the Jugendbewegung, the shortlived Mexican School of Indigenous Dance; in the United States by the Country Dance Society, City Folk Dance Society, Community Folk Dance Center of New York, Youth Hostels, Civic Centers, recreation programs in parks; internationally by the Y.M.C.A., Y.W.C.A., Y.M.H.A.; during World War II the U.S.O.

In America groups from many countries practice at international centers or special headquarters. Native traditions have been upheld in various colonies: Slavs, Germans, and Irish in Pennsylvania; French in Canada and Louisiana; Scandinavians in Minnesota, Iowa, North Dakota, and Seattle, Wash.; Spaniards and Mexicans in California, New Mexico, and Texas.

A larger public is reached by folk festivals, such as the National Folk Festival, formerly held in Washington, D.C., now in St. Louis, Mo., the Mountain Folk Festival of Asheville, N.C.; the programs of the Berea Mountain School, Ky.; the Summer Dance Camp in Buzzards Bay, Mass.; the Monadnock Folkways Summer School, N.H.; also the more professional series at museums, especially the American Museum of Natural History in New York, and at the Ethnologic Dance Center. Also, white friends of the Indians are arranging increasingly numerous powwows at convenient centers. Except in the New Mexico pueblos, the Indians themselves are becoming less averse to white visitors to their local powwows.

In Latin America gala gatherings convenience the tourist: near Lima, Peru, the *Fiesta of Amancaes*; in Bolivia the *Fiesta of Copabacabana*; in Masaya, Nicaragua, the *Fiesta of San Geronimo*; in Guatemala the *Fiesta of Chichicastenango*; near Oaxaca, Mexico, the *Guelaguetza (Fiesta del Cerro)*. But besides these, the ancient religious celebrations continue, without re-

gard for spectator value, as sacred pilgrimages, even at great accessible fairs: Guadalupe, Remedios, Amecameca, Tepalzingo, Papantla, San Juan de los Lagos, San Miguel de Allende in Mexico.

Creative Aspects of Folk Dance

Communal dance is growing into new forms, largely due to the ingenuity of creative leaders.

1) New combinations on old models, especially *Cow-boy Squares* and *Lumberjack Stags*.

2) American *Play Party Games*: formed on frontier of Tennessee, Iowa, Nebraska, Missouri, Texas. Country people play games with words, tunes, dance figures, dramatic action, jingles, ballads, popular songs, calls—all with a medley of realism and nonsensical antics.

3) Children's *Singing Games*: new versions of these remnants of ancient ritual.

4) Improvisatory *Flamenco* performances.

5) Improvisatory *Jitterbug* and *Boogie Woogie*: hypnotic American folk dance.

6) Improvisation and original step combinations: Sioux *Kahomini*, Fox *Snake* and *Eagle Dance*, other American Indian dances.

Ritual may remain immutable for centuries. But changing circumstances, mixture of races and religions bring innovations. The Pawnee *Iruska* (Fire Dance) grew out of the Dakota-Ojibwa *Heyoka* and Omaha-Osage *Crow-belt*, and developed into the Arikara *Hot Dance* and Plains *Grass Dance*, now secularized, thence into the Central Algonquian *Dream Dance*, mingled with Christian ideology. Recently recovered Palestine has renovated its ancient heritage. Peru has instituted a flashy modern vintage *Fiesta de la Vendimia* in March, near San José de Surco. Contemporary events intrude into the masquerade of the one-time sacred *Carnival* and *Mardi Gras*.

Eventually *Komos*, *Kágura*, *Morisca*, *Cuadro Flamenco*, *Barn Dance*, *War Dance* and *Fiesta* accumulate spectators, interpolate the spoken word, and end up as theatrical spectacle, elaborate and meaningless in proportion to the disappearance of practical value.

GERTRUDE PROKOSCH KURATH

Dancers An American Indian name for the constellation commonly known as the Pleiades: so named for the constant twinkling of its stars. Explanatory myths about the Dancers occur especially among the North American Cherokees, Caddos, Micmacs, and Iroquois. These people also perform dances in imitation and memory of their lost dancers. An Onondaga story tells of a group of children dancing in the woods, warned by the chief to stop, and refused food by their parents because they would not stay home to eat. One day as they danced they began to rise and whirl through the air. The parents ran out of the houses with food, calling to them to come back. But the children danced higher and higher, and now dance forever in the sky. In a Seneca variant the eleven sons of a hunter were beguiled at night into joining the dance of the sky spirits. Once dancing, they could not cease dancing and were carried into the sky. Finally the Moon, pitying their fatigue, changed them into a group of fixed stars and put them in charge of the New Year festival, to dance over the council house for three days at that time. In a Blackfoot (Algonquian) story the dancers were seven young men

who danced around a field of sacred grain all night to guard it. For other Pleiades origin stories, see **PLEIADES**.

dance with reeds A motif found in the Coyote cycle of all Apache Indian folktale. The Chiricahua Apache version is typical: After Coyote was blinded, he was going along, and walked into a bunch of reeds in a swampy place. The reeds were blowing and swaying in the wind; so Coyote yelled and danced with the reeds all night. In the morning he climbed out of the reeds and came to a camp. The Lipan Apache story is the same, except that Coyote is not blind, and he personifies the reeds as reed-girls. Compare **DANCING BULRUSHES**.

dancing bulrushes The motif of a number of North American Indian trickster stories of the Plains and Lake regions in which the trickster sees the bulrushes waving and dancing in the wind and dances with them until he is exhausted. Compare **DANCE WITH REEDS**.

dandelion (from French *dent de lion*, lion's tooth). In Maryland, when the dandelions do not open in the morning, it will rain. When there is no wind, yet the down flies off the stalk, it will also rain. In England an infusion of the roots is used as a blood purifier and spring tonic; it is also good for the liver and rheumatism. Wine made from the flowers is generally believed to be a tonic. In Ireland dandelion is regarded as a tonic and remedy for heart disease. The juice of the stalks rubbed on warts drives them away. In Silesia dandelions gathered on St. John's (Midsummer) Eve possess enhanced medicinal properties and the power of keeping off witches.

There is much children's lore connected with the dandelion. Blowing the seed-heads will tell the time: as many puffs as it takes to blow them all away is what o'clock it is. If a child can blow all the seeds away in three puffs, his mother does not want him; if some remain, he had better run home. How much your sweetheart is thinking of you can be told by the amount of down remaining after one puff. Picking a dandelion, or wearing one, makes a child wet its bed (the dandelion is sometimes called piss-a-bed).

Dandoo The title often used in America for *The Wife Wraith* in *Wether's Skin* (Child #277): so named from the nonsense syllables of the refrain.

Dangbe The snake *tauhwiyō* (ancestor) or sib founder and deity of a famous old Dahomean family: still worshipped in Dahomey, especially at Whydah. Dangbe is Dā, but distinguished from Dā in that Dangbe is serpent life *per se*, while Dā is the living quality or essence in all things living and sinuous. There are cult houses and shrines for Dangbe in Dahomey. One of the most conspicuous elements of the West African Dangbe cult is the practice of distintering the skulls of the dead to serve as altar receptacles for offerings to the deified ancestors (*tovodu*). Sib members are ritually called Dangbevi, i.e. children of the snake Dangbe. Dangbesi, literally Dangbe-wife, is the term applied to initiated cult devotees. See **DAGOWE**.

Danu or Dana (genitive *Danann*) In Old Irish mythology, the mother of the gods, the Tuatha Dé Danann or people of the goddess Danu. She has been the subject of much speculation, interpreted variously: 1) as Anu, the goddess of plenty mentioned in Cormac's *Glossary*

and for whom are named the Paps of Anu, two mountains in Kerry; 2) as Brigit, daughter of Dagda, and thus mother of Brian, Iuchair, and Iucharbar, called the three sons of Danu (this MacCulloch thinks is through confusion with the word *dán*, meaning art, knowledge, poetry, of which Brigit was patron); 3) as some possible, still earlier earth mother or underworld fertility deity who mothered the gods; and 4) tentatively, as ancestor of the Black Annis of Leicestershire who required human victims. Danu is identified with the Dôn of Brythonic mythology.

danza A Spanish term for dance. It refers to special couple dances in several Latin American countries, danced in modern ballroom position. The music is in duple time, in Puerto Rico with a syncopated accompaniment, in Mexico with a tango rhythm. In the 15th, 16th, and 17th centuries the term *danza* was used for Spanish court dances in distinction from *bailes* or popular dances. It is also applied to religious dances. [GRK]

danzón An amplification of the Spanish word for dance: a couple dance of African origin, popular in Cuba and Veracruz, Mexico. Modern instruments—brass and woodwind and a *guiro* or notched gourd—burst into exuberant, primitive rhythms. With an expression of almost religious solemnity, the dancers betray a subtle undercurrent of eroticism in their small one and two steps. [GRK]

daoine maite Literally, the good people: the fairies of contemporary Irish folklore.

daoine síde Literally, the people of the mounds: the tall divine folk of Old Irish mythology, the Tuatha Dé Danann. See AES SÍDE.

Daramulum In Australian mythology, the son or deputy of Baiame to whom he is sometimes troublesome. Also, he is the chief totemic ancestor of the Yuin tribe. The name occurs among tribes of New South Wales. [KL]

Dardanus The mythical ancestor of the Trojans; son of Zeus and Electra. He was an Arcadian who married Chryse and received as dowry the Palladium given to Chryse by Athena. Having killed his brother, Dardanus fled to Samothrace, and from there during the flood crossed to the Troad on a raft or a blown-up hide. There he married Batea, daughter of Teucer, and succeeded him on the throne. He was thus the ancestor of Æneas, and as son of one of Hera's rivals caused her to side against the Trojans, his descendants, in the war at Troy.

Daśaratha In Hindu mythology, the childless king of Ayodhyā who performed the horse sacrifice (Áśva-medha) after which four sons were born to his three wives. According to the *Rāmāyaṇa*, Viṣṇu gave Daśaratha a bowl of nectar which he divided among his wives. He gave Kauśalyā half and the other two each a quarter. Thus Rāma, son of Kauśalyā, shared half the nature of Viṣṇu, while the others shared in proportion to the amounts of the nectar their mothers had drunk.

Dasent, Sir George Webbe (1817–1896) Englishman and Scandinavian scholar, assistant editor of the *Times* (1845–1870). He published translations of Norse tales, *Popular Tales from the Norse* (1858) and *Tales from*

the Fjeld (1896). Among his excellent translations are Asbjørnsen's *Hen who went to Dovrefjeld to save the World* and *Cock who fell into the Brewing-Vat*, examples of the cumulative tale.

date Among the ancient Egyptians, the Sumerians, and the Taoists of China the date palm was considered the tree of life, and among the Taoists, also the symbol of offspring. The Hindus thought the tree possessed intelligence and was only one step removed from the animal kingdom. The genus name of this tree is *Phoenix*, from an ancient belief that if the tree falls from age or is burnt, it will grow again greener than ever. In some places Mary is reputed to have given birth to Jesus under a date palm, and a new mother must eat three dates. The root boiled and mixed with flour makes a poultice for swellings and is used to regulate the bowels. The wood is used for building, the leaves are woven into numerous articles, the juice of the tree is used in making palm wine. The fruit is the staple food of many peoples, the seeds are ground into an oil, and one species produces a sugar. See TREE OF LIFE.

datu The Moro (Philippine Islands) name for a chief. The word *datu* is used generally in the Philippine Islands for a chief and in Sumatra for a shaman, who frequently is also a chief. Among the Bagobo the *datu* holds his position because of his personal wisdom and bravery and, of primary importance, with the consent of the spirits. (Among the Batak of Sumatra originally there were no priests, but after the introduction of Hinduism a kind of priesthood was instituted. These *datu* are priests according to Loeb in so far as they hand down the main part of the Hindu ritual and learning.) As *datus* their duties actually resemble those of the shaman. The *datu* is a physician who practices curing magic. He is also a clairvoyant and a weather-maker. He conducts public ceremonies, summons the spirits in a secret language, and determines the propitious time for war-making.

datuḡad Literally, in Irish, a color or dye; coloring. The word is often applied to the magical power some people seem to have in always being dealt the best cards in a card game, i.e. the "coloring" of the cards.

David King of Israel about 1000 B.C.; father of Solomon: perhaps the greatest hero of Hebrew tradition in all respects. David possesses many of the attributes of the folk hero: his parentage was high but obscured; he was a despised youngest son; he served as a shepherd; he was the slayer of giants and beasts; his weapons were magical; he was a great musician; his principal failing was caused by his love of women; his son rebelled against him, etc. His story is told in I and II *Samuel*, I *Kings*, and I *Chronicles*; he is also said to be the author of many of the *Psalms*. Under David, the Kingdom of Israel achieved eminence among its neighbors (in a weak period of Egyptian dominance of the region), an eminence exceeded only by the glory of the kingdom under Solomon.

Jesse, David's father, took a liking to one of his slave girls. But Nazbat, the lawful wife of Jesse, disguised herself as the slave girl, and thus David was conceived. When David was born, however, his mother let it be thought that he was the son of the slave. A legend states that the child was destined to live only 3 hours, but

when at the Creation God permitted Adam to see the future inhabitants of the world, Adam had presented seventy of his allotted thousand years to David. In fact, some say, the world and all upon it were created only that David might one day live. For David is to be reborn as Messiah, though some tradition holds that one of David's descendants will be the Redeemer. The claim that Jesus was the Messiah rested very strongly in his descent from David; the genealogy is emphasized by the Gospels.

As a young man, David was Jesse's shepherd, living the solitary life of the flock-tender. Several of his adventures in the desert are traditional. He slew with his hands four lions and three bears. Once, thinking it was a hill, he climbed up the side of the monstrous animal, the reem. When it stood up, David was lifted far above the earth. In his prayer for help, he vowed to build a temple as high as the reem's horns if he were permitted to descend. (The building of the temple was accomplished by David's son, Solomon.) Therefore God sent a lion, before which king of the beasts the reem bowed down. Then, as in all good hunters' tales, as David got off the horns of the reem, a deer appeared, the lion chased it, and David escaped unharmed.

At the age of 28, David was anointed somewhat secretly by Samuel as the successor of Saul. It was then that his mother revealed that he was not a slave's son. He came to the court, and there, arousing the jealousy of other courtiers, he became the butt of much of Saul's morose ill-humor. After David had killed Goliath with the sling and pebble (three or five speaking pebbles had offered themselves to David and became one when he fought), Saul became more convinced than ever that David was fated to succeed him. David had to flee into the desert, where he and his band, a sort of Robin Hood's crew, became marauders on the outskirts of Saul's kingdom. Once as David hid in a cave Saul almost discovered him, but a spider spun its web across the cave's entrance and Saul went on convinced that the cave was undisturbed.

Eventually David became king. His son Absalom, one of the joys of David's life, rebelled against him and was killed when the uprising was put down. The lament of David is one of the most poignant speeches ever written. David sent Uriah the Hittite to his death in order that the will of God that David and Bathsheba marry be fulfilled. A famine, one of the ten greatest ever to occur, desolated the land. It was finally discovered that the cause of the famine was the burial of Saul and Jonathan outside the land. When the bodies were reinterred in the lands of the tribe of Benjamin, the famine ceased.

David knew that he would die on the Sabbath, and, despite his pleas that it be some other day, it was so. Knowing that the Angel of Death could not take him while he studied the Law, David spent the Sabbaths deeply immersed in study. But the Angel of Death one Sabbath caused a noise in the garden, and David arose from the Book to find out what had happened. While thus distracted from his studies, he was vulnerable, and as he walked down the steps into the garden, they collapsed. David's body fell into the garden in the full sun. As it was the Sabbath, the body might not be moved. Therefore Solomon called great eagles which with their wings shaded the body and kept it cool.

David's tomb in Jerusalem, his capital city, was the scene of several miracles. A Moslem notable once accidentally dropped his sword into the tomb. Four of his followers went down to retrieve it, and all four were brought up dead. It was then announced that the Jews of the city would be made to restore the sword under threat of dire punishment. After a three-day fast, the beadle of the synagogue was chosen by lot to descend. He was hauled up, much shaken, but with the sword. He said later that within the tomb an old man had appeared and handed him the weapon.

On the day of judgment, David will recite the benediction over the wine at the great feast for the elect. God will pass the cup to Abraham, who will pass it on, for he is the progenitor of the Ishmaelites. Isaac too will pass the cup, for Esau's children destroyed the Temple. Jacob will pass the cup, for he violated the law by being married to two sisters at the same time. Moses, who was not permitted to enter the Holy Land, and Joshua, who was not fit to be the father of a son, will similarly refuse the honor. But David, the sweet singer, will say the blessing.

Davy Jones In sailors' lingo, the spirit or personification of the sea; **Davy Jones's locker** is the bottom of the sea. To go to Davy Jones's locker is a common phrase meaning to be drowned at sea, or to die and be buried at sea.

Dayan In Indian belief, a witch who frequents burning grounds and cemeteries, drinks blood, casts the evil eye on children, and knows the *dāyan kā mantar* or charm for destroying life: a name derived from *Dākinī*, the female demon. Among the Oraons a woman who desires the power of a Dayan goes to a cave wearing only a girdle of broken twigs taken from a broom. There for a year she learns spells and, during each seance, drops a stone in a hole. If at the end of the time the hole is full, she has the ability to take away or restore life; if it is only partly full, she has the ability only to take away life.

day-names Gold Coast (West Africa) designations for human beings (and sometimes supernatural beings) given in accordance with the day of the week on which a person of one sex or the other is born. They are found in those parts of the New World where the Negroes are predominantly of Fanti-Ashanti derivation—Dutch Guiana, Jamaica, and the southeastern coast of the United States. Versions from Jamaica and Dutch Guiana (Surinam) can be given here:

	Jamaica		Surinam	
	Male	Female	Male	Female
Sunday	Quashe	Quasheba	Kwasi	(A)Kwasiba
Monday	Cudjo	Juba	Kodjo	Ajuba
Tuesday	Cubena	Beneba	Kwabena	Abena
Wednesday	Quaco	Cooba	Kwaku	Akuba
Thursday	Quao	Abba	Yao	Yaba (Yawa)
Friday	Cuffee	Feeba	Kofi	Afi
Saturday	Quamina	Mimba	Kwamina	Amba

The derivation of such American Negro names as Quashee, Cuffee, and Codjo is apparent from this list. The tradition of giving day-names apparently persisted in the United States after the African names themselves had disappeared, as witness the names

"Thursday" or "Saturday" borne by men living in the Sea Islands off South Carolina and Georgia. [MJH]

day of the dead In some communities a special calendrical day on which it is proper to do honor to the dead, though the ceremonies of the day of the dead are conditioned by the views the community holds about death and about the ceremonies needed for purification and protection. Frequently these ceremonies are determined as much by the hope that the ghosts will be kept from troubling the living as by affection for the departed. The custom is further complicated by the readiness with which communities accept alien customs for protection. In China, for example, important ceremonies are performed in Spring, Summer and Autumn (the second, seventh, and tenth moons). These ceremonies are to give ease and comfort to man's two principal souls: the spiritual soul which in heaven will, it is hoped, exercise political pressure in favor of its descendants on earth; and the animal soul, which if it has great vitality, might still animate the corpse or skeleton or parts of it and cause terrible trouble among the living.

The elaborate Hindu *śrāddhas* (rituals for the ancestors) contain elements found in several parts of the world. They last for ten days when the ghost receives food to help it obtain liberation from the ten different hells it must visit. On the first of the new autumn moon the head of each Hindu family performs ceremonies for the dead of the last three generations. Additional ceremonies are performed on the anniversary of the day of death. Reports from all continents indicate that ceremonies occur which might be called (a) general, for the souls of all the dead such as All Souls Eve in Christian countries, or the Feast of the Hungry Ghosts in China; or (b) particular, for immediate ancestors, heroes, and the like. Other ceremonies for classes of dead fall between these general and particular ceremonies and belong to the special days on the calendars. Among these are memorial days for those who died in battle, those who died at sea, those who died in great disasters. In this connection it is proper to note that the souls of persons who died by violence are more restless and dangerous to the living than the souls of those who died "naturally." [RDJ]

dayong A Kayan (North Borneo) medium whose duties include that of doctor (but not midwife), soul-catcher, magician, and conductor of important ceremonies. The dayong is frequently a woman. In soul-catching she sends her own soul in search of the lost one which is causing its owner misfortune by its absence. When she finds it, she entices it back to the body of its owner and then places palm-leaf wristlets sprinkled with blood on the patient's wrists to make certain that the soul will stay where it belongs. The dayong directs funeral ceremonies, keeps a fire burning to guard against the evil spirits which crowd around after a death, and chants instructions to the spirit of the dead person. She also entices unfriendly spirits onto a small raft loaded with food and gifts and sends the craft away with the spirits aboard, thus ridding the village of these beings though only temporarily.

Dead Horse Chantey A chantey sung on American ships at the halyards or capstan, and on British ships to accompany the celebration of "burying the dead

horse." The dead horse represented the first month's work on the ship, for which wages had been paid in advance and spent ashore. When the debt was worked out, a dummy horse of rags and straw was dragged around the deck and thrown overboard, to the tune of the chantey. The chantey is also called *Poor Old Man*.

dead man's hand In the American West, the poker hand of aces and eights has been known thus for three-quarters of a century. The famous scout of the plains, Wild Bill Hickok (J. B. Hickok of Cheyenne, Wyoming) was shot at Deadwood in the Black Hills on August 2, 1876, while playing a game of poker. The assassin was Jack McCall and the weapon a .45-caliber Colt. When the body was removed from the saloon where the murder took place, it was noticed that the dead man's fingers were tightly clenched upon the cards he had held and that the hand contained two pair, aces and eights. [CPS]

dead rider The motif (E215) of a cycle of traditional European ballads in which a dead man returns and takes with him on his horse some dearly loved person—wife, child, or sweetheart. In some versions the living rider does not know the other is dead; often the living narrowly escapes being taken into the grave with him. In the Greek ballad *Constantine and Arete* or *The Dead Brother's Return*, Constantine returns from the dead to bring his sister, Arete, to their dying mother's bedside. During the ride Arete learns that her brother is dead when she hears the birds in the trees commenting on the wonder that a dead man rides with a living girl behind him. Frequently a dead lover abducts his betrothed and carries her with him to the grave. Sometimes she is saved from going into the grave by a cock's crowing; but she almost always dies the next day. The dead rider motif is found in Icelandic, Danish, German, Bulgarian, Rumanian, Greek, Albanian, Serbian, Czech, and English balladry, and turns up also in an Araucanian legend. Hungarian Gypsy ballads also use the theme. The English ballad, *The Suffolk Miracle* (Child #272) on which Burger's *Lenore* is based, is an undramatic version of this grim story. *Sweet William's Ghost* (Child #77) belongs to the general group.

dead shoes Shoes provided for the dead because of the long journey they must make to the afterworld: a very ancient custom, surviving quite generally in Europe to relatively modern times. The ancient Teutonic and Scandinavian *Helskô* (or *Todenschuh*) were bound to the feet of the dead to ease the rough going of their journey along the Hell way. The traditional Scottish ballad, *The Lyke-Wake Dirge*, presents an old belief prevalent on the border that to give new shoes to a poor man in life guarantees that at death an old man will meet you with the shoes in his hand, so that you need not walk unshod over the stones and thorns in the path.

Southern United States Negroes do not put shoes on their dead for burial, and mourners must not wear new shoes to a funeral lest the dead be envious and try to get them: a strange combination of contradiction and verification of the belief that the dead need shoes.

dead smell bad The reason why the California Huchnom Indian creator, Taikomol, gave up the idea

of resurrection of the dead. After Taikomol had created the earth for the third time, built a dance house, and made human beings, he gave to them the *hulk'ilal wok*, or dance of the dead. During the dance, one of the people did something wrong, and sickened and died. Taikomol buried him, but assured the man that he might come back in the morning. So in the morning the dead man walked back into the dance house. All the people said to each other that that one who came back smelled very bad. They could not stand it and were sick. So Taikomol gave up the idea of allowing the dead to return.

death Nearly all North American Indian tribes offer some explanation of the origin of death. The most widespread tale is that of an early controversy between two characters, either animal or human. One character wants people to die and be revived, the other wants death to be permanent. The second character wins the controversy; often, a little later a close relative of his, such as a son, dies and the parent wishes the decision reversed. His opponent reminds him, however, that he himself has already decided the matter. [EWV]

 Surprising unity of death belief is found over the entire Middle American area. The underlying theme is that the soul on its way to the afterworld is confronted by dangers and difficulties which must be overcome. The soul of the ancient Aztec had to pass between clashing rocks; among the modern Miskito of Nicaragua trees clash together to catch the unwary traveler. Among the Popoluca of Veracruz in Mexico a whip woven of seven strings, the tribal sacred number, is placed in the hands of the corpse to permit it to drive dangerous animals from the path to the hereafter. In Tehuantepec the corpse is provided with thick sandals, since the path to the hereafter is filled with thorns and brambles. It is commonly believed that dogs, often red, must help the souls of their masters across a body of water which lies between them and paradise. For this reason, Indians almost never kill dogs, even though they may permit them to starve. In other cases, as among the Cuna of Panama, the soul of the dead traverses the water in a canoe. Christian influence is reflected in the frequent modern explanation that the water is the River Jordan. Rare is the Tarahumara custom of destroying or abandoning the house of an adult after his death. See AFTERWORLD; DEAD SHOES. [GMF]

death baby A New England popular name for a species of fungus (genus *Ithyphallus*). Its appearance in the yard of a house is said to portend a death in the family, and it is destroyed as soon as sighted.

death coach In Irish folklore, the spectral vehicle whose stopping at the door of a house means that someone in that house will die the next day. It is driven by a headless driver and drawn by black (sometimes headless) horses, and therefore often called the "headless coach." If it is seen passing through a village street, it must not be stopped; it must not be stopped before a house door either, for only in that place where it stops does it mean someone will die tomorrow. There are occasional stories that the banshee rides the death coach, or that sometimes it travels through the air. It is certain that a fallen bridge is no trouble to it; it crosses easily. Compare ANKOU.

death dance A dance or dance drama enacted by a group for the spirits of the departed or personifications of Death. Of the many underlying concepts, the following are the most prominent:

1) Release or exorcism of the spirit, motivated by fear of its malignant potentialities. American Indians often perform a series of funerary and anniversary rites. The California Luiseno banished the spirit from his familiar haunts with the *tuwish* and *chuchamish* (which resemble wakes), and in memorials for all the dead of the year or several years with the *yunish matackish* (which imitates the dead), with the *tauchanish* (which involves burning of images made of rush), with the *notush*, and with the *ashwut maknash*, or eagle-killing for chiefs. Similar to the *tauchanish* is the *keruk* of the Diegueño and *ka'aruka* of the Yuma; the images are danced to a shelter (*keruk*) and burned with stacks of gifts for the other world. The Tarahumara Indians of Chihuahua dance the *rutuburi* and *matachini* and a death dance around the belongings, during a third-week fiesta; after a year they dance the *yumari* and *pascol*. The Yaqui of Sonora hold a fiesta and dance the *pascol* at the wake of a child; the *matachini* dance in honor of a member of their society; the *chapayekas* for anyone dying during Lent. A second wake or *velación* finally releases the *hiepsi* or spirit; this novena occurs after three days among the Yaqui, after the proper eight days among the Mayo. Among the Cáhita (Mayo-Yaqui) Indians ghosts are not feared as in California.

2) Catholicism has introduced the appellation of *angelitos* in the case of the death of children. This motif of cheer and consolation pervades the Spanish wakes for children. "Están con los angeles"—they are with the angels, they say. The *jota* and *canario* are danced on these occasions. Consolation is probably mingled with vague early concepts in the dancing of the *jig* at Irish and Scottish wakes, and of the *baraban*, *lucia*, and *mattacino* of dirges in Sicily and Tuscany.

3) Memorial rites may also have a curative function, as the Iroquois '*ohgiwe*, the women's chant for the dead.

4) Communion with the dead, paramount in ancestor-worshipping cultures. Usually identification is effected by means of masks, as in the ghost dance with mask and shroud enacted by African Wydah and Yoruba tribes, the Brazilian Machacali and Caingang and in ancient times the Roman *archimimus*. Sometimes this communion is mystical, without impersonation, as in the Plains *Ghost Dance*. This however is not mortuary, and so deserves separate treatment.

5) Propitiation of the spirit, especially of enemies slain in battle. In the Plains scalp dances, California Yuki head dance, sentiments of triumph mingle with those of fear.

6) Personification of the concept of Death, pre-eminently in the medieval European *Dance of Death*. This is best known through frescoes and woodcuts, but has foundation in prolonged dance mimes. The grotesque skeleton of Death capers in turn with sinners of all classes and ages, cardinal, child, and laborer: an expression of the medieval horror of death, its *memento mori*. In Catalonia skeleton impersonations still cavort during religious holidays, notably Carnaval and Semana Santa (Holy Week): called the *danza macabra* or *ball*

de la mort, in Ampurdán a quadrille of skeletons carrying a scythe, clock, and banner. In Mexican carnivals *la muerte* is a horrid clown.

7) Fusion of the concept of death and of resurrection, the eternal cycle of life, is prevalent in pagan religions. Thus *la muerte*, apparently Christian, expresses the Aztec attitude typified by Coatlicue, goddess of maize and death. During the Middle Ages funeral dances enacted death and resurrection by a kiss. In the Hungarian *Gyás Tánc* one of the dancers performs this gruesome mime at funerals. The Bororo funeral ceremony is also a boys' puberty rite. The erotic *canario* celebrates a Spanish wake. In Europe and the Americas orgiastic rejoicing commonly follows the mourning, to produce life out of death.

A peculiarity of death rites is the reversal of directions and symbols, probably to mislead evil spirits. [GPK]

death feigned to meet paramour In North American Indian mythology, the tale of a woman who feigns death and is "buried" in order to marry her paramour, is told among Plateau and North Pacific Coast tribes generally, but has also been recorded for at least one Eastern Woodlands group, the Shawnee. The guilty woman marries her lover and lives happily for a time, but eventually is recognized and killed. [EUV]

death postponed by substitution A motif of folktale and myth in which one person's death can be postponed if a willing substitute can be found (D1855.2; T211.1; T211.1.1). Probably the most famous use of this motif is in the Greek story of Admetus and Alcestis. Another folktale, fairly well known in Europe (Type 612; motif E165), is about a man who resuscitates his dead wife by prayer, agreeing to give up half (or twenty years) of his own remaining time in exchange.

death prophesied The motif of a large number of European and Asian folktales (M341ff.) in which someone's death is prophesied in detail: at what age, on what day or hour of the day, by what instrument (hanging, drowning, fire, poison, lightning, a certain sword, a spindle wound, bite of a stone lion, or at the hands of someone of a certain name), at what place, etc. Every extreme of precaution is always taken to prevent the fulfilment of the prophecy (the sword is sunk in the sea, every spindle in the kingdom is destroyed, for instance, or the fatal child is exposed to perish, etc.) but the death prophesied inevitably comes to pass. Compare JASON; LITTLE BRIAR ROSE; TWO BROTHERS.

death tick or death watch The tapping or ticking noise made by a small wood-boring insect (family Anobiidae), called the death watch beetle. In general European and United States folk belief to hear it means there will be a death in the family. To hear it tick *only three times* is especially fatal in Lancashire belief. See BEETLE.

débat A song type in which a question-and-answer contest or an argument takes place: literally, French for debate. Examples in English are *Riddles Wisely Expounded*; *Inter Diabolus et Virgo* (Child #1a); and *The Farmer and the Shanty Boy*, an American song in which two girls argue out the merits of men of each calling as husbands. The type started with a homiletic purpose but developed secular forms.
