Folk song The old Latvian song, *daina*, is short, consisting generally of two lines, and is without rime. The two long lines are generally divided into two each, so that they are written as four short lines. Such a short song is a very old and primitive kind of poetry and we do not know the reasons which forced the Latvian *daina* to remain for centuries at such a primitive stage while the Lithuanian *daina* had developed to a considerable length. The Latvian *daina* is used not only for singing but also for recitation. The fundamental type of metric foot is the trochaic (90 percent) or dactylic (10 percent).

The mixed form of trochaic and dactylic meter is known in some songs used for dancing and playing purposes, instead of instrumental music. The iambic or anapestic meter is never found. The trochaic lines consist of eight syllables, which are divided into four feet or two dipodies, a *cæsura* occurring after every two feet. The fourth syllable at the end of each dipody is always short. The meter of the Latvian *daina* was investigated by L. Bērziņš. Another Latvian folklorist, P. Šmits, postulates the possibility of Gothic influence, because the Goths also apparently had verses of eight syllables. Alliteration in the Latvian *daina* is frequent, but not so developed as in Finnish poetry. Rime, on the contrary, is rare. Very often one finds parallelism, especially as a kind of confrontation: the first two lines are about nature, the second two about human life. From the stylistic figures the most peculiar is the three-membered anaphora.

The present Latvian *daina* does not go back before the 13th century. In the last three hundred years very few songs have been created in the old fashion. The *daina* shows very great stability: the first *daina* was written down in 1632 and three centuries ago the *daina* was just the same in form and content as today. The *daina* stands in close connection with work and worship, dance and play. The magic character of the songs is obvious, especially in the songs of familiar festivals, as of birth, wedding, and death, and in the Ligo-songs on St. John's Eve. The epic and lyric elements are mixed. Often mentioned are the struggles and depredations against the Lithuanians, Russians and Poles, but not against the Germans and Estonians, because these last struggles ceased with the beginning of the 13th century and the *daina* does not go back so far. No hero is mentioned; heroic songs are unknown. The short *daina* is unfit for a long epic account.

Further, the investigations make clear that the Latvian (and Lithuanian) *daina* is chiefly the product of women. According to K. Bücher, over 70 percent of the Latvian songs were created by women. Men also have some particular songs, e.g. the so-called oak-tree songs. Twelve men sit around an oak table in the inn drinking beer; each of the twelve must sing twelve *dainas* about the oak tree, and no one may repeat a song previously sung. The new kind of longer songs or *singes* of more epic character are also sung by men (compare A. Bērzkalne, *Typenverzeichnis lettischer Volksromanzen in FFC* No. 123, 1938). Most numerous are songs about nature and family life. "No gathering, no wedding, no midsummer night's celebration, no harvest festival, no special Latvian *talka* (when they come from the whole neighborhood to do a day's work together and to be regaled), no linen work or spinning was complete without these songs" (Stender). The greatest tenderness and affection is shown in the songs about orphans. The love songs on the contrary are very "cold"; the youth and maid counter each other with mockery which is very far from romantic, and the word *mīlestība*, love, is a very great rarity in Latvian songs. Humorous songs with biting irony are very common and coarse stanzas are also numerous. The didacticism in the Latvian *daina* is more pronounced than in the Lithuanian. The short four-line stanza is just the right form for humor or didactic purposes. Neither the Latvians nor the Lithuanians glorify war in their songs. The long serfdom and required work for German barons in Latvia and for Polish squires in

Lithuania humbled the common people, who did not know for what nor for whom they fought. They went to the wars under compulsion and the war brought only calamities for their countries. The Latvians for many centuries were deprived of freedom and sovereignty. In addition the lyric inclination in the mood of the people was not favorable for epic creation.

The Latvian songs often give us a picture of life which is different from that of the last centuries and about which written history knows very little. Often there were mentioned great forests, and the farms were situated on the banks of rivers and lakes, which gave good opportunity for traffic with boats or sledges. In the forests were plenty of wild beasts which are rare today, like bear, deer, aurochs, lynx. Much of the household equipment, even vessels, shoes, and clothes, were made from the bark of lime trees and birch trees. Before the "wood age" there was a "bark age." The farmers lived in small huts with very high thresholds, as protection against unwelcome visitors. The people were divided into three classes: *bajāri* (squires), *saimnieki* (free farmers), and *kalps* (servants, who were not free, usually prisoners of war). Family life was patriarchal and the situation of the wife was hard. Such were the conditions of life about three hundred years ago.

The first ten Latvian dainas were printed in the second edition of the *Latvian Grammar* of G. F. Stender in 1783. Other German clergymen followed his example, and collected and published dainas: G. V. Bergmann in 1807–08, two numbers with 490 songs, and F. D. Wahr, 411 songs, in 1807 (see *Foreign Quarterly Review*, London, July–October, 1831). A bigger and better arranged collection by Rev. G. F. Büttner appeared in Mitau in 1844, containing 2,854 songs. He had an understanding for folk poetry and was the first to examine Latvian songs critically. A very important collection was published by A. Bielenstein: *Latvešu tautas dziesmas* (Latvian folk songs), 2 vols., Leipzig 1874–75, containing 4,793 songs. We see that the first contributions were made by German preachers. Then the Latvians themselves began to show interest in their folk poetry and ethnography.

The most important work for the Latvian daina was done by Krišons Barons (1835–1923), who devoted his long life to the folk poetry of his own nation. He organized a widespread movement for the collection of dainas; with great patience and devotion he sorted the material and lived to see the task accomplished. His monumental work, *Latvju Dainas*, contains 18,000 items previously published and 200,000 variants from the manuscripts. For each type of daina some variants were given in full or notes about other published variants, and such "basic dainas" number more than 35,000. We must remember that about 90 percent of the Latvian dainas consist of a single four-line stanza; therefore it was possible to put such a great number into eight books. The first volume appeared in 1894 and the last in 1915. The Russian Imperial Scientific Academy supported the printing. The work has a detailed index to the whole collection, in Latvian, in Russian, and in German. Barons also gave valuable introductions and explanations, descriptions of customs and beliefs, which made the texts more comprehensive. The arrangement of the work must be called exemplary. The free Latvian State reprinted a new edition of the work in 1922 in a

representative manner, beautifully bound, in six volumes (eight books). The last book is separate, obscene songs (not for sale).

The Latvian Folklore Archives, in a short time of national freedom after 1918, collected another 450,000 dainas. About 95 percent of these, however, were variants of already published ones.

The new big collection called *Latvju tautas dainas* in six volumes, edited by Endzelins, appeared in Riga in 1928–1930. It contains many melodies, edited by Yurjans, and illustrations by R. Zarinš. Very important are the numerous articles by the most important Latvian scholars who investigated all the former aspects of the life mentioned in the songs.

Finally P. Šmits began to publish the recently collected variants as a supplement to the Barons edition (*Tautas dziesmas*, vol. I, Riga, 1936).

The translations of the daina into foreign languages are notable. The Russian translations of Sprogis (1868) and Treiland (1873) were the earliest. Two small collections in German were translated by K. Ullmann (1874) and Inga Bielenstein (1918). The largest English selection of 283 dainas with a useful introduction was made by U. Katzenelenbogen (1935), and also a Jewish translation by the same translator (see *Daines*, Toronto, 1930, containing 140 Lithuanian and 456 Latvian songs; 2nd edition, Chicago, 1936). Many mythological songs were translated by M. Jonval into French, *Les chansons mythologique lettonnes*, Paris, 1929.

JONAS BALYS

Latvian mythology Folk songs are the richest sources of Latvian mythology. *Dievs*, god, or *Debestēvs*, the Father of Heaven, is the supreme god of the old Balts. It is not obvious, however, that he was a ruler over all the other deities and spirits. On Earth Debestēvs appears as a man and Latvian folk songs give us an entirely anthropomorphic picture of him. Another very important god is *Perkuons*, the Thunder. He is the most common god among the Balts, but we have no evidence that he was the highest god. The functions of Debestēvs and *Perkuons* are often confused. (See L. v. Schroeder, "Der Himmelsgott bei den Kelten, Littauern und Letten, etc." in his *Arische Religion* I, pp. 524–54, Leipzig, 1914). The sons of the supreme god or of Thunder, *Dieva dēli* or *Perkuona dēli*, often mentioned in folk song, are like the Dioscuri of the old Greeks. The Sun (*Saule*) and Moon (*Mēness*) are regarded as deities and are conceived as living like husband and wife. Often mentioned are the Daughters of the Sun (*Saules meitas*), who play together with the sons of the supreme god or Thunder. The Morning Star, in Latvian *Auseklis* (male) and in Lithuanian *Aušrinė* (female), also appear in the songs. Myths about heavenly bodies, known also to the Lithuanians, but more frequently found in Latvian folk songs, have attracted the attention of the scientists. W. Mannhardt wrote an important study, "Über die lettischen Sonnenmythen" in *Zeitschrift für Ethnologie* VII, 1875. Some folklorists, however, have generalized too much; for instance in *The Mythology of All Races* (vol. III, pp. 316–30), Baltic mythology is described as entirely dominated by the myths of the heavenly bodies; this is an exaggeration. The Latvians also venerated the goddess *Zemesmāte*, the mother of the Earth (Lithuanian *Žemyna*).

The Latvians have many nature deities associated with

the *māte* (mother) concept. For instance: *ugunsmāte*, mother of the fire; *ūdensmāte*, mother of the water; *jūrasmāte*, mother of the sea; *mežasmāte*, mother of the forest (there is also a *mežatēvs*, father of the forest); *laukumāte*, mother of the fields; and *vējasmāte*, mother of the wind. All the deities are very similar, they merely have a different sphere for their activities.

An important and frequently mentioned deity in Latvian folk song is Laima, or Laime (the last word means "luck"), a deity of destiny and birth. She weaves the sheets and covers the bed for a woman in childbed, then the birth will be successful. According to one *daina*, "Laime spreads her silken sheets, but not for everybody; only spreads for wives on their day of delivery" (Barons, 1107). Further, Laima forecasts the happy or unhappy life of the newborn. Generally she is a goddess of pregnant women and serious maidens. She helps modest girls weave cloth for the marriage portion, helps to choose the bridegroom, assists at the wedding, and leads the pair to the life of marriage. Another *daina* says: "That girl kept honor, Laime wove a wreath for her . . . Laime's wagon and God's steed, Sun's daughter is the matchmaker" (Barons 6621). Sometimes Laima acts with two other deities, Dēkla and Kārta, similar to the three Fates. Dēkla takes care of babies. It is not clear if another deity known as Māra is a survival of early times or if she is a popular conception of the Virgin Mary, acting also like a deity of destiny and birth.

The mother of the dead, Velumāte, is the goddess of the underworld. This is an unpleasant realm; even the birds fail to sing there. At funerals the traditional dirges and a dance of the dead were performed. Food and other things for the dead were put in the coffins or the graves. The house spirit, *mājaskungs*, is a dead ancestor; he lives in the fireplace or on the threshold. The ghost of one who has died an accidental or unnatural death, *lietuvēns*, is dangerous; he becomes a nightmare.

A spirit of the dead is called *velis* (Lithuanian *vėlė*; probably the word for devil, *velns*, is derived from this word too. Another word for devil is *juods*, black (Estonian *juudas*, Finnish *juutas*).

The hag is called *Laīme*, formerly a harmless fairy, but today *laumīnet* means "to practice witchcraft." The good magician is called *burtnieks*, the bad one *burvis*. The hag has many names: *ragana*, *lauma*, and *spigēna*.

Latvian gods seldom have a clear anthropomorphic nature. The worship of the phenomena of nature, such as the veneration of trees, has quite disappeared. About idols, temples, and priests of ancient times, we know very little. Some prayers are still alive, e.g. "Dear Sun, so white, give me your whiteness! Dear Laime, so healthful, give me your health!" (Barons 27322).

Three great festivals were celebrated by the old Latvians. The feast of spring fell about the time of St. George's Day. The greatest feast in summer was celebrated on St. John's Eve, and was called *Ligo-feast*. It was associated with the worship of the sun and the stimulation of fertility. Above all the Latvians take care to protect themselves, the cattle, and the fields against evil spirits and magicians, who are very active at this time and eager to harm, and who can take away the health of man and the fertility of cattle or crops. For protection pyres were built on the hills. The young people sang and leaped over the fire; wreaths of flowers were hung on their shoulders. There were many special

Ligo songs. Burdocks and thorns were spread before the doors of the stalls to ward against the visits of evil spirits. Houses and gates were decorated with green boughs. (See A. Bielenstein, "Das Johannisfest der Letten" in *Baltische Monatschrift* 23, pp. 1-46, Riga, 1874.) The spirit of the cornfield is named Yumis and is "caught" at harvest time. In the fall the great feast for the dead was celebrated. It was called *velu laiks*, the time of the dead, or *dieva dienas*, the days of the God.

Lau, Lao, Čauga, or Jurua Supernatural beings believed in by Negrito Andaman Islanders. They inhabit forests and the sea, and are also associated with spirits of dead men and women and of foreigners and aliens. They steal the souls of jungle-wanderers. They fear fire, arrows, beeswax, human bones, and red paint. No one agrees on how they look except that they are hideous. Those living in the sea are Jurua in the northern part of the islands and Juruwin in the south. The Lau which live in the jungle are called Ti-miku in the north and Erem Čauga in the south. [KL]

laughter In Egypt's Middle Kingdom, during the reign of Amenemhet I of the XII Dynasty, the *Prophecies of Neferrohu* mentions laughter: "Men laugh with the laughter of pain; there is none that weepeth because of death." Laughter, even then, was not always mirthful. True, the Homeric laughter of the gods of Greece was full of joy, but often it was tinged with bitterness, as was their gusty laughter at the lameness of Hephaestus. It has been noted that laughter in the Bible is usually scornful, not mirthful. Men have always laughed at the incongruous. The hunchback, the dwarf, the cripple, the oddly dressed, the strange and the stranger have been traditional subjects of laughter; perhaps the laughter is the laughter of relief: "There but for the grace of God go I."

And laughter brings its own punishment. If you laugh before breakfast, you'll cry before supper. A Creole saying goes "Cila qui rit vendredi va pleure dimanche" (Who laughs Friday will cry Sunday). The Bosnians say, "After weeping—laughter; after laughter—weeping." Perhaps the same philosophy underlies the saying "Laugh and grow fat." One knows the Devil is laughing when the cock crows near eleven o'clock. The Spanish say that Jesus never laughed. If you can be tickled and not laugh, you can get into heaven. In Tewa town on First Mesa, if you laugh at the jokes during the Hano war ceremony, you must join the society.

Laughter has something of the obscene or not-quite-right in it. The grieving Demeter laughed at Iambe's prankish humor. According to Burton, laughter is a rare thing among the Arabs and a sure sign that the mind is troubled. A folktale of Eastern provenience is keyed to the laughter of a fish (or a fool or wise man or statue). So absurd is the behavior of the queen (who faints when struck by a rose petal—she nightly indulges in passionate cruelties with her lover; or blushes at the proximity of

male fish in the pond—she has lovers a-plenty) that the laughter slips out. As this motif (N456) appears in the Old French *Merlin*, the laughter of the sage is caused by the presence of 12 youths among the ladies-in-waiting of Caesar's wife. In the *Ocean of Story*, a fish laughs at a similar situation. The laughter of the fish occurs again in the story of the judge who condemns a man for some trivial crime. As the prisoner is led away, a dead and dried fish laughs (D1318.2.1). The judge investigates and discovers within his own household many crimes of a much worse nature.

A riddle tale (H583.5) makes the king ask, "What is your sister doing?" The enigmatic answer is, "She is mourning last year's laughter." The sister is nursing the baby of last year's love affair. In Type 1828*, the parson bets he can make half the congregation laugh and half cry. He preaches his sermon with his clothes ripped in back. A stupid ogre laughs himself to death trying to outgrin a dead, grinning horse (K87.1). The king has the trickster's horse's tail cut off. The trickster slits the lip of the king's ass. He is brought to trial, and everyone laughs at the ass. The trickster wins his case by asking how, if everyone laughs at the ass, could the ass keep from splitting its lip laughing at its tailless companion (J1169.5). A foolish woman sets herself up as a doctor. She comes to examine a patient. Someone has told her to look around the bed, and if she sees the remains of food there, to blame the illness on overeating of that food. She sees pillows strewn about and says that the patient has eaten too many pillows. The patient laughs so hard his abscess breaks and he recovers (N641).

Among the tasks assigned to suitors is that of making the princess laugh (H341; Types 559, 571, 1642). The hero accomplishes this by doing foolish or obscene things, or by parading past the princess' window with half the town stuck together to a goose, caldron, etc. (see Grimm #64—*All Stick Together*). The sad-faced princess (F591.1 and 591.2) is of course a folktale relative of the fast-running princess and all other accomplished maidens who must be defeated to be won. An etiological story, on the other hand, explains why women laugh so much (A1372.2). When Eve saw her first child for the first time, she broke into laughter at its absurd smallness. Similarly, a well-known tale (Type 295; Grimm #18; A2741.1) explains why the bean has a black stripe. The coal, the straw, and the bean came to a stream. Straw bridged the gap between banks, but coal burned through straw when crossing, and both fell into the water. Bean laughed so hard that he split right down the back. See EASTER; KING LEAR JUDGMENT.

 The origin of laughter is in several instances accounted for in American Indian tales, but not often. Among the Jicarilla Apache of the Southwest, for example, when the Black Hactcin created man, he told him first to speak, then to laugh, then to shout; after that he told man, "Now you are ready to live around here." (Morris Edward Opler, *Myths and Tales of the Jicarilla Apache Indians*. MAFLS 31, 1938, p. 8.) Among the Zuñi of the Southwest the onomatopoeic term *waha*, laughter, is used to designate the festivities of the fourth night of the "big dances" of the Wood and War societies' ceremonies, and other dances; this is the night when Zuñi and Hopi sweethearts sleep together, when everyone is happy and couples have *waha*. See HUMOR. [EWV]

lauma In Motu (New Guinea) belief, the spirit or soul which leaves a man at death and then leads an independent existence. The lauma can also leave the body temporarily, its absence causing illness. Compare ARU. See SOUL LOSS.

laurel An evergreen shrub (*Laurus nobilis*) of the Mediterranean region: sacred to Apollo, and in Laconia, sacred to Artemis. It is associated with purging and purification because Apollo was the great purifier. It was believed to endow prophets with visions, and is associated with poetry partly because, as evergreen, it symbolizes immortality, and largely because its intoxicating properties are associated with poetic inspiration. The Pythian priestess at Delphi, for instance, chewed laurel leaves to induce oracular powers. Victors in the Pythian games were crowned with laurel. The Greek nymph Daphne was regarded as the personification of the laurel. In Rome victorious generals sent messages of their victories to the Senate wrapped in laurel leaves. It has come to symbolize both victory and peace. See BAY TREE.

Laurel has been widely used as a love charm. In England if a pair of lovers pluck a laurel twig and break it in half, each keeping a piece, they will remain lovers. On St. Valentine's Day place two leaves on your pillow and you will dream of love. Burning laurel leaves will also bring back an errant lover. In Holland the house door of a newly married couple is festooned with laurel. Medicinally laurel is effective in rheumatic fever, as a purgative, and as a vermifuge. It cures epilepsy and madness, but causes forgetfulness.

The American mountain laurel (*Kalmia latifolia*), sometimes called calico bush, is the state flower of Connecticut and Pennsylvania. The foliage is poisonous to livestock and the roots are extremely poisonous. Indians of Pennsylvania are said to have used it for suicide. It is also thought that the flesh of birds which have eaten laurel seed is rendered poisonous. The wood is sometimes called spoonwood because the Indians carved spoons from it. It is used as a purgative, and the juice is dropped into the ears to cure deafness. In Lancaster county, Pennsylvania, a decoction of mountain laurel is used externally for the itch; in Labrador too the leaves of *Kalmia* are mixed with tobacco as a mange cure, the *Kalmia* in this case, however, is probably *K. angustifolia*, or sheep laurel.

In folktale are found various magic laurels (D965.9), the laurel which causes forgetfulness (D1365.1.3), the person transformed to a laurel (D215.1), and the wishing-laurel (D1470.1.3). This is found in a Rumanian version of *The Slippers of the Twelve Princesses* in which the cowherd hero plants laurel branches which grow into wishing-trees and produce magic clothes.

Lauterbach A Swiss couple dance, named for the town and river of Lauterbach, just across the border of Württemberg, Germany. It is a waltz of central European type, resembling the Polish *kujawiak* and German *Neubayrische* in the swinging of joined hands and "wringing the dishrag" under raised arms. It shares the gracious smoothness of these dances rather than the robust vigor of the *Ländler* and *Schuhplattler*. A simple turning waltz always recurs as a kind of chorus, with a new first figure on each repetition of the tune: a waltz balance or a stamp in shoulder-waist position (man's hands on

woman's waist, hers on his shoulders), or the twisting under the arm-arches. [GPK]

lavender A sweet-scented herb (genus *Lavandula*) which has been used since early times as a perfume. The early Romans used it in their baths. It was called a "comfort to the brain" by the English herbalist, William Turner, in the 16th century, and described as a "precious herb" in the 17th. Christian legend says that originally it had no scent, but the Virgin Mary once dried the swaddling clothes of the infant Jesus on it; since then it has had a heavenly perfume.

It was early used medicinally for colds and for ailments of the head. Either the temples were bathed with lavender water or the fresh sprigs were put in a quilted cap to be worn on the head. Formerly in Britain it was used in a folk remedy for epilepsy. It is a stimulant tonic, and a great help for colic and stomach cramps. It cures dropsy, palsy, vapors, faintness, catalepsy, laryngitis, muscular aches, stiff joints. The odor alone is conducive to long life. In World War I it was used as an antiseptic swab for wounds.

Lazar and Petkana A Bulgarian popular ballad featuring the dead rider motif. It is a development of the Greek *Constantine and Areté*.

lead The soft, heavy, dull, greyish mineral considered by the ancients one of the base metals, in the dominion of Saturn. Witches, wizards, demons and the like were invulnerable to leaden bullets or shot, and could only be killed with silver; but this was not true in Vedic magic which made common use of lead against demons and sorcerers. On the other hand, a leaden arrow will kill the love of a youth. Leaden caskets were sometimes used to protect objects, especially religious relics, from demons and also prevented their virtue being dissipated.

Lead was one of the substances most frequently used by alchemists throughout the ages in attempts to make gold, hence its various compounds were known and often used in early medicine, especially against conception and in venereal infections. Because of its dull color it was used in destructive charms with imprecations and curses written upon them. In the 11th century charms on leaden tablets were used both against conception and for fruitfulness in orchards. In the 2nd century, Galen, perhaps with tongue in cheek, recommended for the bite of a sea serpent application of lead and a slice of the serpent itself. The Styrians use a lead bullet under the tongue to cure toothache, and in Sussex, England, an egg cup full of lead shot is recommended to cure rising of the lungs. The sweating of leaden vessels is a sign of immediate rain. In England, lead medals for pilgrims were made by the sacristans. In the 14th century three of the clergy in England made a leaden image in the belief that, once a month, it would speak to them and tell the secrets of alchemy and buried treasure, but because they constructed it under the wrong constellation, it failed. (See BRAZEN HEAD.) In Texas a person suffering from boils takes one shot for every boil he has ever had to purify the blood. Some early explorers in Texas carried a lead bullet under the tongue to allay their thirst when there was no water available. Leaden rings are still worn there to cure rheumatism. Mexican babies are given a cartridge to mouth while teething if there are no rattlesnake rattles available. A bullet, or other piece of lead hung about the neck or carried in the

pocket cures nosebleed, and both cures and prevents poison oak.

leaf Leaves function in folklore in many ways, as badges, in divination, as medicine, and as charms against witchcraft and evil spirits. Everyone is familiar with the emblematic Canadian maple and Irish shamrock leaves. Leaves on the water or blown by the wind are a sign of storm; leaves turned inside out are a sign of rain. In Germany and parts of England, it is said that if you catch a falling oak leaf you will be free of colds during the entire winter; in the United States, you will have twelve months of happiness. In parts of England, they say that if the ash is in leaf before the oak, there will be a thorough soak, but "oak before ash, only a splash."

In folk healing, leaves are used either bound to the skin as poultices or mixed in medicines. In many parts of the world, they are placed on houses and barns at certain times of year to drive away evil spirits and to neutralize witchcraft. See HERBS.

leaf dance A rare but interesting dance of the southeastern North American Indian tribes. Men and women shuffle in a counterclockwise circle and flutter their hands, to antiphonal songs typical of these tribes. Until recently the Yuchi *yacacti* was known to express gratitude for the appearance of leaves in the spring. [GPK]

Leander The youth of classical legend who swam the Hellespont to visit his beloved Hero. See HERO AND LEANDER.

leap dances High leaps are the extreme expression of the vital impulse and by sympathetic magic are believed to communicate vitality to the crops. Peasants of Germany and Bohemia have adhered to the custom of leaping high, for as high as they can leap, so high will the crops grow. That has been the significance of the Austrian *Schermenlaufen*, the running and leaping of maskers in a serpentine course at Carnival time, a pagan vegetation rite which has survived through the Middle Ages until now. Similar vestiges of this belief remain in the Morris caper and the leaping of the leader in the Serbian *kolo* and Greek *syrtos* and *hasapikos*. The medieval *espringale* was a polite version.

In war dances the leaps are partly a display of physical prowess and partly a magic inducement to crops. In couple dances the man shows off to his mate, but also continues an ancient fertility cult, as in the Russian *prisjodka*, the German *Schuhplattler*, Basque *aurreSKU*, and Norwegian *Halling*.

Sometimes the distorted leaps are induced by trance for therapeutic purposes, as in the case of the ecstasies of Siberian shamans, the Huichol Indian *hikuli* dancers, the possessed "servants" in the vodun cults.

The capers of ceremonial and secular clowns probably originate in fertility rites involving possession by a spirit, as the Yaqui Indian *chapayekas* and Taos *k'apio*. Much of the demonic significance is retained in the leaps connected with puberty rites, as the Apache *gahe*. The showy leaps of stage dances, as the *entrechat*, may have a remote ritual ancestry but are shorn of any significance except display.

One of the stage dances, a feminine exhibition, was the cancan, popularized in Paris about 1830. Its special feature was a jumping high kick with simultaneous lift-

ing of the skirts. Dancers vied in kicking off the hats of male spectators. This exhibitionism and high kicking characterize many courtship and fertility dances, from Egyptian mortuary dances to the Breton *triori* and the modern Big Apple. The Basque *aurreku* presents a male counterpart. The *cancan* initiated a fad of vicarious sexual stimulus in the denuded kicks of the Tiller and Ziegfeld girls, burlesque shows, and Roxyettes. [GPK]

Lear Lear seems to be almost entirely a creation of Geoffrey of Monmouth, who in his *History of the Kings of Britain* (c. 1136) names Leir as the son and successor of Bladud, credits him with the foundation of Leicester (a characteristic sample of Geoffrey's misplaced ingenuity), and tells the famous story of the vain, senile king and his daughters (M21). Though Perrett in *Palaestra*, XXXV, collected many folktales from many lands which tell substantially the same story, these may well be of modern literary origin, offshoots of Shakespeare's play or some other version. It seems very probable that Geoffrey coolly stole the theme from the Buddhist parable of the man and his three friends (H1558.1), since the legend of Barlaam and Josaphat was translated into Latin at Constantinople in 1048, and thus made the parable available to Geoffrey. The theme of a man who in distress appeals to his three friends in turn, is rejected by the two whom he had favored most, and is succored by the one whom he had spurned, needed only to be transferred to a king and his daughters to give us the essential plot of Leir. The names of Leir and Cordeila, however, do seem to have their origin in Welsh tradition, since it was Geoffrey's practice to attach his fictions to venerable names in British lore and pseudo-history, for instance, in the cases of Brennius, Bellinus, Kimbelinus, and Merlin; and we find in *Kilhwch* (c. 1100) Creiddylad, daughter of Lludd, Lludd being a name elsewhere confused with Llyr. Presumably, then, Geoffrey Latinized the names Llyr and Creiddylad as Leir and Cordeila. Of Llyr we know nothing more than that he was the father of two figures prominent in the *Four Branches of the Mabinogi*, Bran, king of the Island of the Mighty, and Manawyddan; but his name is almost certainly taken over directly from Irish *Lir*, the genitive case of *Ler*, meaning "sea," and familiar in the combination Manannán mac Lir, i.e. "son of Ler." In early mythology Ler himself seems to have had no story, but there appears in manuscripts of the 18th century a romance, *The Tragedy of the Children of Lir*, which tells how a jealous stepmother transformed the three sons and a daughter of Lir into swans, endowed with the gift of exquisite singing, but doomed to frequent the lakes and shores of Ireland for nine hundred years. At the end of that time the swans returned to the home of Lir and found the site deserted. Mo Chaemoc heard their lovely song and joined the pairs with silver chains. When Lairgren, king of Connaught, seized them, they were changed into withered old men and an old woman. They were baptized, died, and went to heaven. It seems possible that this late romance contains the Celtic kernel of the famous medieval legend of the Swan Children, of which there is an English version, *Chevelere Assigne*, "Knight of the Swan" (L. A. Hibbard, *Medieval Romance in England*, pp. 239-52). Here too we have the motifs of the jealous stepmother, the children transformed into swans, and the silver chains. [RSL]

learned damsel A character of folktale, especially of Eastern tales, but met with also in European stories. The learned damsel, by her wit and lore, defeats the king and his savants and thus proves that femininity is not necessarily synonymous with stupidity. The Queen of Sheba, coming to Solomon, finds herself meeting her master in wit, but nevertheless impresses him with her learning. Shakespeare's Portia outdoes the men by discovering a defense for Antonio. Clever Else outriddles the king. Sheherazade leads her husband-king on and on from night to night with her knowledge not only of stories but of when to end the nightly episode. And in one of Sheherazade's tales, "Abu al-Husn and His Slave Girl Tawaddud" (Burton V: 189-245), appears the ultimate in feminine learning. Tawaddud is beautiful and resourceful. When her master runs through his patrimony, she has him bring her before the Caliph Harun al-Rashid. There she disputes with and defeats successively, at a wager of the clothes on their backs, two doctors of the law of the Koran and traditions, an exegete profound in syntax and lexicography, a physician (she embarrasses him with the riddle of the button and the buttonhole), an astronomer, a philosopher, a rhetorician, a chess master (giving him odds of queen, rook, and knight in the third game), a backgammon expert, and finally plays the lute surpassingly. Harun buys her for 100,000 dinars, then gives her back to Abu al-Husn with a gift for herself of 5,000 dinars.

Leave Her, Johnny, Leave Her A capstan chanty sung as the last capstan rally of a voyage, when the ship was under tow for landing or already at the pier. It expresses the candid sailor opinion of the ship's accommodations, management, and officers, and is derived from one of the oldest of the chanties sung on Atlantic packet ships, *Across the Western Ocean*. Sometimes a pumping version was sung at sea: "A dollar a day is a sailor's pay / To pump all night and work all day," etc.

lectisternium A meal for the gods, often the great twelve of the Greek deities under their Roman names: an ancient Roman public religious custom, originally on special occasions but in later times more frequently. Livy says the first was ordered in 399 B.C. by the Sibylline books. The gods were represented by statues, busts, or bundles of herbs made up to resemble busts (*capita deorum*), reclining on a couch (*lectus*), before which was placed the food. There is some evidence that the practice originated in Greece, for example the Greek *theoxenia* is similar except that the gods themselves were the hosts, the entire atmosphere of the ceremony is Greek, etc. A similar feast of the gods formed part of the Etruscan religion. The Hebrew shewbread table and the general European Christmas feast for the dead seem to have similar conceptual roots.

Leda In Greek mythology, the wife of Tyndareus of Sparta. She bore children to Zeus, who had intercourse with her while he was in the form of a swan, but which of her four children were his is disputed. Of the four, Clytemnestra was the daughter of Tyndareus, and Helen was the daughter of Zeus. But whether one or both of the Dioscuri, and if one which one, was the son of the god is a matter of conjecture. In some versions of the story, Helen is born from an egg, laid either by Leda or by Nemesis (and hatched by Leda).

leek An herb (*Allium porrum*) of the same genus as the onion, used in cooking. The leek is the national emblem of Wales because it was worn as a distinguishing badge either against the Saxons or at the battle of Poitiers. The fact that it was said to carry its wearer unscathed to victory in battle probably influenced its choice. It is worn as official insignia on the uniform of the day by the Welsh Guards Regiment on St. David's Day. Leeks planted in the waning moon will be small and sour; those planted in a waxing moon will grow large and savory. Nero is said to have eaten leeks several days each month to clear his speaking voice. The juice of the leek is good for sore eyes, rough hands, and chilblains. Compare HOUSE LEEK.

left allemande and right hand grand An American square dance term. Each gentleman joins left hands with the corner lady, i.e. the lady on his left, turns her around once, then joins right hands with his own partner, and without turning her proceeds around the set in grand right and left until partners meet again. [GPK]

Legba, Legua, Leba, or Liba These variant New World pronunciations all represent the name of the Dahomean trickster deity, god of entrances and crossroads, the youngest son of the creator. In Dahomey, the first form given above is heard near the native capital, Abomey, while Legua is the southern coastal pronunciation. Legba functions in the belief systems of the Negroes of Dutch Guiana, Brazil, Trinidad, Cuba, and in the *vodun* cult of Haiti and New Orleans. Where Yoruban influence is strong, as in Brazil, Trinidad, and Cuba, Legba is known by his Nigerian counterparts Elegbara and Eshu (*Exú*, the common Portuguese rendering). In the New World, Legba is generally regarded as an old man who goes about in tatters, and whose function in cult rituals is to "open the way" for the other gods to come and possess their devotees. For this reason, his songs are sung first at all rites. In New World syncretism, Legba is often equated with the Devil, thus confirming a tradition begun in West African missionary writings. The identification is, however, untenable when the total significance of the two beings thus identified is taken into account. [MJH]

legend Originally, something to be read at religious service or at meals, usually a saint's or martyr's life—thus the *Golden Legend* of Jacobus de Voragine, a collection of saints' lives. Legend has since come to be used for a narrative supposedly based on fact, with an intermixture of traditional materials, told about a person, place, or incident. The line between myth and legend is often vague; the myth has as its principal actors the gods, and as its purpose explanation. Thus the Hercules stories may be considered to some extent myth (he is semidivine, he made the Pillars of Hercules, etc.) or as legend (Hercules was a lord living at Tiryns). The legend is told as true; the myth's veracity is based on the belief of its hearers in the gods who are its characters. Compare LOCAL LEGEND.

Legend of the Camphor Princess Title of a Malay legend in which seven men went into the jungle hunting camphor. Six of them worked at camphor-collecting while Bonsu, the youngest, did nothing but sleep. After they had worked for about 14 days, the six who had

worked returned to their village with the camphor they had collected. But Bonsu did not go with them.

One day while fishing, Bonsu saw a princess bathing in a stream. He caught her by her hair and she took him into her house, a camphor tree. It was very delightful but after seven days Bonsu grew sad. When the princess asked why, he answered that he was thinking of his wife and children. Then the princess told him to bring his carrying-basket. She combed her hair over it, and as she combed camphor fell from her hair and filled it. When he was ready to leave she warned him not to tell where he had been. So Bonsu went home, but after seven more days he returned, persuaded the camphor princess to return to the village with him, and built a house for her there.

The Raja heard of Bonsu's good fortune in camphor-hunting and called him to his palace. He ordered him, on threat of death, to show how he searched for camphor and to recite the magical verses he used (which the princess had taught him). As soon as he started to sing them, his wife was changed into a cicada and flew away. When Bonsu discovered that she had gone, he took his child and followed the sound of the cicada as she flew to the jungle and he was never seen again.

legless and blind boys cured A motif found in all the Apache Indian mythologies, in which two boys, one born without eyes, and one born without legs, were abandoned by the people when they moved on to a new place. In the Chiricahua Apache version (presented by Morris E. Opler, *MAFS* 37) the boys were left with no food, only some water in a water jar. They did not know what to do; but finally decided to follow their own people. The blind boy with legs carried the legless boy with eyes, who told him where to go. But without food and water they did not get far, and they were dying when the gahe found them. The gahe (the Chiricahua and Mescalero Apache supernaturals) took them into the mountain and saved them. The two boys prayed to the gahe: the eyeless one prayed for eyes and the legless one prayed for legs. Then black clouds covered the boys; lightning and thunder were over and around them; and when the clouds rolled away, the gahe were dancing, and both the boys could see and both could walk. The gahe directed them back to their own people, and the boys told their parents all that had happened to them.

This story is a typical abandoned children story in that the boys were abandoned for economic reasons, were helped by supernatural beings, returned and forgave their parents. But its primary function is to reveal the nature of the gahe. Compare BLIND MAN CARRIES LAME MAN.

legong A Balinese drama-dance performed in temple, street, or village square, by two little girls, the *legongs*, and their attendant, the *tjondong*. The delicate, elegant gestures make this dance the epitome of femininity; their detached formalism and staccato angularity are expressive of the restrained tenseness of Balinese culture. The *pelegongan* orchestra accompanies the dance with a complex array of gongs, drums, cymbals, and xylophone-types. The costumes are of silk overlaid with gold leaf, and frangipani flowers.

The *tjondong* starts the performance with a fan dance. The *legongs* perform a duet of sharpest precision, flutter-

ing their shoulders, hands, fingers, eyes, jerking their heads, twisting their arms. Then they enact with stylized gestures the capture of the Princess Rangkesari by King Lasem. But Lasem is killed in a symbolic battle, while the *tjondong* mimes an ominous blackbird.

The *legong* appears a human elaboration of the archaic shadow play, the *wayang kulit*, in its puppet-like abstraction. Like all Balinese theater dances, it involves years of arduous training and fantastic control and endurance. Though not religious, the *legong* is introduced by ceremonial dedication of the dancers. Its exponents move as in a trance through the patterns hallowed by age-old tradition. [GPK]

legs fed with grease An old practice of the Apache Indians (Chiricahua, Mescalero, Jicarilla, Lipan). Men rubbed their legs with grease, invoking them to be good runners. Once there was one man who refused to do this; he ate all his meat and all his fat and grew a big belly. When white enemies came everybody could run to safety except the fat man. His legs said, "You never fed us. Now run on your belly." Contemporary Apache still rub their legs with grease (see Opler, *Myths and Legends of the Lipan Apache Indians*. *MAFLS* 36:288).

Leib-olmai Literally, the alder man: a tutelary forest spirit of the Lapps. He was the guardian spirit of forest animals, especially the bear. His image is occasionally found painted (bear-shape) on Lapp drums. Bows and arrows were offered up to him. Ethnologists assume a relationship between Leib-olmai, the alder man, and bear-worship, for this reason, because he was tutelary to the bear, and because alder juice was used as an integral element in the bear-hunting ceremony. Following the description of Randolph, Leib-olmai is a bear-man or bear-god, who protects the bear, the holy animal. [JB]

Leif Ericson or Ericsson See page 618.

Lei Kung The Chinese Thunder God: one of the 80 members of the Ministry of Thunder. His icon is a figure with an ape head, eagle beak, and bird talons for hands and feet. A mallet is shown in his left hand, and bars in his right. Drums and lightning surround him. Lei Kung punishes the wicked and frequently appears in the accounts of shape-shifters who attempt to attain immortality by illegal sexual means. He also strikes with thunderbolts those who throw rice wastefully onto the earth or destroy cereals. [RDJ]

leippyä In Burman belief (also to some extent, Kachin, Chin, Karen belief), the soul which is materialized in the form of an invisible butterfly. The soul, as an independent entity, can enter or leave the body at will. While it is away the person becomes ill, dreams, or faints. If the leippyä is captured by an evil spirit while wandering, the person will become ill or die. The leippyä leaves a dead body but hovers in its neighborhood until the corpse is buried. A captured leippyä is recalled by making offerings to the spirit which captured it in a ceremony called *leippyä-hkaw*. The Karen *la* is sometimes believed to be a soul but the word is usually considered synonymous with *nat* rather than with leippyä. See SOUL LOSS.

lejtő A Hungarian folk dance step: a sideward progression of a hop and two steps. [GPK]

Lemba A deity, of Congo origin, worshipped in the African cults of Haiti and Brazil. [MJH]

Lemminkäinen The hero of the *Kalevala* (see songs 11-15, 20, 26-30). He has many other names: Ahti, Kaukomieli, or Kauko. He is young and cheerful, a great adventurer who loves quarrel and war (with the people of Pohjola), a seducer of women (the Don Juan of the Finns). He was murdered by an old Lappman and rescued by his mother. Some parts of the Lemminkäinen cycle have similarities to the Scandinavian Balder myth (see K. Krohn in *FUF* V, 1905, pp. 83-138). [JB]

lemon A tree (genus *Citrus*) having an oval, yellow fruit; also, the fruit. Because it is a small, bitter fruit, it has come to mean the poorest of a lot, e.g. "You certainly picked a lemon." From early times the juice has been used in preparations for the hair and skin, as a laxative, cold remedy, and for upset stomach. Chewing slices of lemon cures toothache, and lemon peel was a common dentifrice in the 15th century. In Europe and the Balkans both the juice and rind are used as a contraceptive and to detect the presence of venereal infection (Casanova mentioned both uses). A 12th century Hebrew writer recommended the peeled pips in a compress for wounds and British pharmacists used lemon juice to dissolve pearls for a remedy for epilepsy and wherever salts of pearl were prescribed. In the folk medicine of Texas and the Southwest, borage boiled in lemon juice is recommended for fever; a sliced lemon boiled in a cup of water, cooled, and administered in the mornings is given for malaria or colds; and a cold-water lemonade is good for measles. In Hawaii the juice is recommended for dizziness. Some have claimed that drinking lemon juice is a cause of cancer. Others recommend lemon as a seasickness cure, but they add that if it is not effective, at least it tastes no worse coming up than it did going down. Writing the name of an intended victim on a slip of paper and sticking pins through it into a lemon to cause suffering and death was a form of witchcraft practiced until very recently in England, Sicily, and Italy.

lemur (plural *lemures*) In ancient Rome, a ghost without surviving family; one of the spirits of the departed: usually equated with the larva and hence an evil spirit. Some believed the lemures to be all the spirits of the dead, which were of two kinds: the lares or good spirits, and the larvæ or evil spirits. The lemures were appeased annually at the Lemuria.

Lemuria or Lemuralia A yearly festival held in ancient Rome on the 9th, 11th, and 15th of May to appease the spirits of the dead: supposed to have been introduced by Romulus after he had killed Remus and said to have been called originally the Remuria (from Remus). During the observance, the participants walked barefooted, cleansed their hands three times, and cast black beans behind them nine times. On the third day, the Ides of May, a merchants' festival was held to make business prosper; on the same day, some 30 images made of rushes were thrown into the Tiber. The period, like the entire month of May, was unpropitious for marriages; a May marriage would not prosper. Compare LEMUR.

lentils An Old World leguminous plant (*Lens culinaris*) having pale blue flowers and broad pods containing edible seeds. The use of the seeds as food goes back to very ancient times: Esau sold his birthright for a mess of lentil pottage, for instance (*Gen.* xxv, 29).

They were highly prized in ancient Egypt, but later were regarded as a cause of scrofula. There is a Hindu proverb: "Rice is good, but lentils are my life"; in India, lentil soup is recommended as a cure for the common cold. In Alsace it is considered good for nursing mothers. Gerard, 16th century English herbalist, however, reported that "it causeth troublesome dreams and hurteth the head, sinuses, and lungs."

There is frequent mention of lentils in folktale. Cinderella was put to the task of picking up lentils out of the ashes. One lentil is the subject not only of one of the famous numskull stories in which the numskull says, "You said you wished a lentil soup, so I put one in" (J2469.1), but also of an Arabian tale in which a monkey lost one lentil, and dropped a handful in order to look for it (J344.1). See JACOB.

Leo The Lion, the fifth sign of the zodiac; a constellation containing the large stars Regulus and Denebola, and the configuration called the Sickle. Leo has been recognized from earliest times; it was the lion in Sumeria, Babylonia, Egypt, Persia, Syria, Greece, and Rome. In the early astronomical era, Leo was the sign in which the sun appeared at the summer solstice. It has therefore been conjectured that the lion symbolized the heat of the summer; similarly, it is said that in Egypt the advent of summer meant both the Nile flood and the appearance of lions in the Valley. Some equate the Sumerian lion with the forest monster Humbaba. Nergal, the Babylonian war god, had a lion's body and was probably identified with Leo. This constellation was also thought to be the sign of the tribe of Judah. The Lion of the Greeks was supposed to represent the Nemean lion slain by Hercules. In the Middle Ages, this was one of the lions to which Daniel was thrown. In China, the constellation was zodiacal, but a horse rather than a lion. In Peru, it was a puma in the act of leaping on a victim. Regulus, the first magnitude star whose name means kinglet, was recognized from the 4th millennium B.C. down to the 17th century A.D. as the ruler of the stars. In Babylonia, it was the King; in India, the Mighty; in Persia, the Center. Other names for this star were the Lion's Heart (Nineveh) and Basiliskos (Ptolemy). In folk belief of western Ontario, Canada, it is said that calves are best weaned during Leo. Compare BAY TREE; FERN.

leprechaun In Irish folklore a small, roguish elf. Originally derived from *lu-chorpan*, little body, the word has been corrupted by folk etymology into a form meaning "half-brogue," with the result that the fairy is usually thought of as a shoemaker. In 15th century manuscripts, we have a delightful tale of Iubdan, king of the Luracan, a noble and truthful potentate, whose strongest subject could perform the feat of cutting down a thistle at a single stroke! As late as 1908 school children and country folk near Mullingar believed they had seen a leprechaun. Besides practicing his trade of cobbling, he is the owner of many crocks of buried treasure. If caught, he can be forced to reveal the secret of their location, but he will vanish if one takes one's eyes off him. [RSL]

 He tricks the one who has caught him into looking elsewhere, and the minute human eyes are off of him, he vanishes. "Your bees are swarming and going off with themselves," he cries, or "The cows are into the

oats." And he who looks to save his property never sees the leprechaun again or finds the treasure. Typical is the story about the man who was *not* thus tricked but got so far as to compel the leprechaun to lead him to the very bush in the field where the gold was buried. But the man had no spade to dig, so he took off one red garter and tied it to the bush, in order to recognize the spot again, politely liberated the leprechaun, and ran back for the spade. He was gone only three minutes, but when he returned to dig, there was a red garter on every bush in the field. This is, of course, a variant of the marked culprit motif (K415).

In Ulster the leprechaun is sometimes identified with a kind of malicious little snub-nosed fairy called *geanncanač*. In the neighborhood of Cork, the leprechaun is sometimes identified with the *clúracán*.

leprosy A chronic, endemic, infectious disease characterized by nodular skin lesions, nerve paralysis and eventual complete loss of sensation, and physical mutilation (caused by *Mycobacterium* or *Bacillus lepræ*): a disease known to man for at least 3500 years, and still common in Asia and the Near East and various tropical regions. In 1949, according to a report to the United Nations by India, there were still an estimated five million lepers in the world, some 2,200,000 in India and China alone. Other estimates place the figure at between two and seven million.

Leviticus xiii-xiv describes in detail the laws and tokens whereby the priest was to be guided in recognizing leprosy in man, garment, or house, the regulations governing lepers, and the ritual cleansing of the patient, garments, and dwellings. "And the leper in whom the plague is, his clothes shall be rent, and his head bare, and he shall cry 'Unclean, unclean.' All the days that the plague shall be in him, he shall be defiled; he shall dwell alone" (*Lev.* xiii, 45, 46). The elaborate ritual of purification involved two birds: the sprinkling of the leper with the blood of one and the simultaneous release of the other to symbolize the departure of the evil. This ritual bears witness to two almost universal beliefs: that blood cures leprosy, and that disease or sin can be transferred to a scape animal, bird, or person.

The Arabs knew both kinds of leprosy: *Bahak*, white leprosy, and *Juzdm*, black leprosy, and regarded either the characteristic thickening of the voice as the first tell-tale sign of infection, or a swelling of the wrists. Both kinds were believed to be caused by improper diet.

Beliefs regarding the causes of leprosy vary according to the culture patterns in which the disease appears. The ancient Egyptians believed that to drink sow milk (pigs being sacred animals) caused leprosy. Among some totemic peoples eating the tabooed totem animal causes leprosy. Among the Philippine Ifugaos, leprosy is the result of being spat upon by one of the supernatural Spitters. In Syria it was commonly thought that intercourse during menstruation would cause it. That lust is increased by the disease is a very old and widespread idea. In the Old Testament leprosy was often regarded as just punishment for wrong-doing. Elisha cursed his servant Gehazi, for instance, for running after Naaman and soliciting payment for the miraculous cure; Uzziah, a king of Judah, was stricken with leprosy for pridefully usurping the office of priest. Plutarch posed the question why a man walking under dewy trees contracts

leprosy in those parts which may have touched the bark.

The story of Naaman, told in *2 Kings* v, is one of the famous leper-cure stories of antiquity. Elisha told Naaman to go wash in the Jordan seven times and his "flesh would come again" and he would be clean. This Naaman did and was cured. This cure is significant testimony to the belief in the efficacy of running water (also mentioned in *Lev.* xiv, 5-6; 50-51) and the magic power of the number seven.

Leprosy was designated by Paracelsus as one of the four monarchs of disease (with epilepsy, dropsy, gout). The Arabic *Gospel of the Infancy* tells the story of a leper cured by washing in the bath water of the infant Jesus. Galen (2nd century) said that wine infected with serpent venom would change various diseases into leprosy which could then be cured "in the traditional fashion." This traditional fashion has been the bath of blood, especially human blood, from ancient Egyptian times to the Middle Ages in Europe. King Richard of England was told to bathe in infants' blood and then to eat the heart of the infant as an infallible cure. Bathing in the blood of two-year-old children "undoubtedly cures leprosy" said Michael Scott (13th century). A bit of cooked snake sneaked into a leper's food was a palliative, if not a cure, recommended by Bartholomew of England (13th century).

Lepers were suspect everywhere in Europe and accused of poisoning wells in France and Italy from the 14th century on, but a certain healing well near Acqui lost its powers as soon as the people forbade its use by lepers. Louis XI of France became a leper in his later years, and there is record that on July 8, 1483, he sent ships to the Cape Verde Islands to bring back turtles of the Isles, the blood of which he had heard would cure leprosy. In the 16th century magic gold chains were sometimes worn to prevent or cure leprosy. Sixteenth century German medicine included a horrid oil from little green lizards which was said to be good for leprosy. In 1513 Philip the Fair of France ordered all lepers to be burned; the order was zealously fulfilled, but before complete annihilation of the unfortunates the monasteries of St. Lazarus (patron of lepers) were opened to them. Many were crowded together in these *lazarettos* and cared for and treated by monks who were also lepers. The Order of St. Lazarus, founded for the protection of lepers, established its houses all over Europe. Those who entered were regarded as dead to the world and their former associations, and the burial ritual was performed for them. If they came forth from their segregation they wore the special garb of the leper, sometimes masks, and carried the leper's bell or rattle which warned of their approach.

Among Dahomey Negroes a leper is hurriedly buried without ceremony, but whether the haste is from fear of contagion, or whether the ceremony is withheld because the disease is looked upon as a divine punishment is not yet known. Sometimes after three to seven years, however, a funeral can be held for him and his soul can be bought back into the family. See BLOOD; DIAMOND; EMERALD; NĀGA; POPLAR; TWO FRIENDS.

Lernean hydra In Greek legend, the many-headed (usually nine) serpent slain by Hercules as the second of the labors. The hydra was the offspring of Typhon and Echidna, and grew back a head, or two in place of one, as soon as one was cut off. Hercules, after crushing

the crab sent by Hera to help the hydra, called upon his charioteer Iolaus to burn the stumps as soon as he cut off heads and thus slew the monster. He then permanently poisoned his arrows by dipping them in the venomous blood. In another version of the story, the hydra had one head which Hercules cut off and buried beneath a rock.

Lethe In Greek mythology, the river of forgetfulness in Hades. Originally Lethe was a plain in the underworld through which ran a river whose waters brought forgetfulness. Later the name became attached to the river or spring itself. The water was said, by the later poets, to be drunk by those souls who were to be reborn, so that they might forget their previous lives.

Leto In Greek mythology, the mother of Apollo and Artemis; daughter of Coeus and Phoebe; the Latin Latona. Though sometimes she is mentioned as the wife of Zeus before Hera, the usual story is that she was another of Zeus' clandestine mistresses. Hera warned all places on earth not to let Leto bear her children where the sun shone, and in fear of her reprisals they refused the pregnant Titaness refuge. Finally Leto called on her sister Asteria, who had been transformed into a rock beneath the sea, and there she bore the children. More commonly, however, she came to the floating island of Ortygia (later identified as Delos), which Poseidon covered with water to prevent the sun from shining on it. Leto clasped a palm tree during her labor and brought forth Apollo and Artemis. In some versions, Artemis was born first and assisted in delivering Apollo; in others Apollo was born and immediately slew the Python which Hera had caused to pursue Leto. The island became fixed after the birth of the children; Delos, as the birthplace of Apollo, was sacred and none could die or be born there. Leto was worshipped only as part of the worship of her children.

letter If a moth flies towards you, you will receive a letter. If a bright spark shoots up from a candle nearby, you will receive a letter. An English sneezing rime says: Sneeze on Wednesday, sneeze for a letter. White spots on the fingernail of the ring finger also mean that you will soon get a letter. In the southern United States it is said that when the fire pops on the hearth a letter is coming; or if your nose itches, a letter is coming. A piece of cotton on the dress not only indicates that a letter is on its way, but also shows the initial of the one sending it. To get a letter, hang up on a nail a hairpin you have found; or if you and your companion speak simultaneously, have her pinch you. If a spider at the end of its thread comes before your eyes, a letter is coming. If your right hand itches you will receive money in it; if the left itches, a letter. To dream of mailing an unsealed letter means that your secrets are known (or you are afraid they will be).

Georgia Negroes recommend putting a letter from your love in a can and throwing it into running water to make sure she loves you, or stamping a letter upside down to insure a speedy answer. Never put a letter in your girl's left hand either, or your friendship will come to an end. To burn up a love letter is to destroy and burn up your love, but some people recommend it as a means of easing the mind of old troublesome memories.

Letters from lover to lover often close with XXXXX, each X for an enclosed kiss. Sometimes the envelope is

"sealed with a kiss," SWAK written across the flap. The letter chain, bringing luck or wealth to the recipient, must not be broken lest bad luck ensue.

The letter of death is familiar in folktale. Related to it is the task letter (H918) in which the bearer is set a task by the recipient of the letter (see BELLEROPHON). In a Spanish tale, the trickster writes that the bearer of the letter be detained; in the meantime he steals the messenger's wife. The famous Ems dispatch of European history is paralleled by the letter in Welsh tale whose falsified message incites a war. Intercepted letters bring the old woman to the man's bed in place of the girl (K1317.2.1), the leper instead of the lover to the princess' bed (K1317.2), the disgrace of the mother (calumniated wife—K2117) when her letter announcing the birth of the children is held up. The presuming ignoramus, in Type 1539, pretends to be reading a letter when all the time it is simply a receipt for taxes. In a European story, a man expresses a desire to see the world. He is given a letter to deliver six miles away. When he returns he has seen all there is to see in the world—hills, valleys, streams, etc.

letter of death A letter ordering the execution of the bearer: a common mechanism of many folktales of Asia and Europe. The theme is probably Eastern in origin; it first appears in Europe during the Crusades (12th century). The *Gesta Romanorum*, Walter Map, the *Book of Sindibad*, all use it. In the Uriah letter (K978), the king orders the bearer put in a position in which he will be killed (see *II Sam.* xi); the same motif occurs in the Greek story of Bellerophon, who is sent by Iobates to fight the Chimera; in the Arabic legend of the poet Mutalammis, he destroys his letter, but Tarafah, bearing a similar letter, is killed. The motif is thus also often called Bellerophon letter, Mutalammis letter. The Uriah letter changed (K511) is the companion to this, appearing in such tales as *The Wolf* (Type 428), a European tale in which the princess carries a letter of death from one witch to another but is helped out of her difficulty by the wolf, a transformed prince, who alters the letter. In *The Prophecy* (Type 930; Grimm #29—*The Devil with the Three Golden Hairs*), the hero carries the letter of death to the queen, but robbers change its text (K1355) so that he is married to the princess. So also Amleth himself alters the letter to England's king and marries the princess; in Shakespeare's play *Hamlet*, the letter of death is rewritten by Hamlet and brings the death not of Hamlet but of its bearers, Rosencrantz and Guildenstern. Another letter of death story, found from Indonesia to Iceland, is *Der Gang nach dem Eisenhammer* (K1612), the title of one of Schiller's poems. The king sends a message to his kiln-burners that the next person to arrive is to be thrown into the fire. Immediately afterwards he sends his intended victim to the kiln on some pretext. But the victim turns aside and the one who is first to arrive at the kiln is the accuser of the intended victim, or the king's son. This is a medieval European tale, the beginning of which is often the story of the offending breaths: the envious courtier tells the king's servant that the king objects to his breath and always turns his head away, and he tells the king that the servant always turns *his* head away because he cannot stand the king's odor. The king sends the letter to the kiln, but the servant turns aside to say

mass before proceeding. The eager calumniator rushes to the kiln to find out what has happened and is killed himself. A typical variation on the letter of death theme, existing elsewhere too, is found in the Hindu *Kathākoṣa*: the letter of death is intended to say that the bearer is to receive poison (*visha*), but the receiver misreads it and gives him the daughter named Vishā.

lettuce A garden herb (*Lactuca sativa*) having crisp edible leaves commonly used as a salad. In the doctrine of signatures lettuce was classified as a sterile plant and believed to be conducive to sterility in those who ate it. In Surrey it is said that too much lettuce in the kitchen garden will prevent the young wife from having a child. And because of the lung-shaped leaves, the doctrine of signatures also recommended its use in concoctions for the lungs.

The European wild lettuce (*L. virosa*) has been known for centuries as a sedative and soporific, and the drug *lactucarium*, made from the milky juice, is so recognized today. This lettuce was one of the ingredients of the medieval "soporific sponge," which was soaked in an infusion of mandrake, hemlock, lettuce, poppy, ivy, and mulberry. One whiff of this was said to knock a man out. Pliny, and the 16th century physician Guglielmo Gratarolo, quoting Pliny, advised eating lettuce to prevent seasickness, if not actually to prevent storms at sea.

The American prickly lettuce (*L. scariola*) was called *minikita'tabūki*, milk leaf, by the Meskwaki Indians. They brewed a tea from the leaves which was given to women following childbirth to increase the flow of milk. White settlers used this plant to make a sedative sirup for babies.

Leza The high god of the Basubiya, a Bantu people: parallel to Bumba or Nzambi (Nyambe) of the Bushongo and Baluyi. One day Leza told his people that he was going away, and gave them instructions of how to worship him. Then he left them and went up into the sky by a spider's thread. The people tried to follow, but the thread broke and they fell back to earth, where they are today. They put out spider's eyes for allowing the thread to break: an etiological story explaining the Basubiya belief that spiders have no eyes. Sometimes when the people see a shooting star they say it is Leza coming back. M. Jacottet assumed that Leza represented the sun to the Basubiya. See A. Werner, "African Mythology" in *Mythology of All Races*, 6: 132 ff. Leza is recognized but not anthropomorphized by the Awēmba, who think of him as a judge and counter of the dead.

lezginka A wooing dance of the Lezgis of Daghestan in the Caucasus, taken over by the Georgians and Tartars as well. Often it is a wild saber dance by a man alone, featuring dextrous passes of the sword. More usually, without a weapon, he whirls and leaps around an impassive girl, who turns slowly in place. As a couple, leap, and sword dance, the lezginka would originally have had a triple fertility potency. [ГРК]

Lha One of the eight classes of Tibetan godlings subordinant to the tutelary fiends. The Lha are good spirits, usually male and white in color. The term is used for the gods of the Indian Buddhist and Brāhmanical pantheon as well as for the aboriginal gods which live in the sky, whether they are unfriendly or friendly. The Lha visited the earth often in the early days and

the high mountains of Tibet became known as their means of ascent and descent from heaven. White altars (lha-tho) were therefore erected on them and these were regarded as the gods' dwelling places.

Lhā-K'a or Ku-t'em-ba A type of sorcerer, especially of western Tibet, consulted for the relief of pain. The Lhā-K'a, who may be either a man or a woman, places a mirror over his heart and a cake on his head while he makes an offering of a libation or incense to the demons and beats cymbals and a drum to attract the *Yul-lha* or country gods. He then takes a divining arrow from a plate of flour and places its blunted point on the affected part. He sucks on the shaft and a drop of blood appears over the painful part although there is no abrasion of the skin. When the blood appears it is considered a miracle and the evil spirit has been expelled. Compare CH'O-JE; NAG-PA.

Lha-mo The Tibetan name for Devī, as one of the most malignant, powerful, and dreaded of the Lāmaist demons. She is credited with letting loose the disease demons and is classed as one of the Tibetan Dharmapālas. She is represented surrounded by flames, riding a white-faced mule, sitting on a saddle of her own son's skin flayed by herself. She wears human skins and eats human brains and blood from a skull. Lha-mo is publicly worshipped for seven days at the end of the year to prevent disease during the coming year. An offering to her of a cake containing the fat of a black goat, blood, wine, dough, and butter, is made in a human-skull bowl. Her hideous and malignant aspects are constantly emphasized and she never reflects any of the milder aspects of her Hindu prototype.

li The Chinese term for rites or etiquette. The observation of li is essential to the political and social philosophy of China and is the source of great confusion among those who attempt to understand that great and difficult people. [RŮJ]

Lia Fáil Literally, the Stone of Fál: the stone from the mythical city of Falias which Lúg took to Tara. It would scream out under the foot of every rightful king of Ireland who took the crown, from the time of Lúg to the day Christ was born. And it has never cried aloud for any king since. The poets often named Ireland Inis Fáil, the Island of Fál.

There is a story in the cycle of Conn telling how the stone screamed one day under Conn in Tara. This was Conn of the Hundred Battles. He was on the high rampart at Tara scanning the horizon to see if the old Fomorians or Tuatha Dé Danann might be attacking Ireland secretly, and he stepped upon a stone which cried out under his foot. Conn asked the fili what kind of a stone did that, and in 53 days the fili came with the answer, saying the stone's name was Fál, that it came to Tara from Falias, would go to Teltown where there would be a fair every year forever, and that the number of times the stone screamed under Conn would be the number of kings of Conn's seed that would rule Ireland. "Tell them to me," said Conn; but the fili said he was not destined to tell them. The filid (singular *fili*) were an order of ancient learned Irish poets.

Another story says the stone was sent to Scotland in the 6th century for the coronation of Fergus mac Erc, who begged the loan of it from his brother, Murtag,

then king of Ireland. It was never returned to its own island, but is said to be the Stone of Scone taken to England from Scotland by Edward I in 1297, to be the Coronation Stone for the kings of England. It lies in Westminster Abbey, enclosed in a wooden chair, still fulfilling the ancient prophecy (through the line from Fergus mac Erc and the Stuarts of Scotland) that a king of Scotie (i.e. Irish) descent shall reign in whatever place it is. But the Irish say that Lia Fáil lies in Tara still, six feet long.

liars and lying tales The "artistic" or "authentic" liar is one who lies not to be believed but for the sheer fun and artistic satisfaction of invention. Lying tales (big lies, big windies, whoppers) spring from the same soil as yarns and tall tales. As "exuberant combinations of fact with outrageous fiction," in Walter Blair's words, tall tales are not always pure lies, cut out of whole cloth, but may be classed as yarns or lies depending upon which way the delicate balance between truth and untruth is turned, which way the "big wind" is blowing.

Even though the "cheerful liar" does not expect to be believed, he may borrow the yarn-spinner's device of the "traveler's tale," reporting wonders he has observed or experienced in a strange land or another part of the country. And because travel gives him a certain immunity to criticism or being checked up on," he may all the more frankly and confidently "draw the long bow" when he goes hunting or fishing, as in Munchausen tales of the "lucky" or "wonderful hunt." Or, abandoning the convention of the traveler, he may fall back upon some mysterious informant, "not known directly" to him but "well known to a close friend" and usually "long since dead" or lost track of, thus conveniently shifting the burden of proof.

While the unconscionable exaggeration of the liar links him with the boaster, the liars' club is also next door to the boosters' club, especially in the Western "paradise of puffers." And while boasting concerns itself with the boaster's prowess, boosting is concerned with the advantages of a place—the perennial wonders of climate, weather, soil. In stories of health-giving and life-prolonging or life-restoring climate, state pride and loyalty are often called into play, as in Florida, California, and Texas. From almost every state comes a chorus of brags of giant vegetables—turnip, pumpkin, beet, potato, cucumber, corn—harking back to the Old World motif of the great cabbage and the pot that matched it.

As disaster follows in the trail of phenomenally large or rapid growth (e.g. the giant cornstalk or the all-entangling cucumber vines), so boom is followed by bust, feast by famine, and flood by drouth. In what should have been "God's country" or the "wonder state," hardship, hard times, and hard luck give rise to boosting in reverse or defensive lying—of the kind that proceeds from having too little rather than too much. Inverse brags take the form of local "cracks and slams" and "laughing it off," with endless gibes at poor country, dry or wet country, flat or hilly country, and all the liabilities of weather, climate, insect pests, and the like. See PIONEER LORE. From insect scourges and freakish animal behavior it is only a step to stories of fanciful traits of animals (see HOOP SNAKE) and mythical monsters. See FEARSOME CRITTERS.

With apocryphal zoology and unnatural natural history, we pass from lying as pure entertainment to lying as hoax, prank, and sell. The boaster and booster become the codder, teaching the "young and tender . . . the great verities by generous untruths." Essentially, mythical monsters are hoaxing inventions, paralleled, in the mechanical world, by such contraptions as "The Rawhide Railroad" (an elaboration of the buckskin harness of Paul Bunyan).

Out of the natural competitiveness and rivalry of liars, as of boasters and boosters, grows the lying contest, and out of the lying contest the liars' club. Almost every community has its traditional gathering place for local liars and yarn-spinners (crossroads store, tavern, saloon, courthouse, bunkhouse, barber shop, garage, filling station), symbolized by an actual or mythical "Liars' Bench" (akin to the proverbial "cracker barrel"). The first liars' clubs were born in the minds of local newspapermen, in the desperation of a dearth of local copy (e.g. the Sazerac Lying Club, created by Fred H. Hart, editor of the Austin, Nevada, Reese River, *Reveille*). At least one of these newspaper hoaxes, the Burlington (Wisconsin) Liars' Club, became a reality (and not just a lie), with an annual National Liars' Contest. With the liars' club the artistic lie gives rise to the burlesque lie, if one can conceive of such a thing. Since lying in, for, and by itself is not necessarily funny or artistic, the burlesque lie contains in itself the seed of its own decay and seldom rises above the level of journalism to join the great lies of folk fantasy. B. A. BOTKIN

Liai Maça The Gray of Macha: in Old Irish legend, Cuchulain's wonderful gray horse, one of the two magic horses (with the *Dub Sanglainn*, the Black Sanglain) which rose out of the Gray Loch of Sliab Fuait and the Black Loch of Sanglainn. They were said to be given to Cuchulain by Macha, or possibly by Morrighu, with whom Macha is sometimes identified. Cuchulain caught and tamed them by springing on their backs. For a whole day they tore around "the circuit of Ireland"; but neither could throw off the boy-rider, and after that they were gentle. Liai Maça, the Gray, was the horse that loved Cuchulain dearly, and got his death wound defending him in the last fight. Both horses went back to their lakes after Cuchulain's death. Eleanor Hull points to a day and night symbolism of gray and black.

Liber and Libera Ancient Italian deities of the vine, worshipped along with Ceres as fertility gods. Ceres being identified with Demeter, Libera became identified with Persephone, and Liber with Dionysus or with his Roman counterpart Bacchus. These are divine beings of greater age than the translation of the Greek attributes to them, but it is difficult to determine their original form beyond their undoubted connection with fertility and increase. Their festival, the Liberalia, was held on March 17, at which time Roman youths habitually donned the toga virilis for the first time.

libera A song sung after the final prayer of a novena at Haitian Negro funerals to send the spirit of the dead from the house. The priest is also paid to sing it each year over the grave on All Saints' Day.

Libra The Scales or the Balance: the seventh sign of the zodiac, a constellation between Virgo and Scorpio. Anciently it was looked upon as the claws of the scor-

pion, and not until the time of the Cæsars, when Augustus appeared in the star maps holding the scales of justice, was the constellation called Libra (or Jugum, the yoke of the balance). Now the scales are considered as belonging to Virgo, the virgin, identifiable with Astræa, the Greek goddess of justice. Elsewhere in the world, the European depiction of the constellation has taken hold, and it is known, wherever recognized, as the balance. In China, for example, it was early called the Dragon, later it was the sign of longevity, but now it is the balance. In Egypt at the time of the Romans, it was pictured as two feathers, but these feathers were those put into the balance at the weighing of the heart at the trial before Osiris after death. Though all trace of the Chaldean identification of this constellation has been lost, the Chaldeans must have known some zodiacal figure at this point of the heavens; otherwise the twelve signs shrink to the odd figure of eleven. But what the constellation was called no one has been able to determine, although some scholars see in the sign used to represent Libra an ancient altar, by which name (Altar) it is sometimes known.

Li Ch'un A Chinese movable feast: observed and celebrated with processions, and at some times and places with the beating of a real or symbolic ox. Li Ch'un belongs to the complex of seasonal festivals, and marks the beginning of spring. See *General Structure of Chinese Folklore* in CHINESE FOLKLORE. [RDJ]

licorice or liquorice An Old World perennial leguminous herb (*Glycyrrhiza glabra*) having a strong, thick, branched root. The name means sweet root: a corruption of the Greek *glykys*, sweet, + *rhiza*, root. The evaporated juice is called stick licorice; the Irish say *maide milis*, sugar stick. Licorice has long been used medicinally in cough mixtures and as a laxative; commercially today it is also used in brewing, and to flavor tobaccos and confections. The 17th-century John Joselyn of Boston numbered it among the "precious herbs" brought to the New World from England by the early settlers. Native American Indians bought it from white settlers and cultivated it for their own pharmacopœias. The Fox, for instance, valued it highly for female troubles. Jamaica Negroes call it lick-weed, and boil a lick-weed tea which is given both to adults and babies for constipation. The ancient Hindu *Kama Sutra* includes it in a milk and sugar drink to increase sexual vigor. The famous Chinese veterinarian and patron of veterinarians, Ma Shih-huang, once found himself being followed by a dragon. He was uneasy about this, but when the dragon called to him that he was ill, Ma Shih-huang turned back and gave him an injection of licorice. The dragon was cured and grateful to his benefactor forever.

Leif Ericson or Ericsson Norse adventurer, said to have discovered America (1002 A.D.). He was born in Norway, son of Eric the Red, who discovered and colonized Greenland. The most widely accepted accounts, the early 13th century *Eric the Red Saga*, and the 14th century *Hauk's Book*, claim he was lost in a storm between Norway and Greenland and landed first on a bleak coast called Markland and later at a point farther along the coast which he named Vineland. According to the late 14th century *Flaty Book*, however, Bjarni Herjólfsson was lost in the storm and discovered

America (987 A.D.) and Ericson set out to colonize it. He landed first in Labrador (Helluland), again in the vicinity of Cape Sable, Nova Scotia (Markland), and finally along the shores of the Chesapeake (Vineland), where he spent the winter and returned to Greenland in the spring with a cargo of brandy and timber which enabled him to retire a wealthy man.

Liekkiö Literally, the flaming one; the elflight or jack-o'-lantern of the Finns, who presides over plants, roots, and trees. He is the soul of a child who has been buried in the forest. [JB]

Lif and Lifthraser In Teutonic mythology, the woman Lif and the man Lifthraser; the human pair who will seek refuge at Ragnarök in Hodmimir's forest, the only place safe from Surtr's sword. They will sleep through the destruction of the world at Ragnarök, living on the dew which falls on their lips from Yggdrasil and will not wake until the earth is green and verdant again to found a new race. Compare DEUCALION; NOAH.

life token In widespread European and Asiatic folk belief, folktale, and traditional ballads, an object (or animal, plant, etc.) either chosen by or born with a person, which manifests in some way the fact that he is in danger, may die, or is dead. The object is sometimes a knife left behind, which rusts or sweats blood when harm befalls the absent hero, an apple which changes to indicate danger or rots to indicate death, a shirt that turns black, a brilliant ring or jewel that grows dull. In European folklore, it is often a tree that withers or dies. The life of the hero is almost invariably co-existent with the life token. The classical story of Meleager and the burning brand is typical (see CALYDONIAN BOAR HUNT), as is the Kashmir story of Panj Phul who was never without her necklace because it was a charm against sickness and danger and contained the core of her life. The life-token belief is strong also among primitive peoples in Africa, Australia, Melanesia, and Tasmania. Typical North American Indian life tokens are a plant that withers, or a pot that boils to signify that the hero is imperiled, or a digging stick that breaks. In Brittany the fisherman's wife puts a candle at the altar; if it burns well all goes well with her husband; if it flickers he is imperiled; if it goes out he is drowned. In northern Nigeria, a house snake is said to be born simultaneously with every human being. The life span of one is measured by the life span of the other; hence these snakes are solicitously fed and protected. In Ireland the life token is called *cómsaogal* (contemporaneous life); it is often a stone which will be broken at the death of its affinity, or a tree which will wither or die. See BIRTH TREE; DEKANAWIDA; FOOTPRINT; SEPARABLE SOUL; SOUL ANIMAL; TWO BROTHERS.

lift dances The exuberant couple dances that climax in the lifting up of the girl have their roots in ancient fertility magic. Any display of superhuman power, such as overcoming the force of gravity, has in folk tradition an impelling effect on the forces of reproduction, animal and vegetable. Such dances are the Bavarian *Schuhplattler*, Moravian *Rozek*, Neapolitan *Saltarella*, Spanish *Jota al Aire*, Catalan *Corranda Alta*. In the last a group of four builds a human pyramid, similar to the finish of American cowboy dances. Lift dances are usually also leap dances.

In European sword dances the final hoisting up of certain leading dancers is a symbol of seasonal resurrection. In the *Txonkórinka* of the Basque *ezpata dantza* the captain is hoisted up on a platform of swords, inert and glorified. In the *Dance of Sena*, Huesca, the sword-play ends by the elevation of four *volantes*, boys dressed as angels. The *Mojigangas* of Tarragona and *Xiquets de Valls* of Barcelona build human pyramids, by chance similar to those of ancient Mexico. [GPK]

light Light seems everywhere to be equated with or symbolic of good. Light in the Bible is the first of all things created. Certainly, to many primitive peoples, light is a concrete thing, something that exists as a material substance, and that may be seen in the sun, in fire, in lightning. In Hawaiian myth, mankind is created from Peace and Quiet fertilized by Light (A1221.2). Darkness, opposed to light, is evil in later thought, when dualism becomes important, when balance in the universe becomes necessary. Primitively, perhaps light results from darkness; the darkness covers the light, and, just as a man awakes with the light, so light appears when the darkness is lifted from it, like a lid. But with the belief in dualism in all things, the dragon of darkness is defeated by the god of light (A162.2: Egypt, Babylonia, China, etc.), and the battle goes on everlastingly, the forces of evil attempting always to swallow the light and plunge the world into darkness. (See ECLIPSES.) Light, in the dualism of the Chinese yin and yang, is identified with yang, the male principle.

The fire guarded by the Vestals in Rome was the symbol of the fire burning eternally and always shedding light on the Roman state and the Roman home. This light was the sign of the fortune of the state and of the home and thus could not be permitted to go out. A pillar of fire shed the light that guided the Israelites at night through the desert. Churches are filled with lights at festivals; light is necessary all over the world at birth and baptism, marriage and funeral. In England, Scotland, Germany, Sweden, Korea, Basutoland, among the ancient Romans, the Parsis, the Jews, the light must always shine near the bed where a mother and her newborn child lie. If the fire goes out before the child is baptized, a changeling may be substituted: this belief is held in Sweden, in Malaya, in Bokhara. These and similar beliefs about the light of fire partake of two elements: fire is the agent that purifies, and light is good in warding off the spirits that live in the darkness. Nothing evil can enter where a light burns. Aside from police advice to leave a light burning somewhere in the house when one is away as a deterrent to thieves, it is good folk practice. The mountain men (F460.2.3), the child-snatching spirits, and those powers lying in wait in the darkness for the moment when charms against them cannot be seen because of the darkness are kept at bay by even one small candle.

Light springs forth of itself from the good. The halo or nimbus surrounding a saint is but a reflection of the goodness within. All the Moslem prophets, Mohammed and El Khidr notably, shone with light from their faces, the "light of Mohammed," which Adam first had and which brings wisdom and supernatural powers to those on whom it rests. The Norse god Balder's face shone with its own light. (Balder and the Greek Apollo are gods whose special province is light.) Light filled the house

when Moses was born; and all the universes blazed with light when the Buddha reached his perfection of knowledge. The house of Celeus was lighted with the radiance of Demeter, whose face shone even though she was in sorrow. The Shekinah, the glory of light with which God surrounds himself, according to the rabbis, to make himself invisible, is reflected in the new moon. The angels shine with the light of purity and holiness. The light of virtue is said by some to be the reason one bows to a king: if one were to look directly at him, blindness would ensue. Such epithets as the Sun King reflect this belief.

Light is, however, more than an indicator of virtue. Sometimes, according to southern U.S. Negroes, lights will be seen in a church. But when someone enters, they disappear. Ghosts have been there. For ghosts too give off a light, usually a dull phosphorescence, that may disappear if looked at directly. Lights dance in graveyards and the will-o'-the-wisp leads the unwary a merry chase through swamps. The light of the hand of glory is invisible to all save the one who owns the hand (D1361.7), and it puts to sleep all who see it (D1410.2). According to a medieval Jewish belief, children conceived in the light will be epileptic, and anyone who stands before a burning lamp naked at night will also fall victim to the same disease. (Similarly, a child conceived in the light of the sun would have a white eruption, one engendered in moonlight would have leprosy, by starlight stammering.)

Light shines from certain stones of themselves. Lucian mentions lychnis, which could illuminate a whole temple. Alexander is said to have used as a lamp at night a stone he recovered from the belly of a fish. Noah lighted the ark with precious stones. Light shines from certain beautiful people (see ILLUMINATING BEAUTY). People still believe a cat's eyes will shine in complete darkness, though obviously some light must be present to be reflected by the eyes: nothing in the eye of the cat is self-luminous. The Talmud says, "A heavy step detracts one five-hundredth from the light of the eyes." Thus eventually one must go blind. As a preventative, one should stare at certain lights, e. g. the Sabbath candles, to strengthen the eyes.

Many such beliefs have no text behind them, but are firmly held. To light three cigarettes from one match will bring misfortune: this is current and widespread in the United States. Many believe this idea was begun and fostered by Ivar Krueger, the match manufacturer. In Macedonia, three lights burning in one room will bring death. Lights move before a person and cannot be approached, just before a near relative is to die—this is from Brittany. See CORPSE LIGHT; FETCH CANDLE. From Germany: a light that goes out by itself is a death omen. If the light is permitted to go out on Christmas Eve, someone in the household will die. During the ten days between Rosh Hashonah and Yom Kippur, European Jews used to light a candle: if it went out before burning down, the person would die before the year was out; if it burned to the end, he had at least another year to live. If, in the north of England, you give someone a light on New Year's Day (or Christmas Day), you give away your luck for the year to come.

In Oldenburg an unmarried girl who sees three lights in a row before her will soon become a bride. In the Tyrol, southern Germany, and Silesia, a woman who

can blow into flame the glowing wick of a candle or lamp is still a virgin.

Light figures in many folktales as a motif. The famous noodle story told of the Schildburgers (J2123) is also in Icelandic folktale. The noodles build a windowless house before they discover that there is no way to light it. So they fill baskets with sunlight and carry them inside. But when the baskets are emptied, the house is as dark as before. Eventually they pull the house down. Light appears as a life token (E761.7.4) and is extinguished with death. Swords flash light (H1337), castles shine from afar (F1645.3), and boats are self-luminous (G222.2: Araucanian). The king or pope proves his power when his candle lights itself (H41.3; Type 671); a magic lamp lights itself when a lie is told (D1316.2). Hidden treasure is marked by a light shining from where it is secreted (N532). In one of the riddle tales, the youth is asked, "What is your mother doing?" and he replies, "She shows the light of the world to one who has not yet seen it." She is, of course, assisting at a childbirth (H583.4.1). See ATEA; CANDLE; CHAMPION'S LIGHT; FIRE; HADBALAH; MITHRA; MOON; NIGHT; NIMBUS; SAMAIN; SUN.

 Origin tales in which light (or the sun, or summer weather, or fire; these four are often confused or identified with light) is accounted for through some character's having stolen it, are widespread in North American Indian oral tradition, being told in practically all parts of the continent. North Pacific Coast mythologies are especially rich in such. The details differ regionally, but almost always light, the sun, or fire is stolen through a trick and given to the people who had previously been living in darkness or in cold. Light is often represented among the western tribes as a ball or disk or other object, kept in a box or basket which is suspended from the ceiling of the chief's house. The thief, often Coyote or another trickster, transforms himself into a child or baby, is taken in, and cries until he is given the contents of the basket, which he then makes off with. Or, the hero may change himself into a stick or other object, be swallowed by the owner-of-light's daughter, be reborn and subsequently steal light from his mother's father. Often, in a race which ensues after light is stolen, it is passed on from one of the thief's accomplices to another, until finally its possession is secure and it can be scattered for the people's benefit. In the Southwest among some of the Apache, dawn, or light, is won in a hidden-ball contest between the so-called "good" animals, who want light, and the bad or poisonous ones who want it to be dark all the time. The good animals, with Slim Coyote as chief, win the contest and kill all but a few of the bad animals; Bear and Yellow Rattlesnake escape. Other southwestern groups represent the underworld from which they emerged as dark; they were led up from this dark region by Sun man and Moon, or Changing Woman. [ewv]

 Some South American Indians make a distinction between daylight and the sun. In Chibcha genesis, the creator sends to the world birds carrying light in their beaks. Zaguaguayu, a solar deity of the Guarayu Indians, lives in a country lighted by small birds. The Bakairi consider dawn and the sun to be two different bunches of feathers which were stolen from the vultures by the culture hero. [AM]

lightning In all cultures lightning has either been personified as a god or regarded as a manifestation of the god. It was either the manifestation of his wrath and agent of punishment, or the accompanying thunder was the voice of warning or portent. Wherever depicted the lightning flash and thunderbolt are usually symbolized by some weapon of the god. Ancient Babylonian cylinders depict Adad, for instance, with a boomerang in one hand (thunderbolt) and a spear in the other (lightning). Throughout the Old Testament lightning struck fear into the heart of man, as a sign of God's wrath, and is frequently mentioned as the arrows of God which strike man with pestilence and death. Job is the exception who marveled at the phenomena: how God "directeth it under the whole heaven, his lightning unto the ends of the world./ After it a voice roareth; he thundereth . . ./ God thundereth marvelously in his voice; great things doeth he which we cannot comprehend. (*Job* 37:3-5.)

The ancient Persians also regarded lightning as a sign of divine wrath. In early Vedic religion several gods were associated with lightning: Trita, who helped Indra kill the serpent Vritra and other monsters, Apām napāt, who personified the thundercloud and went clothed in lightning, Rudra, the destructive storm god, whose bow and arrows represented the thunderbolt and lightning, and the two Maruts, young storm-god sons of Rudra, who rode through the heavens in chariots of lightning and struck down forests, men, and cattle.

In ancient Greece, thunder and lightning were manifestations of Zeus, and any spot struck by lightning became sacred. If his thunder was heard on the right before battle, it was an omen of victory, the implication being that the enemy would hear it on the left (a prognostication of ill). To the Romans also Jupiter was manifest, if not incarnate, in thunder and lightning; scholars posit some likelihood that the cult of Jupiter was superimposed on some earlier lightning cult. In Rome thunder on the left was propitious; and the sound of thunder occurring at the initiation of any undertaking presaged either success or failure for the project.

Various peoples of Indochina regard the god of lightning as the most powerful of all gods, who comes to earth with a stone ax and strikes down those who have offended him. The Chinese have a young goddess of lightning who travels around with the thunder god to keep him from making mistakes. (Once he made a terrible mistake.) She carries a mirror in each hand and flashes a bright light on every object in his path before he strikes it. In New Guinea the people believe thunder and lightning are caused by innumerable evil spirits. In medieval German folk belief they were caused by witches. In parts of Australia it is said that the sound of thunder causes turtles to come out of the water and lay their eggs.

In Dahomey, West Africa, lightning is the element with which the thunder-pantheon children of Sogbo punish wrong-doers. Gbadě, the youngest member of this pantheon, is the one most easily angered, and he alone is the one who kills with jagged lightning. His thunder causes the eggs of lizards and crocodiles to hatch. A man killed by lightning is thereby convicted of a serious crime; he is not buried by his family, but his body is consigned to the priest and cult-members of the thunder pantheon for disposal. His belongings are thrown away at the crossroads and never again touched (if any one should try to salvage something, he too will be killed by

lightning); his house is surrounded by a barricade of palm fronds to keep any one from entering it. No one in Dahomey will mention the name of any god of the thunder pantheon (Xevioso) during a thunderstorm; that would be calling the gods' attention to himself. (See Herskovits, *Dahomey* 1, 398-399.)

In general European and American folk belief lightning never strikes twice in the same place. Thunder curdles milk. Some people are afraid of wet dogs and horses in a thunderstorm, believing that they "draw" the lightning; others hide the scissors, cover mirrors, and sit on feather beds. Fear is augmented by such saying as: Thunder can strike a sword in the sheath and leave the sheath intact; it can strike a man down and leave no mark on his skin.

In Scandinavia the burning of the Yule log on Christmas Eve insures the house against lightning for a year. In Germany a house which harbors a quenched brand from the Midsummer bonfire will never be struck by lightning. In Picardy ashes from the Midsummer fire had the same efficacy. In general Slavic belief any ceremonial bonfire is thought to protect the fields from storm damage and the houses from lightning. In Shropshire, England, a piece of hawthorn cut on Holy Thursday will protect both house and person from being struck. Old writers of Germany and England reported that a magic coal could be discovered under a mugwort plant at exact noon (or midnight) in Midsummer Day, which if dug up and carried on the person protects him from lightning forever. He who carries in his pocket a piece of wood splintered off by lightning will possess extraordinary strength. In Maryland it is said that a toothpick made from a splinter of a struck tree will cure toothache.

Some southern U.S. Negroes say that if lightning strikes nearby while a man is dying, the devil has come for his soul. To dream of thunder means an angry God; it is well to repent of one's sins. Ashes from a piece of wood of a tree that has been struck by lightning, sprinkled in the doorway of the courthouse on the day of a trial, will make all decisions go your way, and the accusation will be torn up just as the lightning tore up that tree.

There is a good deal of weather lore associated with lightning among both Negroes and whites: lightning in the north means rain inside of 24 hours; lightning in the west means drought; in the Ozarks lightning in the south presages dry weather; lightning in the morning is an omen of storm; lightning and thunder in midwinter indicate extreme cold to come. See EAGLE; HARUSPICES; RESHEPH; THOR.

Among some North American Indian groups, thunder and lightning are considered identical; Thunder is personified, and may be an active myth-character as, for example, in Coeur d'Alène myths. Often however lightning is believed a power or weapon of Thunder man, or of the Thunder couple, or of the Thunderbird(s). Myths concerning the actions and powers of the latter are especially prevalent among the Eastern Woodlands tribes. Here the noise of thunder is believed to be caused by the Thunderers flapping their wings, lightning by their striking their beaks against hollow trees in search of a grub which they eat. North Pacific Coast tribes say lightning is the flash of the Thunderbird's eye. Some northern California and southern Oregon groups

believe it is the weapon of Thunder person, issuing from his mouth "like a snake," or from his hand. Other groups say lightning takes the form of a raccoon, or is caused by a mole because whenever lightning strikes a peculiar species of mole is found at the spot. It is also believed that Thunder is a man, Lightning a woman, often his wife; or Thunder a boy, Lightning his younger brother.

Lightning is generally feared. The Achomawi of northeastern California, for example, tell how in a contest between Thunder and Raven, Thunder decreed that if any woman who is about to be delivered of a child in springtime dreams that she is struck by lightning, she will be killed, unless she can be treated by a shaman who knows how to rebuke the cloud from which the lightning issued. To escape lightning persons crawl under burnt trees or logs, run to open spots, jump into the water, cover their heads, hold up a raccoon skin, and often talk to Lightning, telling him or her to go somewhere else. See DWARF. [EWV]

lightning bug or firefly Any of certain phosphorescent night-flying beetles (family Lampyridæ), especially genera *Photinus* and *Photuris* of North America. They give forth a small but bright intermittent light from the lower part of the abdomen. Indonesian folktale has a helpful firefly (B483.1). In Bengal it is said that night-blindness can be cured by swallowing a firefly. Some U.S. southern Negroes say if one flies into your eye, his fire will put your eye out. Through the South in general, if one flies into the house, it brings good luck,—or it means a stranger is coming. In Alabama it is said to be a sign of rain when the lightning bugs are seen flying high. North American Penobscot Indians regard the appearance of lightning bugs as harbinger of the salmon, when they appear late in the spring. The rural lore of Ontario holds that if you kill a lightning bug, you will be struck by lightning in the next thunderstorm. New England fishermen say that if you are driving along at night behind a horse, and see a lightning bug ahead of your horse's nose, that means a fine catch of mackerel the next day.

lilac A shrub (genus *Syringa*) native to China and Persia which was introduced into Europe in the 16th century. A legend of the border folk of Scotland says that the seeds of the first plants were dropped in an old woman's garden by a falcon. They grew into a beautiful bush but did not bloom. One day a young prince stopped to admire the bush; as he was leaving a plume from his cap fell on the bush, and from that day the bush had plumes of purple flowers. Another legend tells of a young girl who died on the eve of her marriage. She asked that lilacs be planted on her grave. When they bloomed they were white, and remained so even after transplanting. Quite generally in England and also in Germany it is said to be unlucky to bring lilacs into the house, but elsewhere only the white, which will cause a death in the household. If lilacs are worn, except on May Day, the wearer will never marry; giving a spray of lilacs to one's betrothed is a sign that the engagement is off. In Devon and Cornwall it is said that bathing in the dew from the lilacs on May Day will make a person beautiful all year long.

lilis An ancient hand-beaten metal drum of Babylonia, having a flat foot and a large cup-shaped body

on a short stem, similar in appearance to certain wooden drums still used in East Africa. See DRUM.

Lilith Traditionally, the first wife of Adam; the queen of the demons and sometimes wife of the Devil. Taking cue from *Gen. i, 27*, which tells a different story of creation from that of the earlier-written version in *Gen. ii*, rabbinical tradition developed the text, "male and female created he them," to indicate that God made Adam and Lilith from the dust at the same time—some say as twins joined back to back. But Lilith would not acknowledge Adam, the man, as her superior in creation; she would not be his servant, for she was created at the same time. Therefore she left Adam and was turned out of Paradise. God then made Eve from Adam's rib (*Gen. ii, 18-22*). Lilith, either before or after she was parted from Adam, was Sammael's mistress; according to Moslem tradition she cohabited with the Devil and gave birth to the jinn. Traditionally, God dispatched three angels to induce Lilith to return to Adam before he created Eve, but she refused and thus incurred the penalty of losing 100 of her offspring each day. However, once more, after the expulsion from Eden, Lilith slept with Adam, and from this union were born the Shedim or evil spirits.

The Lilith of this story seems obviously to be a development of the "maid of desolation (*ardat lili*)" of Babylonian tradition, a demon of waste places who originally lived in the garden of the Sumerian Inanna. She became in Assyrian belief a wind spirit, wild-haired and winged. In the Bible (compare *Is. xxxiv, 14*), she is the screech owl. The Talmudic tradition confused this spirit's name with the Hebrew word for night (*laylah*) and made Lilith a night demon, a succubus who slept with sleeping men and whose offspring from these unions were the demons. She attacked men sleeping alone; she thus was the angel of darkness and night and eventually a goddess (angel) of conception. This belief became strengthened in the Middle Ages by the story of Adam and Lilith, to the point where Lilith was a Lamia-like creature who envied women their children (she had lost hers) and would take them unless prevented by specific charms. One of these charms invoked the three angels sent to bring her back to Adam—Sanvi, Sansanvi, Semangelaf. Children during their first week of life were most susceptible; girls especially were in danger until three weeks had passed; an amulet with the three names engraved on it would protect them. Or, a circle was drawn about the lying-in bed or somewhere in the room, with the charm "Sanvi, Sansanvi, Semangelaf, Adam and Eve, barring Lilith." Or, amulets with a similar message were placed in several parts of the room.

The childless, envious, fatal demon woman appears elsewhere, for example, La Llorona of Mexican folklore. The Penobscot Indian Pskégdemus is a swamp spirit who wails near camps to entice men and children. A man who shows any sympathy for her, even in thought, is lost, for he will never be satisfied to marry a human woman. Another such demon of the Penobscot, dressed in moss and cedar bark, likes children and pets them. But good-willed though she be, children have a way of going to sleep forever when she fondles them.

The demon lover (succubus or incubus) whose children by man or woman become demons is also well-known. In the Iranian *Vendidad*, the man who has a

nocturnal emission is enjoined to say certain formulas, for he has had relations with an incubus and must prevent the child of the union from becoming a demon. To medieval Jewry also, Lilith, *the succubus*, was the cause of nocturnal emissions, and this, combined with her child-stealing activities, made her the terror of Jewish mothers. Her offspring, the *lilin* or *lilim*, were monsters with human bodies, the hindquarters of an ass, and wings: spirits of the wild, especially (thus recalling the Sumerian belief) tree spirits. See ALGOL; HOLDE.

lilt In Irish usage, to sing nonsense syllables, especially as accompaniment for dancing. The voice imitates the *lilting pipe* (pipe played for dancing) with a series of such sounds as *deedle-um-doodle-um-di*, and the pipe is played in a vocalized manner. One lilting song tells the story of a goat that would not give milk unless sung to with a long string of lilting syllables.

lily Any of numerous ornamental plants (genus *Lilium*) with a bulbous root, erect stems, and large, showy flowers. Semitic legend says the lily sprang from the tears of Eve when she was expelled from the Garden of Eden. In Korea a hermit once removed an arrow from the foreleg of a tiger and they became friends. When the tiger died, he begged the hermit to use his magic to keep him nearby, so his body became the tiger-lily. When the hermit was drowned, the lily spread far and wide looking for him. The lily is a symbol of fruitfulness in China, Japan, India, Egypt, Greece, and Rome. The bud is considered male and the flower female. In Japan the lilies were emblems of the war god, the white lily for peace, the tiger-lily for war.

In Christian symbolism the lily represents purity, chastity, and innocence, and is a symbol of the Resurrection and of Easter. The Madonna Lily is sacred to the Virgin Mary and is said to have been yellow until she stooped to pick it. The lily has supplanted the olive branch in pictures of the Annunciation. It was sacred to Venus and St. Catherine.

Smelling lilies, especially tiger-lilies, is believed to give a person freckles in England and most of the United States. Anyone who would step on a lily would crush the purity of the women in his household.

Lilies are not much in evidence in witchcraft, but a 13th century authority says to pluck a lily in the sign of Leo and, after mixing it with laurel juice, to place it under the manure pile until it generates worms. These when powdered and sprinkled on a person's clothing will give him the fever; put in a jar of milk it will cause a whole herd to dry up. The roots ground up and mixed with honey will glue together severed muscles. Mixed with olive oil, they are good for the hair, burns, and muscular aches. The juice is good against poisonous bites of all kinds. The leaves and roots are good for burns and scalds, and will dissolve tumors and swellings. The soul is sometimes represented as a lily (E745.4.1) which is a flower of the dead. On the spot where an innocent man has been executed, the Hungarians say three yellow lilies will spring up. The lily is also sometimes symbolical of the effete and cowardly.

lily-of-the-valley or **May lily** A plant (genus *Convallaria*) of the lily family having fragrant, pendant, bell-shaped flowers: locally in Great Britain called *Our Lady's Tears*. These dainty little May flowers are beloved

wherever they grow and there are many legends as to their origin. One of the most general Christian legends tells of a battle between St. Leonard and the Devil in the form of a dragon, in the forest of Louvain. St. Leonard was frequently wounded as he drove the dragon deeper and deeper into the forest where it eventually fled. Every place where the saint's blood fell sprang up patches of lilies-of-the-valley. In France they are sometimes called fairy cups, the story being that the fairies, out gathering dew, stopped to dance in the moonlight and hung their cups on a blade of grass. They danced too long and at dawn found that the cups had grown fast to the grass, but their protecting spirit hid them with two large leaves. In Norway they say the spring goddess found the bleakness so distressing that she tore up her green dress and, with a handful of snow, made these lovely flowers. In Ireland they are called fairy ladders and the little people amuse themselves running up and down them. In parts of Hesse, landholders pay their annual rent with bunches of these spring flowers. On Whit-Monday they are gathered and brought into the houses in Hanover, but in Ireland it is unlucky to take them into the house or to give them to a friend. In Devon it is said that whoever plants a bed of lilies-of-the-valley will die inside the year. In many parts of England dire consequences follow their transplanting.

North American Cherokee Indians say that the little dawn bird was sent to the top of the mountain. She marked the trail with a handful of white pebbles placed on a leaf which rooted and tinkled merrily as she returned. Later they were deprived of their music and given more bells.

Medicinally the flowers of the lily-of-the-valley are dried and used as snuff to clear the head, or mixed with water and distilled into *eau d'or* and used for nervous disorders, inflammation of the eyes, to strengthen the memory, and to clear the complexion. In the doctrine of signatures the lily-of-the-valley was recommended for apoplexy because of its "flower like a pendant drop." Distilled in wine they are good for the dumb palsy, vertigo, apoplexy, leprosy, dropsy, gout, and diseases of the heart. In the present day this plant yields a valuable drug for the treatment of heart diseases which is considered safer than digitalin which tends to become habit-forming.

Limbo The edge or border; specifically, the borderland of Hell in medieval cosmography: Dante makes it the first of the ten circles of Hell. Either Limbo was divided into three sections (*limbus patrum*, *limbus puerorum* or *infantum*, *limbus fatuorum*) or three classes inhabited it (the ancients who died before Christ lived and thus never had a chance to be saved, such "fathers" as Adam, who died unbaptized in the True Faith; children who died unbaptized and thus were incapable of entering heaven and were not deserving of punishment; fools who were not responsible for their deeds and yet were not worth saving). The fathers or ancients were, some of them, saved from Limbo as a result of the Harrowing of Hell by Christ. To the fools, who knew no better, Limbo was as good as paradise, hence a fool's paradise, but to those who knew, Limbo was a place of punishment, even though the punishment consisted only of eternal banishment from God's presence. Limbo, as the place where things are kept which are not quite

useful yet too good to destroy, is sometimes a synonym for jail.

limbo An acrobatic dance for men, of Trinidad. The dancer bends far back and shuffles forward to drum-beating, to pass under a stick held horizontally; the more expert the dancer, the lower the stick. It doubtless has its origin in the phenomenal acrobatic feats of native Africa. [GPK]

lime A small tree (genus *Citrus*) and its green, lemon-like fruit. In Penang, Malaya, the tree is looked on as a patron of actors, but the fruit is tabu in the mines. Piercing a lime with pins causes love pangs in one's beloved. In India the lime is the prime ingredient in many potent curses. In Jamaica, the juice of limes is reduced by boiling and used in a plaster for wounds. The leaves in a tea with a little sugar are good for a cold. Jamaica Negroes also use the leaves to scent their baths. In Texas a necklace of limes cures a sore throat. The adoption of lime juice for the prevention of scurvy by the British Royal Navy gave rise to the appellation of limey or lime-juicer to all Englishmen and English ships throughout the world, an epithet which still survives.

limping dance A dance suggesting in its limp the gait of a man crippled in one foot: the full weight is placed on the left foot, then the right is dragged and suddenly flexed during the transference of weight. The Ute Indians had two such dances. The Lame dance was performed by women, sometimes as many as 100, in two lines which advanced, then converged and retreated. The progression was forward with even duple foot and drum rhythm. In the Dragging-Feet dance, however, the progression was to the left side, in a sunwise circle, men and women in arbitrary order. The right foot was actually lifted clear of the ground; the left knee was raised sharply during the right knee flexion. It was a social dance held after a scalp dance. The same step occurs among other Plains tribes, as the Teton Sioux, and is characteristic of the present-day Sauk and Fox Victory round dances. There seems to be no special significance attached to the use of a limping step. [GPK]

linden or lime tree Any tree of the genus *Tilia*, having soft, white wood and bearing cream-colored flowers. In Europe it is generally called the lime tree. Its blossom is the national flower of Prussia. Scythian soothsayers turned to the linden when prophesying, and wound its leaves around their fingers as they spoke. It was revered as a tree of immortality of central Europe, and in Estonia and Lithuania sacrifices were made to it by women for fruitfulness and domestic welfare, the men sacrificing to the oak. In Germany and the Tyrol it was the haunt of dwarfs and dragons (*Lindworms*, linden worms). As a tree of judgment, magistrates sat in its shade to pass sentence. In Sweden this tree must not be harmed, for it is the haunt of the domestic spirits.

One of the legends of its origin tells how Zeus and Hermes, traveling together in disguise, were pressed to share the humble home and fare of an old couple, Philemon and Baucis. They were so touched by the hospitality of these old people, that when they died, Philemon was turned into an oak, and Baucis into a linden, growing side by side with their branches interlaced.

In Rome the bark was said to prevent intoxication, and was therefore bound into garlands to be worn at

feasts. In much of Europe the dried flowers are made into a soothing tea for debility, headache, insomnia, nerves, and as a blood purifier. The sap is fermented into a wine, and the seeds are made into a sort of confection. In Russia, oil of linden is used for toothache.

A wonderful linden tree, the *Susterheistede*, remained green as long as the Dithmarschen kept their freedom, but withered when they lost it. Legend says the day will come when a magpie will rear five young in its branches, and their liberties will once again be restored to them.

The North American Meskwaki Indians called this tree the string-tree, because its fiber was always at hand for the hunter or dweller in the forest. They prepared a strong twine from the fibers which they put to numerous household uses and for making baskets, mats, fish-nets, etc. The Meskwaki boiled the inner bark to make a poultice which opened boils. They also made a tea from the twigs for lung complaints. White settlers pressed an oil from the seeds.

Lind Worm A Danish supernatural ballad using the transformation motif. Compare *DAILY WORM*. See *BAL-LAD*.

line dance Any dance in which the dancers form a straight line, or two straight lines which advance and retreat back and forth to and from each other, or in which the dancers form lines which progress in serpentine or circles. In its simplest form, the line dance consists of a static prancing, or of dancing in place with about face, as in the Pueblo Indian *kachina* dances. Sometimes several lines run parallel. By progression a leader may draw his followers into a serpentine or labyrinthine path, especially in vegetation rites, as the Iroquois Corn dance, the French *farandoule*, the Catalan *sardana*. By connecting the two ends, the line dance turns from an open round to a closed round, a maneuver still preserved in the *rondes ouvertes* and *rondes fermées* of rural France. The juxtaposition, meeting, and interweaving of two lines develops into the longways, of which the country dances and related contradanzas are the most elaborate. Many ritual dances take that form: the seises of Toledo and Seville Cathedrals, the English morris dances, the Mexican Yaqui *matachini*. In various Irish group jigs, as the Harvest Time Jig, multiple lines interweave. See *DANCE: FOLK AND PRIMITIVE*, section on *comparative choreography*; *SERPENTINE*. [GPK]

ling Chinese word for a bell with a clapper. A ling is generally suspended from an animal's neck. See *BELL*.

lingam In India, the male sexual organ; the basic phallic symbol, encountered in the earliest known Indian art (the Indus Valley civilization of the third millennium B.C.) and still the most common object of worship in Hindu sanctuaries.

The lingam is associated with Śiva, symbolizing the male creative energy of the god and thus the generative force of the universe. It is regarded as the fixed, fundamental, immovable form of the god; the phallic column or pillar is enthroned in the innermost section of Śiva shrines, whereas the secondary images used in outer sections, on the walls, in processions, are anthropomorphic.

It is also viewed as the abode of Śiva, or of the triad, Vishnu, Brahmā and Śiva. In one version of the myth

of the origin of the lingam (in the later *Purāṇas*) the appearance of the lingam demonstrates the supremacy of Śiva. In this myth, Viṣṇu and Brahmā are described as encountering each other in the primeval universe, and arguing as to which is the progenitor of all beings. As they argued, a huge fiery lingam rose up and grew into infinite space. In a vain effort to measure it, Brahmā as the gander flew up and Viṣṇu as the boar dived down. Finally the side of the giant phallus burst open revealing Śiva within who proclaimed himself the origin of the two while Viṣṇu and Brahmā bowed before him.

The lingam is frequently combined with the yoni, symbol of female creative energy, and the two convey various concepts associated with Śiva and his goddess—the procreation of the world, the divine parents, the principle of division into opposites and reunion into harmony.

In its earliest known form, the lingam is a simple, quite literal stone carving of the phallus. As the phallic symbol in Śiva shrines, it tends to maintain a simple austere quality, reflecting its elemental nature, often in marked contrast to elaborate surroundings. It is approached through four portals and radiates its energy to the four quarters into which the universe is divided. In carvings, the lingam may be represented with an aperture on one side, sometimes on all four sides, from which Śiva, or the triad, or the goddess may emerge. It is sometimes crowned with flames; the concept of the “fiery lingam” which penetrates the yoni corresponds to the ray of light or fire from the sun which impregnates the earth goddess and creates the earth.

When combined with the female symbol, the lingam is depicted as rising out of the yoni as a base. In anthropomorphic representations of Śiva and the goddess, Śiva may be shown holding out the lingam to the goddess, and the lotus, symbolizing the goddess, may support, encircle, or flower from the lingam. [MH]

gLing-chös The mythology of the *Kesar Saga*, found especially in Ladāhki and believed by A. H. Francke to be a mythology differing from that of the Tibetan pre-Buddhist Bon but possibly coexistent with it.

In gLing-chös, heaven (*sTang-lha*) is white in color and is ruled by King dBangpo-rgyabzhin and his wife bKur-dman-rgyalmo. They have three sons, Donyod, Donldan, and Dongrub, the last of whom descended to earth and became King Kesar of gLing. There is a world tree, a willow with its roots in Yog-klu and its top in sTang-lha. It has six branches, on each of which is a bird, a nest, and an egg. The earth, Bar-btsan, which is red in color, is the middle place or land of men. Yog-klu, the blue-colored underworld, is ruled by king lCogpo or lJogspo whose subjects are famous for a large number of beautiful children. A fourth realm, sometimes included, is that of the devil, bDud, which is black or violet in color.

li'ŋka-n The men's dance of the Delaware Indians. In their co-residence with the Iroquois of Six Nations Reserve, the Delaware continued this dance for a while even after the fading of their ritualism into Christianity. On the fifth night of the great Midwinter Bear Ceremony, the warriors, in breechcloths, circled the central pole of their Big House in a counterclockwise direction. The songs were in antiphony between the leader and chorus of dancers. The steps were a test of agility. The

dance had an origin myth about boys who danced themselves into the sky and became stars. The songs say, “We are going away, all of us.” [GPK]

Linus song A Phœnician song of vintagers and reapers, interpreted by the Greeks as a lament for the untimely death of a youth Linus, who was exposed in infancy, brought up by shepherds, and killed by dogs. The name Linus or Ailanus was probably a misinterpretation of the words *ai lanu*, woe to us, the lament for Adonis in his character of corn spirit, symbolically slain in the cutting of the grain and invoked to return in a plentiful harvest the next season. Herodotus remarked on hearing a similar song in Egypt at harvest time. The Egyptian song, called *Maneros* by the Greeks, was also interpreted as a lament for a dead youth, son of a king and giver of grain. *Maneros* may have been a corruption of the words *maa-ne-hra*, return to thy house, the traditional phrase of all Egyptian laments for the dead and believed to be the words uttered by Isis and her sister in mourning for Osiris. Phrygian songs of the same type were called *Lityerses*, after the son of Midas. Lityerses was a mighty reaper who challenged all comers to contest and was finally overcome and killed by a great unknown, sometimes identified with Hercules. The lament bearing Lityerses' name was believed to have been sung first to console Midas for the youth's death. Similar stories are connected with laments for the cut corn sung elsewhere, and contests and mock sacrifices in symbol of the death and resurrection of the agricultural god have been common in harvest custom all over Europe for centuries. Probably the songs of ancient reapers were little more than a series of prolonged cries of sorrow, closely related to the laments sung for the dead at burial rites. See ADONIS; MOURNING SONGS.

The Phœnician vintage and harvest rite, of which the Linus song with its refrain *ai lanu* remained the striking part, seems to have traveled through Asia Minor on its way to Greece. Euripides, for example, calls the wailing lament of Phrygian origin. The observance of the festival of Linus in Argos included songs by women to protect their children, and a sacrifice of dogs. According to the explanatory myth, the mistreatment of Linus and Psamathe, his mother, enraged Apollo, who sent a female monster, Poinē, to snatch children from their mothers. Hence the guardian songs and the expiatory killing of dogs. According to a Theban myth, Linus was killed by Apollo after a musical contest, similar to the one which ended in the slaying of Marsyas. Still later, and dependent on Linus' reputation as a great musician, composer of traditional songs, inventor of musical modes, adapter of the Phœnician alphabet to the Greek language, etc., is the myth making him the musical tutor of Hercules. Once, when Linus tried to chastise his backward pupil, Hercules became angry and killed Linus with a blow of the lyre. For this Hercules was banished to the hills as a shepherd, where he began his career as a monster-killer.

li'oa A Sa'a and Ā'ulu (Solomon Islands) ghost of a deceased chief of the reigning house or of a warrior; a ghost of power. Both the li'oa and akalo (ghost of an ordinary person as distinguished from the li'oa) are called upon for success and for aid to the sick. These ghosts, when incarnate in sharks, swordfish, or gropers are known as pa'ewa. Compare AKALO.

lion Everywhere the lion is the symbol of royal power and strength: it was Judah's emblem; it is Great Britain's today. It is still a current saying that a lion will not attack a true prince. The lioness was the symbol of maternity and the attribute of the mother goddesses of many ancient cultures. The Greeks led a lioness in the processions of Artemis. Lions and lionesses both are frequent in old Aegean icons, figuring as attributes, companions, and guardians of the old deities. Lion statues guarded the doors of ancient Egyptian tombs and palaces, and the doors of ancient Assyrian temples. Lions were the symbols of the Babylonian god, Nergal, as the hot summer sun. The Egyptian goddesses Bast and Sekhmet were lion-headed; and the lion was also associated with Rā and Horus.

The lion is the Buddhist symbol of courage, nobility, and constancy, and the harbinger of good luck. He plays a prominent part in Chinese New Year's festivities. The ceremonial lion dances in front of every house door in the town of New Year's Day, accompanied by drums and firecrackers. In China the silver collected by his companions goes to the temple keepers; in the various American Chinatowns it goes to Chinese hospitals or other Chinese welfare funds.

In Africa where the lion is a daily commonplace and not yet mythologized to attribute or symbol, he is regarded variously as the reincarnation of dead ancestors, as a supernatural spirit or patron to be propitiated, and as a totem animal. Almost everywhere name tabu prevails. In Angola he is *Ngana* (sir), for instance; the Hottentots say "Brother." Propitiation of his spirit occurs among all those who hunt the lion; and the killer is *accused* and is held as a ritual prisoner until ritually forgiven. Among many African peoples also the sorcerer-transformer of a village can become a lion; among the Bushmen a lion can turn into a man. The founder of a certain clan among the Dinka (a Nilotic group) was twin brother to a lion. Men of this clan (having the lion for totemic ancestor) sleep unharmed in the forest, feed lions, i.e. always leave part of their kill in the forest for the lion, and on occasion dare to take some of the lion's kill.

In African Negro trickster stories, Lion is often outwitted by Mongoose, Jackal, or Hare, according to the area. In the *Pañchatantra* and in Tibetan folktale also Lion is often outwitted by Hare. See LION AND HARE.

There are many Arabic accounts of the lion beseeched letting his victims go. And this trait of generosity, wherever it came from, spread all over Europe (where the lion is not indigenous) as one of the outstanding characteristics of this animal. The lion is the king of the animals (B240) as far back as the *Jatākas*, and commonly in European fable and folktale. He is a brave, magnanimous, wise, a thorough gentleman and a sport. King Noble is the name of the lion in *Reynard the Fox*. The learned Italian monk, Savonarola (15th century) reiterated that the lion was magnanimous and wise, and quoted Pliny as proof of his wisdom: the lion obliterates his tracks with his tail as he goes along to keep hunters from following him. Solinus (3rd century) said the lion was not easily enraged, but terrible when roused; he spares those who fall prostrate, however, and is very gentle with virgins. Folktale and legend are full of saving, grateful, and helpful lions (B443). The lion's tenderness for virgins recurs in the European story of

the girl saved from ravishment by a lion (B549.1). In the medieval romance of *Valentine and Orson*, a lion leads the lost king out of the forest (B563.1). See ANDROCLES AND THE LION (B381).

In Aesop's fable of *The Lion's Share* (Jacobs #4) he is not so noble (J811.1). The ass divides the booty equally between himself, the lion, and the fox. The lion then proceeds to eat the ass; and the fox gives the lion the meat and keeps the bones for himself. In another European story, however, the noble lion again is evident (Q3.2). The lion himself divides the booty equally between himself, a thief, and a traveler. The thief demands half and is driven away; the traveler decides to claim nothing and is given half. In the Arabic *Infancy Gospels* and in *Pseudo-Matthew* there are stories of how the lions adored the child Jesus and were told to "go in peace."

It was a commonplace among medieval naturalists that the lion was afraid of the cock, trembled at sight of him, or trembled when he crowed, etc. Proclus (5th century) however, said it was not fear: that the cock was revered by the lion because both were born under the same planet, the sun.

Everywhere in magic the lion's heart is eaten to give courage. Hildegard of Bingen (12th century) said that it would also make the stupid wise. Other of Hildegard's prescriptions were: a lionskin cap would cure not only headache but mental disorders; deafness could be cured by holding a lion's ear to the deaf ear (because of the keen hearing of the lion); a lion's heart buried in the house would protect against lightning. Bartholomew of England (d. 1245) said sitting on a lion's skin would cure hemorrhoids. Albertus Magnus (13th century) prescribed a diet of lion's meat for paralytics. Very common also through the Middle Ages were little images of lions carved (under certain constellations) on certain little stones or gems or stamped on various metals which were potent to cure kidney trouble and especially acute intestinal pains. See EATING THE HEART.

Lion and Hare Title of an African Negro folktale based on the holding up the rock motif (K1251). As told by the Vandau of Portuguese South Africa, Lion, provoked by Hare, chases him. Hare, realizing that he will soon be caught, stands under a leaning rock and pretends to hold it up. "Lion, dear Grandfather," he cries. "Hold the stone! It will fall on us!" Lion forgets that he is chasing Hare and helps hold up the rock, lest it crush them both. Soon Hare lets go and goes home. Lion continues to hold up the rock for many days until he is so hungry and tired that he cannot hold it any longer. But when he lets go the rock does not fall. Now Lion is always looking for Hare to get even. E. Jacottet has recorded a Basuto version of this story. There are Kafir and Hottentot variants; it is known in the Cape Verde Islands and in Puerto Rico, and is also included in Georgia Negro Uncle Remus stories. Lion as a character in African Negro folktale nearly always plays the dupe to Hare's or Jackal's tricks. See HOLDING DOWN THE HAT.

Lion and the Mouse One of Aesop's fables, in which a Lion, awakened by a Mouse, generously lets him go. Later the Lion falls into the toils of hunters. The Mouse, recognizing his roar, hurries to the spot, nibbles the knot, and soon sets him free. The fable occurs in the

general type 75, The Help of the Weak, where the liberated animal is bear, fox, or lion, and it embodies the grateful animal spared motif (B371.1).

Lir (modern Irish *Lear*) In Old Irish mythology, personification of the sea; father of Manannán, the Irish sea god, and identified with the Brythonic Llyr, father of Bran and Manawyddan. See CHILDREN OF LIR; LEAR; MANANNÁN.

Lisa The male aspect of the Dahomean androgynous deity Mawu-Lisa, the first term of which is held to be the creator of the world as it is at present known. In native belief, Lisa is identified with the sun, as Mawu is with the moon. In missionary writings, Lisa is equated with Jesus Christ. [MJH]

Lithuanian folklore We find the first information in regard to Lithuanian folklore in chronicles and accounts of travelers. Chronicler Miechovita in 1517 says that in his time the Lithuanians used to sing sad songs of the death of the great Duke Žygimantas, murdered in 1440. Strykowski's chronicle in 1582 gives the Polish translations of the beginning of the lament songs in his time. The Italian traveler A. Guagnini mentions Lithuanian work songs in 1578. As time goes on we find more information about customs, beliefs, and folklore of the Lithuanians.

The first texts of a Lithuanian dirge, two songs, seven proverbs, and notes on wedding and funeral customs were gathered by J. A. Brand in 1673 and published in 1702. The first book, containing many ethnographic data, *The Lithuanians of Prussia*, was written in 1690 by German Rev. Theodor Lepner and published, 1744, in Danzig (2nd. ed., 1848 in Tilsit). There are some descriptions of customs, i.e. wedding ceremonies, clothes, folk musical instruments, and twelve proverbs; the folk songs are also mentioned, but the author dislikes them. Another important work on folk beliefs and customs, *Deliciae Prussicae oder Preussische Schaubühne*, was written in 1690 by a Lithuanian, M. Praetorius, in German, and published much later by W. Pierson (Berlin, 1871).

As for the oral folklore, at first attention was paid to proverbs and folk songs, chiefly from the linguistic point of view. In about 1830 the Lithuanian folk song, *daina*, became famous and was collected and investigated both by natives and foreigners. The biggest collection was gathered and published by A. Juškevičė (see LITHUANIAN FOLK SONG). With the beginning of the comparative studies of Indo-European languages, many foreign scholars visited Lithuania, studied the language of a supposedly dying people, and at the same time collected and published many folklore items. The work published by A. Schleicher, *Litauische Märchen, Sprichwörter, Rätsel und Lieder* (Weimar, 1857), made many of the Lithuanian folklore items available for comparative studies. Of similar importance was the collection of songs and tales by A. Leskien and K. Brugman, *Litauische Volkslieder und Märchen* (Strassburg, 1882) wherein 49 tales were translated into German and notes added by W. Wollner. The first work in which Lithuanian folklore was also skilfully investigated and compared with the similar variants of other peoples, was Bezenberger's *Litauische Forschungen* (Göttingen, 1882).

The first native ethnologist was L. A. Jucevičė (1813–

46). He published some collections of proverbs (1840), and folk songs (1847), and descriptions of customs and country life (1840–41). Finally in his largest and most important work, *Litwa* (Wilna, 1846), he touched on all branches of folklore and ethnography. He also compared Lithuanian songs and customs with similar traditions of the Slavonic peoples. He was an enthusiast, a fervent lover of his country and folk, an ethnographer, and a poet; hence, his works must be used for scientific purposes with caution. His premature death was a great loss.

In 1879 there was founded in Tilžė the *Lithuanian Literature Society* (LLG). For many years (until 1912) Lithuanians and their German friends worked together and much was done for folklore. The Society published a number of books and the journal *Mitteilungen der LLG* (6 vols., Heidelberg, 1883–1912), wherein much material on folklore and mythology appeared. Such activity was possible only in the part of Lithuania administered by the Germans, because in the largest part of the country, ruled by Russians, even the printing of books in the Lithuanian language was forbidden for forty years (1864–1905). For that reason several books on Lithuanian folklore of the period were published in Germany and in the United States.

Interest in folklore grew and developed together with the struggle for national freedom. The leading fighter of the Lithuanian national awakening, J. Basanavičius (1851–1927), was also one of the greatest collectors and publishers of folklore. For many years he lived abroad. Voluntary collectors sent him folklore material and he was eager to prepare and publish it. In the United States, where about one million inhabitants of Lithuanian origin live, were published his important works on Lithuanian folklore: two volumes of folk songs from his native village Ōzkabaliai (Shenandoah, Pa., 1902, 420 songs), and seven volumes of folktales: *Lietuviszkos pasakos* (2 vols., Shenandoah, Pa., 1898–1902), and *Lietuviškos pasakos yvairios* (4 vols., Chicago, 1904–05). The most important is the big volume *From the Life of Souls and Devils* (Chicago, 1903), which contains 813 tales and legends, with an extensive study "On Spirits and the Ancient Lithuanian Necrocul" by the editor. Basanavičius' publication of the Lithuanian tales remains the largest to date. He published many studies and articles on Lithuanian folklore, but they are the works of a dreamer; throughout, his work is deficient in scientific method, and displays the author's incapability of critically judging his own dogmatic convictions. Despite all this, his service as organizer of the collection of Lithuanian folklore and its publication is very great. As the ban from the Lithuanian press was lifted in 1905, Basanavičius went back to Lithuania and in 1907 founded in Vilnius the *Lithuanian Scientific Society* (LMD). One of the chief purposes of this society was the collection of folklore and ethnographic material. The Society published a journal, *The Lithuanian Nation* (*Lietuvių Tauta*), and there appeared many folklore texts and articles. The Society organized the collection of folklore, and up to 1932 had collected 10,000 songs, 4,500 tales and legends, 3,600 beliefs and superstitions, 21,000 proverbs, 5,400 riddles, and many other folklore items.

In independent Lithuania various collections and articles dealing with folklore were printed in the *Tauta*

ir *Žodis* (*The Nation and the Word*), a publication of the Faculty of Liberal Arts in Kaunas (vols. 1–6, 1923–30). In 1930 the Folklore Commission under the auspices of the same Faculty was founded and functioned until 1935, under the direction of V. Krėvė. The Commission had collected about 132,000 folklore items, published 10 volumes of the series, *Mūsų Tautosaka* (*Our Folklore*) and some other books: a big anthology of folk songs by Dovydaitis (1930), and a collection of proverbs by V. Krėvė (1934). In 1934 the Commission for Folk Melodies was established by the Ministry of Education and began to work with phonographs. In 1935 the government issued a decree regulating folklore activity and established the *Lithuanian Folklore Archives* (*Lietuvių Tautosakos Archyvas*). This institution was to carry on the work begun by the above-mentioned enterprises with better methods, and all the investigations on folklore matters were concentrated in one place. Dr. Jonas Balys was appointed director of the Archives and he remained in charge up to 1944. The Archives dealt with all matters relating to oral folklore. Its task and method was purely scientific; practical application of folklore to daily life was not regarded as its part of its program. Its first care was to organize the collection of folklore and the cataloging of the material gathered. A folklore library was established and bibliography compiled. A publication was started, *Tautosakos Darbai* (*Folklore Studies*), where important material and studies were published, often with English or German summaries (7 volumes appeared, Kaunas, 1935–1940). The big publication of Lithuanian folk legends was begun in 1940 (Vol. I, legends of origin and concerning the devil). In five years (1935–40) considerable work was accomplished. With the help of numerous collaborators throughout the country and together with previous collections, the Archives had amassed by 1940 some 442,000 important folklore items, including 8,300 phonographic records. Most numerous were the songs—173,000; superstitions and folk beliefs—101,000; proverbs—63,000; riddles—44,000; tales and legends—34,000; games—3,000, etc. Folk traditions were still alive in the country and it was not too late for collecting. With the loss of independence and the occupation of the country first by the Russians and then by the Germans, the folklore work was paralyzed. German censorship stopped even the publication of folk legends. The situation today in Lithuania behind the iron curtain is unknown. In Lithuania, as in other Baltic countries, folklore was regarded as an important branch of national science and was generously supported by the state. A special chair for folklore at the Lithuanian University was established in 1934. Of the private institutions must be mentioned the activity of the Society for Research on the Native Land in Šiauliai, which established a rich museum and issued a journal *Gimtasai Kraštas* (*The Native Land*), where many articles on folklore were published (10 volumes, 1934–1944).

Most numerous and original in Lithuanian folklore are the folk songs. Numerous are dirges at wedding and funeral ceremonies. The funeral dirges, mentioned very early by chroniclers, survived up to recent years and are interesting not only as creations of folk poetry but also because they contain many old folk beliefs. A large collection of 220 dirges was published in 1926 (in *Lietuvių Tauta* IV, 1) and some were translated into German by

Bartsch (in *Zeitschrift für vergl. Literaturgeschichte* 1, 1889, pp. 81–99).

The folktales have more types in common with the East than with the West. There are some original types with stanzas for singing. The folk legends have many original motives, e.g. about fairies and thunder. The *Motiv-index of Lithuanian Narrative Folklore* was arranged by Jonas Balys (in *Tautosakos Darbai* II, 1936). Very many of the old elements are contained in the folk beliefs (see LITHUANIAN MYTHOLOGY) and customs. The funeral ceremonies of the Old Prussians were described by Wulfstan in the 9th century. The wedding rites have frequently kept their very ancient form, going back to the old Indo-European era (see J. Balys, *Litauische Hochzeitsbräuche*, Hamburg, 1946). The proverbs often show, even for the international types, a different and figurative version. About 14,000 proverbs, beginning with A to I, were published by V. Krėvė in three volumes (1934–37). Some are not of traditional origin. A book of riddles, *Mislių knyga*, was published by K. Jurgelionis in Chicago in 1913 and contains more than 1000 riddles. In all there have been published about 10,000 songs, 6,000 tales and legends, 16,000 proverbs, and 2,000 riddles—only a small part of the collected material.

JONAS BALYS

Lithuanian folk song The most numerous and original creations of Lithuanian folklore are the folk songs (see DAINA). They are interesting because of their poetical value and folkloristic peculiarities. In content, they differ very little from the songs of other nations, but they differ from them sharply in their poetic artifices.

Subject matter The greatest part of the Lithuanian songs are romances about the relations between youth and maiden; these show great tenderness and are effective and pure. Often the same daina consists of two parallel parts: one concerning the youth, the other the maiden. These are the most beautiful and original. Wedding songs are very numerous with both mournful and cheerful tunes. The bride must weep and recite the traditional wedding dirges (*verkavimai*). The relations of the family members are often the topic of the songs. (It is impossible to imagine an individual without family or society [*kin-dres*]: a man of the folk hates solitude and is a very social being.) Therefore the songs about orphans are very affecting. They sometimes have mythical traits: the sun will replace the mother; the moon, the father; or the orphan will speak with the dead father, transformed into an oak tree. Work songs are also very numerous. A 16th century chronicler who wrote that the Lithuanians have special songs for each type of work was not exaggerating. Particularly interesting are the harvest songs of the *dzūkai* in southern Lithuania. They are often of obviously mythological character, e.g. a prayer to the sun. Other peculiarities of the same region are the Christmas songs and plays (without any traits of Christian customs and beliefs) and the songs of the Lenten season before Easter which have strong epic traits (really war songs). The Easter songs show more Christian influence, but the songs of the calendar festi-

vals, like those of Shrove Tuesday, Whitsuntide, and St. John, are quite permeated with ideas from the old times, with emphasis on the care for fertility. There are few mythological songs where Sun, Moon, and Evening Star play the chief part, and the gods Perkūnas (Thunder), Laima (deity of fate), and some others like Žemyna (mistress of the earth) and *Bangpūtys* (god of the storming sea) are mentioned. Many work and calendar festival songs, however, have some mythological traits.

The fate of the Lithuanian nation was not favorable for preservation of the heroic or historical songs. The final loss of independence occurred in 1795 when Lithuania became a part of the large Russian realm. The upper class early became polonized, and the farmers were enslaved for hard work on the fields of the squires. It is no wonder that the mass of songs cultivated in the last centuries were of elegiac and personal nature. Historical songs mentioning heroes, places of battles, and other important events are not numerous. The heroic songs were mentioned by the chroniclers of the 15th and 16th centuries (Długosz, Miechovita, Strykowski), but were left uncollected and only a few fragments were noticed in Polish translations. Very old and original are the fishermen's songs from the coast of the Baltic Sea. There are all kinds of others songs, of course: humorous and drinking songs, children's songs, pastorals, songs about flora and fauna, etc. The ballads are also numerous and belong mostly to the general international tradition. Perhaps some of the numerous ones about drowned people are indigenous. Transformation of the dead into plants and birds is often mentioned. Slavic influence on the ballads is very great, the Germanic, very small (see J. Balys, *Hundred Folk Ballads*, Kaunas, 1941). In the ballads the epic motifs are often mixed with the lyric. Lithuanian folk *dainos* are *par excellence* lyrical "poesy of the hearth," says B. Sruoga. Even in motifs of epic character the lyricism is overwhelming. In the war songs, for example, the struggles on the battlefield are never described. How the youth was prepared to go out for the war is described, and the parting with his parents, sisters, and sweetheart, but about the battle we get only a few words from the message of the returning steed. The hero fought bravely, was killed, was buried with great solemnity: this is all. This sounds like the end of the ballad, but in Lithuania it is the beginning. Now we hear the most beautiful part of the song, how the relatives, usually his mother, sister and sweetheart, are mourning for the dead hero. Even the sun takes part and does not rise for nine mornings.

Poetic artifices The daina being of lyrical nature has also retained some strong epic fragments, and makes much use of epic formulas. Parallelism is developed as a poetical artifice. The daina does not content itself with the ordinary dual-member parallelism, but uses multiple parallelism. The beauty and effectiveness of its poetical style is produced by the so-called negative parallelism with inexhaustible multiplicity of the formulas.

Among special poetic artifices of the Lithuanian *dainos* must be mentioned their diminutives, lavishly used in various ways (see F. Brender, "Die Verwendung der sog. Deminutiva im Litauischen," in *Tauta ir Žodis*, III, pp. 76-111. Kaunas, 1925). Diminutives give to the Lithuanian daina a special tenderness and grace, but not the weeping sentimentality that a foreigner may think. There are at least 20 acceptable diminutives for

each common word such as mother, father, sister, brother, or maiden. For a Lithuanian each diminutive has a different flavor, even if the difference is microscopic. Hence translation of the daina is a very difficult task. (German reproduction of the diminutives is unnatural, in English impossible. The forms "daughterling" or "youngling" are not natural in English.) The attaching of the words "small" or "little" cannot reproduce the vigor of the original expressions. In some cases it would seem that the word "dear" or "lovely" would be preferable to "little." In the translation of the daina into English, wrote N. Katzenelenbogen, other peculiarities of the Lithuanian language which make translation more difficult are the lack of articles and of auxiliary verbs in either past or future tenses. Another attribute of the *dainos* is their onomatopoeia. The Lithuanian language is inexhaustibly rich in interjections, also direct expressions of experience. Specific verbs are frequent in the *dainos*, where they are often used for their humor. It is quite impossible to reproduce their ingenuity and wit in other languages. For a Lithuanian, of course, each of these words calls up a specific picture. For the expression "to go" a Lithuanian singer can choose from not less than 25 words. Among other distinctive verbal forms of the *dainos* must be mentioned verbs with an internal object and the pleonastic infinitive, e.g. *vakarėli vakaroti*, to keep evening hours; *vasaružę vasaroti*, to pass the summer.

For the history of the epithet, the *dainos* provide abundant material. There we meet a kind of permanent epithet, e.g. *baltas*, white, has become stabilized. If we say *balta oblėlė*, white little apple tree, the meaning is clear: i.e. the apple tree has blossoms. It is quite otherwise in such an expression as *balta saulelė*, white dear sun, or *balta mergelė*, white dear maiden. Generally if the singer wishes to describe the sun or a maiden, he says *škaisti*, red. It seems that the color white for Lithuanians has always been the emblem of goodness, sincerity, joy. Therefore when the singer wished to emphasize the good attributes of things or persons, he used the word white.

The important symbolism of the *dainos* was investigated like their other poetic artifices by B. Sruoga (see *Folk-Lore* XLIII, pp. 301-24. London, 1932). He concluded that "the symbolism of the Lithuanian *dainos* is fundamentally of an erotic nature." For example, a tree symbolizes a man; the leaf, a word; dew, tears; to sow, to love; a falcon (or other bird) breaking the branches, a youth carrying off the bride, etc. A wreath of rue in the *dainos* always signifies innocence or the maiden herself. A lost wreath, forgotten or blown off by the north wind, never can be regained—lost innocence will never again return. When the maiden unlays the wreath, she is preparing to marry. When a maiden is pleasing to a young man, and he raises his hat, she raises her wreath. If she surrenders her innocence to the young man from love, she burns her wreath in the fire. What the wreath is to the maiden, the cap is to the young man: ardor, youth, brightness. The youth of the *dainos* lives in the stable with his beloved steed, and the maiden in the "rue-garden." It is true, in the *dainos* of the last centuries, that rue as a symbol of maidenhood is very clear and common. Nevertheless this symbol is apparently new, and comes to Lithuania with the influence of the Catholic clergy from Poland not earlier than the 16th

century. Rue is unknown to the Latvians; the maiden there wears a wreath of roses. In archeology and folk art the rue motif is absent. The oldest symbol of maidenhood among the Lithuanians was the lily. In the dainos even today we often meet the line: "My dear maiden is a beautiful white little lily." Rue is never called white, but always green. Flax blossoms represent the opposite of the innocence and maidenhood. Even the fairies had fear of flax blossoms. This symbol may be as old as the lily, and is surely older than rue.

Meter The meter of the daina is variable and very often mixed because the accentuation of the words is unstable. The rhythm always stands in close connection with the melody, which shows much beauty and symmetry. The rhythm is the essential requirement of the old daina. Rime is not so rare as in Latvian songs, but not made on purpose. The peculiarities of the Lithuanian language offer many occasions for riming. If the rime was accidentally created, it was accepted but not regarded as an essential requirement. Alliteration is rarer. The stanzas consist of two, three, four, or sometimes six lines. Some older songs do not have regular stanzas, but such stanzas could be made by singing with repetition of certain lines. The dainas often reach a considerable length. The new songs which were created under the influence of Polish and German religious songs and written literature always have rime and four-line stanzas.

Rhythm and melody The text and melody of the Lithuanian daina are closely connected. The recitation of songs is unknown. "The melody on the other hand, is only a cloak for the rhythm, presenting the accent in a more beautiful form" (Bartsch). The accentuation of some words differs in singing from the usual speech. Because the most important thing for the daina is its rhythm and melody, the oldest Lithuanian songs, *giesmės* or *sutartinės*, sometimes consist of meaningless words. The melodies of many of the old dainos have tonalities like those of the old modes (Dorian, Phrygian, Aolian, Ionian, etc.) and were sung in unison. According to V. Jakubėnas, "Lithuanian folk songs differ from Slavic songs in that they do not have the large intervals which are so typical of, for instance, Russian folk melodies. Sudden passages from resigned melancholy to reckless abandon and wild joy are also unknown in the Lithuanian songs. They differ from German songs by the frequency of changes in their measure, the alternation from 5/4 to 3/4 time being frequent . . . Ancient modes of church music are found even at the present time, but certain melodies cannot be attributed to any known mode. Under the influence of the song in thirds for two voices, which came to Lithuania from Germany in the 19th century, many melodies became European in character, but as a result lost their ancient Dorian or Phrygian minor tonality for a rather artificial major tonality. In the southwestern sections of the country, as well as in the Vilnius district, a great many songs for one voice are found which have preserved their ancient rhythmic and harmonic structure. These songs, the songs of the Dūkai people, are suggestive of Oriental songs" (see *Lithuanian Bulletin*, p. 11, New York, 1947). An important study of folk melodies was given by T. Brazys, "Die Singweisen der litauischen Dainos," in *Tauta ir Žodis*, vol. IV: 3-50, Kaunas, 1925. He suggests that some Lithuanian melodies are similar not only to

the alleged old Greek, but also to the Indian recitations of the *Atharva-Veda* (p. 49).

Choral rounds The above mentioned *sutartinės* are the oldest and most primitive kind of daina. Such songs are not numerous, but they are the Lithuanian representatives of the oldest kind of folk poetry and were sung during the dance or work where many people were gathered. The very sharp rhythm and peculiar melody were important enough for the people to enjoy. Similar singing is in use among some primitive peoples, and perhaps in some regions of the Balkans (in Bulgaria and Serbia). Some of the meaningless *sutartinės* are more developed and have between long refrains a few meaningful verses. It seems that in olden times all the Lithuanian songs were of such nature. The singing of the *sutartinės* is very distinctive. There are at least two singers (sometimes three or four). One, the leader or collector (*rinkėja*) sings the chief text; the other, the so-called adviser (*patarėja*) sings the meaningless refrains. The second singer is silent at first and later begins to sing the same melody together with the first singer but singing a second higher or lower. The singing is also contrapuntal or in choral rounds (canon). The *sutartinės* are alive only in the northeastern part of the country and are sung by women. The Lithuanian Folklore Archives was able in 1935-1939 to take down on phonograph disks 336 such choral melodies. The music of the old musical instruments, played mostly by men, such as a kind of harp (*kanklės*), pan-pipes (*skudučiai*) or an orchestra of five wooden trumpets (*trimitai*), is of the same musical arrangement. Some *sutartinės* mention historical events and names, and thus give proof of their great age. (For some examples see in *Tautosakos Darbai*, vol. V, pp. 72-88, Kaunas, 1939).

Collections The first known collector was J. Schulz (1684-1710) but his notes have disappeared. The first three really important songs were published by P. Ruhig in 1745 in his work on the Lithuanian language, and the daina became famous thanks mostly to their enthusiastic review by G. E. Lessing, who in 1759 exclaimed: "What naive pleasantness! What charming simplicity!" The well-known song collection of Herder, *Voices of Nations*, in 1778-79, where eight Lithuanian and six Latvian songs were published, greatly influenced all the Baltic nations from Finland to Lithuania, and the interest in folk poetry grew rapidly. The first collection of 85 dainos with German translation and seven melodies was published by L. Rhesa, *Dainos oder Litthauische Volkslieder*, Königsberg, 1825 (2nd edition Berlin, 1843; 3rd edition Kaunas, 1935-1937). He was a native Lithuanian, professor of theology and philosophy, author and translator of many books into Lithuanian. He had numerous collaborators who sent him the dainos. He supplemented his book with a study on the daina and many of his conclusions remain valid today. The book achieved considerable success: such prominent authors as Goethe and Jacob Grimm wrote favorable reviews, and the daina was introduced to the educated world. The dainos from Rhesa's book were translated into French, Russian, Polish, and Czech. Thereafter many foreign scholars collected and published or investigated the dainos. Among the works of German scholars, the big edition of G. Nesselmann, *Litauische Volkslieder* (Berlin, 1853), is important. Nesselmann tried to reconstruct from sev-

eral variants the original form of the *daina*, but not always successfully of course, and sometimes he is accused of mutilating them. Further, the publications by A. Schleicher (1857), A. Leskien and K. Brugman (1882), A. Bezzenberger (1882), and Tetzner (1897) must be mentioned. The prominent Polish folklorist, O. Kolberg, published a booklet with 76 songs (1879). The Russian folklorists, Potebnya and Kostamarov, used the *dainos* in their investigations. Finally the Finnish folklorist, A. R. Niemi, collected 3,500 songs and 1,500 of their melodies on phonograph cylinders, published with the help of a Lithuanian, Rev. A. Sabaliauskas. He made another important collection of 1,459 folklore items (1912), and wrote many studies of the relations between Lithuanian and Finnish folklore. The Lithuanians themselves were also busy gathering and publishing the songs. The publications of S. Stanevičius (1829), S. Daukantas (1842), and L. Juzevičius (1844 and 1846) were the first. Of great importance is the work of Christian Bartsch, *Dainų Balsai, Melodien litauischer Volkslieder*, 2 vols., Heidelberg, 1886 and 1889, containing 392 melodies with translations of the texts into German, and critical notes on melodies and texts. The greatest collector of the *daina* was the Rev. A. Juškevičius (1819–1880). He gathered 5,500 songs and 2,000 of their melodies. With the assistance of his brother, a skilled linguist, and with the support of the University of Kasan, he published in 1880–1881 three volumes of *Lietuviškos Dainos (Lithuanian Songs)*, containing 1,569 songs. The texts were written down and published very carefully, but the whole work suffers from unsystematic arrangement. Another large collection of Juškevičius, *Lietuviškos svodinės dainos (Lithuanian Wedding Songs)*, was published by the Russian Academy of Sciences in St. Petersburg, 1883; it contains 1,100 songs, very well arranged, and has references to the other published variants of each *daina*. The melodies to the two last mentioned collections were published in 1900 in Krakow. Juškevičius's collection is the largest thus far published. Of the most recent publications, perhaps the best is *Lietuvių liaudies melodijos (Lithuanian Folk Melodies, with texts)*, arranged by J. Čiurlionytė, published in Kaunas, 1939, by the Lithuanian Folklore Archives (*Tautosakos Darbai*, vol. V). These Archives collected in 1935–1940 a very considerable store of *dainas*, 150,000 with texts only; 15,378 texts with melodies; and 6,836 melodies recorded on disks. Lithuanian scholars who investigated the *daina* are M. Biržiška (history of the *daina* and historical songs), T. Brazys (melodies), J. Balys (ballads), B. Sruoga (poetic artifices), and Z. Slaviūnas (*sutartinės*). English translations of songs are: *The Daina, an Anthology of Lithuanian and Latvian Folk-Songs* by U. Katzenelenbogen, Chicago, 1935 (an introduction with bibliography and English translation of 98 Lithuanian and 283 Latvian songs); and *Old Lithuanian Songs*, translated by Adrian Paterson, Kaunas, 1939.

JONAS BALYS

Lithuanian mythology The whole picture of the old Lithuanian religion is not clear, despite numerous books and articles written on this matter. The chroniclers Grunau, Lasicki, Lukas David, Waiselius, Hartknoch, and other authors of the 16–17th centuries recorded many names of the Lithuanian gods, but these are mostly either misunderstandings or purposely fabricated names. Some, however, seem worthy of trust, e.g. in the

chronicle of Malala in 1261 are mentioned the gods Perkūnas (Thunder), Telvelik (probably Kalvelis, the heavenly smith, who forged the sun), and Žvoruna (goddess of wild beasts). More exact are the reports and warnings made by the Christian priests who struggled with the old beliefs.

The Lithuanians became Christians in the 14th century, but for many centuries afterward Christianity was only superficial because of the lack of priests speaking Lithuanian. In the first Lithuanian book, published in 1547, the author M. Mosvidius exclaims: "There are people who make promises to Perkūnas, others worship, for the purpose of crops, Laukosargas (guardian of the fields), and for cattle, Žemepatis (master of the earth); and those who intend evil call upon the Aitvaras and Kaukas." The author probably confused the functions of Laukosargas and Žemepatis. The last two mentioned (Aitvaras and Kaukas) are household spirits who stole from other people to bring fortune to their masters. Canon N. Daukša wrote in his Catechism in 1595: "And who transgresses this First Commandment? Especially those who worship fire, Žemyna (mistress of the earth), snakes, reptiles, Perkūnas, trees, Medeinė (mistress of the forest), Kaukas (house demon) and other devils." In 1533 the Episcopal Visitor reported on conditions in the vicinity of Ukmergė: "The Christians of that district buried their dead in the groves and 'holy fields,' and they worshipped inanimate objects—oaks, stones, rivers and reptiles."

Folklore gives us much valuable material to supplement and correct the statements of printed sources. Lithuanian mythological beliefs can be divided into four categories: 1) gods; 2) spirits and demons, or the "low mythology"; 3) worship of nature; 4) worship of the dead.

The Gods The word for god in general is *dievas*. The most important god of the Lithuanians is Perkūnas, Thunder. He is often mentioned, beginning with the 13th century, as the most popular god of the Balts. He is conceived even today with clear anthropomorphic traits. There is no proof, however, that he was the highest god of the old Lithuanians. But if there was one God of Heaven, this could be Perkūnas only, because he has many traits which belong to the God of Heaven. The folklore of recent days tells that Perkūnas lived on the earth; his castle was on the top of a mountain; he was a good ruler and beloved by the people. After death he was taken to heaven, where he now has his court over the clouds, is ruler of the air, and commands thunder and lightning. "If we did not have a (Christian) God, he (Perkūnas) would be God, but there is a God, therefore Perkūnas cannot be the (Supreme) God. Formerly, however, he was ruler of the world and often descended to the earth to see how it was going for the people. Today he has not so much power, he can only flash the lightning"—so explained a man of the people. Perkūnas is the greatest enemy of all the evil spirits, whom he hunts during storms. He is the overseer of right and order, punishes bad people, and gives fertility to the crops of the good ones. The ill-treated wife asks in a song: "Light the lightning, strike, dear Perkūnas, strike dead my wicked husband." During the storm the Samogitian prayed: "Perkūnas, dear God, do not strike a Samogitian, but strike a Russian like a brown dog" or "strike a German like a devil." Another prayer:

"Perkūnas, dear God, have pity on us; drive out this darkness to the deserts, and we shall be obedient to thee all the days till the end of the world." Perkūnas is usually called *dievaitis*, diminutive, little, or dear god; this name is used only for the heathen god, never for the Christian God. If Perkūnas appears as a man, he is a strong man, a hunter, with a brown beard and some weapon. Often he is imagined as an old man. In his hand he has an ax or hammer. Sometimes he rides in a two-wheeled car, driven by a he-goat (compare THOR). About the Perkūnas family, the traditions are confused. In some traditions the influence of St. Elias is obvious.

According to importance, the second place belongs to Žemyna (diminutive *Žemynėlė*), mistress of the earth. Her brother is Žemėpatis (sometimes called Žemininkas), master of the earth. The latter was protector of the farm. Both have been mentioned since the 16th century. Žemyna was the more popular, and at every feast the first act was to make a libation to her, pouring some of the beer on the ground (see M. Praetorius, *Deliciae Prussicae*, Berlin, 1871). She is often called on, together with sun and moon, in the magic formulas against the bite of the snake. The earth is worshipped by old people even today and regarded as mother and provider of food for all living beings. Before going to bed, the old people kissed the earth and prayed: "Earth, my mother, I have from thee my origin, thou feddest me, thou borest me, and after death thou wilt bury me." Sacrifices are given to the earth: in the first furrow is covered a piece of bread or a whole loaf; at harvest time bread is also offered with the words: "Dear Earth, thou gavest me and I am giving for thee." In old times a sow (and probably human beings) was offered to the earth at the beginning of the building of a castle or town.

An important place belongs to Laima or Laimė, deity of luck and fate, who forecasts the future of the newborn for its whole life; man is unable to make any change. "Such one is the forecast of Laima" (*taip Laima lėmė*), says a proverb, hence there is nothing to do. In a song the youth says: "Weep not, dear maiden, quiet your little heart, perhaps you are destined to me by Laima and despite all will become my sweetheart."

Spirits The most interesting spirits are *deivės* or *laumės*, the Lithuanian fairies. Usually they appear by twos or threes. They are very beautiful maidens, with long fair hair, blue eyes, and big breasts. A *deivė* is able to do all women's work in the most perfect manner, being especially skilled in spinning and weaving. She loves children and often exchanges a newborn child. She is helpful to poor girls or orphans, but a man must be respectful and careful. The *deivės* do not like mockery and are vengeful towards selfish persons. For example, a poor woman who was tired from work forgot her baby in the field; when she found him in the morning safe, he was guarded and generously granted gifts by the *deivės*; a rich woman, hearing of this, abandoned her baby purposely in order to receive similar precious gifts, but found her child in the morning strangled by the *deivės*. It is forbidden to spin on Thursday evening and to wash linen after sunset, because this is the time when the *deivės* are working. They are social beings, very fond of human society. One often falls in love with some young man and marries him; they can also be caught (as are swan maidens or nightmares) by a man. Family life with a *deivė* is happy; she is an exemplary wife and

mother, but she will leave her husband and children if some certain tabu is broken. The *deivės* or *laumės* are also spirits of the wood and water. They are similar to the fairies of the Celtic people, and many Lithuanian beliefs and legends about fairies are similar to the Celtic (see J. Balys in *Die Nachbarn* I. Göttingen, 1948). The *deivės* are not gods but they were worshipped. Mosvidius in 1547 exclaimed that the Lithuanians have "a hundred *deivės* if not more." Later the *deivės* became involved with beliefs about hags.

Very popular also are the demons or dragons, who bring good things to their master (see AITVARAS). In northern Lithuania the term is *pukys*, a borrowing from the Latvians, who in turn received the name and belief from the Germans (see *PUK*). In western Lithuania the household spirit, *kaukas*, a dwarf living under the earth, is charged with similar duties. This may be a borrowing from the Old Prussians, among whom the *kaukas* was a ghost. It seems that the former *kaukas* was a harmless house spirit like the German kobold, who works for a small reward and does not steal.

The Lithuanians do not speak of nature spirits as "mothers," but as "man" or "master"; e.g. *Žemėpatis*, master of the earth, *Vėjopatis*, master of the wind.

Belief in the corn spirit *Rugių boba*, the old woman of the rye-field, is common in western Lithuania (see HDA V: 266-68). To *Ruginis*, the man of rye, a he-goat was offered in the fall (this is mentioned only once in a folk song). On Shrove Tuesday an image in female shape was formed, *Morė* or *Kotrė*, who is a personification of the spirit of fertility (see J. Balys, "Fastnachtbräuche in Litauen" in *Schweizer Archiv für Volkskunde*, v. 45, Basel, 1948). At threshing time the male figure of *Kuršis* was formed from straw; *Rugių boba* was not only made from straw, but also baked from dough. A cock was offered at the harvest feast.

The Lithuanians also have many other spirits: nightmare (*slogutė*), werewolf (*vilkolakis*), giant (*milžinas*), devil (*vėlnias*), and hag (*ragana*). There are many legends about them, but all beliefs of this kind are of a well-known pattern and show few traits distinct from the corresponding traditions of other peoples. The devil is usually depicted as a German dandy. The word for devil, *vėlnias*, probably originated from *velys*, the deceased. Legends about the devil are published by J. Basanavičius (Chicago, 1905) and J. Balys (*Lithuanian Folk Legends* I, Kaunas, 1940).

Worship of Nature In all primitive religions worship of the manifestations of nature is very common. In the written sources it is often mentioned that the Lithuanians worshipped hills and stones, earth, and heavenly bodies, trees and water, and even serpents. There are plenty of places, hills, woods, or groves, rivers and small seas, which are named together with the words "holy" or "sacred" (*švent-*). The older name of such places is *alka(s)* (see E. Stürms, *Die Alkstätten in Litauen*, Hamburg, 1946). In sacred waters fishing was forbidden and in sacred woods it was not allowed to break even a bough. The mountain Rambynas, on the high bank of the Nemunas river, was one of the well-known sacred places. It had a sacred grove at its foot and a big stone for offerings on the summit. There was a place of worship there until the 18th century. The worship of big stones, called *deyves* is mentioned by the Jesuits in 1605. The transformation of man into stone is also

known. Water was worshipped, but water spirits are unknown. Only one water god is named in the songs, *Bangpūlys*, blower of the waves, the god of the storming sea. The water maiden is known at the seashore (see *Globus*, 1902, p. 238). On the floor of the sea is another world where drowned people live. Sacred or healing springs are numerous.

Worship of trees was very widespread. The sacred groves were destroyed in 1390 by Jerome of Prague; the people revolted and the great Duke Vytautas expelled the missionary from the country. The tree most adored was the oak. The Jesuits cut down a sacred oak, devoted to Perkūnas, in Kražiai as late as 1618. Even today trees of a special shape, which have a cavity through the trunk, are worshipped and it is good for a man to crawl through and be healed of a disease. Some trees were regarded as living beings who feel pain; blood was said to flow from them if they were wounded. Spirits of the forests are also known: *Medeinė*, mistress of the forest, mentioned in the 13th and 16th centuries, and *Giraitis*, young man of the wood, mentioned in the 17th and 18th centuries (see J. Balys in *Deutsche Volkskunde*, Bd. IV, 1942, pp. 171–177).

Fire is one of the most venerated phenomena of nature. In the chronicle of Długosz of the 15th century the keeping of “eternal fire” by the priests and priestesses is described. Worship of the house fire is very common, even today. The spirit of fire is *Gabija* or *Gabieta* (from *gobti*, *gaubti*, to pile or put together). Every evening the housewife puts the glimmering coals and ashes together in the fireplace and prays: “Dear fire, little *Gabija*, do not burn, if not intentionally fired; you are nicely covered, then sleep, please, and do not walk in this house.” Or: “Holy *Gabieta*, if you are piled together, you must rest quietly; if you are fired then light.” Such prayers are very numerous. I have collected 55 of them. There is a very popular legend (having about 80 variants) of how the ill-treated fire speaks with the fire of another house and threatens to take revenge against the mistress of the house. (Cf. O. Loorits, *Das misshandelte und sich rächende Feuer*, Tartu, 1935). The duty of the mistress of the house is to keep the house fire unextinguished all the year. If the fire goes out, it is a bad omen and she must ask pardon of the fire and bring another from a neighbor. Only on St. John's Eve was the house fire extinguished and a new one brought from the festival pyre. It is mentioned also that a male god, *Gabjaujis*, fire deity of the kiln, was offered a cock at the end of threshing, because the kiln was heated all the time during threshing. The fire is very important at wedding ceremonies, as the bride brings to her new house her own fire, handed her by her mother.

In regard to the worship of sun, moon, and stars we have numerous statements beginning with Dusburg in 1326. The sun and moon are regarded as married and the earth or stars are their children. Today the heavenly couple is divorced and they never rise or set together. The cause of their enmity is explained in two myths. One of these is recounted in the folk songs (*Rhesa*, pp. 92, 220): The Moon (male) married the Sun (female) in the primeval spring. Because the Sun rose early, the Moon separated and walked alone. He met the Morning Star and fell in love with her. Then Perkūnas became angry, struck down an oak tree, and punished the Moon

with a sword. Therefore we often see that the face of the Moon is cut in two pieces.

In old times—says another myth of the prose accounts—the Sun and Moon lived together in one small house. Living thus, they fell in love with each other and begot a daughter—Earth. After some time they began to quarrel and decided to be divorced, but they could not divide the daughter. God sent Perkūnas as judge, who decided that in the daytime Sun could look at the daughter, and Moon at night. So it is. If both wish to see the Earth then Perkūnas drives one of them away. (From *Dusetos* in eastern Lithuania.)

Another version from western Lithuania says that the quarreling Sun and Moon raced, the winner was Sun, and she had the right to look at Earth by day. An eclipse of the sun is explained by the fact that some demon or hag is devouring or harming the sun, and a horrible noise was made by people to drive the demon away. Another explanation is: the sun and moon are kissing each other and cover themselves with a sheet so that their daughter, earth, will not see this. There are numerous short songs of children who pray to the sun during a storm: “Black clouds, go to the land of the Russians (or Germans); mother dear Sun, come to our land.” Or: “Come, dear Sun, bring us cakes and drive away the clouds with the whips (i.e. rays).”

In Lithuania the moon was apparently worshipped more than the sun. The moon was often called “young god” or “prince.” I have collected 60 prayers to the new moon. When the new moon is seen for the first time, you must pray: “Moon, Moon, dear Moon, bright little God of the Heaven, you must become round and I remain healthy. Give him the fullness and me the realm of Perkūnas.” Or: “I bless you, bright dear Moon. I wish brightness to you and beauty for myself; I wish you the qualities of a deity, and give me the qualities of a man.” Such prayers are used to obtain health and beauty. The first prayer is used against all the diseased, e.g. to stop bleeding. Similar prayers to the new moon are known also to some Finno-Ugric peoples, Estonians (see Loorits, *Grundzüge* I: 9), and Moksha Mordvins (*ERE* VII: 844).

The sun and moon are said to be wandering on the earth, she as a beautiful maiden with golden hair who is helpful to man, and he as a fair young prince, who sometimes seduces a girl and takes her to the moon. An orphan girl asks help from the moon and is taken to him. Sometimes the moon punishes a proud girl, who asks “Which is brighter, my body or the moon?” and takes her to the moon. An old woman with two water pails who offended him was also taken to the moon. In the folk songs there are often mentioned not only sun and moon, but also Venus and the Pleiades. The morning star kindles the fire for the sun in the morning and the evening star spreads his bed. Some legends account for the origin of Ursa Major and the Pleiades. The rainbow is called “the girdle of the fairy” (*laumės juosta*). *The Dead* Formerly the Lithuanians had no fear of the dead. The living and the dead formed one society in the frame of a big family. The dead was thought of as living in the grave with many of the same needs as the living. Therefore food, tools, even whisky and tobacco, were put in the coffin or grave. The dead was feasted at burial, later on his anniversary, and at the big feasts, Christmas and Easter, and especially at the feast of the

dead in the fall. The dead can be vengeful if his will is broken or if he is offended. He can also be helpful to the fertility of the fields.

Along with the idea of the dead as a "living corpse," we find the belief in a kind of material soul (*vėlė*), which is different from the corpse but has many common traits: sometimes it is visible as fog or specter, and we can recognize the dead person or hear him. He feels cold and heat, is hungry or thirsty. The spiritual soul, *siela*, is the invisible power or spirit of man. The dead can be reborn not only as a child of the family, but also can become incarnate as tree, flower, or bird. The dead must climb a high mountain and thus to have long fingernails is of great value. Hell and purgatory are in this world. The souls suffer in the water, in the trees, or on the fireplace of the family. Any underworld for the dead is unknown. The dead are sometimes dangerous to the living, of course, and one must be careful. Love and pity for the beloved dead are mixed with a desire for self-protection. All seeds and unborn lives must be protected against contact with them. A man who was murdered or drowned is especially dangerous, as are also all magicians, suicides, and criminals. They hunt and harm the living. Such a one is called *nelaikis*, one who did not die at his time, or *vaidūlis*, ghost. Some of them became vampires. One must cut off the head of the dangerous dead man and bury it at his feet. Fear of the dead increased with the acquiring of Christian doctrine. The demon of death is a female, *giltinė*, one who stings. She cuts or strangles a man to death, and further, she has no interest in the soul or corpse. The pest-deities (*maro deivės*) drive in a coach with six black horses. There are people who can see ghosts, *dvasiaregiai*, who recount many stories about their visions.

Concerning the worship of the dead there is a large literature (see M. Alseikaitė-Gimbutienė, *Die Bestattung in Litauen in der vorgeschichtlichen Zeit*. Tübingen, 1946, pp. 203–216). I myself devoted an extensive chapter to this question in *Handbook*, vol. II, pp. 170–200.

Old Prussians Much has been written about Old Prussian religion but very few of the conclusions are certain (see H. Bertuleit, *Das Religionswesen der alten Preussen*. Königsberg, 1924). What is certain is that god in general was called *deivas*; the Thundergod was *Percunis*; Kurko probably was the god of fertility, worshipped at harvest time (Lithuanian *Kuršis*). The evil spirit was called *pikuls* or *pakuls* and a ghost was *hauks*. The offering of a he-goat was an important ceremony. A legion of other deities were fabricated by writers. (See "The Paganism of the Ancient Prussians" in *Folk-Lore* XII: 293–302. London, 1901.)

JONAS BALYS

Li T'ieh-kuai One of the Chinese Eight Immortals: Li of the Iron Crutch. Hsi Wang-mu, Goddess of the Western Sky, gave him immortality after his unhappy

childhood. Once while wandering in a wood, Li's soul left his body to visit a sacred mountain. When the soul returned its body had disappeared, and it had to occupy the body of a beggar lately dead of hunger. The beggar had been lame, had matted hair, and bulging eyes. Often Li T'ieh-kuai is honored by druggists and exorcists. [RDJ]

Little Briar Rose Title of the sleeping beauty story as presented by Grimm (#50), in which a childless king and queen eventually were blessed with a beautiful infant daughter. In gratitude and joy the king gave a splendid feast and invited everybody in the realm, including the (supernatural) Wise Women of his region. There were thirteen of these but he invited only twelve, because he had only twelve golden plates. At the feast, one by one, the Wise Women bestowed their gifts upon the child: beauty, goodness, cleverness, a sweet temper, wealth, etc. But suddenly in walked the slighted thirteenth and prophesied that in her 15th year the child would prick her finger on a spindle and die. But the twelfth, who had not yet spoken, said: "She shall not die, but sleep a hundred years."

All came about as prophesied, in spite of the king's precautions in having every spindle in the country burnt. On her 15th birthday the young princess happened into a tower room where sat an old woman spinning, in curiosity picked up the spindle, pricked her finger, and fell asleep. Sleep took the whole palace and everybody in it. A hedge of thorns grew thick around it in the passing years, and every year some king's son died in the impassable hedge seeking the beautiful sleeping princess whose story the whole world knew. At last one came who got through—at the end of 100 years at the appointed hour for the spell to be broken. He got through the hedge, saw the king and queen asleep upon the throne, saw the cook asleep in the kitchen, and the flies asleep on the walls, and finally came to the tower room where slept the beautiful Little Briar Rose. He leaned down and kissed her. She awoke and took his hand, and the pair went downstairs and woke the king and queen. Then the whole castle came awake. Soon the king's son and the little princess were married to live happily forever after.

This story (Type 410) is a composite of folktale elements very ancient and widespread: most important among them the sleeping beauty motif (D1960.3), itself but one of a large group of magic sleep motifs (D1950–2049), and the fairy takes revenge for being slighted motif (F361.1). The story of Eris, uninvited to the wedding feast of Peleus and Thetis, who had her revenge by throwing into the midst of the company the Apple of Discord, testifies to the antiquity of the idea of spite on the part of slighted supernaturals. Many another ancient divinity took revenge for neglect. The Lemnian women, for instance, who had neglected Aphrodite, were visited with an offensive odor which drove away their husbands. And Artemis sent a great boar to ravage the realm of Æneus for his neglect to sacrifice to her. Other motifs utilized in the sleeping beauty story are F312 ff. in which fairies (Fates, Norms) preside, prophesy, or bestow gifts at the birth of a child; F316.1, in which one fairy's curse is ameliorated (but not canceled) by another's amendment, disenchantment by kiss (D735), and hero finds maiden in castle (N711.2), Perrault's version

of the sleeping beauty tale is entitled *La Belle au Bois Dormant*.

Little Goose Girl Title of a Scandinavian folktale (Type 870A) limited to Scandinavia but found as a ballad in France and Scotland as well. Typically, it is the story of the substituted bride, the goose girl taking the place of the princess in the marriage bed because the prince has near the bed a magic stone or other chastity index. When the real, but unchaste, bride attempts to regain her place, the prince recognizes his companion of the night before through tokens he has given the little goose girl. Grimm's *The Goose Girl* (#89) belongs rather to Type 533, *The Speaking Horse Head*, than to Type 870A, though both are bride substitution stories. In the Grimm tale, the evil servant forces the princess to change places with her, and passes herself off as the expected bride. Only after the marriage has taken place and the head of the speaking horse has been hung on the wall does the true state of affairs come to light. The false bride is tricked into declaring her own punishment, the Nageltonne, or nail-studded barrel.

Little Mohee An American song considered by Kittredge to be derived from an English original, *The Indian Lass*, and by Phillips Barry to be indigenous, possibly a landsman's song of frontier days remade by seamen. Its titles and variants are numerous, but in essence it is known all over the country from the mountains of the southeast to the fishing towns of the northeast, and from the plains of the west to the Pacific islands. Mohee, the Indian lass who is loved and left for a sweetheart in the wanderer's "own country," is also called Mohea, Maumee, and a "pretty Kanaka," and may draw her name from Maui of the Sandwich Islands (Hawaii), which was a regular stop for the Arctic whaling ships on their way home. The song was a fore-castle favorite on these ships. In Vermont, the meeting of the song takes place in a tavern in New Orleans. Elsewhere, the hero meets her in a coconut grove, or as he sat alone on the grass along his road. Certain of the sea-going details survive in versions heard far inland in the hills. It is also known as *Pretty Mohea* (or *Mauhee*), *The Fair Indian Lass*, *The Lass of Mohea*. The tune to which it is most often sung nowadays is a close relative of *Old Smoky*.

Little Moron Proverbial embodiment of the humor of absurd misunderstandings in American jokes and wisecracks. As the successor of Dumb Dora and "so dumb" lines (She was so dumb she thought a subordinate clause was one of Santa's offspring), popular during the Twenties, Little Moron came into vogue during the Thirties and soon percolated down to the grade-school level, where he still circulates. Many Little Moron stories are old jokes revamped: The Little Moron told his friend, "I only weighed three pounds when I was born." "Did you live?" asked his friend. "Did I live! Say, you oughta see me now!" Since most Moron stories depend for their point upon a pun or a bull or blunder, two standard patterns are employed: the question and answer (for the pun): What did the Little Moron do when he was told he was dying? He moved into the living room; and the anecdote (for the bull and blunder): The Little Moron got up in the middle of the night to answer the telephone. "Is this one one one one?" says the voice. "No, this is eleven eleven." "You're sure it isn't one one

one one?" "No, this is eleven eleven." "Well, wrong number. Sorry to have got you up in the middle of the night." "That's all right, mister. I had to get up to answer the telephone anyway."

What makes the droll Little Moron so human and likable is his resemblance to the average man—the man with two left feet who succeeds in putting both feet in his mouth every time he opens it. He is Superman turned upside down. And though his ineptness evokes the reaction, "How can he be so stupid!" or "How wrong can he get!" who shall say whether he is wisely foolish or foolishly wise? There is a wholesome moral in more than one Little Moron story. A group of Little Morons was building a house. One of the Little Morons went to the boss and asked if they should start building the house from the top down or from the bottom up. "Why, start from the bottom and build up, of course!" replied the boss. The Little Moron turned and yelled to his fellow workers: "Tear 'er down, boys! Gotta start all over!"

B. A. BOTKIN

Little Old Men (Spanish *Los Viejos*) A comic fiesta dance of Michoacán, Mexico, performed by Tarascan Indians as entertainment for the throngs. Young Tarascans, wearing clay or wooden masks of old men, wide straw hats, serapes, and pajamalike pants, lean on canes. They enact a burlesque of their elders to the thin music of the *jarana*, a kind of ukulele, which the leader carries. Costume and steps are colonial; but ancient ritualism and Indian style persevere through the hispanized surface of the dance. The youths mimic the elders in tottering *zapateados* (footwork) and cruciform steps. The canes beat a staccato accompaniment to the footwork. Three forms of *la cruz* (the cross) occur, with tapping and jumping. [GME; GPK]

little people The dwarfs, leprechauns, apuku, gnomes, goblins, and other diminutive spirits of the wild, of rivers, forests, and fields, of practically every people in the world. They are tricky, sometimes malevolent, but most often helpful to mankind if approached right. In origin they are animistic, and therefore in many ways divine; they are unreliable and amoral. Though they react to kindness, the reaction is sometimes an unexpected one. The cobbler who found his shoes finished by the little people and presented them with clothes found them gone for good the next morning. Yet, for those little people who help to do things about the house, a pitcher of milk or other food is required payment. A forest dwarf like Rumpelstiltskin is essentially helpful; it is only his reward that seems out of proportion to the task, yet the little people do like to take human babies. The *apci'lnic* of the Montagnais of Labrador live in the remote brush. They are knee-high to men and can disappear magically and instantly. Their appearance at any place is supposed to be a warning of danger to the man who sees them. Their one vice is a fondness for stealing human children. The Penobscot *wanagemeswak* are hatchet-faced, but they are so thin that they can be seen only in profile; a full forward look at them shows nothing. They live in the rivers and in river pools and leave clay figures on the river banks which are lucky to the finders. Some of the little people of the world live in the mountains, where they work the metals in the mines; they are therefore possessors of or guardians of great treasures. See

APUKU; AZIZA; CHANGELING; DOMOVIK; DWARF; EGBERE; ERE; MMOATIA; TCIAKAPIS.

➤ Dwarfs of all sorts are found as characters in American Indian folktales, or in the folk beliefs of nearly all tribes. In the southeastern United States among the Cherokee and Yuchi, and also among the Iroquois groups to the north, a particular group of dwarfs, known as Little People, are prominently mentioned. The Cherokee credit these Little People with being generally helpful to mankind; when Sun was shining down and making it too hot, in an attempt to kill people, the Little Men made medicine and changed pairs of men into various snakes which they sent to Sun's daughter's house to kill Sun. But their helpfulness is not limited to mythological instances; Cherokee conjurers were reputedly able to capture Little People and make them do useful work. There are however malicious Little People also; one is a mean little dwarf who lives in caves in the river bluffs, and may cause children's diseases. Yuchi little people are malevolent; they live in the dense woods, and are the souls of evil persons who have died. If intruded upon, they kill the intruder. Seneca (Iroquois) little people are powerful, and revenge themselves on people if they are neglected; the Seneca Dark Dance Society placates them with dancing and feasting. For extended description of little people among the eastern tribes see John Witthoft and Wendell S. Hadlock, "Cherokee-Iroquois Little People" (*JAF* 59: 413-22). [EWV]

➤ Tales about a race of very small men, which were current among the Spanish conquistadors, derive in part from mythological accounts heard from the Indians. Certain Tupi-Guarani tribes of the coastal region believed in the existence of small people living near the country of the Amazon women. Amazons and pygmies are also united in legends transcribed in eastern Bolivia. [AM]

Little Rabbits Sing The title of a brief Chiricahua Apache Indian story (reported by Morris E. Opler in his *Myths and Tales of the Chiricahua Apache Indians*, *MAFLS* 37) in which several little rabbits are playing about in the bush, singing about themselves, and playing at the life and fate of all rabbits. One sang, "Little rabbit is out! Little rabbit is out!" Another sang, "I'll be the first coyote to swallow those rabbits." For this is the story of many little rabbits.

Little Red Riding Hood Title and heroine of a nursery tale familiar throughout western Europe. Most versions stem from Perrault's *Petit Chaperon Rouge* (1697), but Grimm's *Rotkäppchen* (#26) is the source of several oral versions. The story is not popular (directly from oral tradition) but seems literary to the extent that it derives from Perrault and Grimm. It is essentially the same story as the *Three Little Pigs* (*The Wolf and the Seven Little Kids*, Grimm #5; compare *The Glutton*, Type 333), both tales being examples of Type 123. *Little Red Riding Hood* is an ogre story, a swallow story. The little girl (or the goats or pigs) is eaten by the wolf masquerading as the grandmother (or mother). In Perrault's version, that is the end of the story. But a hunter appears in the Grimm version and kills the wolf, slits him open, and Red Riding Hood and her grandmother emerge from the monster's belly. Other endings appear elsewhere: stones are sewed into the

sleeping wolf's belly in place of the kids and the wolf falls in the water and drowns; the wolf leaps to his death; the grandmother hides in the closet and the little girl is not eaten; a woodsman kills the wolf with an ax before he can eat Red Riding Hood. What popularity the tale has is probably based on the two incidents in the story of the girl on an errand stopping to speak to a stranger and from the deliciously horrible series of climactic questions about the ears, eyes, nose, teeth, and mouth of the "grandma." This "What big ears you have" "The better to hear you with, my dear" is paralleled in the companion tale of the pigs by the formulaic repetition of the "chinnny-chin-chin" and the "huff and puff and blow your house in." The story of Little Red Riding Hood is known in Africa, but because the story is mixed with that of the *Three Little Pigs*, it is essentially an animal tale, even though the heroine is human.

Little Sea Day The third Sunday in August, formerly celebrated at Seagirt, New Jersey, by New Jersey farmers and farm hands who had to miss Big Sea Day.

Little Startlers Title of an American Indian tale in which Trickster badly frightens young quail; they retaliate by hiding beside a path and whirring up at him as he passes by, startling him so that he stumbles or falls into a hollow log, or otherwise hurts himself. Often the whirring noise which quail make is accounted for thus. The tale of the Little Startlers is told by many Central Woodlands tribes (Algonquian, Assiniboin, Cree, Kickapoo, Menominee, Ojibwa, Sauk. See William Jones, *Ethnography of the Fox Indians*. *BAEB* 125: 30-31, 48). [EWV]

Liu Pei In Chinese folklore and legend, the God of Basket-makers and Straw-Shoe-sellers: one of the "Three Musketeers" (with Chang Fei and Kuan Kung) of China, and numbered among the 24 assessors of Kuan Kung.

liver Plato said that the liver was a mirror on which the thoughts of the mind fell and were reflected as the image of the soul. The *Odyssey* calls the liver the seat of desire and therefore a potent charm to produce desire when eaten. The 16th century anatomist, Fallopio, on the medical faculty at Padua, claimed that the veins originated in the liver as the arteries originate in the heart. In the 17th century a Parisian philosopher claimed that the brain, liver, and heart, being the first parts of the body to be formed, were the principal seats of the soul (E714.5). By far the most universal attribute of the liver, however, has been the belief that it is the seat of strength and courage. Peoples as widely separated as the ancient Arabs, the Veddas of Ceylon, several tribes of Indochina, the Bantu Bakongos, and the Micmac Indians of northeastern North America have eaten the livers of their slain enemies to absorb their courage and strength. Among the Basuto a brave man is said to have a large liver. Young Bechuana boys eat ox liver to increase their courage and intelligence; however one lobe induces forgetfulness, and this is eaten only by the women who have much to forget. Some central African peoples believe that crocodile liver enlarges the soul. In the 3rd century in India the liver of the dragon was eaten by those who wished to understand the language of the animals. The liver of the unicorn was particularly highly thought of, although the Romans preferred that

of the vulture, and the Greeks that of the goose. In the 16th century the most diabolical sorceries could be counteracted with the liver of a black cat. Egyptian records show that as early as 1850 B.C. they used liver as a cure for night blindness, a use to which it is put today because of its richness in carotin. Pliny recommended weasel liver to cure pains in the human liver. The Omaha Indians eat it not only for courage, but for good voice, and Mississippi Negroes hold calves' liver over a wound to make it heal more quickly. Liver divination (hepatoscopy) is one of the most ancient of all forms of divining; artificial livers of clay or stone have been found by archeologists, models marked off into the significant areas to be observed by the diviner. It is a potent charm in hoodoo. The liver of a woman in Italy is still supposed to confer secrets of witchcraft, though, in the Middle Ages, one of the most potent antidotes for witchcraft was to eat the liver of a witch. Mississippi Negroes bury the liver of a murdered man some distance away from the corpse on the theory that his murderer will be drawn to the spot, and thus be caught. An Eskimo will eat the liver of his victim to weaken the vengeance of his relatives and to lay his avenging ghost. The liver of a left-handed person is on the left side of the body.

Liverpool Girls A capstan chantey sung when hauling up anchors and cables in readiness for landing. When the wind is fresh it is said that the Liverpool girls, known in days ashore, are holding the towrope. The chorus is "ho, row, row, bullies, row," and the title is sometimes given as *Row, Bullies, Row*.

liwa A term or name (*Liwa*) given by the Miskito and Sumu Indians of eastern Nicaragua and northeastern Honduras to a kind of water-dwelling evil spirit. One, named Liwa, lived in a great whirlpool at Namakalmuk (Upper Wanks River) and killed whole caneloads of Indians. A *sukya* (shaman) drove him away by burning an alligator on the beach nearby. Another liwa inhabited the shallows of Caratasca Lagoon where he drew boats and crews underwater. Liwa are always white, perhaps worm-shaped, and are said to have their own underwater ships. See G. R. Heath's "Miskito Glossary," *IJAL* 16: 25.

lizard Everywhere that the lizard is indigenous (in all his genera, species, and varieties) man has felt an inevitable affinity with him. This may be because the hand of man was fashioned after the hand of the lizard (A1311.1) or because the first men were lizards. But whatever the reason, it is true that he is regarded as mysterious, a bringer of omens and warnings, the incarnation of god or ancestor, or even the dwelling of one's own separable soul—and this in spite of the fact that his bite is feared as poisonous in many places. In magic the dried lizard or some part of his body is used to rejuvenate the old—possibly because the lizard, like the snake, sloughs his skin and renews himself. The ancient Egyptians had great respect for *Monitor Niloticus* (which grows to 4-6 feet) believing that it destroyed crocodile eggs. In Alsace it is said if a lizard runs across a woman's hand she will be a skilful needlewoman.

Old travelers' tales describing the New World produce some interesting observations on lizards. John Oldmixon, in his two-volume *British Empire in America* (1708) says that the lizards of Barbados "loved to be where Men were, to gaze in their faces, and hearken to their

Discourse." *The Voyages, Dangerous Adventures, and Imminent Escapes of Captain Richard Falconer*, London, 1720, reported that lizards would tickle the ears of sleeping persons to warn them of the approach of alligators, vipers, "or any voracious Beast." The warning lizard is the subject also of a Breton folktale (B492). This feeling of affinity holds also in New England, where the people say that if you kill a lizard you will die yourself inside of a year. Zoroastrianism presents an exception where the lizard is associated with evil and said to be the food of the damned. See ANGRA MAINYU.

According to Australian Dieri mythology, the First Ancestor created a lot of little black lizards, divided their feet into toes and fingers, touched the middle of the face to make a nose, indicated eyes and mouth the same way. Then he stood them up, but they could not stay upright, so he cut off their tails, and then they were men. The Australian Pindupi and Jumu tribes recognize Pupula (*Lizard*) as creator of the ancestors. At first human beings were smooth all over; their fists were doubled on their chests; their legs were bent up against their bodies (perfect description of the embryonic position). So Pupula gave them breasts, noses, eyes, ears, elbows, knees, vulva, penis, and cut their toes and fingers apart. He also taught them to make fire and gave them their marriage laws. The western Aranda have almost the same story: Munger-kunger-kunja (*Lizard*) drew the first people out of the ocean, cut them apart with a stone knife, cut eyes, ears, mouth, etc., circumcized them, gave them fire, spears, shields, boomerangs, and *churingas* (bull-roarers.) The Aranda also associate Lizard with their sky and earth myths. They will not kill a lizard lest the sky fall down upon the earth.

In the mythology of the northern Aranda, the first man existed in the form of a lizard, but he was so stiff that he could not walk. So he lay down in the sun and grew warm and stretched. After a while he looked at himself and said "Hello, I'm a lizard." So he just lay there in the sun and after a while he saw another lizard beside him, which had come from his own body. He said "Hello, there's one just like me." So he lay in the sun and after a while there were a lot of lizards in the sun, which had sprung from his body. After a while he saw one of them die. He said "That is me." And after a while all the lizards stood up and walked away like men.

Many peoples believe that lizards are messengers of the gods or the dwelling of the souls of the dead. Hence their appearance is ominous. If the big iguana walks into a house in the Philippine Islands, for instance, it is interpreted as an omen that someone in the house is summoned to die.

In the Malay Peninsula the lizard brings new babies and causes their souls to enter into them. The Miskito Indians of Nicaragua and Honduras also believe that it is an omen of conception if *lupalila* (a species of lizard) walks on a woman's dress. Everywhere in Polynesia the people have great respect for lizards; there is a widespread lizard cult, and Moko, the king of the lizards, is well known. House-god images in the shape of lizards have been found in Easter Island. The external (separable) soul and the dream-soul often take the form of a lizard, especially among Melanesians. Lizards are the shadows of the gods in Tahiti. One inland species is believed to be the shadow of Tipa, the healing god. *Mo'otea*, a kind of light-colored lizard, represents the

deity of the moonlit sky. A certain dark lizard and a streaked variety are shadows of the god of the conquering arrow. *Mo'opuapua*, the flower lizard, represents certain ethereal, flower-dwelling supernaturals. In some parts of Micronesia lizards are kept in enclosures and well cared for because they are believed to have power over thunder and lightning. In the Celebes and also in parts of Australia, lizards are sometimes killed when seen because they are believed to be the familiars of witches and sorcerers, and as such can cause sickness and death.

A lizard is the tribal god of the Shilluk people of the White Nile. In Bonny, Nigeria, lizards are fed and those seen to be in danger are rescued.

In India the lizard is ominous also, and is used in magic as a love charm, curing charm, and luck charm. In Arabia a lizard held in the hand acts as aphrodisiac; it is used in medicine also to cure old men of impotence. Thirteenth century medicine recommended the gall of green lizards for diseases of the eye.

In general folktale and etiological story, lizard got his tail from snake (A2247; A2378.1.8); the giant lizard is blind because he chose the gift of poison instead of eyes (A2332.6.2); the dragon is a modified lizard (B11.2.1.2). See ANIMAL CHILDREN; CHAMELEON; INAPERTWA; MBERE; TCHUÉ.

lizard hand In a dispute between Coyote and Lizard, in North American Indian tales from central California, Lizard succeeds in having human beings' hands shaped like his, but only by conceding to Coyote's alternative—that if they do, they will then have to die, as mortals do now. See MAN. [EWV]

Lizzie Borden Late American popular ballad, often sung to the tune of *Ta-ra-ra-boom-de-ay*. It deals with the accused in one of the most widely discussed of all murder trials—the trial of Lizzie Andrew Borden (1860–1927) of Fall River, Mass., for the ax-killing of her father and stepmother, Aug. 4, 1892. The brutality of the murder and the cold-blooded calm of the accused have been the subject of numerous writings. Though acquitted by the jury, Lizzie was pronounced guilty by the song, which states: “Lizzie Borden took an ax/ And gave her mother forty whacks;/ When she saw what she had done,/ She gave her father forty-one.”

lizzie labels Humorous mottoes and slogans inscribed on Model T Ford cars (the tin “lizzie”), especially the collegiate “flivver” or “jalopy,” popular in the 1920's and 1930's. The term lizzie label was given currency if not originated by the humorous periodical, *Judge*, which in 1925 paid \$5 for every label printed. Ford epigrams also doubled as conversational wisecracks. Of earlier and also later vintage are the metal tags affixed to rear license plates bearing such legends as “If you can read this, you're too darn close,” “Excuse my dust,” “My rear end is no bumper.” Present-day tourist stickers, harking back to the pristine pennant announcing “California or bust,” continue the practice of adorning motor cars with emblems and labels—a direct descendant of covered-wagon inscriptions (“Pike's Peak or Bust”).

Lizzie labels rang the changes on the dilapidated state of the car (Don't laugh; you may be old some day), wolfish propositions (Chicken, here's your coup; Capacity, four gals), and the cheapness of Fords (If I get the tin, will it buy the car?). Many labels parodied or

punned on current advertising slogans (Beauty in every jar; The tin you love to touch), mottoes and proverbial sayings (Slow but sure; It won't be long now; In God we trust; Believe it or not), and popular song titles or lines (*The Old Chokin' Bucket*; *Darling, I'm growing old*; *I'm just a Vagabond Lover*). B. A. BOTKIN

llaço Literally, loop or figure: Portuguese term for dance figures. These are particularly complex in the *dança dos paulitos* at Cercio. The twenty llaços include quick runs, jumps, and stick-striking in double lines and heys. Some of the picturesque names are *Senhor Mio*, *Carmelita*, *O Caballero*, *As Águias* (the eagles), *As Bichas* (the dragons). In *O Caballero* the dancers tap sticks above and below their legs, recalling the English Morris Bean Setting. In *Acto de Contrição* (act of contrition) they drop on bended knee. In the particularly interesting llaços dos ofícios (professions) they imitate various occupations: shoemaker, barber, carpenter, etc.

The Spanish *lazo* is the corresponding term for the interlacing figures of dance groups. In the more virtuoso solo and couple dances it also refers to a step involving crossing of the feet in closed half-toe position. The derivative term *lasso* combines the idea of a loop and of the figures described in the air by the loosely knotted rope. [GPK]

Llew Llaw Gyffes In Brythonic mythology, one of the marvelous twins born to Arianrhod when she failed to pass the test for virginity required of all who aspired to be footholder to Math Son of Mathonwy; twin brother of Dylan: interpreted as a sun god. Most of the myths state that Gwydion was the father of the infants. Arianrhod resented the existence of Llew for disproving her maidenhood. Dylan had plunged into the sea; but Gwydion saved Llew and brought him up on the Carnarvon coast. Llew was noted for his amazing growth from infancy to maturity; when he was four, he was as big as a boy of eight; when he was eight he was a handsome youth.

When Gwydion first presented the child to his mother she put the curse of namelessness upon him unless she named him herself. But by disguising himself and the boy, Gwydion tricked her into naming him. Arianrhod saw the child shoot a wren with such acute aim that she cried: “With a steady hand (*llaw gyffes*) the lion (*llew*) hit it.” So Gwydion named him Llew Llaw Gyffes. Arianrhod was so infuriated at being tricked, that she cursed her son anew: that he never bear arms till she herself gave them, never marry a woman of the people of the earth. But Gwydion with superior magic tricked Arianrhod into bestowing arms on Llew. And then Gwydion and Math made a wife for him out of flowers, and named her Blodenwedd. Blodenwedd's beauty, however, belied her soul. She wormed out of Llew the secret of his vulnerability, and exposed him at the vulnerable moment to her lover Gormw, who hurled a spear into him. But Llew was not killed. He flew off in the shape of an eagle. The eagle was discovered later by Gwydion, who magically restored Llew to his own shape and healed the poisoned wound which he still carried. So Llew went back to rule over his own lands and ruled them well to the end of his days.

Rhys equates Llew with the Irish Lúg, believing that the two names mean “light,” and relating the epithets Llew Llaw Gyffes (of the Steady Hand) with Lúg Lam-

fada (of the Long Arm or Far-Shooter). This theory, however, though acceptable to most scholars, has not been unconditionally accredited.

Five traditional folklore motifs are present in this myth: the virginity test, the amazing growth and prowess of the hero as child, invulnerability except under specific conditions, and the transformation of hero at death into eagle, the bird-soul, overlapping into the separable soul motif.

Llorona 1) Literally, the weeper: a regional couple dance of the state of Oaxaca, Mexico, seen especially in Tehuantepec, Juchitán, and Salina Cruz. It is similar to the *zandunga* with steps both native and European, the woman swaying her magnificent skirt haughtily. Sometimes the man pursues the woman in a circle, with a kind of waltz step, as she looks back over her shoulder; or partners elude and meet with a step-pat in duple time against the triple beat of the music.

The text of the song has no connection with the popular legend of the spectral wailing child-murderess. The words express sultry, melancholy passion:

La pena y la que no es	Pain and what is not
pena; ay llorona,/	pain, alas llorona.
Todo es pena para mí;/	All is pain for me;
Ayer lloraba por verte,	Yesterday I wept to see
ay llorona,/	you, alas llorona.
Y hoy lloro porque te ví.	And today I weep because
	I saw you.

coll. Concha Michel (F. Toor, *Mexican Folkways*, p. 443)
[CPK]

2) The weeping woman: a bereaved female of Mexican folklore, similar to the Lilith of Jewish and the Lamia of Greek folk belief, eternally searching for her child. La Llorona is met with in various places, deserted streets, the woods, along the river banks, usually at night, especially midnight, but sometimes in broad daylight, a shrouded figure looking for her lost little boy. In some variants, she herself has killed the child and is somehow demented; or she is condemned to wander about as penance for the murder. Sometimes she does nothing to the ones she meets, or simply asks whether they have seen the child, but usually she is dangerous, for she lures young men to quiet places and kills them. Occasionally La Llorona is simply a disembodied spirit whose voice is heard wailing in the night and who is not seen.

Lludd or Nudd In Brythonic mythology, one of the four sons of Beli (a disputed god of the Brythonic pantheon, possibly a sea god). The four brothers were Lludd, Caswallan, Llevelys, Nynngaw. As identified with the Irish Nuada, he is termed Lludd Llaw Eraint. In a story entitled *Lludd and Llevelys*, Lludd is a king of Britain whose kingdom was cursed with three terrible plagues: 1) the Coranians (a race of superhuman warriors who could hear every whisper everywhere); 2) a shriek on May Eve which made barren all growing things, trees, crops, animals, women; 3) the vanishing in one night of enough food to last a year. By the advice of his brother Llevelys, Lludd rid the land of all three plagues. He managed to poison the Coranians. The shriek was revealed to be the shriek of their own native dragon when it was attacked by a foreign dragon; Lludd and Llevelys killed both and buried them in Snowdon. Finally Lludd seized the magician who had been whisking off the food.

Lludd was famous for generosity and the giving of food and drink: a fact which MacCulloch points to as probable indication that an earlier Lludd was a god of growth and plenty. Lludd rebuilt the walls of London (Caer Ludd), according to Geoffrey of Monmouth. His name survives today in Ludgate Hill. For Lludd as father of Creiddylad, see *LEAR*. This confusion occurs elsewhere, for Lot seems to be the Norman-French form of the name for the Lludd who built the walls of London, and this Lludd's father is mentioned as Bladud, the builder of Bath.

loa Haitian designation for deity of the vodun cult. The loa are in the main of African derivation, but are identified with saints of the Catholic church so that they may be spoken of either by their African or Christian names. In the same manner, the term loa itself has as synonyms the French words *saint* and *mystère*. [MJH]

Loango winti A spirit worshipped by the Saramacca Bush Negroes, the name of which is derived from the early kingdom of Loango on the coast north of the mouth of the Congo River, from which many Negroes were exported to the New World. [MJH]

loa Sénégal A deity of the vodun cult of Haiti, deriving from the name of the region of western Africa from which many Negroes were exported, especially during the earlier period of the slave trade. The fact that this name of a god consists of a geographical term illustrates a process that has occurred in Haiti and elsewhere in the New World as Africa has receded further into the past. By this process, place and tribal names become the names of deities, so that the vodun cult not only has the *loa Sénégal*, but other loa, named *Dahomé*, *Ibolé* (from Ibo of the Niger Delta region), *Congo*, and the like. [MJH]

loathly lady The horrible hag or loathsome woman transformed (or disenchanting) into a beautiful woman by the act of love or a kiss is a motif (D732) occurring in European folktale, ballad, and romance.

In Chaucer's *Wife of Bath's Tale*, one of Arthur's lusty knights rapes a maid, and to save his life is sent to discover within a year "what thing women love most." He has a long and unsuccessful quest. At last he meets an old woman ("a fouler wight ther may no man devise") who promises him the secret in exchange for whatever thing she may ask of him next. Readily the knight agrees, learns the answer, journeys back to the court, says women desire "soverainetee over men," is not contradicted, and so his life is saved.

The loathly lady then makes her request: that this knight make her his wife. He begs off in horror, but is held to the bargain. He marries the hag "and all day after hid him as an owl/ So woe was him, his wife looked so foul." Eventually, however, he goes to bed with her; is given his choice of having her remain foul and old, but faithful, or having her turn young and fair—and to take his chances on the outcome. He leaves the choice to her and gets the best of both alternatives: a wife beautiful and young, and also devoted and faithful.

Child's fragmentary ballad *The Marriage of Sir Gawain* (#31) is practically identical with the *Wife of Bath's Tale*, except in the ballad the question is put to King Arthur by a baron in the wood, and it is Arthur who promises the loathly hag a fine knight in marriage

in return for the right answer. Moreover Gawain does not demur at the sight of the loathly lady, but accepts her in her repulsive form; her bewitchment falls away, and she is transformed into a beautiful woman.

Gower tells the story in *Confessio Amantis*. The motif has some frequency also in English and Scottish popular ballad. (See KEMP OWYNE.) It occurs in Icelandic saga, and also in Old Irish legend in *The Adventures of the Sons of Eochu Muigmedón*. This story is found in the *Yellow Book of Lecan*, *Book of Leinster*, *Book of Ballymote*.

Niall was youngest of the five sons of Eochu Muigmedón, king of Ireland. One day the five went hunting, and as they ate their supper by a fire in the forest, they wanted water. Fergus went to seek it, and found a well guarded by a hideous old woman; "her foul teeth were visible from ear to ear"; her nose was crooked; her nails were green, etc. She would not let Fergus draw water from the well unless he kissed her first. But Fergus refused. One after another the brothers went to get water, but none could bring himself to kiss the horrible creature. All were refused water until Niall went. Not only did he kiss her, but lay down with her; and when he looked at her, she was white and fair and beautiful with a purple cloak upon her. "You are beautiful," said Niall. "Yes," she said, "I am the Sovranty of Ireland." So she gave Niall the water, and said he and his descendants would be kings of Ireland forever except for three names, which she told him. And this all came true.

The motif of the loathly bridegroom (D733) is associated with the unpromising hero who wins the princess, and with the whole Beauty and the Beast cycle. See BEAUTY AND THE BEAST.

lobelia A large genus (*Lobelia*) of herbaceous plants with showy flowers. The cardinal flower (*L. cardinalis*), sometimes called Indian tobacco, was macerated and dried by the Meskwaki (Fox) Indians and used to stop approaching storms. This was done by throwing a bit of the dust into the air before the storm broke. Both *L. cardinalis* and *L. syphilitica* were used as love medicine. The ground-up roots were put into the food of a quarrelsome pair, unbeknownst to them; partaking of it together caused them to stop quarreling, insured a happy marriage, and forestalled divorce. The Iroquois also regarded lobelia root as a potent love medicine. Chippewa Indian medicine-men used lobelia as an emetic. White settlers made a successful vermifuge from *L. cardinalis*. *L. syphilitica* was named for its early use as a remedy for syphilis.

lobi singi Literally, love song; in Surinam Negro usage, a type of song sung especially by women as a form of revenge in special ceremonies during which unfaithful lovers are ridiculed.

lobola Zulu word for the wealth passed from the family of a man to that of a woman to validate a marriage. It is thus the native Zulu term for what is termed "bride-wealth" or, mistakenly in the earlier literature, as "bride-price." This latter phrase is a misnomer because the goods that pass, cattle in the case of the Zulu and other East African peoples, are in no wise a purchase price. They are rather an indication of the ability of the bridegroom to head a family, of the position of his own relationship group, and an earnest that he will not mistreat his future wife. To the degree that the

European concept of legitimacy can be applied cross-culturally, it can be said that the passage of lobola wealth is a sign of the highest social sanction to a given mating. Among the Zulu and other East African peoples, the position of a man in society is largely determined by the source of the cattle given for his mother. [MJH]

local legend A legend fixed to a definite locale, explaining some local feature of geography or name, or telling a story of local tradition explaining some custom. Local legends are short, etiological, etymological; they repeat the same themes, though in different parts of the world, again and again; they give unmistakable signs of antiquity, embodying long-dead customs and a primitive morality. The story of the foot- or hand-print in the rock is attached to Adam's Peak in Ceylon and to a rock in Germany. Lovers' leap tales are told of mountains and precipices in Japan, North America, Europe, and many other parts of the world. The Tarpeian Rock in Rome and the Ægean Sea are said to derive their names from similar leaps to death; the Hellespont is the water into which Helle fell from the ram carrying her and Phrixus to Æetes. The legend of Godiva's ride through Coventry probably attempts an explanation of an early fertility rite in which naked women rode through the town or countryside to bring plenty to the land. Among local legends are tales of buried and lost treasures, foundation sacrifices, sunken or lost cities of evil habits, sunken castles or islands, or bottomless lakes, walls or hills made by giants or demons; tales having to do with outlaws, with the origins of families or of family customs, with dragon-slaying heroes. As with other legends, historical fact often underlies these stories, for example those of sunken lands or destroyed cities, but the age-long addition of the marvelous and the obviously anachronistic makes it almost impossible to separate the true from the traditional.

☞ The story of the king who sleeps in a mountain or lake and will return to save his people is attached to Arthur, Charlemagne, Barbarossa in the Occident, as well as to several Chinese emperors. Stories of haunted houses and hidden treasure belong to this type of universal narrative. The collection of legends preserved by any community is a useful index of that community's interests and imagination. [RDJ]

☞ Natural cavities or spots on rocks which have the shape of footprints are generally explained by South American Indians as marks left by the wandering culture hero. The same interpretation for these natural oddities is given all through South America from Colombia to Paraguay. [AM]

local weather A magician causes winter to stay in one place while the rest of the world has summer. This motif (D2145.1.1) is found in North American Indian tales of the North Pacific Coast; also among the Shasta of northern California, and the Menomini of Wisconsin. A related idea is that found in the Plateau: a sky deity or chief gives each of his two daughters a ball when they leave him. One ball contains heat, the other cold; when they are opened the weather becomes very cold or very hot around the girls. Because of possessing these balls the girls cannot be burned or frozen by a wicked creature who wishes to kill them (Diamond Jenness, "Myths of the Carrier Indians of British Columbia," *JAF* 47: 97-257, 1934, pp. 108-09). [ewv]

Locust 1) A North American tree (*Robinia pseudoacacia*) of the bean family. Cherokee Indians explain the long slender racemes of fragrant white flowers with the story of the moon woman who cuts a new moon out of white moon material each month. She is so fond of the locust tree that when she sweeps up the scraps each spring, she hangs them on the locust tree. Tewa Indians used locust wood to make their bows. The Meskwakis drink a locust bark tea for severe colds, fevers, measles, and to keep the bowels and kidneys free. They use it both externally and internally in cases of smallpox to prevent pitting. Mississippi Negroes say that to make a forgetful debtor pay up, drive some nails into a locust tree in the shape of a cross, and the debtor will come unsummoned to pay his debt. See BONES.

2) Plagues of locusts have been known and feared both in Africa and the Mediterranean regions for centuries. The plague of locusts was the eighth plague brought on the Egyptians by Moses (*Ex. x*); "and when it was morning the east wind brought the locusts./ . . . They covered the face of the whole earth so that the land was darkened, and they did eat every herb of the land and all the fruit of the trees, and there remained not any green thing . . ." Then following the fear and repentance of Pharaoh and the entreaty of Moses, God "turned a mighty strong, west wind which took away the locusts and cast them into the Red Sea."

So dreaded was the plague of locusts that ancient writers mythologized them into monsters. Pliny, for instance, mentions a locust of India three feet long. The spectacular locust flight and the locust march (of the larvæ) and the devouring of the food of man by the hordes wherever they appear has stimulated and horrified the imagination of man everywhere. In 1889 a cloud of locusts was seen over the Red Sea, which occupied 2000 square miles. Swarms which have perished in storms at sea are said to wash ashore in heaps 3-4 feet deep, 50-100 miles long, the stench reaching inland 150 miles. After a flight of locusts has settled in an area, the females lay their eggs in the ground. The hatchlets are called *twisters* in South Africa from the fact that their emergence makes the ground itself look alive and in motion. These larvæ advance (this is the locust march) eating everything en route, even the bark off of trees, garments drying on the ground, curtains at windows, etc.

In Dahomey, West Africa, where locusts descend in great clouds and eat everything growing within range, the people have a scapegoat ceremony for driving them away. One person is selected, dressed in rich garments and loaded with bracelets and other valuables, and sent away out of the country forever. The locusts accompany him; should he come back, the locusts would also return; hence, death is the penalty for return. In India the Dravidians practiced conciliatory control: the custom was to catch one locust, decorate its head with a drop of red lead, reverence it, and let it go. When this was done the swarm would depart. Conciliatory pest control was practiced in ancient Greece also. In Syria noise-control is the custom. The people beat pans, yell, shoot guns, etc., to divert a swarm.

The locust has been the symbol of destruction in many ancient symbolisms. In Moslem legend a locust explained to Mohammed that each locust lays 99 eggs; if

the number were 100, the locusts would be so numerous that they would consume the whole world.

The ancient Babylonians had a "rite of the locusts" which involved the placing of two locusts, one on each side of a sick (i.e. bewitched) man's door. They represented the two "gods of the watch" and would leap out on the sorceress and kill her when she approached. A specific incantation was said over them, which was efficacious on the second recitation.

In China there are several gods of locusts and grasshoppers: Liu-mêng Chiang-chün, who protects against them, Pa Cha, who summons and imprisons them in a gourd (often identified with the former), and Ma-cha Shên, the goddess of locusts, revered especially in northern China where locusts are most frequent.

In medieval times in Europe, whenever the behavior of animals and insects seemed especially obnoxious or injurious to man, the people brought complaints against them in the ecclesiastical courts. In the case of locusts the verdict for riddance was apt to be the payment of tithes on the part of the people. This judgment was based on *Malachi* iii, 7-12, wherein God promised in return for the paying up of overdue tithes not only to open the windows of heaven and pour out a blessing, but to "rebuke the devourer . . . and he shall not destroy the fruits of your ground."

In California Yurok Indian mythology the locust larva "wished death into the world." In Wiyot mythology the locust larva is also responsible for death. Among the Hopi Indians the flute is associated with Locust, "the hunchbacked flute player," who is depicted on cliff walls near the pueblos. Locust is the supernatural patron of the Hopi Flute Society. The Clouds shot lightning bolts at him and he just went on playing his flute. For this reason, because he cannot be struck by lightning, locust medicine (the curing power of the locust) is considered good for wounds. It also gives a man power to dream true about the future, and brings warm weather. Why locusts live in certain pueblo towns is an etiological tale motif (A2434.3.1) for which see E. C. Parsons in *JAF* 31, p. 225.

lodestone or loadstone Magnetite (oxide of iron) which shows polarity: literally, way stone (from Old English *lād*, way, journey, and stone). The attraction of this stone for iron has held the attention of philosophers, alchemists, magicians, and charlatans for centuries. In fact, its property of always pointing north, or to the lodestar (the guide star) was first realized in the 11th century.

There are tales that in the southwestern part of Madras province ships were formerly built with wooden pegs because of a magnetic mountain (a lodestone mountain) near Calicut, which pulled out iron nails; there was a statue reputed to have been suspended in mid-air by the use of lodestones; and in many parts of Europe horses became mysteriously unshod, although curiously, there is no record of an armored knight being debagged in this way. This mineral was so powerful that it could even reunite parted lovers, and was often included with other gems in a piece of jewelry to symbolize the compelling attraction of love. It is still used in conjure in the southern United States.

Lodestone was the basis of many alchemical experiments and early inventions, especially in regard to per-

petual motion. It was powerless to work its wonders, however, in the presence of a diamond or garlic. Should a stone lose its powers, other than in the presence of these, they might be restored to it by anointing it with linseed oil, wrapping it in a goatskin and burying it in the earth for three days, or by feeding it on iron filings. Dipping the stone in "oil of iron" or goatsblood were other methods of restoring its strength. Lodestone is said to impart fortitude to the possessor and to render a person invulnerable. Alexander the Great provided it for his soldiers as a protective measure.

There was formerly a widespread belief that lodestone aids the burglar in his profession. One might assume he could poke the lodestone in the silver drawer and make off with the plate. Bishop Marbod, 11th century lapidary, however, explained that when powdered lodestone is sprinkled over hot coals, the terrible odor will drive the occupants out of the house, thus leaving the burglar to work unmolested. Its properties as a chastity index are stated, but not explained. Placing it under a wife's pillow, or touching it to her head, will cause the chaste wife to embrace her husband violently. Should she be unchaste, however, she will be bodily thrown out of bed, where presumably she may remain. DeBoot, in the 17th century was inclined to doubt a similar virtue in the diamond.

Hildegard of Bingen, famous learned nun of the 12th century, stated that lodestone would cure insanity if moistened with the patient's own saliva and drawn across his forehead, the proper incantation being said at the same time. Gerard's translation of the *Lapidary* of Aristotle tells how to set fire to water with it. It is also said that lodestone has great power to raise spirits and phantasms, if used with the right incantations.

Lodestone also has marvelous medicinal powers. Bound to the soles of the feet, for instance, it will pull out the gout. Throughout Great Britain and in many parts of the United States just carrying a piece in the pocket or holding it in the hand will cure gout, rheumatism, and sciatica. In India, in the 16th century, it was said to preserve virility. For this reason the King of Siam had his cooking utensils made of magnetite. A necklace of lodestone and coral was worn to assist in childbirth, and Trotula, said to have been the first woman graduate of the school of Salerno, so recommended it. In the 17th century powdered lodestone was in general use for burns; in the same century a Belgian doctor developed an eight-day cure for rupture which consisted of feeding the patient iron filings while applying crushed lodestone in a poultice externally. When worn in a silver setting, lodestone sharpens the sight and other senses; when worn in gold it strengthens the heart. It is also said to produce somnambulism. [JWH]

Lodge-Boy and Thrown-Away Title of a popular hero tale of the North American Indians (T581), especially prevalent in the Plains area. While her husband is away from home, a pregnant woman is killed by a man or woman, and twin boys are taken from her body. One of the twins, Lodge-Boy, is reared by his father; the other boy, "Thrown away," lives in a nearby spring. Father and son catch the second boy, and the three live together. They succeed, in some versions, in awakening their mother, who also comes to live with them. Their father forbids them to do certain things; they disobey,

and in this way kill various monsters: an old woman who had a magic pot, a sucking serpent, bending trees, rectum snakes, a man with moccasins of fire, and so forth. See BEAD-SPITTER AND THROWN-AWAY. [EWV]

Lodur or Lothar In the *Voluspá*, one of the three creators (with Odin and Hœnir) of Ask and Embla, the first man and woman. He gave man blood and a ruddy complexion. He personifies beneficent fire.

Loegaire Buadaic Leary the Triumphant: in Old Irish legend one of the three first champions of Ulster; contender, with Cuchulain and Conall Cearnac, for the champion's portion at Bricriu's feast.

Lohengrin A swan knight of 13th-century Teutonic legend. In tales from old Brabant, he is the son of Parzival and associated with the Grail legends. Lohengrin arrives at Antwerp asleep in a boat drawn by a swan, awakes to save a princess from an obnoxious suitor, and marries her. When she breaks the imposed name tabu, the swan-boat reappears, and Lohengrin departs.

loka In Hindu mythology, a world or division of the universe. The lokas number three (earth, hell, heaven), seven (earth, space between earth and sun, Indra's heaven, abode of the saints, abode of Brahmā's sons, abode of the Vairagis, and abode of Brahmā), or eight (abode of the Piśāchas; of the Yakshas; of the Rākshasas; of heavenly spirits; of inferior deities; of moon and planets; of Pitris, Rishis, Prajāpatis; and abode of the superior deities). Compare PĀTĀLA.

Lokāloka In Hindu mythology, the belt of mountains which divides the visible world from the perpetual darkness beyond. The mountains lie beyond the outermost of the seven seas. See DVĪPA.

lokapālas In Hindu mythology, the eight guardians or supporters of the world who preside over the eight points of the compass. Each guardian has an elephant who also protects the quarter and is also called a lokapāla. The guardians and their elephants are Indra and Airāvata (in the *Rāmāyana*, Virupaksha) on the east, Agni and Pundarika on the southeast, Yama and Vamana (in the *Rāmāyana*, Mahapadma) on the south, Sūrya or Nirriti and Kumuda in the southwest, Varuna and Anjana (in the *Rāmāyana*, Saumanasa) in the west, Vāyu and Pushpadanta in the northwest, Kubera and Sarvabhauma (in the *Rāmāyana*, Himapandara) in the north, and Soma or Prthivi or Śiva and Supratika in the northeast.

In Tibet the chief of the Lokapālas is incarnate in the head of the monastery of gNas-c'un.

Loki In Teutonic mythology, one of the æsir, son of Borr and Bestla, brother of Odin; and in this capacity one of the three creators of the first human pair (some versions). Other authorities classify him as one of the jötnar, son of Fornjotr, and related to Odin only by oath of blood brotherhood. In this capacity he was the personification of destructive fire and played the role of trickster and mischief-maker. In the early myths especially, Loki was comic trickster and transformer rather than evil. With the advent of Christianity, however, he came more and more to be regarded as the personification of evil, analogous to, though not identified with, the Christian Devil. His identification with Lodur has never been substantiated.

Loki first married Glut (glow) and produced two

daughters, Eisa (ember) and Einmyria (ashes). His second consort was the giantess Angur-boda who bore Hel, the Fenris wolf, and the Midgard Serpent, Jörmungandr. His third and final marriage was to Sigyn who bore him sons, Narve and Vali. She was charming and faithful, and stood by him even when he was bound in the cavern.

Loki was much in the company of Thor and Odin and Hœnir, and, while his pranks got them all into trouble, he was the one who extricated them from the results of folly. He also traveled with the bluff and powerful Thor, who greatly appreciated Loki's sense of humor.

In the later stories he shows a meaner streak. The killing of Balder has no redeeming feature. His reviling of the gods at Ægir's feast, while truth, was bitter truth. They were enraged, and to escape their wrath, Loki fled and disguised himself as a salmon. He feared only a net such as Rán alone used, and was experimenting to see if one could be made when Odin, Kvaser, and Thor came after him. He hastily flung the net on the fire, but they found an unburned corner of it and guessed his whereabouts. They fashioned a net and on the third try Thor caught him and held him so tight that the salmon has had a thin tail ever since. He was bound with the entrails of his son Narve and put in a cave where the giantess Skadi placed a serpent so that the venom would fall in his face. His wife, Sigyn, holds a cup to catch the venom, but every time she empties the cup a few drops fall on him and his writhing causes earthquakes. He will remain bound until Ragnarök when he will break loose and lead the forces of evil against the gods until he and Heimdall kill each other. See ANIMAL CHILDREN; ASK; EGIL; FENRIS; FIRE; IDUN; SURTR. [JWH]

London Bridge A children's game and rime of the British Isles and the United States, believed by students of games to derive from ancient bridge foundation sacrifice rites. The old rite, meant to preserve the bridge from destruction by the angry water spirits through the offering of a human victim, is vaguely recalled in the game. Theorists on games believe that children's imitations of adult practices often survive as games even long after the actual rituals have disappeared, and point to *London Bridge* as a distinct example. The players begin by chanting that London Bridge is falling down: presumably the act of the malignant spirit. Various means of repairing it are suggested, but even "Iron bars will bend and break"—though iron is a specific against demons. Finally a prisoner is captured, chosen by chance, either from the ring or from the line of players as they go through the linked arms of the two players acting the part of the bridge. In the course of the many years since bridge sacrifice was actively practiced, this fossilized central idea has become obscured and varied, e.g. the prisoner is a thief, etc., but it is still discernible. The American variant of the game has become intermixed with another game, *Oranges and Lemons*, so that the actual play of the game is different from that in Britain. American variants sometimes substitute other names in place of London. See GAMES.

Londonderry Air A melody of unknown age, first written down by a Miss Jane Ross of Newtown-Limvady, Ireland, and given by her to Petrie, the great collector of Irish folk music, who published it in 1855. It was ap-

parently known all over the northwest of Ireland, but none of its original words have survived. One explanation of its difference in rhythmic pattern from the body of Irish melodies is that individual expression on the part of the singer from whom it was taken, or misinterpretation in the notation, gave it the peculiarly haunting quality of its held notes. The words of *Danny Boy*, *Emer's Farewell to Cuchulain*, and others set to the air since its discovery are mostly of art rather than folk origin.

Lone Man Creator-culture-hero of the Mandan-Hidatsa Indians: **Only Man** in the Hidatsa versions. In the beginning when everything was water and darkness, Lone Man and First Creator were walking along on the top of the water and met a duck. They asked her how she managed to live; she dived down and came up with a small ball of mud. Food grows in this, she told them. From this the pair created the land and all living creatures and caused the soil to produce. Lone Man went northward to do his creating; First Creator turned south. Between them they left a strip of water (now the Missouri River). First Creator made mountains, hills, valleys, streams, springs, trees, wild antelope, buffalo, and mountain sheep. Lone Man created flat lands, lakes and ponds, beaver, otter, cattle, etc. When they compared their works First Creator did not approve of Lone Man's handiwork: his lands were too flat, there were too few trees, his ponds could stagnate, mankind would have nothing but cattle to eat when the wild game was gone, etc.

After a while, as mankind multiplied on the face of the earth, Lone Man got himself born of a Mandan Indian virgin. Many episodes of his life in human form show recognizable resemblances to the Jesus story as told to the Indians by white missionaries: his calming of the waters, for instance, his twelve men, etc. Lone Man taught the Mandan many things, gave them rites and ceremonies for overcoming evil, taught them how to barricade the river against floods. When he departed, he set up a cedar tree in the center of the village, painted it with red earth, told the people to pray and sacrifice to the cedar, which henceforth *was* his body, left with them in token of his return.

One of the Hidatsa tellings of this story begins with the statement that Jesus was born on the other side of the world, but Only Man created this side of the world. In this tale, when Only Man and First Creator compare their works, First Creator takes one look at the human being Only Man has made and says, "That's a queer kind of man to make; he'll always be greedy." See Martha Warren Beckwith, *Mandan-Hidatsa Myths and Ceremonies*, MAFLS 32, 1938.

Lone Prairie See BURY ME NOT ON THE LONE PRAIRIE.

long cold One of the four major world cataclysms in the mythology of the Chaco and Tierra del Fuego Indians of South America. Compare FIMBULWINTER.

longways dance Any dance in which the performers stand in two parallel lines, the men in one line, facing their partners in the other. See CONTRADANCE; CONTRADANZA; LINE DANCE. [GPK]

looking tabu One of the widespread tabus of folktale: looking at the forbidden object or person causes its loss. The motif appears in the Cupid and Psyche story, where

Psyche breaks the prohibition and loses her husband (C32.1). Orpheus looks back at Eurydice and loses her to Hades forever (C331). Lot's wife turned into a pillar of salt because she looked back at the destruction of Sodom and Gomorrah (C961.1)—*Gen.* xix, 26. The Bluebeard story with its forbidden chamber uses the motif. Pandora was forbidden to look into the box but did so and loosed all the evils on the world (C321). Semele and Actæon looked upon the gods and perished. Tiresias examined two snakes copulating and was stricken blind (D513.1); Tom of Coventry too was blinded after he peeped at the naked Godiva against strict prohibition (C943).

The turtle in fable is carried aloft by the eagle but looks down against the eagle's advice, gets dizzy, loses his grasp, and is smashed in the fall. Väinämöinen is warned by Louhi not to raise his head above his sledge to gaze about him or misfortune will follow (C333); he looks, sees Pohjola's daughter, tries to get her to join him in the sleigh, and as a result injures himself with the ax. The looking tabu often occurs in tales of wonderful journeys (D2121.2), especially journeys to cliff-tops or to the skies. Sometimes, as in the Hittite dragon-slaying myth, the tabu is based on folk practice: the hero must not see his wife or child before setting out on his adventure or he will lose his strength—the parallel to ritual sexual continence before battle is apparent.

Among the Zuni, looking back is tabu during certain rituals and in the obtaining of omens. Before a raid, the warrior seeks omens at a river, performing the necessary rites. Four times he takes four steps backwards from the river and each time pauses and listens for omens. Then, without looking back, he goes directly to the War Chief for an interpretation of what he has heard. The Hopi believe that their salt gatherers must not look back at the lake lest their souls be trapped there; death will soon follow. Among the widespread relationship tabus is one prohibiting a man from ever seeing his mother-in-law. The moon must not be looked at over the left shoulder, according to general European and U.S. belief, insanity or death will follow. In European belief, a baby must not be allowed to look at its own reflection in a mirror until it is a year old; otherwise its luck in life will be hard. Many persons believe that a dog will have convulsions if it sees itself in a mirror.

lookman One who "looks": the diviner of Trinidad Negroes. He is consulted especially when one has had a dream of bad omen. The lookman knows not only the meaning of the dream, but who sent it: whether it is a warning from an ancestor or a threat from some other, malicious supernatural. If it is a warning dream the lookman makes for his client the *guard* which will prevent the prophesied misfortune; if it is a threat, he advises his client what he must do to propitiate the evil spirit. The lookman can "see" an illness, and also "see" the cure; he can "see" future obstacles and calamities in the path of a client, and knows what kind of charm to give him to clear the way. He also knows tricks for insuring the success of a job or a journey.

The lookman is often called upon to whip a vampire (*sukuyan*) or werewolf, when some terrified person thinks he has identified or caught one. It is especially important for this to happen while the vampire or werewolf is in his animal shape, for once the whip of the lookman

has touched him (her) he can never again assume human shape or behavior, and is thus more easily caught. The lookman is always paid for his services. Anyone who fails to pay incurs the full force of his powers to cause bad luck, disease, or death. Compare LUKUMAN. See OBIA.

loom A frame or machine in which yarn or thread is woven into a fabric. Through this medium weavers express many of the beliefs of their people, notably the East Indians, and the Indians of North, Central, and South America. Through many inventions, the primitive loom has been now transformed so that it is almost automatic. Various loom substitutes are used among semiprimitive people. In Jutland people used to say that if one wakes at night and hears the loom working of itself, silver has been stolen from the house. See R. Wikman, *Die Magie des Webens*, Abo, 1920. Lilts, croons, and songs of weavers at work comprise a large part of the body of Irish folk song. In Ireland they say that weavers never get either to heaven or hell.

The loom appears in impossible task folktales: making a loom from shavings, making loom and spindle from one piece of wood, etc. The horizontal loom was used by Delilah when cutting Samson's hair, this form being most convenient for the task she was performing. [grs]

Loon Woman or The Girl Who Marries Her Brother An American Indian tale. One brother in a large family is kept hidden; his sister finds a hair and longs for the person to whom it belongs. When she discovers the owner she insists he go away with her; she attempts to commit incest, but her brother returns to his family. The family escapes in a sky basket to the sky, knowing the girl will kindle a great fire on earth. One member breaks a looking tabu, and the entire family falls into the fire. As they burn their hearts burst out; the daughter, Loon Woman, gathers the hearts and strings them about her neck. Later she is killed and the members of her family are resuscitated. The tale as a whole is practically confined to tribes in the northern half of California (Modoc, Shasta, Achomawi, Yana, Wintun, Maidu), but various elements in it are found in many parts of North America and some (lover identified by hair floating in water, sky basket, magic objects talk and delay pursuer, Achilles heel) are world-wide. A recent comparative study of *Loon Woman* focuses on the material which native narrators of this myth had to draw upon, and their handling of such material; see D. Demetrocopolou, *The Loon Woman, A Study in Synthesis* (JAFL 46: 101–128). See also Stith Thompson, *The Folktale*, p. 361. [ewv]

loosestrife Any of various plants, mostly with four-cornered branches, regular or irregular flowers, as the common loosestrife (*Lysimachia vulgaris*) or the purple loosestrife (*Lythrum salicaria*). A sprig of loosestrife laid under the collars (or yokes) of a pair of quarreling oxen was formerly said to calm them. In the United States loosestrife is burned to drive away mosquitoes, and it is also considered excellent for ridding animals of flies and gnats; nor can snakes abide the smell of it. Wizards and sorcerers used it in times past to harness evil spirits; on the other hand, it was used to drive away witches and evil spirits and to guard treasure. Medicinally loosestrife was widely used as a remedy for dysentery, and for all manner of bleeding, both internal and external. In Ireland the purple loosestrife (*créactac*), sometimes called

crane's-bill, is used for healing and as a dye. In Britain crane's-bill was a popular remedy for gout and rheumatism. In Russia purple loosestrife is regarded with fear and awe.

Lō-pūn or sLob-dpon Literally, teacher: Tibetan name for the Buddhist monk, Padmasambhava, who was invited to Tibet by King Thi-srong-de-tsan to organize a Buddhist sect.

Lord of Misrule An officer of the Christmastide revels in the Middle Ages, who directed the festivities of the holiday season, and who ruled over his "subjects" so absolutely that he might do or command almost anything without censure. The Lord of Misrule held office at least during the twelve days from Christmas to Epiphany, and often from Allhallows (Oct. 31–Nov. 1) to Candlemas (Feb. 2). This latter period, for example, corresponds to the period of rule of the King of the Bean (another name for the Lord of Misrule) at Merton College, Oxford. The Abbas Stultorum thus ruled over the Feast of Fools (Jan. 1) in France; the Boy Bishop was in charge of the Innocents' Day (Dec. 28) celebrations in France and England; in Scotland his name was the Abbot of Unreason, of Misrule, of Bon Accord; in France there was an Abbé de la Malgouverné. These masters of the revels held forth in the royal household, in the houses of the nobles, in the colleges, in the Inns of Court. Depending upon the place, they were elected or appointed. From the period of the year (winter solstice) and the pomp surrounding the Lord of Misrule, Frazer supposes that he was a survival of the ancient Roman Saturn who ruled over the Saturnalia, one of the temporary kings whose reigns were short and sweet and who died when their functions had been fulfilled. Frazer further hypothesizes that the suspension of the normal course of events occurred in the intercalary days, when time itself ran off the calendar. The ability to relax then the normal progress of things, and the occurrence at the same time of the yearly revolution in the sun's course, made for a grand festival and a burlesquing of what during the rest of the year was held holy and sane.

Lord Randall An English ballad (Child #12) in dialog form which tells the story of a young lord who has been to see his sweetheart and has been poisoned. Many versions include the testament theme and the climax of relations. In both song and story the tale is known all over Europe, variants having been collected in Italian, German, Wendish, Dutch, Swedish, Magyar, Bohemian, and Catalan languages. A song containing the details about the poisoned eels he had been given for his dinner was sung by a blind Florentine singer early in the 17th century. A Swedish version also mentioning eels made the victim a girl. The Scottish lullaby version, *Wee Croodin' Doo* (wee cooing dove), which exists in many variants, has a slaughtered child as the victim. Innumerable versions of the song have been collected in America, where the hero's name varies almost endlessly, appearing as Johnny Randall, Johnny Ramble, Jimmy Randal, Jimmy Ransing, and even Boss Randal (in a Negro chain-gang version). It is among the half dozen ballads most frequently found both in the north and the south, has been found in the Ramapo Hills within sight of New York's skyscrapers, and in the railroad camps of Colorado. The Shakers used one of its airs as a hymn tune, and the nursery song *Billy Boy* is believed

to be one of its progeny. What is thought to be its original melody, to which it is still often sung, is derived from the same source as *Lochaber No More*, *Reeve's Maggot*, *Limerick's Lamentation*, and *King James's March to Ireland*. It is also sung to a setting of the *Villikens and Dinah* air.

Lorelei A water nymph of the Rhine whose song misled sailors onto the rocks below her perch. The story is neither myth nor local legend but is a fabrication of Klemens Brentano, who told the tale in his *Lore Lay* (1800). Through Heinrich Heine's poem on the subject, the story became familiar to English readers, and to tourists the legend of the Lorelei became a local legend of sorts. The Lorelei is a tall rock on the right bank of the Rhine in Hesse-Nassau, noted for its echo, and thus the romantic literary fiction has had an excuse for passing to a degree into tradition.

lotus The "fairest flower" of the East—a predominant ornamental motif which has an uninterrupted symbolic history of almost five thousand years, with a range and subtlety of meaning comparable to that of life itself. Its significance includes: (1) the female principle—the *yoni*, the womb, the reproductive act or power, the procreation of life; (2) fertility, fruitfulness, or abundance—hence, fortune, prosperity, happy augury, offspring, and such other blessings as long life, health, and fame; (3) the earth and creation—creative force or power, the self-generative cosmic action, the Mother Goddess, the generative organ of the female waters, the life-giving Nile; (4) divinity—superhuman birth, spontaneous creation, eternal generation; (5) immortality and resurrection—the preservation of life, life everlasting, rebirth, the restorer of the sun at dawn, the cup of the sun, the flower that enfolds the souls of the dead, the resting place of Buddha; (6) purity and spirituality—the preservation and procreation of the law, the wisdom that leads to Nirvāṇa, the essence of enlightenment.

From these basic concepts it is possible only to hint at the innumerable uses of the flower in custom, legend, and art. It is auspicious when worn, health-giving when eaten, a synonym for beauty in the poetry of many languages. It may be the highest number, a charm, a remedy for lovesickness, a good omen, a holder for incense sticks, a sign for a candle shop, a wrapping for food for the dead.

The lotus idea will be traced first in India, where it is most ramified and where creation itself is visualized in terms of the sacred flower. Already in the *Brāhmaṇas*, c. 800 B.C., the lotus leaf is viewed as the womb. It is the symbol of the *yoni*, the female generative organ, and this is the basic element in its meaning, whether it becomes the female goddess (the universal mother), the cosmic lotus (the womb of creation), or the seat (source) of divinity or spiritual power. When the *lingam* is depicted in India, it is generally based on or rimmed with lotus petals, entwined with the lotus stalk, or situated in the innermost "womb" of the temple, representing the complement or dual nature of those forces which animate existence.

The Lotus Goddess What is presumably the oldest representation of the lotus in art—many centuries older than any written reference to it—occurs with a figure unearthed at Mohenjo-Daro in the Indus Valley, which is assigned to the third millennium B.C. This simple nude

goddess—wide-hipped, uplifting the breasts with the hands, prototype of the familiar earth mother in many regions—wears in her hair the lotus blossom. Among tillers of the soil, she has remained supreme as the simple goddess of fertility, “the possessor of dung.” However, as male deities gained the ascendancy in the more complicated pantheon, her personality was absorbed into that of consort, and she is often shown seated on the lap of the god or caressing his feet. As the spouse of Vishṇu, she is called Padma (lotus), Lakshmi, or Śrī, and one story has it that she came out of a lotus which sprang from Vishṇu’s forehead. Śiva holds out the lotus-twined lingam to his goddess Śakti. As Kālī, she holds in one hand the lotus symbol of eternal generation. The Universal Buddha has as his consort Prajñā-Paramita, who also bears the lotus, in this case surmounted by a book. In Chinese Buddhism, the goddess Tara is called Lotus.

The earliest reference to the goddess, in a supplement to the *Rig-Veda*, describes her as born of the lotus, standing on the lotus, garlanded with lotuses. She is praised (as beautiful women have been ever since) as being of the hue of the lotus, lotus-eyed, lotus-thighed, lotus-decked. In the story of the Churning of the Milky Ocean, she is one of the earlier figures to appear. She is constantly associated with the waters (which are feminine and life-giving) and with the white elephant. Carvings of Padma from at least the first century B.C. to the present time characteristically show the goddess standing upon the lotus, flanked by elephants who pour water from their trunks over her and the lotus which she holds.

The Cosmic Lotus To the Hindu, creation (conceived as the emergence of the world from the universal waters or void on which the giant Vishṇu sleeps) takes on cosmic proportions, but the lotus serves as the medium just as it is the simple sex symbol. Vishṇu, the “lotus-navel,” puts forth from his body a single giant lotus on which is seated Brahmā, the “lotus-born” Creator. This lotus with its thousand golden petals grows with the expanding universe. Out of its petals the mountains rise and the waters flow. Symbols of the earth or the goddess may be depicted on it, demons and serpents under the petals. With each succeeding *kalpa* or day of Brahmā (12,000 heavenly years) Brahmā is reborn on the lotus from the navel of Vishṇu. The *Padma-Purāṇa*, second in the list of *Purāṇas*, contains an account of the age when the world was a “golden lotus.”

In the myths associated with Prajāpati as the Creator (in the *Brāhmaṇas*) it is said that he saw a lotus leaf standing in the waters of the fluid universe. He dived beneath the surface (in his boar form), brought up a bit of earth and spread it on the leaf. Or again, Prajāpati himself appeared on the lotus leaf.

Buddhist periods, also, are initiated by the appearance of a lotus, which indicates the location of the sacred tree of Buddha. If the period is to be void (without Buddhas), there are no blossoms on the lotus; however, at the beginning of one era, the Bhadrakalpa (according to late versions), there were a thousand blossoms to indicate the number of forthcoming Buddhas. The Buddhist paradise is sometimes described as a place where everyone is born as a god upon a lotus flower. In diagrams or paintings of the wheel of life, the rim of lotus petals or depictions of the cosmic lotus are salient. See WHEEL.

The Attribute of Divinity The lotus as the symbol of creative power or of spontaneous divine creation, or

simply of divinity, came to be applied over the centuries to many deities. This attribute takes many forms, according to the nature of the deity and the period or country, but there are three basic types. Two are art forms, already noted as characteristic of the lotus goddess—the lotus seat or pedestal on which the deity sits or stands and the lotus in the hand. The third is vocal, the famous lotus-jewel formula, *Om maṇi padme Hūm* (So be it, lotus-jewel, Amen). This formula is traceable to Brahmanized ritual and was borrowed for Buddhism. In the latter, it is addressed to Avalokita, who is depicted as a hermaphrodite, seated upon the lotus of his father (the Buddha of meditation) or holding both the lotus and the jewel. This formula, according to L. A. Waddell, whether applied to Vishṇu or Avalokita, “presumably symbolizes the creative cosmic action by self-generative power”; it still occurs throughout the East, almost universally in Tibet, as a wishing-gem or good-luck spell.

The lotus seat appears with almost all the figures of the Hindu pantheon, and Buddha characteristically sits cross-legged upon it. It is usually a simple pedestal, recognizable by its rim of lotus petals, or, occasionally, two to four lotuses carved on the front. Sometimes it is transformed into a footstool on which the god or Gautama rests his feet. In all Buddhist countries, the lotus seat came to be the support of the images of bodhisattvas, with whom it has a more metaphysical significance (like that associated with Prajñā-Paramita)—the preservation and rebirth of the Law rather than the procreation and resurrection of life itself. (*The Lotus of the True Law* is one of the great texts of Mahayana Buddhism.)

The lotus in the hand (or sometimes shown in carvings alongside the deity or blossoming from the pedestal) is also characteristic of many divinities. It may be surmounted by sword, thunderbolt, jewel, sun, or book. Vishṇu holds a lotus in one of his four hands. It is the symbol of the sixth Jina in old Jain sculptures. The title Padmapāni (lotus-handed) is especially applied to Avalokita. In Tibet the lotus is the special emblem of the founder of the Order of Lāmas, Padmasambhava.

The Lotus in China Before the advent of Buddhism, the sacred flower had already been conspicuous in Chinese thought as in the landscape. Among the Taoist eight immortals Ho Hsien Ku holds this “flower of open-heartedness” or the lotus-pod wand. Among the flowers of the four seasons, the lotus is that of summer. As elsewhere, it is the emblem of purity (because it rises unsullied however muddied the waters and does not grow in the earth), of fruitfulness (the numerous seeds, in particular, being symbolic of offspring), and of creative power. In rural communities, incense is still burned to the Spirit of the Lotus to prevent misfortunes from evil spirits.

As in India, images of Buddha and Buddhist priests are seated upon the lotus, and the flower is one of the eight Buddhist emblems of happy augury. The Chinese usually depict it with ribbons which represent its sacred rays; it also appears as one of the auspicious signs on the sole of Buddha’s foot. (In India, Buddha could imprint the lotus flower on the earth at every step.) The lotus sprang up to announce the birth of Buddha.

But the particular Chinese contribution to Buddhist art lies in their pictorial concept of the Western Heaven with its Sacred Lake of Lotuses, a replica of which is

characteristically found in temple courtyards. Each soul is conceived as having its particular lotus blossoming on the bosom of the Sacred Lake, where it is received after death and where it rests in a sort of painless purgatory until the appointed time for its opening. The flowers thrive or droop according to the piety of the individual during his life on earth, and for the particularly devout they open immediately when he dies, admitting the soul at once to the divine presence. Chinese paintings of the Western Heaven (as it was interpreted by the Lotus or Amidist school of Buddhism) depict a truly delightful paradise. Lotus blossoms of varied hues, said to be as large as wheels, float on the conventionalized wave pattern of the water. In the center Amitābha is enthroned, surrounded by bodhisattvas. Beautiful pavilions float on conventionalized clouds, vases smoke with fragrant incense, music-clouds play, and jewel flowers rain down through the air.

The Egyptian Lotus The lotus of the Nile is commonly the blue lotus; the white variety also occurs (recognized in art by its rounded rather than pointed ends and strongly ribbed sepals) but the rosy-hued lotus of the farther East is not native here. It provides the greatest number of Egyptian ornamental patterns (notably as the source of the lily capital) but the extent to which it is symbolic rather than strictly decorative is a matter of some dispute. In the later periods at least, it is the flower upon which Horus is seated, it is associated with Osiris, and worn by Nefertete. It is associated particularly with the reproductive power and fertility (since it grows upon the life-giving Nile) and with the sun and resurrection; it is placed upon mummies, used in funeral rites, and commonly depicted in tombs. The association with the sun, which occurs also in the other countries where the lotus grows, arises partly from the raylike petals, perhaps, and from the fact that the blossom opens in the morning and closes at night; it is the cup of the sun, its cradle at night and the source of its renewed life at dawn.

The lotus also occurs on Assyrian seals, where figures are shown as if worshipping the flower. From the Mediterranean and the East it spread into classical mythology (Hercules borrowed the golden cup of the sun, shaped like the lotus, for one of his journeys) and throughout the Western world. Those who like to trace or postulate a world-wide diffusion of basic symbols find reminiscences of the lotus in the Christian lily, the fleur de lys, the petal design within the wheel, the water lily and tulip, and in innumerable circular ornaments, medallions, and rosettes. To the Western mind it apparently sums up the mystical beauty of the Orient and of metaphysical thought, for it has lent its name to numerous volumes of poetry in the English language and to at least one literary magazine. Every part of the lotus plant may be either eaten or used as medicine. However, the "lotus eaters" partook, not of this plant but of the fruit of the lotus tree, which brought forgetfulness. See DA-CHA; JUJUBE. [MH]

Louhi The mistress of Pohjola or Northland in the epic songs of the Finns: a very powerful sorceress and the greatest adversary of the heroes of the *Kalevala* (see songs 45–47). She commands fog and wind, sends diseases and wild beasts. Finally she was defeated by Väinämöinen, but not killed. She captured the sun and

moon and hid them in a mountain, and stole the fire from the homes of Kalevala. [JB]

loup-garou The French word for werewolf: one who transforms himself into a wolf at night and runs the countryside devouring animals and people. In French Canada a man (always a man) becomes a loup-garou because of some curse or as a punishment from heaven. One man, for instance, found that he was a loup-garou because he had not been to mass (or confession) for ten years. The loup-garou is not always a wolf; he may be almost any other animal: a white horse, a dog, pig, even a tree, or an inanimate object. The *loup-garou de cimetière* digs up and eats dead bodies; those who take the shapes of other animals devour both animals and people; some, however, do little damage except to frighten passers-by and await their deliverance. Deliverance from the state of loup-garou comes by religious exorcism, by a blow on the head, or by the shedding of his blood while in the metamorphosed state. See Marius Barbeau, "Anecdotes Populaires de Canada," *JAF* 33: 202 ff.

In Haiti the loup-garou is a sorcerer (man or woman) who can change into an animal, insect, a tree (usually bearing lights), or some inanimate object. Methods for discovering and besting the loup-garou are the same in most cultures: the shifted skin is found and peppered so that it is too painful to be resumed, or the loup-garou is wounded while in animal shape, discovered by the identical telltale wound on his human body, and so taken and killed. In Haiti, St. James saves his devotees from loup-garous. The Trinidad Negro term for werewolf is *legarou*. See WEREWOLF.

lovage A sweet, rather pungent herb (genus *Levisticum*) now used to flavor candy, formerly used by the monks of southern Europe as a remedy for quinsy and to make an eyewash. Culpeper says this herb "opens, cures, and digests humors"; he also recommends it for freckles. Lovage was said to aid digestion, and to cure dog and snake bites. Samuel Johnson believed in it in medicinal baths for rheumatism.

love apple Because the apple has many seeds the Chinese customarily designate it as "good." J. Rendel Harris has contended that Aphrodite was a personification of the mandrake which was also known as the love apple. An undated Tuscan story is that women who wished to become pregnant got from the priests apples which had been consecrated. Once a man ate one of these and was delivered by Cæsarean section. Until recently in America tomatoes were known as love apples. This is the consequence of an error in etymology. Tomatoes were imported into Italy from northern Africa and were known as apples of the Moors. When they came to France they became known, by confusion between *Moro* and *amour*, as love apples. This confusion was then brought into North America. [RDJ]

love magic, charms, philters, potions, etc. Charms to bring about love are found in folk practice the world over. They fall into two general types: 1) The general charm used as a medicine and based on ingredients of a general character; 2) the charm that acts by "inoculation" or magic transference of loving quality from one person to another. The first type is the least common, probably because it is general in its action and not per-

sonal. The love potion that Isolt's mother (a lady from the land of fairy) brewed for Isolt and Marc worked equally well on Isolt and Tristan. Of the several plants widely used for such love potions, the mandrake is the most famous. Its fruit, in some languages called "love apples," would make the one partaking of it fall in love with the one giving it. Likewise the *shang-luh*, a plant like ginseng, has long been used in China as an ingredient for love philters. Briony was also used for this purpose in England. In India a girl who would win a man prepares betel nuts or tobacco and secretes it in his pouch.

Many concoctions, more fantastic, were used. From the Creoles of Louisiana comes this recipe for a love philter: Roast hummingbird hearts, then grind them into a powder and sprinkle the beloved with it. From Nova Scotia: Steep the plant lady's tresses (*Spiranthes*) in water and give the beloved to drink. From American Negro: Place a live frog in an anthill and leave until the ants have cleaned the bones; then take the heart-shaped bone and the hook-shaped bone; keep the first yourself but hook the second in the clothing of the beloved. Among many primitive peoples love potions were often prepared from the reproductive organs of animals; the Australians used the testicles of the kangaroo, for instance, and some American Indians the testicles of the beaver.

The second type of love charm is based on the belief that properties of one person can be transferred to another by magical contact. So one who would induce love in another transfers to him a bit of his hair, clothing, nail parings, ornament, sweat, saliva, blood, bath water. Usually the object is "charmed" by having an incantation said over it by the person administering it or by a medicine-man. Then it is secreted in the food of the beloved or hidden on his person. Arunta women place necklaces of their hair around the necks of their beloveds; in Indonesia a girl hides her girdle in the clothes of the man she loves. In Newfoundland one who would induce love in another pricks an apple full of holes, carries this for a time under the left arm, and then gives it to the beloved.

Out of these practices develop the mutual exchange of love charms as a pledge of love or a guarantee to the continuance of love. Two lovers exchange bits of hair, clothing, rings, blood. This practice constitutes one of the simplest and one of the earliest types of marriage ceremony. [MEL]

Among practically all North American Indian tribes love magic of various sorts was practiced: songs were sung, or played upon the flute, to lure young girls out into the woods; various medicines prepared from herbs and other substances were given to victims; and sorcery of one sort or another was practiced against intended victims. Of all North American Indian tribes the Cree of Canada are probably most noted for their love magic. A lively traffic in love medicines still exists between the Cree and their neighbors, and their prowess as love magicians is greatly feared by surrounding tribes. In many tribes frequent "true tales" are told of elderly men, often powerful shamans, who proposed to marry desirable young girls; if the girl objected the shaman would threaten her or members of her family with death, and so firmly was it believed that he

would make good his threats that the girl often consented, or was forced to do so by her parents. [EWV]

love of one unseen A motif (T11 ff.) known to all folk literature: most easily examined through the numerous references in Arabic listed in Chauvin's bibliography and in the many episodes in the *Ocean of Story*. In Hindu tradition the love of one unseen is known as *adrstakāma*; in Old Irish legend it is *grád écmaise*.

The hero falls in love with a woman on hearing a description of her (T11.1)—in Old Irish legend Findabair first loved Fraech from "the stories told about him"; or sometimes on hearing her name mentioned, or on seeing her picture (T11.2)—see BUSHY BRIDE; FAITHFUL JOHN;—or seeing her in a dream (T11.3)—see ANGUS OG AND CAER. Falling in love through seeing the marks of a lady's teeth in the fruit she has bitten (T11.4.4.) is in an Indonesian story. For love through sight of unknown's hair (T11.4.1) see TWO BROTHERS.

That men and women actually do become enamored by hearing friends describe the virtue and charm of wives or husbands can be proved by the records of many social workers. The narrative theme which develops usually has to do with the difficulty of finding the person who has been described. The medieval courts of love, concerned with whether fancy is bred in the heart or in the head, also speculated as to whether it entered through the eye or through the ear. [RDJ]

lovers' leap A favorite form of American local legend in which death or suicide for love lends romantic associations to a rock or cliff, often accounting for some unusual or unnatural feature of it—a human likeness or imprint or bloody stain on the rock, a ghost or ghostly cry that haunts the rock or the waters below. In its typical form the story concerns an Indian couple separated by parental or tribal disapproval, or threatened with death by torture at the hands of enemies, or with the maiden's abduction by a jealous rival.

Instead of a desperate couple or a lovelorn maiden, the victim of the tragedy may be a deserted or unfaithful wife. As in the latter case or the case of a maiden who otherwise transgresses tribal law, the victim may be hurled to her death, or, like a prisoner or fugitive (not a lover) seeking simply to escape from captors or pursuers, may be chased or forced over the precipice, as the only way out or as an alternative to shameful punishment. While the scene of the tragedy is generally known as Lovers' Leap, the name may vary with the circumstances or incorporate the name of the victim (e.g. Deborah's Rock, below Reading, Pa.), or involve a folk etymology (e.g. Squantum, Mass., said to be a corruption of Squaw's Tumble). [BAB]

love songs The lyric expression of devotion sung to or in praise of the beloved is one of the chief themes of secular folk song. Even among primitive peoples, the major part of whose music is ritual or magic in character, love songs are found to range from the slight, allusive, and poetic, to the forthright, lusty, and jocular. Love songs may be an important and seriously accepted part of the process of courting, as serenades, aubades, etc.; they may be a more playful manifestation of group courting and flirtation, as in British singing games and the American play-party; they may be sung purely as entertainment for an audience; or they may be sung in pursuit of many unrelated activities such as marching,

rowing, dancing, working, children's play, etc. Certain types of songs, such as *blues*, *fados*, *cante hondo*, are primarily concerned with love, but chanteys, hollers, lullabies, revolutionary songs, forecastle songs, cowboy songs, jailhouse and chain-gang songs, roustabout songs, the songs of wagoners, Japanese tea-pickers, Haitian hoe gangs, Canadian voyageurs, Michigan lumbermen—all these are sometimes love songs, too. A great part of the ballad literature is concerned with tales of love, generally tragic, in which certain stanzas are simple love songs. Occasionally that love-song section is all that survives of the whole story; in the southern United States, for instance, *The Riddle Song*, or *I Gave My Love a Cherry* is all that remains of *Captain Wedderburn's Courtship* (Child #46) and *Who Will Shoe Your Foot?* (*The Lass of Roch Royal*, Child #76) has also become a plaintive love ditty.

The melodies of love songs are among the loveliest in all the folk repertory and may be as melancholy and haunting as *À La Claire Fontaine* of French Canada and the Hebridean *Sheeling Song*, or as gay as *Cindy*. The words may range from the despair of the sweetheart betrayed or forgotten to the joy of first love on a May morning; from the bravado of "There's more pretty girls than one," to teasing or pleading; from complete faith to utter disillusionment; and from courtly poetry and gallantry to frontier buffoonery and plain speaking. The sweetheart may be described as anything from a red rose or a "rose blanche" to a gal with buck teeth or one who is "chocolate to the bone."

The serenade is particularly the custom of the southern European countries, where courting goes on under strict chaperonage or must be pursued during evening strolls around the plaza or Sunday encounters on the church steps. Songs sung under the lady's window at evening or dawn (*aubade*, *alborada*, etc.) constitute the lover's best means of communicating with the girl he loves, and her reception of the music indicates her feelings toward him. The eight-line *canzuni* or *rispetti* of Italy are often aubades or serenades. Others include the *aria* of several stanzas, usually sung to the guitar, and the flower songs, *ciuri* or *rispetti*, in rimed couplets or triplets, each one worked around the name of a flower.

In Mexico a number of serenading customs of Spanish derivation survive. *Las Mañanitas*, for example, is a dawn serenade to wake the girl and wish her joy on her birthday. Another type, the *gallo* (literally, cock), is a serenade at cockcrow, sung to the guitar by bands of young men who rehearse their songs together and then sing under the window of each one's girl in turn. There is a traditional series of songs, beginning with an "awake, my love" (*Si Estas Dormida*) and ending with a farewell. Etiquette requires that the lady remain unseen and show no light at her window. The lover leaves his card in the slit of a small pottery bank in the shape of a cock, which he places on the windowsill.

The interrelation of folk song and art song is close in songs of the serenade type particularly. The *minnelied* of 12th and 13th century Germany, the *trouvère canso* and the troubadour songs of Provence and France, and the love songs of the goliards of medieval Europe were developed to a fine art from musical materials of the folk, and, after their height as courtly art, returned to the folk, among whom their surviving forms are still sung.

The serenade is not unknown among primitive peoples. Young men of some of the American Indian tribes, for example, wooed their girls in the evenings with songs and flute playing (which was believed to be particularly aphrodisiac).

Probably the *reductio ad absurdum* of the serenade was reached in the *charivari* (called *shivaree*, *skimmerton*, etc., in America), a performance given to bait, or sometimes to censure newly married couples. The "music" consisted of hoots, catcalls, blowing of horns, and banging of pots and pans.

Courting songs on the game level originally were sung by adults, though they survive now chiefly in children's singing games. *Go In and Out the Windows*, a love game popular in the British Isles in the 18th century and derived from a weavers' dance, is still played and sung by children and was a frontier play-party game in the United States. Its verses, "I'm here because I love you," and "I'll measure my love to show you," etc., could be as personal and meaningful as any couple in the dance cared or dared to make them. Another one of British origin, *Here Come Three Dukes a-Riding*, or as it has often been known in the United States, *What Are You Riding Here For?*, imitates the riding forth of a band of young men to choose wives from another village. As the line of young men advances and retreats alternately with the line of girls, they sing teasingly, "What are you riding here for?" / "I'm riding here to get married." / "Who do you think will have you?" / "I think Miss Jennie (or whatever her name is) will have me." Here again the choosing of partners and the singing of the declaration of love, though playfully undertaken, might be a serious proposal.

Like many other types of folk song, love songs may take the form of a dialog. *No, John, No* is such a one, the suitor receiving "no" as an answer to all his questions because the girl's father had told her always to say "no." John gets around that arrangement by asking her if he should leave her and stop loving her. She still answers "no." A variation of the dialog is the bribe song, in which the lady is offered many gifts if she will give her love. She refuses all until finally the lover offers his heart. *My Man John* and *The Paper of Pins* are of this kind.

The separation theme is common. Mountains, death, the prairie, the sea, prison walls, or long journeys divide the lovers and the singer wishes them away. A Japanese rice-hulling song, for instance, complains of the mountain that hides the house of the beloved from sight. Messages, letters, and love tokens are important features of such songs. "Write me a letter / Send it by mail / Send it in care of / Birmingham jail," wails one of the stanzas sung to the American mountain lonesome tune, *Down in the Valley*. (*Lonesome tune* is one of the synonyms for love song in American folk usage.) "If I could fly," "if I had wings," such songs often say; sometimes the lonesome lover reveals his sad heart to a bird, preferably a turtle dove, who either mourns for his own lost love or will carry the message to the faraway sweetheart.

The unfaithful lover, naturally, has a major role in love songs, "for love grows old, and waxes cold, and fades away like morning dew," as the English song *Waly, Waly* laments. His defection may be on a fairly abstract plane, as in the courtly *Greensleeves* ("Alas, my love, you do me wrong to treat me so discourteously"), or it may be

a plain "fact of life," as in the blues, *Easy Rider* ("Easy Rider / See what you done done. / You made me love you / Now your woman done come") and *Careless Love* ("Now I wear my apron high and you pass my door and don't come in"). Most of the forsaken lovers merely mourn and philosophize about the fickleness of philanderers. "They'll hug you and kiss you, and tell you more lies / Than the cross ties on the railroad or the stars in the skies," says *Old Smoky*, the central character of which lost out because of "courtin' too slow." Surinam Negroes, however, use satiric love songs for revenge. See LOBI SINGI.

Work songs of many races and occupations are full of the named or nameless ladies lost and won. Negro chain gangs and field hands sing of Juley, or Juley Ann Johnson, or jumping Judy; the chanteyman sang of Sally Brown, of the unnamed maid of *Amsterdam*, of Boston girls and Liverpool girls, of Irish girls and Yankee girls; the roustabouts sang "Alberta, let your hair hang low," or about Saro Jane or Anniebelle. Soldiers on both sides in World War II sang *Lili Marlene*, which started out as a German popular commercial ditty, and achieved significance by virtue of its popularity and the claims of its "capture" by Allied soldiers. By amateur translation into English, the development of a ghost story around it, and parody and rewording, this sentimental love ballad became partially a folk product in a matter of months. Another soldier's heroine of a love song is Adelita, of the Mexican revolutionary ballad.

In general, it has been remarked that the love songs of southern Europe are more passionate and tragic, more abandoned in their expression than those of northern Europe and the British Isles. The British love songs, apart from the tragic ballads, are more light-hearted, even though they range from the wistful and sad to the broad and lusty types such as *Blow the Candles Out*. In their emigration to America many of the British songs changed as did the language, the style of humor, and the character of narrative. Lyric melancholy, though it survives to a great extent in the singing of the southern United States, is often replaced by a sort of yellow-journalism balladry. Getting mixed up with a woman (or a man, as the case may be) can only lead you to the kind of thing that happened to Jimmy Randall (see LORD RANDALL) or to Pretty Polly, who was murdered by the sailor she trusted. The light-hearted and teasing mood was translated on the frontier to humorous exaggeration and horseplay. "Purty little blackeyed Susie," one of the sweethearts of the comedy type of love song, "jumps on the boys like a dog on a bone."

In primitive love song there are fewer tales, less playfulness, and less tragedy, though none of these elements is completely unknown. A Chinook song says, "Whose sweetheart is very drunk? / My sweetheart is very drunk. / You don't like me. / I know you." Other American Indian love songs liken the girl to the young birch tree, to the soft breeze, to the star, in poetry as delicate and elliptical as a Japanese quatrain. See AZUMA-UTA; BLUES; CANTE HONDO; FADO. THERESA C. BRAKELEY

Lowalangi or Lowalani The Nias (Indonesia) god of the sky and winds; creator of the human race upon whom he bestows souls or breath. Lowalangi, still today, inquires of each person about to be born what he wishes to be or to do on earth. Lowalangi was the younger son

of Ina-da Samadulo Höse, the mother of gods and of all races, who arose from the splitting of stones and who had two sets of mixed twins. The elder son was Latura. Lowalangi married the twin of Latura and with her became the ancestor of the human race.

Lowlands A chanty used at the capstan or pump, based on an old English or Scottish ballad telling of a tragic and prophetic dream of love. "I thought I saw my own true love and knew my love was dead," etc. The title is from the chorus refrain, "Lowlands, lowlands, away, my John," and is not related to one of the alternate titles of *The Sweet Trinity* (or *Golden Vanity*). The same song was taken over by American Negroes in the cotton ports of the late days of sailing and made into a ditty about "screwin' cotton by the day / My dollar and a half a day."

Lu In Karen folklore, an extremely wicked nat who brings illness and death to families; his favorite food is dead bodies. If a man suddenly falls ill because there is nothing more for Lu to eat in the cemetery, other members of the family place offerings of fowls, rice, pigs, and liquor in the cemetery and at home to appease Lu's hunger and to prevent the man from dying. There are actually two Lus; the second is older and less formidable. Sacrifices to him are made only once in five or six years or when sickness is rife.

Lua Literally, plague, calamity, war: an ancient Italian goddess, the cult consort of Saturn (as Ops was in myth): sometimes called *Lua Mater* or *Lua Saturni*. To her the Romans dedicated captured arms before destroying them, probably as a sacrifice to forestall a like calamity or to avoid possible punishment.

Lucifer The Latin name of Phosphorus, Venus as the morning star, the light-bringer which heralds the dawn. The name is sometimes applied to the planet as the evening star as well, although Hesperus is properly its name then. By a curious chain of reference, the passage in *Luke* x, 18 was thought to refer to *Isaiah* xiv, 12, in which the star was used metaphorically for the monarch of Babylon. Thus Lucifer became the chief of the fallen angels, the name borne by Satan before his rebellion.

Lucina An epithet of Juno as the goddess of childbirth, or of the bringing to the light of the child: equivalent to Eileithyia. The name is also given to Diana and to Hecate.

luck ball A hoodoo charm or trick of certain groups of Negroes of the southern United States, designed to give the possessor good advice and bring him luck. One luck ball, described by N. N. Puckett in *Folk Beliefs of the Southern Negro*, pp. 232 f., contained the breastbone of a chicken, some ashes, and bits of rag. It was worn by an old woman in her right armpit against the skin and was periodically given a "drink" of whisky. Another contained four lengths of white silk thread (to tie the owner's friends to him), four lengths of white yarn (to tie down devils), each tied in two knots, i.e. 16 knots in all. The strands were coiled nest-shape and whisky spit upon them; a piece of tinfoil was added (bright as the spirit which was to inhabit the ball), and dust (to blind the eyes of the owner's enemies). The whole was then wound in white yarn, whisky being spat upon it during the winding; then it had to be wrapped in tinfoil and

silk and worn under the right arm in a little linen bag. Once a week its efficacy had to be revived with whisky. It could be questioned and its answers were "felt" by the owner. In Missouri, Christian prayers are frequently addressed to the luck balls, or they are invoked in the name of God or some saint.

lucky and unlucky days The foci for much popular feeling and innumerable maxims. The vague feelings about luck have been embodied by professional astrologists, numerologists and others into a complex doctrine, as ideas about fate have been embodied by philosophers and theologians. The somewhat indefinite distinction between the two attitudes is that fate is predestined and cannot be changed, but that luck is a stream of events which just happens and will continue until it mysteriously stops. To get out of bed wrong foot first, to put on the left shoe before the right shoe, to meet three nuns, or a black cat, or to walk under a ladder are bad luck. Since the 18th century in Anglo-Norman communities Friday has been unlucky and the number 13 is unlucky in these same communities, whether it is a date, the number of people at a table, or the number of a room. For some persons the 3rd, 5th and 7th days of the solar or lunar month are lucky. These computations are the province of the numerologists. In many communities luck can be changed by beginning over again, by touching a priest, by touching or having intercourse with a person of another race, color, or class, by such rituals as walking around an object counterclockwise, or by other rituals. The subject of lucky and unlucky days is frequently confused with the subject of tabu days. A tabu is a prohibition supported by legal and religious sanctions. Disaster will inevitably occur if prohibited acts are performed on tabu days. The breaking of a tabu may be accidental or inevitable, but it belongs to a different level of thinking and feeling from an act which brings bad luck. Some people believe that luck resides in a talisman, a saint's image, a rabbit's foot, and that those days when this repository of "external luck" is not on the person of the owner are unlucky days. Popular mentation is more occupied with unlucky than it is with lucky days. The pessimistic tone of folklore is contained in the admonition, "Don't boast about your luck." [RDJ]

Lucretia In Roman legend, the wife of Tarquinius Collatinus, whose rape by Sextus Tarquinius, son of Tarquinius Superbus, led to the establishment of the Roman republic and has been the subject of much literary treatment. During the siege of Ardea, the unoccupied sons of the king and Collatinus, their cousin, disputed about the relative virtues of their wives. Sextus, following the visit of the group first to the wives of the king's sons and then to Lucretia, returned to Collatinus' home. He was received hospitably, but late at night entered Lucretia's chamber and raped her at sword's point. She, after recalling her husband and her father, told the story and then committed suicide. The uprising under Lucius Brutus, friend of Collatinus, which followed this outrage, dethroned the Tarquins.

Lug An Irish god, prominent in the sagas, *The Second Battle of Mag Tured*, *The Fate of the Children of Turenn*, *The Prophetic Ecstasy of the Phantom*, and in some modern folktales. He was probably identical with the Celtic deity who gave his name to 14 towns named Lugdunum (Lyon, Laon, Leyden, etc.) and to Lugubal-

lium (Carlisle). His epithets were Lamfaða (Long Hand), Lonnbéimnech (of Mighty Blows), Samildanach (of Many Gifts). A solar nature is indicated by the fact that Lug had a red color on him from sunset to morning and that his visage is repeatedly compared to the sun—which accords with the testimony of St. Patrick that the heathen Irish were heliolatrous. The story of his begetting on the daughter of the one-eyed giant Balor and of his slaying his grandfather shows a marked affinity to the legend of Perseus. He was given in fosterage to queen Tailtiu, and was trained in athletic feats by the sea-god Manannán, who bestowed on him his horse, corselet, and sword. When the Tuatha Dé Danann (the gods) were oppressed by the Fomorians, Lug appeared at the palace of King Nuada and was admitted because he possessed all the arts and crafts. He demonstrated his strength by hurling a flagstone which required eighty yoke of oxen to move, and was accepted as the deliverer of the Tuatha Dé Danann. He played a great part in the slaughter of the Fomorians at the battle of Mag Tured, and killed his grandfather Balor by knocking out his eye with a sling-stone. In the *Prophetic Ecstasy*, Lug appears as a supernatural horseman, who summoned King Conn to his palace and there, though he declared that he was a son of Adam and had returned after death, he foretold the names of the rulers of Tara. Lug's bride, "the Sovranty of Ireland," was present and served Conn with huge ribs of meat and cups of red ale. At the end of his prophecy Lug and his house disappeared.

Lug has two counterparts in Welsh literature—Llwlch Llawwynnawc (White Hand) and Llew. The former seems to have borrowed his name and epithet directly from the Irish, but unfortunately we know little of him except that he must have been prominent among Arthur's warriors. Llew's name is the Welsh cognate of Lug, and, as Gruffydd has shown in *Math Vab Mathonwy*, several elements in Llew's story, though curiously distorted, are cognates of or borrowings from Lug's legend. See BALOR; CELTIC FOLKLORE; DECHTIRE; FATAL CHILDREN; GAWAIN; GLAS GAIBLEANN; LLEW LLAW GYFFES; LUGNASAD. [RSL]

Lugaid Mac Con A legendary 2nd century king of Munster, Ireland; literally, Lugaid, son of a dog; so named because he was suckled by a bitch in the house of his foster father, Oilill Ólom, who had seized the kingdom. Lugaid was raised side by side with Oilill's son Eógan. These two met in battle one day to settle a dispute between them in which Mac Con claimed there had been false judgment given by Oilill. Mac Con's fool was killed in the battle, impersonating his master; the battle went to Eógan; Eógan pursued Mac Con, recognizing his white legs through all the confusion of the rout.

Then Mac Con fled to Scotland with 27 companions. They all make a vow to speak, eat, and behave with equality in order to keep secret the identity of Lugaid Mac Con. The king of Scotland provided for them for a year with great generosity; and he marveled at their prowess and because they had no chief. One day an Irish poet came to Scotland, and, on being questioned, told how Ireland and the people of Lugaid Mac Con were in subjection and misery under Eógan, who was ruling in place of his aging father. Mac Con's distress at the news revealed his identity to the king of Scotland, who sought

again to test the group by serving raw mice at a feast. Mac Con was the first to put the mouse in his mouth and swallow it tail and all; the others watched him and did the same. Then "Are you Lugaïd?" said the king. And Lugaïd Mac Con said that he was.

So the king of Scotland gathered his forces and went to Ireland with Lugaïd to help avenge the wrong. On the plain Mag Mucrama they engaged in battle with Eogan, son of Oilill, and Art, son of Conn. It was on the eve of this battle that Art begot Cormac Mac Airt on the smith's daughter in the house of the smith. And on the eve of this battle the blind druid, Dil, foresaw defeat for Eogan because Eogan's cause was unjust. The battle of Mag Mucrama was Lugaïd Mac Con's victory. Art son of Conn was killed in that battle, and also the seven sons of Oilill.

Lugaïd Mac Con ruled in Tara seven years. He took Cormac Mac Airt in fosterage, and was expelled from the kingship at the time of his false judgment in regard to confiscation of the old woman's sheep. He then went back to his foster father, Oilill, to tend him in his old age; but when Oilill welcomed him, he bit him in the cheek with a poisoned tooth. Mac Con fled, but Oilill's people pursued him and killed him. Various texts report the rule of Lugaïd Mac Con in Ireland as 30, 27, 25, and 7 years. See ANIMAL NURSE; BIRTH OF CORMAC.

Luġnasad A great festival which used to be held on August 1 at Teltown on the River Boyne, where a mound still marks the site. It was mentioned in Cormac's *Glossary* (c. 900) as a commemorating fair, celebrated by Luġ mac Ethne in the beginning of autumn. The *Dinnsenchas*, *The Book of Invasions*, and Keating's *History of Ireland*, all say that Teltown took its name from a certain Tailtiu, Luġ's foster mother, who was buried on this spot, and that Luġ instituted the games as an annual memorial. This ancient explanation seems to be an error which arose when the true meaning of the word Luġnasad and of the festival was forgotten. Rhys and Gruffydd suggested another interpretation, which is supported by impressive evidence. The element *ndsad* seems related to words signifying "to give in marriage." Keating says of the fair of Teltown that "the men kept apart by themselves on one side, and the women apart by themselves on the other side, while their fathers and mothers were making the contract between them; and every couple who entered into treaty and contract with one another were married." O'Donovan reported a tradition that at a place near by, called "the Hollow of the Fair," nuptials were solemnized in pagan times, and even in the 19th century young men and women used to resort thither and arrange trial unions. A late medieval manuscript says that at Tailinne, presumably Teltown, Luġ Scimaig made the great feast for Luġ mac Ethlenn to celebrate his wedding of the sovranity, while we find in an 11th century text Luġ dwelling in a faery palace with a crowned woman identified as the Sovranity of Ireland (Ériu). It seems, then, that Luġ's bride was the Sovranity of Ireland, but a number of stories relate how one or another of the destined kings of Ireland mated with the Sovranity of Ireland, transforming her thereby from a monstrous hag into a radiant beauty. These stories show an analogy on the one hand with the tradition that the goddess Medb allowed no king to reign in Tara unless

he were wedded to herself, and so mated with nine kings of Ireland, and on the other with Aldhelm's account of Constantine's vision of Byzantium as an ancient crone transformed into a lovely maiden. But though in the Irish stories the hag is an allegorical figure personifying the kingship, she must be a rationalized form of the goddess Ériu, personifying the land of Ireland. For we learn of Ériu that she was of the Tuatha Dé Danann, took many shapes, and was the wife of Mac Greni, "son of the Sun." The metamorphosis of the Sovranity of Ireland, therefore, is a blurred version of a nature myth, in which the future kings of Ireland have inherited the role of Luġ, the sun god, while the hag is the land of Ireland, transformed by the caresses of the sun from the bleakness of winter into the floral splendor of spring—a version of the widespread myth of the union of sun and earth. All this fits in with the persistent association of the Luġnasad with marriage rites, and it is significant that the date August 1 is exactly nine months, the normal period of gestation, before the great feast of Beltane, which celebrated the beginning of summer. See ERU; LUG.

ROGER S. LOOMIS

luinig A type of song sung by Hebridean women at the tasks of spinning, fulling cloth, haymaking, etc., consisting of short, mournful melodies in traditional pentatonic scale patterns. See WORK SONGS.

Lukman or **Lokman** The name traditionally given to the compiler of an Arabic collection of fables and proverbial material. He was pre-Islamic; according to tradition, he was a contemporary of David. *Sura xxxi* of the Koran bears his name. Burton distinguishes three Lokmans: the Koranic; the Negro, identifiable with Kai Khusrav and perhaps with Æsop (or Æthiops, says Burton); and Lokman of the Vultures, a folk hero of tremendous appetites who lived 3500 years. The fables of Lukman resemble the Æsopian collection; some of the stories are Indian, some come from Greek originals.

lukuman Literally, those who look: the diviners of the Surinam Negroes; specifically, the diviners who cure souls. To effect a cure the lukuman must question the afflicted soul. He will place a bowl or cup (containing rain water and an egg) on the head of the patient, or put it in his right hand. Then he will "call" the soul of the patient into his head. As soon as the soul is in the head, the patient's body quivers, his eyes close, and the bowl or cup shakes. Thus the lukuman knows that the soul is available to be questioned: if the answer is yes, the water spills out; if the answer is no, it does not even quiver. There are other methods: the lukuman may get his answers by looking into a mirror, or by watching the surface of a basin of water; when the water quivers the spirit has entered into it, and may be questioned; or he may use a fan which unfolds if the answer is yes, remains closed if the answer is no.

The lukuman is a highly and specifically trained man whose knowledge is usually given to him by an elder

brother or a maternal uncle. He is chosen by his predecessor, however, for some special talent or some supernatural experience which marks him as suitable for the profession. If the lukuman is a woman, she has learned her wisdom from a sister or mother or a maternal aunt. Occasionally a man or woman with the mediumistic gift becomes a lukuman by becoming possessed with a *komfo* spirit. The male lukuman is consulted for illness of the soul; male or female may be consulted for illness caused by the *winti*. Lukuman are consulted not only for illnesses, however, but for advice on tabus and how to avoid the penalties for the unwitting violation of one or more tabus; how to evade evil magic, find murderers, diagnose poor crops, etc.

For fine differences between the *lukuman*, *kartaman*, *obiaman*, *piaman*, *wintiman*, *wisiman*, see M. J. and F. S. Herskovits, *Suriname Folklore*, Columbia Contributions to Anthropology 27, New York 1936, p. 56. See DIVINATION; LOOKMAN; MAMA FŌ GRO; WINTI.

lullaby A type of song sung by mothers and nurses the world over to coax their babies to sleep; a cradle song (Fr. *berceuse*, Ger. *Wiegenlied*, Gr. *nannarismata*, L. *lenes nenia*, etc.). The simplest form, merely a humming or a repetition of monotonous and soothing sounds, often accompanied by a gentle rocking of the child in the arms or in its bed or carrier, is almost too slight to be called a song and is heard even among peoples who otherwise show little musical development. One collector was told by an old man of an American Indian tribe that the women made noises to put babies to sleep, but he would hardly call that singing. Some South American Indians, who live nomadic lives, often in enemy territory, have almost no songs, but the mothers croon to the infants to quiet them because it would be dangerous for their cries to be heard. Aside from humming, the most common syllables of lullabies are loo-loo, lalla, lullay, ninna-nanna, bo,bo, do,do. These are heard in English, Polish, Rumanian, French, Italian, etc., as they were in the Latin of ancient Rome and the Greek of Athens. In Italian and Rumanian *ninna-nanna* is the word for rocking an infant to sleep.

The more developed airs may be plaintive or gay, but they are usually sung softly, with little expression, and repeated over and over until, as sleep claims the baby, the voice trails off to a whisper. Some are so constructed that stanzas can be added almost endlessly, following a cumulative pattern.

Possibly the most familiar of American lullabies is *Rock-a-bye, Baby*, set to the words of an old English Mother Goose rime, with a melody said to have been composed by Mrs. Effie Canning Carlton in 1874 and made popular by a play, *The Old Homestead*, in which it was sung. However, a number of persons claimed to have been familiar with the air before the date of Mrs. Carlton's publication, and it is possible that the air is a folk tune current some time before that and a product of unconscious memory on her part.

Another lullaby air known to the people of many European countries is that of the Norwegian and Danish *Sov nu Sødt*, originally the French song *Ah, vous dirai-je, maman*. Both in Germany and in America it is the tune to which the alphabet is sung. It also provides the melody of *Baa-Baa, Black Sheep, Twinkle, Twinkle, Little Star*, and a ring game, *The Snail*. In art music

it has been the inspiration for variations by many composers, including Mozart and Dohnanyi.

Perhaps the greatest number of lullabies say, in whatever the tune and whatever the language, "Go to sleep. Mother is here. You are safe. Everything is all right." The all-rightness of everything may be elaborated by a placid description of what the rest of the household is doing. Father has gone hunting, fishing, tending sheep. The favorite German cradle song *Schlaf, Kindlein, Schlaf*, known in America in both English and Pennsylvania Dutch versions and made familiar by Wagner by its inclusion in the *Siegfried Idyll*, is of this kind. A Swedish lullaby says that pussy is climbing the big pine tree, brother is turning the millstone, and papa has gone to feed the pig. If the singer is the big sister, the grandmother, or the nurse, the song may tell where mama has gone, and when she will be back, and how nice it will be as soon as she comes, if only the baby will be good. Another set of reassuring words is devoted to how peaceful the surroundings are (the stars are shining, the bees are buzzing, breeze blowing, etc.). This line of argument often develops with descriptions of the sleepy flowers, the rabbits, squirrels, birds, etc., going to sleep, and has occurred to mothers in Hungary, Ireland, Japan, and many other lands.

As a guarantee of safety during the night, the words often invoke saints, angels, or guardian spirits to watch over the cradle. The lullaby may thus become a sort of evening prayer. Some are cast in the form of a song of the Virgin Mary to the infant Jesus, as in the lullaby carols (see CAROL), in the medieval Latin *Dormi, Jesu* still sung in Chile and probably imported there by Jesuits, and in the sacred lullabies of Europe.

Sleep itself may be personified as "the sandman," or "La Dormette" of Poitou (a female sandman), or Willie Winkie, or "le souin-souin" of France, and called upon to take the child to dreamland.

Another type of lullaby concentrates on maternal admiration of the child, enumerating his personal beauties and charms, comparing him to flowers, stars, princes, jewels, etc. Or the theme may be a prophecy of his glorious future. A Kwakiutl cradle song says, "When I am a man, then I shall be a hunter, harpooner, canoe-builder, etc.," outlining prowess in the pursuits most admired in his society. A Corsican lullaby prophesies that the infant will accomplish the studied revenge of an old vendetta. "Hush, Little Jimmy (substitute child's name here), don't you cry. You'll be the president by and by," says a song of the American South.

Promises and bribes for good behavior provide a common theme. The offers may range from the simplest of comforts to the height of riches and power, according to the environment and the imagination of the singer. Baby Bunting, in the English lullaby, is promised a rabbit-skin to wrap the Baby Bunting in. A Danish and Norwegian cradle song says papa will bring new shoes with shining buckles for baby. A French standby says the white hen on the branch will lay an egg. One of the Greek cradle songs with a *nani, nani* refrain promises the city of Alexandria in sugar, Cairo in rice, and Constantinople to rule. In Japan, the rewards may be toy drums, papier-mâché dogs, and other toys. In China, one lullaby promises a bamboo flute for the baby to play. A Norwegian song tells about fishing and distributes one of the catch to the father, one to the mother,

one for sister, one for brother, and one for him who pulled the fish, the baby. In Brittany the baby is bribed with the cake the mother is baking and the boat the father is building. An American example of the bribe offer, extended for stanza upon stanza, is the familiar, "Hush, little baby, don't say a word / Mama's gonna buy you a mockin' bird. / If that mockin' bird don't sing / Mama's gonna buy you a diamond ring. / If that diamond ring turns brass / Mama's gonna buy you a lookin' glass," etc. Another American favorite, *All the Pretty Little Horses*, is also full of promises.

Threats, from the playful to the hair-raising, also enter into lullaby texts. These make use of the bogey-men of all nations to persuade wakeful babies to go to sleep. In some southern European countries, the Moor, or black man, is the bogey whose wrath will be provoked. "El coco" among Spanish-speaking peoples is pictured as a black man who eats crying babies. The Santa Claus figure is also brought into prominence, with threats that he will be angry and not bring gifts. In Japan, the displeasure of Hotei is threatened. Hotei is a kindly man who distributes a sack of goodies, but has eyes in the back of his head for seeing bad behavior. Sometimes the punishing figure is an animal—the bear or the owl who will hear bad children crying. A German song says a black sheep and a white sheep will bite the baby's toes. In some lullabies a historical bogey-man such as Wellington or Bonaparte is still invoked. In all of these the idea is that the punitive character is listening, and "he'll come for you if you don't hush." Occasionally the threats are direct and violent, though teasingly sung, as in the South African *Siembamba*: "Siembamba, Mama's baby / Twist his neck and hit him on the head / Throw him in the ditch / And then he will be dead."

There are also many sad little lullabies complaining of the mother's weariness and hard lot, of the father's absence, neglect, or drunkenness. A Basque song says that papa will surely come home drunk from the tavern.

In addition to these types, many lullabies tell little stories. The American *Go Tell Aunt Nancy* (Sally, Tabby, Rhody, etc.) relates the loss by drowning of the old gray goose destined to make a featherbed. Bits of *Lord Randall* (as *Wee Croodin' Doo*), *Lamkin* (cut down to the dialog of nurse and lady), and other ballads are sung as cradle songs. The African Bushmen have a lullaby worked into the tale of *The Anteater, the Young Springbok, the Lynx, and the Partridge*: a soothing series of sounds and comments called *The Song of the Springbok Mothers*.

Practically any kind of song can and does serve as a lullaby. Perhaps the mothers, realizing that the words cannot be understood, feel no need to censor their singing and make use of the blood-curdling as well as the soothing in their selection according to their knowledge. In any case, lullabies are perhaps the most likely to survive of any type of folk song for as long as babies cry and the voice of the mother will quiet them, such tunes and words will be handed down or continue to come into being.

TERESA C. BRAKELEY

Lumawig The principal deity, creator, and culture hero of the Igorot (Philippine Islands). Traditionally Lumawig was a resident of Bontoc who taught the people the useful arts and performed many miracles. He has a real cult; prayers are conducted by priests ask-

ing him to send rain or stop a heavy storm, to bless crops and multiply animals. When the new rice crop is stored Lumawig is asked for his blessing, so that the rice will be sufficient for the family. See *INDONESIAN MYTHOLOGY*.

Luna The Roman goddess of the moon: perhaps of Sabine origin. Her principal importance was in the figuring of the calendar; her worship was never important.

lundum A type of song, melancholy and languid, sung to the guitar and probably originally accompanying dancing, popular in Portuguese cities in the 18th and 19th centuries. Probably of Brazilian or African coastal origin, the type is thought to be an ancestor of the *fado*.

Lung Wang The Chinese Dragon King: bringer of rain, controller of the ocean and of all storms and waters, and inhabitant of all lakes. The phenomena of waterspouts is always associated with him. In dry seasons the peasants bring his image from the temples and show him the damage done by the droughts. In Peking he receives particular attention at the Big Bell Temple. See *DRAGON CULT*. [RDJ]

Luonnotar A Finnish deity, "daughter of the creation" (see *ILMATAR*). Luonnotar is the deity of birth, sometimes also called Synnytär (from *synty*, birth). From the Catholic period the Virgin Mary is also called, in magic songs, by the name of Luonnotar or Luojar (from *Luoja*, Creator) and is appealed to in childbirth. The Virgin Mary is also often associated with the deities of birth, like Mara by the Latvians. [JB]

Luot-chozjik The guardian spirit of the reindeer of the eastern Lapps. She protected the domestic herds while they were turned loose in the forests in the summer.

Lupercalia An ancient Roman fertility festival held on the 15th of February: said to have been established by Romulus and Remus or by Evander, but probably more ancient than Rome itself. The Luperci, priests of Lupercus, a fertility god equated with Faunus or Inuus or Pan, came on this day to the Lupercal, the cave on the Palatine where the she-wolf suckled Romulus and Remus. There they sacrificed goats and a dog, emblems of fertility, and smeared the blood on the foreheads of two noble youths. The blood was wiped off with wool dipped in milk, and the two youths laughed loudly. The priests then ate. After the meal they cut up the goat-skins, dressed themselves with patches of the skin. The rest of the skins were cut into whips with which the priests ran around the boundaries of the Palatine precinct, striking all whom they met. A woman so struck was made especially fertile and could look forward to bearing her child easily. The ceremony purified the land for the new year, February being the last month, and from this underlying concept (*februare*, to cleanse) the month took its name.

lupin A plant of the bean family (genus *Lupinus*), bearing racemes of mostly blue or purple flowers. The seeds of *L. albus* have been used for food in the Old World from very early times. The use of lupin-flour as soap is mentioned in the *Arabian Nights*. In the latter part of the 17th century the doctrine of signatures recom-

mended lupin for the nerves, for the kidneys, and also for the fingers and hands. The Navaho Indians made a remedy for boils from lupin seeds, and regard them not only as a cure for sterility but helpful in producing female children. *L. subcarnosus*, the bluebonnet, is the state flower of Texas.

lur Danish name for the prehistoric bronze trumpet of northern Europe, numerous examples of which were preserved in the peat bogs of Denmark, Germany, and Sweden. The instrument has a twisted S-shape, is more than 80 inches in length, and is terminated by a flat, ornamented disk, rather than a bell. It was made in sections and joined. The instrument is always found in pairs with opposing curves, resembling a pair of mammoth tusks, from which it is believed to have taken its original shape; the extinction of the mammoth and the acquisition of skill in metal-working brought about a change in the material but not in the shape. It shows a high degree of craftsmanship in metal-working, and was the source of considerable excitement and controversy when the first finds were made. Exaggerated claims for the range of the instrument were tested by trumpeters and trombonists, and assertions of three-part harmony in the playing of the 3000-year-old trumpets were widely disputed. Compositions were written to include lur for public performance in Denmark. However, none of the suppositions about its original use and sound could be established.

lure A wooden trumpet with birchbark casing, formerly used in the mountains of Norway: similar to the alphorn and used for the same purposes until recent years. It is rarely heard now.

lute In the scientific classification of musical instruments, a stringed instrument having a body and a neck, with strings stretched over the combined length. Two principal divisions of the category include the lutes played by plucking the strings, as the guitars, mandolin, banjo, samisen, and the instrument specifically named "lute," and those played with the bow, for which see VIOLINS and FIDDLES. Further distinctions are made according to the length of the neck and the shape of the body. The earliest and most primitive lutes, as well as some survivors in the Orient and the Near East, are *long lutes*, of which the neck is comparatively longer than the body and may consist of a long stick thrust through the body. *Short lutes* are longer of body than of neck, the latter in some types being merely a tapered extension of the body. Body shapes may be in the form of a half pear or melon, recalling the fruit shells of which the earliest were made; round and flat, as in the banjo and the Chinese *yueh ch'in*; waisted, as in the guitars and violins. Materials used for making lutes have included large, pumpkinlike gourds and ostrich shells, as in some of the Indian *sitars*; the armadillo shell, as in the Mexican *concha*; catskin, as in the Japanese *samisen*; as well as fine woods, nacre inlay, etc., as in the classical European lutes and violins.

One or another type of lute has been used for thousands of years to accompany singing and dancing, both solo and ensemble, on primitive, popular, and sophisticated levels; and in the 16th and 17th centuries in Europe, particularly in Spain, the lute and its adaptation, the *vihuela*, reached a high position in art music. For love songs and ballads, from court to marketplace, from

the studied movements of the *basse danse* to the erotic gesture of the flamenco and the mingled symbolism of *Los Concheros*, some form of lute has set the tune and strummed the rhythm.

Individual members of the lute classification have been the subjects of a body of legend and story involving witches, Satan, gods and spirits, charms, and other magical powers. For example, a Sanskrit story tells of a lute of bone, which, when played in accompaniment to the chanting of a charm, made its listeners dance uncontrollably and brought out horns on their heads. Another lute, described in *The Ocean of Story*, had the power to subdue wild elephants. Śiva is depicted as holding the *tanbur*, an Indian lute in which the magic syllable *om*, the essence of the Vedas and of the universe, is inherent. Resuscitation by the playing of a lute is a folk-tale motif (D1234). See also BANJO; GUITAR.

While the origin of the instrument is unknown, its invention is variously attributed to the Assyrians, the Egyptians, the Cappadocians, and, by the Manicheists, to their leader, Mani. The earliest lutes shown on art works, small-bodied, long-necked instruments on Babylonian seals and plaques dating from 2000 B.C. or earlier, show shepherds playing to their flocks and dogs. The lute of ancient Egypt was a woman's instrument with a skin soundboard and a long, slender neck piercing the body. A similar but cruder wooden lute survives among the Negroes of northwest Africa, and a refined version of this was made by the Arabs.

Persian art works of the 8th century B.C. show the first pictured examples of the short lute, but the parent of the types to be found today among Arabs, Chinese, Japanese, and Europeans was probably the Indian short lute depicted about 100 A.D. In India lutes called *tanbur*, *sitar*, etc., have developed in great variety of shape, size, material, and decoration—one so fantastic as to be called in both Hindustani and Sanskrit the peacock, because it is designed and painted to resemble the bird. Indian lutes, with a wide range of timbres created by deeply vibrant drone strings, movable frets, and other devices, accompany singing and dancing and are combined in chamber music with other instruments. Some types are bowed.

One of the most important among the lutes of the Far East is the *pi'p'a*, a Chinese short lute dating from the Han period, with a shallow ovoid body and four silk strings symbolizing the four seasons. It is used to accompany singing and flute-playing, both classical and popular, and is played on the streets by blind girl singers seeking employment. The Japanese equivalent is the *biwa*, which has been known in three main forms: a large orchestra instrument held in the position of a cello and used for the classical music and dance of the 10th century; a smaller type held in the lap and played as accompaniment to epic recitation; and a third even smaller form. Flat-bodied Oriental lutes, appearing about 500 A.D., have been prevailingly of two shapes, octagonal and round. The round type is more recent and is called *yueh ch'in* in China and *gekkin* in Japan, both names meaning moon. The best known of the surviving long lutes of the Far East is the guitarlike Japanese *samisen*.

The word lute is derived from the Arabic *al'ud*, meaning wood or stick, and the lutes of Europe were derived from various types carried by the Arabic expansion

across North Africa and into Spain—both long-necked and short-necked, and both round-backed, as in the mandolin, and flat-bodied, as in the guitars. The four strings characteristic of many of the instruments had many meanings—the elements of earth, air, fire, and water; the cardinal directions; the four seasons; the phases of the moon; the number of weeks in a month; the four humors (blood, phlegm, bile, and black bile), etc. While the music of stringed instruments was forbidden in early religious teaching, it achieved acceptance at least by the 10th century, when it appears in German psalters and in Spanish manuscripts. From that time on the lute became one of the most generally played and highly esteemed of instruments all over Europe. Courtiers and ladies found it a polite and useful accomplishment to accompany their songs on the lute or one of its relatives. To the jongleurs, it was one of the ten instruments listed as required by Guiraut de Calanson in his *Conseils aux Jongler* (1210).

On the American continents lutes are believed to have been unknown before the coming of Europeans. Since that time, however, Central and South American natives have adopted and adapted lutes, guitars, and fiddles down to the crudest and most primitive levels; and backwoods North America has depended heavily on fiddle, guitar, and banjo for its song and dance music. [TCB]

Lü-tsu Chinese patron of barbers, beggars, and pedicures; often confused and identified with Lü Tung-pin, and like him often depicted holding in one hand the wonderful two-edged sword, gift of the Fire-Dragon, but holding in the other his hair-switch. Lü-tsu was even more dissipated than the other disciples of Lao-Tzu (traditional founder of Taoism), who spent their time drinking and misbehaving. Barbers, beggars, and pedicures are also thought to be dissolute. They are one of the few groups not admitted to the Imperial examinations. [RDJ]

Lü Tung-pin One of the Chinese Eight Immortals. Lü is eight feet tall, with a sparse beard. A great light appeared and a stork flew through the room at the hour of his birth. He lived in the T'ang dynasty, 618–907. After enjoying honor in the court, he fled with his family to the mountains because of a political revolution. He studied alchemy, and learned how to live on air alone. In his time he rid the earth of many devils. He still kills devils, and is revered by literati and barbers. The latter have confused him with Lü-tsu. [RDJ]

lycanthropy The power of becoming a wolf or of turning a human being into a wolf; also, belief in werewolves. See WEREWOLF.

Lycaon In Greek mythology, an Arcadian king, son of Pelasgus; the father of Callisto and of fifty sons. These sons were extremely impious and Zeus, to punish them, appeared at court disguised as a poor laborer. The sons slew a child and mixed its entrails with the other meats served at the meal. Zeus arose in anger, overthrew the table (hence the place-name Trapezus), and slew the sons with a thunderbolt, changing Lycaon into a wolf. The myth has many variants: Lycaon himself was evil and tried to kill Zeus, finally testing his suspected godhood by offering him human flesh; or, Lycaon was very pious and founded the temple of Zeus Lycaeus, thus being spared when his sons were slain; or, the murdered

child was Lycaon's own (a parallel to the story of Tan-talus); or, the child was brought to the altar of Zeus as a sacrifice; or, all the sons but one, Nyctimus, were killed, and when Nyctimus ascended the throne further punishment was added in the form of the flood (see DEUCALION); or, the sons were all changed to wolves, etc. The myth seems to be an explanation of the rites connected with the cult of Zeus Lycaeus. Cannibalism appears to have been a part of the rites, and the partaker of the human flesh was believed to turn into a wolf and to wander for eight or ten years in wolf form, changing back into a human being at the end of that term if he had avoided human flesh. This in turn may be based on a pre-Hellenic cannibalistic cult superseded by the worship of Zeus, or it may be a reflection of the belief in werewolves. Many attempts have been made by scholars to explain the contradictory elements of the story; for example, Lycaon is both pious culture hero and impious. The transformation and cannibal themes seem to point to some underlying pastoral and agricultural rite of increase.

lycopodium Genus name for the club mosses, ever-green mosses growing erect or creeping: often called *ground pine*, and often used for Christmas decorations. In Ireland one of its names is *crúibíní sionnaig*, little feet of the fox. It is known to have been used as food in famine times in Ireland.

Lycopodium has long been recognized as an ingredient for eye washes and a lotion for swellings; but its efficacy depends on how and when it is gathered. It must be taken at sunset on the third day of the moon. The gatherer must wash his hands, display his knife to the crescent moon, and kneeling say: "As Christ healed the issue of blood/ Do thou cut what thou cuttest for good." The moss must then be boiled in water from the nearest spring. Only thus is assured its full potency to aid eyes or swellings. It is also used in an ointment mixed with butter from the milk of a new cow.

Lycopodium is sometimes called witch's meal or vegetable brimstone because the dried spores constitute a fine yellow inflammable powder used by sorcerers and magicians to make lightning, and still so used by stage magicians. A thin cloud of this powder blown through the flame of a candle explodes with an awesome flash. Commercially it is used in fireworks. Medicinally it is used as an absorbent on wounds and sores, and also as an ingredient in a lotion against vermin. A decoction of the moss mixed with spruce twigs was used by the Chipewa Indians for steaming stiff joints. In Newfoundland it is recommended as a remedy for spitting blood. It is an irritant, a counter-irritant, and makes a fine itching powder.

Lygni According to the *Volsunga Saga*, one of Hunding's sons. He had been one of Hiordis's suitors, and was so angry at her marriage to Sigmund that he attacked the Volsungs and slew them all. Hiordis escaped, however, and later bore Sigmund's son, Sigurd, who slew Lygni when he was grown.

Lyra A northern constellation, including the brilliant Vega, which was the pole star 14,000 years ago. The Akadians knew Lyra as a storm bird; the Chaldeans and ancient Hindus saw it as a vulture. Later Chaldean astronomers depicted the vulture holding a harp. Thus, in Greece and Rome it became the harp or lyre made from

the tortoise shell by Hermes, the Lyre of Orpheus and Apollo. Thence through Europe the constellation was the Lyre or the Harp; in Britain it was King Arthur's Harp. The Bohemians knew it as the sky fiddle. In Peru Lyra was the ram at the head of the celestial flocks, and the stars guarded over the Incas' sheep. To the Arabs it was the Mule. In China, Lyra, or Vega, is the Weaving Maid, the patroness of the domestic fine arts of women. The goddess is seated at her loom spinning with the little crown of three stars over her head. See CHIH NÜ.

lyre A musical instrument consisting of a soundbox in either vaulted or flat shape, two approximately parallel or converging arms attached to the sides of the body, a crosspiece (yoke) adjoining the arms, and varying numbers of strings stretched from yoke to soundboard. It is sounded either by plucking or bowing the strings. Various forms of the instrument have been known since ancient times, figuring on Sumerian monuments of 3000 B.C. and in Greek mythology and legend, and it is still played in Estonia and Finland, by the Ostyaks and Voguls of Siberia, by the Arabs, by the Nubians, Ethiopians, and Negroes of Africa. The size of early lyres, as depicted by the Sumerians and Egyptians, was large—taller than the player as he sat before it—but, as in the case of many other instruments, later types were smaller and lighter and could be simultaneously played and carried.

The lyre was imported into Egypt in the 15th century B.C., first in the large form. Portable lyres appeared there about 1000 B.C. The later type was generally played by women, as was the *kinnor*, the lyre of Biblical times in Israel. Invention of the instrument was ascribed in Egypt to the god Thoth. In Israel, Jubal, according to the Bible, was the "father" of lyrist.

It was in Greece that the lyre achieved its greatest fame and became the most venerated of instruments. Two main types were played there: 1) the *lyra*, a lightweight instrument with a body originally made of a turtle shell, arms of animal horn, a stretched skin soundboard, and strings of sheep gut (later hemp); 2) the *kithara*, a heavier wooden instrument with a body constructed of two flat resonating boards joined by a side section of uniform width. The *lyra* was played chiefly by amateurs—students, lovers, etc.; the *kithara* by professional musicians, epic singers, theatrical performers, etc. The *lyra*, though cruder and more primitive in construction, was probably the later of the two. Both as a solo instrument and as accompaniment to singing, the *lyre* was the favorite of the Greeks. When the *skolion* (drinking song) was sung, a lyre was passed zigzag back and forth among the reclining banquet guests and each in turn contributed a stanza or a health.

In legend, the lyre was the instrument of the gods and Homeric heroes. While some accounts state that the lyre came from Thebes or from Thrace, its invention was generally credited to Hermes or to Apollo. Homer says that Hermes was born at dawn and that by noon that day he had found a tortoise shell, fashioned a lyre of it, and was playing heavenly music. He gave it to Apollo as a peace offering after a quarrel, and from them on Apollo was the master musician of Olympus, playing his lyre for the entertainment of the gods. In later Greek art the lyre is Apollo's attribute, replacing the sun-god's bow of archaic works.

His virtuosity was such that other musicians, performers on other instruments, felt called upon to challenge him as a final test of their own skill, and all were defeated. Marsyas competed against Apollo with his flute (the *aulos*, actually an oboe), which he had found after it had been thrown away by its chagrined inventor, Minerva (Athena), in a fit of embarrassment over the grimaces she made while playing it. Marsyas, defeated, was flayed and his skin hung in a cave. Pan, with his pipes, was also outplayed by Apollo, and Midas, the umpire of that contest, grew ass's ears as evidence of his poor judgment in favoring Pan.

The magic power of the lyre to command nature and the supernatural is stressed in many stories. When Poseidon (Neptune) was building Troy, Apollo sat by, playing his lyre, and the stones danced into their allotted positions. Thebes, also, arose magically to the strains of the lyre played by Amphion, son of Zeus and Antiope and husband of Niobe, who had been given the instrument and taught to play it by Hermes. There, too, the scattered bits of masonry organized themselves into walls. Orpheus, son of Apollo and Calliope, charmed the very demons of hell and softened the heart of Hades when he played his lyre and sang, seeking the return of his love, Eurydice. Though he failed to fulfil the hard conditions offered for her return, the sweetness of his playing was forever commemorated in the skies, for the gods set his lyre there as the constellation Lyra. Arion, a 7th century B.C. poet and lyrist of Lesbos, so charmed the inhabitants of the sea with his playing, that when pirates robbed and threw him overboard, a dolphin (one of Apollo's sacred animals) bore him to shore. The constellation Delphinus is sometimes identified with Arion's dolphin.

Whether the lyre of the early peoples of northern and central Europe was imported or separately invented there is not certain. It differed from that of antiquity in being constructed all of a single piece of wood, rather than from assembled sections. The earliest example of the lyre of the barbarians was found in the tomb of an Alemannic warrior who lived about 500 A.D. At about that period Theodoric the Ostrogoth (454–526) is reported to have sent a lyrist to the Frankish court of Clovis. Through the Middle Ages lyres of various forms were known in Britain, France, Germany, Scandinavia, Estonia, and Finland, and their music accompanied the chants of epic narrators, the boasts of warriors and heroes, and the singing of entertainers. Up to about 1000 A.D. European lyres were plucked, as were the ancient lyres of Greece and the Middle East. Bowing then became more usual, and bowed lyres are shown in manuscripts from the 11th century on. A bowed lyre, the *crwth*, became one of the national instruments of Wales, continuing in use until the 18th century, when its form took on some of the characteristics of the fiddle, but its name and history are linked in confusion with the ancient Welsh harp. The surviving bowed lyre of Finland and Estonia, a rather crude instrument strung with horsehair, is also confused with the harp, particularly since it is called *harpa* in Swedish. It is probably from this Finnish lyre that the Siberian instrument is derived, even though the bow is not used by the Ostyaks and Voguls, for these tribes are akin to the Finns. Compare HARP. See KINNOR.

THERESA C. BRAKELEY

Ma The Great Mother of Cappadocia in Asia Minor and probably the mother goddess of the Hittites: identified with the Phrygian Cybele. Her great temple at Comana, with its periodic festivals, sacred prostitutes, and temple attendants, was of great renown in the ancient world. After Sulla led the Romans to Cappadocia, the cult of Ma was popular, though unofficial, among the soldiers. The Romans identified her as Bellona. Compare ANĀHITA; BELLONA; CYBELE.

Mabinogion The title given by Lady Charlotte Guest to her collection of translations from the Welsh, published 1838–49. The word is a plural form of *mabinogi*, which originally meant the story of a hero's childhood and youth (compare *mab*, boy, youth), but seems to have acquired the more general sense of "tale of a hero." The first four stories in the collection are referred to in the text as "the Four Branches of the Mabinogi," and the hero seems to have been Gwri, later called Pryderi. All the stories except *Taliesin* are found in a manuscript of about 1400, but some in a manuscript of the early 13th century. Most of them formed part of a vast body of prose narrative, now lost, which formed the stock in trade of professional reciters called *cyfarwyddon*.

Matthew Arnold has beautifully described the nature of the *Mabinogion*: "the medieval story-teller is pillaging an antiquity of which he does not fully possess the secret; he is like a peasant building his hut on the site of Halicarnassus or Ephesus; he builds, but what he builds is full of materials of which he knows not the history, or knows by a glimmering tradition merely;—stones 'not of this building,' but of an older architecture, greater, cunninger, more majestic." All the researches of modern scholarship have confirmed this view of the conglomerate nature of the stories and the venerable age of the materials.

The *Four Branches of the Mabinogi* were probably written down about 1060 but they represent in large measure myths of the pre-Christian era. The annual combat of Arawn and Havgan (Summer White), kings of Annwn (the abode of the gods), represents the yearly struggle between winter and summer. Llew's name is cognate with that of the Irish sun god Lug, and his story is largely a distorted form of Lug's legend as it survived in modern Irish folklore. Bendigeidfran (Blessed Bran), son of Llyr (the sea), who wades across the Irish Sea, in aspect like a mountain, was a euhemerized god of the ocean. (See BRAN.) His brother Manawyddan is probably the Irish marine divinity Manannán, but since the noun *mynawyd* means an awl, he is represented as an expert shoemaker! The sons of Dôn were originally deities, and their sister Arianrhod (Silver Wheel) was probably a British Luna. Not only were some of the narrative patterns borrowed from Irish myths, but we also recognize some of the widespread themes of European fiction. The misfortunes of Rhiannon and Branwen are confused versions of the Calumniated Wife or Accused Queen, while the relations of Pwyll and

Arawn may well represent the source of *Amis and Amiloun*. Interwoven with these strands of myth and legend are many onomastic tales, devised to explain names of persons and places—a favorite preoccupation of Celtic story-tellers.

Kilhwch and Olwen was probably written down in its present form about 1100 since a Fflergant, king of Brittany, is mentioned, and Alan Fergant was Duke of Brittany from 1081 to 1109. But the language shows that it must have been copied largely from a text of the 10th century. Here again is the typical conglomeration of myth, hero-tale, folklore, and onomastic interests. The personages of Arthur's court form surely the oddest assemblage in the world. Here are Manawyddan and Cnychwr (Conchobar) from Irish saga; Arthur himself and Geraint, heroes of history; Taliesin the bard and Gildas the historian, rubbing shoulders with the helpful companions of fairy tale—Medyr (Aim), who from Celliwig in Cornwall would hit a wren on Esgeir Oerfel in Ireland, exactly through its two legs; Sgilti Lightfoot, beneath whose feet never a reed bent, much less did one break; and Drem (Sight), who saw from Celliwig in Cornwall when a fly would rise in the morning on Pen Blathaon in Pictland. The main plot is clearly related to that of Jason and the Golden Fleece—the quest, the helpful companions, the father of the princess who imposes arduous tasks; worked into this framework are such immemorial themes as the jealous stepmother and the oldest animals. The onomastic interest reveals itself in accounting for the hero's name, meaning Pigsty, by the circumstances of his birth, and in laying the pursuit of the boar Twrch Trwyth and its offspring through places whose names have porcine associations, as Rhys showed (*Celtic Folklore*, II, pp. 509–37). In spite of distractions the tale of how Kilhwch won Olwen has a dominant theme, reaches the expected dénouement, and contains passages of charming description and grotesque humor.

It has, moreover, a special interest as the earliest Arthurian romance, and there are many links with later French romances. Among the more obvious parallels are the arrivals of Kilhwch and Perceval at Arthur's court and the meetings of Kilhwch and Ivain with the giant herdsman. Kei and Bedwyr are easily recognizable as the Kay and Bedivere of Malory, and one may even detect in strange disguises the originals of Lancelot and Gawain.

The Dream of Rhonabwy, probably composed in the 13th century, is understandable if one realizes the author's three purposes: first, to recall the glorious memories of the historic Arthur and Owain and the historic battle of Badon; secondly, to give to these splendid evocations the phantasmagoric character of a dream, in contrast to the squalid realism of the opening scene; thirdly, if one may judge by the last sentence, to introduce so much minute detail that no bard or *cyfarwydd* could memorize it. Curiously enough, Owain's ravens are still depicted in the arms of the house of Dynevor

which claims descent from him, and the clue to their identity may be found in the French *Didot Perceval*. They were his mother Modron and her sisters in bird form.

Three other Arthurian stories, *The Lady of the Fountain*, *Geraint*, and *Peredur*, belong to quite a different category, for they are free redactions, made about 1200, from French prose romances. The long dominant belief that they were based on the corresponding poems of Chrétien de Troyes is no longer tenable. Though the material is still Celtic in origin, it has been filtered through and colored by Breton and French culture. For a century or two these stories, inherited from the Welsh, had formed the repertoire of strolling Breton *conteurs* who entertained noble households in France, after 1066 found a welcome among the Anglo-Norman nobility, and by 1100 were making a sensation in Italy. About 1150 the vogue of these stories was such that some were written down in French prose and were used by Chrétien as sources for his poems. Two of them, the originals of *The Lady of the Fountain* and *Geraint*, reveal such a mature art and such a similar general outline that we may take them to be the work of a single man, who was interested in psychology and morals. The original or originals of *Peredur* must have been almost completely lacking in form and consistency, but have a special fascination as giving an early version of the famous legend of Percival and the Grail. It is one of the mysteries of that legend that the holy vessel is replaced in *Peredur* by a wide dish containing a man's head—a mystery to which a clue is provided by the severed head of Bran in the *Four Branches*. The three romances redacted from the French show little of that intimate knowledge of Welsh geography, little of that elfin charm which is characteristic of the older native stories.

The Dream of Maxen is a literary fabrication probably of the third quarter of the 12th century. The main plot is akin to that of the Irish *Dream of Oengus* (8th century), and in Wales it was attached to the beautiful fay Elen, whose home was a Roman ruin near Carnarvon, conceived as in the days of its splendor. The author, knowing this local legend and discovering in a Welsh translation of Geoffrey of Monmouth, the *Dingestow Brut*, an account of the Roman Maxen, who came to Britain with a large fleet and married Elen, the daughter of King Eudav, neatly fitted the legend into the pseudo-historic framework.

Taliesin, unlike the other tales, is found in no manuscript earlier than the 16th century. The titular hero was a bard of the 6th century, to whom in the course of time many poems were attributed and many legends were attached. Despite the lateness of the text, much of the material in it is medieval, related in fact to the Irish story of Finn's thumb of knowledge and to the Irish poems ascribed to Amaigen and Tuan mac Cairill.

The *Mabinogion* not only possess great intrinsic value but also show fascinating affinities to the Irish sagas and to Arthurian romance. In modern times they have inspired Peacock's *Misfortunes of Elfin* and Tennyson's *Geraint and Enid*.

Macha (Irish Maça) 1) One of a group of three great war goddesses (with Baðb and Neman) of Old Irish mythology. She is mentioned as the daughter of Ernmas, one of the Tuatha Dé Danann, and granddaughter of Nét. All three of these goddesses appeared at times on the battlefield in the form of a scald-crow. Battle-crow was another name for any one of the group. After the old battles the heads of the slain were brought home and dedicated to Macha. She is sometimes called the ancestress of the Red Branch; and in the great hall of the Red Branch were hung the heads of slain enemies. She is also confused with and sometimes identified with: 2) Macha, a woman of the *side*, wife of an Ulster chieftain, and who possessed the gift of extraordinary speed. All was well with the pair as long as the husband never mentioned this gift of swiftness. For his thoughtless remark at the races that his wife was swifter than the king's horses, see ÉMAIN MACHA. The king ordered the man to be put to death for his boast unless the wife could make it good. Macha was sent for, and ordered to race with the horses. She begged the king to wait until she gave birth to her child. The king would not wait, so to save her husband's life, Macha ran against the king's horses and won, and gave birth to twins at almost the same moment. For these twins, Émain Macha was named. And Macha put the annual curse of debility on the Ulstermen because of the cruelty of this old Ulster king. See CUCHULAIN; MORRIGAN.

machi Shamans of the Araucanian Indians. Formerly the machi were transvestites, but in modern times most of them have been women. Machi adopt their profession as the result of a supernatural call. Their principal task is to cure the sick. Formerly they simulated the extraction of the entrails of the patient and their replacement. Today they cure by means of suction and massage. The main accessories of the machi were a shamanistic drum and a ladderlike pole on which they climbed to get in touch with the spirits. See SHAMAN. [AM]

Mademoiselle from Armentières Soldier song of World War I comprising countless stanzas contributed by anyone who had an idea and celebrating any event or personality that evoked comment. The tune was picked up by Americans from British troops with whom they were brigaded in 1917. The British ditty, variously known as *Skiboo*, *Snipoo*, *Snappoo*, *The Little Dutch Soldier*, *The Little Marine*, told the tale of two German officers (or a little Dutch soldier) who crossed the Rhine "to love the women and taste the wine." It involved an adventure with a landlord's daughter and in some versions produced a son who grew up to do "what his daddy used to do," a result also celebrated in *Bell-Bottomed Trousers* and its sea-going antecedents.

The AEF song, also known as *Hinky, Dinky, Parlez-Vous*, included some of the basic incidents of this tale, but also collected miscellaneous stanzas devoted to the peculiarities of the other armies—the French, British, Belgian, etc.—, lampooned the officers who won battles in bed and medals behind desks, griped about the food, the trenches, the pay, the lice, and the Y.M.C.A., and described the mademoiselles of many towns in addition to Armentières.

The original mademoiselle is said to have been actually two French girls attached to a theatrical troupe which played before British soldiers in Armentières. Another tale is that the girl was a spy working for Marlborough in Flanders during the War of the Spanish Succession (1701–14).

The chorus, “parlez-vous,” represents one of the few French words with which English-speaking troops were familiar enough to toss into their conversation. The same casual use of foreign words was made in a version sung by troops who came into contact with Russians and adapted the text to their surroundings.

The origin of the older ditty is sometimes said to be *Der Wirthin Tochterlein*, with words by the German poet Uhland, sometimes a song, *Drei Reiter Am Thor*, of the 16th century, and sometimes the old French song *Le Retour du Marin*. The last is about a sailor who returns after years at sea, finds the landlady at the inn to be his wife, who has married again, and since she does not recognize him, returns to the sea.

Like most army songs, *Mademoiselle from Armentières* is heavily censored in most printed versions.

Madumda Constructive creator of the Pomo Indians of north central California. The meaning of this creator's name is unknown. He lives in the sky, and is an otiose deity; it is his younger brother Coyote, the trickster, who is the active agent of the pair. It was Coyote, not Madumda, who formerly traveled over the earth begetting children, creating human beings, stealing the sun for them, and transforming animal-beings into true animals. [EWV]

madweed or skullcap A square-stemmed herb (*Scutellaria galericulata*) with deep-green leaves and pairs of bright blue flowers, found growing wild on the banks of streams and ponds. The British variety is named skullcap for the shape of the calyx (from *scutella*, tray or salver); the American species (*S. lateriflora*) is frequently called madweed because of its powerfully sedative effect on the nerves. Early 19th century New Englanders often referred to it as **mad-dog skullcap** on the assumption that its sedative powers would quiet or even cure mad dogs or persons suffering from hydrophobia.

mae de santo and pae de santo Terms employed in the AfroBrazilian cults for priestess and priest respectively. Their literal meaning (“mother” and “father” of the “saint,” deity) represents an exact translation into Portuguese of the Yoruban terms for priestess and priest, *iyalorisha* and *babalorisha*. See CANDOMBLÉS. [MJH]

mænads or mainades (Greek, possessed ones, the ravers). The ecstatic female devotees of the cult of Dionysus, celebrated most anciently in the *orgia*; also, the nymphs in the Dionysian train. In ecstatic devotion to the god, troupes of mænads wandered in wild bands in the mountains, dismembering wild beasts and de-

vouring them, in the fervent illusion that they were devouring the god and thus communing with him. Later, 5th century B.C., the Attic and Delphic mænads were trained in more disciplined expressions of these ecstatic trances. They are immortalized on vase paintings in these whirling dance moments. At times they are shown eluding the aroused male followers in the Dionysiac train—the Satyrs and Silenes. The cult deteriorated into the Roman Bacchanalia and Lupercalia, and to its lowest point in the modern Carnival celebrations of urban Europe and America. The theater of today attempts to emulate both the mystic trances of the mænads and the abandoned inebriation of the bacchantes. [GPK]

Magatama The sacred stones of Shinto; pear-shaped pieces of crystal, agate, jasper, and the like, used for religious purposes. [JLM]

magic The art of compulsion of the supernatural; also, the art of controlling nature by supernatural means. The word derives from the Magi, Persian priests whose practices were labeled magic (*mageia*) by the Greeks. A definition of what is magic and what is not is difficult, for one's own beliefs are seldom if ever connected with magical practices, while those of other peoples which differ are often magic, superstition, witchcraft, etc. The relationship of magic to religion and science, indeed the very nature and definition of magic, has been the subject of much debate among students of the subject. Such men as Sir J. G. Frazer, whose influence is widespread but whose theories have been criticized because of his selectivity in choosing facts from among a mass of other facts and basing his theories on them, believe magic to be a preliminary stage in the development of religion. To Frazer, magic is compulsion; religion is propitiation; a combination of the two exists side by side since neither method proves fully successful alone. Frazer subdivides sympathetic magic into homeopathic magic, which assumes that similarity between things indicates their identity, and contagious magic, which postulates that things once in contact remain in contact indefinitely. Homeopathic magic is exemplified by *envoûtement*; the image is the person and sticking pins in it or the like will cause pain, illness, or death to the person the image is named for. Contagious magic uses such materials as nail parings, locks of hair, excrement, names, even footprints, of the person for similar effects; since these were once part of, or in contact with, the person, they retain his essence and what is done to them will affect the body.

Aside from theories of the nature and origin of magic and its relationship to the growth of religion, magic generally is considered to be either positive or negative. Positive magic is intended to do something; the talisman performs positive magic. Negative magic is meant to prevent something; the amulet protects by negative magic against demons, spells, witches, and other workers of positive magic. A tabu that prevents some action by a person is positive, rather than negative magic, for the breaker of the tabu is punished by having something done to him. Generally magic works by controlling forces or demonic beings; it is the attempted control of those forces which students believe underlies primitive science. Magic may also be either black or white. Black magic is evil, for it calls into play unsanctioned forces and beings, or it aims at illness, death, injury, or

other uncountenanced effects. White magic performs cures or wonders without the invocation of dark powers; astrology, alchemy, legerdemain, the doctrine of signatures, and the like, all are classified as white magic. In folktale, the man who sells his soul to the Devil in return for the Devil's aid (compare FAUST) is a practitioner of black magic; the hero who is given special powers by a grateful animal either is not considered a magician or is a practitioner of white magic. See DIVINATION; GBO; HOODOO HAND; JACK.

magical impregnation In folktale and mythology, the marvelous conception (T510–539) of a child through some act or circumstance that ordinarily has no connection with fertilization. The motif is common in mythology; many heroes are magically conceived. Zeus, appearing to Danae in her tower as a shower of gold, impregnated her; Hera plucked a flower and conceived Ares, and later conceived Hebe from a lettuce leaf. Coatlicue became the mother of the Aztec war god Huitzilopochtli because she secreted a ball of feathers in her bodice. Widespread, in Siberia, Oceania, Latin America, Africa, China, North America, is the belief in the fertilizing power of the sun's rays falling on a woman. Not only is this reflected in the mythology of these regions, but in practice great care is taken to keep girls, especially in their first menstruation, away from all contact with sunlight. See ADOLESCENCE CEREMONIES. Some such belief and practice may underlie the Danae story, for sunlight and gold are often synonymous in imagery, and the seduction of the girl who nevertheless is impregnated by the sun's rays may easily be read into the myth.

Magical impregnation may occur in many ways: from eating (T511) a berry (see MARJATTA), a mandrake (see MANDRAKE), a fruit (in Gipsy, Turkish, Indonesian, South American stories), a rose (in an Italian story eating the red rose results in a boy, a white rose a girl), a mayfly (see DECHTIRE), a woman's heart (Norse), finger bones (twins are born when two fingerbones are eaten in a Bakairi, central Brazil, tale), cheese, a stone (Haida, Tlingit), medicines (Kaffir, Basuto, Arab). It may happen after drinking some substance (T512), e.g. urine (European, African, Chinese, Indonesian). A look, especially a lustful one, or a wish or a dream may cause conception. It may come from the gods (T518) or from some extraordinary method of intercourse (T517), e.g. intercourse with hand or foot or side or ear. Sunlight and moonlight, rain or wind, magic objects, fire, blood, spittle, scarification, stepping on an animal or over a grave, smelling a cooking dragon's heart, embracing a tree, bathing—all figure in folktale and myth as magical means of impregnation.

Occasionally men become impregnated, and magically at that. In Type 705—Born from a Fish—the man eats a magic fish meant for his wife. He becomes pregnant and gives birth to a girl child from his knee. In the *Vishṇu Purāṇa*, Yuvanaśva drinks a potion intended for the queen and bears a boy from his side. Perhaps, in light of the deliberate rebirth of heroes who cause themselves to be swallowed in order to be reborn, we may suspect a ritual belief behind some of these stories, or at least a parallel to the story of the birth of Dionysus from the thigh of Zeus.

Mention should be made here of the much reported lack of knowledge among certain peoples, notably the

Trobriand Islanders as reported by Malinowski, of the actual part played by the male in conception. To a people ignorant of the physical fact, all impregnation must be magical, the work of some spirit—or perhaps any impregnation by any means is normal. It is believed for example that the man's role in coition is simply to "open the way" for the spirit that is to be the child so that it may enter the womb.

☞ This is a widespread motif in the New World. Paul Ehrenreich chose it as an example of the wide diffusion of certain folkloric themes and as a striking case of possible connection between the folktales of America and Asia. A beautiful girl, the daughter of a chief, is made pregnant by an ugly man (often the culture hero in disguise) by his giving her some food impregnated with his semen. When the child is born a contest is held to discover the father; several men claim the child, but the infant himself designates his real father. The more ancient versions of this story were recorded almost simultaneously in the 16th century among both the coastal Indians of Peru and the Tupinamba of the Bay of Rio de Janeiro. The story is still popular among the Chiriguano and other Chaco tribes. [AM]

☞ That North American Indians were aware of the physiological facts of impregnation is indicated through the indirect evidence contained in their mythology alone. Misplaced genitalia (A1313.3), for example, prevent intercourse and consequent child-bearing. American Indian tales also contain frequent references to magical impregnation and virgin birth (T540); these are presented in the tales as extraordinary phenomena, and it is often explicitly mentioned that the girl who gives birth had no contact with any man. Pregnancy occurs from swallowing various kinds of food; from wind, rain, tears, hail, water, or sunlight; from bodily secretions; from casual contact with a man; or, in some tales, no reason at all is assigned. Usually the child born is a boy, who quickly grows to manhood and is gifted with supernatural power to overcome obstacles and kill monsters. Children are also born outside of the mother's womb, as Splinter-Foot-Girl, born from a wound in a warrior's leg, or Blood-Clot-Boy, born from a small clot of blood, or Child-Born-in-a-Jug, or the various characters born from body secretions, mucus, and tears. In nearly all cases of virgin or unusual births, the children born grow rapidly to adulthood. [ewv]

☞ Supernatural conception and birth are widespread concepts in Middle America. One legend says that the god Quetzalcoatl was conceived when his mother, Chalchiuhtlicue, the Jade Woman (and the wife of the rain god Tlaloc), came into contact with a piece of jade. The Aztec origin myth tells how a virgin, Cuatlicue or Coatlicue (she is sometimes already the mother of children), held a bunch of white feathers to her breast, thus becoming pregnant, and how she gave birth to Huitzilopochtli, the god of war, who sprang from her flank fully armed, killing several hundred men who were attacking his mother. Quiché mythology tells of the god Hunhun-Apu, whose head was hung from a calabash or tree-gourd tree, so that it resembled the other fruit. The princess Xquiq passed by, stretched out her arms to pluck the fruit, the head spat into her hand and thus she became pregnant, subsequently giving birth to the twin heroes Hun-Apu and Xbalanque. Mayan and Popoluca mythology tell of an old woman who

found an egg near a spring which, after being carried to the house and placed with her clothing, broke open in a few days to liberate a miniature infant who already talked, and who in a few more days grew up to become a god or culture hero. [GMF]

magic caldron The caldron or kettle of folktale (D1171.2) in which magic and miracles are performed: typically Celtic but appearing also in North American and African folktales, in the *Arabian Nights*, and in Greek mythology. The caldron of regeneration appears in the story of Bran in the *Mabinogion*; Demophoon or Triptolemus, son of Celeus, was put in fire, probably in a caldron, by Demeter to give him eternal life. In Norse myth, poetry came into existence when two giants or dwarfs were boiled in a caldron. The pot, kettle, or caldron that supplies inexhaustible food in task or quest folktales is related to the table that sets itself and the inexhaustible purse. In some of the stickfast tales, it is a caldron to which the chain of people is attached. Witches of course have kettles or caldrons in which their hell-brew bubbles. In "The Warlock and the Young Cook of Bagdad" (Burton *Supplemental Nights* to the *Thousand and One Nights*, VI: 95–112), the vizier and the king enter the magician's caldron and find themselves swimming in a magic sea. They undergo many adventures in the strange land to which they are thus magically transported; the vizier has become a woman and bears seven children; the king is sentenced to be hanged. But at the climactic moment, each sticks his head above the caldron's rim to find that practically no time at all has passed. See BRAN; CALDRON OF REGENERATION; MEDEA; ODHROERIR; YEARS SEEM DAYS.

magic canoe A canoe which goes by itself when its owner raps on its bottom with his paddle or utters a cry of command: an incident which occurs repeatedly in American Indian myths of the Great Lakes region, generally, but not always, in connection with the Evil Father-in-law cycle. [EWV]

magic flight See OBSTACLE FLIGHT.

magic object In folktale, mythology, and legend, an object through which magic may be performed, or which can summon up wonder-working spirits, or which behaves in an extraordinary fashion. Magic objects (D800–1699) are an essential of märchen, appearing everywhere in the world, defining some tale types (e.g. Type 566—The Three Magic Objects and the Wonderful Fruits), being focal in others (e.g. Type 561—Aladdin and His Wonderful Lamp), or serving as apparatus in still others (e.g. tales involving the obstacle flight, D672). The fairy's or magician's wand is most familiar as the magic object capable of performing magic; the touchstone of the alchemist which was thought to be able to transmute metals by contact, the regalia which transmit regal power to the king possessing them, iron or the magic circle which possess power to confound demons are all examples of objects with whose aid magic is made. These amulets or charms are similar to Aladdin's lamp or Solomon's ring which controlled spirits who were the actual performers of the magic acts. The object that is magical in and of itself is still more common. The comb thrown down by the fleeing hero becomes a forest to delay pursuit; the magic purse is always full of money; seven-league boots, wishing rings, swords or spears that

never fail, fiddles and pipes that cause compulsive dancing, kettles that make all who touch them to stick together, mills that grind salt, cloaks of invisibility, all are magic objects of widespread folktale occurrence. To these must be added the magic plants (of immortality, Jack's beanstalk, mandrake, etc.) and magic animals or animal parts (speaking excrements, soul-containing eggs, golden-egg laying geese, etc.) of many tales.

magic ships One of the earliest versions of the magic ship is Noah's Ark of the Old Testament (*Gen.* vi–viii). See ARK; DELUGE; FLOOD. In Serbian mythology, Burkhan, the Deity, commands that a great ship be built and that all animals on earth, with the exception of the mammoth, be herded together and placed upon it. Meanwhile, Shitkur, the Devil, conspires to undo the will of God and makes himself into a mouse to gnaw at the vessel's timbers and sink it. So Burkhan created the cat and counteracted the attempt at rebellion. Just as the Hebrew ark grew from Utnapishtim's ship in Babylonian mythology, this South Slavic ship derives from the Biblical account as amplified by legendists.

In Egyptian mythology the magic ship is part of the sun-god myth. The sky is a river and the sun a ship sailing across it. The sun god sits at the prow. One version maintains that he paddles his ship or that it moves of its own power; another that he is accompanied by the nine gods of the Heliopolitan ennead. According to *The Book of Gates*, in the daytime the ship is manned by elect souls or the "never-vanishing stars." This enables the sun god to retire in his cabin in the shape of a disk or an asp. The ship is sometimes thought of as a great double-headed asp, one head at each prow. The staircase of the sun, indicating the regular upward movement of the sun in the heavens, rests at the center of the vessel. On the ivory tablet of King Menes is a pictorial representation of the sun god as a hawk reclining in the cabin of a ship. Traditionally, the Egyptian sun god has two ships: the *Me'enzet* for daytime trips across the sky, and the *Semektet*, for night trips. During the night the sun god floods the underworld with light while traveling through the waters on a journey in which he is assisted by spirits of the netherworld.

The magic ship is also found in Greek mythology. Homer (*Odyssey*, viii), describes the magic ship of the Phæacians as mind-reading, rudderless, self-steering, capable of driving forward under the motive power of human wish and steering its own course. The magic boat Apollo gave to Hercules in his quest for Geryon's oxen was the golden goblet in which the sun made his nightly journey through Ocean.

The Norse god Frey had a magic ship, *Skidbladnir*, "swiftest and best of ships." It was built by the dwarfs, and could hold all the gods and their weapons and armaments. When not in use it could be folded up and put into a pouch.

The magic ship motif is popular in both Finnish and Estonian folklore. The *Kalevala* tells the story of the magic ship that brought two Finnish culture heroes to their destination in the Northland. Väinämöinen and Ilmarinen, seeking a route to the "never-pleasant Northland," where stands the copper-bearing mountain of Pohjola, come upon a vessel, which bemoans its disuse and begs to be a warship. So Väinämöinen conjures up

heroic rowers, but only the blacksmith Ilmarinen can successfully row the ship.

In Marie de France's *lai*, *Gugemar*, in the romance of *Partenopeus of Blois*, in Tristran's Voyage of Healing, and in the death scene of King Arthur, the magic ship reappears. It is a commonplace of fairy tale.

The magic ship of folktale (D1123; F841 ff.) is made of many materials: glass, stone, bronze, and other metals, mahogany, nutshells, nail-parings from the bodies of the dead (the Norse Naglfar). Indian mythology knows a winged ship. Extraordinary to folktale, but not to 20th century daily life, are the self-propelling ship (D1523.2) and the ship that goes on land and water (D1533.1.1). There are intelligent ships (D1310.3) and ships that may be summoned by a wish (D2074.2.3.2). In an Indonesian story, the task set is to build a ship of stone (H1021.3).

magic whip A motif (D1208) of Old World folktale, whereby transgression of an accepted mode of behavior, or failure to keep one's word, is punished by a whipping administered by a magic whip. With equivalents in African tales (D1401.3) it has been syncretized in Dutch Guiana in the Negro version of the Cinderella story. (See M. J. and F. S. Herskovits, *Suriname Folklore*, tale #100.) [MJH]

magnetic islands The cartographers of ancient Rome and Alexandria, Pliny and Ptolemy, make the earliest written mention of magnetic islands. Pliny writes about a mountain near the Indus that attracted iron; but it is to Ptolemy (c. 150 A.D.) that we usually turn for the first geographic location of a magnetic island; the fabulous Maniolæ Islands of the Indian Ocean, latitude 0°, situated slightly east of Ceylon, have upon them the *lapis herculeus* (lodestone mountain which can pull to it any ship built with iron nails).

The magic island motif (D936) occurs notably in "The Third Kalendar's Tale" of the *Arabian Nights*. The magnetic or lodestone mountain attracts every bit of a ship's iron. Richard Burton, editor and translator, puts forth the hypothesis that the story of the magic mountain owes its origin to certain fierce sea currents that may carry ships as much as fifty miles a day off their course. Also, men who saw seacraft being built, as on the East African coast, without nails, were led to conclude that there must exist a perilous lodestone out at sea.

The magnetic island in the *Travels of Sir John Mandeville* (1449) is near the fabulous Christian kingdom of Prester John and can draw to itself vessels that have iron nails in their structure. The vessels are irremovably held by the magnetic force of the island. The holding and drawing powers come from the nature of the "adamant" rock on the island, another name for the lodestone.

The use of the compass, and the inexplicable natural force that pointed the needle northwards, helped foster, during the early periods of navigation, the belief in some magnetic terrain which could be blamed for the disappearance and loss of exploratory sea-galleys and merchant ships that went in search of ports of trade across distant seas.

Travelers from Europe to India, men like Marco Polo, have mentioned that nailless sea-bound vessels constructed with cords and wooden pins were frequently used during the Middle Ages.

A curious application of magnetism in a medieval

story is evident in Bk. V, xxxviii, of Rabelais' Works. This writer believed, apparently, that garlic germander could counteract the magnetic power of a lodestone. This counteragent he called Scordium.

magpie A bird (genus *Pica*) having a very long, graduated tail. The European magpie (*P. pica* or *caudata*), the common magpie of folklore, has iridescent black plumage with white scapulars, belly, sides. It has often been tamed and taught to say a few words; it is famous for its love of small bright objects which it will steal and put to its own devices. See BIRD SEIZES JEWEL. The American magpie is closely related to the European. In Greek mythology the nine daughters of Peirus (the Peirides) were transformed into nine magpies because they disputed the prize for singing with the Muses.

Quite generally in western Europe and the British Isles the magpie is regarded as a bird of ill omen. It is unlucky to see one, especially *one*. To break the charm and escape the presaged evil one must take off his hat, or make the sign of the cross, or cross his thumbs (Yorkshire) or lay two straws across each other on the ground (Lincolnshire). A popular saying in regard to seeing magpies goes: One for sorrow/ Two for mirth/ Three for a wedding/ Four for death. In Lancashire and Yorkshire, however, a wilful optimism has changed the fourth line to: Four for a birth.

A magpie lighting on the ridgepole of a house is a sure sign that the house will not fall down or be demolished by storm. This belief may spring from the Eastern story that the magpie would not go into the Ark but spent the whole deluge time perched on the ridgepole. A magpie on the house also means, however, the death of one of the inmates. A magpie on the roof in Macedonia means that guests are coming. The sound of magpies chattering around a house quite generally presages either death—or coming guests. In Ireland the magpie is called *cabaire breac*, speckled prattler.

In France and Germany it was unlucky to kill a magpie. Magpies were said to warn their human neighbors of the presence of foxes, wolves, or armed men; hence in Poitou formerly little bunches of heath or laurel were tied up in the trees in honor of them. In Norway it was unlucky to kill a magpie, yet their eggs were hunted on May Day. In Bengal and other parts of India also it is unlucky to kill a magpie.

In China a magpie nesting near a house means good luck for the people of the house. Especially is it good luck to hear the magpie just as one sets out on some undertaking. The chattering of the house magpie, in China as elsewhere, announces a coming guest.

Among North American Mandan-Hidatsa Indians, members of the Old Women's or Grandmothers' Society wore two magpie feathers in their hair. This was their symbol of fearlessness: the magpie does not fear heat or cold but stays around all year. (See M.W. Beckwith, *Mandan-Hidatsa Myths and Customs*, *MAFLS* 32, p. 232.) The Jicarilla Apache Indians leave offerings of hoes, offal, and other waste parts from their kill for Magpie in thanks for success in hunting.

The magpie plays numerous roles in folktale. Magpie once exchanged her two eggs for dove's seven (A2247.4) with the result that the numbers remained reversed forever. There are many etiological stories of the origin of the magpie (A1922), why magpie is bald (A2317.6), why magpie is colored as he is (A2411.2.10), how he got his

long tail (A2236.4; A2378.3.1), etc. There is a Chinese tale of a helpful magpie (B467), also a Mandan-Hidatsa story of a magpie raised from a nestling by an Indian boy, which helped his young master in war and hunt, and a German tale of magpie as bird-soul (E732.4).

Magpie A myth character in several North American Indian tales; a clan animal among the Hopi and other Southwestern tribes. Relationship of human beings to Magpie and other clan animals is slight, however, among the Hopi. Magpie is said to have been taken into the clan in early days when the Hopi were wandering and chanced to meet him. In the Keres pueblo emergence myth, Magpie figures as the character whom Spider Man sends to cover the rising sun with his wing so that the sun will shine on one of two sisters who are engaged in a contest, before it shines on the other one. Among some of the Plateau tribes, Magpie is one of the many birds who act like human beings during the Mythical Age. In Taos pueblo mythology one character is Magpie-Tail Boy, who performs marvelous deeds; in many of the pueblos, East direction is associated with Magpie, gray wolf, and the color white. In the Tewa pueblo emergence myth, the people cross a river on Magpie's tail which serves as a bridge. Compared to other birds, however, such as Raven or Bluejay, Eagle and Falcon, Owl, Roadrunner, Turkey, Crow, or even Grouse or Chickadee, Magpie does not play too important a role in American Indian myths. Magpie feathers were used for ceremonial costumes by many tribes; the Yokuts of south central California, for instance, used a tall dance headdress made of magpie tail plumes encircled at the base with crow feathers. [EWW]

maguca'n (Naskapi) or **mukuca'n** (Montagnais) The bear feast of the Naskapi and Montagnais Indians of Labrador, for the propitiation of the bear spirit after a successful hunt. Special tabus and ceremonies accompanied the eating of the meat, and the bear skull was placed in a focal position. In the ceremonial tent, men who had dreamt hunting songs entertained the audience and accompanied the dances called *ni-mi*. These dances, in figure-eight formation, consisted of a heavy shuffling step and shaking of the whole body, and resulted in considerable elation on the part of the dancers. As in all Labrador ceremonies, the drum was imbued with magical power, revered as a living entity, and endowed with speech. [GPK]

Magus (Old Persian *Magu*) A member of a distinct priestly caste of Medians renowned as astrologers, diviners, and magicians. The Magi made themselves indispensable in the Median and Persian religious ritual and some of their beliefs were carried over into Zoroastrianism. Zoroaster may have been a Magus; he was regarded as the Magus *par excellence* by the Greeks. The Magi believed that mountains are blots on the symmetry of creation which will be removed when the period of regeneration is reached. They practiced next-of-kin marriage and exposed their dead to the vultures: customs which became a part of Zoroastrian practice.

The word *Magi* is used specifically in the Vulgate edition of the Bible to denote the wise men who came to Bethlehem to worship Jesus (*Matthew* ii, 1). This use may have been based upon the strong Magian belief in the coming of a savior.

magyar kettős The Hungarian double, which occurs as a popular couple dance in local variants. In villages of central Hungary near Budapest partners dance in line formation with two-steps and *bokázó* (see CSÁRDÁS), and finish revolving in social dance position. In southern Hungary, particularly in the village of Pecsudsvard, it is a double circle of the Slavic type. Partners progress counterclockwise, the man's right arm around the lady's waist. The first part consists of running steps, the second of hopping steps in social dance position. In both forms of the dance the music starts slowly and gradually grows faster and faster. [GPK]

Mahābhārata Literally, the great Bhārata or story: one of the two great Hindu epic poems, probably the longest in the world. The *Mahābhārata* is divided into 18 books (*parvas*) and contains 100,000 verses. The books are of unequal length and are followed by the *Harivamśa*, a supplementary book of 16,000 stanzas. The epic is partly narrative, partly didactic and includes a heterogeneous mass of legend, myth, philosophical and religious lore, as well as geographical and historical data. It represents the ancient tale (*purāṇa*) as distinguished from the elegant poem (*kaavya*) represented by the *Rāmāyaṇa*. It is older in its oldest parts than the latter, but as a compiled work it is considered about a century later in date. It belongs to the region now known as the Eastern Punjab; the *Rāmāyaṇa* belongs to Western Bengal.

The main theme deals with the struggles between two groups of descendants of the lunar race, the Pāṇḍavas and the Kauravas, for possession of a kingdom (capital, Hastināpura) located near the present city of Delhi. There was a king named Śāntanu who, in his old age, wished to marry again but could not obtain a desirable match because of the hereditary rights of Bhīṣma, his son by a former wife. Bhīṣma, to gratify his father, renounced the succession and Śāntanu then married Satyawatī by whom he had two sons. Both died, the younger leaving two childless widows, Ambikā and Ambālikā. Satyawatī then called upon Śāntanu's half brother, Krishna Dvaipāyana Vyāsa, the reputed author of the epic, to fulfil the law and raise up seed. Vyāsa, an anchorite who had lived in the woods, was terrible to behold. The elder of the two widows closed her eyes and so gave birth to a blind son, Dhṛitarāshtra, and the younger turned so pale that her son was named Pāṇḍu, the pale.

When the two came of age Pāṇḍu retired to the forest and left his blind brother as king. Dhṛitarāshtra had a hundred sons by his wife Gāndhārī. These, led by Duryodhana, were known as the Kauravas. Pāṇḍu's wives Kuntī and Mādri had five sons whose paternity, since Pāṇḍu did not consort with them either because of leprosy or because of a curse, was attributed to the gods. Yudhisthira, the eldest, was son of Dharma and considered a pattern of justice and integrity. Bhīma, the second and son of Vāyu, was noted for his brute courage, great appetite, and his boasting. Arjuna, the third and son of Indra, brave, generous, chivalric, is the most prominent character in the epic. The twins, Nakula and Sahadeva, were the sons of the Aśvins. They were amiable and brave but not prominent in the story. Pāṇḍu died and Dhṛitarāshtra brought up the Pāṇḍus with his own sons. When he nominated Yudhisthira as his heir, the

king's own sons rebelled and the Pāṇḍavas were sent away from court.

They attended the *svayamvara* held for Draupadī, daughter of the king of the Pāṇchālas, and were victorious. When they told their mother Kuntī that they had jointly won a prize, she, unwittingly, told them to share it and so Draupadī became their wife in common. This circumstance has been explained by some commentators as proof of polyandry among early Aryans.

Dhṛitarāshtra recalled the brothers to his court and divided his kingdom between the two groups. Yudhiṣṭhira proved so successful as a king that he excited the hatred of the Kauravas. The latter planned his downfall by inducing him to partake in a great gambling match. Yudhiṣṭhira lost not only his kingdom but Draupadī who was then dragged by her hair into the assembly, an insult Bhīma swore to avenge. Duryodhana also insulted her by seating her upon his thigh. Bhīma swore that he would smash that thigh. Through the intervention of the blind king the kingdom and Draupadī were restored, but Yudhiṣṭhira again gambled and lost. He and his brothers and wife were banished to the forest for 12 years. When the period of exile had elapsed the Pāṇḍavas set out to recover their throne.

The great battle between the two groups, the climax of the epic, followed. Even the gods were involved in the conflict. Kṛishṇa served as Arjuna's charioteer and while thus engaged spoke the *Bhāgavad-Gītā*. The Pāṇḍavas were victorious and returned to Hastināpura where Yudhiṣṭhira was again crowned king. Dhṛitarāshtra, however, unable to forget or forgive the loss of his sons, retired to a hermitage in the woods and perished there in a great forest fire. The Pāṇḍavas were seized with remorse and left Hastināpura for the heaven of Indra on Mount Meru. All but Yudhiṣṭhira fell by the way because of their weaknesses, but all were waiting when he arrived there.

Mahādeva In Hindu mythology, Śiva: literally, the great god; often, especially in southern India, Śiva. Devī, the great goddess, is **Mahādevī**. [mws]

Mahāsthāma In Buddhism, one of the two chief bodhisattvas who occupy thrones in the heaven of Amitābha. With Avalokita, Mahāsthāma aids those who invoke Amitābha's name to obtain salvation.

Mahāvira The last prophet of Jainism, a contemporary of Buddha; Mahāvira Vardhamāna or Jina; died c. 500 B.C. He was a disciple of one Pārshvanātha, the 23rd Jainist savior. The first of all was Rishabhanātha, in the beginning of the world, when men and women were two miles tall, had 64 ribs, and were born together, man and wife, as twins. According to one sect of Jains (the Svetāmbaras), Mahāvira was married, enjoyed a full life before entering the order, and waited until his parents' deaths lest he grieve them by his choice. According to another sect (the Digambaras), he renounced the world at the age of eight, attained enlightenment after twelve years, preached as a wandering monk for 30 years, and died at the age of 72.

Jainism denies the authority of the Vedas, and is based on the idea that life is perpetuated by the transmigration of the soul. Since life is painful, it is the aim of all Jainists to put an end to the cycle of births. To the Jains their religion is eternal and has been revealed in every one of the periods of the world.

To the Jains the universe is made up of soul (consciousness) and non-soul. There is no one creator god; gods exist in great numbers, but are subject to transmigration. The Jains divide living things by the number of sense organs they possess. Plants have only one, ants have three (touch, taste, and smell). Plants have one or more souls. Beings with one soul are found everywhere in the world while those with more may be invisible. These are called *nigoda* and have an infinite number of souls. Innumerable *nigoda* form one of the globules which pack the whole world. These supply the souls to replace those which reach nirvāṇa. Thus far an infinitesimally small fraction of a single *nigoda* has been sufficient to replace those souls reaching nirvāṇa.

The soul's natural qualities are faith, bliss, and perfect knowledge. These are weakened by the presence of karma, so the goal of Jainism is to rid oneself of karma. This is accomplished by monastic conduct and the practice of austerities. When karma is removed the three jewels of right knowledge, faith, and conduct, necessary for reaching nirvāṇa, are revealed. The ascetic Jain takes the five vows of non-killing, truthfulness, complete chastity, non-stealing, and relinquishment of all possessions. Jain ritual is based upon reverence for Jina and his predecessors whose images are found in Jaina temples.

The Jains are divided into two groups, the Digambaras who go naked, and the Svetāmbaras who wear white garments. The Dhundia and Lunka sects reject image worship. Because of their desire not to destroy life, the Jains are vegetarians and are deterred from occupations such as farming. See **AHIMSĀ**. This has forced them into banking and commercial pursuits, making the followers of Mahāvira a wealthy and influential element in Indian life.

Mahi Name of a people living north of Abomey in the present French colony of Dahomey. Many Mahi were enslaved after being captured by the Dahomeans, and the name still survives in Brazil, where the term Gêge-Mahi denotes a subvariant of the Gêge (Dahomean) cult in Bahia, and in Haiti, where a dance called Mahi (spelled *Maïs*) is found. [MJH]

Mahisha or **Mahishāsura** The buffalo-headed monster killed by Durgā in her battles with the Asuras; in the *Mahābhārata* a monster killed by Skanda. The modern form of Mahisha is Bhainsāsura who lives in the fields and tramples the corn unless he is appeased by an offering of a pig or is worshipped when the rice is ripening.

Mahuika or **Mafuika** The Polynesian underworld goddess of fire or earthquakes; mother of Pere (Pe): on Samoa, Mahuika is god of fire. In a New Zealand myth, Maui comes to her for fire. She gives him, one by one, her fingers and toes, in which are fire. But the trickster quenches each of them in water. The goddess uses her last digit to start a great conflagration that threatens to burn up the world. Maui invokes rain, snow, and hail to put out the blaze. Since then fire exists within the trees, from which it may be liberated by rubbing.

Maia In Greek mythology, the eldest of the Pleiades; the mother by Zeus of Hermes; the nurse of Arcas after his mother, Callisto, died. Maia means mother or nurse. She was perhaps originally a mountain nymph who

became associated with the Pleiades. She was identified with the native Italian goddess, Maia or Maia Majesta, a goddess of growth and the spring season, associated somehow with Vulcan. Along with other growth goddesses, she was identified by the Romans with the Phrygian Cybele. The flamen of Vulcan performed a sacrifice to her on May 1. In addition, because of her equation with the Greek goddess, the Roman Maia became associated with Mercury (Hermes), and was worshipped on May 15, the anniversary of the founding of Mercury's temple.

Maiden's Lament A feminine version of the Irish song, *The Unfortunate Rake*, source of *The Cowboy's Lament*.

Maid Freed from the Gallows An English ballad (Child #95) of a theme common in Sicilian, Russian, Finnish, Slovenian, Wendish, and other European song—a maid condemned to be hanged, who watches hopefully as father, mother, brother, sister in turn come to see her hanged and not to save her, until finally she is ransomed by her true love. The British and their offshoot American versions lack the usual continental explanation of the victim's plight, which is that she has been captured by corsairs and will die if ransom is not paid, and deal mainly with her series of questions to each of the relatives (see CLIMAX OF RELATIONS) and their heartless answers ("Oh have you brought me gold, father, or have you brought me fee?" "No . . . I am come to see you hanged, as you this day shall be."). Sometimes her situation is explained as punishment for the loss or theft of some valuable such as a golden ball, comb, key, and the whole drama of the girl with the noose around her neck and the dialog is acted out as a game. Both adults and children, English and American, white and colored, have played this game. A game version called *The Golden Ball* was collected in 1916 from New York children at a settlement house. The girl in that case was to be hanged on "yonder rusty gallery." Other names for the gallows tree in England are the "briery bush" and the "prickly bush" and in America the "willow tree" or "sorrow tree" or "gallows pole," any one of which may give its name to the song. Sometimes the song is interspersed with prose narrative in cante fable style, as in the Negro version *The Gallus Pole*, in which the victim is a man. Other titles include *Ropesman*, *Hangsman*, *The Hangman's Tree*, and *The Hangman's Son*.

Maid Marian The name of the Queen of the May in the May dances of England. She wears a golden crown over her cascading hair and carries a red pink in her left hand. Robert Graves (*The White Goddess*) sees in Maid Marian an aspect of the Syrian sea-fertility goddess Marina, Myrrha, Mariamne, who is also the mermaid. Though commonly in the Morris dances Maid Marian is coupled with Friar Tuck, she has been popularly associated, since Tudor times, with Robin Hood as his greenwood sweetheart. Robin and Marian appear in several ballads together (Child #150: *Robin Hood and Maid Marian*, for example), for Maid Marian has taken over the position of Matilda Fitzwalter, the "historical" wife of Robin Hood (Robert of Huntingdon). See ABBOTS BROMLEY ANTLER DANCE; MORRIS.

Maimed King Pellinor: custodian of the Grail castle in some versions of the Grail romances. See ARTHUR; FISHER KING; GRAIL.

maina, myna, or mynah Any of certain Asiatic birds (*Eulabes religiosa* or *Acridotheres tristis*) related to the starlings, which can be tamed and taught to speak. They are held almost sacred in India because of their strange gift. The name is used for any talking bird in Indian folklore. In folktales the maina sometimes is a life-index bird (see the story "Punchkin," in M. Frere, *Old Deccan Days*, London, 1881) or sometimes a companion of the hero.

Maira-monan Composite creator-transformer-culture-hero of the South American Tupinamba Indians, regarded as beneficent, the originator of agriculture, and giver of all their laws and tabus to the Tupinamba. He was fond of transforming himself into a small child, who, when whipped or punished, would drop edible fruits on the ground. When he was burned by an ungrateful mankind, his head burst from the funeral fire, giving forth thunder and lightning. By the missionaries he was identified with Sumé.

The Tupinamba also had another Maira, *Maira-pochy*, a legendary very powerful medicine man who impregnated the daughter of a chief by feeding her with fish. Later when her child was born, every man in the village claimed it as his, but the baby decided the question himself by handing Maira-pochy the paternity token (a bow and arrow).

Maisö The first human being, the stone woman who created the world in the mythology of the Paressi Indians of the Matto Grosso. The stone man, Darúkavaiteré, was her first son. Maisö was so distressed at the numerous serpent and parrot offspring of Darúkavaiteré and his wife Uarahiulú that by magic she caused Uarahiulú to give birth to Uazale, the first Paressi Indian.

makara Literally, sea monster; in Hindu mythology and folktale identified variously as a dolphin, a shark, a crocodile, or a crab. It represents Capricorn in the Hindu zodiac and is the vehicle of Varuna. The vehicle of Gangā, too, is the makara upon which she stands. In art representations, as the Face of Glory became progressively conventionalized, it was combined with two makara.

In folktale the makara is frequently identified as a crab. In one story the makara outwitted a greedy crane who had convinced the fish in a tank to let it carry them to a safer place. Of course the crane ate the fish, until one day a makara asked the crane why he was carrying off the fish. The crane said he was saving them from the fishermen and the makara begged to be saved too. When the crane landed on his favorite dining rock with the huge crab, prepared for a good dinner, the crab, seeing the bones of the fish lying all about, cut off the head of the crane. He returned to the tank and told the remaining fish what had happened to their brothers and was hailed as their deliverer.

Makunaima The most clever and powerful of the Twins in the mythology of various Carib tribes of the Guianas. He often plays the part of culture hero. [AM]

malagueña (1) A Spanish couple dance, originating in Malaga, Andalusia, similar to the *sevillanas*. As a folk

dance it uses bouncy footwork. Spanish colonists brought it to Oaxaca, Mexico, where it is known as a mestizo dance and song.

(2) A slow and sensuous flamenco song. [GPK]

malaohu boys On Sa'a and Ulawa (Solomon Islands), the men's society, absolutely forbidden in its many aspects to women. The name comes from the words meaning "like boiling," referring to the foaming of the sea when the fish rise to feed or to a frothy material exuded by the bonito when it is caught. A boy becomes malaohu after he has touched the rod while a bonito is being brought into the boat; the underlying concept is that he is now a man, since he has aided in man's work. According to W. G. Ivens (*Melanesians of the South-East Solomon Islands*, London, 1927), the malaohu ceremonial falls into the following outline: a chief's son goes into formal seclusion, accompanied by other boys of his own age. This group lives for several years in a canoe house on the beach (forbidden to women). They attend the bonito fishing and catch a bonito symbolically by touching the rod on which a bonito is hooked. They are brought back to the village in state. A feast is given honoring them, at which time they are seen by the women again after the long initiation period.

Malbrough s'en va-t-en guerre French folk song about the Duke of Marlborough, set to one of the most popular of folk melodies. The air is believed to have been learned from Arabs and brought to Europe during the time of the Crusades. Much later it was sung to the infant son of Marie Antoinette as a lullaby by his nurse, picked up by the queen, and made a court favorite. The earlier French version was about the Duc de Guise. Various stanzas have been set to the tune in English, including *For He's a Jolly Good Fellow*, the square-dance and play-party version, *We Have a Pig in the Parlor*, *The Bear Went Over the Mountain*, and the drinking song *We Won't Get Home Until Morning*.

male child disguised as girl A folktale motif (K514) occurring in many folklores, in which the sex of a male infant is concealed, or in which a boy or youth is disguised in girl's clothes in order to avoid execution. The execution is usually to be at the hands of a parent, grandparent, or uncle whom the child is prophesied to displace. Sometimes, however, the boy is put into girl's clothing to avoid some other fate. The classic example of this is the Greek Achilles who was dressed as a girl and sent to be brought up in a foreign court, lest he be drawn into the Trojan war. He was discovered, however, and induced to go. In the case of the Hindu Krishna, the disguise involved more than garments; an actual female infant was put in his place, and suffered immediate death at the hands of the frustrated power-jealous uncle. King Alfred the Great was whisked into a woman's dress and set to baking bread by an old woman in whose hut he took refuge, to escape death from the Danes (K521.4.1.2).

A change of sex was often simulated in India to baffle the evil eye (D2071.1.3). In China male infants and small boys, especially a first-born or an only son, were dressed in girl's clothes to protect them from evil spirits. Little Irish boys were sometimes dressed as girls in red flannel skirts until they were ten years old to protect them from being abducted by the fairies, the girls being less subject to abduction.

 In certain test tales among some of the American Indian groups of the North Pacific Coast, the Plateau, and the Plains, a jealous uncle tries to have all his nephews killed as soon as they are born. The sex of one nephew is concealed by his mother, and the boy-child brought up as a girl. When the boy becomes adult his uncle discovers the deception and tries to kill him; the uncle's attempts and his nephew's successful thwarting of them form the main part of the tale. See **ACHILLES**; **REVERSAL OF SEX**. [EWV]

male rain The term for a hard pelting rain among many Southwestern, Plains, and Eastern Woodlands North American Indian tribes. See **FEMALE RAIN**. [EWV]

malesk A story of personal adventure or a historical tale: a Tsimshian Indian term. See **ADAOX**.

malimba, manimbula, marimba, madimba, or manimba A Haitian Negro musical instrument descended from the African *sanza*: a box made of wood with a hole crossed by strips of metal fastened at one end. The other ends are plucked rhythmically to play a tune.

Malinche The mistress of Cortés, now an important figure in Mexican religious fiestas, as a man or boy in women's clothes. He-she appears most frequently with groups of *matachini*, among the Cora, Yaqui, and Rio Grande pueblos. In a long white dress, sometimes with the trousers protruding, she follows the leader *monarca* in all his movements. However, she also is associated with native dance groups, with the *viejitos* of Petamba, Michoacán, as the center of their circle and the partner of each *viejito* in turn. She is one of the six flyers of Otomí and Aztec *voladores* in the Sierra de Puebla. As *Maringuilla* she is the central figure of the Puebla *acatlaxqui*, the bearer of a wooden snake. *Maringuilla* also carries a snake, a live one in a gourd vessel as the central object of the Papantla *negritos*, brandishing a whip in the other hand. Only in Huasteca does she enact the character of her prototype: remorse for her betrayal of her countrymen.

The *malinches* of the Huave Indians, in Dionisio del Mar on the Isthmus of Tehuantepec, differs from the other representations. It is a group dance performed by men in trousers, a rattle in the left hand and a feathered stick in the right, in the manner of the *matachini*.

With this exception, *Malinche* represents similar fertility symbols as other transvestites, especially in the various *moriscas*. See **TRANSVESTITES**. [GPK]

Malcu Aymara Indian word formerly meaning "chief": applied today to gods and spirits. When it is used after the name of a mountain it implies that the mountain is regarded as a deity. The word is the equivalent of the Quechua *apo*. The Uro-Chipayay Indians apply the term *malcu* to the large earth cones erected near their villages, and to which they make sacrifices. [AM]

mallow Any of a large family of plants (*Malvaceae*) important for both food and drugs. Of more than 1000 genera and species not one is known to have any unwholesome qualities. Both the leaves and roots of the common European mallow (genus *Malva*) have long been used medicinally. In England the roots are boiled with a few raisins and bottled; if this is taken in the morning it will protect a person from disease all day. This decoction is also excellent for all internal inflam-

mations of the throat or digestive tract. In Bohemia a warm decoction of the leaves is used for toothache, and is also soothing to the eyes. Either green or dried the seeds mixed with vinegar are said to remove freckles; but the preparation must be applied either in the sun or in a hothouse. In the United States a medicinal tea is made from the leaves which has a soothing effect.

The marshmallow (genus *Althea*) whose root was formerly made into a sweetmeat (today's marshmallows are a mixture of starch, sirup, sugar, and gelatin) has been used as a soothing medicine since before the Christian era. Pliny reports that the medicinal root was dug up with a gold implement and not allowed to touch the ground. Charlemagne paid a farm subsidy for its culture, and it is still widely used in medicine today. A marshmallow ointment cures those suffering bewitchment and also protects from hot metal. This property of the plant was known to the medicine men of the Dakota Indians, who coated their hands and arms with a paste of the red mallow so that they might plunge their arms into a boiling pot. The root of the marshmallow is a cure for toothache when boiled in vinegar, for a cough when boiled in sweet milk, and for all manner of palsies when boiled in wine. Irish names for the marshmallow are variously translated yellow mantle, lady's mantle, and lion's paw. Rural people in Ireland use it for sprains, and in an ointment for sores.

The Meskwaki Indians use the roots of the glade mallow (*Napaea dioica*) for piles and female troubles, and to keep old sores soft. The Tewa Indians use powdered root of the globe mallow (*Sphaeralcea lobata*) in infected wounds and snakebites. The ancient Greeks believed that the seeds of mallows aroused the passions. They also planted mallows on graves.

malunas Literally, the mill: a Lithuanian dance for eight couples. As in most Lithuanian dances, the action is inspired by agricultural activity, here by winnowing and grinding of the grain into flour. The couples form two concentric circles, the men on the inside facing the women on the outside. The predominant direction of circling is counterclockwise, in common with other folk dances of central Europe. The dance progresses as follows: 1) Sieve, couples holding hands and swaying arms back and forth; circle to the right. 2) Mill, four of the men touching left hands in the center, the women running around on the outside; then *dos-à-dos* weaving back and forth, women counterclockwise, men clockwise. 3) Arch, the women running against the sun through the upraised arms of the men who progress sunwise. 4) Serpentine, the leading woman breaking hold, winding about and finally guiding the whole line of sixteen dancers into a large circle. The relationship of music and dance is interesting: fast melodic beats accompany slow motions, and slow beats form the background for the fast runs. Not only the bits of stylized pantomime, but the geometrical formations are typical of agricultural and fertility dances, particularly the arch and the serpentine. [CPK]

Mama Literally, mother: collective name for the four sisters of the four brothers (Ayar) of whom one, Manco, was culture hero and founder of the Inca royal family. The four Mamas were: Mama oclo (pure), Mama huaco, Mama ipa qora (aunt weed) and Mama rawa. The Mamas were strong and formidable characters and

played an active role in the slow journey of the eight across Peru seeking new lands. Mama huaco wiped out one whole opposing tribe by herself, for instance. Ayar Manco and Mama oclo were the parents of a son named Sinci Roq'a, and thus established the precedent of brother-sister marriage among the Incas. Manco and the four Mamas founded their city at Cuzco. Sinci Roq'a was the first of the royal house of the Incas. See AYAR.

Mama-cocha A goddess whose name means Sea Mother: worshipped by the fishermen of the Peruvian coast. [AM]

Mama fō Gro, Gro Mama, or Mama fō Doti The Earth Mother of Surinam Paramaribo Negro religion; the universal goddess of all *winti* worshippers regardless of their specific cults. She is the tutelary goddess of the soil, presiding over the earth as a whole and specifically over every plantation and every little house garden, and regarded as inhabiting the sacred *kānkantri* (silk-cotton tree). Great care is taken not to pollute her domain; offerings of food are made to her annually, and also on specific occasions. During a childbirth in the house, for instance, especially that of a first child, food is offered to Mama fō Gro. If a woman's previous children have all died, the *lukuman* (diviner) invokes the aid and cooperation of Mama fō Gro, beginning with the words, "Mother of the Earth, you are the mother of children . . ." She is thus invoked to help the parents "buy" the new child from some deity who has been jealous of the mother's having children.

Mama fō Gro is so great and so greatly feared that her true name is never spoken, except in songs sung by those in the state of possession. She has many names; those occurring most frequently in the songs are Asase (see ASA'ASE), Aida, Waisa, Awanaisa.

If angered, Mama fō Gro may appear to the offender in the form of a snake, alligator, owl, etc. If one finds a snake in his bed at night, he knows he has offended the Gro Mama, and makes an offering of eggs with a prayer for forgiveness. Mama fō Gro in her benevolent aspects is protectress and guardian of those within her domain. The strongest oath known to the Paramaribo Negroes is made in her name. See M. J. and F. S. Herskovits, *Suriname Folk-Lore*, Columbia Contributions to Anthropology, 27, pp. 62-63, 41.

ma'makoni-ni'tkap The Bear dance of the Ute Indians: formerly a spring ceremony to celebrate the time when the bear comes out of hibernation; now a social occasion, though a consciousness of its ceremonialism may remain. Mimetic attributes are contained in the heavy tread of the dancers, the songs, which are said to sound like a bear, and the accompanying *morache*, or notched stick, which certainly sounds like a bear. The men in a line face the women in a line, and for four days progress forward and backward, parallel but without contact: two steps forward and three steps back. This is a common pattern of Ute and also of Navaho social dances. On the fourth day, the last song changes beat, and the women pursue the men. [CPK]

mambu The priestess of the vodun cult in Haiti. [MJH]

Ma-mo One of the eight classes of indigenous Tibetan country gods; black she-devils, the disease mistresses who are often spouses of malignant demons.

Mampes In Menek Kaien (Malay peninsula) folklore, the guardian of the bridge of the dead, called Balan Bacham, which spans the sea to Belet, the afterworld of these people. On either side of the bridge grow flowers. Mampes conducts only the good souls to Belet.

man The creation of man, an important episode in many, though not all, of the cosmogonies of the world, plays a minor part in Greek mythology. In the early Greek myths, man is either coeval with the gods, or is born from objects or from Ge, the earth; later, Prometheus was said to have made man from earth and water. The Biblical account of creation tells essentially two different stories. In one, probably the later version, the making of man from chaos is the culmination of the process of creating the universe. In the other, Adam was made from clay and inspired with life by God: this is not something that comes as a climax, but occurs before the animals are made. This account follows, not the Babylonian story of creation, where man is made from Kingu's blood, but the earlier Sumerian story of the creation of man by Ninmah from the clay of the abyss. In this Sumerian myth, Enki also tries to make man, but his creation is imperfect; it cannot sit or stand or bend its knees; it does not answer Ninmah, it does not reach for bread. So too in the *Popol Vuh* of the Quiché Indians of Guatemala, the first men are made of mud but are unable to stand and are mindless. They are destroyed. A second race of men is made of wood. These have no regard for the gods or for anything but themselves. The world revolts against them, and they are destroyed by their domestic animals and their utensils—pots, millstones, etc. The third creation is successful and the four men thus made are the ancestors of the human race. The sequence of stone, wood, and clay (or the like) in the creation of man is common in the Pacific area. Plants, stones, parts of the Creator's body, spittle, blood, worms, shells, wooden images, figures drawn on the sand, sweat, ashes—all these are somewhere considered the original stuff from which mankind was made.

Sometimes, man instead of being made by a Creator hatches or emerges from somewhere. Thus, the Indians of the Southwest have, alongside the myths of man's creation from ears of corn, tales of the emergence of man from underground. Among the Indians of the South American Chaco, men are dug out of the ground by a dog who scents them (Mbaya), they emerge from a hole in the ground (Tereno), they come from a great tree when it is split (Chamacoco), the first man is hatched by a huge bird in a hole on a mountain top (Mbaya). Throughout Indonesia, the first man is said to have hatched from an egg. In eastern Indonesia, men came from worms and larvae in the ground. The Tagalogs of the Philippines say the first man and woman were inside bamboo sticks which were cast ashore and pecked open by a bird. In Formosa, the Yami say that man came forth when a rock split. Man is descended from tadpoles, according to the Wa of Indochina. These are but a sampling; all over the world the creation or first appearance of man is explained in as many ways as there are peoples.

The dual nature of man, the animal being who nevertheless can know of God and sometimes act nobly, was explained by the Greeks as the result of man's creation from the ashes of the Titans after they had eaten Dionysus Zagreus. Man thus has something of the divine in him, though a good deal of him is evil. In a Ruma-

nian tale, the Devil got the idea of making man and fashioned the body, but he had to have God's assistance to give it life: thus man's body is ruled by the Devil but his soul is divine. There are also tales illustrating concepts taken from such books as the Bible. A Slovene tale, for example, says that God made creation from a grain of sand adhering to His nail. As He worked, some sweat fell on the sand, and from this man was created. Thus, man must earn his bread by sweat. And, in explanation of the nature or position of woman, there are such stories as the creation of woman from man's rib or, even more widespread, from the tail of a dog or of the Devil. In Borneo, man and woman are said to have been created from a sword hilt and a distaff. See ADAM; ANTHILL; ASHES; ASK; EMBLA; HATUIBWARI; ILMATAR; KHNUM; LIZARD; MBERE; TIKI.

Among the North American Indians the actual creation of man seems to be of lesser interest, on the whole, than the establishment and ordering of the world and of the daily living of man. A few tribes lack any myths that definitely account for the actual first creation of man, and the Eskimo as a large group have no such tale. Except among the Eskimo, however, the advent of man into this world is noticed in American Indian mythologies; human beings "appear" at the end of the Mythical Age when the animals become true animals, or people emerge into this world from the underworld where they formerly existed. The majority of tribes give somewhat more attention to the creation of man than merely announcing his presence. Man is created from sticks (Huchnom of northern California), from the rubbings of the skin of the creator (southern California and Southwest), from ears of corn (Navaho), from clay, ashes, beads (Shawnee), etc. The Indian is created from red clay, the white man from the foam of the ocean or white clay, the Negro from black clay, etc. (Eastern Woodlands). During the creation of man he may have been imperfectly formed and the mistake rectified later; a tale fairly widespread in the West pictures man as having first had solid hands until Lizard decided he should have hands like hers. See LIZARD HAND.

A motif widely distributed in North American Indian tales is that of misplaced genitalia; man's sexual organs were first put on his forehead, then on some other part of his body; he failed to procreate, so finally they were placed where they are now.

In the Zuñi emergence myth, after the people came to Slime Spring from the underworld, Elder Brother and Younger Brother cut mouths in their faces (previously people could not eat). The knife made these cuts red from the red of the whetstone on which it had been sharpened. Then Elder Brother and Younger Brother cut the anus, so that people could defecate; it was black. People's fingers and toes were webbed, so they cut them apart. People still had tails and horns, so the two brothers went to each house and cut these off of everyone. The people "were glad that they were finished." [EWV]

The most common explanations given by South American Indians for the origin of man fall into two categories: 1) Men were created by the culture hero out of some substance (clay, reeds, etc.); or 2) They came from some other region, generally from an underworld.

The Choco have a creation myth which follows the pattern of Mayan mythology. The culture hero made the

first men of stone, then of wood, and finally of clay. Likewise Viracocha, the great Inca god, made successively two different races of men, the first of which he destroyed by changing them into stones. Later he created a new mankind who populated the earth. The culture hero of the Taulipang Indians modeled the first men in wax; then because they melted in the sun, he made new ones out of clay. Kenos, the first man in Ona mythology, modeled sexual organs out of peat. The first men and women were born from the union of these organs.

The migration of the first men from another world is described either as an ascension from a subterranean country (Caraja, Mundurucu, Yaruro, Witoto) or as a descent from the sky (Warrau). The ancient Peruvians, the Taino of Haiti, had their first men come from large caves.

The Cashinawa account for the origin of mankind by a process of spontaneous generation: they state that men developed from maggots that grew on the bodies of giants drowned by the flood, or else that they sprouted from seeds.

That the first men were hatched from eggs is an interesting mythological motif common to South America and the Old World. In a Peruvian myth recorded in the 16th century, the ancestors of the coastal people originated, according to their social status, from three eggs, one of gold, one of silver, and one of copper, which had been sent by the Sun God. The ancient Mbayá of the Gran Chaco believed that their forbears issued from eggs laid by a gigantic bird. The motif is unknown in the rest of South America. [AM]

mana General term among the Melanesian (and Polynesian) peoples of the Pacific (according to R. H. Codrington, *The Melanesians*, Oxford, 1891) for the mysterious spiritual power which pervades the universe and is indwelling in men, animals, trees, and inanimate objects. Mana transcends human power, has various physical manifestations, but operates through human medium or that of supernatural beings, the vehicle however often being water, sticks, stones, etc. Max Müller defined the concept of mana as a "sense of the infinite." It underlies all life; all good comes from mana; all success, health, and material well-being are the result of this unseen power. When a Melanesian fisherman makes a good catch, he believes there was mana in the net. Evil comes from its being diverted to harmful ends, either by the dead or by the living. A medicine man possessing mana to still storms might also raise them, or having herbs with power to cure might also divert their mana to poison. A living man may possess mana, but the spirits of the dead *are* mana. Mana is available at all times, but never operates of itself.

In general ethnological usage the term came to be applied to the concept of spiritual power immanent in sacred persons, things, and places. It might be applied, for instance, to that virtue which went out of Jesus when the woman touched the hem of his garment and was healed. But the term is again falling into disuse except for its specific Oceanic applications. Compare ANIMISM; MANITU; MYSTERIOUS, HOLY, AND POWERFUL; ORENDA; WAKANDA. See BARAKA.

 American-trained anthropologists seldom if ever use the concept of mana for American material; it is regarded as specifically Melanesian (and Polynesian) and

referable especially to Melanesian concepts of supernatural power. Even its applicability to general Polynesian material has been recently challenged by an American anthropologist, G. P. Murdock, who writes in the preface to his book *Our Primitive Contemporaries* (New York, 1934, p. xiii): "The author began with the intention of making full use of the concept [of mana]. In tribe after tribe, however, he found it inapplicable, the more so the more deeply he dug into the facts, and he ended without being able to use it at all. To choose but one example out of many, he could find little relation between Handy's reconstruction of Polynesian religion in terms of *mana* and the reported facts on Samoan religion. In science, when a theory, however plausible, parts company with the facts, there is no choice; the theory must yield." [EWV]

Manabozho Same as NANABOZHO. See also END OF WORLD; HARE; HIAWATHA; MIDETWIN; WOLVERINE.

Manama Chief deity of the Philippine Island Bagobo people: same as EUGPAMOLAK MANOBO.

Manannán The Irish sea god. Bishop Cormac (died 907) gives a euhemeristic description of him as "a celebrated merchant who was in the Isle of Man. He was the best pilot that was in the west of Europe . . . Therefore the Irish and the Britons called him god of the sea." His maritime nature is emphasized in many ways: he was the son of Ler (genitive Lir), the sea; he possessed a magic coracle, the Wave-Sweeper; he rode a horse or drove a chariot over the ocean; his home was the Land of Promise, an elysian island. Like other deities, Manannán was "a good provider." He settled the Tuatha Dé Danann (the gods) in the fairy mounds of Ireland and established a feasting which protected them from old age and at which pigs were killed and eaten and yet came alive again. When he entertained King Cormac mac Airt (3rd century) at his palace, one of these immortal pigs was boiled, and we learn of his inexhaustible supply of wheat and of his wife's seven cows which gave milk enough for the people of the Land of Promise. He gave Cormac a golden cup which broke in pieces when lies were told over it, but was restored when truths were uttered. Among his other possessions were a mantle and a helmet of invisibility, and he was a notorious shape-shifter. When Fiachna the Fair, king of Ulster, invaded Lochlann, Manannán appeared to him and promised him victory in return for a night with his wife. With Fiachna's consent Manannán returned to Ireland, took Fiachna's likeness, and begat on his wife the probably historic king Mongán (7th century).

The sea god was long remembered in the Isle of Man, from which his name was derived. Though his grave, thirty feet long, was to be seen outside Peel castle, he was the object of a cult which lasted into the 19th century. On Midsummer Eve the people of the neighborhood used to carry green meadow grass to the top of Barule in payment of rent to Mannan-beg-mac-y-Leir, and the grandfather of a woman living in 1910 used to pray to the same divinity for a blessing on his boat and a good catch of fish. The Manx coat of arms, three legs forming a sort of wheel, was believed to be the shape in which the god rolled swiftly across the island. As a magician he would form a miniature fleet out of peascods and so magnify it as to frighten invaders away.

The Welsh Manawyddan was probably borrowed from the Irish since the name of his father, Llyr, simply reproduces the Irish genitive Lir. The connection with the Isle of Man was recognized, the Welsh name of the island being Manaw, but the association with the sea has been completely lost in surviving Welsh literature except that in poem VIII of the *Book of Taliesin* Manawydd is said to know a faery fortress surrounded by ocean's currents, and in *Branwen* he dwelt for eighty years in the isle of Grassholm in the Irish Sea, abundantly supplied and free from sorrow and advancing age. According to *Manawyddan* he was a miraculously successful wheat-grower and shoemaker, the latter accomplishment being suggested by the Welsh word *manawyd*, awl. The main theme of this mabinogi is the wasting of the land of Dyfed (southwestern Wales) and the imprisonment of Manawyddan's wife and stepson through the spells of Llwyd, followed by Manawyddan's outwitting Llwyd and forcing him to remove the enchantments.

ROGER S. LOOMIS

Manasā Literally, mind, thought; a Hindu snake goddess, sister of the serpent king Śeṣha, worshipped in Bengal especially by the Bāgdis, Bāwariyas, and Mals. Manasā is depicted as yellow, with four arms, sitting on a waterlily and clothed with snakes, or represented by a pot marked with vermilion placed under a tree and with a trident driven into the ground. Four annual festivals are celebrated in her honor. The chief festival is held in Savan (July-August) at which time no fire is kindled, since Manasā is known as "She who does not cook." Pigs, sheep, goats, or buffaloes are sacrificed to her and some devotees play with snakes, which custom results in frequent deaths. The goddess sometimes dwells in the pipal tree and her plant is the Manasā (*Euphorbia nerifolia*) which is planted in the courtyard during the Daśahra festival.

Manco-capac One of the four Ayar brothers, mythical founders of the Inca dynasty. According to the version of the story recorded by Garcilaso de la Vega, Manco-capac came from an island of the Titicaca in the guise of a culture hero. See AYAR. [AM]

Mandarangan One of a pair of evil spirits who are the patrons of Bagobo (Philippine Islands) warriors; his wife is Darago.

mandrake A poisonous plant (*Mandragora officinarum*) of the Mediterranean region, to which numerous traditions are attached relating to its origin, the human shape of the forked root, its narcotic, soporific, and aphrodisiac properties, its magical powers, and especially its power to effect conception. So realistic is the resemblance of the root to the human shape that English folklore distinguished even sex differences and commonly referred to *mandrakes* and *womandrakes*. Old herbals picture the roots as male or female forms with bunches of leaves growing out of the head, sometimes with a dog chained to the waist, or a dog dying in agony in the background. (See INSANE ROOT.) Belief in the semi-humanity of mandrakes is reflected in John Donne's line "Get with child a mandrake root."

Sir James Frazer believed that the shape of the root "helped foster, if it did not originate" the notion that the mandrake springs from the body drippings of a man hanged on a gallows. (See Frazer, *Folklore in the Old*

Testament, ii, 381.) The German term for mandrake, *Galgenmännlein*, bears testimony to this belief, which occurs also as folktale motif A2611.5 (belonging in turn within a larger cycle of beliefs in the origins of various plants from the bodies of slain persons).

The ancient Greeks, long familiar with the soporific properties of mandrake, used it as an anesthetic in surgical operations, and it was so used well into the Middle Ages. For aphrodisiac effects they steeped the root in wine or vinegar, and its erotic properties were so well known that Aphrodite was sometimes given the additional title of Mandragoris. Mandrake was also called the plant of Circe, in the belief that an infusion of mandrake was the witch-draught with which Circe first enamored and then transformed her victims. Theophrastus gave specific instructions for gathering it: one should draw a circle around it three times with a sword, face westward while cutting it; or one should dance around it while reciting some kind of love-prattle. Pliny advised keeping to windward while digging the root on account of the stink. In some parts of Greece today young men still carry bits of mandrake root as love charms.

In Arabia mandrake was called the Devil's candle because it was said to shine in the night: a phenomenon caused by glowworms, which thrive in the damp rosette of the leaves. In France its name is *mandagoire* or *mandagloire*, which folk etymology has corrupted into *main-de-gloire* (compare HAND OF GLORY). For the etymologies of these terms and the mandrake terms in other countries, consult O. Gruppe, *Griechische Mythologie und Religionsgeschichte*, Munich, 1906; and A. Usteri, *Pflanzmärchen und Sagen*, Basel, 1925.

The magic powers of the mandrake turn up variously in folktale: the mandrake bestows invulnerability (D1344.10); it prophesies (D1311.13); it reveals treasures (D1314.7.1); in French folklore especially will it do this if it is clothed in silk, bathed and cared for regularly. It shrieks when uprooted (F992.1). In Wales black bryony was called mandrake and endowed by the popular mind with all the mysteries of the true mandrake. When uprooted it would shriek and sweat blood; whoever uprooted it would die in agony, shrieking as the mandrake had shrieked. Eating mandrakes effects conception (T511.2.1). That elephants have sexual desire only after eating mandrakes is a motif (B754.2) found in one of the Middle English bestiaries.

The ancient Hebrew belief in the power of the mandrake to induce conception is present in *Genesis* xxx, although as several scholars have indicated, the direct attribution of this magic power to the mandrake has been "emended." Reuben, the son of Leah and Jacob, gathered some mandrakes and gave them to his mother. Rachel, the beloved young, but barren, wife of Jacob, begged Leah for the fruit (Hebrew *dudaim*, love apples). Leah, jealous and suspicious, sensed the reason and was unwilling, but Rachel persuaded her to trade the fruit for that night in Jacob's bed (when Leah conceived Issachar). But after eating the fruits of the mandrake, the hitherto barren Rachel also soon conceived and eventually bore Joseph. Frazer states that belief in the aphrodisiac powers of mandrake and in its power to remove barrenness was still a living belief in Palestine and the Near East well into the 20th century. The

belief that mandrake would cause conception even if laid under the bed spread into western Europe.

Hildegard of Bingen, 12th century, explained the man-shape of the root with the statement that the mandrake was created "of that same earth of which Adam was created." The 16th century English herbalist, Gerard, also believed in its powers to effect conception, and may have influenced the spread of the belief. An inordinate value came to be set upon mandrake root, which caused a prodigious trade in counterfeit roots through several centuries. The counterfeit roots were usually bryony carved into human shape, sometimes incised and planted with wheat or grass so that the tiny shoots might simulate pubic hair. See ALRAUN.

maneki neko The beckoning cat: a Japanese good-luck charm used by shopkeepers to lure customers into the shop. It is the figurine of a cat sitting on its haunches with one paw raised in a beckoning gesture.

manes In ancient Roman religion, the spirits of the dead; the Di Manes or divine dead: the name is probably a euphemism meaning "good spirits," and may have been used instead of *lemures*, the lonely, wandering ghosts of the dead. Manes was also used for the underworld deities, the underworld itself, the ancestral spirits, and, eventually, as a non-collective noun, to refer to individual spirits of the dead. See MANISM.

mani or chintamani In Hindu belief, the magic jewel obtained by the gods at the Churning of the Ocean; the jewel in the cobra's head. According to the *Atharva-Veda* the mani is an amulet against all kinds of evil and is identified with the thunderbolt which Indra used against Vritra. According to the Pāli Canon it is a transparent beryl with eight facets so bright that it turns night into day. The mani is an attribute of Avalokita and of Vishnu who is represented with the jewel at his waist or on his navel. In modern Indian folklore the mani is the snake stone, the jewel in the cobra's or nāga's head, which has the value of the treasure of seven kings and can be hidden only when cow dung is thrown on it.

man in the moon The moon, second to nothing in its influence on world-wide folk belief and practice, is important principally for two things: its face and its phases. In Europe, generally, a man's face is seen on the moon's surface. Sometimes the man is Judas, sent to the moon as punishment (A751.1). In Panama, the punishment suffered by the man in the moon is for incest. Elsewhere in the world, the hare (A751.2) and the frog (A751.3) are most often seen. Thus in Zululand and Tibet, in Mexico and India, the markings on the moon form a hare. The Buddha, in one of his early incarnations, offered himself, a hare, as a sacrifice to Sakka, the chief god; Sakka painted a picture of the hare on the moon as an eternal remembrance of the act. The moon is called, in India, the hare-marked (*śasānka* or *śadīhara*) or the deer-marked (*mṛīganka*). In ancient Mexico, it was said the hare was sent to the moon to dim its light, since previously it was as bright as the sun. The Chinese see a frog in the moon; and the connection of the lunar frog of Brittany, Tibet, the Solomon Islands, etc., with the moon as rain-symbol is clear. See "The Lunar Frog" by A. H. Krappe (*Folk-Lore* LI: 161-171). A Peruvian tale explains the marks as the clawings of a fox that

embraced the moon. The Masai of Africa say that the sun and moon had a husband and wife quarrel, both being the worse for wear afterwards. The sun shines brightly in shame, but the moon exhibits to those who look at her her swollen lip and her missing eye. In New Guinea the marks are the fingermarks of mischievous boys; they opened the jar in which an old woman kept the moon and tried to grab it as it escaped. The Eskimos see tell-tale ashes on the moon. Moon, brother of his sister Sun, crept into her bed at night. She put ashes on her hands to mark the culprit. Since then Sun chases the marked moon through the skies. In parts of northern Europe, the man in the moon carries a tar bucket; he marked the moon with his tar and the marks have remained there. In Malaya the sharp-eyed make out a banyan tree under which sits a hunchback making a fishing line. At the other end of the line is a rat eating it almost as fast as it is made; this is good, for when the line is finished the hunchback will use it to fish everything on earth up to the moon. The Buriats and other Siberian tribes recognize a girl with a pail near a shrub; she was rescued by the sun and moon from a pursuing wolf. In the Cook Islands, it is a girl with a pile of leaves and a pair of tongs who makes tapa. The stones holding down the tapa may be seen; when she pushes aside the stones, it thunders. The Maori descry a grumbling woman, who complained when the moon went behind a cloud as she went for water; her water gourd, her basket, and the tree she held onto when the moon seized her. A girl with a bucket is seen by the Kwakiutl. The Scandinavians saw a pair of children, Hiuki and Bil, and their water pail. They were made to carry water all night by a cruel father and were rescued by Mani, the moon god. Many see in this pair the originals of the Jack and Jill who went to "fetch a pail of water." The Chams of Cambodia recognize in the moon the face of Pajan Yañ, who is the great healing goddess, and who was banished to the moon before she could heal and bring to life all the dead.

Probably all North American Indians, if the distribution of the item were known, have some explanation for the dark patches on the moon. That most frequently encountered among the western tribes is that the figures are those of Frog(s). Frog protects both Sun and Moon so that Bear will not swallow them. Or, Frog once swallowed Moon, but was in turn swallowed by her and is now in the center of Moon, weaving a basket. Or, two or more Frog sisters reject animal suitors; the latter weep; a flood ensues from the tears; the Frog sisters go to the house of Moon and jump on his face, where they may be seen at the present time; this latter tale is widespread in North America. Among the Caddo Indians of the Southeast a brother commits incest with his sister in the dark; she smears paint on his face and so later identifies him; he becomes the man in the moon. Some other tribes in the West say the figures are those of a giant, or of Coyote, or are the picture of a large oak tree from which the dead obtain their food, or that they are scars left on Moon after Bear bit her. The Shawnee of the Eastern Woodlands see their female creator's picture in the moon; she is bending over a cooking pot, with her little dog near her. The explanation of the figures in the moon is often added to tales, or inserted in them as an explanatory element. [EWV]

manioc A staple root plant (*Manihot esculenta*) of South and Central America, in two varieties, the bitter and the sweet (yucca), both of which are used. It is one of the three principal food crops of the region, and the main root crop. The roots are ground or grated to a meal from which the poisonous juice (prussic acid) is pressed or otherwise extracted. This juice is used for a fish poison (Brazil, Ecuador). Manioc beer is made throughout most of South America north of the Plata, excluding the Andes and most of the Chaco. Manioc meal is used to make bread, tortillas, etc. According to legend, the daughter of a chief bore a child by the spirit of manioc, who showed the people how to cultivate and propagate the necessary plant. In a Christian legend, St. Thomas, besides bringing the gift of faith and relief from plague, taught the cultivation of the plant. The Paya of Honduras say that men were sowed or planted by their god as manioc is propagated. The Mundurucú of the Tapajoz region in Brazil pray to the Mother of the Manioc: "Favor us with the fruit of your sons. Do not let us suffer privations. Every year we pray to you and do not forget you." See ORIGIN OF CULTIVATED PLANTS.

manism The worship of the spirits of the dead: from the euphemistic appellation *manes* or *Di Manes* (i.e. the good ones) used by the ancient Romans for the souls of the dead. The *Di Manes*, the divine dead as a group, were early recognized by the Romans; they were worshipped at the *Feralia* (February 21) and *Parentalia* (February 13–21). Later the *Di Manes* became identified specifically with the *Di Parentes*, the ancestral spirits of the family; and still later, as a consequence, *manes* came to be used for spirits of individuals. Thus the early formula used on graves *Dis Manibus Sacrum* (DMS) was modified during and after the period of the Empire to carry in addition the name of the dead person. Since the spirits dwelt within the earth, *manes* became a term for both the country of the dead in the underworld and the great underworld gods, Pluto, Persephone, Orcus. The *manes* came forth at certain periods, especially at their festival at the turn of the old Roman year in February. To help their emergence, three times a year the stones guarding the entrance to the underworld (*lapis Manalis*) were removed. These entrances were specially dug at the founding of cities throughout Italy.

Manism, the general term for the worship of the spirits of the dead, and, more specifically, for ancestor worship, is widespread in the world. Apart from the Semitic area of the Near East and the Mediterranean, for which evidence of manism is circumstantial, it is known in practically every corner of the earth. The ancestor cults of India, China, and Japan show the highest development, and the complex systems observed there have become well integrated into the general cultures and beliefs of these countries. Ancestor worship was a state cult in Ashanti and Dahomey in West Africa, and the Bantu tribes also possess a well-developed manism. An ancestral cult, part of the tremendous cult of the dead, flourished in ancient Egypt. North and South American Indian tribes to varying degrees observe an ancestral cult. The Pacific Islanders have an important ancestor cult, but in Australia and New Zealand ancestor worship, though present, is comparatively undeveloped. In Malaya, Islam has modified a native

animistic manism. Ancestor worship was known in ancient Babylonia, and the Iranians too had their cult of the dead. The Indo-European tribes carried manism throughout Europe; evidence of ancestor worship is very prominent throughout the Continent from the Slavonic peoples to the Celts.

Generally manism seems founded in the belief that the ancestors will continue, in death as in life, to protect and advise their people, their children. Perhaps equally prominent, however, is a belief in the jealousy of the dead towards the living, a jealousy manifesting itself in unfriendly acts, as the bringing of disease, hauntings, and the like. Thus in some regions, the bones of the dead are broken, or their eyes are sealed or their limbs bound, or heaps of stones are placed over them, all to make it difficult for them to return or to recognize those against whom they may hold a grudge. Sometimes the family moves from its home or changes the names of its members to make it harder for the dead to know them. Among the other widespread customs and beliefs entering into ancestor cults are: belief in oracular spirits (the dead continue to advise), known from Greece to Lapland, from Melanesia to East Africa; the belief that the ancestral spirit is reborn in a new child, hence various naming customs and divinations to determine which ancestor now resides in the child (see ANAPEL); totemism and idolatry, where the ancestral spirit becomes one with the totem animal or dwells in the image; state and family worship of the ancestors; burial customs designed to keep the spirits contented or to assuage their anger; annual festivals for the dead, days on which they return to earth, often by invitation and with the aid of the living, to receive gifts from their remembering survivors. Compare ANCESTOR WORSHIP; CULT OF THE FRIENDLY DEAD; NATS.

✦ Ancestor worship was more prominent in the religion of the Andean people than it was among the primitive tribes of Brazil and of the plains of the Chaco and Patagonia. The cult of the dead was important among the Chibcha, as may be assumed from the wealth of their tombs and the reverence in which their modern descendants keep their ancestors. The Kaggaba, for instance, regard the souls of their ancestors as superior to demons. They attribute to them the origin of all their institutions. The mummies of the Inca emperors were worshipped as gods and placed in the palaces which they had occupied during life. The ancient chronicles make constant references to the cult of the dead which the Andean Indians practiced against the rules of the church.

The care with which the Amazonian Indians preserve in their houses the bones of their dead is also indicative of a religious attitude toward them. The cult of the dead was one of the main elements of the religion of the Cobeuo of the Caiari-Uaupes region. Their ancestors were represented by sacred trumpets which were played during certain ceremonies.

In the Chaco, the Guaicuruan tribes performed many ceremonies over the tombs of their dead which are buried in special cemeteries or in large huts.

The Bororo of the Mato Grosso believe that the ancestral souls are wont to visit the villages of the living and to ask for food and drink. These Indians have special categories of shamans who serve as mediums for the souls of the dead.

Ancestor worship was a salient feature of the religion of the Taino in Haiti and Cuba. The great *zemi* (idols) were believed to contain the souls of the chiefs' ancestors. No evidence, however, of a cult of the dead has been found among the Indians of Tierra del Fuego. [AM]

manitu, manito, or manitou A word which in variant forms occurs in all Algonquian languages, having various specific meanings in each language. These meanings usually relate to supernatural power, but manitu is not a general term for a "mysterious cosmic power everywhere in nature." The conceptual abstraction of manitu as an impersonal manifestation of supernatural power, as presented by William Jones in "The Algonkin Manitou" (*JAF* 18: 183-90) is dubious; it now seems probable that Jones was influenced more by the mana-concept prevalent in his day, than by his own Fox data. In this tribe manitu is applied to an indefinite number of definitely conceived supernatural beings; for example, to Wisa'ka, the culture hero; to *keca manitowa*, the gentle manitu; to *ke'tci manitowa*, the great manitu, and to a host of other manitus, who live above, on, and under the earth, as well as now also being applied to trains and the automobile, to a parrot which can talk, to snakes (which are regarded with awe and never killed), and to the Thunderers, to corn, to turtle dove (*manitowa mimiwa*, because it makes sounds like the voices of the manitus), to the dog, which the Fox eat ceremonially in order to get in touch with the manitus, and to plants, etc. Among the Sauk, Delaware and other Algonquians the creator and other supernaturals are also referred to as manitus, although the specific Delaware term for their creator is *ketanto'wit*, great power. The Sauk-Delaware use of manitu horrifies the Shawnee, who use the term *manedo* as the regular name for all kinds of snakes; *manedo* in compound means monstrous or evil creatures; with the prefix *matci* it denotes an evil being now identified with Satan; *manedowikamekoiki* is the Shawnee term for the house (heaven) where an Indian goes when he dies. Conceptual abstraction of the term manitu has also been specifically denied for other Algonquian tribes such as the Menomini, various Ojibwa groups including the Plains Ojibwa, and for coastal Cree groups. [EWV]

Mañjuśrī In Buddhist belief, an Adibuddha, the personification of wisdom often occupying the chief place in the Buddhist polytheism. Mañjuśrī is better known in China and Tibet than in India. In Nepal, where he is the giver of civilization, his worship is especially popular. Among northern Buddhists he is grouped with Avalokita and Vajradhara in a triad which corresponds to the Hindu triad (*trimūrti*). He is represented seated on a lion and sometimes bearing small figures of the Dhyānibuddhas on his head. Probably the most ancient of his numerous names is Mañjughoṣa which means pleasant voice.

manman Literally, mother (Haiti); largest, most ritually significant of the three vodun drums; also the most important and first placed of the pegs in a vodun drum. The instrument commonly measures between 32 and 36 inches in height, and 10 to 12 inches in diameter. The player strikes it with a crooked stick or mallet called *baguette*, which is held in the right hand. Variation of tone is provided by striking with the fingers or heel of the other hand. The manman is the last drum to begin

its part in accompaniment to the dancing and heralds the dance figure, *asagwe*, the salute to the gods. See DRUM.

Mannekin-pis The small bronze statue of a urinating Eros which fills a public fountain near the center of Brussels, Belgium. Since it is one of the famous sights of that city, and because the reason for the original choice of such a pose has been lost, several legends have grown up about the fountain. It is said that towards the end of the 11th century, the young son of a certain count was taken to see a parade honoring some returning Crusaders. The five-year-old, as the Holy Sacrament at the head of the procession passed, began to relieve himself in the street. Through a miracle, he was unable to stop until the end of the parade passed, and in the meantime everyone in Brussels came uncomfortably to know what was happening. His mother, in expiation, had the statue placed near the spot. A later event it is supposed to memorialize is the extinguishing by a child of the fuse of a bomb in the Town Hall. Perhaps older than either of these legends is the one that links the statue with Kristeljik-manneken straat, though the name of the street postdates the statue's erection. An old Jew is the villain; he kidnapped the child for a sacrifice; Our Lady of Bon Secours rescued the little boy. Other legends make the Eros the surviving member of a quartet which included the Three Graces, all similarly engaged in supplying the fountain. The statue was first mentioned in 1452, and it has been replaced several times. It was stolen in 1817 and mutilated; the thief was sentenced to life imprisonment (commuted to 20 years at hard labor). After World War I, Mannekin-pis added to his many honors—including several foreign decorations and uniforms—by being made a corporal in the French army, the citation being for "maintaining his position" in the face of the enemy for four years.

Mannhardt, Wilhelm (1831-1880) German mythologist, born in Schleswig and educated at the Universities of Berlin and Tübingen. In 1855 he became editor of the *Zeitschrift für deutsche Mythologie und Sittenkunde*. After various studies in Germanic mythology, he published *Wald-und Feld-kulte* (Berlin, 1875-77; 2d ed., 1904-5), and *Mythologische Forschungen* (1884), significant contributions to the fields of mythology and folklore. He had earlier published *Germanische Mythen* (1858), *Die Götter der deutschen und nordischen Völker* (1860), and *Die Korn dämonen* (1868). Mannhardt was the first scholar to study harvest rites and the ceremonies connected with the vintage, presenting its underlying idea of fertility with respect to next year's crops. Mannhardt followed in Tylor's wake and is considered one of the most able and influential of German mythologists.

mantra The Sanskrit word *mantra* has had as many and as various meanings as its Teutonic-English parallel, lore or learning. The Sanskrit term *veda* meant a collection of such lore, especially sacred knowledge, and the four great Vedas of the Brāhmins were composed, the *Rig-Veda* of lore of hymns, the *Sama-Veda* of lore of chants, the *Yajur-Veda* of lore of prayers and formulas recited at sacrifices, and the cruder *Atharva-Veda* of the multi-varied lore of the Atharvans or fire-priests. The holy verses, sacred texts, stereotyped petitions and formulas from all four vedas were called *mantra*.

The second and more limited meaning of the word

is in the sense of password or formula of initiation. No *guru* (teacher) admits a *chela* (novice) into a Hindu sect without whispering into his ear the mantra or countersign of the order. The Ramanuja mantra was '*Om Rāmāya namaḥ* (So be it! Reverence to Rāma.) Comparison is obvious with the Christian trine formula of initiation repeated by the priest or minister at baptism: *In nomine Patris, et Filii, et Spiritus Sancti* (In the name of the Father, and of the Son, and of the Holy Ghost), and with the corresponding Moslem *bismillah*: *bismillāhi-r-raḥmāni-r-raḥīmi* (In the name of Allah, the Compassionate, the Merciful), which Mohammed carefully modeled along Christian and Jewish mantric lines.

The use of the mantra as a prayer gives it a third or supplicatory meaning apart from its initiatory function. In India, for many centuries, no public religious ceremony nor any private devotion in the home has been complete without the recitation of familiar mantras, which somewhat resemble Christian prayers. They are not of the extempore original sort, however, fostered in Protestant prayer-meeting circles, but are standardized, verbatim, and repetitious. In fact, any form-prayer of any religion is a true mantra.

The fourth and commonest meaning of mantra, and possibly its oldest, is in the sense of spoken or written charm, spell, incantation, or magic word. (See ABRA-CADABRA.) In Hinduism and in theistic Buddhism (where *dharani* is the word often used for mantra) this idea of the magic potency of certain words themselves, even if not understood by him who says them, has long obtained. It is believed that *om* or *aum*, for instance, represents onomatopœically the very hum of the universe, and if caught into a written or preferably vocalized syllable, its power is absorbed into the worshipper or he into it.

The well-known beautiful Gayatri or Savitri: *Om maṇi padme Hūm* (So be it! O lotus-jewel! Amen!) into the words of which infinite esoteric meanings have been read, has degenerated in some circles from a popular prayer mantra into a mere wishing-gem spell. It is used in Japan, China, parts of India, Burma, Indonesia, but most in Tibet. A hermit who has repeated it at least 100,000 times is entitled to be called *Mani*.

The Iranian Zarathustra's message to his people was termed a *manthra*, especially in the form of his noblest prayer, the *Ahuna Vairya*, the "Our Father" of Zoroastrianism, but in later time it was used as a magic incantation, the repetition of which would assuredly cure disease or repel demons. Similarly, the use of the trine Christian formula and the Moslem *bismillah* was extended far beyond the initiatory ceremony, and both these and many other holy phrases were used on many less important occasions as magic mantras to counteract evil or bring good luck. The phrases used in blessing, cursing, and exorcising are in this sense mantras, and so indeed is profanity. The Bible is full of mantras, from the imprecatory psalms to the apostolic benedictions.

Bismillah, along with the Hebrew tetragrammaton JHWH and the Christian ICHTHUS, IHS, and XR, passed into folklore with many legends of the magic power and prophylactic efficacy of the words alone. For one example, in north African Islam it is believed that Allah himself wrote "bismillah" on Adam's breast, Gabriel's wing, Solomon's seal, and Jesus' tongue.

When the name of God is used purely as a mantric

incantation or charmed spell, it is obvious that Christianity, Judaism, and Islam have thereby in that practice reverted to the primitive idea that to know the correct esoteric name of the deity and pronounce it properly is to have him under your control as a sort of genie who must therefore perform your will.

CHARLES FRANCIS POTTER

Manu The hero of the deluge of Hindu mythology. In the *Śatapatha Brahmana*, one day Manu found a fish in the water brought to him to wash his hands. The fish spoke, asking to be saved, and promised in turn to save Manu from destruction: if Manu would keep him in a vessel of water, removing him to larger and larger ones as he grew, and finally to the ocean, he, the fish, would save Manu from the great deluge that was soon to come. The day Manu put the fish in the ocean, "Build a ship," the fish said, "when the waters come, go in it, and I will save you."

All happened as foretold; when the deluge came, Manu went into the ship, fastened the ship's rope to one horn of the fish, who turned up as promised; the fish towed the ship without tire for years, until finally it was over Mt. Himālaya. Then the fish bade Manu tie the ship to a tree and await the subsiding of the waters. This Manu did; and when the waters were drained away, he saw that every living thing on earth but himself had perished. So Manu offered sacrifice, and a woman was given to him for a wife, with whom he reseeded the earth. In the *Mahābhārata*, Manu is performing devotions on a river bank when a small fish calls to him from the water and begs to be saved from a big fish. Manu saves it; it predicts the flood; the story follows.

The Manu of this myth is the seventh of 14 progenitors of mankind named Manu, each of whom was (or will be) lord of the earth for a period of time called a *manvantara* (Manu interval) equal to 4,320,000 years. Each *manvantara* is named for its own Manu, and ends with a deluge. This present *manvantara* is the seventh one, named for the Manu of this myth, son of the Vedic sun god Vivasvat. Thus the world has seven more deluges to go.

manzana Literally, apple: a wedding dance of Largarera in Castile. The bride holds an apple impaled on a knife, and must dance with every man who deposits a coin in the apple. If the coin drops out, it is reclaimed by the man. The rigid posture necessary for holding the knife, and the innumerable dances are thoroughly exhausting. This dance is doubtless of ceremonial origin. It is reported as early as 1555 and certainly is much older. The symbolism of the apple may be similar to the baptismal custom of giving all men an apple, representing original sin, and a bunch of flowers, representing paradise. Or, we may have here an instance of bride barter, found in other European wedding dances, as the Hungarian *mennyasszony tánc*. [GPK]

maple Any of a large genus of trees (*Acer*) of the north temperate zone. Many of the folk uses of this tree are similar to those of other trees, such as the custom, in parts of England, of passing a child through its branches to insure long life, and using it as a divining rod for water. In Alsace storks place a piece of maple in their nests to frighten away bats whose touch will make their eggs infertile. At one time the maple was the emblem of reserve. According to Pliny maple roots were good for a sluggish liver. The Japanese consider

the leaves of the maple akin to flowers and celebrate their appearance with one of the blossom festivals.

Among the Indians of the northern United States and Canada, the sap of the sugar maple was an important commodity. It was formerly much used in cooking, even to season meat. Some tribes claim that the sugar was the gift of Nanabozho, others that it came to the Indians by chance: a lazy squaw tapped a maple tree rather than go after water to cook some moose meat. She fled in terror when the whole thing cooked up into a sticky mass, but her husband enjoyed his dinner and sought her out to compliment her. The Meskwaki boiled the inner bark of several species of maple and drank the decoction as an emetic. The maple leaf is common in Meskwaki beadwork designs. The Chippewas made a dye from the rotted wood.

In New Hampshire people say that the sap ceases to run when the first peepers are heard in the spring. In Maine the old-timers claimed that too much fertilizer and rich earth would change a hard maple into a soft maple in three years.

Māra In Hindu and Buddhist mythology and belief, the embodiment of the powers of evil; in the *Atharva-Veda*, Death personified. In Buddhism Māra is the sovereign of the world of men and gods. As god of lighting and of death, he is also a god of the living, or rebirth, and of desire (similar in this respect to the Hindu Kāma). Since Buddha delivers men from desire, birth, and death, Māra is his special enemy, and thus the tempter of Buddha and of his disciples. He began this role the night Buddha left home by appearing before him and offering him the glories of empire if he would return to a worldly life. When he was repulsed, Māra changed his method and filled the air with thunder and conflagrations. Having failed to dissuade Buddha, Māra waited until he was engaged deep in meditation and then sent fiends and demons, furies, and hideous monsters enveloped by serpents and masses of fire to harass him. The tempter also sent his beautiful daughters, but to no avail, for the darts hurled by the monsters changed to flowers and the fire became a halo around his head. At the moment of enlightenment, Māra appeared again with taunts, asking him to prove his buddhahood. Gautama pointed to the earth to witness and an earthquake followed. In folktales and popular belief Māra is a homeless demon who roams everywhere "in the visible shape of murky smokiness" to catch the souls of the dying.

maraké A mat holding poisonous ants or wasps: used among the Guiana Indians and some Amazonian tribes for magical ordeals. The mat is applied against the skin of young people during puberty ceremonies or against the limbs of hunters and fishermen who seek to increase their skill or restore their strength. The magic ceremonies in which this almost unbearable torture is practiced is also known as maraké. [AM]

Marassa The Haitian term for the twin cult which, of Dahomean-Yoruban derivation, has been preserved with all its attributions of supernatural powers to those who fall in this category, and to the child that follows them. See DOSU; HOHOBI; HONSU; TWINS. [MJH]

Märchen A German word much used by folklorists but without universal agreement as to its meaning. As

generally employed it is very close to the English "fairy tale" but it is perhaps even broader in its acceptance than that very vague expression. It is certainly broad enough to include everything in the Grimm collection of *Kinder- und Häusmärchen*. Here we find what some folklorists call *real Märchen*, such as *Snow White*, *Faithful John*, and *The Frog Prince*; but there are also nonsense tales, cumulative stories, tales of numskulls, and many other divergent kinds.

For those who use Märchen in this broad sense there is a difference made between Märchen and *Sage*. The latter is concerned with things actually believed by the teller or at least told to inspire belief in the hearer. The Märchen is definitely fiction; the Sage attempts to be history or a record of scientific fact. That it is pseudo-history and pseudo-science does not affect the intent of the teller: he is not dealing in a fiction.

On the other hand a man who tells a Märchen, at least in our culture, is making up a story for pleasure without any regard to its truth or as to whether it will be really believed.

Among peoples in other parts of the world than western Europe and the lands influenced by it, the difference just pointed out is not certainly present in the minds of the tale-tellers. How large an element of belief is present in stories that we would find fantastic will differ from people to people, and for this reason some writers have wished to confine the concept of Märchen to the western European cultures just mentioned. But the same tale plots appear in all parts of the world and the differentiation based upon the belief or non-belief of the tale-teller would not seem to be very useful. Shall we say that in some countries *Cinderella* is a Märchen and in other countries not a Märchen? This is the essential position taken by the late Albert Wesselski who wishes to confine the use of the term Märchen to the particular style and narrative attitude found in the central group of Grimm's folktales. Thus interpreted, Wesselski would hold that there was no composing of Märchen until the late Middle Ages or perhaps the early Renaissance. For these same tales when told by other peoples he uses the term Märlein. It must be said, however, that most students of Märchen have not found this distinction very valuable and it seems likely that the broad and loose employment of the word will continue in this way. It is practically equivalent to the English word "folktale." See FAIRY TALE; FOLKTALE.

STITH THOMPSON

Marduk The chief god of the Babylonian pantheon; Baal Merodach of Babylon, the god of the city of Babylon, and the greatest god in the territory under Babylonian dominion following the period of Hammurabi's conquests (20th century B.C.); hero of the *Enuma Elish*, the Akkadian creation myth. Quite clearly, in this myth, Marduk has replaced the earlier hero of the story, Bel or Enlil, for the Marduk of *Enuma Elish* is distinctly a wind god (as was Enlil), and, though all the other important gods are mentioned, Enlil does not appear

in this myth, though he probably was the hero of an earlier, but lost, version. And having replaced Enlil of Nippur, Marduk of Babylon was in turn superseded by Ashur of Assyria.

Marduk was the son of Ea, tall, with four eyes and four ears; from his mouth issued flame. When Tiamat, mother of the gods, determined to battle against them in their attempt to put order to the universe, one by one the great gods quailed at facing her. Marduk, the young, a newcomer to the company of the gods, offered to be the gods' champion, if he were given power equal to that of the other gods. The council of the gods agreed, and Marduk became their overlord in full power in the battle against the sea dragon Tiamat. To test his acquisition of power, the gods placed before Marduk a garment; by the power of his words alone, Marduk caused it to be annihilated, then caused it to re-exist. Thus powerful, and armed with the bow of the rainbow, with the lightning, and with a net held by the four winds, Marduk went forth, riding the tempest, to battle Tiamat and her host.

Marduk cast the net over the dragon. She opened her mouth to engulf him, but he sent the winds rushing into the open maw. With her jaws open and her belly distended, Tiamat fell victim to an arrow shot through her mouth into her heart. Once their chief was dead, the other gods of Tiamat's band were easily captured. From Kingu, consort of Tiamat, Marduk took the tablets of destinies, and thus Marduk became the most powerful of all beings.

Marduk then set about to create order in the universe. Splitting Tiamat's body in two, he raised half to form the heavens and placed the other half opposite Ea's dwelling place to form the earth. He created the stars and constellations, the planets, the order of succession of the calendar. Under Marduk's direction, Ea then took the blood of the executed Kingu and made men to be the servants of the gods. As their last and greatest work, the grateful gods, now organized and each with his work to do, built a capital city for their chief. This, the story of the *Enuma Elish*, was enacted in Babylon each New Year's Day, with Marduk conquering the forces of evil for another year. During the festival the entire epic was read.

As chief god of the Babylonian pantheon, Marduk was able to assume the aspect and powers of any of the gods, since in addition to all else, they derived their provinces from him. Thus, Marduk, as god of the planet Jupiter, lighting the night, became equivalent to Sin, the moon god. Through his consort Sarpanitum, Marduk was father of Nebo, the culture god, inventor of writing and herald of the gods, and originally the god of Borsippa, which became a suburb of metropolitan Babylon as that great city expanded.

marét Among the Botocudo of eastern Brazil, a class of beings, anthropomorphic but non-human, who live in the sky. They intercede with their chief for the human beings they protect, and he, unless he is angry and in a mood to send storms, generally is well-intentioned. The marét are protectors of the Botocudo and will cause bad weather if the Botocudo are injured. They come to earth on a sacred pillar when the shaman calls. He can see them, as can other fortunate people, but most men cannot. The chief of the marét has given the Botocudo

some of their songs, and he taught them how to wear earplugs and labrets. (Lowie, "Eastern Brazil," in *BAEB* 143:1:394)

mariachi A street orchestra of Mexican villages and towns, originally consisting of from three to twelve string players who promenaded the plazas playing for any who offered a coin, but now augmented by brass instruments and strongly influenced by radio and movie styles. The word may be derived from the French *mariage*, since the orchestras were often invited to play at court weddings during the time of Maximilian, who enjoyed their music.

Māriamma, Māramma, or Marī Mātā In modern Indian belief, a village goddess or mother goddess; a malignant disease-bringer. She presides over, or is, smallpox, cholera, and other fatal diseases. Each village has its own mother or tutelary deity, often given a local name. These mothers are more feared than loved and their worship actually consists of propitiatory rites and sacrifices. The Nats propitiate Marī when cholera appears in a village by sacrificing a hog and a libation of spirits. According to William Crooke, in Kānga the goddess is propitiated by the Pachbala rite which consists of the sacrifice of a pumpkin representing a man, by a he-goat, a ram, a cock, and a male buffalo, or by the Satbala, which adds to the above list two human victims. See GRĀMA-DEVATĀ.

Marie de France An Anglo-French poetess and fabulist of the last quarter of the 12th century. She was probably Norman by birth, and may have been born in the vicinity of Paris. Her writing, according to recent scholarship, was done at the court of Henry II of England; the manuscripts are however much later than this period. Her fables, the *Ysopet*, are a translation into French of an English version of Aesop's Fables of Phædrus. To this English telling of the fables, attributed in error to King Alfred, were added some Indian fables. The *Lais*, a group of Celtic tales, are doubtless from Breton originals. She says she heard them sung by the jongleurs; they were probably English versions of the Celtic tales with Scandinavian and Eastern materials intermixed. The stories told in the *Lais* are for the most part tales of love, with romantically tragic endings, and with much of the supernatural in them.

marigold (1) Any of a genus of plants (*Tagetes*) including the French marigold (*T. patula*) and the African or Aztec marigold (*T. erecta*), all having bright golden flowers and pungent aromatic foliage: used both medicinally, as a pot-herb, or in salads. One persistent myth of the origin of these plants is that they sprang from the blood of those slain in Cortés' conquest of Mexico. Claims that it was unknown in Mexico before that time have proved to be false. Marigolds were introduced into Europe from Mexico at this time but, since they reached England from France and Africa respectively, they have retained the respective names. In northern India the marigold adorns the trident of Mahādeva and crowns of these flowers are worn on his festivals.

(2) The pot-marigold (genus *Calendula*) takes its name from the story that the Virgin Mary wore it on her bosom. Many of the folk beliefs concerning the various marigolds have become interchangeable. The origin myth that claims the calendula sprang from a Greek maid, Caltha, who was in love with the sun god and

wasted away watching him is mentioned in connection with all sun-flowers (i.e. flowers which turn their heads to follow the sun's progress).

In Germany the marigold is considered unfavorable to love; in England it is used in "loves-me, loves-me-not" divinations. Just looking at the calendula was supposed to benefit the eyes, and at one time it was said to have the power to show a vision of anyone who has robbed you. The Welsh say if it does not open its petals before seven, it will rain or thunder during the day. In Devon and Wiltshire if you pick marigolds or gaze long at the blossoms you will take to drink, which accounts for the name "Drunkard" which it was sometimes given in those shires. In the 16th century it was used in broths to comfort the heart. During World War II quantities of the flowers and leaves were gathered and used to induce perspiration, and for bronchial complaints. Among Jamaica Negroes marigold, boiled and drunk as a tea, is recommended to start menstrual flow after unnatural cessation, and for other menstrual troubles.

Mari Lwyd The words, which may mean either "Gray Mare" or "Holy Mary," are applied to a custom observed mainly in South Wales at the Christmas or New Year's season. A party of men, headed by one carrying a horse's skull or a wooden imitation, went from house to house, sometimes engaging in a poetic contest with the inmates, and receiving from them coin or drink in a wassail bowl. A very similar custom observed on November Eve in County Cork, Ireland, was called the White Mare. See CELTIC FOLKLORE; HODENING; HORSE DANCE; SAMAIN; TRURON. [RSL]

marinera Literally, of the sea, or seafarer: a popular couple dance of coastal Peru patriotically renamed for the Peruvian navy after the War of the Pacific. It corresponds to the Chilean *cueca*. Though definitely a mestizo social dance, it has retained a plaintive Indian quality in its ingratiating minor melody and its curious step. In duple count against the triple beat of the music, the feet alternately step and twist, with rhythmic knee flexion. The theme of courtship is played upon by approach and withdrawal, and by manipulation of kerchiefs. The woman reacts to the man's advances one moment with scornful pride, the next with head drooping in mournful tenderness. The marinera is gayer and more hispanic than the related *cashua*, *huayñu*, and *sanjuanito*. [GPK]

Marjatta In the *Kalevala* (Runo L), the mother of the child who supplants Väinämöinen. She had always lived a virgin, but one day ate a cranberry which cried out to her from the hill to come and eat "before the slug should come." When the hour of childbirth came, mother, father, and neighbor all turned her out of doors. She sought a stable in a clearing wherein to have her child, and prayed to the horse for his warm breath: "O thou good horse, breathe upon me . . ." When the horse breathed upon her, the room was filled with steam, the steam bath to ease her pain that had been refused her in all the houses.

And a sinless child was given
On the hay in horses' stable.

This seems to be, especially since it ends the long pagan epic, a Christian episode, Marjatta being equated with Maria, but the incident may be pagan in origin as

magical impregnation and virgin birth is a common folklore incident elsewhere than in Christian countries, and since Marja is the Finnish word for berry.

marjoram Either of two pungent herbs (genera *Majorana* and *Origanum*) of the mint family: used in cooking and, formerly, medicinally. It was one of the "precious herbs" brought from the Old World to the New by the early settlers. In Greece and Rome bridal couples were crowned with this herb. Gerard in his *Herbal* (1597) says that sweet marjoram (*M. hortensis*) is "good for those who are given to overmuch sighing." In the doctrine of signatures marjoram was one of the herbs recommended for head ailments. It was considered a cure for headache and toothache and is still in use in England as a spring tonic. From *Origanum majorana* was made a medieval German folk tea highly recommended as an abortifacient and contraceptive. The pungent oil of the marjorams was used in perfumes, and in all manner of toilet preparations.

marked culprit The clever miscreant of folktale, who, when marked in some way during the commission of a crime, marks everyone else and so avoids punishment (K415). The story of Ali Baba uses the motif: the robber chief marks Ali Baba's door, but the clever servant Morgiana chalks the same mark on all the neighbors' doors, thus making it impossible for the robber to recognize the house. In the second story of the third day of Boccaccio's *Decameron*, the king discovers that someone has just been in bed with the queen. He finds out who the guilty person is by feeling the pulses of the sleeping servants; the guilty groom's heart is beating rapidly. When the king clips the hair of the groom just above the ear so that he can pick him out in the morning, the groom gets up and does the same to his companions; the king is forced to let him escape with only a vague admonition. Hyena is promised a child, in a tale from East Africa. When he is about to come and get the boy, the mother gives her son a bell to tie to his ankle so that Hyena will know him. But the boy ties bells to the ankles of all his playmates and tells them to answer to his name. The mother then shaves the son's head. He shaves hers too, and when Hyena enters their hut in the darkness he seizes the mother, for she is the first person with a shaven head he encounters. The motif is found in stories from Italy, France, the Netherlands, Finland, southern Siberia, North Africa, Arabia, Africa, and elsewhere. It is related to the telltale hand-mark (H58), found in the Eskimo and the North American Indian *Sun Sister*, *Moon Brother* tale (A736.1). The clandestine lover is marked by the girl as he embraces her by means of paint or soot on her hands. Sun sister then pursues her marked moon brother into the skies. The marking of the night visitor is found in other North American Indian tales, e.g. *Dog Husband*, *Bear Woman*, *The Deserted Children*.

market of the dead An element in West African tales about orphans, which characteristically figures where a mistreated child runs away from home and comes upon its dead mother at one of these centers. [MJH]

Marko Marko Kraljević (Marko the King's Son); the great hero of South Slavic (Serbian, Yugoslavian) folk song and ballad; a historical personage who died in 1394. More than a hundred songs and ballads relate the

career of this prince, from his birth to his death. Though historical references sometimes appear, they are outnumbered by the mass of folkloristic material in the poems: Biblical stories, folktales, anachronisms, etc. His deeds are those of a hero larger than life: he is stronger than other men, drinks more than any other, is firmer and crueller with women. As a ruler, Marko is just, a lover of liberty, a God-fearing fighter for the Faith. In view of the fact that Marko was really a Turkish vassal rather than a fighter for Slavic independence, and a plainsman rather than a mountaineer, his reputation as the Serbian hero of heroes is perhaps strange. The stories of the ballads of Marko often resemble other ballad stories of Europe; parallels to *Edward, The Noble Moringer*, etc., are clear. Marko ballads are known in Bulgaria and Rumania as well as Yugoslavia. See BALLAD.

marré Literally, to tie; term used in Haiti to denote proper control of a supernatural being (*loi*) of the vodun cult by a devotee; also used in connection with magic. [MJH]

marriage The confusions found in general discussions of marriage arise because of failure to note that as marriage is a word it can be defined, whereas matrimony is a state of being or a way of life and can only be described. In the Occident the English word marriage and other words with almost identical meanings in other European languages has a fairly reasonable legal, social, and theological reference, though because of the confusion of American law a distinguished poet and critic had to ask the court to explain to him whether or not he were married and if so to whom. There is no doubt that he performed the rituals which the word marriage compactly refers to. The question for the court was to decide whether the rituals were appropriate at the time they were performed, whether they "took," and whether in the court's opinion the man was in a state of matrimony. Consequently, when observers, still uncertain about these initial confusions, examine the rituals attendant upon marriage, if any, or customs, habits, licenses, ways of life similar to those we associate with the state of matrimony, they are often tempted to make broad generalizations which further confuse the issue. Finally, when in an unknown language or through an interpreter they have to ask natives about rituals or ways of living which are unknown to both the interpreter and the natives, they produce lengthy studies invaluable for their direct observations of habits and customs, but somewhat confusing to the general reader.

An Anglican divine has described matrimony as an honorable state, instituted by God for the continuation of the race and the mutual comfort of men and women. Although the description is obviously eclectic, it serves well enough as a statement of Occidental views of the subject, for it lists the relation to divinity, the physical relations of the sexes, and the spiritual well-being which is supposed to be produced by the magic of ritual-marriage. Parts of this view seem to be accepted by many cultures in many sections of the world as well as by cultural strata in the Occident. A part of the difficulty in coming to an understanding of the comparative folklore of marriage results from the different emphases which students place on the several components of the description. The promiscuousness of Australian aborigines and

Hollywood stars differs principally in the Hollywood determination that God's blessing be conferred on each new attachment, no matter how temporary. In China the first wife and her husband kneel before the tablets of his ancestors, though the approval of the social unit to which they belong is more important than the good-will of the dead; children by secondary wives, taken informally, have all the rights and dignities of the children of the first wife. Communities where sexual promiscuity is taken for granted (examples: Chukchee, Bushman, etc.) form marriages, that is, permanent unions, comparatively late in life and the component of mutual comfort is important, whereas youngsters who indulge themselves because they "are married in the sight of God" are little concerned with the continuation of the race, more concerned by mutual comfort, though at the same time they are aware of the traditional need of divine sanction which is important in the traditions of our Occidental culture. Conversely, the justification of divorce in the Occident is frequently that the couple is "no longer married in the sight of God," that theirs is no "true marriage" with the implication that God, whose blessing they implored at the beginning of their relations, made a grievous mistake for which wives must be compensated by alimony.

The folklore of marriage is extensive. Much of it has been created by professional ethnographers, more by married folk who, puzzled by the confusions introduced by the religious, the sexual, and the social urges, have tried to make sense in a situation which is constantly disrupted by powerful impulses, each of which is good in itself.

Some of the difficulties met by writers on marriage are linguistic. Many languages have no term for marriage, wife, or husband, which refer to the several components which Occidentals consider important. Men and women observed to be living together are frequently referred to as married, though a closer investigation of their relations may show that only one of the components of marriage is present, perhaps in some minor aspect. This situation is further complicated by the very human tendency of persons being questioned to reply in terms which the questioner will understand either because of ignorance of the meaning of the question or because no term exists which will explain the relationship in a satisfactory manner.

Attempts to define marriage in terms of the length of time the relationship must endure fail because of the great diversity of custom. Thus Westermarck's definition, "a more or less durable connection between male and female lasting beyond the mere act of propagation till after the birth of the offspring," leaves much to be desired even in Occidental mores, much more in the mores of distant peoples. Many peoples do not consider propagation a "mere act" but make it central in the marriage relation. The general agreement throughout the history of Occidental culture that adultery is a justification for divorce, whether or not the adultery results in offspring, is here pertinent. Some societies in Central and British East Africa for example, do not think a girl is attractive until she has become pregnant and are indifferent as to the father. Granet has given reason to believe that the spring festivals of ancient China were promiscuous couplings with marriages taking place in the autumn.

Among some Indochinese, the Wadaba of Somaliland, and the Eskimo Aleuts, couplings are considered casual until children are born and the women undertake their duties. A survey of human custom shows that relations generally regarded as matrimonial may last for a few hours or for many years, even after death, as is seen by the custom of *suttee* in Asiatic India, the burning of papier maché concubines in China, and the Mormon belief in "sealed wives."

The ages at which marriages are contracted show similar variations. Child marriages, customary in India and Central Africa and known in the Occident, have been contracted by parents while their offspring were still in the fetal stage. Ruth Benedict reports that these marriages do not imply prepubertal sex play even in communities such as the Trobrianders where this sort of game is recognized or even encouraged. In the Admiralty Islands a child bride must cover herself with mats when she meets any male of her husband's social group. Among the West African Yoruba the child bride must prove that she has a virginity for her husband to destroy at the age of puberty. In Northern Nigeria the child bride is brought up in her husband's home, but if she has relations with him her family may take her back without returning her bride price. Late marriages are customary in the Occident, among the North American Iroquois Indians, the Masai of East Africa, and elsewhere for a variety of reasons. In the United States the husband is responsible for establishing a separate home for himself and his wife and for supporting a wife none of whose duties except sexual are well defined. Frequently he has the added responsibility of supporting a former wife or wives and their children. The Iroquois postponed marriage until the age of 30 for fear of ruining their war magic. The Masai of East Africa gave similar reasons for late marriages, although they had access to the kraals of the unmarried women, a situation which was repeated in World War II when American wives were excluded from theaters of war in which their husbands were serving, and marriages with native women were permitted by military authorities only when "necessitous," though the young men were encouraged to have casual sexual relations with native women. Some medieval bishops required their charges to be continent for a fixed period of time before attending mass; and for the greater mysteries this period was extended in Christian as well as in pagan cultures.

The physical component of marriage is thus seen not to be a "mere act" but an act with magical implications. Even in communities where sexual intercourse within a permitted group is a casual exercise, it is, on some occasions enjoined, and on others, prohibited. In many communities marriage is formal, and ritualized defloration is required. The marriage night is followed, in China and elsewhere, by a display of the bloody sheets to prove that defloration occurred. When brides are not intact, whether by accident or by the woman's promiscuity during the tumescence of courtship, the fact is, in many communities, including our own, carefully hidden. In some African communities, the chief man and his principal wife must have intercourse within a given time after the group has moved to a new location. Communities with orgiastic customs frequently require general and promiscuous intercourse as calendrial ritual

though in many of them, too, this promiscuity follows a period of enforced continence.

Human marriage customs are frequently projected into natural phenomena by a sort of "pathetic fallacy." Thus the sun in many places is thought to marry and fertilize the earth. In China heaven does it. When these unions are calendrial holidays, ceremonies are performed to fix the act, increase its potency, and rejoice with the newly united or reunited couple.

Symbolic marriages are known in many parts of the world. In the Occident proxy marriages are performed and recognized by the ecclesiastical and civil authorities when the two principals cannot be together but a marriage is necessary either to protect the rights of the unborn child or to save the reputation of the pregnant woman. The temple prostitutes of India were married to a dagger, which possibly, at one time or another, was thought of as a phallus. On New Year's Eve the Germans tied trees together with ropes, said that they were married, and hoped for increased production. In parts of India the shrub *tulasi* represents a goddess and is annually married to Krishna or his image. Frazer, remembering that Pliny embraced a beech in a grove sacred to Diana and lay under its shade and sacrificed wine to it, speculates that the priest of Nemi embraced the tree he guarded as though it were his wife. Ceremonial marriages of nuns to Christ and such terms as the "bride of Christ" also refer to symbolic marriages.

The Occidental capacity for irony is demonstrated by the Occidental emphasis on the physical component of cohabitation and at the same time the effort to "solemnize" marriage by invoking divine sanctions. In other communities the casual couplings of men and women are taken for granted and matrimony exists only when each undertakes duties and work traditionally appropriate to husband and wife in that community. Whether this occurs late in the relationship or early is determined partly by tradition and partly, no doubt, too, by impulses which are difficult to analyze. In the Occident, though woman's work is never done, failure to do that work has only recently been recognized, and in scattered areas only has it been accepted as cause for divorce. For years divorce has been granted only on grounds of adultery and marriages have been annulled only if it could be proved that cohabitation has not occurred.

The folklore about matrimony created by married people themselves is in part due to the difficulty of adjusting themselves individually to the powerful sexual, social, and religious impulses which matrimony involves and then in adjusting each other to them. This folklore is to be found in beliefs and behavior patterns too numerous to be touched on here. They range from firm beliefs about how frequently intercourse is permissible within the limits of decency, whether either partner should see the other in a state of nakedness, the goodbye kiss in the morning, the observance of anniversaries, and the appropriate behavior on days and seasons appropriate for marriage, appropriate ages, and the like on those occasions. Though these may seem to be trivial, they constitute for small or large groups that "severely objectified network of historically determined patterns" which Sapir called "custom."

A paging through the other articles in this publication will disclose attitudes toward marriage and matri-

mony which, by their amazing variety, will at first bewilder the reader. A partial understanding of them is possible only when one dissociates oneself from the "we-group" which is always right because it is ours and recognizes that the "they-group" lives according to patterns of belief which are in many ways similar to our own. But because patterns of custom and belief are so deeply a part of our characters it is difficult to make this transition in an evaluation of the general folklore of marriage and matrimony. See ABDUCTION; AMASIADO; BEAST MARRIAGE; BRIDE; CECROPS; section on *Marriage* in CHINESE FOLKLORE; COMMONLAW; HIEROS GAMOS; KEEPERS; SVAYAMVARA.

R. D. JAMESON

☞ Marriage as a social institution, or a ceremony, is seldom accounted for in North American Indian mythologies, but knowledge of intercourse, and how such knowledge was obtained by the first human couple or by young persons, is fairly frequently mentioned in myths. Often tales explaining how people first learned to have intercourse and procreate contain mention of misplaced genitalia; other tales, such as the Zuñi story of "The Boy Who Had to Learn to Marry," have no such mythical setting, but are told of young virgins—in this case, a boy whose grandmother makes him ready for marriage by sleeping with him herself. The Shawnee state that such a practice was actually followed in former times; young Shawnee boys and girls were initiated into sexual intercourse by old men or old women.

Tales concerning the courtship and marriage of specific beings, either human or supernatural, are abundant in American Indian mythology. Daughters are sent by their families to marry good hunters; youths and girls are too proud to marry and ill fortune befalls them; girls court men; a poor boy marries and turns out to be a great hunter; Coyote and other tricksters court and marry women under false pretenses; young men seek desirable girls and have a series of tests imposed on them, or the reverse situation occurs, especially in Southwestern tales; girls or youths marry supernatural beings, a man marries a fox, a buffalo, a dog or a deerwoman; Sedna, the Eskimo heroine, marries a bird (or dog). All these and many more tales of marriage are abundant in the large body of American Indian mythology.

Marriage among the American Indians was usually based on contracts between two families, although elopements and marriages based on individual choice were not unknown social phenomena. Contract-type marriages were arranged by either the bride's or the groom's family; exchange of goods and native currency between the two families was customary. Child betrothal was often practiced. The marriage ceremony itself ranges from practically none at all, to fairly elaborate ceremonies in which the couple eat together and have prayers recited over them, to the very elaborate, wealth-displaying marriage ceremonies of the North Pacific Coast nobility. The newly married couple may live with either the bride's or groom's family after marriage, temporarily or permanently, or live by themselves; if the latter, relatives often build their first home for them before they are married. A girl was, generally speaking, considered ready for marriage after she had reached puberty, and the girl's puberty dance of many western tribes functioned as an announcement that the girl was now ready to be married; a youth was considered ready after he had demonstrated his ability to hunt successfully.

Polygyny and polyandry (multiple wives or multiple husbands) both occurred, the former more generally, all over North America except in the Southwest. There, among the Pueblo peoples especially, monogamy was and is the rule, but divorce is a relatively simple matter; the wife puts the man's personal belongings outside the door of their dwelling, and the man by this token knows that he has been divorced. Grounds for divorce among the American Indians were barrenness of the woman, scolding on the part of the woman, physical cruelty and failure to provide on the part of the man, laziness on the part of either spouse. [EWV]

☞ The Catholic service has supplanted indigenous rites in most parts of Mexico and Central America. Where ancient forms are still found, they usually involve the use of the *pedidor* or "go-between" who, speaking for the boy or his father, asks the parents of the girl for her hand in marriage. If this is granted the suitor usually is expected to work for the girl's father, either bringing him firewood and other presents, or laboring in his fields for a stipulated length of time before the marriage. Actual marriage ceremonies usually are simple, involving feasting for both families. Anciently members of the priestly class often lectured the young couple on their duties and responsibilities as spouses and parents. Among many groups today godparents are expected to do this. [GMF]

Marsk Stig The hero of a sequence of Danish ballads; like Robin Hood, a champion of the people against the tyrannous king Eric. [MEL]

Marsyas In Greek mythology, a Phrygian satyr or silen, associated with the river Marsyas, a tributary of the Meander in Asia Minor. Athena had invented the aulos, an oboe-like instrument (often called a flute); but when she saw how it distorted her cheeks while she played she threw it away. Marsyas picked up the instrument, risking the beating that Athena gave him. He learned to play so well that he challenged Apollo to a musical contest. The god, playing the lyre backwards (upside down), which Marsyas could not do with his instrument, won the competition and, in keeping with the agreement that the winner might do as he pleased with the loser, tied Marsyas to a pine or a plane tree and flayed him alive for his presumption. The river was said to have come either from Marsyas' blood or from the tears of his companions. Within historical times his skin was displayed in Asia Minor. The whole story seems to be etiological. Some see in it the conflict between aulic and citharic music. Marsyas, as a Phrygian figure of myth, naturally became associated with Midas, who is said to have been a judge of the contest with Apollo, and whose ass's ears resulted from his vote for Marsyas. S. Reinach, seeing a relationship between the flaying, the ass's ears, and the preservation of the skin, postulates the sacrifice of a sacred ass as underlying the myth; and Jane Harrison (*ERE* xi: 514) adds that the *peau d'âne* of French literature may originate here. See MIDAS.

Martin Krpàn Slovene peasant hero of the region of Istria; a salt smuggler who found favor with the Viennese emperor, had quite a career attending the emperor in Vienna, but finally asked and was granted the boon of going home to his farm and the right to import salt free. Martin Krpàn was the typical strongman folk hero,

and has been regarded by some scholars as a kind of personification of the Slovene people.

Martinmas The feast day of St. Martin, November 11, celebrated especially in Europe and the British Isles. St. Martin, patron saint of France (especially Tours), patron saint of tavern-keepers, beggars, and vine-growers, and of drinking and reformed drunkards, was born in Pannonia, Hungary, about 316, died 397. He was elected Bishop of Tours about 374. When he heard that he was elected it is said that he hid himself in a stall but was discovered by a goose who noised the discovery. This is one of the stories told to explain why his day is celebrated on the Continent with roast goose.

The legend of St. Martin's cloak is probably the most famous connected with him. One cold day at the gates of Amiens in Gaul, Martin divided his cloak with a shivering beggar. His half is kept as a relic. The story of the wine cup passed by the Emperor Maximus at a feast to honor Martin, and passed on by Martin to a humble priest, is another familiar tale.

Martinmas falls at the time of year when fodder is scarce and the seasonal slaughtering of cattle takes place. J. A. MacCulloch considers the Irish invitation to Martin to join the feast as a transference to him of some earlier primitive sacrificial slaughtering and propitiation of an animal-god. (In Ireland if you have roast goose for dinner on Martinmas, St. Martin is invited to dine. Whoever omits this invitation will get no more goose himself for a year.) Irish legend also says that Martin was cut up and eaten in the form of an ox. This carries over into Scotland and parts of England also, where an ox, called a *mart*, serves for the feast.

In Ireland the blood of animals is always shed on Martinmas and meat is traditionally eaten. Wild birds or domestic fowl are killed, or a sheep, lamb, kid, pig, calf, or cow is killed on St. Martin's Eve and eaten on St. Martin's Day with special prayers. The blood of this animal is sprinkled in the four corners of the house, on the threshold, walls, and floor, and a little is smeared on the forehead of each member of the family. This keeps evil from the dwelling and its inmates and is potent for one year to the day. Aran Islanders tell a story of St. Martin, that on his travels he came to the house of a poor woman and asked for food. She had no meat for the stranger but sacrificed her child. Martin ate what was offered, and when he left the house the woman found her child asleep in the cradle, alive and well. The people say it is gratitude for this miracle which obligates them to sacrifice a living thing on Martinmas. And roast cock or goose is fed to any beggar who comes to the door on November 11.

Martinmas, falling as it does at a time when the crops are all in, surplus animals are killed, and new wine is opened, is a feast of thanksgiving and great cheer. Thus St. Martin is a saint of cheer and conviviality and the medieval Martinmas has been likened by some writers to the ancient Vinalia, with Martin in the role of Bacchus. Those who got drunk on new wine at Martinmas were called Martinmen. In France and Germany children set out jugs or vessels of water on St. Martin's night, praying "Martin, Martin/ Change the water into *vin*." The parents do this instead, and also leave a little Martin's horn beside the jug, to be found in the morning. These little horn-shaped cakes of St. Martin are said to be a

survival in northern Europe of Odin's harvest cakes. Formerly in Swabia the children gave their teachers gifts on Martinmas—usually a live goose decorated with ribbons, some corn to feed the goose, a jug of wine, and a huge cake. In Dunkirk there is a legend that "the whole populace goes mad" on Martinmas from 5 to 7 P.M., reenacting the ancient search for St. Martin's stray donkey, which took place in that village in 386. The people run around with paper lanterns and tooting penny horns to call the ass. The penny horns represent the fisherman's trumpet that was used on the original occasion.

In Yorkshire, England, groups of women singers formerly went from house to house in the villages on Martinmas, carrying an image of the Christ adorned with evergreens, and singing songs of the Nativity. This is said to have taken place every night between Martinmas and Christmas Eve. They were entertained in the houses with cakes and fumety. English children still go about in some sections soliciting apples and nuts and chanting "Martin is a good man/ He'll repay you if he can."

In Ireland no fisherman would go fishing on St. Martin's Eve or St. Martin's Day. If any one did, he would meet a horseman riding over the sea towards him, followed by a destroying storm. It was also wrong to turn any kind of wheel on St. Martin's Day—mill wheel or cart wheel or spinning wheel. Misfortune came upon those who ignored this prohibition.

There is a good deal of weather lore associated with Martinmas. In the English Midlands, the weather on St. Martin's Eve indicates the kind of weather to expect for the next two months. In England generally if St. Martin's Day is fine, the winter will be cold; if there is frost before Martinmas the winter will be mild. There is a saying that "if the goose slips on the ice at Martinmas, she will stick in the mud at Christmas." The balmy weather of early November in Europe is called St. Martin's summer.

In France in the days when vaccination was still a terror to the people, prayers to St. Martin to save from smallpox were thought to be an efficacious substitute. St. Martin also saves from sudden death.

Mārttāṇḍa In Vedic mythology, the sun; the son of Aditi by the sun; her eighth son, whom she cast away; one of the Ādityas.

marujas Literally, sailors: a Portuguese religious dance (*dança dos marujas*) performed by boys enacting a sailors' drama of escape and gratitude to the Virgin. [GFK]

Marunogere Deity and culture hero of Kiwai Papuan (Melanesian) mythology, associated with the first pig. He created the first coconut tree, among his many "firsts" for mankind, built the first men's house, inaugurated the *moguru* ceremony. He has two ferocious dogs who live with him in Adiri, the afterworld, and come forth to raid the villages. See G. Landtman, *The Kiwai Papuans of British New Guinea*, London, 1927. [KL]

Maruts In Vedic mythology, the storm gods, allies of Indra, who ride on golden cars gleaming with lightning. They are variously sons of Rudra and the earth-cow, Prithivī; the sons and brothers of Indra; in the *Rāmāyana* and the *Purāṇas*, they rose from an unborn son of Diti, shattered into 49 pieces by Indra. They are represented as warriors, 21, 180, or 27 in number, armed with

spears, wearing helmets, riding the winds, shattering the trees of the forest, or killing men with their lightning. They also have a beneficent aspect in that they bring healing remedies.

Mary Celeste A brigantine, built in Nova Scotia in 1861 as the *Amazon*, and found drifting abandoned by all hands, between the Azores and Portugal in 1872. The case of the *Mary Celeste* is so puzzling, and leads so to conjecture, that many attempts, literary and otherwise, have been made to explain it. At the beginning of November, 1872, she sailed for Genoa from Boston with a cargo of alcohol. On December 4, she was met by the *Dei Gratia*, boarded, and sailed as a derelict to Gibraltar. The *Mary Celeste* flew no distress signal; her sails still stood, though somewhat disordered; her compass was broken; the crew had left without oilskins and pipes; the ship's register, its sextant and chronometer were missing. One of the boarding sailors said that she seemed to have been abandoned in a hurry, from the evidence aboard. Water had caused some damage, as if the ship had been struck by a wave. But beyond the physical fact that the ship still sailed and that no one was aboard, nothing definite has ever been brought forward to show what happened on the *Mary Celeste*. Writers and yarners soon filled the tale out. The ship was doomed to hard luck; she had stuck on the ways when being launched. When the *Dei Gratia* met her all sails were set; the wash still hung on the line; the chronometer was ticking away; in the mate's cabin there was a slip of paper on the table with an unfinished addition on it; a sheet of music was in place on the skipper's wife's melodeon; in her sewing machine a child's pinafore was being stitched; an opened but unspilled medicine bottle was on the table; in the dining room coffee, bacon, oatmeal, and a hardboiled egg were on the table. Yet the crew had abandoned ship completely and hurriedly; there was no sign of violence. Still further folklore says that all the ship's boats were in place on deck; but in fact the ship had carried only one boat, instead of the usual two, on this voyage, and that boat was missing. The two most plausible explanations, according to George S. Bryan (*Mystery Ship: The Mary Celeste in Fancy and in Fact*), are that a slight explosion of alcohol fumes in the hold frightened the crew into the boat and that the bowline parted; or that the crew tried to abandon ship when it seemed she would pile up in the Azores, and were lost in the surf. The *Mary Celeste* finally was lost on a reef off Haiti in 1885 under suspicious circumstances. The trial of captain and owners, for an attempt to defraud insurance companies by deliberate wrecking of a ship carrying a phony cargo, ended in a jury disagreement.

Masān In Hindu belief, a hideous black demon or ghost who comes from the ashes of the funeral pyre and afflicts children with disease, especially with consumption, by throwing funeral ashes over them. The Masān is usually regarded as the spirit of a child, but in the northern hills it is said to wander about in the guise of a bear. In the Punjab the shroud of a child who dies from consumption is washed, preserved, and placed under the next child born to protect it from the disease.

Masauwū Hopi Indian god of death, war, fire, and night: a towering figure, the first denizen of Hopiland, conspicuously individualized and of paramount impor-

tance in the Hopi pantheon. Masauwū is the prototype for a Hopi society, the chief of which impersonates the god in a masked dance. After a burial the Hopi mark four parallel lines with cedar charcoal, in four places across the trail back from the grave, to "close the way" against this god. Masauwū is not found in any non-Hopi pueblo; at Laguna the name occurs, but the identification is with the War Brothers. See AHAYUTA ACHI. [EWV]

mascaradas A masquerade of the French Basques of Soule, loosely related to the Moriscas. During the last weeks before Lent the performances are assiduously rehearsed for carnival time. First there is a procession of the characters: *rouges*, reds (see PYRRHIC DANCE), the beautiful or good ones; and *noirs*, blacks, the uncouth ones. (See PERCHTEN.) The *rouges* include the following characters: Zamalzain, a hobbyhorse; Kantiniëra or Vivandera, a man-woman; Cherrero, a pig-man; Gatuzain, a cat-man; Señor, a Lord; Señorita, a Lady; Enseñeria, a banner-bearer.

The performance itself starts with a mock barricade between the two factions. The reds dance branles: a *branli haustia*, gavotte, and a farandoule-type serpentine. One by one they exhibit fantastically dexterous leaps. They conclude with a "snail." Then the blacks perform the *fonctions*, first as burlesque on the display by the reds, then by original tricks over a glass of wine. Their hobbyhorse is the star, the most dexterous dancer. In the end he loses his strength by being shod by a gelder, then recovers.

This conglomeration of personages and dance figures combines all of the fertility symbols: transvestite, leap, serpentine, and battle of two factions; it formerly contained more vivid enactments of resurrection mime. [GPK]

maschalismos An ancient Greek practice; the cutting off of the hands, feet, nose, ears, etc., of the victim by his murderer, stringing them together, and tying them under the armpits of the corpse: an attempt to avoid retribution by making it impossible for the ghost to follow the slayer. The piercing of the feet of Œdipus when he was abandoned as an infant may have had some such reason underlying it. Similar customs prevail in many parts of the world to avoid the attentions of the unfriendly dead. In the Moluccas, the body of a woman dying in childbirth is buried with pins stuck through the several joints and with eggs placed under the chin and armpits; it is believed that the dead fly as birds and that the presence of the eggs will influence the maternal instinct and prevent the ghost from leaving the body. Generally in Europe, suicides were buried with a stake driven through the heart, or with the head cut off and placed between the legs; still practiced in many parts of Britain and the Continent is the tying together of the feet or the large toes of the dead. The Omaha slit the soles of the feet of those killed by lightning; the Basuto and Bechuana slit the sinews and spinal cord of the dead; the Herbert River aborigines of Australia beat the body, often breaking the bones, and filled incisions made in it with stones.

mascot A person, animal, amulet, etc., thought to bring good luck to a household, sports team, or the like: literally, little magician, from Provençal *masco*, sorceress. The mascot of a baseball team in the United States is usually a young boy who wears the team uniform and is thought to be the luck of the team in miniature. The

animal mascots of American colleges are chosen for the nicknames of the athletic teams: the Army mule, the Navy goat, the Yale bulldog, the Columbia lion, the Princeton tiger. Sometimes, as in the latter instance, the students merely masquerade as the animal. So too, many fliers, automobile-race drivers, or even ordinary automobilists, have mascots in the form of toy animals, baby shoes, luck medals, etc., attached to their instrument boards or windshields, in the belief that the mascot will avert dangerous accidents. In southern France, gamblers' mascots are amulets: a coin with a hole in it, a bit of coral, etc.

Masewi or Masewa Son of the Mothers of the various Keresan pueblos; a fairly prominent character in Cochiti and other Keresan mythologies. It was Masewi who was sent into the universe by his Mother to place the sun properly in the sky. In a Cochiti myth Masewi and his brother Oyoyewa take charge of the contest between Naotsiti, Mother of the Navaho, and Uretsiti (Iareku), Mother of the Cochiti. At the time of the emergence from Shipap, Masewa led the people up; it was he who told them where to go and what to call their pueblos. See AHAYUTA ACHI. [EWW]

Mashya and Mashyoi In Persian mythology, the first human pair. In the first millennium, according to the *Bundahishn*, a double plant was produced from the semen of Gaya Maretan. From the ten leaves of this tree came the ten varieties of mythical men—those of the earth, those of the water, the one-legged, the breast-eared, the breast-eyed, those who have bat wings, the rail, and those with hair on the body. The vegetable then passed into human form as a couple. Because they worshipped Angra Mainyu instead of Ahura Mazda they became the prey of the druj for fifty winters and had no intercourse. After that they had a pair of children which they immediately devoured. Ahura Mazda interfered with this procedure and the pair did not eat the seven pairs of children which followed. Mashya and Mashyoi died when they reached the age of 100. Their children, after a period of fifty years, brought forth the 15 races of mankind.

masks The function of masks varies from society to society, so that few generalizations can be made either as to their form or uses. They are undoubtedly very old. Not only do we have early Greek and Egyptian masks, but there is reason to believe that the figure known as the "Sorcerer" from the cave of Trois Frères, in Ariège, France, which depicts an erect reindeerlike form standing on human feet, and which dates from Paleolithic times, may represent an early form of masking. Masks figure in recreational activities, they are worn by healers, employed to disguise members of secret societies, used in the worship of the gods, and to convey authority. They are made of all manner of materials, are carved or painted, or both; they may be large or small; in one piece or with moving parts; they may be realistic or highly conventionalized. They may be worn in front of the face or carried on top of the head; they may form part of a whole costume, or be worn by themselves. In many cultures, masks are a primary art-form, the finest artists lavishing their best technical and esthetic competence on their production. The African mask, derived from the Congo and western Africa, was the inspiration of much of "modern" French painting, while the masks

of the Iroquois healing societies, of the Kwakiutl Indian religious groups, of the Melanesian ancestral cults, and the like, have achieved a comparable, though somewhat more restricted, fame. Various theories, historical and psychological, have been put forward to explain the wide distribution of the use of masks, but none seems to be more than speculation. As in the case of explanations of other similar phenomena, it is likely that all theories have some degree of validity, but that none will hold for all cases, or even in any given case. [MJH]

 Masks carved from wood, molded from clay, woven from basketry materials, bark, or braided corn shucks, or made from cloth or hide are used by the Eskimo and by many North American Indian tribes, usually for religious ceremonies, girls' puberty ceremonies, or in doctoring, to represent male, female, or animal supernatural beings. Masks are either simple as the False Faces of the Delaware and some Eskimo masks, or elaborately decorated with shell, bark fiber, hair, herbs, feathers or down; many are painted symbolically, as on the North Pacific Coast and in the Southwest. Mechanically some American Indian masks are quite elaborate, being provided with an interior device by which the eyes or mouth can be opened or closed; or different parts of the mask are so hinged that the wearer can change its aspect. The wood carvers of the North Pacific Coast excelled in making such elaborate masks; they and the Eskimo also made compound masks with double faces, the outer of a bird or animal, the inner of a human being. The outer mask was held in place by pegs, and could be quickly removed at a certain point in the ceremony when a supernatural being was supposed to change from animal to human form.

In the Southwestern pueblos, where masked dances are customary during the half of the year that the kachinas are visiting on earth, there are many proscriptions for the handling of dance masks. Hopi mask painters, for example, must purify themselves before painting the masks, and Hopi masks must be put on and taken off with the left hand only. Masks are not always worn over the face by the Pueblos; some are carried on poles; some set in a row to form altars and "fed" with sacred cornmeal. In certain Eskimo ceremonies also, women wore masks on the fingers of one hand.

The chief masked ceremony of the Central Eskimo was the thanksgiving festival in the fall, to banish disease and ensure hunters success. The North Pacific Coast winter ceremonial season saw many masked dances given, including the Hamatsa or Cannibal Society initiation. Shamans in this region also wore masks when curing patients and during doctors' contests. Masked dancers representing the gahe or supernaturals lead the dancing in the girls' puberty ceremony of the Chiricahua and other Apache groups of the Southwest. In the pueblos dance masks are sometimes referred to as kachinas, since many masks represented these ancestral and mythical beings, and the youth who danced in such a mask was temporarily transformed into the kachina represented. Hopi men sometimes invoked their masks, thanking them for favors conferred. Some Hopi masks belong to clan groups and are kept by them. No uninitiated child may look upon a kachina dancer with his mask removed, and pregnant women must not touch certain masks. A simple mask is put over the face of the dead by the Hopi.

The Iroquois tribes of the Eastern Woodlands, besides

using False Faces, carved grotesque wooden heads and masks of male and female supernatural beings, some of them, as the Flying Heads, notable for their distorted or twisted lips and glaring or drooping eyes.

On the lighter side, young people in some tribes made queer masks in play or festivities; poor boys among some of the Siouan tribes made masks of bladder or raw-hide representing the head of the Thunderbird, when the first thunder was heard in the spring. Donning these, they called on their uncles, imitated the sound of thunder, and collected presents. On the Northwest Coast masks were occasionally made as children's toys, as figures of the kachinas are made for Pueblo children. See KACHINA; GAHE; FALSE FACES. [EWV]

 Masks are worn by dancers in a great number of South American tribes from the Guianas to Tierra del Fuego. Unfortunately the function of the masks is not always clear. The Ona, Yahgan, and Chamacoco use masks during their initiation rites to impersonate demons and frighten the women. The masks of the Caraja represented animals and were displayed during feasts which coincided with the harvest of wild fruits or successful fishing and hunting parties. Masks were also a distinctive feature of the dances performed by the Indians of the Upper Xingu. Symbolic motifs painted on bark cloth represented various animals. In the tropical area the most famous masked dances were those of the Arawakan and Tucanoan tribes of the basin of the Caiari-Uaupes. They took place after a death. Individuals dressed in bark-cloth masks impersonated demons and spirits. They simulated an attack on the funerary house and, after having been repulsed, executed a phallic pantomime. The whole ceremony has been interpreted as a ritual propitiation of the ghosts and demons who might have caused the death.

Dancers wearing masks appeared also in the girls' puberty feasts of the Chaco. Likewise the most spectacular episode in the puberty ceremonies of the Tucuna was the appearance of the guests hidden under huge masks representing demons and animals. The masked persons asked for drinks and then vanished into the forest.

Paintings on the Mochica vases give us an idea of the elaborate masks which were used by the ancient Peruvians during their ceremonial dances. The fiestas of the modern Indians of Peru and Bolivia owe much of their color and interest to the grotesque masks worn by groups of dancers. [AM]

 In relation to folk and primitive dance, a mask is a disguise which transforms the wearer, hides or heightens his personality, or identifies him with the character of the mask. Costumes, gestures, and actions conform to this character, in order to produce a definite result.

Purpose: Impersonations of deified natural forces, totemic or chthonic spirits of the dead, totemic, hunted, or phallic animals, respected or derided human beings, serve purposes that are variously purgative or constructive for: 1) Arousal of a desired emotion (bravery, self-esteem, prophetic trance); 2) Exorcism of baneful spirits in curative, puberty, and agricultural rites, by frightening them with a more horrific and powerful identity; 3) Coercion of favorable spirits by identification and propitiation for health, hunt, crops, and other necessities of life; 4) Social prestige, by membership in ex-

clusive totemic societies; 5) Moral control and social therapy, by fright or burlesque; 6) Entertainment by presentation of stories, sacred or secular, or by laughter-producing satire. Usually more than one motive is involved. These objectives do not include mortuary or protective masks, which do not produce dance expressions.

The purpose is identified with its plastic expression. The materials and forms depend on natural resources, native flora and fauna, on technical advancement as well as imaginative endowment, and particularly on the vitality of the purpose. Forms range from realism to fantastic aberration or abstraction, expressions from monstrous to beatific, sizes from the finger masks of Kwakiutl and Eskimo women to Ivory Coast towers five yards high, covering the partial face, entire head, or the entire body.

Materials: 1) Natural materials. Actual animal heads were the earliest kind of mask, as shown in paleolithic cave-paintings of France, and are retained today in the Taos Deer dance. A Mexican armadillo shell also may suggest a face and become a mask by the insertion of two eye-holes. Hides can be shaped into face-coverings or helmets. Other accessible raw materials are gourds (Papago, Nigeria), grass (Pomo), raffia (Africa), leaves (California, Brazil, early England), feathers (Pomo, Arunta of Australia). Fabrications from raw materials include bark cloth (Amazonas, New Ireland, New Guinea), basketry (Florida Key dwellers), petate (Mexico), corn husks, twined or braided (Iroquois).

2) Plastic materials. Ivory (Africa), shell and bone (Mexico), and above all, wood, are the basis of the sculptural arts of West Africa, western Europe, Mexico, the Iroquois Indians, North Pacific Coast tribes, and Eskimo (driftwood). Precious stones are found in ancient and modern Mexican masks (obsidian, alabaster, jade, lignite, serpentine, turquoise mosaic).

3) Ceramics in Ceylon, Java, Japan, Mexico.

4) Metals are of fairly recent use as mask material except in the Far East: gold and silver (Ceylon, Incas, Zapotecs), brass, bronze (Cameroon), copper (Mexico), tin (Mexico, Iroquois, and others).

5) Decadent substitutions. Besides tin, also cloth, papier maché (especially Mexico), newspaper (English mummies).

6) Accessories. Human or horse hair, fur, feathers, beads, teeth, beans, wool, flowers, ribbons, bits of mirror for light-reflecting eyes of demons, or for inlay, paint on the face, body, or mask.

These materials have cultural significance; i.e. hide is handy in a hunting culture on plains devoid of forests; wood implies a forest environment, and the corn husk a maize economy.

Plastic Forms: Though the human face furnishes the starting point for most masquerading, realistic representations are exceedingly rare. Distortion of features, or mingling with animal attributes, and symbolic designs strive for supernatural identification to the point of complete animal metamorphosis, monstrosity, or abstraction. Only in mortuary masks and sophisticated drama does the modeling emphasize human characteristics.

1) Distorted human features for demoniac impersonation: Primitive tribes manipulate the face itself instead of superimposing a mask—the California Yuki *hul'k'ilal*-

wokam, ghost impersonators, achieve a monstrous appearance by stuffing grass in each cheek, a slit twig in each nostril and lower lip, concealing the upper part of the face with false hair of maple bark and a wreath of leaves, and the body with black horizontal stripes.

In true masks, one of the features or all may be distorted for a specified purpose. Iroquois and Delaware False Faces frequently have thick lips like a duck's bill; the "door keepers" may have spoon lips or the "common faces" have funnels for blowing ashes. The whistling Wind God and some corn husk faces have a long snout like the Navaho Whistling God and the Mexican Wind God. False-face mouths may droop or wear a grotesque grin like the Greek comedian. In the Belgian Congo, Baluba spirits combine a square funnel with stylized spiny wrinkles, which are also common among False Faces. Protruding tongues, teeth, tusks, and popeyes produce a ghastly demonic mien in Borneo, Africa, Ceylon, Mexico (*tecuanes*), among the Iroquois, and in Austria (*Perchten*). Most African features are symmetrical, but Japanese and Chinese theatrical demons may have a lopsided chin or nose, and the *Perchten* and False Faces often wear a twisted face, the former to terrify, the latter by an origin legend of a supernatural contest. Long projecting noses serve burlesque among the Eskimos, the Yaqui (*chapayekas*), Papago (*djidjur*), the Iroquois (*hagonde's*, reminiscent of Longnose, the trickster, the frightener of children). Ear flaps attached to wooden or hide cylinders appear in the Amazonas and Malay ancestor masks, most consistently in the American Southwest ceremonial clowns. Hair is rarely attached in Asia, sometimes in Africa, regularly on the head of False Faces and as a beard and protruding brow on *pascolas*. Mexicans use beards and mustaches for burlesque of the European invaders, either as small twiddly mustaches or as the large hook-shaped beards of the *chinelos*.

2) Theriomorphic features: In European medieval carnivals, hairiness characterized animal demons, in fact hair covered the entire body of the wild men and continues to cover the Thracian *kalogheroi* and the *Rautschegetten*. The *Perchten* achieve a particularly awe-inspiring aspect by combination of furriness with distorted human features. Horns are also a universal theriomorphic attribute, as for the *Perchten* and *diablo*. In the Belgian Congo an antelope initiation mask may have abstract human features and graceful tall horns. In French Guinea a sylvan divinity may wear multiple vertical horns. So do the Apache gahe or crown dancers who represent mountain supernaturals. The horned El of Patagonian Puelche, on the other hand, represents the spirit of evil analogous to the horned Devil of medieval drama and the *diablo* of the Mexican carnival.

The identity of man, beast, and supernatural is expressed in a curious way by the Kwakiutl and Bella Coola—in the form of compound masks with an animal form (eagle, raven, wolf) or several animal forms on the outside and an inner human face within. This symbolizes the primal dual existence of animals as men. By nasal elongation, Liberian sylvan divinities and Yaqui *pascolas* blend human and animal features. Again, the Bapende of the Belgian Congo attach an elephant tusk to a human face. The European hobbyhorse, usually fastened to the wearer's hips, appears in Padstow, Cornwall, as a ghostly black frame with a small eerie head.

3) Animal representations: Beyond the stage of donning an actual head, the deification of animal spirits has created a wealth of forms realistic and stylized, birds with tremendous beaks, as the vultures of the Mexican *tlacololeros*, the curved eagle beaks of the Pueblos, and Tlingit and Haida shamans, the great mobile Kwakiutl raven-beak ornamented with polychrome designs. Hybrid beasts move gaping jaws in Africa, as the horned dog of northern Cameroon, and the horse-antelope of the Gold Coast, and as the killer whale and wolf on the American North Pacific Coast. Each part of the world teems with native potent creatures, not only the common bear, buffalo, deer, but the Arctic walrus, and the tropical alligator and monkey, the wild phallic trains of pigs, goats, bulls in the carnivals of the Middle Ages, of Thrace, Spain, and Mexico. Stylization develops with cultural formalization, but may survive in various stages within one culture. The deer mask, which in Taos is realistic, and at San Ildefonso and San Juan is stylized, has at Hopi reached complete abstraction, with a realistic vestige only in the pair of antlers.

4) Unearthly beings: The fear and fascination of death fired the imagination of the medieval Europeans and Aztecs, to the creation of grinning skulls of bone, pottery, or mosaic. Featureless coverings evoke ghostly connotations from the African Whydah to the modern child's Halloween sheet. In New Ireland the ancestors appear as gigantic geometric phantasmagoria. Among the Pueblos, the helmet masks of the *shiwanna* merely suggest human features with circles, squares, or triangles, and for the rest are covered with colorful unsymmetrical designs conjuring rain and fertility from these ancestral divinities. The Zuñi *shalako* mountain spirits impersonate these unearthly beings by their gigantic size and the shedding of all features but for a tremendous beak.

In contrast with the flat pictorial devices of the American Southwest, Chinese and Ceylonese mask artists mold fearful creatures out of discordant combinations of animal and human features; and West African tribes abstract the human face into plastic patterns by elongation, protrusion, hollowing, intersection of planes, attached flaring forms, open-work rays representing the sun god, by coercive symbolic incisions and relief. Double masks represent, in the divided False Face, a god half human and half supernatural, in association with emergence or life and submergence or death; in Mexico they are life and death, in Africa, as Janus masks, they combine the male and female principles. Multiple demons on Ceylonese headdresses overwhelm the human features, as do the animal beings on the heads of some Yoruba and Ibo masks and the superstructures teaming with small gods, or with people enacting the tribal activities.

5) Heightened human realism: Whereas divine drama at its apex produces phantasmagoria, the enactment of human tribulations and foibles intensifies natural expressions. In ancient Greece typical emotions of grief and laughter were stylized and enlarged into the tragic and comic masks. Stock characters are superbly delineated in the Japanese *Nō* (the scowling villain, bulbous old man, serene lady). Comic masks of the Orient, as the Balinese *topeng* dancers, and of Mexico, as the Tarascan *viejitos*, exaggerate toothless foolish grins into shrewd formalized designs. In the Occident, crystallized expression and character have been re-created in modern

dance dramas, as Talhoff's "Totenmahl," and in the famous Benda dance masks.

Technique and Faith: The true ritual mask fuses the mystic purpose, the creative procedure, and the resultant forms. A host of beliefs affect the formative process, beliefs concerning the creature inherent in the mask, its origin and reaction to treatment. The Seneca (Iroquois) must carve his supernatural out of a living tree and on all occasions of use or transference must address him with tobacco invocations. The African carver works through ritually established stages. Everywhere the mask itself has the supernatural's potency for ill as well as good.

Every detail of form and ornament is derived from the attributes of the Being: jagged lightning, bulbous clouds, and interlaced serpents from meteoric and chthonic attributes; pointed headdresses, single or doubled into horns, from phallic potencies. Colors, too, refer to his qualities. White, the ghost color, outlines the eyes and mouth of African masks, and together with black, covers the bodies of the *koshare* and of the Pomo Thunder dancers. Red and black symbolize the human and supernatural division of the Iroquois Great Defender, as he comes from the east and leaves in the west. Yellow and red portend the lightning brought by the *potshrövisht shiwanna*, and the corn-colors—white, red, blue, and yellow—identified with the four heavenly directions, depict the *ye'i* and *kachina* power over the earth and sky for human welfare.

The myriad designs have produced remarkable virtuosity in all cultural stages with full-fledged faith. The primitive fox and walrus of the Alaskan Eskimo are as expressive in their exquisite simplicity as the superbly distorted Iroquois *gagôsä*, the abstract Bundu cult masks of Sierra Leone, and the surrealist monsters of British Columbia. Economy or effervescence of design may appeal to different tastes, with equal artistic validity. Deterioration haunts the craftsman only with the coming of the trader and his demand for garish colors and multiplication of sacred effigies intended, originally, for one and only one significant occasion.

The dancer: The mask, through its potent forms, instills in the dancer the spirit invoked, and incites him to mimetic portrayal of the deity. The enactment of character, myth, epic may range from the age-old gesture codes of the Orient and the puppet-like Javanese *wayang-wong* to the impromptu clownery of the Yaqui *pascolas* and Iroquois False Faces, from majestic motions encumbered by stupendous disguise to unhampered acrobatics. Thus the *ye'i* trot in unison; according to traditional pattern the Pueblo *kachina* dancers conjure rain and the game animals succumb to the hunt. In contrast, the Plains buffalo or bear stampeded or clawed with overwhelming realism. The slinking Eskimo fox-maskers are foxes. The African monkey maskers of Odienné, Ivory Coast, are monkeys.

Mexico shows two tendencies corresponding to the native and imported styles: on the one hand life-like portrayal of fierce tigers and sly coyotes, on the other hand puppet-like battles of Moors and Christians. Everywhere the ceremonial clown performs his ridiculous uninhibited antics in perfect characterization. The Cherokee *bugah*, Pueblo *koshare*, Tlaxcalan *catrines*, and Quechua *sejillas* parody the white trader, missionary, bourgeois, and Spanish master, and thereby purge

the community of resentment. Beyond censorship because of his supernatural identity, the clown-demon heals social ills in Bali, ancient Greece, medieval Europe, modern Austria and Portugal, down to the circus clown.

The power of these dramatic portrayals, like the geometric forms, depend for their vitality on conviction. They accompany the religious tenets through the various stages of crudity, efflorescence, formalization, fossilization, or extravagance, and decline. The masks start as gods and end as pranksters. See ANIMAL MIME; CARNIVAL; DANCE; FOLK AND PRIMITIVE; MIME; RITUAL DRAMA; SHAMAN.

Maso (Mexican *venado*) Yaqui Indian term for deer, applied to the deer impersonator and also to the famous deer dance of the Sonora Cáhita (Yaqui, Mayo, Ocoroni) and Arizona colonists. The ancient "religion of the woods" survives in the mime of the deer, *pascolas*, and *coyote*. The Jesuit missionaries suffered their retention in religious celebrations, without seasonal associations, and separate from the semi-Catholic rites at Easter, San Juan's Day, Virgen del Camino, etc. The most realistic pantomime is enacted during household baptisms, birthdays, funerals, memorials, and votive fiestas.

On Easter Saturday they dance first in the church, then, after a procession, in the "profane" half of a *ramada* or bower. Maso identifies himself with the woodland creature, not by a true mask, but by a *masó koba*, a small deer-head with wistful glass eyes and perfect horns hung with red tassels and flowers. As his first action he fastens this on top of his head, while the two singers intone the first verse of the song to the mechanically precise scratching of notched sticks on gourd resonators. During the next two verses he vibrates two large gourd rattles with floral decorations, while pawing nervously and sniffing about with quivering nostrils. As another musician starts striking a resonant water drum, a half gourd floating on water (*bakúbahi*), Maso bursts into a light and powerful stamping rebound, with vibrant torso and head motions. He manipulates each rattle with a special technique, and simultaneously intensifies the rhythm with his clicking deer-hoof belt (*rihhu'utiam*) and swishing butterfly cocoon anklets (*téneboim*). Suddenly he pauses in an attitude of suspense and terror, then continues his frenetic bounding and leaping. Sometimes one of the *pascolas* joins him, along with the *pascola* flute and

tabor. Between dances they engage in amiable play, often raw and hilariously comical. With intervals of rest and mescal drinking, this continues all night. The climax of the drama is not enacted till near dawn, when Maso hides, is tracked down by the *pascolas*, bounds, falls, and palpates on his knees, and is symbolically sacrificed and skinned. After an interval he casually lights a cigarette and lies down to rest before the processional dance of Domingo de Gloria, Easter Sunday.

In pre-Christian times, when hunting was even more ceremonial than now, deer and coyote dances continued all night in celebration of a good hunt. The success still depends on the favor of the deer-spirit leader, *maliti*. The meat must be treated with respect at risk of illness or misfortune. The tail and bezoar have magical curative properties; the bezoar contains a small snake which attracts lightning and so should not be worn as an amulet in the summer. Thus, analogous to beliefs among other Southwestern tribes, Maso is associated not only with spirit propitiation for the hunt, but also with cure and rain. Vegetation symbolism is inherent in the name for the tail (*sewa* or flower), the flowers on the horns and rattles, the confetti and flowers thrown at him, and, above all, in the words of the deer songs: *yó'ota pa'aku welama*, the (deer) spirit walks in the meadow; *sewata pa'aku welama*, the flowers walk in the meadow; and allusions to clouds, mist, rain.

Thus much of the original drama has been retained: the music, action, and symbolism. The only modern notes are the women's rebozo draped as a kilt, and the crucifix on a necklace. Nevertheless, both Maso and *pascolas* are ceding their ceremonial significance to the *matachini* and other Catholic organizations, and are becoming secular entertainment for the crowd, particularly in the Arizona colonies which have relinquished the hunt as a means of livelihood. The Sonora version remains as one of the few Mexican Indian dances without European metamorphosis. See ANIMAL MIME; COYOTE DANCE; DEER DANCE; RATTLES. [GPK]

Maspéro, Sir Gaston Camille Charles (1846–1916) French Egyptologist. He was professor of Egyptology, Collège de France (1874–1880 and 1886–1899). For many years, he was in Egypt (1880–1886 and 1899–1914) as director of excavations and antiquities. As founder of the French Institute of Oriental Archaeology at Cairo, he accomplished valuable work at Luxor and Karnak. One of his outstanding efforts was, during this time, the translation of the inscriptions on the pyramids of Sak-kara. His writings include works on Egyptian history, mythology, and art: *Études de mythologie et d'archéologie égyptiennes* (1893); *Histoire ancienne des peuples de l'Orient classique* (3 vols., 1895–97), and others. Besides these publications, results of his own study and research, he assembled and translated from ancient Egyptian papyri old fairy tales, publishing them under the title *Les contes populaires de l'Égypte ancienne, traduit et commentés* (1892). Since this collection salvages folktales from ancient times, it is of value to the scholar and makes even the casual reader appreciate the great age of some of our familiar stories (compare *The Treasure House of Rhampsinitus*, closely related to *The Master Thief*, Type 1525).

masquerade A celebration involving disguise by means of masks or mask-substitutes. The *mascherata* (Italy)

reached its apogee of magnificence in the carnival processions and dances of 16th century Venice. It has its source in demonology, in supernatural coercion by imitative magic. Throughout western Europe in the 15th and 16th centuries masquerade evolved into a loose form of successive performances by maskers at secular entertainments of the nobility. These consisted usually of 1) tableaux in geometrical patterns, pageantry rather than dance; 2) *balli*, or social dances; 3) *brandi*, costumed theatrical dances; and 4) *moresques*, *morris*, *Moriskén*, grotesque improvisations representing savages, animals, monkeys, etc. These *ballet-mascarades* were informal presentations of dances and tricks, less expensive than the theatrical spectacles of the *ballet-comique*. Such acts were introduced in the English *masques*—verse-comedies with plots motivating the entrances of dancers. This 17th century theatrical art drew upon both popular and court dance forms. The preliminary *anti-masque* corresponded to the *moresque*, with grotesque fools, satyrs, and wild men, medieval demon-vestiges carried over through the Renaissance. See CARNIVAL; MASCARADAS. [GPK]

Mass of St. Sécaire A Black Mass of the folklore of Gascony, said against a person who then goes into a mysterious and incurable decline. An evil priest officiates, assisted by his mistress, in an abandoned church. He begins at eleven o'clock so as to end at midnight, repeats the Mass backwards, uses a black Host, drinks water from a well in which is the body of an unbaptized child, makes the sign of the cross with his left foot, etc. Compare SABBAT.

Mastamho Brother or son of Matavilya, Mohave culture hero. After the death of Matavilya, Mastamho put into execution the former's plans for the Mohave and neighboring desert tribes; for the Mohave account of his teaching this tribe the arts of life see A. L. Kroeber, *Seven Mohave Myths* (Anthropological Records 11:1, Berkeley, Cal., 1948), pp. 50 ff. The Mastamho institution of culture myth of the Mohave is a Great Tale and is unaccompanied by songs, such as are characteristic for many Mohave myths. See CANE OF BREATH AND SPITTLE. [EWV]

Master of Life English term applied to the supreme deities of various North American Indian tribes, especially to the Delaware Indian supreme deity. Currently the supreme deity is usually referred to in English as the Creator. See BIG HOUSE. [EWV]

masters of the game Like the Indians of the northern hemisphere, the South American natives attribute a divine protector to the game animals in general or to some species in particular. For instance, the popular demon Curupira, so frequently mentioned in the folktales of the caboclos (mestizos) of Brazil, is the guardian of the game animals. In the Amazonian basin and in the Chaco, these supernatural beings are generally the protectors of fish, and are called the "father" or "mother" of all the fish or of some particular species.

The custodians freely permit the use of their protégés as food, but they do not tolerate their wanton destruction by man. They severely punish those who kill more game or fish than they actually need. In some cases these supernatural guardians can be propitiated by prayers and small gifts. In ancient Peru the divine pro-

tectors of the animal species were identified with constellations to which prayers were addressed. See COQUENA; CURUPIRA. [AM]

master thief Hero and title of a tale type—Type 1525—known throughout the world (more than 700 versions have been collected) and appearing in almost every European and Asiatic tale collection. The literary versions of the tale are traceable back to the Renaissance, though it is much older and is probably one of the stories involving robbers that have been popular throughout the centuries such as the tales of Ali Baba and Rhampsinitus, with which it shares some incidents in various versions.

One series of events (Type 1525A) forms the heart of the master thief tale and permits it to be recognized no matter what other incidents are added to this core story. The ne'er-do-well, or one of three brothers who set out to learn trades, announces himself as the master thief. This comes to the earl's notice and the master thief is given the task of stealing the earl's horse. He masquerades as an old woman and gets the stable boys drunk, or he induces the stable hands to chase a rabbit, and makes off with the horse. After this, he must steal the sheet from the bed of the earl's wife and the ring from her hand. The thief obtains a corpse and, in the dead of night, raises it to the earl's window, making a noise so the supposed second-storey man will be discovered. The earl shoots the corpse and rushes out to see whether his shot has taken effect. The thief, pretending to be the earl, quickly enters the bedroom, tells the countess that he has killed the prowler and wants the sheet to wrap the body in; and, he adds, since the thief was probably after her ring, it would be only decent to bury it with him. When the earl gets back to the bedroom, the trick is discovered. The master thief is condemned to die. He is put into a sack to be executed but manages to convince a dupe to take his place: the parson by telling him he is Peter and the Day of Judgment is at hand, the greedy peasant by telling him that he is going to visit his many cattle at the bottom of the river, etc.—the variations of this theme are many.

Other incidents are usually added somewhere in the tale. The master thief (here obviously the trickster) comes to the earl with the bright thought that it would be very easy for a dishonest person to steal the earl's horse. The earl asks for a demonstration, and the master thief demonstrates by stealing the horse (Type 1525B). Or he determines to steal an ox. He puts one shoe in the road and another down the road a bit, around a bend. When the ox-driver sees the second shoe, he dismounts and runs back to pick up the first. Meanwhile the thief goes off with the animal (Type 1525D). Compare ADDED EQUIPMENT. The master thief stories (Types 1525A-F) are often compounded with other tales, for example with the stupid ogre stories where the hero dupes the giant (e.g. Jack the Giant-killer—Type 328), or with the clever boy (Type 1542) which borrows the horse-stealing and sack incidents. Some of the incidents of the master thief type often appear as separate tale types, but Type 1525A with the possible addition of Type 1525D identifies the story of the master thief.

matachin (from Arabic *mudawajjihin*, plural *mudawajjihēn*, those who put on a face, or those who face

each other.) A form of *Morisca* dance, widespread in Renaissance Europe, and brought by missionaries and colonists to Middle America and the Andes. Despite the name, Arabic origin of the dance is as debatable as in the case of the various *Morisca*s. The ancestry is probably traceable to the strolling medieval buffoon dancers, *ioculatores*, *jongleurs*, *mimi*, and ultimately the *pantomimi* of Rome, in a blend with ritual fools of pre-Christian Europe. Masks or face-blackening may have suggested the Arabic name to Moslem-conquered Spain.

The earliest definite description is by Arbeau in 1585. At that time the French *matachins* enacted a polite and humorous battle mime for four men with ribbons on their shoulders, morions of gilded cardboard, bells on their legs, sword in right hand and buckler in left. After a circular entrance with a kicking step, they made passes at each other in codified positions called *taille haute*, *revers bas*, etc.

Later on the *matachins* and the Italian *mattacino* provided the court *entremets* or *entermedii*, grotesque dance interludes, to contrast with the serious parts of plays or masquerades.

However, the Spanish *matachini* still enact symbolic battle mime at religious fiestas. In the Sierra Madre Occidental of Mexico the pyrrhic play has been stylized to a dance in two opposing lines with ornamental manipulation of a feathered trident in the right hand, and a small gourd rattle in the left. Characteristic paraphernalia includes a high feathered headdress with mirrors and ribbons, a scarf around the chin or lower face, bandoliers, and ordinary trousers or a double pair with a side slit in the outer shorter pair. Fiddles and a harp (or guitar) play country dance tunes. The longways formations, too, are of European type: cross-overs, *dos-à-dos*, *heys*, etc. But the steps are indigenous.

Among the Yaqui of Sonora the execution is particularly precise and vigorous. Also, the dance has become most thoroughly integrated into Catholic ritualism, with a complex votive organization dedicated to the Virgin. Led by a *monarca*, 18 to 100 men solemnly execute their decorative evolutions in the church, during all ecclesiastical and many private fiestas. They are gradually superseding the indigenous *pascolas* and *masos* in ceremonial significance.

Among the Tarahumara, Huichol, and Cora, the *matachini* are confined to Catholic festivals, among the Cora with rain-inducing power. The Yaqui and Cora groups are accompanied by a transvestite *Malinche* and clown or *viejo* (old man); the Tarahumara are supervised by an equal number of *chapeones*, who resemble the Yaqui *chapayekas*. In the New Mexico pueblos the *matachines* usually appear only at Christmas or Twelfth Night, in the Mexican towns sometimes in August, following a high mass. Despite native costume details, they clearly supply an alien attraction. In their midst a *Malinche* follows their *monarca* and a tattered clown-*abuelo* (grandfather) battles and kills a *toro*, bull-masker, who is finally resurrected.

The various *matachini* were obviously introduced by the Spaniards. The forms and written records prove this. Nevertheless, Indian qualities have blended with the European surface, as Indian beliefs with the Catholic. Strikingly enough, while the *matachin* deteriorated and virtually disappeared in Europe, in the New World it

has retained its ritualism and even enriched it with native fertility and rain symbolism. [CPK]

Matavilya Eldest son of Sky and Earth, and one of the two leading figures in Mohave Indian mythology, his younger brother (or son), Mastamho, being the other. Matavilya led men and beings upward to Aha'av'ulypo, "house-post water," in Eldorado Canyon on the Colorado, where he made his first house at the center of the earth. He offended his daughter, Frog, who swallowed his excrements and caused his death. Mastamho disposed of his brother's body by burning, but Coyote stole the dead Matavilya's heart, and his ashes offended; neither wind, hail, nor rain could obliterate them. After Matavilya's death Mastamho put into execution his dead brother's plans for the way of living of the Mohave and the desert tribes nearest them. For the outline of the Matavilya myth see A. L. Kroeber, *Handbook of the Indians of California* (BBAE 78), pp. 770-771. See EXCREMENTS SWALLOWED. [EWV]

Mat Chinoi In Semang (Malay Negrito) belief, chief of the small supernatural beings who live in flowers and trees, aid shamans, and are messengers to Tak Pern. Mat Chinoi lives, as a snake ten cubits around, on the road to Tak Pern's house. His job is to manufacture mats for Tak Pern. Inside his huge body are 20 or 30 beautiful female chinoi and great stores of combs, headresses, etc. On his back is a male chinoi, Halak Gihmal, who looks after the things stored inside. A male chinoi who wishes to obtain one of the female chinoi hidden in the snake-body must run the gauntlet of seven mats hung above the snake which are always opening and closing. If he is swift enough to escape the mats before they close on him, he must undergo another trial—that of entering a rapidly opening and closing tobacco box. If he is successful in escaping the lid, he is allowed to choose one of the female chinoi for himself.

materials, science, and art of folklore As a body of materials, folklore is the lore, erudition, knowledge, or teachings, of a folk, large social unit, kindred group, tribe, race, or nation, primitive or civilized, throughout its history. It is the whole body of traditional culture, or conventional modes of human thought and action. It is created informally in a group of persons for themselves, but has been accepted widely enough to have attained considerable currency, and over a sufficient period of time to have acquired traditional traits, such as anonymity of authorship and historic-geographic patterns of variants of basic forms.

Currency and tradition constitute the acid test of folklore materials. These materials may have literary relations, they may have been written down in some form and made their influence felt in erudite circles or literary tradition. Conversely, they may have appropriated literary or learned elements. But fundamentally, to be folklore, their currency must be or have been in the memory of man, bequeathed from generation to generation by word of mouth and imitative action rather than by the printed page: by word of mouth chiefly in the so-called "literary" types of folklore (myth, legend, folktale, and poetry), "linguistic" types (speech, gesture, proverb, riddle), and "scientific" types (cures, prophecies, witchcraft and all other sections of belief); or by action or practiced example chiefly in the so-called

"action" types (music, dance, game, festival, custom, drama, art, craft, cookery). The "literary" types seek artistic application of language. The "action" types seek artistic application of bodily movement. The "scientific" types seek to explain cause and effect. The "linguistic" types seek the formal aspect of verbal expression. Being current in memory, act, and oral tradition, folklore never has a fixed form, but rather an approximate pattern which varies from time to time, from group to group, and even from one telling or performance to another within the same group or by the same individual.

A learned creation of one individual may or may not become folklore, depending upon whether it does or does not gain and maintain for some time general acceptance and currency in a group. Morphologically, the approximate pattern and unfixed form of folklore, emerging from the memory in continually varying forms, are in a constant state of flux. It receives modifications imposed to suit not only the tastes of hearers or learners, but also the various imaginative and creative impulses of tellers or performers. Such varying forms give all types of folklore a character of collective authorship that makes them quite different from the fixed single forms of the creations of erudite circles. Indeed, when one finds a number of variants of a folklore form in a given area, which do not have the numerous differences normally found among variants in their details, at once one suspects the influence of an erudite form behind their suspicious uniformity. Although some folklore may be of communal origin from the start, one must usually think of an original individual creation, which is taken up by the folk and subsequently becomes folklore. Its original author then fades into obscurity, and the most vital factor in authorship, in any case and with any form of folklore, is the folk. Folk tellers or doers and hearers or learners, like a last court of appeal, accept or reject it and modify it continually, thus putting upon it the stamp of group authorship, which is really what makes it folklore, regardless of its ultimate origin.

The scope and classification of folklore materials are still rather obscure. The general index to the volumes of the *Volkskundliche Bibliographie* offer some clarification, as do the section headings in the annual folklore bibliographies of the *Southern Folklore Quarterly*, illustrated by the terminology used by writers in their titles appearing under these headings. Stith Thompson's *Motif-Index* offers a detailed classification, chiefly of narrative types. Robert Lehmann-Nitsche's introduction to his *Adivinanzas rioplatenses* proposes a rather substantial system of riddle classification. Various systems of melodic indexing of folk music have been proposed. But a comprehensive and definitive system of classification for the whole field is still to be desired. For the present, a rough, simple and practical system may be devised to cover the various species in the field as conceived and determined by the current practice of those who write about them and publish collections of them, even though there is still considerable divergence of opinion. See TYPES AND CLASSIFICATION OF FOLKLORE.

The question of who is "folk," is not so important as that of what is "lore," for everyone may be "folk" if the conditions essential for "lore" are established. It is of interest but not indispensable that one individual may be wholly "folk" or not "folk." An individual may be partially "folk." He is "folk" insofar as he participates

in the propagation of "lore" as described above. When he reads a book, follows the written law laid down by his legislative body, or the latest dogma of scientific theory taught in his schools or classical music or modernistic art expounded by his teacher, and when he learns and follows the dogma of his church, he is not "folk." Rather, he is following learned culture, which is distinguished from traditional culture in that it is created by small leader groups of priests, politicians, scientists, etc., who impose their cultural creations upon the rest of society. Thus learned culture arises in a fashion quite different from "lore." But insofar as an individual follows the accepted "lore" current in his group, created by his group, or even adopted from other groups or from learned sources by his group, "lore" which is a vital force functionally in his own life, the customs, beliefs, traditional music, crafts, etc., of his group, he is "folk." In most human groups, these two types of culture mingle in the life of an individual: most of us are partially "folk." Some of us, especially those who live in large, modern cities, find our lives so influenced by radios, films, books, municipal ordinances, state and national laws, schools, newspapers and other devices of molding consciously opinions and ways of life, automobiles, airplanes, chain stores and a multitude of other products of modern civilization so new and rapidly changing that they have had no time to penetrate deeply into our traditional cultural patterns—so saturated, in short, that our "folk" element is almost smothered out. But others of us, especially those who live in remote and isolated rural regions, find our lives so little disturbed by these things that our "folk" element is still quite vigorous and still practically dominates our lives.

Folklore materials thrive in a society in which there are people of considerable native intelligence, artistic appreciation, memory, imagination and creative urge, who can comprehend, value, remember and recreate their native folklore and thus propagate it as a living tradition. Folklore lives its fullest, purest and most natural life away from learned culture. Folklore suffers greater suppression and contamination the more it comes into contact with learned culture and its great concentrated and uniformizing social organizations. In small groups, isolated from considerable outside influence, in which everyone knows everyone else and the whole little group, in fact, is a network of intermarried families, an economically independent and selfsufficient unit, whose members are illiterate and depend entirely on oral tradition and practiced precept rather than on books and formal education, and are not specialized workers, and are more or less all alike in their cultural heritage, education, social and economic position, etc., folklore should be in its purest and most thriving state. But in a great literate and specialized nation, with highly developed means of communication and formal education, with large urban centers, diverse cultural, social, and economic elements, formal and impersonalized laws governing individuals, such small folk groups constitute only a small minority, are likely to contain only the lowest strata of the population, and are liable to be drained of their most intelligent and ablest folklore propagators, who have risen by their abilities into more learned circles. Hence in such a nation the folklorist must turn to these folk groups, stripped of their best intelligence, imagination, etc., and contaminated by

learned tradition, in order to find such folklore as may survive. Or he must attempt to extricate it from the abler propagators, despite the fact that the latter are no longer more than partially "folk" and present added difficulties with the complexity of their more recently acquired learned background. Far better for the folklorist is a nation in which such folk groups still embrace a great majority of the population, with most of the abler propagators still in their group. Thus one can see why folklore can be gathered even among the most highly "civilized" nations and even in the biggest and most modern urban centers, but also why folklorists prefer to turn their efforts towards primitive peoples and isolated regions. Thus one can see why some persons are almost wholly "folk," living in an environment of traditional culture, while others are almost wholly "learned," living in an environment of books, newspapers, films, radios, machine products and all manner of standardized norms which are set and reset by individuals or small groups; while still others (the majority of the world's population) are partially "folk," living in that broad intermediate cultural zone in which folklore forms survive alongside complementary and even parallel or contradictory learned forms in the same group.

As a science, folklore studies its body of materials from a certain viewpoint, recording accurate descriptions of these materials and their environment or determinative background data, classifying, analyzing and interpreting them, deducing the general rules or tendencies that govern their origin and evolution, relating them to other phases of life and showing their application to human welfare and the advancement of civilization, just as any other science does. Frequently different sciences study the same materials. This partial coincidence is especially true of the numerous sciences that study man. History may well study social history; so may sociology. Law may study customs; so may folklore, sociology, and anthropology. Linguistics may study primitive languages; so may anthropology and archeology. Psychology may study folk beliefs; so may folklore, anthropology, sociology, and religion. Archeology may study folk arts and crafts; so may folklore and anthropology. Geology may study the earth; so may soil chemistry. And so with other coincidences. But rarely do different sciences study the same materials from the same viewpoint. History studies social history as a part of the whole record of man's past; sociology studies it as a part of the whole picture of human relations. Linguistics studies primitive languages as a part of the whole development of linguistic phenomena; anthropology studies them as a part of man's whole cultural pattern. Archeology studies folk arts and crafts as a part of one whole ancient civilization; anthropology, as a part of the whole cultural pattern of one primitive tribe; folklore, as a part of the whole process of this type of cultural product throughout the world. Geology studies the earth as a part of the whole historical picture of the earth's development; soil chemistry studies it as a part of the whole question of what makes crops grow. Etc. Thus, although sciences are distinguished often by their materials, they are more precisely differentiated by their separate viewpoints.

Likewise, the science of folklore is distinguished chiefly by its particular viewpoint. Though the typical overlapping of materials studied is often found between

folklore and other sciences, folklore, like other sciences, has its separate and unified viewpoint, different from that of other sciences. This distinction justifies its pursuit in giving us still another basic point of approach among the various approaches of diverse sciences that help us better to comprehend the complex phenomenon of man in his world, and to improve man's position therein. To attain these high purposes, we need as thorough an understanding as possible from as many different angles as possible. The basic point of approach, or viewpoint, of the science of folklore is its interest first and foremost in folklore materials (as indicated above in speaking of "folk" and "lore"), for their own intrinsic interest and from an all-time historical and world-wide geographical or international viewpoint. Regardless of time and space limits, folklore considers all manifestations of similar nature in a certain type of folklore materials. It seeks to discern accurately, classify, compare, and correlate those manifestations into a unified historic-geographic pattern, from which may be deduced conclusions regarding origin, evolution, and spread, environmental determining factors and adaptations, morphologic changes, reflections of racial, national, or regional characteristics, and the broadly human and basic traits of living folk traditional culture as produced by the human mind. From the conclusions of a multitude of studies of individual patterns emerge the general laws of this science. These laws may ultimately be applied to facilitate the unification of peoples of different traditional cultural patterns, when they are brought by migration to live together. They also may be applied to develop regional and national consciousness and unity, when there is a deterioration of harmony among diverse elements in such an area, and to better mutual understanding among the different peoples of the world internationally, when their superficial differences in folk culture blind them to the comprehension of the basic human traits they have in common (these traits are perhaps best exemplified by the basic communality which underlies their various folk cultures). The unity of the science of folklore is the unity of the materials of folklore, comparatively and historically studied. Every science evolves its own methodology to suit its own particular point of approach to its materials and to attain its ultimate purpose. Only in the science of folklore is the center of interest focused primarily upon the folklore materials themselves, hence the methodologies of other sciences are inadequate for the purposes of folklore. Folklore must evolve its own methodology, which it has been doing ever since it was formally christened in the early 19th century. Although its first century of life was predominantly one of collecting activity, in the present century it is beginning to turn more toward classification and analysis of its materials.

Environmental factors must be considered by the science of folklore. It would be just as great a folly to consider a version of a folktale or proverb entirely divorced from its teller, his group and region, as it would be to consider a flower entirely divorced from the soil and climate in which it grew. Yet the proper perspective established by the viewpoint of the botanist requires that he study in the foreground his flower and in the background the soil and climate in which it grew, that he study soil and climate secondarily and in relation to his flower, and that he seek the cooperation of soil chem-

istry and climatology, but not that he become a specialist in these sciences. Likewise, the proper perspective established by the viewpoint of the folklorist requires that he study in the foreground his folktale or proverb and in the background the informant, group and region that produced it, that he study informant, group and region secondarily and in relation to his folktale or proverb, and that he seek the cooperation of, but not that he become, a specialist also in anthropology, ethnology, sociology, human geography, history, religion, economics, and numerous other fields which specialize in the study of a great variety of factors which influence any particular variant of a folklore form. Science is a matter of relative specialization, not of complete divorcement of systematized bodies of knowledge.

Folklore, like other bodies of knowledge, has both its scientific and its artistic aspects. Strictly speaking, in its scientific aspect it seeks to ascertain, classify, study, and deduce conclusions from, its materials, and there its prime objective ends. And there begins the prime objective of its artistic aspect, which is the mastery and consummate control over the attainments of the scientific aspect, so that, by skilful performance and in accordance with aesthetic principles, these attainments can be applied and adapted to man's use and welfare, or to effect any desirable result. Thus it is the scientific aspect of a body of knowledge which is concerned with the attainment of the immediate goals of that body of knowledge; and it is its artistic aspect which is concerned with the attainment of its ultimate goals. There is usually no definite line of division between the scientific and the artistic aspects of a field. In medicine the same doctors who toil over experiments in attaining the immediate goal of their science often continue with the skilled practical application of their results, far into the artistic realization of their ultimate goal. But the investigator in the science of pure physics often leaves to engineers the artistic and practical application of the immediate results of his investigation. Likewise, the painter may delve into the scientific aspects of his colors, methods of their application, and surfaces to which they are applied. But the musician seldom passes from his artistic sphere back into the science of the physics of sound.

In folklore, as in other fields, no sharp line of distinction has been drawn between its scientific and its artistic aspects. The field of folklore is still so new that little occasion has arisen for such a distinction to be made. Folklore is still largely concerned with those first stages in any field—collecting and classifying its materials. Some effort has been made to push on into the comparative and correlative activities, but much remains to be done here, and until considerably more is done, we cannot hope to progress far with the deduction of valid and valuable conclusions. And until the immediate goals of the science of folklore materialize further in such comprehensive and adequately based conclusions, the ultimate goals of the artistic, practical and applied phase of folklore can progress only to a very limited degree. This fact explains why so little has even been attempted along these lines. However, as the ultimate values of folklore in integrating cultural patterns of diverse traditional elements, in bettering mutual understanding between peoples internationally, etc., become more generally and more clearly realized, all the processes of

folklore study and utilization, both scientific and artistic, will be pursued more vigorously. The field will then doubtless undergo various refinements. Specialized branches of its scientific aspect will probably develop into more crystallized forms. And specialists in the practical applications of its artistic aspect (indeed, in the various ramifications of these applications) will no doubt develop.

ma'toki The womens' Buffalo Cow dance society of the Blackfoot Indians in Montana. Initiation was bought by gifts from ceremonial "mothers." They danced in a ceremonial enclosure similar to that of the sun dance, which, in fact, has buffalo associations. Milling in a sun-wise direction, they realistically imitated the buffalo park. Four groups wore varying headdresses and paraphernalia—the four scabby bulls, six snake-bonnets, feather bonnets, buffalo-wool headdresses with horns, and a bone-whistle as in the sun dance. The purpose was the increase and capture of buffalo by means of imitative magic, plus motives of animal-guardianship so prominent in the Great Plains and circumference. [GPK]

Matron of Ephesus A widow of ancient story, famous for her beauty and marital devotion, equally famous for her faithlessness: subject of a motif that has passed through world literature (K2213.1; Type 1510). The tale is told by Petronius (*Sat.* 111–13), first century A.D. A married woman of Ephesus, renowned for personal qualities of beauty and virtue, at her husband's death followed him to the tomb to keep watch over his body. Deaf to the appeals of her relatives, she mourned five days and nights, the perfect example of devotion. A soldier, who had been set to guard robbers crucified outside the tomb, noticed the light with which the lady was keeping her watch and descended into the tomb. With food, drink, and blandishments, it was not long before the widow was persuaded to begin life anew. It is recorded that the tomb itself saw the wedding of the lady and the soldier consummated. To save her lover from public disgrace and sentence after it was discovered that one of the bodies outside had been stolen, she had her husband's body removed from his coffin and substituted for the missing body. This medieval "merry tale," known to classical antiquity, is thought to be of Eastern origin. Voltaire incorporated the story in his *Zadig*. For the odyssey of this piece of fiction through world literature, see Griesbach, *Die Wanderung der Novelle der treulosen Witwe durch die Weltliteratur*. [GPS]

Matsya In modern Hindu mythology, the fish incarnation of Vishnu. The god infused a part of his essence into the huge, horned fish which appeared to save Manu from the Deluge. In common belief, the fish was the first incarnation of Vishnu; the *Bhāgavata Purāṇa* mentions 22 incarnations, however, of which Matsya, the fish, is the tenth. In the late version of the story in the *Mahābhārata*, the fish says he is Brahmā Prajāpati (the great creator of the *Brahmaṇas*). Compare KŪRMA.

Matuta or **Mater Matuta** A Roman goddess, often said to be the goddess of dawn and hence equated with the Greek Leucothea, but rather a goddess of birth and increase allied with Janus. She has no mythology, which

causes Rose to doubt her identity as a dawn goddess, the latter seldom if ever being a cult goddess; her festival, the Matralia, on June 11, was celebrated by the Roman matrons. The observance took place at her shrine in the Forum Boarium, a still extant round temple known as the Temple of Hercules. Slaves were not permitted in the temple, one only being admitted to undergo a slap on the cheek and then to be sent away. The matrons prayed for their sisters' children, a rite explained variously as emphasizing that such children should not be left to the care of slaves or as being a misreading of *pueri sororii*, adolescent children. Whatever mythology attaches to Mater Matuta, and whatever accretion of function beyond that of goddess of growth, seems to be a transference from her identification with Leucothea.

máuari Masked puberty rite of the Maipure and Baniba Indians of Venezuela. Máuari, the spirit of evil, is impersonated by a dancer who is fully covered with red and black body-paint, a face-covering of lion or tiger pelt, and a crown of deer antlers. On the day appointed for the initiation of a youth, he emerges from the forest with a wild animal cortège, maskers representing lions, tigers, deer, bears, and other wild beasts. Their blood-curdling growls and howls mingle with the groans of the *botutos*, the sacred trumpets, to fill the night with a gruesome din. With wild leaps and contortions they dance around the neophite and four shamans.

At a girl's initiation, all women and children withdraw to a special hut, because of their official ignorance of the identity of the maskers. The masked crew leaps and howls around the hut. In either case the identification with demon and animal spirits serves to propitiate these and protect the initiate from maleficent influences. At the same time the initiates seek to obtain a vision, the favor of a supernatural animal guardian. [GPK]

Maui The trickster and culture hero of Polynesia from New Zealand to Hawaii: he sometimes also appears in Melanesian myth. The Maui cycle has some dozen to twenty tales clearly belonging to it and which appear fairly consistently throughout the area. Maui appears in tales more often than any other Polynesian hero. He is usually a youngest son, sometimes an abandoned child, either abortive or premature, who is thrown away by his mother. This commonly is the explanation of his small stature. Maui was reared by the sea gods, then educated by his ancestor in the sky Tama-nui-ki-te-rangi. He returned to earth and joined his brothers in a game, during which he identified himself. He discovered that each morning his mother went into the ground. He followed her and found her with his father Tangaroa. Tangaroa gave Maui a name, but during the naming ceremony left out one of Maui's names, which omission provided the loophole through which eventually the gods were able to destroy Maui.

Maui is a demiurge (A. H. Krappe, *Mythologie universelle*, p. 387, calls him the best possible example of the demiurge) who fished up the islands on which the Polynesians live. New Zealand is called by some of the Maori The Fish of Maui. In a Maori myth, Maui used the jawbone of his ancestress and his own blood to fish the land out of the sea. He warned his brothers not to cut the land, but they sliced it all up, thus causing the islands and the mountainous character of the land. Maui's mother tried to make tapa, the bark cloth of the

islands, but the sun crossed the heavens and set before she could complete her work. Maui took the hair of Hina, his sister or wife, or some green flax, and made a noose or net with which he snared the sun. Then, with a club he had gotten from his grandmother, he beat the sun until it agreed to move more slowly. It was Maui too who brought fire to man (see FIRE). Other of his exploits were the raising of the sky (this does not appear in New Zealand, where Tane performs the feat) in three heavens—once to the tree-tops, once to the mountain-tops, then to where the sky is now; the trapping of the winds; invention of the kite, the barbed spear, the eel-pot, the calabash of the winds (the navigational instrument of the Polynesians). Maui, the friend of mankind, died in the attempt to obtain immortality for man. He descended to the underworld, where he entered the body of the goddess who dwelt there. If he passed through her body—i.e. if he were born again—he would become immortal. This rebirth without dying is obviously symbolic. But once he had been eaten by the ogress, the flaw in his naming was discovered and the jealous gods saw to it that Maui could not win free of the monster's body. Thus he died and mankind remained mortal.

Maundy Thursday The Thursday of Holy Week, the week before Easter, is variously called Holy, Shere or Chare, and Maundy Thursday. The derivation of Maundy has been explained as from the Saxon *maund*, the charity hamper in which provisions were carried to give away to the poor, also from *maund*, to beg, from the French *mendier* or *maundier*, to beg. But it is likely that Maundy Thursday, as well as the maund basket and the maunder beggar, came from *Mandatum novum do vobis*, the Latin of "A new commandment I give unto you" (John xiii, 34). These words, long the first antiphon in the Latin Christian ceremony of the washing of the feet, were said, on the Thursday eve before the Friday crucifixion, by Jesus to his disciples in connection with his establishment of the eucharist (communion or Lord's Supper) and his washing of the disciples' feet. The latter act was obviously a dramatic example and symbol of humility and service to others (see John xiii, 1-17; Luke xxii, 24-27) and has been taken as a literal command at certain periods in some sections of the Christian church. Instead of the priest or minister washing the feet of lay communicants, especially the newly baptized (*pedilavium*) as obtained in earlier times, there have been such variants as washing the feet of choir boys, or of 12 poor old men, or of a group of travel-stained pilgrims.

St. Oswald, who was Archbishop of York from 972 to 992 A.D., was so assiduous that every day he fed 12 poor men and washed their feet. Shortly afterward, Ælfric, Archbishop of Canterbury 996-1006 A.D., considered once a week often enough for the charity, instructing his Saxon priests: "Do on Thursday as our Lord commands you, wash the feet of the poor, feed and clothe them, and with humility wash your feet among yourselves as Christ himself did and commanded us so to do." These two forms or parts of the ceremony were distinguished at Durham in 1593 A.D. as *mandatum pauperum* and *mandatum fratrum*. The ceremonies of the Maundy varied in the different cathedrals, and evidently more

latitude was permitted than in any other Christian ceremony.

The Norman, Plantagenet, and Tudor kings and queens of England adopted the custom of washing the feet of and giving clothes and money to the poor on Maundy Thursday. Sir Thomas More recorded that Henry VIII on Maundy Thursday washed the feet of as many poor men as he himself was years old and afterward gave them meat, clothes, and money. Queen Elizabeth also washed the paupers' feet, but only after servants had washed them in herb-scented water first.

Since 1754 feet-washing has been discontinued by the Church of England, although the money gifts are continued from the regents but through the Lord High Almoner. During the reign of Charles II (1660-1685) the practice arose of coining special Maundy pennies. There is probably a connection here with the "touch pieces" of money given to the sufferers from scrofula (king's-evil) by the king after he had touched the sick, coins which were said to have healing virtue in themselves, especially if they bore the bas-relief of the king.

The rites of Maundy Thursday are, however, still celebrated in certain places in England by the Roman Catholic church, in conformation with the general custom in Roman cathedrals. The ceremony is called the *Mandatum* and, with local variations, usually runs as follows. The bishop washes the feet of 13 poor men or others. In monastic churches, the superior washes the feet of 13 monks. In Westminster Cathedral the cardinal-archbishop laves the feet of 13 choir-boys who also receive gift-books. Usually the deacon sings the gospel of the Mass, the choir sings the antiphons, and the prelate, after washing and kissing the feet, repeats the *Pater Noster* silently, a few versicles, and then ends with the appropriate prayer "that as here the outward stains are washed away for us and by us, so the inward stains of us all may be washed away by thee."

Luther denounced feet-washing as a Christian ceremony, and the Lutheran Liturgy for Maundy Thursday is concerned mainly with the institution of the sacrament of the Holy Supper, confining reference to the feet-washing incident merely to the words: "and hast also left us an example of mutual service by humbly washing Thy disciples' feet." Twelve Lutherans were condemned in 1718 in Dresden to do public penance for having let a duke wash their feet.

Maundy Thursday and/or feet-washing as a rite is not much observed in Protestant churches except among minor sects, such as the Dunkards, Seventh-Day Adventists, and Free-Will Baptists. In the Eastern churches, the 13th chapter of John's Gospel is dramatized in detail even to Peter's refusal to let Jesus wash his feet. In Jerusalem on Maundy Thursday the Greek Patriarch washes the feet of 12 bishops publicly in the court of the Church of the Holy Sepulcher in an elaborate and dramatic ceremony, after which roses are dipped into the rest of the holy water and the crowd is therewith sprinkled. What falls on the pavement is wiped up with handkerchiefs by the communicants and rubbed on their faces. The whole practice of feet-washing as observed in the Holy Thursday ceremony has definite relations with practices in other religions and cultures. (See *ERE* v: 814-823.) It was not original with Jesus, for he was but following and somewhat adapting the old Jewish custom

of ceremonially washing the feet. It is a part of the world-wide custom of symbolizing, dramatizing, and to a certain extent obtaining, purification of mind, heart, soul, or spirit, by various types of lustration, baptism, and ceremonial cleansing of the body or parts of it. Hence Shere, Sheer (Pure) Thursday.

The additional idea of humility as demonstrated in the rite had more significance for Jesus and his disciples than is appreciated by his modern followers. Rabbi Huna, among others, points out that a Jewish husband was entitled to have his feet washed by his wife personally, no matter how many maids were hers. Hindu wives were required to perform this sacred duty, as a sort of means of salvation through abasement. See BAPTISM; PENITENTES; PURIFICATION.

CHARLES FRANCIS POTTER

Mawu The Great God of the Dahomeans, conceived as the creator of the world and mother of the gods, and symbolized by the moon. The difference between living things and things inanimate is the *lîdǎ* or "bit of Mawu" within them. This is not to be confused with the soul (*se*), although the soul also comes from Mawu (see *Dahomey* ii: 232, 244). Often conceived as the female portion of the androgynous deity termed Mawu-Lisa (Lisa being conceived as the male, and identified with the sun), Mawu is worshipped as the sky god, and, as parent, chief of the other deities. Though it has been claimed that Mawu has no cult because of a presumed deistic concept of her, this is not the case, as elaborate rituals and initiation rites for her have been reported. See ACBE; AIDO HWEDO; FA. [MJH]

Max Müller, Friedrich (1823-1900) Anglo-German Orientalist and comparative philologist; son of the German poet, Wilhelm Müller. In 1841, the younger Müller ("Max") matriculated in the University of Leipzig where he was induced to take up the study of Sanskrit though his natural tendency was towards music. Accordingly, he was trained in the study of this language, in comparative mythology, and comparative religion by celebrated savants in Leipzig and Paris. In 1846, he went to England where the East India Company had undertaken the expense of publishing his edition of the *Rig-Veda*. He settled permanently at Oxford in 1848. On account of his German birth, he did not receive the professorship of Sanskrit at Oxford, but later was given the chair of comparative mythology.

During this period he wrote his *Chips from a German Workshop* (1865-75) and his *History of Ancient Sanskrit Literature* (1859). His outstanding effort was the editorship of the 51 volumes of *The Sacred Books of the East* (1875 on). This imposing set consists of records of the non-Christian scriptures of Oriental nations translated by competent scholars and is said to have been more effective than any other book in placing the study of comparative religion on a sound basis.

Müller, with other scholars (De Gubernatis, Fiske, Cox, and others), was deeply interested in comparative mythology and, using his knowledge in this field, he sought to discover the origin of Indo-European myths by the interpretation of metaphorical expressions in the *Rig-Veda*. His conclusions and those of the other "solar" mythologists received a setback, if not a mortal blow, when attacked and reduced to absurdity by Andrew Lang. The estimate of the *Encyclopædia Britan-*

nica is similar: "His essays on mythology are among the most delightful of his writings, but their value is somewhat impaired by a too uncomprising adherence to the seductive generalization of the solar myth."

Mâyā (1) The primordial Mother-goddess, worshipped by the Burmese and southern Buddhists. In Tibet she is sGrol-ma or Tara.

(2) The mother of Buddha.

mâyā A psychological term of Hindu cosmic philosophy posing the problem of illusion and reality. In the *Upanishads* the term took on the meaning of "cosmic illusion" along with the concept of the *âtman*, i.e. the inner essence or "self" of the universe. All that is not self is illusion. Hence *mâyā* embodies the doctrine of non-dualism. The concept is the most important tenet of Vedānta philosophy and still pervades all Indian thinking.

May-apple A North American herb (*Podophyllum peltatum*) bearing an ovoid yellowish edible fruit. The root is poisonous, however. This was the powerful suicide root of the Huron and Iroquois Indians. The ground or chopped root was used by the Meskwaki Indians as a poultice to draw poison out of snake-bite, and also for rheumatism. Baking the root, however, rids it of the lethal podophillin, and a decoction of the baked root made a safe cathartic or emetic, and was sometimes given for dropsy. White settlers used it as a very slow purge. May-apple root, soaked in whisky, is given to drive snakes out of the body of one afflicted with internal snakes, in Mississippi Negro conjure curing.

May Day The first day of May: observed as a spring festival everywhere in Europe, the United States, and Canada, and as a labor festival in certain European countries. The typical European May Day celebration includes: 1) the gathering of green branches and flowers on May Eve or very early May Day morning; 2) the choosing and crowning of a May queen (often also a king) among the young people, who go singing from door to door through the village, carrying flowers or the May tree, soliciting donations for a merrymaking in return for the "blessing of May"; 3) the cutting, setting up, decorating of the May tree (bush, pole) and the dance around it. Sometimes this is a communal dance around the beribboned tree set up in a central location; in some villages, however, a May tree or bush is set up in every front yard, decorated by the family, and danced around by the family group.

The going out and picking of flowers and branches and bringing them home is the symbolic act of bringing home the May, i.e. bringing new life, the spring, into the village (see Frazer, *Magic Art*, ii, London, 1911, p. 59). Carrying the May tree and garlands from door to door is the symbolic bestowing and sharing of this new creative power that is stirring in the world. As the group goes from door to door, the May Bride often sings to the effect that those who give will get of nature's bounty through the year. And all the symbolic figures in the little drama, the boy and girl, the tree, the flowers, were believed to embody, and hence to have the power to bestow, new life and fertility on crops, cattle, women. In some places the May Bride and Bridegroom go through the village singing together; in England their wrists were linked together with a kerchief or garland.

In some villages, including many in England, the Maypole was left permanently standing on the village green, and thus the meaning of "bringing home the May" anew each year became gradually lost. On or about May Day the ancient Scandinavian peoples welcomed spring with mock battles between summer and winter, in which summer always won. These were still a feature of the May Day celebrations on the Isle of Man late into the 19th century. However much the people may have forgotten of the significance of their May Day merrymakings, Mannhardt, Frazer, and others believe that the marriage mime of the May Bride and May Bridegroom originally symbolized and was believed to be the marriage of spring and vegetation.

In parts of France some jilted youth will lie in a field on May Day and feign sleep. If any village girl is willing to marry him, she goes and wakes him with a kiss; the pair then go to the village inn together and lead the dance which announces their betrothal. The boy is called "the betrothed of May."

Getting your head wet in the rain on May Day prevents headache for a year. Washing in May dew (on May Eve or before sunrise May morning) is a common practice; it keeps the complexion beautiful and the person lucky for a year. In some parts of Europe women rolled naked in the dew on May Eve for beauty, health, and luck. In England it was sometimes said that the girl chosen May Queen would not live another full year; and there is some local feeling that to bring Mayflowers into the house is unlucky. Mayflowers picked before sunrise, however, will prevent freckles. The Mayflower in England is usually the white hawthorn; in the United States and Canada it is the arbutus, but sometimes the hepatica, sometimes the spring beauty.

In Ireland the house is blessed and a prayer said by some member of the family on May Eve. Sheep and cattle are let out to pasture for the first time on May Day, because after May Day there will be less sickness in the district. Everyone is loath to light the first fire on May Day morning, in the belief that some misfortune overtakes whoever does so. See BELTANE. There is a small grayish slug in Ireland (*driúctín*) from which young girls divine the color of their true love's hair. The future husband will have hair the color of the first *driúctín* found on May morning: if the slug is whitish, the future husband will have fair hair; if it is black, he will be black-haired.

In southern U.S. Negro belief, May Day is a good day for love charms and divinations: look down a well reflected in a mirror to see your future spouse's face; sometimes instead you see your own coffin. In South Carolina it is good luck to plant watermelons on May Day before sunrise. But never get married on May Day, for the bride will die within the year. Some Mississippi Negroes recommend May butter against witchcraft; butter made on May Day, mixed with saltpeter and egg-yolk and rolled into little pills, will cure any kind of poisoning caused by conjure.

In many places all the typical May Day practices are observed at Midsummer or at Whitsuntide. In the Pyrenees the May tree is cut on May Day and set up for the Midsummer celebration. See BONA DEA; HAWTHORN; JACK IN THE GREEN; section *May Day* in SPANISH FOLKLORE.

Maypole dance A dance performed around a tall central pole with ribbon streamers, two opposing circles weaving in and out in such a way as to braid the ribbons in a pattern. In England and the United States and Canada, the custom has become inseparably associated with May Day celebrations of every sort, because of the ancient English observance. Descended from the Roman Floralia or perhaps from indigenous springtime ceremonies, May Day celebrates the return of spring and verdure, and is naturally focused on a sacred tree. At the time of Henry VIII dramatic characters took part in elaborate spectacles, with characters already popular in the 15th and 16th centuries (Robin Hood and his company, Jack in the Green, Morris dancers). In fact, the Morris dance frequently concludes with a Maypole winding, to the tune "Sellenger's Round".

The custom has a wide distribution as German *Bändertanz* and Asturian *baile del cordón*. In India the *kolattam* stick dance becomes the *pinnal kolattam* when the dancers hold a ribbon in one hand and weave in and out while executing the stick-striking rhythms. The Basque sword dancers frequently conclude with a fast and furious ribbon winding (*cinta dantza*). The Spanish *baile de cintas*, or *de listones*, turns up in Yucatán and Venezuela for men and women, and in the male *negritos* and *voladors* dances of the Sierra de Puebla, as well as in the Yaqui *matachini* of Bacun, Cocorit, and Torin. These may be blends with avowed ribbon dances of ancient Mexico. Connections between these windings and those of Aryan peoples are possible but speculative. [GPK]

Mayweed Dog fennel (*Anthemis cotula*): also called stinking camomile. A tea from this plant with alum was considered a preventive for cholera, malaria, and typhoid fever. Chewing the root was good for those recovering from fever. A tea made from the steeped leaves and drunk cold was an old European remedy for fevers, adopted by the Mohegan-Pequot Indians of Connecticut. In China the Mayweed is believed to contain much *ling* (indwelling spirituality, spiritual power). Many plants contain *ling* in Chinese belief, but the Mayweed is especially endowed with *ling* because it grows on the grave of Confucius. Aside from its medicinal properties, it even brings good luck to the possessor.

mazateca A social fiesta dance of the Mazatec tribe on the border of Veracruz and Oaxaca states, Mexico. It is also called *našo nakoče* (flower of the pineapple) after the words of the simple melody sung by the dancers: "Flower of the pineapple sits in the corner; flower of the pineapple falls on the ground." Men and women form two lines face to face; they advance and recede and turn with slow native step: right foot forward with flexed knee, left foot behind the right heel with straight knee. The dance is doubtless indigenous. [GPK]

Mazda The word Mazda appears in many combinations and various associations from ancient Iranian times to the present. Its meaning is consistently inclusive of the three concepts: light, wisdom or truth, and divine personality. Mazdaism itself stems from Asia Minor; it is the pre-Zoroastrian polytheism of ancient Iran and the substratum of several religions, including Zoroastrianism, Mithraism, Neo-Platonism, Manicheism, and Parsiism, Christianity itself, through post-exilic Judaism, inherited many of the doctrines

and concepts associated with Mazda worship, especially the apocalyptic and eschatological accompaniments of the *parousia* (Second Advent).

Mazdāh was the Iranian form of the Sanskrit word for science, *medhas*, which may afford some justification for its appropriation, although the name of a deity, by Edison for his electric lamp. He may have had more in mind, however, than the fact that Mazda was the god of brilliant light. To Zoroaster, *Mazdāh Ahura* or *Ahura-mazda* (Lord Mazda), was the god of law, justice, truth, and light who would finally triumph over *Angra Mainyu* or *Ahriman*, the god of evil and darkness. [CRP]

mazurka or **mazurek** Specifically, a dance step of recent Polish origin. As folk dance it is a round dance, with much leeway in step sequence, two constituents being the stamp and the heel-click in cumulative order (one click, then two, then three). As a ballroom dance for couples, the step is in 3/4 time with an accent on the second beat: stamp right, stamp left next to right, hop on left and raise right knee. Though native to eastern Europe, the mazurka has invaded the ballrooms of western Europe and the United States. It has even encroached upon ritual dances of Mexico, the *conquista* and other *morisca* dances, notably the Oaxaca *plumas*. It constitutes one of the motley tunes and steps of the *jarabe tapatio*. [CRK]

Mbere The creator of Fans (western Bantu) mythology. Mbere made a man out of clay, but first he was a lizard. Mbere put the lizard in the great big sea water. He left him there five days. On the fifth day Mbere looked and the lizard was in there. On the seventh day Mbere looked and the lizard was in there. On the eighth day Mbere looked and the lizard came out. But when he came out he was a man. "Thank you," said the man to Mbere. See NZAMBI.

Mbir In the mythology of the Guarayú Indians of South America, the creator worm. At first there was only water. Then the worm Mbir appeared in the rushes, took human form as *Miracucha*, and made the world. See VIRACUCHA.

Mbôn A Kachin (Burma) wind nat: worshipped only by the chiefs at the national harvest festival.

mead A fermented drink made of honey and water, known to the ancient Greeks and Romans and common in medieval times throughout Europe: especially associated with the early Teutonic peoples. Priscus, Byzantine historian of the 5th century, reports it as the drink of the Hunnish court in 448 A.D. Long before this, however, mead was the sacrificial drink of the early Aryans. Mead was poured into the jeweled cups of Hrothgar's warriors in the huge resplendent mead-hall, Heorot, to celebrate Beowulf's victory over Grendel. Mead is the answer to one of the famous Anglo-Saxon Riddles, which begins, "I am cherished by men, found far and wide, brought from the groves and from dales and downs. By day wings bore me in the air, carried me with skill under the shelter of a roof. Men bathed me in a tub. Now I am a binder and a scourger; straightway I cast a young man to earth, sometimes an old churl . . ." When Oisín returned to Ireland from Tir-na-nOg and was entertained by St. Patrick and his monks in the 5th century, they brought him bowls of mead and mullets stewed in mead. The Earl of Digby (14th century) de-

scribed mead as "a mace of honny and water boyled together; yf it be fyred and pure, it preserveth health; but it is not good for them whiche have the bellyache or the Colycke." Chaucer's "Miller's Tale" mentions "mead and spiced ale."

Mead is probably best known as the heavenly drink of the old Teutonic gods. It was supplied to them endlessly by Odin's goat, Heidrun, who fed on Yggdrasil. The mead in the phrase *Odin's mead* was the mead of poetic inspiration brewed from the blood of Kvaser in the kettle Odhroerir, and which Odin stole from the giant Suttung. See ODHROERIR.

In Polish legend the famous Prince Piast once welcomed two strangers to his board when he was still a poor wheelwright and gave them the best of what he had. For thanks they told him that his cellars would be always filled with mead. The promise came true, for the young man had entertained angels unaware, who henceforth supplied him with mead and helped to make him king of Poland.

The people of the island of Rügen used mead in the worship of their sun god. At each harvest a cup of mead was put in the hand of the idol. During the following rites (seed-time or first-fruits) the priest took the cup from the god and predicted the coming year from the liquid left in the cup.

Rivers of mead in the other world is a motif (F162.2.4) occurring in English and Scottish ballad and in the Hausa Negro story of kind and unkind, the two girls en route to the other world pass by rivers of honey. That the Virgin Mary supplied mead to the unprepared hostess of a king (V262) is a motif familiar in religious legend. Sometimes this story is associated with St. Brigit of Ireland.

meadowsweet A shrub of the rose family (genus *Spiraea*). Meadowsweet was one of the strewing herbs of the 16th and 17th centuries, when the floors were strewn with rushes and various sweet-smelling plants. The 16th century English herbalist, Gerard, prescribed the flowers boiled in wine to "make the heart merrie and joyful and delight the senses." Meadowsweet is still used in England to make an herb beer, and for the cure of feverish colds and digestive troubles. The North American Meskwaki Indians used it to stop the flux; other Indians of the western United States use the leaves to regulate the bowels, and the pulp as a salve. In Ireland it is called *airgead luacra*, or silver rushes, and in the country is used for scouring vessels. Meadowsweet was one of the sacred herbs of the druids, and in Welsh mythology was one of the flowers that went into the creation of Blodenwedd, the flower-wife of Llew Llaw Gyffes.

measure of eternity A folk riddle motif (H701.1): How many seconds in eternity? This belongs in the number riddle category (H700 ff.) and is often included among the questions in versions of *The King and The Abbot* (Type 922). The answer to how many seconds in eternity is: If a bird should carry one grain of sand away from a mountain once each century, one second of eternity would have passed when the mountain was gone.

Medea In ancient Greek legend, the daughter of *Aetes*, king of Colchis, by one of the Oceanids or Hecate. She was thus the niece of Circe, the great witch,

Medea too, a priestess of Hecate, was versed in magic; her reputation as a witch in antiquity probably surpassed that of Circe. When Jason came to Colchis in his quest for the Golden Fleece, Medea fell in love with him and helped him accomplish his aim. She gave Jason a drug, made from the yellow flowers that grew from Prometheus' blood in the Caucasus, and Jason was, for 24 hours, invulnerable to fire and iron. Thus he was able to yoke the fiery bulls, plow the land, and sow the dragon's teeth. She told him to throw stones among the warriors that sprang from the sown teeth, just as Cadmus had done, and he survived that dangerous task. Then, knowing that her father plotted to kill Jason and the Argonauts in the night, she herself stole the Fleece from the grove and fled with Jason on the *Argo*. The fugitives took with them Apsyrtus, Medea's younger brother, and when Æetes, in pursuit, came close, she slew the boy and threw his severed parts onto the sea. Æetes had to stop to gather the scattered Apsyrtus for proper burial, and the Argonauts escaped. (Another, later version says that Apsyrtus was the pursuer and was trapped in ambush by his perfidious sister.) Medea helped the Argonauts in several of their adventures on the return trip. For example, she either drugged the bronze Cretan monster Talos or used her evil eye or other trickery in such a way that she was able to pull the pin or break the membrane that let out his life fluid.

At Iolcos, they discovered that Pelias had had Æson, Jason's father, slain. Jason begged Medea to avenge him. Medea therefore convinced the daughters of Pelias that she could rejuvenate the old man: she took an old ram, chopped it up, boiled it in a caldron, and drew forth a lamb. (Some say she thus revived or made young again Æson too; in some versions of the legend, he was not killed by Pelias.) But when Pelias was chopped up and put in the caldron, Medea made sure that Pelias perished. For this outrage, Pelias' son drove Jason and Medea from Iolcos. They settled in Corinth where, after several years, Jason threw over Medea for Glauce, daughter of Creon, the king. Medea, in revenge, sent Glauce a poisoned garment which burned the bride to death (in some versions, the palace itself burned down, and Creon along with it) and she killed her own two children by Jason. Then, in a dragon-drawn chariot, she fled to Athens, where she married Ægeus.

Recognizing Theseus when he came to Athens seeking his father, Medea plotted to do away with him. She had Ægeus send his son (though the fact was unknown to either Ægeus or Theseus) to destroy the Marathonian bull; when Theseus accomplished that feat, she plotted with Ægeus to poison him. But at the last moment, Ægeus recognized his son and dashed the cup of aconite from his lips. Driven from Athens, Medea fled to Asia, where her son Medeus, after slaying Medea's uncle, Perses, who had replaced Æetes on the throne, became eponym of the Medes. Medea, approached by Zeus, rejected his advances, thus earning Hera's gratitude. The goddess granted immortality to Medea and her children. In Elysium, Medea became the wife of Achilles.

The story of Medea and the Argonauts follows in outline folktale type 313—The Girl as Helper on the Hero's Flight. The Greek legend includes the son-in-law tasks (H310), the ogre's helpful daughter (G530.2), the obstacle flight (D672), the forgotten fiancée (D2003)—all less markedly than these motifs are found in more re-

cent European märchen, but nevertheless recognizably. The typical ending, of the attempts by the girl to regain her husband and the eventual recognition and reconciliation, is not present here; but the tasks accomplished with the aid of the girl and the obstacle flight (not, however, with magic objects in this tale) mark this as belonging to the type. Probably originally (though the chronology is naturally not at all definite) the story of the Argonauts was one of extraordinary companions (e.g. *The Four Skillful Brothers*, Type 653)—compare the special abilities of the members of the crew of the *Argo*: Lynceus' sight, Orpheus' music, etc.—which later became fused with the story of the Girl as Helper.

media luna Literally, the half moon or crescent moon: a ritual dance of Mexico, near Mexico City, most solemn in the village of Ixtapan de la Sal. It is completely indigenous in its vigorous stamping steps and its accompaniment of drums and bamboo flutes. The dancers accent the rhythm with sweeping strokes of their short swords, recalling the *morisma* of Michoacán. They wear long one-piece tunics with long sleeves and on their heads large crescents. The significance is completely obscure, but suggests agricultural lunar associations. [GRK]

Media Vita A famous prayer melody of medieval plainsong, often mistakenly ascribed to Notker Balbulus (d. 912) but probably taken over into Roman Chant from the Gallican Chant; it was believed to work miracles and to give protection to those who sang it. One French brotherhood of monks sang it to prevent the installation of a new and unwelcome abbot. So strongly were its powers believed in that in 1316 the Council of Cologne forbade the singing of it against anyone without permission from the bishop.

medicine There is a plant in the world for every ailment; all you have to do is find it. This is the core of wisdom of an old Louisiana Bayou herb woman lovingly depicted by Ruth Bass in her article in Botkin's *Folk-Say: A Regional Miscellany*, 1930, p. 150. That there is a cure for everything, all man has to do is find it, has been the activating faith of medical research from the most ancient and primitive seekings to cancer and polio research today. The age-old belief of maritime fishermen in the efficacy of cod-liver oil has been substantiated by modern vitamin research. Burnt sponge for goiter was an old remedy and one good way of liberating the iodine therein (a modern must for goiter). Boiled toads for dropsy may sound like black magic, but the skins are now known to contain two alkaloids having marked diuretic properties. The herb women of the Carpathian area practiced antibiosis centuries ago: they applied bread mold or soil fungi to infected wounds and sores with success. Some primitive peoples terrify a sick man to frighten the disease demon out of his body. South American Aymara Indians cure tertian fever in this way. It is a method used everywhere for hiccups. A good dose of castor oil has always had the same effect regardless of the color, creed, or century of the patient, or of the ceremony accompanying the dosage. One good old folk cure for asthma is to swallow a handful of spider webs rolled into a ball. This is not as far-fetched as it may sound either: in 1882 a substance called *arachnidin* was isolated from spider webs which proved to be a remarkable febrifuge

(see Leslie F. Newman, "Therapeutic Value of Folk Medicines" in *Folk-Lore* 59, p. 128).

Much has been written of healing by magic, incantation, and conjuration in ancient and primitive cultures. Disease and death were (and are) caused by malignant spirits everywhere; and the ancient and contemporary primitive cure is to outwit or get rid of the spirit. Thousands of elaborate incantations have been preserved from early Assyrian, Sumerian, and Babylonian cultures; and the holy or sacred incantation, recited or worn as amulet or talisman, was regarded as efficacious far into the European Middle Ages. See *ABRACADABRA*. But the remarkable practicality of the ancient Egyptian *Book of Surgery* (often referred to as the Surgical Papyrus, Old Kingdom), which goes back to at least 2500 B.C., is not often stressed. This work describes the diagnosis and treatment of 48 surgical operations, and for only one of the 48 was magic recommended.

The history of folk medicine is the history of medicine: a long drama of trial and error and dedication, of which the end is not yet: too long and involved a story for this article, including as it does no definite chronology but an overlay of theories of which the most ancient often coexist both in belief and practice with the newest. Modern European medicine is said to begin with Hippocrates (460-370 B.C.); but 100 years before Hippocrates Pythagoras advanced his theory of the harmony of the spheres and a doctrine of numbers which colored not only the Hippocratic theory of "critical days" but seven centuries later was applied by Galen (2nd century A.D.) to every phase of medicine. Names like Pythagoras, Empedocles, Hippocrates, Æsculapius (all B.C.), Pliny (23-79 A.D.), Galen (131-201 A.D.) become synonymous with the story of medicine. Galen's writings especially were infallible gospel for centuries after his death. The astrological school, stressing the influence of the planets, astrological houses, signs of the zodiac, on the prevalence and virulence of specific diseases and on the efficacy of the plants, gems, and other substances used as cures, reaches from its incipience in Chaldea through several thousand years. Even more than the astrological school has the doctrine of signatures probably influenced medical practice. The doctrine of signatures established the belief that all natural objects (plants, animals, animal parts, stones, etc.) bear a mark or sign (signature) indicating plainly the human need to which they are specifically applicable. Whether the doctrine of signatures originated in Egypt or Babylonia, its hold on human thought was still strong in the 17th century. Wm. Coles in his *Art of Simpling*, 1656, writes regarding herbs that not only has God given each its distinctive form, "but also hath given them particular signatures whereby a man may read . . . the medicinal virtue attached to it." Wm. Turner, who wrote the first English herbal, 1551, says therein, "the nutmeg being cut resembles the brain, the red poppy-flower resembles at its bottom the settling of the blood in the pleurisie and how excellent is that flower in disease of the pleurisie." The poppy was also assigned to cure brain disorders because its fruit was shaped like a head. Red roses were recommended for the blood. The ancient Assyrians used henbane seed for toothache, probably actually because of their soporific virtues, but according to the signaturists because the seed-container is jaw-shaped. Spotted plants

were recommended for spots; gummy plants were good for pus-exuding sores; non-flowering plants (fern, lettuce, savin) would cause sterility; many-seeded plants would cure barrenness. Any of the trefoils was indicated for heart trouble; bloodroot was given for bloody flux (dysentery); saffron cured biliousness; liverwort (named for its shape) also cured biliousness. Herb lore progressed from the "simples" (one-plant remedies) to fantastic mixtures and theriacs (poison antidotes) containing great numbers of herbs, animal parts, blood, ground or flaked gemstones, minerals, etc. Animals and parts of animals also were used because of some resemblance in shape or color to a disease or to a diseased part of the body. One theriac prepared by Andromachus for Nero is described as the longest and most complicated in history. See *ÆSCULAPIUS*; *ANIMAL CURERS*; *BEAR MEDICINE*; *BEZOAR*; *CLOWN MEDICINE*; *COLLAHUALLA*; *COLLASIRI*; *CURES*; *EGG-CURING*; *EPILEPSY*; *HERB*; *LEPROSY*; *RABIES*; *RASPBERRY*; *RHEUMATISM*; *SHAMAN AND SHAMANISM*; see also various specific plant, tree, and gemstone entries.

➤ To ward off or cure, or to produce illness and disease, either psychosomatic or physical, the North American Indians employ a variety of magical and non-magical procedures. Many of the annual ceremonies, such as that of the California World Renewal, the Pawnee Hako ceremony, the Big House, the Eskimo fall festival, and numerous others, as well as lesser rites such as the False Face and Shuck Face rites of the Iroquois and other tribes, were performed to ward off disease and epidemics and insure the health of the tribe for the ensuing year. Small family rites, such as Ghost Feasts given for dead relatives, were also customary insurance against sickness being visited upon individuals by the dead. The observance throughout native North America of hundreds of eating, looking, and many other tabus, was also a preventive measure against becoming sick or having bodily harm befall one.

Curing measures employed by the American Indians for illness, either mental or physical, are of three main types: those, magical or ritual, which were employed by shamans and priests; those measures which everyone in the tribe knew; and those measures which only a few persons had special knowledge of. Magic practices of many different sorts were used by shamans in treating sick persons; a very widespread one was that of sucking out the disease object from the patient's body. To locate this object, and to be able to tell who had sent it into the patient, the shaman was often assisted by his guardian spirit, usually an animal being whom he called to him with songs the spirit had taught him. Other magic practices were the capture and putting back into the patient of the patient's soul; Puget Sound shamans once a year made a dramatic journey to the land of souls, captured those belonging to living persons, and put them back into the patients' bodies. Elsewhere in North America belief in soul loss was common, but the measures taken to recapture souls not so dramatic. While most curing rites are conducted for an individual patient, some are communal, as the Puget Sound soul-loss treatment referred to above, or the communal cures conducted by some Pueblo Indian societies at which anyone present is treated gratis, sucked, brushed, or given a drink of medicine water, or the modern peyote rites which any sick person may attend.

Another curing measure, and the chief one among the

Navaho of the Southwest, was the singing or letter-perfect recitation by a "singer" of long formulas that must be repeated by the patient, to cure the latter's illness. Abbreviated formulas are also used by many tribes, when washing away a name that is causing a person to be ill, for example, and in the administration of herb medicines. In the Southeast, where medical practices are closely associated with shamanism and priestcraft, formulas are used extensively. Causes of disease are, according to native belief, natural and supernatural; in Cherokee and Creek mythology emphasis is laid upon animals as disease bringers and upon plants as healing agents. The greatest number of southeastern remedies were of vegetable origin, infusions being made and taken internally or applied externally, with certain objects often added because of their magical properties. Doctors blew into the infusion with a tube, and later sprayed the patient or sweated him, massaged him, caused him to vomit, scratched and sucked the affected parts, recited a formula over the patient, and finally buried the disease.

Some remedies, consisting chiefly of plant and animal parts and some minerals made into poultices, boiled up into teas, etc., are likely to be known generally by all members of any tribe, and are used for minor ailments; but for more acute illnesses a specialist, who has bought or inherited knowledge of special plant remedies, is likely to be consulted. Such plant remedies of specialists are often mixtures of two to as many as 30 or so plants. Knowledge of such medicines is usually kept a jealously guarded secret. If the illness is a major one, or of long standing, and does not yield to herb treatment, or if the patient has reason to believe that his illness is being caused by an evil shaman practicing witchcraft against him, treatment by a professional shaman or priest is the only efficacious medicine. In general esoteric knowledge or possession of medicine was one way to gain prestige and wealth in the group, since fairly heavy payment was made to shamans and priests for medical treatment. See MEDICINE MEN; SHAMAN. [EWV]

medicine bundles Sacred bundles, sacred packs, or palladia: among North American Indians a collection of objects believed to be endowed with sacred or magical properties. Such objects are usually wrapped up in a skin (deerskin, otterskin, etc.) and carefully tied into a bundle; the bundle is owned either by a group, or by individuals; it is believed to have been originally bestowed by supernatural beings, or to have been assembled according to the directions given by supernatural beings. Medicine bundles owned by individuals have a prominent place in Plains Indian religion; to each bundle is attached a long origin myth, but all such medicine-bundle origin myths conform to the same general pattern. Plains Indian bundles are kept outside the owner's dwelling house, suspended from a tripod arrangement; they, the myth, and the songs that go with them can be bought and sold. Plains societies also had their sacred bundles. In the southwestern pueblos medicine bundles are also the property of the many societies existent among these people. Ownership of society bundles is a group matter, as it is for Southeastern and Eastern Woodlands society, gens, and tribal sacred bundles. Minor medicine bundles, such as witch or rain bundles, might be privately owned, but the tribal or

clan bundles of the eastern tribes were considered the property of the group as a whole, were the most sacred of all objects, and the ones with which the welfare of a group was closely associated. Such bundles were in charge of a man who inherited the obligation of attending to the bundle, seeing that it was kept dry, that menstruating women kept away from it, offering tobacco to it at stated intervals, and, once a year during a ceremony attended by only a few persons, reclothing the bundle in a new deerskin covering, talking to it, and feeding it with food and tobacco. If the group as a whole moved to a new location, the tribal bundle was carried at the head of the procession by a bearer who walked slowly and saw to it that the bundle was kept dry. Actual objects within tribal bundles include flint knives, braided captive leaders, birds' claws, beaks, feathers, animal parts, wampum belts, etc. The provenience of each article is usually made clear in the myths told by the tribe. [EWV]

medicine man A name, loosely applied by 17th, 18th and 19th century travelers and missionaries to the American Indians, for any Indian who treated the sick in a variety of ways, prophesied, conjured, was able to find lost objects, or in general seemed possessed of supernatural powers. In the 20th century, when serious studies of American Indian cultures began to be made, such terms as shaman, doctor, herb doctor, witch, prophet, soon replaced the general term medicine man in the ethnographic literature. Today medicine man is seldom used except in popular writings on the Indians, by authors who probably do not realize that in several tribes either men or women, or women only, have the power to cure by supernatural means. [EWV]

 In Mexico and Central America the concept of the shaman, or medicine man, who receives supernatural powers from a spirit who may take possession of his body during a curing or divination seance, is poorly developed. The curer, or *curandero* (who may be male or female), usually is a person who, through long study and experimentation, has mastered the tricks of a complex profession, just as a doctor in our society may practice, not because of divine revelation, but because of the proper education. There are exceptions to this general rule, however, among which may be noted the *sukya* and *okuli* of the Miskito Indians of Nicaragua, and the *nêles* of the Cuna of Panama, shamans who are "born, not made," i.e. they receive supernatural powers through involuntary "election" by divine spirits, and are unable to refuse this call, even if they should so desire. [GME]

medicine rites Curative procedures dealing with supernatural causes and effects. Exorcism of malign spirits is commonly resorted to as a preventative measure. The Tamil Pariah (Paraiyans) caste of southwest India blow horns and strike themselves to drive out devils from the houses of the high Nayar caste. The Papago Indian deer dance and Tarahumara *rutuburi* summarily expel evil influences. For the same purificatory purpose the California Shasta women shamans and Iroquois False Faces make the rounds of the houses.

If a malignant object, spirit, or sorcerer has caused disease by intrusion or by stealing the patient's soul, a prophetic shaman must in a vision determine the cause and cure. In some tribes cause and effect are well recog-

nized. The Papago believe that spirits of the dead cause nervous disorders; the deer spirit causes tuberculosis (deer cough); the Ponca Buffalo Dance healed wounds; the Iroquois Society of Mystic Animals (*hadi'hi'duus*) cures wounds and broken bones. To the Iroquois, ghosts cause neurosis; the buffalo spirit causes rheumatism in the shoulders, the bear spasms, the disembodied False Face spirits ailments of the eyes. These are cured by placating the offending spirit with various formulæ and rites, songs, dances, as well as by mechanical means.

Herbs and medicines are administered either by special kinds of doctors, as in the Menominee *muckiki*, or by the regular doctor. Medicines were received from the supernatural: by the Menominee from the owl, by the Plains Bear, Elk, or Buffalo Societies, from these animals; and the power was received during initiation. Plains medicine bundles, however, contained an assortment of magic objects.

Curative herbs are always administered with attendant ritual, incantation, and sleight-of-hand tricks. Suction of the offending object is employed from Melanesia to Wisconsin and Brazil. Bleeding, massage, and trepanning effect cures in Melanesia; among the Navaho, ash-blowing, fire-jumping, asperging, arrow-shooting heal. The Iroquois strew ashes, spray berry juice to asperge the patient. An offering is essential, in the form of prayer and tobacco or incense. The world over, chanted formulæ strengthen the appeal; for instance, among the Zapotecs, Navaho, California and British Columbia tribes, the Melanesians, the Panan of southwest India.

Exorcism is effected by chanting, various noise-instruments, and dancing which varies from mild circling to frenzy. This may be the work of 1) a single shaman; 2) a select group of initiates; 3) the community, including the patient. 1) The Siberian, Navaho, or Ojibwa shaman hypnotizes himself and the patient by his chant, with drum or rattle accompaniment. The Tlingit and Labrador Eskimo medicine man may wear a spirit mask to intensify his impersonation. 2) Masked groups identify themselves with the spirits. The spectacular Navaho *yeibichai* perform rituals and dances, particularly in the Nightway, but also in the Windway, Beautyway, and other curing chants. The maskless shaman societies of the Algonquians (*midewiwin*) and of the Iroquois (*hadi'hi'duus*) sing and dance around the patient, who finally joins in and is thus initiated. 3) In several Iroquois curing rites the community may join after the introductory cure, thus the Bear and Buffalo Dances (*degwiyago'oeno* and *nyagwai'oeno*). The Ute Sun Dance cures all present, particularly of rheumatism.

The choreographies are well defined for each dance, but show great variation, especially between solo and group rituals. Shamanistic solo dances may be virtuoso exhibitions; and soloists who perform simultaneously, as the Iroquois False Faces, may improvise elaborate steps. On the other hand, group dancers use simple steps, commonly a side or forward shuffle. These groups follow various ground plans, as the single line of men and women in the Meskwaki Bear Dance, the double column of men in the *yeibichai*, the clockwise closed circle of the Shoshoni *naroya*, and the open counterclockwise circle of the Iroquois Bear Dance. Meskwaki dancers imitate the bear with clawing arm gestures; the Iroquois simulate his waddling gait and climax with a jump-kick in pairing formation.

The double function of many of the healing dances shows varying emphasis, and, in the course of time, the loss of one function. Southwest tribes retain both hunting and healing objectives, but the latter is secondary. The Iroquois animal dances, on the other hand, concentrate on cures. The Cherokee Green Corn Dance, which formerly included a curative rite to prevent illness from the unripe corn, is now reduced to this secondary function. Or the ritual purpose may be lost entirely, as in the Medicine Dance of the Christian Cherokee.

The efficacy of these kinetic cures is not superstition. The incantations, mysterious passes, and unhygienic practices obscure the principle of dance therapy. But, in addition to the physiological benefits of the various herbs, the soothing effects of rhythmic song or dance-participation aid recovery, especially from neurotic and mental ailments. Modern psychotherapy has merely rediscovered the principles inherent in the ancient medicine rites. See ANIMAL CURERS; MASKS; SHAMAN. [GPK]

Mekala A female spirit of terrifying appearance whom the Aymara Indians accuse of laying waste their fields and of killing their herds. [AM]

Melampus In Greek mythology, the first person with prophetic powers, the first mortal doctor, the first Greek to worship Dionysus. Living at Pylos with Neleus, Melampus once found that his servants had killed two snakes. He burned the bodies—thus performing a pious rite accorded the human dead—and raised the young snakes as pets. Later, as Melampus slept beneath a tree one day, the snakes licked his ears with their tongues. When Melampus awoke, he discovered that he could understand the languages of the birds.

During his stay with Neleus, Melampus offered to help his brother Bias win Pero, daughter of Neleus, as wife. Neleus demanded as the bride-price—in a kind of suitor test (H310)—the cattle of Iphiclus which had belonged to Neleus' mother Tyro. Melampus, though he knew that the quest meant that he would be imprisoned for a year, set off to obtain the cattle. These cattle were guarded by a fierce dog that no man or beast could approach, but Melampus stole the cattle nonetheless. However, he was caught and thrown into prison. At the end of a year he suddenly demanded to be released, for, he said, the prison was about to collapse. And so it did; Melampus had learned the secret from the worms in the wood of the prison. His jailer carried the story to Iphiclus, who thereupon offered to release Melampus if he could tell why Iphiclus was childless. The seer learned the answer from a culture that he questioned. See IPHICLUS. Compare JOSEPH.

Melampus also cured the mad daughters of Prætus, either through his knowledge of herbs or as an initiate of the therapeutic Dionysiac dance rites.

Melanesian mythology Melanesia, a tropical and often heavily vegetated culture area of the Pacific, is made up of three major geographical divisions. The first is New Guinea, largest island in the world, and connected in Pleistocene times with Australia. The second is an irregular, curving chain of archipelagoes, predominantly volcanic rather than coral, which starts near the equator north and east of New Guinea and extends south to the Tropic of Capricorn. It includes the Bismarck Archipelago, Solomon Islands, Santa Cruz and Banks Islands, New Hebrides, Loyalties, and New Caledonia. The third

division is the Fiji Islands on the western boundary of Polynesia.

On the basis of differences in culture and physical type, Melanesian inhabitants are classified into three groups which, however, overlap as the result of contact and mixture. The oldest residents are the Negritos of the New Guinea interior, of whose mythology nothing is known. Papuans, the next arrivals, who stand out for amazing linguistic diversity, occupy most of New Guinea and have mixed with inhabitants of nearby islands. The Melanesians proper, who are Oceanic Negroids like the Papuans and speak Malayo-Polynesian dialects, occupy the central archipelagoes exclusive of distinctly Polynesian or Papuan islands. They have also immigrated to parts of the eastern New Guinea coast.

Occasionally, anthropologists classify New Guinea as a culture area distinct from Melanesia because of its size and the differences between its predominantly Papuan inhabitants and the Melanesians of the eastern islands. However, both New Guinea and the eastern islands are treated here as one great province whose mythology is related though probably divisible into subprovinces.

Throughout the area, cosmogonic myths assume the pre-existence of the world and its major characteristics, and merely describe subsequent alterations and additions to the landscape, zoology, botany, and culture by preexistent beings, deities, first man, and culture heroes. Few primitive areas have such a pot-pourri of cosmogonic beliefs. Even one small island will have different myths about the origin of man. Inconsistencies on the subject in myths of his own tribe do not trouble a narrator. Sometimes a deity or other being created man from wood, mud, or sand; sometimes man had a magical or spontaneous origin from eggs, plants, stones, blood-clots, or other things. The Papuan Keraki of southwestern British New Guinea narrate that the first people came out of a palm; the linguistic diversity of neighbors is explained by Gainji, the principal Originator (also the name of the primordial time when he lived), having listened to the chatter in the palm and released together people who sounded alike. That the first people came out of the ground is a belief often found among Papuo-Melanesian tribes and islands, like the Trobriands, near New Guinea. Emergence sites are respected but rarely seem to be places of worship.

Of the important deities of Melanesian mythology, the following are only a sampling: Ora Rove Marai of Roro-speaking tribes of New Guinea (see Seligmann, *Melanesians of British New Guinea*, Cambridge, 1910, p. 302); and Marunogere of the Kiwai Papuans, a deity associated with the first pig. Marunogere built the first men's house, inaugurated the *moguru* ceremony, created the first coconut tree, among other things, and has two ferocious, named dogs who live in Adiri, the afterworld, and raid human villages (see Landtman, *Kiwai Papuans of British New Guinea*, London, 1927, pp. 12, 18, 97, 221, 350). Kalou-Vu is a class of important gods of Fiji (see W. Deane, *Fijian Society*; B. Thomson, *The Fijians*, London, 1908). See KALOU-VU. Others include Ye of Rossel Island (see W.E. Armstrong, *Rossel Island*, Cambridge, 1928, p. 132) and Sivotohu, a preexistent sky deity of Guadalcanal and his wife Koevasi (see Hogbin, *Oceania*, vol. 1, #1, 1937).

The sea, night, and fire are frequently said to have been hoarded by an elderly person, usually female, until mankind obtained it. The widespread Oceanic theme of fire hidden in the body is common in Melanesia. Frequently it is associated with serpents and lizards, and the fire, in western tribes, is usually said to have been kept between the firekeeper's thumb and forefinger, which explains the space now found between these fingers. Another universal Oceanic theme found in Melanesia ascribes the origin of the coconut from the buried head of a slain snake or other creature. Myths about plant origins abound and figure prominently in fertility rites. As women are kept ignorant of sacred myths and rituals, it is interesting how often myths, reminiscent of Australia in spirit rather than detail, are told about women having first possessed the bull-roarer and other sacred objects until men, realizing their value, took them for themselves. Myths frequently describe elderly women as culture teachers, and, in tales of abandoned villages, an old woman left behind contrives to get magically pregnant to bear children who marry each other, destroy monsters, and start the tribe anew.

Rarely is the name of a hero, deity, or other supernatural character of religion and mythology known beyond a single island or even one tribe, although other characters obviously drawn to a similar pattern appear in myths of nearby regions. The situation is typical of Melanesian cultural and linguistic variety which renders generalizations difficult. For the most part, specific motifs have an amazingly helter-skelter distribution.

Although R. B. Dixon, in his great work on Oceanic mythology, distinguished between Papuan and Melanesian elements in the myths of the area, he often found both kinds of elements in the same island. The Papuan stratum, he concluded, is best developed among certain New Guinea and New Britain tribes, and is characterized by a relative absence of cosmogonic myths, numerous stories of ghosts, many tales of only local distribution, and a simple, naive quality. The Melanesian stratum is most pronounced in Santa Cruz and Banks Islands, New Hebrides, Fiji, and some coastal tribes of eastern New Guinea, New Britain, and the Admiralties. Dixon also pointed out Melanesian and Papuan relationships in mythology with other parts of Oceania.

Since much Melanesian mythology has been published since 1916, Dixon's pioneer classification could now be sharpened and subprovinces defined on the basis of distribution of motifs, incidents, style, and character types. Unfortunately, little systematic comparative analysis has been done. Dixon used myths as indirect evidence for reconstructing the history of Oceanic cultures; and myths enter to a slight extent into the large-scale reconstructions of Melanesian culture history by schools of thought led by Rivers and Graebner. In general, the reconstructions are based on the hypothesis of immigration at different times into the area of peoples with distinctive culture-complexes. Diverse forms of the same culture element, for example origin myths, are attributed in these theories to introduction by different groups of immigrants, while the different classes of spirits, often of a goblin type, are claimed to represent folklorized memories of intruders or ancient residents of alien appearance and culture. Little is said of the diffusion of motifs and incidents independent of large-scale migration. Interpretation of the myths as symbolic accounts

of the movements of the sun, moon, and other natural phenomena enters into many reconstructions.

Ivens (1934) used a few religious and social beliefs backed by mythological charters to define as a cultural unit the northern New Hebrides, the Banks, and southern and central Solomons. He observed the presence here of the Indonesian concept of soul substance and dual souls, one good, the other evil. San Cristoval worships the malevolent souls. The region, in general, worships souls of the dead, especially of greater individuals and culture heroes. Souls of the dead are distinguished from spirits who never were human. The latter called *figona* (or variants thereof) appear in various aspects, particularly snakes. Their San Cristoval leader, Agunua, creator of man among his many other activities, is probably equatable, according to Fox, to the Florida Island *vigona*, Koevasi. Shark cults are prominent.

Dual homes of the dead occur, with, however, the sky never figuring as one. The homes are in nearby islands except that a northern Mala home is underground. Ghosts travel by land or ship of the dead to a port of entry where a ghost ruler segregates them. Ysabel Island dead who are tattooed with the frigate-bird design cross a pool of quicksand safely on an ironwood log; those without the design perish in the collapse of a softwood bridge. Florida Island ghosts are segregated, with souls of evil intent going to a dolorous district of Guadalcanal where they eventually perish; the good souls go to Malapa Island to live happily eternally.

Ivens also found myths of this region to lack emphasis on sexual matters. Another characteristic, the rarity of long migration traditions, he attributed to Melanesian social organization being predominantly matrilineal. Patrilineal Mala Island, he pointed out, has migration myths about red-headed culture heroes like Sina Kwao and Gwau Meo, now powerful war ghosts with cults, who introduced magic, new foods, the war bow, and other culture elements. Nowhere in the area occur migration legends and genealogies comparable in length and elaboration to those of Polynesia.

Comparative analysis of the myths alone would probably support Ivens' view of this region as a closely related cultural unit. It seems to be the heart of Melanesian culture as distinguished from Papuan. While certain concepts found here, such as those of soul substance, dual souls, worship of ancestral spirits, distinction between ghosts and non-human spirits, stones with magical power, and reincarnation in snakes and other creatures, appear elsewhere in Melanesia and New Guinea, they have perhaps a sufficiently distinctive local interpretation to justify their use as criteria for defining a subarea.

This is certainly the case as regards different classes of spirits who were never human and who people the Melanesian atmosphere, making travel outside the village an affair of extreme danger. From Buka Island to the New Hebrides, some of the same classes, with occasional overlapping of traits and adventures, occur. For example, one class consists of foolish people, often without individual names, who do everything topsy-turvy. Ulawa and San Cristoval call them merely *masi*, foolish; southern Mala has a variant of the same term, but northern Mala calls them "People of Morodo" after their residential site. They do silly things leading to their death, like diving for sunbeams in deep pools or tying

their canoes to a tree on a precipice, cutting the rope, and shoving off. Spirits called *Kakamora* in San Cristoval and Guadalcanal are like the *Tukis* of Buka and *Nopitu* of Banks Islands. Though sometimes dangerous, their favorite sport is to count the toes and fingers of sleeping Melanesians and discuss the villagers. Many myths are about rather stupid, cannibalistic ogres who, in Guadalcanal and Mala, constitute a class called *Muumuu* because of their babbling in an alien tongue. Numerous pathetic myths concern snake grandmothers who have good qualities but suffer through human distrust.

Snakes figure prominently in the religion and mythology of most of Melanesia and New Guinea. The *figona* (*vigona*, etc.) of eastern Melanesia often have snake form; Agunua of San Cristoval is a leading *figona* of that island and a creator. Ndengei, chief member of the Fijian Kalou Vu, has serpent form—which Thomson thinks may have been a late idea. Wonajo, culture hero and deity of Rossel Island has snake form as has Raudalo of British New Guinea.

Wonder heroes, whether regarded as ancestors or fictions, share many qualities. For instance, the moment a hero is born he wraps his umbilical cord around his neck and sets out to kill monsters and perform miraculous deeds. The numbers eight and ten predominate in these and other eastern Melanesian tales. Incidents pass from one hero to another whether he is Rapuanate, Sina Kwao, Born-by-the-side-of-a-bow, or one of the famous conflicting brothers.

Many stories are about a hero who is wise and benevolent but is hampered by one or more stupid brothers or companions who attempt to kill him or muddle up his deeds. Though often compared to the Polynesian cycle about Maui and his brothers, these Melanesian hero cycles appear to have no specific resemblances to it. No single name dominates Melanesian hero cycles. In the Banks Islands, Qat has either eleven brothers, including Tagaro the wise and Tagaro the foolish, or a spider, Marawa, who act as marplots. Marawa sometimes is his aide. The New Hebridean Tagaro, the wise brother, is hindered either by Suqe-matua, Meragbutu, or eleven brothers including Suqe. In the Solomon Islands, Waruhunuga has difficulties with his brothers; and in New Britain, To-Karvuvu and To-Kabinana are at odds. Even Agunua has been outfitted with a human brother to act as a marplot and burn some of the yams, thereby causing certain foods to be forever unedible. Cosmogonic, trickster, and monster-slaying adventures have accrued to the wonder heroes, and although their specific deeds vary, a frequent kind of incident is of the type described for Agunua. In the Banks Islands, the widely spread Melanesian theme of the origin of death is attached to the Qat cycle. The grandmother who rejuvenated herself by casting off her old skin in a stream frightened her grandson who did not recognize her, and so she put back her old skin and death came to the world.

Inevitably, the mythology reflects the life of its narrators. An interesting group of eastern stories is about orphans, who though scorned by other children and relatives, rise to the highest rank in the Suqwe, the Banks Islands' secret society whose ranks determine social status in the village. Typical of the group is the story told by Codrington about Little Orphan who is miracu-

lously aided by a sea woman, Ro Som (Money), and her child. She magically builds the orphan a house and clubhouse, supplies him with gardens and pigs, and sends him to his maternal uncle to ask him to pay for his first Suqwe grade. The astonished uncle, who thus far has fallen down in his obligations, agrees to sponsor him and make the first payment when he sees Little Orphan's wealth. The boy immediately repays him and gives a great feast. With only progressive differences, the narrator with loving detail describes the bags of money and pigs Little Orphan produces to pay his sponsoring uncle for each advanced grade and the feasts with all the trimmings. Villagers "carry away, carry away, carry away, carry away" payments of Little Orphan whose uncle's wives are now making love to him. His luck ends when he insults Ro Sum and she returns to the sea leaving him in the midst of a deserted garden. Here is the Cinderella story, *par excellence*, of Melanesian culture.

Both important ceremonies and minor magical rites are backed by myths accounting for their origin and their ritual, which is often a reenactment in costume, with dances and songs, of the events of the myth.

Going north and west of the region defined by Ivens, more and more unfamiliar elements, designated as Papuan, begin to appear, although elements familiar from the southern and eastern islands persist. Wheeler (1926) noted parallels without drawing conclusions about historical relationships in myths he collected in the western Melanesian-speaking islands of Mono and Alu with myths in a sample of a half-dozen collections in a region from north of the New Hebrides to Papuo-Melanesian New Guinea and Torres Straits. Mono-Alu myths and songs, he stated, are in many instances directly derived from Papuan-speaking Buin district, southern Bougainville, studied by Thurnwald.

A. C. Haddon, in his field reports and introductions to studies by other ethnographers, has frequently analyzed portions of the mythology of western Melanesia and New Guinea, particularly that of Torres Straits Islands and the adjacent areas of Cape York Peninsula, Australia, and Papuan New Guinea. Especially helpful are his descriptions of culture bearers like Sido of Torres Straits and New Guinea, and cults which have arisen around heroes like the war-hero Kwoiam (who has affinities with the Cape York hero, Sivriri), Waiet, the Brethren, and others. He found no direct connection between the myths about the Brethren and the brother cycles of eastern Melanesia. As seems to be the case in Melanesia, similarities are often only of a general kind at opposite ends of the area.

The most immediately striking quality of Papuan mythology and religion as contrasted with eastern Melanesia is the elaboration of sexual matters which reflects the intense concern about the fertility of gardens. Innumerable stories are told about the origin of plants, and plant fertility is often anthropomorphized. For instance, Kiwai Papuans (Landtman) tell about Sido, the culture hero, who killed his wife and planted parts of her body from which food plants arose. Sido ate the fruits without biting them and they lodged in his sexual parts. His marriage with Pekai of Murray Island led to the birth of plants now growing there. Impregnation of this type recalls Polynesian myths about Maui, Pani, and other characters. Both Sido and Pekai now figure prominently in gardening magic. Sido was also the first

man to die; his trip to Adiri, the other world where he married the ruler's daughter who then bore plants like Pekai, established the itinerary and adventures of later ghosts.

The function of mythology in the culture particularly of Papuans and Papuo-Melanesians is extremely well documented in the reports of Malinowski, Fortune, Williams, Landtman, Seligmann, and others. Malinowski, finding that he was "collecting texts but disregarding contexts," began to "study the myths alive," recording data on modes of narration, circumstances of narration, and the direct and indirect influences of the myths on the life of the people. He learned that the Trobriand Islanders, the subject of his research, recognized three categories of folklore, categories based less on textual differences than on differences in cultural setting. The *kukwanebu* are fairy tales told in the rainy season for entertainment. Their telling, vaguely believed to help agriculture, ends with a conventional phrase, "very fertile wild plants." Stories are individually owned. The *libogwo* are historical legends believed to be true and are told at historic spots or on overseas journeys. They enhance the prestige of the people involved. The *liliiu*, sacred myths, are connected with religious beliefs and rituals. They tell about miracles which rituals and dramas today reenact, and provide codes, justifications, and precedents for religious, magical, and ethical behavior. They belong especially to great ceremonial occasions and the harvest season when spirits of ancestors, *Baloma*, come from the underground to visit the villages. Comparable categories with much information particularly about the function of sacred myths have been described by the other ethnographers mentioned above.

Analysis of the literary style of myths and songs has been carried on particularly by Fortune for Dobu Island, Thurnwald for Buin, Seligmann for Papuo-Melanesians of New Guinea, and Quain for Fiji. Whenever collectors have published texts with both literal and free translations, as in the case of Wheeler for Mono-Alu and Fortune for the New Guinea Arapesh, to quote two examples, it is possible to carry on literary analysis for oneself to some extent. Ivens and Fox have recorded in eastern Melanesia proverbial sayings, lullabies, and conventional, poetic salutations to places, objects, people, and animals which give a good idea of these phases of literature.

Little has been said here of Melanesian relationships in mythology with Micronesia, Polynesia, Australia, and Indonesia. One finds few attempts, except by Dixon, to deal with this aspect of the problem. The southern New Hebrides, Tikopia, Ontong Java, Fiji, and other islands within Melanesia with more or less Polynesian culture and physical type are always of interest. Here one finds the Polynesian Maui-tikitiki at some of his old tricks plus a few Melanesian additions, and there are many other Polynesian themes, some of which have spread into adjacent islands more definitely Melanesian in character. Polynesian parallels in Fison's Fijian collection have been pointed out by Gifford. The Polynesian outliers in Melanesia probably represent colonization from Polynesia. Many of the themes shared by Melanesia and Micronesia are the same as shared with Polynesia.

Melusine Heroine of a local legend attached to the house of Lusignan of France and embodying the tabu against offending the supernatural wife (C31). The Melusine story, though localized, is paralleled elsewhere and makes a well-defined motif (C31.1.2) within this group of motifs. Some trace the story from Mylitta wor-

ship (e.g. Mylitta, Melissa, Melusine) coming to France through the Mediterranean from the Near East; others derive the name Melusine from Mère des Lusignan (Mother of the Lusignans: e.g. Mère Lusigne, Merlusine, Melusine).

As told by Jean d'Arras in 1387 (some 200 years after first mention of the tale in Gervase of Tilbury), Elinus, king of Scotland, married the fairy Pressina. To this marriage was attached the lying-in tabu: the husband might not see the wife in the lying-in chamber. After three daughters were born, Melusine, Melior, and Mantina, Elinus broke the tabu and Pressina returned to Avalon. Melusine, when she grew older, imprisoned her father in a mountain, for which act her mother ordered that she become a serpent from the waist down every Saturday. Yet, if she could find a husband who would agree not to see her on Saturdays, she might obtain release from this punishment and die naturally. She was discovered by Count Raymond of Lusignan (Raimund of Russetum in Gervase) bathing in a woodland spring. They married; he agreed to observe the tabu. But her many sons were born each with some defect. One of Raymond's brothers convinced him finally that Melusine's Saturday retreats were made in order to entertain a lover. (Monstrous children are commonly believed to be the offspring of illegitimate love.) Raymond broke into her room and saw her, half-serpent, bathing. Nothing was said then, but during a later quarrel he called her a "false serpent." She left at once and he never saw her again. As she fled, she left a footprint outside a window of the castle: a corroborating bit of evidence for tellers of the local legend. Melusine returned to nurse her children and could be heard flying around the castle, crying mournfully.

This latter incident indicates either that she was dragon rather than serpent, or that we have here an obvious link to the swan-maiden tales. The breaking of the tabu, reduplicated in this story by the incident of Pressina, is itself simply another version of the offended supernatural wife motif told by others and worked into the tale so that it would not be lost. Parallels of the Melusine story are found in several parts of the world. The lying-in tabu is known in Japan, where Hiko-hohodemi disobeys his wife's commandment and sees her as a monster. She, daughter of the sea king, flees in shame, leaving behind her child. This childbirth tabu reflects a general custom, well known in Europe. The nakedness tabu appears in the Hindu story of Urvaśi. The serpent lady is a central character in the *Libeaus Desconus* of the 14th century, but such monsters, transformed or otherwise, are common in folktale, legend, and myth through the undines, mermaids, etc., back to Oannes and Tiamat of Mesopotamia. See CUPID AND PSYCHE; LOOKING TABU.

mending the jug A folktale motif (H1023.9; H1023.9.1) occurring in a large category of stories based on the impossible or absurd task (H1010-1049) and associated with the equally absurd or impossible countertask (H951). When the man is given the task of mending the broken jug he says he will if the other will first turn it wrongside-out for him. The man who was given the task of skinning the stone (H1023.10; H1023.10.1) countered with the request that the other first let the stone bleed a little. See CATCHING A MAN'S BREATH.

mennyasszony tánc Bride's dance: a wedding dance of Hungarian peasants. On the evening following a wedding, the bride is "bartered" off by the best man. All who wish to buy a dance with her put money in a plate or a shawl hung around her shoulders. Finally the bridegroom gives the largest gift and the bride is his. The step used is a *csárdás*. [GPK]

Mên Shen Chinese gate gods: commonly seen as pictures of two warriors in full uniform and brilliant colors pasted on the front doors at New Year's time. A third figure is sometimes pasted on the back gate. These posters, printed from woodblocks and colored by hand, represent an aspect of Chinese folk art little known in the Occident. The legend of origin is that a T'ang emperor suffered from insomnia because his vital essence was being depleted by a female shape-shifter. Two officers from his army spent all their time at his door to protect him. In order that they too might have rest he had their pictures painted on his door. Chinese recognition of the dangers of the threshold is, however, much older than the T'ang dynasty. [RDJ]

menstruation The process of discharging the unfertilized ovum and its accessory tissues, including blood, which periodically occurs in women. This recurrent phenomenon is a manifestation of the human reproductive cycle, and an index of the maturity of the human female. It occurs between the menarche (i.e. the first appearances of the flow), and the climacteric (period of cessation), which approximately covers a period between twenty-five and forty years. Although there is great individual variation in frequency and duration of the menstrual period, it recurs roughly once a month, and lasts from four to seven days, hence its obvious association with the phases of the moon. The word itself is from Latin *mensa*, month.

Patterns of behavior during the period of the discharge show great variation. Some cultures select this period as a time within which specific behavior is enjoined upon women and men.

The first appearance of menstruation is known in English as the menarche. The Italians recognize it linguistically, in the phrase "she has become a woman." Both of these usages mark a transition from one feminine status to another. Observation of such transition may take sundry forms: it may be ignored; or it may have familial recognition as among the Jews of eastern Europe, where the newly menstruating girl is slapped on both cheeks "to give her color" or "so that she won't have pain." Among North American Apache Indians, the pubescent girl is the source of greatest blessing, and in a special ceremony transfers this boon to all who are near her. Some index of the culture's value system may be deduced from the phrases used to give reassurance to the girl: for the east European Jews, the girl is told "Every woman menstruates. Your mother menstruates. Your grandmother menstruates." The Irish girl is told "Even the Virgin Mary menstruated"; in England she is informed that "Even the Queen menstruates."

In the cultures of which we have record, there is a wide range of behavior regarding this periodic and recurrent phenomenon which physiologically so strongly demarcates the woman from the man. From some peoples in or near New Guinea we have reports of "male menstruation." The Banaro simulate menstruation in

men by cutting the urethra so that blood flows. In some cultures menstruation is a shameful thing, to be concealed at all costs; in others, it is overt and a matter of common knowledge.

There are many places where a menstruating female is forbidden to participate in religious activities. In Poland, she is not allowed to attend church, for if a drop of the menstrual flow should fall on the floor or ground, the place would become impure. Similarly, among members of the Russian Orthodox Church, a menstruating woman is forbidden to kiss the Cross or to take communion. It is remarkable that among east European Jews, who practice strictly circumscribed menstrual behavior, these religious interdictions do not operate.

According to the rules laid down in *Leviticus*, all kinds of dire penalties ensue for the male who has congress with a menstruating female, including various forms of skin diseases. The rationale which lies behind these interdictions are protective—not for the man or woman, but for the child; it is thought that a child born of such a union may be scrofulous, feeble-minded, crippled, epileptic, or insane. Nevertheless, the menstruating female, who must avoid her husband, is not prohibited from baking the Sabbath bread, worshipping in the synagogue, blessing the candles, or preparing and serving food. Recent researches have uncovered the fact that menstruation as a special state is operative *only* for the matron and not for the girl. An unmarried Jewish girl does not have to observe the ceremonial purification in the *mikva* (ritual bath), which married women must take seven days after the cessation of the flow. This involves three total immersions of the body in a pool of "living water." After this has been done, the woman may then resume her conjugal duties.

The woman in childbed and the menstruating woman are often treated identically, both being in an impure state and needing ceremonial cleansing before they can resume their normal duties. See CHURCHING OF WOMEN.

In some places menstruation is regarded as advantageous for or antithetical to various mechanical and natural processes. For example, over large areas of East Africa menstruating women may not come near the dairy, or have anything to do with milk. In some extreme cases they may not even drink milk. Not only may the direct touch be harmful, but also the glance (as among the Bushmen of Africa), the footstep (as among American Indians, where the girl must take a separate path), or the breath (in southern France) which will prevent mayonnaise from thickening. In Italy the urine of a menstruating woman will cause flowers to wither, and, if a menstruating woman approaches a mare in foal, it will abort. In various parts of the United States, a menstruating woman must not touch cut flowers, else they will wilt; if she handles bread dough, it won't rise, or if she touches meat in pickle, jelly, or pickles, they will be spoiled. By the same token, in the south of France, she may not go near newly fermenting wine, flowers that are to be made into perfume, or milk for cheese. On the other hand, the blood of a newly menstruating girl, a virgin, was used in Germany to give the proper temper to the metal forged into a sword.

Menstrual blood has been used as an element in love magic: several drops introduced into the food or drink of a desired lover "binds" him to the woman. Such practices have been reported from Spain, France, Ger-

many, and the United States. Sometimes the reverse takes place, and possession of a few drops of the discharge enables the possessor to have a permanent hold on the person from whom it has been obtained. In certain places *poltergeist* phenomena have been equated with the menstruating woman. Several cases in France have been noted whereby if a menstruating woman touches a harp or violin, the strings break; and in some extreme instances, such women cannot keep their clothes on.

It is thought by many people that prolonged lactation will prevent the return of menstruation after the birth of a child. In some instances, the return of menstruation is thought to poison the mother's milk.

Certain people hide the fact of menstruation most prudishly; others advertise it, as did Marguerite Gautier in *La Dame aux Camelias*, who carried red flowers during her catamenial period, or the Italian peasant woman who wore a red head kerchief while menstruating. The high caste woman in India will use a deeper shade of red cosmetic when she paints her forehead.

Cessation of the menses is not necessarily equated with pregnancy by all peoples. The Arunta of Australia, for instance, date the onset of pregnancy from the time they feel the quickening.

While in a number of cultures the onset of the menses is celebrated, the cessation (the menopause) is often overlooked. There are no known or authenticated records of the celebration of the menopause. In a limited area, mainly in the Washington and Oregon coastal region, a woman after her climacteric is the heroine of the stereotyped "romance," i.e. the romantic tales most relished are those which deal with love between a post-climacteric woman and a young man.

The position that menstruation holds in a given culture may often be identified by the jokes and other verbal play given to this topic. In the United States, it is an adolescent humorous theme; in France, it is considered more suitable for adult humor. See ADOLESCENCE CEREMONIES; AVYA; BLOOD; BREAD; DELUGE; PUBERTY DANCES; PUBERTY RITES.

✍ The periodic flow of blood from the uterus, normally occurring in adult females every four weeks, is accounted for in American Indian origin tale material from several tribes. Nanabozho, culture-hero-trickster of the Ojibwa, Menomini, Potawatomi, etc., causes his grandmother to menstruate and decrees that thereafter women shall do so each month; the Shawnee also attribute menstruation to the grandson of their supreme female deity who causes his grandmother to menstruate. The Yuchi Indians of the Southeast believe that Sun

created the Yuchi, having caused their forebears to spring from a drop of menstrual blood in the Sky world, before they were put on earth. In a White Mountain Apache tale the Sun sends one of his beams, a red one, into Changing Woman as she lies in the ceremonial menstrual hut, and she begins to menstruate. In a Chiricahua Apache tale White Painted Woman institutes the puberty rites for girls at their first menstruation.

White Painted Woman spoke to the people and said: "When the girls first menstruate you shall have a feast. Let there be songs and dancing for the girls for four nights. Let the Gahe dance in the east in front of the ceremony." Today masked dancers personify the Gahe in the rite. The girl herself must not sleep for the four days and nights; on the fifth morning she must make four runs around the ritual baskets, while the woman who has care of her during the rite chants the shrill praise-call and prays for her. The songs are sacred prayer songs, among them homeopathic songs to White Painted Woman:

White Painted Woman carries this girl,
She carries her through long life,
.....to good fortune,
.....to old age,
She bears her to peaceful sleep.

On the morning of the fifth day, while the girl runs into the sunrise, the last song is sung, beginning with the moving words: "You have started out on the good earth." See M. Astrov, *The Winged Serpent*, New York, 1946, p. 206.

Menstrual blood, as well as the blood and bloody secretions from childbirth, are generally believed so powerful by American Indians that women are, with a few exceptions, isolated in a special hut, at a distance from the family dwelling during menstruation or childbirth. Men should never come into contact with menstruants or with the dishes, baskets, clothes, or any other articles used by them. To do so makes a man unclean; being unclean he will not be able to obtain a guardian spirit, or kill game when he hunts—two matters of prime importance to the American Indian male. Yet occasionally, in American Indian mythology, there are tales in which Trickster or some other character has intercourse with a menstruating woman; this is an unthinkable act in real life. Menstrual blood, being so powerful, is occasionally mentioned as being used for medicine of a powerful sort, and in a Shawnee tale of the horned underwater serpent the monster is lured to land by a group of shamans, through the use of ashes taken from the hearth in a girl's menstrual hut. It was during menstrual periods, and especially the first one, that young girls were likely to have visions and obtain guardian spirits who conferred upon them songs and supernatural power for doctoring or other pursuits open to women. [ewv]

✍ Menstrual seclusion is not a general custom in Middle America. Among the Sumu and Miskito Indians of Nicaragua, however, menstruating women must occupy a special shelter or a secluded corner of the hut for two or three days. During this period the woman is unclean, and must not touch food intended for other people, since to do so would cause their death. [cmf]

mento An erotic Jamaican dance, formerly a country dance, now a night-club favorite. Its music is slower

and more voluptuous than that of the *rumba*. The woman tantalizes her partner into a frenzy with seductive rolling of the haunches and belly and works herself into a state of autointoxication. [CRK]

Mentula Loquens A variation of the talking privates motif (D998; D1610.3) found in Plains Indian myths, in which Trickster's private parts give him magic advice, or betray unchastity. In the Mentula Loquens motif (D998; D1610.3; H451) a man's penis speaks and can be silenced only by his mother-in-law. The full import of this can only be gained when one realizes that in the Plains tribes (Crow, Assiniboine, Pawnee, Kiowa, Apache) in which this incident is told the mother-in-law tabu prevails; a man cannot speak to, look at, or eat with his mother-in-law, much less indulge in any joking or sex-play with her. Closely related to talking privates and Mentula Loquens is the more widespread American Indian motif of talking excrements (D1002, D1312.1) in which a man, usually Trickster, is given magic advice by his own excrements. [EWV]

mercy-killing To be properly classified as a mercy-killing it must be humane in both motive and method. Its connection with folklore is mainly in infanticide and geronticide. It also has secondary folklore interest because arguments both for and against it are taken from religious tabus, commandments, and sanctions. Many, for instance, argue against even the voluntary euthanasia of incurable sufferers on the ground that it is prohibited by the Mosaic "Thou shalt not kill" of the King James version of the Bible, although the original Hebrew and LXX of the Old Testament passages (*Exodus* xx, 13 and *Deuteronomy* v, 17), the Greek of the corresponding New Testament passages (*Matthew* xix, 18; *Mark* x, 19; *Luke* xviii, 20) where Jesus quotes the commandment, and all modern scholarly revised translations give "thou shalt not commit murder." Murder is properly applied only to killing which is with malice aforethought, hence killing in self-defense, capital punishment, and war are exempted by law. Euthanasia advocates contend that carefully regulated euthanasia of those who request it and are pronounced medically incurable by examining physicians should be legalized since it is with mercy aforethought. They also quote the beatitude of Jesus (*Matt.* v, 7) "Blessed are the merciful for they shall obtain mercy," and the golden rule of Jesus (*Matt.* vii, 12) "Therefore all things whatsoever ye would that men should do to you, do ye even so to them: for this is the law and the prophets." In modern times the law seems to disagree with the prophets on this issue, but convictions for mercy-killing are hard to secure, sentences if any are apt to be light, and juries are likely to accept a plea of temporary insanity rather than face the controversial ethical issue. Religious leaders are divided on the subject. [CFP]

 It is customary in many South American tribes to strangle or choke a dying person. The Aymara Indians have expert killers called *despenadores* who dispatch the dying by strangulation or by breaking their necks. The psychological motives behind this custom are not well known. It is attributed to the desire of hastening the departure of the fearful ghost or to the wish of sending away the soul before the illness has impaired its vigor. [AM]

merengue The national dance of Santo Domingo, West Indies: distantly related to the Haitian *meringue*. Gay music in 2/4 time is played by an accordian, a *tambora* (drum) and a *guiro* (notched gourd rasped by a notched stick), in catchy rhythms. The first part of the dance, *pambiche*, is a slow promenade; the second part, *jaleo*, is a lively reminiscence of Afro-Spanish-Cuban dances. To steps resembling the *son* and *rumba*, it adds more virtuoso motions, like the horizontal shaking of the knees in flexed position. As all dances of the West Indies, it has an erotic flavor, but without the trancelike abandon of more aboriginal dances like the *mento*. [CRK]

Merlin A poet, wizard, and prophet, who lived supposedly in the 6th century, and in the 12th became a prominent figure in the Arthurian legend. The works ascribed to him are few, but the medieval literature about him is very extensive, being found in most of the languages of Western Christendom. The material may be divided into four classes: 1) Welsh poems; 2) Geoffrey of Monmouth's works; 3) the French and derivative romances; 4) local associations and folktales. The Breton poems printed in *Barzaz-Breiz* by La Villemarqué will not be considered since they are forgeries.

1) During the Dark Ages there grew up a legend about a wild man of the woods who was endowed with the gift of prophecy. Among the Ulster Irish it was told about King Suibne, among the Strathclyde Britons about Lailoken, and among the Welsh about Myrddin, who was in all likelihood a historic bard of royal blood in the 6th century. The story of Myrddin, one infers, ran to the effect that he went mad at the battle of Ardderyd (574) near Carlisle because of grief at the carnage. He lived many years in the wood of Celyddon (southern Scotland), subsisting on roots and berries. He prophesied three different deaths for the same boy, but was vindicated years later when the boy fell from a rock, was hanged by his feet from a tree, his head under water, and so drowned. Thrice he gave way to laughter, knowing as a seer that the unsuspected queen had been lying with a paramour, that a beggar was sitting over buried treasure, and that a youth, buying new shoes, would never live to wear them. This motif came from India, probably through Jewish channels. No authentic effusions of Myrddin have survived, and it is only in obscure poems of the 11th and 12th centuries that we get evidences of the familiarity of the legend and spurious vaticinations—allusions to Ardderyd, to the long life in the wood of Celyddon, to an apple tree under which, Myrddin says, he enjoyed the company of a fair, sportive maid, to his sister Gwendydd, and prophecies relating to events of the 11th and 12th centuries. A poetic address delivered by the seer from his grave concerns the reigns of William Rufus and the two Henrys, and includes a warning against the time when a strong, freckled man would reach a certain ford over the Usk. Giraldus Cambrensis tells us that the Welsh took this prophecy so seriously that when it seemed to be fulfilled by Henry II in 1163, they were much disheartened. Indeed, throughout the Middle Ages the mantic verses of Myrddin had a potent influence. Though all early tradition connects the prophet with Strathclyde, a late legend reported that he departed with the Thirteen Treasures of Britain to the Glass House on Bardsey Island, and was still there, though doubtless invisible to human eye.

2) Geoffrey of Monmouth, the learned but unscrupulous Oxford scholar, finished about 1135 his *Prophetia Merlini*, professedly a translation from Welsh or Breton. It followed the convention of giving *ex post facto* predictions of events in somewhat obscure phrases. Arthur is referred to as the Boar of Cornwall, who will trample on the necks of foreigners and inspire fear in the house of Romulus and whose end will be doubtful—evident allusions to the fabulous exploits which Geoffrey was already inventing about the hero and to the famous British hope of his return. The struggles of the Red Dragon (Wales) with the White Dragon (the Saxons), the Norman Conquest, the death of William Rufus are similarly sketched, and the sinking of the White Ship (1120) is foretold in the words: "The Lion's whelps shall be transformed into fishes of the sea." Geoffrey, having reached his own time, is forced to deal cryptically with the unknown future, indulges in picturesque rigmorale about the Castle of Venus, the Ass of Wickedness etc., but does echo one genuine tradition of the return of Cadwalader (d. 664). Almost all of the book, then, is a fabrication, but it had a prodigious success, inspiring many commentators throughout the Middle Ages, and editions were printed in Germany in the 17th century, though William of Newburgh had exposed the sham as early as 1198. When Geoffrey published the *History of the Kings of Britain* (c. 1136), he incorporated the prophecies and provided an account of their supposed author. He lifted out of Nennius' *History of the Britons* the story of Vortigern's tower, the fatherless boy, and the prophecy about the Red and White Dragons, coolly identifying the prophetic boy with Merlin. Later he credited Merlin with transferring the Giants' Dance (Stonehenge) from Ireland to its present site. Again by his magic powers the wizard gave Uther the form of Gorlois and so brought about the begetting of Arthur in Tintagel castle. Though this last tale seems based on Cornish tradition and ultimately on the Irish *Birth of Mongan*, the role of Merlin in Geoffrey's *History* is an arbitrary medley of the author's. When, however, his *Life of Merlin* was written about 1150, he used, even at the expense of consistency, much genuine Welsh lore. Merlin is no longer the counselor of Uther and Arthur but a king of South Wales, who engaged in a battle which can be recognized as the Ardderyd of the poems, and the names of the other participants are traditional. His sister Gwendydd appears as Ganiada. We have the madness, the life in the forest, the triple death, the three laughs, and a poetic dialog with Taliesin, in which there are echoes of the vernacular poems as well as of Ovid and Isidore of Seville. The great discrepancy between Geoffrey's two accounts of the mage led Giraldus to state that there were two persons, Merlin Ambrosius of the *History* and Merlin Calidonus of the poetic *Life*.

3) About the year 1200 Robert de Boron, a Burgundian poet, composed a romance about Merlin, of which 500 lines have survived but which was rendered into prose and introduced into three compilations, those of the Didot and Huth MSS. and the Vulgate cycle. Robert seems to have known Wace's redaction of Geoffrey's *History* and gave a confused version of the Merlin story. Though he shows no acquaintance with the *Life*, he did borrow from some unknown source the motif of the triple death. He gave an elaborate account of Merlin's begetting by an incubus, based on the apocryphal story

of the begetting of Antichrist. Merlin is provided with a confidant, Blaise, who recorded all his prophecies; he advised Uther to establish the Round Table; after Uther's death Merlin proposed to the barons that the true heir would be revealed by the test of the sword in the stone. The poem ended with Arthur's coronation. In the 13th century the prose version received two continuations in which Merlin plays a large part as the counselor of Arthur, as seer, and as shape-shifter. The Vulgate continuation, though largely occupied with Arthur's wars with the rebel kings, the Saxons, and the Romans, introduces the motif of the three laughs and the famous story of the wizard's infatuation for Niniane or Viviane, which ends with her enchanting him under a whitethorn in the forest of Broceliande. This same legend occurs with variations in the other continuation (the *Huth Merlin*) and in the *Prose Lancelot*, and though doubtless influenced by such famous themes as the beguilement of Aristotle and Virgil, may well have had its root in Myrddin's sporting with a maid under an apple tree in the wood of Celyddon, already mentioned. The *Huth Merlin* furnished the materials which Malory condensed and rearranged in his first four books. The Vulgate *Merlin* was thrice rendered into English, once as *Arthour and Merlin* about 1300 and twice about 1450. An extraordinary concoction is the *Prophécies de Merlin*, written in French by a Venetian between 1272 and 1279, and mingling veiled references to events in Italy and the Holy Land with fantastic adventures of the Arthurian cycle.

4) Merlin's fame has been preserved in certain humbler forms. In the Scottish ballad of *Child Rowland* (*Folk-Lore* II: 183) he is a warlock who brings about the rescue of Arthur's daughter from fairyland. There are Breton folktales about a wizard Murlu. Geoffrey of Monmouth's spurious etymology of Carmarthen as *Kaermerdin*, town of Merlin, still lives on in the legend that Merlin's favorite walk was along the banks of the Towy, and Geoffrey is also responsible for a Merlin's Cave at Tintagel, though here, as elsewhere, one may suspect that the particular association is due to the romantic revival of the 19th century, not to old folk tradition. Merlin's grave was pointed out at Drummelzier on the Tweed and in the Forest of Broceliande. According to a tradition of doubtful antiquity, the mage was born on the Ile de Sein off the Breton coast, and to it he conveyed the wounded Arthur.

ROGER S. LOOMIS

mermaid A supernatural sea-dwelling female of general European maritime folklore: German *Meerfrau*, Danish *maremind*, Cheremissian *wut-ian üder*. (See HAVMAND, the Estonian *NÄKK*, Finnish *NÄKKI*.) The Irish mermaid, *murdúac*, is Anglicized to **merrow**. The Morgans, or sea-women, off the coast of Brittany are considered beautiful, sirenlike, and dangerous to men. Mermaids are usually depicted as having the head and body of a woman to the waist, and a tapering fish body and tail instead of legs. A carving on Pucé Church in Gironde, France, however, shows a young mermaid with lower body divided and two tapering tails instead of legs. They live in an undersea world of splendor and riches, but have been known to assume human form and come ashore to markets and fairs. They often lure mariners to their destruction, and are said to gather the souls of the drowned and cage them in their domain. Those who seek fact underlying every belief have offered the manatee or the dugong, warm-blooded sea mammals, as the original for the mermaid, relying on analogy more than on sailors' ability to differentiate between a sea-cow and a fish-woman.

Concerning the origin of mermaids, the Irish say they are old pagan women transformed to mermaid shape and banished off the earth by St. Patrick. A Livonian folktale says they are Pharaoh's children drowned in the Red Sea (B81.1). For origin of the mermaid concept S. Baring-Gould suggests (*Curious Myths of the Middle Ages*, London, 1884) the various semi-fish gods and goddesses of the early religions, e.g. the Chaldean Oannes and the Philistine Dagon, especially when associated with the sun-god concept, as Oannes who appeared on earth every day and plunged into the sea every night. Atargatis (Derceto, Dea Syria) too is sometimes depicted with semi-fish body. For association of the mermaid with the ancient sea goddess and love goddess, Marian, identified by the Greeks with Aphrodite, born of the sea, and the symbolism of the comb and the mirror, see Robert Graves, *The White Goddess*, New York, 1948, pp. 327-328; for explanation of the fish tail in statues of Atargatis-Derceto, p. 335.

Medieval belief in the mermaid, however, was widespread and substantiated. There is a Netherlands story reported by Baring-Gould (p. 509) that in 1430 when the dikes near Edam broke in a storm, some young girls in a boat found a mermaid floundering in shallow, muddy water. They got her into the boat, took her home, dressed her in women's clothes; she could weave and spin with extraordinary skill, but never learned to speak. Old Henry Hudson is said to have seen one near Nova Zembla on his arctic explorations. In 1560 west of Ceylon some fishermen caught several in a net, which were taken ashore and dissected with great interest by a learned physician. He reported that internally and externally they were constructed like human beings.

It is generally thought unlucky to see a mermaid; the sight of one presages storm or disaster (D1812.5.1.9) as witness Child's ballad *The Mermaid* (#289), in which one of a ship's crew sighted a mermaid sitting on a rock with comb and mirror in her hand. Very shortly the ship was lost in a raging storm and for want of a lifeboat all hands were drowned. Mermaids also often lead people astray (B81.3). Getting hold of the cap or belt of a mermaid gives one power over her (D1410.4). The marriage of a mortal man to a mermaid (B81.2) is com-

mon in folktale and folk belief; descendants of such a union are still living in Machaire, Ireland. Such people are usually under some kind of a curse; either they cannot sleep at night for the haunting sound of the sea in their ears, or they are doomed not to speak.

The heroine of *The Little Mermaid* by Hans Christian Andersen falls in love with a beautiful prince on a passing ship, voluntarily assumes human shape in order to gain an immortal soul and be near him forever, is doomed never to speak, attends the prince constantly, but when he marries a human princess her heart breaks. She becomes an elemental light being, with a chance at immortality.

merman The male counterpart of the mermaid in general European and Near Eastern folklore. The *Arabian Nights* refer to the merman both as human and as fish. "The Tale of Abdullah and Abdullah" in the *Arabian Nights* is the story of the poor fisherman named Abdullah and his benefactor, the merman named Abdullah. Al-Kazwini refers to a Syrian story of a merman married to a human wife, whose son knew both the language of the earth and sea. Probably the most familiar merman motif of folktale and ballad is the merman forsaken by his human wife (C713), widely popularized by Matthew Arnold's poem, *The Forsaken Merman*. Various ramifications of this motif include the prohibition against the human wife's overstaying her visit home (C713.3), or even seeing her old home (C713.2), or staying in church for the benediction (C713.1) which inevitably prevents her returning to her merman husband. See HAVMAND; NÄKK; NÄKKI; NIX.

merry tale A short, simple humorous story, usually of daily life: called variously *Schwank*, *jest*, *humorous anecdote*. Sometimes, and especially in certain regions, it is an animal tale, but more often the actors are human; the tales themselves are numskull stories, tales of deception, or obscene. The stories are uncomplicated, usually limited to a single motif, and make little use of the supernatural. They tend to cluster about the person of a central character or group, e.g. Coyote, Fox, the Gothamites, Till Eulenspiegel, but exist also as isolated "joke" stories. The anecdotal character of the merry tale makes it easily remembered; some current merry tales may be traced back almost 4000 years and some have spread so as to become known worldwide. See *Merry tale* in EUROPEAN FOLKLORE; GERMANIC FOLKLORE.

Meru or Sumeru In Hindu and Buddhist mythology, the mountain at the center of the earth where the gods dwell. Meru, the chief of the mountains, holds the earth fast, is 84,000 *yojanas* high and is surmounted by the heavens. Within, it is adorned with the cars of the gods. Around it the sun, moon, and stars revolve. In the Buddhist system, Meru rises from the ocean. Hindus identify it with Mt. Kailās or Kailāsa in Tibet. Lamas represent Meru by a small pile of rice in the center of their daily offering of the universe in effigy to the Buddhas.

mesi'ng keo The False Face dancers of the Delaware Indians. They participated in the Midwinter Bear rite of the Grand River colony, and at the Corn harvest and Big House ceremony of the Oklahoma group. The mask, *mesing*, could be worn only by a man of supernatural ability, a man capable of personifying the spirit

mishingali'kun. This spirit combined potential maleficence with power to guard from disease and to expel evil spirits. Furthermore he had the dual function of helping vegetation and controlling game, particularly deer.

At the Bear rite, 12 men (the sacred number) wore two kinds of masks. Six white Unami moiety masks, representing peace, crept in the west door, split into two groups, and danced around the central post, three clockwise, three counterclockwise. Then six red Wapachki masks, representing violence, crept in the east door and went through the same performance. They were accompanied by song and water drum and the vibration of the turtle rattle carried by each dancer. As conclusion they used the same steps in a war dance.

The *mesing* or mask of the Big House ceremony was a divided mask, half red, half black, with thick lips, tin eyes, and horse hair—recalling the Iroquois type. The dancer who wore it was covered with a bearskin to his toes, carried a tobacco pouch, a staff of twisted wood, and a tortoise rattle filled with corn kernels (combining animal and vegetable potency). He jumped, kicked, and whinnied.

Despite many apparent resemblances between these maskers and the Iroquois *gagósa*, the concept is not identical. The Iroquois do not emphasize duality to the same extent. Neither do they include the game-owner concept, nor vegetable association, which they relegate to the Corn Husk masks. The game-owner concept was held by all eastern Algonquians to the Naskapi of Labrador. It bears a remarkable analogy to the *gahé* of the Apache Indians. [GPK]

Metal Old Man Be chasti, or Metal Old Man, a character in White Mountain Apache Indian mythology whom Monster-Slayer, younger of the two boy heroes, meets and worsts in a fight. Metal Old Man is represented as a great man (giant) covered with black metal (obsidian) all over his body except for his armpits, the vulnerable spots where Monster-Slayer's arrows were able to penetrate. Among the Chiricahua Apache the same tale of a contest between a boy hero and a monster is told, but the two protagonists are Child-of-the-Water and Giant, a being whose body is covered with four coats of rocks. Child-of-the-Water succeeds in shooting off the first three coats and then shooting Giant through his heart, which could be seen beating under the thin, innermost coat. [EWV]

metamorphosis A change of form or shape; shape-shifting: a common incident in mythology and folktale. See TRANSFORMATION.

Metsänneitsyt The "forest virgin" in western Finland. It is believed that she looks like a very beautiful and well-dressed woman, but from behind she is like a stump, a bundle of twigs, a pole, or a trough. She is eager to entice any man in love with her. (Compare the Skogsjungfru of the Swedes.) [JB]

Metzgersprung Literally, butchers' leap: a running dance by the butchers' guild, particularly of Munich and Nürnberg, Bavaria. As they danced their serpentine paths and manipulated their butchers' knives into arches and platforms (recalling sword dances), they were followed by a host of *Schemen*. There are two traditions as to their origin, both of which may have been operative.

One explanation connects them with ancient animal sacrifice, in view of the sword dance features and the ritual serpentine. The other traces them to a prerogative issued to the guild in the 14th century for the performance of their occupational dance during carnival festivities. As part of their ceremonies, sheepskin-clad apprentices were released and had to jump into the fountain—in Munich the Fischbrunnen, in front of the city hall. These customs continued into the early 20th century. See SWORD DANCES. [GPK]

Mexican and Central American Indian folklore The folklore of Mexico and Central America—a geographical region frequently referred to as Middle America—represents the product of 400 years of fusion of two basic strains, that of the indigenous cultures of the New World, and that of Old World cultures, principally Spanish. To a greater extent than is perhaps the case in North and South America, the Indian cultures of this region have blended with those of Europe to such a degree that the term "Indian" must be used advisedly. Anthropologists are beginning to suspect that some groups, at least, are as nearly 16th century Spanish in terms of the content of their cultures as they are Indian. Hence, the folklore of the modern Middle American Indians, as one aspect of the total cultural configuration, can best be understood through an awareness of the ingredients which have gone into this mixture. For this reason, attention will be drawn to the type of motifs of stories, the festivals, religious beliefs and the like which have come from the Old World, but since these are better known to most readers than the indigenous stratum, they will not be elaborated upon.

In the treatment of both pre-Conquest and modern Middle American folklore, greater emphasis must be placed upon Mexico and Guatemala than upon the remainder of the area. Since pre-Conquest times these countries have had much denser populations, and much greater variety in customs and ways of life than the regions farther south and east. They represent the areas of highest culture, particularly exemplified by the Aztec and Mayan peoples, but also noteworthy for other advanced groups such as the Tarascans, Mixtecs, Zapotecs, Huastecs, and Totonacs. Among these peoples traditions, beliefs, and concepts, undoubtedly common to the entire area, were formalized more completely into elaborate religious systems, with resultant opportunities for complex and colorful ritualistic and ceremonial additions to the more mundane life of smaller social groups. Meanwhile, as these developments were taking place—perhaps earlier—the groups to the southeast of the Maya, from Honduras and El Salvador on, were being strongly influenced by diffusion from South America, so that today, much of the folklore of these areas reveals a South American origin, and is rather different in flavor from that of Mexico and Guatemala.

Unfortunately, less is known about the pre-Conquest folklore of these peoples than in the case of the larger countries. By chance, Guatemala, and particularly Mexico, offered to the conquering Spaniard the wealth which had brought him to the New World. Whether this was in the form of minerals, or large holdings of land, only these countries had the native populations which made exploitation feasible. Moreover, in addition to simple economic exploitation there was, to a much

greater degree than is often recognized, a crusading zeal on the part of many Spaniards, not all of whom were churchmen, to carry the true word of God to the heathens. The Spaniards felt that the Indians had long been under the power of the Devil—in whose existence they had not the slightest doubt—and that it was their bounden duty to seek out the enemy and vanquish him. Hence, the particular field of most interest to the folklorist was precisely that which received the earliest and strongest attention on the part of the conquerors. Heathen temples were destroyed, the idols broken or buried, and churches with crosses and images of saints were erected on their sites. This early preoccupation with the ideological and religious aspects of culture, while quickly destroying most of the formal elements, at the same time resulted in the recording and preservation of this material, subsequently lost in other areas which received less attention. If the enemy were to be destroyed he must first be known. Friars wandered from one end of the land to the other, established convents, learned the Indian tongues, wrote down their beliefs, recorded explanations of their picture writings, and attempted to fathom their minds. Within a few years some of the Christianized Indians themselves were doing this work, writing in their native languages, using Spanish characters. These incomparably rich sources, many of which survive to the present time, make it possible to know the basic outlines of myth, legend, religion, and ceremonial prevalent at the time of the Conquest. Lacking such documentation for most of the area to the southeast of the Maya, we can only surmise.

Most of the peoples under consideration have been agricultural for at least 3000 years, perhaps much longer. Since the body of knowledge which forms the religion and mythology of a people deals most closely with the interests of the group, it is not surprising to find that from the very beginning, preoccupation with agriculture and fertility is very marked. The earliest stages which we can discern suggest a personification of nature as the basis for myth and legend. The wind and the rain, lightning and thunder, fertility and growth, gods of maize and "masters" of game, all personified, are the actors on the stage, and in cosmic forces are seen the struggles of these deities.

The Conquest mythology which survives to the present time deals especially with the "origin" theme, the origin of the world, the people and animals in it, the origin of cosmic forces and the origin of maize, and with the "explanatory" theme, what causes rain, earthquakes, winds, why human sacrifice is necessary, and like subjects. Such beliefs doubtless were common, though with individual variations, to the entire area. Subsequently, in the regions of higher culture—central and south Mexico, Yucatan and Guatemala—these simpler concepts were fused into more precise bodies of belief which, with a priesthood to guide and develop, became religious in a more formal sense, with a pantheon of deities, an elaborate yearly cycle of ceremonial, complex and often bloody sacrifices and rites, and other time-consuming demands on each and every person. This is the stage which is represented in the accounts written by Spaniards and educated Indians of 400 years ago, a few examples of which may be given.

The ancient Aztecs believed that there had been

three or four previous worlds, or "suns," all of which, including the people, had been destroyed. The sequence is not always the same, but the forces are—flood, fire, wind, and being eaten by supernatural beasts. Each time the world was re-created and new people placed upon it. In one legend the first world lasted 676 years, during which time people lived on pine-cone nuts, finally being devoured by ocelots. The people of the second world were carried away by wind, turned into monkeys; thus the explanation of the origin of monkeys. The third world was destroyed by a rain of fire, the inhabitants turned into wild fowl. The fourth world was destroyed by flood, and the people became fish. The present world, it was believed at the time of the Conquest, was to be destroyed by earthquake.

The actors upon this legendary stage were the gods—Tezcatlipoca, Quetzalcoatl, Huitzilopochtli, and a bewildering array of others among the Aztecs—Itzamna, the Chacs, Ah Puch—and others among the classic Maya—Hun-Apu, Xbalanque, Vukub, and Jurukán of the Maya-speaking Quiché of Guatemala, to name only a few. A marked duality pervades the cosmological speculations which have come down to us. Among the Aztecs the male and female gods Ometecutli and Omecihuatl, "Two Lord" and "Two Lady," who lived in Omeyocan, "the place of two," were the progenitors of all of the gods. Known also as "The Lord and Lady of our Flesh," or "The Lord and Lady of our Sustenance," they are represented by symbols of fertility, adorned with ears of maize. Among the Quiché, Xpiyacoc, and Xmucane, the "Father-Mother" deities, take their place.

Struggle between gods is a dominant theme. Classic is the account, recorded in a dozen or more variants, of the contests between Quetzalcoatl, the feathered serpent, and Tezcatlipoca, the god of the night wind. The former was the culture hero of the Toltecs, who preceded the Aztecs in the Valley of Mexico by a thousand years. It was he who went to the underworld, gathered the bones of the dead of preceding worlds, returned, sprinkled his own blood on them, and thus created man. It was he who brought agriculture, arts, and sciences. According to one account Tezcatlipoca was the first sun in the first world, until he was knocked out of the sky by Quetzalcoatl who became sun, only to be knocked out of the sky in turn by Tezcatlipoca, leaving the world in darkness. Legends tell of a much later period in which Quetzalcoatl now reigned peacefully, instructing his people, until Tezcatlipoca, by means of a series of tricks, made life so miserable that he went off to the east, leaving a barren waste behind, and embarked on a raft of serpents to set out over the eastern ocean, saying that he would some day return. This Quetzalcoatl had a light complexion and a long beard. Small wonder that Moctezuma, king of the Aztecs, believed that Cortes, landing on the gulf coast of Mexico, was the god returned! The same "feathered-serpent" god appears among the Maya as Kulkulcan and among the Quiché as Gucumatz. Perhaps these accounts of struggle reflect the entry of the newer, bloodier religion of the Aztecs, with their gods Huitzilopochtli and Tezcatlipoca, superimposing themselves over the older cult of Quetzalcoatl and the rain god, Tlaloc.

Tlaloc, so the story goes, lived in the sky with his wife Chalchiuhtlicue, and in the patio of their home

were four barrels. One was filled with good water, which made seeds germinate and crops grow; the second had bad water which produced mildew on growing things; the third contained hail and sleet, while the fourth held rain which fell when crops needed dry weather to mature. Servants of Tlaloc, also known as the *tlalocs*, at the bidding of their master took small containers, filled them with water from the barrels, and with wooden paddles splashed it out to fall as rain, or broke the containers, thus causing thunder to accompany a downpour.

Coexistent with these tales of the creation and development of the earth, the basis for the religion of peoples at that time, were countless superstitions and beliefs which undoubtedly have their origins deep in the antiquity of mankind. Omens were legion: the hoot of an owl presaged death; a croaking bird the arrival of someone; tamales sticking to the pot foretold that the woman cook, at parturition, would experience difficulty in expelling the afterbirth. Offerings of food and drink were made to deities: a mouthful of food was thrown on the fire before eating, and a little pulque was spilled on the ground as a libation before drinking. Maize, a god in itself, was treated with great veneration: if any were seen on the ground it was carefully picked up and never trampled upon. Milk teeth were thrown into rat holes so that the new teeth would be strong and bright; at the festival of the new year children were lifted off the ground momentarily by their heads to promote growth (the same is done today in some places during Easter Week observances, on Saturday, when church bells first ring out after having been "dead" since the preceding Thursday). A pregnant woman gazing at an eclipse was believed to give birth to a hare-lip child; small obsidian knives carried in the clothing against the abdomen counteracted this malevolent influence (an iron knife today is substituted; otherwise the belief and practice are identical). Human fingers were valued by robbers to open doors and put the victims in a trance. Only a few of these superstitions which existed have been recorded, and most of them survive but little changed until today.

Religious rituals and observances, as contrasted to simple folk beliefs, were unbelievably numerous and complex among the more advanced peoples. They were bound up with the native calendar, which divided the year into 18 months of 20 days each, plus a final 5 day unlucky period. Coordinated with this was a ritualistic period of 260 days known as the *tonalpohualli*, composed of the 20 named days combined with the numbers 1 to 13. The superposition of these two counts results in a cycle of 52 years, the "century" of the advanced peoples of Middle America. Among the Aztecs each month was characterized by an elaborate fiesta in honor of the appropriate deity, while lesser fiestas occurred almost continually. Most impressive and important of all was the observance at the end of the 52-year period, when it was feared that the world might come to an end, as it had done, according to Aztec mythology, three or four times before. This "New Fire Ceremony" was highlighted by the extinction of an old altar fire and the ceremonial lighting of a new one, symbolizing humanity's new lease on life. Toward dusk of the fatal day all fires in the Valley of Mexico were

extinguished and the priests, followed by immense throngs, walked several miles from Mexico City to a temple at the summit of the Hill of the Star. This hill, rising from the flat valley floor, commands a view of the heavens in all directions. Here the priests took up their anxious vigil, waiting until midnight to know whether the celestial sign foretold the end of the world or the beginning of another century. The sign was a star, or stars, Aldebaran or the Pleiades, which, if they passed the zenith, indicated a continuation of life. If they failed to do so, the end was at hand: the sun and the stars, it was believed, would be converted into wild beasts to fall to earth and devour all human beings, after which earthquakes would destroy the world. At the instant the sign was interpreted favorably, priests kindled a new fire with a wooden drill in the breast of a recently sacrificed victim, and runners joyously carried burning brands to the far corners of the valley to relight fires on the hearths of each house.

This picture was abruptly interrupted by the arrival of the Spaniards at the beginning of the 16th century. Religion received the first impact of foreign influence, and, in spite of the persistence of many indigenous elements, there is no doubt but that today Catholicism is the inspiration for the form and content of most religious observances. Apart from formal religion, it is probable that the conquerors, intensely superstitious themselves, did not find the basic Indian philosophy of life, the concept of the supernatural forces at work in the world, to be very strange. Hence, on this level there was less pressure to change the indigenous way of life. In the course of time many Old World folk superstitions and stories were accepted, without force, by Middle American peoples. In some cases local forms were replaced, but more often a harmonious blending resulted. At the same time, the Spaniard unconsciously adopted many of the New World *creencias*, the beliefs and tabus. Whatever the origin of a particular element, it fitted easily into the fundamental pattern, understandable to conqueror and conquered alike. This pattern presupposed that the individual, to be born, grow up and pass through life, had to maintain a delicate balance, a harmony between himself and the powers of nature on one hand, and himself and the powers of evil of other men on the other hand. Life was filled with tabus. To break them or to fail to observe them could cause illness and death, destroy one's hunting luck, or cause the fields to dry, bring bad luck in love, or cause one to suffer abject poverty. Evil persons, through witchcraft, might cause the same things. Hence, religious and magical observances were all directed toward the maintenance of this harmony, or toward its restoration should it be destroyed. The same description is valid in the 20th century.

The ancient concepts of gods as personifications of the forces of nature are to a large degree lost. Most deities have disappeared entirely, a few have blended with Catholic concepts of Christ, the Virgin, and the pantheon of saints. The ritual observances of pre-Conquest days are gone, but many of the simpler rites are continued, some secretly in the mountains away from towns, others incorporated as parts of Church procedure. Thus, copal gum was the pre-Conquest incense; today it is found in churches, in Mass, or it

may be burned quietly by the lone hunter as he sets out at dawn, his offering to the "masters" of game to gain their approval of his venture. Turkeys are sacrificed in caves to bring luck or health, or food may be buried in the ground at planting time to give strength to the earth. The wind, the rain, thunder, and lightning are still considered to be gods by the more remote, primitive peoples, but also the sorcerer can show himself in the same forms. Through malevolence of the witch, or through bad luck, a man becomes ill, and the proper persons must be consulted to effect a cure. Now, as formerly, if one can maintain the essential harmony, he will go through life with a minimum of trouble. Some of the acts are Old World, some are New World, but the Indian is unaware of their dual origin.

The maintenance of health is a matter of primary importance to the Indians of Middle America, just as it is to persons of other societies. A large portion of the concepts of causes and cures of sickness found in this region appear to be indigenous in origin. While there is some idea about "natural" causes of disease, more often it is believed that magical or supernatural factors are involved. Apparently universal in this area is the idea that the loss of one's soul results in sickness, to be followed by death if the soul is not found and returned to the body. A man's soul may leave his body as he sleeps, and dreams usually are so interpreted. Hence, it is considered unwise suddenly to awaken a sleeper, since his soul may be wandering in a dream and not have time to return. Stories tell of hunters who come upon a companion sleeping in the woods, a butterfly hovering about his head. A wasp approaches, stings the butterfly to death, the man awakens ill and quickly dies. The butterfly was his soul; when it was killed, there was no hope for recovery.

Fright in any form, often fear at falling into a river, may shake the soul from the body. A *curandero*, a medicine man, is called to diagnose the cause, to determine how and where the soul was lost, and to take steps to recover it. The soul is believed to be near the surface of the body at places where the pulse is visible, the wrists, temples, and so forth. Hence, these are the places where the soul can most easily be put back into the body. The medicine man then sucks at these points, and in magical fashion the soul is induced to return to its home. Or the medicine man may visit the place where the soul escaped, calling to it to come near so that it may be trapped or otherwise brought back to the patient.

Illness also is believed to be caused by a sorcerer placing a disease-object, usually a toad, spider, worm, or some small animate object, in the body of the victim. The patient has a gnawing, burning sensation, which is interpreted as the insect eating away the flesh from within. For this type of illness the curer prescribes herbs which kill the object, allowing it to pass out in the feces.

A third type of belief is that evil spirits have possessed the sick person. A cure is effected only when they have been driven out. Among the Chocó of Panama the shaman places the patient in a special curing house, paints pictures of the presumed spirits

on the walls of the structure and on the back of the patient, and exorcises by means of chants.

Other types of illness and cures appear to be a legacy from Europe, even though now they are deeply engrained in indigenous belief. Such are the evil eye, *mal de ojo*, which particularly attacks children, and which is cured by rubbing the body of the little patient with an egg to extract the fever. Perhaps *bilis*, or bile, a strange quality or substance in the blood, is of the same origin. Certainly the falling of the *mollera*, technically the soft spot on an infant's skull though in folk belief a vague "something" perhaps identified with the spirit, is in this category. The curer often picks up the infant by the heels, head down, and presses up on the hard palate to force the *mollera* into place. It is uncertain as to whether sympathetic magic of the type in which the witch makes an image of the victim and sticks sharp objects into it or otherwise harms it is European or New World in origin.

Ancient superstitions which survive to the present time in Mexico and Central America include the curious complex known as *nagualism*. Phenomena described under this term include two types of belief which appear to be indigenous over all the Americas. Many of the native peoples in the area under consideration believe, just as the Plains Indians in the United States, that each individual has a guardian spirit who watches over him through life. But in Middle America this identification of human being with a spirit, usually an animal, is so close that both are thought to share the same soul. Both are, really, manifestations of the same being, and should either animal or human die, the other also ceases to exist. One's spirit, or *nagual* (sometimes *tonal*), is found shortly after birth. The father spreads ashes around the resting place of the newborn infant at night, and next morning examines the ground to see what animal tracks are visible. It is thought that the animal spirit comes to see his charge, leaves his tracks, and thus is identified.

A second American belief is that of the transforming witch, the evil-doer who can assume animal form in which to wreak vengeance on enemies. Middle America is no exception to this rule, and the folklore of all Indians is replete with accounts of persons who assume animal form, usually leaving their head or a leg at the scene of the transformation. If it is possible to find the member, place salt, tobacco, chile, or some other substance on it, the witch is unable to replace it, and with the dawn his true nature is revealed by the headless or legless condition. From Mexico to at least as far south as Nicaragua, such witches are known as *naguals*. Often this concept blends with that of the spirit animal: the individual with occult powers assumes the form of his *nagual* guardian.

All native Middle American Indian groups have beliefs which determine and guide the rituals which accompany planting. Since in all Middle America maize is the staple food, it is not surprising that ceremonies to ensure a good maize crop are most important. Among the Mixtecs and Mixe (Oaxaca, Mexico) and the Chorti (Guatemala) turkeys are sacrificed at planting time, and food is buried in the corn field "to feed the earth" which is to feed man. The Maya make offerings of prayers and maize gruel to the chacs, the rain gods.

Among the Popoluca (Veracruz, Mexico) men observe continence for seven nights before planting, pass the seed corn through incense smoke, pray to the Virgin of Catemaco, and then plant.

Sympathetic magic plays a part in the beliefs of some people. A pregnant woman may plant papayas, so that the fruit will be large and plump; a woman plants gourds, standing over the seed and turning rapidly, causing her skirt to billow out, thus magically ensuring fat gourds; chayotes are sown in pairs, so that the vines will produce paired fruits.

Among even remote Indians, planting beliefs are mixed with Catholic concepts. In addition to prayers to saints or virgins, it is commonly believed that the days of certain saints are particularly propitious for different crops. Thus, bananas and pineapples may be planted on August 15, La Asunción, beans on October 4, San Francisco, and so forth.

In the field of the folktale, changes in the form and content of the corpus of stories belonging to any tribe has been extensive as the result of European influence. As has been pointed out, aboriginal legends and tales dealt with the creation, with origins and explanations, and with cosmic forces. Animal tales, when not belonging to these categories, tended to be anecdotal. The new folklore dealt with such themes as kings' sons who undergo ordeals and tests to win princesses, and usually the youngest of three, through kindness to a disguised supernatural being, acquires the necessary magical aids to attain victory. Hansel and Gretel fool the evil witch, a boy's soul is sold to the Devil by his father, and John the Bear bites the Negro's ear when he needs extra help. Animal tales thought at times anecdotal, tend to be moralizing, a theme little developed in the autochthonous folklore of the New World.

In the larger cities, and in areas where Indian influence is relatively negligible, that is, areas with a European literary tradition, European folktales have been transplanted with few modifications. But the instant the stories wander from the printed page, when they begin to be passed by word of mouth—as was almost always the case in the years following the Conquest—curious things begin to happen. Stories tend to break up into their component motifs, each of which may form the basis for a story in itself, or, as is more often the case, several motifs from different European stories will be recombined to form a new tale, into which indigenous elements almost always are injected. Thus, the stick-fast motif, probably the most widely known single theme in the entire area, rarely ends in European or African fashion. Rather, it is the jumping-off point for a long trickster cycle in which the dupe animal consistently is worsted by his adversary who persuades him to jump into a pond to retrieve a cheese (the moon's reflection), to hold up a rock lest the earth come to an end, to beat naughty children who turn out to be wasps, to choke on spiny fruit, and finally, in most cases, to be killed. Most of these episodes appear to be European; some probably are New World. The trickster cycle itself, usually with coyote, is as characteristically American as Old World.

Biblical stories are found in all the area, and here some of the most interesting of assimilations have taken place. An Aztec creation myth tells of the first man

and woman who, following divine instructions, bored into a hollow log and sealed themselves during a flood. When the waters receded they emerged, found dead fish, fried them, and angered the gods Citlallinicue and Citlallatónac by smoking up the sky. Tezcatlipoca was sent to find out what had happened, became angry, cut off their heads and placed them on their buttocks and thus made the first monkeys (dogs in some accounts). A modern Indian tale tells how Christ ordered the first man to make his ark and take two of each species aboard. After the waters receded this man likewise found dead fish, fried them, the smoke angered Christ who sent first a vulture and then a hawk to investigate. Both accepted the invitation of the man to eat. Finally the humming-bird was sent, a bird of great importance in native Mexican mythology, and he informed Christ who, in his anger, made monkeys out of the man and his family, just as Tezcatlipoca had done. Who can say whether this is a Mexican story with a strong Biblical cast, or the Christian story of the flood which has been adapted to local conditions?

Hence, in Mexico and Central America an analytical study of the folktale reduces itself, in most cases, to a study of the unit episodes, the motifs. Almost any combination of motifs is expectable, and almost all combinations are found. To illustrate the flavor of this folklore, a few examples of motifs, without regard to origins, may be given:

A poor hunter angers the "master" of game by wounding many deer. He is brought to the master's home under a mountain and told he may not leave until he cures all of the wounded animals.

A culture hero is born from an egg which is found by an old woman. He then goes on to perform many wonderful feats.

A woman conceives a culture hero by supernatural means, by grasping a ball of feathers to her bosom, or by having a tree gourd, really the head of a god in disguise, spit into her outstretched palms.

A man fells trees to make his corn plot, but the next day they are all standing again. The deity who does this then helps the man, who usually is very poor and in great need of aid.

A man loses his wife, worries because there is no one to prepare food for him, returns from his cornfield to his home to find food awaiting him, spies, sees that his faithful bitch has taken off her skin to become a beautiful woman. The man breaks the enchantment and marries her.

The magic flight sequence makes use of such episodes as thimbles, combs, needles, salt, and water becoming walls, forest, thorns, rocks, and rivers.

A man rescues a king's daughter and slays a seven-headed serpent. When a pretender claims the honor, the hero produces the seven tongues which he secretly cut out to verify his story.

A person is killed or caused to assume animal form by having a nail driven into the base of his skull. Removal of the nail restores the status quo.

A trickster sells non-existent maize to a cock, fox, dog, tiger, and hunter in turn, asks them to call at his house to pick up the merchandise, hides the weaker animal when a more powerful one appears until all

are in the same place, and then escapes with the money while the hunter shoots the tiger.

A man releases a serpent from a trap, the serpent wishes to eat the man "since it is well known that good is repaid by evil," the man asks permission to verify this statement by asking three animals. The first two agree, but the last says that before deciding he must see how the serpent was trapped. The serpent obligingly reenacts the scene and is left to his fate.

A man goes away from his village, falls in love with a beautiful girl, marries her and lives contentedly for some time. He decides to return home to visit his parents, and is told not to kiss them or tell where he has been. When he violates this tabu he dies.

To the folklorist one of the most interesting theoretical problems is the sorting out of traits, to attempt to determine which belong to the New World, and which to the Old. To the Indian this would be a meaningless pastime. To most the concept of a time dimension is but poorly developed. The raconteur who tells of Solomon, the Tower of Babel, or Tar Baby feels that these stories are just as much the property of his people—as indeed they now are—as stories which explain the origin of the partridge or the activities of transforming witches. If his pregnant wife places metal scissors on her abdomen during an eclipse to prevent harm to her unborn child, little does he know that at one time his ancestors, for want of steel and knowledge of its magical powers, used an obsidian knife for the same purpose. To the Indian, and to students of society, the modern Indian cultures of Middle America are just as valid, just as legitimate, as if they were pure Indian or pure Spanish. And, thanks to their dual origin, they have a richness and variety in content of breath-taking magnitude. Both to the casual reader and the professional folklorist, an excursion into the folklore of Mexico and Central America produces rewards equaled in few other parts of the world.

GEORGE M. FOSTER

Meyer, Elard Hugo (1837–1908) German folklorist, born in Freiburg i. Br. He was the most significant pupil of Mannhardt in the field of Germanic mythology, a follower of the Brothers Grimm, and editor of the 4th and definitive edition of Grimms' *Deutsche Mythologie* (Berlin, 1875–78). His works include *Deutsche Volkskunde* (Strassburg, 1898) treating Germanic civilization, folklore, and mythology; *Germanische Mythologie* (Berlin, 1891); *Indogermanische Mythen* (Berlin, 1883), and *Mythologie der Germanen* (Strassburg, 1903). Meyer found that belief in the souls of the departed living on in nature, and reverence for them was the basis of all mythic thought. This idea of a *Seelenkult* (cult of the dead) he developed at a later period to a *Dämonkult*, including *Wölkenwinddämonen*, *Wasserwinddämonen*, *Baumwinddämonen*. His theories apart, he accomplished valuable work with his compilations (A. H. Krappe, *The Science of Folklore*, p. xix).

Michaelmas The feast of the archangel Michael, celebrated September 29: a church festival, and in England one of the old quarter-rent days. Michaelmas is the most ancient of the angel festivals, and probably originated in the dedication of a Michael church near Rome, now destroyed. The feast of Michael in the Eastern

Church (November 8) is also associated with the dedication of a church to Michael—by Constantine near Constantinople, because Michael had appeared on that spot. In Abyssinia the 12th of every month is St. Michael's Day. In Asia and also throughout coastal Europe numerous Michael churches on capes and headlands, on hilltops, or beside lakes, or special wells are associated with Michael's having saved the community from the peril and terror of some ravaging giant or monster in that place. There is a 9th century Michael abbey, Mont St. Michel, off the Normandy coast, where the red velvet buckler worn by Michael in his fight against the dragon was cherished and shown until the 17th century. The Epistle in the English Prayer Book mentions the victory of Michael over the dragon "that old serpent called the devil and Satan who deceiveth the world."

Eat goose on Michaelmas and you will not want for money for a year has been general English folklore since the 15th century; and when paying their rents on September 29 it was long the custom in rural England for farmers to include in their payment "one goose fit for the lord's dinner." See *GOOSE*. The reason for eating goose at Michaelmas seems to be unanimously attributed to the fact that geese are especially plentiful at this time of year.

Michaelmas bonfires were once a feature of old Lincolnshire and Yorkshire celebrations, and a handful of every kind of grain in the farmer's stores was scattered for wild birds, strewn in the poultry yard, and given to the cattle at night. This brought luck to the farm and its activities. In Shropshire it is said that the brake flowers at midnight on St. Michael's Eve. See *BRACKEN*.

St. Michael's cakes are a feature of the Michaelmas observances on the Isle of Skye. These are large round cakes (occasionally triangular): a milk and oatmeal mixture thinly coated with eggs, made for St. Michael's Day, one for each member of the family, and shared with neighbors and strangers.

Michaelmas is one of the most important feasts of the year in Ireland: *Cinn Féile*, a top or head feast. At this time people expect a marked decrease in sickness and disease. Some bird, usually a goose, or a sheep was specially killed and eaten for Michaelmas, even if this were the only time in the whole year. This is said to be an act of gratitude for a miracle of St. Patrick's long ago, performed with the aid of Michael. The finder of the ring in the "Michaelmas pie" will have an early marriage. The *púca* is believed to go into the sea on St. Michael's Day. This day is a great day for Irish fishermen. They say *Sáid do báid ó Lá le Micil amaí*, Plenty (comes) to the boat on Michael's Day indeed. See *CELTIC FOLKLORE*; *HORSE DANCE*.

Michigan-I-O A lumberman's song of come-all-ye type sung in the lumber camps of the American West in the '80's and '90's, the name changing with the state in which the singer worked. It tells of the hardships of the lumberjack's life. It is based on an earlier song of the eastern woodlands called *Canaday-I-O*, the words of which may have been written by a lumberman, Ephraim Braley, about 1854. The earlier song was a descendant of an English sea song, which itself derived from a love song called *Caledonia*. In its travels westward the tune

and the word pattern was also made over into a western plains ballad, *The Buffalo Skinners*.

Mickey Mouse Favorite animal hero of screen and comics, who has achieved folklore status through modern mass craftsmanship and distribution processes paralleling those of collective oral transmission. Following Walt Disney's earlier and cruder experiments in animating Alice and Oswald the Rabbit, Mickey made his debut in the first sound cartoon, *Steamboat Willie* (1928), and soon spread to the comic strips and comic books. His wide folk diffusion is attested by his appearance in children's rimes (see *FROG WENT A-COURTING*), the Italian nickname for the little Fiat car (*Fiat Popolino*), and the trade slang term for an overdainty, thin musical sound effect (a "Mickey Mouse"). While American youngsters sport Mickey Mouse watches, European fans are responsible for the rumor that Mickey's bust occupies a niche in our Hall of Fame.

Mickey is rivaled only by Donald Duck in comic appeal and is second to none in versatility and human interest. He capitalizes upon the proverbial man-or-mouse dilemma and emerges as the "average guy," whose endless love of fun, desire to be of service, and curiosity involve him (and his sweetheart, Minnie, and his pals, Goofy and Pluto) in cheerful mischief (most of his pranks being boomerangs), chivalrous adventure, and thrilling mysteries and marvels.

B. A. BOTKIN

Micronesian mythology Micronesia ("little islands"), made up of four archipelagoes, Marianas, Carolines, Marshalls, and Gilberts, was the least known of the South Pacific culture areas to the world at large before 1941. Now, Tarawa in the Gilberts, Kwajalein in the Marshalls, Truk in the Carolines, and Guam and Saipan in the Marianas, are familiar names that immediately identify the area. Spain, then Germany, and after World War I, Japan under a mandate from the League of Nations, administered the islands except for the Gilberts which have always been British, the Marshalls which were never Spanish, and Guam which was never German or Japanese.

Knowledge of native culture, including the mythology, is derived mainly from the many-volumed series published by a German scientific expedition of 1908-1910 and from books of German Catholic missionaries. Now that the Marianas, Carolines, and Marshalls constitute a Trust Territory administered by the United States, Government-sponsored ethnographical research is being conducted under a project called the Coordinated Investigation of Micronesian Anthropology (CIMA). The future will see more descriptive material, and, undoubtedly, comparative and analytical studies to define the place of Micronesia in the total Pacific anthropological picture. Although others are being prepared, only two CIMA-sponsored articles on mythology have been published. Both are on Kapingamarangi, a Polynesian cultural outlier south of the Carolines. Additional material will also be available on the Gilberts as the Viking Fund, Inc. in 1948 sponsored my ethnographical research there.

Comparative studies of Micronesian mythology are few. Except for incidental comments in the German collections, there are only Dixon's summary based on the limited number of collections then available, and Grimble's discussion of Gilbertese mythological bonds. Analyses of myths of a single island are even rarer. The

characterization of Ponape mythology by Eilers (Hambruch, vol. 3, 1936), who edited Hambruch's ethnographies after his untimely death, is a significant survey of the lore of the island. Bollig's description of Truk literary style is outstanding.

Certain cultural elements of popular interest will serve to sketch, in broad outline, the native culture and traditions of a population of about 100,000. The languages spoken belong to the Malayo-Polynesian linguistic stock. Physically the people are difficult to classify briefly, although the pronounced Malay element in their heterogeneous ancestry gives them the "Micronesian look" which distinguishes them from whatever Melanesian and Polynesian ancestors some may have had.

The large, wheel-like stones used in Yap for money are as well known as the native stories of stone money, which, though lost at sea, are more valuable in the monetary economy than pieces safely transported to Yap from quarries in other islands. The importance of wealth in determining social status is echoed in myths, particularly from Yap and the Palau in the Western Carolines. They tell of poor families scorned by richer villagers until a Cinderella-like daughter or son, who has befriended a supernatural being, is rewarded with wealth. Then the family becomes rich and socially powerful.

Also well known are the mysterious stone ruins in the Marianas and the Carolines left from an earlier age. In Ponape the numerous, sacred stone monuments and 50 artificial islets, a "South Seas Venice," have given the island its native name *Pon Pei*. Hambruch (vol. 3, 1936), feeling that the riddle of the ruins might never be satisfactorily solved, pointed to native traditions mixed with myth and truth as possible sources of information. Narrators say that two young magicians, Sipe and Saupe, wished to beautify their district and honor the spirits of the dead (important in all Micronesian religion) and the deity, Nan Dzapue, also called Luk. The brothers instituted sacred feasts and built sacred enclosures which, however, dissatisfied them. Then in Matolenim district they found a site sheltered from the waves to erect their most magnificent monuments. They commanded rocks to fly from their homes to suitable places in the structures, a technique used by later magicians to give the landscape its present peculiarities.

The number and size of the now ruined tombs and altars required, despite the magic of their mythical builders, a closely knit social life with a powerful priesthood and ruling class to command their construction, and enough docile peasants and slaves to do the work. Such a social organization and class system is described by early European visitors. Caroline myths stress the ingenuity of magicians, the oppression by rulers, and the struggles of poor heroes and heroines to meet almost impossible demands. Aided by friendly spirits, they win success, but often they leave the envious villagers at the moment of triumph, gather their relatives in a thatched hut, set fire to it, and perish rather than risk further orders from above. One hero who boldly visited the ruler without the expected present magically produced at the crucial moment a canoe full of food and other gifts. A Marshall metaphor compares a good chief to a tiger fish which waits in its hole in the rocks for its prey to swim past; similarly, a good chief stays home and waits for his subjects to bring him gifts.

The most elaborate Ponape legendary history (also told on Kusaie) concerns the overthrow of a line of dictators, the Sau Telur, by Isokalakal, King Wonderful, now a Ponape war god and founder of two of the clans of the island. He was the son of an elderly Kusaie woman who had been magically impregnated with a sprinkling of lemon juice by Nan Dzapue. The thunder deity wanted a son to take revenge on a Sau Telur for having imprisoned him as he visited a holy place. The precocious but militarily vacillating son went to Ponape with 333 warriors (no narrator changes that figure) in one canoe that took eight days to build. Advised and encouraged by a woman who entertained him at an isle along the way, Isokalakal was successful, and the Sau Telur escaped death only by transforming himself into a fish, now tabu as food.

Familiar to museum visitors are the tightly knotted sennit armor and headgear worn by Gilbertese warriors to deflect spears edged with sharks' teeth. Even more reminiscent of medieval European knights are the duels fought over women and land claims by Gilbertese warriors supported by squires. Gilbertese, at least as far north as Tarawa, tell of Kaitu and Uakea from Beru who set out to conquer the islands. As in the Isokalakal tradition, narrators emphasize not the battles but the feasts and entertainment provided the invaders and the magic to detect and outwit treachery. Tabiteuea, on the path of invasion, still recites traditions about Kaitu, Uakea, and other Beru invaders like Tanentoa and giant Kourabi, to fortify land titles and to claim privileges and honorary duties in the village assembly house, the *maneaba*, a vast, thatched building supported on coral monoliths in which the spirits (*anti*) rest. Warriors here as elsewhere in Micronesia depended for help in battle on magical chants invoking the gods and describing the anticipated fate of the enemy.

Textbook photographs of Marshall "star charts" suggest the standard of native navigation. In a typhoon-swept region of some 700 high and low islands, it is no surprise that mythological characters are constantly traveling and that stars are personified. Many short traditions tell of destructive typhoons and how new clans subsequently originated from survivors. Micronesian narrators of popular tales are not quite as engrossed as their Polynesian colleagues in naming characters and identifying locales. However, they are likely to name the locale even though they often start out vaguely, as in the Marshalls, with "Once there was a woman with two sons . . ."

Besides fine canoes such as any Micronesian might own, mythical heroes use canoes that fly through the air. Or like Polynesian characters, they ride in or on sharks, whales, or turtles, or, using a device older than the airplane, they enter artificially constructed birds to be whisked to a kidnapped relative or wife. Any stone, even if not in canoe form, will support the drowning refugee if he knows the right magic. Should the canoe sennit break or the mast give way, a good seaman creates an island from a bit of sand he has and plants a tree which magically grows to the height needed for a mast. If he lands in strange territory as the hero, Rongerik, did, he knows enough to distrust the residents and put bits of white coconut meat or shell on his eyes to look as if he were awake through the night.

Texts of Marshall sea lyrics, composed by natives for

European tunes, charm by the direct simplicity of their descriptions of weather at sea and the mariner's exultation in defying the elements and death (Erdland). The seaman is said to wear the islands he sails like a bracelet in his mind.

A European on first reading Micronesian myths finds them less alien and grotesque than, say, Melanesian stories. Micronesian myths in Hambruch's anthology (1916) from his and Kramer's collections were doubtless selected for their appeal to European readers; they sound like Old World *märchen* localized in Micronesian culture. In both cultures, the wishful thinking of narrators approved by listeners leans to stories about people of social extremes. The poor overcome economic and social discrimination with the aid of supernatural helpers and gain favor with the ruler. However, these Micronesian characters, as remarked above, rarely "live happily ever after." They reach the end of their rope quickly and commit suicide by fire rather than continue from one *tour de force* to another.

The reader soon realizes that many themes are unquestionably of Old World origin and have been introduced since 1521 when Magellan discovered Guam. The themes are so compatible with Micronesian psychology and older, native mythological concepts that they have been thoroughly assimilated. For instance, Ponape tells of a poor boy with only orange seeds to eat. He planted one, and a tree sprang up to the sky. The boy climbed up to a little house where a woman warned him against her cannibal husband. When the latter arrived, he smelled the human being hidden somewhere, but after his wife's false reply he sat down to count his wealth. Then "Jack and the Beanstalk" stole the money, fled home, and put the current ruler out of a job because he was richer. Hungry, younger brothers, as in a Peliliu story, receive a speck of fish and taro from a supernatural bird and find the amount never decreases no matter how heartily they eat—and best of all, it is the custom to take home whatever is left! Of course, they wisely refuse the first two wonderful things offered them by a friendly old lady and take an unpromising-looking third object full of magic. Haughty, human-headed cocks, who magically produce money like the golden egg-laying goose, help lowly Palauans but are incensed when rulers ask them to visit them.

Other Old World themes include one about a turtle who escapes with a "drowning punishment" by suggesting to his stupid captors that, before cooking him, they clean him in deep water. The swift garfish loses a race to the slow crab helped by mussels. Heroic families sometimes have seven children, and things are done by sevens or threes, especially in Yap and Ulithi. However, ten (and its half) is the older ritual number and still predominates in the myths over the two Old World favorites, seven and three. Eight, a favorite over the older ten in Polynesia, Melanesia, Indonesia, and Japan, is rarely the Micronesian conventional figure for the number of sons in a family or the number of times the hero tricks a slow-witted cannibal. The Symplegades theme occurs widely. Truk integrates it into heavenly topography by setting the clashing rocks in the sky before the door of the god Anulap (Great Spirit), to squash the souls of the dead.

Names and themes common in Polynesia appear in Micronesia. Maui-tikitiki himself (dialectically, Motiki-

tik) fishes up islands in the Western Carolines. Local heroes, like the Gilbertese Nareau, replace him as earth-fishers in the east. Discussed more fully later is the sky-raising theme, which is connected, as in Polynesia, with a primeval Nothingness broken only by the sea and the closely adhering sky and earth. It appears occasionally in what may constitute a subarea in mythology—the Gilberts, Ocean, Nauru, Kapingamarangi, Nukuoro, and at least three islands in Melanesia, namely, Ontong Java, Nukumanu, and Nuguria. The Marshalls too may belong on this list. Several of the islands listed are now called "Polynesian outliers," an increasingly unsatisfactory term. Nareau, important in Gilbertese cosmogony, is also known in the three outliers in Melanesia. Nukuoro has Tahaki, a prominent Polynesian hero, in a family of sky-raising deities. The god Tangaloa and other Polynesian names like Tinirau and Taranga are known in the southern Gilberts, where traditions describe migrations to and from Samoa. In Truk, the theme found in Polynesia and Melanesia about a tree which is miraculously restored every time the hero chops it down to make a canoe, is told of the sons of Paluelap and his wife Leofas, deities whose names recur in the Carolines.

Frequent in the Carolines, Marshalls, and parts of the subarea outlined above, are stories which in Polynesia constitute a myth-complex about Tinirau, Hine, Maui, and Rupe. Micronesian names change from variant to variant. A missing woman is sought by a devoted husband or relative who assumes the form of a dove or travels by birdplane to rescue her. The girl sometimes is said to have left home when scolded for letting family treasures get wet. She may marry a chief and be forced by an ugly witch to exchange shapes, an alteration that deceives the chief but not the faithful, seeking relatives.

Melanesian-like are innumerable tales about stupid giants and giantesses, or bush spirits, who sometimes eat a whole village except for a woman whose son becomes a monster-slayer. Ogres are delayed and eventually perish by following destructive advice from their captives. Cheering news from Truk is that female bush spirits who used to lure men and drive them insane are now outlawed. Sky-dwelling women will perhaps petition against earthly women who lure married sky deities to the earth to start new clans.

Recalling Melanesian plots are stories of kindly animal mothers who generously aid beautiful, human daughters until a curious son-in-law spies on them and slays them in horror. Then everyone in the family, including the murderer, commits suicide. An eel or lizard, rather than a snake as in Melanesia, is the mother. Believing them temporary residences of spirits, Micronesians protect eels with a severe tabu. Eels, malevolent or friendly, are important in myths, particularly those about clan origins. Traditions about the origin of clans constitute a major part of Micronesian mythology, and any ancient or new story may be reinterpreted as a phase of clan history.

Many myths hinge on tabu violations. Often tasks set a hero by a harsh ruler are punishments for breaking tabus. A sniffing dog, or Sau Kompul, the Sau Telur's adjutant, spies on the people; birds too spread gossip as in Polynesia. The course of a tale may depend on whether the hero or heroine obeys the injunction to drink from the dirty rather than the clean spring (Mar-

shalls, Eastern Carolines), or to look around in the second village visited but not the first (Western Carolines).

Compared with Melanesian mythology, the Micronesian emphasizes sex but little in the stories, although incest themes are frequent. A goddess who bears both children and food is well known in Melanesia, especially New Guinea, and in New Zealand. In Truk, Ligoububfanu, sometimes the sky god Anulap's daughter or wife and connected with eels, miraculously bears the first human beings and nuts and grains. The face of her child is seen on the coconut which grew from a corpse. A comparable origin myth is widespread in Oceania.

Once, only men bore children, but Laponga, a magician about whom Ponape has a genre of tales, angrily transferred his fetus to a woman when a midwife revealed that he was pregnant. Present is the widely held belief of Oceania that until normal childbirth was learned women were cut open and killed to remove the child.

Like Melanesian stories about the Masi are tales from Tabiteuea, Truk, and other islands about clans of silly people who do everything the wrong way. Merry, elusive, clever little people, like Hawaiian Menehune and their Melanesian counterparts, are known to Ponape as Tsoke-lai and to the Marshalls as Anjinmar or Nonieb. Truk and Kusaie tell of fabulous races of giants, which on Ponape are called Liat and Kona; in the Marshalls, Rimogaio.

Animal tales are common, though rarely of the Animal Kingdom or Aesop's Fables type. In a battle between birds and fish for supremacy, the provoker of the fight sleeps soundly at home while the fight rages, and a great bird, who screams for a duel with a fish with a proud and terrible-sounding name, is captured by the bearer of the name, a tiny shellfish, who clamps his bivalves on the bird's leg. Rats, like eels, are prominent mythological beings. Nauru has a tale, diffused from Indonesia into the Pacific and common in Micronesia, about a bird, a crab, and a rat who go to sea; when the canoe sinks, the rat, abandoned by its friends, is rescued by an octopus which it mistreats and tricks. Usually, though, Micronesian animals act in plots with human beings as their totemic guardians and helpers. Although slightly personified plants and trees figure in the myths, plant totemism, at least on Ponape, is rare, as Eilers points out.

Myths predominantly about human beings often revolve around two major characters who may be brothers, sisters, husband and wife, or friends of the same sex. Myths, like that about Edao and Jemaliwut in the Marshalls, summarized later, usually set a younger, precocious sibling against an older, less astute one who fails to repeat the younger's successes. Tales showing European influence shade the characterization to make the younger kind and considerate while the older is haughty and unkind. However, much of this pronounced ethical dualism and moralizing seems as native to Micronesian mythology as to the Melanesian and may explain why these European märchen were so well assimilated.

Caroline narrators have strung an odyssey of adventures, widely known through the vast archipelago, on a thin thread of plot about the search by faithful Rongerik, well versed in magic, for Rongelap, his lost, older brother. Like those of many characters, the names of these sons of Paluelap are identical except for the final

epithets, which merely mean old or young, big (*lapalap*, *lap*) or little (*tikitik*, *tik*).

In the 2000-mile, east-west sweep of the Carolines from Palau to Kusaie, the most recurrent and culturally significant myths about two contrasting and conflicting brothers form a major hero cycle. The hero, Olofat, is the younger of the two, but he is a mischievous troublemaker. The incidents and personalities of the *dramatis personae* of the Olofat cycle recall cycles about the Polynesian Maui, the Melanesian Qat, and the Gilbertese Nareau. Many details are so similar as to leave no doubt about the single origin of these details and their subsequent diffusion from area to area. The four heroes, and perhaps Edao should be included, are younger brothers, gods or demigods, crafty magicians, and remodelers of customs and aspects of the universe. While Edao and Qat tend to take an ethically superior role to their brothers, Olofat, Maui, and Nareau are tricksters of global scope who annoy their elder brothers, their deified relatives, human beings, and the animal and plant world.

The name of the older brother selected to act as the hero's particular foil shifts in these cycles from version to version. For instance, in the Olofat myths of Truk and Lukunor, the good and handsome brother or half-brother is Lugeilang (Lukelang, Luk) while Anulap (Anuelap, Onulap, Enulap) is the father. Nearby Namoluk has Samonekoaner (Semenkoror appears to be a dialectical variant) as the brotherly foil to ugly, jealous Olofat, and Luk as the father. Usually when Luk is the father, Anulap is the grandfather.

Olofat's career includes his magical birth and development on earth; visit to the sky on a column of smoke to claim recognition of his sky relatives; the seeking out of the protected brother and putting him temporarily to death; outfitting sharks with teeth; seducing wives of older relatives; stealing food from feasts and leaving husks and skins; assuming innumerable transformations, often into an old man with ringworm, to escape punishment; and dodging death at the hands of older relatives who get him into a post hole before jamming in the post, or burn him, or throw him into the sea in a fish trap. Namoluk islanders conclude by having the gods make Olofat the god of fire and condemned souls and having little sister, Rat, suggest that Olofat die at the end of the world but the other gods be eternal. To single out only one of the elements recurring elsewhere in Oceania, the post hole episode is in the Qat and Nareau cycles but not the Maui series.

The Olofat cycle is in the Caroline cosmogony as the Nareau cycle is in the Gilbertese and the Maui cycle in the Polynesian. Heroes belong to a family of deities, the Caroline pantheon, which functions in every sphere but calls the sky its home. Characters with similar names, functions, and departmental duties recur throughout the group. Anulap at the apex of the pantheon has achieved the epitome of prestige in Truk where his ten sisters and brothers are his subordinates. His age and weakness now separate him from active participation in world affairs. This giant requires servants to lift his eyelid when he wishes to see and to raise his lip when he wants food. Sister Inemes is the local Venus. Ligoubub-fanu, mentioned above, is the most creatively busy member of the family. With or without Luk, she produces people, plants, and animals miraculously and indis-

criminately, and between times piles up rocks and sand to make islands.

The Carolines rarely attempt to describe the ultimate or nearly ultimate origins of the world. They concentrate on dividing and subdividing, like unscrupulous real estate agents, not only the earth but the air, the sky, the sea, and the land beneath their feet. Anuelap's quarrelsome family is assigned space, and the narrators ponder the relationships of the family to each other and to earthly people. The origin of fire is ascribed to Rat stealing it from the sky. Death as a permanent sleep was decided by the pantheon. It is also popularly attributed to older relatives misusing a younger relative's magic to resuscitate the dead. They practiced on him but as they forgot part of the magic he died permanently and could not tell them what they had forgotten.

The Marshalls and the Gilberts have cosmogonies which leave no doubt of historical connections with Polynesia.

According to Ralik Group people of the Marshalls, an uncreated being Loa or Lowa lived in the primeval sea. Like the Tahitian Ta'aroa, he commanded reefs, sandbanks, plants, and birds to appear, and finally a god for each of the four cardinal directions in the sky which a white gull encircled. Irjojrilik was in the west; Lalikian or Lajbuineamuen in the north; Lokomran in the east; and Lorok in the south. From a blood blister on Loa's leg came Wulleb and Limdunani, a boy and a girl. The latter bore Lanej (Zenith) and Lewoj (Nadir) who conspired to kill Wulleb. He escaped and fell to the earth where a blood blister on his leg burst and two boys, Jemaliwut and Edao, came forth. Edao, the younger, is the hero who, unlike his discriminating and constantly frustrated brother, is not revolted by Lijebage, Lady Turtle, to whom Wulleb has sent them for a magic tortoise shell. As a reward, Turtle makes Edao a great magician. Like Olofat he is an agile shape-shifter, but must assume his own shape when a certain sentence is pronounced. After many adventures he died in Butari-tari, Gilberts. Of Jemaliwut it is told that he recognized the tattooing on a mysterious hand that came to steal as that of his aunt. By making her show him first one hand, then the other, and then both together, he trapped her with one hand still absent. Like the Gilbertese Nei Auti, she brought insect pests into the world.

The Radak Group variant makes Wulleb and Lejman, identified as male and female worms living in a shell, the first living beings. As in the southern subarea (Nauru, for example), the worms raise the upper part of the shell which becomes the sky, the lower the earth. Wulleb now lives on mysterious Eb Island in the west where birds go annually to have their feathers plucked and fish bring Wulleb tribute. Nothing more is told of Loa. His name makes one wonder if it is a remnant of the Polynesian name, Tangaloa, a dialectical variant of Ta'aroa, the god whose deeds resemble Loa's.

In the Gilberts and Gilbertese-settled Nui in the Ellices and Ocean Island, the cosmogonic myth complex, religion, and traditions about migration and settlement, published by Grimble and Hambruch, repeat names like Te Bo ma Te Maki (Darkness and Cleaving Together); Nareau (Sir Spider) the Elder and the Younger; Tabakea (Turtle); and many others including Riiki (Eel), Auraria, Tabuariki, Taburimai, and Lady Tituabine. Nauru, influenced by Gilbertese castaways, also knows some of

them and identifies as Spider the primal being, Areop-Enap, who lived in a mussel shell which became the world. Qat, it is interesting to note, sometimes has a spider companion, Marawa, in Melanesia.

Beru describes Te Bo ma Te Maki and Nareau the Elder as pre-existent in the world. Nareau commanded Sand and Water, also in existence then, to produce children. Among them is the mischievous culture hero, Nareau the Younger, who vitalized his inactive siblings and ordered them to rise. They could not because the sky was too low. Eel becomes the most important sky-raiser. Nareau then set a woman in each of the cardinal directions to support the sky, and killed his father to use his eyes for the sun and moon and his spine as the source of the ancestral tree (Kai-ni-tiku-aba) from which people came. The tree was on Samoa, the land piled up by Nareau's brothers and sisters. Subsequent events lead into genealogies and individual family histories. This same Nareau later plays malicious and puerile tricks, which are a great source of amusement to people hearing the stories.

Ocean Island has Tabakea and Tituabine, offspring of Heaven and Earth, produce the rest of the pantheon which enjoys an inexhaustible fish trap and coconut tree until they violate tabus. Nui Island makes Auriaria perform the feats that Nareau usually does in world organization. A Tabiteuean version, astoundingly Polynesian in style, gives the origin of the world in a genealogical chant, starting with Te Bo ma Te Maki producing Land; Land and Sky producing Void; Void and the Sundering (of Earth and Sky) producing Nareau.

Micronesia has little native literary classification. Ponape, for instance, distinguishes between stories (*soi*) and true stories (*kosoi*), terms they give even to descriptions of culture communicated to ethnographers. Truk is the only island with riddles or at least where they have been recorded. This island, according to Bollig, uses the name *uruo* for narratives, which are known to magical experts but not to the commoners, about clan origins, chiefs, and the settlement of specific land tracts. Much loved, and often rather didactic, fireside tales, *dudunap*, begin with a formula like "It goes, it comes" and end with "It breaks off." "Crazy people," *umes*, is the name of a genre of comic tales about certain clans who do everything wrong. Marshall narrators, who tell stories only at night to keep narrators and listeners from getting swollen heads, often use introductory and terminal formulae too, and refresh a wearying audience by breaking a long story with a set, comic formula. That Micronesian myths and tales have, on the whole, a great deal of humor is obvious even to a European.

Comedy relief is used in dances too. For instance, Tabiteuean dancers refresh themselves with a child's patty-cake song, or two performers will burlesque experts by mistiming gestures to poke each other in the eyes, bump heads, and snatch each other's wreath or mat. Certain old hags often act as comedians. They even break into serious food-assembling ceremonies in the *maneaba* when everyone is nervously watching to see his family properly represented; then the capers of an old lady chased by a solemn but secretly convulsed dignitary who swats her with his symbol of respected age, a fly whisk, makes everyone shriek with laughter.

Neither new nor modern chants and songs have terminal rimes. In the Marshalls and Carolines, many

songs and dances have European melodies and native words. Few old chants used to accompany dances seem to have been recorded there, and the old native style must be studied in the magical formulae. In the Gilberts, the more melodic tunes and less ritualized dances of the Polynesian Ellice Islands have been given native words to which young people dance with the additional rhythm of a mercilessly beaten bottom of an upended box or a 44-gallon kerosene tin. A certain mode of behavior, solemnly cultivated by the younger set among the intense-spirited Tabiteueans, goes along with these dances, which are merry in contrast to the highly stylized, set-expressed old dances (*ruoia*), still important for ritual and entertainment. It is "very Ellice Islands" to pull a careless lock over the eye, hang a plastic belt open around the neck, drape one's lavalava sloppily, and nourish a love-'em and leave-'em attitude toward the opposite sex. Ellice Islanders are hard put to it to think up variations to hold their position as fashion leaders.

Little is known of Marianas mythology; a Spanish account from 1683 describes a dozen women in a circle chanting myths "in verse and in measured time in three part singing" and accompanying themselves with perfectly timed hand gestures, a crescent in the left hand and a little box of shells and bells in the right as castanets (Thompson). A fragment of cosmogony recalls the Gilbertese in parts of the world being made from the body of a god.

The *idan* of Truk are trained specialists in religion, magic, and mythology. They are split into different sects but all claim Onulap and Semenkoror, as their founders and teachers. Their tribal importance, prestige, tabus, secret languages, and rigid training recall native scholars and schools of central-marginal Polynesia. Lay experts in metaphors, similes, and pithy allusions are the *soufos*, masters of speech, who glorify the language of the common people of Truk. Tabiteuea has two classes of composers. In the training of one, a frigate bird's feather and a rat's nest are part of the magic. The bird comes from afar bringing new words while the rat, a thief, steals words for the composer. The composer also goes out on the reef and literally fishes for words with hook and line. As inspiration seizes him, he shouts back the phrase to his followers, each of whom is entrusted with one word or phrase. Nareau's shrine is also visited by earnest composers with offerings.

This survey shows that, despite the numerous mythological elements which Micronesia shares with Polynesia, Micronesia, and to a lesser extent with Indonesia, the area has more than a miscellaneous hodgepodge of foreign myths. It has interpreted the themes shared with these areas and those acquired from Europeans in a fashion uniquely its own. It seems, moreover, to have selected extremely compatible themes and rejected others. Narrators have infused these selected themes with the literary and psychological qualities peculiar to their culture, as has been suggested above. Some of these qualities now appear elusive and delicately and subtly molded in contrast to the bold qualities of Melanesian and Polynesian cultures. The precise definition of the typical Micronesian spirit must depend upon more comparison and analysis than has yet been done. Such study may also bring out in stronger relief than could be done here the themes found only in Micronesia, themes

perhaps more indicative of the spirit of the people than the remodeled myths.

KATHARINE LUOMALA

Midas A legendary wealthy king of Phrygia in Asia Minor, son of Gordius and Cybele, of whom two principal stories are told: some equate him with Mithras, the god of light of the Persian area. While Dionysus was making his progress through the East, Silenus became more than usually befuddled with drink and wandered into Midas' court. The king entertained him for ten days, then escorted him to Dionysus. The god offered to grant Midas any wish he might make, and the foolish king asked that anything he touched be turned to gold (J2072.1). But, after he had played with the power for a while, Midas discovered that his food too was turning to gold as he touched it, even between his teeth. By bathing in a spring at the source of the river Pactolus (which afterwards had much gold in its silt), Midas was able to remove this gift turned curse. A sophisticated appendage to this legend adds that during his stay the wise Silenus was questioned at length by Midas, one of the questions being "What is best for a man?" The answer: "Not to be born, and next best to die immediately upon being born." Another variant says that Midas trapped Silenus or one of the satyrs by filling a pool with wine. The satyr drank, fell into a drunken sleep, and was tied up by Midas.

The other story, a migratory legend found also in India, Gaul, and Ireland, concerns the musical contest between Pan and Apollo. Tmolus, the god of the Lydian mountain of the same name, judged Apollo the better. Midas disagreed, being a follower of Pan and the satyrs. In rage, Apollo changed Midas' uncritical ears into those of an ass (F511.2.2). Midas covered the ears with his Phrygian cap, but naturally this was a secret his barber was bound to find out (N465). Unable to contain himself, the barber dug a hole in the river bank and

whispered into it the secret. Then he covered it with earth, but reeds grew there, and every time the wind blew they whispered, "Midas has ass's ears" (D1316.5). The connection of this story to Midas may be due to the fact that the ass was a sacred animal in Phrygia, and the king of that country may have been figured with ass's ears, which the Greeks explained by attaching the legend to the personage.

Midewiwin or **Mide** The Grand Medicine Society, a secret society of four degrees, open to men and women, of the Ojibwa (Chippewa), Ottawa, Sauk, Fox, Potawatomi, Winnebago, and Kickapoo Indians of the Central Woodlands. The midewiwin was first performed by various supernatural deities to comfort the culture hero, Nanabozho, after the death of his younger brother; later Nanabozho taught the same rites to the Indians. The Medicine Society met inside a specially constructed oval lodge; members of the society, attired in their finest clothes, danced in a circuit around the lodge, and prayers to various deities were offered by the priests at stated intervals. Initiation of a candidate into the first degree of the Medicine Society involved payment in goods collected for this purpose by the candidate's family; in return, the newly initiated person was provided with an otter, mink, fisher, etc., skin medicine bag and taught how to control a white shell or *mide*, which he kept inside him or in the bag, and used as a magic "shot" against other members of the society. Shooting exhibitions were given by midewiwin members as they danced during the exoteric part of their rites; by pointing the nose of the bag at another member and blowing a whiff at the same time, they would cause that person to fall down. Upon recovering, the person shot would then shoot others in the same way. Esoteric knowledge, of curing, of magic, of witchcraft, was also imparted to the newly initiated by the Mide priests. If a member was able to afford it, after learning all that pertained to the first degree, he could, upon additional payments, advance to the second, third, and to the fourth or highest degrees.

Although the origin myth of the Grand Medicine Society stresses that Nanabozho taught human beings the rites so that they could cure disease, obtain an abundance of food, and triumph over their enemies, the indications are that members of the society misused their powers, worked for evil instead of good, and were generally feared by their fellow humans—so much so that in one tribe after another the Indians themselves outlawed the Midewiwin. The Shawnee Prophet is reputed to have preached against it among the Winnebago, and the Fox Indians claim to have gathered all members of the Society together, in the past, and to have told them that this dance must not go on any more because every time it was danced two or three important men among the Fox died. The Kickapoo then followed the Fox example and stopped the Mide dance in their tribe in the same way that the Fox had. [EWV]

Midgard or **Manaheim** In Teutonic mythology, the middle earth, i.e. this earth, home of man, formed from the body of the giant Ymir. The Old English word for this middle region between heaven and hell was *mid-dengeard*. After the gods killed Ymir they rolled his body into the void in the center of the universe, *Ginnunga-gap*. Here his blood (or sweat) became the oceans,

his bones the mountains, his teeth the cliffs, and his hair the trees and all other vegetation. The skull, held up by the four dwarfs, Nordri, Sudri, Austri, and Westri, from whom the points of the compass are named, formed the vaulted heavens. This they filled with sparks from Surtur's sword which formed the sun, moon, and stars; Ymir's brain continues to brood over the earth in the form of heavy clouds. To the north of Midgard is Niflheim, a region of cold and ice; to the south is Muspellheim, the land of fire. The earth is connected with Asgard, the home of the gods, by the rainbow bridge, Bifrost, and deep within it reaches one of the three roots of the world tree, Yggdrasil. The rooster of Midgard will crow to announce Ragnarök.

Midgard Serpent The monstrous serpent that encircles the earth, in Teutonic mythology, offspring of Loki and Angur-boda, named Jormungandr. See ANIMAL CHILDREN.

Midsummer Eve or St. John's Eve The eve (June 23) before Midsummer Day (June 24) about the time of the summer solstice: for centuries probably the most important and widespread of the annual festivals of Europe. Today June 24 is commonly celebrated as St. John the Baptist Day, but the old vegetation-fire-water rites remain conspicuous through their coating of churchification, and this in spite of the fact that the meaning of the observances is forgotten for the most part in the popular mind. In Ireland it is said that St. Patrick changed the festival from Beltane to St. John's Day, the celebration of Beltane in Ireland being practically identical with Midsummer Eve or Day observances all over Europe.

On Midsummer Eve witches, fairies, spirits of the dead, wraiths of the living, and all sorts of supernatural beings, good and evil, are abroad, not only especially active and numerous, but often visible. The phrase *Midsummer madness* is proverbial in England. *To have but a mile to Midsummer* means to be a little mad. The Midsummer moon is the month of June, the month of lovers, and a time for happy lunacy.

All magic, good and bad, is exceptionally potent on Midsummer Eve. All magic plants plucked at midnight on this night are doubly efficacious; any plant or flower plucked at this time keeps better. The herbs of St. John (usually St. Johnswort, hawkweed, vervain, orpine, mullein, wormwood, mistletoe) plucked either at midnight on St. John's Eve or at the stroke of noon on St. John's Day, protect houses from fire and lightning and people from disease, witchcraft, and disaster. Divining rods cut on this night are the more infallible. Dreams dreamed on Midsummer Night are likely to come true. Dew gathered on St. John's Night restores sight (see D1505.5.2.1). In northern Europe the Wild Hunt is often seen on St. John's Night (see E501.11.1.3). The fern blooms at midnight of Midsummer Eve (see FERN SEED). In Devonshire people used to crawl under the communion table in the church three times at midnight on Midsummer Eve to cure fits. (See G. L. Kittredge, *Witchcraft in Old and New England*, Cambridge, Mass., 1929, p. 148.)

In Germany and southeastern Europe there was a strong belief that rivers and various water spirits demanded a human victim on Midsummer Day; yet in contradiction to the danger of waters on this day, all

natural waters have special medicinal virtue on this day of all days, from Sweden to Sicily, from Spain to Ireland to Estonia. In Germany people went out and bathed in the night in streams and rivers to cure their diseases and strengthen their legs. Moslems in Morocco are said still to plunge into seas and rivers on Midsummer Day and also to drive their animals into the water and bathe them. The ancient water rites fell naturally into St. John the Baptist Day observances.

The Midsummer fires, however, are the outstanding feature of this summer solstice festival: interpreted by Frazer and Mannhardt specifically as sun charms to help the sun in his course, and by others as fumigation-purification rites. The people leaped through the fires and drove their cattle through them, or to leeward of them so that they got the benefit of the thick smoke. They hurled burning disks toward the sun, rolled burning wheels downhill, burned effigies impersonating death or winter or all man's ills. All the various games, tugs-of-war, mock battles, and destruction of effigies are interpreted as survivals of very early dramatizations of the summer-winter, good-evil conflict. New fires in the houses were lighted from the Midsummer fires; burning brands were carried through the fields and barnyards to avert evil, cure and ward off disease, and ensure fertility, new life, crops, offspring. In parts of England it was formerly thought that the apple crop would fail if the Midsummer fires were not lighted. The kindling of Midsummer fires is a dying practice in most of Europe today but is still a feature of festival life in Ireland and in some parts of Scandinavia.

Midsummer is especially a festival for lovers. All kinds of love divinations are performed (see MIDSUMMER MEN), dreams interpreted, and images evoked. Lovers clasped hands across the Midsummer bonfire, tossed flowers across the fire to each other, or leaped through it together. In Scandinavia girls put little bunches of flowers under their pillows on Midsummer Night to induce dreams of love and insure their coming true. In England it was said if an unmarried girl would fast on Midsummer Eve, and at midnight set the table with a clean cloth, bread, cheese and ale, leave the yard door open, and wait, the boy she would marry would come in and partake of the midnight feast with her.

In Ireland in some districts each family builds its own bonfire, circumambulates the fire, and circumambulates the house three times with a burning brand from the fire. Sometimes there is a community fire on a neighboring hilltop or at a crossroad through which the people leap, drive their cattle, and light their brands for the circumambulation of houses, fields, and byres. Blazing brands from the fires are thrown into potato fields and gardens; ashes from the fires are mixed with seeds for planting. Sometimes the cattle are penned up and the people run around the pens with their blazing brands. In the Scottish Highlands also the herders circumambulate the herds with torches lighted at the Midsummer fire. See BELTANE; BORDON DANZA; CORRI-CORRI; DAISY; LUGNASAD; MAY DAY; NEW FIRE; section *El Día de San Juan* in SPANISH FOLKLORE.

Midsummer Men The plant orpine (*Sedum telephium*): so termed in England because used as symbolic of human beings in midsummer divination. Slips of these plants are planted in pairs on Midsummer Eve, either by

a young man or young woman, one representing the planter, the other his or her sweetheart. If one slip withers, the one it represents will die. If both slips take hold, flourish, and grow strong, and lean toward one another, the pair will surely marry. In Germany and Switzerland young couples also use orpine for the same kind of future-reading.

Midwinter Bear Society dance A dance held by the Bear Society, an Iroquois Indian group which functioned as a curing society among the Seneca, Cayuga, and other Iroquois tribes of what is now New York state. The Bear Society dance can be included in communal festivals as given by the Iroquois, but only at midwinter. There are in reality two dances: one that functions as a curing rite, and another than can be performed at any time without a patient. The first form is in three parts: the cure to slow chants, the round dance with stomp step, and finally the pairing of dancers. The curing dance was held to cure victims of bear sickness, which resembled cases of mental derangement of which the patient was aware, but which he could not control. The sickness is caused by the bear spirit; to cure the victim a ritual has to be performed in the patient's home and ceremonial foods provided which the bear spirit likes. A shaman is in charge of the curing ritual, and members of the society blow berry juice on the patient. The dance itself is led by the sponsor of the ceremony and the leading shaman, and danced by the society members. At the Midwinter festival anyone present may join in the dance. Patients who have been cured by the ritual are thereafter members of the society. [ewv]

Mike Fink "King of the keelboatmen," known as the "Snag" on the Mississippi and the "Snapping Turtle" on the Ohio. Born at old Fort Pitt in 1770, at the age of seventeen he enlisted in the Indian scouts on the Pennsylvania border and soon acquired a reputation for boldness, cunning, and skill with the rifle. On one occasion he shot and killed an Indian at the very same instant that the other fired at a buck and was thus able to satisfy his hunger without being discovered by the Indian hunting party. Having always wanted to become a boatman, he next joined the keelboatmen on the Ohio—a hardy, dissolute breed of giants and "reckless savages," who alternated between heroic battling with upstream currents and riotous brawls and sprees. Mike Fink's famous brag, beginning "I'm a Salt River Roarer! I'm chuck-full of fight and I love the wimen," punctuates the various kinds of half-horse, half-alligator prowess that made him a legend and the mythical "demigod of the rivers": "I can out-run, out-jump, out-shoot, out-brag, out-drink, an' out-fight, rough-an'-tumble, no holts barred, ary man on both sides the river from Pittsburgh to New Orleans an' back ag'in to St. Louiee."

Notorious for his daredevil pranks as well as for his fights and marksmanship, Mike Fink displayed almost diabolical cunning and cruelty toward the victims of his practical jokes, as his predatory exploits were called. These included "trimming" a Negro's heel because he disliked its shape, shooting a scalp-lock from an Indian's head, and curing his wife of looking at other men by forcing her to lie down in a pile of leaves to which he set fire.

Once Mike Fink carried his lawlessness too far—beyond the point where "even a crime might take on the aspect

of a good joke." This was in 1822, when, displaced by the steamboat, the "last of the boatmen" became one of Ashley's men in the service of the Mountain Fur Company. At Fort Henry, at the mouth of the Yellowstone, while engaged in his favorite sport of "shooting the whisky cup," he aimed too low and shot his friend Carpenter in the forehead. For this act of carelessness or treachery he paid with his life soon after, at the hands of Carpenter's avenger, Talbott. B. A. BOTKIN

mikita The Lithuanian rod dance. The version for men is an energetic battle mime with rods, in longways formation similar to the English Morris. The *motero mikita*, the version for women, discards the rods and virility symbolism and substitutes pleasing longways formations of the Virginia Reel type. With a consistent step of three polkas and three stamps, opposites meet and retire; then, in turn, each set of corners meets and retires, starting with the first man and fourth woman and working up through the four couples. As a refrain between each exchange, the two lines form two separate circles, and polka clockwise. In the end all polka right, then left in one large circle, and conclude with the initial advance and retire and a final bow. [GPK]

Mikula A Russian peasant hero of the Paul Bunyan type, figuring in many byliny. See BALLAD.

Mikumwesu In a Malecite Indian myth, the older and more powerful brother of Gluskabe; a small man who could do more with his weak-looking bow, than Gluskabe could with his strong one. The character also occurs, as Megumooeweco, father of Gluskabe, or Mekmues, a good spirit in Micmac Indian tradition. The name is equivalent to that of the Passamaquoddy Mickumwes, a small wood spirit who had the power of increasing its stature at will. The character is of interest for its possible relation to Tcikapis, the dwarf culture hero of the Montagnais-Naskapi Indians. See Margaret Fisher, "The Myths of the Northern and Northeastern Algonkians in Reference to Algonkian Mythology as a Whole," pp. 229-30, n. 6, in *Man in Northeastern North America*, Frederick Johnson, ed., *Papers of the Robert S. Peabody Foundation for Archaeology*, vol. 3, 1946. [ewv]

Milesians In Old Irish mythology and legend, the fifth people to invade Ireland; sons and companions of that Mil who went from Spain to Ireland to avenge the death of Ith; ancestors of the present people of Ireland. The Milesians came to Ireland in 30 ships; they tried to land at Inber Stainge, but the Tuatha Dé Danann raised druid mists and illusions about them so that they could not; they sailed around Ireland three times before they finally set foot on the earth at Inber Stainge, on a Thursday before the first day of May in the Year of the World 3500. At once they set out for Tara, meeting en route the three queens, Banba, Fódla, and Ériu (see these). At Tara they conferred with the three kings (MacCuill, MacCecht, and MacGreine) and the judgment was given for the Milesians to go to sea again and take the land by force, and whichever won, the others would depart. When the Milesians were nine waves off shore, the Tuatha Dé Danann raised such a storm, a druid storm, against them that many were drowned or lost. But Eber and Eremon and Amergin, three of the five sons of Mil, survived and landed. Then

Eber and Eremon divided the fleet and chieftains between them, and conquered the Tuatha Dé Danann in two battles: the battle of Sliab Mis (where fell Scota, the wife of Mil) and the battle of Tailltiu where the Milesians slew the three kings and three queens of Ireland. Thus the Tuatha Dé Danann were routed and the Milesians took the lordship of Ireland. Eremon took kingship over the north; Eber took the south. Amergin, being a poet, wanted no possessions. Cir, a great poet among them, went northward with Eremon; Cennfinn, a famous harper went south with Eber. Thus music has been the gift of the south of Ireland up till now; and knowledge and poetry still come out of the north. See BILE.

milk Milk is the only substance on the face of the earth whose primary purpose is nourishment. Specifically it is secreted by female mammals after they have borne young. Human milk has been supplemented by that of other species, but the domestication of animals, which ensures a regular supply of milk has a limited distribution. Various animals have been domesticated and used for milking, most commonly hoofed mammals: cattle, sheep, goats, caribou, reindeer, buffalo, yak, camels, asses, and mares. Milking was unknown in the New World prior to the 16th century. Some cultures depend upon milk and its products as their chief food, e.g. the Hottentots of Africa, the Lapps of Europe, the Todas of India, and numerous pastoral tribes of central Asia. Over most of Europe and parts of Asia and Africa, dairying was part of the general agricultural complex; but milk is absent from the diet of the Chinese, Japanese, Polynesians, and Melanesians.

All cultures rely upon the milk of the mother or of other nursing women as infant food. This may be supplemented by milk of other species as well. The Italians feel that a young infant may take on some of the characteristics of the animal who produces the milk; this is why a wet nurse of good character should be selected, or why animal milk should not be introduced too early. A Jewish child may not nurse beyond its fourth birthday, although human milk may be given to an adult, provided it has first been expressed from the breast. The Polish peasant will not let a baby nurse for more than two St. John's Days. If the Polish baby has been weaned and it begins to nurse again, it is said that the child will be a stammerer.

As a food for adults, or in its relation to adult human beings, cultural attitudes range, on the one hand, from the positive aspect in India and Africa, where milk is treated with the greatest reverence and ceremony, to the negative, as in China, where it is equated with excreta. In our own culture, milk (specifically cold, fluid, pasteurized, cow's milk) occupies a somewhat medial position. It is said to be good for one, nourishing, and health-giving, particularly for children, invalids, pregnant and lactating women, but *fattening* for adults.

Among the Todas of southern India, the entire life is geared around their buffalo, with the dairy serving as a temple. All activities connected with milk are the sole concern of the men. Milk is given to the dying to drink, and the dead are taken to the stable before disposal. Women can do nothing with milk, except to consume it.

In East Africa, the cattle are also the objects of great

concern, and there are many observances which ensure the supply of milk. The Bahima and the Masai believe that if milk is boiled, the cattle will die, or the cows will dry up. On the other hand among the Baganda who normally tabu the boiling of milk, it is mandatory to boil the first milk from a newly calved cow, make it into a cake, and eat it. Among the Zulus, a wounded man could not milk a cow until he had been purified. Milk and blood may be antithetical, as with the Thonga, where a menstruating woman could not go near the kraal or look at the cattle. The menstruating woman among the Banyoro was permitted the milk only from old cows. In other places, "blood" was good for milk: The Hottentot pubescent girl was led around the village to touch the milking vessels and the rams, for good luck; while among the Herero, all fresh milk was consecrated to the newly delivered women. Milk is often not eaten with meat, as among the Jews. The Baganda would not touch meat that was boiled in milk. Before the Masai drink milk after meat, they use an emetic. Washing milk vessels with water imparted a peculiar odor to them, according to the Masai, who used cow's urine instead. Sexual activity and milk also were antithetical among some tribes, for the Akamba and Aikuyu, for instance, abstained from coitus while the cattle were in the pasture. During the mourning period, the Dinka and the Banyoro abstained from milk.

In Europe and the United States there are many beliefs about the digestibility of milk when eaten with other foods, notably acid foods like tomatoes, pickles, lemons, or when eaten with shellfish. However, this does not necessarily apply to its derivatives like cheese, or when the antitheses are cooked together, as in clam chowder. Many practices are widely followed to protect the milk supply. In Estonia, the first milk after calving is not boiled without the precaution of placing a silver ring and a small saucer under the kettle, to keep the udder froth harm. In Bulgaria if milk runs into the fire, the supply of milk will be jeopardized. Milk is left out in a saucer or other vessel, for the house spirits in many parts of western Europe. [NEJ]

 The Gallas of East Africa smear the trunks and boughs of sacred trees with blood, butter, and milk to prevent them from decaying. Pastoral tribes connect milk-production and milk itself. The Damaras believe that they must not wash out milk vessels, since this would bring an end to the cow's milk-producing powers.

In England (*Memoirs of Samuel Pepys*) it was customary for milkmaids to put garlands on their pails on May Day and to dance. During the latter part of the 19th century Irish peasants and housewives celebrated the Eve of May Day by cutting off and peeling rowan boughs and winding them around milk pails and churns. It was believed that the housewife who put rowan on her churn-dash would not have her butter stolen by fairies. According to the folklore of northeast Scotland, fairies are delighted by milk and frequently seek to satisfy this delight by approaching unchurched women (see CHURCHING OF WOMEN). In Germany peasants still fasten May-trees, one for each cow and horse, on the doors of stables. The May-tree or May-bush protects not only the cattle but also women against the evil-doings of witches on the Eve of May Day (Walpurgis Nacht).

Likewise, on St. George's Day (April 23), French and German peasants crown their cattle with wreaths of

flowers, as do the South Slavonian peasants. But on Midsummer Day the Slavonians bathe the cows in dew. The Rumanians of Transylvania observe an elaborate festival on St. George's Day to mark the beginning of spring and of herding. A member of the folk tells the herdsmen that they can nullify the charms of witches stealing the milk from sheep by thrashing the shepherd's pouch with a switch or branch.

The *Iliad* tells of milk poured out for the dead; and "milk and honey" is used as a symbol of abundance and wealth, as it is in the Hebrew Old Testament. Pliny's *Natural History*, xxxvii, tells of a milk-stone which, if dissolved in honey-mead and drunk by a woman, will produce an abundant supply of milk. Even today milk-stones are utilized in Crete and Melos, in Albania and Germany.

The people of New Hampshire call milk "thatchy" if it comes from cows that fed upon thatch, a long grass growing in the salt marshes. In Portsmouth milk which has been slightly burned is said to be "caught."

The Russians say: "Don't cry over spilled milk. If you would live forever, wash milk from your liver. What is taken in with the milk, goes out with the soul." [JLR]

milkweed A plant (genus *Asclepius*) named for its abundant milky juices, or latex. The term is also applied to various similar plants exuding a milky juice. The orange-flowered milkweed (*A. tuberosa*) of the eastern United States is often called *butterfly weed* because butterflies (especially the monarch) are seen in hordes upon it. Its root is called pleurisy root, because an effective expectorant is made from it.

Throughout the southern United States the "milk" of the milkweed is used to relieve ground itch. Warts pricked until they bleed and then rubbed with the juice will disappear. Jamaica Negroes make a tea which is good for menstrual pain by boiling milkweed and marigold together. The Meskwaki Indians use a milkweed-root tea as worm medicine, a diuretic, and to relieve gas pains. The plant itself they cook in soup and also serve with pork. The Navahos use the dried leaves soaked in water as a tonic after childbirth and for upset stomach. The Chippewas use the down from the seed pods in pillows, and various parts of the plant as a magic charm. To make a charm to lure deer, they would chew some of the root along with root fibers of the plant boneset, and apply this liquefaction to the whistle used for calling deer. In Texas the children are taught to put the milky juice on cuts and scratches; for rattlesnake bite the roots are crushed, taken internally and at the same time applied to the bite.

Milky Way The luminous band of myriad distant stars and nebulae which encircles the heavens has provoked astonishment and challenged the imagination of man everywhere that it is seen. Almost everywhere in ancient times it was thought of as a river, a river of heaven, a river of light. Anaxagoras in 550 B.C. called it the shining wheel. The ancient Akkadians and Syrians spoke of the River of the Snake, the Great River, or Great River of the Cord of the God, or Great River of the Abyss. Job said, "By his spirit he hath garnished the heavens; his hand hath formed the crooked serpent" (*Job* xxvi, 13.) To the ancient Arabs also it was *Al-Nahr*, the River. The Chinese called it Celestial River, *Tien Ho*, in which the little fish were afraid of the crescent

moon because they thought it was a hook. The Berbers called it the "beam of the sky."

The Milky Way as path or road has been equally common. In Egyptian mythology it is marked by the ears of corn dropped by Isis in her flight from Set. In Greek mythology it is the track of the sun or the track of the luckless Phaethon. In Teutonic mythology it was known as Odin's or Holde's Way. To the ancient Saxons it was Irmin's Road, and Ursa Major was his chariot. It is sometimes referred to as Wætlinga Stræt, perhaps the path of the sons of Wæcla from the eastern to the western sea, perhaps marking the course of the old Roman road from London to Wroxeter; modern writers say from London to Chester. Langland's *Piers Plowman* calls it Walsyngham Way, as the heavenly road to the Virgin Mary, Lady of Walsyngham. Later in European church legend it was called the Way of Saint James. In Siam it is the Way of the White Elephant; the Turks called it Pilgrim's Road; Basuto Negroes refer to it as the Way of the Gods.

Finno-Ugric mythology, and the mythology of many primitive peoples, interpret the Milky Way as the path whereby the souls of the dead travel from this world to the next. Among some tribes in Siberia it is a seam stitched across the sky (A778.4), an idea not far removed from 1st century A.D. astronomy which suggested that it was the mark showing where the two halves of heaven joined. Elsewhere among various peoples it has been interpreted as milk from the breast of a woman (A778.5), the sperma of the gods (A778.6), or smoke or ashes (A778.7). To some tribes of Siberia it represents a hunting party (A778.1). In German and Russian folklore it is the path followed by the Wild Hunt. Hungarians have called it the Way of War in memory of the fact that it guided their early people in the migration out of Asia. See ASHES; BREATHMAKER; COATLICUE; GWYDION.

 The Milky Way is identified as the path or trail that ghosts of the dead take on their way to spirit land by some North American Indians; by other groups it is referred to as the White River, or as a river that forks near one end, or as a creek. Some conceive it as a dusty road, others as a backbone or the smoke from a fire. The Jicarilla Apache say that it is Sun and Moon's first path, when they traveled from north to south instead of from east to west as they do now. The Maidu of central California call the Milky Way "Morning Star's path." The Luiseno of southern California represent the Milky Way in the groundpaintings they use in connection with their boys' jimsonweed initiation, their death rite for initiates, and their girls' puberty ceremony. In this tribe the Milky Way has several esoteric designations, and is more than the mere ghosts' road of most California Indians. Symbolically it was associated with the spirit of the dead man, with the sacred cord which represented life, and probably also with a mystic being "White Grayish," Whaikut Piwkut, one of the preexistences of Night and Earth. See AFTERWORLD. Certain Algonquian groups call the Milky Way "birds' path" because it is by the Milky Way that birds follow their northward or southward course in their migrations. Less frequently the same groups also refer to it as "spirit path" over which the dead are thought to travel. [eww]

 The Milky Way is, for the Toba Indians of the Gran Chaco, a huge path covered with ashes. The Conibo

see in it a jaguar following a deer. The Mosetene say that the Milky Way was formerly a huge worm bristling with the arrows shot at him. [AM]

mill (1) A folk dance figure: same as the *STAR*; a joining in the center of hands by men alone, women alone, or both. In the two-hand mill, both hands are extended to the center; in the one-hand mill only one. [GPK]

(2) Both mill and miller figure largely in European folktale, in stories of magic, in jests, in moralizing anecdotes, and in legend. There are magic mills which will not grind stolen wheat (D1318.15) or on Sunday (D1676); rejuvenation is sometimes attained by being ground in a magic mill (D1338.6). There is an absurdity story about the mill giving birth to the calf (J1533.1), and the moral tale about the ass who was jealous of the horse until later he learned that the horse had to work in the mill (L452.1). The Devil sometimes builds a mill (G303.9.1.3). The traditional mill is haunted by ghosts and frequented by bogles and boggarts (see *BOGLE IN THE MILL*); and the Wild Hunt sometimes is seen at certain old mills (E501.12.10) in German legend. There are also self-grinding mills which produce gold, or whatever the owner wishes.

The legendary Danish king Frodi had two huge magic millstones which ground out gold and peace and prosperity for him until he became so greedy that the giant maids who turned the stones changed their spells and ground out disaster and warriors instead. Because of their spells came the Viking Mysinger, who slew Frodi. He took the millstones (the *Grotti*) on his ship and bade them turn out salt, which he could use for trade; but he too became greedy, and they turned out so much salt that the ship sank with the weight of it in the Norwegian Sea. The millstones made a deep hole and the water flowing into it is what causes the Maelstrom there. The salt dissolved in the water and made the sea salty.

Young German brides used to lay as many wheat kernels as they hoped for children under the mill; or they would slip out at midnight and turn the wheel of the grain mill backwards four times as a charm against pregnancy.

The dishonest miller is ubiquitous in merry tale (see X210 ff.). The Spanish story of the double-cheating miller (K486) is perhaps typical. The miller admitted to the farmer that he had measured in the grain with an oversized measure, but he promised to get a smaller one. He did so, and when the farmer came for the ground grain, the miller measured it back to him in the smaller one.

 The miller appears in characteristic guise and demeanor in the *Decameron* (Day ix, nov. 6); in Chaucer's "Miller's Tale" and "Reeve's Tale," both said to have probably derived from old fabliaux. "Worth a miller's thumb" is a saying that has become proverbial, deriving from the miller's ability to test the quality of meal by rubbing it between his fingers and thumb. [GFS]

Milu In Hawaiian mythology, the god of the underworld under whose supervision the soul led an aimless and shadowy existence.

mime Representation in action and gesture of actual and spiritual events. Originally the term referred to the *pantomimi* or "dumb-show" actors of ancient Greece and Rome and their descendants, the *mimi*, or wandering acrobats and minstrels of the Middle Ages. Panto-

mime is essentially an art, founded on natural everyday expression, but recreated into rhythmic and decorative products, commonly in a blend with music and song or chant.

The primal purpose of such imitative action was ritualistic and it underwent a long series of transitional stages to the purely spectacular court ballet and clownery. To this day some ritualism clings to entertainment and has been revived in modern theater arts.

The most natural expression would have been impulsive, that is, externalization of erotic, warlike, etc., emotions. Next in line comes the imitation of the outside world, of observed actions, frequently reaching over into a parallel spirit world. The penetration into the character and emotions of others is already a highly developed attitude. And the organization of consecutive gestures into the reproduction of events and into dance dramas also presupposes a highly developed artistic and constructive sense.

Several historical examples will briefly trace stages of development from realism to symbolism, from externalization to penetration—and back again to superficiality. 1) Previous to the incipience of its great theater, Greek ritual enactments included realistic imitations of animals. These correspond to the animal mime still found in Africa and among American Indians in various stages of realism and stylization. 2) The battle mime of the pyrrhic dance, similar to aboriginal war dances the world over, developed into spectacular mimetic portrayal, and lastly into disreputable shows. Analogous ritual battles of Europe appeared in history as partly stylized, yet varying from the fierce *calușar* to the playful *morris*. Every stage of sword dance, down to the stick dance and to abstract longways opposition, remains today. 3) Bloody sacrificial killing of Dionysiac rites became sublimated in the *tragoidia*, and finally relegated to abstract choral relation and gesture. In other parts of the world, horror of death is emulated by mechanical means in the Bella Coola *kusiut* dances, and in the *kachina* fight at Acoma. At the other end of the scale, the Japanese *kabuki* drama invests even death with a decorative quality, as the *seppuku* (suicide) and *korosi* (murder) scenes, and *tatimawari* (sword play). In English and Basque sword dances, sacrifice is completely symbolic and choreographic (see *SWORD DANCES*). 4) In Greek *xeironomia* (gesture language), the representation of emotions and of character were termed, respectively, *phorai* and *schemata*. There is doubtless a connection between the *phorai* and the elaborate Hindu gesture code, the *mudras*, which can portray the most delicate and most heroic moods in ever new combinations. The *schemata* find their counterpart in the stock characterizations of the Chinese theater and the Japanese *Nô* dramas which differentiate the sexes as well as human types.

Many gesture codes visualize external things and events, and emotions, thus the *mudras* and related *hula* gesture language. The American Indian sign language, which may or may not be related to the *mudras*, has a complete vocabulary, in this case utilitarian rather than choreographic. Drama combines the portrayal of the external and mental word in an exciting sequence of events. Yet different parts of the world have a preference for certain types of pantomime, as well as a special style.

1) *Impersonations* of beasts, real or fantastic, and of

demons are particularly apt in animal and demon dances of Africa, Ceylon, the Great Plains, British Columbia, and the Alaskan Eskimo. Such impersonations have been abstracted to dance steps in European folk dances, in the *Morris* "caper," "danse de la chèvre" (goat) and "pas de loup" (wolf) of Limousin.

2) *Imitation of actions*, with or without props. Primitive rites are frequently occupational, as the Fijian *vakamalolo* or fishing dance and the Philippine *balitao* or rice-planting and harvest dance. Folk dances and games frequently re-enact activities, especially in northern Europe (Finnish *Harvest dance*, Swedish *Reap the Flax*, *Washing the Clothes*) and in France and French Canada (*Rondes*, *chants mimés*, as *Les Saisons of La Dauphinée*, *C'est la Poulette Grise of Canada*, *Le Roi de France*, children's game). Mexican Indians prefer to use real props, as the basket and meal in *las sembradoras*. Japanese *kabuki* and *odori* dancers manipulate their props symbolically, the fan representing an infinity of things. The Pueblo Indians and eastern tribes, notably the Cherokee and Iroquois, prefer to mime without actual objects: the Laguna Saint's Day dancers express rain or the growth of corn purely by gesture, by lowering or raising the hands. In the Iroquois-Tutelo *Four Nights Dance* the women winnow corn in abstract movement. Imitation may become completely choreographic, as in the Irish *Waves of Tory* and Lithuanian *malunas* or mill.

3) *Human character* is most aptly portrayed in dramas of the Far East and in the burlesque of clowns, as the *koshare* and the Japanese *topeng* dancers. Not only are posture and hand motions shrewdly reproduced, but facial expression too. In this, face paint or mask may aid the actor.

4) The portrayal of *emotions* also involves facial expression with or without mask, and hand gestures, as well as the attitude of the entire body. Masks of Greece and the Far East immobilize the face into a stereotyped emotion, whereas Japanese and Chinese unmasked dancers play subtly on their features. American Indians hold an impassive expression; Spaniards display ever-changing sentiments. The Hindu confines the ideas to his hands, the American Indian mimics with his entire body. The Far East codifies its gestures, even in the trance state of the Balinese *kris*; Cherokee and Fox Indian *Snake* dancers, and American *play-party* enthusiasts improvise ever new combinations.

Courtship mime, this most fundamental of emotions, has a particularly significant range of forms and styles. In India it is delicately abstracted into hand gestures. In Scandinavia it is stereotyped into patterns of rugged pursuit and coy flirtation, and into humorous facial mimicry. In Spain the fire breaks through the conventions of elusive or alluring postures. In the West Indies all pre-established patterns are forgotten in uninhibited erotic display.

In the same culture there are periods of realism, followed by fossilization, again followed by a new spurt. The crude realism of the medieval folk drama was ritualized into the moralities and mysteries. The conventions of ballet pantomime, developed since the 18th century, have been discarded by modern dance art in its search for new forms, abstracted out of reality.

Everywhere pantomime follows the same general trend from ritualistic to spectacular function, from observed

mimicry to expressive abstraction to affected externalization. Sometimes one of the phases may be retained for a long period, or the cycle may start all over again. See MASKS; RITUAL DRAMA; SIGN LANGUAGE. [GPK]

Mimir (1) In Teutonic mythology, gigantic god of the primeval ocean or the open sea, as opposed to Niörd, god of the coastal waters. His home is Mimir's well (the ocean) beside one of the roots of Yggdrasil. Drinking from this well gave him great and mysterious wisdom; he knew all things, past and future; and Odin forfeited one of his eyes for a draft of the water that he might know the future. As the well was beside the rainbow bridge, Bifrost, Heimdall sometimes left the Gialler-horn there for safety. As a giant, Mimir is the son of Ægir (Hler), one of the three gods of the elements. Other sources call him the son of Bolthorn, brother of Odin's mother, Bestla. According to the *Yngling-saga*, the æsir sent Hœnir and Mimir to Vanaheim in exchange for Niörd and Frey. Thus originally he belonged to the æsir. Hœnir was an essentially stupid fellow and the vanir were angered. They beheaded Mimir and sent his head to Asgard where Odin preserved it with herbs and consulted it as an oracle. The *Svipdagsmål* refers to the world tree (Yggdrasil), as Mimameid, or tree of Mimir. Hodmimir, in whose forest Lif and Lifthrasir escape the fire at Ragnarök, is also identified with Mimir. Some claim that he presides over Odainsakr (the acre of the not-dead) where there is no sickness, age, or death. Alexander H. Krappe in *Mythologie Universelle* (Paris, 1930) points to the story of Odin's preservation and consultation of Mimir's head as based on early Teutonic practice of divination from skulls.

(2) In *Thidriks-saga*, Mimir is a dwarf master-smith who teaches Sigfrit and Velint. Variants of this name are found as smiths in a number of Teutonic myths and tales; he turns up as *Mime*, for instance in the *Ring of the Nibelungs*, as the smith who aids Siegfried. It was probably Mimir who forged the sword, Miming, later attributed to Wieland.

Mink Animal-character in various American Indian tales, but especially prominent as the culture hero-transformer-trickster of the Indian tribes in the middle part of the North Pacific Coast region. In the northern part of this area it is Raven, voracious and greedy, who plays this role; in the central part the erotic Mink, and in the southern third Bluejay, always anxious to outdo his rivals, or Fox, or Moon. Clever and crafty Mink piled up the mountains; wherever he camped creeks and springs sprang up; he killed off many monsters; he stole the sun; he changed the inhabitants of the earth into beasts, birds, fishes, rocks, and trees for the good of the human race that was coming. The amorousness which was Mink's special characteristic, distinguishing him from the other trickster-transformers of the North Pacific Coast, has led to the development of a long series of tales concerning his marriages; all these, as shown by Boas, are of the same general type. As a trickster, Mink was often outwitted, but as a transformer he had great powers. Whether or not he created the human race, he prepared the earth for humans, which is the point that is emphasized in these regions, more than his capacities as a creator. See EARTH DIVER. [EWV]

Minona Literally, our mother Na: a semi-deity of Dahomean Negro religion. She is an earth-dwelling, specifically forest-dwelling, spirit, appearing in the myths variously as the mother of Mawu, mother or sister of Legba, or mother of Fa and the Fa group. She is the protectress of women; every woman has a shrine for Minona in her house, where she is given offerings of all first-fruits before members of the family may partake. This guarantees continued fertility of the fields. She is also the giver of magic to the sorcerers, and perhaps activator of many gbos.

Minotaur In Greek mythology, the monster with a bull's head and a human body for which Dædalus built the Labyrinth: the name means Minos bull, the bull of the Minos dynasty of Crete. Minos offered to sacrifice the white bull sent from the sea by Poseidon, but instead sacrificed another. Poseidon therefore incited lust in Pasiphae, Minos' queen, for the white bull. The craftsman Dædalus made a hollow wooden form, covered it with a cow's hide, and placed Pasiphae within it. In this manner the queen was able to indulge her passion; the resulting offspring was Asterius, the Minotaur. Some years later, Androgeus, a son of Minos, having won at the Panathenaic games, was waylaid and slain by a group of jealous Athenians. Minos marched on Athens and forced from them a tribute of seven youths and seven maidens every ninth year, to be shut up in the Labyrinth to be eaten by the Minotaur. With the third such group went Theseus, son of Ægeus, king of Athens. He slew the Minotaur with his fists and thus ended the practice of sending the youthful sacrifice to Crete.

Many scholars have recognized in the Minotaur a reflection of the bull and sun cult of Crete. Parallels throughout the Mediterranean, e.g. the Baal-Moloch of the Phœnicians who devoured victims in his flames, have been indicated. The myth of the Minotaur's birth, according to A. B. Cook and J. G. Frazer, may have originated in a sacred union, the hieros gamos, between the queen and the bull god. Similarly, the victory of Theseus is said to represent the abolition of human sacrifice to the sun by the Greeks. That a bull cult was prominent in Crete is well known through the many representations of sports like bull-leaping as religious rites. Similar to the Minotaur, and perhaps identical with him, is the mythical Talus, the red-hot man of brass, met with in the Argonaut story, probably an animal-headed anthropomorphic representation of the sun in whose heated body victims, perhaps strangers to the island of Crete, were enclosed.

mint Any of several aromatic herbs (genus *Mentha*) of the family *Labiatae*, of which spearmint or garden mint (*M. spicata*) and peppermint (*M. piperita*) are the most popular. The mints have long been valued for their medicinal and culinary uses, and many varieties are raised commercially. The sprig of mint in iced drinks, mint sauce, mint jelly with meats, mint tea for indigestion are commonplaces of daily life.

In classical mythology Pluto was in love with a nymph named Mintha, but his jealous wife turned her into the mint plant whose beauty still attracts through its fragrance. Mint was one of the herbs known and valued by the ancient Hebrews; "tithes of mint" are mentioned in the New Testament. It has been a popular herb from earliest times in the British Isles, where it was intro-

duced by the Romans, and is mentioned as one of the "sweet herbs" used for strewing floors in Elizabethan times. John Josselyn's herb book (17th century) lists mint as one of the "precious herbs" brought from England by early settlers in Massachusetts. Mint was used medicinally in baths to calm and strengthen the nerves and muscles. It was also widely used for upset stomach, earache, watering eyes, and the bites of animals and insects. Powdered leaves of mint in wine (along with rue, vervain, plantain, wormwood, and other herbs) was recommended for hydrophobia by the 16th century physician, Varismann. Iron destroys the effects of mint, however, and must be avoided. In northern Europe, mint was considered useful in preventing milk from souring. In Ireland spearmint (*mismtn*) is sprinkled in beds and houses to banish fleas. In Bolivia the people believe that anyone who finds mint in bloom on St. John's Day will have happiness forever.

Jamaica Negroes brew peppermint tea for colic, and the Meskwaki Indians drink mint tea as a tonic, and for ague. The Meskwaki also use the leaves of mountain mint (genus *Pycnanthemum*) on mink traps to mask the scent of earlier victims, or, some say, as a lure. Winnebago Indian hunters also use it to mask the odors of their traps. The Meskwaki also recommend mountain mint as "snake bait": i.e. chew some of the top leaves, spit them onto the end of a stick, hold the stick in front of a snake's mouth; the snake becomes unaware of his danger and is easily caught. This is just as effective as sprinkling salt on a bird's tail. The Meskwaki also make a snuff of the dried leaves of mountain mint mixed with horsemint (*Monarda punctata*) which they use for headaches. This is also often applied to the nostrils of one about to die to revive him. The Mohegan-Pequot Indians used both peppermint and spearmint tea as a vermifuge for babies. White settlers used these mints for dyspepsia. See PENNYROYAL.

minuet (French *menuet*, Italian *menuetto*) A French court dance flourishing in the 18th century, originating as *branle de Poitou* and languishing into the 19th century till absorbed by the quadrille and waltz. It owes the epithet *menu*, small or neat, to the rococo daintiness and precision of its steps. The lively duple time of the branle de Poitou was subdued to an elegant and sedate triple time. A two-part musical form, with the occasional addition of a trio, accompanied two specified minuet steps. The *menuet en avant* consisted of forward balancing, bowing, and crossing, the partners touching fingers with the utmost delicacy; the *menuet de côté* placed the partners back to back or face to face with sideward grapevines and toe-pointing. Though a late-comer to the musical suite, a minuet features in most of Mozart's symphonies.

This utmost stylization of courtship pantomime was expressive of the decadent, perfumed court just before its spectacular deposition. In its heyday it was considered the "queen of dances," which traced "les chiffres d'amour," the figures of love, to the strains of violins, or rather "les âmes des pieds," the souls of the feet. [GPK]

min-yo The Japanese term for folk songs, literally translated from *Volkslied* and applied especially to the work and occupational songs of farmers, communal labor groups, teamsters, fishermen, lumbermen, tea and

silk workers, etc., and to the banquet and festival songs of villagers. The verse forms are based on syllable patterns, rather than on meter or rime, the characteristic measure, *dodoitsu*, being a twenty-six-syllable arrangement in groups of 7,7,7,5, with refrains of nonsense syllables, *dokkoise*, sung in chorus and in work songs serving as the stressed phrase for the concerted action. Another measure, the *hayashi*, is less regular in form and is used in more improvisational and humorous songs. The texts make use of many words of double meaning, sometimes quite seriously extending the references of the subject, often merely punning and carrying a secondary sexual significance. The words of occupational and work songs do not necessarily refer to the task at all, but may be of love, of food and drink, of nostalgia, of old stories or new jokes. The singing is often helped along by the melancholy notes of the bamboo flute, *shakuhachi*, or a smaller flute, *fue*, by the rhythm of the small hand drum, *tsuzumi*, or the larger *taiko*, by the samisen, by hand-clapping, beating sticks, barrels, or bells, or simply by the cries that time the work stroke.

Among the types of Japanese work song are:

The *dotsuki* or *jitsuki-uta*, which are earth-pounding songs, sung by communal groups at work on foundations, roads, pile-driving, etc. The pounding device is a heavy log hung in a framework, hauled up by ropes, and dropped from a height. The songs set the rhythm for the rope-pulling and are sometimes, like sea chanties, sung by a leader with a chorused response from the crew at the moment of the effort. Often they are long tales strung out to relieve the tedium of the job. Songs are begun only after ground-breaking ceremonies which include shooting an arrow into the sky and pouring sake on the ground.

Stone-hauling songs, *ishi-hiki-uta*.

Horse-driving songs. *Umakata-bushi*, or songs of the horse leaders, may differ according to the occasion. For example, one such is sung only at weddings when the bride's special horse is led to her house. The *oiwake-bushi*, literally "fork-of-the-road songs," are mournful melodies of long drawn-out notes with words lamenting the length of the road and wishing for the end of the journey, sung especially at crossroads by pack-horse drivers. The origin of the type may be either a chant to placate the gods of the crossroads or an 8th century form of music, *saibara-gaku*, possibly related to the delivery of tribute to an overlord.

Songs of lumbermen, including *kobiki-uta*, for hauling logs, and *hiyari-uta*, sung by the sawyers, both with exclamatory refrains of the "heave-ho" type.

Funa-uta, the songs of fishermen and boatmen, sung while rowing, dragging nets, hauling on ropes, etc. They may tell of faraway homes and lovers, of the luck of the catch, or of almost any other subject, but regardless of subject, the songs of this type are sung only on boats. Special songs of whalers are called *kujira-uta*, and songs celebrating a big catch are *tairyō-bushi*.

Songs of agricultural workers of the rice paddies, tea plantations, and fields. The songs of rice culture, *ta-ue-uta*, are work songs, but are also sung nowadays simply for entertainment and in accompaniment of the dances of the rice ceremony. These go back to early fertility rites and are still performed to bring good crops. The various steps of the dancing go with certain songs to the music of drums and samisen. The original songs

were called *ta-uta*, and the old form of the dancing, *dembu* or *ta-mai*, imitated the motions of planting the rice. Other special songs are devoted to the rice harvest and to the hulling of the grains. Weeding, which is generally done by women, also has its songs, *kusatori-uta*, with spoken phrases to emphasize the rhythm of the pull. The tea workers' songs, like work songs of many other groups in other lands, often express a low opinion of the boss. The *chatsumi-uta* are sung for picking the tea; sorting and roasting are accompanied by other groups of songs.

Hata-ori-uta are loom songs of the silk industry. There are individual song types for each stage of the process, from the *kuwa-tsumi-uta* of the mulberry leaf pickers to the songs of the cloth finishers.

Apart from work songs, min-yo include many village songs, *ko-uta*, sung for special occasions and festivities and often quite localized. *Tate-daru-ondo* and *yoko-daru-ondo* are country dance songs accompanied by beating on a barrel with sticks and by the small flute or a bell. Banquet songs sung at drinking gatherings, wedding celebrations, farewell dinners, etc., often go to a kind of tune known as *rokuchosi*, a six-tone song form possibly so called from the tuning of the samisen which accompanies it.

The most common surviving folk songs of Japan are the *bon-odori-uta*, or songs for the Bon or O-bon festival (Feast of Lanterns), which takes place during the seventh month and was originally a feast of offering to the spirits of the dead who returned to their earthly homes at that time. Both religious and secular observances mark the season. In certain sections miniature straw boats are set adrift with lighted candles to direct the journey of the spirits. Evenings are given over to dancing and singing to the samisen from a repertory of 400 or more songs. The dancing part of the festival probably is older than the Buddhist religious ceremonies and may go back to certain ancient summer festivities of China, during which sexual freedom and betrothal of young couples were in order. More than half of the songs are love songs, with sexual connotation by implication if not in actual expression, and the others deal with seasonal congratulations and many other subjects.

There is a special series of songs sung at New Year's in connection with the lion dances (*shishi-mai*, *shishi-odori*) and the pantomime of door-to-door performers. Sometimes the lion of the dance is a head and drapery worn by two dancers; sometimes each dancer appears with a lion mask. The general tenor of the songs is good-luck wishes for the new year, though the words may describe the mating of lions. Monkeys, boars, and deer are also featured in certain festival songs and dances not necessarily performed at New Year's but associated with shrine worship.

Among the religious songs of Japan are the Shintoist shrine songs, *kami-uta*, the Buddhist chant, *nembutsu* (Hail, Buddha), and the Buddhist hymns, *wa-san*, from which a highly irreverent and satirical body of popular song has grown.

Children's songs, *do-yo*, and lullabies, *komori-uta*, are classed apart from the min-yo. They are in general simpler both in verse structure and in melody than the songs of the adults, and the puns and *double entendres* are lacking. Subjects of children's songs include the little snail rime common to children almost everywhere

in the world, the firefly, the moon, and long tales and enumerations. They are sung or chanted in singsong to ball-bouncing, hand-clapping, rope-skipping, bean-bag play, etc. See CHILDREN'S SONGS; LULLABY.

A modern class of songs called *shin-min-yo*, or new folk songs, is actually not folk in origin at all, being the product of popular song-writers of the cities. [TCB]

miraculous pipe A pipe which, when smoked by the hero, gives forth clouds of turkeys and pigeons instead of smoke; when used by an impostor who enchants the hero the pipe produces dung, beetles, and flies. This is a recurrent element in Great Lakes North American Indian tales. [ewv]

mi'raj Literally, an ascent: Mohammed's night journey to paradise, believed by many to have been merely a vision. It is mentioned briefly in the Koran and described in detail in the Sunni *Mishkātū'l-Masabih*. Gabriel came to Mohammed in his sleep, cut out and cleansed his heart, and filled him anew with "faith and science." A white animal was brought to him, named Burraq, whom he mounted. They ascended to heaven and Gabriel called out to open the door. "Who is it?" said the voice of heaven. "I am Gabriel." "Who is with you?" "Mohammed." "Has he been called?" "Yes." "Welcome Mohammed," said the voice. They entered the first heaven and saw Adam. In the second heaven they saw Jesus and John who welcomed Mohammed as brother and prophet. In the third heaven they saw Joseph, in the fourth, Enoch, in the fifth, Aaron, in the sixth, Moses, who wept because more people of an after-prophet (Mohammed) than his were destined to enter paradise. In the seventh heaven they saw and spoke with Abraham. After that Mohammed was shown the sacred tree named Sidratu'l-Muntaha and the four mighty rivers, of which two flowed through paradise and two on earth (the Nile and Euphrates). Wine, milk, and honey were then offered him. Mohammed chose milk and Gabriel said, "Milk is religion." Then the divine orders were given him to take back to the people: 50 prayers a day. As he passed by Moses, Moses said, "Your people will not be able to perform it." So Mohammed went back and God struck ten off the list. Again Moses said, "Your people will not be able to perform it." Again Mohammed went back and God struck ten more off the list. This happened until only five prayers a day were ordered. Moses still thought it was too much, but Mohammed was ashamed to go back another time, so five it remained. And as they passed out of heaven they heard a voice declaring, "I have established my commandments and I have made them easy."

mirror of al-Asnam In "The Tale of Zayn al-Asnam," *Arabian Nights* (Burton *Supplemental Nights* III), a mirror given by the King of the Jann to the Prince: a chastity index which would show the Prince whether the wife he was to obtain for the King of the Jann were chaste or unchaste. If the maiden were so pure that no man had so much as lusted for her, the mirror would show a clear image; if she were sullied in any way, the image would be dark.

misplaced genitalia An incident of origin myths, especially of the Pacific and western North American areas: men and women are created with their genitals

elsewhere than in their present positions (A1313.3), or they mistake the use and function of the genitals. The culture hero—usually semi-divine—rearranges their physical position or explains their proper use. For example, in the Northwest Pacific Coast region of North America, and throughout Polynesia, Melanesia, and Micronesia, myths tell of people who believe it necessary to cut open the mother in order for a child to be born, until the culture hero (Coyote, Tura, etc.) teaches them otherwise. The tale may have existed in other regions of the world, where it has now disappeared; it may underlie such Greek myths as the story of the birth of Athena and the myth of the birth of Dionysus from the thigh of Zeus after Semele was consumed by fire. See MAN; VAGINA DENTATA.

Miss Nancy The Spider: in South Carolina Sea Island folktale, corruption of ANANSI.

mistletoe The common mistletoe is a European ever-green hemiparasitic plant (*Viscum album*, family Loranthaceae) bearing white glutinous berries, and found growing on various deciduous trees: one of the most magical plants of European folklore. It was regarded as mysterious and sacred from earliest times from the Mediterranean to the Baltic, a bestower of life and fertility, a protection against poisons, and potent for numerous medical and magical uses, an allheal and aphrodisiac. The oak mistletoe especially could extinguish fire, in both Italian and Scandinavian belief: a belief which seems to be rooted in another, that mistletoe comes to the tree in a flash of lightning.

The famous Golden Bough which Aeneas plucked from the oak at the gate of the underworld, and which served as token for his safe conduct in that place, is the mistletoe. (The berries become deeper and deeper gold-tinged as the plant withers.) For discussion of identification of Vergil's golden bough, see Frazer, *Balder The Beautiful*, ii, 315–320.

The mistletoe of the sacred oak was especially sacred to the ancient Celtic druids. The druid rite of plucking the mistletoe, as described by both Caesar and Pliny and of which little more is known, adds its aura of mystery to the lore of sacredness and magic surrounding this plant. On the sixth night of the moon white-robed druids cut the oak mistletoe with a golden sickle; it was not allowed to touch the ground but was caught in a white cloth. Two white bulls were sacrificed at the time with prayers to the god to prosper the gift (i.e. the mistletoe) and the recipients thereof. Mistletoe is still ceremonially plucked on Midsummer Eve in Europe, especially in the Celtic and Scandinavian countries; for this reason MacCulloch believes that it must have been especially associated with the Midsummer festival in druid times.

Frazer associates the druid ritual with the plucking of the golden bough in the sacred grove by the successor (and slayer) of the priest of Nemi. Robert Graves suggests (*White Goddess*, New York, 1948, p. 48) that the ritual cutting of the mistletoe from the oak symbolized the emasculation of the old king by his successor, mistletoe being a widespread sexual symbol, and also the "life" of the oak. See CRONUS. The mistletoe as the soul of the oak, had to be cut before the sacred tree could be felled or before the human proxy of the sacred tree could be slain. Frazer, after A. B. Cook, posits also the

association of the mistletoe with the sun by the ancient Greeks because of the cult of Apollo Ixius at Ixiæ in Rhodes, named for the mistletoe. In fact the custom of gathering mistletoe at both the solstices (Midsummer and Christmas) links the plant definitely with the various old European sun cults. For his association of the druid rite with the death of Balder, mistletoe as life token and death token of Balder, see *Balder The Beautiful*, ii, 279, 283.

Decorating the house with mistletoe at Christmas is often assumed to be a survival of the old druid oak cult. Frazer links the custom of kissing under the mistletoe with the license of the Greek Saturnalia. Others associate the practice with certain primitive marriage rites. R. Reynolds in *Cleanliness and Godliness*, New York, 1946, p. 249, suggests that both the holiness and the extraordinary fertilizing powers of the mistletoe are associated with the fact that the plant is propagated from the dung of birds dropped on the branches of trees and with the special holiness and life-giving powers of dung. The method of its propagation was long recognized. Pliny remarked upon it; Turner's *Herbal* (1532) says that "the thrush shiteth out the miscel berries." The word mistletoe itself may derive in the last analysis from this very fact. According to Skeat, Old English *mistel* (mistletoe) "is clearly a diminutive of *mist* which in German means dung" and is cognate with Gothic *maihstus*, dung.

In the realm of folk medicine mistletoe is still called *allheal*; it is one of the herbs of St. John, and is believed to cure sterility, control epilepsy, and act against poisons. A potion from mistletoe berries is sometimes given to man, woman, and beast to make them fruitful. The berries were formerly dried and powdered and prescribed for 40 days for apoplexy, palsy, and epilepsy, and a sprig was worn about the neck to enhance the internal effects of the dose. Culpeper (*Complete Herbal*, 1653) also places mistletoe under the dominion of the sun, adding that the oak mistletoe "partakes of the nature of Jupiter because the oak is one of his trees." He recommends the birdlime from the berries to "mollify hard knots and tumours," and states that mixed with wax it helps old ulcers and open sores. Lloyd's *Treasury of Health* (c. 1550) stated that "Mysceltowe layd to the head draweth out the corrupt humors." Late into the 19th century mistletoe had a reputation for alleviating the ills of old age. It has been an old folk remedy for epilepsy and hysteria from the time of Pliny to the present day; modern research discloses that the active principle of mistletoe (*guipsine*) not only relieves hypertension but is valuable in treating nervous disorders.

In some parts of Europe the people are unwilling to cut the holy plant, believing instead it should be knocked or shot down and caught as it falls. In Switzerland mistletoe gathered this way, especially under the sign of Sagittarius, is good for the diseases of children. Southern U.S. Negroes say that a decoction of mistletoe will dry up mothers' milk. Robert Greene (1590) said "None comes near the fume of the misselden but he waxeth blind." Shakespeare also mentioned the "baleful mistletoe"—*Titus Andronicus* II, iii.

All over Europe mistletoe is seen over house and stable doors or hung in rooms to prevent the entrance of witches; in the Louisiana bayous it is often hung over doors to counteract the powers of conjurers. Tiny

mistletoe figurines are sometimes seen in this region over fireplaces or hung on bedsteads for the same reason.

In Sweden the divining rod cut from the mistletoe on Midsummer Eve is especially potent. The golden color of the withered plant may account for the belief that such rods will point to hidden gold. Mistletoe growing on hazel is potent for discovering treasure in the Tyrol; mistletoe found on the thorn was ascribed such virtue in Prussia. In Cambodia a decoction of mistletoe is believed to bestow invulnerability. In Christian legend mistletoe is thought of as cruciform and called Holy Cross wood. Mistletoe is also one of the plants which open locks.

Farmers in Worcestershire and Wales sometimes give the Christmas bunch of mistletoe to the first cow that calves in the New Year. This brings luck and health to the whole herd. In parts of England the Christmas mistletoe is burned on Twelfth Night lest all the boys and girls who have kissed under it never marry. In Staffordshire the Christmas bunch was kept all year and burned under the next Christmas pudding. See *ÆNEAS*; *EPILEPSY*.

Mithra or Mithras In Persian mythology and belief, a god of light, truth, and justice: the chief aid of Ahura Mazda in his fight with Angra Mainyu. Mithra's henchmen are Rashnu and Sraosha. Mithra was born of a rock, coming forth armed with a knife and a torch. He measured his strength with the sun and finally made a truce with the latter. Then he attacked the primeval ox and slew it. From its blood and limbs came all the animals and the useful herbs; its soul went to heaven as the guardian of animals.

The feast of Mithra, *Mihrajān*, falls about September 7th and lasts for six days. During this festival the Persian king can become intoxicated and dance the national dance. The violet is consecrated to Mithra.

In Vedic mythology, Mitra is a sun god and one of the *Ādityas*: literally, friend. He is identified with the Persian Mithra. Mitra belongs to the early triad of Agni (fire), Vāyu (wind), and Mitra. He is one of the five gods representing various aspects of solar activity and is probably a personification of the beneficent characteristics of the sun. Mitra, ruler of the day, is often associated with Varuṇa as ruler of the night. [SPH]

 Mithra is a widely worshipped mythological nature god-hero, revered in the ancient Indian Vedic pantheon, where, as Mitra, the light of day, he was associated with Varuṇa, the thousand eyes of night. Inscriptions found by Winckler at Boghaz-keui in 1907 indicate that as early as the 14th century B.C. Mitra was worshipped among the Mitanni of northern Mesopotamia. In Iran, Mithra was powerful before the time of Zarathustra (Zoroaster), who rather subordinated him as representing the worship of the demons the prophet was trying to eliminate, but after Zarathustra, Mithra was restored to Mazdaism's pantheon and reigned as one of the most powerful Persian deities along with Mazda and Anāhita.

The remarkable influence of Mithra on other religions and mythologies was potent over a wide area and for many centuries, although little recognized until recent years. He seems to have been a very adaptable divinity, for he appears successively as god of daylight in India, as "lord of wide pastures" in later Zoroastrian-

ism, then as a Persian rock-born god of the middle zone between heaven and hell, later as a cave-dwelling bull-slaying hero-god of the Roman legions; finally he returns to the sun-god role as Helios-Mithra in the complex neo-Platonism of the 4th century A.D. Roman emperor Julian, called by Christians "The Apostate" because they resented his Mithraism. These apparent changes in the character of Mithra are, however, really only changes of emphasis on one or the other of his many attributes and exploits, for he had almost as many attributive titles as Zeus-Jupiter and nearly as many "labors" as Heracles-Hercules. But the illuminative aspect prevails throughout and even in the cave he was worshipped as the god of light.

The importance of Mithraism, the worship of Mithra, lies in the fact that it was a serious, perhaps the most dangerous, rival of Christianity from the time of Trajan (early 2nd century A.D.) till the 4th century, when the official adoption of Christianity by Constantine and his successors deprived Mithraism of its state income and encouraged its ruthless extermination by zealous Christian bishops. The incredibly cruel murder of the neo-Platonist Hypatia belongs in this dark period.

The competition between Christianity and Mithraism had been very keen for two centuries, however, and for several reasons. First, from the introduction of the cult of Mithras, which Plutarch says was originally brought to Rome by captive Cilician pirates in 67 B.C., the new faith, with its mystic symbolism of hope and its teaching of austerity and endurance, gradually began to win slaves, workingmen, and the common people generally, the classes among whom Christianity sought converts.

Second, by the time of Trajan, Mithraism had become familiar to the great mass of soldiers, who soon adopted it as their own and became its missionaries to the whole Roman world. Kipling's *Song to Mithras*, a Hymn of the XXX Legion, beginning:

Mithras, God of the Morning,
our trumpets waken the Wall!
"Rome is above the Nations,
but Thou art over all!"

catches the victorious spirit of the spreading faith.

Third, Mithraism had much in common with Christian beliefs, symbols, and practices, such as baptism for the remission of sins, a symbolic meal of communion including consecrated wine, the sign on the brow, redemption, salvation, sacramentary grace, rebirth in the spirit, confirmation, and the promise of eternal life. The celebration of the birth of Mithra was on the 25th of December, and that of his rebirth at the spring equinox. Indeed, the shocked Christian apologists were driven to denounce the Mithraic beliefs and customs as diabolical and blasphemous caricatures of Christianity.

The few borrowings, however, were mutual, and who borrowed which is now difficult to determine. Most of the parallels were probably independently originated. From the folklore standpoint it is of interest that both religions featured seasonal and astronomical celebrations and followed the general pattern of the solar myth.

Mithraism has left many archeological remains, partly because the *Mithraea*, chapels for Mithraic rituals, were underground caves or excavations, purposely well concealed, for they, as well as the Christians in the earlier catacombs, had to go "underground."

Bas-reliefs abound, including the innumerable famous *taurobolia*, the exact meaning of which is now disputed, as literary remains are few, due either to the secret oral transmission of the mysteries of the cult or to Christian zeal in destroying the pagan records, or both.

The taurobolium is featured in relief in all Mithraic sanctuaries. It depicts Mithra as a young man slaying a bull. In Oriental (Persian) costume of tunic, trousers, and pileus (liberty cap), he partly bestrides the semiprone beast on whose back he rests his left knee. His left hand holds the animal's head back by a grip on the nostrils (or sometimes the horns), while his right thrusts a dagger in its throat. A dog and a serpent lap up the spurting blood, and a scorpion grips the testicles. Two torchbearers light up the slaughter cavern; a crow is usually depicted along with trees or plants, and the tail of the bull sprouts an ear of corn. The whole drama, like other Mithraic symbolic pictures, seems quite bizarre to the uninitiated.

These symbols have several possible interpretations but the usual one is from Zoroastrian (*Bundahishn*, xiv, 1) mythology, in which the divine bull by its great generative power and sacrificial death promoted the fertility of vegetable and animal life and assured its annual renewal on the earth. CHARLES FRANCIS POTTER

mitiyuki Literally, travel, on the way of travel: a feature of the Japanese *kabuki* drama, particularly of the type descended from the puppet play. It serves as a scene of relief in multiple-act plays, an idyllic scene between lovers, or between a mother and daughter. All of the action is rhythmical and stylized, more in the nature of dance than dramatic acting. [GPK]

mitote From Nahuatl *mitotia* (*mo*, reflexive, and *itotia*, to dance): a secular dance of the ancient and modern Aztecs, *mitotiliztli* being a secular fiesta. The term now covers the round dances of the Aztecs, Tepehuanes, Cora, and Huicholes of the Sierra Madre Occidental. They are the vestiges of ancient rituals, suffered to remain in an attenuated state, deprived of their meaning by the early missionaries. The same dance celebrates January midwinter, February sowing, summer rain, and October harvest rites. Vestiges of ceremonialism remain in the altar east of the dance ground, and in the accompanying prayers. The shaman lives on in the person of the *cantador*, singer, next to the fire in the center of the circle.

The dancing continues all night on a flat hilltop near the village, in a counterclockwise direction. Carl Lumholtz speaks of a double column, men in the lead, women following, with a forward stamping two step, the women rising on their toes. J. A. Mason describes the step as a series of broken steps and skips in a single circle. The music is furnished by song and a musical bow on a gourd resonator, named *mitote* after the dance. Lumholtz describes a symbolic deer hunt at sunrise, consisting of five circuits in either direction and a deer hunt and capture. At the appearance of the morning star there is a feast on the special foods, which had been placed on the altar together with two ceremonial sticks decorated with hawk and eagle feathers.

There are remarkable analogies between this dance and the rounds of the southeastern and Iroquoian tribes of the United States, particularly the counterclockwise

direction, single or double file, with men in the lead. Feather paraphernalia and a consecrated feast are common to many Indian tribes. [GPK]

Mixcoatl The Cloud Serpent: the Aztec god of the chase, probably of Otomi (Tlaxcaltec) origin, and identified in several aspects with Camaxtli, the Tlascalan war god, and with Tezcatlipoca as a wind god. Mixcoatl has deer or rabbit characteristics. He was identified with the morning star, since he was a culture hero who, in *ome acatl* (two reed), the year after the world was created, made fire from sticks just before the creation of man. He was one of the four creators of the world as Camaxtli, along with the three other sons of Tonacatecutli and Tonacacihuatl. His feast was the Quecholli, a ceremonial hunt being part of the observance. At this festival, on the 280th day, i.e. the 14th day counting by twenties, from February, weapons were made. See ACATLAXQUI; ARROW; COATLICUE.

mmoatia "Little people" of the forest in the belief of the Ashanti and other Gold Coast peoples. Equivalents are the *azizā* of Dahomey and the *ijimere* of Nigeria, with parallels widely found elsewhere in Africa. Retentions in the New World among Negroes include the *abuku* of Dutch Guiana, and the *saci* of Brazil. They exist in unnamed form in the folklore of rural Negroes of the United States as various small folk encountered in the countryside. [MJH]

mnemonic device Any method, system, physical activity, rhythmic utterance, verbal formula, graphic indication, or material contrivance designed to aid in the process of memorizing or recollecting. Perhaps the most familiar of these devices is tying a string around the finger as a reminder of something to be done later; another is the rosary, which serves to check off and to prompt the recitation of a series of prayers. These examples display the distinguishing characteristic of most material mnemonic devices; viz. the object used as a reminder bears little or no resemblance to the subject to be recalled and could serve its purpose only for persons who already knew the subject, and then only by association. They differ, thus, from literal representation in graphic terms, from writing which can be read in full by anyone who knows the language, and from symbols with widely understood and accepted connotations. Even verbal mnemonics, which may actually embody the information to be recalled, and can, if written language exists, be preserved in documents and studied, are usually abbreviated and elliptical, and their purpose is to make possible oral reproduction or practical application of the information and its broader context without reference to written or graphic records.

In ethnological usage, the term mnemonic devices as applied to primitive societies includes the inventions that are used, in the absence of written language and mathematical and musical notation systems, for record-keeping, for calculation of time, for reckoning of accounts, for preservation of historical, genealogical, mythological, musical, and ritual lore, for communication with distant persons, and for the prompting of appointed singers or narrators whose duty it is to remember and recite the tribal memorabilia. These primitive methods and devices fall into three main classes: 1) some form of counter, which may be elaborated to convey more than purely numerical information; 2) some

form of graphic symbol, which may be combined with counters or representational drawings to suggest a broad background of meaning; 3) extensive oral recitations, with or without the use of any of the other devices as an aid to recollection.

Commonly accepted unit counters all over the world have included fingers and toes, sticks, straws, reeds, pebbles, beads, knotted strings and thongs. These have served primitive men of many races for measuring, enumerating, or tallying trade goods, herds, hides, weapons, groups of persons, periods of time, game scores, crop yields, tribute paid, etc. The counters may be combined, arranged, or modified in various ways to convey more specific or more complicated meanings. For example, counting with pebbles may be no more than adding one pebble to a pile for each unit of a transaction, but the calculation may be elaborated by marking divisions or hollows in the ground to separate groups of ten or some other sum, or by giving a value of ten to larger stones, etc. The Creek and Chickasaw Indians made their mercantile calculations by drawing lines on the ground—one short line for each unit, and a cross for tens. (Clerical workers today sometimes follow an exactly equivalent system, except that they use pencil and paper, and usually cross off fives.)

Sticks have proved extremely adaptable material for mnemonic devices, since they can be combined, distinguished by length, marked by notching, peeling, painting, etc. Scores for ball games of the Siouan tribes were kept by setting sticks upright in the ground and removing them as points were won or lost, much as a cribbage board is pegged. Passage of time was marked by many North American Indian tribes by bundles of sticks. The number of sticks might indicate the number of days before an agreed rendezvous; one stick would then be removed each day until the appointment was kept. The Natchez Indians used this device as a signal for an uprising against the French. Loss of some of the sticks was blamed for the failure of the attack, which took place before all the warriors were assembled.

Simple numerical tallies are often kept by notching a stick for each unit to be recorded. The Pawnees notched sticks to keep track of nights elapsed, or months or years. The Pima of Arizona used notched sticks with special notches for years in which notable events occurred, so that a narrator could recall from the marks on the stick the story of the past. Natives of Guiana used to send sticks to the white men to be notched with the number of days until Christmas, so that they could celebrate at the right time. The device has been used not only by primitive men but also by members of more advanced civilizations who were by some circumstance separated from their fellows and from the record-keeping paraphernalia of their culture. The notched sword or gun, showing the number of men killed by the owner, the growth record of children notched or penciled on the doorpost, and the swastika series painted on allied planes of World War II are similar tallying devices.

The Abnaki used sticks thrust into the ground to convey messages between separate traveling parties. The slant of a stick would tell the direction in which the head group was going; another short stick nearby would indicate that the journey was not long; or the number of additional sticks would tell how many days' journey it was. Cuts in the bark, smoking of the stick, and other

such distinctions added further directions. Piles of stones, sometimes laid on buffalo robes, were used by the Plains Indians for the same purposes.

The mnemonic range of stick records is considerable. A Siouan funeral orator, using his bundle of sticks as notes, might spin out a comprehensive review of past events, noble achievements, and proud heritage recalled to his mind by the varying lengths, and the character of the notches, incisions, or painted marks. The Choctaws organized and recorded a large-scale migration by a combination of sticks and tied strings, the individuals, classes, and family groups being indicated by the arrangement of the parts.

Possibly the most elaborate of all material mnemonic devices was the *quipu* of the Incas. Its basis was one of the most primitive and simple of tallying devices, the knotted cord, used by many other peoples in many parts of the world. The Nahyssan of South Carolina, for instance, used knotted thongs for time reckoning, a knot for each day. The *quipu*, however, consisted of a whole system of knotted cords, depending from a main cord and having subsidiary strings tied to the secondary ones. There might be as many as 100 strings attached to the main one. Not only did the knots along the strings record numbers and sums in a decimal system, but the subject of the reckoning was distinguished by the color of the string and the relative importance of the parts was shown by position. Red meant war or soldiers; yellow, gold. Less important parts of the record were smaller and farther away from the main cord, and the subsidiary cords, showing subsidiary data, were of finer thread.

The *quipu* was not in itself a calculating device. Figures recorded on it were first worked out with piles of pebbles placed in the divisions of a sort of tray, which served as an abacus. These might refer to new ordinances, to warriors recruited, tribute demanded, deaths during a stated period, taxes collected, or any of the other highly organized business of the Inca empire and its officials.

The *quipu* was also a memory aid to a trained group of interpreters who memorized genealogies, historical lists, poetry, etc. and used the strings, knots, colors, and positions of the cords to prompt recollection of the details and sequence of the material. Lengthy oral recitations are believed to have been word-for-word speeches formulated by learned dignitaries and taught by fathers to sons in a hereditary line of *quipu* interpreters. Even in narratives, allegories, and liturgical formulas recited with the aid of the *quipu*, however, numerical sequences were the key. The device was not equivalent to writing and would have been generally meaningless without the orally handed down knowledge of the "readers."

The Araucanians used the *quipu* to record events, count livestock, receipt payment of fines, and summon assemblies. Though the great collections of Inca *quipus* were destroyed by the conquering Spaniards, a few examples from graves have survived, and simpler forms are still in use among Andean shepherds who use them to count sheep.

Another complicated primitive mnemonic device is the wampum collars, belts, and strings of North American Indians. While primarily designed for personal adornment, and then used as a ceremonial object and as a medium of negotiation, it also served as a form of

record and a means of communication. Meanings were inherent in the colors, in the size of the string, the motifs worked into the design, and in the number of elements in it, but these were of mnemonic character in that when specific messages were embodied in wampum they had to be accompanied by a speech of interpretation learned word-for-word by the bearer. Treaties of alliance, proposals of marriage, expressions of mourning or condolence, and pledges were among the subjects of mnemonic treatment in wampum. A collection of wampum strings and belts formed the record of alliance of the Abnaki confederacy; in one belt the four tribes were symbolized by a blue rectangle and four small crosses, all on a white background signifying peace.

Certain of the motifs on wampum were purely representational (the peace pipe, the tomahawk, the triangle of the wigwam, etc.) and were widely understood among Indians, but the message of the whole string was so elliptical that full interpretation depended on the orally transmitted information which was recalled by the elements of the design, just as in the reading of a bundle of sticks or a *quipu*. One marriage-proposal belt of the Passamaquoddy had a white string attached at the place where the bearer was to begin his carefully rehearsed speech, which was organized in five sections, each marked by a new string. Readings of the message were expected to be fairly exact. For example, one of the treasured strings of the Abnaki said, "The bond of the bones of the Abnaki be respected." The word for "speech" was figuratively applied by them to their ceremonial wampum.

Similar mnemonic belts, made of seed beads, colored and arranged in significant sequence to prompt the narrator, were used by the Creeks for archives, genealogical lists, etc.

The examples mentioned so far have all been basically counters, more or less elaborated toward actual depiction of the subject. Certain mnemonic pictographs of many primitive peoples, appearing on such surfaces as bark, boards, hides, rock faces, or incised in the earth, take a step beyond depiction, forming a sort of graphic shorthand somewhere between representational drawing and word or syllable writing. The sacred *churingas* of the Australian Aranda and Luridja tribes are decorated with the only art form of these people: incised conventional patterns of totemic significance, relating the people to their kindred in the plant and animal worlds. The motifs are mnemonic, rather than representational or ideographic, since they are conventionalized beyond recognition as likenesses, yet not related to language, and are meaningless except to an interpreter already familiar with the legends they connote.

Some of the drawings of North and South American Indians, Australian natives, etc., have a landscape-like appearance. These, too, are aids to memory, designed not merely to represent the features of the landscape but to recall battles, migrations, natural catastrophes, etc., or to give information to following groups of the tribes. They are cartographic plans, diagrams, elevations, bird's-eye-views on a primitive level, to be construed within a context known to the intended observers.

While many of the existing pictographs are inde-

cipherable since the memory of the subject is lost to living men, some information has been recovered, particularly in relation to North American Indian pictographs, by the comparison of the graphic notations with the gestures of sign language, once familiar to both Indians and the white traders, trappers, and settlers who came into contact with them. It has been found that many of the symbols are linear descriptions of these gestures. The gesture of pointing out the position of the sun as an indication of the time of day or season of the year is an example of sign language translatable into pictographic symbol.

The Kiowa Indians showed winter graphically by a bold black stroke for dead vegetation, the first of the month by a new moon, summer by the medicine lodge. The Dakota used a circular figure for units of time (a small circle for a single year, a larger one for a number of years) and rows of circles to show elapsed time between pictures recording memorable events. Both of these peoples, by means of representational drawings, pictographs, and repetition of unit symbols like counters, kept extensive archives of tribal history painted on buffalo skins (later on paper). The stories they recorded were told over and over to members of the tribes during ceremonies and in story-telling sessions, so that all would be familiar with them. These documents are often referred to as calendars, but they are actually mnemonic histories.

Calendars, however, are important among the kinds of lore entrusted to pictographic record, as well as to the simple notched stick or knotted string. When the reckoning system is complicated, it is frequently in the hands of the priests, since one of the chief functions of a calendar is to indicate the correct time for holding religious rituals. Thus the calendar of Bali, operating on a double scheme of time calculation, is so intricate that only specialists can interpret it and yet so important in determining the proper or auspicious days for public and individual activities (festivals, weddings, cremations, tooth-filings, etc.) that the priests must be consulted and paid for their advice before any serious undertaking can be begun. The priests have secret charts or calendar keys painted or carved with symbols showing the name signs of the various days. The Aztec calendar stone, with its concentric circles of day signs and symbols, is another priest-interpreted mnemonic system of time reckoning, though its motifs and figures also include historical and mythological dates. Calendars of many other unlettered peoples depend on moon signs for months, and pictographs of the local designations for years related to special events (year of the great snow, etc.) and for months related to occupation or vegetation (lambing month, blackberry month). Calendars of this type approach the function of an almanac.

One of the functions of mnemonic pictographs among various primitive peoples is to record music. The religious songs of the Ojibwa Midewiwin society were set down in pictographic symbols on birchbark rolls. From these the singers could reconstruct the melodies and rhythms and the associated rituals. Many of the Ojibwa songs were in themselves mnemonics, actually précis of long stories, and the singing was often prefaced by an explanation of the song and what it stood for.

These practices of the Ojibwa are a good demonstration of the twofold role of music in mnemonics. Since

music is one of the most difficult of subjects to record in the absence of musical notation, the devices for recalling musical patterns are ingenious and varied. And since music inherently possesses two of the most powerful aids to memory—rhythm and melody—many subjects are put into musical form to assist in their retention.

As aids to the recollection of songs, some North American Indians used the notched stick, relying on the repetition of units of the counter device to reconstruct the rhythms; in Peru the knotted cord served the same purpose. The Cuna of Panama use conventionalized picture writing on ceremonial boards to prompt official chanters in the songs and the ritual order of girls' puberty rites. Certain African tribes (Yorubas, for instance) use mnemonic phrases or sentences to identify drum rhythms as a means of recalling or memorizing their music. The "talking drums" may actually speak the significant sounds of the song.

In all long oral recitations, whether guided by material mnemonic devices or not, rhythm (however free) and melody (however narrow the range) play a part. The Polynesian genealogical and cosmological chants and the Dahomean historical and genealogical songs are cases in point. In Dahomey the office of narrative singer is hereditary and carries with it the duty of keeping the records in song. Even in advanced societies the illiterate section of the population makes use of song for the preservation of memorable events. "As I do not know how to read," said a modern Greek folk singer to one collector, "I have made this story into a song so as not to forget it." Such motivation doubtless lay behind the creation of many of the "journalistic ballads" of American folksong.

A few other customs of primitive peoples have a secondary mnemonic function aside from their primary purposes. Tattooing and cicatrization, primarily serving as personal adornment, as identification or certificate of membership, or as invocation of superhuman power for battle, etc., may also convey more individual and more specific stories, going beyond the badge or identification significance. Totem poles of the American northwest coastal tribes depict the legendary heritage of the family in carved and painted figures whose full meaning can only be read with the aid of a body of information surviving in oral tradition. Both of these kinds of device are comparable to the heraldic lore of Europe and the personal and family emblems of other parts of the world. The heralds of Europe served a genealogical purpose in devising the partings, quarterings, borderings, etc., by which a knight's whole family relationship could be shown at a glance. Considered in the light of the full information revealed by the shields and crests, heraldic devices are mnemonic. When the device serves merely for instant identification of persons or property, it becomes no more than a badge or trademark.

Even among highly advanced peoples who have a written language and exact methods of writing mathematical and musical material, mnemonic devices and systems have been and still are used for learning and teaching facts and skills that in themselves are difficult to remember or to relate in proper sequence to the purpose at hand. Material devices and counters are not completely discarded—witness the cribbage board, the rosary, and the string around the finger previously mentioned. The string and the knotted handkerchief re-

minders are believed to be derived from the ancient Jewish shawl, worn during prayers in the synagogue, which had strings at each corner knotted five times to call to mind the five books of Moses. Counting on the fingers is still common, and another counting device not yet forgotten is the telling off of flocks with one black sheep for a given number of white ones. However, much of the mnemonic practice of advanced peoples has to do with verbal material. Speeches, music, historical dates, religious formulas, genealogical lists, grammatical and mathematical rules and other "school" subjects, recipes, spelling, occupational lore and industrial skills, advertising names and slogans, are among the kinds of information it has been desired to imprint on the mind by mnemonic means.

Recommended aids to memory have ranged from pure superstition to the psychological studies and statistical charts of postgraduate education courses of the present day. More than one child has gone to bed with his schoolbook under his pillow, hoping that in his sleep the assignment would find its way into his head. Diet has often been thought to be an influence on memory; the saying is still current that fish is "brain food." In India the way to acquire a long memory was to fast three days, then eat of the soma plant, or drink soma juice for a year. An English book of 1697 suggests liniments, ointments, plasters, and sneezing powders to clear the memory by dispelling the noxious fumes arising from the stomach. One of its prescriptions is shaved or powdered ivory taken internally; another is a potion of white frankincense in liquor taken at bedtime; a third is an application of gold to that "sutura" of the head which divides the memory from other sections of the brain.

The Greeks and Romans worked seriously to devise a systematic, scientific means of training and reinforcing the powers of memory as an aid to oratory. Most of their systems evolved around a diagrammatic plan of a place or a human figure, with each part of which a part of the subject to be memorized was associated. Said to have been invented by the Greek poet Simonides (500 B.C.), this scheme of topical or local association was widely used in later Europe and still occasionally appears as the principle of "how-to-train-your-memory" books published today.

A related method, popularized by Marafortius (1602), related all facts to be memorized to the hand, 44 visual images being located on the backs, palms, and fingers. So successful were some of the early "professors" of mnemonics with these methods that charges of sorcery were brought against them.

In addition to these diagrammatic systems and the hand charts, which will be considered further in other connections, rhythm, rime, melody, word plays, alphabetical organization, and cabalistic formulas have all been used to superimpose on the data to be learned a structure by which it can be recalled at will.

Repetition is basic to memorizing. (Doubtless one of the factors in the survival of long ballads is the use of incremental repetition, which not only facilitates composition but also makes for easy recollection or approximate reconstruction of words and incidents.) Rhythm is a kind of repetition (the recurrence of stress at expected intervals) and is thus a reliable aid to memory of material for recitation.

A simple example of the application of pure rhythm to information to be learned is the monotonous singsong used by children in saying the multiplication tables and the converse "gozinta" tables of division. (*Two gozinta four twice; two gozinta six three times . . .* etc.) Singsong has been a common method of study by both European and Oriental students.

Making use of this principle, pedagogs have put all sorts of information into metrical form, often with the further memory reinforcement of rime. Their verses are not, of course, folk compositions, but many have passed into oral tradition, are known in several versions, and the learning methods and purposes do not differ from those of primitive recitations.

Latin grammar, a stumbling block to generations of school children, is well represented in mnemonic verse:

With *nemo* never let me see
Neminis or *nemine*.

Common are to either sex
Artifex and *opifex* . . . etc.

After remember, pity, forget,
The genitive case is properly set.

Among the rimes for English grammar, is this:

A noun's the name of anything,
As, *school* or *garden*, *hoop* or *swing* . . . (etc. through "eight parts of speech, which reading, writing, speaking teach." Sometimes a ninth is included—the interjection.)

One of the most troublesome quirks of English spelling is straightened out by "i before e, except after c." The problem of changing wet to dry measures is solved by "A pint's a pound the world around."

To deal with the complexities of dates and calendars many rimes have been devised. The most familiar of these is, "Thirty days hath September, April, June, and November . . ." etc. This is known in numerous variants, including a Latin one:

Junius, Aprilis, Septemq, Novemq, tricenos
Unum plus reliqui, Februs tenet octo vicens
At si bissextus fuerit superadditur unus.

One version, given by Richard Grafton in his *Chronicles of England* (1562), was labeled "a rule to knowe how many dayes every moneth in the yere hath."

To remember the Latin dating system, some version of the following is often recited:

In March, July, October, May,
The Ides come on the 15th day,
The Nones the 7th; all other months besides
Have two days less for Nones and Ides.

Among the Arabs, time reckoning was for centuries based on the stars, particularly on the positions of the Pleiades; thus many Arabic mnemonic verses were composed to incorporate the rules of reckoning according to these positions.

Important dates in history are also the subject of many rimes:

In fourteen hundred ninety two
Columbus sailed the ocean blue.

In 732 at the Battle of Tours
Charles Martel defeated the Moors.

Lists of rulers and other historical facts are often set in rime for memorizing. "First William the Norman, /

Then William his son," goes the best-known of these, which has thoughtfully been brought up to date from time to time by "Unknown." Many other attempts to make this list memorable have failed to be remembered themselves. Other metrical mnemonics on "school subjects" include the seven wonders of the ancient world ("The Pyramids first which in Egypt were laid/ Next Babylon's Garden, for Amytis made . . ." etc.), the signs of the zodiac ("The Ram, the Bull, the Heavenly Twins/ And next the Crab the Lion shines" . . . etc.), the syllogisms of logic, and even the subject of meter itself. "Trochee trips from long to short/ From long to long in solemn sort/ Slow Spondee stalks; strong foot! yet ill able/ Ever to come up with dactyl trisyllable . . ." and "In the hexameter rises the fountain's silvery column/ In the pentameter aye falling in melody back." These lines frequently come to the aid of both Latin and English classes who have forgotten, if ever they knew, that Coleridge wrote them.

Meter and rime as aids to memory have also been used on a much more practical and down-to-earth level. Sailors of chantey days learned their occupational lore from a number of rimes, some of which survive in oral tradition among the penanted yachtsmen of Long Island Sound today. Here are the rules of the road:

If close-hauled on the starboard tack,
No other ship can cross your track.
If on the port tack you appear,
Ships going free must all keep clear,
While you must yield when going free
To ships close-hauled upon your lee.
And if you have the wind right aft,
Keep clear of every sailing craft . . . etc.

Barometric readings were supplemented by more homely prophecy in rime:

First rise after a low
Squalls expect and more blow.
First the rain and then the wind,
Topsail sheets and halliards mind.
First the wind and then the rain,
Hoist your topsails up again.
Mackerel skies and mare's tails
Make tall ships carry low sails . . . etc.

Many weather rimes are so familiar as to be proverbial, but their underlying purpose was informational and mnemonic, serving the farmer, the shepherd, the sailor, the traveler as guides to planning and pursuing his occupation.

Year of snow
Fruit will grow.
A rainbow in the morning
Is the shepherd's (or sailor's) warning;
But a rainbow at night
Is the shepherd's (or sailor's) delight.
Rain before seven,
Clear before eleven.

Tricks of many trades and epitomized conclusions of long observation are buried in these how-to-know verses. Will the fishing be good? What is the wind?

When the wind is in the East,
Then the fishes bite the least.
When the wind is in the West,
Then the fishes bite the best.

When the wind is in the North,
Then the fishes do come forth.
When the wind is in the South,
It blows the bait in the fish's mouth.

Should you buy this horse?

One white foot—buy him.
Two white feet—try him.
Three white feet—look well about him.
Four white feet—go without him.

Is this a good year for sheep?

A leap year
Is never a good sheep year.

Which card should you discard?

When you discard, weak suits you ought to choose,
For strong ones are too valuable to lose.
(From Pole's *Theory of the Modern Scientific Game of Whist*.)

How do you make a Planter's Punch?

1 of sour (lemon or lime)
1 of sweet (syrup)
1 of strong (rum)
1 of weak (crushed ice)
(A West Indian recipe.)

Often the verses are set in abecedarian order, adding another type of easily recalled structure to rhythm and rime. Preschool riming alphabets, bestiaries, the books of the Bible, and many other lists to be memorized have been given this formula. (See ALPHABET RIMES.) On the strictly practical level, the *Sailor's Alphabet* begins, "A is the Aftermost part of the ship/ B is the Bowsprit on the bow of the ship/ C is the Capstan where the sailors go round/ And D is the Davits where the jollyboat hangs down." (See ALPHABET SONG.)

Even without rime or meter, the alphabet is an organizing principle used in many languages for material to be committed to memory. The Hebrew alphabet has long been used for mnemonic instruction in religious matters. In Greek carols the letters of the alphabet have been used for outlining the parts of the St. Basil story.

Various acrostic arrangements, alphabetical, metrical, or merely initial combinations have been applied to many subjects as mnemonic aids. The Jews from Biblical times have formed mnemonic words and phrases from the initials of names or statements; for example, RAM-BAM, from Rabbi Moses Ben Maimon. Another method is to use the initials of a list and create a sentence from them. "Read Over Your Greek Books In Vacation," is one by which school children have learned the colors of the rainbow: red, orange, yellow, green, blue, indigo, violet. "On Old Monadnock's Peaked Tops, A Finn and German Picked Some Hops" was used in physiology classes to remember the cranial nerves: olfactory, optic, motoris oculi, pneumogastric, etc.

One more letter device is to select the one common letter in a miscellaneous list; the R, for instance, in the names of the months during which it is believed safe to eat oysters. The reminder is often seen in ads reading, "Oysters R in season."

Repeating a list backwards has sometimes been thought an effective memory aid (as well as a magical spell). To "know a thing backwards and forwards" is to know it too thoroughly to forget. Thus children are proud to chant their numbers, letters, days of the week,

or months of the year backwards. And thus it was the custom of the McNeills of Colonsay that each Sunday the children of the clan were put through their genealogy backwards in Gaelic, so that no one of them could ever forget his proud lineage.

Certain subjects have been thought so difficult, or so important, or have comprised such an extensive body of knowledge that many mnemonic methods have been applied to them. The doctrines, sacred books, important personages, and catechisms of religion are an example. Rime, acrostics, alphabets, numerical sequences, counters, and music have all been used. The five canons of the Dutch Reformed Church, as laid down in the 17th century at the Synod of Dort, are taught by an acrostic on the word TULIP, the national flower of Holland:

T—Total Depravity
U—Unconditional Election
L—Limited Atonement
I—Irresistible Grace
P—Perseverance of the Saints

The Bible, epitomized in Latin acrostic verses of abecedarian order, was translated by an English clergyman, John Shaw, and published by Simon Wastel in 1683. Many other riming lists of the books of the Bible have been composed, the most familiar being:

The great Jehovah speaks to us
In Genesis and Exodus;
Leviticus and Numbers see
Followed by Deuteronomy . . . etc.

The Ten Commandments are summarized thus:

1. Thou shalt have no more gods but me.
2. Before no idol bow thy knee.
3. Take not the name of God in vain.
4. Nor dare the Sabbath day profane . . . etc.

The names of the twelve apostles are also set in rime:

These are the twelve apostles' names:
Peter, Andrew, John, and James;
James the second and Jude were called, too,
Philip and also Bartholomew;
Matthew and Thomas who doubted His word;
Simon and Judas who sold his Lord.

In the back country of Virginia the names of the evangelists were memorized by the rime, "Matthew, Mark, Luke, and John/ Saddle the cat and I'll get on/ Gimme a stick and I'll lay on/ Open the gate and I'll be gone." This is one of many parodies on a widely known bedtime prayer formula, the White Paternoster, "Matthew, Mark, Luke, John/ Bless the bed that I lie on/ And blessed guardian angel keep/ Me safe from danger while I sleep." In Languedoc a version of the song, *The Twelve Apostles*, was used at the time of learning the catechism.

The use of melody to reinforce memory, as in this song, is widespread. One of the simplest examples of melody as a mnemonic device is the little lullaby and nursery tune to which generations of American, German, and other European children have learned their A-B-C's. See LULLABY. Many children cannot go through the alphabet without soundlessly singing this tune over.

As in primitive mnemonics, there is in advanced cultures an interaction of music and other memorizing devices. When the theory or groundwork of a musical culture is complicated, other devices are called into play to help in the learning process. A mnemonic sen-

tence, for instance, helps beginners to learn the lines of the musical staff: "Every Good Boy Does Fine" (e, g, b, d, f). The intervening spaces are remembered because they spell "face." The order of sharp and flat keys is also embedded in mnemonic sentences and phrases. "Good AIE and Beef" is one such. The capital letters indicate the sharp keys if read in regular order; when read backwards, they give the flat keys. The same information, in country singing schools of America, was often given by the initials in these two sentences: "Girls Dread All Evil Boys First" (sharp); and "Four Boys Eat Apple Dumplings Greedily" (flat).

One of the basic aids in the teaching and learning of melody has been cheironomy, or hand signs, used by the Jews, by the Vedic singers of India, in European plain chant, etc. The notes are associated with the fingers, joints, palm, and mounts of the human hand. The correct note was shown to a chorus by the gesture of the leader, and because of the relative positions of the notes on the hand and the already familiar intervals of pitch, the chorus could follow the melody. Some of the early musical notation of Europe (9th–11th centuries) is of cheironomic significance and can be only sketchily interpreted now that the gestures of the conductor are no longer known. The hand of Guido, however, attributed to Guido d'Arezzo (c. 995) but similar to the Hindu hand signs, survives in various documents as a drawing of the hand marked with the position of each degree of the gamut as it was used as a memory aid in solmi-zation.

Other types of hand signs and gestures survive as mnemonic devices to this day. In the teaching of elementary geography within recent years a series of gestures was used to show the movements of the constant winds, accompanied by a rhythmic recitation of their names and areas: belt of calms, trades, antitrades, horse latitudes, doldrums. Various "rules of thumb" are also memorized by hand signs, as the demonstration of the coil, the core, and the direction of current in an electric motor by the hand with thumb and forefinger extended at right angles to each other and the other fingers loosely curled.

Modern industry has not overlooked the value of mnemonic methods in training its operators. The Morse alphabet for telegraphy was taught about 1870 in mnemonic sentences. The letters were divided into related groups according to the arrangement of dots and dashes. The range from one to four dashes, including letters T, M, O, and Ch, was made into the sentence, "Turnips Make Oxen Cheerful." Highly technical current books on industrial management recommend giving abbreviated or acrostic names to complicated mechanical and electronic equipment so that employees may learn the operation without confusion over long scientific names. The essentials of advertising layout have been taught by the mnemonic word AIDA, signifying the elements of Attention, Interest, Desire, and Action. Advertising, both printed and on the radio, makes use of mnemonic principles over and over again to impress on the audience the names of the sponsor and the product. The name is spelled, pronounced, repeated, rimed, chanted, sung, echoed on the glockenspiel, and included in puns, alphabetical rigmaroles, and acrostic formulas until, presumably, the listener cannot think of the type of product without recalling the brand name.

It will be noted by those who attempt to collect examples of mnemonics from oral tradition that the ones that survive most completely are the short, simple, homely, almost proverbial type, such as the "i before e" rule. The long and more literary or more complicated compositions are retained only in fragmentary lines, even though the subject to which they relate is recalled.

TERESA C. BRAKELEY

moaning American Negro word for humming. The characteristic humming heard in solitary singing or interpolated in blues, etc., is an African survival and is similar in sound to the hum of an African side drum which changes pitch under pressure of the arm which holds it.

Mobog An important religious ceremony of the Tuaran Dusuns (Borneo), performed to expel from a village the evil spirits which have collected there during the previous year: literally, beating. The ceremony is so named because a small pig, which is carried in procession in a basket on the back of a woman, is beaten so that its squeals will attract the spirits. The ceremony, performed chiefly by women, consists of chanting and a combination of dancing and chanting before each house in turn in the village, accompanied by the squealing of the pig. When this has been completed the procession of women proceeds to the river with the evil spirits following. These embark upon a raft covered with models of animals and people as well as offerings of food. This is set adrift, thus freeing the village of its bad spirits acquired during the preceding year.

mock or false plea A captive, about to be killed, gains respite by a false plea and escapes his captors: a worldwide folktale motif (K550 ff.). In North American Indian tales it is found commonly in the Brer Rabbit tales of the southeastern United States, and also in the widely distributed, apparently largely native tale of Turtle's War Party. In the latter tale, Turtle, with or without companions, goes on a raid, kills a chief, is captured, is threatened with death by being pounded with a rock or being burnt, encourages his captors to do either of these to him, but pleads with them not to throw him into the water. So they throw him in the water, and he escapes. Among some tribes it is not Turtle but some other creature (Rainbow Trout, Bluejay, Cuttlefish, etc.) who goes on the raid and makes the false plea. The tale is especially popular among the Plateau and Plains tribes, but has been recorded from several other areas in North America also. [EWV]

modes The series of diatonic scale patterns on which much of the early folk song of Europe is constructed; they are based on the prevailing tonal structure of medieval ecclesiastical melody, Gregorian Chant, and are also called *ecclesiastical* or *church modes* and *Greek modes*, from a complicated and remote derivation from the Greek musical system. The modes are encompassed by the white keys of the piano, each natural note, in turn, forming the tonic of a mode played up through the octave, as from A to A consecutively through G to G. The modes are named for Greek tribes: *Æolian* (A to A), *Locrian* (B to B), *Ionian* (C to C), *Dorian* (D to D), *Phrygian* (E to E), *Lydian* (F to F), and *Mixolydian* (G to G).

Ionian, of course, corresponds to the modern C-Major scale and is the mode of two thirds of English folk song, according to Cecil Sharp, and of perhaps three quarters of America's surviving heritage of British songs. It was called the *modus lascivus* in medieval times because it was the basis of so many impious secular tunes. The melody of *Sumer is iucumen in* is Ionian.

Next most common in English song, and thus in American, is Dorian, and Mixolydian and Æolian are also fairly usual. Mixolydian is a favorite of Irish and Hebridean singers. It differs from our common major mode only in having a flattened 7th. Dorian and Mixolydian were also the modes in which the troubadours and trouvères were most likely to cast their tunes. Phrygian is comparatively rare in British songs, and Lydian is not found in English melodies, though some Irish and Scottish tunes use it, and it is characteristic of Slavic folk songs. Locrian is never found in British folk song, and indeed is a later and logical or theoretical addition to the series, rather than one found in ecclesiastical practice.

A striking difference between modern scales and the modes is that the modern scales are based on chord construction and a vertical harmonic relationship, and the modes are based on melody in a horizontal sequence relationship. A real minor key is rare in modal folk songs. The minor effect of certain songs is often a modern recasting of the melody or a variation on the Æolian mode. The essence of the modal construction is not in beginning with the tonic, but rather in the sequence of intervals and the relation of other notes to the tonic. Folk songs frequently end with the tonic, though sometimes the tonic is merely a core from which departures and returns are made often enough to establish the tonality and the end is a bold dominant. Certain tunes, known as "circular," have an inconclusive ending, which leads directly back into the opening phrase and therefore may go "round and round." The circle canon, or round, does this, and is, like the nonsense story or song, without an end. "Spring would be a dreary season/ Were it not for flowers of spring would be a dreary season," etc., is an example which in both tune and words return to its head. The *Irish cadence* is the opposite kind of ending, which stresses its finality with a twice-repeated closing note.

Modulation, in the usual sense, is not found in modal folk song, though certain melodies may be bimodal, swinging from one mode to another, without a full change of key.

Within the modal pattern melodies may be heptatonic, as in the ecclesiastical system; they may also be pentatonic or hexatonic, lacking the 2nd or 6th tone, or both. "Gapped scales" of this type are fairly common in Scottish folk tunes, though not the majority, as is sometimes supposed.

The gradual displacement of the modes is largely the result of a growing interest in harmony in the 17th century. The modes, though effective in counterpoint, were not harmonically adaptable. However, modal scale in a tune, while generally a sign of age, is not necessarily dependable in dating music, since, as was pointed out by Phillips Barry, traditional singers have often recast current tunes in the manner to which they are accustomed. [TCB]

modinha A popular song type originally heard in Lisbon, Portugal, in the mid-eighteenth century, telling a romantic and sentimental tale to a sorrowful, minor melody, perhaps based on Italian theatrical tunes. It became an urban folk song type then and may have been one of the ancestors of the fado. It survives in Brazil, where it was introduced late in the 19th century, and preserves its character as an expression of the folk of the cities.

Moe, J r gen Engebretsen (1813–1882) Norwegian poet and folklorist; collaborator with Peter Christen Asbj rnsen on the *Norske Folkeeventyr*, Christiania, 1842.

Moir  In Greek mythology, the Fates who presided over the course of human life: probably a development of a group of birth spirits. In Hesiod, they are three: Clotho, the spinner of the thread of life; Lachesis, the determiner of its length; and Atropos, the snipper of the thread. The Moir  were daughters of Zeus and Themis, or of Night and Darkness, and carried out the decrees of Zeus, not having independent action. Homer speaks of *moira*, but without personifying fate. The Moir  often appear with the Keres, and are sometimes confused with the Erinyes. In modern Greek folklore, the Moir  appear on the third night after the child's birth and direct then the future course of its life. Propitiatory offerings are made to them. See HATHOR.

mok a In Jainism, literally, release: the liberation of the soul from evil and from further transmigrations. In Jainist symbolism mok a is situated at the crown of the head of the Cosmic Giant.

moly (perhaps from Sanskrit *m lam*, root) An unidentified legendary herb possessing magic power. As described by Homer, it had a black root and a white flower; Pliny said that its flower was yellow and that it had white fleshy roots. Some late authorities have thought that moly might be identified with rue; others have suggested that it was mandrake; still others identify it with the famous wild garlic of southern Europe. (See GARLIC.) Moly was the plant given to Odysseus by Hermes that he might resist the wiles of Circe when he went to rescue his men whom the enchantress had turned into swine. (*Odyssey* x, 305.)

momentary gods (German *Augenblicksg tter*) Gods who exist for a specific purpose and at specified times at special places, and who have no existence except for such purpose, time, and place. In Arcadia and Elis, for example, such a god was Myiagros, who chased the flies away during the sacrifices to Zeus and Athena.

Momotaro The hero of a well-known Japanese fairy tale, who was found by an old couple in a peach: hence his name "eldest son of a peach." [JLM]

Moneta The admonisher or warner: a title of Mnemosyne or of Juno. The temple of Juno Moneta on the Capitoline seems to have replaced, in 366 B.C., an older shrine that contained the sacred geese. This temple later became the mint, hence the transference to the languages of today of the words mint and money. Several tales explaining the title were told; according to Cicero, a warning voice from Juno's temple ordered, during an earthquake, the sacrifice of a pregnant sow to end the danger.

Money Musk A tune played for square-dancing in

America, known since Revolutionary times. It takes its name from a Scottish village and its melody from an early 18th century *contradance* tune, *The Countess of Airly*.

monkey Any of the primate mammals, excluding man and the anthropoid apes, though often including the latter in common usage. Monkeys are mentioned in the Bible (1 *Kings* x, 22) as having been brought to King Solomon from Ophir, and the Assyrians were familiar with apes (not indigenous to that region) because they were brought as tribute. In rabbinical lore, the blessing on Him "who varieth his creatures" was to be said at sight of an ape. To see a monkey in a dream, according to the Talmud, is unlucky. In rabbinical legend, one of the three classes of men who built the Tower of Babel was turned into apes; in Moslem legend, Jews dwelling in Elath on the Red Sea fished on the Sabbath and were turned into apes as punishment.

The Ewe of Togoland believe the hussar-ape and the long-tailed monkey are individual totems of twins. Some West African as well as American Negroes believe that apes can speak, but hold their tongues to keep from being put to work. One clan of the Bataks of Sumatra may not eat monkey flesh because they believe they are either descended from similar animals and their souls may transmigrate into them, or that they are under certain obligations to them. When the Yuracare Indians of Bolivia kill apes, they sprinkle them with chicha and say, "We love you, since we have brought you home." This gratifies those still in the woods. Natives of northeastern Celebes believe they are descended from monkeys and send offerings of food to their ancestors on a bamboo raft which is floated down a stream.

The folklore and stories about monkeys and apes in Europe are restricted, largely learned, and probably the products of the fable literature of the Middle Ages and tales of African hunters. Gregory of Tours records the oldest Western variant of a story relating how an ape threw overboard the ill-gotten wealth of a wine merchant. Shakespeare in *Much Ado About Nothing*, refers to a then current saying that the fate of old maids is "to lead apes in hell." Folktales concerning apes are found in Indonesia, Rhodesia, Zululand, Japan, Melanesia, China, and India.

Monkey Though it might be expected that Monkey would be utilized in African and New World Negro folklore as an important character, he actually plays a subsidiary role. In the Congo, he appears occasionally as opponent of trickster, and he also figures in the mythologies of other parts of Africa. In the New World, however, he is almost absent, except in tales recorded in Brazil and Dutch Guiana, and here only occasionally. [MJH]

Monkey Prince The hero of a Filipino folktale (#41 in *MAFLS* xii) thought to be of genuine native tradition. Long ago the young son of a certain king fell in love with a beautiful young witch, daughter of his father's bitter enemy. He kept his love for the witch a secret for many years, refusing to marry hundreds of young girls brought for his choosing. At last the king forced his son to marry. And the beautiful young witch in the forest so despised the prince because he was afraid to acknowledge their love that she put a spell upon him on his wedding day. She changed the

fine city into a deep forest, and her timid lover into a monkey in its tallest tree, there and thus to remain for 500 years until a young girl should love him. Four hundred years went by and the outside world forgot the ancient city. At last new settlers came. The monkey came down from the tree and abducted young girls from time to time, but they all died of fright. Another day he carried off a young girl who had already been disappointed in love, and who ate the rich fruits he brought her, and saw in his eyes an incalculable sadness and kindness. By the tenth day she loved him; the monkey was suddenly transformed back into the handsome prince, and the city too was disenchanted and resumed its life. The young pair were married and lived long and wisely.

Although this story has a distinctly European flavor, there is no reason to assume that the beast marriage is a European transplant, that idea being so natural to primitive cultures. It would be most interesting if the Beauty and the Beast motif (i.e. disenchantment of hero through a woman's love) were equally indigenous. There are also striking parallels between this story and the sleeping beauty stories, especially in the resumption of life and activity in the prince's city at the moment of his disenchantment, and the fairy (or other supernatural) taking revenge for a slight (in this case, curse by disappointed witch, G269.4). See LITTLE BRIAR ROSE.

monkshood or **helmet flower** A plant (genus *Aconitum*, family *Ranunculaceae*) having shiny, dark green, deeply dentate leaves: named for the shape of the flowers (usually dark blue). The poison aconite is procured especially from the root, but the whole plant is poisonous, and early became known as wolfbane. Its poisonous and paralyzing properties were well known to the early Greeks, who also ascribed to it the power of causing fevers in the regions where it grew. Some myths report that it first sprang up beside the entrance to Hades through which Hercules returned bringing the dreadful Cerberus, starting from the drops of spittle from the hell-dog's mouth.

Guy de Vigevani in his 1335 treatise calls this plant the source of the worst of all possible poisons for which there is no antidote. Avicenna had said there was a mouse which fed on the roots and whose flesh provided an antidote. Guy could find no such mouse, but in his researches for an antidote took the slugs which were feeding on the leaves of the plant, made a decoction of the slugs mixed with theriac, which worked on animals—and on himself! The 16th-century sage Hieronymus Mercurialis of Forlì produced a lively work on poisons in which he sought the answer *how* aconite kills both man and beast if it touches their genitals. Among his serious findings stands the fact that aconite will cure scorpion bite. Medieval witches delighted in the numbing and flying sensations caused by chewing the leaves. Only a witch could do this with impunity. See ACONITE.

monogatari Literally, narration: a form of *kabuki* dramatic technique used for the narration of events and communication of important matters from one actor to another. The highly stylized gestures and the musical *chobo* accompaniment hark back to Japanese puppet-play origin. The motion, sometimes graceful, sometimes

grotesque, is always fantastic, and of the nature of dance. It is one of the most difficult forms of the *kabuki* acting. [GPK]

monotheism Belief in a single god, as opposed to polytheism or belief in several or many gods with special provinces of interest and action. Many students of comparative religion hold to an evolutionary belief in the growth of religious thought from the simplest form of animism, peopling all the objects and phenomena of the world with spirits, through several stages to monotheism. Others, with equally strong evidence, see in monotheism an early stage in religion, and hold that polytheism and polydemonism evolved from an original belief in a supreme god. Critics see in the one philosophy an ethnocentric belief in the supremacy of monotheistic religion over all others, and in the other an attempt to justify the Biblical story. Yet even in the great monotheistic religions—Judaism, Christianity, Islam—angels, saints, and demons appear as aides or adversaries of the One God, even though their powers are of a lesser order. And Hinduism, admittedly polytheistic, possesses a high god who in theory is supreme over all others yet receives little direct worship. Primitive monotheism has been noted in Australia, in Africa, and elsewhere in the world. A strong argument has also been made for a Stone Age monotheism in which the supreme deity, from whom all things derived, was the Great Mother, the goddess of fertility.

monsters In ancient mythologies and lore there were a number of composite monsters, part bird and part beast. The elders of Babylon explained that the eagle represented the good in nature and the winged monsters the forces of evil and destruction. Such creatures were the dragon, roughly a crocodile with wings; the griffin, with the head and wings of an eagle and the body of a lion; the hippogriff, a griffin combined with a horse; a chimera, with the head of a lion, the body of a goat, and the tail of a dragon (sometimes with a human head in the middle of the back). There were also the old English Vasa Mortis, the winged bull of the Babylonians, and the winged elephant of the Hindus. Countless part man and part animal monsters abound in classical mythology, such as the centaurs, satyrs, the Minotaur, Lamia, Echidna, etc. Persian mythology and folktale teem with monsters, some famous and named, others nonce creatures occurring in the specific story. See CERBERUS; GIGANTES; HECATE.

 Large, fantastic, evilly disposed beings, human, semihuman, or animal in form, are mentioned in nearly all North American Indian origin myths as having lived on earth during the first creation. The various culture heroes are credited with killing many of these male and female monsters, but not all, since several reappear in myths having human actors in them as well. Among the Eskimo, who have no culture hero, monsters of all sizes, shapes, and description are mentioned in the tales; some are cannibals, others are harmless except for their terrifying appearance. Of all the American Indian mythologies, perhaps that of the Iroquois exhibits the greatest profusion of monsters, ogres, flying heads, jealous uncles, cannibalistic mothers, and other unsavory characters; these appear not only in the origin myth, but throughout the body of Iroquois mythology.

Stories of monsters clad in bone, stone, metal, or scales

are very characteristic for the Southeastern tribes. The monster is usually a cannibal, and is finally slain by persons or beings who have learned the secret of its only vulnerable spot; often the culture hero is the slayer. (See Frank G. Speck, *Ethnology of the Yuchi Indians*, *Anthr. Papers of the Univ. Museum*, Univ. of Pennsylvania, Vol. 1, 1909, #1, p. 140.)

Some of the monsters who appear in many North American myths from different parts of the continent are Burr-Woman, an old woman who gets on the hero's back and cannot be dislodged; Sucking-Monster, a giant who sucks in his victims; Pot-Tilter, an old woman who has a pot that sucks people in as she points it at them; the cliff ogre, a giantess who kicks people over a cliff where they are eaten by her young; the sharp-elbowed women who stab victims with their elbows; Fire-Moccasins, an ogre who wears moccasins that set fire to everything he walks around; the cannibal giant(ess) who abducts children in a sack or basket; the cannibal who was burned in a fire and whose ashes became mosquitoes; many-headed monsters; the one-sided man; the woman with toothed vagina; vampires. The distributions of all these characters in American Indian mythologies are to be found in Stith Thompson, *Tales of the North American Indians*, Cambridge, Mass., 1929, pp. 267 ff.

Birth of the monsters whom Killer-of-Enemies, Jicarilla Apache culture hero kills before the Apache are created, is specifically accounted for by the Jicarilla Apache. Among the First People were women who misbehaved, became pregnant, and give birth to a Giant Elk, a monster eagle, a kicking monster, the two running rocks, a monster rock (Flint Man), Big Owl, a giant fish—all of whom Killer-of-Enemies disposes of. Other accounts which narrate, with detail comparable to that in the Apache tale, how monsters were disposed of by the culture hero are to be found in some of the North Pacific coast Raven cycles, and in the Nanabozho cycle of the central Algonquians. See CANNIBALS; OGRE; VAGINA DENTATA. [EWV]

monster (animal) killed from within A motif (F912) occurring in many swallow stories in which the hero, often by building a fire in the belly of the swallowing creature (bird, fish, ogre, etc.) or by cutting its heart, is spewed out by the animal, or cuts his way through the side of the carcass, in many tales thus rescuing other persons who have been swallowed. The motif is very widespread, appearing in tales from Africa and Siberia, from North America and Europe. In a Bella Coola myth, the sparks from the fire in the Grizzly Bear's stomach fly up and become the stars.

Monster-Slayer or Slayer-of-Monsters The younger of the two boys born to Changing Woman, Apache Indian deity. Monster-Slayer's name, among the White Mountain Apache, is Na-ye'nezyane; his father was the Sun, and his brother was Born-from-Water. Monster-Slayer is identical with Killer-of-Enemies of other Apache groups, and with Reared-Within-the-Earth of the Navaho. To the White Mountain Apache Monster-Slayer is their most important male deity except for the Sun; everything he did was for the good of the earth and of people, and he embodies all that is good, holy, and manly. His birth, his visit to his father the Sun, the tests his father sets him, and his deeds on earth are described in detail in several Apache origin myths recorded by Grenville

Goodwin in *Myths and Tales of the White Mountain Apache*, *MAFLS* 38, 1939, pp. 1-49. See AHAYUTA ACHI. [EWV]

moon The phases of the moon, caused by the varying angle at which its lighted surface is seen from the earth, have formed, from earliest times, one of man's best means of measuring time. Every 28 and a fraction days, the new moon appears in the sky. This period coincides with the menstrual period of the human female; it has been made the measure of the month. The three words—moon, menses, month—all come from the same root, meaning to measure. The Mohammedan calendar is figured on the lunar month, with the result that the months progress through the seasons, since the calendar does not take into account the earth's rotation about the sun. The Islamic year is therefore only 354 or 355 days long. Thus, where the opening of the year 1359 A.H. began February 10, 1940 C.E., the year 1369 began October 24, 1950. Similarly, the religious festivals, such as the fast of Ramadan, occur at various seasons of the year, since they are fixed by the month. The Hebrew year too is based on the lunar month, but, by the use of leap years in which an extra month is figured, it is brought into balance with the solar year in a 19-year cycle.

Festivals of the new moon are observed among many peoples, and thankful prayers are said for the reappearance of the extinguished light in the sky. The full moon is looked upon as a climactic period of the month; the Jewish Passover is celebrated at the full moon, and the Christian Easter, from which the dates of all other movable feasts in the calendar are figured, occurs on the first Sunday following the full moon after the vernal equinox. The full moon nearest the autumnal equinox is called the harvest moon, as it occurs at harvest time; the full moon following the harvest moon is known as the hunter's moon. Eclipses of the moon occur only at full moon, when the earth gets between the sun and the fully illuminated disk of the moon. The earth's shadow casts a dark reddish color on the moon, dimming its light or blacking it out altogether. These "bloody" moons, or other aspects of the moon when the atmosphere makes the moon's face seem red with blood, are evil omens, portending catastrophes. The Chinese, for example, see in an abnormally red (or an abnormally pale) moon, a warning of evil. In the Andaman Islands and elsewhere, the waxing moon is male, the waning moon female. The waxing moon is the right-hand moon, for the curve of the right hand index finger and thumb follows the curve of the crescent; similarly the waning moon is the left-hand moon. The crescent moon with its points upward is holding water, and presages a dry spell; among the Bushmen, the moon on its back is an omen of death. The faint outline of the full disk of the moon at the time of the bright crescent new moon, the "old moon in the arms of the new" (D1812.5.1.5), is the sign of a storm. Thus the sailor warns Sir Patrick Spens in the ballad:

"Late late yestreen I saw the new moone,
Wi the auld moone in hir arme,
And I feir, I feir, my deir master,
That we will cum to harme."

Elsewhere than at sea, the full moon is a propitious time. Medicines and tonics are more efficacious if given

at the full moon. The light of the moon is the time for planting crops which grow above ground; the dark of the moon is best for rootcrop planting. The dark of the moon is also a time for nefarious deeds (Canaanites, Hindus, Jews, Teutons, Moroccans, etc.); but the lucky rabbit's foot is taken in the dark of the moon. The best of these charms is the left hind foot of a rabbit killed in the dark of the moon in a graveyard by a cross-eyed person.

The waxing or waning moon has its sympathetic influence on sublunary affairs: shingles, for example, laid in the waxing of the moon tend to swell as the moon grows. But whereas in Devonshire hair should be cut in the waning moon, in Worcestershire it should be cut in the waxing moon. The new moon is the most powerful phase of the waxing moon: it has further to grow. The Gold Coast inhabitant who sees the new moon blows ashes towards it and says, "I saw you before you saw me"; if he doesn't, as the moon grows to the full his strength will fade. When the new moon is seen, one should turn all the money in his pockets, or show newly minted coins to the moon; then, as the moon grows, the money will increase. Just as is true of the moment of the New Year, whatever one is doing when he first sees the new moon he will do for the remainder of the month. Wishes on seeing the new moon will come true if they are not told, or if one kisses the nearest person. Pointing at the new moon brings trouble, as does seeing the moon, in any phase, over the shoulder. While in Europe generally the bad luck seems to come from seeing the moon over the left shoulder, elsewhere the right shoulder is the unlucky one. Ominous too is a halo around the moon. This means rain; if there are stars in the ring, it will rain for as many days as there are stars, or the rain will come after that number of days. If there are more than five stars in the ring, the weather will be cold; if fewer, it will be warm. Elsewhere, the number of stars within the ring indicates the number of friends who will shortly die.

Sleeping in the light of the moon is bad. In Egypt, Greece, Armenia, Brazil, and many other places, sleeping with the moonlight on one's eyes weakens the sight. In Europe generally sleeping in the moonlight often results in insanity; the lunatic is so called because he is moon-mad. Throughout the world, the moon is an evil principle or body as compared with the good sun.

Whether the moon is silver—the alchemists called silver the moon and used the crescent as its symbol—or whether it is made of green cheese, whether it is the abode of the souls of the dead or the resting place of everything wasted or broken on earth, it is often personified as a god or goddess. The Semitic moon god Sin dwelt atop Mt. Sinai, and some students believe he was identified with Yahweh as the law-giver of the Israelites. The Egyptian Thoth was god of the moon; therefore he was god of measurements, hence god of learning, wisdom, and writing. The Greek goddesses Selene, Artemis, and Hecate were all identified with the moon. The Hindu god Soma, personification of the divine drink, was later identified with the moon. In the *Rig-Veda* (x, lxxxv, 5), the moon's phases are explained as the result of the drinking of amrita (soma) by the gods, its depletion and replenishment.

Though the moon is often feminine and the moon deity is a goddess, often the moon god is male and the

moon is a man (see for example the *Sun Sister, Moon Brother* tale of the North American Indians). The "man in the moon" is the English locution for the marks on the moon, yet generally in English the moon is considered a "she." In Rumanian tales, the moon is the sun's sister. But the sun lusts for her, and she hides when he rises and comes out only when he sets. In Greenland, the moon is male, and no woman dares to sleep on her back without taking the precaution of rubbing some spittle on her belly. The moon was a man, according to Bushman mythology, who made the sun angry. The sun kept slicing at the man with his knife-like rays until only a little of the man was left. Then the man's entreaties caused the sun to relent, and the moon grew again. But every time the sun sees the moon full and round he begins to cut him up again.

The moon is prominent in folktale, for example as a quest-goal in märchen. It is this for instance in *The Twelve Ravens* (Type 451) and often in variants of *The Search for the Lost Husband* (Type 425). Noodles often get confused by the moon. One, who had just come to town, was heard saying the prayer to the old moon as if it were the new moon. When they asked him why, he said he hadn't seen this moon before; he was a new-comer in town, and surely each town had its own moon. See AVYA; *Chinese calendar* in CHINESE FOLKLORE; DRINKING THE MOON; HATHOR; IO; MAN IN THE MOON; NOODLE STORIES.

Many American Indian languages lack specific words for moon and sun but have instead a noncommittal word meaning luminary, to which is prefixed "night" or "nighttime" and "day" or "daytime" for the moon and sun (compare, for example, the Delaware Indian *ni'pai gi'cux*, night luminary, moon, and *gi'ckweni-i gi'cux*, day luminary, sun). Personification or deification of the sun and moon is usual and the two appear as actors in several American Indian myths. The moon and the stars are the Night People or Fathers of Taos pueblo, and are more prominent in the pantheons of the northeastern Pueblo Indians than in the western ones. Moon-Old-Man is distinctly a personage at Taos, Isleta, Jemez, and Tewa. At Zufii Moon's sex is reversed; she is Sun's younger sister or, in prayer, Moon Our Mother. Among the Apache of the Southwest, the Jicarilla are not consistent as to Moon's sex; they say that Moon is female, in connection with the menstrual cycle, but in a ceremonial race Moon is represented as a male, and Moon is also associated with Water, the father of one of the culture heroes. The Lipan Apache represent sun and moon as human beings who led the people after the emergence; the sun is a man, the moon is Changing Woman, an important Apache female deity. In the related mythology of the Navaho, Klehanoai, a male deity, is the Moon Carrier and husband of White-Shell Woman. Among the Cora Indians of northern Mexico the moon, like the sun, is a god, and is both man and woman. The Chehalis of the Pacific Northwest have Moon as their Changer, a male Creator-Transformer; the Tillamook, however, while assigning to Moon the same role, make her a female changer.

Origin tales accounting for the moon are prevalent; perhaps the most striking one is that of Sun Sister and Moon Brother. This tale is known to nearly all Eskimo groups, to several Indian groups in the Mackenzie area, and to the Caddo of the Southeast, and related forms

of the tale have been reported from Central and South America. Briefly, the tale is concerned with an unknown suitor who visits a woman secretly at night; the latter blackens her hands and smears the man's back. Later she discovers her suitor is her brother. She flees and her lover pursues her; both rise to the sky where she becomes the sun, he the moon. Other origin stories for the sun and moon are incidental elements, or a series of elements, in the tribal origin myths. The Maidu Indians of California, for example, credit Earth-Initiate, their creator, with having caused his sister the sun and his brother the moon first to rise. The Jicarilla Apache say that both the Sun and Moon were obtained by Holy Boy, as minute objects. They were released and brought to life by White Hactcin and Black Hactcin (see HACTCIN) while Holy Boy and Red Boy threw pollen. Both luminaries traveled from north to south at first. False claims on the part of the shamans that they had made the sun and moon resulted in eclipses of the two bodies, and their disappearance. With the help of the animals the Hactcin caused Sun and Moon to be brought down again; Sun was made into a Taos Indian boy, and Moon into a Jicarilla Apache girl. The two married and were sent back to the north to travel, Sun in the lead, from north to south. Later the Holy Ones, White Hactcin, Black Hactcin, Holy Boy and Red Boy changed this so the Sun and Moon traveled from east to west; the Holy Ones also directed Sun to go in the daytime and Moon at night. [EWV]

 In the cosmogony of the Taulipang (Guiana) and Ona Indians (Tierra del Fuego), the moon is personified and its phases are explained by the changes in his bodily appearance. The moon alternately loses and gains weight. According to the Bakairi (Central Brazil) the phases of the moon are caused by various animals which gnaw at it and finally swallow it.

The spots on the moon are often explained by the South American Indians as one of the consequences of incestuous relations between the Moon and his sister (generally identified with the Sun). The woman, not knowing who her mysterious lover was, marked him with genipa, ashes, or menstrual blood. The Moon, out of shame and fear, went to the sky (Taulipang, Cuna, Okaina, Conibo, Witoto, Zaparo, Shipaya, Guarani, Indians of the Yamunda and of Tumupasa).

According to the Yahgan and the Ona, the spots on the Moon are the marks of the beating received by the Moon when the Sun discovered the secrets of the initiation rites. The Mataco and Chamacoco interpret the spots as the intestines of Moon which were bared when Moon was torn to pieces by ducks or rheas which he had tried to catch. To the Yuracare, the spots on the Moon are a four-eyed jaguar which escaped to the sky. [AM]

moonstone A whitish, cloudy, feldspar gemstone which is said to contain an image of the moon. The Hindus believe that this stone was formed by the congealing of the moon's rays. A moonstone owned by Pope Leo X (1475-1521) was said to wax and wane in brilliance with the moon. Held in the mouth at the full of the moon it will reveal the future. It is well thought of by lovers since it evokes the tender passion. It brings luck to its owner, cures epilepsy, nervousness, has a cooling effect, and makes trees fruitful. In some places it is con-

sidered unlucky to wear a moonstone unless it is your birthstone. The fabulous moonstone stolen from the idol in Wilkie Collins' *The Moonstone*, brought disaster to every unrightful owner.

moon tree The moon tree of Japanese folklore (*katsura*) is a kind of laurel. It grows on the moon and the spots on the moon are visible patches of these trees. When the moon seems especially bright, the people say that the *katsura* is turning red (or yellow).

Chinese mythology often associates the moon tree with the cassia, the tree of immortality, which grows on the moon. A certain Wu Kang was banished to the moon in punishment for a crime and condemned to cut down the cassia. He keeps trying, but the marvelous fragrant tree springs up as fast as it is cut. The fruit of this tree confers on those who eat it immortality and transparency.

Alexander described to Aristotle two marvelous trees of India, which spoke Indian and Greek; one was male, the other female. These were the trees of the sun and the moon, which would prophesy good or evil for the questioner. Alexander tested this fact, observing all the rules for approach: chastity, the putting off of rings, garments, and shoes. At sunrise the sun tree spoke and told Alexander that he would never return home; at moonrise the moon tree said that he would die at Babylon. A third question brought the answer that he would die by poison, but the name of the poisoner was not revealed. Marco Polo also came across and mentioned these two marvelous trees.

moorooboy A dance ceremony which forms part of the boys' initiation rites of Australian aborigines, specifically of the tribes of Broome. It consists of the dancing by men of the *wallang-arree* or double circle, alternate rows going in opposite directions. To high chanting the men raise their knees and bring the foot forcibly on the ground. At the end the boy initiate (*balgai*) is taken out of the center of the circle for a respite, and then brought back in on the shoulders of his *yagoo*, or special guardian. [GPK]

moralizing tales Tales which have a moral for their point, as exemplified in the animal fables of Europe and India, are not abundant in American Indian mythology. Where they do occur, close similarity to European tales demonstrates that they are of non-Indian origin. Examples of Indian borrowings are Aesop's *The Fox and the Crane* (told among the Yuchi and Biloxi of the Southeast), LaFontaine's *The Cock and the Fox* (Wyandot, Great Lakes region), Aesop's *The Fox and the Crow* (Ojibwa, Great Lakes), *The Ant and the Grasshopper* (Biloxi, Shuswap of Plateau, Wyandot). For detailed references to the above see Stith Thompson, *European Tales among the North American Indians* (Colorado College Publications, General Series # 100 and 101, Colorado Springs, April-May 1919).

Of possible native origin, however, is a collection of transparent animal fables recorded by Benedict at Cochiti pueblo (Ruth Benedict, *Tales of the Cochiti Indians*, BAEB 98, Washington, 1931, pp. 236-238) which, according to Benedict, are "a type of story rarely found among the American Indians. In Cochiti it is characteristic of these tales that the moral is not given explicitly, but when informants are questioned they phrase the underlying idea of the story in terms of their own cultural life" (p. 236). None of these Cochiti animal

fables seem to have European prototypes, but the fact that they are found in the Southwest, where many European tales have been borrowed by the Indians, raises some doubt as to their being purely native forms.

If few native tales exist that are told primarily to point a moral, it does not follow that American Indian tale material is not used for moralizing purposes. Over the continent trickster tales are told chiefly to amuse, but generally they also have a moral import—as, for example, the “trotting Coyote” stories of the Navaho, told to impress children that they must not act as Coyote acted. Tales of the abuse of power in the Plains and Eastern Woodlands emphasize that supernatural power, if used too often, will be lost; the theme occurs not only in trickster, but in more serious tales. Another theme, that an individual should not make immodest demands on the supernaturals, is also widespread; supplicants who ask for eternal life are turned into stone or cedar trees. In general, as Boas has pointed out, American Indian tales end in the triumph of the good and the downfall of evil characters, which makes all of them in a sense moralistic; although the tale plot may not have a moral for its point, the effect gained is a moralistic one. [EWV]

For the moralizing tale of European folklore, see *Edifying stories and exempla* in EUROPEAN FOLKLORE. For the moral in African Negro folktale see sections *Explanatory elements*, and *Proverbs*, and *Folklore in education* in AFRICAN AND NEW WORLD NEGRO FOLKLORE. See BOASTFUL DEERSLAYER; DISAPPOINTED FISHER; FABLE; KIND AND UNKIND.

Mordred or Modred The notorious traitor, who at a battle in Cornwall wounded Arthur, his uncle or father, but was himself killed. The earliest mention is in the *Annales Cambriae* (c. 955) under the date 537 (?): “The Battle of Camlann, in which Arthur and Medraut fell.” In *The Dream of Rhonabwy* (13th century) a certain Iddawg is called the embroiler of Britain because he kindled strife between Arthur and his foster son and nephew Medrawd before the battle of Camlan. In the *Red Book of Hergest* (14th century) we have two triads, one of which gives an account of the treachery of Medrawd based on Geoffrey of Monmouth’s *History of the Kings of Britain*, and another which tells of Medrawd’s raid on Arthur’s court at Kelliwic in Cornwall, when he consumed all the food and drink, dragged Gwenhwyvar from her throne, and struck her. This last seems to be a Cornish tradition, and it is probably from Cornwall that Geoffrey derived his story of Modred’s treachery and the last battle, for the form of the traitor’s name is Cornish. Geoffrey tells how when Arthur left Britain for his campaign against the Romans, he placed his kingdom in charge of his nephew Modred and Guenevere. During his absence Modred seized the throne and made the queen his wife. Arthur returned, defeated the traitor, and drove him into Cornwall. There at the river Camblan he killed Modred, but was himself wounded and borne away to Avalon. Practically all accounts of Mordred’s treachery and the last battle in the chronicles and romances derive more or less directly from Geoffrey’s book. In the French Vulgate cycle (1200–1230) there are several references, however, to Arthur’s begetting Mordred upon his sister, the wife of Lot, though their relationship to each other was unknown.

This story appears also in the *Huth Merlin* together with an additional theme. Merlin reproached Arthur for his incest and warned that his offspring would bring disaster. When the time arrived, May 1, when the infant was due to be born, Arthur, like another Herod, planned to get rid of all the newly born sons of nobles and sent for them. But Modred was shipwrecked en route and was found floating in his cradle by a fisherman, who saw by his silk swaddling clothes that he was of high birth and turned him over to a noble to rear. A very similar story, without the incest motif, is told of Gawain. In Welsh we have two tales of wonder children born on May Eve, Gwri and Taliesin; the former is discovered wrapped in a mantle of satin, the latter floating in a fisherman’s weir. We also have striking Irish parallels. Fiachu Fermara was begotten by Angus on his daughter when drunk, was set adrift on the sea in a royal robe, and was rescued by a fisherman. Eochaid Bres was the offspring of the son and daughter of Delbaeth, and when grown up he fought incognito with his father. Though Bruce derived the incestuous birth of Modred from the strange legend of Pope Gregory, it is far more likely to be a genuine Celtic tradition.

Mordvins A Finno-Ugric people, in 1920 about 1,500,000, dispersed between Russian and Tatarian settlements in the districts of Penza, Samara, Simbirsk, Saratov, Nijni Novgorod, Tambov, etc. They are divided into Moksha and Erza Mordvins. The belief in a supreme procreator god, living in the sky, is very clear among the Mordvins (see SHKI-PAS in SHKA-BAVAS). Mother Earth, *Mastor-ava* or *Mastor-pas*, is one of the most revered deities, especially among the Erza Mordvins. The songs mention that the hero “first bowed before the sky god, and then before Mother Earth.” The Sun and Moon are also venerated. The thunder god of the Erza Mordvins, *Purgine-pas* or *Pirgene*, is also an old god; the name is common with the Lithuanian *Perkūnas*. There are many protecting spirits associated with the word for mother (see AVA). A curious custom among the Mordvins is the observance of the “harvest of the dead.” The relatives of the deceased reap the portion of the dead man, each of them cutting only a few straws. The chief part is played by the widow, who all day wears a belt of straw made by herself. Cattle are slaughtered for this feast. A very important work of Mordvinian folklore texts was published by H. Paasonen and P. Ravila: *Mordvinische Volksdichtung*, 4 Vols., Helsinki, 1938–47. MSFO 77.81.84.91. For mythology see John Abercromby, “The Beliefs and Religious Ceremonies of the Mordvins,” *The Folk-Lore Journal* VII, 1889, pp. 65–135. [JB]

Morgan le Fay A protean character in the Arthurian romances, who is related to goddesses of Irish and Welsh mythology on the one hand, and to mermaids of Welsh and Breton folklore on the other. She first appears in Geoffrey of Monmouth’s *Vita Merlini* (1150), dwelling in an island paradise with her eight sisters and employing her skill in herbs on the wounded Arthur. Chrétien de Troyes (1160–80) also knows her medical powers,

makes her Arthur's sister, and tells us that she was the mistress of Guingamor, lord of Avalon. In later romances she is generally a malign and repulsive enchantress, the wife of King Urien and mother of Ivain. She is constantly making assaults on the fidelity of Lancelot or the virtue of other knights. *Gawain and the Green Knight* depicts her as a wrinkled crone, Malory as plotting the death of her brother Arthur.

Evidence is gradually accumulating that Morgan's inconsistencies are due partly to the composite character of the tradition she inherited, partly to the pejorative tendency in the attitude of the Christian world towards the pagan deities. Three medieval texts speak of her as a goddess, and it is now possible to trace her on the one side to the Irish Morrigan, and on the other side through the Welsh Modron (who was the mother of Owain by Urien) back to Celtic Matrona, a deity who was worshipped from northern Italy to the mouth of the Rhine and who gave her name to the River Marne. Morgan combines in her person the manifold attributes of the Gallic river goddess and of the Goidelic valkyrie. Thus, though unnamed, she may be detected with certainty in the charming water nymphs, the mistresses of Guingamor, Lanval, and Desiré, and also in the chief of those bellicose females, the nine sorceresses of Caer Loyw, who trained Peredur in arms and whom he later slew.

Morgan is also related to the many, frequently nameless lake fairies of modern Welsh folklore. They lie in wait for their human lovers, endow them with wealth, impose on them a tabu, and abandon them when the tabu is broken, just as do the faery mistresses of Lanval and Desiré. The most famous of these Welsh water fays, the Lady of Little Van Lake, was identified by Rhys as Modron, and her preternatural knowledge of medicinal herbs links her with Morgan. The fay in her sinister aspect may be recognized in the Gwrach y Rhibyn, a hideous hag dressed in black, who sometimes appeared beside a piece of water, splashing it with her hands, or who dipped herself up and down in a pool.

Morgan is also to be recognized in the mermaids of the Breton coast and islands, who go under the name of Morgan, Morganes, Mari Morgan. They retain not only the name of the medieval faery queen, but also her amorous propensities, for they rise to the surface of the sea and entice fishermen into their arms. According to some tales, the embrace is fatal; according to others, their lovers live long and happily in their submarine palaces.

Not only was Morgan known to the Breton peasants and sailors of yesterday, but back in the 12th century professional Breton story-tellers carried her legend to Sicily. There her reputation as an enchantress survived so that in the 19th century the mirages in the Straits of Messina were popularly attributed to "la Fata Morgana." See ARTHUR; CELTIC FOLKLORE.

ROGER S. LOOMIS

morisca Literally, Moorish dance: a ritualistic form of battle mime widespread throughout Europe (except for Scandinavia), whole-heartedly adopted in Central

America and the Caribbean. In the Spanish version, commonly known as *Los Moros y Cristianos* two factions dance through a drama (often with dialog) of battle between the evil Moors and good Christians, with ultimate victory for the Christians. This element of battle characterizes most, but not all, *morisca* forms. The battle mime is generally enacted during Catholic festivals, notably at Carnival time, on Corpus Christi, and San Juan's Day. Versions most closely recognizable by their names are the Portuguese *mouriscada*, English Morris, and Dalmatian *moreška*. Other dances just as truly *moriscas*, despite the names, are the Mallorcan *cossiers*, Austrian *Perchten*, Rumanian *calușari*, the *Santigos* and *negritos* of Mexico. Sword dances and derived stick dances are closely related, as also the Basque *mascaradas* and English mummers. In the *matachini* forms, as also in the related *seises* of Toledo, the battle mime has been absorbed in longways opposition, and among Mexican Indians the sword has been replaced by a feathered trident. It is striking how with loss of symbolism and drama the formations and steps have increased in complexity, as the Mexican *moros* in contrast with the *matachini*. In New Mexico, however, the Pueblo *matachines* includes the killing and resurrection of a bull, reminiscent of the former killing of the dragon by St. George in the English Morris.

At one time these *matachins*, known to us from the 16th century, enacted a battle mime. On the other hand, the *morisque* and the German *Moriskentanz* were frequently solo exhibitions, grotesqueries which were introduced in court entertainments and ballet-mascarades. Almost consistently their paraphernalia consists of a high ornate crown, helmet or plumed hat, breeches, bells, ribbons, and the battle emblem—sword, staff, trident, kerchief. Dramatic characters wear masks; some *matachini* wear disguising bandanas; other *moriscos* use no facial disguise. But originally it was a dance of disguise.

The name points to original face blackening, which, contrary to former theories of Moorish origin, is now connected with the sooty faces of pagan rituals. The battle mime is now traced to vegetation symbolism (a battle of the seasons) and the various associated characters and elements, as the man-woman and hobby-horse, sacrifice and resurrection, the leaping and interweaving, are interpreted as fertility symbols. These dances are always held in the budding season, and often conclude with Maypole winding. Some versions are still the property of closed brotherhoods, as the *calușari* and the Yaqui *matachini*.

With the Christianization of Europe, this symbolism had to be reinterpreted in a form which was at hand in the various invasions from the East—the Moorish conquest of Spain and the Turkish occupation of the Balkans and Hungary. Here the "Moors" are often called Turks, as in the Hungarian *törökös tánc*, and "Turks" danced in Nuremberg carnivals of the Middle Ages, alongside morris groups and *Schemen*: an association in a metamorphosed pagan celebration of two renamed groups and one aboriginal dance group all with the same purpose. These vestiges of pagan rites—*Schemen*, *Perchten*—corroborate the theory of Morisca origin in vegetation rites. See DANCE: FOLK AND PRIMITIVE. See bibliography in Gertrude P. Kurath, "Mexican Moriscas," *JAFI* 62:87-119, 1949. [GPK]

Mormo A lamia-like female monster with which ancient Greek mothers threatened their children: also called *Mormolyce* (perhaps banewolf or werewolf). The scholiast on Theocritus explains that she was a Læstrygonian queen who lost her own children and stole others' children in revenge. Compare **LILITH**.

morning star Any of the planets Jupiter, Mars, Saturn, Mercury, or especially Venus, when rising shortly before sunrise. Among North American Indians especially the morning star was of great importance and was widely symbolized by an equi-armed red cross. In Lithuanian folk song the morning and evening stars are mentioned together as servitors of the sun: the morning star kindles his morning light; the evening star prepares his bed. In Lettish folk song they are mentioned together as the sons of god. The people of ancient Palmyra in the Syrian desert (Greek-aculturated Semites of Arab origin) worshipped the planet Venus as both morning and evening star as a kind of dual deity (Arṣu and 'Azizu), the compassionate gods. The Greek scholar, Bartholomew of Edessa, identified 'Azizu, the morning aspect, as a "merciful god" of the Arabs before the time of Mohammed.

In Norse mythology, the morning star is identified as Orvandil's Toe. The story is that Orvandil, young son of the sorceress Groa, was taken by the frost giants. Thor rescued him, carrying him off in a basket. The child kept poking one bare toe through a hole in the basket; it got badly frozen and broke off. Thor tossed it into the sky, and there it glitters—the morning star. (Some say, however, that Orvandil's Toe lies permanently in Ursa Major, or Orion.) In Polynesian mythology the morning and evening stars are the eyes of Maui's two sons, which he placed in the sky. In the widespread cycle of quest stories occurs a Flemish tale about a man who set out to go to the morning star for answers to certain questions (H1282; Type 702). See **LUCIFER**.

 **Anthropomorphized deity, or supernatural, usually benign, in the folklore and religion of nearly all North American Indian tribes. To cite only a few examples: Among the Crow Indians of the Plains, Morning Star is a kindly disposed supernatural, the father of Old Woman's Grandson in mythology and a being more likely to be invoked than any other, in the absence of a specific tutelary. The Skidi Pawnee represented the morning and evening stars as masculine and feminine beings, and connected them with the advent and perpetuation on earth of all living forms; a series of Skidi Pawnee ceremonies relative to the bringing of life and its increase began with the first thunder in the spring, culminated at the summer solstice in human sacrifice, and closed when the maize or "mother corn" was harvested. The Fox Indians consider Wāpanananāgwa, the morning star, as one of the big stars that are great manitus or supernatural beings. The morning star is the father of a Fox legendary hero, Wāpassaiya. In the Pueblos the stars have more supernatural significance for the Tanoans than for any other Pueblo groups, and Morning Star is definitely associated with war, being prayed to before fighting. At Taos offerings of cornmeal, eagle feathers, and pollen were given to Morning Star; it is believed that this star travels during the day and becomes the twilight or evening star. Kiowa peyote worshippers say that Morning Star heralds Peyote**

Woman's approach, at peyote meetings. The Cora of Mexico worship the Morning Star as a major deity; he is visualized as a youth armed with bow and arrow, who once shot the powerful sun at noonday because of the latter's intense heat. In the widespread North American Indian tale of the Star Husband the chief male character is sometimes identified either as the Evening or Morning Star. [EWV]

Moros y Cristianos Moors and Christians: a form of *Morisca*, of Spanish derivation, but now rare in Spain and extremely popular in central and eastern Mexico, during the great *carnavales* of Guerrero, Tlaxcala, Morelos, and especially in the Federal District. In the Sierras of Puebla and Veracruz the drama is featured along with others during the Corpus Christi celebrations, the most famous event being the *volador* fiesta at Papantla, Veracruz.

The regalia and dramatic procedure is like those of the *Santiagos*, but without this saintly horseman. The Moors are always distinguished by their turbans and crescents, otherwise varying their outfits according to the purses of the dancers: cotton kimonos, or silken capes. Their masks may represent stylized bearded Orientals or long-nosed comics. The Christians may be magnificent with visors, plume-crested morions, gaudy capes and breeches, and halberds, or in derby hats and wrinkled stockings with ludicrous pink masks. The play itself, too, varies from the mystical to the burlesque. In Matamoras de Izucar, Puebla, the two opposing groups enter with a solemn march, then launch into a realistic attack amid loud cries and bits of dialog, and end with the conquest of the Moors by the grace of God. In Puebla the combat frequently commences with a contest between the two *capitanes* or leaders with their long machetes, the two opposing parties leaping about in the background. Brandishing their weapons, they engage in a pitched battle, which may last for four or five hours. After the inevitable conquest of the Moors, the leader was formerly symbolically buried, as in the old-time *entierro del Moro* or *entierro del Rey del Mal Humor* of Spain. In Tecapulco, Guerrero, the motions are as absurd as the costumes, consisting of wiggling of the feet, jerky hops and sword flourishing, pursuit of a tall, gaunt *embajador moro* (Moorish ambassador) by a diminutive *embajador cristiano*, with the inevitable dénouement. In the end the Moros kneel in submission and the Cristianos lock swords around their necks. The music may consist of a one-man flute and tabor, a fiddle and drum, or a band.

Despite the quaint native style of action and masking, the Spanish provenience is evident in the resemblance to the battles at Alcoy, Valencia, and Toledo. But the Moros of Michoacán are a unique development. Four of them, in fantastic Oriental, mirrored, befethered turbans, spurred boots, beads and sequins galore, appear on horseback, dismount, then twostep through various formations: circles, cross-overs, dos-à-dos, etc.

The Moros y Cristianos, sometimes called *Moros y Españoles*, are related to the *Morisma*. See **MORISCA**; **SANTIAGOS**. [GPK]

Morpheus In Greek mythology, one of the sons of Hypnos, the god of sleep. Morpheus either gave shape to dreams or brought dreams of human figures. His brothers Icalus (or Phobetor, his name among men) and

Phantasus brought visions of animals and inanimate objects respectively.

Morrigan or Morrighu (Irish *mór-ríogán*, great queen). One of a group of three war goddesses of Old Irish mythology. In the triad of Morrigan, Neman, and Macha, the name of Badb often occurs in place of that of Morrigan, and for that reason Badb has frequently been identified with Morrigan. Almost as frequently, however, the name of Badb displaces one of the other two. And Morrigan is often used as a generic term to include all three. Robert Graves (*White Goddess*, New York, 1948, p. 306) says that "Ana, Badb, and Macha together are known as the Morrigan, or Great Queen." (See DANU.) The characteristics of the three are practically identical: the heads of warriors killed in the old battles were dedicated to one or the other of them; each of them appeared on the battlefield in the form of a raven or scald-crow; it was said of each that she ate the bodies of the slain, or that they feasted together (probably in their roles as scald-crows). And all three were transformers.

In the Mythological Cycle, Morrigan was the daughter of Ernmas, and either the wife or granddaughter of Nét, or the wife of Dagda. And she, with Badb, helped the Tuatha Dé Danann overcome the Fomorians in the Battle of Mag Tured.

Morrigan is prominent in the Cuchulain story. She was in love with Cuchulain and wooed him in the form of a young girl, after one of his most wonderful victories. Battle-weary, he repulsed her and thus incurred her antagonism. Time and again after that she made trouble for him in battle, in the form of a heifer, a water serpent, etc. She aided Ulster in the War for the Brown Bull, however, and later tried to save Cuchulain from his death. The night before his last fight she broke the pole of his chariot, as a sign to him not to go forth.

Morris The English version of the Moorish dance or *Morisca*. Occasionally the Morris is a solo jig, such as Greensleeves or Bacca Pipes, which is danced in and out among two crossed pipes (compare the Scottish SWORD DANCE). Usually the Morris is a longways performed by six men with accompanying traditional characters (Cotswold), or by ten (Lancashire). The figures vary as follows: 1) *Processional*, a progressive double serpentine of the two interweaving lines; 2) *Bean Setting*, a stick dance with obvious agricultural symbolism in the "dibbing" or floor thumping with the sticks and striking of partners' sticks; 3) *Stick Dances* (Constant Billy, Rigs o' Marlow, Shepherd's Hey) which involve a complex pattern of stick striking by partners, parallel, across, right, left, up, down; 4) *Handkerchief Dances* (Blue-eyed Stranger, Country Gardens) with manipulation of kerchiefs throughout the leaps and the formations; 5) *Corner Dances* (Trunkles, How d'ye Do, Laudnum Bunches), purely dances of diagonal cross-over formations; 6) *Morris Off*, a circular prelude to the exit.

A rude vigor characterizes the movements, the various leaps, called capers or springs, the various combinations of steps and hops in duple and triple time, the straight-kneed kicks, the cross-steps, side-steps, the straddles, arm swings, and climatic high jumps with shouts.

The formations include a great variety of longways figures: corners, cross-overs, *dos-à-dos*, various heys,

initial and terminal circling to left and right, sometimes a Maypole dance (see tabulation of MORISCAS).

The tunes were formerly played by a bagpipe or a wood pipe and tabor, called whittle and dub, nowadays commonly by a fiddle or accordion. The costume, formerly consisting of breeches, plumed hats, blackened faces, have now been replaced by white trousers, frilled shirts, and top-hats with feathers. The bell pads on the ankles have been retained.

The associated characters have retained much of their original identity, while changing their names. Bessy, the man-woman, was Maid Marian and, before that, Mother Eve. The hobbyhorse rider is descended from Robin Hood and, previously, St. George, the dragon-killer. A fool in medieval costume or tatters has always cavorted on the outskirts, formerly with a fox mask and perhaps a bladder on a stick. In some sections (Gloucestershire, Norfolk, Lancashire, Northumberland) a sword-bearer carries a cake which is offered. Not only is the Morris continued on Whitsunday in English villages, but urban folk-dance groups and May-Day pageants have featured it ever since its discovery by Cecil Sharp.

The ancient pyrrhic vegetation symbolism is evident not only in the characters, but in the formations and the dibbing. The associations are further described under MORISCAS; MUMMERS; SWORD DANCES. [GPK]

Moses The lawgiver of the Hebrews; leader of the Israelites through the desert from Egypt to Canaan. Moses is a typical folk and culture hero: he was saved from a massacre of children; he was found floating in a basket on the water; he was an unpromising hero, because as child and young man he stuttered; he spent years in exile and returned to lead his people in their hour of need, etc. Twice Moses ascended the mountain to obtain the tablets of the Law from God; the first time he destroyed the tablets at the sight of the molten calf, but finally Moses brought the Law to his people. Moses is credited with writing the Pentateuch, the first five books of the Old Testament. He is one of the great national heroes of the world and there is perhaps more folklore about Moses and his career than there is about any other Hebrew hero, excepting only Solomon. But, strangely enough, there is strong evidence that Moses was not an Israelite at all. Some students believe that he was actually a member of the royal family of the pharaoh Ikhnaton (Amenhotep IV), or a priest of the monotheistic religion founded by that king and destroyed at his death. Thus, Moses may be the introducer of the worship of one God to the Hebrews, and a tie between Egyptian religion and Christianity and other modern monotheistic religions may therefore exist. The name Moses seems to be Egyptian—compare the names of the pharaohs Thutmose (Thotmes), Ahmose (Ahmes), etc.—and may derive from an Egyptian word meaning child. The usual order of events in the folk hero's career is reversed in the story of Moses: here the hero is abandoned by the poor parents and reared by the princess. An attempt to provide Israelite parents for the hero may be suspected, just as in the customary sequence royal descent is provided for the commoner who becomes king. Of course, the whole subject is conjectural and, like the mass of lore about Moses, his career before and after the exodus, his death and burial in the

mountain, can be only hinted at here. See AARON; AARON'S ROD.

mosquito A two-winged insect (family *Culicidae*) having in the female a long proboscis capable of puncturing the skin and extracting blood. Malaria and yellow fever are transmitted by the bite of certain species. The Miskito Indians of northeastern Honduras and eastern Nicaragua were so named by early travelers and writers for the hordes of biting insects of that territory which are large enough and numerous enough to kill a man in one night. In the Sun and Moon stories of Chaco Indian mythology, Mosquito is powerful enough to kill Moon. Moon (seeking the same honors in Mosquito's house that had been offered to Sun) in his blundering way almost stepped on Mosquito; Mosquito bit him, and Moon died; but (in Chamacoco myth) was resuscitated by Sun.

A cannibal-monster story of North Pacific Coast and Plains Indians accounts for mosquitos as having originated from the ashes of the burnt monster's body (A2001). Rumanian etiological story says mosquitos were created from smoke from the devil's pipe. They also say if you want angels in the house, drive out the mosquitos, for angels cannot enter where mosquitos are.

There are a number of Filipino stories about Firefly being reproached for so carelessly carrying fire; he explains, however, that he needs a light (or fire) to protect himself from the sharp dagger of Mosquito. Mosquito is jailed for carrying the dagger, and in jail loses his voice. This explains why the male mosquito is silent. In another version Mosquito arrives with a horde of his relatives and bites the face of the judge (a small land-crab), who runs into his hole followed by clouds of mosquitos. Mosquitos can still be seen humming around his door. In still another version the judge condemns Mosquito never to bite again. Mosquito explains that he *has* to bite now and then; but the judge makes no compromise. Mosquito then lights on the judge's forehead and jabs him. The judge grabs his mallet, smashes Mosquito, knocks himself out.

Mosquitos bite worst just before a rain, according to Newfoundland and Labrador lore. Hold your breath when a mosquito lights on you, is quite general folk advice; he cannot get away as long as you hold your breath, or cannot pull his stinger out until you do and will therefore die. See ALDER.

mother goddess The goddess of birth, fertility, sexual union, and the entire complex of birth and growth, plant, animal, and human. The mother goddess is found in many pantheons all over the world, sometimes limited in function, sometimes with such width of province that she may be considered a sole deity. In fact, some students claim a Stone Age monotheism with the goddess of fecundity as the only divinity to whom worship was due. Often the mother goddess is chthonic, i.e. an earth deity, from whom all growing things come. The Great Mother of the Mediterranean region, Cybele, influenced and modified the concept of other mother goddesses of the area—Ishtar, Aphrodite, etc.—so that the various fertility goddesses of the Mediterranean and the Near East resemble one another strongly. See COMMON MOTHER; CYBELE; EARTH; GREAT MOTHER; MOTHERS; MOTHER WORSHIP.

Mother Goose The anonymity of children's oral tradition rimes was bound to tempt editors and compilers to allege pseudonymous authorship of their collections, with the result that the various "garlands," "melodies," "pretty" books, and other anthologies were rather transparently and whimsically attributed to fictitious characters like Peter Puzzlewit, Tom Thumb, and Gammer Gurton.

Of all these innocent pseudepigrapha the oldest, most popular, and still surviving compilation is that attributed to Mother Goose. Modern American "Mother Goose Books" whose varieties are legion and sales enormous contain as many as 700 rimes, jingles, riddles, and tongue twisters for juveniles, but the earlier American editions were much smaller in format and had fifty or sixty rimes, usually one to a page under a rude woodcut.

A persistent legend circulates in Boston, Mass., and vicinity affirming that Mother Goose was an actual person living in that city in the early 18th century. Her name is variously given as Elizabeth Goose, or Vergoose, or Verboose, and she is said to have sung the old nursery rimes to her little grandson, whose father, Thomas Fleet, is supposed to have copied them down and published them in 1719, as *Songs for the Nursery*; or, *Mother Goose's Melodies*. Unfortunately for this theory of the origin of the famous rimes, and in spite of the fact that the anserine lady is allegedly interred in the Old Granary Burying Ground just off Washington Street near Brimstone Corner, she cannot be the answer to the children's query: "Who was Mother Goose?"

For not only has no copy of, or reference to, this book of Thomas Fleet's ever been found (and one can imagine the exhaustive searches that have been made), but also we know that Mother Goose was well known in France as Mère L'Oye in the 17th century, and came to America from that country, via England.

In 1697 Charles Perrault published in France a book of fairy tales entitled *Histoires ou Contes du Temps Passé, avec des Moralités*. It contained ten stories, including those familiar to us as *Puss in Boots*, *Cinderella*, *Red Riding Hood*, and *Hop o' My Thumb*. The frontispiece showed a picture of an old woman spinning and telling stories to children and a cat, while a placard announced, evidently as a sort of subtitle for the book: *Contes de mère l'Oye*. Now Mother Goose already had a reputation among French peasants and even in the court as a sort of mythical fairy birdmother who told marvelous yarns to children. In Loret's *La Muse Historique* (1650) appears the line: "Comme un conte de la Mère l'Oye," which may have been the source of Perrault's famous subtitle. The latter seems to have been somewhat embarrassed about this charming little collection of tales, apparently fearing to cheapen his literary reputation by such trifles, for he sought out another publisher than the one he commonly used, and also issued the book in the name of his young son, Perrault d'Armancoeur.

The tales themselves already had a long history, in both oral and written tradition, many of them appearing in an earlier (1637) Italian collection, the *Pentamerone*, by Giambattista Basile, while Perrault's "Le Maistre Chat, ou le Chat Botté" reveals its descent from one of Giovanni Francesco Straparola's 73 folktales in his *Tredici piacevoli notti* (Facetious Nights) (Venice, 1550,

1554), a perfect mine of popular yarns, as Shakespeare and Molière so well knew.

Some researchers have attempted to trace the origin of the Mother Goose idea to 8th century Queen Goosefoot, or Berte aus grans pies, the mother of Charlemagne, for she was regarded as the children's patroness, but the connection is tenuous.

Perrault's book was translated about 1729 into English as *Mother Goose's Fairy Tales*, but the name was first connected with children's rimes a generation later when a friend of Goldsmith, John Newbery, published in 1760 the first real edition of Mother Goose as we know it, *Mother Goose's Melody*, borrowing Perrault's pseudonym.

In 1785 or 1786 appeared the first American edition, published by Isaiah Thomas in Worcester, Mass., entitled *Mother Goose's Melody: or, Sonnets for the Cradle*. The second Worcester edition, 1794, exists in the earliest known perfect copy, republished in facsimile by Frederic G. Melcher in 1945.

Thomas's book contained 52 nursery rimes, including such perennial favorites as "Cross Patch, draw the Latch," "Little Tom Tucker," "High diddle, diddle," and "Jack and Gill." Thomas also had an appendix or Part Two, "Containing the Lullabies of Shakespear," selected songs from the plays, several of which seem to us today rather lusty for lullabies.

The Newbery rimes were soon greatly expanded, as other nursery favorites were included, until our current Mother Goose books are veritable libraries of popular juvenile verse.

CHARLES FRANCIS POTTER

Mothering cake One of a series of cakes traditionally eaten on various Sundays in Lent. Other such cakes are called Simnel and Whirlin cakes. In England, in earlier days, it was customary to observe certain ceremonies on Mid-Lent Sunday. One was to visit the Mother-Church and make offerings at the high altar. This custom became one of visiting parents on that day, the fourth Sunday in Lent. In the 18th century all English servants and apprentices visited their mothers on Mid-Lent or Mothering Sunday and brought them a present of money or of some pleasant eatable. Sometimes the visitors received furrumty, a wheat boiled in milk and spiced. A Simnel cake was another suitable present to bring one's mother. On the Isle of Ely, for the fifth Sunday in Lent—Whirlin Sunday—cakes known as Whirlin Cakes were made by nearly every family.

Mothers, Mother The personification of various deities, of the forces of the universe, of the earth, and of many plants, minerals, etc., in or on the earth as relatives (Grandfathers, Fathers, Grandmothers, Mothers, sisters, brothers) is common practice in North American Indian prayers, myths, etc. In many tribes relationship terms are generally used in direct address or in reference to the various personifications mentioned above; this conforms to the practice, also quite prevalent, of human beings using relationship terms to or for each other more frequently than they use personal names.

The most widely recognized Mother in North America is Earth Mother. Corn Mother comes next, but Corn or Maize is not always visualized as a mother; among the Iroquois she is one of a trio of sisters (Corn, Beans, and Squash) and in some of the pueblos the Corn Maidens figure in several myths. Earth, however, is always Mother;

the Apache, for example, state explicitly that the earth is a woman lying with her head to the north, her feet to the south.

In the Keresan pueblos of the Southwest, Iyatiku, or Maize Mother, is of paramount importance in the pantheon. Among the Delaware Indians of the eastern seaboard the sea, and bodies of water, running water, and corn and earth are addressed as Mother, but water as "our Grandfather."

Two widely distributed myths have attached themselves to the Corn Mother. One concerns the origin of corn, who was once a beautiful woman; this is told among the eastern tribes especially. The other concerns the violation, disappearance, and reappearance of Corn, a myth known in both the Eastern Woodlands and the Southwest. [EWV]

mother-worship, Mariology Reverence for motherhood has been expressed in many forms in both mythology and folklore, reflecting religious beliefs on the one hand and human affection on the other.

The Great Mother religions probably existed early in man's prehistory, for primitive images of mother goddesses are found in very old remains. The eastern Mediterranean countries, both north and south, were evidently the locale of a cult of Great Mother worship which has left its indelible mark on the religions of that region ever since.

Isis, a very ancient Egyptian deity, was the goddess of fecundity, the counterpart of the Roman Ceres and the Greek Demeter—all three of them evidently local versions or atavistic survivals of the original Mediterranean Mother Goddess. When this Great Mother was thought of as identified with the bountiful fecund earth, she might be known as Gæa or Ge (Greek) or Tellus (Roman). The Gæa or Earth Mother cult was widespread and was most powerful at Olympia and Delphi. When the sexual aspect of the Great Mother was emphasized, she was known variously as Cybele, Rhea, Cybele, Agdistis, or Dindymene, and was worshipped in Phrygia and western Asia with wild orgiastic rites. In Greece, Cybele was identified with Rhea, and when her worship was brought to Rome in 204 B.C. she became identified with Ops (Plenty), the mother of Jupiter, as Cybele-Rhea was the mother of Zeus. Thus the Great Mother evolved through the centuries into the Christian Mother of God.

The eastern Mediterranean Great Mother influence was bound to continue to modify all religions in that and nearby areas by acculturation. In North Africa in the late 4th century the Cybele influence was flourishing, according to the testimony of St. Augustine in *De Civitate Dei* (ii, 4): "I took pleasure in the shameful games which were celebrated in honor of gods and goddesses, of the virgin Collestis, and Berecynthia (Cybele), the mother of all the gods."

All this mother emphasis influenced Christianity itself. The New Testament and the very early church had little to say about and little recognition of any place of importance for the mother of Jesus. But the cult of the virgin and the cult of the mother of god were both too deep in the life of the people to permit Mary to remain in comparative obscurity.

The Roman Catholic church draws careful distinctions between Mariology and Mariolatry. Attwater's *Catholic*

Dictionary, 1941, defines Mariology as "The study of the Blessed Virgin Mary and the body of theology, history, speculation, etc., concerning her, particularly her relationship with the Incarnation and the Redemption." The same book defines Mariolatry as "Idoltrous worship of the Blessed Virgin Mary, with which Catholics have been, and by the ignorant still are, frequently charged. 'It is forbidden to give divine honor or worship to the angels and saints (of which Mary is one) for this belongs to God alone . . . we should pay them an inferior honor or worship . . . ' The Penny Catechism."

It is further explained that Mary occupies a special place between the saints and angels on the one hand, to whom *dulia* (reverence and homage) is paid, and God on the other, to whom *latria* (adoration and worship) is given. Mary has *hyperdulia* (special honor) paid to her, because she is the Mother of God and is "holier and nobler than any angel or saint."

As far as folklore is concerned, and without venturing into theology, Mariology can be classified as the existing lore of legends, miracle cycles, and folk stories about Mary, the Mother of Jesus. This lore is vast in its extent and still growing. It was in part incorporated in the canonical gospels, and was expanded and elaborated in the apocryphal gospels, acts, and epistles, in Coptic, Armenian, Syriac, and Eastern sacred literature generally, and in medieval contes, legends, songs, and church-steps miracle and mystery plays. It has grown in modern times, due to such books as Liguori's *La Glorie di Maria* (1750) and by the influence of various Marist orders and societies. See VIRGIN MARY. [CFF]

Motho and Mungo Two sisters, heroines of many Indian folktales: literally, the grains vetch and pulse. [MWS]

motif In folklore the term used to designate any one of the parts into which an item of folklore can be analyzed. In folk art there are motifs of design, forms which are repeated or combined with other forms in characteristic fashion. There are similarly recurring patterns which may be identified in folk music and folk song. The area in which motifs have been most studied and most carefully analyzed, however, is that of folk narratives such as folktales, legends, ballads, and myths.

Narrative motifs sometimes consist of very simple concepts which continually find their place in traditional tales. These may be unusual creatures like fairies, witches, dragons, ogres, cruel stepmothers, talking animals, or the like. They may consist of marvelous worlds or of lands in which magic is always powerful, of all kinds of magic objects and unusual physical phenomena. A motif may also be essentially a short and simple story in itself, an occurrence that is sufficiently striking or amusing to appeal to an audience of listeners.

While the term motif is used very loosely to include any of the elements going into a traditional tale, it must be remembered that in order to become a real part of tradition an element must have something about it that will make people remember and repeat it. It must be more than commonplace. A mother as such is not a motif. A cruel mother becomes one because she is at least thought to be unusual. The ordinary processes of life are not motifs. To say that "John dressed and walked to town" is not to give a single motif worth remember-

ing; but to say that the hero put on his cap of invisibility, mounted his magic carpet, and went to the land east of the sun and west of the moon is to include at least four motifs—the cap, the carpet, the magic air journey, and the marvelous land. Each of these motifs lives on because it has been found satisfying by generations of tale-tellers.

For the student of tales whose interest extends to various cultures in all parts of the world, the investigation of motifs is very important in showing international relationships. Sometimes these are merely logical and signify no more than similar thought processes in different parts of the world. Sometimes they are historical and indicate an actual line of descent from one to the other or from some common source. For this world-wide study motifs are much more usable than complete tale-types since tale-types are usually confined to a narrower geographic area than the motifs of the tale. In the comparative study of motifs there is no assumption of historical relationship. Sometimes it exists and sometimes it does not. On the other hand, such a study of a complete tale-type is always concerned positively or negatively with the question of historical relationship between the variants.

The difference in approach to motif studies and tale-type studies is very apparent in two works in which the author of this article has been concerned. In the Aarne-Thompson *Types of the Folktale* only such complete tale types were included as seemed to have some general circulation in the particular geographic area extending from Ireland to India. It is, therefore, very limited in its scope and is essentially selective. On the other hand, in the *Motif-Index of Folk-Literature* every attempt is made to have the listing of motifs as inclusive as possible. It is hoped because of this very comprehensiveness to bring to light interesting comparisons and to make possible significant studies which such comparisons suggest.

It is one of the dogmas of those who founded the historic-geographic method of folktale study that every motif belonged in a particular tale-type, and that the search into the history of motifs anterior to their appearance in particular folktales was futile. There is little doubt that this is an overstatement of the actual situation. A thorough study of motifs would undoubtedly throw some light on what we may call the pre-history of tale-types, but the argument is not one that is likely to be resolved into an easy formulation. Rather, it is clear that some motifs are practically universal, and form the material out of which tale-types are constructed, and some motifs are so specialized that they owe their very existence to the tale-types of which they are a part.

STITH THOMPSON

mountain lion A large quadruped (*Felis concolor*) of the cat family, found from British America to Patagonia, but now extinct in eastern North America: known as mountain lion in the far West, as puma (Sp., from Quechua *puma*) in the Southwest, or cougar; in the eastern United States generally referred to as panther. In the far West, mountain lion plays the role of Tricker's companion, especially in the mythologies of western Great Basin Shoshonean-speaking Indians. Among the Chemehuevi of eastern California he is Coyote's elder brother, and plays a role similar to that of Wolf's

in Northern Plateau Shoshonean myths. See PANTHER. [EWV]

Mourisca The Portuguese version of the *Morisca* dance form. The male dancers are called *Moriscos* and the whole festive conglomerate a *Mouriscada*. They are traditional features of Corpus Christi processions and fiestas, and also celebrate San Juan's Day (summer solstice, June 24) and other Catholic festivals. As other *Moriscas*, they consist fundamentally of battle mime between two factions, commonly with a dramatic frame. Thus, in the *Mouriscada* of Maltas, a *Rei Moro* (Moorish king) entices a beautiful maiden, besieges her castle, and is finally routed with the consequent rescue of the maiden. By this element of folktale it is linked to the *autos*. The most interesting *Mouriscada* is the battle between *Mouriscos* and *bugios* at Sobrado, in revealing origin in demonology and vegetation mime. A number of degenerate forms have discarded the battle mime, i.e. the *dança do Rei David*, *dança do genebres*, and the version in Casalinhos which retains *mauresque* costumes—tall helmets, beribboned wands—but consists of steps from popular dances (*viras*, *verdegaios*, *foxtrots*.) The stick dances or *paulitos* are either derivatives or parallel developments. For discussion of symbolism see MORISCAS. [CPK]

mourning In communities accustomed to express grief for the dead the patterns of expression are extremely diverse as between communities and between the social status of the persons who grieve. Most communities tend to formalize their lamentations. Thus, the sending of flowers, sometimes in ostentatious displays, the giving of gifts to charity, to the bereaved family, or actual or symbolic gifts to accompany the ghost on its otherworld journey are customary. In some communities the expression of spontaneous grief is formalized and the head of the bereaved family or the entire family is expected to lament over a period of days or weeks and to renew its laments at stated intervals over a period of years. The lamentation consists of weeping, wailing, beating the head, soiling the body and clothes, refusing food, wearing tattered or disreputable garments. Professional mourners are frequently engaged for this purpose. The Irish wake in which the women wail in the parlor while the men drink in the kitchen is a current example of this sort of lamentation which is also frequently mentioned in the Bible. The Jews, Slavs, and Chinese are three peoples who indulge in noisy lamentation over a long period of time. In Greece the lamentation became so excessive that Solon legislated against it by restricting it to close members of the family. The words in which this grief was expressed gave rise to the literary form known among the Greeks as "elegies" and among the Jews as "lamentations." [RDL]

➤ Among all North American Indians mourning observances of one sort or another are obligatory for close blood relatives of the dead and the surviving spouse if there is such. Elaborate mourning ceremonies for the dead are also held by some tribes within a year or so after burial.

Close blood relatives fast or abstain from certain foods (meat, salt, grease, water, usually) for a prescribed number of days after the death, in many tribes. They may not wash their hair or put on new clothes; a man should not hunt or a woman gather wild foods. Parents who

lose their first-born child are under especially strict rules in many tribes; they should remain in isolation, refrain from intercourse, fast, remain unwashed, wail, for a prescribed number of days or months. The mother of the infant should, in many cases, cut or singe her hair off short. Ritual purification (often a ceremonial bath, or being smoked in cedar or other incense) should take place at the end of the mourning period. Widows, especially, but also widowers to some extent, were also under rigid tabus after the death of a spouse. Widows in many tribes were expected to remain in seclusion, cut their hair short, cover their hair and face with ashes, pitch, or clay, wear old clothes, fast, cut themselves or cut off a finger joint. Only after they had been ceremonially released by their dead husband's relatives could they resume their normal life and remarry.

Gravediggers and corpse-handlers are under many of the same tabus enjoined on relatives for a few days after a funeral. In some Eastern and Southwestern Woodlands tribes dances could not be held for a month after the death of someone living in the village or pueblo. In some tribes the bones of a dead child or spouse were made into a bundle and carried on the back for a year or more by the mother or widow. It is said that the English name for the Carrier tribe in British Columbia derives from this custom observed by its members. Among the Ojibwa and other Eastern Woodlands groups women made up a "spirit bundle" to represent a lost relative, especially a child, carried it with them, fed, talked, and slept with it.

In three parts of the continent at least commemorative mourning ceremonies of an elaborate sort were held to honor either all the dead or individual dead of the preceding year, and smaller feasts or ceremonies in honor of the dead were given by many tribes. The Eskimo hold memorial feasts for the dead late in November; near relatives are hosts; the dead are present, beneath the house floor. They enjoy the activities in their honor, "eat" the food and water given them, and "receive" the clothes put as a gift on their namesakes. At North Pacific Coast feasts the spirits of the dead were also present, and fed, the food being passed through the fire to feed them. Similar family feasts were held for the dead elsewhere. The Huron of the Great Lakes region held a celebrated ceremony for the dead in the fall, when all who had died during the year were disinterred by relatives, the flesh cleaned from the bones, and the bones wrapped in beaver and other valuable skins and reinterred in a clan burial pit. Among the Indians of central California, from the Maidu southward to the Yokuts and Luiseño, an annual mourning ceremony was held, at which images of the dead and property, especially finely made baskets, were burned, and shell currency was scattered among the wailing excited mourners. These California mourning ceremonies ("burnings" or "Fiestas") lasted several days; they were attended by many or all members of the tribe and visitors; food for feeding the group was usually provided by the chief and relatives of the persons whose death was being commemorated. The burning of the image climaxed the ceremony. Trading and exchange of gossip went on during the rites; gambling games were played and dances held and, in the words of one Maidu woman, the annual burning was a highly anticipated and most "joyful" event. See BURIAL; FUNERAL CUSTOMS. [EWV]

 Cutting of the hair is one of the most commonly observed funerary rites in South America. Often the mourning period ends when the hair of the relatives has grown again to a certain length. The mourners discard their ornaments and neglect their persons. They often paint their face or their body black with charcoal (Tierra del Fuego, Araucanians) or with genipa (Tupinamba, Sipibo, Macushi, Mundurucu, etc.). Red was also the color of mourning in some regions (Chibcha, Macushi). In the Andean region mourners dressed in black. Widows among the Chaco tribes pull a net bag over their head or cover it with a piece of cloth.

Mourners refrain from certain foods (for example, game among the Taulipang, or fish and meat among the Mbaya) and sometimes observe a rigid diet (Apiaca, Xingu tribes, etc.).

The name of the dead becomes tabu and, if it included words in common use, these became obsolete. In the Chaco the closest relatives of a dead person took new names.

Widows are secluded for a few days (Araucanians) or for several months (Chaco tribes).

In many tribes, mourners show their grief by throwing themselves to the ground (Guaraní, Apinayé) or by gashing their bodies with sharp instruments (Ona, Tehuelche, Pampa, Cayapo). In the ancient tribes of the Parana delta women cut off a joint of their fingers.

Soon after death or immediately after the burial, the relatives, generally the surviving spouse, praised the dead person, reproached him for having abandoned them, and described the greatness of the loss. Funeral laments are either wailing and crying or monotonous chants uttered in a plaintive voice. Although they are generally meaningless utterances, sometimes they contain expressions of grief and regret. As a rule they take place at dawn or sunset.

Dances are sometimes performed after the burial (Yahgan, Saliva, and the masked dances of the Cobeuo and other tribes of the Caiari Uaupes).

The mourners cleanse themselves from the evil influences and the contagion of death by washing themselves in a river (Chiriguano, Saliva, Paez, Quechua) or jumping over a fire.

Throughout South America, among civilized and wild tribes alike, the personal effects of the dead are either buried with him or are broken or burned. Only exceptionally valuable pieces such as stone axes and canoes could be retained by the heirs. The domestic animals belonging to a deceased person were frequently killed on the grave (Warrau, Muinane, Iquito, Zaparo killed the dogs; the Tehuelche slaughtered the dead man's horse). In ancient Peru llamas were sacrificed on the sepulcher.

In the areas where there were powerful chieftains and kings, the wives and the servants of these rulers were often buried with them. Suttees and slave sacrifices occurred in Peru, Colombia, the West Indies, and in those parts of the lowlands where Andean influences were strong.

Measures are also taken to prevent the ghost from returning and harming the living. Ashes are strewn on the footsteps of the mourners (Araucanians, Bororo, Jivaro), arrows or fire weapons are discharged against the ghost (Indians of the Uaupes region, Macushi). Or an attack is simulated against him (Araucanians, Ayмара).

The end of the mourning period is often marked by a special ceremony. The Tucano and Cobeuo perform a masked dance symbolizing an attack of the funerary house and the defeat of the spirits; the Tupinamba gave a big drinking bout; the Rukuyen and other Guiana tribes celebrate a dance during which the guests lashed at each other with whips; the Caingang broke their ties with the dead in a big ceremony held several months after his burial. [AM]

mourning songs Dirges, laments, eulogies of the dead, funeral ballads, or merely rhythmic wailing cries, sung at the deathbed or at the graveside during funeral rites and in the mourning period and sometimes repeated on other occasions, such as anniversaries of death, exhumations, and feasts of the dead. The custom of such wailing and singing is age-old and world-wide, and the attendant beliefs and practices are markedly similar—whether the singing is Russian or Australian, African or Polynesian, Irish or Corsican, American Indian or Arabic. Laments at the most primitive level (which is not necessarily consonant with the general level of the culture) are little more than howls and screams of actual or ritually obligatory grief; at the other extreme (which may be found among peoples called “primitive”) the songs achieve a high order of poetic and musical expression approaching the lyric elegy and the epic lay. Frequently both types occur side by side, the formless outcry of the death wail being consciously distinguished from the more organized cadences of the mourning song. See KEEN.

The songs, generally sung in slow, mournful, dragging chant style, are often addressed to the departed, saying in effect: “Why did you leave us? What did you lack to make you happy? Look with pity on the children you have left. Long is the day without you. Dark is the sun since you are gone. Never will your like be seen in this world again.” Some recite the events of the life that has ended and are testimonials to the deeds and character of the dead. The Irish *keen* and the Corsican *vocero* are especially laudatory, detailed, and individualized. Others, such as the mourning songs of the Kwakiutl Indians, may be more figurative (“it broke down, the post of the world”). Chinese, Irish, Ruthenian, and other dirges express reproach to the dead for having died (“Father, how can you leave me behind?”). Some South American Indian and Corsican examples carry a promise to avenge the death.

A feature of Greek and Chinese laments is the loud calling of the name of the dead just before burial. If he does not answer or rise up, it is safe to close the coffin or the grave. He is not sleeping but really dead. Among North and South American Indians and Australian aborigines, the dirges and wails avoid the name of the dead, and renaming of those who bore the same name is required. See NAME TABU; TABU.

The words of the songs are punctuated with shrill or plaintive mourning exclamation characteristic of each people: *aue* in Polynesia, *ochone* in Ireland, *isa lei* in the Fiji Islands, *ai lanu* and *maa-ne-hra* (see LINUS SONG), *ehéu* in Latin, and *hana, haya, or hanu* among the Indians of the American Northwest Coast. (The last, according to Barbeau, is the same as the word meaning “alas” in Chinese Buddhist chants, echoes the sound of

East Asiatic dirges, and is a relic of the influence of Buddhist missionaries.)

While generally the theme of dirges is all praise of the departed (*de mortuis nil nisi bonum*), the tribe of Badagas of the Nilgiri Hills of India sing accusations to the deceased of all the sins in the catalog, which are transferred from the soul to a scapegoat buffalo calf, so that the soul may go unblemished out of this world.

The purpose of the singing is essentially the same everywhere, though varying explanations are advanced and details of the observance differ. The custom is protective for the living and sometimes also a comfort to the dead. It is a propitiation to the spirits of the departed, who are believed hostile to and envious of the living. The soul, who lingers near his body, must be flattered and reminded of his ties of affection with the survivors, so that his newly acquired supernatural influence will be for their good and his malice warded off. Demons hovering over the place of death must be frightened off with loud noises, and the journey of the deceased into the world of spirits must be eased by a bridge or wings of song and by gifts, payments, food, and sometimes transportation for the trip. Among the Pueblo Indians (Santo Domingo) the medicine men accompany a farewell song of the departing spirit to his people with shaking rattles and holding up eagle wings in token of the eagle which carries the spirit to the other world. In Omaha Indian belief the song, which itself came from the land of the dead, encourages the spirit on its way to the unseen world. The Klamath Indians believe that for three days the departed soul is menaced by devils, and, until it is safe, the friends keep up a fire and a determined wail to scare them away. Occasionally, as in the Congo, an extreme demonstration of grief is assumed as proof that the mourner cannot be guilty of causing the death by witchcraft or other foul means.

A Maricopa story explaining why it is proper to sing for the dying and the dead is as follows: One time Coyote ran afoul of the transformers and was dying. One of them, Namet, felt sorry and sang for him. At the singing Coyote opened his eyes; then he began to keep time with the music; finally he felt so well that he got up and danced.

Failure to honor the dead with song and all due evidence of mourning is believed to invite the anger of the spirit, who will take revenge by sending sickness (Basuto), by reappearing as a vampire (Slavic), or by refusing to rest in the grave and walking the earth to haunt the survivors. When a barren woman dies among the East African Ja-Luo, a dirge is raised immediately, as for any other death, but since she would be more than usually jealous of the living, and since she has no offspring of her own to haunt and bother and might thus haunt anyone, a special precaution is taken to prevent her walking—a thorn is stuck into her foot. Then the dirge is stopped, not being needed any further.

These reasons and purposes of the lament do not exclude the existence of genuine sorrow for the loss of the person; they do explain the exaggeration of outward expressions of bereavement, the dramatization of grief by persons only remotely connected with the deceased, the rapid emotional recovery of many of the participants once they have taken their turn at singing, and certain other customs to be discussed. Fiji etiquette requires

the news of death to be conveyed and received with weeping. In China, visitors to the home of mourning are expected to wail ceremonially at stated points in the visit, and the wailing of the funeral procession is maintained as it passes through inhabited sections, but when it reaches open country, the lamentations may stop. In Dahomey, there is both a ritualized wailing, the *avidochio*, preliminary to the burial, and an outburst of personal grief at the actual burial.

The singing of the dirge is generally a function of women, though men take part and even lead it among the Chinese, Kaffirs, Dahomeans, etc. The North American Indian traditionally sings his own death song, which is either composed in advance and memorized so that he may die singing, or is improvised on the deathbed. The singer may be the chief female mourner—the mother, widow, etc.—, it may be the best friend of the deceased, who plays an important role in Dahomey, or the favorite playmate, as sometimes in Corsican children's or young people's funerals, it may be a group of related or associated persons, such as the Afro-Bahian cult group or the Dahomean *dokpwe*. In many parts of the world, however, the wails and laments are the special duty of hired or hereditary professional public wailers, always women.

The use of hired mourners (Latin *præficia*) is ancient and widespread. They are shown on Etruscan funeral urns. In China, Russia, and all over the Near East, they have been a part of funeral ceremonies for centuries. In Calabria, the position of public wailer is hereditary from mother to daughter. Singers of the vanishing Irish keen were sometimes professional, sometimes members of the bereaved family and neighbors. Prostitutes serve as hired mourners among the Bedouins of Abyssinia. Among certain American Indian tribes (the Mandans of Dakota and the Gros Ventres) the one who wails longest receives the highest fee. Paid women wailers howl at the graveside three times a day for a number of months among the Chiriguano of South America. In Corsica, the hired mourners are called *voceratici*, singers of the *vocero*, or dirge. In Malta, two women, *neuuiha*, are hired to sing laments. They appear in long mourning cloaks, sing by the bier, and carry on demonstrations of uncontrollable grief at the grave.

The songs of the professionals have the semblance of improvised creations for the particular occasion, and the details of the testimonial and the events of the life are tailored to fit the individual case, but the pattern of phrasing and the rhythmic and melodic form of the whole performance are traditional. In Tikopian practice the dirges are composed for a specific kinship tie—for death of a father, mother, etc.—and each type is sung only for that relationship of the deceased.

The singing and wailing is frequently accompanied by self-mutilation and by an appearance of intense emotional disorder, betokened by dishevelled hair of the bereaved and the hired mourners, scratching or cutting the face, plucking out or cutting off of the women's hair at the graveside, stamping the feet, rolling in dust or ashes or putting these on the head, wearing of sackcloth, etc. Such lamentations and displays of grief by the Trojan women for Hector's death were described by Homer, and are characteristic of mourning all over the world. In China men formerly loosened their queues and

let their hair hang ragged and unkempt. In Corsica men let their beards grow rough for weeks after the funeral. In Polynesia mourners slash their foreheads with shells and knives. In Biblical Israel, mourners rent their garments and tore their hair. See FUNERAL CUSTOMS AND BELIEFS.

Such unrestrained demonstration has occasionally aroused the disapproval of authorities and been the subject of legal decrees. Solon made it a law that only the nearest female kin of the deceased should take part in the mourning and that there was to be no cheek-scratching, no breast-beating, and no singing of set forms. Charlemagne attempted by edict to prohibit the singing of "profane songs" at funerals. Obviously these and similar efforts had little effect on the custom. In Provence and in Gascony, lay dirges and lamentations were carried on hundreds of years after the death of Charlemagne, and they are still heard among Greek-speaking peoples. They were sung in England into the 17th century, though the songs have survived only in rare cases, as the *Lyke-Wake Dirge* ("This æ nighte, this æ nighte/ Everie nighte and alle/ Fire and sleete and candle lighte/ And Christe receive thy saule.").

Formal laments for particular heroes, gods, spirits, and notables are a part of the tradition of many peoples. Thus among the ancient Teutons there was a lament for Attila and a *geomorgyd* (dirge) for Beowulf. In Provençal French the lament was called *planh* (complaint), and was one of the subjects for *trouvère* composition. See COMPLAINT. The Provençal singer Gaucelm Faidit composed a *planh* for Richard the Lion-Hearted. The aborigines of Australia have preserved a lament, called *The Broken String*, for a magician and rainmaker who was shot while disguised as a lion. The broken string refers to a ringing sound in the sky, which ceased to be heard at the magician's death. See also FROG MOURNING SONG. Composition of laments for the noble houses of Scotland was in the hands of experts, bards, whose works were called *coronachs*. In Toyama Prefecture, Japan, a lament for the defeat and flight of a once powerful family of the section is sung as a harvest song.

Laments sung at the harvest are common in European and Mediterranean tradition. While the singing is bound up with the symbolic death and resurrection of the corn spirit, the form of the songs resembles closely the local dirges for human deaths.

Many other ceremonies, apart from human death and burial, are associated with songs of mourning. The Tikopian dirges have a second special use, certain ones, differing from the death chants, being sung for boys on the day of their initiation. These express grief and sympathy for the pain of the circumcision. The same wail, *aue*, is interspersed with the words, and the same ritual cutting of the forehead and tearing of the corners of the mouth occur as in the death laments, but each mourner's wailing ceases when he rubs noses with the boy after the operation.

The killing of sacred and sacrificial animals demands ritual lamentation among many peoples. Examples are the dirge songs for bears among North American Indians and similar songs among Siberian tribes, the Ainus, etc., as well as the California Akaghemem laments for the sacred buzzard and the Egyptian lament for the sacred ram of Amen. In each of these rites

the animal is royally groomed and prepared for its execution, receives apologies and speeches in advance, and is sung over after death with the solemn honor due to the passing of a king or god or the pathos of the loss of a beloved child.

Occasionally dirge singing is a part of a mock funeral, performed for a magical purpose. In Madagascar, a maiden who dreams that her children will die before her may ward off the evil fate by killing a grasshopper, maiming others to buzz and wave their legs around it in imitation of mourners at a funeral, and herself singing laments over it as for a dead child. Having by this act lost and mourned her yet unborn children, she cannot again lose them in real life. A similar Albanian mock funeral was formerly held to rid the fields of locusts. The women would catch a few, march in a mourning procession with dishevelled hair, and sing dirges over the locusts as if they were their nearest and dearest. The march ended at the river, where the locusts were drowned. The death of the remaining locusts was sure to follow.

Another type of mock funeral, which is still occasionally held, though in the spirit of horseplay, is the burying of the Carnival figure. A straw man or other effigy is burned or hanged or drowned for his carnival sins, and buried to the accompaniment of parodied dirges and lamentations. At Saint-Lô in Burgundy the corpse of Shrove Tuesday was in recent times hauled through the streets, followed by his chanting and weeping widow, a burly man in female dress, howling a burlesque of mourning songs.

Elsewhere, however, death songs are dangerous and not to be trifled with. The 42 "gravehead" songs of Dahomey Negroes, sung at the grave a day or so after the burial, can be performed only by those who are sufficiently exalted in spirit. Any others would sing at their peril. The Papa songs or death songs of Surinam Bush Negroes would bring death to the village if sung at any time but the death ceremonies.

Ceremonial dancing (see DEATH DANCE) sometimes goes with dirge singing and burial rites. (Members of the Dahomean *dokpwe* carry the corpse in a strenuous pre-burial dance.) And instrumental music and noise are often a prescribed part of the proceedings. The instruments most often used are those with life-giving, exorcising, and amuletic powers—the flute or oboe, the trumpet, bells. Thus, the Latin *naenia*, a song praising the dead, was accompanied by the oboe; an Arab lament of the North African coast is played by the flute alone, having lost its original vocal character; the beating of an iron bell, as well as a whole battery of orchestral instruments, accompanies the Dahomean rites; and in China one of the first accessories hired for a funeral, even before the death has occurred, is the pair of copper trumpets to frighten away demons and unpropitiated spirits. For the sake of both the living and the dead, both the music and the din are urgent.

THERESA C. BRAKELEY

mouse It is reported that mice were created in the ark by the Devil (A1853.1), or that they fell to earth from the clouds during a storm. In Germany it is said that witches make mice: they take a piece of cloth and make out of it a little mouse, saying, "Run along and come back," after which the mouse runs away alive,

Witches in northern Germany when brewing magic herbs say, "*Maus, Maus, heraus in Teufels Namen!*" whereupon mice jump out of the pot. A story tells of a girl who took two pinches of earth, made them into little balls, threw them over her shoulder, and soon the whole field was filled with mice.

The mouse is associated with the Greek Apollo Smintheus, and mice were kept in his temple. For its cleverness in catching rats and mice, the Egyptian mongoose is often called "Pharaoh's Cat," though it is far better known as "Pharaoh's Mouse."

In general, the mouse is a beast of ill-omen (B147.2.1.3). It is a death sign if it gnaws the clothes of a sleeping person; it has the evil eye, and the ancient Greeks had coins struck with the picture of a mouse which they used for protection against it. Mice as ministers of vengeance plagued the Philistines who had taken the Ark of God from the camp of the Israelites. They returned it later with five golden mice (1 Sam. vi, 45). Among many peoples the soul emerges from the body in the form of a mouse during sleep and at death. After leaving the sleeper, if the mouse (soul) did not return, the sleeper died; hence it was considered dangerous to awaken a person lest his soul be wandering somewhere.

In Bohemia and parts of Germany white mice are regarded as luck bringers and are encouraged and fed to keep them about a house, but in some districts a white mouse is a death omen. In Germany it is thought that mice flee from a house in which there is (or is to be) a death, just as it is said that rats desert a ship about to sink. In Jewish folk belief, anything already nibbled at or gnawed by a mouse is never eaten; to eat mouse-gnawed food causes forgetfulness, or sore throat. In France and northern Germany it is said that the appearance of great numbers of mice is an omen of war. In Greece a mouse hole gnawed in a bag of flour, or in clothing, portends hunger or death.

The mouse was an early element in the healing art and was widely used in medicine in antiquity. Examination of the stomachs of children from pre-dynastic excavations in Egypt indicate the presence of mice. The custom of administering mouse-pie or fried mice as a cure for bed-wetting has been reported not long ago from England and from among the Pennsylvania Dutch, and still exists in many groups. Cooked mice were also recommended for smallpox, whooping-cough, and measles. Pliny recommended mouse ashes mixed with honey for earache and as a guarantee of sweet breath if used as a mouth wash. [cgs]

 The mouse figures as helpful animal (B431.2) in African Negro and Indian folktale. A man is transformed into a mouse (D117.1) and a mouse is transformed into a person (D315.2). The Devil appears as a mouse (G303.3.3.9); the Devil himself in the form of a mouse gnawed a hole in the ark (A1811.2). The mouse often plays the role of witch's familiar, or the witch appears in the form of a mouse (G211.8). The mouse sits on the lion's mane while the huge beast rages at his impertinence (J411.8.); but in gratitude for being spared the mouse saves the lion from the net. See ELK; FLOOD; HATTO; LION AND THE MOUSE; MOUSE TOWER.

mouse tower A tower or other building in which, in various local legends, some heartless miser has been devoured by mice or rats; specifically, a medieval tower

near Bingen on the Rhine where the Hatto legend is localized. The story is told in several localities in Germany, Austria, Switzerland, Poland, and Scandinavia. One legend records that a certain German count bought up all the corn of his district, expecting to become wealthy on speculation. There was a famine the following year, and he was for selling at great profit. Swarms of starving rats, however, swept across the fields, got into his barns and ate all the corn, invaded his castle and ate the old man himself. Among other mouse tower victims were Adolf, a bishop of Cologne, who was eaten by rats about 1112 A.D., the Swiss Freiherr von Guttingen, eaten alive by rats in his castle on Lake Constance, and Widerolf, another German bishop, who was devoured by mice for suppressing the convent of Selton. For a complete discussion of the legend, see S. Baring-Gould, *Curious Myths of the Middle Ages*, London, 1884, pp. 447 ff., and Felix Liebrecht, *Zur Volkskunde*, Heilbronn, 1879, pp. 1 ff. See HATTO.

Mṛigāṅka In Indian folktales, the magic sword by which its owner can conquer and control the world: literally, the moon, because it is bright and shining. In Somadeva's story of "Śrīdatta and Mṛigāṅkavati" the sword was controlled by a yaksha cursed by Kubera so that he had become a lion.

Mṛikanda The culture hero of the Koshti, a caste of Indian weavers; the first to weave cloth for the gods from lotus fibers. He was rewarded with a tiger and a giant. He killed the giant for disobedience when he made the first loom from his bones. The tiger, on the other hand, was obedient and to this day has so much respect for Mṛikanda that all a Koshti need do, if he meets one in the jungle, is to mention the hero's name and the tiger will pass him by.

dMu One of the eight classes of indigenous Tibetan country gods; bloated fiends, dark purple in color.

Mucalinda In Buddhist mythology and belief, the serpent-king who spread his hood as a canopy over Buddha to shelter him from the elements during the third week of the period preceding the enlightenment.

Mudjikiwis (1) The hero of a rather long American Indian tale of fairly restricted distribution (Plains and Swampy Cree, Plains Ojibwa and Ojibwa) which, it has been suggested, may be an American Indian adaptation of the European tales of Cupid and Psyche, or the Swan Maiden. The American Indian myth concerns ten brothers who find their house put in order by a mysterious housekeeper, much to the relief of Mudjikiwis, eldest of the brothers. The housekeeper is a beautiful girl who marries the fifth brother. Mudjikiwis is jealous, and courts her; when she rejects him he shoots her. She flees; her husband goes in quest of her, and is advised and helped by supernatural old women. He succeeds in reaching an upper world of the Thunderers, where his wife is living, wins her back, and takes her and her nine sisters home as wives for his nine brothers. The eldest of the sisters married Mudjikiwis.

(2) In Longfellow's poem *Hiawatha*, Mudjekeewis is the father of Hiawatha. After Mudjekeewis killed the Great Bear he was honored by having his name changed to Kabeyun, the West Wind. [ewv]

mudrās or hasta-mudrās Dance-gestures of the Hindu *natya*. They translate the *rasas*, or emotions, into decora-

tive expressions of the hands, highly conventionalized by their ancient divine tradition. Thus the *Pataka* hand originates from Brahmā. It is the flag hand of victory, with the fingers and thumb extended straight and close together. Among its numerous variations are the symbol for the world of the gods with palm up, for the underworld with palm down, and palms joined for devotion. The *Tripataka* or "three-fingers" pose came from Śiva and expresses invocation and is used for holding weapons. The third finger of the *Pataka* hand is bent and joined to the thumb at the middle of the palm. The *Ardapataka* hand, expressing a dagger, flag, tower, or horn, is formed by bending the little finger of the *Tripataka* hand. The *Sirpa-sirsa* hand, from Vishnu, is used for *arati*, light-waving, and water-offering at twilight. The hollowed palm and fingers of the hand form the cobra's head. The *Ardachandra* hand forms a half-moon by stretching the thumb of the *Pataka* hand. The *Padmakosa* hand forms a lotus bud by drawing the fingers and thumb together.

These are a few examples of this elaborate code, which includes in the *Bharata Nāṭyam* 24 symbols for a single hand, and for both hands, plus 13 for *nr̥tta*; in the *Kathakali* school 64 symbols form 500 words. The wrist is the supple and expressive pivot for the hand; the palm, as the center of expression, is often turned toward the spectator.

The mudras have influenced all of the dance cultures of the Orient, and, with loss of symbolism, that of Spain. The effects are most evident in the South Pacific, especially in the Hawaiian *hula*, which contains in its gesture code many equivalents of the mudras, as the identical form and meaning of the *Ardachandra* and *Padmakosa* hands. [GPK]

muerte, danza de la Dance of Death in its Spanish version. Though the concept of the impersonation of death is probably of northern European origin, and came to Spain with the Austrian dynasty, it is in Spain and Mexico that it developed the most fantastic forms. The Catalan *danza macabra* used to consist of a whole group elaborately dressed in skeleton uniforms and high head-dresses, manipulating *castañuelas*, or a more symbolic clock and scythe, and cavorting in quadrille or serpentine formations. In Mexico *la muerte* usually clowns as a single impersonation of death in Carnival processions, urban as well as rural. Here the blend with Aztec death concepts has invested the figure with particular grim significance, as well as humor. [GPK]

mugwort A tall plant (*Artemisia vulgaris*) common through the north and south temperate zones, having grayish green leaves and masses of grayish yellow flowers. Mugwort is the woman's and maiden's plant: named for and sacred to Artemis, whose shrines were often centers of healing. Mugwort was said to ease childbirth, control the complaints of maidens, and cure all women's diseases.

The North American Chippewa Indians used a decoction from the root fibers in a steam-bath for the aged to give them strength. These people also used mugwort to counteract charms, as a remedy for all women's diseases, dysentery, hemorrhages, and as a hair tonic. Quite widely among both primitive and rural people, mugwort was famous as a protection against mice, weariness, eye troubles, and magic.

For centuries in Europe and Asia mugwort was regarded as a magic herb, sought by witches, occultists, and crystal-gazers. In the British Isles especially it is known to dispel weariness; even a sprig of mugwort in the buttonhole prevents one from tiring. Modern medicine has cashed in on this old wisdom: a nervine and stimulant made from the roots does provide a pickup after fatigue. Mugwort leaves, steeped in hot water, also provide a well-known eyewash.

In China, dolls made of mugwort plucked on the Fifth day of the Fifth month are suspended over gates or doors to expel poisonous airs or influences. Chinese surgeons use it in cautery and the leaf, Aiyeh, is used in Chinese art as a symbol of felicity. The Ainu of Japan also use bunches of the herb to exorcise the spirits of disease, who dislike the odor and flavor of the plant.

Its use in Europe is widespread. In France, if gathered on the Eve or Day of St. John, mugwort is believed to protect corn from mice. In Poitou it is worn as a girdle to prevent backache. In Normandy wreaths of it are a protection against thunder and thieves. Mugwort sprigs are used to hinder witches from laying their spells on butter. In Germany the mugwort girdle is called St. John's girdle and is believed to protect the wearer for a year against ghosts, magic, misfortune, and illness. If one holds the girdle up and peers through it at the Midsummer bonfire, it will prevent headache and smarting eyes. Washing a cow with an infusion of mugwort will break a spell cast on the animal. The Germans also believe that he who carries mugwort in his shoes will not grow weary. In Mecklenburg there is a legend that at the root of the mugwort, at noon on Midsummer Day, lies a burning coal which is a remedy for all sorts of maladies, or may turn to gold if the finder digs it up and carries it off in silence. In Belgium and the Isle of Man the plant is a protection against witchcraft.

muñeira gallega A courtship dance of Galicia in Spain. In the first part the man tries to impress his partner with all manner of acrobatics and leaps, finally kneeling before her. In the ensuing couple dance he continues his leaps and turns, while she moves modestly with eyes cast down. In the second part many couples join in a round dance, the women forming an inner circle and the men an outer, protecting circle. Or the dancers may line up in a double file, and two men engage in mock rivalry. In conclusion couples dance again separately.

The round dance is termed *contrapaso* and shows a strong relationship with the *contrapàs* of Catalonia. Both are probably of ceremonial origin, derived from Greece. [GPK]

mulberry In the well-known story of the ancient Babylonian lovers, Pyramus and Thisbe, Thisbe, arriving first in a forest spot for a secret rendezvous, was startled by a lioness, fled, and dropped her cloak. Pyramus, arriving on the scene, found the lioness worrying the cloak which was covered with the blood of an ox the lioness had just eaten. Jumping to conclusions, he killed himself in grief. Thisbe returned, saw her dead lover, and killed herself under the mulberry tree beside him. Their blood saturated the ground beneath the tree and the berries have maintained the rich color ever since.

The Romans dedicated the mulberry to Minerva; and it is also a sacred tree in Burma. God signaled to David

by rustling the tops of the mulberry trees when the right moment came to attack the Philistines in the valley of Rephaim.

In China where the mulberry tree is cultivated extensively for the silkworm culture, the people regard it as a symbol of industry. So important is it in the life of China that farmers and villagers constantly appease and invoke San Ku Fu Jên, the goddess who protects all mulberry trees growing outside city walls. But the mulberry tree is never planted in front of a house lest it bring sorrow. To carry a staff made of mulberry wood betokens mourning for a mother.

In western England rural people expect no more frost after the mulberry has started to leaf. In Germany children are prevented from eating the berries by being told that the Devil needs them to black his boots. In Greece a mouthwash is made from the bark and leaves which is said to ease toothache. The North American Meskwaki Indians use the root bark of red mulberry as a general cure-all, and that of the white mulberry to expel worms. For the use of mulberry in the soporific sponge, see LETTUCE.

mullen A tall stout woolly herb (genus *Verbascum*) having spikes of yellow flowers. Like many another plant, its virtues are contradictory, it having been in medieval times a monastery charm against demons and at the same time a favorite of witches for their brews and potions. Roman soldiers dipped this plant in tallow to make torches, and the thick down on the plants is still used today to make candlewicks.

North American Iroquois Indians used mullen leaves in poultices for swellings and sores, and such poultices are still used more or less generally in the rural United States and England for toothache and neuralgia. The Mohegan-Pequot tribes smoked the leaves for asthma and sore throat. The ancient Romans used mullen as a remedy for coughs, and throughout Europe it is still made into an ointment for chest and bronchial ailments. The handful of Shinnecock Indians on Long Island today still recommend a tea from the leaves as good for colds.

In rural Massachusetts mullen leaves were considered good for the bite of a parrot. The leaves rubbed on the face bring ruddiness to the cheeks. Southern United States Negroes know the remedial properties of this plant, holding that a tea from the leaves is good for fevers, colds, and swellings; tea from the flowers is good for rheumatism; and a few mullen leaves put in the shoe before leaving the house will prevent one from taking cold. An Ozark love test consists of bending down a mullen stalk to point toward the beloved's cabin. If one's love is returned, the plant will spring up again; if the beloved loves another, the mullen will die. In colonial times the Swedish settlers in New Jersey smoked mullen leaves as a substitute for tobacco. Parkinson says the moth mullen is useless except to attract moths.

Müllenhoff, Karl Victor (1818-84) German philologist; successor to Jakob Grimm at the Prussian Academy of Sciences (1864). His works are principally on German philology and antiquities, and include *Denkmäler deutscher Poesie und Prosa aus dem viii-xii Jahrhundert* (1864), written in cooperation with his pupil Wilhelm Scherer; *Das deutsche Heldenbuch* (1866-73), with others; *Deutsche Altertumskunde* (1887-1900); *Sagen,*

Märchen, und Lieder der Herzogtum Schleswig, Holstein, und Lauenberg (1921). In his glossary to Klaus Groth's *Quickborn* (1856), he made the first grammatical and lexicographical study of Plattdeutsch.

multiple creators A trio of creators, or a creative trinity, is believed in some North American Indian tribes to have done the same sort of deeds (creation and ordering of the earth, creation of man, ordering of life, etc.) that is credited to only one, or at most to two creators in the majority of American Indian groups. (See DUAL CREATORS.) Such multiple creators are found chiefly in the west; the Maidu of California, for example, have Earth-Initiate, Father of the Secret Society, and Turtle, while the nearby Yana have Rabbit, Grey Squirrel, and Lizard. The acts of this latter trio are relatively trivial, however, when compared with those of the Maidu creators. The Salinan, farther south, also have a creative trio: Eagle, Kingfisher, and Coyote. [EWV]

multiple heavens, hells The destination of the souls of the dead is, in many cultures, only vaguely defined. Often, as for instance in ancient Teutonic belief, the souls wander endlessly in a Wild Hunt. Or they haunt the place of their death, or they remain near the resting-place of the body, or they become transmigrated into bats or serpents or other animals or beings. But, as often, souls go to a place of reward or punishment. Sometimes the division is sharp: the souls of the good go to a heaven or paradise; those of the evil are condemned to eternal punishment in a hell. To these are added the fringe-worlds: a Limbo, where neutral souls go, souls of those too young to have been good or bad, souls of those who had no opportunity to embrace the faith; or a Purgatory, where those souls not deserving of eternal damnation are purged of uncleanness before admittance into Paradise. Paradise may exist in heaven, and there may be at the same time a Paradise on earth. Sometimes there are several heavens. To Valhalla, where the spirits of brave warriors lived the good life, went only those who died in battle; the commoner sort of Scandinavian soul went to the regions of Hel, which were not originally a place of punishment but a paradise more like the Greek Elysium. Ancient Mexican warriors were united in the sun god's regions; those who drowned went to the realm of Tlaloc, the rain god, etc. Members of various primitive secret societies have their own heavens, separate from and superior to the heavens of the other societies and the common heaven. Medieval European cabalistic belief divided the infernal regions into four, seven, nine, or more areas, each with its own demonic chief. There were seven heavens, each purer in ascending order as it was nearer to God. Mohammedan belief similarly counts seven heavens; there are seven divisions of hell as well (*Sura xv*). Multiplication of heavens and hells reaches its greatest complexity in the Far East. See for example *General Structure of Chinese Folklore* under CHINESE FOLKLORE for a discussion of the more than 84,000 Buddhist hells. See ADLIVUN.

 The Aztecs, Maya, and many of the other native peoples of Middle America divided the world into horizontal regions of religious significance. The heavens, which varied from the 8 of the Cuna of Panama to the 13 in some Aztec and the Maya accounts, were the dwelling places of the gods, ranked in order of their age or importance in the hierarchy. Hell was divided into 9

levels, each of which was presided over by a lord of the underworld. [GMF]

mummers Maskers, in particular the English ritual maskers who enact an age-old play on Christmas Day. The jumbled texts tell of St. George's victory over his infidel antagonist, of a doctor, and a resurrection. Formerly a dragon and hobbyhorse were included in the *dramatis personæ*. In addition to the enacted duel, the group of mummers springily circle sunwise with sticks or wooden swords. They now wear shredded newspaper overall coverings, probably at one time animal skins, similar to the shaggy wild men of medieval Carnival. The resemblance to the Morris on the one hand and the English sword dance on the other is evident, as is also the similar interpretation as New Year vegetation ceremony. Similar mummers are found in Portugal and Thrace to this day. [GPK]

mummified animal helpers A dried-up dog (or tiny beavers or other animals) is kept in a box by the hero. When the latter is killed his widow takes out the animal mummy, which comes to life. The animal collects the hero's bones, howls over them, and the hero revives. This is a recurrent element in Great Lakes American Indian tales. [EWV]

mummy Human carcasses artificially preserved are called mummies. The Egyptians had elaborate methods of removing the vital organs and stuffing the bodies with bitumen and precious spices and performing incantations. This was necessary to enable the soul to enter paradise. Because the soul had to be tried before Osiris and 42 judges, in the XII Dynasty a scarab was put in place of the heart, which it was supposed was weighed on a scale. The magical inscriptions on the scarab prevented it from giving testimony.

Mummification is practiced in several places. The people of Comagre worshipped bejewelled mummies. In Peru mummies were petitioned for health, food, and life. Among the Guanches the preservation of mummies was the work of a special class. The Aleuts hung their dead on poles or put them in rock shelters and caves in life-like positions. In order to gain the skill and good luck of the dead, hunters would take the bodies, put them in streams, and drink of the water. The dried bodies of celebrated hunters were sometimes cut into pieces and distributed. They were used to rub the head of the whale spear.

In the Middle Ages powdered mummy was an expensive drug. It was mixed with wine or put directly on the wounds. In the 16th century Ambroise Paré voiced skepticism and noted that much of the mummy then on the market was not Egyptian mummy and was greatly adulterated. See W. R. Dawson, *The Bridle of Pegasus*, London, 1930, Chap. VIII, "Mummy As A Drug."

A story widely circulated but not verified is that Cleopatra came to an appropriate end in the sewers of Paris. When the Egyptian treasures taken by Napoleon were returned, a mummy in its case was overlooked. Some thirty years ago when a new sewer was being built under the Bibliothèque Nationale, the workmen went into an unused room and found it. Being both tidy and French they dumped its contents into the sewer and dusted out the case. It was not until some years later that an Egyptologist identified the case as having contained the body of Cleopatra. See IMMORTALITY. [RDJ]

mummy A Votjak word meaning mother. The word is used for the names of nature deities, for instance *šundy-mummy*, mother of the Sun; *gudyri-mummy*, mother of thunder; *mužem-mummy*, mother of the Earth; and *šur-mummy*, mother of the river. Such deities are regarded, not as personal beings in the human shape, but as objects of nature. Nevertheless they are conceived as living beings and in possession of a soul. They require sacrifices to reinforce their souls. The sacrifices for the mother of the Earth are put in the soil, for the mother of fire, are thrown into the fire, etc. At the sacrifice of an animal, attention must be paid to the color of the pelts, i.e. for the mother of Sun, white animals must be chosen; for the mother of Earth, black ones; and for the mother of cold, gray, etc. The primitive intention of such sacrifices was of a practical kind; if you make the soul of the Earth stronger, the soil will be fruitful. [JB]

Munchausen Whoever was the true author of *Baron Munchausen's Narratives of His Marvellous Travels and Campaigns in Russia*, it is certain he had a strong arm for drawing a long bow. This small volume, first published in London in 1785 and containing only 45 pages, is a pleasingly mendacious collection of tales which may or may not be poking fun at the travel books of the time. These are probably slightly altered versions of tales told for the entertainment of his friends by Karl Friedrich Hieronymus Baron von Munchausen (1720-1797), a Hanoverian nobleman, who served the Russians against the Turks (1737-39). They were probably written by Rudolph Eric Raspe, a professor at the University of Cassel, who fled to England suddenly, due to the disappearance of certain items of value in the University museum of which he was the curator. The latter part of the book as we know it today was undoubtedly added later by a different hand and does not have the bluff soldierly sincerity which makes the first part so effective.

Typical of the Baron's tales (X91 ff.) is the one of the tunes which froze in a post-horn, which played themselves out in order when the horn was laid by the fire; the hunter's tall tale of loading his musket with a cherry pit, hitting a stag between the horns, and later finding the stag with a cherry tree growing from its head; the story of the big snow, and of tying the horse to a post at the height of the blizzard, to discover next morning—sun shining, snow all gone—the horse tethered to the church steeple. An inescapable beast rushed on Herr Baron in a tight place in the mountains; the redoubtable Munchausen reached down his open maw, seized the tail, and flipped him inside out and hindside to; the animal found himself running in the other direction. See LIARS AND LYING TALES.

Munin In Teutonic mythology, one of two ravens who perched on Odin's shoulders. Hugin was the name of the other. Each morning they flew out into the world and returned at nightfall to whisper in his ears what they had seen and heard during the day.

Mura-mura The dream time and the ancestral spirits of the Australian Dieri. See ALCHERA.

murt A word of the Votjaks meaning man. They have many deities using this name: *korka-murt*, man of the house; *gid'-murt*, man of the cattle house; *obin-murt*, man of the kiln; *nules-murt*, man of the forest; *vu-murt*, man of the water. Such deities are conceived in the shape

of man and probably originate from the worship of the dead. [JB]

muscular tremor Muscular tremors are considered diagnostic signs by several of the Southern Athabaskan groups; the Jicarilla Apache, for example, consider them to be warnings of danger, or suggestions of good luck to come. A short Jicarilla tale has been recorded by Opler, of a dispute between two characters, Muscular Tremor and Involuntary Noise, concerning the outcome of a war going on between the Jicarilla and the Arapaho (Morris Edward Opler, *Myths and Tales of the Jicarilla Apache Indians*, *MAFLS* 31, 1938, p. 391). Among the related Navaho Trembling-in-the-hand is a regular form of prognostication practiced by specialists. See L. C. Wyman, "Navaho Diagnosticians," *AA* 38 (1936): 236-46. [EWV]

Muses In ancient Greek mythology, the nine (originally three) nymphs, daughters of Zeus and Mnemosyne, who presided over poetry and the arts of music. They had as their favorite dwelling-places Pieria near Olympus, their birthplace, Mt. Helicon and the springs Hippocrene and Aganippe, Mt. Parnassus, and Castalia. All these sites were sacred to the Muses. Later poets and mythographers felt it necessary to assign various fields of interest to each of the nine, but agreement is generally lacking. The Muses, and their most accepted provinces, are: Calliope—epic or heroic poetry; Clio—history or lyre-playing; Melpomene—tragedy or lyre-playing; Euterpe—tragedy, flute-playing, or lyric poetry; Erato—love poetry, hymns, lyre-playing, or pantomime; Terpsichore—choral dancing and singing or flute-playing; Urania—astronomy (i.e. cosmological poetry); Thalia—comedy or idyll; Polymnia (Polyhymnia)—hymns, pantomime, or religious dance.

As can be seen, the same field is often attributed to several Muses. There is no doubt however that as a group they presided over poetry. Several times they had contests with human or semi-divine beings, but the Muses always won. Thamyras lost to them, betting his enjoying each of them against whatever they cared to do to him; they blinded him and broke his lyre. Thamyras in Hades, blind and sitting by his useless instrument, was a favorite poetic and artistic example of punishment in the underworld. The Sphinx that terrified Thebes was given her riddle by the Muses.

museums, folk A museum dedicated to the life, work, and creations of people at that stratum of society which works with its hands. Many folk museums contain outdoor units which re-create phases of bygone life at the level described above. Emphasis is upon the working men and women rather than upon leaders of communities.

European Folk Museums: Credit for founding the first European folk museum goes to Dr. Artur Hazelius, who founded Nordiska Museet in 1872 in Stockholm. It was Hazelius who conceived the idea of the vitalized museum which would be a collection of homes, farm houses, workshops, where earlier rural life could be re-created. In 1891 Dr. Hazelius' private collection was set up as an outdoor museum known as Skansen. To it was brought various types of buildings from many sections of Sweden, and in these buildings the whole complex of folk life was re-created. From Sweden the movement spread to Norway, where Dr. Sanders Sandvig founded Sandvigske Samlinger at Lillehammer in 1887. Denmark, Holland,

and Germany all followed suit with re-creations of their own early rural culture. In many instances these museums became centers for the continuing of crafts, folk dancing, and folk music.

American Folk Museums have been slow in arriving. Beginnings were made with collections of tools and implements. Impetus to this movement was given by the Early American Industries Association, among whose leaders were William B. Sprague, Lewis N. Wiggins, C. M. Stow, and Allen Eaton. Notable collections are those of the Bucks County Historical Society at Doylestown, Pennsylvania, and the Landis Valley Museum at Lancaster, Pennsylvania. The New York State Agricultural Society made a collection as early as 1926, for which a building was built at the State Fair, held annually in Syracuse, New York. Here a cobbler, a weaver, and a cooper demonstrated the early crafts, and a log cabin was brought into the building and erected.

Greenfield Village, founded by Henry Ford in 1929 at Dearborn, Michigan, like the Swedish museums, sought to bring together actual buildings and arrange them in a natural pattern. A great collection of implements housed in the adjacent Edison Institute provides study collections of craft tools, implements, and materials. The arrangement of buildings at Greenfield Village seeks to re-create the layout of a midwestern town. The pattern at Greenfield Village was not consistently adhered to and certain European buildings and buildings of specific historical importance, such as Edison's buildings at Menlo Park, were added to the development.

Colonial Williamsburg, Williamsburg, Virginia, the most famous of American outdoor museums, while not a folk museum, does emphasize certain elements of 18th century folk life. Its craftsmen make wigs, pewter, furniture, shoes, and iron work, and these functions are carried on with historical exactitude. The emphasis at Williamsburg is at a higher economic and social level than is consistent with our definition of the folk museum, but no study of folk museums can neglect the work done there.

Old Sturbridge Village at Sturbridge, Massachusetts, was the outgrowth of the collections of Albert B. Wells and J. Cheney Wells, both of whom had been active in the Early American Industries Association. Here thirty New England buildings have been brought together around a village green—there is a tavern, a sawmill, a gristmill, a smithy, homes, barns, a meeting house, general store, a tinsmith, a woodworking shop, and boot and gun shops, etc. The emphasis is upon crafts and craft products. The time covered, roughly speaking, is 1775-1825, the locale, generally speaking, Massachusetts.

The Farmers' Museum at Cooperstown, New York, operated by the New York State Historical Association, has chosen as its scope central New York State from 1780-1850 and seeks to re-create and preserve as many different aspects of folk life as possible. The main building, once a huge stone dairy barn, contains important collections of household implements, farm and craft tools, but increasingly the emphasis is upon demonstration of hand-skills. Flax grown on the property is completely processed: broken, swingled, hatched, spun, and woven. The carding, spinning, and weaving of wool, and the making of rope, woodworking with the early tools, and broom-making are all shown. Beyond the main building a country crossroads is taking form. An

early schoolhouse, a country store, a blacksmith shop, and a lawyer's office have been brought in from different parts of the area and re-erected with the utmost exactitude. A farm house will soon be rebuilt on the property, and the eventual plans contemplate a tavern, a print shop, a carpenter shop, a pharmacy, and other businesses and crafts common to the frontier village of New York State. The Farmers' Museum has an important library relating to American folk culture and a large manuscript and recorded collection of folklore; and at Fenimore House, the museum of history and art directly across the road and also operated by the State Historical Association, there is one of the most important collections of American folk art in the country.

The emphasis of the folk museum is upon the way of life of the working people. It seeks to re-create their environment and to preserve their mind-skills and hand-skills, their arts and artifacts commonplace at an earlier period.

LOUIS C. JONES

Director, New York State
Historical Association,
Cooperstown, New York

 The following discussion of the museum resources of the world in folklore materials is intended to be not a directory but a general survey. Space limitations have made it necessarily a mere skimming of the great number of collections in existence. It is true also that some of the museum collections listed here have been destroyed as a result of the war. In the instance of Poland, for example, all significant museum work can be said to have ended within a short time after 1935, the effective date of the Polish survey below. Although many of the collections undoubtedly have been annihilated, and probably none at all escaped wartime damage, the list has been included on the assumptions that it represents the highest point of Polish museum work in this century, and that postwar attempts at restoration will have taken place even where collections suffered complete destruction.

Africa

University of Witwatersrand Museum of Anthropology and Archaeology, Johannesburg, a representative series of the various Stone Age cultures of southern Africa, together with tools, implements, and utensils illustrating native life and manufacture from South Africa to the Congo.

Duggan-Cronin Gallery of Photographic Studies of South African Natives, Kimberley, Cape Province, galleries each devoted to a tribal group and its culture.

Kaffrarian Museum, King William's Town, Cape Province, specimens of the work and ornaments of the Fingo and Xosa tribes.

Natal Museum, Pietermaritzburg, Natal, a general ethnological collection.

South African Museum, Cape Town, Cape Province, Bushman paintings and rock engravings.

Durban Municipal Museum, Durban, Natal, exhibits illustrating the evolution of man, the Stone Age of South Africa, and native work.

Museum of Ethnology of the University of Cape Town, Rondebosch, objects of native workmanship.

Transvaal Museum, Pretoria, Transvaal, native imple-

ments, musical instruments, pottery, basketware, weapons, and domestic utensils.

East London Municipal Museum, East London, Cape Province, local native work from the Swazi, Pondo, Kaffir, Zuhe, Basuto, and Xosa tribes.

Voortrekker Museum, Pietermaritzburg, Natal, wagons, furniture, wearing apparel, and household utensils of Voortrekkers, with photographs and documents.

Rhodesian Museum, Bulawayo, Southern Rhodesia, specimens of native industry, and relics found at Great Zimbabwe and other prehistoric Rhodesian ruins.

Queen Victoria Memorial Library and Museum, Salisbury, Southern Rhodesia, ethnographical specimens from Zimbabwe.

Peace Memorial Museum, Zanzibar, native artifacts. *Coryndon Memorial Museum*, Nairobi, Kenya, valuable general African ethnological collections.

Kampala Museum, Kampala, Uganda, ethnological specimens, including native weapons and manufactures.

Achimota College Museum, Accra, Gold Coast, Indian, Burmese, and African utensils, musical instruments, and weapons, also a unique collection of Ashanti gold weights for the weighing of gold dust used as currency.

The Department of Antiquities and Cultural Relations of Nigeria has four museums which house the art treasures of its people: one each at Jos, Oron (wood carvings), Benin (sculptural bronzes), Ife (terra-cotta figures).

Khartoum Museum, Khartoum, Anglo-Egyptian Sudan, Sudanese ethnological collections.

See also French West Africa in this article.

Argentina

Museo Argentino de Ciencias Naturales "Bernardino Rivadavia," Buenos Aires, extensive general collections, with a great deal of American folklore material, including a large number of specimens of native music.

Museum of the Institute of Archaeology, Linguistics and Folklore, Córdoba, special collection on the Americas.

Museo de Lujan and *Museo José Hernandez*, Buenos Aires, collections devoted entirely to the folklore of the Argentine.

Museo de Nahuel Huapi, San Carlos de Bariloche, ethnology of Patagonia.

Museo de Historia Natural "Juan Cornelio Moyano," Mendoza; the *Instituto Martiniano Leguizamón*, Paraná; the *Museo Histórico de Entre Ríos*, Paraná; the *Museo Etnográfico de la Facultad de Filosofía y Letras*, Universidad de Buenos Aires, Buenos Aires, and the *Museo de la Plata*, La Plata, regional folklore material.

Australia

Australian Museum, Sydney, ethnology of the Bismarck Archipelago, including ceremonial carvings; ethnology of New Guinea, including weapons and implements, ceremonial objects, Kaiva-Kuku masks; ethnology of numerous Australian aboriginal tribes, including artifacts associated with burial customs, handicrafts, and weapons.

National Museum of Zoology, Geology and Ethnology, Melbourne, Australian totemic ceremonial objects, clothing, and ornaments, as well as mourning, burial, and other ceremonial objects of Australian tribes; New

Guinea and South Sea Islands ethnological collections, and a group of Maori stone and wooden implements.

Museum and Art Gallery of Western Australia, Perth, ethnology of western Australia; objects used during initiations and *corroborees*.

Queensland Museum, Brisbane, Australian and Papuan ethnological collections.

Tasmanian Museum and Art Gallery, Hobart, Tasmanian historical material connected with early whaling life; also Tasmanian aboriginal material.

South Australian Museum, Adelaide, exhibits of native handiwork.

Technological Museum, Bathurst, war implements of South Sea Island and Australian aborigines.

Austria

The important *Museum für Volkskunde*, Vienna, is devoted to the folklore of all Austria, as is also the *Schloss Hellbrunn*, in Salzburg.

Museum für Völkerkunde, Vienna.

Among regional museums of folklore: *Tiroler Volkskunstmuseum*, Innsbruck, Tyrolean folk material; *Steierische Volkskundemuseum*, Graz, Steiermark folklore; *Nieder-Oesterreichisches Landes-Museum*, Vienna; *Haus der Natur*, Salzburg; *Museum des Landes Kärnten*, and *Landesmuseum*, Klagenfurt, Carinthian folklore material.

Belgium

Musée Gruuthuuse, Bruges, Belgian folklore.

Musée de la vie Wallone, Liège, Walloon folklore.

Museum of Flemish Civilization, Antwerp, Flemish life and folklore.

Musée du Congo Belge, Brussels, ethnography, anthropology, prehistory, and folklore of the Belgian Congo.

Musée Royal d'Histoire Naturelle de Belgique, Brussels, ethnography of all Belgium.

Musées Royaux d'Art et d'Histoire, Brussels, Belgian prehistory, Egyptian, Asiatic, Greek, Roman, and Mediterranean archeology, and the ethnography and folklore of the Far East.

The following are typical of Belgian regional museums:

Maison du Drossard, Aarschot, local folklore.

Musée archéologique, Hôtel de Ville, Alost, Belgian and French folklore.

Musée du Folklore, Antwerp.

Musée du Gulden Spoor, Antwerp, archeology and folklore.

Musée Luxembourgeois, Arlon, archeology and folklore.

Musée du Cercle Archéologique, Ath.

Musée Archéologique, Audenarde.

Vereeniging voor Heemkunde en Folklore van het Land van Bornhem, Bornhem, archeology, folklore, and local history.

Musée régional, Bouillon, archeology, local antiquities.

Musée de la Campine, Brecht, archeology, prehistory.

Musée de Folklore (Bond van Westvlaamsche folkloristen), Bruges.

Musée du Vieux Béguinage, Brussels, history, archeology, folklore.

Musée Archéologique, Hôpital Saint-Jean, Damme.

Hôtel de Ville, Deinze, folklore, archeology.

Sterckhof, Deurne, Flemish life and folklore.

Musée de Folklore, Diest, Béguinage lore.

Musée Archéologique, Enghien.

Château des Comtes ('s Gravensteen), Ghent, archeology and folklore, including a valuable collection of ancient instruments of torture.

Musée Curtius, Liège, Belgian, French, and Roman archeology and folklore.

Musée du Folklore (Bond van Oostvlaamsche folkloristen), Ghent, Flemish folklore.

Musée Communal, Louvain, archeology, numismatics.

Musée de Folklore, Louvain.

Musée d'Art et Archéologie Communal, Malines.

Musée de Malmédy, Malmédy, folklore.

Domaine de Mariemont, Mariemont, history and archeology of Egyptians, Greeks, Romans, French, Hindus, Chinese, and Japanese.

Musée des Beaux-Arts et d'Antiquités, Mons, Belgian, Roman, and French archeology, prehistory, and folklore.

Musée Montois de Jean Lescarts, Mons, folklore, numismatics, prehistory, weapons.

Musée Archéologique, Namur, Roman and French antiquities.

Musée van Folklore en Heemkunde, Neder-over-Heembeek, folklore.

Musée Archéologique, Nieuport.

Château, Nismes, folklore, archeology, numismatics.

Musée Archéologique, Nivelles.

Musée d'Art et Archéologie, Ostend.

Musée Communal (Oudheidkundige Kring), Saint-Nicolas (Waas), local archeology and folklore.

Musée Archéologique, Soignies.

Musée Communal, Spa, folklore.

Musée Archéologique, Stavelot, Belgian and Roman antiquities and folklore.

Musée Archéologique, Termonde, folklore.

Musée Archéologique "Taxandria", Turnhout, local folklore.

La Maison Tournaisienne, Tournai, folklore.

Musée Communal, Verviers, archeology, folklore.

Musée des Antiquités et des Arts Décoratifs, Tournai, Celtic, Roman, and French antiquities.

Bolivia

Museo Nacional "Tihuanacu", La Paz, Bolivian native folklore.

Museo Arqueológico de la Universidad de San Francisco Xavier de Chuquisaca, Sucre, Bolivian ethnological and folklore material.

Borneo

North Borneo State Museum, Sandakan, British North Borneo, collection illustrating Bornean life and crafts.

Sarawak Museum, Kuching, Sarawak, ethnology of Sarawak.

Brazil

Museu de Etnografia, São Paulo University, São Paulo, extensive collections of Brazilian Indian cultures.

Other Brazilian museums containing folklore material are chiefly ethnographical institutions, such as *Museu Nacional*, Rio de Janeiro; *Museu Paranaense*, Curitiba; *Museu Goeldi de Historia Natural e Ethnographia*, Para.

British Guiana

British Guiana Museum, Georgetown, general collection of native ethnological and folklore material.

Bulgaria

National Ethnographic Museum, Sofia, collections illustrating the ethnography and folklore of all Bulgaria.

Canada

National Museum of Canada, Ottawa, anthropology of Canada, including a large collection of photographs of Indian and Eskimo life.

Peter Redpath Museum of McGill University, Montreal, ethnographical material from North and South America, Egypt, Africa, and New Hebrides.

Ethnological Museum of Laval University, Quebec, Indian, Eskimo, Mexican, and Chinese material, as well as specimens from the cultures of Oceania and Africa.

Ethnological Museum of the University of British Columbia, Vancouver, arts, crafts, and industries of the native peoples of South America and Australasia.

Collège de l'Assomption Museum, L'Assomption, folklore material of all Canada.

Ethnological Museum of the University of Alberta, Edmonton, extensive Eskimo collections, together with objects illustrating the folklore of the Indians and pioneer whites of western Canada.

Royal Ontario Museum of Archaeology, Toronto, North American Indian material.

Elgin Historical Society Museum, St. Thomas, pioneer and Indian relics, looms, spinning wheels, bake-ovens, and other material.

Vancouver City Museum, Vancouver, North American and Pacific Coast Indian material.

Hudson's Bay Company Historical Exhibit, Winnipeg, collections illustrating the life of various North American Indian tribes.

Newfoundland Museum, St. John's, relics of the Beothuck Indians of Newfoundland.

Provincial Museum of Nova Scotia, Halifax, regional Nova Scotia collections.

Grand Pré Museum, Grand Pré, material illustrating the cultures of the Micmac Indians, the French Acadians, and the New England planters, together with Canadian pioneer relics.

Ceylon

Kandy Museum, Kandy, life and economy of the Sinhalese in the days of the Sinhalese kings, including musical and ceremonial instruments, temple articles, masks, costumes, charms, articles used in sports and games, execution knives, and other material.

Colombo Museum, Colombo, local arts and crafts, games, masks, musical instruments, coins, and jewelry.

Chile

Museo de Arte Popular Americano, Santiago, ritual material of all the Americas.

Museo Regional de los Padres Salesianos, Punta Arenas, ethnography of southernmost South American and Tierra del Fuego tribes.

Museo Araucano de Temuco, Temuco, Araucanian Indians of southern Chile.

Museums possessing general collections of folklore material are the *Museo Histórico Nacional*, and the *Museo Nacional de Historia Natural*, both in Santiago.

China

The collections of the *Shanghai Museum*, Shanghai, encompass material illustrative of all the races of mankind, modern and aboriginal Chinese material, prehistoric and ancient Chinese, African, Australian, and Papuan implements and weapons, Tibetan, Chinese, and Mongolian religious objects, official beads, Chinese pipes, geomancers' compasses, ancient Chinese *medicinal*, surgical instruments, Peiping toys, ancient Chinese coins, stone artifacts, oracle bones, cowry shells, glass beads, bronze mirrors, pottery tomb figures, stone carvings, and Balinese religious woodcarvings.

West China Union University Museum, Chengtu, Szechwan Province, culture of Szechwan Province and western China, Szechwan and northern Chinese shadow plays.

Museum of Kai Feng, Kaifeng, Honan Province, ethnology and archeology, pre-Confucian inscribed bones, unique collection of ancient Hsin Chêng bronzes, and one of the largest collections extant of funerary epitaphs engraved on stone, from the Wei, Sin, T'ang, and Sung periods.

Shensi Museum, Sian, ancient bas-reliefs of the horses of T'ang T'ai Tsung, also Buddhist stones and Wei period steles.

Shansi Provincial Museum, Yangku, Buddhist images and neolithic pottery.

Peiping Historical Museum, Peiping, funerary stones of the T'ang dynasty, and Buddhist steles.

Shantung Provincial Museum, Tsinan, Han funerary stones, Buddhist sculpture, and neolithic artifacts.

Colombia

Museo Etnográfico Nacional, Bogotá, Colombian regional cultures.

Museo de Oro, Bogotá, Colombian and pre-Colombian gold objects of the Quimbaya and Chibcha cultures.

Museo Arqueológico, Bogotá, Colombian archeological material.

Cuba

Museos Antropológicos Montané, Havana, Cuban ritual objects, also magic, witchcraft, secret society, and other folklore material.

Museo Nacional, Havana, Cuban ethnography.

Czechoslovakia

National Museum, Prague, Ethnographical Collection of peasant cultures of Bohemia and Moravia.

Náprstek Museum, Prague, general ethnographical collections.

Jewish Museum, Prague, material of the Jews of Czechoslovakia.

Slovak National Museum, Turčiansky-Svätý Martin, ethnography of the Slovaks.

Moravian National Museum, Brno, Moravian ethnography.

Folklore Museum of the Province of Pilsen, Pilsen, regional folklore.

Canterbury Museum, Christchurch, ethnology of New Zealand, Maori artifacts.

Otago University Museum, Dunedin, Maori artifacts and South Island, Melanesian, and Polynesian folk material.

Dominion Museum, Wellington, extensive Maori collections, which include artifacts, canoes, *patakas*, and meeting houses.

Open-Air Museum, Rotorua, folk museum of Maori life, including a *pa*, or palisaded stronghold, typical Maori houses, storehouses, memorials, canoes.

Norway

Norsk Folkemuseum, Bygdoy, near Oslo, both open-air and indoor sections, culture and folklore of the Norwegian countryside and towns.

De Sandvigske Samlinger, Lillehammer, collection of about a hundred old houses and 60 old workshops, all preserved intact to illustrate phases of Norwegian rural and urban culture.

Samlinger av Nordiske Oldsaker (Museum of Northern Antiquities), Oslo, Viking material.

Stavanger Museum, Stavanger, typical of the smaller regional museums of Norway illustrating local culture.

Universitets Etnografiske Museum, Oslo, ethnological collections of Scandinavian countries.

Palestine

"Bezael" *Jewish National Museum*, and *Museum of Jewish Antiquities of the Hebrew University*, both in Jerusalem, have exhibits illustrating the folklore of various Jewish cultures both in and outside of Palestine.

Panama

Museo Nacional de Panamá, Panama City, ethnology of Central America.

Paraguay

Museo de Historia Natural y Etnografía, Asunción, Guaraní Indian exhibits.

Peru

Museo de la Cultura Peruana, *Museo de Antropología*, and *Museo de Javier Prado* of the *Universidad de San Marcos*, all in Lima, general Peruvian collections.

Museo de Arqueología "Inca" de la *Universidad Nacional*, Lima, culture of the Incas.

Museo de Cayma, Arequipa, and *Museo "Rafael Larco Herrera"*, Chiclin, local Peruvian cultures.

Philippines

Santo Tomás Museum, Manila, ethnology of native Philippine tribes.

Poland

Muzeum Etnograficzne przy Muzeum Przemysłu i Rolnictwa Warszawa, Warsaw, ethnography of all Poland.

Muzeum Starożytności Żydowskich im. Mathiasa Bersohna (Bersohn Museum of Jewish Antiquities), Warsaw, religious objects of the Jews of Warsaw.

Tatarskie Muzeum Narodwe, Wilno, Tartar ethnology.

Muzeum Śląskie, Bytom, Silesian ethnography.

Muzeum Mazurskie, Działdowo, Mazovian ethnology.

Muzeum Wielkopolskie, Poznań, ethnography of Poland.

Muzeum Etnograficzne, Kraków, photographs and drawings of the life of the people of all Poland.

Muzeum Miejskie, Bydgoszcz, ethnography.

Ukrainskyj Narodnyj Muzej im. ks. Józefata Kobryńskiego, Kołomyja, Ukrainian ethnography.

Muzeum Miejskie, Cieszyn, ethnography of Cieszyn territory.

Museums of ethnography: *Muzeum Regionalne*, Chojnice; *Muzeum Państwowe w Grodnie*, Grodno; *Muzeum Miejskie*, Grudziądz; *Muzeum Miejskie*, Jarosław; *Muzeum Ziemi Kaliskiej*, Kalisz; *Muzeum Śląskie*, Katowice; *Muzeum Nankowego Towarzystwa im. Szewczenki we Lwowie*, Lwów; *Muzeum Etnograficzne Polskiego Towarzystwa Krajoznawczego*, Łowicz; *Muzeum im. hr. Dzieduszyckich*, Lwów; *Muzeum Wołyńskie*, Luck; *Miejskie Muzeum Etnograficzne*, Łódź; *Muzeum Regionalne Ziemi Myślenickiej*, Myślenice; *Muzeum Kurpiowskie*, Nowogród; *Muzeum Ziemi Opatowskiej*, Ostrowiec; *Muzeum Poleskie*, Pińsk; *Muzeum Ziemi Piotrkowskiej*, Piotrków Trybunalski; *Muzeum Mazowsza Płockiego im. Prof. Ignacego Mościckiego*, Płock; *Muzeum Narodowe Ziemi Przemyskiej*, Przemyśl; *Muzeum im. Władysława Orkana*, Rabka; *Muzeum Regionalne w Rohatynie*, Rohatyn; *Muzeum Towarzystwa "Bojkwuszczyna"*, Sambor; *Muzeum Polskiego Krajoznawczego*, Sandomierz; *Muzeum Podlaskie im. M. Astanowicza*, Siedlce; *Muzeum Powiatowe im. Wł. Reymonta*, Skierniewice; *Muzeum Pokuckie*, Stanisławów; *Regionalne Muzeum Podolskie*, Tarnopol; *Muzeum Regionalne P.T.K.*, Tomaszów Mazowiecki; *Muzeum Regionalne Borów Tucholskich Polskiego Towarzystwa Krajoznawczego*, Tuchola; *Muzeum Towarzystwa Przyjaciół Nauk w Wilnie*, Wilno; *Muzeum Etnograficzne Uniwersytetu Stefana Batorego*, Wilno; *Muzeum Ziemi*

Kujawskiej i Dobrzyńskiej, Włocławek; *Muzeum Tatrzańskie im. Dr. T. Chałubinskiego*, Zakopane.

Portugal

Treating of the folklore of all Portugal are *Museu Nacional de Historia Natural*, *Museum of Popular Art*, *Museu Etnológico "Dr. Deite de Vasconcellos"*, all in Lisbon; and *Museu Etnológico Português*, in Belem.

Museu "Hipolito Cabaço", Alemquer; *Museu Arqueologico Infante D. Henrique*, Faro; *Museu Regional "Francisco Tavaré Proença Júnior"*, Castelo Branco, all regional folklore museums. *Museu Marítimo*, Faro, Portuguese fishermen's lore.

Rumania

Baron Brukenthalisches Museum, Hermannstadt-Sibiu, Rumanian peasant folklore.

Siam

National Museum, Bangkok, material illustrating Siamese culture.

Spain

Museo de Pueblo Español, Madrid, folklore of all Spain.

Typical of the smaller regional Spanish museums is *Museo Municipal de San Telmo*, San Sebastián, which illustrates Basque culture.

Sweden

With over seven hundred open-air museums, most of them true folk museums, in the country by the beginning of 1950, Sweden has perhaps the finest national program in existence for the exhibition of folklore material. The unique and extensive system of open-air folk museums is headed by the famous *Open Air Museum* at Skansen, a prototype for such exhibits throughout the world.

Statens Etnografiska Museum (National Ethnographical Museum), Stockholm, world as well as Swedish ethnography.

Northern Museum, Stockholm, peasant culture of Sweden.

Malmö Museum, Malmö, Swedish "cultural history."

Gotland Museum, Visby.

Museum of Cultural History, Lund.

Norbotten Museum, Luleå, Lapp life.

Vasterbotten Museum, Umeå.

Municipal "local life and culture" museums in Göteborg, Norrköping, Hälsingborg, Ystad, and Varberg.

Switzerland

Musée d'Ethnographie de la Ville de Genève, Geneva, collections on the cultures of Africa, Asia, Oceania, and America. This institution also houses the headquarters of the International Archives of Folk Music.

Schweizerisches Landesmuseum, Zürich, native Swiss cultures.

Kunstgewerbemuseum der Stadt Zürich, Zürich, Swiss folk art.

Turkey

Ethnographical Museum, Ankara, and *Museum of Oriental Antiquities*, Istanbul, have exhibits illustrative of Turkish, Near Eastern, and Oriental folklore.

U.S.S.R.

Museums treating of the cultures of all Russia are *State Museum of Anthropology*, Moscow; *Museum of the Institute of Anthropology and Ethnography of the Academy of Sciences*, Leningrad; *Museum of the Peoples of the U.S.S.R.*, Moscow.

Museum of the History of Religion, Leningrad.

Leningrad Hermitage, general Russian ethnography.

Moscow Historical Museum, implements, houses, and a monastery, from the 17th century. Typical of regional folk museums is the *Chelyabinsk Museum of Local Lore*, Chelyabinsk.

United States

Alabama

Birmingham Public Library Museum, cultural history of Central Africa, China, and Mexico, American Indian material, general collection of archeological and historical objects of the states of the South.

Alabama Anthropological Society, Montgomery, local anthropology and archeology.

Arizona

Casa Grande National Monument Museum, Coolidge, prehistoric and early American Indian implements and ornaments, material illustrating cremation and burial customs.

Museum of Northern Arizona, Flagstaff, Hopi Indian material and local archeology.

Arizona State Museum, Tucson, archeology and ethnology of the Indians of the Southwest.

Gila Pueblo Museum and Wayside Museums, Globe, archeology of the American Indian.

Pueblo Grande Museum, Phoenix; *Yavapai Archaeological and Historical Society*, Prescott; *Smoki Public Museum*, Prescott.

California

Museum of Anthropology of the University of California, Berkeley, anthropology and physical anthropology of Egypt, Peru, the ancient Mediterranean civilizations, and western North America.

Los Angeles Museum of History, Science, and Art, ethnology of central Asia, India, the East Indies, Australia, Melanesia, Polynesia, Africa, and the Americas.

Southwest Museum, Los Angeles, archeology, ethnology, and history of the southwestern states.

San Diego Museum, general anthropology and ethnology, ethnology of the American Indian, Mayan archeology, Egyptian and Babylonian antiquities.

Oakland Public Museum, ethnology of California, Alaska, British Columbia, and the Pacific Islands.

Claremont Colleges Museum, Claremont, Indian cultures of the Southwest, California pioneer exhibits.

Special collections: *Glidden Museum of Island Indians*, Catalina Island, artifacts, utensils, and musical instruments of the native Indians of Catalina Island; *San Joaquin Pioneer Historical Museum*, Stockton, relics of the California pioneers; *Pioneer Museum*, Ventura, pioneer material; *Sutter's Fort Historical Museum*, Sacramento, material from the Great Gold Rush.

University of Pennsylvania Museum, Philadelphia, North American and Alaskan Indians, the Mayans, Mexican Indian tribes; ethnology of the primitive peoples of South America, Europe, Asia, Africa, and the Pacific Islands; antiquities from Egypt, Greece, Etruria, Crete.

Cyprus, and Rome; Babylonian antiquities; material from Palestine, China, India, Persia, Arabia, and Turkey.

Carnegie Museum, Pittsburgh, Egyptian and Central American antiquities; Chinese, Japanese, and south Asiatic material; American Indian ethnological exhibits; and groups illustrating the cultures of Africa and the Pacific Islands.

Academy of Natural Sciences of Philadelphia, anthropological material from Greenland, South America, and the Pacific Islands.

National Museum, Independence Hall, Philadelphia; *Wyoming Historical and Geological Society Museum*, Wilkes-Barre; *Reading Public Museum and Art Gallery*, Reading; *Moravian Historical Society*, Nazareth. See PENNSYLVANIA DUTCH FOLKLORE.

Rhode Island

Park Museum, Providence, American Indian, Eskimo, and Pacific Island ethnology.

Museum of Primitive Cultures, Peace Dale, Stone Age cultures of Europe, general American archeological specimens, including objects of early Rhode Island cultures, and of the "Red Paint" people of Maine.

Rhode Island Historical Society Museum, Providence, pioneer and American Indian material.

South Carolina

University of South Carolina Museum, Columbia, and *Clemson Agricultural College Museum*, Clemson, both exhibit local history, and material on the ethnology of the American Indian.

Charleston Museum, Charleston.

South Dakota

University of South Dakota Museum, Vermillion, archeological and historical specimens of American Indian cultures.

State Historical Society Museum, Pierre, American Indian artifacts and historical material.

Tennessee

University of Chattanooga Museum, Chattanooga, American Indian archeological and ethnological material, and collections illustrating the cultures of Egypt, Palestine, Japan, China, Korea, Mexico, and Africa.

Tennessee State Museum, Nashville, ethnology, history, and prehistory of the American Indian.

Vanderbilt University Archeological Collections, Nashville.

Texas

University of Texas Department of Anthropology Museum, Austin, Southwest Indian artifacts, European neolithic specimens, and ethnological material from the United States, Africa, and Mexico.

Baylor University Museum, Waco, general archeological, historical, and ethnological collections.

North Texas State Teachers College Museum, Denton; *Houston Museum of Natural History*; *Museum of the Scientific Society of San Antonio*.

Utah

University of Utah Department of Anthropology Museum, Salt Lake City, archeological and ethnological

material of the Indians of the Southwest and the Great Basin; Mexican and Peruvian culture exhibits; and archeological specimens from Babylonia.

Latter-Day Saints Church Museum, Salt Lake City, Mormon life and history.

State House Museum, Fillmore, American Indian and pioneer material.

Vermont

Robert Hall Fleming Museum of the University of Vermont, Burlington, archeological and ethnological exhibits of the Indian tribes of Vermont, and general ethnological specimens from American Indian cultures and from the South Pacific Islands, the Orient, and Africa.

Virginia

Williamsburg Restoration, Williamsburg, is a project aiming at the preservation and imitation of the most significant portions of the Colonial city of Williamsburg.

Valentine Museum, Richmond, Virginia cultural history, and Oriental and American Indian ethnology.

University of Richmond Museum, Richmond; *Hugh Mercer Apothecary Shop*, Fredericksburg.

Washington

Washington State Museum of the University of Washington, Seattle, ethnology of Indians of the Pacific Northwest and Alaska; ethnology of the Eskimos and of peoples of the Philippines; archeology of the Columbia River region; Colonial and pioneer Washington.

Washington State Historical Society Museum, Tacoma; *Columbia River Archeological Society Museum*, Wenatchee.

West Virginia

West Virginia State Museum, Charleston, American Indian and pioneer ethnological and historical exhibits.

Oglebay Park Museums, Wheeling, local Indian ethnology and history, and Mound Builder objects.

Wisconsin

Logan Museum, Beloit College, Beloit, ethnological specimens of the American Indian and the peoples of the South Pacific Islands and Africa, archeological material from Europe and Africa.

Wisconsin Historical Museum, State Historical Society of Wisconsin, Madison, American Indian and early American historical and ethnological material.

State Teachers College Department of History Museum, La Crosse; *Public Museum of Milwaukee*; *Neville Public Museum*, Green Bay; *Museum of the Kenosha County Historical Society*, Kenosha; *Oshkosh Public Museum*.

Wyoming

Yellowstone National Park Museums, American archeology and the ethnology of the American Indian.

Uruguay

Museo de Historia Natural, and *Museo Nacional Histórico*, Montevideo, both have general Uruguayan and South American folklore material; the latter institution exhibits a special collection of Gaucho objects.

Venezuela

Museo de Ciencias Naturales, Caracas, Tairona funeral treasures.

Yugoslavia

Etnografski Muzej, Belgrade, folk culture of the Balkan peoples.

Zemaljski Muzej Kraljevine Jugoslavije u Sarajevu, Sarajevo, Bosnian and Herzegovinian cultures.

Narodni Etnografski Muzej, Split, Yugoslavian and Balkan national costumes. [CG]

musical bow A primitive musical instrument consisting of an arched stick with a stretched string or connecting fiber from end to end, resembling the bow of the hunter, but requiring a resonance chamber to make the string vibration audible, and occasionally making use of a bridge or of a string loop dividing the cord into sections of different tone. It has been known since neolithic times and is distributed over much of North and South America, Africa, Asia, and Melanesia. It is most used as accompaniment to fertility rites and women's ceremonies, for intimate leisure-time music, and for meditation and communication with spirits. The resonating chamber may be a large separate jar or bowl, an attached gourd, or the mouth of the player, as with the jew's harp, and the size ranges from the 25-foot length used by the Chinantecs of northwestern Mexico to the small intimate instrument held against the teeth in the Chaco.

Among the Miskito and Sumo tribes of the Caribbean lowlands the musical bow, sometimes with gourd soundbox, is a woman's instrument, and in Rhodesia it accompanies girls' initiation ceremonies. The Cora musical bow of Mexico is played for corn rites and is the gift of God (originally of the earth goddess, whose pottery or calabash bowl forms its resonator). God teaches the medicine men to play it. The Mexican instrument, as well as a large type found in India, is sometimes played by striking it with a pair of sticks. Young men of the Chaco tribes make and play a small double musical bow, actually two bows attached by interlacing the strings, one of which is held against the teeth and the other rubbed across it like a fiddle bow. This is now played as a pastime. Californian Maidu and East African Akamba commune with spirits through the thin nasal sound of the musical bow. The African Wahehe have a tale about the instrument closely related to the singing-bone motif of other peoples, in which a girl is murdered and her body becomes the bow, her head the gourd soundbox, and her arms and legs the strings. [RCB]

Muskrat A North American aquatic rodent (*Ondatra zibethica*) chiefly prominent in North American Indian mythology as the animal who succeeds in bringing up earth or sand from the depths of the primeval waters, or after the flood, in order that the world may be made. Muskrat often succeeds after other animals fail, but in some American Indian mythologies the feat is credited to other creatures—Beaver, Hell-Diver, or Crayfish. Muskrat appears as a minor animal character in other American Indian tales, but is not particularly associated with any one tale except that of earth-diving. Muskrat is also used as a man's personal name among the Crow Indians and other Plains tribes. See ATAENSIC; EARTH DIVER. [EWW]

mustard Mustard was well known among the ancients, especially in Greece where its seeds were so esteemed that physicians attributed its discovery to Æscula-

pius. Pythagoras is said to have recommended it as an antidote for the bite of a scorpion; Hippocrates advised seeds of the plant both internally and as a counter-irritant poultice. Pliny named 40 remedies in which mustard was the chief ingredient. It is mentioned several times in parables in the Bible (*Matthew* xvii, 20, *Luke* xvii, 6); among the rabbis, "a grain of mustard seed" was a symbol of something very small.

In Hindu mythology, magic powers are attributed to mustard seeds, e.g. enabling one to travel through the air, turning one's enemy into a mare, revealing secret places and diseases. Mustard has been much used as an aphrodisiac. Conversely, the Greeks and Indians believed that its seeds, mixed with oil or honey, would prevent conception.

In England, mustard has extensive medicinal use. It is excellent for clarifying the blood and for weak stomachs, being an herb of Mars, but unfit for choleric people; it also strengthens the heart and resists poison. Mustard seed draws out splinters from the flesh. It is good for epilepsy and lethargy; it can be taken internally or applied externally, and is rubbed on the nostrils, forehead, and temples to warm and quicken the spirits. It purges the brain by sneezing and draws down rheum and other viscous humors. A decoction of the seed in wine resists poison, the malignity of mushrooms, and the bites of venomous creatures. The seed taken either in an electuary or drink stirs up lust, helps the spleen, eases pains in the sides and gnawings of the bowels; used as a gargle it draws up the palate of the mouth, if fallen, dissolves swellings about the throat. Mustard is frequently chewed to help toothache. Mustard poultice is good for the pains of sciatica, also for gout and other joint-aches, and is often used to ease pains in the sides, loins, shoulders, and other parts of the body. It is also used to help the falling off of hair, and to cleanse the face from spots, freckles, and other deformities (Culpeper).

North American Meskwaki Indians used the ground-up seeds as a snuff to cure cold in the head. The Shinnecock and the Mohegans bind leaves of the plant to the skin to relieve toothache or headache; the former also use mustard in a poultice for body pains.

mutilation The impulses most commonly associated with mutilation, whether of a ritual, orgiastic, or social nature are pride, revenge, a desire to get power over the gods or the forces of nature. All parts of the body are subject to mutilations though the head—hair, ears, nose, lips, cheek, and tongue—, the chest and arms, the sexual organs, and the feet seem to be the most popular.

The rituals connected with the passage from the state of childhood to the state of maturity usually referred to as initiation ceremonies or puberty ceremonies, have as one of their purposes the need to demonstrate that the candidate is able to withstand pain and torture and thus to perform the functions, religious, magic, and social of an adult in the community. In American culture, remnants of these ceremonies—usually without mutilation—are preserved in the initiations into lodges and the "hell weeks" and hazings of college fraternities.

At puberty ceremonies scars on the chest, neck, or face were kept from healing and were considered a mark of maturity and therefore of beauty. Among the West African tribes the wounds are preserved by putting

in them the fluff of a tree. Mutilations of the bodies of young men and women are frequent in many cultures and are particularly popular among the Australian aborigines. In north central Australia cuts on the back and on the neck of the candidates are in memory of events from the early history of the tribe. Young men and women among the Kikuyus of East Africa are proud of incisions made on their bodies. The sisters of men of New Guinea make scars on their chests when the man spears his first dugong, and some of the California Indians burned the images of their tutelary deities into their bodies. The Ba-Mbalas scarred their faces and bodies at puberty. The peoples of Formosa and Malaya are reported to file their teeth to sharp points or to grind them down. The Wiradthuri cut their gums or the flesh under their tongues; the Kamilaroi gash their arms with flint or shell. Bantu and Negro tribes in Africa knocked out their teeth; the Seri Indians of North America knocked out the teeth of their girls before marriage. Holes were made in the tongues of medicine men among some central Australian tribes during initiation.

Mutilation of the sexual organs of boys and girls are of many sorts and are usually lumped under the term circumcision. They include circumcision proper, or the cutting off of the foreskin of the penis, subincision, infibulation, excision, artificial defloration. Explanations of these customs are as varied as the peoples who practice them, but two themes are dominant: they are preparation for the responsibilities of maturity, and proof that the candidates have been accepted into their community as grown men and women. The circumcised or élite are distinguished from the uncircumcised.

Many peoples regard these mutilations as a mark of distinction. Among peoples who inflict them at initiation ceremonies, they are evidence that the individual now "belongs." German students in the early part of this century were proud of the saber cuts they got in duels; winning a letter in American universities or wearing the school tie in Britain expresses a similar feeling. Some peoples of Africa split their lips. On Fiji, Easter, and Nicobar Islands ears are mutilated; and the piercing of ears has a religious significance in India, Burma, and the Malay peninsula, as it has a social significance in some communities in southern Europe and the Americas. The Botocudos of South America pierce the underlip and the ear lobes of young girls and gradually enlarge the opening until amulets can be inserted. Similar practices have been reported elsewhere. Filed teeth, sometimes blackened or decorated with gold, were known among some California tribes, the Mayas of Yucatán, and in Sumatra and Borneo. The Filipinos are very proud of the gold or brass teeth which they were able to procure through the free dental service of the Philippine Red Cross. The production of tiny feet by binding is reported from among the Kutchin Indians of the Arctic. The bound feet of Chinese women are marks of beauty and have a definite erotic significance, as the attempts of Euro-American women to keep their feet small by wearing undersize shoes has also an indefinite though clear erotic motive, similar to the wearing of corsets and girdles to distort the abdomen or emphasize the breasts.

The impulse to mutilate the body in moments of religious excitement is thought to give power over the gods or forces of nature. The men of the Tonga Islands have been known to cut off a finger to appease the anger

of the gods, and the amputation of the little finger of the sister or daughter of a sick man will cure him. When a man is ill in Bengal, his mother or daughters draw blood from their chests to propitiate the goddess. The Dieri of South Australia sprinkle the tribe with blood from gashes made on the bodies of two tribesmen. This will produce rain. In central Australia, blood on the bodies of people who are sick or aged will give strength. It will also seal a covenant. The Syrian priests of the goddess Cybele wounded themselves. Arnobius reports the case of a woman who cut off her breasts in devotion to Aphrodite. The priests of the Roman god Bellona sprinkled blood from wounds made on their shoulders on the image of the god. Self-castration during the ecstasies of the spring orgies of the Greeks and Romans has also been reported. In the Americas reports are early and unreliable. Adelung says that the Cochinites of California cut off the little fingers of wives and sisters to cure disease, and Garcilaso de la Vega said that the Aztecs and Peruvians drew blood from arms, legs, ears, and nose at religious festivals. The Mískito tribes of Honduras and Nicaragua did so to influence the success of important undertakings. In 1927 a Chinese student during an anti-British demonstration was seen to cut off his little finger and write on the city wall of Peking the Chinese characters, "Down with Britain." This mutilation was possibly similar to others of a magico-religious nature in that it was performed at a moment of considerable excitement.

Mutilations of several sorts are punishments for offenses against civil or social laws. The most frequent of these offenses is sexual intercourse with persons of a forbidden category. In recent times the hair was shaved from the heads of French, Dutch, and other women who received Nazis, or were suspected of receiving them.

Although the laws against adultery are severe, one anthropologist has warned his readers to accept with skepticism reports about adultery being punished with death. However, Johnston reports that adultery with a king's wife in the Uganda Protectorate caused both to be chopped to pieces and in Ashanti emasculation is the punishment. American cuckolds frequently threaten to emasculate but seldom do. In parts of Australia the adulterous woman was made accessible to all comers. In South Australia, the punishment for the first offense was branding, for the second, spearing in the leg, for the third, death. Among some North American Indian tribes, the punishments were mutilation and disfigurement; in Mexico the women had their noses and ears cut off. In the book of Manu the book-punishment for an adulteress was to be torn to pieces, for her lover to be roasted on an iron bed. In the Viraf-Namak the adulteress had to gash her bosom and breasts. The nose and ears of the adulterous Hindu wife were cut off. The Assyrians made generous use of mutilation as punishment for crime.

The Code of Hammurabi ordered that a surgeon who caused the death of a patient or the loss of an eye must have his hands cut off, a certain way to protect the life of other patients. The crime of striking a father was punished by cutting off a hand; the tongue was cut out for ungrateful speeches; the eye was torn out for illegal curiosity. Examples of the mutilation of both the living and dead in ancient times are plentiful. In Europe throughout the Middle Ages and into recent times, pun-

ishment by amputation of noses, ears, hands, by branding or gashing were considered appropriate for crimes which are now thought to be petty. Flaying alive was the punishment for more serious crimes. See ATTIS; FINGERS; MASCHALISMOS; PENITENTES. R. D. JAMESON

✎ Deliberate destructive change in body-form was a common practice among North American Indians. Such changes were accomplished by piercing holes in or cutting off various parts of the body or face; they might be either self-inflicted or effected by another person for various purposes: as punishment, to render oneself pitiful in the sight of supernatural beings; as ordeals, in fulfilment of vows; as part of mourning ritual, to ensure good health; or merely because it was fashionable.

An unfaithful Plains Indian wife was likely to have her nose cut off by her husband; this well-attested practice persisted into historic times. Plains Indians, asking for help from the Sun or other dieties, sacrificed finger joints to the deity; this also was a common practice. Youths undergoing puberty initiation rites were scarified by their elders; in the Southeast the jaw of the garfish was used, in other regions, obsidian flakes or stone knives. Plains Indians inserted skewers between the muscles of their legs, arms, or backs, threaded ropes through the holes, and dragged heavy objects at the ends of these ropes in the Sun dance ceremony, in fulfilment of vows made, or to receive the blessing of the supernaturals. Widows and bereaved parents gashed their arms and legs so that the blood flowed freely, after the death of a spouse or child. The septum of an infant's or young child's nose was pierced to accommodate the noseplug worn later in life to ensure good health or for fashionable reasons; the upper lip was pierced to accommodate labrets, and ear lobes were pierced, or the rims of the ears slit, so that ear ornaments could be worn for reasons of health or fashion. Among many tribes tattooing of the faces, and sometimes the bodies, of men and women was also a common practice. [EWV]

✎ Among South American Indians, self-inflicted wounds are a common expression of grief for the loss of a relative. This custom was carried to extremes among the ancient Charrua tribes of the Parana delta. The women cut off the joint of a finger after the burial of a relative and lacerated their arms, breasts, and sides. Early travelers saw women who had even lost the joints of both hands. Men thrust wooden rods through their skin and buried themselves up to the head in holes for a whole night. Apinaye, Kayapo, Karaja, and Achuare Indians gashed themselves with their arrows. At the burial of a chief, Guahibo women pierced their tongues with a sharp bone. In many tribes of the Amazon and of the Gran Chaco, the Indians puncture their skin with bone awls to dispel fatigue or to impart strength to their bodies. The nature of the bone used for the operation is of great importance since they believe it can transmit to them the qualities of the animal to which it belonged. Awls made of jaguar bone give ferocity, for instance, of deer bone, swiftness, etc. [AM]

Müy'ingwa Male maize spirit of the Hopi underworld; chief of the nadir, god of vegetation, and father of the underworld. Müy'ingwa is represented as sitting below the earth, wearing a mask of clouds of all five colors (yellow, blue-green, red, white, black), with butterflies and birds of all colors, with speckled corn and

sweet corn, melons, squash, cotton, and beans. He is covered with grain; as his feet are ears of corn, he could not move very fast when the people came up from the underworld. Müy'ingwa is represented as a kachina, impersonated by masked dancers, in Hopi dances. [EWV]

Mylitta A Babylonian goddess, identified by Herodotus with Aphrodite and probably Ishtar in one of her forms, i.e. as goddess of fertility. The name means She who causes to bear. Once during her life, every Babylonian woman had to sit within the precinct of the temple of Mylitta, awaiting the first stranger who offered to have intercourse with her. When the stranger threw a coin, any coin, into her lap in the name of the goddess, she left the precinct with him and freed herself of her obligation. The fee was given to the goddess. According to Herodotus, some women were soon released, but the uglier ones occasionally waited three or four years. The common idea that strangers bring fertility and may be gods in disguise underlies the custom.

myrtle An evergreen shrub or tree (genus *Myrtus*), especially *M. communis* of Asia and southern Europe. One of the many origin stories of the myrtle says that it was the chief scented tree in the Garden of Eden and Adam was therefore allowed to take it with him. It was said variously to have been transformed from Myrtelus, son of Mercury, from the maid Myrsine who bested Minerva in a foot-race, or from the discarded lovers of the enchantress Alcina.

To the Jews myrtle signified the promise and bounty of God. God promised to plant myrtle in the wilderness for the children of Israel (*Isaiah* xli, 19; lv, 13): "instead of the brier shall come up the myrtle tree." In the rites of Tabernacles, the bearing of the palm branch, citron, myrtle, and willows (*Lev.* xxiii, 40) symbolizes atonement for the various sins of those human parts symbolized by these trees (respectively, spine, heart, eye, mouth). Thus myrtle, symbol of the eye, symbolizes also atonement for the lusts of the eye.

Myrtle was sacred to Aphrodite and Astarte throughout the Mediterranean region. In Greece its evergreen quality signified immortality and was a promise of resurrection. It was associated with the death of kings, and was regarded in general as the tree of death. Greek colonists carried myrtle boughs to the founding of a new colony—double token of the fact that association with the old colony was dead plus the gesture to Aphrodite to prosper the new. In Athens it was symbolic of authority; magistrates wore wreaths of myrtle. In Rome it was used to crown bloodless victors. It also signified unlawful or incestuous love and was barred from certain Roman ceremonies. See BONA DEA.

Myrtle is not one of the trees in the Old Irish Tree Alphabet, but Robert Graves holds that it was probably the Greek equivalent of the elder (see *The White Goddess*, p. 220).

Pliny mentions two old myrtle trees in the sanctuary of Quirinus, one of which flourished while the patricians were in power, withered with the rising strength of the plebeians, while the second flourished with their growing power. See SEPARABLE SOUL.

In England it was considered lucky to have myrtle growing about. In Somersetshire it was the luckiest of all plants for a window box; but it would not grow unless planted by a woman. In Wales myrtle on each

side of a house door would keep love and peace inside; if dug up, love and peace depart. Medieval German brides sometimes wore myrtle wreaths to their weddings as a protection against pregnancy. In Prussia it was formerly said that a girl engaged to be married must not plant myrtle or the wedding would not come off. Whether these last several beliefs refer to the shrub myrtle or to what is often called the common myrtle (i.e. trailing periwinkle, *Vinca minor*) is not ascertained.

mysterious, holy, and powerful A concept of the human mind from earliest times: the basic psychological reaction to the universe and environment which underlies all religion. The man in awe in the presence of the astonishing and mysterious, cognizant of its power, and inevitably stirred to terror or ecstasy, forms the added concept holy, and is the religious man.

It follows that from this unknown and unfathomable power comes strength, food and plenty, success, life itself, birth, fecundity, and eventually death. Man has reacted to the concept everywhere with a build-up of ritual, prayer, propitiation, interdiction, and sacrifice designed to augment and insure the continuance of this power, and to receive, increase, and communicate its beneficent effects.

That which gives power to medicines, amulets, and incantations, and truth to the spoken word is this mysterious and holy power. It is the cause of and inherent in everything extraordinary and miraculous. It is the *makt* (might) of modern Swedish folklore. This special sacredness is inherent in kings, priests, and shamans, in certain objects (e.g. bull-roarers, churingas, drums, rattles, masks); it is in brides, the sexual act, in just-born infants and animals, all first fruits, in epileptics, in strangers, and in all marvelous unknown things, like phonographs and airplanes. All primitive peoples find it in certain trees, in certain powerful and wily animals, and in the killers of such animals who become contaminated with the mystery and holiness of the animal and must be divested of it by special rites before returning to the safe commonplaces of daily life.

The concept of mysterious, holy, and powerful is inherent in the Polynesian tabu; that which is holy is therefore forbidden to ordinary usage. The same ideas are inherent in the Zulu *hlonipa* and Bechuana *ila*. *Sumangat* is the Malay term for their mysterious "life-stuff." See BARAKA; HUACA; MANA; MANITU; ORENDA; TABU; WAKAN.

✍ That the ability to perform in a superhuman way is characteristic of deities and supernatural beings, and that these beings can in turn aid human beings so that they also can perform in superhuman ways, is constantly assumed in North American Indian myth, folklore, and belief.

This assumption is reflected in cultural practices of the American Indians, especially in those centering around the so-called "vision quest." Except in the Southwestern Pueblos, young people everywhere in North America were enjoined at puberty to seek aid, advice, and instruction from supernatural beings. Rendering themselves pitiable objects in the sight of the supernaturals through fasting, isolation, exhaustion, etc., the candidates were, if successful in their quest, visited by some specific being who advised them, taught them songs, etc. Later these supernaturals would return at

intervals to continue instruction, provided, of course, that the candidate followed the line of conduct which had been outlined to him.

The First People of the Mythical Age are everywhere in North America powerful beings; this was part of their natural endowment and is unquestioningly accepted as fact. The human beings who followed them never had any of the powers of the First People, but could be given some by the latter if they behaved in the proper way. However, a point which has received little emphasis is that even among the First People there are many indications that "power" was not a general or unspecialized attribute shared equally by all, but specific supernaturals possessed specific power or powers only; they were not omnipotent beings. The theme of power lost through abuse or violation of a tabu, recurrent in North American trickster tales especially, presupposes that specific beings had to learn from other beings how to juggle their eyes (see EYE-JUGGLER) or obtain food by magical means (see BUNGLING HOST), to mention only two examples; if, furthermore, this learned power was used too often or unwisely it was lost to the learner.

In the same way abuse of power led to loss of such power as human beings acquired from vision-questing, from dreams, trances, epileptic seizures, etc. That it was specific power to perform specific acts which they lost—or kept—as it was specific powers which the First People possessed or acquired has not been generally emphasized in the literature on the North American Indian vision quest, or in discussions of the powers of the First People in North American mythology, but would seem to be a point worth investigating. [ewv]

mysterious housekeeper In several North American Indian tales, a man or group of bachelors find their house put in order by a mysterious housekeeper while they are away from home. In the tale of Mudjikiwis several brothers who live together find this done for them, and when the mysterious housekeeper, a beautiful girl, is discovered she marries one of the brothers. In the widely distributed Eskimo tale of the Fox Wife, which is also Asiatic, a single hunter finds a woman who is really a fox, keeping house for him. He marries her, but later insults her and she dons her foxskin and leaves. See FOX; MUDJIKIWIS. [ewv]

Mystery Play of Tibet The name by which Europeans refer to the pageant of the lāmas which unsophisticated Tibetans call the *sTag-dmar-ch'am* or Dance of the Red-Tiger Devil, a deity of the Bon.

Originally this appears to have been a performance of a devil-dancing cult employed to expel the old year and to exorcise malignant demons and human enemies. It was possibly associated with human sacrifice and cannibalism. Under Buddhist influence it was changed to represent the triumph under the leadership of Saint Padmasambhava of the Indian missionary monks over the fiends of the earlier paganism. More recently the Ge-lug-pa sect has again altered it so that it represents the assassination of Lang-darma, the king who tried to rid Tibet of Lāmaism, followed by the restoration of religion. Despite Buddhist influence, however, the play still retains the devil-dancing, shamanist features of its earliest form.

The play is performed at government expense on the

last day of the year in the courtyards of all the temples or monasteries of the established church. It begins with a dance performed by black-mitred priests, followed by the entrance of a troupe of masked, man-eating, skull-carrying demons against whom man is helpless but not the lāmas, who offer them a libation of beer and rice or mustard seed. Troop after troop of these fiends in different masks rush on dancing and howling. These are followed by a crowd of wan, rag-covered shapes (the souls of dead men lost in space) which flee hither and thither among the troupes of fiends. As each group of demons comes on stage, they are exorcised by holy men, but are followed by another group.

The superiority of Buddhism over shamanism is then demonstrated with the arrival of Padmasambhava and his assistants which is followed by the disappearance of the demons.

On the second day of the play a dough effigy of a boy (representing the enemies of Tibet and Lāmaism) is stabbed with the phurba by the Dam-ch'an Ch'os-rgyal or Holy King of Religion (Vajrabhairava, Yama, or Heruka). Then the limbs are chopped off and the figure is disemboweled. The heart, lungs, and intestines, which have been made as lifelike as possible, are extracted. Pieces of the effigy are thrown about among the actors and audience and a general scrambling for morsels to eat or to use as talismans follows.

A burnt sacrifice is then offered and a procession is organized. The priests, with the laity in the rear, march out of the courtyard with a three-headed image of dough which is abandoned to the crowd. It is torn to pieces and the morsels treasured. Then the whole company returns to the courtyard and the performance concludes with the appearance of the Chinese priest, Hwashang, who was expelled from Tibet by Saint Padmasambhava. Compare EATING THE GOD.

myth A story, presented as having actually occurred in a previous age, explaining the cosmological and supernatural traditions of a people, their gods, heroes, cultural traits, religious beliefs, etc. The purpose of myth is to explain, and, as Sir G. L. Gomme said, myths explain matters in "the science of a pre-scientific age." Thus myths tell of the creation of man, of animals, of landmarks; they tell why a certain animal has its characteristics (e.g. why the bat is blind or flies only at night), why or how certain natural phenomena came to be (e.g. why the rainbow appears or how the constellation Orion got into the sky), how and why rituals and ceremonies began and why they continue. Not all origin stories are myths, however; the myth must have a religious background in that its principal actor or actors are deities; the stories are thus systematized at least to the extent that they are related to a corpus of other stories in which the given god is a member of a pantheon. Where such interrelation does not occur, and where the gods or demigods do not appear, such stories are properly classified as folktale.

Much study of mythology has been made from very early times. Euhemerus, for example, saw in myth the apotheosis of human events; his Zeus was supposed to have been an actual Cretan king who had reigned some hundreds of years before. The more recent "comparative mythologists" saw in all myths an explanation of natural phenomena—sun, moon, rain, dawn, wind, etc.—

going to great lengths to induce the myth to fit the theory; this school was discredited by the attacks of such scholars as Andrew Lang and by the ridicule of others, e.g. the paper proving that Max Müller was a myth himself, by H. Gaidoz, editor of *Mélusine*. No single explanation of myth yet set forth is fully satisfactory. The interchange between myth and folktale—attachment of a folktale to some member of a pantheon, or loss of the divine element in a popular retelling—is constantly occurring. Many folktales, as the Grimms noted, are obviously "broken-down" myths; many myths utilize motifs and themes common to folktales the world over. A myth remains properly a myth only as long as the divinity of its actor or actors is recognized; when the trickster becomes human rather than divine, when the hero is a man rather than a god, myth becomes legend, if explanatory or limited to some specific location, or folktale, if more generalized. See ADAOX; FOLKLORE AND MYTHOLOGY.

 The epic as a traditional form of literary expression is lacking in native North America, but long myths, which A. L. Kroeber characterizes as having an "epic breadth of manner," are told by the Mohave of southern California, the Yuma of Arizona, and several other Colorado River tribes. The Great Tales or Great Tellings of the Mohave are liberally interspersed with songs, and are said to be dreamt by their narrators; actually they conform to a definite tribal style. The long myth-cycles of the Winnebago, an Eastern Woodlands Siouan-speaking tribe, have also been characterized as epiclike by Paul Radin, but were not chanted, and are often lacking in unity. The relation of the North American material to the Old World form of the epic would seem to be comparable to the relation of North American Indian dramatic performances to fully developed forms of drama. [EWV]

Mythical Age The first period, in North American Indian mythology, predating the appearance of human beings; an age when all the animals, birds, forces of nature, etc., behaved, talked, and at times looked like human beings. The only areas in North America where the Mythical Age is not part of the mythology are the Eskimo area, and parts of the Southwest; some of the Pueblo and Apache tribes in the latter region do not tell any tales relating to the prehuman age, but others do. On the west coast, where a prehuman, Mythical Age is stressed in native mythologies, a definite ending is given to this Age. Either 1) the beings of the Mythical Age are changed into birds, beasts, fishes, rocks, trees, etc., as a punishment, or 2) they agree to become the above when it is known among them that the human race is coming. In some California Indian mythologies the animals outline the new way of life that they will follow at the close of the Mythical Age: what food they will each eat, where each will live, what each will do. [EWV]

mythical animals, birds The term mythical animals refers to strange and fantastic creatures who have little or no connection with myths, in that stories about them have not been made into a system and have no theology. They frequently appear in folktales. They seem to have a connection with the projection and symbolization of popular fear and to be derived from travelers' tales of the weird and horrifying. Thus the basilisk, king of the

serpents, a horrid spotted creature, must die if it sees itself in a mirror. The unicorn has the head and body of a horse, hind legs of an antelope, the beard of a goat, and is distinguished by a single horn in the middle of its forehead. Although the unicorn is a dangerous animal, it becomes tractable when approached by a virgin. The Chinese name for unicorn is the "four-not-likes" (like a horse but not like a horse, etc.). Other such animals are phoenix, griffin, dragon, sphinx, lamia. European accounts of mythical animals are in large part derived from the *Physiologus* or *Bestiary*, an early Christian account of zoology which was widely circulated and itself derived from the works of classical zoologists who accepted in good faith the weird tales of travelers. The early Christians elaborated on these in many ways and attached a moral to each account. See FEARSOME CRITTERS.

R. D. JAMESON

mythical islands The "never-never" lands found in the folklore of all peoples. The Greek islands of the blessed and the Celtic Islands of the Blessed are the abodes of immortals and heroes. Food, drink, and women are plentiful and always of the best quality. Avalon is the island where King Arthur, consoled by several fairy queens, is not too impatiently awaiting the moment of his country's need. Odysseus spent ten years on the island of the nymph Calypso who would have kept him forever had not the gods intervened. The Irish, themselves islanders and great travelers, have a number of tall tales called *imrama* or voyages which contain accounts of these and other islands. The inhabitants of the Island of Women are eternally young, beautiful, immortal, and pleasantly—and dangerously—immoral. Stories of such islands are found in the folklore of the Chinese, Japanese, and Ainus. Inasmuch as all of these islands have a similar social and economic system they seem to have more to do with the mechanics of the imaginative lives of seafaring men than with trade routes and the dissemination of themes. Suggestions that the Islands of the Blessed contain reminiscences of forgotten early voyages to the Canary Islands seem to be superfluous, although serious attention is still being given to the possibility that the island Atlantis, the home of a highly developed civilization, did at one time exist. Such stories gain plausibility by the fact that some islands, particularly in the Pacific, still do appear and

disappear in a disconcerting manner, and the accounts of some of these islands, such as the early accounts of Tahiti display a happy way of life not dissimilar to that described in the *imrama*. [RDJ]

Mythological cycle A body of ancient Irish mythological, epic, and pseudo-historical tales dealing with the five invasions of Ireland, the great mythological battles, the personages of the Tuatha Dé Danann, etc. Most of the material exists in the *Book of the Dun Cow* (11th century), the *Book of Leinster* (12th century), and includes also material in the *Dinnshenchas* or *History of Places* (12th century).

The five invasions of Ireland are those by: 1) Cessair, granddaughter of Noah, 2) Partholan, 3) the Nemedians, 4) the Tuatha Dé Danann, 5) the Milesians; or more commonly: 1) Partholan, 2) the Nemedians, 3) the Firbolgs, 4) the Tuatha Dé Danann, 5) the Milesians. The story of Cessair is that Noah had no room in the ark for Cessair, her father, brother, and husband, so to escape the Flood they sailed to the western world, as yet uninhabited and therefore sinless. But the Flood found them, and Cessair with 50 maidens, her father, and brother were drowned. Finntain, her husband, survived to tell the story, even into the 6th century, as Eleanor Hull states (*Pagan Ireland*, Dublin, 1923, p. 8), "an elderly man of some 5000 years." Partholan came to Ireland a fugitive patri-matricide from his own country in the unknown western ocean, and he and his people were wiped out by a plague after 30 years of pleasant life on the plains around Dublin. A nephew of Partholan, Tuan mac Cuaill, alone survived out of that crowd. Tuan, like Finntain, lived for centuries afterwards, and was renewed in the form of a deer, as an eagle, as a wild boar, etc., to be annalist and chronicler. See BATTLE OF MAG TURED; FIRBOLGS; FOMORIANS; MILESIAINS; NEMEDIANS; TUATHA DÉ DANANN.

Among other famous stories classified in the Mythological cycle are *Toímarc Étaíne*, *The Wooing of Étaíne* (a triple tale of courtship); *Cat Maige Tured*, *The Battle of Mag Tured*; and *Oídead Clainne Lir*, *The Tragedy of the Children of Lir*. Another long story, *The Nourishment of the Houses of the Two Milk Vessels*, a manuscript preserved in the *Book of Fermoy* (15th century), also belongs in the cycle.

N

Nä-ch'un The chief sorcerer and oracle of the Tibetan government: an incarnation of Pe-har or of a god of the Turki tribes who was brought to Tibet by Padmasambhava and made the religious guardian of the first monastery. Once a year he goes to Lhasa to prophesy the events of the coming year. He and other sorcerers accompany troops to battle to interpret portents and he is consulted by private persons who can afford the expense, which is great. See CH'O-JE; NAG-PA.

nacimientos Literally, births: Christmas celebrations of the birth of Christ, in Spain and Latin America. In the province of Santiago, Argentina, a colorful festival

blends pagan and Christian observances. Effigies are arranged in traditional fashion—the *niño* (child) on an altar of leaves, surrounded by the Virgin, Joseph, angels, and animals. At nightfall the people dance and drink algarroba beer, which they call *licor de niño*. At midnight they sing *gozos* (rejoicings), then enact the *adoración*, then during *la icha* they throw cakes and other food offerings. At dawn *indios* run with fresh branches to the *arcos* (arches formed by two small trees), offer them to the *niño*, then pillage the *arcos*. Finally, all dance.

These ceremonies are analogous to those of the

sumamao harvest festival and help explain some of its enigmas. The nacimientos also throw light on certain European Christmas customs dealing with evergreens, offerings, and orgiastic celebration during the Christmas anniversary. [GPK]

nāga In Hindu mythology, one of a group of semi-divine beings, usually with human heads and serpent bodies, carrying a precious jewel in their heads: also, one of a group of historical people bearing the same name, probably a snake-worshipping Scythic race of trans-Himalayan origin and distinct from the Hindus. The history of these people is so closely interwoven with myth that it cannot be determined with any certainty. The mythological nāgas were the sons of Kadrū and Kaśyapa, born to people Pātāla or the Kashmir Valley.

The nāgas are not necessarily evil and only harm men when they are mistreated. They are armed with deadly venom but also possess the elixir of life and immortality. They are rarely mentioned in the Vedas but are important figures in the epics and in classic literature. The story of their destruction through the sacrifice of Janamejaya is told in the *Mahābhārata* and they appear in innumerable folktales and legends playing many and varied roles.

The nāgas live in splendid, jewel-studded palaces in their subaqueous city, Bhagavati, midst dancing and singing and flowers. Their girls and women are beautiful, richly dressed, celebrated for their cleverness and charm, and sometimes marry mortals. Minor royal families of southern and western India claim nāga descent and consider a *nāgini* (female nāga) an important member of any family tree.

In Buddhist belief Buddha's almsbowl was a gift of the nāgas and the Nāga Rājā Muçilinda protected Gautama from the storm following his enlightenment.

The nāgas play important roles in the *Jātaka* and in the *Kathā Sarit Sāgara*. Their kings are Takshaka, and Vāsuki; Śeṣha who sometimes serves as Viṣṇu's couch and canopy, sometimes bears the world on his thousand hoods, sometimes is represented as becoming a man in the form of Balarāma. Their mortal enemy is Garuḍa.

The daughter of Vāsuki brought amṛita to cure her father of leprosy. She rubbed it on all parts of his body except his thumb. Realizing her error, she sought more amṛita, but while on the quest was carried off by one of the Pāṇḍavas and thus her father's thumb remained leprous. This explains why that disease flourishes in the Punjab. The connection of the nāgas with the weather, especially with rain, is emphasized by a Nepalese legend: King Gunkāmdēva conquered the snakes. Each gave the king a likeness of himself drawn with his own blood and promised that worship of the pictures would cause plentiful rain. Pictures of nāgas are still worshipped in time of drought. Once St. Gorakhnāth shut up nine nāgas in a hillock, and a twelve years' drought resulted. In modern Hindu belief, Kārkoṭaka is king of the nāgas who control the weather.

The worship of the serpent, symbolizing the life force, is widespread in India. Stone images of nāgas are placed at the portals of Buddhist and Hindu shrines as door guardians. The Gaddī of the Punjab hills offer them beestings, male kids and lambs, and first-fruits. In Mysore effigies of the cobra are placed at the entrances to most towns.

Nagaicho "Great Traveler," creator of the Sinkiyone and Kato Indians of north-central California. See Yuki and Huchnom TAIKOMOL, "He Who Goes Alone," the creator. Nagaicho was also referred to as *Kyoi*, spirit, a name applied also to the whites, who were not Indians and, therefore, non-human. Nagaicho made the earth and men; Coyote, who was present when the earth was made, helped in its establishment, but also introduced death and much that is wrong. Among the Kato Nagaicho is the less powerful of two original beings, himself and Thunder; it was the latter who actually created men, many animals, mountains, trees, and springs. See EARTH; EHLAUMEL. [EWV]

Naglfar In Teutonic mythology, a ship made from the nail-parings of the dead (i.e. men who died with long fingernails or of corpses whose families had not cut them close before laying them out): launched by the violent seas caused by the lashings of Jormungandr, the Midgard serpent. The size of Naglfar depends on available materials. One story is that Hrym will pilot this ship at Ragnarök, bringing the giants to the fray against the æsir; another states that it will come from Muspellheim bearing Loki and the hordes of Hel.

Nagpa A Tibetan sorcerer who is not admitted to the monasteries of reformed or semireformed sects. The Nagpa, who is closer to the original Tibetan devil-dancer than either of the other two types of sorcerers can be distinguished by the tall conical hat with broad brim of yak hair which he always wears. The hat is surmounted by a vajra-topped skull, peacock feathers, and five-colored silk streamers. He also wears a sash of human bones and a breastplate of magic metal mirror. To battle demons he uses the sword, phurbu, sling, bow and arrows, magic triangle, and the divining arrow (*Dah-dar*).

nagualism Early Mexican theory of the animal double or familiar. The Aztec nagual stole at night, in the guise of an animal, caused sickness, and was generally feared. Traces of belief in nagualism appear among the Pueblo Indians of the Southwest; see E. C. Parsons, *Pueblo Indian Religion* (2 vols., Chicago, 1939), pp. 66, 189n., 1011. See MEXICAN AND CENTRAL AMERICAN INDIAN FOLKLORE. [EWV]

Nairyōsangha In Iranian mythology, the god of fire and messenger between gods and men: associated with Ātar in the *Avesta*.

Nakali A legendary hero of the Mískito Indians of eastern Nicaragua and northeastern Honduras, who went to seek his wife in the afterworld. When he returned to this earth, he told the people that every soul who journeys to the land of the dead comes to a bridge the width of a single hair which he must cross. Below the bridge is a pot (*sakaldakama*, cooking pot of the *sikla* bird) which is kept boiling by the *sikla* bird. If one has been stingy in this life, especially with food, nothing can keep him from falling into the pot. If he has been generous in life, he safely gets across the one-hair bridge. See C. R. Heath's "Mískito Glossary," *IJAL* 16: 30. Compare CHINATPERETU.

Näkk An Estonian spirit of the water, derived from the *Näcken* of the Swedes. Drowned people become Näkk. The Näkk is believed to live in the deepest spot in the water. He presents himself in different shapes, but usually as a human being or an animal. He appears

as male or female, even as a child. He has an enormous mouth and swallows everybody in his path. His charming singing bewitches his listeners, who unconsciously become victims of the water. The female spirit is called by the Estonians *Näkineiu* or *Näkineitsi*, i.e. Näkk's maid. She is a pretty, young girl, sitting near the water and combing her long hair with a golden comb. Occasionally she appears naked and sometimes has a fish tail. She performs very sweet songs and music. She possesses beautiful fat cattle, living in the water. Sometimes the Näkk appears as a horse. In every shape he is dangerous and his appearance predicts drownings. Before going into the sea, the inhabitants of the island Mohn pick up a stone from the beach, spit on it and throw it into the sea, saying: "A cake to the Näkk." [JB]

Näkki Among the Finns the Näkki is almost the same as the Estonian Näkk. In West Finland he is represented as a man of unusual size. Sometimes he is half man and half animal, with horse feet. The female *Näkinneito*, or Näkki maid, is a beautiful woman with glistening white body and very long, curly hair. She is further known by her big breasts which she can throw over her shoulder: a widespread trait of all female water deities. Belief in the magnificent cattle of water spirits is general in Finland. [JB]

nakulob The helper of the *cargador* or sponsor of a Mayan religious fiesta in Yucatán. Usually three of them share expenses with the *cargador*. They also execute a slow dance with little leaps around a table with food offerings (pig's head, tortillas, rum, cigarettes) to the accompaniment of a violin and drum. They receive bread and a *cuch* (a pole with streamers) and other ceremonial objects. Thus in spite of the Hispanic instruments and tune, their function has evidently an Indian ritual provenience. [CPK]

Nala A mythical king or monkey chief who, in the *Rāmāyaṇa*, could make stones float on water and thus built the bridge from India to Ceylon over which Rāma led his army to the rescue of Sītā and the destruction of Rāvaṇa.

Nala and Damayanti Title of a popular, and perhaps the most widespread, story from the *Mahābhārata*: the story of Nala, a beautiful young king, and Damayanti, the daughter of Bhīma. King Bhīma searched the world and decided Nala was the only living king worthy of his daughter; Nala, wifeless, inquired far and wide and heard about Damayanti. Both young people heard such tales of each other's beauty and worth that their hearts were set on one another. See LOVE OF ONE UNSEEN.

Damayanti, in order to make sure of Nala, asked her father for a *svayamvara* (a form of marriage by choice in which the girl throws a garland around the neck of that man, among those who present themselves, whom she desires), and Bhīma sent messengers to every king in the world to announce it. Among the suitors were also the gods Indra, Agni, Yama, and Varuṇa, who thought a mere mortal not good enough for Damayanti. So it happened when the hour came for the *svayamvara*, each of the four gods took on the form of Nala to deceive Damayanti in her choice. She was distressed that all her suitors looked alike, appealed to the gods by the act of truth, so that they revealed themselves in their own identities and Nala too was shown to her as himself.

(Recognition of transformed person among identical companions is motif H161, well known also in European folktale.) She threw the garland over him and King Bhīma married them. They lived in happiness and wisdom; a son and a daughter were born to them; and Nala ruled his kingdom well for many years.

But on the way home from that wedding the four gods had chanced to meet two demons of gambling, dice gods (Kali, personification of that side of the die marked one, and Dvāpara, two). These two, when they heard the news that Damayanti had chosen a mortal, meant to separate the pair as soon as an appropriate moment came. Years later, when Nala, forgetful, slept without saying the evening prayer, Kali entered into him and Dvāpara entered Nala's younger brother. Everything Nala saw henceforth he avidly desired; he longed to own his brother's bull; the two gambled for it, and Nala lost; he gambled and lost, gambled and lost with his brother until his kingdom was gambled away.

At last he and Damayanti left the country on foot and wandered into a forest where they ate roots and fruit and slept on kuśa grass. One morning Nala took half of Damayanti's garment for himself while she slept and left her, still impelled by Kali to seek his fortune in the world. Then follow two famous episodes: 1) in which Damayanti again invoked the act of truth to save herself from an importunate hunter, saying if it be true that she loved Nala only, let the hunter fall dead (he fell dead); and 2) in which Nala saved the life of a jeweled snake, who in return bit him so that he became blackened and deformed, and also gave him a garment which, when donned, would restore his true appearance.

Damayanti had returned to the kingdom of her father Bhīma, and in time, when news came of a marvelous cook and charioteer who was serving the king of Kośala, she felt sure that this was Nala. For the gifts of magic cooking and skilful charioteering were Nala's gifts. So she had another *svayamvara* declared, seeing to it that the king of Kośala heard the news. He heard and he set forth for this choosing, with his marvelous chariot driver driving the chariot. So wonderful was the driving that when the king dropped his cloak, the chariot was already miles on its way before he could stop to pick it up. The king was so impressed that he traded gifts with Nala; i.e. he took Nala's skill in charioteering in exchange for his own skill with dice. And Kali departed out of Nala.

When they arrived at Bhīma's palace, Damayanti took pains to penetrate the deformity disguise of the charioteer, observing his magical cooking (H35.2) and beguiling him to tears with his own two children, etc., finally asking, "Are you Nala?" And Nala, seeing her faithful love, could not deny his own desire also. Quickly he put on the garment given him by the snake and was restored to his own shape. The pair were reunited; Nala returned to his own kingdom with his wife and children. With his new gift of infallible skill at dice he won back the realm from the younger brother, but being generous and lawful, bestowed upon him a share.

names Names have a mystic or magical importance in all cultures. The difficulties that follow on the misspelling of a name in a modern American newspaper are surpassed only by using, even inadvertently, a secret name in other cultures where names and souls are

closely associated. In imperial China it was a serious crime to use the name of a reigning emperor even when that name was a homonym in common use. Modern numerologists have been known to change a name, if it has an inauspicious number of letters, for another which they hope will be more fortunate. The Euro-American custom, followed elsewhere also, of attaching to an individual a family name as well as a given name has, in addition to other advantages, the folkloristic virtue of identifying a person with the family, its magical strength, and its power. At this point magic and practical advantage meet. The name given may be that of a saint, a hero, an ancestor or relative, or a natural object, and the hope is that the child will develop the admirable qualities of the name it bears. This involves the psychology of simile, and the folklore of cursing and name-calling.

In many societies individuals have several names. The nobles among the Kwakiutl Indians of British Columbia had winter and summer names. Ritual names are common all over the world with the thought that the name used at a given time and moment has changed the character of the individual. The multiplication of names, when not intended to appease numerous aged and wealthy relatives, has the further magical advantage of giving the bearer the potencies which his ancestors once possessed. The methods of choosing these names are various. They may be determined by the day of birth, by dreams and divinations. Where metempsychosis is part of the folklore of the group, the belief is that the spirit of the ancestor or hero is pressing to be recognized. See ANAPEL. The natives of Brazil and other parts of South America ask a priest to interpret their dreams before choosing names. In New Guinea and the Belgian Congo the name is chosen by the behavior of the child when the child sees possessions of its dead ancestors. In New Zealand the child may interrupt the recitation of the names of its ancestors by a cry, sneeze, or gesture. Methods of divination are various: movements of leaves, articles floating in liquid, patterns formed by objects thrown on the ground.

Chinese names are particularly complex. The "milk name" is given to an infant. Families that have lost a child give a new one an unattractive name so that it may not be attacked by evil spirits. If the child is a boy, the name may be that of a girl so that the spirits will not consider it as of any importance. Compare BEGYINA BA. Some families limit themselves to naming the child the "First," "Second," "Third," etc. On going to school, a school name is conferred by the teacher. At the age of sixteen or upon getting married a man gets his marriage name. For publishing books or poems a man uses a literary name.

The identification of the name with the soul is an early Egyptian belief that has survived into modern times. Cursing a man by name may destroy his soul and when the name of a dead man was ritually placed on his statue, that statue became the residence of his soul.

Among the Lapps and the Chinese, dead ancestors assist their descendants and thus the preservation of the family name is important. Among the Lapps the ancestor helped only those who bore his name. But the preservation of the family name elsewhere has strong socio-magical values.

Secret names, known only to the owner, have to do with belief in name-souls. In folktale, myth, and folk belief, the discovery of the secret name gives the discoverer power over the owner of the name. In many religions, the names of the gods are the secret property of the priests and may not be used by others. In witchcraft and diabolism the speaking of the names of devils and evil spirits materializes them or puts them under the power of the witch. Actions performed "in the name of . . ." have particular authority. Many people think that they have a good chance of getting into heaven if they repeat the name of their god or protecting power at the moment of death. [RDJ]

Bestowal of a personal name upon a child, youth, or adult was the occasion for family or larger ceremonies among American Indian tribes of the Plains and eastern United States especially, although naming rites are not confined to these areas alone in North America. On the North Pacific Coast for example, the assumption of an hereditary name by a noble man or woman was only valid if a potlatch were given, and was attended with much ceremony and display. In the eastern United States naming rites have been given especial attention for the Osage by Francis La Flesche in *The Osage Tribe: Two Versions of the Child-Naming Rite* (RBAE 43, Washington, D.C., 1925) and for the Shawnee by C. F. and E. W. Voegelin in *Shawnee Name Groups* (AA, n.s., vol. 37, pp. 617-35, 1935). Among several groups it is believed that if one is sick one's name is possibly not agreeing with one, hence the name is "washed off," and a new personal name given. Among some tribes organized on a unilateral basis, each clan or gens group had its own stock of personal names which were drawn upon in naming members. [EWW]

The naming of a boy child and the first cutting of his hair were a joint ceremony among the Incas of Peru. It was a festive occasion which took place when the child was two or three years old. It was celebrated by the whole family. The oldest uncle cut the child's hair and gave him the name which he retained until maturity. This rite is still observed by the Catholic Indians of Peru and Bolivia. A "godfather" cuts the first lock, and the rest of the family each cut a lock. The "godfather" is expected to make a present to the child. The custom has spread to several forest tribes of the upper Amazon, especially to the Omagua. [AM]

name tabu The prohibition against speaking the name of a god or other supernatural being, the names of the dead, names of witches, the Devil, etc., of certain animals greatly revered or feared, in some societies especially the name of the king or other sacred person, or of tabued relatives. Often not only the name but the dominant syllable of the name is tabu as well. Name tabu includes also the prohibition against revealing one's own name, in the belief that the personal name is a vital part of the self, that it is dangerous for anyone to know it, and to reveal it puts one in the power of the other. See HLOIPA; JOKING RELATIONSHIP AND KINSHIP TABUS.

In the ancient Egyptian, Babylonian, and Hindu religions, just naming the gods compelled them to answer prayer. The name of the Hebrew Yahweh was never uttered except under special conditions. Among many primitive peoples today the belief prevails that to utter

the name of the dead is to invoke (call for) him. The modern practice of mentioning "the deceased" is not far removed from name-tabu tradition.

Name tabu in the case of dreaded or revered animals is so widespread as to be almost universal. Ural-Altaic peoples of Siberia, for instance, never speak the name of the bear; they call him Little Old Man, Grandfather, dear Uncle, or Wise One. Baltic peoples say to him Beautiful Honey-Paw, Broadfoot, or Grandfather. North American Kiowa Indians say that unless you are named for the bear you must not say bear. Bears can drive you crazy just for saying their names. In Quebec the Tête de Boule Indians also call the bear Grandfather. In Sumatra the tiger is mentioned as He With the Striped Coat. In Java the crocodile is Grandfather or the Old One. The Bechuanas refer to the lion as the boy with the beard. Among the Kols (a Dravidian group) the elephant is often spoken to as You With the Teeth. In parts of Africa and India no snake is ever called a snake. The people say, "There lies a strap (string, rope)," thereby believing that they make it lie still, for he who is called a snake is apt to behave like a snake. Diseases also are not named, lest they come upon the namer. Leprosy, for instance, is mentioned in Arabia as the "blessed disease." In the Malay Peninsula there exists a whole tabu language to be used while hunting camphor (see PANTANG KAPUR). Malay miners, fishermen, etc., also have special tabu languages to be used during their vocations.

Bavarian farmers will not name the fox lest he hear himself called and come to steal chickens and ducks. In parts of Germany mice are not called mice between Christmas and Twelfth Night lest they multiply rapidly.

The name-tabu motif (C430 ff.; Types 400 and 500) is prominent in both European and primitive folktale and mythology. There are stories of tabu against uttering the name of a god (C431) or of a supernatural (C432); guessing the name of a supernatural gives one power over him (C432.1); ghosts can be exorcised by name (E443.3); the Devil becomes powerless when called by name (G303.16). In German folktale a dwarf promises money to a mortal if he guesses his name (F451.5.15.1), or a maiden saves herself from a dwarf suitor by guessing his name (F451.5.15.3). The names of malevolent beings are not uttered (C433); the Furies, for instance, were spoken of as Eumenides. Not to ask a spouse's name, not to utter a spouse's name is a familiar motif (C435) in all folklore, as well as the prohibition against revealing one's own (C436). Breaking the name tabu often results in transformation (D511). The wife whose husband called her "my swallow" turned into a swallow. See ABACADABRA; ADONAI; EUPHEMISM; OFFENDED SUPERNATURAL WIFE; RUMPELSTILTSKIN.

 The name of the dead becomes tabu in a considerable number of South American Indian tribes. For instance, the Abipon regarded the use of the name of a dead person as a grievous insult which brought prompt retaliation. If the tabued name was a common noun or had some resemblance to such a word, the term was dropped and a synonym invented. This tabu is specifically reported among the Island Caribs, the Guajiro, the Chaco and Patagonian Indians. [AM]

gNan In Tibetan belief, malignant local spirits which infest special rocks, springs, or trees, and cause disease.

It is possible that they represent the spirits of the wild sheep formerly worshipped by Tibetans. Their habitats are avoided or they are propitiated with red paint and other offerings.

Nana or Nana Buruku Dahomean-Yoruban deity. In Nigeria, the Yoruba worship Nana as an earth-deity, mother of Omulu. In Dahomey, Nana Buruku is held to be the parent of Mawu, the Creator, and is worshipped with only a restricted cult. This deity is found under both names in Brazil (here spelled Nanan) and in Cuba, as one of the "older" deities, with an important place in the African cult-group among the Negro populations of these countries. Wherever worshipped, the Dahomean provenience of Nana is recognized. [MJH]

Nanabozho, Manabozho, or Nanabush Trickster-transformer-culture hero of the east-central and central groups of Algonquian-speaking Indians in the Central Woodlands culture area. Ojibwa Manabozho stories were recorded and published early in the 19th century by Henry Rowe Schoolcraft, whose wife was herself an Ojibwa woman; it was Schoolcraft also who confused Manabozho with the historic Iroquois statesman, Hiawatha. The central Algonquian culture hero Nanabozho has by later scholars also been confused with, or even identified with, Gluskabe, culture hero of the eastern or Abnaki Algonquians, because of superficial resemblances and because so little Gluskabe material has been published. A recent study indicates that the two culture heroes are not identical; Gluskabe does not participate in crude buffoonery (Abnaki trickster tales are all related about animals, not credited to the culture hero), and his altruistic concern for mankind is pronounced. Like Nanabozho, Gluskabe had a wolf brother, and his first recorded act was to kill him, since his wolf twin had wilfully caused their mother's death at his birth.

Nanabozho in his many forms among the Cree, Algonquin, Ottawa, Ojibwa, Potawatomi, Fox, Sauk, and Menomini Indians is, like nearly all American Indian culture heroes, a composite and contradictory character. He is the most powerful of supernatural beings, the creator of the earth and founder of the Midewiwin, most sacred of all ceremonies; yet on the other hand he is a buffoon, the butt of gross jokes, a dupe and victim of his own stupidity and greed. Some of the tribes above mentioned identify him with the Great Hare and with the Wolverine, yet at the same time attribute to him human actions and shape.

Recent analysis of all the body of Nanabozho myths shows a so-called Cree type of Nanabozho cycle, an Ojibwa type, and a Potawatomi type. The Potawatomi type is as follows. Nanabozho was the eldest of quadruplets, the fourth of whom, Flint, killed their mother at birth. Nanabozho and the second child, also a boy, had human form; the third brother who went north became a White Hare and a great magician; the fourth was Flint. When Nanabozho grew up he killed Flint, and lived with his second brother. The supernaturals became jealous and drowned the younger of the two brothers; Nanabozho was inconsolable, and warred against the supernaturals. To appease him they initiated him into the Midewiwin or sacred medicine society. His drowned brother came back, and was sent to preside over the souls of the dead; then Nanabozho initiated

the Indians into the Midewiwin. In the Ojibwa and Cree types Nanabozho, in search of his younger brother, finds him as a wolf, runs with the wolf-pack, has a series of trickster-type adventures, and is finally dismissed by the wolves with one wolf as a companion. This wolf is seized by powerful underwater beings, but Nanabozho rescues him; a deluge ensues, Nanabozho escapes on a raft, from which Muskrat dives to secure a bit of earth so that Nanabozho can recreate the world. For a recent analysis of the Nanabozho cycles see the paper by Margaret Fisher, cited in ROMANTIC LOVE. See END OF WORLD; HARE; HIAWATHA; MIDEWIN; WISAKEDJAK; WOLVERINE. [EWV]

Nānak or **Nānak Chand** The Guru Nānak (1469–1538), founder of Sikhism and the first of the ten gurus of the Sikh community. Sikh traditions concerning his life are completely myth-ridden. Nānak was born in the village of Talwandī (now Nankāna) on a moonlight night to the sound of celestial music. All the Hindu gods appeared to announce his birth. As a boy he was immersed in meditation and consorted with fakirs and sadhus. At one time the angels seized him and carried him before God who bade him proclaim one god. The exigencies of living, however, interfered. Finally his father sent him to town to do some trading, but he spent the money entrusted to him on a group of devotees whom he met on the road. Enraged and disgusted, his family sent him to Sultānpur where he obtained employment in the commissariat of the Nawāb Daulat Khān. While thus employed he frequently bathed in the Bein River and there one day he saw a vision in which he was commanded to worship the Lord. He gave up his job and became an itinerant preacher, traveling east, south, north, and west until his death in 1538, preaching a mixture of Hinduism and Mohammedanism. He was a reformer, preaching against caste, superstition, and idolatry.

Nānak's followers or disciples, known as Sikhs, believe in metempsychosis, wear their hair long, carry a sword in token of their perpetual warfare with the Moslems, do not wear the sacred cord, never shave the hair or beard, wear a turban instead of a cap, and ascribe sanctity to the cow. There are 84 lakhs (great numbers) of existence through which a soul passes, before the cycle is complete. These include 2,300,000 quadrupeds; 900,000 aquatic animals; 1,000,000 feathered animals; 1,100,000 creeping animals, 1,700,000 immovable creatures such as stones and plants; and 1,400,000 human beings. Probably the most remarkable feature of their belief is in their quasi-deification of the *Granth*, their sacred book. This book has been endowed with the title of Sāhib (Lord). In folktales Nānak appears as a wonder-working fakir.

Nandi The milk-white bull of Śiva; chief of his attendants and leader of the Gaṇas; vehicle of the god. An image of Nandi is placed before temples dedicated to Śiva.

Nandinī In Hindu mythology, offspring of Surabhi, the cow of plenty belonging to the sage Vasishṭha.

nañga The Cuban form of a religious cult, paralleling the Haitian *vodun*, Trinidad *shango*, and Jamaican *obeah*. Deities of African origin are invoked and personified in trance dances induced by hypnotic chant-

ing and dancing. In their state of ecstasy devotees sometimes attempt to walk through or sit in fire, or they may climb on top of another dancer. Magic and exorcism are practiced by the priests, including the use of switches to invoke or exorcise evil spirits.

Nañga worshippers in a unique ceremony termed *diablito* (little devil) salute the sun at its zenith. With nude torsos painted yellow, and bells on dungarees and skirts, they chant and dance joyfully to the sun. Despite prohibition by law, the cult continues to function unabated, and worshippers continue to initiate neophytes. [GPK]

Nañ-lha The Tibetan house god: anthropomorphic with a piggyish head. The Nañ-lha has a roving disposition and occupies different parts of the house in different seasons, thus causing the householder much anxiety, because no objects may occupy the god's place nor may it be swept. The Nañ-lha has, however, a routine from which he never deviates. During the first two months of the year he occupies the center of the house, during the third and fourth he resides at the doorway, in the fifth under the eaves, in the southwest corner during the sixth month, and is back under the eaves in the seventh and eighth months. During the next two months he lives in the fire-tripod or grate, and in the last two in the kitchen hearth.

While he is stationed at the door neither bride and groom nor corpse may enter or leave. If there is no other means for entrance or exit and such is necessary during the third and fourth months, images of a horse and a yak are made of flour and decorated with the hair and skin of the animals represented. The god is invited to sit on the images and is offered tea and beer. Then the door is unhinged and carried out after which the corpse or bride and groom may enter or leave.

Nanna In Teutonic mythology, goddess of purity, blossoms, and vegetation; wife of Balder and mother of Forseti. She and Balder were a devoted and faithful couple, which was unusual among the northern gods. On Balder's death, as Nanna bent to take leave of him, she too died, of a broken heart and was laid beside him on his funeral ship. When Hermod came to Hel to sue for their release Balder wanted Nanna to return, but she refused, sending instead a beautiful flowered carpet (the spring vegetation) to Frigga and a ring to Fulla.

Nanni or **Nannius, Giovanni** (1432?–1502?), called Annus of Viterbo, the Dominican friar who "recovered" the work of Fabius Pictor, earliest Roman historian, which spurious work he published in 1498. He is noted for his attempt to harmonize the Bible with astrological findings and theory, with Greek, Roman, and Hebrew myth, etc., to form what purports to be "true history." His writings and his method were popular during the Renaissance and after.

Nāōnhaithya (Pahlavi *nāikīyas*, *nākahēt*, *nākišīyyā*; Persian *nāūnhas*, *nānikahēt*) In Zoroastrian belief, one of the six archfiends: the aid of Ahriman and the embodiment of discontent.

Napi Blackfoot Indian trickster-culture-hero: sometimes also referred to as Old Man Napi. The animal-like quality of Napi is not strong in stories which stress his role as creator-culture-hero; in trickster tales he is identifiable with Coyote, or Old Man Coyote. [EWV]

Nārada One of the seven great Rishis, and inventor of the *vinā* or lute, also author of a law textbook, the *Nāradiya Dharmaśāstra*. Nārada once asked the secret of *māyā* from Vishṇu who, instead of replying directly, subjected the ascetic to a harrowing adventure in which he was forced to dive into water, making it clear that the waters are the materialization of Vishṇu's *māyā*.

Naraka In Hindu mythology, an Asura who, in the form of an elephant, outdid the evil deeds of all the other Asuras, carrying off the daughters of men and gods. For the 16,000 women he seized he built a splendid palace. According to the *Laws of Manu*, Naraka is the name of one of the 21 hells (other authorities vary the number) in which the souls of the wicked are tortured.

Narasinha The man-lion, fourth avatar of Vishṇu.

Nārāyaṇa An epithet of several Hindu gods, but especially of Brahmā and Vishṇu: literally, moving (*āyana*) on the waters (*nārāḥ*), or son of man (Nārā, the primal male). The word is most frequently used today as an epithet for Vishṇu, but also as an equivalent for Brāhman, and for the eighth of the Jain Vāsudevas. Vishṇu is represented as Nārāyaṇa at Bālajī in Nepāl with an image having a snake-hood projecting over the water.

narcissus A flowering bulbous plant of the amaryllis family (genus *Narcissus*) said by the Greeks to have sprung from the body of Narcissus, a youth who spurned the love of the wood nymph Echo and fell in love with his own reflection in a pool. The Greeks believed that these flowers wreathed the brows of the Fates. Sophocles says that they crown the goddesses on Mt. Olympus. The Romans dedicated it to Venus. It is used medicinally against all obstructions and for chills and colds. The root, pounded to a pulp, mixed with honey, and applied externally, is good for all manner of aches and pains, and will draw out thorns and splinters. The roots were considered antiseptic and healing on wounds.

Narmadā The holy Nerbudda River, regarded as the boundary between the Deccan and Hindustan: literally, making happy. The Narmadā is the rival of the Ganges (Gangā) in Hindu mythology. Personified, she is variously a sister of the Nāgas, daughter of the Rishi Mekala, or daughter of the moon. For her aid to the Nāgas in their battles with the Gandharvas, the snake-gods made her name a charm against snake venom. The Narmadā is associated with the cult of Śiva and was to replace the Ganges (Gangā) in 1895 as the most sacred river. This has not happened, but local river priests rank it above all other rivers, because freedom from sin is gained by bathing in the Ganges for a day, but the mere sight of the Narmadā cleanses the sinner. Many Hindus desire to die on the Narmadā's banks and the ashes of the dead are brought from all parts of India to be consigned to its waters. The Ganges herself comes to bathe in the river once a year in the form of a black cow.

Nāsatya In post-Vedic mythology, the younger of the Aśvins: originally an epithet applied to either of the twins as the physicians of Svarga. See AŚVINS.

nativity Nativity with a capital N refers in western cultures to the birth of Christ. The word conjures up the whole human scene of the baby in the manger, the surprised animals standing by whose warmth tempers the cold stable, the strange bright star over the little

building, kind neighbors running in with gifts for a mother and baby in need (warm milk, eggs, cheese, bread, a warm shirt, mittens, a toy), and the three kings arriving with their gifts. Around this has amassed the whole western Christmas complex of feast, song, symbolic tree, Santa Claus (Saint Nicholas), and gift exchange, plus the charming custom in rural Spain of putting out gifts for the Magi and hay for their camels on Epiphany Eve.

The word *nativity* is also associated with the birth of Buddha, of Zoroaster, and with the birth of the sun at the winter solstice (northern Europe, Egypt, also Mithraic). Buddha's mother was a virgin who conceived after or in a dream in which she saw her child descend from heaven and enter her womb. Singing devas announced the conception to the father; sun, moon, and stars flared into brilliance at the moment of Buddha's birth.

Zoroaster also was born of a virgin and his birth was accompanied by marvels.

The annual Nativity of the Sun at the winter solstice (December 21–25) was a period of joy and reaffirmation of life in the dark winter of northern Europe. The old Iranian Mithraic festival of the Nativity of the Sun (Mithra himself) was celebrated on December 25. For the Egyptian Nativity of the Sun, infant images were brought forth for the people to worship. See CAROL; CHRISTMAS; JESUS; NACIMIENTOS.

nats Generic term for the spirits of indigenous Burmese religion and folk belief: spirits of the air, sky, earth, forest, rivers and streams, hills, rain, wind, etc., and also of the house and of the cultivated fields. Ghosts of the dead are nats; and the supernaturals of Buddhism are also nats. All may be harmful unless constantly appeased and propitiated. Buddhist monks propitiate the nats as zealously as any nat-cult priest; there is a *natsin* (nat house or spirit shrine) in the shade of every pagoda, as well as one at the end of every village, where periodic ceremonies are performed.

The Kachins name Shingrawa (creator; indifferent to man), Jan (sun), Shitta (moon), Mbon (wind), and Trikurat, who helps hunters capture game animals. Other nats are Sinlap (giver of wisdom), Mu (sky), and the Burman Upaka, who "snaps up mortals." Flood nats cause drownings. The Burman Hmin Nat drives people mad. Forest and tree nats are especially feared and dreaded. The Kachins believe that disease and death are caused by the ancestral nats; any pain is the bite of a nat. For rain nats, see THEIN; for agricultural nats, see SABĀ-LEIPPYĀ.

Nats also serve as guardians of the house, village, tribe, and personal property. *Nat-thami* is the term for eleven nat maidens who guard eleven royal umbrellas in Mandalay. Nats also protect boats and treasure.

A feature of the Buddhist November festival in Burma is the *padēthā-bin*, a tree loaded with gifts and money which is carried and placed in the pagoda or monastery; the money is used for alms.

The Burmese have a specific list of Thirty-Seven Nats, who, with two exceptions, are national heroes and heroines of five groups of pseudo-historical tales. Originally there were 33, but four more have been added in modern times. Their biographies are in the *Mahā Gītā Medanī*, a book of verse. The *nat-than* (spirit songs) are

chanted by the mediums (*mathadau*), accompanied by music, during festivals held for each specific one. The songs are intended to impress upon the audience the sinfulness of assassination and treason. There are images of the Thirty-Seven Nats in the Shwe Zigôn pagoda at Pagân. See CHINÜN WAY SHUN; EINGSAUNG NAT; KA; TAK-KENG.

natya Sanskrit term for the science of Hindu dance and drama. It originated with Brahmā, was passed on from him to Śiva and by him to the sage Bharata. It is thus of ancient religious origin, and still religious in content. Its subjects cover many facets of life, but particularly deal with stories of the gods, the epics of the *Mahābhārata* and *Rāmāyaṇa*. Its laws have been explained in venerable books, Bharata's *Natya Shāstra*, Nandikeshvara's *Abhinaya Darpana* (mirror of gesture), and the Sangita *Ratnakar*. It is associated with the religious festivals of Hinduism.

Its technique emphasizes torso and arm movements, without neglecting foot rhythms. The elaborate terminology recognizes every shade of variation in purpose and technique: *nritya*, pure dance as distinguished from *nritya*, pantomime; *narga*, classical dance as against *deshi*, popular dance; and two contrasting modes, *lasya*, the feminine, and *tandava*, the virile. *Karnas* are combined actions of the limbs into postures; *angchāras* or *manadalam* are the postures; *bhṛitti* is expression. The vocabulary deals with *pada*, footwork; leg movements, *čari*; five kinds of jumps, *utplavana*; floor contacts, *thattadavu*; eight kinds of gaits, *gati*; seven spiral movements, *bhramari*; movements of the waist, *kati*; shoulders, *kaksa*; nine kinds of neck motions, *griva*; of the face, *mukhaja*; nose, *nasa*; cheeks, *ganda*; mouth, *asya*; chin, *cibula*; eight eye motions, *dristi*; 44 glances, etc. Most eloquent are the arm movements, *varianam*, and the gesture language of the hands, *mudras* or *hastamudras*, of which there are 24 for a single hand and for both hands and 13 more for *nritya*.

Forms and function vary with the region and school. The outstanding schools of classical Hindu dancing, while developed from folk worship, are distinguished by their set rules and stylization. The four most important schools are:

1. The *Bharata Natyam* follows the rules of *natya shāstra* with the classical terminology: originated by the sage Bharata probably about 1500 B.C., it is of non-Aryan provenience. Essentially a woman's style, it includes *nritya*, *nritya*, and *nautch*, and the *dēvadāsī*, female temple dancers. The costume is a tight blouse shot with gold threads, a sari with pleats on the legs and a richly embroidered band, jewelry, and lilies. The musical instruments usually consist of a drum, two cymbals, a wood block, sometimes a violin, and *tampura* or drone. The songs, with texts from the 17th and 18th centuries, are intoned by a learned *vidvan* and echoed by a chorus.

2. The elaborate *Kathakali* school enacts heroic epics of the gods. Its texts were composed by 16th century Rajas on the *Mahābhārata* and *Rāmāyaṇa*. It is the revival of folk drama of Kerala, the southwest coast of Malabar, and the state of Travancore. It interprets the story with vigorous and sweeping motions, using 64 *mudras*, and a vocabulary of 500 dance words. The performances take place in the open air at night, with eight

musicians using percussion instruments, a *nandi* or narrator, and barbaric costumes with full skirt, long-sleeved jacket, great circular headdresses, and many-colored jewelry and ornaments. The *chutti* or masks of thick paint (now being abandoned) have a set design for each character. This type of dance was taken to Indonesia by a king of Bali, and has exerted widespread influence.

3. In contrast, the *Manipuri* school, in the *lasya* style, deals with delicate pastoral themes and the *ras*, the love-story of Kṛishṇa. It mingles the folk style of Manipur and Bengal in northeast India with a Far Eastern quality, resulting in an elegant technique, without *mudras*, but spontaneous, swift, and supple, frequently in a circle for boys and girls. The costume is a tight velvet blouse with short embroidered sleeves and a full skirt hemmed with sequins and mirrors. Kṛishṇa wears a male sari and jeweled crown. The music is provided by a *khol* or drum, a flute, and a chorus of singers.

4. The *Kathak* school grew out the classical court tradition of northern India. Including both *tandava* and *lasya*, its style also shows Moslem influence. It serves entertainment, though often with mythological themes, e.g. Kṛishṇa and the *gopis* (milkmaids). Though more spontaneous than the *Bharata Natyam*, it uses a code of *thorahs* or foot beats, *gaths* or pantomimic passages, and *bolos* or spoken rhythmic phrases. Solo and group dances are accompanied by a *sarangi*, a stringed instrument, and *tablas* or drums. The costume shows a Persian touch in the wide silk skirt, tight blouse, and veil over the head, shoulders, and front of the blouse. The *nautch* combines the technique of the *Kathak* with that of the *Marwari* women.

In the recent renaissance, dance artists have combined and modernized the classical foundation, Shankar blending Kathakali, Manipuri, and European techniques. Ram Gopal was the only male interpreter of the *Bharata Natyam*; Rabindranath Tagore founded on the Manipuri style an independent school in Bengal for the enactment of his poetry. The eclectic Indian Peoples Theatre utilizes traditional and new styles for the representation of contemporary, even industrial themes. [CPK]

navel Popular speculation about the navel generally emphasizes its function as a symbol for the center of the universe rather than its qualities, physiological or esthetic, though these have not been overlooked. The Buddhist ascetic meditating on his navel is more concerned with grasping the universe as a whole than with the fascination of his own person, for it is that person as an individual which he attempts to obliterate.

Several geometrically minded cultures think it is important to discover the exact center of the universe. The Zuñi of New Mexico have several complicated migration legends about their search for the navel of the world. These are also connected with origin myths about their emergence from the womb of the world. The cities of Cuaco, Delphi, Delhi, Peiping, and many others are at that particular geographical spot. The Greeks had a myth about it. Zeus, eager to discover the exact center of the earth had two eagles fly at exactly the same speed, one from the east and the other from the west. They met at Delphi. There in Apollo's temple, the Greeks set up an *omphalos*, a holy navel stone guarded by two golden eagles. Several of these have been excavated.

They are in the shape of half-eggs on low quadrangular bases, sometimes artfully decorated. Mythopeic folklorists with their minds on sex have made them "ultimately" or "remotely" phallic. The fact that these folklorists may be correct does not relieve them from the necessity of producing more evidence in favor of their views than is at present available. The boundary stones in the fields of southern India have generally the same shape as the omphalos and are also called "navel stones." [RDJ]

 A Turkish etiological story states that at sight of the first man created by Allah, the Devil spat at his stomach. Allah quickly snatched out the polluted spot, and so men have navels.

necromancy Divination by communication with the dead; hence, any magic performed with the aid of the dead or the spirits of the dead; thence, magic in general. The word was corrupted by medieval Latin writers into *nigromancy*, in which form it came into English; the word thus meant magic, the black art. The 10th century *Canons of Edgar*, however, mentions *licwiglunga*, body wizardry, undoubtedly a synonym for necromancy proper. A Renaissance writer, in the *Wagnerbuch*, divides necromancy into *necyomancy*, divination from a reanimated corpse, and *sciomancy*, divination from the shades of the dead, like Saul's conversation with the spirit of Samuel in the house of the witch of Endor (1 *Sam.* xxviii). Necromancy is often used of any magic that uses part or all of a corpse; and grave-robbing for the various parts of the bodies of the dead seems to have been attributed regularly to accused witches. Basically necromancy depends upon the concept that the spirits of the dead know everything, past, present, and future. If they can be compelled to reveal their information by spells, charms, etc., the necromancer can predict the future, discover hidden treasure, or the like.

need fire Need fire, an occasional, not a calendrial, ceremony was made throughout Europe from very early times when cattle, pigs, or other stock were threatened with plague. The ecclesiastical authorities denounced it in the *Index of Superstitions* in the 8th century. The method of producing need fire was to insert a crossbar between two uprights, wrap a rope about the bar, and, by having two strong men pull the rope, cause the bar to revolve rapidly until fire was produced. The fire was then put between the city gates and the stock driven through it. Sometimes the fire was put in the center of a pen and the stock exposed to its influence. It was thought, even near the end of the 19th century, that the magic would work only if all the other fires in the village had been extinguished, and stories are told of occasions when the fire refused to light. At these times a search through the village revealed that some villagers had failed to extinguish their hearth fires. These fires were then put out, and relighted from the need fire. In some places the brands were extinguished by being dipped into a tub of water. They exercised further influence if left in the manger for some time. Bartsch reports having seen the ceremony in Mecklenburg in 1868 and that the fire must be started by two brothers or near relatives. In 1598 a cattle plague threatened Marburg. One Joh. Köhler induced the Marburgers to start a need fire by twirling a wagon wheel on an unused axle. This however

had no effect on the plague and Köhler was executed as a witch. See *NEW FIRE*. [RDJ]

Negritos Literally, little Negroes, or black ones: masked figures in Mexican dance ceremonials, especially at Carnival and Corpus Christi celebrations. They take their name from the black masks, which, however, do not have negroid features. These masks are adorned with ribbons and jeweled headdresses. At the great *volador* fiesta in Papantla, Veracruz, at Corpus Christi, they also wear black velvet trousers and jackets and large hats instead of crowns. Ten of them are dressed as field workers and are accompanied by a sorcerer, two battered clowns, and a *Maringuilla* with a gourd vessel and a small live snake. After singing to guitar accompaniment, and dancing lively longways and a circle figure, the Negritos are "bitten" by the snake and cured by the sorcerer with invocations to the four winds. The dancers jump for joy. In the Sierra de Puebla they do not enact a drama, but, to fiddle and guitar, execute cross-overs, and filing down the center, or a circle. To the final gay *son de listones* (ribbon tune) in 6/8 time, they perform a Maypole dance. Their steps are *zapateados* of the complex variety. In the final ribbon dance they introduce waltz steps.

In Michoacán, particularly in Tzintzuntzan and Cherán, the Negritos dance officially on February 2, Candlemas, but actually at any suitable time. They are feasted as they dance from home to home. With a marching step or heel two-step, 12 Negritos and a leader weave through typical longways formations, cross-overs, serpentine, and end in a circle. Two *flachicos*, caretakers, and a *Señor Amo* master, dance at the end of the lines and in between the two files. In the end they pay him homage with little gifts. The choreography is similar to that in the Sierras, but the costume is different, especially in the type of mask, headdress, and ornaments of small fishes (associated with Lake Pátzcuaro).

The invasion of Negritos dancers may be associated with the Negro slaves brought to Veracruz by the Spaniards. The steps of the Papantla Negritos, in fact, resemble the *huapangos* of the seaport. But none of the forms suggest any Negro influence, neither the story, formations, music, nor masks. It is more likely that we here have a variant of the face-blackened *Moros* which danced *Moriscas* in medieval Europe, and survive in the *Moros y Cristianos* of Spain and Mexico, in the *noirs* of the Basque *mascaradas*, and the various Portuguese *Mouriscadas* and the black clownlike dancers of the *dança dos Pretos*. [GPK]

Negro folklore See *AFRICAN AND NEW WORLD NEGRO FOLKLORE*.

Neman One of a group of three great war goddesses (with *Badb* and *Macha*) of Old Irish mythology. She was the daughter of *Ernmas*, one of the *Tuatha Dé Danann*, and like *Badb* and *Morrigan*, either the wife or granddaughter of *Nét*. She is associated by scholars with a Gallic *Nemetona*, who appears in some inscriptions at Bath, and who was identified by the Romans as wife of Mars. See *BADB*.

Nemean lion In Greek legend, the invulnerable lion slain by Hercules as the first of the labors. The lion was the son of Typhon (or Orthrus) and Echidna (or Selene). Hercules choked it to death, his weapons being useless,

and skinned it with its own claws. This was the lion-skin Hercules wore afterwards.

Nemedians An early people who invaded Ireland; descendants of Nemed, son of Agnoman of Scythia; the third group to land in Ireland, following next after Partholan and his people, who were wiped out by a plague. Nemed came from Scythia with 34 ships, seeking the gold that was in the tower of Conann, chief of the Fomorians, but all were drowned except Nemed and the few he could save. Four lakes burst out of the ground in Ireland in the days of Nemed; two famous forts were dug by him; twelve plains were cleared by Nemed in Connacht, Munster, Leinster, Ulster. Nemed won three great battles over the Fomorians but later died in a plague with 3000 of his people.

There was great oppression on the Nemedians after that at the hands of the Fomorians. Two thirds of their corn, two thirds of their milk, two thirds of their children they were forced to pay in tribute every Samain Eve (November 1). The Nemedians went to Conann and begged for alleviation of the tax, saying they would rather fight and perish than continue the insufferable tribute. Conann granted them one year of grace on condition that they never scatter but assemble for slaughter in battle if they could not pay when the year was up. The Nemedians agreed, hoping to receive aid from Greece before the time.

When the Greeks received news of the distress of the "children of Nemed," Smol, king of Greece at that time, assembled a host of warriors, druids, and venomous animals and sent them to the Nemedians, following himself soon after with an army. The Nemedians welcomed them and at once declared war on Conann of the Fomorians, unless he gave them freedom. Conann then attacked the Nemedians, but they sent the druids and venomous animals against him, who confused and killed many. Conann and his people could not stay in the tower because of them. Then battle after battle went against the Fomorians, and at last Conann came out of the tower to fight in the open. In that battle Conann was soon killed by Fergus, the son of Nemed, and after that it was defeat for them. The Nemedians surrounded them, beheaded them, looted the tower and burned it, and shared the booty with the Greeks, who then went home.

Not long after this the Nemedians were attacked from the water by Morc, son of Dele, a second powerful Fomorian chief. So desperate was this fight that none survived except one shipload of Fomorians and thirty warriors of the descendants of Nemed. Of these thirty, three grandsons of Nemed were over the rest; and these three divided Ireland between them into three parts. But this did not hold for long; they finally scattered to other places, partly for fear the Fomorians might rise again and destroy the remnant of their blood, partly for fear of the plagues which had destroyed their forebears, and partly because they did not love each other much. One returned to Greece; one (son of Fergus son of Nemed) went into Britain; Beotač, the third of them, went to the northern islands of Greece with his people, where they set about learning the wisdom of the universe, druidry, and all the arts. So great was their knowledge that they deified their learned men and the name Tuatha Dé was given to them.

Neoga In Seneca (Iroquois) Indian mythology, Fawn, the south wind. He was called by Gaoh into the sky to lead the summer winds and carry the odor of flowers and the sound of birds and brooks across the world.

Nerthus or Hertha A very early northern Teutonic earth mother and goddess of fertility, mentioned by Tacitus (*Germ.* 40) as Terra Mater, who, he says, was worshipped by seven Teutonic tribes on the Baltic Sea. Her car was driven by her priest through the region every spring, to promote the fertility of the lands, and the slaves who accompanied the car were drowned in her sacred lake after the processional. Goddess and car too were immersed in the lake after the round through the region: obviously the rain charm and fertility bath known the world over. This statement of Tacitus has led later scholars to presuppose the existence of an image. In later Norse mythology, Nerthus became the male Niörd (Njörd), father of Frey, but survived as Freya (see E. Moght, "Deities peculiar to the northern Teutons," *ERE* vi, 304, 305); or as the wife and sister of Niörd, hence her occasional confusion with Skadi, also Niörd's wife. In later German folklore she is variously associated with Berchta (Frau Gode, Dame Wode) or with Holde. See CARNIVAL.

nettle An herb (usually genus *Urtica*) having inconspicuous, greenish, imperfect flowers and minute stinging hairs. The stinging is caused by the irritating juice discharged by the hairs when broken. In England and Scotland the young tops are boiled as greens, and nettle broth, tea, and beer are still popular spring drinks. Gerard's *Herbal* mentions that nettles baked with sugar "makes the vital spirits more fresh and lively."

Roman soldiers used to chafe their limbs with nettles to increase circulation when they were cold. This plant was sacred to Thor, and wearing it banished fear in the presence of danger. In the Tyrol and England it is credited with keeping away lightning. In Germany, if it is gathered before dawn, it is good for ailing cattle. In Yorkshire the leaves are used to exorcise the Devil; in Ireland the stings are said to be the tines of the Devil's pitchfork. In Anglo-Saxon medicine the nettle was considered effective against the green venom, one of the nine flying venoms causing disease. In Roman times nettles were seethed in oil to make a cold ointment. In Russia an infusion is a cure for toothache. In Germany nettle seed is considered aphrodisiac. In Ireland, St. Fabian's nettle is good against consumption. In Jamaica the juice of the Spanish nettle is poured into a fresh cut. The Chippewa Indians of the United States use a mixture which they call Winnebago medicine made of stinging-nettle root and lady-fern root for disorders of the urinary system; the Chippewa and Meskwaki both used the steeped root to cure incontinence of urine. The Meskwaki also made a tea of the leaves of the rough hedge nettle for severe colds. In Texas the seeds of the bull nettle are used as a cathartic and bull nettle tea is specific against all manner of serious illness. In 1942 in England 90 tons of dried nettle were used in the manufacture of a green dye for camouflage and of a chlorophyll tonic.

In European folktale, nettles and thistles are identified as the Devil's vegetables (G303.10.13). In Hans Christian Andersen's story *The Eleven Swans* is depicted the spinning of flax by the little princess from the fiber of sting-

ing nettles to make the eleven white shirts which would unbewitch the swan brothers. This was no unusual incident, for the spinning of nettle-flax from these tough fibers to make household linens was common in Europe before the importation of cotton. In fact the North American Meskwaki Indians also made a very tough strong twine from the inner bark of wood nettle.

never The obvious answer, or implied answer, to a host of folk sayings such as "in a week of Sundays," "once in a blue moon," "when water runs uphill," "when it is as easy to undo slander as pick up spilled water," etc. Bibliography for the various ways of expressing this idea is given under the never motif (Z61) in Stith Thompson's *Motif-Index of Folk-Literature*. "When black sheep turn white" is one of the expressions cited. Folktales involving the idea of never include disenchantment when some ostensibly endless task is done (D791.1.2). A bewitched woman is allowed to return to human form once every seven years and put one stitch in a smock; when the smock is finished the spell will be broken. How long does it take to reach Schlauraffenland? A mountain of grain has to be eaten through first (X950.2).

The obvious answer or expectation of never is often circumvented either by magic or wit, however, as in the case of the woman who promised herself to a lover when the rocks should leave the coast (M261). They were removed by magic. Never to be vanquished "till Birnam Wood shall come to Dunsinane" sounded like never to Macbeth. "When a dry rod blossoms" also implies the answer never, but folktales using the motif are concerned with its miraculous flowering. See LAMMAS; section on *Conventional phrases* in PROVERBS.

 The answer never is unmistakably conveyed in a modern popular song from a waterfront café in Monrovia, Liberia, entitled *Bush Cow Milk*. In this song a man asks a girl to be his love; she says she will if he will milk the bush cow for her. (The bush cow is the short-horned buffalo of West Africa, one of the fiercest and most dangerous of animals.) The man replies to the effect that when ships don't swim in the ocean, when elephants sleep in trees, then he will milk the bush cow for her.

Bush Cow Milk is one of the songs collected on a tape recorder by Arthur S. Alberts in Liberia in 1949, and played at the sixth New York City meeting of the New York Folklore Society, February, 1950. It is one of the songs composed in English by a Liberian descendant of American slaves "after songs heard from American sailors." It is very similar to an old popular American song (also using the never motif): "*When the pussy willow whispers to the catnip*." The meter and word arrangement are the same; the tune (especially of the chorus) is similar. [RCB]

never-finished weaving A detail concerning the Shawnee Indian female creator, which in a general way, resembles the never-finished weaving of Penelope. The Shawnee creator is said to be weaving a basket or net (*skemotha*, untranslatable) which is unraveled every night; if she ever succeeds in finishing it the world will come to an end. [EWV]

new fire Ceremonies associated with the lighting of new fires in villages, homes, or temples are calendrical in some societies and occasional in others. Variation is also

found in whether the fire must be newly kindled, in the procedures of kindling it, and in whether the fire is to be taken from a sacred fire already burning. The calendrical festivals—the Beltane fire of Ireland, Scotland, Isle of Man, etc., Candlemas, and the candle dances—are generally known.

In parts of Australia the old fires are formally extinguished when a member of the tribe dies or when the tribe is going through a crisis or calamity and new fires are freshly lighted. The Greek Argives also extinguished old fires after a death and rekindled them from another source. The presence of barbarians at Plataea required the extinction of old fires. New ones were procured from the temple at Delphi. In China, Ch'ing Ming, the spring festival of pure brightness which occurs 106 days after the winter solstice, was at one time the occasion for lighting new fire by rubbing sticks together and corresponds to Beltane, or the Celtic May Day festival. The day before Ch'ing Ming was *han shih*, the day of cold foods, which indicates that all old fires had been extinguished. The Paleo-Siberians produce new fire by means of a drill and a flat board in the shape of a human figure. The drill is turned rapidly by means of a bow string. It is an annual ceremony and is thought to ensure the health of man and beast. Sacrificial blood and fat are also used. The fireboard itself has sacred qualities as have also the implements used and even the dust that is produced. When the new fire has been produced the hearth fires are relighted from it.

The sky sacrifice among some of the Turki tribes occurs every third summer. Women are excluded. The ceremony is held on the "top of a mountain in a sacred birch spinney." The new fire is lighted from the old fire and is protected by shamans, for it must not be allowed to go out. The sacrifice is a he-goat or ram which must be killed without spilling blood or its uttering a cry. Among the Altaians the forequarters of a horse are cooked on the old fire and the hind quarters on the new fire. During both ceremonies the heads of families attach flax threads to the birches and eagle feathers to the threads. Meat is then taken from the old fire and carried around in a sunwise direction. Finally a feast is held from the meat on the new fire. All remnants and implements are then burned in the old fire.

Among the Greeks, when a new colony was established the new fire was lighted from the civic fire in the mother city. In Armenia the fire lighted in a new household is taken from the old fire of the old home. The story of Prometheus and the torch races explain the transfer of pure fire from one place to another. All fires in Athens were extinguished on the occasion of his festival. The Vestal fire in Rome was protected by an association of high-born virgins who enjoyed many privileges. When the fire went out despite all precautions, elaborate ceremonies were needed to rekindle it. It was rekindled by friction.

Many of the fire ceremonies of northern Europe—Beltane, Midsummer, and the like—were connected with ceremonies of purification, leaping through the fire, carrying burning faggots through the streets, and cries of "burn the witches." The blessing of the new fire and the Paschal candle occurred during the Easter vigil. It is first mentioned in the legendary life of Saint Patrick. This fire was kindled by flint and steel which, because

the fire drill has, universally, sexual implications, was both "modern" and acceptable.

The production of fire by means of a fire drill is known throughout the world; but the use of the fire drill aroused the particular opposition of the medieval church because in Europe as well as elsewhere it had been given a phallic significance which the church dignitaries deplored. The fire drill is a pointed piece of hard wood twirled rapidly in a notch made in a piece of flat wood on the ground. The drill was considered the male member and the piece drilled was female. Despite the ecclesiastical law that anyone who performed incantations to a phallus must perform a penance of bread and water for three Lents, the use of the fire drill was continued into modern times.

New fire and its ceremonies are closely associated with beliefs about the sacredness of the hearth which, as the center of tribal and family life, contains vestiges of beliefs which are at the same time primitive and authentic human needs today. The Girl Scout invocation to the fire, "burn, fire, burn," defines a common human need. Of the five sacred parts of the house in old Chinese custom the hearth was the most important. Greeks presented their children to the gods by carrying them around the hearth, which was in the center of the room. In many American families today, the lighting of the first fire in a new house is attended by a certain amount of ceremony and emotion. Frazer has an elaborate account and impressive evidence to show that the sacredness of the hearth, and the custom in a number of places of making the fire from the wood of special bushes and trees is connected with ancestor worship.

Some students have associated "new fire" with "need fire," possibly on the grounds that when new fire is necessary it is needed. However a somewhat arbitrary distinction is that need fire is therapeutic and not calendrical.

[RDJ]

 Ceremonial kindling, at regular intervals, of a sacred fire is a ritual practice found in both the Old and New Worlds. In the Old World new fire rites are widespread in the classical Mediterranean area of Greece and Rome, and survive in Easter rites of various branches of Christianity; in Africa they occur in the East African cattle area, and in South Africa; in Asia they are found in Persia, parts of India, in China, Formosa, and Japan. In the New World new fire rites are, except for the Karok, a northwestern California Indian group, characteristic of the maize-growing tribes of the Southeast, Southwest, Eastern Woodlands, Mexico, Yucatán, Central America, and Peru. No direct connection between Old World and New World new fire rites has ever been established and it is assumed they developed independently in these two regions. For a recently published survey of New World new fire rites see William Harlan Gilbert, *New Fire Ceremonialism in America* (*Revista del Instituto de Antropología de la Universidad Nacional de Tucumán*, Vol. 3, No. 3, Tucumán, 1947). [Ewv]

New Rice and Okra A work song of American Negroes, sung to shuffling feet and beat of heavy pestles as rice husks are removed.

New Year The ceremonies which mark the passing of the old year and the beginning of the new are as diverse as the communities which observe them, but they all have in common the sense that one cycle of liv-

ing is finished and a new one is beginning and thus partake of the *rites de passage*. Whether this nodal point in living is noted with rejoicing, regret, or hope is determined by complex ethnic factors, the ethos of the group. When in 46 B.C. Julius Caesar revised the calendar and made January the first month, it followed immediately after the Saturnalia, a period of license and great rejoicing. The Christians opposed this. Tertullian, the Christian historian, deplored it. The Council of Auxerre condemned it as diabolical, and the Council of Tours required prayers and a mass of expiation on New Year's Day, which it said was "a practice long in use." Dances were forbidden, and crimes were to be expiated by fasts.

Most agricultural and some nomadic peoples compute the year on the basis of the movements of the moon. Because the lunar calendar does not get the earth around the sun at the proper time each year and this complicates the reckoning of the seasons, such devices as intercalary months and irregular months are used. Consequently, whatever basis of computation is used, most calendars are of a luni-solar variety. The Chinese, for example, have twelve moons or months, but every so often have to insert an extra month.

In Europe, New Year's Day occurred in March, or at Christmas or other dates, even after the reforms of Julius Caesar in Rome. Most of Europe, except Russia, made the change to January 1, soon after the Gregorian calendar reform in the 16th century, Scotland in 1600, and England in 1752. Thus the celebration of the first day of January as the first day of the year is a modern innovation. Elsewhere, because of intercalations, the first day of the year is a movable feast according to our present system of reckoning the months. Thus the Jewish calendar, on a luni-solar basis, has movable feasts.

The excessive jollification which characterizes the Occidental New Year cannot be attributed to Julius Caesar's placing it so near the Saturnalia, as other cultures also consider the ending of one year and the beginning of the next as a moment of gratification. In China, the first few days of the new year are the only days celebrated as universal festivals. All shops are customarily closed, and the lowest coolie then takes his annual leave to be with his family for a few days. At this time too, families which have subsisted throughout the year on a meager diet of parched grain try to get a bit of meat. The household gods who have been absent on various missions connected with the end of the year return, and they too join the reunion. The head of the household, having paid all of his debts before midnight, takes his ease and makes plans for contracting new ones. Door posters and pious maxims invite the Gods of Wealth and Babies to visit the house or warn away evil spirits that might be tempted to enter. Sometimes posters on the wall of a neighbor's house direct the God of Wealth not to enter there but to go to the house across the street. Japanese customs are somewhat similar. In both countries, New Year's Day is everybody's birthday.

On this day special foods are customary. The Japanese offer a "male" cake to the sun and a "female" cake to the moon. In India, the attempt is made to eat only new foods, new grain, peas, and the like. The festival marks the turning of the sun at the winter solstice. It is the period of ceremonial purification in the sacred river, and

of the great pilgrimage. In the south, the boiling of new rice is an augury for good luck during the new year. Cattle decorated with flowers are led about. Presents are given. Rejoicing is general and lasts for three days. In Bengal, the Ganges is worshipped, and the congregating of tens of thousands of people in the Ganges creates much excitement. The Veddas of Ceylon offer rice cakes. The Persian New Year, which became Moslem, is the day when God returned Solomon's ring, the devils brought fine gifts, and the swallows sprinkled water on him. In northern Europe, Estonia, Sweden, and Denmark, cakes in the form of a boar were made from the meal from the first sheaf. The Scots celebrated Hogmanay on the last day of the old year. Pancakes are appropriate in France. They are tossed on a griddle to bring good luck and riches. In Mexico, February 2, corresponding to the Aztec New Year, is a time of rejoicing and follows five days of lamentation.

Many Occidental countries mark the passing of the old year and the arrival of the new by elaborate balls, drinking, and generally orgiastic behavior in which, at midnight, everybody blows horns, rings bells, shouts, throws confetti, sings "Should old acquaintance be forgot," drinks additional toasts which are usually not needed, and, as an important part of the ritual, tries to kiss all the prettiest girls in the party, who offer enthusiastic collaboration. See *New Year's Day* in SPANISH FOLKLORE. [RDJ]

✍ Rites marking the beginning of the new year were practiced by many North American Indian groups, but the time for such ceremonies varied: for the Seneca, an Iroquois group of the Eastern Woodlands, the New Year begins in February, for the Eskimo in the fall, for the Northwest California tribes late in July, for the Hopi in November, and for other Pueblo Indians at the winter solstice. New Year observances varied from area to area; the Seneca rites, for instance, last a total of 7-8 days. On the first day all fires are put out and the ashes scattered; new fire is made by the Keepers of the Faith and a white dog is strangled and hung up. During the next three days people in masquerade rush from house to house; boys steal food, people ask for interpretations of their dreams, the False Faces throw ashes over people to drive out disease, and women of the Otter Society sprinkle water on passersby. On the fifth day sins are publicly confessed, and the white dog is carried on a slab of bark to an altar and burned with speeches, songs, prayers, and offerings of tobacco. This concludes the ceremony proper; the last 2-3 days are devoted to social dances and games. For the Northwest California and Hopi New Year ceremonies, which differ in many respects from the Seneca ceremony outlined above, see WORLD RENEWAL; SOYAL; WÜWÜCHIM. [EWV]

nguneme A Dahomey Negro protective charm (gbo), perhaps the most common of all gbos. It is a leaf (the sacred *akúko* leaf) which a man leaves in his house to protect his possessions during an absence. He may put a branch of these leaves across the door, on or beside any specially valued object (as a pile of firewood), or a well. It will bring harm to anyone who violates it; the man will become impotent, the woman barren, the child dead, who disregards it. (Herskovits, *Dahomey* ii: 285)

Nhang In Armenian folk belief, a monstrous evil spirit which sometimes appeared in rivers as a woman

or as a seal which dragged swimmers to the bottom. In Persian the term means crocodile. These spirits used their victims for their lust and then sucked their blood.

Nibelungen hoard In Teutonic mythology and story a fabulous, accursed treasure, the possession of which is the central theme of such famous epics as the Icelandic *Volsunga Saga*, the German *Nibelungenlied*, and Wagner's operatic *Ring* cycle. Some say Nibelung was a dwarf king who commissioned Siegfried to divide his large treasure among his three sons. In another version it is the Andvari treasure secured by Loki to ransom himself, Odin, and Hœnir from the dwarf Hreidmar. The term Nibelung is sometimes applied to the possessors of the treasure and those under the influence of the curse, as the Burgundians in the *Nibelungenlied*. In most of the versions this treasure ends up hidden in the Rhine (the Rhinegold) with all those knowing its whereabouts dead. It is frequently guarded by water maidens, as the Rhine Maidens in Wagner's version.

Niels Ebbeson Hero of a cycle of Danish ballads of the 14th century dealing with the heroic deeds of Niels Ebbeson and how he rid the land of foreign oppression.

Niemi, A. R. (1869-1931) Finnish folklorist and editor of several volumes of the *Old Songs of the Finnish People*. He published many works about the *Kalevala* and the old relationships between Finnish and Lithuanian folklore. [JB]

Niflheim In Teutonic mythology, the region of eternal cold, mist, and darkness, north of Midgard across the river Gjøl. Into this region Odin banished Hel to rule over the "nine unlighted worlds" of the dead. Here Hel presided, with her dark red bird and her rake. Here was the inexhaustible, seething spring called Hvergelmir inhabited by the dragon Nidhug; here was the deepest root of Yggdrasil; here lived Uller, god of winter, during the summer months; and from edge to edge of Niflheim arched the Bifrost bridge. Niflheim and Nifhel are sometimes synonymous; but Nifhel is more often synonymous with Hel, as a subterranean region entered through the Gnipa cave, and later regarded as a place of punishment, where the dead undergo a second death.

night Night is everywhere synonymous with darkness, and, wherever the dualism of good and bad is equated with light and dark, night is equivalent to evil or death. The sun sets in the west, therefore the west is the place of death, and night is the time of death. In ancient Egyptian religion, night was the time when the sun fought his daily battle with Apepi, the serpent, and won to rise again in the east. Darkness is, in *Genesis*, the original state of things; after darkness, light was created by God. The analogy still remains valid in folk thought: the beings of the night, demons, devils, hags, witches, are of the old belief; during the light of day God's religion holds sway. The *Popol Vuh* of the Quiché Indians begins with darkness as the first state of things. One of the Orphic cosmologies of classical Greece depicted Night as the primeval being; this black-winged bird laid an egg from which came Eros, love; the halves of the shell became Sky and Earth, Uranus and Ge. In the Hesiodic account Erebus and Night came from Chaos, and from Night came Air and Day. Still earlier, in Homer, Nyx (or Nox), the feminine personification of night, was so powerful that Zeus, as well as gods and men, might be

subdued by her. The systematizing of the mythographers had her living in Hades; she was a winged female, or she rode in a chariot, she dressed in dark clothes, she was accompanied by the stars.

Among several peoples, the night's beginning at sunset is the beginning of the day. This holds true of much European festival observance, for often the eve of a special day is more important popularly than the night of that day or the day itself. Thus, Christmas Eve and Halloween take precedence in popular observance over Christmas Day and All Hallows Day. The Jewish Sabbath begins with darkness on the eve of the seventh day, traditionally when three stars are visible in the heavens. But the time when the spirits of darkness are potent ends with cockcrow. Then the spirits out of their graves, the witches riding to their meetings or their mischief, the mountain spirits, and all the evil powers must return to their abodes or natural shapes, for, during the day, when the sun shines with God's power, they dare not move to cause evil. Night is the time when baby-snatching beings rove; lights must be kept blazing in the room of an unbaptized or uncircumcised child lest Lilith or other evil-wishing spirit take the infant, perhaps leaving a changeling in its place. Disease-causing demons rove the night and, until recent hygiene suggested otherwise, bedroom windows were kept closed at night to prevent the spirits from getting into the sleeping chamber. Prayers are important before going to sleep. There is a strong resemblance in night prayers from Babylonia calling on Shamash, Sin, Nergal, and Ninib, from Ireland calling on Mary, Joseph, Brigit, and Patrick, and among Jews naming Michael, Gabriel, Uriel, and Raphael. Popularly, if you say "rabbit" as you fall asleep on the last night of the month and say it again first thing in the morning, that month will bring you good luck.

The nightmare or incubus comes during sleep; so do the demons that bring evil dreams. During the night, in sleep, the soul wanders about, too, and then it may be trapped by a witch or magician while an evil spirit possesses the body. Werewolves and vampires are active at night; one who seems perfectly normal by day may become a ravening beast at night. In the reverse of this, beast marriage tales often have the hero an animal by day and a man at night (D621.1).

Certain nights are worse than others. To the medieval Jews Tuesday and Friday nights were most dangerous; then a greater number of spirits wandered looking for a lone man to seize. The last man at prayers on Friday night had to have company home from the synagogue; special time-consuming prayers were said by those who finished before him, in order that he might have company going home and still not be embarrassed or hurried in his prayers by seeing someone waiting for him. See DREAMS; ECLIPSES; HABBALAH; LIGHT; MOON.

✍ Before the sun, or light, was stolen or otherwise obtained, the world was in darkness, according to the mythologies of many North American Indians. The White Mountain Apache, however, go behind this period of darkness, to a period in which there was no night, only light. During the period of light, Badger carried something in a basket, which he warned Coyote not to untie. Coyote disobeyed and let out night. It was then night all the time. During this period of darkness the animals and birds could speak like human beings and

all spoke the same language. They all wanted daylight, so they divided into two sides and played the moccasin game, and daylight came through the mountains when the birds won the game. [EWV]

✍ In a few South American tribes night is conceived of as something tangible that was acquired by mankind. The Cashinawa say that darkness was owned by spirits. At first night was released so suddenly that men were caught by sleep in whatever position or activity they might happen to be; later nights were too long. Finally a regular rhythm was established.

Several South American myths tell how the world was plunged in darkness for a long period (the long night). According to the ancient Peruvians, the darkness was accompanied by a general revolt of the domesticated animals and of the artifacts against man. (See REVOLT OF THE UTENSILS.) The Araucanians attributed the long night to two brothers (the mythical Twins) who had put the son in a pot. The Shipaya have a myth about the long night which fell over mankind after a man had killed the Sun. The incoming of darkness is one of the cataclysms in the cosmogony of the Chaco Indians. A great many men were changed into animals and birds when light returned. [AM]

Nighthawk dance (*pi-ckwelane'oka-n*) A dance of the Delaware Indians which concluded the 10th night of the Midwinter Bear Rite, and recurred in the Green Corn and Thanksgiving dances of the group coresident with the Grand River Iroquois. It was a communication with spirit forces, not for rain as in the Southwest, but for thanksgiving and a healthful season. Two to four young men, stripped to the waist, faced the singer in a line. In his right hand each shook a rattle, previously a turtle rattle, later one of cowhorn; in the left hand they held extended the wing of a nighthawk, later on a feather wand. They would lunge and then jump toward the singer in a squatting position, shaking the muscles of their backs like nighthawks. The songs would be interrupted by speeches and gifts of cornmeal cakes, then continue where they left off. The similarity is evident between this dance and the Iroquois eagle dance. See GANEGWA'E. [GPK]

nightingale The folklore of the nightingale has a literary flavor. A medieval story is that the nightingale is afraid of snakes and keeps awake all night by pressing her breast against a thorn, singing mournfully because of the pain. The Greek myth of the origin of the nightingale is a variant of the universal folktale of the loathsome feast. Tereus, son of the evil god Ares, was married to Procne who produced a son Itys. When Procne asked to see her sister Philomela, Tereus offered to get her. On the way back he told Philomela that Procne was dead and tricked her into marriage. She, learning the truth, threatened to expose him whereupon he cut out her tongue and locked her up. She wove a tapestry which told the story of her misfortunes and sent it to Procne. The two sisters, plotting revenge, murdered Tereus' son Itys, cut him up and served him to his father in a stew. Tereus, about to kill the women, was foiled because the gods changed one to a nightingale and the other, the tongueless Philomela, into a thrush, which can only twitter. The Roman mythologists to whom the English poets are greatly indebted, got the story mixed up and reported that Philomela was the nightingale. [RDJ]

Commonly in European folklore, the nightingale is the bird of spring. It is said never to sleep; in Westphalia, the nightingale was once a shepherdess who kept postponing her marriage until her lover cursed her with the same sleeplessness he had been undergoing. If the bird's eyes and heart are dissolved and given in a drink, the drinker will never sleep again as long as he lives, and death will come soon. The tale of the nightingale and the blindworm embodies motif A2241.5: The nightingale and a certain worm were created with one eye each. One day the nightingale borrowed the worm's eye and forgot to return it. So the blindworm cannot see, and the nightingale has two eyes. This story has been told in Finland, Germany, and England. Compare however Shakespeare's *Romeo and Juliet* III, v, 31: "Some say the lark and loathed toad change eyes." See *ANIMAL TALE; BIRDS' WEDDING*.

nightmare A spirit or incubus that comes in the night to sleepers and sits or lies on their chests, stops up their breath, brings terrifying dreams, and awakens them with an oppressive feeling; also, a bad and vivid dream or experience. The word is sometimes popularly derived from night and mare, thus the steed whose riding in sleep brings such dreams; actually, *mare* is the Old English word for incubus, related to such words as *Marut*, the leader of the Hindu wild hunt; German *Mahr*, the nightmare; Russian *mora*, ghost, revenant; Czech *murawa*; Latin *mors* and Lithuanian *maras*, death; the word *cauchemar* in French contains the same root. A. H. Krappe sees in the word the root *mas*, male, virile man, also an obvious description of the incubus.

The Babylonian *Alu*, a storm god, was also the nightmare. Ephialtes, one of the Greek giants, whose name means the leaper, was the nightmare spirit of the Greeks. In Slavic and Teutonic belief, the *maras* were female nightmare spirits.

night-raven A bird of evil omen whose identity has baffled scientists and folklorists from the Middle Ages to the present day. Murray's *New English Dictionary on Historical Principles* defines it as "a nocturnal bird variously identified as a night-owl, night-heron, or night-jar, or imagined as a distinct species." It is listed among the unclean birds in *Lev. xi, 6* and *Deut. xiv, 15*. The *New English Dictionary* also identifies it with the European goatsucker, which is said to blind goats. In the 16th century the night-raven was quite commonly thought to be an owl, a bird whose cry was also regarded as a dread omen. Willoughby (17th century) says that people call the bittern the night-raven and dread it because its cry means either one's own death or a death in the immediate family.

In Danish folk belief especially, to hear the night-raven is a bad omen. The bird is believed to be the reincarnation of a criminal or suicide who has been buried where three roads meet. These poor souls may dig themselves out at the rate of one grain of sand per year, and when thus finally liberated they go about at night in bird form. Their voices have been described as mournful, hideous, or uncouth. A. H. Krappe regards the night-raven of Danish folk belief as the same bird that precedes the Wild Hunt, and probably a personification of Odin.

Nihansan Arapaho Indian trickster who may also be the Arapaho creator of the world; he is sometimes

named as such in Arapaho myths, but the creator is often referred to as Father, only. *Nih'ānzan* is now the ordinary word for white man in Arapaho; *Hixtcābā Nih'ānzan*, above-white-man, is the Arapaho name for the God of the missionaries. The original meaning of the word is spider; among the Santee Dakota the trickster Unktomi is the Spider. However, in no Arapaho myths is there the slightest trace of any animal or spiderlike qualities which are attributed to Nihansan. He is entirely human. Apart from the hesitating identification of him with the creator of the world, he is not found as the hero of any serious myths, but always figures in ridiculous and often obscene Arapaho tales; he is thus the equivalent of the Dakota Unktomi, rather than of a creator trickster like the Ojibwa Nanabozho.

Among the Gros Ventre, linguistic relatives and neighbors of the Arapaho, the name for the trickster is Nix'ant; the Gros Ventre trickster shows somewhat more of the character of a creator, in combination with his trickster qualities, than does Nihansan. See George A. Dorsey and Alfred L. Kroeber, *Traditions of the Arapaho* (Field Columbian Museum, Anthropological Series, Vol. 5, Chicago, 1903), p. 6, n. 3. [EWV]

Niman Hopi Indian 9-day kachina ceremony held during July to celebrate the return of the Kachinas or supernaturals to their underground home in Shipap, where they stay until the winter solstice. The Niman kachina ceremony includes dramatization, group dancing, and altar ritual. See *SOYAL*. [EWV]

nimbus A halo or circle of light around the head or body of a god, saint, or hero. It is commonly used by Christian, Greek, Indian, Tibetan, Chinese, and other artists. It is an attribute of divinity or great virtue, as is seen in the general belief that God is too radiant to be looked upon by mortal man and in the phrases about the "bright god." It is also connected with the complex about fire making all things bright and transcendent. See *CHAMPION'S LIGHT; ILLUMINATING BEAUTY*. [RDJ]

Ningyo A kind of mermaid of Japanese folklore. [JLM]

ning wōt A Kachin (Burma) method of divination in which a piece of thin green bamboo-stem is heated until the wood splits and small hairy fibers stand out along the edges of the split. By consulting these the diviner foretells events.

Ninigi-no-Mikoto Grandson of the Japanese Sun Goddess, who descended from heaven to Japan, after having received the Three Imperial Jewels. [JLM]

Ninki The wife of Ea (Enki) in Babylonian mythology; the lady of the waters. She is a very vague personage of almost no importance in worship.

Ninlil In Sumerian mythology, the consort of Enlil; an air goddess. In *Enlil and Ninlil*, the poem telling of the begetting of the moon god, she dwells in Nippur. Her mother tells her to walk by the river bank, since the keen-eyed Enlil will see her there. (Thorkild Jacobsen, using Mrs. Henri Frankfort's translation of the poem, indicates that she was *not* to go bathing, for fear that Enlil would see her, and that she disobeyed.) Enlil seduces the maiden and leaves Nippur. She follows, and at various stages along the way encounters him again in various disguises. Each time, at the gate, at the bank of the underworld river, and in the boat taking her across

the river, she submits to him again. Nanna (or Sin), the moon god, is the first conceived; the gods resulting from the other episodes are less important, one being Meslamtaea, a name of Nergal, lord of the underworld. The myth perhaps reflects an early belief in the impregnating power of the waters. A curious episode occurs early in the poem: Enlil, having seduced Ninlil, is tried by a council of the gods and is banished from the city; here he does not seem to be the powerful god who developed into Bel and Marduk.

Niörd or Njord In Scandinavian mythology, the handsome god of the sea, especially of the coastal waters; god of fishing, commerce, and prosperity. Originally one of the vanir, he went to Asgard after the war with the æsir as a hostage. He is highly respected and counted third among them, but at Ragnarök he will return to dwell among the vanir. In Vannaheim, he married his sister Nerthus by whom he had a son, Frey, and a daughter, Freya, both of whom accompanied him to Asgard. His home, Nôatûn (Haven), is near the shore and from here he stills the storms lashed up by the sea god Ægir. In Asgard he married Skadi, daughter of the frost giant, Thiassi. She agreed to spend three days at Nôatûn if he would spend the next nine days at Thrymheim, her home. In this they personified the northern summer (3 months) and winter (9 months), but as neither was happy in this arrangement, after several years they separated. Niörd is usually worshipped in conjunction with Frey. The sponge is called Niörd's glove. See NERTHUS.

Nirṛiti A Vedic goddess of evil and disease; personification of destruction, sometimes connected with Kālī.

nirvāṇa In Hinduism, the "blowing out" of the spark of life; hence, release; merging or absorption into the Absolute. In Buddhism, nirvāṇa is the ideal and goal of all religious effort. It is extinction, *through enlightenment*, of individual consciousness, but a kind of qualified extinction: the word denotes bliss, deliverance from the long round of birth, death, rebirth, and death, and far transcends any mere nothingness. It is the end of individual desire, release from passion and delusion and pain, the end of consciousness, therefore the end of suffering (i.e. release from existence), and greatly to be desired and worked for. Brahmanism stresses the joy of merging with the Absolute; there is no greater good. The idea of nirvāṇa is beyond human concept; the road can be followed; the state can be attained; but before attainment the concept of *nirvāṇa* is beyond encompassment by the human mind.

nisse A class of household spirits of Scandinavian folklore, associated with the Gardsvor, house guardian, in that he is often believed to be the manifestation of the spirit of some ancestor or other kin. The nisse behaves more like the English and Scottish brownie, however, and the German kobold, since he is both helpful in the house and barn, and annoying and exacting. He is fed and fostered by the house-dwellers, the same as other household spirits. Compare BOGGART.

nith songs A species of word-duel practiced by the Greenland, Baffinland, and other Eskimo groups. The name derives from the Norwegian *nith*, contention. Private quarrels and disputes are often settled, among the eastern Eskimo, by the disputants singing sarcastic songs which they have composed at each other, at a public

gathering. The audience decides which singer is the winner, and thereafter the loser must hold his peace and be friends with the winner. The singing of nith songs and wrestling matches are common means of taking revenge by Greenlanders and other Eskimo who consider themselves injured by another person. For translations of some Eskimo nith-songs see Alexander Goldenweiser, *Anthropology*. New York, 1937, pp. 97ff. See APO; CALYPSO; LOBI SINGI. Compare PENILLION. [EWV]

nix or nixie In German folklore, water beings inhabiting any body of fresh water, where they live in beautiful palaces. They are generally conceded to be able to assume various forms or to become invisible. They have human torsos with fish tails, but they go to markets in the guise of old ladies; and at dances, which they love, they are young and attractive. Even while they are in human form, there is always some give-away feature which may be recognized by the observant. They are reported also to have been seen in the form of gray horses. In the main they are unfriendly, but may be propitiated. They lure human beings into dangerous water and drown them. It is believed that they must have at least one victim a year, and at one time they were offered human sacrifice. In many places it is considered bad luck to rescue a drowning person for fear of reprisal by the nixes. Some authorities claim these beings are normally old with green hair, skin, and teeth, who become young and beautiful to entice mortals. Others say they live normal family lives, even keeping cattle, which, if they graze in meadows with mortal cattle, will make these more prolific. Nixes sometimes take human mates and have children, though a human mother must have a human midwife who, if discreet, is exceedingly well paid. In some localities they are accused of placing changelings in the cradles of humans; especially the German *Wasserkopf* (child with a large head) is attributed to nixes. In other places the elder of the nix family frowns on human dalliance, and there are many tales of the human lover suddenly finding blood-red water where the nixie has disappeared, which would indicate that they were considered mortal. See HAVMAND; KELPIE; MERMAID; NÄKK; SIREN.

nō, nōgaku or sarugaku no nō (The accomplishment of scattered mime) A form of Japanese dance-drama. Its roots in early religious and secular ceremonies grew into a complex art form under numerous influences. The genealogy goes back especially to the *sangaku* (Chinese *sanyao*), which came from China in the Nara period (708-784) and later became the *sarugaku* or "monkey-mime," a compound of songs, music, dances, acrobatics, stunts, and wrestling. With the addition of the dances known as *kuse-mai*, the use of plots derived from such older pieces of literature as the *Tales of the Heike* (13th century), and with an increased emphasis on serious elements, the *nō* finally emerged in the Ashikaga period (1392-1573). Particularly under the ægis of Kannami (1333-84) and his son Seami (1363-1444) it reached its highest development; and during the Tokugawa period (1603-1868), the *nō* became greatly favored by the *shōgun*.

The *nō* program consists of five or six short dance-dramas given in a theater in a single day. A distinctive pattern runs through each part and through the whole group. These are: 1) A congratulatory play, in which

deities appear; 2) A battle piece, involving warriors; 3) A lyrical "wig-piece," in which a woman is the leading character; 4) A play in which such themes as lunacy and vengeance are treated; 5) A concluding play involving supernatural beings. In between the plays a comic *kyōgen* brings an interlude of contrast and relief.

The actors, besides a chorus of 8–12 and four musicians, are the *shite*, leading actor, and the *waki*, who plays a secondary role. Both may have a companion, *tsure*, who may speak a few words, or a *tomo*, who is wordless. The leads wear masks. All are men.

The stage is a resonant, roofed platform without curtain, with an unchanging background consisting of a conventionalized pine tree (symbolizing undying strength), and a walk extending to the left for entrances and exits.

The themes of *nō* plays are heroic, ethical, or mystical. The music, played by an orchestra of a drum struck with two sticks, two hand drums, and a flute, enhances the sense of mystery; and the conventionalized gestures and speaking evoke a world of unreality. The motions, all fantastically slow and restrained, belong to the *mai* type of dance. The chants are rendered in measured tones, with smaller intervals and slower tempo for the leads ("strong") than the subcharacters ("weak"). They are fixed by tradition in diagrams accompanying the texts. Every element is symbolic: the gestures, the properties, and the design of the sumptuous costumes.

Though the *nō* is distinctly an aristocratic, courtly art form, the *kabuki* has taken over dances from the *nō* and adapted them to the popular stage. This took place during the Tokugawa period. It is possible to prove that foreign influences from China, India, Korea, and Manchuria have been operative in shaping the *nō*, in combination with ancient native ceremonies and the recent native rice-planting dance. Yet the Japanese genius has here created a unique and characteristic theatrical art and invested it with a dignified fantasy as expressive of profound experience as the Greek theater of antiquity. See KABUKI; ODORI. [CPK]

Noah In the Bible, the righteous man chosen by God to survive the deluge (*Gen.* vi-ix). Noah was the son of Lamech and grandson of Methuselah. When he was born, a shining child, so perfect that he came circumcised from the womb, his grandfather warned Lamech to keep the child's real name a secret, for the world was evil and the magicians would do the infant harm if they could learn his real name. So Noah was known until after the flood by the name Methuselah gave him, Menachem the Comforter.

Warning of the flood was given to Noah in time for him to plant a teakwood tree, wait 20 years for it to mature, and cut it into planking for the ark. Noah tried to get the wicked people of the world to reform, but they jeered at him, especially at his folly in building the ark on dry land and in a high spot far from the sea. In those days, people were larger than they are now, giants, and they said that if a flood came they would stop the water with their feet. At last the ark was finished and Noah began to collect the passengers, two, male and female, of all animals, but seven of each of the clean beasts. (Here, as in other parts of the Noah story, the Priestly writer-editor amends the Jehovahist's more folkloric account. The P version accounts for two

of all kinds; further, P counts a full year of 12 lunar months plus 11 days to make the duration of the flood a whole solar year, where J's version recounts the familiar 40 days and 40 nights [for which see FLOOD]; P, protecting the priestly prerogatives, does not mention the altar and sacrifice after the flood, whereas J does, etc.) A Moslem commentator says that as the animals entered the ark, Noah touched and counted them, the males with his right hand, the females with his left. The ass was slow in getting on the ark, and the impatient Noah called, "Hurry, even though Satan be with thee." The Devil, taking this as an invitation to board the ark, came on with the ass. The ark was in three stories, the lower for the beasts, with the birds and men on the two upper decks, though commentators disagree as to this order. Men and women were separated in the ark by the gigantic body of Father Adam, who was disinterred by Noah to keep him from a watery grave. Not that there were many people aboard, only Noah, his wife, their sons, their wives and children.

At last the waters began to come. First water rose and began spilling from the stove of Noah's wife. Then God removed two of the Pleiades and water began to spill from the heavens. (Later, to fill the holes, God took two stars from the Great Bear, which is why the Bear chases the Pleiades across the skies; but it will not recover its lost stars until the Judgment Day.) The waters rose from the earth too, and the giants tried to stop the springs with their feet. But the waters were hot, for God had passed them through Gehenna, and the soles were burned from the giants' feet. In desperation, the evil generation cast its own children into the springs, but to no avail; soon the waters covered the highest mountaintops. Even Canaan, Noah's grandson, died thinking he could live above the flood on a mountain. The giant Og, the monster reem, and the fishes of the sea alone survived outside the shelter of the ark.

The trip aboard the ark was not uneventful. The lion was seasick the whole time and once, when Noah was a bit careless in feeding it, the irritable lion bit him, laming him. The filth from the animals too piled up aboard the ark, and rats became a problem. So Noah created two new animals, which had hitherto not existed. Passing his hand over the elephant, he made it give birth to the pig, which soon devoured the filth; Noah then rubbed the lion's nose, and it gave birth to a cat, which grew sleek on the rats. See CATS.

The weather was overcast, and day and night were undifferentiated. But aboard the ark, Noah had a book that had once belonged to Adam, the book from which Noah learned to build the ark. This book was encased in a jeweled box, and at night the jewels shone to illumine the ship, while in the daytime they grew dimmer. Some say, however, that the illuminating jewel was the philosopher's stone. Finally the rain stopped; the waters ceased to rise; the ark floated on the waters. Noah sent out a raven to see if land were yet exposed. But the raven, a white bird, found a corpse floating on the water and began to eat it, never returning to the ark; for this its plumage ever since has been black. Noah sent forth the dove, which returned with an olive branch. A. H. Krappe sees a real custom here; as late as the Middle Ages, seamen released birds when out at sea to determine the direction in which land lay.

The ark at last grounded on a mountaintop. European

and most Near Eastern tradition says this was Mt. Ararat in the Caucasus, though other peaks are similarly noted. But, for the ancient world, since Noah was the inventor of viniculture, and since wine-making traditionally began in the mountains of Armenia, Ararat was the obvious landing place. The sacrifice of thanksgiving was not made by Noah, however, because he had been lamed by the lion and was therefore unfit to perform the rite. Instead Shem built the altar and offered the sacrifice.

The survivors of the flood set about building a civilization. Noah invented the hoe, the scythe, the plow, and several other agricultural implements. One day he discovered some grapes and got drunk on the juice. In his drunken condition, he went to his wife's tent and had intercourse with her. Ham, Noah's inquisitive son, watched the whole incident and told his brothers, Shem and Japheth. The two entered the tent backwards and, not looking at their father, covered him as he lay in his drunken stupor. For this act of filial duty, Shem and Japheth and their descendants were blessed by Noah, but since he looked, Ham and his descendants were condemned to have black skin, red eyes, kinky hair, everted lips. The story is, according to Krappe, either an etiological story intended to be opprobrious to the neighboring Hamites, or a reminiscence of a myth paralleling the Uranus-Cronus castration story of the Greeks. The vine itself was pointed out to Noah by Satan as something to cultivate. In planting it, Noah fertilized the ground with the blood of a lamb, a lion, an ape, and a pig; thus, as a man drinks, he is at first bleating and simple, then brave and roaring as a lion, then foolish as an ape, and finally he rolls in the mire like a pig.

Myths of great floods have been found all over the world. The Hebrew story, with Noah as its hero, is acknowledged to be a borrowing from the Mesopotamian flood story, told in the Gilgamesh epic, but certainly much older. Though the captivity in Babylon would on the surface appear to be the ideal time for such borrowing to have taken place, the flood tale was known to the Hebrews long before that time. Probably contact between the wandering desert tribes and the Mesopotamian city-dwellers took place, for purposes of trade, from earliest times. The Babylonian myth itself, with Utnapishtim as its Noah, may be traced back to the Sumerian account, where Ziusudra is the hero. The Armenian Xisuthros sounds very much like this Sumerian Noah. Manu is the parallel figure in ancient Indian mythology.

Noah and Noah's wife were popular characters of the English mystery-play pageants. Noah, the essence of the convivial toper, is a very sympathetic character who fights with the Devil in the ark and beats him. But his wife is a worse opponent for Noah than the Devil: a sharp-tongued, ill-tempered shrew who makes Noah's life miserable. See ARA; ARK; DELUGE; FLOOD; OLIVE.

Noah's ark The idea of the first world being destroyed by a deluge and then re-created is found in almost all North American Indian mythologies, and may well be a purely native concept. However, since it is so similar to the Biblical deluge story which was told to the Indians by missionaries, it was not difficult for the former to incorporate in their native material the Noah account; many tribes did this and now relate the story of Noah and his big boat as part of their creation material. [ewv]

Noble Moringer A German Minnesinger ballad of the 12th century which, transmitted throughout Europe, has become one of the most famous of all ballad stories. It begins with the *aubade* theme, borrowed from French tradition, the separation of lovers on the morning after the wedding. The wife pledges to the husband that she will wait seven—or nine or some other number—years for his return. He leaves for the crusade, or to kill the dragon, etc. The time limit expires but still the faithful wife waits. At last she is forced into a match. The husband comes back just in time to attend the wedding feast and drop his ring in the bride's cup. She recognizes it, the lovers are reunited, and the groom—unless he is the villain of the piece—is dismissed. Where the bridegroom has forced himself on the bride, the ballad-makers have invented suitable and stern punishment.

The German version mentions the name of the Minnesinger Heinrich von Morungen and so can be dated as originating in the 12th century, though the story itself is probably much older. Its hero is Gerhardt von Holenbach; later versions make the hero Henry the Lion of Brunswick, who is the Bruncvík of Czech legend. Transmission of the ballad as a unit is clear because of the several motifs it includes: the parting of the lovers, the pledge of waiting (M131), the forced marriage, the arrival of the hero just as the marriage is to take place (N681), the ring in the cup (H94.4). In England the ballad is known as *Hind Horn*, related to the other Horn romances; in Spain it is *Count Dirlos*; in Denmark *Finnekonster*; in Russia *Dobrynja* and *Aljoša Popović*. It is the Serb *Pomorovac Todor* and *Jankovic Stojan's Imprisonment*, the Czech *First Love*, the Greek *Constantine the Little*, the Rumanian *Mosneagul*. Other ballads, e.g. the French and German *Soldier's Return*, resemble it and may be descended from it, or they may have arisen independently. On the other hand, the eastern versions, especially, of the *Moringer* have become assimilated to cycles like the Balkan ballads of Digenes Akritas, where the kidnapped bride ballad has been joined to the *Moringer* theme. In Russia, where the *Moringer* is one of the few Western ballads adopted, it is told of Dobrynja, hero of the Kiev cycle. In Spain, *Count Dirlos*, the longest of the Spanish ballads, is attached to the Carolingian poems, but is simply the story of the *Noble Moringer* embroidered with names and places familiar in that cycle. Compare YOUNG BEICHAN.

nocnitsa The night-hag of Russian, Polish, Serbian, and Slovak folklore, who torments children at night. In the Archangel region mothers place a knife in the cradle, or draw a circle around the cradle with a knife, or hide an ax and a doll under the floor beneath the cradle to prevent this nocturnal being from getting at the child. This practice may be related to the world-wide belief that supernatural beings cannot touch iron. Other Russian names for the nocnitsa are *kriksy* and *plaksy*. The Bulgarian analog of the nocnitsa is the *gorska makva*, a hideous wood-hag.

noide or noaide The shaman of the Lapps. The most important of his possessions is the magic drum used for excitation as a medium. The drum is painted with magic figures and pictures of gods. The assistant spirit to the shaman (*suoje*, shadow) could be obtained by inheritance or purchase, and even as a marriage portion. Some-

times the spirit comes voluntarily to the service to the shaman. [JB]

Nokomis A term, widespread in North American Algonquian Indian languages, for grandmother: e.g. Shawnee *kokumtha*, our grandmother. The Ojibwa word *nokomis* was used as the proper name for Hiawatha's grandmother in the poem *Hiawatha* by Longfellow. See *HIAWATHA*. [EWV]

nolema'higan Literally, acting like a clown: the former Penobscot Indian Trading or Clown dance. The "traders" were disguised with deer-heads and antlers, and birch-bark masks. They wore women's clothing, or wore humps in their backs. For several successive nights opposing parties bargained at the several homes for objects of every description. The clown heralded his entrance by singing, weird cries, and stamping on the threshold like an animal; then he would engage in all manner of buffoonery. The song and actions are reminiscent of the Iroquois False Face Begging dance. Also, macabre stories connect the traders with ghosts. Long ago the procedure probably had serious ritual significance. [GPK]

nominee Term used, especially in the study of Negro folklore, for set phrases or other devices employed to introduce a tale. Among the Ashanti, most tales are preceded by the phrase, "We do not really mean, we do not really mean (that what we are going to say is true)." The Hausa may begin with "A story, a story, let it go, let it come." In Dutch Guiana, tales may begin with "*Er, tin tin*," with the answer "*Tin, tin, tin*," the equivalent of "Once upon a time"; or with "*Kri-kra*, all men on their *Kra-kra*," or "All in your places." In the Bahamas, according to Parsons, many tales begin with the rime "Once upon a time, a very good time; Monkey chew tobacco and spit white lime," a formula also reported from the Sea Islands of the Georgia and South Carolina coastal region. [MJH]

noodle stories One of the types of the droll story; stories of people whose actions are absurd almost to the point of idiocy. Typical noodles are the inhabitants of Gotham in England, of Schildburg in German tradition, of Chelm in Yiddish stories, of Emessa in Persian tales, of Boeotia in ancient Greek tradition. The butts of these stories are stupid peasants, city slickers, absent-minded professors, Little Morons, habitual worriers. The Micronesians call such stories *umes*, crazy people. The tales form a distinct genre almost everywhere in the world, but shade into the trickster tales where the dupes of the Reynards and the Till Eulenspiegels are noodles.

Carolyn Wells notes Theophrastus' character of the Stupid Man "who, after doing a sum and setting down the total, will ask the person next to him, 'What does it come to?'" The story of the fishermen who want to return to a good spot the next day and mark the location by cutting a notch in their boat while they are over the place is as popular today as it was 500 years ago; the point of the story is usually "But how do we know we'll get the same boat tomorrow?" The students who were the noodles of the earliest jestbooks have become the absent-minded professors of today; the most modern "switch" is the psychiatrist with hallucinations. The most famous English noodle story is *The Three Sillies*: a suitor discovers his intended and her parents

crying down in the cellar because their child may some day be killed by an ax stuck in a beam; he travels until he finds three sillier people in the world—a man who spends hours every morning trying to jump with both legs into his trousers, a woman who feeds her cow on the thatched roof of her house, a whole townful of noodles fishing the moon out of a pond. The starting point of this story, in a version from Massachusetts, is: "If I had a darter and my darter had a darter and she should fall in the warter, how dreadful it would be."

The Turkish Khoja Nasreddin puts an arrow through his own coat, thinking he sees a thief. In the morning he recognizes it, and then says, "It's a good thing I wasn't in it when I hit it."

Famous in Arabic, German, English, etc., is the tale of the stubborn couple, neither of whom will get up to bar the door. Robbers enter through the unlatched door. Finally the husband is outraged at the treatment to which the robbers subject his wife and cries out. "You spoke first," she says. "You lock the door."

The Irish bull too is a sort of noodle story. The Irishman who rode a kicking donkey was perturbed when it put a hoof through the stirrup. "Faith," he said, "if you're getting up, I'm after getting down."

An old story tells of the man going through the market place with his arms stretched out, warning passersby not to jostle him or he'll lose the size of the turban he needs. Nowadays, this story has become altered: the man enters the department store with his hand cupped and carefully shielded and heads for the brassière department. No less intelligent was the man who couldn't see the use of a sundial at night; he couldn't tell time by it when it was dark, until someone gave him a candle so that he could go out and see what time it was.

From the 13th century Bar Hebræus comes the tale of Socrates being led to execution. "They're killing an innocent man," a woman cried out. To which Socrates replied, "What shall I do? Commit a crime?"

A husband and wife are driving in their automobile, in a current Yiddish story. "Shut the window; it's cold outside," she orders. He shuts the window. "Now is it warmer outside?" But who is the noodle here? See DRINKING THE MOON; DROLLS; DRYING THE CANDLE; GOTHAM; IMPOSSIBILITIES; LITTLE MORON; NUMSKULL TALES.

noru miego One of the oldest Lithuanian dances for couples, performed in two facing lines. It uses a succession of two-steps common to a number of dances in adjacent countries—Finland's *Ålands Flicka*, Sweden's *bleking* and Norway's *tantoli*, Germany's *Herr Schmidt*, Bohemia's *komarno*; and also in Mexico's *La Raspa*: 1) Partners hold opposite hands and shift them back and forth with an alternation of forward heel-thumps. 2) Partners hook elbows and pivot with a skipping step. This combination is believed to be of Slavic origin. [GPK]

Norns In Scandinavian mythology, the fates, usually three virgins, who predestine the life of god and man at birth, often assisting and comforting the mother. These women who, with the Valkyries and fylgjas, comprise the Disir, live beside Urdar's fountain where they receive daily visits from the gods and water the roots of Yggdrasil. Originally there was only one Norn, the giantess Urdar, but a triad developed, one of whom often negates the gifts of the other two, or turns it into a curse.

The *Völuspá* calls all three giantesses, but Snorri, who through an error named them Urd (past), Verdandi (present), and Skuld (future), calls them giantess, elf, and dwarf respectively. While neither god nor man may alter their decrees, they often perform good services. Wolves are called "hounds of the Norns." *Nornaspor* are marks on the fingernails, white signifying coming good fortune. At various times they have appeared as spirits, demons, souls, or human oracles. Their counterparts are the Anglo-Saxon *Wyrdes*, the Greek *Moiræ*, the Roman *Parcæ*; in later German folklore they appear as the three spinners or fairy godmothers.

North American Indian folklore Prose narratives, songs, chants, formulæ, speeches, prayers, puns, proverbs, and riddles are the chief forms of oral expression found among North American native peoples. The first five forms are common to all North American groups; the last three occur less frequently, and only among a restricted number of tribes.

All native North American literature was—and still is to a great extent—transmitted from one generation to the next by word of mouth only. That it is recorded in print today is due largely to the work of anthropologists who, for the past seventy years, have been steadily collecting an ever-increasing corpus of American Indian literary material directly from Indian raconteurs.

Prose Narratives Prose narratives are part of the cultural tradition of every North American group, no matter how simple the culture of that group may be. From our viewpoint these prose narratives are of a fictional and non-fictional character; from the native viewpoint they are almost all non-fictional, or true stories.

Fictional material includes in the main serious creation and origin tales, humorous trickster tales, and tales which develop either wholly, or essentially, in human society. Non-fictional narratives consist of "historical" accounts of tribal encounters, personal accounts of war and hunting experiences, and incidents of everyday life told as droll stories.

The creation and origin stories and the trickster tales are set, as a rule, in a remote and prehuman Mythical Age during which the world was created and occupied by birds and animals having superanimal and superhuman power. Exceptions to this statement are Eskimo and Pueblo Indian tales, which reflect no such concept of a prehuman Mythical Age.

Tales set in human society, and all non-fictional narrative materials, belong to a more recent period, that of human beings and the world as it exists today. This is not to say that some of the actors in the "human being" tales may not be monsters, or cannibals, or birds and animals with power to transform themselves into animals, because they often are, but only that the existence of humans is recognized and the tales set in the familiar, fully formed world of the present.

Narratives serve either to instruct or to amuse. In some tribes one or the other of these functions is emphasized. The Utes and other Uto-Aztec speaking groups of the Great Basin, for example, are reported to tell tales primarily and chiefly for entertainment, whereas among the Yokuts Indians of California and among many other tribes tales provide historical information, and among the Jicarilla and other Apache groups tales are primarily pedagogical and represent the

summation of knowledge on the basis of which the Apache must live and act.

In many other North American Indian groups the tribal body of narrative serves both to instruct and to amuse. The Navaho, for example, have a long, esoteric emergence myth which is a repository of historical information, and other tales of a similar serious nature; they also have "trotting or traveling" Coyote stories which are told to children principally for entertainment.

Nearly all American Indian tales are moralistic in that they tend to constantly reaffirm the culture of the group. If cultural tabus are broken in the story, punishment always follows; violators of accepted behavior patterns inevitably receive their just deserts. Material covered in North American Indian myths, particularly in those of a more serious nature, includes accounts of the creation or origin of the world; the origin of human beings, animals, natural phenomena, customs, and ceremonies; the ordering of the world and human conduct; the "history" of the group (often in the form of migration stories); accounts of animal-human marriages; visits to otherworlds by humans, and so forth. Space does not permit summaries of even the most widespread American Indian tales; for such a summary, see Stith Thompson, *The Folktale* (New York, 1946), pp. 303-65.

A tribal corpus of tale material is seldom presented in any particular order or temporal sequence, although among some groups it has been noted that narrators will tell recorders the origin myths first.

The myths told primarily for amusement usually revolve around the deeds of one or more tricksters: Raven, Mink, or Bluejay in North Pacific Coast mythology; Raven, Old Man, the Three Brothers Hogfennel, or Coyote in the Plateau; Raven, Beaver, Crow in the Northern area; Coyote or Rabbit in the Basin and Southwest; Coyote, Old Man, Sen'deh, Inktumni in the Plains; Hare, Raccoon, Nanabozho, Wisaka, Tcikapis in the Woodlands area; Opossum, Rabbit in the Southeast. This trickster may also appear in more serious tales as a culture hero, but in tales told for amusement he is a buffoon, lewd, greedy, stupid, boastful, forever dying through his stupidity, but always coming to life again, to enter upon another foolish imitation or series of amusing misdeeds and tricks. Humor often enters the trickster tales in the form of obscenity; particularly is this true for Great Basin and Plains trickster stories, where sexual practices and perversions, incestuous relationships between father and daughter, or trickster and his mother-in-law, excretory and other bodily functions, and anal references are made with no attempt at euphemism. Other forms of humor may be noted for the trickster tales, and also for many of the tales set in human society. It has been noted that the Coeur d'Alene employ humor of situation and humor of language or word play; the White Mountain Apache, humor of impertinence; the Caddo and Bella Coola, humor of invectives. The Jicarilla Apache find irony humorous; among the Crow Indians incongruity gives rise to laughter, and among the White Mountain Apache the ludicrous arouses mirthful audience-response.

Tales are often told by prearrangement, and somewhat formally, to a large or small audience which gathers for the purpose of listening to stories. Such an audience may include adults, adolescents, and children, of both sexes. Often, too, tales are told less formally: a parent

or grandparent may tell children stories at home; an old man and old woman, or two or three old men or old women visiting together at night, may tell each other stories until 3 or 4 o'clock in the morning; men and women often tell stories at funeral wakes, at all-night dances, on hunting trips, and so forth.

Narrators of generally known, exoteric tales are usually old men or old women who are noted as good storytellers. The esoteric tales, such as accounts of the origins of ceremonies, the origins of sacred bundles, of clans, families, and so forth, are generally told to restricted audiences by trained narrators, usually middle-aged or elderly men.

Winter is generally (but not always) the preferred time for telling tales, and many tribes follow rather definite rules in this respect. The White Mountain Apache, for example, tell tales only during the cold months, from November through February; in the other months "there is too much danger abroad—snakes, poisonous insects, and lightning will hear themselves spoken of, and punish the narrator or his family." Furthermore, tales should be told only at night among these Apache; "the sun should not see you." (Clan legends, on the other hand, may be told anytime.) At the pueblos of Isleta, Zuñi, and Hopi, summer tale-telling attracts snakes and is therefore prohibited. At Taos story-telling begins with the January moon; if tales are told in summer it will snow or turn cold. The Kiowa have a tabu on daytime story-telling, "Sen'deh (the trickster) will bite off your nose, but when stories are told at night, Sen'deh laughs." The Tübatulabal and Yokuts tribes in California tell stories only on winter nights; if stories are told in summer snakes will bite narrator and listeners. The Eskimo devote the winter months to visiting, feasting, dancing, and story-telling, but the economic round, rather than any formal tabus, seems to be the determining factor.

Sometimes narrators are paid by their adult or child listeners with small gifts of tobacco, food, or firewood. Listeners are expected, in many groups, to respond with "Hau" or some other exclamation at intervals while a story is being told. After a night or part of a night spent in listening to stories auditors in some groups are constrained to bathe in an icy stream or pool, or to refrain from sleeping during the next day and night.

Skilful narrators who have a flair for story-telling—and there always seem to be one or more, no matter how small the group—are remarkably good at pantomime and use of gesture. The hands, arms, posture of the head and body are frequently used to pantomime actions and incidents, in simple stylized gestures. The voice, also, often is controlled, to help carry the dramatic burden of tales. To indicate a climax in a story, for example, a White Mountain Apache narrator may raise his voice for humorous incidents, or lower it and talk from the back of the mouth through compressed lips, in order to produce peculiar restrained mouthed sounds when speaking of dangerous, holy, or sinister things.

Narratives vary greatly in length. A few brief tales of a hundred words or so are to be found in almost every collection; Great Basin tales are preponderantly brief, often consisting of a single incident told in a few hundred words. At the opposite extreme are some very long tales, such as the Great Dream tales of the Mohave Indians, one of which was recited for six days for a total of twenty-four hours and then was far from being

finished, or the 35,000-word English rendition of the Jicarilla Apache *Dirty Boy* tale. Between these extremes lie the great bulk of tales, ranging from 350–2000 words in length in English rendition or translation. The number of tales in a tribe's repertoire also seems to vary considerably; the Pueblo and Apache peoples of the Southwest, the people of the North Pacific Coast, and the Plains tribes apparently are rich in tales, each narrator knowing many different ones, but no one narrator knowing all in the tribal stock. In some Plateau groups and in the Basin, each narrator may know all or nearly all of the tribal repertoire, and individual versions do not vary greatly in plot. A recent collection made by one collector for the Coeur d'Alene, a Plateau tribe, contains 38 myths, 2 tales relating to the historical period, and 10 narratives of actual historical encounters.

European *märchen* and noodle tales have been borrowed by the American Indians, especially by the Southwestern, Plateau, Southeastern, Northern, and North-eastern tribes. A few such, frequently encountered, are *Tar Baby*, the Biblical story of the Flood, *John the Bear*, *Cinderella*. American Indian renditions of European tales show all degrees of assimilation. Some tales have been completely recast in setting, characters, cultural background, style, and thematic emphasis to suit the native pattern. Others are narrated with few or no such adaptations.

The form of American Indian folktales varies. Some groups show a preference for one form by casting most of their tale material into one particular mold, while others display an interest in a quite different form of narrative. In brief, there are over North America the following tale forms: 1) that of the self-contained episode, with its corollary form, 1.1) that of the composite tale consisting of a series of self-contained episodes which are usually connected through the identity of the character(s) in them; and 2) the novelistic tale, in which the action flows along from one episode to the next, so that each episode depends, to a greater or lesser degree, on the preceding one.

On a somewhat different level of formal distinction is the tale-cycle, in which several tales (of either forms 1.1 or 2) are welded together into connected groups.

In North America the brief, self-contained incident is found as a tale form in practically all groups, but is a favorite among the Great Basin tribes and several Plateau groups, and is frequently used for children's stories in the Southeast, the Southwest, and among the Eskimo. Composite tales, or series of self-contained incidents, are also a popular form in the Basin, and among several California Indian groups.

Novelistic tales, likewise, are told in all parts of the continent, but are an especially popular form among northern Plains tribes such as the Blackfoot and Crow, among Pueblo groups (Zuñi raconteurs, for example, handle this form with high literary skill), and among certain northern California-southern Oregon groups such as the Shasta and Klamath. An example of a novelistic tale with continental distribution is the Orpheus myth, the tale of a person who attempts to bring a deceased relative back to earth from the land of the dead. (See A. H. Gayton, "The Orpheus Myth in North America," *JAF* 48, pp. 263–93, 1935).

Tale cycles or connected groups of tales are a notable form on the North Pacific Coast, where the deeds of the

trickster-transformers, Raven, Mink and Bluejay, are told as cycles; among the Kiowa of the Plains there is a long cycle of tales about Sen'deh, the Kiowa trickster; many other western tribes have similar trickster tale cycles. Somewhat more unusual are the Jicarilla cycle of culture hero tales about Killer-of-Enemies, and the Northeastern Algonquian cycle about Gluskabe.

Little work has been done on the stability of form in American Indian folktales, but several studies have been made of the stability of content as a stylistic feature. Among the Eskimo letter-perfect reproduction of tale material is a literary standard which narrators are obliged to adhere to; if they do not they are subject to correction by members of their audience. The Tillamook of the Oregon coast, likewise, adhere to the tradition that tales should be told as relatively fixed units, and among the Cœur d'Alene, a Plateau group in Idaho, it has been found that individual versions of the same tale show no great amount of variation.

The opposite holds true for tales as told by the Pueblo peoples of the Southwest. In these groups narrators are encouraged to exercise originality, to vary the combination of stock episodes, and to achieve new emphases in theme or motivation. Among the Apache of the Southwest it has also recently been noted that narrators are allowed a liberal amount of artistic latitude in combining and recombining episodes, to form new tale plots. This premium on originality is however counterbalanced to some extent by the fact that certain other stylistic features are retained with striking consistency by Southwestern narrators; tales are always localized at their start, for example, and a good deal of cultural detail can be counted on to be introduced into them.

An attempt to number, classify, and indicate the distributions of the recurrent elements or *motifs* in American Indian tales has been made by Stith Thompson (*Tales of the North American Indians* [Cambridge, Mass., 1929]; see also *Motif-Index of Folk-Literature* [6 vols., Bloomington, Ind., 1932-1936]). Thompson's isolable units (motifs) include any narrative element, large or small, which is recurrent among several groups; a motif may be, therefore, a tale plot, or a discrete incident within a tale, or a minor imaginative detail. All motifs, when isolated as such, are referred to by catchwords or tag phrases; examples of such are "sun sister and moon brother" for a tale plot widely recurrent among Eskimo groups; "eye-juggler" for a discrete incident in which a trickster throws his eyes up in the air for sport, and finally loses them; "sky window" for the detail of a hole in the sky, from which the earth is visible below.

No anthropological folklorists have attempted any classification of folktale elements on a scale comparable to Thompson's, nor has their interest focused, recently, on wide distributional studies. Rather, the attention of students of American Indian folktales seems to have been turning more and more during the last two decades to structural analyses of particular bodies of folktales.

For such structural analysis units of like order and function must of course be isolated and defined, and their sequences established in specific tribal collections of folktales. At the present time three such units are generally referred to, namely, the *tale-plot* (using this term in its widest sense to include theme, episodes, and

succession of episodes), the *episode* within the tale-plot, and the *element*, or detail within the episode.

The smallest of these units, the element, is a detail which may be 1) either closely concerned with the plot of the tale, or 2) a purely stylistic device, or 3) a detail performing functions relating both to plot and style, or 4) a detail inserted to characterize actors, or to add humor or interest to the narrative. Stylistic elements, for example, are often used both at the beginning and end of tales; the stylistic element of specific localization is present in the opening of a Santo Domingo Pueblo tale—"They were living at Kackatcutya . . ." An element which, in a Shawnee tale, performs functions relating both to plot and style is one known by the catchword "years thought (called) days." This element is first used stylistically to refer to years by the term days, but later on in the story when the actors interpret "days" literally, they lose their chance to move to a better land. An element inserted for humor, in a Cœur d'Alene tale, is that of the Land People phoning upriver to Snake.

Although elements are basic to tales, by themselves they are meaningless so far as narrative significance is concerned. It is only when two or more elements are combined that the plot begins to thicken into meaningful narrative units or episodes. Episodes (sometimes also referred to as incidents) are therefore our second structural unit. An episode may stand alone, complete in itself as a short tale, or several episodes may be combined into longer tales. The "self-contained episode" already mentioned as a popular tale form in the Great Basin is an example of the episode forming a complete tale-plot. Composite and novelistic tales are examples of two or more episodes either tenuously or skilfully combined in a tale-plot.

The tale-plot is simply the tale in its entirety, the largest of our three structural units.

Other Prose Forms Prayers, formal and highly ritualistic, and informal and personal, are a widely used form of oral expression among the large majority of American Indian tribes. While many prayers have been recorded, the collecting and analysis of this particular prose form has not been as systematic or intensive as has been the collecting and analysis of tale forms. Several illuminating studies on the prayers of particular tribes have however been made; among these are G. A. Reichard's *Prayer: The Compulsive Word* (Monographs of the American Ethnological Society VII, New York, 1944) [Navaho]; R. Bunzel, "Zuni Ritual Poetry" (*RBAE* 47, Washington, D.C., 1930); R. H. Lowie, "Crow Prayers" (*American Anthropologist*, n.s., Vol. 30, pp. 433-42, 1933); P. Radin, *The Road of Life and Death* (Bollingen Series V, New York, 1946) [Winnebago].

The areas in North America in which formal prayers are emphasized as part of ritual are the Southwest, the Plains, the Eastern Woodlands, and the Southeast. In the last three areas named, an attitude of humility and mortification on the part of the suppliant is stressed in all prayers, especially those connected with rituals; "for we are a pitiful people" is a constantly recurrent phrase, for example, in the prayers of the Algonquian-speaking Woodlands tribes. In these areas, no great emphasis is laid on the letter-perfect repetition of ritualistic prayers; tribal prayers conform of course to tribal patterns, but

leeway is allowed the speaker to shorten or lengthen a prayer and to embroider extempore on its themes.

Among the Navaho and other groups in the Southwest, prayers are of a quite different order. The attitudes of humility and mortification are not expressed; through prayer, the Navaho hopes to compel his gods to bring the good and the beneficial to pass. He does not ask for pity, nor does he give thanks in prayer, but is more apt to dwell on what has happened in the past, in order to insure its recurrence in the future. Navaho prayers must, moreover, be learned as a whole, and when recited, must be recited letter-perfect from beginning to end, in order to achieve their purpose.

Short, non-ritualistic prayers made by individual suplicants are widely used in North America. The only areas, in fact, in which even simple prayers seem to be rarely resorted to, if at all, are the Great Basin, the Mackenzie-Yukon, and the Eskimo areas. Such short prayers are used on many occasions; in the Puget Sound region, for example, it is reported that each man prayed twice daily, at daybreak and in the evening, asking that he live to old age. Since the prayer was borne upward on the smoke from a fire (a belief also held by the Shawnee of the Eastern Woodlands), the suppliant usually prayed when building a morning fire. In this same region, prayers of a more formal sort were delivered at special seasons and in special places by whale-hunters; the time of most intensive praying, however was for four days in December and four days in June, "when the sun seems to pause before changing" (winter and summer solstices).

Prayers are either chanted or spoken; ritualistic prayers seem mainly to be chanted, and many such, from various North American tribes, are reproduced in translation in verse rather than in prose form. Unlike American Indian songs, however, prayers are not delivered to the accompaniment of musical instrument.

Compulsive, inherently powerful formulæ, from one to many lines long, are another widespread form of composition. Such formulæ are sometimes recited, sometimes sung. To be efficacious they must always be rendered letter-perfect. Often formulæ are regarded as valuable incorporeal personal property, are kept secret by their owners, and are sold or, as on the North Pacific Coast, handed down in families. An example of a very short formula used frequently in Jicarilla Apache ceremonies to drive away evil and sickness is as follows: "Long life, everything good, old age, no evil." In the Southeast, tribes such as the Cherokee and Yuchi rely heavily on formulæ in connection with curing the sick, gaining success in love, hunting, fishing, war, the ball play, and witchcraft, for self-protection and the destruction of enemies, for crops, councils, and other enterprises. For Cherokee formulæ, which have been more extensively studied than the formulæ of any other tribe, see J. Mooney, "Sacred Formulas of the Cherokee" (*RBAE* 7, Washington, D.C., 1886) and F. M. Albrechts, ed., *The Swimmer Manuscript* (*BBAE* 99, 1932).

Speeches of many different sorts, to suit many occasions, are delivered among the American Indians by chiefs, chiefs' speakers and messengers, war leaders, funeral directors, even by clowns. Like preaching among ourselves, speechmaking among Indian groups is essentially a male vocation. For example: Although Iroquois women have great political power, they generally voice

their decisions, opinions, and admonitions through a male speaker. In nearly all groups, even those having a very simple culture, oratorical powers carry prestige for their possessor. Among the Eastern Woodlands tribes one of the three or four ways for a man to attain distinction is to be a good speechmaker.

Public speeches are by no means limited to council meetings, but are part and parcel of the daily life of many groups. In California, for example, a chief or his speaker formerly addressed his people each morning telling them what to do, how to behave, and so forth. The same is reported for the Shawnee. Speeches are part of the great public ceremonies, as well as a regular feature of funerals, ghost feasts, naming ceremonies, and other rites.

A skilful speaker employs rhythmic repetition of words, phrases, and sentences, makes liberal use of euphemisms, metaphors, imagery, and other rhetorical devices, employs gestures, and uses stylized forms of delivery. The form, content, and manner of delivery probably varied from area to area, but as yet no serious comprehensive analysis of American Indian speeches has been attempted.

Riddles, proverbs, and puns are forms reported only occasionally, and for widely separated North American tribes. For long it was believed that none of these forms was native to the New World, but examples of Crow, Navaho, and Coeur d'Alene proverbs and puns have been collected, and recently Archer Taylor has cogently argued for the pre-Columbian existence of riddles in native America (Archer Taylor, "American Indian Riddles," *JAF* 57, pp. 1-15, 1944).

Two forms of prose composition familiar to us are either lacking or rare in native North America. One is the prose essay, which seems to be entirely absent; the other, dramatic compositions.

Pantomime, performed by persons dressed, masked, and painted to represent characters other than themselves, is an important part of the ceremonies of certain groups, notably the Pueblo peoples of the Southwest and the Indians of the North Pacific Coast region. But any dialog which accompanies the pantomime is episodic and apparently improvised. However, on the North Pacific Coast, certain performances seem to approach more nearly to being true dramatic representations than do comparable ones elsewhere on the continent. The Duwamish, who formerly lived around Seattle, Washington, had soul-loss doctors who annually enacted a journey to the land of the dead to recover lost souls, and the journey home with the souls. This performance seems to have fulfilled nearly all the requirements of true drama, except that the songs and speeches which are part of the performance were apparently largely extempore or subject to variation. The presentation does, however, have a definite beginning, middle, and end, a stage setting, stage properties (carved boards which represent spirit canoes used for the journey), definite actors, and is performed before an audience. The Makah Indians of Cape Flattery are also said to have enacted certain of their myths. From this and other evidence we conclude that if true drama existed anywhere in North America, the most likely area to look for it would be the North Pacific Coast. Unfortunately many of the peoples and much of North Pacific Coast culture disappeared soon after white settlers entered the region, so

the problem is one which may at this late date be capable of only partial solution.

Verse Verse, among the American Indians and the Eskimo, is either sung or chanted. Of the thousands of examples of native North American poems which have been collected, only one selection, from the Eskimo, is reported as having been recited.

Songs are universal among all North American groups, and command more interest than any other form of oral composition. They are used on all sorts of occasions: there are shamans' songs, gambling songs, traveling songs, ceremonial songs of many different sorts, social dance songs, vision quest songs, work songs, hunting songs, love songs, mourning songs, contest (nith) songs, and songs inserted in tale texts, to mention only a few. Songs may be improvised on the spur of the moment, may be obtained in dreams or visions, or may be learned from another singer. Some songs are known to all members of the tribe, others are esoteric and must be either inherited or purchased from their owners.

Songs are sung without accompaniment, or to a variety of accompaniments ranging from simple handclapping by the audience or singer(s), to use of the dry or wet drum and various types of rattles (turtle shell, gourd, carved wood, pottery) as accompanying instruments.

Songs are sung as solos, with or without chorus, or in chorus, by men, or women, or both. While singing is not so markedly a man's province as oratory is, for example, public rendition of ceremonial songs falls more often upon men than women.

Songs are composed by both men and women. Song texts consist either entirely of meaningful words, or entirely of meaningless vocables or burden syllables (*a, ho, he, aye, aja*, etc.), or, what is much more usual, of a mixture of both vocables and meaningful words. A few general statements about style can be made, which apply to all or the great majority of North American song forms.

One of the most obvious characteristics of native poetry is an extreme use of repetition of similar or contrasting units. Syllables, words, phrases, lines, stanzas, or entire song texts are subjects for simple rhythmic repetition through reduplication. Incremental repetition, which carries forward the action of the narrative, and alternating and more complex repetition of lines also occurs.

Second only to repetition, in many songs, is the use of the mnemonic summary, or the suggestive power of words to carry the memory of the act which the song commemorates. This reliance upon a few words to suggest action is universal in North America, but is not found in all North American songs, some of which have texts which are fairly explicit.

The use of preludes and refrains is also characteristic. Both form integral parts of most Indian song texts. Often such preludes and refrains consist entirely of meaningless syllables; it is to be regretted that in popular collections of American Indian songs they are often excised, and only the meaningful lines of the text reproduced.

The words used in song texts are frequently quite different forms from those used in everyday speech. They may be archaic, or borrowed from other languages, or modified according to certain stylistic conventions, or

incremented by vocables which serve to fill out a measure.

Two major devices found in European poetry are lacking in that of native North America. Rime is not used, nor are stanza forms, except as these latter are brought about by the rhythmic repetition of phrases.

Minor stylistic devices frequently (but not universally) encountered in native poetry are: onomatopoeia, or the use of sounds similar to those made by animals or natural elements; oppositional or contrasting phrases (day and night; our Mother the Earth, our Father the Sky); parallelism of thought and parallelism of structure; poetic diction and extensive use of sense-imagery (usually tribally stereotyped); use of metaphors and similes; use of climax; alliteration; assonantal tone quality.

While the importance of songs among all tribes cannot be over-emphasized, two areas in which songs are highly developed stand out, namely, the Arctic and the Southwest. The peoples of both these areas are master versemakers; for their traditional songs, both adhere to the requirement of letter-perfect renditions. Many of their extempore songs are masterpieces, those of the Eskimo being highly imaginative, emotional, lyrical, and rich in human appeal, while those of the Pueblo peoples and the Navaho abound in sensuous imagery and are beautifully balanced in structure.

Chanted verse is on the whole reserved for prayers in some areas, and for origin and culture hero myth material. The practice of chanting myths, either in whole or in part, has been noted specifically for several widely separated groups—the Choctaw, the Delaware, the Pima, the Papago, and the Eskimo.

A form of rhythmic expression which approaches poetry is the death wails used in many groups, but most frequently noted for the Plains Indians, who hired mourners to wail vigorously as the corpse was borne to its resting place. Such wails consisted of a highly emotional but also formalized cry of moaning at short intervals, followed by a rapid even recital of the attributes and deeds of the deceased.

Consideration of space has prevented inclusion of actual examples of the poetic and prose forms mentioned in this summary discussion. No single volume is available which includes examples of all the North American native forms mentioned, but several of these are presented in a recently published anthology (Margot Astrov, *The Winged Serpent* [New York, 1946]). The selections for this anthology, the only one of its kind which has appeared to date, are the standard ethnographic reports of American anthropologists, who have collected the material directly in the course of their field researches, from American Indian narrators and singers.

ERMINIE W. VOEGELIN

nose The nose is a good place for souls to leave the body or for evil spirits to enter it. Thus closing the nose of the corpse with fishhooks in the Celebes, plugs among the Eskimos, or pieces of jade among the Chinese, not only keeps the physical soul where it belongs but protects the corpse from errant ghosts that might cause trouble. Nose rings and other ornaments in the nose have a talismanic value among many peoples, notably those of Australia, the South Pacific Islands, western Africa, northwest America, and South America; among the Hindus and the early Semites. Like many talismans,

nose rings and similar attachments acquired a decorative value. In India the objects indicate caste and social position. In the Fly River district, women with unpierced noses are considered scandalous. The Gipsyland natives believe that people who have no nose ring will suffer in the next world. The Matu of British New Guinea pierce the nose when a child is six years old and, if a child dies before the age of six, they pierce the nose of the corpse. The *kupitja* worn in his nose by the medicine man of the Warramunga tribe is both a sign of his profession and associated with his powers. The nose kiss or Malay kiss consists of placing the nose against the cheek briefly and is reported from north Asia and America, Polynesia, parts of Melanesia, Malay Archipelago, New Guinea, among the aborigines of India and Madagascar, and elsewhere.

Other scattered superstitions are that a large nose indicates a generous nature and that the size of the nose is proportionate to the sexual parts. In India and Indonesia it is said that ghosts speak with a nasal twang.

[RDJ]

 If your nose itches, you will become angry, see a stranger, kiss a fool, or be in danger. This is a fairly general English and American saying. In Scotland, however, an itching nose means you will receive a letter. Quite general folk remedies for nosebleed are wearing a piece of red ribbon, red silk thread, or just plain red string around the neck. Tying a piece of yarn around the little finger of the left hand is also good. A cold key down the back of the neck will also cure nosebleed; so will a big hunk of brown paper under the upper lip. South Carolina Negroes also recommend wearing a brass ring or a necklace of red corn.

novella (plural *novelle*) A short tale with a realistic setting, with characters drawn from real life, and supposed to occur at a specified time and place, often using familiar folktale motifs and sometimes including incidents of the marvelous or supernatural. Typical novelle appear in the *Decameron* of Boccaccio and *The Arabian Nights* (e.g. the voyages of Sindbad). The distinction between novella and *märchen* is not always clear, since the same story may appear in one place as *märchen* and in another as novella. The *märchen* are, therefore, called by some students of the folktale *novellenmärchen*. Novelle appear in classical antiquity; the lost *Milesian Tales* of Aristides (2d century B.C.) were probably novelle of amorous adventures.

Ntikuma or **Tacuma** A character in Ashanti-Fanti folklore, the son of Anansi the spider, the Gold Coast trickster. In the New World, as Tacuma, Ntikuma figures in the lore of the Negroes who have preserved the Anansi stories (as against those in which Rabbit or another character is the trickster). Compare ANANSI. [MJH]

nudida Literally, thing prepared; a *gbo* or magic charm of Dahomey Negroes, which fulfils the spoken wish and also serves as a remedy for colic. It is a little sack filled with red and white kola and a kind of powder, all soaked in pigeon blood. One must utter his wish early in the morning while eating, and the nudida will effect it. To cure colic a small amount of the contents are swallowed. See M. J. Herskovits, *Dahomey*, II (New York, 1938), p. 284.

nudity Nudity is most commonly of importance in ceremonies to produce or to stop rain or to frighten evil spirits. Pliny reported that a woman could drive away storms by uncovering herself. Among some Moroccan tribes, women strip in a secluded place and play ball to bring rain, and in southern India, men stand naked on dikes and beat drums to stop rain. Other rain ceremonies of India require naked women to perform rituals at wells or at crossroads. Spirits are often prudish and take fright at the sight of a naked body. Transylvania farmers protect fields against depredations of birds by walking naked around their fields before sunrise, burning sulfur, taking an ear of corn in their mouths, and walking home without speaking. Elsewhere similar ceremonies are performed by the women. The Tagalog of the Philippines frightens the evil spirits during his wife's confinement by standing naked on the roof of his house with sword and shield while his friends engage naked in mock combat.

Stories among the Pueblo Indians about the girl warrior who exposes her genitals to prove to the enemy that she is a woman may be connected with the belief that evil spirits fear nudity. The pictures of persons in the act of copulation in China and Japan are sometimes explained by the belief that the Thunder God, god of punishment, is prudish and will avoid houses where copulation is taking place.

The popular movement currently called social nudism is connected with other magical impulses, little recognized by its followers. It originated in its present form in Europe in the early part of this century and in modern nudist camps its adherents give vigorous support to a number of hygienic tenets: that clothing is unhygienic, that the action of sun and air directly on the body is beneficial, that many sports—handball, swimming, tennis—are more effectively followed in the nude, and that communal nudism improves the morals of those who practice it. Tobacco is sometimes prohibited and alcohol is usually prohibited. The moral standards are maintained with a somewhat unnatural rigidity. Lewd stories are absolutely forbidden and any action, voluntary or involuntary, which indicates that the spectacle of nude bodies has aroused sexual emotions calls for expulsion. A visit to these camps, which is permitted only after the applicant has been interviewed by one or more members and is, for the first visit at least, provisional, leads to the conclusion that the related sexual impulses of voyeurism and exhibitionism are involved. Many camps will accept only married couples and difficulties are sometimes encountered because wives often object to accompanying their husbands or to attending the camp themselves. "Modern Nudism" with official headquarters in New Jersey has camps in most of the states of this country and is a flourishing movement in England, France, and the other countries of Europe.

Nudism as a civic protest involves other folkloristic impulses. The Dukhobors who have settlements in Canada and the United States are a mystic sect which arose in Russia in the 18th century. Members deny the authority of civil government. When the government attempts to exercise its authority, members of the sect revert to the nude. Sporadic examples of nudity as a protest, a symbolic divesting oneself of the conventions, have been reported from several countries and are usually regarded as psychopathic. See GODIVA. [RDJ]

Nuinumma-Kwiten Title of a playfully frightening song sung by the Australian aborigines to quiet children. Nuinumma-Kwiten is a monster beast of prey, who was once a member of the early race of men and who could swallow whole ostrich eggs. The song says, "I kill children who cry," and the effectiveness of the threat lies in the fact that the creature tracks down his victims by the sound of their crying voices. See LULLABY.

Num The Samoyed god of the sky and heaven. [JB]
numen (plural *numina*) In ancient Roman religion, the mysterious inner power existing in some personage or thing; that which inspires the feeling of awe: from the word meaning nod, command, divine will. It corresponds closely to the Polynesian concept of mana; it is what makes a thing divine and what makes it needful for man to perform certain rites. This expression of divine power eventually became personified in various gods, nature powers, etc. The earliest Roman gods were called the Numina and included Saturn among others.

Numi-Törem The god of the heaven of the Voguls: among the Ostyaks *Num-Türem*. The god of the Voguls and Ostyaks dwells, like a rich and powerful ruler, in the highest heaven in a house littered with gold and silver. He has seven sons and many assistant spirits. [JB]

numskull tales Generic term for the absurdity, ignominy, noodle, and fool stories of the world, popular everywhere, and occasionally overlapping with the trickster-buffoon anecdote, as in the case of the dancing bulrushes and the creaking limbs. More typical, however, is the story of the nitwit who squeezes the insides out of a sausage in order to use the cover for a sack (J1732; Type 1316); of the mad wheelbarrow (J1887) in which the numskull chains up the wheelbarrow because it has been attacked by a mad dog and might go mad and bite others; of the boy who gives the hens hot water so they will lay boiled eggs (J1901.2), or plants a sow to grow pigs (J1932.4). There is the world-wide story of the numskull who stays till he has finished (J1814); he urinates by the side of a brook in the night, mistakenly interprets the sound of the brook, and stands there till morning. The Arabian anecdote of the goose who dives for a star, thinking it a fish (J1791.8) and will not be fooled into diving for the fish which she sees next day is also typical. For the literal-minded numskull see JEAN SOT. See FATAL IMITATION; HORSE LEARNS TO LIVE WITHOUT FOOD; NOODLE STORIES; PENT CUCKOO.

nursery rimes The earliest rimes a child learns are apt to be the ones associated with the motions, gestures, and pantomime of the parent or nurse playing with the parts of the child's body. As the first counting was done by touching the fingers and toes, so also the first rimes, such as:

This little pig went to market;
This little pig stayed home;
This little pig had roast beef;
This little pig had none;
This little pig cried "Wee, wee, wee,"
All the way home.

Accompanying the first line, the mother takes the child's hallux between her thumb and forefinger, then the next toe for the second line, until the last and smallest toe is gently pinched while the mother makes an attempt to squeal like a pig: "Wee, wee, wee," part of

the fun being that the last toe is the wee one. The child is encouraged to join with the mother as the rime is repeated again and again, until he can say it alone. From California comes a toe verse which starts with the wee toe:

Little Pee;
Penny Jew;
Judy Whistle;
Mary Gristle; and
Old Big Gobble Gobble.

A rime for the fingers, popular in New England in the latter 19th century, began with the thumb:

Master Thumb is first to come,
Then Pointer, strong and steady,
Then Tall Man High,
And just close by,
The Feeble Man doth linger;
And last of all,
So fair and small,
The Baby Little Finger!

Slightly more complicated as the child grows older comes the widely known action rime:

Here's a ball for baby,
Big and soft and round;
Here is baby's hammer,
Oh how he can pound!
Here is baby's trumpet,
Toot, ta-toot, ta-too!
Here's the way that baby plays
At Peek-A-Boo!

At the repetition of the first two lines of the above, the parent or older child makes a "ball" by putting the tips of the fingers and thumbs together and getting the child to do the same. The hammer is one fist striking the other, and the trumpet is made with the hands partly closed and placed tandem. For the last two lines the hands are placed over the eyes but with fingers apart enough to peek through, and the game ends with a loud boo as the hands are removed.

The pantomime of cake- or pie-making, with obvious motions, accompanies the recitation of the following old English rime from the days of apprentices:

"Pat-a-cake, pat-a-cake, baker's man."
"So I will, master, as fast as I can."
"Roll it, and prick it, and mark it with T
And toss it in the oven for baby and me."

The following has variations, but generally runs:

Here's the church;
And here's the steeple;
Open the doors,
And see all the people.

At the saying of the first line, the doubled fists are interlocked by intertwining the fingers alternated. At the second line, the forefingers are raised with tips touching; at the third, the thumbs are spread apart, and at the fourth, the hands are opened far enough to show the finger ends inside. Older children add:

Here goes the minister up the stairs,
And there he is saying his prayers,

and act out the little drama in various obvious ways.

There are many verses to go with the action of the child "horse-riding" on the parent's foot or knee, the climax coming with the "home again" as the signal for

the parent to lift the child with foot and hands and catch him in the arms to the breast. Here are a few samples of many:

Ride, ride to Boston;
Ride, ride to Lynn;
Ride, ride to Salem, (sometimes Lexington)
And then home again.

Walk, walk, walk, walk, walk;
Trot, trot, trot, trot, trot;
Ta-gallop, ta-gallop, ta-gallop!

(Walk is alternately raising heel and toe; trot is faster, raising heel only; ta-gallop is whole foot.)

To market, to market,
To buy a fat pig;
Home again, home again,
Jiggety, jig.

(Above is walking to market, and trotting home.)

To market, to market,
To buy a big bun:
Home again, home again,
Market is done.

(Same as one before, except big bounce on "done.")

To market, to market,
A gallop, a trot:
To buy some meat
To put in the pot.

(Starts furiously, then slows from gallop to trot to walk, slower on each word in last two lines, but bouncing at very end with "pot.") There are infinite variations of these "to market" rimes. Sometimes the child rides on his daddy's back.

We used to act out the following old English nursery rime with a burlap sack of leaves for the pig every autumn at leaves-gathering time. The leaves were used during the winter for bedding down the horse and for scratch litter for the poultry.

Tom, Tom, the piper's son,
Stole a pig and away he run;
The pig was eat,
And Tom was beat,
And Tom ran crying down the street.

We had a merry time dramatizing the following very ancient one, using a sandpile or any pile of dirt for the hill and requisitioning the other needed properties from the kitchen:

Jack and Jill went up the hill
To fetch a pail of water.
Jack fell down and broke his crown,
And Jill came tumbling after.
Up Jack got and home did trot
As fast as he could caper;
While Jill had the job
To plaster his nob
With vinegar and brown paper.

In South Carolina the folk remedy for headache is to tie around the head a piece of brown paper soaked in vinegar. Query: Did they get it from *Jack and Jill*, or was it a common remedy in old times when the rime originated?

The rime may be very old, or at least based on an old legend, for in Norse myth the lunar waterpot was filled at a well by two children, the boy Hjúki and the girl Bil, who were carried away by the moon god Mani.

Jack and Jill is popular with adults as well as children, and has become the answer to an adult riddle:

They did not climb in hope of gain,
But at stern duty's call;
They were united in their aim,
Divided in their fall.

A strong rival of *Jack and Jill* for children's affection is *Little Jack Horner* of whom most people know nothing save that:

Little Jack Horner sat in a corner
Eating a Christmas pie.
He stuck in his thumb and pulled out a plum
And said "What a brave boy am I!"

There are two other versions of that last adjective, and if you wish to start a hot argument, argue that it should be "good" or "great" in place of "brave." And some affirm that he "put" in his thumb. As if he were as namby-pamby as that! There is a Jack Horner pie sometimes at children's parties, where you pull a string to get your "plum" from the pie, only it doesn't explode like a Christmas "cracker" with a cap in it. If you want to know more about Jack Horner, you can learn of his "witty tricks and pleasant pranks" in Halliwell's *Nursery Rhymes of England*.

There are countless thousands of nursery rimes for the younger children. We have given but a sampling. For rimes for older children see COUNTING-OUT RIMES; EENY, MEENY, MINY, MO; section on *Charms, Nursery Rimes, Riddles* in EUROPEAN FOLKLORE; MOTHER GOOSE; SHEPHERD'S SCORE; SKIP-ROPE RIMES.

CHARLES FRANCIS POTTER

nutmeg The aromatic seed kernel of the fruit of various tropical trees (genus *Myristica*). The covering of this seed provides another spice, mace. According to the doctrine of signatures the nutmeg was good for ailments of the brain because of its resemblance in shape to the human brain. It was also considered good for the sight, and was used to remove freckles. Pierced and hung about the neck a nutmeg prevents boils, sties, cold sores, croup, and neuralgia. In Michigan it is carried in the pocket to prevent or cure rheumatism, and in Texas a nutmeg tea cures summer complaint. Among Jamaica Negroes, women in labor take powdered nutmeg for their pains. At one time it was the custom in England to give a gilt nutmeg at Christmas. Connecticut is called the Nutmeg State, supposedly because her native Yankee traders carved wooden nutmegs which they sold to the unwary.

nuts Throughout North America generally it is said that carrying a buckeye or horse-chestnut on the person will protect the bearer from rheumatism. All over south-east Asia and into the islands of the Pacific, there is a widespread practice of chewing the fruit of the areca palm (the betel nut), as we chew gum. In time the teeth are blackened. As we have all kinds of smoking accessories, the gourds for the lime which is chewed with the nuts, the spatula with which it is dipped, may be highly ornamented and a source of great pride. In parts of China, betel nuts are presented to one who has been grossly insulted, as a symbol of abject humiliation. If the person accepts the nuts and chews them, it is a sign that the offender has been forgiven. See BETEL CHEWING. Jewish children play with nuts on Passover, using

the nuts as a stake in a game, as one uses marbles. In English, the word nut is used to denote the head; one who is "nutty" or "cracked" or a "nut" is crazy. Nuts, in the plural, is a euphemism for the testicles, and, though once disreputable slang, it has lost its original force and is now perfectly respectable. [NFJ]

nyagwai'oeno (Seneca) or **nyagwai'geha** (Cayuga-Onondaga) The Iroquois Indian Bear dance, a curative rite. If offended, the bear spirit is believed to cause hysteria, crawling, clawing, and behavior involving supernatural strength beyond the patient's control. These are cured by a dance rite addressed to the bear spirit, in the patient's home, and renewed annually at the Midwinter festivals. Cured patients constitute the membership of the society.

In the first part, three chants are intoned by the two singers with drum and horn rattle, while the shaman offers tobacco and the members spray berry juice over the patient. In the second part, the patient, the ceremonial leaders, and thereupon the members begin to circle the room counterclockwise with a shuffling, lumbering waddle. In part three, a large company of men, women, and children clomp around in imitation of the bear's cumbersome ways. The dance leaders answer the singers in monotone antiphony, and puff and blow at the end of each song. Nuts, berries, and mush are passed down the line in symbol of offering of the bear's favorite foods. In part four, the cure has been effected. The dancers become animated, kicking, stamping, and crossing over in pairs. This final formation and step terminates other medicine rites, as the buffalo rite, *degwiago*-

oeno, and suggests a therapeutic function. Sometimes at Midwinter the cure and introductory chants are omitted, in a version termed *oenoska* (songs only). The complete rite is termed *gayowa goowa* (great moccasin.) [CPK]

nymphs In classical mythology, spirits of nature, envisaged as young, beautiful women, dancers and musicians, companions of the satyrs. The nymphs were not immortal, but their lives were, according to Hesiod, ten times that of the phoenix, which outlived nine ravens, who outlived three stags, who outlived four crows, who outlived nine generations of aged men. The nymphs had the power of prophecy and generally were kindly toward men, though they could be dangerous. They served as nurses to some of the gods, e.g. Adonis. Generally there are several classes distinguished, though some writers make no attempt to differentiate them: the dryads or hamadryads, tree nymphs; the naiads, nymphs of lakes, rivers, and springs; the oreads, mountain nymphs. The nymphs probably developed into the fairies of general European folklore.

Nzambi The name of the supreme deity of certain Congo Negro peoples, occurring in various forms: **Nyambe** is the supreme god (maybe a sun god) and creator of animals and men among the Barotse; **Njambi** is regarded as a kind of father-creator among the Mpongwe; among the Fan **Nzame** is known as the creator, but is said to have gone far away long ago; **Nzambi** as mother-creator or Mother Earth is known to the Fjort, and also plays the role of judge in the disputes of men and animals in their folktales. See SUPREME BEING.

oak The most widely worshipped of all trees: said by the Greeks to have been the first of all trees created, and from which, according to Vergil, sprang the human race. It is sacred to Jehovah, Zeus (Jupiter), Hercules, Demeter, the Teutonic Thor, the ancient Celtic druids, the Old Irish Dagda, and others. Greek legend says that its roots go down to the underworld. Beneath the spreading branches of the oak, Abraham received the angels, the Scandinavians met in council, and Merlin worked his enchantments. Herodotus testifies to the fact that the sacred grove of Dodona had the gift of prophecy, and the oaken mast and beams of the *Argo* warned the Argonauts of danger. The ancient Aryans also believed that the whispering leaves of the oak foretold the future. In Estonia, the blood of slaughtered animals is poured on its roots as sacrifice.

Northern European peoples have always testified to the fact that lightning strikes oak oftener than any other tree, hence the association of the oak with North European thunder gods, e.g. Thor, Perkunas, etc. Greeks and Romans also identified the oak with their thunder god (Zeus, Jupiter). Farmers of northern Europe, including England, still plant an oak near their buildings to act as lightning-attractor, and hence as a protection against lightning. It is unwise therefore to build a roof of oak. Scandinavians place an acorn in their windows as a protection against lightning. In Lithuania it is lucky to

come upon a blasted oak, but elsewhere a blasted oak is a messenger of disaster. Fire is also associated with the oak; its wood was used in Rome by the Vestal Virgins for their perpetual fire. It is the traditional, essential wood used for Yule log, Midsummer Night fires, and need fires.

In northern Europe, the oak was the tree of the dead and the abode of departed spirits; in Christian times the hollowed trunk of an oak tree served as a rude coffin. In Iceland, the blood oak is unlucky and ships made from it are doomed to destruction. In northern countries, reverence of the oak was so great that in early Christian times a cross was carved in the trunk to re-sanctify it from Thor to Christ. In Westphalia, it is said the Wandering Jew cannot rest except where two oaks grow together in the form of a cross. In Athens, the boy who was chosen to pronounce the Eleusinian wedding formula was crowned with oak and thorn. In Rome, oak leaves made a civic crown to honor service to the state, or a man who had saved the life of another. Oak boughs were carried in wedding processions as a symbol of fecundity. In the Middle Ages, many authorities advised the use of oaken sticks for gathering medicinal herbs.

Many particular oaks are venerated, or were in their lifetime, to commemorate historical or legendary events, as the Royal Oak which hid Charles II of England after

his defeat by Cromwell. May 29 was long celebrated as Royal Oak Day because it was both his birthday and the day of his return to London. A hollow oak also served to hide William Wallace. There is Robin Hood's Oak, the Volkenrode Oak of Gotha, the Oak of Dorset, George Fox's Oak in Flushing, New York, and the Charter Oak at Hartford, Conn.

In Saxony, the oak was so highly valued that there was a law forbidding its injury. In Germany and England, oaks were highly regarded medicinally. The patient merely by walking around it passed his ailment to the tree, which in turn gave it to the first bird alighting in its branches. In Cornwall, a nail driven into an oak rid the patient of toothache; passing an invalid through a cleft or crotch of one removed disease. In Shropshire, the oak is said to bloom at midnight on Midsummer's Night, but the bloom is gone by morning. In Wales, rubbing a piece of oak on the palm of the left hand in silence on Midsummer Day will keep you from illness throughout the year. In Surrey, certain tumorlike growths on the trunks are carried in the pocket to guard against gout. Parkinson in his herbal recommends a confection made from the leaf galls to cure melancholy and sorrows arising from no evident cause. The North American Meskwaki Indians used the inner bark of the white oak in a tea to bring up phlegm, and the acorns as a substitute for coffee. They also used the inner bark of the black oak for pinworms. The country people in the same region use this tea as a gargle, a laxative, and as an irrigant in venereal diseases; in Texas it is used for summer complaint, galls, and to keep the teeth from falling out. South Carolina Sea Island Negroes use the bark of the red oak to cure rheumatism. Acorns are carried by many for general good luck, long life, and against disease. Two acorns floating in a basin of water mean love if they come together; if they drift apart there will be no wedding. In many art forms the acorn is used as a phallic symbol, both male and female, and as a symbol of fecundity. The oak is a symbol of endurance, strength, and triumph. That the last leaf never falls from an oak tree is an old observation. The last leaf (K222; Type I184) is the motif of a group of northern European folktales in which a man promises to pay a debt (pay the Devil) when the last leaf falls, knowing full well that the last leaf never falls from the oak tree. In foretelling the weather for the coming season, countrymen recite some form of the following:

Oak before ash—only a splash/ Ash before oak—a thorough soak. See ACORN; FIRE; MISTLETOE. [JWH]

Oannes According to Berosus, Babylonian historian of the 3rd century B.C., the water god, with a fish's body, the heads of both man and fish, and the feet of a man and a fish's tail: equated with Ea. Oannes was the demiurge who periodically came ashore from his home in the Persian Gulf to teach men, and to renew his teachings, the arts of civilization. He was the god of healing, of the waters, of fertility.

Oaqöl Hopi Indian women's ceremony, held in autumn, and similar to the two other women's society ceremonies, the Marau and Lakon. The god of vegetation and the seed goddess are both impersonated at the Oaqöl initiation ceremony. The Oaqöl ceremony was formerly held annually, but is now held irregularly. [EWV]

oaths The deplorable fact that many of us have reason to doubt most of the things that are said to us, and the further fact that this situation seems to have obtained since the very beginning of time, has led to the elaborate checks of evidence known to law enforcement officers and lawyers. Policemen test truth by the ordeal, lawyers check it by the legal oath which, if violated, subjects the perjurer to lengthy incarceration. The usual pattern of the oath is to demand some punishment upon the speaker if he is not telling the truth. The simplest form of this oath is the small boy's "Cross my heart and hope to die." More elaborate formulæ which say much the same thing are found in many parts of the world. The Sumatran oath follows the small boy's rhetoric though it is couched in much more formal phraseology. Medieval and modern literature contain many examples of people who were mysteriously struck blind or deaf and dumb at their own request when they perjured themselves. The Euro-American appeal, "So help me God" (i.e. if this is not true) is paralleled in other communities by appeals to other gods. The Khonds stand on a tiger skin and ask for death if they lie. The Naga of Assam stands in a rope circle and prays that he should rot as the rope rots if he is not telling the truth. The Ostyak pretends to eat and calls upon a bear to devour him if he lies. Others solemnize their oaths by touching sacred objects: the Bible, in Europe; the genitalia, among the early Hebrews; the earth and sea, among some of the early Greek tribes. The Tungus swear by their children, the Hottentots by their sisters. A powerful Euro-American oath is by the soul of a dead mother, i.e. "May my dear dead mother burn in hell if. . . ." etc. These oaths are charged with no less feeling than the direct self-imprecation. See ACT OF TRUTH; FLAMEN. [RDJ]

Oats Goat A field spirit, the spirit of the growing oats; in eastern Europe, also the puppet made of the last sheaf, which is topped with goat horns; or the cutter of the last sheaf. In Prussia especially the Oats Goat is a prominent field spirit; children are warned out of the oat fields lest the Oats Goat "get" them; reapers hurry with the work to keep ahead of the Oats Goat, who "pushes" laggards. In some parts of Germany there are two goats, a he-goat and a she-goat. In the Grenoble region a live goat is decked with flowers and ribbons and turned loose in the field; when the reaping is over it is caught, killed, and roasted for the harvest supper. Its skin is made into a cloak, which usually the farmer wears during the threshing, but which is transferred to any reaper who gets a pain in the back, because of the power of the Oats Goat to cure ills caused by himself.

In parts of Bavaria threshers sing a threshing song describing the Oats Goat among the oats. Often the Oats Goat, inherent in the puppet made from the last sheaf of one farm, is transferred to the field of a farmer who has not yet finished. See CAILLEAC; HARVEST DOLL.

In Bohemia the mummer dressed in straw and wearing goat horns and called the Oats Goat is led from house to house during the Shrovetide observances: the Bohemian counterpart of the Fastnachtsbär. He dances in front of the houses, or enters and dances with the women of the household, is given food and money. All the fertility symbolism associated with the Fastnachtsbär is also attached to the Oats Goat. In some sections of Lithuania

the bear and the goat formerly appeared together. Frazer's *Spirits of the Corn and of the Wild*, 2 vols., discusses the Oats Goat at length.

Oat-Stallion In the harvest customs of parts of Baden, Germany, the last sheaf of oats to be gathered. The personification of the last sheaf as a horse is paralleled elsewhere by the old woman, old man, cow, goat, wolf, etc. Compare HARVEST DOLL.

ob (plural *oboth*) In ancient Hebrew belief and practice, a necromancer or a necromancer's familiar spirit (thus translated in the Authorized Version of the Bible); also, the object in which the spirit was thought to reside. The Witch of Endor (*I Sam.* xxviii) was *baalat ob*, possessor of an ob. This expression is, in the Septuagint, made to equal ventriloquist, one who makes his voice come out of the ground. This, with an indication that the ob was made—a physical rather than a conceptual object—, has caused it to be equated by some with a mummy, a mummy's head, or, in later times when mummification became a lost art, with a skull. Medieval necromancers were wont to utilize skulls in their spells.

The resemblance between *ob*, father, and *ob* has led to a hypothesis that the ob is an ancestral spirit, perhaps the spirit of the mummy or mummified object. Still another hypothesis may be made: the word *baal* indicates lordship or ownership most commonly of a place rather than of an object. The ob therefore may have been either a diagram drawn on the ground, from which the evoked spirit spoke, or it may have been a place, like the Delphic sanctuary, at which such diagram-drawing or other ceremony was efficacious. In Jewish tradition, "Ob is the python who speaks from his arm-pits; *yiddeoni* is he who speaks with his mouth." *Yiddeoni* is a word of similar meaning to ob, and occurs generally in the Bible in connection with ob.

Obaluwaye Yoruban earth deity, equivalent of the Dahomean Sagbata, or the Ashanti Asa'ase. Another, better-known name for this Yoruba deity is Shakpono. He is known under both names in the African cults of Brazil, Cuba, and Trinidad. The name means "Master of the Universe" (i.e. the Earth). [MJH]

Obassi Supreme deity of the Ekoi and Ibibio of the Niger Delta. [MJH]

obelisks Because obelisks are monolithic erections which vary in height from three feet, as the obelisks found in the Egyptian tombs of the IVth Dynasty, to 836 feet, as the Heliopolis obelisk now in the Piazza di S. Pietro in Rome, they are inevitably referred to as phallic symbols. The great number of them found in Egypt, which had a great many phallic components in its religion, makes refutation of this view difficult. Obelisks may be described as four-sided pillars with pyramidal tops. Some of the Egyptian obelisks were surmounted by symbols of the sun god. One in Rome has a bronze cross which contains one of the many fragments of the true cross. The long line of obelisks at Axum (Abyssinia) are of several types. They are in various stages of development from rude stones to highly finished and decorated monoliths. Some of them once bore metal statues of the pre-Christian kings of Axum, others had altars for animal sacrifices built into the base, and one is surmounted by a solar disk.

Another view is that the rough pillars of conical shape resembling in "a rough way" a phallus in which the gods dwelt are common in Hamitic and Semitic culture and developed into the Egyptian obelisk. The sanctuary of Astarte (or Atargatis) at Byblus on the Syrian coast contained a tall stone or obelisk which was a symbol of the goddess. Still other writers have thought that the obelisk symbolizes a ray of light and the "finger of the god." Finally the obelisk is the single horn of the unicorn which rises into the zenith and symbolizes dominion over the whole earth.

From the variety of the views sampled here it is obvious that authorities are not in agreement as to the meaning at any time, modern or ancient, of the obelisk, and that in ancient as in modern times obelisks are polysemantic. One of their meanings is that they clearly mark a particular place. Whether additional meanings at certain times or for certain people are that they represent the finger of God, mark a good spot to immortalize a forgotten king, or represent an exaggerated *membrum virile* is not at all clear. [RDJ]

obia or **obeah** A term used by Negroes of the English-speaking islands of the Caribbean and of English and Dutch Guiana to denote various forms of supernatural power. In the islands it is officially regarded as a term for evil magic and its use is prohibited by law, though the Negroes recognize that, like all magic, it may be good or bad, depending on the circumstances and motivations of its use. In Dutch Guiana, it is, especially among the Bush Negroes, a kind of impersonal, over-all power. In all instances, its use is in the hands of a specialist termed in Guiana the *obiamā* or, in the Islands, *obiaman*. [MJH]

obley cakes Cakes offered as part of a religious ceremony, usually first-fruit oblations. Primitive and civilized cultures have such cakes in one or another form. Among the Burgher tribesmen of the Nilgiri Hills the first sheaves of grain are baked into a cake and offered as an oblation. Among the ancient Greeks, cakes and frankincense were consecrated in sacred baskets at the temple of Delphi. Cakes in the shapes of lyres, arrows, and bows symbolized the two aspects of the deity. At Athens, on the 15th day of the month Elaphebolion, a sacrificial cake with twelve knobs on it was offered to Cronus each spring. In Japan, on New Year's Day, unleavened cakes made of glutinous pounded rice are placed on the domestic shrine. These "mirror" cakes represent the male and the female principles respectively: the sun and the moon. They are made up in the shape of a flattened sphere.

oboe A wind instrument consisting of a pipe of cylindrical or conical shape, blown through a double reed to set up a sounding vibration in the column of air. The sound principle thus differs from that of the flute and the trumpet, with both of which its history has been confused by indiscriminate translation of the names of various tubular instruments and by the misinterpretation of ancient art works depicting wind instruments. However, its uses and associations are similar to those of the flute and to some extent the trumpet, insofar as its shape suggests phallic, and thus life-giving, properties. The difference in its tone makes its connotations somewhat less intimate than some aspects of flute symbolism.

and somewhat less frightening and awe-inspiring than certain of the trumpet meanings.

The instrument was known in ancient Sumer, in Egypt from the 15th century B.C., in Biblical Israel, in the Orient and India, in Greece and Rome, and in Europe. Its uses have included accompaniment to ceremonies of circumcision, marriage, and mourning, martial processions, sacrifices, orgiastic dancing and drama, and it has been believed to influence the behavior of animals, and to cure such ailments as epilepsy, gout, snakebite, and sciatica. In the ancient world oboes were often joined in pairs played simultaneously, one as a drone, the other carrying the melody.

The Hebrew *halil*, while it was used for joyous occasions also, was commonly played for funeral processions and was thought to induce a state of trance (see JORDAN FLUTE). Both wedding and circumcision rites in the Near East make use of oboe music.

In Greece, the oboe *aulos*, often played double, was one of the chief instruments, rivaling the lyre. It served particularly the Dionysian cult, its shrill tones whipping up the frenzy of the dancing, and was originally always connected with trends from the peoples of Asia Minor. Greek drama, as a derivative of Dionysian rites, continued its use in the theater. It was also played for wedding festivities, generally in pairs of different length, distinguished as male and female. Smaller instruments and those with sweeter tone were used for courtship and were associated with the arts of courtesans. Indeed, Lamia, a Greek-born mistress of Ptolemy Soter (306 B.C.), was raised to the rank of a goddess and honored by a temple because of her patronage of the oboe.

Oboes of varying size and pitch set up a wail in accompaniment to Greek mortuary rites and expressions of grief. To Marsyas, the Phrygian piper, is attributed a melody called "the Mother's Air" composed to lighten the grief of Cybele for the death of Attis. It was he who, boastful of his skill, challenged the god Apollo to a musical duel. See LYRE.

Spartans went into battle to the sound of the oboe; military drills and rowing strokes were paced by its notes; it accompanied wrestling and boxing matches, and offenders against the law were whipped as it played.

A particular oboe melody, the *hippothorus*, was believed to assist procreation in the breeding of horses, and the Sybarites, according to Athenæus, taught their horses to dance to its strains. Their achievement was turned against them by the Crotonians, who won a victory by playing oboes as the Sybarites advanced against them, so that the horses began to dance and the Sybarites were thrown into confusion and captured. Crabs were enticed from their holes and dolphins lured from the ocean depths by the *aulos*.

In Rome, according to Ovid, the oboe, along with tuba and horns, accompanied funeral chants and was heard at games and in the temple. Virtuosi of the instrument in its varying forms were the idols of the Roman theater, dressed effeminately in yellow gowns and green or blue slippers, and were permitted to eat in the temple of Jupiter Capitolinus. Women's rites of April 4th in honor of the Magna Mater, a ceremony taken over from the Near East, and the spring sacrifices for Proserpina both made use of oboe music. Both Romans and Greeks had faith in its power to revive and to cure human ills.

In India, pairs of oboes played by two players, with

or without other instruments, are favorites for weddings, dancing, processions, and festivals, the players in some sections being highly respected and holding hereditary positions. An Indian origin of the instrument is postulated by Far Eastern lamas, who consider it sacred, and its voice is said to be that of an Indian bird.

European oboes include the *shawms*, used for both dancing of the moriscas type and for military music, and a hunting instrument, the *oboe da caccia*, used early in the 18th century. Compare FLUTE; TRUMPET. [TCB]

obosum The Ashanti word for deity, the equivalent of Dahomean *vodun*, Yoruban *orisha*, Ibo *alose*, Congo tribes *nkisi*, with dialectic variants. [MJH]

obscenity Although lawmakers have had difficulty in defining obscenity, popular opinion in all cultures seems to be clear that obscene acts or words are degrading, therefore offensive and punishable. The difficulty is that acts and gestures considered obscene in some parts of the world and in some classes of society are not considered obscene in others. Respectable American women use phrases and tell stories at cocktail parties which they would consider obscene at meetings of their church guilds. Opinions about obscenity by judges who rule on publications considered indecent or obscene reflect the prejudices of a social class in which the capacity of being shocked by direct language has been developed to an extraordinary degree. The general opinion is that obscene words and acts are degrading and the extent of degradation or obscenity depends on the conditions under which the words or acts are used. A. E. Crawley need not have gone to Queensland, Australia, to learn that the savages there had a polite and an obscene set of words for the sexual acts and organs—information which he could have acquired by a half hour in his neighborhood public house. Although exposure of the sexual organs is considered obscene in many parts of Europe and America, women elsewhere breast-feed their children in public and men enter very imperfectly protected urinals without loss of modesty.

Obscene phrases or epithets frequently refer to the acts of excretion or to sexual relations of a prohibited nature. In a series of curses frequently heard on the streets of China, the participants, usually women, command each other antiphonally to have intercourse with their fathers, mothers, brothers, aunts, uncles, themselves, etc. In China obscene language is generally prohibited to men and even to women when men are present, though in this instance the phrases have become so common that they are meaningless except as expressions of amazement, displeasure, or anger. In this connection it is relevant to note that Dr. Johnson defined "bastard" as a "term of endearment among sailors," as it is still a term of mild affection among Australian soldiers who preface it with the word "bloody" (a corruption of "by our Lady") which is highly offensive in England though innocent in America. Another transformation of values due in part to cultural change and in part to its use as an exclamation is the Americanism "Holy Mackerel," which is a corruption of *makaraille de Deus*, a Provençal obscenity meaning "God's whore."

Whether used as a curse or a term of affection, the rhetorical form of the obscene phrase is often that of an imperative command. This has helped to give plausibility to the extraordinary hypothesis among pundits

that obscenities have a magic function in warding off evil or, among other folklorists, that they have a connection forgotten in Europe but presumably remembered elsewhere with fertility magic. Though obscenity seems to have been customary in some of the spring and autumn festivals of Greek, Roman, African, American Indian, and other cultures, the connection with fertility ceremonies seems to be that on festival occasions, particularly the festivals of sowing the seed and reaping the harvest, normal social restrictions are relaxed. The use of the obscene command as a curse is as much due to the fact that during an excess of emotion, sudden fear, or disgust, degrading expletives seem to be appropriate. In many sophisticated cultures these obscene commands have to be "said with a smile." The lists published in *Anthropophyteia* are worth study though they would be more useful if accompanied by more complete notes on the cultural attitudes of the ethnic groups which considered them degrading.

Obscene stories or jokes have been generally neglected by folklorists due in part to the difficulty of publishing the results of such studies, in part to the monotony of the data, and in part to the danger that students might get tagged as "persons interested in *that* sort of thing." This is all the more unfortunate because the "dirty story" enjoys a great popularity in all parts of the world and is almost the only *genus* of folktale transmitted in all cultural strata of Europe and America. Father Wieger omitted large sections of many Chinese folktales on the grounds that they were obscene. A reading of the folktales of many cultures, as translated by missionaries, would give the impression that primitive people are unaware of the acts and organs of sex or defecation and of the ridiculous antics of human beings when gripped by these impulses. Many of the "dirty stories" have two parts, a "build-up" and a "pay-off" or "punch-line." The punch-line frequently takes one of two forms: either the build-up leads the hearer to expect an obscenity at the end but startles him by an innocent phrase, often a euphemism, for a prohibited organ or act, or the build-up leads to an expectation of an innocent phrase and the pay-off leads to an obscenity. Another of the many types of dirty story is the Noodle Tale or the Moron Story which tells of the absurd and often obscene confusions attributed to simpletons.

Among many cultures, the use of obscenity at fixed occasions is recognized as appropriate. In America the stories and references at bachelors' dinners in which the groom is inducted from the state of bachelorhood into marriage are part of a recognized ritual of passage. In China brides are required to sit for many hours in the bridal chamber while the groom's friends, whose relations with women are restricted by a very rigid code, are expected to file through the room, tell filthy stories, and generally behave in an obscene manner. These customs, like the charivari, may have to do with ancient beliefs and rituals, though their persistence leads one to look for more immediate motivation—possibly that at rituals having to do with procreation, the normal social prohibitions are relaxed.

Ritual obscenity in religious ceremonies has not been examined in any detail. In these ceremonies matrons who are reported to be normally modest and sedate are expected to tell each other obscene stories and do so without any loss of modesty. This was true of the spring

festival of the Roman Bona Dea among women who, whatever their morals may have been, observed a very rigid etiquette. At the Greek Halos, the presiding priestess whispered into the women's ears "things not to be spoken," presumably obscene. The voodoo ceremony *coucher yame* in Haiti is interrupted by a woman talking through her nose and making indecent jests. Similarly the men and women in some of the American Indian ceremonies sang obscenities at each other. Obscenities were a recognized part of the medieval *ludi* and the Feasts of Fools.

General conclusions about the meaning of customs, varied as those which are referred to as obscene, are difficult. The general reference of the term is to the degradation which people may normally be expected to feel at references to defecation or the acts or organs of sex and which all cultures seem capable of feeling. The capacity for experiencing this feeling varies greatly, not only as between cultures whose social and emotional values differ, but in the same cultures under different circumstances. Under the general sexual excitement of weddings in cultures all over the world, comments are tolerated which under other circumstances would be considered grossly obscene and, in the solemnity of their court rooms, judges frequently rule that words or descriptions are obscene which they would unblushingly use in the good fellowship of their clubs.

R. D. JAMESON

obsidian Obsidian or volcanic glass, and flint, a variety of quartz, because of their easy fracturing qualities and general procurability were the two most widely used substances for the manufacture of arrowheads, spear points, knives, etc., in both the Old World and the New in aboriginal times. Translations of the North American Indian name or names for these materials have sometimes confused flint with obsidian, or vice versa. Hence the presence of a Flint man, or of a character named Flint, in the mythology of a particular tribe located in a region where obsidian is plentiful, does not necessarily mean that flint is what the name actually refers to; the reference may be to the more showy, shiny obsidian. It seems likely that Metal Old Man of the White Mountain Apache may be a creature encased in obsidian, not in flint as the English versions of the Apache myth have it. In the case of the evil character Flint, Nanabozho's youngest brother who killed their mother, and of the Iroquois Flint, one of the twin culture heroes, it is probable that flint is intended, considering the Great Lakes locale of these myths.

Obsidian, besides being used for weapons and implements, was also used in the West especially for ceremonial objects. The long blades displayed in the Northwest California World Renewal dances were of obsidian; bear shamans in south-central California wore bear hides with sharp pieces of obsidian attached to the sleeves, which they used to slash people with while simulating bears; the Wailaki and Yuki of north-central California held an obsidian ceremony which was an initiation rite for boys and girls. The children were made to fast and undergo a series of strenuous ordeals, including having obsidian knives stuck into them by the obsidian doctors who were in charge of the initiation. Among the Yuki the word *kichil* denotes both flint and obsidian, but the ceremonial references in the initiation

rites seem to be prevailing to obsidian. See OTHAG-WENDA. [EWV]

obstacle flight or magic flight A folktale motif (D672) known all over the world: Europe, Siberia, North and South America, Africa, Indonesia. Fugitives from a giant (cannibal, monster, ogre, witch) throw down behind them certain magic objects (usually three, occasionally four or five) which turn into time-consuming or death-dealing obstacles. The magic objects often answer for the fugitive when the ogre calls out, and thus delay him; and they turn into mountains, precipices, thickets, forests, rivers, lakes, fire, etc., when released during the flight. See DZOAVITS; TWO BROTHERS.

Familiar magic objects thrown behind are a comb (which becomes a thicket), a stone or whetstone (which becomes a mountain), a mirror, bottle of water or oil (which becomes a lake or other body of water); a bit of earth thrown down turns into a mountain, a drop of water becomes a river, a thorn turns into a thicket, or fire springs up, which finally stops the chaser.

In *The Water-Nixie* (Grimm #79) two children are kidnapped by a nixie. They finally escape by means of the magic flight: the little girl throws down her brush, which becomes a hill covered with spikes; when the nixie begins to catch up, the boy throws down a comb which becomes a jagged ridge; finally the girl throws a little mirror behind them, which turns into a mountain of mirrors so slippery that the nixie can never cross it. In Jamaica Negro folktale the fugitive merely throws corn or seed for a pursuing animal or monster to pick up or eat. In an Indonesian story the fugitives throw salt behind them, which becomes an ocean and stops the giant until he drinks it up; next they throw ashes, which blind him for a little while; then they throw marbles, which become thorny plants, then millet, which the giant stops to eat. This giant was not deterred until killed through his vulnerable spot. A Koryak story describes a man, wife, and child fleeing from wolves; as the wolves draw near, the woman takes a stone from her bosom and throws it behind them; sharp rocks fill the path which cut the wolves' feet. Next she throws down a small chip which turns into an impenetrable forest and the wolves give up. In an Eskimo (Baffin Bay) tale an old woman draws a line on the ice with her little finger; the ice separates, and the pursuers are stopped.

✍ In North American Indian native versions of this incident either three or four objects are thrown behind; for example, in a Tlingit tale from the North Pacific Coast, the hero, pursued by Moon, throws behind him successively a piece of devil's club which makes a thicket, a rosebush which makes a thicket of rosebushes, and a whetstone which becomes a great mountain.

Two paths of diffusion for this series of magic flight or obstacle flight incidents in North American tales have been suggested by Boas; the first, an ancient one from Siberia via Bering Strait, the second, a recent one from Spain into Latin America and northward to California, where the old and the new versions meet.

Related to the obstacle flight are the incidents of the reversed obstacle flight (D673) in which the pursuer throws obstacles in front of the fugitive, the transformation flight (D671) in which fugitives transform themselves in order to deceive the pursuer, and the Atalanta type (R231) in which treasure or the like is thrown

back to tempt the pursuer to delay. For the distribution of the obstacle flight and its related forms in North American Indian folklore, see Stith Thompson, *Tales of the North American Indians* (Cambridge, Mass., 1929), pp. 333-334, n. 205, (a), (b), and p. 342, n. 232. [EWV]

✍ The motif of the miraculous escape occurs rarely in South America. A tale, recorded among the Shipaya Indians of the lower Xingu, describes the successive evasions of a man pursued by a demon. Each time he is saved by friendly animals. In a Mundurucu story, a girl stops a demon who runs after her by dropping magic substances which become successively smoke, forest, and a river. The motif of the obstacles created by the transformation of objects may well be of European origin. [AM]

ocarina A globular flute with a whistle mouthpiece and fingerholes stopped to play the melody. It is made of pottery, wood, gourd, and nowadays of plastic. It is played in one form or another on the primitive, folk, and popular levels. Its shape may be ovoid, or tuberlike, as its popular name, "sweet potato," indicates. South American Indians make the instrument of gourd, molded pitch, or clay. Latin American popular bands sometimes use large and gaily painted ocarinas of pottery or gourd. The dime-store plastic variety are played by children and amateur performers. The name ocarina for the age-old globular flute is particularly connected with the type devised by an Italian in the middle of the 19th century and made in whole families like recorders so that a choir or orchestra could play together. For other globular flutes, see FLUTE.

Ocnus In Greek mythology, the personification of delay. He is placed in the underworld, perhaps as analogous to the Danaides, where he continually twines a rope of straw which is eaten by his ass as he makes it. Ocnus sometimes is pictured as trying to load the ass with sticks which fall off on the other side as he places them on the animal. Rose believes him to be a typical character of folk droll transplanted to the underworld.

October horse The sacrifice at an ancient Roman fertility (later a martial) rite on October 15. A chariot race was held in the Field of Mars on that date, and the right-hand horse of the winning chariot was killed as a sacrifice to Mars. Its head, first sprinkled with sacred crumbs, was cut off and strung with a necklace of cakes or loaves. A fight for the head then occurred, the inhabitants of two quarters of the city attempting to seize the head and place it either on the king's palace wall or on the Mamilian tower. The tail too was cut off and rushed to the king's hearth in time for blood to fall on the hearth. The remainder of the horse's blood was carefully preserved, and on April 21 it was mixed by the Vestals ceremonially with other blood. This mixture was given to shepherds to be burned; the smoke was a purifying agent for their flocks. In every aspect the various elements of the October horse sacrifice make powerful fertility symbols: the race, the blood, the hearth, the necklace of loaves, the auspicious right hand—these are widespread symbols of increase. The horse's head as a charm against evil is still common in Germany where it decorates gable-ends. Compare the speaking head of the horse Falada in Grimm's tale *The Goose-Girl* (#89).

Odhroerir In Teutonic mythology, the kettle of inspiration which, with the two bowls *Son* (expiation) and *Boden* (offering), was used by two certain dwarfs to contain the poetic mead brewed from *Kvaser's* blood. Whoever drank of this brew became at once poet and knower of poetic charms. These three vessels were stolen by the giant *Suttung* and given into the charge of his daughter, *Gunlod*, who guarded them in a cave in the mountains. *Odin's* ravens told him of this and, though *Odin* already knew all runes, had drunk at *Mimir's* well, and was the wisest of beings, he still desired to drink the mead of inspiration. Accordingly he wormed his way (literally) into the cave through a hole bored by his magic auger, *Rati*. Once inside, he resumed his godly form and seduced *Gunlod*. After three days she consented to give him a sip from each of the three vessels. But instead of sipping, *Odin* drained all three. Later he disgorged the poetic mead into containers reserved for the gods. A few dregs fell to earth, however, causing rimesters to spring up here and there. Only the gods could bestow enough to make a true poet. *Bragi*, the god of poetry and music, was the result of *Odin's* union with *Gunlod*. *Odin* henceforth was regarded as the patron of poets and singers.

Odin, Woden, or Votan In Teutonic mythology, the one-eyed patriarch and chief of the gods; god of wisdom and war. In northern belief, he is the son of the god *Borr* and the giantess *Bestla*. With the help of his brothers *Vili* and *Ve*, or *Hœnir* and *Lodur*, he slew the giant *Ymir* and from his body shaped the earth. The human race they fashioned from an ash and elm tree. *Odin* himself, in conjunction with various female beings, is the father of all the *æsir*, though his wife and queen is *Frigga*. He is usually represented as a vigorous man of about fifty, either with long curling hair, or bald with a long gray beard. He dressed in gray with a cloak and hood of blue and usually wore his ring *Draupnir* and carried his spear *Gungnir* which he used as a scepter or staff. As chief of the gods, he presided over their deliberations in the great hall, *Gladshheim*, where stand the twelve seats of the gods.

As the wisest of beings, the all-seeing, all-knowing father-god, god of wisdom, knowledge, and poetry, he is seated on his elevated throne, *Hlidskialf*, in the silver thatched hall, *Valaskialf*. From this seat he looks out over all the world and watches the doings of the gods, giants, dwarfs, and men. On his shoulders perch his two ravens, *Hugin* (Thought) and *Munin* (Memory), who whisper in his ears events they have seen in their daily flights over the earth. At his feet lie his two wolves or watchdogs, *Geri* and *Freki*. His thirst for knowledge is insatiable. He gave up one of his eyes for a draft from *Mimir's* well of knowledge. For nine days he hung from *Yggdrasil* in a trance gazing into the depths of *Niflheim* and thus learned to write runes. He nearly lost his life securing the poetic mead made by the dwarfs from *Kvaser's* blood and when *Mimir's* head was sent to *Asgard* by the *vanir*, *Odin* preserved it by charms and herbs and consulted it as an oracle. He discoursed with the dwarfs, seers, and sages. He even made a trip to *Hel* to find the answer to one question and he often sits beneath the gallows to absorb the knowledge of the hanged.

As warrior god, he presides in his palace, *Valhalla*, in the shimmering amber grove, *Glaesir*, where he gathers about him his chosen warriors, the *Einheriar*, who

will aid the gods in time of need. Here, seated upon his throne, wearing his eagle helmet and shining armor, he welcomes the slain warriors brought to *Valhalla* by the *Valkyrs*. He plans the course of battles, even to the warriors who will be slain, usually leaving the actual direction of events in the hands of his battle maidens, *Valkyries*. He plans the course of battles, even to the warriors who will be slain, usually leaving the actual direction of events in the hands of his battle maidens, originating the wedge formation of battle.

As the supreme god he is not aloof or vengeful. He frequently passes among his people in the guise of *The Wanderer*, clad in a voluminous blue cloak and a wide brimmed slouch hat to disguise his one eye. Thus he keeps in touch with king and commoner alike, delivering reward or punishment. In many localities, in the guise of the wanderer, he is believed to be the leader of the *Wild Hunt* and, mounted on his eight-footed horse, *Sleipnir*, he leads his hosts through the countryside instilling fear into all as he goes. While *Odin* is known generally throughout western Europe and Scandinavia, his importance and attributes vary greatly with locality and time. His worship probably originated in Lower Germany and spread from there. Besides being the creator, father of the gods, inventor of the arts, god of wisdom and war, he was also considered a potent magician, sorcerer, and healer. Others invoked his aid in trade and commerce. Sailors called on him for a fair wind and he is the patron of travelers. In Christian times he had often been identified with the Devil, and Anglo-Saxon medicine believed that disease (flying venoms) sprang from the nine parts into which he hacked the worm (dragon). In northern countries the constellation Great Bear is often called *Odin's Wain* and Wednesday is contracted from *Woden's Tag*. In all *Odin* is known by over two hundred names, many of which refer to a particular identity he assumed for one of his many adventures either alone or in company with his fellow gods. In his human aspects, *Odin* is believed to have been the progenitor of most of the royal houses of the north. [JWH]

odori A Japanese dance term including both theatrical and folk dances. The term is often used all-inclusively, though strictly speaking *odori* is distinct from *mai*, the latter being slow and dignified, emphasizing the movement of the hands, the former emphasizing quick and lively motions of the feet. The characters used in writing *mai* and *odori* may be put together to read *buyō*, meaning dance in general. *Mai* goes back to early times, in such forms as the *kume-mai*, *yamato mai*, and *azuma asobi*. The dancing of the *nō* is of the *mai* type. See *nō*.

Japanese theatrical dances are performed by actors to complex musical rhythms. Most of them are spring dances. The most famous are the *Miyako odori* or cherry dance, at Kyoto, the *Kamogawa odori* at Kyoto, the *Naniwa odori* at Osaka, and the *Azuma odori* at Tokyo.

Folk festivals include the famous *bon-odori*, which commemorates the dead. On July 16 the souls of the dead are believed to return and are given food offerings. The steps and gestures of the *bon-odori* vary in different parts of Japan; all are uncannily silent and smooth but with occasional handclapping; everywhere it is a circle dance for men and women. Harvest dances and banquet dances accompanied by song are popular throughout Japan, also the great Catch-fish and Shinto Lion-mask

dance. The *Tanabata-odori* is performed by children, celebrating the union of two stars. The *gebon-odori* is danced in Wakayama to the beating of gourds, gongs, and drums, and the chanting of Buddhist songs.

Geishas are popular *odori* performers and experts on the *samisen*. When they appear without special costume, the performance is known as *su-odori* (just as is). The geishas are past masters in the manipulation of fans. In general the fan is an indispensable element of the Japanese dance, expressing an infinite number of ideas: falling petals, the rising moon, a butterfly, a sword, a bird. Gestures are elegantly traditionalized. Male and female postures are distinct, the men perform with broad stance, the women (notably the geishas) with closed flexed knees and slight back tilt. Hand gestures are also differentiated, not only for characters and situations, but for the sexes: the virile male spread hand, the languid female hand.

The *odori* is, however, yielding to the onrush of civilization. The popular *ondō* which has reached the United States still preserves Japanese posture and gesture. Ballet and musical comedy, however, now attract large crowds, though they might seem to be styles unsuited to the Japanese genius. Fortunately, many artist dancers base their creations on native styles. [CPK]

Odysseus In Greek legend, king of Ithaca; hero of the *Odyssey*. His name in Latin, Ulixes, became Ulysses in the modern European tongues, by which name he was known until recent scholarship established Odysseus as the preferred form.

Odyssey One of the two great ancient Greek epics attributed to Homer; with the *Iliad* it tells much of the story of the Trojan War and what happened afterwards. The *Odyssey* is the story of what happened to Odysseus, king of Ithaca, an unwilling but vigorous participant in the Trojan War, as he traveled homeward from Troy, how he arrived home, and how he rescued his wife (Penelope) and estate from greedy suitors. It is the great voyage tale of the ancient world and contains many familiar folktale themes and motifs. Odysseus himself, it has been suggested, is a Bear's Son, and among the events and personages in the story are Polyphemus, the Cyclops, the one-eyed ogre; Circe, the great witch, and Calypso, the wonder-working goddess; the voyage to the underworld; the Sirens; Scylla and Charybdis, the dangers to right and left circumvented by the hero; Penelope's web, the seemingly unending task. The telling of the *Odyssey* begins when the story is almost over. Odysseus is being kept on Calypso's isle, while at Ithaca the suitors have gotten out of hand. Penelope is to be forced to make a decision. The gods declare that Calypso must release her prisoner. In order of time, however, the tale begins when Odysseus and his crew round the Peloponnesian peninsula for the last leg of their journey up the west coast of Greece. A wind drives them off course and they make land in the country of the Lotus-Eaters. There, the men, partaking of this otherworld food (C210), forget their homes and must be forced to resume the journey. They land again, enter a cave, and are trapped by Polyphemus. Blinding the giant by driving a stake through his eye, Odysseus and his depleted crew escape by hiding beneath the bellies of the ogre's flock. Æolus, god of the wind, next helps them by presenting Odysseus with a bag that contains all the contrary winds. Just within sight of Ithaca, the hero per-

mits himself to doze, and the crew, inflamed by their own suspicion that the skin contains treasure that Odysseus wants to keep for himself, open the bag. The ship is blown back to Æolus. He forbids them to land, and they fall among the Læstrygonians, a race of cannibals who leave only enough crew to man one ship. They escape to Ææa where Circe transforms them into swine. Odysseus, using a magic herb, forces her to change them back to human shape. On Circe's advice, and with her aid, he undertakes a voyage to Hades, where he sees again many of the heroes of the late war. Tiresias the seer is among the shades, and from him Odysseus learns how best to return to Ithaca. Forewarned he evades the sweet-singing Sirens and the whirlpool and rock of Scylla and Charybdis. The ship touches at the island of Thrinacia where Apollo keeps his oxen. There, while Odysseus naps again, his men sacrifice some of the cattle. As punishment, the ship is wrecked in a storm and only Odysseus escapes alive. He is washed ashore on Calypso's island, lives with the goddess for eight years. At this point the *Odyssey* proceeds with the narrative.

Odysseus sails for twenty days on a raft and is driven ashore in the land of the Phæacians whose king, Alcinous, receives the hero kindly. After telling of his adventures, Odysseus is placed in a deep sleep and, in a magic ship, is taken home to Ithaca. He awakes and, disguised, discovers what has happened in his absence, and how the insolent suitors, having devoured his estate, are about to force the faithful Penelope to choose among them. Penelope, weaving her web through the day, spends the night undoing the work. Odysseus, enlisting the aid of his now grown son Telemachus and some of his faithful servants, enters the hall and with his own bow, which none but he can draw, slays the suitors and reclaims his wife.

Œdipus Literally, swell-foot; in Greek legend, a king of Thebes who solved the riddle of the Sphinx, killed his father, and married his mother; one of the line of Theban rulers doomed to tragedy by the curse of Pelops. Œdipus was the son of Laius of Thebes and Jocasta (Epicastia in Homer). In some versions an oracle had warned Laius that he would be killed by his son; in others Pelops' curse itself had threatened Laius either with childlessness or with a son who would kill him. Laius therefore ordered the infant abandoned with a spike driven through his feet, either to prevent the child from crawling to safety or to keep its ghost from returning to haunt him. But a shepherd of King Polybus of Corinth found the infant and brought it to the queen — Peribœa or Merope or Medusa. She and Polybus raised the boy as their own, naming him Œdipus because of his wounded feet.

When Œdipus grew to young manhood, his accomplishments aroused the envy of his companions, who pointedly mentioned his dubious parentage. Unable to get a satisfying answer from Peribœa, Œdipus went to Delphi to find out what the oracle of Apollo might tell him. The oracle warned him that he would slay his father and marry his mother. Therefore Œdipus decided not to return to Corinth, for there his supposed parents reigned. Instead he headed toward Thebes and on his way, in a narrow pass, disputed the right of way with Laius and killed him, thus fulfilling unwittingly part of the prophecy.

At Thebes he found the Sphinx desolating the countryside: this is the type of dragon (as Krappe points out) that the folk hero must slay to attain full heroic stature. The Sphinx accosted all who passed with the riddle: "What goes on four legs in the morning, on two at noon, and on three in the evening?" Those who failed to answer correctly—everyone until Œdipus came that way—were devoured by the monster. Œdipus however gave the answer: "Man, who crawls as a child, walks erect in manhood, and uses a cane in old age." He then slew the Sphinx (or she killed herself because he gave the answer) and entered Thebes. As deliverer of the city, and the king being dead, Œdipus was presented with the crown and the queen, Jocasta, his own mother. The oracle was fulfilled, though as yet everyone concerned was ignorant of the fact.

Œdipus and Jocasta lived together for some years, but eventually the gods made known the true relationship. The common version of the story says that the oracle declared the sin was the cause of a famine gripping the land. Jocasta hanged herself and Œdipus put out his eyes, or the servants of Laius blinded him, and he was deposed as king of Thebes. The death of Jocasta and the deposition of Œdipus follow closely in some versions; in others many years elapse between the events. The several tellings of the story are confused on various of these elements. Œdipus' four children, Eteocles and Polynices, Antigone and Ismene, are by Jocasta or a second wife, Euryganeia or Astymedusa. Athenian writers further complicate the story by setting the tale's end in Attica. There at last the blind Œdipus wandered into the grove of the Eumenides at Colonus, whence he disappeared from earth. Other tradition says he was killed in a battle, perhaps in defending the cattle of Thebes from raiders. His body was refused burial at Thebes; it was buried elsewhere, disinterred when it brought calamity to the people living in the vicinity of the grave. Finally at Etceonos, at a shrine of Demeter, the people were ordered by the goddess: "Remove not the suppliant of the god." Renamed the Œdipodion, this burial place became famous in the ancient world.

Homer knew the story of Œdipus, which may be a compilation of folktale motifs attracted to the person of a historical Theban chief or a group of folktales taken over as pseudo-history by the Greeks. Parallels to the main themes of the story, incest and parricide, have been found in Finland, Hungary, Rumania, Lithuania, Lapland, the Ukraine, and in various other places in the world, like Java. The *Golden Legend* retells the Œdipus story but makes Judas Iscariot the central figure. The tale (Type 931) is thus in essence of great popularity throughout the world. Among its motifs may be mentioned: exposed infant reared at king's court (S354), the parricide prophecy (M343) unwittingly fulfilled (N323) though the child is exposed to prevent fulfilment of the prophecy (M371.2), the mother-incest prophecy (M344) unwittingly fulfilled (M365.1), mother-son incest (T412), the riddle of the Sphinx (H761) propounded on pain of death (H541.1.1), Sphinx perishes when riddle is solved (C822).

The Sphinx episode of the Œdipus story is related to the ogre tales and to such märchen as *Rumpelstiltskin* and others of supernatural helpers defeated by the discovery of a secret (Type 500). The Sphinx itself is a monster similar to the Sirens, the Harpies, the Minotaur,

Cerberus, the dragon of European folklore, and various other monstrous creatures of other folklores. A parallel may be drawn between the story of Œdipus and the Sphinx and Vararuchi and the Rākshasa. The demon asked Vararuchi: "Who is considered the best-looking woman in this city?" To save his life Vararuchi replied: "Any woman is good-looking to the man who admires her," and obtained the friendship of the monster.

oeh-da Term for the earth in Seneca (Iroquois) Indian mythology, the bit of earth brought from the bottom of the sea by Muskrat (earth-diver) to sustain the great light which enveloped Ataensic as she descended from the sky. Only the earth (oeh-da) was thought great enough for such blinding light to rest upon. When Muskrat dove under the sea and returned with the merest morsel of oeh-da in his paw, "It is heavy," he said, "it will grow; who will hold it?" Turtle said he would hold it, so the earth was placed upon his back. Oeh-da grew so rapidly that already it had become an island large enough to receive Ataensic when her descent was completed. Thus it is that Turtle is the Earth-Bearer of Iroquois mythology. When he is tired and moves a little the earth quakes and tidal waves rush against her shores. See ATAENSIC.

Enone In Greek legend, the nymph of Mt. Ida, who was married to Paris of Troy; daughter of the river god Cebren. Having obtained the power of prophecy from Rhea, she foresaw the result of Paris' voyage to Sparta and warned him against going, but promised to cure him with her skill if he were wounded. When Paris was struck by an arrow shot by Philoctetes from the bow of Hercules, Enone nevertheless refused to aid him. Then, relenting too late, she came with her slaves to Troy after Paris died. She killed herself by leaping on his funeral pyre, by hanging herself, or by jumping from a tower.

offended rolling rock A folktale motif (C91.1) popular among the North American Indians of the Plains, Plateau, and Southwest, and found also in the Central and Northeast Woodlands regions, and among the Hudson Bay Eskimos. The usual story is that the trickster gives his coat (or blanket) to a rock or boulder to warm it, later needs the coat, and goes back to get it. The rock is offended at having the gift taken away and rolls after him. The trickster runs before it, begging help from a series of animals, each of whom the rock rolls over and kills; but one way or another the trickster finally escapes.

In the Pawnee Indian story Coyote presents the rock with a knife in return for help in finding food. He comes upon a village where he is given meat, needs the knife to cut the meat, goes back and takes it, and is pursued by the rolling rock, which kills in sequence the bears, mountain lions, and buffalo who undertake to aid Coyote. He is finally saved by the Bull-Bats.

Wolverine is the trickster in the Hudson Bay Eskimo story. Wolverine makes no gift but mocks and taunts the rock until it is provoked into chasing him. After a long run Rock catches Wolverine and rolls onto him. Wolverine yells to get up, but Rock will not move because of the taunting. Wolverine yells for the wolves and foxes to come help push Rock off, but the wolves and foxes say it serves him right. Then Wolverine calls on the thunders and lightning, which come and split the

rock, but also strips the skin off of Wolverine's back. (See *RBAE* 11: 336 ff.)

In a Southern Ute story Sünā'wavi (creator-trickster-culture-hero) one day urinated upon a little round rock. When Big Rock came home Little Rock told his father. Rock went rolling angrily after Sünā'wavi. Sünā'wavi ran and ran; Rock rolled after him over mountains, across rivers, through trees. Sünā'wavi begged for help from a series of animals, each of whom the rolling rock relentlessly killed. At last Sünā'wavi hid behind a little rock which suddenly enlarged and was as big as Rolling Rock. Rolling Rock smashed into it but the boulder stood fast and the rolling rock was splintered into little bits. Then in gratitude Sünā'wavi said, "Animals shall die, but you shall last till the end of the world." And so it is. (See *JAF* 37: 25.)

In the Apache version Coyote is warned to be careful of a certain living rock lest it run him down. He does not believe that the rock can move, defecates upon it, and walks away. The rock rolls after him. When Coyote is about to be crushed (or when the rock comes to a standstill over the hole in which he has hidden) he promises to clean it off. The rock releases him; Coyote cleans it; the rock rolls back to its own place.

offended supernatural wife A widespread folktale and traditional ballad motif (C31 ff.) in which a man married to a supernatural being breaks the tabu which ensures the continuance of their relationship; the offended supernatural wife returns to her own world and the benefits which she bestowed cease. She departs typically for being looked at against her specific warning (C31.1)—in English, North American Indian, and Maori folktale; or looked at too soon (C31.1.1)—European; or at a certain time (C31.1.2)—see *MELUSINE*; or she must not be seen naked or during childbirth (Japanese). Her origin must not be mentioned (C31.2)—European, Indonesian, Fjort Negro; she must not be blamed (C31.4)—Greek, Arabian, Indonesian; or questioned (C31.4.1), or scolded (C31.4.2), struck (C31.8), or bragged about (C31.5)—see *MACHA*. The disappearance of the wonderful animal wife at the mention of her origin (C35.1) belongs to this cycle and occurs variously in Siberian, Eskimo and North American Indian, Basuto and Fjort Negro, and Indonesian folktale.

In Koryak folktale, Eme'mqut, son of Big Raven, is married to Fox Woman. A lodger in their house desires her greatly, but she does not respond to his advances. One day he remarks on the strong fox odor around her; she is offended and runs away (W. Jochelson, *The Koryak*, *MAMNH* 6, part 1, p. 313).

In Basuto Negro story there was once a poor man who had no clothes but rags and no food but the wild mice he caught. One day he found an ostrich egg and took it home. He began to notice that every day the hut was now clean, and a good meal was waiting to be eaten when he entered. One day a woman came out of the egg and consented to be his wife; but she warned him never to mention her origin. All went well for a long time: the man was finely clothed and fed, and became chief of a big village. One day in irritation, however, he forgot and said, "You daughter of an ostrich egg!" Immediately he fell asleep and, when he woke, was lying on the grass. The big village was gone; his clothes were rags; he was hungry; and the wonderful

supernatural wife never returned. See E. Jacottet, *Contes Populaires des Bassoutos*, Paris, 1895, p. 259 ff.

Stories about the offended supernatural husband (C32 ff.; Type 425) follow the same patterns. See *BEAR WIFE*; *CUPID AND PSYCHE*; *PIQUED BUFFALO WIFE*.

offerings The primitive Indians of the Amazon and of the Chaco make occasional offerings of food, drinks, or goods to the spirits. Spirits are often invited to partake of a meal or of beer during a feast. Before eating fesh and game, the Bororo reserved a few morsels for the supernaturals. The Carib makes an offering to the spirit whenever he cuts a tree or opens a clearing. The Ona of Tierra del Fuego cast away firebrands or morsels of meat as presents to the Supreme Being.

The Incas gave to the gods food, magic substances, clothes, and jewels. Immense treasures in the form of gold figures and precious stones were buried or were thrown into the lakes by the ancient Chibcha to propitiate their gods. See *CHHALLA*. [AM]

Og In the Bible and biblical legend, a giant who survived the Flood, lived 500 years, and was slain by Moses. Og was half as wide as he was high, and he was so tall that the waters of the Flood reached only to his ankles. Others say however that he sat on a rung of one of the Ark's ladders, or that he perched on the roof, and that Noah fed him through a hole in the side of the Ark when the giant promised to be his slave. Og's daily meal was a thousand oxen and a thousand measures of liquids.

Og later became enamored of Sarah, Abraham's beautiful wife. So when the kings made Lot captive, Og told Abraham, hoping the patriarch would be killed trying to rescue his nephew and that afterwards he would be able to win Sarah's affections. But Abraham conquered the kings and Og's plan failed. He was rewarded with long life for bearing the news (some say the archangel Michael was the news carrier) but for his evil motive he was doomed to be slain by a descendant of Abraham. Og is said to have been Eliezer, Abraham's steward. One day when Abraham scolded the giant, a tooth fell out of Og's mouth, from which tooth Abraham made the bed he always after slept in.

When Moses marched against the Amorite city of Edrei, Og, who was king there, sat atop the wall. Moses and the Israelite army camped near the city and Og, seeing the extent of the Israelite camp, picked up a mountain of the same area, intending to crush the army. However, God caused ants or locusts to eat through the mountain and it fell about Og's shoulders. When the giant tried to throw off his blinding burden, his teeth grew out of his mouth and into the mountain, holding it fixed in place. Moses, 10 ells tall, took a 10 ell ax, leaped 10 ells into the air, and hewed at Og's ankle so that the giant died.

A rabbinical legend says that a gravedigger, who later was a famous rabbi, once chased a stag for three miles into a cave. Later, this cave proved to be the hollow of one of Og's thigh bones.

ogan A piece of iron, often a hoe blade, beaten with a spike as a ground rhythm with rattles in Haitian vodun dance accompaniment. The iron is given supernatural power to call the loa and to appease the beings of the otherworld by a ceremony of baptism drawn from Catholic ritual. Dancers in a state of possession pour

offerings of water before the ogan, making the sign of the cross. The use of similar pieces of iron to beat a steady rhythm under the more elaborate drum rhythms is observed in Africa, and the word ogan is believed to be related to Yoruba *éganran*, which has the same meaning.

Ogier the Dane or Holger Danske A legendary hero of Denmark, prominent in Danish ballad, song, and story; one of the opponents of Dietrich von Bern in the 5th century. He is a king in the mountain: he is said to be asleep under the Kronenberg with his beard grown to fabulous length right through the table. He will rise and save Denmark in her need. Ogier, Otgarius, or Holger Danske resisted Charlemagne for seven years at Castelfort but submitted *circa* 773. The poem about Ogier in the Carolingian cycle has taken somewhat more from folklore than other novels in the series. [RDJ]

Ogma One of the Tuatha Dé Danann of Old Irish mythology; a culture god of poetry, speech, and eloquence; eponymous inventor of the ancient ogam writing. Ogam was a system of notches (vowels) and lines (consonants), representing the early Goidelic alphabet, cut into the edges of rough stone tombs and monuments. The arrangements represented 5 vowels and 15 consonants. Ogma is probably the ancient Gaulish Ogmios mentioned by Lucian as having a smiling face and the gift of eloquence, and described as drawing crowds to him by chains connecting their ears to his tongue. Except for Epona, Ogmios is the only native Celtic deity mentioned by name by the Romans. He is likened to the Roman Mercury by MacCulloch. See BATTLE OF MAG TURED; BRES; DAGDA.

ogre, ogress A giant or hideous monster of folklore and märchen, often given to eating human flesh, and characterized by extreme stupidity and gullibility. He is easily frightened, as in the story of the ogre who was afraid of a rustling noise (K2345; Type 1143). His stupidity is shown in stories of partnership between Man and Ogre (Type 1030); in one of these the ogre, in the dividing of crops chooses the tops of root crops, and of other crops, the roots (K171.1). The stupid ogre is spread throughout the world. Typical of stories of the ogre's timidity is the Indonesian tale in which an ogre is made to believe that a very small hero is very large; he runs away (K1711). Typical of the stupidity stories is that about the ogre who tries to drink the lake dry in order to get at a beautiful woman reflected therein (J1791.6.2; Type 1141). In contests with man, the ogre is always worsted, as in contests in climbing, jumping, squeezing, throwing, and in tests of endurance.

The word *ogre* is said to have been first used by Perrault in his *Contes* (1697), though the ogre himself, according to Gaston Paris, is a descendant of the Indian *rakshasas*. The word may be from the Italian dialectal *ogro* for *orgo* or *orco*, monster, demon, in turn from the Latin *Orcus*, god of Hades. Conjecture has found in the word a similarity to the ethnic *ogör*, Hungarian; but no substantiation has been found.

The whole of Chapter G in Stith Thompson's *Motif-Index of Folk-Literature* is devoted to ogres and their habits. The different kinds include cannibal ogres, giants, ogres in animal form, the witch types of ogre, male or female, in both animal and human form, the corpse-eating ghoul types, and various monster ogres.

The Devil plays the ogre's role through much of medieval European folktale. The Greeks had their Scylla and Charybdis; the Greeks and North American Indians both had their cliff-ogres (G321). See CLIFF-OGRE. The Hottentots have their Thrower-Down (G321.1). See HAITSI-ATIBAB. The North American Crow Indians, also the Hidatsa and Gros Ventre, frighten their children with the Pot-Tilter (G331), an old woman with a boiling pot which sucks in whomever it is tilted toward. The sucking monster who just sucks in his victims (G332) is common to North American Indian folktale of the Plateau and North Pacific areas, the Plains, the Woodlands, and the Southwest.

The ogre is a giant in Sweden, Scotland, Ireland, and in certain parts of France; he is a troll in Norway, a dragon in Greece, a serpent with seven heads in Lithuania, Hungary, and Russia. Most cultures have their own traditional ogres. The general concept of ogres is discussed by P. Saintyves in his *Contes de Perrault* (Paris, 1923) with remarks on märchen containing cannibal episodes, and by J. A. MacCulloch in *The Childhood of Fiction* (New York, 1905) who points to the typical forms of cannibalism in earlier times when such practices were common and possibly connected with ritual. [GRS]

For North American Indian tales involving ogres and ogresses see AYL-ELBOWED WITCHES; BIG OWL; BLACK TAMANOUS; CANNIBALS; MONSTERS; MONSTER-SLAYER; OLD WOMAN'S GRANDSON; VAGINA DENTATA.

Ogun The Yoruban deity of iron, and by derivation, as master of weapons, of war: the equivalent of the Dahomean Gu and an important retention among all Afroamerican cults which have continued the worship of African deities of Yoruban or Dahomean derivation.

[MJH]

ʔohgiwe The Feast for the Dead, managed and danced by Iroquois Indian women. The ancestral spirits are believed to continue circulating among the living and to be present at the feast, though visible only to a few especially empowered individuals. There are many tales of Indians who encountered spirits or danced with one during the ʔohgiwe. An offended spirit may cause sickness, or loss of sleep and appetite and must be placated by dance and offerings of tobacco and food. Thus the ʔohgiwe may be a healing ceremony at the home of the patient or in the longhouse, with a renewal at Midwinter; or it may be a communal ceremony held in the longhouse in the spring and in the fall.

The body of the ceremony consists of two long dances, ʔohgiwe and *ganadgitdghq*, separated by an interlude, the *qdasát'da*. 1) the ʔohgiwe chants are intoned by the male song leader, repeated by his two male assistants, and again twice through by the two women leaders. These two matrons guide the society members and later on additional volunteers, in a slow counterclockwise procession. Sometimes they break the monotonous dragging step with small stamps, kicks, pivots, and elbow-wafts. Halfway of the songs the drum-beat changes. Finally the tempo speeds up and a brief *eskanye* terminates this phase of the ritual.

2) During the cloth distribution (*qdasát'da*) the two chief matrons face the male singers and receive pieces of cloth from the female sponsor. They wave them back and forth in rhythm and distribute them to all officials,

singers, and dancers. These gifts from participants may be a vestige of ancient sacrifice.

3) Carry-out-the-Kettle (*ganadgitgdhp*) focuses around the drum, which is carried out at the finish. In the middle of the room the drummer and four singers rotate slowly against the sun. Other women join and then men, all hooking arms and jumping sideways with a lively hop-kick, joking and laughing.

4) After the feast an epilog of social dances resembles the food-spirit sequence.

5) At Onondaga longhouse a dawn procession takes place, the elevation of the cakes (*odenphso'dahkwa*), which may once have symbolized sacrificial communion and still is attended by bad-luck beliefs and omens. One group raises up special cakes for the dead, another will try to snatch them in a scrimmage.

In addition to the beliefs still connected with the *ohgiwe*, much of the ancient significance has been submerged, and the snake origin myth has lost functional expression. A consistent duality couples the functionaries and the structural parts of the ritual. The dance steps tie up with other medicine rites, but also with the women's *eskanye* and the food-spirit dances, as the *oneont'oeno*. These items emphasize the concept of fertility inherent in the important role played by women. The women, as mothers and agriculturists, are in a position to evoke life out of death, out of the soil where all creatures lie buried. By pleasing the spirits of the departed they appeal to their chthonic powers. [CPK]

ohorodnik Literally, gardener: a Ukrainian social dance for four groups of three, forming a set of twelve. Usually a man stands between two women, but a woman can be the center. In contrast with the more spectacular Ukrainian dances as *kolomaiika*, the *ohorodnik* carries the dancers through two simple formations with a running step: 1) The sides of the square approach and recede in syncopation, that is, set one and three forward while two and four go back—producing a fluid and pleasing effect; 2) The right hand woman, and then the left hand woman, hooks elbows with the central man and turns him once around in female aggressiveness unusual in folk dancing. The dance is popular at weddings, especially among the Ukrainians of Rhode Island. There is no pantomimic enactment of the title. [CPK]

Oisín In Old Irish legend, the son of Fionn MacCumail and Sadb, in her deer form: discovered as an infant in the forest by Fionn's dog Bran and brought home safe to Fionn, who knew him at once for his own child. See BRAN.

Oisín is frequently referred to as a poet of Fianna; there are a number of poems in the *Book of Leinster* ascribed to him, but he was not the chief poet among them. He was the father of Oscar, who was killed at the Battle of Gabra, when the Fianna themselves were overcome. After that battle there was no more peace or pleasure for Oisín, or Fionn, or Caoilte (nephew of Fionn, companion of Oisín) again in this world. Oisín is Macpherson's Ossian.

One day soon after the Battle of Gabra came a woman riding over the sea from the west on a fast white horse. Niam was her name; she had given her love to Oisín, she said, and begged him to come with her to Tir na n'Og, the Land of Youth, that marvelous Otherworld of the Celts, a country of plenty, of honey

and wine, without old age, or wasting away, or death. Oisín sorrowed to leave Fionn, yet joyfully consented to go with Niam. He got up on the horse and the two disappeared westward facing out to sea. Caoilte, it is said, went into a hill of the *side* to be healed of his wounds received in battle, and no one ever saw him come out. A different story tells that he turned south and came to where Patrick was teaching the doctrines of Christianity, and that Caoilte told Patrick all the legends of the Fianna, which were written down by Brogan, Patrick's scribe.

Years later, 100 years or 1000 years, no matter, Oisín came back to Ireland on the wonderful white horse, seeking his old companion Caoilte. In Tir na n'Og he "did not feel the time passing"; years seemed days; he did not know that ages had gone by. Niam could not bear to see him go, knowing the fate of mortals who return to this world from that immortal land. She warned Oisín not to get down from the horse, or he would never come back to Tir na n'Og. Oisín promised, of course, but one day he recognized the great stone trough of the Fianna and got down from the horse (or he attempted to help some men who were raising a huge stone and slipped). The minute he touched the earth, he was a withered old man, half blind and spent, and the horse rushed back to Tir na n'Og.

Oisín also finally came to where Patrick was. The stories differ as to whether Caoilte too was there. The longest story of the Finn cycle is *Acallam na Senóirec*, the *Colloquy of the Ancients* or *Colloquy of the Old Men*. Oisín among the monks complained of the meager food in contrast to the Fenian feasts; he complained of the sound of the bells and the singing of thin hymns in contrast to the music of the kings. But most of all he was horrified at the ethics of Christianity which could send a man like Fionn to hell. Fionn was in hell, Patrick told Oisín, "because he gave no heed to God." Oisín would answer, "The story is pitiful, Fionn to be under locks, . . . a heart without envy, without hatred. . . . It is an injustice, God to be unwilling to give food and riches; Fionn never refused strong or poor." Patrick strove with Oisín to turn him to the Christian God, for his end was nearing. But Oisín did not want to go to heaven without his dog, without Fionn, without Oscar, or Caoilte. Patrick assured Oisín of the joys of heaven in contrast to Fionn's plight in hell "on the flagstone of pain," and begged him to choose God. But Oisín could only reiterate, "If God were in bonds, Fionn would fight for him! Fionn left no one in pain or in danger without freeing him." The story ends with Oisín still unreconciled.

okoztah-pol Literally, dance of the head: a vestige of pagan sacrifice, enacted by the Maya of Quintana Roo at Catholic fiestas, particularly the Fiesta of the Patron Crosses in late April. At dawn of the second day a pig is sacrificed, cooked, and eaten; then its head is decorated and placed on the altar. In the public part of the church early the next day a dance burlesques the selling of a pig. Nine young women circle the table to the Spanish tune of *La Carbonerita*, each with a bowl of pinole and honey and an agave leaf for spoon. A man with a gourd rattle pretends to lead the pig by a cord attached to the head, and to offer it for sale. During the mock

bartering that follows, the girls circle nine times against the sun and nine times sunwise, count being kept by cigarettes laid on the table. The pig-impersonator, bearing the head, pretends to escape and is recaptured, and finally "sold" to the organizer of the fiesta for a hundred cigarettes. The head is placed on the table and the pinole served to the guests. [CPR]

Old Dan Tucker An American square-dance and play-party song, a favorite of fiddlers and banjo pickers: composed by Dan Emmett (who wrote *Dixie*) and widely sung in minstrel shows. Farmers of New York state picked it up in 1844, set words of protest against their landowners to its tune, and sang it in a demonstration during which they paraded in Indian dress. The Dan Tucker words deal with a rough old character who combed his hair with a wagon wheel and died of a toothache in his heel.

old (or faithful) dog A folktale motif (B842; Type 101) in which a faithful old dog is regarded as having outlived his usefulness and is to be killed. The dog confides his predicament to the wolf; the wolf plans to save the dog's life by attacking the farmer's child and allowing the dog to rescue it. The plan succeeds and the old dog is not only spared but honored. Later the wolf expects the dog to allow him to take off some of the farmer's sheep, but the old dog refuses, again proving his fidelity to his master (K231.1.3). This is the substance of the story *Old Sultan* (Grimm #48) which continues with the episode of the old dog's outwitting the wolf (who tried to get even) with the aid of a three-legged cat.

An equally famous faithful dog occurs in the Gelert story (B331.2) in which a certain Welsh chieftain, Llewellyn, on returning home was joyfully met and welcomed as usual by his great hound¹ Gelert. Llewellyn noticed that the dog's mouth was bloody and on entering the room he saw that his child's cradle was overturned. Assuming that the dog had killed the child, Llewellyn plunged his sword through Gelert's heart, only to discover the body of a slain wolf in the room and the child safe and sound under the overturned cradle. The old Welsh proverb *to repent as deeply as the man who killed his hound* refers to this story, the eponymous legend of Bethgelert in Caernarvonshire, north Wales.

This is not a strictly Welsh local legend, however, but turns up as local legend in several places in Europe, the most ancient probably being the Greek story (eponymous legend of Ophiteia) in which the returning father kills a huge snake which he finds coiled around the urn in which he had hidden his child. Later he sees that the snake has saved the child from a wolf.

This ancient Eurasian tale occurs in many collections (e.g. *Panchatantra*, *Kathā Sarit Sāgara*, *Gesta Romanorum*, etc.). "The Story of the Brāhman and the Mongoose" in the *Panchatantra* (see *Ocean of Story* v: 133) is the same story: In the Brāhman's absence his pet mongoose kills a huge snake which approaches the Brāhman's child, runs to meet the Brāhman as he returns home; the Brāhman seeing the mongoose spattered with blood assumes it has killed his child and kills the mongoose with a stone. On entering the house he sees the child safe, the dead snake, and is filled with remorse. K. Campbell in *Seven Sages of Rome*, Boston, 1907, cites

31 analogs of this story. For full discussion of its antiquity and spread, see W. A. Clouston, *Popular Tales and Fictions* ii: 167 ff.

Old John A mythical tramp printer of early American composing rooms. Every printer was well acquainted with someone who had seen and talked with him. Whenever Old John quit a job he inevitably chose the moment when he was distributing type at the news case. With one sweep of Old John's left hand the types would fall simultaneously into place. Old John and all tramp printers were said to go to a compositors' heaven: a wonderful shining, clean printing office with new presses and all new types. See JOHN.

Old Jokey Song One of the American titles of *The Farmer's Curs'd Wife* (Child #278): a ballad relating the story of a shrewish wife who was carried off by the Devil but proved so troublesome that she terrorized the demons of hell and was finally brought back. This tale is old and widespread in both Europe and Asia, appearing in the *Panchatantra*, in Russian folklore, and all over western Europe. The ballad is also known as *The Devil and the Farmer's Wife*.

Old Man or Old One The term applied to the creator-culture-hero by several American Indian tribes; also, the term generally used by a wife, among American Indians, in direct address or in reference to her husband. The reciprocal, husband speaking, is "my old woman" (wife). In Blackfoot mythology Old Man and Old Woman were the original inhabitants of the world; the Crow Indians, neighbors of the Blackfoot in the northern Plains, in their cosmogonic myths, credit Old Man with teaching human beings the arts of life. Among the Modoc Old Man is also the culture hero, and the Aleut of Alaska credit a character referred to as Old Man with making people by throwing stones over his shoulder. In several Plateau tribes Old One or Chief also figures as creator of the earth; he also made the Indians from balls of mud. [ewv]

Old Man Coyote A popular term often used by American Indians when narrating myths in English about the trickster, Coyote; specifically, the Crow Indian trickster, who is always referred to in the mythology as Old Man, or Old Man Coyote, and never simply called Coyote, as among other tribes. Opinion among the Crow differs on whether Old Man Coyote and Sun are identical beings in Crow mythology, but Lowie accepts the majority of Crow opinion, confirmed in the mythology, that Sun is distinct from Old Man Coyote. The latter, as he exists in Crow mythology, is a typical exemplar of the North American trickster. See Robert H. Lowie, *The Crow Indians*, New York, 1935, pp. 130 ff. See MOTHER; TRICKSTER. [ewv]

Old Man of the Mountain The leader of the Assassins. The crusaders in Syria often came into contact with this sect of murderous fanatics, and the Old Man of the Mountain became a symbol of slaughter and power, giving orders to slay here or there, often without giving the slayer any information other than the name of his victim. These orders were carried out by his subordinates without question, for they believed the killing of their victims to be meritorious deeds, and believed also that to die on such an errand would bring them to paradise. Rāshid ad-Dīn Sinān, the greatest of the Old

Men of the Mountain, claimed to be an incarnation of Allah. He had many supporters to this claim, but others said he could not be the deity because he was lame. The crusaders are said to have marched to a tune called *The Old Man of the Mountain*, but this was not the tune of the same name popular in the 20th century.

Old Man of the Sea In the fifth voyage of Sindbad in the *Arabian Nights*, a horrible old man who asks to ride on Sindbad's shoulders; an evil jinni in man's shape, who cannot be dismounted. He rides Sindbad unmercifully until the sailor is near to complete exhaustion. Finally Sindbad smashes his head in. The Old Man of the Sea resembles to some extent the hag who rides men at night, the nightmare or incubus who exhausts them sometimes further and further until they die of physical debility. See BURR-WOMAN.

Old Smoky One of the most popular of American mountain lonesome tunes, or love songs, known in many variants and compounded of elements of many other songs—*The Waggoner's Lad*, a song of the Conestoga wagon era, *Courting Too Slow*, *Loving Nancy*, *The Forsaken Girl*, *The Inconstant Lover*. Its most common tune is the same as that of *The Little Mohee*. "On top of Old Smoky," it says, "All covered in snow / I lost my true lover / By (from) courting too slow." Some of the stanzas from *The Waggoner's Lad* name the girl Polly and the lad Johnnie. "Go put up your horses," she says, "and feed them some hay / Come sit down beside me / Just as long as you stay." But the wagons must move and the lover has other girls along the line. "My horses ain't hungry / They won't eat your hay / So goodbye, my darling / I'll feed on the way." Many of the often-recurring lines of the lonesome tunes and other ballads and songs appear in one version or another of this song: the grave "on the mountain so high"; the turtle doves; the warning not to "pin your affection on a green-growing tree"; the generalizations on false-hearted lovers who will "hug you and kiss you and tell you more lies / Than the cross-ties on the railroad and the stars in the skies." In at least one version, however, the romance ends happily, the girl leaving her Mama and going off in the wagon with the lad. See LOVE SONGS.

Old Testament The older and larger of the two major divisions of the Bible, containing the Pentateuch—the five books of Hebrew law and history through Moses—; such historical books as *Samuel*, *Kings*, and *Judges*; the writings of the prophets; several poetical and philosophical works, like *Job*, *The Song of Songs*, and *Ecclesiastes*; the story of *Ruth*; the book of *Psalms*, and the book of *Proverbs*. The Old Testament, the basic book of Judaism and Christianity, and containing much of the common tradition later used by Mohammed in the Koran, is now thought to comprise four principal writings and editings, the sequence presumably as follows. The J version, so called because it uses the name Jahweh for God, dating from the 9th century B.C. and compiled in the Southern Kingdom, and the E version, using Elohim for the deity, from the Northern Kingdom in the 8th century, deal with much the same period of history, from the very beginnings of the world to the end of the reign of King Saul, and with the same sort of folkloric and legendary material. These were combined in the 7th century, at about the time that the D author (Deuteronomic code) wrote. In the 6th century, the P or Priestly

version or editing of much of this material was written, and in the century following the four versions (or three: JE, D, P) were combined and canonized. It was not until about 100 A.D. however that a final acceptance or rejection of existing materials established the Old Testament canon as we know it today.

The material in the Old Testament is thus of varying antiquity. Moses is traditionally credited with writing the first five books, but modern scholarship has been able to point out no single passage that can definitely be ascribed to him. The age of the writings varies from the book of *Daniel* (about 165 B.C.) and the final editing of the *Psalms* (about 100 B.C.) to the "Song of Lamech" in *Genesis* and the "Song of Deborah" in *Judges* (each at least 1000 years before). The Old Testament contains stories of folk heroes (David the giant-slayer, Joseph the clever youngest son), cosmographic tales (compare the two tellings of the story of the Creation in *Genesis* i and ii, the latter attributed to J), etiological tales (*Genesis* ix: the rainbow; *Genesis* xi: the languages of mankind), proverbs, riddles, laws; in fact it is a storehouse of the lore of an ancient people unequaled elsewhere in its literary and inspirational power. Merely to mention such well-known type tales as the stories of Samson, of Jephthah, of Joshua and the walls of Jericho, of Abraham and Isaac, of David and Bathsheba, is to indicate only partly the scope of the folkloristic material. To this Scriptural writing must be added the great mass of apocryphal literature, of commentary, of rabbinical legend. And see Sir James G. Frazer's *Folk-Lore in the Old Testament* (3 vols., 1918) for an indicative group of "studies in comparative religion, legend and law."

old woman adviser A helpful character in many North American Indian test and hero tales (N825). An unnamed woman who usually is referred to as "grandmother" advises the hero how to kill monsters, escape from dangerous situations, what path to take, how to overcome obstacles on his way, etc. Often the woman is not to be distinguished from animal advisers, as in the Eastern Woodlands tale of Mudjikiwi, where the old woman advisers are a moose and other animals who assume the form either of old, or in one case, young women. [EWV]

Old Woman Bat See BAT; BATS.

Old Woman's Grandchild (Grandson) Title and hero of a popular hero tale of the Plains Indians of North America. Old Woman's Grandchild, son of the Sun, or of Morning Star, by an Indian woman, leaves his father's celestial home with his mother; the mother is killed, but the boy reaches earth and is taken in charge by an old woman. He grows to manhood quickly, kills various monsters, beginning with the old woman's dragon husband, despite his "grandmother's" admonitions, and is watched over by the Sun, his father. In the end Old Woman's Grandchild turns into the North or Morning Star, and the Old Woman, his grandmother, into the Moon. In the mythologies of several Plains tribes the exploits told of Old Woman's Grandchild are also accredited to two twin heroes, Lodge-Boy and Thrown-Away, and there is much confusion between the two myths. For the Crow Indian version of this tale see Robert H. Lowie, *The Crow Indians* (New York, 1935), pp. 134-157. [EWV]

olive An evergreen tree (genus *Olea*) with leathery leaves, a hard, yellow wood, and an oily fruit, which has been grown in the Mediterranean region since the Neolithic Age and has remained since the earliest days of Minoan Crete one of the chief staples of trade and husbandry. The tree was sacred to Athena and Apollo. Both Poseidon and Athena wished to possess Attica, so they took their dispute to Zeus (or other judges, divine or human) for arbitration. The region was to be awarded to the one who gave the greatest boon. Poseidon smote the earth with his trident and a salt spring came forth, but Athena produced the olive tree, symbol of peace, fruitfulness, and security, and won. Irene, goddess of peace (Pax of the Romans), in Hesiod the daughter of Zeus and Themis and one of the Horæ, was worshipped in Athens and Rome. She was young and usually depicted with a cornucopia in one hand and an olive branch or a caduceus in the other.

Originally the branches for the Olympic crown were from the sacred wild olive which grew at the west end of the Temple of Zeus; they were cut with a golden sickle by a pure boy whose parents were both alive. Athenian brides either wore an olive crown or carried a branch for fruitfulness, and an olive crown was the highest distinction for those who had served the Athenian state. In Rome the olive crown was worn by conquerors; on Numa's medals the king holding an olive branch signified that he had had a peaceful reign. In China a wreath of fragrant olive was the reward of literary merit. An olive branch on the chimney piece in Venice warded off lightning; in Italy a branch over the door keeps out witches and wizards. Before the use of coffins, the dead were frequently laid on a bed of olive leaves in the grave and covered with them. In early representations of the Annunciation the Angel of the Lord is pictured holding an olive branch, which was later supplanted by the more familiar lily. The dove returning to Noah's ark with an olive leaf (*Gen.* viii, 11) showed him that the waters had abated on the land. In the *Psalms* (cxxxviii, 3) a man's children are likened to olive plants around his table. In Spain the olive insured the fidelity of a husband (D1355.8) and the magic olive branch made the woman master in the house (D1359.1.1.). Some believe fruitfulness in the olive trees was increased if they were tended by young and innocent children; elsewhere an olive gatherer had to be faithful to his wife or there would be a poor crop the next year. It is said that the quality of the olive crop may be predicted by the colors in the rainbow. In Bilda, Algeria, there was an ancient olive tree into which pilgrims drove a nail to cure their ailments. In Rome they said wine within and oil without was the secret of health and happiness. [JWH]

Olrik, Axel (1864–1917) Danish folklorist, specializing in Norse mythology and epic poetry. Olrik was born at Copenhagen and was professor of folklore there from 1913. He has a long list of writings on Scandinavian history, mythology, folklore, ballads, songs, and on other related topics. He was leader in the organization of the Dansk Folkemindesamling in 1904. With Grundtvig and other Danish scholars, his work in tracing the archetype of Danish ballads showed scholarly insight. In the comprehensive classification of folklore envisioned by Kaarle Krohn and prepared under the direction of

Antti Aarne, he was an assistant. The work appeared in 1910 under the title *Verzeichnis der Märchentypen* (revised and expanded by Stith Thompson as *Types of the Folk-Tale*, 1928).

Of great interest are Olrik's "epic laws" expounded in his *Folkelige Afhandlinger* ("Folkedigtningens Episke Love"), published at Copenhagen in 1919. In studying story narrative, Olrik found certain laws governing style and content whether myth, ballad, tale, or local legend, and, further, these laws obtained from whatever quarter the material studied happened to come. The chief value of these laws is that they may direct "attention to qualities that differentiate all kinds of oral tales from the literary tale" (Stith Thompson, *The Folktale*, New York, 1946, p. 457).

Some of Olrik's works have been published in this country, namely, *A Book of Danish Ballads* (New York, 1939), of which the Introduction is by Olrik and the translation by E. M. Smith-Dampier (*Danske-folkeviser*, I, 1899; II, 1909); *The Heroic Legends of Denmark* (New York, 1918), a translation from the Danish, revised in collaboration with Olrik and translated by Lee M. Hollander; *Viking Civilization* (New York, 1930); *Personal Impressions of Moltke Moe* (FFC 17, 1915), which gives interesting sidelights on this scholar who collaborated with Asbjørnsen in production of the work, *Danske Folkeeventyr* (Christiania, 1842), but who was a folklorist in his own right. Olrik was interested in various phases of individual folktales. One of his studies of importance, on Little Red Riding Hood and related tales, is in *Folkelige Afhandlinger*, I (1919), pp. 140 ff.

Olympians The gods of ancient Greece who, under Zeus, lived atop Mt. Olympus. In the mythological succession of Uranus, Cronus, and Zeus, most students see an echoing of the successive invasions of Greece by outlanders and the replacing of the gods by the gods of the newcomers. The Olympians include the children of Cronus and the divine children of Zeus. Compare **TITANS**.

Olympus The name of several mountains in Greece and Asia Minor; especially, the peak, slightly less than 10,000 feet in height, in Thessaly near the Macedonian border, reputed to be the home of the gods. Whether the gods live on Olympus or in heaven is often confused by ancient Greek writers, but perhaps the peak of Olympus, snow-crowned and above the clouds, was thought to be in heaven. The giants warring against the gods piled Ossa on Olympus and Pelion on Ossa to reach the heavens; this has been taken to mean that Ossa and Pelion were placed on the lower slopes of Olympus to reach the Olympian heights. On the peak of Olympus Zeus and other gods had their palaces and here too Zeus called the councils of the gods.

om Besides its role as first and last words of the venerated lotus-jewel mantra *Om mani padme Hūm*, the Sanskrit word *om* (pronounced with long ō and a hum or nasal sound like French *bon*) has had five general meanings and uses.

In the first place, it is the universal yea-say *par excellence*, the syllable of assent and the hum of approval. It is more or less cognate with the *amen* (so be it) of agreement uttered by ancient Hebrews and its echoed ejaculation by modern evangelistic Christian sects, with the "um-hum," "mm," or "m-hum" still used in conversation almost everywhere in the English world more

often than yes, and is related to the ritualistic "so mote it be" of the Rosicrucians and Freemasons. It apparently vaguely connotes the resolute affirmation of existence in the to-be verb *I am* (Eng.), *sum* (Lat.), *eimi* (Gr.), *eam* (Old Eng.), *em* (Arm.), and *asmi* (Skt.).

Again and often it is the syllable of emphasis, either introducing or ending an assertion, or both as in the famous mantra quoted above. It has almost the significance of "Notice!" or "Listen!" particularly in the form of *amen* prefacing the important sayings of Jesus in the synoptic gospels where it is translated usually "Verily," and in the fourth gospel where it is always double. The word *amen* occurs 30 times in the Old Testament, where it is transliterated 27 times, translated once as "so be it," and twice as "truth." In the New Testament it is found 150 times, is rendered "verily" 100 times, and transliterated 50. Where it occurs at the end of a sentence or is antiphonal, both in the Old and New Testaments, it usually combines these two meanings of assent and emphasis.

The third use of the word is as a symbol of deity. In India the liturgical use of the word *om* led to its increasing veneration until the ejaculation became the noun. The teaching of the sacredness of the symbol can be progressively traced in the *Upanishads* and it early became practically synonymous with *Brahman* (the undefinable and unknowable origin and source of all). Later, the *om* was spelled *aum*, and it was taught that it represented the triple nature of the cosmos, and that the *a*, *u*, and *m* respectively represented the Absolute, the Relative, and their mutual relation. One *Upanishad* of 500 B.C. asserts that the entire creation was derived from the *Om*. In very similar fashion, the equivalent word *amen* becomes one of or part of the names of both God and Christ. In *Isaiah* lvi, 16, it is translated twice "God of truth," in violation of the usual translation procedure. In *Revelation* iii, 14, Christ is referred to as "the Amen, the faithful and true witness," and there is a related usage in *2 Cor.* i, 20.

The fourth meaning of *om* is by itself as a mantra of mystic adoration, as one might repeat the word God in rapt worship. If a devout Hindu is unable to recite the Veda, due to circumstances, he may properly substitute the meditation on the one word *om*, "which is the root of the tree of the Veda and its essence."

It is easy to see that such use of the word would lead to the fifth practice, the magic charm. We find that the repetition of *om* is guaranteed, if properly performed, to protect the worshipper from danger and even purify a murderer. "Its utterance with understanding of its significance secures the accomplishment of every wish." The *Kausika Sūtra*, a book of Hindu magic, requires the recitation of *om* at the time of the preparation of holy water. The repetition of *om* "the oldest son of Brahman" before and after sacrifice is supposed to counteract any errors in the procedure, and "Om recited 1,000 times grants all wishes." There is a somewhat similar belief in the potency of the "Amen" at the end of Christian prayers, where its omission causes vague uneasiness, but it is often disregarded at the end of hymns.

CHARLES FRANCIS POTTER

omele drums Three medium-sized drums of a battery of eight used in rites of the Shango cult of Trinidad Negroes. The drums are of European type and played

with sticks. The two large drums, named for Ogun (St. Michael in his Catholic identity) and Shango (John the Baptist), call upon the gods. Devotees in a state of possession address the drums speaking the rhythms of the different gods, each selecting one for special homage. Of the three small drums, one is named for Ogun and the other two are Congo drums.

omen A phenomenon or incident regarded as a prophetic sign. Formal divination seeks out omens; the Roman augurs watched for the flight of birds to either hand as an indication of the will of the gods; tea-leaf readers descry omens in the chance configuration of the leaves in the teacup; the petals on the daisy tell the inquirer whether he is loved or not. Chance omens may be even more powerful, for often their meaning is hidden and does not fall into a systematic method of interpretation. But some chance omens are generally recognized; meteors, comets, eclipses, and the like are extremely ominous; meeting an old woman as one sets out on a journey is very unlucky; breaking a mirror, putting a shirt on backwards, tripping as one enters a house, having a bat fly in the window are all indications of ill fortune. Omens may occur at any time, at any place, and be of any sort of occurrence. The creaking of the boards in a house has its message for some people. The banshee, fetch, jack-o'-lantern are often specific death omens.

 Omens, or signs foretelling future events or revealing events occurring at a distance, are multitudinous among North American Indians; many are undoubtedly of native origin, many others may represent borrowings from European beliefs. To start out on a trip and meet a Coyote is a bad omen among the Tübatulabal of east-central California; one should return home and start the trip again. Buzzing in the ear, itching palms, sudden sneezing are signs persons are talking about one, thinking of one, inviting someone to go somewhere and so forth in nearly all tribes. Bird or animal calls are usually considered bad omens, especially when such are heard after dark or before dawn; they may be a sign of war, death, rain, or of an evil shaman sending out his spirit helper. Falling stars are also interpreted as omens. [EWV]

omigiwen Literally, in Chippewa, presentation: an offering from one tribe to another, as a token of friendship and peace. One of the most important Chippewa-Menominee ceremonies is the *dewe'igun omigiwen* or drum presentation. To the American Indian the drum is an object of reverence and a mediator between man and the spirit land. The great drum (*o'gima dewe'igun*) is painted with symbolic designs and hung on four feather-ornamented hooks. Great reverence is also shown toward the second or warrior's drum (*ogit'cida dewe'igun*) and toward two calumets.

The "drum religion" concerns the general welfare of the tribe, as well as peace and kindness toward all in need. When the owner of a drum wants to present it to the chief of another tribe, elaborate procedures take place on both reservations. Four days are devoted to dancing before departure, four days to the drum presentation, and four to continued dancing. The ceremony opens with lighting and smoking of the calumets by leading drummer-singers and dancers, proceeds with speeches, and climaxes in the reception of the drum

with four strokes with a special stick: three feints and a final stroke. Plentiful gifts are exchanged as offerings to the drum and between hosts and guests. The four days proceed as follows: 1) Reception of the visiting tribe; 2) Presentation of the chief drum; 3) Presentation of the warrior drum; 4) Dancing and feast.

The dancing itself is individualistic, except for the consecration features. The dancers may remain stationary or move in a clockwise circle, with a double heel-bumping with alternate feet, or toe-taps forward and back. The body remains fairly erect. Participation is voluntary and open to all men present. Conduct is decorous at all times.

The ceremonial procedure and arrangement of conductors varies somewhat between tribes and reservations, but in each place these are observed strictly according to rule. Only men participate in the dancing, though women join in the singing and in a final squaw dance. The ceremonial number four governs all actions: the number of days' duration, the number of leading singers of each sex and leading dancers, the repeated calumet offerings during the day, with four puffs to the cardinal directions. The food consecration by the ceremonial leader proceeds around the kettle in the four directions, finally also with gestures to the zenith and nadir. Secondary ceremonials may be introduced—the Restoration of Mourners, allowing their participation in the dancing, and a Ceremony of Divorce. Each feature has its special songs.

It is also called dream dance because of its dream or vision features; it was received in a vision by a Sioux girl, with additional enrichment due to a vision of a Chippewa child, and from time to time during the ceremony dreams are related and accepted. The derivation of the drum dance from the ghost dance is open to question for the drum dance contains no trance or hypnosis, no calling upon the dead; neither does it progress in a sideward shuffle, with interlocked hands, but forward and singly. Relation to the grass and calumet dances of the Plains is more evident, though costume paraphernalia has deteriorated. In particular the two calumets, the give-away and consecrated feast (formerly of dog meat) is common to all. The Menominee claim reception of the dream dance from the Potawatami. A similar obsolete ceremony of the Iowa was attributed to Kickapoo provenience. It is evidently a fairly recent form of worship, with ancient roots. See CALUMET DANCE; GHOST DANCE; GRASS DANCE. [GPK]

Om-ma-ni The Sanskrit lotus-jewel mantra, a mystic formula used especially in Tibet and Japan. It is addressed to Padmapāṇi (Avalokita) and its utterance is believed to convey the reciter directly to paradise, ending the Buddhist cycle of rebirths. The full formula is *Om-ma-ni pad-me Hūṃ*. Saying the syllable *om* prevents rebirth among the gods, *ma* prevents rebirth among the Titans, *ni* among men, *pad* as a beast, *me* as a kind of Tantalus, and *Hūṃ* as an inhabitant of the underworld.

Even sight of the formula without articulation is believed effective; hence it is printed millions of times on long ribbons which are coiled and inserted in prayer-wheels. These are revolved all over Tibet, in the hands of the faithful or by the wind or by water power. The

formula is also printed on flags and stones. The followers of Bon repeat it in reverse.

The expanded version of the formula, known widely in Japan among Buddhists, but to only a few Tibetan lāmas, is addressed to the first of the Dhyani-buddhas, Vairocana. See OM.

Omolu The Yoruban earth deity, son of Nana and Obaluwaye; retained in the African cults of Brazil and Cuba. [MJH]

Omphale In Greek legend, a Lydian queen who owned Hercules as a slave for a time. Hercules, seeking purification for his murder of Iphitus, came to Apollo's oracle to ask how the stain might be eradicated. Apollo would give no answer, so Hercules began to remove the oracular tripod. The god and the hero wrestled for its possession; Zeus at last threw a thunderbolt between them and stopped the fight. Apollo then ordered that Hercules be sold as a slave and that the price be given to Eurytus, the father of the slain Iphitus. Hermes sold Hercules to Omphale. While serving the queen, for one or three years, Hercules performed several of his customary deeds against oppression, and according to later legend many incongruous womanly tasks while Omphale donned the lion skin and carried his club. Omphale is said to have borne one or more sons to Hercules during the period he served under her.

omphalos The navel; the center of the world, located at the temple of Apollo at Delphi. Zeus let loose two eagles at the ends of the earth, and marked the spot where they met with a stone. Therefore, the omphalos, one of the typical navel or cone-shaped stones worshipped throughout the Mediterranean region, was guarded by two golden eagles at Delphi. Together with the pit and the tripod it was one of the great sacred objects of the Delphic oracle.

Om sondagsmorran A humorous round dance of the Faroe Islands, popularized on the Norwegian mainland, and also among Norwegian groups in North Dakota, Minnesota, and Wisconsin. The nonsensical text is a Hired Man's Complaint—*Om sondagsmorran er det kaffikoppen svart. Sjung falleri, hei fallerallera . . .* On Sunday mornings it's coffee without cream. Sing falleree . . . The dance steps have nothing to do with the text, except for their jollity. They resemble the *branle*, ("double" left, "simple" right, all facing left), except that the right foot steps toward the center. The three-count step makes an interesting rhythmic counter-pattern against the duple musical beat. During the second part, as in *Per Spelmann*, partners face, hold hands, and hop on alternate feet. Then, as an absurd finale, each whispers in the partner's ear, claps hands, and pivots away. [GPK]

Onatah Literally, Corn: one of the three daughters (with Beans and Squash) collectively known as Deohako, of Seneca Indian mythology.

oneiromancy Divination from dreams: a world-wide and ancient practice. The dream may be explicit, for example a warning from a deceased ancestor that a contemplated action will be disastrous; or it may be symbolic, as the dream of Pharaoh, where seven fat and seven lean kine indicated to Joseph the diviner the coming of seven years of plenty and seven years of famine. Standards of interpretation of such symbols have

existed, e.g. a snake dream as being one either of sex or of an enemy; included in this is the canon of psychoanalytic dream symbols.

oneont'oeno The Iroquois corn dance, dedicated to this member of the life-sustaining family of divine sisters (corn, beans, and squash). Women are identified with corn, and thus own the dance, though they do not monopolize nor even lead it. It is a single short dance, distinct from the three-day green corn festival. It is included in the food festivals and in social evenings and in "sings." It is related to the women's *eskanye* by concept but not by its step, which is a forward shuffling trot or stomp. Men start the circling, the two leaders shaking horn rattles and intoning resonant, sometimes antiphonal, songs. The women join in various ways, among the Cayuga at the end of the line, among the Seneca in alternation, among the Onondaga in double file, with the left arm hooked in the partner's right. The leader may wind the whole queue back and forth among the benches and stoves in a serpentine path. Thus not only the corn but the bean is symbolized by the clinging action of the women and again by the representation of the tortuous growing habits of the plant. [CPK]

ongon In Buriat religion, an image embodying a god and therefore possessing the power of the god: among the Altai called *kurmes*, among certain Turks, *tyus*. It is usually either a picture or a figure, usually human, made of feathers, cloth, fur, occasionally of wood. Famous shamans sometimes become ongons after death. Ongons are numerous: there are mountain ongons (usually devised of brocade or silk with bead eyes and owl feathers sewed to the head) kept in little niches in the yards of farmsteads; men's and women's ongons (women's ongons protect children), and these are fed respectively by the master or mistress of the house; ongons of the bear, ferret, ermine, wolf, porcupine, pig, etc.; ongons of disease (one to cure swellings, one for the itch, for influenza, etc.); ongons of the sun, moon, and of the smiths. There are also joking and dancing ongons invoked and personified by the shamans at merrymakings. Offerings are made to them (meat, wine, etc.), and animals are dedicated to them (see АДУКН). In the Ural mountains are found little bronze birds and small human figures with smaller human figures on the breasts. All ongons bear human depictions on the the breast, which are thought to represent the soul or inner power of the ongon.

Usually an ongon serves only its possessor, upon whose death it is burned. The shamans make new ones, consecrate and install them in their new places. Some ongons, however, are very ancient. The Balagan Buriats possessed a very famous one named Borto, made in the form of a human head with hair and beard and rattles around the neck, and thought to embody an ancestor of Genghis Khan. (See *ERE* iii: 12.)

oni The demons or devils of Japanese folklore. [JLM]

onion Quite general is the saying that to dream of onions means good luck. Georgia Negroes say it is good luck to burn onion peels in the fire. A crop of thick-skinned onions is a sign of a severe winter.

In the British Isles sometimes young girls scratch the names of their various suitors on each of four onions, and put them in the dark to sprout. The first one to

sprout bears the name of the one she will marry. An onion under the pillow on St. Thomas Eve is said to bring dreams of one's future spouse.

Negroes in some parts of the United States say that to carry a red onion in the left hand, or left pocket, wards off disease. This is a general European folk belief transferred to the New World. In South Carolina a necklace of small crushed onions is placed around the neck of a child with diphtheria to overpower the disease.

Countless folk remedies call for onions. The one for sores prescribes an onion, cooked for 35 minutes, to be rubbed on the sore and then thrown to the pigs. If this is done, the sore will heal. To cure earache, drop the juice of an onion that has been roasted in wood coals into the aching ear. The heart of a hot roasted onion slipped into the ear is even more effective. Onion sirup, prepared by boiling equal parts of sliced onion and sugar over the teakettle, and swallowed slowly a teaspoonful at a time, is good for colds, phlegm in the throat, etc. Hot onion poultices will get rid of fever, chest colds, and croup. These may be applied to the chest or tied to the soles of the feet. An onion, cut in half, rubbed on a wart, tied together again, and buried until it decays, is a remedy for warts. As the onion decays the wart disappears.

Polish peasants believe that birth will be facilitated if the woman in labor sits over a pail of boiled onions. Ibn al-Jamil, Jewish Egyptian 12th century physician, recommended onion juice rubbed on the penis as a contraceptive.

New England settlers brought with them from the Old World the belief that a string of onions hung over the door would absorb disease germs as they enter and thus save the inmates. These onions of course could never be eaten. Among the handful of Shinnecock Indians still living on Long Island an onion is taken into the sick room and left there to "draw the fever out." When it has done so it will have turned black. The bactericidal effects of onion vapors have recently (1937) been acknowledged. (See "Folktales and Herbal Lore Among Shinnecock Indians" in *JAF* 58:120 n.17).

onnagata A female impersonator in the Japanese *kabuki* drama. Though originally a dance play by female performers, the *kabuki* is now enacted entirely by men. They dress even in daily life like women, and understand and present their roles with rare artistry, aided by expert make-up and sumptuous costumes. An element of romance is introduced into the plays in the person of the *ohimesama*, the daughter of a family of high position. This role originated in the *mahuron-mono*, or puppet play. The *ohimesama* is the beautiful heroine of a love story.

The *oiran*, or courtesan, is also a symbol of romance, stemming from the artistic culture of the Edo period. Her gorgeous array includes an ornamental headdress weighing at times 25 pounds. A famous *oiran* is Agemaki, playing opposite Sukeroku in the title role. [CPK]

ono pacakoti In Inca mythology, the great flood with which Viracocha, the creator, destroyed his first created race of giants. He saved only two to assist him in re-creating a new world and new race of people.

onyx A cryptocrystalline variety of quartz consisting of layers of different colors. A fabulous city of onyx occurs in Arabian folktale (F761.3). In Jewish lore onyx

was used as an innocence test. Onyx is the gem of Aquarius, birthstone of August, and symbolic of conjugal love. In India, however, it is worn around the neck to cool the ardors of love. Some, however, call it a gem of Leo and say that it promotes discord among lovers. There is a demon imprisoned within the stone which awakes at night and causes terror and nightmares, but this may be counteracted by wearing the stone in conjunction with sard. In the 10th century, the Abbey of St. Albans had an onyx so large that a man could not grasp it in his hand. This stone was in high repute as an aid to birth. Onyx was applied to the bites of animals; worn around the neck it would stimulate the spleen, allay pain, and dispel terror and melancholy.

In the fabulous 12th century *Letters* of Prester John, which enumerate the marvels of India, his own palace is described as having a courtyard paved with onyx and set aside for judicial ordeal combats. It is paved with onyx so that the stone may augment the courage of the duelists. Onyx can be depended upon to reflect back to the source a glance from the evil eye.

opal An amorphous, variously colored, silica gem which presents a peculiar play of delicate colors; the emblem of hope and birthstone of October. In early times it was called *pederus* (from Latin *puer*, child) because "it was beautiful as a child and inspired the love of all." It was highly thought of as a gem until the 19th century when it came to be regarded as a gem of ill omen. This is probably due to Sir Walter Scott's novel, *Anne of Geierstein*, wherein that lady disappears when some holy water falls on a lustrous opal in her hair. Queen Victoria's high regard for the opal did much to bring it back to its former repute. It was highly esteemed by the Romans; Pliny tells the story of Senator Monius, who was exiled by Mark Antony for the opal he owned, which was the size of a hazelnut and valued at great price. A supposed opal in the crown of the Holy Roman Emperors guarded the royal honor.

The opal was especially regarded for the eyes, strengthening the sight, curing eye diseases, and making the wearer invisible, whence it became the patron of thieves. It is said to turn pale in the presence of poison, protect from contagion, and dispel melancholy and sadness. An opal necklace guards the color and life of blond hair. The black opal is especially regarded. See FATAL GIFTS.

Opening of the Mouth and Eyes The name given to one of the burial ceremonies performed at the tomb of the deceased king in ancient Egypt. Its purpose was to enable the dead to see and taste, to enjoy the offerings buried with him and to recite the correct formulas in his adventures in the otherworld. Early it was enacted with a statue of the king, but later the body itself was used. The ceremony was part of a general reenactment of the Osiris myth of death and regeneration, and the dead man was thought to be brought to life again by it. Milk and some of the food were smeared on the mouth and eyes to arouse the desire of the deceased man for food. Then one of the priests, the *sem*, dressed in a leopard's skin, touched the mouth with an iron chisel or adze, the instrument with which Anubis opened the mouths of the gods. Horus, who had opened the mouth of Osiris, his father, was invoked. The lips were touched, then the mouth, then the lips again, so that color might be given them and the jawbones made moveable. Food

was placed in the mouth, and to end this part of the ritual the body or statue was dressed with the regalia. A part of the ceremony of the Opening of the Mouth and Eyes consisted of sprinkling the image or mummy with water, the fluid of life.

Open Sesame Magic formula for opening doors, trees, caves, mountains, etc.: catch phrase for the familiar folktale motif (D1552.2; N455.3; Type 676) in which a man watches a band of robbers enter the side of a mountain (cave, etc.) by means of the magic words "Open Sesame," later uses the magic words himself, enters their hide-out and discovers a great store of treasure. See ALI BABA. The story of *Simeli Mountain* (Grimm #142) is the same Ali Baba story, ending with the forgetting of the formula by the intruder and his murder at the hands of the bandits. In the story of the *Seven Robbers* as told in the Cape Verde Islands (see E. C. Parsons, *MAFLS* 15, i, p. 1; ii, p. 1) the magic formula for entering and leaving the treasure cave is merely "Open rock." The magic formula of European folktale which causes a tree to open is motif D1556. A magic flower opens the home of the dwarfs (F451.3.3.9) in still another German folktale. The magic opening of a mountain, rock, cave, etc., containing treasure occurs in a number of Finnish and Latvian Cinderella variants (see M. R. Cox, *Cinderella*, *PFLS* xxxi, 1892, p. 499), though in these tales the opener is a magic stick given to the heroine in reward for a kindness. The question of the magic opener having originally been some plant is discussed by early scholars. Certainly there is a legion of magic plants which open mountains and lead to treasure. Miss Cox says (*ib.*, 500) regarding Open Sesame "the mere name of the plant opened the rock." See FERNSEED; MANDRAKE; MISTLETOE; SPRINGWORT.

Opete Twi term for the vulture, conceived among the Ashanti, as among other West African peoples, as the instrument of the gods whereby the sacrifices made by men are transmitted to them. The name and sacred functions of this bird have survived in Dutch Guiana. A generalized feeling that the vulture is sacred has likewise been carried over into the New World by the descendants of Africans. In the West Indies the Negroes refrain from molesting the vulture (called "carriion-crow") for a variety of reasons, all of which are recognizable reinterpretations of African belief concerning this bird. [MJH]

Ophion In ancient Greek religion, an Orphic cult god; the Titan who ruled the universe before Cronus. Eurynome was his consort and together they were banished to Tartarus or were thrown into Ocean when Cronus attained supremacy.

opium Opium for smoking is a dark brown gum made by evaporating the juice of the poppy. Smokers make the gum into a small cone, perforate it, and attach it to the bowl of the pipe, a round, flattened ball, also perforated. The opium is then held over, not in, a flame and the fumes are inhaled. The longer the fumes are kept in the lungs, the more powerful the effect will be. Chinese smokers believe that Persian opium, which is expensive and difficult to get, is the best; Indian is next. Chinese opium is frequently adulterated with ash.

The effects of opium are various, depending in part on the source of it and in part on the temperament of

the smoker. Smokers normally become talkative, their noses itch, and the pupils of their eyes contract. They seldom become violent and their mental powers seem to be stimulated rather than clouded. The "opium dream" is not a necessary effect. At times smokers seem to have hallucinations of color in that vivid colors seem to pass before their eyes. Opium disturbs the time sense. Smokers frequently feel that they lie awake all night in a condition of pleasant and peaceful relaxation. The next night they report that they fall into a deep dreamless sleep. This disturbance of the time sense may account for the belief that opium-smoking greatly prolongs the sexual act.

Opium-smoking seems to be a national vice of the Orient, as alcohol is of the Occident. Many Chinese have smoked several pipes a day over a long period of years with no impairment of health or mentality, as many Occidentals have been able to take several drinks a day. In both areas some individuals react violently and quickly. The effects of opium are more slow to appear and less violent than the effects of alcohol. The preparation of the pipe and the smoking take more time than the pouring of a drink. Consequently opium-smoking has less appeal for the Occidental than it has for the Oriental.

Objections to the cultivation of opium for smoking are on two grounds. First, because opium brings a high price on the market, Chinese farmers, badly overtaxed, use land for opium that would better be used for food crops. Second, those who smoke opium until late at night get up late in the afternoon.

Opium derivatives—heroin and the like—have violent and vicious effects. Many believe that in the years between 1931 and 1937 the Japanese, in an attempt to demoralize China, introduced, through Korean agents, large amounts of heroin into China. Whether this is fact or counter-propaganda by the Chinese, the use of heroin increased enormously in China during the 1930's. [RDJ]

opossum (popularly called **possum**) An American marsupial (genus *Didelphis*) of arboreal and nocturnal habits, having a prehensile tail and grasping feet; ranging from the central United States to Brazil. The fact that the possum plays dead when caught (folktale motif A2466.1) has given rise to the folk phrase **playing possum** for any sly bit of feigning or lying low. When taken, the possum lies limp, breathing imperceptibly, eyes closed, but watching through the merest slit for a moment of inattention on the part of his captor to make an escape. Occasionally he does.

The possum figures especially in the folklore of the southern North American Indian and the Negroes and whites of the southern United States. There are various etiological stories explaining his characteristics: Possum has a bare tail (A2317.12), according to the Cherokee Indians, because originally it was white and he wanted a brown one. Raccoon advised him to brown it at the fire; Possum tried this but burnt all the hair off it instead. One southern U.S. Negro version of this story, however, shows Possum, along with Fox and Rabbit, stealing corn from a cornfield near a graveyard. A ghost from the graveyard jumped out and Possum lit out for the fence. The ghost caught Possum by the tail just as he was escaping and skinned all the hair off. Possum got his big grinning mouth (A2341.2.1) from grinning and laughing at a malicious joke once played on Deer.

And there is the Delta region story about the possum that stole the doctor's last chicken, was killed and roasted for the doctor's supper, but ate all the potatoes and gravy in the roasting pan and ran away the minute the oven door was opened. (See B.A. Botkin, *Treasury of Southern Folklore*, New York, 1949, p. 452).

A strange bit of rural folklore common from New Jersey to the Rio Grande is that the male possum copulates into the nose of the female, and the female blows the seminal fluid into her pouch, where the young develop. This idea probably originated in the fact that the male organ of the opossum is bifurcate and that the female does lick and prepare the pouch for the young for weeks preceding birth.

 The opossum often plays the part of the clever trickster in the tales of the Amazonian Indians and caboclos (mestizos). The motifs of these stories are generally identical with those of the Turtle cycle. [AM]

Ops An ancient Roman fertility goddess, identified by the Romans with Rhea, and connected with Saturn and Consus. She was worshipped at the Opalia, December 19, and the Opiconsivia, August 25; at the Volcanalia, August 23, she was among the gods sacrificed to. As a goddess of plenty, she was invoked by touching the earth.

oral tradition in music The term "oral tradition," long used to denote a concept of basic importance in the study of folk speech, has been adopted without reservation by students of folk music in the Western world. It has given good service in that field and in the integration of the twin studies of speech and music within the more general folklore. Presumably, it could serve also to tie together the studies of the folk and the fine arts of music within the more general musicology—an equally desirable end. But there are several reasons why the term does not serve this second function any too well.

In the first place, it is a curious but incontrovertible fact that the term "oral tradition" and the study of folk music have not only been elaborated outside of musicology, but have never become acclimatized there. On the one hand, to paraphrase Leonard Bloomfield's remarks upon students of (speech) literature, the majority of musicologists are not primarily interested in music, but in the literature of the European fine art of music, its grammar and syntax (harmony and counterpoint), and have dug neither deeply nor broadly enough even in that rich field to find either oral tradition or folk music, except in some rather superficial aspects. On the other hand, the valiant little minority of comparative musicologists—primarily interested in music rather than the literature of music—has not yet worked up far enough from its logical beginnings with primitive music to tie in either the concept of oral tradition or the study of folk music with the fine art of music, European or other. See discussion in SONG: FOLK SONG AND THE MUSIC OF FOLK SONG.

In the second place, though students of folk speech in the Western world can perhaps afford to ignore the comparatively rare instrumental speech (signal-drumming, Morse code, deaf-and-dumb manual speech, etc.), and while students of folk music can make the term "oral tradition" stretch to serve consideration of fiddle-tunes, banjo-picking, and harmonica-playing, musicians can hardly be expected to regard the term seriously in

speaking of a Beethoven symphony. They would recognize the role of oral transmission in the fine art of music if it were explained to them. But they would know it as plain "tradition"—the tradition of Joachim, Caruso, or De Reszke, or of Palestrina or Bach. In the former cases, they would be referring to very concrete musical realities, transmitted largely by word of mouth. In the latter, they would be referring to substantial stylistic generalizations conventionally dealt with in written words. In both cases, they would be journeying far from what the folklorist calls "oral tradition." The increasing dominance of instrumental music in the Western world since 1600 has pushed consciousness of *oral* processes into the background and placed main emphasis upon *aural* processes. Musicians recognize "playing by ear" and "singing by rote" (singing what is heard); but traditions of both, together with the allied art of improvisation, are utterly dead in professional life, and no serious consideration—to the best of present knowledge—has been given to their revival. The term "aural tradition" is no substitute. For the mere suggestion, that there were any but heard music, would seem ridiculous.

In the third place, it may be remarked that in the study of folklore in general the term "oral tradition" is used a bit loosely. Three separate meanings in common use may be distinguished: 1) an inherited *accumulation* of materials; 2) the *process* of inheritance, cultivation, and transmission thereof; 3) the *technical* means employed. This is not an unusual semantic complication and does not confuse us unduly as long as we remain in the field of folk music. But it may confuse us when we attempt integration of the folk and fine arts of music. And the uninitiated musicologist, upon whose cooperation we would largely depend in such an endeavor, might be pardoned if he were to accuse the folklorist of cult-worship in placing such strong dependence upon a concept that must seem almost mystical to him.

A fourth consideration bears upon this misunderstanding. Popularization of the European fine art of music has itself achieved such cultlike devotion that oral tradition and folk music alike are very generally regarded, by professional musicians, as a low form of musical life. Almost universal adoption has been given to a theory of unilinear evolution whereby the art of music progresses ever onward and upward from primitive, through folk and popular, to the fine art. The possibilities that estimable qualities may be lost as well as gained, that the order of historical development may have been different in different places, and that the whole hierarchical conception may be unwarrantably subjective, have apparently been little explored.

With these considerations in mind, it would seem that our difficulty were twofold: on the one hand, ambiguity in the use of the word "oral"; on the other, lack of attention to the basic conditions and processes—the dynamics—of music tradition in general. Oral tradition is only one of many kinds of tradition. Examination of other traditions, or rather, classes of tradition, as they function in connection with music will show that if we range beside each other the main classes of tradition that affect both the folk and the fine arts of music, they cease to be mutually exclusive categories of *things*, but rather generalizations, useful to study, of a *flow of events* whose outer limits show well-defined opposite characteristics, at the same time that the inner relations show almost

unbroken shadings of hybridization or acculturation from one extreme to the other. After this is done, we may hope to make some progress with the problem of *oral* tradition.

Tradition, as the handing on of acquired characteristics, has been said to be the basic distinction between man and the other animals. Korzybski, in adopting a more abstract homolog, refers to "time-binding" as enabling men to communicate over intervals of time, so that the younger members of a group can begin where the older leave off. According to him, it is man's principal survival mechanism, in terms of which relative sanity or insanity can be measured. Whether or not acquired characteristics can be inherited biologically, there can be no doubt that they are inherited socially. And whether or not these serve, as Korzybski believes they do, as principal survival mechanisms of individual men, there can be no doubt that they do serve human culture communities in such a way. There would seem to be good grounds for very serious evaluation of tradition in any study of cultural activity.

In the schematic outline given below, the main uses to which we already admit the term "tradition," together with some additional uses to which it would seem we must admit it, are grouped so as to show a field, operations within it, and the environment in which both are present to us.

Music tradition, as envisaged here, is a function of culture—a dynamic conception. With respect to the first sense of the term "oral tradition" to which reference was made above, this appears to us, however, as an accumulation of material products—a repertoire of songs, dances, etc.—and so, structural in character. But we must not be deceived by this illusion, which is entirely subjective and a direct result of our individual existences in general space-time. The repertoire as a whole and its relation to the culture of which it is an accumulation of traditions are in a constant state of flux.

With respect to the second sense of the term to which reference was made above, we must recognize two main types, oral and written, which combine in a variety of ways that we may conveniently set down as: predominantly oral, mixed (more or less equally) oral and written, and predominantly written. Unquestionably, pure oral tradition can only be found in the more primitive musics. Whether or not a pure written tradition, comparable to the higher mathematics of speech, exists or even can exist in any music need not be speculated upon here.

With respect to the third meaning of the term, attention should be called to another type of tradition, that operates not only through the persons in the field which is studied, but also *through the persons who do the studying of the field*. Traditions of control are of two main types: *intrinsic*, *D*, operating within the music activity, and *extrinsic*, *E*, operating from outside the music activity, in the environment—the general field of culture. We are conscious of traditions of control in the field of municipal, state, national, and international politics, and even in the politics of organizations and other groups. In our study of folk music, as elsewhere, these operate largely below the threshold of consciousness and receive little if any criticism from their owner (though plenty of it from his fellows!). It is evident that both carriers and students of folk music hold a variety of traditional atti-

Dynamics of Music Tradition

Conspectus of principal accumulations of traditions <i>as a field</i>	A and B
within which, tradition <i>as a process</i>	C
operates, under intrinsic traditions <i>of control</i>	D
in an environment of extrinsic traditions <i>of control</i>	E and F

THE FIELD

Structures given to and, so, tending to be static for us

A. Families of tradition (defined by geographical area covered)	B. Traditional Idioms (defined by social stratum)
Highly differentiated (in terms of B and C)	
1. East Asia	1. Primitive art
2. South Asia	2. Fine art
3. Southeast Asia	3. Folk art

THE OPERATIONS

Functions given by and, so, dynamic for us

C. Traditions of music Technique	D. Traditions of Control (intrinsic)
1. Purely oral	Critical inclinations, such as esthetic, ethical, logical, normalistic,
2. Predominantly oral	lead to action with such effects as:
3. Mixed oral and written	discontinuance continuance acculturation
4. Predominantly written	revival survival exploitation
5. Purely written?	regress status quo progress
	loss permanence gain

THE ENVIRONMENT

E. Traditions of Control (extrinsic)

The structural-functional complex of general culture traditions, within which music traditions are accumulated, processed, and handed on, operates, along with D (and in similar manner), as control; and potentially at least is responsive in turn to operations of music tradition.

F. Total physical Environment of total culture

tudes toward their respective activity—attitudes fostered by and expressed, often as not, *qua* oral tradition. They want it, or expect it, to change; or they do not want it or do not expect it to do so. They want to revive it, but not to put it to new uses; or vice versa. They wish to preserve it for themselves, or they want to popularize it. And so on. Sometimes they want to do two or more apparently contradictory things at once, or at different times, or in different ways. These attitudes and the actions that flow from them are essentially critical in character. But we seldom subject them to disciplined criticism, because they appear to us as self-evidently right, good, desirable, or beautiful. In fact, they present both thoughts and feelings about what is right, good, desirable or beautiful, not only in musical terms, but in terms of life and culture in general.

This map has been made as comprehensive as possible

within a small space. It is not to be confused with the territory mapped. There is quite a bit of dead reckoning in it, and there are many omissions. It is based upon a competence solely within captions A.5 and B.2 of the field. The validity of captions A.1–5 and B.1–4 is, however, customarily granted by scholars for purposes of discussion. As to captions A.6–9, the question marks indicate a doubt their reality is more than suggestive.

We may presume that in using the term “oral tradition” students of folk speech and of folk music have taken for granted that what the voice produces is sound and that it is heard. Extension of the term to include sound produced by instruments has not disturbed them, though it might well have done so. Oral-ness easily implies aural-ness, and avoids the clumsy hyphenated term. The heart of the problem of the use of the term “oral tradition” in the integration of folk music and the

general study of music is reached, however, when we face the tradition of writing—written tradition. Both music and speech must have been purely oral up to the time writing—even the crudest visual-oral correlations other than gesture—was introduced, and they have remained so ever since in many places where writing has not been cultivated. A very vigorous oral tradition in speech can flourish among people who are literate in speech. Music literacy being even rarer than speech literacy, oral tradition in music is probably the more widespread. But without a very vigorous *oral tradition of writing*, neither speech nor music writing can be learned. Writing cannot be read—either in song or upon an instrument—without recourse to that same oral tradition. What the connection is between the oral tradition of folklore and the oral traditions of speech and music writing in general is difficult to say.

Though competent students may disagree upon the amount of material (A and B) for which there may be provenience in written tradition and the amount of influence music literacy may have upon the processes (C and D), there seems to be general agreement that both provenience and influence are ponderable. What we conventionally call "oral tradition" in folk music is, then, only *predominantly oral* (or even *oral-aural*). For though in many cases we cannot prove written provenience or influence, there are so many cases in which we can prove it, that the inference is: folk music is definable *in part* by survival in it, upon a "lower" social level where writing is rare, of traditions that have sifted down from a "higher" social level where writing is more common. It seems untenable today to say it is exclusively this, but equally so to say it is none of it. A theoretical 50-50 normal ratio between the dying survival of written tradition and the living creation of oral tradition would seem to be the safest working hypothesis. This would apply, of course, to the field (A.5 and B.1-4)—the accumulation of materials—and might, with respect to individual products (songs, dances, etc.) vary theoretically from a ratio of 1-99 to one of 99-1, but ordinarily within a much narrower neighborhood of the norm, 50-50. We are, however, speaking here mainly of norms, not of the infinite variety of departures from them.

Taking all these considerations into account, it would seem the better part of wisdom to confine the use of the term "oral tradition" to bona fide word of mouth (*os, oris*), substituting for it, as the main technical process of folk music, the less picturesque but more accurate "unwritten tradition," with the understanding that by "unwritten" we mean "predominantly unwritten." This would seem especially desirable in connection with the discussions now being held more and more frequently on both sides of the Atlantic relative to the problem of the notation of folk music.

The Occidental (international) technique of music notation—probably the most accurate and most widely used throughout the world—is a development of the fine art of European music. With its use, throughout more than a thousand years, this art has been able to individualize its products and assure reproduction of them wherever its traditions are elaborately maintained with a high degree of accuracy. *Ur-texte* have become defined by their composers, during the last century, with increasing precision. This means with increasing elab-

orateness. Today, notation of very minute inflections of phrasing, accentuation, nuances, etc., are a *sine qua non* of the typically unique product of value. The tendency shows no sign of abating.

When we range beside such products a product of folk art, we see at once they are upon two very different levels. If one were asked, "Where is the First Prelude of the Well-Tempered Clavichord?" one could say, "Here." And if it were played within established norms of scholarship, that would be it and all of it. But if one were asked, "Where is Barbara Allen?" the answer, "Here," followed by the best rendition of an excellent informant, might be difficult to explain as "both it and not it, and certainly not all of it." One could sing only one variant of one version.

The gap between the highly individualized identity of the product of fine art and the highly generalized identity of the product of folk art must not be underestimated. Their treatment by a science of folklore or by musicology demands two very different techniques. Their evaluation in terms of critical method involves two very different sets of criteria. The single standard of musical value, maintained by many historico-musicologists, cannot serve here. And the study of folk song might help to demonstrate that it should not serve anywhere.

The last matter to be stressed at this point is the usefulness of a revised concept of oral tradition in correcting unilinear theories of the evolution of music in another connection. If the above analysis can stand, the order of historical development is definitely as in section B of the conspectus, i.e. there can be no folk music in the proper sense of the word until there has been for some time a fine art of which it can be *in part* a dying survival. The common confusion of primitive and folk music, as idioms, should be clarified from a music-technical as it can be from an anthropological viewpoint. We can then envisage the formation and differentiation of music idiom as twin processes of acculturation: a) between families and b) between idioms, with the potentiality always that both may operate at once or separately and in various ways in one and the same situation.

Perhaps in conclusion the reader should be reminded that the latter part of the preceding argument applies solely to the Occidental family of music tradition. The relationship of oral and written traditions undoubtedly differs greatly in the other families. One of the most important tasks of comparative musicology is to clarify this relationship upon a world basis. This will involve a revaluation of the notation system and a thorough critical and technical revision of the whole concept of written tradition and its relation to unwritten tradition. For the basic differences between the idioms and their respective products are largely the result of the notation system and the elaborate traditions by which its currency is maintained.

The Occidental notation system is *par excellence* a control system, and its use is a process by which traditions of control of the most varied, even opposed, kinds may be exercised. It is a set of directions for the reproduction of products so as to conform to the peculiar traditions of the Occidental fine art. When, therefore, we notate in it a product of the traditions of the folk art, the reproduction is almost bound to be as much, if not

more, in the traditions of the fine art than in those of the folk art. The act, in short, is one of translation from one idiom into another. The notated folk song is, then, not a primary but a secondary datum of study. Employment of special diacritical symbols to indicate deviations from the 12-tone equal temperament, shortening or lengthening of the duration of notes and rests, presence of slides, waverings, peculiar attacks, releases, etc., not traditional in the fine art, may increase the accuracy of the translation. But at the same time, it may lull the student into an illusion that it is not a translation and that he has before him a product with something of the individuality of a product of the fine art.

To offset these dangers, we have fortunately, in an increasing number of cases, the sound-recording—a primary objective datum for study, especially when it is accompanied by motion-picture film. Furthermore, it may perhaps not be premature to mention the fact that both in Europe and in the United States electronic-mechanic devices are being experimented with by which at least the single, unaccompanied melodic line may be automatically and objectively graphed. With the perfection of these devices, the rigorously scientific study of unwritten tradition in music (and possibly also in speech) can finally get under way, clear not only of the inaccuracies of our conventional techniques of writing, but of the subjective element inherent in even the most conscientious and skilled use of added diacritical symbols.

CHARLES SEEGER

orange A large, round, juicy fruit (technically a berry) of a low, evergreen tree (genus *Citrus*). Because the tree is evergreen and everbearing (having both fruit and blossoms at all times) it has always been in high repute as a symbol of fruitfulness. Some call it the "Golden Apple of the Hesperides," and Zeus is said to have given Hera the orange at their wedding (another explanation of its use as a bridal flower). But it was originally from southeast Asia and practically unknown in the Mediterranean area until the Saracen conquest and the Crusades. It was through them that the crown of orange blossoms was introduced into Europe. In Japan it is said to have been brought from the Eternal Land at the request of the Emperor. It is a symbol of purity, chastity, and eternal love. Orange blossoms from a wedding must be discarded before the end of the first month (before they wither) or they will bring barrenness. In England, Italy, and Sicily oranges are used in witchcraft as a symbol of the victim's heart. The victim's name was written on a slip of paper, secured with as many pins as possible, and placed in the chimney until the victim died. This practice was known in Yorkshire as late as 1880.

Fresh or candied orange peel was used as an aromatic tonic. An orange the first thing in the morning is a cure for dyspepsia, or—it causes acid stomach. In Yucatán, the leaves are used in a bath for a new mother. Oranges were frequently used as a pomander in crowded places before the institution of bathing and air-conditioning.

orchesis The Greek term for dance. In Greek drama, dance was indispensable, as "an imitation of actions, characters, and passions by means of postures and rhythmical movements" (Aristotle). Poetry, music, and dance were inseparable, and the divisions of verse re-

ferred to dance steps. As Greek theater grew from ritual drama, the dance group or *choros* continued to dance in a circular space, no longer the place of the dithyramb, but the orchestra or dancing-floor of the theater. The term has been adopted widely to designate the advanced dance groups in American educational institutions and colleges. [GPK]

Orcus or Horcus In classical mythology, one of the synonyms of Pluto or Dis. The name in Greek means "oath," and probably Orcus was the deity of the underworld who punished perjurers. He may however have been originally an early Roman deity who became identified with Pluto in later times, the name being one of the more popular synonyms for Pluto. Orcus was specifically a sort of angel of death who slew the dying. A man dressed as Orcus carried the dead gladiators from the arena. The fifth of the month, birth day of Orcus, was an unlucky day. In the later tradition of Europe which was descended directly from the Roman, Orcus became a hairy and black man-eating forest spirit, perhaps the "ogre" of folklore.

ordeal An appeal to the judgment of the gods, God, or the supernatural: a form of trial by pain, poison, fire, water, combat, divination, etc., often involving the death of the suspect (or his accuser).

Ordeals test the authenticity of the oath. In societies where no evidence is available to support either contestant, the decision by ordeal is taken to be the judgment of God. The ordeal was not recognized by Roman law and was tolerated in China more as a concession to popular belief than as a reputable legal procedure. Best known of the ordeals in modern times is the throwing of the litigant, frequently a suspected witch, into water. If she drowns, she is innocent, and if she floats, she is guilty and must be burned at the stake. A variant of this is holding the head of the suspect under water. Another ordeal is by taking poisons or substances thought to be poisons. In New Guinea red water is made by soaking the bark of a local tree in water which produces nausea or a trance state, depending on whether the participant is guilty or innocent. In ancient Greece bull's blood was thought to be poisonous. It was drunk by priestesses in order to acquire the power of prophecy, according to Pliny; but Pausanias, so often alert to sexual implications, thought it was to test their chastity. Several ordeals depend upon the subject's ability to withstand heat. The Bedouin custom was to require the subject to lick a hot iron spoon; the Indian custom is to carry a hot iron; and in Scandinavia the heated object must be carried a certain number of steps. In the Malay Archipelago, Africa, and elsewhere, a stone had to be taken out of boiling water; in India the ordeal was to walk through fire. A curious fact in connection with these ordeals of heat is that some people either are insensitive to extreme heat or can make themselves so, as has been frequently demonstrated by the Indian yogi.

The wager of battle or decision by combat, known in Borneo, Greece, and Scandinavia at early dates, seems to be intimately associated with the structure of human instinct. God gives victory only to the Right. As late as 1818 an Englishman accused of murder is said to have claimed the right of ordeal by combat which necessitated the repeal of the old law. Other ordeals are psychological. The truth-machine is based on plausible physiological

theory but the invention of it is evidence that man still looks for evidence more objective than mere asseveration. Similarly the truth serums belong in the category of the ordeal by poison or pseudo-poison. The heat ordeal, said to be used by American gangsters, and the third degree as formerly practiced in American police-stations, differ from the ordeal in folk belief in that the ordeal as discussed in these notes was required only after all other attempts to arrive at truth had failed. See BITTER WATER; CALABAR BEAN. [RDJ]

ordering of world, human life, institutions Among the North American Indians the establishment of the world (creation of mountains, lakes, rivers, procuring of light or fire, etc.), after the creation of the world, the ordering of human life (procreation, bodily form, economic pursuits, death) and the establishment of social groups and religious observances is generally credited to the culture hero-trickster-transformer and his associates. See AHAY-UTA ACHI; CREATION; CREATOR; CREATOR BORN AT BOTTOM OF OCEAN; CREATOR'S GRANDMOTHER; COYOTE; CULTURE HERO; DETERMINATION OF SEASONS; JUSKAHA; LAUGHTER; NANABOZHO; ORIGIN STORIES. [EWW]

oread In Greek mythology, one of the nymphs inhabiting the mountains, hills, and grottoes. See NYMPH.

orenda Iroquois Indian term, equated with the Algonquian Indian term *manitu*, and the Siouan term *wakonda*, which has been defined as the name for the creative force, principle, or magic power inherent in every body and being of nature; the active cause or force involved in every operation of nature in any manner affecting or controlling the welfare of man. It is dubious whether the Iroquois or the Siouans had any such conceptualization of a generalized supernatural power; *manitu* has recently been shown to have, for a host of Algonquian tribes, actual specific meanings rather than any generalized one. The same is probably true for the Iroquoian and Siouan terms *orenda* and *wakonda*, which, like *manitu*, are found in the several languages of these two large linguistic families. See MANITU. [EWW]

Orestes In Greek legend the avenging son of Agamemnon. While Agamemnon was away at Troy, Clytemnestra, Orestes' mother, perhaps in revenge for the sacrifice of Iphigenia, lived adulterously with Ægisthus. On the return of the king to Mycenæ, Clytemnestra and Ægisthus murdered him, some say in his bath, others that the pair offered him a sleeveless and neckless shirt and killed him as he struggled with it. Cassandra was also slain by the guilty lovers. Orestes, then a child, was spirited off either by his nurse or by his sister Electra, and was reared at the court of Strophius of Phocis along with Pylades, Strophius' son. The two became proverbial friends.

Some years later, Orestes, accompanied by Pylades, made his way to Mycenæ and there avenged Agamemnon's murder by killing Clytemnestra and Ægisthus. To the mind of Homer, who was perhaps telling of a historical deed, this was both natural and commendable, since Orestes was head of his family and therefore the one on whom the act of blood revenge devolved. But later writers, especially the great Athenian dramatists, expanded the story and gave it a slant which upsets the previous moral standard. Orestes, because he murdered his mother, was hounded by the Erinyes. This is per-

haps rooted in older tradition because earlier the Erinyes were spirits of the dead, and Clytemnestra's ghost might be expected to haunt her slayer. Fleeing before the avenging deities, Orestes came first to Delphi and then, on the orders of the oracle, to Athens where he submitted to trial before the Areopagus. The vote was even, and Athena, thereby establishing the tradition that a tie vote was for acquittal, cast the deciding and releasing vote. The Erinyes thereupon ceased to bother Orestes and were thenceforth known as the Eumenides, a euphemism meaning the gracious or kindly ones. In another version of the story, Orestes had to expiate his crime by rescuing the image of Artemis from the Taurians. This image was worshipped by the Taurians with human sacrifice, and no stranger to their land was safe. Orestes was somehow recognized by his long-lost sister Iphigenia, who was the priestess of the temple in Tauris, and Orestes, Pylades, and Iphigenia fled with the image back to Greece. In several versions they carry the image to Rhodes, but it is also said that they brought it to Italy, to the grove at Nemi, where Orestes became the first priest of Diana (Artemis) at Aricia. When he died he was buried before the temple of Saturn in Rome. Still another version of the expiation has it that he bit off one of his fingers, and that the black-seeming Erinyes then appeared to him as white. Yet another series of legends says that expiation was accomplished in more normal manner: Orestes had the blood of a sacrificial pig poured on him. After his death, in an early version of the story, the Erinyes still pursued him and Apollo had to give him a bow for his protection.

Orestheus In Greek mythology, an Ætolian king. He owned a bitch who gave birth to a wooden stick. This Orestheus buried, and from the stick grew a vine. From the shoots (*ozoi*) the Ozolian Locrians derived their name. Orestheus also named his son Phytius, Plant Man. The myth is obviously an attempt to explain an already existing name, and modern scholarship hypothesizes as well the derivation from *oze*, a bad smell, or a goatskin, since there were sulfur springs in the country and the inhabitants dressed in goatskins.

orgia (Greek, act of divine homage) The winter ritual dedicated to Dionysus, particularly in his vegetation aspect as Dionysus Liknites. The ecstatic dances and actions of the *menads* in these rites, and the phallic attributes, spread like wildfire. At first intoxication by wine was not a part of the ritual. But later the orgia lost its solemn connotations and became synonymous with unbridled, licentious mass intoxication. Today its sacred and even its dance connotations have vanished, except when applied to the ecstatic dance rites of contemporary tribes, or the debauchery following on these rites under the influence of sacramental intoxicants. Thus, in the former category, the ecstatic dance of the West Indies, the Indian peyote (*hikuli*) cults, and in the second category, the *tesguinadas* of the Mexican Tarahumaras. [CPK]

origin of cultivated plants North American Indian myths accounting for the origin of specific cultivated plants, or for the origin of cultivated plants as a body, vary from region to region, but are told among all the agricultural tribes. Such myths are concerned with the origin of corn, often from the body of a slain person. In the pueblos Corn Mother and the Corn Maidens emerged with the people from the underworld. The main Pueblo Indian

corn myth concerns the loss of Corn or the Corn Maidens after attempted violation, the search for them, and their final return to the people; this myth also has a wide distribution outside of the Pueblo area.

The origin of all cultivated plants is attributed by Apache groups of the Southwest to Turkey. In a Jicarilla Apache myth Turkey brings forth from his body for the hactcin, or supernaturals, black corn in the east, blue corn in the south, yellow corn in the west, and in the north, all kinds of fruits and vegetables. In another Jicarilla myth Turkey provides his companion, Man-Who-Floated-on-the-Water, with black, blue, and yellow corn seeds, and fruit, vegetable, and tobacco seeds; he tells his father to get busy, and the man starts planting the seeds. Together he and Turkey watch the garden mature in twelve days. Later the man meets Animal Raiser and exchanges vegetable for meat gifts with him, and marries Animal Raiser's daughter. He shows her people how to use the plants and fruits, and they show him how to use meat: that is why the Apache use both now. An interesting footnote to Apache sophistication about origins of cultivated plants is that they do not include wheat (a non-native cereal) among the seeds given by Turkey; Grasshopper produces wheat for the hactcin, and is considered to be the guardian of wheat by the Apache. See CORN FROM BODY OF SLAIN PERSON; DEOHAHO. [EWV]

➤ According to South American mythology, food plants were given to mankind by the culture hero or by benevolent animals. For instance, the Bakairi and Cashinawa learned the use of manioc from a deer, and the Sherente owed their knowledge of food plants to a rodent.

More often, however, the staple plants are said to have originated from the body of a mysterious being. Either they fell from the body of a child whenever he was beaten (Tupinamba) or grew from his corpse after he had been buried. According to the ancient Peruvians, their main plants sprouted from the corpse of the son of the creator. The motif of plants growing from the human body is also found in the myths of several Guiana and Brazilian tribes (Tupinamba, Bororo, Carib, Arawak, Paressi). [AM]

➤ See the story of Sido, who killed his wife and planted various parts of her body, from which the food plants grew, in MELANESIAN MYTHOLOGY.

origin stories A lively interest in origins, or how man and his environment and the creatures in that environment came to be is evinced in the tales of North American Indians, especially in those from the North Pacific Coast, Plateau, Plains, California, Southwest, and Eastern Woodlands peoples; it is not pronounced in Eskimo or Great Basin tales. Explanatory elements are often inserted or tacked onto tales to explain the origin of particular phenomena; why Coyote's nose and tail are black-tipped, why there is a black mark on the nose of antelope, how chipmunk got his stripes, and so forth (see EXPLANATORY ELEMENTS). Such "origin" or explanatory elements have been remarked upon as particularly abundant in Coeur d'Alene (Plateau), Zuñi (Southwestern Pueblo), and Apache (Southwestern) mythology; myths and tales from these tribes have hundreds of explanatory incidents inserted in them, but the mythologies of other American Indian groups, with the exceptions

named above, contain an abundance of such elements.

A random sampling of origin material in American Indian myths follows. Animals are accounted for from pieces of the meat of a slain antelope which Child-of-the-Water, Chiricahua Apache culture hero, blows on, naming and creating the various animals as he does so. Birds are created from the feathers of an eagle, by the same deity. Frogs and fishes are the supernaturals who were transformed when a flood covered the earth (Jicarilla Apache); fish are Sedna's cut-off fingers among the Eskimo. Games such as that of hoop and pole, and stave games, are taught to the people by the hactcin in Jicarilla Apache myths; the people "had nothing to do; there were no games" so the hactcin taught them particular ones. Fratricide, old age, the woman's cry of applause, laughter (see LAUGHTER), and facial and pubic hair are also among the many items accounted for by the Apache. Diversity of languages is not only explained as due to people quarreling by the Apache, but also by many other Indian tribes.

Besides the very widespread American Indian controversy tale wherein the child of the proponent for death is the first to die (see DEATH) death is also explained by other American Indians as having been instituted because 1) the first dead person, when revived, smelled so bad the living could not stand him, or 2) because the earth would be overcrowded if death were not final. A variant of the controversy tale is to be found in the sinking test to determine whether the dead should return to life in four days; objects are cast in the water, and one sinks, so death is made permanent. See CHAMELEON; DEAD SMELL BAD. The origin of the various tribes, of the whites, Negroes, and Mexicans, is accounted for in numerous Indian mythologies, with the inference often that all foreign groups are of inferior origin. Sacred bundles, ceremonies, social and political groups (clans and gentes) nearly all have origin myths attached to them throughout North America (see CHANT; MEDICINE BUNDLE). For discussion of the origin of certain specific items see CONFUSION OF TONGUES; CREATION; CREATOR; DEATH; MAN; ORIGIN OF CULTIVATED PLANTS; WOMAN. [EWV]

➤ In Kodiak Island (Alaska) mythology all the animals on earth and fish in the sea were born of a young woman whose confinement was attended by two old men, her uncles. As the creatures were born, one by one, the old men either threw them on the ground or tossed them into the sea. When the girl got well she ran away, eventually met and married a star spirit. Her husband explained to her that although all animals were her children, they would have to kill certain ones in order to eat. (See M. Lantis, "Mythology of Kodiak Island, Alaska," *JAF* 51: 134.)

How various birds and animals got their characteristic markings, shapes, habits is the motif of countless etiological stories in all cultures. Rabbit laughs and gets his harelip (A2211.2)—European; Moon strikes Hare and splits his lip (A2216.3)—Hottentot; Lizard bobs his head up and down because he once got a fishbone in his throat (A2211.9)—Ibo Negro; Chipmunk's stripes are Bear's claw marks, reminder of the time Bear nearly caught him (A2217.2)—North American Seneca Indian; the ass is honored with a black cross on his back because he bore Christ into Jerusalem (A2221.1)—European; swallows donned mourning for Christ's crucifixion and

still wear it (A2221.2.4.1)—Spanish; Flounder got a crooked mouth for not answering God (A2231.1.2)—European; Crab's eyes popped up out of his body when he beat the god's forbidden drum (A2231.10)—Fjort Negro; the stag borrowed the dog's horns and never returned them (A2241.1)—European; Beaver borrowed Muskrat's tail and never returned it (A2241.10)—North American Menominee Indian; Buffalo and Cow exchanged hides, now neither's skin fits (A2247.1)—Indonesian; the hog once lost a pancake in the mud and is still looking for it (A2275.5.1)—European.

Penobscot Indians say that snowfall is caused by a mythical Snow Bird who lives on top of a mountain. When it sheds its down, snow falls on earth. In Germany when snow flies through the air, they say old Mother Hulda is shaking her feather bed. See HOLDE.

There are innumerable others: about the origin of fish scales (A2315) or alligator scales (A2315.2); why the vulture is bald (A2317.7); how various birds got their crests (A2321 ff.)—see KINGFISHER; how lynx got his squint (A2211.1); why eagle's back is brown (A2356.3.1); why quail has no tail (A2378.2.1). The motifs explaining animal and bird characteristics run A2200–2599 in Stith Thompson's *Motif-Index of Folk-Literature*. See BEAR FISHES THROUGH ICE WITH TAIL; BUZZARD; CROCODILE; HADDOCK; NIGHTINGALE; OFFENDED ROLLING ROCK.

 The distinctive peculiarities of various species of birds are explained in various South American Indian etiological tales by the accidents that happened to them during a brawl (Chiriguano, Mataco). [AM]

orin The term among the Yoruba people for their songs, including their religious ceremonial songs and also those in the improvised topical categories. See AFRICAN AND NEW WORLD NEGRO FOLKLORE.

Orion The most striking and brilliant of all the constellations, including the two first magnitude stars, reddish Betelgeuse and blue-white Rigel, the unique belt or girdle of three bright stars lying between these two, and the visible nebula in the sword. The constellation takes its name from a giant hunter of Greek mythology, but it is and has been recognized as an asterism all over the world from ancient times. Its position in the heavens makes it visible in both northern and southern hemispheres. Betelgeuse is the right shoulder of the giant, Bellatrix the left; the left knee is Rigel and the right Kappa Orionis. On his left shoulder the giant carries his shield or a lion's skin; his sword hangs from his belt. Before him flee the Pleiades; at his feet lies Lepus the Hare; he is accompanied by the Dogs, in which are the brilliant Sirius and Procyon.

To the ancient Egyptians this constellation was Horus riding in a boat (Lepus), and it was Osiris in his ghostly nightly journey towards the sunrise. Earlier yet in Egypt, in the V Dynasty, the constellation was Sahu, hunting through the heavens for gods and men to rip apart and boil for food. The Hebrews knew it as Kesil, the Foolish or Self-Confident, or as Gibbor, the Giant, identified with Nimrod and tied to the heavens for impiety. The name of Kesil, the Fool, may be related to the Arabic root meaning to be thick, and thus to the giant concept; the word *kesilim*, a plural, was perhaps used of all first magnitude stars, and thence for the greatest of constellations. Gibbor the Giant is reflected in the modern Arabic al-Jabbar or Algebra, the Giant, as the name for the con-

stellation; it is also al-Babadur, the Strong, and al-Shuja', the Snake. In earlier Arabia it was al-Jauzah, probably taking its name from the word meaning walnut, for the belt was known as the Golden Nuts. In Mesopotamia Orion was Tammuz, the shepherd loved by Ishtar, or Nin-Girsu, the god of Lagash, who was identified with Tammuz. There too, earlier, it was called Uru-Anna, the sun or heaven-light. Some profess to see in the name the origin of the name Orion for the constellation, and claim a later development of explanatory myth for the name. The Hindus knew Orion as Mriga, the stag, a form of Prajapati; the belt was an arrow transfixing the stag to the sky. In China the belt was Three-Side-By-Side; now it is the constellation Shen, to mix, in the western or autumn quarter of the heavens ruled over by the White Tiger. In New Zealand the belt of Orion is the Elbow of Maui; sometimes it is the stern of the canoe of which the Southern Cross is the anchor. The Australian Arunta recognize in these stars a group of young men dancing in a coroboree. Among the Buriats of Siberia the constellation represents three wapiti being chased by the demon-hunter, Erlik-Khan, overlord of the underworld, and his three dogs. One of the wapiti has been wounded and is bleeding (red Betelgeuse). When the hunt ends, the world will cease to be.

The Eskimo of Point Barrow see in the belt three hunters lost in the snow. Among the Indians of the Americas, the Micmac recognize in these stars three fishermen; the Zuñi, the Hanging Lines or the Celestial Hunter; the Indians of Mexico see Citli, the Bowman; the Patagonians, the Three Bolas (the South American parallel of the lariat, a set of three stones tied to thongs and thrown about the legs of an animal to trip it). The Peruvians (and the Basques and some of the peoples of India as well) saw in it the Steps; to them, as to so many other peoples of the world, the constellation had a relationship to hunting. A faint resemblance to the myth of Prometheus is in the Peruvian story that this constellation is a criminal held in the heavens by two condors. Among the Chaco Indians, the belt, las Tres Marias, is the Old Women or the Women's Grandmothers. The stars of the great rectangle of the feet and shoulders are sometimes the house and garden of the old women and various surrounding stars are people waiting for the women.

In North Africa, Orion is a belted hunter followed by Sirius the dog and following some gazelles (Lepus); or the stars emerge from a muddy well and Rigel, the last to rise above the horizon, is the Foot in the Mud. The French call the belt le Râteau, the Rake, or the Three Kings or Magi, or Jacob's Staff. The stars of Orion represented Thor, the Norse god who carried the infant vegetation god Aurwandil; the belt was Freya's Spinning Wheel or Spindle. And to the Greeks, in addition to being Orion, the constellation was called the Giant, the Hunter, the Warrior, the Cock's Foot, the Double Ax. The belt has been known also as the Arrow, the Line, the Yardstick, the Scale, the Beam.

Homer knew both the constellation Orion and the mythological giant Orion, but he made no connection of myth with asterism. Later myth is however often ingenious in its explanation of the giant, his name, his deeds, his being placed among the stars. The name, about 500 B.C., was Woarion, and, according to Strabo, the Bœotians, who claimed Orion as a native of their

country, called him Kandaon, an epithet of Ares, the Warrior. Krappe recognizes the name as belonging to a pre-Hellenic, pre-Olympian vocabulary. Fairly late, from the time of Ovid and Hyginus, we have the story of how Orion was named, an elaborate pun. Hyrieus, Orion's father, had been childless, but he was a good man. One day he was visited by three strangers, who were Zeus, Poseidon, and Hermes, in disguise, and he showed them unstinting hospitality. Granted a boon, he asked for a son, whereupon the three gods took an ox-hide and urinated on it. Hyrieus buried the hide according to instructions and, at the end of ten lunar months, Orion, or Urion after the fluid that made him, was born from the earth. The lion's skin he now carries was formerly recognized as this ox-hide. In this story, some of the raw material of myth is well worked into a witty tale. The stranger-gods, the hero born of the liquid of the gods, the supernatural birth from the earth: these are more serious matters than this almost flippant Roman myth makes them. In other versions of the Orion story, he is a son of Poseidon, a tide-making sea deity who could walk through the deepest of waters, like the Celtic Bran. Orion was said to be responsible for the tides of the Aegean Sea.

Orion's possible origin in the Mesopotamian sun god and his identification with Horus and Osiris have already been mentioned. Hinting also at this connection with the sun is the name of Orion's first wife, Side, or pomegranate, who tried to equal Hera's beauty and was sent to Hades for her presumption: this may have some relationship to the Persephone-Hades tale. Some of this connection with the sun is retained in the Greek myth. Orion fell in love with Merope or Hæro, daughter of Enopion. The father objected to the match and interposed various tasks and other obstacles to the union. Finally, the king, forced by Orion's clearing an island of wild beasts to make a decision, reneged on his promise. Because he tried to elope with the girl, or because he prematurely acted on what he thought would be her father's acquiescence to their marriage, Orion was blinded by the angry father. Guided by one of Hephæstus' aides, Orion traveled eastward to where the sun rose, and there, gazing into the full strength of the sun, he regained his sight. Another of the young giant's love affairs, in late myth, was with Eos, who kidnapped him and kept him as her lover. One of the clearest of all classical examples of the explanatory star myth draws Orion in this character of importunate lover. He chases the Pleiades across the skies in Boeotian myth, trying to catch one of the sisters, who flee before him.

Myths of his death vary. He was bold enough to challenge Artemis to a contest in throwing the discus; or he tried to rape one of her maidens and so was slain by an arrow of the goddess. Or she caused a scorpion to sting him, which is why Orion's constellation sets as Scorpio rises into the sky. Still another myth says that Artemis loved him so that she forgot her duties. Once, as Orion was swimming or wading far out in the sea, Helios shone so strongly about him that he was a dark blur on the water. Then Helios challenged Artemis to hit the vague mark. The unerring huntress immediately slew, unwittingly, the giant.

The constellation is a weather sign in many parts of the world. It rises near dawn at the beginning of summer, at midnight when the grapes are ripe, in the early

evening as winter approaches: this Hesiod knew. The ancient inhabitants of Mesopotamia and India knew that its early rising portended storms. The Babylonian Talmud states: "If it were not for the heat of Orion the world could not exist because of the cold of the Pleiades; and if it were not for the cold of the Pleiades the world could not exist because of the heat of Orion": again an echo of the linkage with the sun.

 The constellation of Orion is visualized by a few South American tribes as a human leg. According to an Arekuna story, it originated from the leg of a man which had been cut off by his adulterous wife. The Conibo say that Orion is the leg of one of the boys of the Pleiades who had been mutilated by a cayman. [AM]

orisha Yoruban word for deity. See OBOSUM; VODUN.

Ormazd or Ormuzd Persian name for AHURA MAZDA.

ornithomancy Augury; divination from the flight of birds. The word is sometimes extended to include all omens derived from birds, for example the death omen when a bat flies into the house, but is properly limited to a formal divining system such as was used by the Romans.

'Oro The chief god of Tahiti, whose mysteries were celebrated by the Arioi Society. He is recognized elsewhere in Polynesia; for example, in Mangaia, Cook Islands, the conch trumpet was sacred to 'Oro as the drum was to Tane.

Orpheus In ancient Greek mythology and religion, a Thracian musician, son of one of the Muses (usually Calliope, by King Cægrus of Thrace): looked upon by initiates in the Orphic mysteries as a real person who invented or modified the Dionysian cult observances. The myth of Orpheus embodies a story theme found all over the world, the folktale type of the descent to the underworld in search of a lost wife. His cult followers are important in the history of religion, for the Orphic mysteries may form a link between the Osiris death-and-resurrection cult of ancient Egypt and the religious revival of the 1st century B.C. that culminated in Christianity.

Orpheus is one of the heroes numbered among the Argonauts. Orphic writers magnified his part in the expedition, i.e. he saved the *Argo's* crew from destruction by outplaying the Sirens. The music of Orpheus was so sweet that it charmed stones and trees to dance or to gather around him. Orpheus married the dryad Eurydice; one day, fleeing from Aristæus, she stepped on a snake and died of the bite. Orpheus went down to Hades and played before the king and queen of the underworld. Hades and Persephone agreed to permit Eurydice to return with Orpheus to the upper world, but on condition that he not look back at her until they had passed out of the underworld. If he did look back, she would be lost to him forever. But when they neared the light, Orpheus, either because he could no longer resist his impulse or because he missed hearing his wife's footsteps behind him, looked around, and Eurydice vanished.

Orpheus, having lost his chance to regain his wife, became despondent. Some time later, he was torn to followed his wife, Izanami, to the land of the dead, Yomotsu-kuni. But she had eaten of underworld food and could not be wholly freed. If he would never see her

because he attempted to reform the Dionysian rites. It was also said that Orpheus began to worship Apollo, the sun, as the greatest of gods, and that this was the reason the Mænads killed him, on the god's orders. Variants say that Zeus slew him with a thunderbolt for having revealed certain divine secrets or that he committed suicide in despair at the failure of his mission to Hades. In the principal version of the story, his head and his lyre floated to Lesbos. The head, after speaking oracularly, was buried near Antissa, where a shrine was built to Orpheus. The lyre was taken up to the heavens, where it may be seen as the constellation Lyra. Several places in Greece claimed to be the burial place of his body.

Parallels to the various incidents of the myth are found elsewhere in the world. The Japanese Izanagi too followed his wife, Izanami, to the land of the dead, Yomotsu-kuni. But she had eaten of underworld food and could not be wholly freed. If he would never see her face, she would however accompany him to the land of the living. He ignored the tabu and lit a torch, seeing the putrid decaying corpse of his wife. He fled; she, a vampire now, pursued him to the entrance of the underworld. He dropped fruits as he ran, delaying Izanami and her helpers in the chase. Izanagi rolled a rock over the entrance to prevent the emergence of the evil spirits. See ORPHEUS MYTH. The irresistible music of Orpheus is recognized in the fiddle of Type 592—*The Jew in the Thorns*—and the piping of the Pied Piper of Hamelin (D1427.1). The search for the wife is widespread as a tale type (Type 400), and the voyage to the underworld is a frequent incident in this type. The descent to the underworld of the dead (F81), the Harrowing of Hell, occurs also in the Babylonian Gilgamesh epic, the Tammuz-Ishtar myth, the legends of Hercules, Theseus, and Odysseus, the story of Æneas, of St. Paul, of Dante. The dismemberment of Orpheus probably derives from the myth it most resembles, that of Osiris, whose head also floated far from the place of his murder. The speaking head occurs in the Norse myth of Mimir, and, according to A. H. Krappe, may, along with legends of the brazen head, have its origin in the ancient practice of skull divination. See BRAN.

It is possible that Orpheus and Dionysus are identical. Orpheus may have been considered an incarnation of the god. Orphic religion was an ascetic, mystic way of life, following specific rules of conduct and having an underlying philosophy of existence. The followers of Orphism, never numerous or well organized, believed that the body was a sort of prison of the soul, that the soul went through a cycle of deaths and rebirths, that through the living of a more and more stringent life the soul was enabled to ascend through higher forms of life until it was freed of impurity and became one with divinity, not to be reborn. During sleep, the soul escaped from its prison or "grave" and dreamed; belief in the prophetic nature of dreams was an important part of Orphism. The Orphics practiced abstinence, e.g. they did not eat beans or flesh, they wore special clothing, they avoided the "taint of childbirth." They were proselytizing missionaries who held to the belief in Dionysus-Zagreus, his murder by the Titans, his rebirth from Zeus through Semele. This myth was enacted in their mysteries, along with the Hades-Persephone story. At the Orphic rites, the prohibition of flesh was placed in

abeyance while the initiates partook of the flesh of the torn god, the sacrificed kid. The Orphic cult has superficial resemblances to other cults, particularly the Pythagorean, but where Pythagoreanism embodied a definite political philosophy, Orphism tended more to what is now called the religious.

Orpheus myth A North American Indian tale, first recorded in the 17th century by the Jesuits from an Eastern Woodlands tribe and containing no references to European culture elements—therefore probably of native origin—concerning the visit of a person (usually a husband or father, but sometimes a wife or wives) to the land of the dead to recover his spouse. The recovery of the dead spouse is effected; the latter accompanies the seeker back to earth, but in several versions of the tale a tabu is broken and the dead spouse returns to the afterworld. In other versions she remains on earth, and sometimes a dance is instituted. The North American Indian Orpheus myth has been analyzed into its various types, and its distribution over practically all of North America except among the Eskimo and Great Basin tribes shown, in a study by A. H. Gayton, "The Orpheus Myth in North America," *JAF* 48, pp. 263–286, 1934. [ewv]

orris Any of several species of *Iris* having a scented root; especially *I. florentina* whose dried rootstock is used in medicine and perfumery. The scented root has been highly valued medicinally in both the Old and New World. A perfume is made from white orris root. The Indians of the southern United States use it as a purgative and as a cure for scrofula, dropsy, sore throat, and lung complaints. They place it, freshly ground, on burns and sores. In Europe it is used for these things and also for liver complaints, feeble-mindedness, teething troubles, toothache, and bruises. In Britain orris root is one of the ingredients in a remedy for asthma and coughs. A 16th century British remedy for tuberculosis contained, among other things, the blood of a calf (3 lbs.), turpentine (.002), licorice root (1 lb.), 70 garden snails, and 6 ounces of orris root. The dose was two ounces daily for 15 days. In Siberia it is used as a cure for syphilis and in remedies for heart and lung troubles. In Korea, washing the hair in orris-water in June makes it grow long.

The *Kama Sutra* of Vatsyayama mentions orris root as one of the means of subjugating women. A few pieces of orris root soaked in mango oil and hidden for six months in a hole in a tree, later mashed into an ointment and applied to the penis before intercourse, is a sure means of subjugating women.

Osain Yoruban deity of leaves and herbs, conceived as living in the forest and giving medicines to man. He has been retained in the Afroamerican cults of Brazil, Trinidad, and Cuba and (as Ossange) in Haiti. [MJH]

Osai Tutu Fourth king of Ashanti, who reigned c. 1725 (one date given is 1700–30) and who is credited with having made this people dominant in the area now the Gold Coast, through the instrument of the famous Golden Stool, which is believed to have been brought to earth from the sky by Komfo Anochti, a priest with great supernatural power. This stool, reputed to contain the *sunsum* or soul of the Ashanti, was believed to have made it possible for the Ashanti to gain their freedom from the Denkyira, and extend their own power. [MJH]

Oshossi Yoruban deity of the forest and the chase. He has been carried to the New World and is worshipped in those centers where Yoruban cult-practices have predominated, notably Cuba and Brazil, where his devotees dance for him carrying the miniature bow that is his insignia. [MJH]

Oshun Yoruban deity of the river which bears her name and, by extension, of fresh water. She is held to be one of the principal wives of Shango, the god of thunder. The amber beads worn by her devotees in Nigeria are likewise found worn by those vowed to her in the AfroBrazilian cults; elsewhere in the New World, she is worshiped in Cuba and Trinidad. [MJH]

Oshunmare The rainbow serpent of the Yoruba, the counterpart of the Dahomean Aido-hwedo. This deity has been retained in Brazil, with function unchanged. [MJH]

Osiris The king and judge of the dead of ancient Egyptian religion; chief deity of the cult of the dead, and thus the great cult god of Egypt. Only the solar cult of Rā rivalled that of Osiris. Osiris seems to have been originally the protecting god of the cemetery at Busiris in the eastern Nile Delta, and was perhaps a deified king of the region. From there his worship spread throughout the Delta and Lower Egypt and eventually to Upper Egypt. In later times his cult center was at Abydos.

The jackal, one of the chthonic animals of the world, was identified with Osiris through the equation of Osiris with Upuaut-Anubis, god of the necropolis at Abydos. The general tendency in Egyptian religion to equate gods similar in function results in the identification of Osiris with such other gods as Ptah-Seker, Khentamenti, Serapis. Osiris was depicted as a human figure, usually green- or black-fleshed, bearded, wearing the *atef*-crown of Upper Egypt, and swathed like a mummy with the hands projecting from the wrappings; he held as scepters the crook and flail (or whip). These insignia more or less identify him as an agricultural god; as god of the underworld he was an earth god, and like other chthonic deities had to do with increase of crops. Osiris was a culture god who brought to the Egyptians their knowledge of agriculture, the several crafts, the religious rituals. He ruled over crops, life, growth, vegetation, the Nile and its annual flood; later, in the 3rd millennium B.C., he became generally the god of death and resurrection. At first only the Pharaohs became Osirises on death, being identified with the god of the dead as their successors were with Horus, the son of Osiris. By the time of the Middle Kingdom (after about 2450 B.C.), all men able to pass the judgment of good and evil might become Osirises. In later times, this judgment became formalized into a trial weighing of the heart in the presence of Osiris. Anubis preceded the soul into the judgment hall; Isis and Nephthys followed. Before 42 assessors, the soul recited the Negative Confession, denying the commission of 42 acts. The heart was placed in the balance against the feather of truth. Thoth examined the scale and recorded the result. Nearby stood Ammit, the hippopotamus-lion-crocodile, ready to devour those whose hearts were heavy with misdeeds. Those who passed examination went to Aalu, the subterranean Field of Reeds in the west, where they joined the company of the gods.

The myth of Osiris as god of resurrection and fertility

is, as we know it, probably colored by its principal reporter, Plutarch, 1st century A.D. Hellenistic writer, who may have interpreted the Osiris-Isis story in the light of other mysteries that he as a traveler had encountered, e.g. Adonis-Tammuz, Attis. Osiris and Isis, brother and sister, children of Geb, the earth god, and Nut, the sky goddess, lived together in happy marriage. But their brother Set envied them their happiness and one day, while the brothers were hunting, Set killed Osiris and cut his body into 14 pieces which he scattered far and wide. Isis sought out the pieces and either completed the body (traditionally she found all parts but the genitals) and revived it; or she buried each piece where she found it, thus giving a bit of the fertilizing power of the god to the several places; or she placed the parts in a coffin that floated down the Nile and across the sea to Byblus in Phœnicia. She bore a posthumous child, Horus, who battled with his uncle Set and slew him.

This myth of death and resurrection, the rebirth of Osiris, champion of good, in his son, was the subject of great fertility dramas enacted periodically in Egypt. The cult mysteries undoubtedly had a strong influence on the later Greek mystery religions; hence, the cult of Osiris, with its concept of the dead being received by and becoming one with the god, had a formative influence on Christianity. The Osirian cult was very popular among the Romans, who carried it with them throughout the Empire. The fertility symbolism of the myth is paralleled elsewhere in the world; the Scandinavian Frey and the Finnish Lemminkäinen, for example, both were killed and cut into pieces. The Osiris-Set conflict is likewise part of the world-wide pattern of the conflicting brothers, one the culture hero, the other the spirit of the undisciplined life. See RÅ.

Ostara (Old English *Oestre*) The very early Teutonic goddess of spring; a development from the earlier Aryan goddess of the dawn. The transition from dawn to spring goddess, according to O. Schrader (*ERE* i: 34b), was the natural ascription to the goddess of the time of year she was honored. The old Aryan dawn goddess was worshipped with special festivals in the spring (the dawn of the living year). See EASTER.

ostówegowa The Great Feather dance of the Iroquois Indians, one of their four chief communal rituals. It offers thanks to the Creator for all benefits, especially crops, during the Midwinter and Thanksgiving ceremonies, and it forms part of the sequence of food-spirit dances in the various harvest and green corn festivals. Two singers pound turtle-shell rattles thunderously against their bench. The men start circling, with experts in the lead. They stamp furiously with alternate heels and work themselves into an ecstasy of gesticulating, whirling, and yelling. In their wake the women, shoulder to shoulder, quietly glide to the right with a twisting shuffle. A double line may wind itself around the room, all pulsing down and up with a unison flexion and rebound of the knees. The strenuous efforts of the men continue unabated for forty minutes or an hour, except for the walk-arounds (punctuated with yells) between the dances. Today the costumes are eclectic: the men wear breechcloths on top of trousers, bright-colored shirts and war bonnets, usually of the Sioux type; women wear the modified 19th century Iroquois costume, with

smock and beaded trousers. The men thus wear feathers on their heads, but they do not carry the feathered wands formerly wielded by the similar feather dancers of the Creek and Yuchi. The feathers serve as instruments for the conveyance of prayer to the sky. [GPK]

Ostyak or Chanti folklore The Ostyaks or Chanti are an Ob-Ugric people, about 19,000, living on the Ob River, the Irtysh, and its tributaries, western Siberia. Their god of heaven is Num-Türem. Chief of their evil deities is Tarn, god of war, sickness, bad weather, etc., usually represented in female shape. Ostyak heroes, if one believes the folk songs, were taken after death to the sky where they live in the form of iron wolves, and are still leading the warrior life. The worship of the bear and shamanism are common. Every man has his soul and his shadow. After death the soul is believed to be reborn in some baby within the clan; the shadow goes to the underworld and there lives a life very similar to that on earth. (S. Patkanov, *Die Irtisch-Ostjaken und ihre Volkspoesie*, 2 vols., Petrograd, 1897 and 1900; M. A. Czaplika, "Ostyak," *ERE* ix: 796-800; A. O. Väisänen, *Wogulische und ostjakische Melodien*, Helsinki, 1937, *MSFO* 73.) [JB]

Othagwenda Flint, eldest of the twin culture heroes of the Iroquois Indians. For his birth and deeds see *JUSKAHA*. [EWV]

otherworld The three otherworlds general in European tradition are Heaven (the land in the skies where deserving souls go), Hell (the underworld where the evil are eternally punished), and Fairyland (the land of magic where the fairies live, and where a logic like that of dreams governs everything). There may be a historical line of development from Fairyland, the pagan land where the fairies are ruled by their queen, to Heaven, the dwelling place of the angels ruled by God. Purgatory and Limbo are later additions to the Heaven and Hell of official doctrine. The Garden of Eden, too, is an otherworld, lost to man by his own foolhardiness. Avalon (E481.4.1) is a fairyland-otherworld where all ills are cured, and where King Arthur waits to return to his people. The Islands of the Blest (A692) of Irish tradition are paralleled by the Greek western land of Elysium. Also of Celtic tradition is the Land of Women (F112), a Paradise of sorts for men, but perhaps referable to an early gynocracy looked back to as being in a better time and place; the Greek *Argo* too stopped at an island of women, Lemnos, where Jason, Hercules, and the other Argonauts replaced for a time the husbands the women of the island had killed. Otherworlds, fairylands, lie at the bottoms of wells, under the sea (there are many local legends of sunken lands), beneath rivers (see the common ending to the *Master Thief* tale, where the thief convinces a passerby that he has many cattle in his lands on the riverbed), inside mountains, within deep forests, across forbidding rivers or mountains, even on the sun, moon, and planets. Jack climbed the beanstalk to an otherworld in the clouds, and Orpheus descended to the underworld in an attempt to free Eurydice from Hades. The sailors have their Fiddler's Green, where wine, women, and song are free and easy. The American hobo's Big Rock Candy Mountains are peopled with wooden-legged cops and rubber-toothed dogs; the jails are tin and streams of alcohol run down the rocks. See AFTERWORLD; ANNNWN; ARROW CHAIN; ASCENT TO UPPER

WORLD; DESCENTS TO UNDERWORLD; ECHTRAI; EMERGENCE MYTH; FOOD TABU IN THE LAND OF THE DEAD; HADES; HEL; ITIWANA; RAINBOW; UNDERWORLD.

Our Good Man A popular English ballad (Child #274), a tale of cuckoldry in which the husband, coming home and finding various evidences of the presence of his wife's lover, is offered a series of absurd explanations and in turn comments wryly on the excuses. The strange horse in the stable, for instance, is explained as a cow, the strange coat on the bed a bedquilt, the head on the pillow a cabbage. The husband remarks that he has never seen a saddle on a cow before, nor a pocket on a quilt, nor a beard on a cabbage. The song was translated into German in 1789 and passed into German, Scandinavian, and Hungarian oral tradition. In the United States it is widely known and is sung by hillbillies, soldiers and sailors, etc., under many titles.

Our Grandmother Kokumthena, Our Grandmother, is the term generally used in reference to the Shawnee female creator, the most important active deity in the pantheon of the Shawnee Indians of the eastern United States. The Shawnee differ from all their Woodlands Algonquian neighbors by having a female instead of a male deity who is credited with creating man, ordering the world to some extent, and giving to the Shawnee their own "way of life." Historical documents show that it is only during the last 125 years that Our Grandmother has been accorded by the Shawnee such an important position in their pantheon and mythology. Formerly, a male being who is now completely otiose and whose existence is unknown to many members of the tribe was referred to by the Shawnee as their creator. The Shawnee female creator is depicted in their present-day mythology as sometimes large, sometimes of ordinary size, having gray hair, and now living in or near the land of the dead. She has as companions a grandson, a small dog, and some giant "boys" who are cannibalistically inclined. Personal names, seldom used for her, are Snaggle-Tooth Woman, and Cloud. Her picture, bending over a cooking pot, is to be seen in the full moon. Formerly she and her grandson lived on earth; she sometimes attends Shawnee bread dances, manifesting her presence by singing with the women in a high, distinguishable voice. See C. F. Voegelin, *The Shawnee Female Deity*, Yale Univ. Publications in Anthropology 10, 1936. [EWV]

our mother's brother Coyote, the culture hero of California Kato and Yuki Indian mythology, is often referred to as "our mother's brother." In this mythology Coyote stole the sun and secured fire from Spider, who was hoarding it.

Outlaw Murray A Scottish border ballad (Child #305) telling of the subjection of an outlaw to the Scottish king. The long ballad (74 quatrains) is older than 1700 and may date back to the 16th century; no historical incident to parallel the story told has ever been discovered. The outlaw Murray lives an idyllic life in Etrick Forest with his lady and 500 men in a stone castle. Someone brings news to the king that Murray will not acknowledge him as overlord.

"I mak a vowe," then the goode king said,
 "Unto the man that deir bought me,
 I'se either be king of Etrick forest,
 Or king of Scotland that Outlaw's be."

Earl Hamilton counsels caution and suggests sending a messenger first to see whether Murray will submit. Afterwards, he says, will be time enough for force. The messenger returns with Murray's answer:

"Thir landis are mine," the Outlaw said,
 "I own na king in Christintie;
 Frae Soudron I this forest wan,
 When the king nor's knights were not to see."

The king collects an army of 15,000 men and marches against Murray, who calls his friends to aid. But before fighting can begin, cool heads suggest one meeting between king and Murray. Murray kneels before the king and agrees finally to acknowledge that the lands are held from the king; in return he is granted the sheriffdom of the forest for himself and his descendants.

ovens of youth A metaphorical term used for the initiation ceremonies in Tikopia (Polynesia). The *punaumu*, kindling of the ovens, first takes place following a boy's first torchlight fishing expedition in a canoe at about the age of ten, and great quantities of food are prepared by his parents for the celebration which takes place on his return. The kindling of the ovens more significantly applies, however, to the actual initiation when he undergoes the operation of superincision at the hands of a maternal uncle, receives instruction in matters of sex and tribal history and codes, is given permission to marry and to take part in dangerous enterprises. The initiations are always accompanied by the preparation of quantities of food, and the kindling of the ovens refers literally to just that, the kindling of the ovens for the cooking of food.

It is the custom in Tikopia to kindle two ovens for a person who has experienced either death or injury. Hence the oven is symbol among these people of sympathy, concern, and reparation. To say "his ovens have been kindled" means that a boy has undergone the initiation ritual. See R. Firth, *We, The Tikopia*, New York, 1936, p. 432.

overhearing A folktale motif (H13, N450-452, etc.) in which animals, gods, dwarfs, ogres, and other non-human beings are overheard telling some secret which is then turned to advantage by the hero. It occurs in tales all over the world. The overhearing motif, as described by Penzer, excludes the accidental listening to human speech or conversation, though some might consider incidents like Ali Baba's hearing the robbers' "Open Sesame" (N455.3) an instance of overhearing. The motif is always incidental and is used by the story-teller to solve a dilemma for his hero, although the information, the way it is used, and the informers themselves, unwitting or purposeful, vary from tale to tale. Almost always the overhearing is of a conversation between a pair of animals or birds, of the same or different species. The popular saying "A little bird told me" utilizes this common incident. Faithful John listens to three ravens; in a French-Canadian story, the conversation of a lion, a bear, and a wolf is overheard. Often the listener is hidden in a tree or is thought to be asleep; often the threatened penalty for telling what he has overheard is some kind of horrible death. The minister's son who overhears two owls will have his head burst into a thousand pieces if he tells what he knows.

The information obtained through overhearing may be used to avoid death or catastrophe; to obtain wealth

or high position; to resolve a perplexity. Though the knowledge is of great help to the hero of the stories, in many instances the same knowledge results in the death of the animal that so rashly talks, not knowing of the hidden listener. For example, a bird may tell that its heart is the only thing that can cure the king: the hero will then kill the bird and cure the king. This sort of self-defeat is most apparent in the Rumpelstiltskin story, where the princess, because she overhears the dwarf singing to himself, is able to rescue herself from an impossible situation. A very similar idea is found in many life token stories, when, for example, the giant gives away the secret of where his soul is kept, and the listening hero is able to kill him by using the information. How the hero can understand the animals or birds he overhears is seldom a problem to the story-tellers, but sometimes the understanding is knit into the story by some other incident, as with Siegfried's tasting of the dragon's blood and his subsequent understanding of the language of the birds—or sometimes the animals simply speak in human language. The animal languages motif, in which the hero understands the language spoken by the animals among themselves, as do Siegfried and Faithful John, is thus intimately connected with the overhearing motif. Compare ANIMAL LANGUAGES.

overlooking The act of the one who casts the evil eye: the term most generally used in English for the action. Belief in the evil eye is world-wide and is found from earliest times. Probably it arose from the belief that people whose eyes somehow looked different (Pliny cites Phylarchus on people with two pupils in one eye and the image of a horse in the other) were capable of doing magic: this is a specialized form of the fear of strangers common among many peoples. Thus generally throughout the Mediterranean area, where eyes are commonly dark, one with blue eyes is thought to possess the evil eye; in northern Europe, the dark-eyed person has the evil eye. Squinters, people with a cast, even sufferers from cataract, all may be in certain places suspected of overlooking.

Overlooking may not be voluntary; the possessor of the evil eye, whether he wills it or not, may cause ill to things, animals, or people he looks at. However, most overlooking is considered to be malicious. The powers of the evil eye are boundless. The overlooker may cause death, illness, poverty, loss of affections, bodily injury, or any number of other evil effects. Especially vulnerable are young children and animals. Therefore, among many peoples, praise of a child's beauty or cleverness or health, or of a herd's numbers or the like, must never be fulsome, or, if given, must be balanced by a counter-acting expression to avert the evil eye. The evil eye seems to be most potent when the victim is healthy, prosperous, happy, especially if his wealth or good fortune has brought him to public importance—at least its effects are more noticeable when the person bewitched loses much because of being overlooked.

Averting the evil eye may be accomplished by sayings (counter-charms), amulets, certain actions or gestures. Amulets in the form of frogs or various loathsome creatures are worn to attract the power of the evil eye to them rather than to the wearer. Red ribbons plaited into a horse's or cow's tail or mane, or placed over the doorway of a house, will destroy the effect of the evil eye.

Wearing a bit of holy writing, or putting it at the entrance of the house, averts the influence of the evil eye. Planting the jack bean around a field or garden preserves the crop from being overlooked. Many plants, e.g. the shamrock in Ireland, garlic in Greece, protect against the evil eye. Gestures like the "horns" (*mano cornuta*) or the "fig" (*fico*), which have a sexual, hence fertility, connotation, turn the evil eye from the maker of the sign. Spitting, in ancient Greece and Rome, and in many other places since then, is a powerful antidote. The bridal veil is thought to have originated as a specific protection against overlooking, for the happy bride might be especially the target of envious evil-doers. See BALOR; MEDUSA.

Ovid Publius Ovidius Naso (43 B.C.–17 or 18 A.D.) Roman poet of the Augustan period. He was an Equestrian by birth, held several positions of minor importance in the public service, and was exiled by Augustus some ten years before his death to Tomi, a town on the Danube near the Black Sea. The cause of the exile is not known: Ovid was in some way involved in a scandal concerning Augustus' granddaughter Julia, and this, added to the emperor's probable long-standing resentment against the author of the libertine *Ars amatoria*, may have been at the root of the poet's banishment. Ovid's retelling of the Greek myths and legends, and his calendar (incomplete) of the Roman year, are a principal source of our knowledge of these matters, though much of his statement of the myths is probably of his own invention. The *Metamorphoses*, 15 books, retells many of the transformation tales of the ancient world, beginning with Chaos and ending with the catasterism of Julius Caesar. Here too are the many tales of the amorous adventures of the gods who transformed themselves the better to accomplish their aims. The *Fasti*, written at the same period, essayed to describe the legends, the historical background, the astronomical and meteorological signs, the festivals and other religious events associated with each day of the calendar. Only six books, covering six months, were completed. An earlier work, the *Heroides*, purports to be a group of letters from famed women of past time. Ovid, even more than Vergil, has had the greatest influence of all the classical writers on English writers, stylistically, technically, and as reference source.

ovinnik A form of the domovik, the household spirit of Russia, who resides in the drying-kiln. He does not like to have the kiln fired on the great festivals and may burn down the building if his wishes in this are ignored. He is propitiated and thanked for helping with—and for not interfering with—various chores near the kiln, for example for a good threshing. Sometimes the blood of a sacrificed cock is sprinkled near the oven for his delectation.

owe The term among the Yoruba people for proverbs: quoted to conclude and point the moral of stories, to spice dialog, and to influence the behavior of others by derision or defiance. See AFRICAN AND NEW WORLD NEGRO FOLKLORE.

owl As the bird of Athena (companion and attribute) the owl was auspicious in classical Greece; old Greek vases associated with the worship of Athena depict owls with breasts, and vulva represented by a circle. But in Rome the owl was a bird of ill-omen and its hooting

presaged death. The death of Augustus, for instance, was predicted by the hooting of an owl; an owl came and sat in the room of the emperor Commodus Aurelius just before he died; Caesar's murder was heralded by the screeching of owls. The Talmud mentions its being bad luck to dream of owls. *Leviticus* numbers the owl among the unclean birds.

In European and American folklore in general, the owl is also a bird of ill-omen whose hooting is an omen of death. In Scotland, it is bad luck to see an owl in the daytime. In Wales, the hooting of an owl not only presages death but often the loss of virginity of some village maiden, or the hooting "tells" the moment of such an occurrence. In Newfoundland, the cry of the horned owl predicts bad weather. There are various charms for counteracting these omens: turning your pockets or any article of clothing inside out will stop the screech-owl from hooting; so will tying a knot in a handkerchief hush him, or throwing salt in the fire.

North American Kiowa Indians hold that the medicine man becomes an owl after death, and the owl after death becomes a cricket. The eastern Cherokees believe the cry of the screech-owl portends death or sickness. Penobscot Indians say the screech-owl, if mocked, will burn up the mocker in his camp; but they regard the barred owl as a camp guardian who will warn of approaching danger. Among the Chippewa, a stuffed owl is set up to "watch" and superintend the pounding of medicine roots by the Mide medicine men. The Pawnees regard the owl as a protection in the night.

In Kalmuck legend, a white owl once saved the life of Genghis Khan; these people therefore venerate him today. The Buriats keep a tame owl in the house as a protector of children. Bantu and Zulu groups are terrified of the owl because they associate him with the machinations of the sorcerer. Yoruba Negroes also associate the owl with the sorcerer. See FAMILIAR; SENDING.

In India, owl's flesh is regarded as an aphrodisiac, but eating it will turn a man into a fool. Eating the eyeballs, however, enables one to see in the dark. In medieval magic and medicine, owl feathers laid on a person would cause him to fall into a soothing sleep. Owl broth was an old cure for whooping-cough. The Wends say the sight of an owl would cause a woman to have an easy delivery.

One of the best known folktales about the owl is the story of the baker's daughter who was turned into an owl for begrudging bread her mother had baked for Jesus. Other motifs include the owl as bird of ill omen (B147.1.1.4), owl as a ghost in the Wild Hunt (E501.4.5), etiological incidents explaining why the owl is blind by day (A2233.3; A2332.6.6), owl as revenant, etc. (E423.3.5). See ATHENA.

 Apparently since pre-Conquest times the belief has been widespread in Middle America that a hooting owl at night presages death; hence, owls are greatly feared. [GMF]

owl dance A representation of this night-haunting bird, confined to American Indian tribes, notwithstanding the prevalent European beliefs in its baneful powers. In the mimetic Menominee owl dance, the men and women, moving around a drum, stoop and peer through spectacles formed by touching the forefinger and thumb. Sauk couples suggest the motion of an owl's wings by

swaying their arms forward and back as they circle sunwise with a balancing step. In the beginning and end of the dance, the partners (of opposite sexes) hold outside hands; in the middle they break hold, moving forward in a single file or sideways to the left. The Crow Indians formerly alternated their non-mimetic owl dance (*po'pete disue*) with the hot dance, as a social squaw dance. Though social dances, and not always imitative, these owl dances have a magical origin, malefic or beneficial. To the Iroquois Indian the owl is baneful, and is invoked in the songs of the Hanáhidós medicine society. The Creek propitiate him in dance, because he can send disease. To the Delaware hunter, as he leaves for the ritual hunt on the fourth day of the Big House ceremony, the screech owl brings good luck. The Menominee trace their gift of medicine to an owl disguised as grandmother Mí'āniú, and their hunting medicine to Koko'ko, the horned owl. The Papago associate the owl with the dead, but the feathers with cure. [GPK]

ox In Iranian creation myth, *Geush Urvan* is the huge primeval ox from whose blood sprang all useful herbs and all living animals. In the Talmud, Adam's first sacrifice was an ox with but one horn on its brow. In ancient Greece also the ox was a frequent sacrifice; most pleasing to the gods was an offering of 100 oxen, a *hecatomb*. Oxen were important in the rural economy of the Israelites, and in their sacrifice, and strict measures were enacted for their protection.

In folktale we find numerous etiological stories explaining why the ox is a draft animal (A2252.2; A2515.1), why he has no hair on his lips (A2342.2), how he got his horns (A2326.1.4). There is the helpful ox motif (B411.2), the oracular ox (B154.1), and the magic ox (B182.2). There is the man transformed into an ox (D133.3), the ox himself taking the shape of another animal (D412.2 ff), the devil as ox (G303.3.3.10). A giant ox occurs in European folktale as in American. See *BABE THE BLUE OX*. Christian legend says that Jesus was born in the oxen's stall, that the ox with other animals knelt in adoration, and still kneels at midnight on Christmas Eve. One of *Æsop's* fables recites the sad end of the frog who wished to be as big as an ox (J955.1). In Italy great ox horns protect from the evil eye. In Madagascar it is customary to apportion parts of the ox as follows: its horn to the makers of spoons, its teeth to plaiters of straw, its ears to the doctors to make a certain medicine good for a rash. See *CAKE CUSTOMS*; *GEUSH URVAN*; *OX THAT GORED*. [GPS]

Oxdansen Oxen dance: a Swedish sham fight in dance form. The two male opponents go through absurd gestures in a truly Scandinavian spirit of good-natured horseplay. Taking turns in time with the lively tune, they bow and squat, pull each other's hair, make a long nose, pull ears and stick out the tongue, bump elbows, box each other's ears, etc. In the last gesture, the victim bends to the side to avoid the blow, as he claps his hands to simulate the swat. After each bit of mime, both perform a refrain face to face, a sharp side-kick, head turn, and lunge, followed by glaring. This "duel" is said to have originated as a form of hazing by students of Karlstadt, Sweden, the freshmen or "oxen" being obliged to keep straight faces through all their antics.

It has become immensely popular in all Swedish folk-dance gatherings in the United States as well as abroad, and has been welcomed as an entertaining male tidbit in demonstrations. [GPK]

ox that gored *Exodus* xxi, 28, says, "And if an ox gore a man or a woman, that they die, the ox shall be surely stoned." Summary execution of animals causing injury to man is known in northeastern India, Celebes, Persia, and many other parts of the world. The doctrine that "every dog is entitled to one bite," but that subsequent use of the teeth on mankind, whatever the provocation, may bring punishment, is still followed by many U.S. courts. However, full-dress trials of animals in Europe were many (at least 92 in France from the 12th to the 18th century), with defending lawyers basing defenses and appeals on everything from the doctrine of natural rights to quotations from Scripture. In Brazil in 1713, after full argument of the case, the bishop trying the case decided that a number of ants who were undermining a monastery were entitled to seek for food as their natures led them, but that, since the friars had come to the New World to spread the Gospel, the ants must follow their natural bent in an appointed nearby field and leave the monastery. The migration of the ants to the designated field in obedience to the court's order was soon after observed. As J. G. Frazer indicates (*Folklore in the Old Testament*, Part IV, Ch. IV), trials of vermin were usually in ecclesiastical courts, since sentences against them were enforceable only by God; a human executioner would have been hard put to it to execute a horde of mice, ants, locusts, caterpillars, or the like. But domestic animals, such as sows, cows, dogs, horses, were tried, condemned, and executed by civil courts. A famous trial at Basle in 1474 ended in the death sentence for a cock that had laid an egg. Though the animal itself was deemed innocent of crime, obviously some evil spirit had invaded its body, and the sorcerer or demon was destroyed, along with the egg, at the stake. The principle here underlying, that of possession, undoubtedly was behind many of the trials. But at a much earlier stage in human thought, man and beast were conceived of as being animated by the same sort of essence. All things have a soul or personality in primitive animistic thought. Thus, examples of punishments of destruction visited upon spears, trees, statues, etc., which had caused death are quoted by Frazer (*loc. cit.*) from India, the Ainu of Japan, British East Africa, ancient Athens (where the ax used in the Bouphonia, the yearly slaughter of a sacrificial ox to Zeus, was tried and condemned), Thasos, Olympia, Rome, etc.

Oyandone In Seneca (Iroquois) Indian mythology, Moose, the east wind. He was called by Ga-oh into the sky to blow forth mists and chill from his nostrils, to lead the rains, and break down with his antlers great paths through the forests before storms.

Oykanye Archaic singing style of Dalmatian peasants, in which the first of two singers starts with *oy* on one note, then trills on a minor third, dropping back finally to the interval of a second, and the other voice, beginning after the opening, carries only one note, until both finish together on a second.

P

Pa'am Akhat Literally, once: a play dance of Palestine, with singing, first by the male central player, then by his chosen partner: "Once a lad went walking . . ." "Once a lass went walking . . ." The player, in the center of a circle, beckons to his chosen lady, who dances with him, then does the beckoning, dancing backwards. She stays in the center to recommence the dance. [GPK]

Paccari tambo The three mythical caves from which emerged the four Ayar brothers and their four sisters who became the ancestors of the Inca family and its related lineages. See AYAR. [AM]

Pa Cha The Chinese god who protects against locusts and grasshoppers: associated with rites for the "calling" and destruction of grasshoppers. He is depicted with a bird's beak; his clawed right hand holds a magic gourd, containing a magic insecticide; his left holds a sword. His mammæ are strongly developed. His color is blue-green; his hair is red. After good harvests a hut is built or a tent put up in the village street, in which images of Pa Cha and other gods are hung. Here priests beat drums for a half a day or more, and make a great racket to the delight of the local children, who are also given magic charms to take home. Pa Cha has been identified by some scholars with the agricultural deity Liu-Mêng Chiang-Chün, and also with a Mongol peasant named Pa Cha who lived unharmed in the midst of wolves and scorpions and whose garden was never injured by grasshoppers. [RDJ]

Pachacamac The supreme god of the ancient coastal people of Peru. His name means Earthmaker: identified with Viracocha, the supreme god and creator of the Incas. Pachacamac was worshipped in a famous temple, the ruins of which still stand near Lima. [AM]

Pachamama Mother Earth: the earth goddess of the Incas of ancient Peru. She is still worshipped by the natives of the highlands of Ecuador, Peru, Bolivia, and northwestern Argentina. As their main deity, she is invoked in prayers and receives sacrifices of llamas and other animals. The most important ceremonies in her honor coincide with the beginning and end of the various agricultural cycles. Following the contact of these peoples with Europeans, Pachamama has in many cases been identified with the Virgin Mary. [AM]

pachecos Literally, cowboys or herdsmen: an enactment of bull-baiting and lassoing performed by Mixtec men of Oaxaca, Mexico. Their outfits copy cowboy attire: leather jackets and fur-trimmed flaring trousers, wide sombreros, and spurs. One of their group masquerades as the bull, and two clowns disguised as women cavort in their midst. This sprightly dance is related in content and probably in meaning to the *vaqueros* and *toreadores*. [GPK]

pada The Sanskrit term for footwork in the *natya* code of Hindu dancing, *boumya mandala pada* being executed on the floor in five different positions, and *akasa pada*

in the air. The corresponding leg motions on the floor and in the air are termed *boumya çari* and *akasa çari*. Jumps are called *utplavana*. [GPK]

Padmapāni Literally, lotus-in-hand: the universal savior of Mahāyāna Buddhism, the greatest of the bodhisattvas, and prototype of the Chinese goddess, Kuan-yin (and Japanese Kwannon): an epithet of Avalokita. The archetype of Padmapāni was also female, as the lotus suggests. Padmapāni is one of the divine transformers of Indian Buddhist mythology, appearing variously as man, woman, animal, insect; one of his famous shapes is the winged horse *Valāhaka* (cloud); in Tibet Padmapāni is sometimes depicted with eleven heads. A 9th or 10th century figure of Padmapāni depicts him with right hand down and palm out (the granting-gifts gesture, *varadāmudrā*) and lotus in the left. See H. Zimmer, *Myths and Symbols of Indian Art and Civilization*, New York, 1946, pp. 96-97.

Paguk In the folklore of the Timiskaming Algonquians and Timagami Ojibwa, a creature of bones, a human skeleton without flesh, who clatters noisily through the forest, and travels as fast as thought. For a person to hear Paguk is a sign that a friend will be lost and die. Paguk is believed formerly to have been a hunter who starved to death in the bush. Before he died he wished that his life and the strength of his flesh might be transferred to his bones. His wish was granted; his strength went into his bones, and his flesh fell away. [EWV]

Pa Hsien The Chinese Eight Immortals: a group of legendary characters said to have originated in the Sung dynasty, 960-1127, but obviously their tradition is much older. This fraternity, in revolt against the stuffiness of Sung etiquette, is immortal, and goes around indulging in all imaginable sorts of nonsense. The members are: Chang Kuo, Han Chung-li, Han Hsiang-tzū, Ho Hsien-ku, Lan Ts'ai-ho, Li T'ieh-kuai, Lü Tung-pin, Ts'ao Kuo-chiu. See CHINESE FOLKLORE. [RDJ]

pairikas In the *Avesta* and other Zoroastrian texts, supernatural beings; enchantresses; female counterparts of the *yatus* or sorcerers: classified among the *drujes*, the spirits of evil and aids of Ahriman or Angra Mainyu. Pairika is the Avestan form of modern Persian *peri*.

paixtle dance (from the Nahuatl *paixtli*, moss or hay) A masked dance of Tuxpan and neighboring villages of Jalisco, Mexico: also called *el heno*, the hay. The men are covered, except for their arms, by a cape of moss, by a wooden or paper mask, and a kerchief over the head. They are said to represent sorcerers with animal power, despite the human features of the mask. They cry like mysterious beasts and carry a shepherd's staff carved with an animal's head. The bells on the neck of the animal jingle as the dancer strikes the staff rhythmically on the ground. The cumbersome outfit permits the execution of simple steps and stamps. The *sones* (tunes) played on a fiddle are the only Spanish touch.

Otherwise the dance evidently preserves a pre-Columbian rite of animal magic. [GPK]

Paiyatemu, Paiyatamu or Paiyatuma Zuñi Indian Sun Youth, the first of the Koshare, son of Sun Father or of Underground Mother. A powerful spirit with whom the clowns of Zuñi identify themselves, Sun Youth is believed to travel along the Galaxy, and be so senseless and funny that his father, the Sun, has to let him do exactly as he pleases. In some Zuñi tales the Paiyatemu are referred to as a group, rather than a single individual. Paiyatemu as an individual at Zuñi and in the Keresan pueblos is characterized as a handsome seductive flute player associated with the Sun, who allures or frightens away and then recovers the Corn Maidens, and who is the prototype of lovers. He is equated with the Hopi T'aiowa. [EWV]

Pakrokitat The name of the beneficent creator of the Serrano Indians of southern California, from whose left shoulder Kukitat, the evil creator of the Serrano, was born. Kukitat and Pakrokitat were always quarrelling; finally Pakrokitat left the earth to his evil brother and retired to a world of his own to which people go after death. See EXCREMENTS SWALLOWED. [EWV]

Pa kua A set of eight trigrams important in ancient as well as modern Chinese divination, each composed of three broken lines. When these are placed one above

From top clockwise
ch'en: thunder, hard
li: fire, creation
tui: water, sea, light
kan: sky, *yang*, life,
 good omen
hsü: wind, wood
k'an: liquid, cool,
 moon
kên: mountains, hin-
 dering
kun: earth, *yin*, des-
 olation, ill omen

the other, 64 hexagrams result which contain 384 lines corresponding to the days of the intercalary year. The science of interpreting these trigrams has occupied the attention of many Chinese and Occidental scholars. [RDJ]

Pāli Canon The sacred canon of the Hināyāna school or Little Vehicle of Buddhism. The Buddhist scriptures have been handed down in two forms, the Pāli or southern, and the Sanskrit or northern (Mahāyāna) texts. Only the former is extant. The Pāli Canon prevails in Ceylon, Burma, and Siam; the extant fragments of the Sanskrit text, as well as Chinese and Tibetan translations, are used in China, Tibet, and Japan. This Buddhist literature includes collections of speeches, rules of conduct, sayings, and tales combined into "three baskets," or the *Tripitaka*. The first, the Basket of Discipline (*Vinaya-piṭaka*), includes the rules for Buddhist monks and nuns, directions for life during the rainy season, clothing to be worn, medicinal remedies, and stories from the Buddha legend. The second basket (*Sutta-piṭaka*) makes extensive use of parables in explaining the doctrine of Buddha. The Basket of Higher Religion (*Abhidhamma-piṭaka*), first uttered in the Tāvātimsa heaven to which Buddha went to preach the doctrine to his deified mother and the devas, is more scholastic in

form than the second basket but contains the same material.

Palm Sunday The sixth and last Sunday of Lent and the beginning of Holy Week; part of the complex of beliefs that has to do with the coming of spring. Although the day itself commemorates Christ's victorious entry into Jerusalem, the processional use of palms is traditional to symbolize victory and rejoicing. In all Christian countries it is a solemn festival. After the palms are blessed and distributed to the congregation, various uses are made of them. Formerly they were burned and the ashes preserved to be used on Ash Wednesday of the following year. In Ireland on Palm Sunday the blessed palms (usually yew) were hung up in houses and cattle stalls for luck and often planted along with the potatoes to bless the crop. Elsewhere they decorate the graves. In the East they are used to procure rain. Dust swept from the churches on Palm Sunday is helpful, in other places, in preserving the crops. See ASS. [RDJ]

Pan The ancient Arcadian god of flocks, the Feeder or Herdsman; a minor god whose worship spread to other parts of Greece within historical times (5th–4th century B.C.): identified by some with the Vedic Pūṣan and the Egyptian Min. It is said that before the battle of Marathon (490 B.C.) Pan promised help against the Persians; in the battle he routed the Asiatic armies with "Panic fear"; the grateful Athenians then established a shrine for him on the Acropolis.

Pan, as a god of herds, appears as a goat from the waist down, with goat ears, turned-up nose, and goat horns. Like other pastoral deities (Apollo, Hermes), he plays a musical instrument he invented, the Panpipes, made of reeds. He invented the open-air *danse cham-pêtre*; when Pelops received his ivory shoulder, Pan danced for joy; he is often depicted dancing and playing the pipes in a spirit of revelry. He is generally a lusty god, sporting with or chasing nymphs—since fertility is a necessary province of a pastoral god. In Arcadia, when hunting was poor or when flocks declined, the image of Pan was scourged with squills to induce greater fertility. Pan was leader of the satyrs, the woodland spirits of fertility and license. Despite his love of noise and riot, Pan also liked lonely places in the mountains and hills, and at noonday would sleep in some quiet shady spot. Travelers had to be wary not to wake him; in fact, noon was generally a good time to be quiet, for the god's anger was terrible. He could drive men with great fear with his loud voice or he could send them horrid nightmare dreams.

In myth, he is son of Hermes and Dryope or of Hermes (as a ram) and Penelope, Odysseus' wife. Another story makes Pan the child of Penelope and all her suitors. He was born perfectly formed and was raised by the nymphs. He was a companion of Dionysus and Cybele, whose riotous processions included the noisy pans or satyrs. His emblem was the phallus. In Pan's province were weather, the flocks and herds, forage plants. Later etymological amplification of his myth made Pan the god of all (*pan*) nature, but is extraneous to the Arcadian shepherd god. A curious myth of late occurrence says that on the day Christ was crucified, a ship passing the island of Paxos in the Ionian Sea heard a call from the island: "Great Pan is dead!" When the ship got to

Rome, the story was told and it was noted that thenceforth all the oracles were silent.

Panan A Malayalam devil-dancing caste of southwest India. By identification with the demons, in costume and motion, the dancers have power to exorcise them or to induce benefits. 1) They cast out petty devils from bodies, especially of children, and thus effect cures, by beating on an hourglass drum (*thudi*), by magic formulae (*mantram*), and by offerings. 2) By means of the din of drum and cymbal they drive evil spirits from the homes of the higher Brāhman and Nayar castes. 3) They dance all night, beating on metal plates with sticks to allay demons in the fifth pregnancy month of women of the Tiyan caste. 4) By dancing with an umbrella before a temple they invoke their demons' power over crops, and allay the spirits of the dead on the seventh day of funerals. [GPK]

pancakes Thin batter cakes fried in a pan, associated especially in the British Isles with Shrove Tuesday, which is often called Pancake Tuesday. It was quite common in rural England for the girls and boys to congregate in the kitchen and eat pancakes after the cock-threshing on Shrove Tuesday. Whoever had the reputation of being a lie-abed was supposed to receive the first one. The cakes had to be tossed high during the frying, and there was much merrymaking, especially if any fell short of the pan. Tossing a pancake into a crowd was also a favorite game on this day, with a prize for whoever came up with the largest piece. It is a general rural saw that to eat pancakes on Shrove Tuesday and peas on Ash Wednesday will keep you in money for a year. Lincolnshire farmers throw a pancake to the barnyard rooster on this day; if he eats it all, bad luck is in the offing; if he calls his hens to share it, good luck is in store for the farmer and his house. The "pancake bell," originally rung in the church to call the people to their shriving, is now interpreted as a signal to begin frying pancakes. Rich and poor alike eat pancakes on Shrove Tuesday in Lancashire, Cheshire, and northern England generally.

The famous pancake race, run in Olney, England, since 1445, was abandoned during World War II, but resumed in 1949 and recorded both over B.B.C. and television. The race is run from the market square to the church and begins at 11:55 A.M. Two pancake bells are rung, one at 11:30, one at 11:45, as signal to Olney housewives to prepare their pancakes. Women who enter the race must be over 18, wear aprons, hats or other head-covering, dresses (no slacks permitted), and the pancakes must be tossed three times during the race. In Ireland the young people also enjoy themselves in rural kitchens eating pancakes on Shrove Tuesday night. In some sections the flour to make them has been collected from house to house.

In Brittany pancakes and cider are set out for the dead on All Souls' Eve. In some Macedonian villages the evil spirits known to be abroad on New Year's Eve are burnt to death by hot pancakes sizzling in a pan. In Estonia at cabbage-planting time, a big round pancake is made and placed in the garden to encourage the cabbages to grow big round leaves. See BERCHTA; CAKE CUSTOMS.

Panchajana In Hindu mythology, the sea demon who lived under the ocean in a conch-shell. Panchajana carried off the son of Sāndipani, thus arousing the anger of

Kṛishṇa who plunged into the waters, killed the monster, and used his shell as a trumpet. When blown the trumpet annihilated the unrighteous. *Pāñchajanya* is the term for Kṛishṇa's divine conch-shell. A small shell is used to pour holy water over images of the god during his worship, and its representation is often branded on the arms of his worshippers.

Panchatantra or **Pañcatantra** The most famous Sanskrit collection of stories and fables and the "chief source of the world's fable literature": literally, the five *tantras* or books. The *Panchatantra* was compiled about the 5th century A.D. by Vishṇuśarma for the enlightenment of a king's sons. Today more than 200 different versions exist in fifty languages. The Arabic version is the *Kalila wa Dimnah*, those in modern Persian the *Anwār-u Suhailī*, and the *Iyār-i Dānish*. In England the collection is known as the *Fables of Bidpai*. For full discussion see Penzer-Tawney, *The Ocean of Story V*: 207–242.

P'an Chin Lien The Chinese goddess of fornication. She was a young widow caught *in flagrante* by her brother-in-law, who killed the lover. She became the patroness of prostitutes, who frequently make obeisance to her as they enter their places of business. [RJD]

Pāṇḍavas or **Pāṇḍus** In the *Mahābhārata*, one of the two families which fought for possession of the kingdom whose capital was Hastināpura. The five Pāṇḍava princes were Yudhishṭhira, celebrated for his integrity, Bhīma, huge and of a fiery temper, Arjuna, symbol of chivalry and hero of the epic, and the twins Nakula and Sahadeva, representatives of wisdom and beauty. The five were the sons of Pāṇḍu's wives Kuntī and Mādri, but their paternity was attributed to the gods, since Pāṇḍu did not consort with his wives. He, however, recognized them as his heirs. Yudhishṭhira was said to be the son of Dharma, Bhīma of the wind god Vāyu, Arjuna of Indra, and the twins of the *Asvins*.

The Pāṇḍavas are closely associated with the Himalayas, to which they retired after World War I. Many spots are venerated in connection with their wanderings. They receive little actual worship today except in the south of India where the village mother is often called Draupadi and five stones are sometimes seen in a field, representing the five princes who guard the crops.

panḍé The Balinese blacksmiths, makers of the famous Balinese krisses: a separate and revered caste. They are regarded as holy and believed to be possessed of such powerful magic that they alone are able to cope with the mysteries of fire and iron.

Pandion In ancient Greek mythology, a king of Athens; son of Erichthonius and a naiad. Pandion was the father of Procne and Philomela. Tereus married Procne, but became enamored of her sister and raped her. (Or he told Philomela that Procne was dead and married her.) To keep Philomela from telling what had happened, he tore out her tongue. But Philomela embroidered the story and gave the embroidery to Procne. Procne killed her son Itys, served him in a meal to Tereus, and fled with Philomela. The three unhappy mortals were transformed by the gods: Tereus became the hoopoe, Philomela the swallow, and Procne the nightingale. Roman retellings of this story make the nightingale Philomela and the swallow Procne, but

obviously the sweet-singing nightingale does not fit the tongueless Philomela.

Pandora Literally, the all-endowed; a woman made by Hephæstus out of earth as the gods' revenge on mankind for the gift of fire made to them by Prometheus. Prometheus warned his brother Epimetheus not to accept any gift from the gods: a familiar tabu in folktale. But Epimetheus gladly accepted the woman brought to him by Hermes, for she was a magnificent creation, being endowed with some quality from each of the gods—beauty from Aphrodite, cunning from Hermes, etc. Pandora carried a jar as a sort of gift offering, and which she had been forbidden to open; but one day her curiosity got the better of her and she opened the jar. Out flew all the ills that since have afflicted mankind; only Hope was left in the jar. Other versions of the myth say that all good was in the jar, and that when it was opened all escaped forever from the possession of man. Pandora is said to have been the mother of Pyrrha and Deucalion by either Epimetheus or Prometheus. She becomes in the Orphic poetry an underworld goddess, an associate of Hecate and the Erinyes, an awesome personage: this may be however an aspect of Ge, the earth mother, who is sometimes called the all-endowed, Pandora.

panpipes A musical instrument consisting of a series of one-note vertical flutes, graduated in length, fastened together in a flat row or fagot bundle with the upper ends level. The instrument is of particular importance and widespread distribution in eastern and southeastern Asia, across the islands of Melanesia and Polynesia, and in South America, but it takes its name from the Greek god Pan, who, according to legend, invented it. Pan was hot in amorous pursuit of the nymph Syrinx when she came to a river and called in despair upon the naiads to save her; they did so by turning her into reeds along the bank just as he had her in his grasp. Pan sighed gustily with frustration and the reeds gave forth a strain of music under his breath. He cut seven reeds and bound them together into the instrument the Greeks called syrinx, and, in playing it, possessed the nymph symbolically. The panpipes were believed to be the favorites of wine-loving Silenus, were played by Hermes to distract the hundred-eyed Argus Panoptes, and among men were the pleasure and pastime of shepherds. The original pipe of Pan was said to have been kept in the cave of Diana at Ephesus and to have served as a virginity test.

In China panpipes consist of sixteen notched reeds, developed from originally twelve pitch pipes, and divided into male and female tone sequences. The instrument is associated with the spring season, the eastern direction, the mountains, and bamboo.

Combinations of male and female pairs of panpipes are common to both Asia and South America. Sometimes the male and female notes form two fanlike wings of the same instrument, but often the male and female instruments are entirely separate, each having only half the notes required to play a melody and the notes being played alternately by two players. In eastern Venezuela, the reed pipes *mare* have five reeds for the male instrument and six for the female. Such pairs are frequently connected by a long string, as in Burma and among the Indians of Panama and Bolivia. The Cuna

consider these pairs as man and wife. Large bands of panpipe players among South American Indians maintain the separation of male and female instruments.

Similarities in this respect, together with a comparison of pitches and scales and binding methods common from Asia and the Pacific islands to the South American continent, have led to the conclusion on the part of some authorities that American panpipes are all derived from an Asiatic origin. Panpipes were known in South America before the Europeans came, having been common in ancient Peru. Many examples of the period were made by boring the series of air passages through solid material, such as pottery, stone, or metal. Only one early example of the instrument has been found on the North American continent, a pottery panpipe from Tres Zapotes, Veracruz, Mexico. However, in slavery times in North America, Negroes constructed crude sets of reed pipes in a framework, which they called *quills*.

In Europe the masters of the panpipes are the Rumanian Gipsies, who have achieved such virtuosity that the instrument has there achieved orchestral recognition. Their pipes are tuned by dropping peas into certain pipes before each piece to sharp or flat its note. Similar devices for altering the fixed tones have been used elsewhere, such as the gourd slide of the Aymara pipes of South America, or the custom in other South American tribes of pouring in sand or water.

In England the panpipes have been a favorite accompaniment for the Punch and Judy show. In Italy boys make and play crude panpipes of reeds called *fischietti* (whistles).

Though not nearly so widespread, the panpipes have much the same significance in love and for rebirth as the flutes. The spread wings sometimes thought of as the male and female banks of tones are also conceived as the wings of the phoenix. See FLUTE, [TCB]

pansy, heartsease, kiss-me-quick, love-in-idleness, Jove's flower, St. Valentine's flower, or Herb Trinity (because of its three colors in one flower) In Scotland and Germany it is called stepmother. The large lower petal is the mother, with her own two gaily dressed daughters on either side of her; the stepdaughters are the two smaller and paler upper petals. It is a cooling herb in the dominion of Saturn and the sign of Cancer and symbolizes thought (it is called *pensée* in France, whence the English name). German legend says that it was once so fragrant that people trampled all the grass coming into the fields to pick it. The flower prayed to be deprived of its scent so that the cattle would not be starved. In Rumania they tell of a young king who fell in love with a serving maid and had a friend introduce her to his mother as a princess. His mother was jealous and bid her magician turn the girl into something ugly like a toad, but she was so modest and lovely that the worst he could do was turn her into a pansy.

To pick a pansy with the dew still on it will cause the death of a loved one; to pick pansies on a fine day will cause rain before long. In Shakespeare's *Midsummer Night's Dream* Oberon squeezes the juice of a pansy on Titania's eyes so that she will fall in love with the first person she sees on awakening. The leaves are bruised and used for skin diseases, especially in infants. It is also used for epilepsy, asthma, and inflammations of the

lungs and chest. The flowers are taken internally as a cathartic. Pansy is a term applied to an effeminate or homosexual man.

pantang kapur A tabu language used in Johore and South Pahang by the Jakun (Malay) collectors of camphor. The *penghulu* (leader) and the *sakai* (followers) must use this language and no other while working in the jungle. The language, believed to be only partly Malay, is also known as *bahasa kapor*, *chakap berkapor*. See BISAN.

Panther An animal character in Southeastern and Eastern Woodlands Indian mythology. Among the Yuchi Panther is one of the animal creators who, angry at Chipmunk when he made the night, jumped on him and made the red scratches (stripes) which Chipmunk bears to this day. Panther is the eponymous animal for one of the Yuchi clans; the second highest official at Yuchi ceremonies, who represents the Warrior Society, is usually taken from the panther clan. Among the Shawnee the great underwater panther is a powerful supernatural being. See MOUNTAIN LION. [EWV]

para A Finnish spirit: the name is formed from the Swedish *Bjara* or *Bära*; literally Bearer. The para brings money, rye, and other goods to his owner, but usually he is regarded as the bearer of milk, cream, and butter. In such cases he takes the shape of a cat (compare the Scandinavian Buttercat and Lappish Smierragatto). The milk is carried by the para either in its mouth or in its intestines. The spirit can be created by man himself from some stolen objects. It is possible, however, that the name and idea is much older than a recent borrowing from the Swedes. Among the Cheremis, the *pari* is an evil spirit. The same among the Tatars of Kazan. The Osman Turkish *peri* means a fairy or good genius. The word originates probably from the Persian. [JB]

parachicos Literally, for children: masked dancers on horseback, with a child-frightening function. The group with this particular name participates in the fiesta of Chiapa de Corzo in Chiapas on January 20. But the idea of frightening a naughty child by a masked bogey is not unique. The parachicos are thus related in function to the *wükufi* of the Araucanians, the terrifying ritualistic *Natacka* of the Hopi, and the special cloth masks of the Seneca, as well as the various bogeys of Europe. [GPK]

Paradise An otherworld where the perfect life is lived: the word is derived from Persian words meaning an encircling wall, probably of the king's gardens. Paradise may be either terrestrial or celestial. The Garden of Eden, somewhere on earth, is reflected in medieval travelers' tales of lands of plenty, often situated on mountains, in far-off places—China, India, the headwaters of the Nile, etc. Later travelers and explorers made of places like the Polynesian islands earthly paradises similar to the mythical islands of earlier centuries, and the history of literature is replete with Utopias, Erewhons, and New Atlantises. The Christian Heaven, in the sky, its streets paved with gold, finds its counterpart in the Iranian Yima's House where no one fights, no one is poor, everyone has what he wants. In the Moslem paradise everyone wears green silk, grapes are always within reach—not a long reach—, there is neither heat nor cold.

The Sumerian Dilmun was a land where all water was good and crops were plentiful; so too in the Egyptian Aalu crops were easily grown to supplement the diet of grave offerings. See ELYSIUM; ISLAND OF THE BLEST; ISLANDS OF THE BLESSED; OLYMPUS; OTHERWORLD; VALHALLA.

paragueros The Umbrella men: Carnival dancers of Tepeyanco and other villages of Tlaxcala. Their curious elaborate headdresses have given the dance its name: ostrich feathers spread from the headdress like an umbrella; ribbons ripple down the back in profusion. The shawl is costly and elaborate, with embroidered native flora and fauna. Simpering mustached masks and breeches complete this fantastic outfit. The men dance quadrilles with elegant polka and mazurka steps; wind and string instruments play mincing 19th century tunes. The purpose of this recent creation is clearly satire on the superficial sumptuousness of European, particularly French, high society. [GPK]

Paraiyan A devil-dancing Tamil caste of southwest India. To the din of trumpets and drums, and decked in towering headdresses, skirts of coconut leaves, and body and face paint, they drive out devils from the houses of the Nayar caste. They strike themselves and whirl in a frenzy. Commonly known as Pariah, they are thus identified with the most miserable type of outcast. Government efforts have of late mitigated prejudices and improved their status. [GPK]

pāras or pāraspatthar In Indian folk belief, the philosopher's stone which turns everything it touches to gold. In legend a man cutting grass in the jungle found that his sickle had turned yellow. He consulted a blacksmith who went to the spot, found the stone, and presented it to Raja Jai Singh Deva. The Raja used the riches thus acquired to build a fort, then gave the stone to a Brāhman who, not knowing its worth, threw it into the Narbadā River where it still lies.

Paraśurāma In Hindu mythology, the sixth incarnation of Vishnu and the first Rāma: literally, Rāma with the ax. Paraśurāma was a Brāhman, the son of Jamadagni and Reṇukā, born in the Tretā Yuga to clear the earth of the Kshatriyas, which task he is said to have accomplished 21 times. After completing this he gave the earth to Kaśyapa. As a youth he was instructed in the use of arms by Śiva who gave him the ax (*paraśu*) for which he was named. His first deed, recorded in the *Mahābhārata*, was the slaying, at the command of his father, of his mother who had had impure thoughts. Granted a boon for the deed, he asked that she be restored to life and that he be invincible in combat.

He instructed Arjuna in the use of arms and was present at the war council of the Kaurava princes. According to the *Rāmāyaṇa*, he challenged Rāma, the seventh avatar, to a trial of strength because he had broken Śiva's bow, but was defeated and lost his place in the celestial world. Originally Paraśurāma had no relation to Vishnu, but he was represented as possessing Vishnu's bow and thus associated with the latter in popular tales until he was incorporated as one of the less important in the series of incarnations.

Pariaca Culture hero of the Huarochiri Indians, born from one of 5 eggs which appeared mysteriously on top of a mountain. He traveled throughout the land of the Huarochiri changing the landscape. He destroyed a

village because its inhabitants, mistaking him for a vagabond, treated him harshly. He opened irrigation canals and changed a girl into stone that became a *huaca* (idol). [AM]

Parijāta In Hindu mythology, the celestial coral tree which yields all desired objects, produced at the Churning of the Ocean and planted in Indra's heaven until Kṛṣṇa, at the insistence of his wife, carried it off and defeated Indra in the battle which followed. It was planted in Dvārakā until Kṛṣṇa's death after which it returned to Svarga.

Parilia or **Palilia** In ancient Roman religion, the festival of Pales on April 21; a festival of increase of flocks which was also the celebration of the day of the founding of Rome in 753 B.C.: the name is either from *pario*, bear, increase, or from Pales. Pales was the protector of shepherds and their flocks, sometimes thought to be male and thus a parallel of Pan or Faunus, sometimes female and related to Vesta and Anna Perenna. The Parilia, an important celebration, was held both in the city of Rome, as Rome's *dies natalitus*, and in the country, where shepherds asked to be forgiven for unwitting trespass on the holy places by their sheep. The sequence of the festival, according to Ovid, included a public lustration with fire and smoke at which were burned the blood of the October horse (preserved by the Vestals since the sacrifice of the horse six months previous), the ashes of the cattle sacrificed at the Cerealia, and bean shells. The people were sprinkled with water, washed in running springs, and drank a mixture of milk and must. The stables were purified with smoke, swept with brooms of bay, and decorated with branches of bay. Foodstuff was burned as an offering. Fires of hay and straw were built, and to the sound of cymbal and flute the shepherds and their flocks passed through and over the fire thrice. The celebrations ended with a feast in the open air. In modern Italy, the festival of St. George seems to have taken over many of the observances of the Parilia. Compare BELTANE.

Paris The abductor of Helen of Troy, hence instigator of the Trojan War. Paris was the second son of Priam and Hecuba. Before he was born Hecuba was forewarned in a dream (of a firebrand that destroyed the city of Troy) that she would bear a son who would be the cause of the city's fall. So the infant was given to a shepherd and exposed on Mt. Ida. But when the shepherd returned after five days he found the child still living; a she-bear had suckled him. The shepherd reared Paris, who distinguished himself as a young man against raiders of the flocks and was therefore named Alexander, or defender. While he tended flocks Paris awarded the apple of discord to Aphrodite as the most beautiful among Hera, Athena, and Aphrodite. (See JUDGMENT OF PARIS.) Here too he married the nymph Ænone.

At last Paris came from the mountains to the city on the occasion of a festival. He made so good a mark at the games that he was recognized as being of high rank; his sister Cassandra, the seeress, who had interpreted Hecuba's dream originally, stated that he was Priam's own son. Soon Paris visited Menelaus at Sparta, persuaded Helen to elope with him (or abducted her by force), and fled to Troy by way of Egypt and Phoenicia. Some accounts say that in Egypt a spurious Helen was substituted for the real Helen, and that this Helen was

the one who went to Troy with Paris and bore his children. In Troy, Paris led the war faction, and, though somewhat cowardly, fought throughout the war, killed Achilles, and was himself finally killed by one of Hercules' poisoned arrows, shot by Philoctetes.

Paris, (Bruno Paulin) Gaston (1839-1903) French disciple of Benfey and one of the sponsors in France of the literary school of folklorists. Paris was one of the founders of Romance philology; he taught at the École des Hautes Études (1868-72) and after 1872 at the Collège de France. In 1866 he founded the *Revue Critique*, and in 1872 *Romania*, leading journal in Romance philology. He popularized medieval French literature in such works as *Aventures merveilleuses de Huon de Bordeaux mises en nouveau langage*. His studies on the French literature of the Middle Ages are of significance, including those on epic, romance, lyric poetry, as well as on the literature of the 15th century (see *Mélanges de Littérature Française du Moyen Âge*, Paris, 1912, a collection of Paris' works on this particular period, edited by Mario Roques).

Parjanya In Vedic mythology, the god of rain and personification of the rain cloud; son of Dyaus; the deity of fertility who makes seeds germinate, causes conception, and rules over lightning, thunder, and rain. In later Hindu mythology, his name is applied to Indra.

parsley This plant was regarded in the ancient world as sacred to the dead. Wreaths of parsley were given to winners of funeral games, and Greeks and Romans both used it to decorate graves.

Hazlitt in his *Dictionary of Faiths and Folk-Lore* says, "At Islip in Oxfordshire, the transplantation of parsley is considered inauspicious." The people of Devon also consider its transplantation inauspicious, for they say that it will result in death in the immediate family and the Devil will take charge of the garden. In London and Surrey even growing parsley in the garden will cause a family death; in Surrey, if planted on Good Friday it will grow double, with what results they do not say. To be in need of parsley means to be at death's door.

You should never cut parsley if you are in love. If you give it away, you give away your luck; nor should you accept it as a gift—if you must have it, steal it. On the other hand, babies are found in parsley beds; it rendered the fumes of wine harmless (in Rome), and Turner's English herbal (1551) says "thrown in fish ponds it will cure the sick fishes there in." Another early herbalist describes "a marvellous efficacious fumigation to cause a man to see visions in the air," which was made from violet roots, and, among other things, parsley. The leaves distilled in water made a decoction which would remove superfluous hair; the roots, powdered and drunk in wine promoted a sound brain, perfect memory, and purified the blood. In England the leaves, roots, and seeds are still used medicinally to give a drug (*apiol*) which is recommended for kidney disorders, for dropsy, and female ills. Fool's parsley (*Æthusa cynapium*) is ill-smelling and poisonous, and so named because it looks so much like parsley that fools don't know the difference.

Parsley's association with the dead is attested by the general European belief that the effects of the Wild Hunt on one who has seen it (such as blinding, swelling

of the head, injury from a knife in the hand at the time, even death) can be averted by asking the huntsmen for parsley (E501.19.2).

partridge dance One of the many bird imitations of North American Indians, possibly of propitiatory origin, but now performed for the diversion of both sexes on social occasions. Though waning in popularity, it survives among the Menominee, Cherokee, Alabama, and Seminole in the eastern United States. The Onondaga near Nedrow, N. Y., enact a courtship mime in their partridge dance, but only for show purposes: the male follows the female, both fluttering their hands and arms like wings and jerking their heads in birdlike fashion. [GPK]

Pascola Hispanization of Yaqui *pahko'ola*, old man of the fiesta: the ritual clown of the Cahita Indians of Sonora and of Arizona Yaqui colonies, also adopted by the Tarahumara. The Pascolas, usually three, are always associated with Maso at the same festivals and dance alone or with him in burlesque and hunting mime. The Tarahumara Pascola appears together with the *matachini* at church festivals, funerals, and memorials, but not during agricultural ceremonies.

Pascola serves as ritual host, welcomes the crowd, opens and closes the fiesta with exorcisms, with greetings to the animals of the woods, such as *santo vovok*, saint frog, and with cross markings on the ground in the cardinal directions. His music is called "pieces of the woods" and represents animals and birds. It is played by a one-man flute and double-headed drum, a notched stick (*hirukia bweha*), resting on a gourd resonator, and by the same type of water drum as for the dance of Maso. The scraping and booming are reinforced by the tinkling of bronze bells on the dancer's belt, the swish of *teneboim* anklets, and the syncopated clash of the *sonazo* (a rattle of brass disks on a hardwood frame, manipulated by striking it against the palm of the left hand).

Each performance starts with an unmasked solo by each clown, to innocuous jig tunes on a homemade harp and fiddle. The soloists clearly compete with each other in a display of swift *zapateados* of Mexican extraction, combined with native stamps and heel-and-toe twists.

After this display of dexterity, they don their masks, black wooden stylizations of aged human features or animal heads, with white-painted incisions, horsehair brow and beard, mirror or abalone inlay, and a cross on the forehead and chin to mitigate the curse of this pagan creature. To the "pieces of the woods" they dance singly or in a group, with or without Maso, burlesquing or chasing him, copying his leaps in ludicrous fashion, and finishing with a split. They caper, crouch, sway their hips, jerk their heads and shoulders, howling like wild beasts. The comic interludes between dances, whether in mime or Yaqui language, savor of lusty and amiable obscenity. The deer pretends to suckle one of the pascolas. He pokes them in the ribs or ties them together with bandannas, while they stand transfixed and helplessly bleating. Between performances they renew their zest with cigarettes and mescal. Toward dawn of Easter Sunday, the hunt becomes more realistic, but it is most convincing in the "deer play" at private festivals.

The Pascolas are as enigmatic as the rest of the ceremonial clowns of the great Southwest. They are differen-

tiated from the *chapayekas* in their lack of organization, their vestiges of priest-like attributes, their hunting and animal associations, and their complete segregation from the Catholic ceremonies, in which the *chapayekas* participate. Beals suggests former shamanistic function, which is now rapidly being obliterated by the professional role of entertainer. None the less, many of the old beliefs adhere, such as the magical initiation by entering the serpent's cave in a red mountain, by walking into a serpent's mouth, being ejected, and finally receiving from the king of snakes the necessary knowledge and paraphernalia.

Pascolas are still believed to have power over streams and mountains. Fertility magic is evident not only in the phallic gestures, but in a gesture of sowing made during the dance with the *sonazo*. The missionaries have branded them as demoniac, while tolerating them in the ritual, but have striven to mitigate their power by putting holy water in the drum, and crosses on the masks and on a bead necklace around the neck, and by wrapping a blanket around their loins, knickerbocker fashion.

They continue to stand for an ancient ideology through centuries of religious metamorphosis and confusion, and the mechanizing and secularizing influence of modern civilization. See CLOWNS; MASO; RATTLES; RITUAL DRAMA; SNAKE DANCE. [GPK]

 The Yaqui Indians of northern Mexico have a Deer Dance at all ceremonial and religious fiestas. Presumably it is pre-Conquest in origin and perhaps had as its purpose luck in hunting. Two groups participate: the pascola dancers, who are masked clowns, and who give their name to the dance, and the deer dancers themselves, who wear stuffed deer heads over their heads, and cocoons filled with gravel, as rattles, around their ankles. [GMF]

pas de basque The Basque step: a form of leap from side to side, probably, as the name would suggest, of Basque origin. In fact, the Basque version with its high kicks is the most spectacular. Many folk dances, as well as school dance or ballet, use the fundamental step—a low leap to the right with circular swing of the right leg, a forward step with the left, and back step with the right, preparatory to reversal of the leap to the left. Each European country modifies the character and the arm position. The leaps of the Scottish sword dance are small and crisp, those of Spain curved and flourishing, those of the Ukraine high and bold with raised knee. The Portuguese pas de basque may be in 6/8, 3/4, or 2/4 time, the first being the regular pas de basque, the second cutting the left foot in back, the third holding the third step for two beats. The step turns up in blended dances of American Indians, e.g. in the *concheros* dance of Mexico, certainly as an importation. [GPK]

passacaglia or passacalle A dance and musical form, deriving its name from Spanish *passar*, to pass, and *calle* street, i.e. a street serenade. The original dance steps are unknown; but as a musical form the passacaglia attained great importance. Similar to the *chacona*, it developed and still may develop a stately theme in triple time through infinite variations. [GPK]

passe Literally, sacred, in the language of the Lapps. *Passe-vare*, the sacred mountains; *passe-jokka*, the sacred river; *passe-javrra*, the sacred sea: all are phrases which testify to the worship of nature by the Lapps. [JB]

passepié A peasant dance, the *branle* of Upper Brittany, named after the crossing of one foot in front of the other with a pawing motion. Along with other *paysanneries* the French court of Louis XV adopted the passepié for its dances of shepherds and shepherdesses. The music resembled a lively minuet in its 3/8 time with an upbeat and rapid figures, and syncopation with the dance step.

In England, where it was known as the *paspe*, couples performed it in longways, with running steps, crossing over, casting off, grouping into threes, etc. What with the frequent arm-clasping of couples, and the buoyant triple time, it appears as one of the antecedents of the waltz. [GPK]

Pātāla In Hindu cosmogony and cosmology, the collective name for the seven infernal regions, the abode of the Nāgas, Daityas, Dānavas, and Yakshas; also the name for the lowest of the seven regions. Pātāla, which extends downwards 70,000 *yojanas* below the earth, equals the seven upper regions in magnificence and beauty. Beneath it are the hells and the serpent Śeṣha who bears the world upon his hood.

Patch Tanz Clap Dance: a Jewish couple round dance, very popular at weddings and other festive occasions. The fundamental step for the clockwise circling is a slow strut with knee flexion after each step. The dance takes its name from the second figure, where all walk to the center and clap their own hands three times, then walk back and stamp their feet three times. Finally the circle breaks up into couples who pivot with outstretched arms at shoulder level. Then each woman, under her partner's upraised arm, goes on to a new partner to the left. [GPK]

paternity test A widespread motif (H480 f.) in which an infant or young child magically picks out his unknown father, either by handing him an apple (H481.1; Type 675—European), or by urinating on him as he is handed round from man to man (H481—North American Indian). One way of picking out the unknown father among several claimants is to sprinkle gold in the streets (H485): the man who rides straight to the door of the princess, on hearing the news of the birth of the child, without noticing the gold is the true father. This is reminiscent of the maternity test devised by Solomon: the woman who protested against the dividing of the child in half, but who would give it up rather than have it killed was the true mother. The three tests of paternity in ancient Irish legend were not made until a child was more than a year old or of enough age to show the form, voice, and manner of its progenitor.

 An incident detailing how a child magically picks out his unknown father (motif H481) is of common occurrence in North American Indian folktales. The method of establishing the paternity differs. In an Ojibwa tale of Mudjikiwis a baby is passed about until it urinates on one of several men present; this has been agreed upon as the sign that the man is the baby's father. In a White Mountain Apache tale the situation is reversed in that a father satisfies himself that he is the parent of a particular child; Sun gives a boy very strong tobacco to smoke, and when the boy, aided by the four winds, empties the pipe four times Sun is satisfied. These are only two of many specific ways detailed in American Indian folktales for establishing paternity;

for a score or so of others see Stith Thompson, *Tales of the North American Indians* (Cambridge, 1929), p. 336, n. 212. See MAIRA-MONAN. [EWV]

Paul Bunyan Giant logger and super-lumberjack; mythical hero of the woods and patron saint of the American lumber industry. As inventor of logging and creator of American geography, celebrated for his ingenuity in solving problems and for his resourcefulness in turning adversity to advantage, Paul Bunyan possesses epic traits and bears a family resemblance to the giants of myth and fairy tale. His legend may even retain traces of folk memories of Gargantua and Finn MacCool preserved by French and Irish lumberjacks. But as the hero of stories of comic exaggeration—tall tales or lying tales in the Munchausen tradition—Paul Bunyan has never risen above the level of the comic demigod or trickster hero, and his exploits have never developed into a full-fledged cycle. As to whether he is of folk or literary origin, the truth, as Stith Thompson suggests (*The Folktale*, p. 250 n.), probably lies somewhere between the two extremes of a "very old popular legend among American lumbermen" and an "essentially . . . literary concoction of the past thirty years."

Paul Bunyan may have had a French-Canadian original, named Paul Bunyon, a redoubtable giant warrior in the Papineau Rebellion of 1837 and later hell-raising boss of a logging camp (James Stevens, *Paul Bunyan*, p. 1) or Paul Bonhomme of the Two Mountain country (Walter Havighurst, *Upper Mississippi*, p. 181). Or his name may be derived from "Bon Jean" or the French-Canadian word *bongyenne* (Esther Shephard, *Paul Bunyan*, p. 8).

Just as narrators claim "actual acquaintance" with Paul Bunyan or some one who knew him, so collectors and scholars claim oral sources for the tales. But even where genuine oral versions exist, it is difficult to tell whether they were learned from oral tradition or from print. In any case, the fabulous adventures of Paul Bunyan, his Blue Ox, and his loyal crew are known to Americans chiefly through the literary versions of Esther Shephard (1924) and James Stevens (1925) and innumerable journalistic accounts and children's books.

As far as can be determined, the legend originated in Canada during the last century, and was considerably amplified as it spread west and south with the lumber industry, centering in the Lake states and the Northwest. In the course of his migration Paul Bunyan incorporated elements of local heroes like Jigger Jones (Johnson), Joe Mufraw, and Jean Frechette, whom he supplanted. To the original French and Irish elements were also added Scandinavian and Indian elements.

Many details of the legend are certainly literary additions. W. B. Laughead, author and illustrator of the first Paul Bunyan booklet (1914) and of Paul Bunyan stories in advertisements of the Red River Lumber Company of Minnesota (1914–1916), claims credit for having invented the names of Babe, the Blue Ox, and many members of Paul Bunyan's crew, including Brimstone Bill, Johnny Inkslinger, and Sourdough Sam.

In a letter to Louise Pound (*Southern Folklore Quarterly* VII: 139 n.) Laughead states that he began with what he "remembered from Minnesota logging camps (1900–1908) . . . then picked up odds and ends

from letters received . . . and from columns that ran in various newspapers, in the *Seattle Star* [1920] by Lee J. Smits, the *Portland Oregonian* [1922] by DeWitt Harry, and others. Correspondence to the *American Lumberman* also provided clues." It was in the latter publication that the Chicago poet Douglas Malloch's poem, "The Round River Drive," appeared in 1914. An earlier printed source was established in 1944 by W. W. Charters (*Journal of American Folklore* 57: 188), who has identified James MacGillivray as the author of Paul Bunyan stories appearing in the *Illustrated Supplement*, *Detroit News Tribune*, June 24, 1910.

The immediate source of Paul Bunyan stories is the extravagant Western humor of the 1830's and '40's, just as Paul Bunyan's immediate predecessors are ring-tailed roarers like Davy Crockett and Mike Fink. As a pioneer industrialist he also has links with the titans and wizards of American business. Spreading to other occupations and regions and merging his individuality with that of other strong men, miracle men, and work giants, he ultimately became a symbol of American bigness and a proverbial peg on which to hang an extravagant tale. Invading the Southwest oilfields after World War I, he even displaced Gib Morgan as hero.

Typical of the sophisticated diffusion of the legend is Mody C. Boatright's statement (*Gib Morgan*, pp. 5-6) that "in the 1920's young book-reading oil-workers, especially college men during summer vacation, carried his name into oil patches in which they worked." Similar evidence is supplied by a university student employed on a water pipeline at Big Spring, Texas, in 1928 (*Folk-Say*, 1929, p. 51), who, not to be outdone by other story-tellers on the job, put together Paul Bunyan stories from "stories he had read and jokes he had heard." In the same way, most Paul Bunyan stories are adaptations of tales from other sources, with or without occupational coloring.

Among the familiar jests that have entered into the Paul Bunyan saga are those of the buckskin harness that stretches when wet, the pet fish that drowns when it falls into the water, Liverpool Jim who jumps across the Round river and back without touching the other shore, the oxen strayed into the hollow limb of the tree through which they are driven, and Big Ole sinking knee-deep into solid rock while carrying one of Babe the Blue Ox's shoes.

In their original setting Paul Bunyan stories served as an outlet for the worker's love of tall talk, yarning, and practical joking. Originally, they were extemporaneous fragments—jest, sayings, repartee—exchanged in conversation and in competitive boasting, lying, and pranking. Thus many tales were told to haze or "take down" tenderfeet and greenhorns, as in the case of the stories of mythical monsters or "fearsome creatures of the lumber woods," which originated separately and were attracted into the Paul Bunyan saga. Other tales satirized or caricatured conditions in early-day camps (e.g. the stories of Gargantuan feeding of the men on endless pea-soup from a pea-soup lake and pancakes made on an iron stove-top griddle greased by assistant cooks skating over it with bacon rinds, hams, or bear-steaks strapped to their feet).

The extensive development (and essential monotony) of the Paul Bunyan saga is seen from Harold W. Fen-

ton's anthology, *Legends of Paul Bunyan* (1947), and its bulky bibliography—a tribute accorded few, if any other, American legendary heroes. B. A. BOTKIN

paulitos Literally, little sticks: Portuguese term for stick dances, corresponding to the Spanish *palitos* or *paloteo* and the Morris stick dance. They are always associated with Catholic holidays, as Epiphany at Moguerinha, and the *romariô* (pilgrimage) at Cercio, to Santa Barbara on the last Sunday in August. The men commonly wear white shirts, black trousers, waistcoats, broad black hats, ribbons and flowers galore; or they may be dressed in plain white trousers and shirts as the Spanish *palitos*, Basque *ezpata dantzariak*, and English Morris men. Formerly they are said to have been dressed sometimes in skirts and petticoats, revealing a transvestite connotation. Two drummers and a bagpipe furnish the accompaniment as the dancers strike together their short staves and execute various elaborate figures called *llaços* or, Spanish, *lazos*. The relationship to *Moriscas* and sword dances is evident. [GPK]

pavane A stately court dance, popular from about 1530 to 1676. The origin of the name is probably the Spanish *pavo*, peacock, because of the proud strut of the men with their swirling capes and their swords. It was danced either by one couple or many couples in circular processions around the room, with partners barely touching the fingers of their inner hands. The step was in slow 4/4 time, alternately forward and back—two simples and a double (left, close right, right, close left, left-right-left close). A drum accompanied the songs and the melodies on hautboys and sackbuts. Native in Spain, the pavane spread through all of western Europe. A lighter and faster version was the *passamezzo*. The *pavane d'Espagne* was an ornate version with small foot flourishes. The solemn pavane was followed by the lively *galliard*.

The pavane may have originated in religious processions; its tunes retain an ecclesiastical flavor to this day. In this connection it is noteworthy that an oath taken "on the Peacock" was one of the most solemn acts of medieval chivalry. [GPK]

pawang Malay Peninsula medicine man or magician, still a powerful and active figure in every village, though disappearing in the large towns. The office is usually hereditary but can be acquired by undergoing certain supernatural experiences and consultations with the dead. The pawang is the intermediary between man and the supernatural; he is medium, prophet, curer, although curing is more specifically the function of the *bomor*. (It is the *bomor* especially who knows how to expel the evils absorbed from touching a dead thing or meeting up with the Wild Huntsman of the Malay forests.) The pawang is consulted for all new projects and undertakings, that he may prosper them, and before all hunting, fishing, and crop-sowing, -growing, and harvesting activities, as well as for puberty rites, marrying, birthing, dying, burial. He is also associated with weather control. He commonly has an animal familiar which helps him cope with the supernatural, discover the causes of disease, maintain the world-order, and also to bewitch and punish. The term *pawang* is used also for the concept of "forbidden." His injunctions not to do certain things make those acts *pawang*. See article

"Malay Peninsula" by W. W. Skeat, *ERE* viii, pp. 363 ff. See *SENDING*.

Paw Paw Patch An American play-party game. As all play-party games, it combines song, dance, pantomime, and spontaneity of footwork and action. The dancers, lined up in couples, sing "Where, oh where, is sweet little (the name of the head woman) . . ." as she dances around the entire set. Then to the words "Come on, boys, let's go find her . . ." the boys dance around the women's line. The real pantomime follows the words, "Pickin' up Paw Paws, puttin' 'em in her pocket . . . Way down yonder in the Paw Paw Patch." Partners, hands joined, enact the scooping up of fruit and putting into the pocket. Finally the head couple slides down between the two lines to the foot. This song-dance is especially popular among southern Negro children. But it serves as an excellent ice-breaker in social gatherings all over the country. [GPK]

pea The edible seeds of a climbing herb (*Pisum sativum*) which, according to the countrymen in some parts of England, grow the wrong way in the pods during Leap Year. In order to insure a good crop, they should be planted in the wane of the moon that they may wax with that celestial body and bear plentifully. To find either one or nine peas in a pod is a sign of good luck, and in the case of a young girl, the first man to enter the room (after she has discovered nine peas in a single pod) will be her husband. In Scotland, on Halloween, if a boy and girl each place a pea on the coals, it will foretell their future. If the two peas stay where they are placed and burn, the pair will be married; the length of time and brightness of the burning indicate the duration of their happiness, but should one pea move from its place, there will be no marriage; and whichever one moves indicates the fickle party. In parts of England the water in which peas have been boiled is given as a cure for measles.

peach In China the peach is the emblem of long life, immortality, and a female phallic emblem, and the peach blossom is the emblem of a bride. Porcelains with a peach design, intended as birthday gifts, carried the wish of long life and prosperity. The tree is especially venerated because it contains much *ling* (soul substance or spiritual force). The peach is also a potent force against demons; branches, blossoms, or even carvings of a peach over the doorway keep demons out; and children wear a peach pit suspended about the neck to keep demons away. During the Chou period an attendant at the royal court waved a peach wand to dispel evil spirits. If the soul ate a peach from the world tree (a peach tree) he would have 3,000 years of good health, and he could renew his youth as long as the supply held out. Immortality is symbolized in Taoist depictions by an old man emerging from a peach. On New Year's Day, young and old alike in China drink peach soup.

In Japan the peach is a symbol of fertility. There is a tale of a woman who was washing and found a great peach in the water. She carried it home to her husband, who opened it. Inside the pit they found a baby boy which they raised; when the boy, Momotaro, was grown he repaid them by defeating the people of the Island of the Devil and giving them their treasure.

Peach was a wood in universally high repute as a divining rod. In the north country of England they say

that when the leaves on the peach tree fall early there will be a murrain on the cattle. The Zufi Indians have special bogeys which guard the peach orchards against youthful pilferers. Members of the Fire Brand Society of the Pueblo Indians fast from peaches in order that they may not be burned by fire. The Navaho Indians use dried peaches as a purgative. In Italy, burying peach leaves will cure warts; in Texas notches are cut, one for each wart, in a branch which is buried under the tree. In Texas also the leaves boiled in water are good for upset stomach, and peach sticks steeped in water are good for sudden pains of the heart, of the stomach, and for swollen abdomen.

peacock The worship of the peacock among the Yezidis has been reported as a survival of Tammuz worship. In Greece the peacock was sacred to Hera and kept in her temple. In Kutch the peacock may neither be caught nor annoyed. It is sacred among the Jats and Khonds of India and in the Punjab its feathers, smoked, will heal snakebite. Elsewhere, waved over the sick, the feathers will cure disease. However the Moslems of Java report that the peacock was guardian at the gate of Paradise, ate the Devil, and thus got him into the gate. The *Kama Sutra* recommends that if the bone of a peacock be covered with gold and tied on the right hand, it will make a man lovely in the eyes of beholders. In European lore the feathers are unlucky and the cry of the peacock is a bad omen, though in medieval hermeneutics the peacock was the symbol of the soul. The serving of peacocks as a delicacy at great feasts in former times in Europe is part of a housewives' superstition, still powerful, namely that anything that looks beautiful must taste good. [RDJ]

pearl A lustrous, calcareous concretion deposited in layers around a central nucleus in the shells of various mollusks, notably the oyster: formerly said to be rain-drops swallowed by oysters. In Hindu folk belief pearls were said to be found in the brain, forehead, and stomach of elephants; these were especially powerful as protective charms. Dissolved pearl is an ingredient of every love charm in the East. It is one of the gems included in many Hindu charms: the five-gem *pancharatna*, the nine-gem *navaratna*, for instance. In Hindu astrological charms it represents the moon and appears in the southeast corner of the arrangement. The gates of the New Jerusalem mentioned in *Revelation* will be made of single pearls; the third of the Mohammedan heavens is of pearl. In the Orient pearls were said to be formed from teardrops, and would bring tears to the possessor.

In Borneo every ninth pearl taken is placed in a bottle with two grains of rice each, that they may breed, and the bottles are stoppered with the finger of a dead man. A 6th century Chinese belief held that dragons spit pearls, or that it rained pearls when dragons fought in the sky. In China the pearl is also regarded as a charm against fire, perhaps by association with the dragon, the rain-giver.

Pigafetta, who accompanied Magellan, compared pearls seen in the Celebes to doves' eggs, and reported two owned by the king of Borneo as large as goose eggs. Natives of the Sulu Archipelago believe that nautilus pearls are unlucky and throw them away.

In the Orient it has long been maintained that pearls lose one percent of their luster per year. In Europe they

become dulled through the sickness of the owner; death of the possessor sometimes destroys their luster altogether. It is also said that pearls have to be constantly worn to preserve their beauty, luster, and power.

Benvenuto Cellini, the famous goldsmith, claims as a boy to have shot down cranes which contained numbers of small pearls they had eaten. In his day man too consumed pearls internally. Because of their great price, they were not taken whole, but powdered, or dissolved in lemon juice. This solution known as "salt of pearl" was especially recommended for epilepsy and hysteria. Powdered pearl was given as late as the 16th century as an antidote for poison, and was later used in France as a cosmetic powder because of its power to improve the texture and luster of the skin. Powdered pearl in distilled water was given to Charles VI of France to restore his sanity, though in that case the cure is known to have been ineffective. Physicians of the 13th century prescribed it for the heart because it was "hard like the heart." In 17th century Denmark milk of pearl was used as a general tonic. Pharmacists were cautioned to buy their pearls whole because they lost their potency when powdered, and because there was much adulteration in the powdered pearl sold commercially (as they should have known). [JWH]

Pecos Bill Legendary cowboy culture hero of the American West, Australia, and the Argentine. He taught the cowboys everything they know, including their songs and oaths. He even taught the bronchos how to buck. He dug the Rio Grande, invented the six-shooter, and the Western movies. He was weaned on moonshine liquor and died from drinking nitroglycerine.

pe'dles be'djose Literally, Peddler is coming; the former Peddling Dance of the Penobscot Indians of Maine. It was danced as a typical round, but with pantomime of the pioneer peddler and all his goods, outlandish to the Indians of those days. The songs, in typical Penobscot antiphonal form, say that "Peddler is coming, ya hi ho; he has money," etc. Thus the dance is certainly neither of ancient nor of ritual origin. [CPK]

Pegasus In Greek legend, a divine winged horse which sprang from the body or the blood of the slain Medusa. It was caught and tamed by Athena, presented to the Muses, and kept near Corinth. The Corinthian Bellerophon, sent by Iobates to conquer the Chimera, tried to catch Pegasus unaided and failed. Upon advice, he slept a night in Athena's temple; there the goddess appeared to him in a dream and presented him with a heavenly bridle which remained even after he awoke. With it he was able to mount Pegasus. Bellerophon, using spears and arrows and fighting from the horse's back, slew the Chimera. Later he fought the same way against the Amazons. When, however, he tried to reach heaven on the horse, it threw him and escaped to Zeus, who used it to fetch his thunderbolts and other tools. In much later tradition, Pegasus is the mount of the poets, but in classical legend his only connection with poetry is the fountain Hippocrene, which bubbled forth from the mark made when Pegasus' hoof struck the earth. The latter accretion to the myth seems to be based almost wholly on false etymology, Hippocrene meaning the horse fountain.

Pe-har or Pe-kar A Tibetan fiend of the king class; the patron of sorcerers and protector of yellow-hat monasteries. Pe-har is identified with the Chinese Wei-to and the Indian Veda. The diviner of gNas-c'un monastery near Lhasa is believed to be an incarnation of Pe-har.

Pekko God of barley of the Finns. Kaarle Krohn believes there is an affinity of this Finnish deity with the Icelandic *Beggvir* or *Byggvir*, the servant of Freya. [JB]

Peko God of fertility of the Estonians in Setumaa. Even in recent days (1933) some statues of this god were found in the shape of a man, formed from wood or frequently from wax. The worshippers of Peko were a kind of secret society. The most important feast was celebrated on the night of October 1. All of the ceremonies were performed like a mystery. The following song was sung: "Peko, our God, give your protection to our cattle, preserve our horses, give shelter to our corn fields from all the hail storms." The people were noisy and scuffled about until one of them was accidentally wounded and blood appeared; this one became priest for Peko for the next year. The idol is hidden in the priest's granary. At sowing time it is brought out to the fields to give fertility to the crops. (See *FUF* VI: 104-111; and *Mitteilungen des Vereins für finnische Volkskunde*, II, 1944, pp. 44-5). [JB]

Pekwin Zuñi Indian speaking place, speaker; the name for any Zuñi assistant to the head or chief of a society. The Zuñi Pekwin *par excellence* is the Sun Watcher and Crier chief, who is speaker to the Sun, but also serves as speaker to the council of the Rain chiefs. Appointment to this office is for life or good behavior, and is made by the Council. Pekwin determines the solstices by watching the sunrise in winter and sunset in summer. The solstices at Zuñi date other ceremonies, so Pekwin is virtually keeper of the calendar. He has no sacred bundle; the sun is his sacred possession. These and other duties make Pekwin the most revered and holy man at Zuñi, and the most valuable to the community. [EWV]

Pelintsiek The dentalium shell money (*tsik*) of the California Yurok Indians is personified in their mythology as Pelintsiek, or Great Dentalium. The myth describes how the dentalia came to the people from the north. When they came to the Klamath River the small shells continued southward, but Pelintsiek and Tego'o, his traveling companion, went up the river. The story is full of place names, naming specifically what places they entered, and what places they passed by. The story ends with Pelintsiek's remark that some money must advance even farther up the river to the Karok and Hupa Indians.

Pellinor (1) or **Pellan** or **Pelleam** The Maimed King in various versions of the Grail story in the Vulgate Cycle of Arthurian romance; in earlier Grail stories the Maimed King is called the Fisher King, or the Rich Fisher. See *GRAIL*; *JOSEPH OF ARIMATHEA*.

(2) In the romance *Palamedes* and in the prose *Tristan*, etc., Perceval's father, the hunter of the Questing Beast. [MEL]

penates The gods (*di penates*) worshipped in private households in ancient Rome: probably originally pantry or store-closet (*penus*) guardian deities. There was a place kept at every hearth for the penates, who were, when

identified, thought to be the Dioscuri, Castor and Pollux. They were worshipped in connection with Vesta and the lares, the latter sometimes being considered a subclass of the penates; the fire was kept burning in honor of the penates; the table was specially set with a saltcellar for them, and first-fruits were offered to them. The state too had its penates, said to have come from Troy with Æneas. Once, when the images of the penates were transferred from Lavinium to Rome or Alba Longa, they disappeared and were found again in their original place; the attempt to move them was abandoned.

penillion An ancient Welsh contest of improvising stanzas to well-known airs played on the harp. Contestants in turn had to fit riming verses to the time of the melody. The singer, according to some regulations, had to sing a counterpoint to the harp melody; other standards allowed him to sing the melody but not to begin with it nor to start with the first beat. The practice survived in bardic times as a form of music training.

Penitentes *Los Penitentes*, the penitents; specifically, a lay brotherhood of religious flagellants. The modern *Hermanos Penitentes* of New Mexico originated in the *flagelantes*, *disciplinati*, and *bianchi* of Italy and Spain, and the *Geissler* of Germany. As a Christian penance, flagellation was introduced about 1000 A.D. by Italian ascetics. The first folk demonstrations were impelled by catastrophic events and by terror of the end of the world, in 1250 by Italian political unrest between the Guelphs and Ghibellines, in 1349 by pestilence and earthquakes. The *disciplinati di Gesu Cristo* were organized in Perugia in 1260, with definite rituals of initiation and penitential procedure. Without any apparent leadership, the frenzy spread through Germany to the Netherlands and the borders of England and France.

The temporary votive brotherhoods lasted the 33 1/2 days of the pilgrimage duration, with flagellation twice daily according to locally varying statutes. For the public ritual the penitents were disrobed except for an ankle-length loin-cloth and a sack tied over the face. They lay down in a circle, each one indicating his transgression by his posture. After an act of absolution the self-flagellant processions wound through the streets amid laments and outcries. The chants (*laudi*) listed the deadliest sins: perjury, adultery, homicide, blasphemy, rape, etc. These poignant folk songs bewailed the *passio Christi*, the sufferings of Christ here reenacted; the *cantus maternus* implored the Virgin Mother to mitigate the wrath of the Deity:

Pianzi con iochi et comel core
La passion de Cristo salvatore!
Wainent tougen mit den ougen,
Habt in herzen Christes smerzen!

Thrice during the processional the penitents prostrated themselves on the ground in a cruciform position with extended arms, then knelt with arms upraised in supplication.

The companies of 40–100 members attracted men of every class, but largely simple people, peasants and laborers. Women flagellants were in the minority. At sacred shrines they sometimes congregated by the hundreds. The tremendous spectacle gradually became more formalized and at the close of the 14th century was enacted on a *talamo* or stage in the nave of the church, as *devozione*. The spontaneous demonstrations, under

ecclesiastical suppression, attracted subversive elements and in Germany decayed by the end of the 15th century. In Italy and thence in Spain the *bianchi* (white men) organized as a monastic order.

The Third Order of Franciscans transplanted the cult to the Philippines and to Mexico, and in 1598 a member of this lay order, the *adelantado*, Don Juan de Oñate, brought it to New Mexico. The Mexican *penitentes* are not organized, but individually expiate transgressions or fulfil vows made in times of stress. On Good Friday, on the occasion of a Passion Play, they hobble about the Stations of the Cross, with iron grills mangling the flesh of their ankles; or they drag huge wooden crosses; or they uphold bundles of organ cacti on their shoulders and extended arms, while candles burn into the palms of their hands. In Tzintzuntzan and Taxco they appear clad in a black loin-sheet and face-covering, mercilessly lashing their bare backs. In Tenancingo the flagellant *arrieros* wear ordinary clothes and mitigate the force of the blows by sacks borne on their backs, as they dance back and forth in single lines.

In New Mexico *Los Hermanos Penitentes* have persisted in villages colonized by conquistadors and their Mexican companions, now intermingled with native Indian blood. They acquired particular significance after 1828, following the exodus of the Franciscans. They took over the spiritual administration of the people and still continue their offices of solace, charity, and political consolidation. The papal bull of 1886 attempted in vain to suppress the brotherhood and public penance. Today under ecclesiastical and civil toleration the organization has increased its prestige as a bulwark against "gringo" encroachment and has become a political factor in the Spanish-speaking pueblos.

None the less, the initiation rites and the ceremonies in the chapter house (*morada*) are guarded as secrets. Visitors are at all times resented, except by special dispensation; and the dark of night hides the climactic dramas. The great annual rites begin on the first Friday in Lent. During Holy Week the *disciplinas*, or whips of yucca-fiber, lacerate bare backs falling first on one shoulder, then the other. Ecstasy rises to its peak during the night of Maundy Thursday. The *tinieblas* (three dark hours) are realistically enacted in the *morada*, to the clanking of iron chains on the stone floor and to the laments of the *laudi*. These liturgies are accompanied by a small piercing reed-flute (*pito*) and a swishing bull-roarer (*metraca*). The chants invoke the Mother of God and bewail the sufferings of the Savior:

. . . Santa Maria, pecadores somos;
ruega para nosotros . . .
. . . Por el rastro de la sangre
Que Jesu Cristo derrama . . .

Their own trail of blood leads to the *calvario* on an adjacent mountainside. A *cantador* (chanter) and *resador* (prayer leader) head the procession of dusky flagellants clad in white trousers and a face-covering, plying their whips or dragging huge wooden crosses over precipitous paths. A chosen representative of Christ totters under his crown of thorns and his heavy cross. His crucifixion formerly took the realistic form of nailing for the duration of three hours, but now has been modified to tying by ropes for 40 minutes.

These ordeals, as in general the austerities, have been

mitigated. In some villages a figurine replaces the human Christ. The spectacle at Talpa, for instance, starts a processional with an image of Our Lady and a cart with a life-size figure of death (*carreta de muerte*). A full cast of characters reenacts the crucifixion scene, with Roman centurions, Jewish constabulary, the three Marys: a Passion play similar to these folk-plays of Mexico with texts dating back to the Conquest.

The frenzy recalls the spontaneous demonstrations of the loosely organized *Geissler*; the permanence of the society resembles the well-ordered *disciplinati* and *bianchi*. The officers are the Brothers of Light, *hermanos de la luz*, as the *hermano mayor*, *cantador*, *resador*, and *inferno* (healer), etc. The flagellants are the brothers of darkness. All proceedings and the course of life in the *morada* are strictly regulated.

The immediate religious motivation and forms certainly have their prototype in medieval Christianity. Yet in the New World they have been blended with Indian elements: musical tonalities and instruments, an organization analogous to that of the *kiva*, a recurrent seasonal climax like the seasonally rhythmic ceremonials of the Indians. Native analogies may account for the ready acceptance and for the continuance beyond its life span in Europe. Indigenous self-torture was always propitiatory, at times penitential, frequently vision-seeking. The Aztecs pricked their tongues with maguey thorns in personal humility; the Pueblo whippers lashed initiates for greater fortitude and power; the Plains sundancers pledged their ordeals to avert personal and communal disaster. In seasonal rites such drawing of blood fertilizes the latent earth. A dim remembrance of vegetation magic may have roused the penitents of both continents to their orgiastic self-mutilation for Christ and for their own souls.

Other motives, such as sexual perversion, socio-political heresies, may have contributed in some cases. It is evident that social strife inaugurated the movement and political prestige developed in later stages. A possible undercurrent of exhibitionism may have contributed to the ultimate spectacular display. But fundamentally the *penitentes* have offered their blood sincerely and exultantly as atonement to the supernaturals. See *ARRIROS*; *FLAGELLATION*; *RITUAL DRAMA*; *SACRIFICE*; *SUMAMAO*; *SUN DANCE*.

GERTRUDE P. KURATH

Pennsylvania Dutch folklore Like other folklores this grows out of the daily lives of the common people and represents a fully American manifestation in that it results from a fusion of folklores of a number of peoples of different backgrounds, who, leaving their native lands for the New World, learned to live together. Most of the Pennsylvania Dutch are descended from Germans of the Palatinate, or from the Swiss, or from French Huguenots, but intermarriage with the English, Irish, Scotch, and others has produced a people apart from the original stock known as the Pennsylvania Dutch. It must be noted that today Pennsylvania Dutch really indicates a distinctive culture.

The Pennsylvania Dutch dialect—Pennsylvania Dutch not because the people call themselves *Deutsch* but because the English have from time immemorial called the Germans Dutch—is a mixture of Swiss, Swabian, and Palatinate dialects commingled with English. The famed humor of the Pennsylvania Dutch speech comes prin-

cipally from the attempt to translate German idiomatic expression into English. "It wonders me" and "Throw the horse over the fence some hay" or "The bell won't make" have a skewed grammar that to some is as hilariously funny as Brooklynese pronunciation. In addition to this stands the vocabulary itself, quaint-sounding and imaginative. Coffee is *barfiessich* (bare-footed) when served without milk or sugar. The *littel haus*, exactly descriptive, is an outdoor toilet. A *gipser* is a little fellow who cuts the grain with a sickle at harvest time, doing his very best to help his parents get the fields cut. Pennsylvania Dutch has also borrowed words from English and adapted them to its pattern. *Bischur* is faintly recognizable as the English "to be sure"; the *fensemaus* is the fence mouse or chipmunk; the *bandihawna* is the bantam rooster. A *frallich* is a dance or a farmer's bee for some special work; the word may come from the English "frolic" or it may be the German *frohlich*, happy, gay. The old lore too lives in the language. A *hexe-schuss* (witch-shot) is either a shot fired at a witch, or a sudden pain, a stitch, rheumatism, or the like, which is sent by witches.

The single word meaning "rooster without a tail" in Pennsylvania Dutch is *bortzardhawna*. The word for "hen without a tail" is *bortzardhinkle*. *Bortza* means a tailless chicken of any variety. In English this kind of chicken is known as the *rumpleless fowl* or *rumpie*. Children in Berks County, very angry at each other, yell feelingly, "Du bortzardhawna!" or "Du bortzardhinkle!" depending upon the sex involved, or simply "Du bortzie!" to indicate either. Sometimes the noun is preceded by an expletive. Whenever used in name calling there is always great derision or contempt indicated.

Chief among sources of this folklore are marriages, deaths, religion, hymns and songs, superstitions, folk cures, *hexerei* or witchcraft, Christmas and Easter, decorative arts, butchering, harvesting, story-telling, etc.

There seems to be complete uniformity of opinion that, of the Pennsylvania Dutch festive occasions, births have always been relatively unimportant, while the one which calls the greatest number of persons together is the funeral. Weddings have ever been highly festive occasions, but are usually confined to relatives and very close friends of the family. Such gatherings are none the less large. As recently as 1949 there occurred a remarkable affair in the old tradition between a young man of the Reformed Church and a young woman of the "plain people." Convention among the particular sect of the latter required that the bride-to-be prepare with her own hands the wedding feast for all the guests, advised and aided only by her mother. For four days she labored from before daylight till after night had fallen, preparing for the two hundred guests who had been invited because of the considerable size of the *freundschaft*. This ordeal for the lady is designed to keep her ever mindful of her obligation as a hostess and to provide liberally for her family.

Frequently there is great fun at weddings, games played including the "bloom-sock" (also much enjoyed at Christmas parties). The "bloom-sock" is a handkerchief twisted, doubled, and knotted at the ends. Thus treated it is passed by a group seated on a bench from one to the other behind them, while one in front of them hunts it. If those on the bench can do so, they hit the hunter with it, whereupon, if he is able, he snatches

it away, takes a seat on the bench and the one from whom it has been snatched replaces him in front.

As previously noted, funerals among the Pennsylvania Dutch have been the occasions of the greatest private concourses of people. Within twenty years there are records of funerals in Berks County with two-mile-long processions of automobiles driving from the home of the deceased to the country church. On one such occasion the clergyman having completed his lengthy eulogy declared that the bereaved family wished him to thank all those present (some nine hundred) for their many kindnesses during the trying weeks of the last illness, and that they wished him on their behalf to invite all present to return to the farm for supper. Some three hundred accepted. The hospitality was lavish for the supper, as it had been for the dinner preceding the funeral. This lavishness seems to be required because of the great distances—sometimes several hundred miles—close friends and relatives travel for such an occasion.

Many former gatherings, such as "singings", quiltings, "snitzings," and apple-butter boilings, are less frequently held today than formerly. Except for quiltings, which are now usually carried on in church or organization rooms rather than homes, many old-time events are things heard of instead of things experienced. Snitzings, literally "cuttings," are gatherings at which fruit (principally apples) is cut, usually in eight pieces, for drying. Peaches, pears, and other fruits are prepared less frequently.

Folk songs have been numerous among the Pennsylvania Dutch. These have included songs of immigrants, songs of nature, rounds, spinning songs, lovers' songs, game songs, and ballads concerning local celebrities and local tragedies. Many hymns, particularly those of the Old Order Amish are folk poetry, some really being ballads. Tunes are not printed in Amish hymnals, airs being handed down orally in the ballad fashion. Within recent years some have been taken down and published in folklore studies. Pennsylvania Dutch spirituals exist in scattered instances. These have been used at "bush meetings" frequently as songs to invoke God's power upon those present.

Numerous folk beliefs, many of them extremely picturesque, persist among the Pennsylvania Dutch. Cows that "go dry" quickly are sometimes said to be bewitched, and so are butchered. A family heirloom pitcher that unaccountably dropped from a mantel in a "Dutch" farmhouse was interpreted as a "token" that someone in the house would die in a few days. Three days later a farmhand was killed in a motorcycle accident! Permitting the roofer to repair the gutters and spouting on a farmhouse on Good Friday was held accountable for the death of a litter of shoats during a cold spell the following night. Peach trees have been horsewhipped on Good Friday morning before breakfast so that they would produce more fruit. A farmer has walked around inside his garden fence three times on St. Patrick's day before nine o'clock in the morning to keep moles out. A bottle of asafetida has been kept hanging in a cow stable to keep cows from giving stringy milk. The list of acts that will "bring bad luck" is as varied as interesting.

Folk cures, including "powwowing" and charms, follow well-known patterns. Cures for hiccoughs include sucking lemons, scaring the hiccougher, holding the

breath for a slow count of ten, tying a belt tight around the waist, swallowing seven small pieces of ice, finding seven bald-headed men, etc. A well-known cure for whooping cough is *for the victim* to drink out of a small blue glass cup. The quickest cure for a nosebleed is thought to be placing a key on the back of the neck. Placing a feather in a child's diaper will break him of wetting himself. Sprains are frequently treated literally with "vinegar and brown paper." Warts are "bought," or charms in Pennsylvania Dutch are spoken over them to remove them. Powwow equipment is sometimes simple, sometimes elaborate, even to including a chest in which the powwow doctor keeps his equipment. (A fine example of such a chest is in the Landis Valley Museum, Lancaster County, Pa.) While powwowing is probably less frequently employed today than formerly, it still exists and is often resorted to when professional medical aid appears to have failed. A man now living in Reading, Pa., had his knee badly crushed when a threshing machine on which he was riding turned over and pinned his leg beneath it. His complete recovery of the mobility of his knee joint has been attributed by many to the work of the powwow doctor rather than to that of the physician.

In our day, while witchcraft, or *hexerei*, is frequently treated lightly by many, probably most Pennsylvania Dutchmen know at least one witch or someone who is suspected of being a witch. The *Sixth and Seventh Books of Moses* are said to be the source of the major part of the formulas for witchcraft. Witches are about evenly divided between men and women, because of the fact that the power cannot be passed on to one of the same sex. Stories of witchcraft are frequent and, from time to time, cases involving the practice come up in court. The effects of *hexerei* may be either good or bad, depending upon the circumstances and whether the hex is being "put on" or "taken off."

The daughter of a farmer, while crossing another farmer's property to go to the mailbox, was impertinent to the latter, who, promptly gave her a few lashes with his whip. Her father, indignant, took the case before a justice of the peace who settled the matter, but presently things began to happen in the house of the first farmer. Strange noises were heard in his house at night. Doors that had been securely locked and shutters that had been bolted were found to be mysteriously opened. Chairs were overturned and dishes in cupboards were broken, but no intruder could be discovered. Finally the farmer and his wife journeyed to a witch they knew of twenty-one miles away. He took water from his spring; into it put herbs, and over it said incantations in "Dutch," gave it to the farmer, told him to go home, cut a branch of cedar from a tree in his pasture, dip the branch in the water and sprinkle it on every threshold, every windowsill, and in every chimney hole in the house. This removed the spell.

In another case, a woman who felt all was not well with her consulted a witch as to her ailment (which she did not reveal in telling the story), and he informed her that she was indeed *ferhexed*. When she asked him what she should do to remove the spell, he told her to clean her house from cellar to attic, and to save all the sweepings, then to make a bag of red flannel that had not ever been used for anything. Into this she was to put the sweepings. Next, she was to stick 15 pins into

the dust—not through the flannel—six with the points down and nine with the points up. Finally, she was to tie the bag shut with a rope, hang the whole up on the branch of a tree and take a club and beat it. She did all this, and the spell was removed.

Other instances involve deaths and recoveries achieved by magic and include the use of wax and dough images and other paraphernalia whose origins go back to the Middle Ages.

Christmas and Easter have their own folklores. Christmas trees, while given to the United States by Germans, did not originate with the Pennsylvania Dutch, as some have claimed. The Christmas *putz* or *crèche*, however, is thought to have been first introduced by the Moravians around Bethlehem, Pa. Christmas cookies—*lebkuche* (gingerbread or spice cakes), *sprengerle*, *pfeffernüsse*, *matzebäume*—and other elaborate creations with sugared designs, belong to the Old World Germans as well as to the “Dutch,” as does Belznickle (who “takes care” of naughty children by putting coal and switches in their stockings). See KNECHT RUPRECHT. The old European belief that animals in the barns talk at midnight on Christmas Eve is also widely accepted.

Easter-egg coloring and decoration have been widely practiced at least since the 18th century. Onion skin is the usual coloring matter used; tulips and other designs scratched skilfully on the shells through the red-brown dye thus produced carry on the ancient traditional designs. The famous egg-tree is an old Germanic institution, but seems first to have been associated with Easter by the Pennsylvania Dutch. It is usually a birch or a cherry tree whose trunk and branches are wrapped with cotton batting and hung sometimes with hundreds of colored eggs. Such egg-trees are often erected at Easter time as evergreen trees are at Christmas. The ancient concept of the egg as fertility symbol lies at the root of the practice and the belief still exists, as Cornelius Weygandt mentions in *The Blue Hills* (1936), that the creation of such a tree will bring children to the childless.

The traditional Easter Sunday morning breakfast among the Pennsylvania Dutch is ham and fried eggs, and it is not uncommon for a vigorous man to consume from one to two dozen eggs for breakfast. Hard-boiled dyed eggs are eaten in great numbers throughout the whole Easter season. Ham, boiled or baked, and fresh dandelion greens are *de rigueur* for Easter Sunday dinner.

The items indicated above are merely such as would be included as part of an ordinary dinner on the occasions mentioned. A typical Pennsylvania Dutch dinner held in Philadelphia in April, 1948, whose menu was suggested and prepared by a group of women in upper Montgomery County, Pa., included the following:

Chicken Noodle Soup		
Celery	Jelly	Pickled Beets
	Smearcase	
Pickled Eggs	Molasses	Apple Butter
	Scallions	
	Stewed Chicken	
	Giblet Gravy	
Potato Filling	Peas	Pickled Cabbage
Dried Corn		Chow Chow
	Apple Sauce	
Green Apple Pie		Cheese
Bread	Coffee	Butter

Not least among the folk contributions of the Pennsylvania Dutch to the world's cookery has been pie, and no subject is more likely to provoke a discussion than pies and how to make them. In November, 1923, *Pie-ology of the Pennsylvania Dutch* was the title of a talk given at a meeting of the Montgomery County (Pa.) Historical Society, the talk being accompanied by an exhibit of real pies—forty varieties—these being a few of the many kinds invented by the “Dutch.” The English settlers upon that occasion were credited with inventing only two varieties—meat pie and mince pie.

Of all the folk accomplishments of the Pennsylvania Dutch, however, their decoration is most prominent because of their love of the gay and beautiful. Pottery, china, cooking utensils, furniture, architecture, glassware, metalwork, boxes, textiles, needlework, quilts, *frakturschrift* (*Geburts-Scheins*, *Tauf-Scheins*, *Haus-Segens*, etc.), have long been decorated with the signs and symbols long known in the European homelands, and which were cherished by immigrants in the New World. Tulips, pomegranates, roses, peacocks, *distelfinks* (thistle birds or goldfinches), other birds, horses, deer, fish, and geometrical designs are freely employed.

Some of these were symbols of fertility; some symbolized the Christian Resurrection; some of purely geometrical form were used for sheer decoration; some were used to protect from evil. Much attention has been devoted to them, and many widely varying opinions regarding them have been held in this country from the day of Francis Daniel Pastorius to the 20th century. Painting symbols, or “hex signs,” on barns apparently first became customary in Pennsylvania Dutchland in the early 19th century. Many students of Dutchiana believe these symbols to be akin to Rosicrucian signs designed to protect animals from the working of witchcraft and the evil eye. An equal number believe them to be merely decorative devices, and point to the fact that pictures of horses, cows, and other animals are also frequently painted within the circles and other geometric figures for decoration only. In support of the latter idea may be mentioned the belief of an old woman of Berks County, Pa., who died in 1927 at the age of 87. Though her people had been in the United States for some two hundred years, she could scarcely speak more than a dozen words of English, and had been known in her younger and more active days for her ability to powwow. She was familiar with all the lore of the countryside, and when she and her husband bought, in 1890, the farm on which she died, the barn symbols were repainted after their older fashion. Neither she nor her children had any association with such signs except as decorations. Her many sayings and advices indicated the high regard in which she held the supernatural, but that regard did not extend to “hex signs.”

Pennsylvania Dutch folklore includes tales of phantom dogs, phantom children, and phantom adults. In Berks County, a few years back, old folks were still telling stories about a dragon (a great rarity in American folklore) that flew across the heavens snorting fire and smoke.

The “Dutch” are past masters at the art of storytelling, and having found that most phases of ordinary life furnish fruitful material, have by no means neglected the so-called “dumb Dutch” story which wherever told among them provides much amusement. Typical of the genre is that about a Reading street car conductor

who was suspected of "knocking down" fares. One day a "spotter" called his attention to the fact that he had one more passenger aboard than fares rung up. Whereupon the conductor stopped the car and said to the passengers, "Vell, now, I guess von of yous'll have to get off." Another is about a Pennsylvania Dutch woman who had country connections, but who had been brought up in Philadelphia. After World War II she moved with her family to the remote suburbs, and decided to fulfil a lifelong ambition to keep chickens. She visited a market in Lancaster and asked a farmer: "How long does it take eggs to hatch?" He replied that chickens required three weeks; ducks, four. She bought a setting, and three weeks later returned the eggs and demanded her money back. On being questioned as to why, she said, "Well, you see, I waited three weeks and didn't get chickens, and I don't want ducks."

At the present time there are in Pennsylvania several Pennsylvania Dutch folklore museums; chief among them are the following:

The Landis Valley Museum, four miles out of Lancaster, Pa. This includes a general collection covering Pennsylvania Dutch material from Lancaster and neighboring counties.

The Moravian Museum, located in the George Whitefield House (1740) at Nazareth, Pa. This entire collection is unified by Moravian interests, and includes the well-known paintings by John Valentin Haidt (1700-1780).

The Schwenkfelder Museum, now housed in the second floor of the library of the Perkiomen School at Pennsburg, Pa., but soon to be displayed in a new building which will be constructed especially for it. The collection includes household goods, books, garments, china, farm implements, examples of folk art, etc., solely pertaining to the Schwenkfelders.

The Pennsylvania Dutch Folklore Center, at present housed in the Fackenthal Library, Franklin and Marshall College, Lancaster, Pa., publishes *The Pennsylvania Dutchman*, a folklore newspaper. A building to house a Pennsylvania Dutch Library on the campus of the College is planned.

WILLIAM J. PHILLIPS

pennyroyal A low, hairy, strong-scented herb (*Hedeoma pulegioides*) of the mint family yielding the oil of pennyroyal; also, the European mint (*Mentha pulegium*). The name is a corruption of the Latin *puleium*, fleabane,

and *regalis*, royal, or poison for the king's fleas. In America it is called mosquito bane and a bunch is tied to the bedpost. It is made into a malignant draft by witches and causes those who partake of it to see double. In medieval times it was used as a water purifier by voyagers, being put into whatever manner of foul water was available to drink, whether salt or fresh. Medicinally, it purified the blood and was useful for colds, headache, and fainting fits. In colonial times it was made into a tea for measles and whooping cough. The Catawba Indians boiled the root for colds. The Navaho medicine man chews the seeds and blows in the face of the patient, or on the affected part for all manner of ills. The Tewa Indians use it powdered and rubbed on the head to cure headache or on the body for fevers. The Santa Clara Indians wear it in a deerskin bag about the neck for sore eyes. The Negroes of Jamaica boil it with marigold (or a rusty nail) to cause miscarriage or abortion; it eases labor pains, and is good for babies, but bad for young girls. As a tea with sugar and salt they use it for headache, colds, catarrh, and as a general medicine. They also shave a spot on the top of the head and apply leaf poultices steeped in rum to cause a head cold to run out of the nose.

pent cuckoo A folktale motif (J1904.2) in which several noodles made a hedge to pen in the cuckoo, so that she might sing to them all year. They made the hedge, got the cuckoo and put her into it, and, as soon as she discovered herself free within the hedge, she flew away. The fools were exasperated that they had not built the hedge high enough. This is one of the most famous undertakings of the Mad Men of Gotham (see W. A. Clouston, *Book of Noodles*, London, 1888, pp. 26-27). It is classified by Stith Thompson with stories featuring absurd ignorance of proper places to keep animals (J1904 ff.). See LITTLE MORON; NOODLE STORIES.

Pentheus In classical legend, king of Thebes and cousin of Dionysus. After Dionysus returned to Thebes from his journeyings, Pentheus opposed his worship as a god by the women of Thebes. When force did not cause an end to the rites, he attempted to spy on the ceremonies and was seen and torn apart by the followers of Dionysus, among them Pentheus' own mother Agave.

pepper (1) An aromatic spice made from the berries of the pepper plant (genus *Piper*) coming originally from the Indian Archipelago. This was one of the earliest known spices and has continued a staple of commerce between India and Europe since earliest times. The ransom of Rome was paid partly in pepper. Its high price at Venice induced the Portuguese to explore the route around the Cape of Good Hope, and was responsible, among other things, for Columbus' voyage. The finest pepper comes from Malabar, and to secure the finest flavor it should be ground fresh at the table. Both black and white pepper come from the same source, the outer skin being removed for the white; this is said to remove much of its value.

In the 13th century pepper was a panacea for all the ills of mankind, from weak eyes to the plague. However, in 1563 Garcia da Orta was seriously doubting some of the uses to which it was being put, and of the Greeks he says, "All agree with one accord not to tell the truth." In Bavaria a paste of black pepper and sugar was used to fill the cavity in an aching tooth. For ague

you are advised to swallow a whole peppercorn on each of seven successive mornings, preferably beginning the dosage before beginning to shake. A favorite general medicine was a pepper posset made of peppercorns boiled in whey. In Mexico and Texas, peppercorns are often placed in a wound suspected of being poisoned, as by arrows. In Texas a piece of cotton filled with black pepper is placed in the ear to cure earache. An excess of pepper is said to be aphrodisiac.

(2) The fruit of a plant of the nightshade family (genus *Capsicum*). This is the pepper from which red pepper, Cayenne, and paprika are made. For success in growing these peppers it is well either to plant them while in a rage, or to hire a red-headed person to do it for you. Strong red-pepper tea is good for a horse with a bellyache. In Texas and Mexico, eating plenty of chili peppers is good for ague, and swallowing whole, small, chili peppers like pills will cure a cold. Boiled pods mixed with buffalo tallow are good for burns. All manner of peppers are said to have strong aphrodisiac properties.

Perchten or **Berchten** The followers of Perchta, Berchta, or Bertha, also known as Holle in Germanic mythology, the custodian of the dead. Perchta and her following are believed to rush through the sky during *Perchtennacht*, which is Twelfth Night, sometimes with baneful, sometimes with beneficent intentions. They frighten naughty children in the former capacity; in the latter they aid the fructification of fields. Their impersonators in weird, horned and hairy wooden masks, have these same functions. In the Bavarian and Austrian Alps they participate in *Niklasumzüge* and in carnival *Lärmumzüge* (rowdy processions).

In Salzburg until recently they enacted a drama of conflict which recalls Portuguese *Mouriscadas* and other forms of *Moriscas*. The two factions are represented by the beautiful and good *Schönperchten* in high ornate headdresses with chains, ribbons, flowers, and by an opposing motley, tattered, and rowdy crew of *Schiechenperchten* or evil Perchten. In a hand-to-hand combat the weird maskers are of course vanquished. This symbolic combat is of particular significance in the explanation of *Moriscas*, for the Perchten retain the pagan connotations which most *Moriscas* have ceded to Christian ideology. Other shaggy figures abound in this same mountain region, though without the combat: the *Huttlrläufer* and *Zottler* of Tyrol, the *Hänsele* of Überlingen, the Swiss *Rautschegetten* with black sheepskin. See MASKS; MORISCAS. [GPK]

Percival or **Perceval** One of the chief figures of the Arthurian legend, and the subject of a score of medieval romances in French, Welsh, German, English, Norse, and Italian. The earliest of these is Chrétien de Troyes's *Perceval* or *Conte del Graal* (c. 1175). The first part is a charming story of a boy brought up in the forests of North Wales by his widowed mother in entire ignorance of chivalry, of his naive blunders when he goes out into the world, and of his arrival at Arthur's court to seek knighthood. After Perceval has received instruction in the use of arms and in manners from Gornemant, he enters upon a series of adventures distinguished by their inadequate motivation and incoherence, including the visit to the Grail castle and

his humiliation consequent on his failure to ask the mysterious question, "Whom does one serve with the Grail?" Wolfram von Eschenbach in his *Parzival* (c. 1205), using Chrétien but also drawing largely on traditional sources, adds an account of the hero's parents, treats the hero's development from callow ignoramus to a pattern of Christian knighthood with much more realism and coherence. As a young man with a sense of wrong, he defies God, but after years of suffering and of separation from his wife, he learns the lesson of human sympathy, becomes king of the Grail, and is reunited with his wife. Most versions of Perceval's legend retain the story of his forest upbringing, his naive blunders, and his association with the Grail. The later forms tend to make him a virgin knight, and in the *Queste del Saint Graal*, composed by a Cistercian monk (c. 1210), he plays a secondary role to that of Galahad. This is the text condensed by Malory, and through Malory known to Tennyson.

As with other Arthurian personages, the origins of Perceval have been the subject of much speculation. His name and some of his relationships seem to be derived from the historic Welsh hero Peredur, who died in 580, but more important are the borrowings from the story of Pryderi in the *Four Branches of the Mabinogi*. Certain features of Perceval's story may even be traced back to Irish sagas of Finn and Cuchulain. Adapted by the Welsh and blended with their own traditions, they were passed on to the Bretons and from these to the French and Anglo-Normans. It should be noted that the Welsh *Peredur* was based on one or more lost French romances. See GRAIL; MABINOGION.

ROGER S. LOOMIS

perfumes Perfumes were used by the Egyptians, Greeks, and Romans, and were brought into Europe by the Arabs about the 16th century. Today the important centers of manufacture in Europe are in France, England, Bulgaria, and Sicily.

The poetical association of perfume fragrance and love-sickness, in folktale and myth, makes perfume a kind of love magic that bewitches and entrances its victims. Science explains this phenomenon in its own terminology. Perfume scents, by acting upon the olfactory nerves, stimulate the brain and call up emotions such as sympathy, love, and physical attraction. Perfumes are classified as aphrodisiacs. The natural ingredients in perfumes provide the element of fragrance. Varying the herb, flower, or blend will vary the scent.

Resinous gums were used in ancient Arabic countries to make a kind of perfume known as incense. Myrrh, spikenard, and frankincense were generally used. To this day, Arabian women living in the desert perfume themselves by sitting in the smoke from fires of burning spices.

The story of Joseph and his brethren depicts the Ishmaelites who carried to Egypt myrrh, balm, and spicery. It is recorded that the Queen of Sheba supplied Solomon with perfumes and that her subjects, to drive away her competitors in the trade, told a terrifying tale about cinnamon and the Phoenix or cinnamon in the marshes guarded by winged snakes. In *Exodus* it is

stated that Moses received two recipes for a holy anointing oil rich in perfumes.

The dandy of the ancient Greek city commonly used one kind of perfume for his robes and another for his hair. By the time of the classical period, flower scents were a part of perfumes. Under the Empire, the Roman nobleman worked upon an elaborate scheme of perfuming his body: mint—arms; palm oil—jaws and heart; marjoram—eyebrows and hair; ground ivy essence—knees and neck. The importance of sweet scents to the Roman is nowhere better exemplified than in the report that Nero lavished four million sesterces (about \$200,000) upon a festival in which roses were a main feature. Through conquest the Romans opened new perfume horizons when they moved eastward and returned with strange and interesting scents from conquered countries.

With the rise of feudalism in Europe the art of perfuming went into decline, until the time of the Crusades, during which the East contributed, through the Arabs, innovations in perfumery. The Arab Avicenna discovered that fragrant water could be distilled from leaves. Islam was the root of Arabian concern for perfumes, and in the Koran it is written that paradise would be populated with "black-eyed houris . . . of the purest musk." Musk is one of the oldest perfumes known to men, and was probably brought into Europe by the Arabs. Musk perfumes are usually made from a dried secretion of the scent glands of the musk deer.

As new trade routes opened up and enterprise expanded during the Renaissance, Italy came to hold supremacy in perfume manufacture and maintained it until France seized the initiative. In Italy, sweet bags, perfume cakes, scented gloves and pomanders, fragrant candles, and cosmetics were fashionable. France's perfume centers were to be concentrated in the cities of Grasse, Cannes, and Nice.

It is told that the Emperor Napoleon used to bathe his head in *eau de cologne* before his campaigns, doing what had been traditionally done in Rome by the nobility under the Empire. It is also told that his consort, Josephine, so impregnated her apartment in Malmaison Palace with perfume scents that nothing has ever been successful in removing them.

As of 1937 there were 150,000 perfume names on record. Many of these are highly suggestive of folklore ideas and themes, e.g. Tabu, Love Potion, Cinderella, Vampire, Witcherie, Voodoo, Nymfaun, Spellbound, Sorcière, etc. Likewise, the names of men's colognes and shaving lotions are taken from folklore: John Peel, Pericles, Royal Oak, etc.

Such names as Nymfaun and Witcherie and Spellbound are reminiscent of folktale. In a Japanese version of the swan-maiden tale, a celestial maiden who is in attendance on the heavenly prince in the moon visits the earth and lures a fisherman with the scent from her perfumed and feathered heavenly robe that she had hung upon the limb of a pine tree. In Oriental mythology, the Tennyō, the Japanese equivalent of the Indian Devatās, are described as heavenly musicians who fill the air with flowers and perfumes. They are ministering angels to pious Buddhists, but sometimes they will assume the shape of women and make love to men.

The parallel between the range of known perfume scents and the range of musical notes was recently worked out by the chemist Dr. Septimus Piesse, and his achieve-

ment has become a perfume blender's tool. Starting with the bass clef, three octaves below middle C, he assigned musical equivalents to perfumes in the following order that is based on the assumption that the sharpness of the perfume scent is directly proportional to the height of the musical note on the scale: do—patchouli; re—vanilla; mi—clove bark; fa—benzoin; sol—frangipane; la—storax; ti—clove; do—sandalwood, etc. Thus, only certain scents will harmonize with others, just as certain musical notes harmonize with some but produce a dissonance when brought together with other notes.

The use of perfumes by males continues as a tradition of the Latin countries—France, Spain, Italy, and in South America. But the men in the United States, like the knights of medieval Europe, frown upon this practice as an indication of deficient masculinity. Instead they indulge in toilet waters and shaving lotions. [JLR]

peri or pari (from Persian *pari* or *peri*; Pahlavi *parik*, evil genius) In modern Persian mythology and folklore, a group of beautiful and graceful supernatural beings, male and female. Originally they were evil and identified with the *pairikas* of the *Avesta*, who as agents of Ahriman visited eclipses and drought on mankind. In later concept, they became benevolent genii, likened to fairies or angels, and guiders of human souls to Paradise. They are said to be formed of the element of fire; perfume is their only food. They are constantly at war with the *deus* (evil spirits), who lock them in iron cages, whenever they capture any, and hang them in high trees. Here they are visited by their own kind and fed with delicious odors.

pericón Literally, large fan: a group circle dance of the Argentine pampas, expressive of the lusty and cohesive spirit of the gaucho. The circle is symbolic of daily habits of eating together around a fire, and of encircling the cattle to be lassoed. Kerchiefs sweep through the air like lassoes. Shouts and quips punctuate the monotonous shuffle of the feet, while spurs jingle and the *payadores*, wandering minstrels, vie with each other in improvised verses. The rugged communal spirit contrasts with the coquetry of couple dances like the *cueca*. [GPK]

periwinkle or ground ivy A trailing evergreen plant (genus *Vinca*) with blue or white flowers, often called myrtle or creeping myrtle in the United States. Eleventh century herbals gave an important place to this plant. When plucking it, however, a person should be clean of every uncleanness, and it should be plucked only on the first, ninth, eleventh, and thirteenth nights of the moon. It will cure Devil sickness, demoniacal possession, terror, envy, poisons, and the bites of venomous serpents and beasts. It also gives grace and prosperity when carried. In Britain and France it was called the "sorcerers' violet," because so widely used against the evil eye and spirits; in Italy it was known as *Centocchii*, hundred-eyes. Some called it joy-of-the-ground, and if powdered and wrapped in a house leek with worms and taken at meals it induced love between husband and wife. It was used frequently in place of hops in beer. In modern Italy it is strewn on the graves of young children. In Wales it is said that if one takes periwinkle off a grave, the dead will appear to him and haunt his dreams for a year. In England it is still used in skin ointments, as a tonic, and for intestinal troubles.

Perkele Finnish name for Devil, derived from the Lithuanian Perkūnas, Thundergod. Compare Estonian *põrgu*, hell. [JB]

Perkūnas The thunder god of Lithuanian mythology: similar to the Latvian Pērkuons and to the Old Prussian Percunis. He is the most popular god of the Balts (see LITHUANIAN MYTHOLOGY). The Slavonic word for thunder, *perun*, is of the same root. The philologists formerly explained that the origin of the word is in connection with *quercus*, oak, the sacred tree of the thunder god, but another theory seems more convincing, i.e., that the name Perkūnas is from Lithuanian *perti*, to strike, to beat. It is not clear if the name of the thunder god of the Balts is related to the old Indian god Parjanya and Scandinavian Fjörgynn. The Slavonic Perun may be a genuine god and not a borrowing from the Scandinavian Thor as S. Rožiniecki tried to prove (*Archiv für slavische Philologie* 23, 1901). We have proof for the antiquity of Perkūnas in *Pirgene* or *Purgine-pas*, the word for thunder among the Erza Mordvins. About 2000 B.C., when the Balts were living in the neighborhood of the Mordvins not far from the middle of the Volga River, the thunder name Perkūnas was already known to the Balts and was borrowed by the Mordvins. Other loans of this name to the Finns from the Balts can be seen in the Finnish *perkele*, devil, and the Estonian *põrgu*, hell. As the Balts reached the Baltic Sea and had contact with the Vikings, the borrowing of ideas and myths about the thunder god from Scandinavia was quite possible.

The Lithuanians have many thunder god legends, especially about his enmity with the devil. One of the most popular relates that a man, usually a hunter, in the woods during a storm, perceived a strange animal (cat or small he-goat) who came out from a hole in a tree or from behind a big stone, and mocked the thunder. As the thunder sounded, the animal hid himself for safety. The man met a hunter who told him, "I am Perkūnas, help me catch this little devil." So the man closed up the devil (animal) in his hiding place, the thunder struck, and the devil was killed. When the devil was destroyed, the hunter received from Perkūnas a marvelous gift: a horn with gunpowder which would never be empty, some bullets which would never fail.

This legend was examined by J. Balys in 1939 and the author discovered a considerable number of variants: Lithuanian—46, Latvian—7, Estonian—2, Livian—1, Ukrainian—15, Polish—2, and Rumanian—1. He came to the conclusion that the legend was of Lithuanian origin.

Interesting is a tale about the friendship between a man, usually a carpenter, Perkūnas, and the devil. They build themselves a house and plant potatoes or beets. A *laumė* (fairy) comes to steal their vegetables. She flogs both Perkūnas and the devil who is guarding the vegetables, but she is outwitted by the man, who plays a fiddle and tricks her by catching her fingers in a cleft tree. Then the three agree on a contest in frightening each other: the house shall belong to the one who succeeds best in frightening the others. The man is the winner.

Perrault, Charles (1628–1703) French poet. He was at one time comptroller of the king's buildings and was elected to the Academy. His poem, "Le siècle de Louis le Grand," which he read before that body, began a controversy on the respective merits of the ancients and moderns. However this may have turned out, Perrault will be remembered not for his verses, but for his collection of tales entitled *Contes de ma Mère l'Oye* (1697). Some of the suggestions given for the source of this title are that it is connected with the person of a mythical Queen Pedauque, whose statue in churches is represented with goose feet; or that it may have been taken from a fable where Mère l'Oie was shown as instructing and entertaining her little goslings. Such a fable, it is thought, never existed, but the idea took hold of the popular imagination. Perrault's title appears to suggest impossible happenings and is to be compared with such phrases as "Contes de la cigone," "Contes à dormir," "Contes au vieux loup," each of which denotes a series of fanciful stories (compare the generic term *Märchen*).

Perrault's tales are significant inasmuch as he was the first one in France who wrote down stories that had hitherto been floating around in nursery, kitchen, and salon. His *contes* in verse are decidedly inferior to his prose *contes* (under the title discussed above) which include: *La belle au bois dormant*, *Le petit chaperon rouge*, *La Barbe bleüe*, *Le Chat Botté*, *Les Fées*, *Cendrillon*, *Riquet à la Houppe*, and *Le petit Poucet*. See *CONTES DE MA MÈRE L'OYE*. Perrault had many imitators, but his simple fascinating style was scarcely ever approached by them and never surpassed in dramatic brevity. On account of interest in the writings of his imitators (Comtesse d'Aulnoy, Mme. le Prince Beaumont, and others), the prose *contes* of Perrault were forgotten for a time. At the beginning of the 19th century there was an awakening of interest in the works of Perrault and editions of his prose *contes* were published in both Italy and Germany. Musicians, artists, and poets have made use of material drawn from these sources. Scholars have studied individual tales but the best known is probably the study by Saintyves (*Les contes de Perrault*, Paris, 1903) which surveys the prose and verse *contes*. Saintyves classifies the tales into three groups: 1) stories of the origin of the seasons; 2) those arising from initiatory rites, and 3) apologues and fables, detritus of medieval exempla. Saintyves brings masses of data to support his theses, but his conclusions fail to carry complete conviction with present-day scholars. Compare A. H. Krappe in his review of this work in *The Romanic Review* XVI (1925), No. 2; Stith Thompson, *The Folktale* (New York, 1946), p. 386.

Persephone In Greek mythology, the daughter of Zeus and Demeter; consort of Hades: known also, especially in her cult aspects, as Cora or Kore, the Maiden. The name was corrupted by the Romans into Proserpina. Demeter and Persephone seem to be two separate aspects of the grain goddess, probably the old and the new crops. According to the myth, Demeter kept Persephone secluded in Sicily, but Hades one day, as Persephone picked flowers near Henna, caused the earth to open and appeared before her in his chariot. He seized the girl and carried her off to the underworld. Demeter

searched everywhere for her daughter and while she did so nothing grew on earth. At last the gods negotiated the return of Persephone. But Ascalaphus had seen Persephone eat at least one pomegranate seed while she was in the underworld, and she therefore had to spend six (or eight) months of every year with the lord of the underworld. See **FOOD TABU IN THE LAND OF THE DEAD**. Persephone, as the Maiden, seems also to have been an aspect of the fertility goddess Aphrodite: in the Adonis myth, Aphrodite and Persephone both claim Adonis, and he is to spend a third of the year with each of them. But he spends two thirds of each year with Aphrodite.

Perseus In Greek mythology, the Gorgon-slayer, dragon-slayer, and rescuer of Andromeda. Acrisius, king of Argos, was told by an oracle that the son of his daughter Danae would kill him. He therefore built a brazen chamber, either below ground or in a tower, and imprisoned Danae in it. Zeus saw the girl and entered the chamber as a shower of gold, thereby impregnating Danae. When the child, Perseus, was born, Acrisius discovered the fact, and not believing Danae's story about Zeus and the shower of gold, put mother and child into a chest and had them thrown into the sea. The chest floated to the island of Seriphos where Dictys, brother of the king Polydectes, found it. He took the pair under his protection. In later years Polydectes became enamored of Danae but was afraid to approach her because Perseus was well grown and formidable. Polydectes took the pretext of a rash boast by the youth to send him for the Gorgon's head, the sight of which could kill.

On the advice of Athena and Hermes, Perseus first sought out the three Grææ and stole from them the one eye and one tooth they had among them. The eye and tooth he traded back for information on how to get to the nymphs. From the nymphs he obtained Hades' cap of darkness, the shoes of swiftmess, and the *kibisis* (probably a wallet on a long strap). Athena gave him a mirror (or loaned him her shield) and Hermes gave him an adamant sword. Thus equipped, he crept up on the Gorgons, looking all the time in the mirror (or shield), and with the sword cut off the head of Medusa, the only mortal one of the Gorgons. He put the head in the wallet and fled on the winged shoes. The Gorgons could not see him to chase him because of the cap of invisibility.

On the way back to Seriphos, he passed Ethiopia and there saw Andromeda chained to a rock as a sacrifice to a sea monster. He killed the dragon with the Gorgon's head, married Andromeda, and went back with her to Seriphos. There he found his mother besieged by Polydectes; he took the head out of the wallet again and petrified the king and his assistants. The Gorgon's head he gave to Athena to put on her shield, the ægis; the other objects were returned to the nymphs. Perseus, Andromeda, and Danae went to Argos, after installing their protector Dictys as king, but Acrisius fled before them, fearing the fulfilment of the oracle. Perseus followed his grandfather to entreat him to return, but at the games at Larissa he let fly a discus which by accident struck and killed Acrisius. Perseus traded the throne of Argos for that of Tiryns, where he reigned as king; among his descendants was Eurystheus, the master of Hercules.

Another myth tells how Hera egged Perseus on to attack Dionysus and his train. The higher Perseus flew on his magic shoes, the taller Dionysus grew, until he touched the sky. Dionysus, very angry, was about to destroy his tormentors when Hermes interfered and calmed the god. Realizing that Hera and not Perseus was to blame, Dionysus pardoned the hero; the inhabitants of Argos instituted rites honoring Dionysus and Perseus in memory of the peace.

The story of Perseus, Danae, and Andromeda is probably an old folktale adapted to mythology, a tale picked up from the oral tradition and told and retold by several writers. E. S. Hartland made a study of the myth, comparing it with other folktales and with belief and custom all over the world (*The Legend of Perseus*, 3 vols., London, 1894-96). Hartland tried to prove its identity with the modern stories of the dragon-slayer (Type 300) and the two brothers (Type 303), but most students, though admitting some relationship, return a verdict of not proven. The story is full of familiar motifs: magical impregnation (T510), abandoned child (S300), theft of the eye from three old women (K333.2), magic objects (D800), petrification by a glance (D581), princess as prize (T68.1), etc. It is even possible that the *kibisis* may be identical with the inexhaustible purse or source of food. Compare **BALOR**; **CRONUS**; **EXPOSURE OF FAMOUS PERSONS IN INFANCY**.

persicary Any of a genus of plants (*Polygonum*) of the buckwheat family; especially *P. persicaria*, commonly called lady's thumb because of its reddish, oblong spike, shaped something like a thumb. In the past this plant was sometimes called heart's-ease and was recommended for disturbances of the heart. Its seeds were used in place of pepper, and in medicine it was used in pepper possets and as a counter-irritant on the limbs. Culpeper calls it an herb of Saturn though he admits that others attribute it to the sun; still others call it an herb of Mars. The juice was good to stop bleeding. Culpeper says it cools the temper and heats the stomach and blood, yet he also claims it cools inward pains from "heat and corruption of the blood and liver." It also kills worms, expels the stone, promotes urine, cleanses the ears, relieves prickly heat and other inflammations, heals fresh and green wounds, gangrene, ulcers, cankers, and venereal infections, and mends broken joints and ruptures.

persimmon In Alabama, if a girl eats nine unripe persimmons she will turn into a boy inside of two weeks. Chills and fever may be cured (in Alabama) if the skin of an egg shell is taken to a persimmon tree on three mornings running, and a knot tied in the skin each time; Mississippi Negroes tie a knot in a piece of string (one for every chill one has had) and then tie the string around a persimmon tree. They also say: Never toss a piece of persimmon wood on another man's fire unless you want him to move away for good. In Texas a teaspoon of the white inside bark steeped in six cups of water and drunk will cure chills and fever.

personification Anthropomorphic treatment of animals, natural elements, and natural phenomena is a characteristic of North American Indian mythology, not only in tales set in the Mythical Age, but in those in which human beings also appear. Rock, Flint, Thunder,

Coyote, Buffalo, Deer, Sun, Moon, Water, Earth, Corn, Tobacco, to mention only a few personified elements and phenomena, are all well-known actors in tales; they talk, behave, and appear as human beings in a plethora of tales from all parts of the continent. The one area where human actors and fantastic beings outnumber animal or other actors in mythology is the Eskimo area. Animals appear in many Eskimo stories, but they are usually animals who speak definitely either as animals, or as transformed human beings, and not as humanlike creatures. [EWV]

Per Spelmann Literally (Norwegian), Peter the Fiddler: one of the round dances of the Faroe Islands, recently popularized and hence elaborated in Norway. The formation and step is essentially of the *branle* type. Alternate men and women, lady on the right, face center in a circle. While all hold hands they progress left with a double, right with a simple, and finish with a toe-rise. In the new version, the circle breaks up into couples. Partners face each other during the chorus, hold hands with a jolly hop-skip from side to side. All join in the song during the dance. [GPK]

peteneras A Spanish couple dance of Andalusia, a development from the *seguidillas Sevillanas*. It is attributed to a famous flamenco singer of that name. The fundamental step is: right forward, lift left with a leg twist (*floreo*), four steps forward. After an excursion to Cuba, it returned to Cadiz with an added Negro flavor. Lately it has been adapted to stage presentation. In Oaxaca, Mexico, the *Peteneras zapoteca* is known among mestizos and danced in 6/8 time to typically Spanish music of guitar and harmonica. [GPK]

Peter's fish Term for both HADDOCK and JOHN-DORY.

petrification Stories about people who are changed into stone are very ancient. Lot's wife was changed into a pillar of salt for looking back at Sodom and Gomorrah while she and her husband were fleeing from the doomed city. The Gorgon Medusa once had beautiful hair of which she was very proud. Because she competed with Hera, the hair was turned into snakes and she became a creature so horrid in appearance that all who saw her were turned into stone. This story is not reported by Hesiod; but other mythologists have developed it to the point where stone figures of persons who have looked at her clutter up her courtyard. Even after Perseus chopped off her head it retained the power to petrify. A development of this general theme is the "Adventure of Abdullah Bin Fazil and His Brothers," which is Night 182 in the *Arabian Nights*. Here the hero comes to an enchanted city in which all the figures are stone, even an old lady carrying washing through the streets. In more modern popular tales people are sometimes turned into stone by wicked witches. Thus in a Breton version of folktale type 706 the three children of an ill-fated queen visit an enchanted castle where the witch turns the two brothers to stone and little sister disenchants them. Northern European dwarfs are said to turn into stone at sunrise. See ALVISS. The city of Ishmonie in upper Egypt is called the petrified city because of the number of bodies of petrified men, women, and children there. According to an Inca story of origin, when the four brothers and four sisters who originated the Incas were

traveling north from the "tavern of the dawn," one brother was turned into stone. See FAITHFUL JOHN. [RJD]

 The conversion of human beings and animals into stone is an incident which occurs in several North American Indian folktales. In Eastern Woodlands tales immoderate requests made to a deity by earthly visitors, such as a request for eternal life, are punished by transformation of the human being into a cedar or another kind of tree, or into a stone (Q339). (See IMMORTALITY.) In Shawnee migration myth material one division of the Shawnee is said not to have made a journey long ago across a large body of water, but to have turned into stone and remained in their original place of creation while the rest of the tribe pressed on. In a Hopi Indian tale the twin war gods as an act of kindness turned into stone two little runaway children who had been whipped. (See AHAYUTA ACHI). Belief in the petrification of footprints and handprints of the culture-hero-trickster or other supernaturals is also widespread in North America; many tribes account for hand- or foot-shaped depressions on rocks in this manner in their tales. [EWV]

Péto A group of deities of the Haitian vodun cult, which includes a large proportion of those whose powers are generally held to be used for evil ends, as against the Rada deities. The origin of the designation of this aspect of the cult is most generally ascribed to the name of a powerful vodun priest who lived in the early days of Haitian history. Functionally, however, these deities are to be thought of as deriving from the African principle that the ancient and powerful dead take the status of deities. [MJH]

Péto drums Two drums used in rituals of the Péto cult of Haiti, accompanying dances and singing for the *loa*, Dan Péto, who was originally a slave Don or Dom Pedro and became a legend after his escape. The drums are played with the hands only.

peyote (Nahuatl *peyotl*) (1) A small carrot-shaped spineless cactus (*Lophophora williamsii* Lemaire) growing in the Rio Grande Valley and southward in Mexico. *Peyotl* is also used in Mexico to designate other cacti and non-cacti which, like peyote, are believed to have aphrodisiac and other qualities. Peyote is not to be confused either with *teonanacatl*, a narcotic mushroom of Mexico, or with *mescal* (Nahuatl *mexicalli*, *Agave americana*, or *Agave* spp.) or the native beer derived from *Agave* spp., or with mescal beans (*Sophora secundiflora*) or mescal buttons. The identification of peyote with mescal, especially, has led to much confusion in the literature on peyote.

(2) The name applied to a 19th century North American Indian religious cult which is now widespread among the tribes from the Great Basin eastward to Oklahoma and northward to the Canadian border. This cult has as its central feature worship of peyote in the form of the so-called peyote "buttons." These latter consist of the rounded top surfaces of peyote plants that appear above the ground, which are cut off, dried, and eaten or made into a tea that is drunk at peyote ceremonies.

(3) A pre-Columbian ceremony involving the ritual eating of peyote, either in a green or dried state, which is practiced by the Aztec, Huichol, and other Mexican Indians. Peyote is also used non-ritually for prophesying, clairvoyance, and finding lost objects.

The consumption of peyote produces visual hallucinations or color visions, as well as kinesthetic, olfactory, and auditory derangements, due to the alkaloids in the plant. There are no ill after-effects, and peyote is not known to be habit-forming.

In Mexico peyote was used in an agricultural-hunting religious festival, preceded by a ritual pilgrimage to gather the plant. Since about 1870 the cult has spread to the United States; it is especially strong among the Plains groups where it is connected with war, with Southwestern groups where it is involved in shamanistic rivalries and witchcraft, and among several Eastern Woodlands groups in which stress is laid on the health and vision-giving properties of peyote. The usual peyote ritual, in present-day United States Indian practice, consists of an all-night meeting of men, women and children in a tipi around a crescent-shaped earthen mound and a ceremonial fire; a special drum, gourd rattle, and carved staff are passed around to each adult after smoking and purifying ceremonies, and each person sings four peyote songs to the accompaniment of drum and rattle. Various "water-bringing" ceremonies occur at midnight and dawn; at the latter time there is a baptism or curing rite and sometimes public confession of sins, followed by a ritual breakfast which includes parched corn and preserved wild fruit. Certain innovations in the standard peyote ceremony were introduced by one John Wilson, a Caddo-Delaware, and adopted by some tribes; an Oto teacher, Jonathon Koshiway, founded a Christian version of peyotism, the "Church of the First-Born" which spread to Negro groups also, and from which grew the Native American Church, an organization of confederated tribes.

Various legends and beliefs are attached to the plant itself: that the plant deliberately conceals itself; that the plant can sing and speak and can open and shut over a large hole which is like a kiva, where a man teaches visitors the peyote rite; that peyote is like a mole—if not looked at closely it will disappear; that there are two kinds of peyote, male and female, or Peyotl of the Gods and Peyotl of the Goddesses. The Huichol of Mexico have a tutelary goddess for peyote; the Tarahumara peyote deity is male. The latter tribe believe that peyote sings beautifully in the country wherein it grows, so that seekers may find it; it also sings in the bag while being carried home. Several Plains and Woodlands tribes believe the peyote goddess, or Peyote Woman, joins in the singing if she is pleased with it during peyote ceremonies, or gives worshippers songs. The Lipan Apache claim they hear Changing Woman's voice in peyote meetings. A Taos origin legend of peyote tells of a man abandoned by his companions who discovered that the singing and rattling he was hearing came from the blossom in the center of the button.

Despite the fact that the modern peyote cult, as practiced among United States tribes, dates back to the earliest to around 1870, origin material and beliefs concerning the supernatural qualities of peyote are already abundant; fairly reliable historical information on the introduction of peyote ceremonies is also still obtainable from Indian peyote believers. The so-called "pagan" form of peyote worship in such tribes as the Shawnee has not supplanted older Shawnee forms of worship of their native deities, but serves to supplement these. Not all Indians in all tribes are, however, agreed that peyote

ceremonies are beneficial, and in some tribes the group is split into peyote and non-peyote factions. For a recent study of the modern peyote cult see Weston La Barre, *The Peyote Cult*, Yale University Publications in Anthropology, No. 19 (New Haven, 1938). [EWV]

Among the pre-Conquest Indians of Mexico peyote was widely considered to be a sacred plant. It is used ceremonially today by members of several Mexican tribes, particularly the Huicholes and Tarahumaras, by whom it is regarded as a supernatural personage who must receive ritual courtesies in the form of complex ceremonies. [GMF]

peyote dance or hikuli The Tarahumara and Huichol Indian version of peyote. Hikuli is the mescal button, sometimes soaked in water, which exhilarates and produces visions, cures snakebites, burns, and wounds. In October and November the hikuli seekers, after purification, make long journeys to eastern Chihuahua; on their return they sacrifice a sheep or goat and don ceremonial face-paint: the designs represent coiled serpents, rain symbols, grains of corn, squash vines, and fruit. The shaman sings during the dance which is performed to the accompaniment of two notched deer bones rubbed together (among the Tarahumara a notched stick on a gourd, and rattles of deer hoofs). The movements are ecstatic, jerky jumps with twists of the body, performed in anticlockwise circling around the shaman and the fire. Men and women carry bamboo sticks, or "serpents," the men gesticulate with deer tails. Hikuli first appeared as a deer and the dance is performed after the first deer-hunt in January. The dance has curative and visionary functions and also benefits the crops, as the face designs show. [GPK]

Phaethon In classical mythology, son of the sun god Helios and Clymene (or Rhode); Hesiod and Pausanias call Phaethon's parents Cephalus and Eos. The form Phaeton is an incorrect spelling appearing nowhere in classical literature. The story of Phaethon's ride in the sun's chariot is the subject of motif A724.1.1. Knowing from his mother that his father was the sun, Phaethon boasted of his parentage to a friend. The friend said, in effect, "Don't be silly." Phaethon went to his mother, who reaffirmed the story and suggested that he seek out the sun for corroboration. After a long voyage, Phaethon came to the sun's home in the east. The sun was glad to see his son, acknowledged that he was Phaethon's father, and in a burst of parental pride offered him any boon he might desire. Phaethon quickly took advantage of the hasty offer and asked to be allowed to drive for one day the chariot of the sun through the heavens; nothing could dissuade him; this would be proof indeed for his doubting friend. The sun did not have much time to instruct the boy; the time for daybreak drew near. So Phaethon donned his father's solar crown and climbed into the chariot. Soon the horses of the sun felt an unfamiliar hand on the reins and began to gallop where they would. Going too high, they knocked stars from their places; dashing too near the earth's surface, they burned the desert in the Sudan, dried up the Nile, made the inhabitants of Ethiopia permanently black of skin. The earth itself began to burn and cried to Zeus for aid. The chief of the gods quickly tossed a thunderbolt and Phaethon fell, streaming fire, into the Eridanus River. His sisters wept so at his death that

they were transformed into trees; their tears became the amber exuded by these trees. Phaethon's best friend Cynus grieved too, until he was changed into the swan.

☞ A Phaethon-like myth, probably of native origin, is well known among the Indians of the North Pacific Coast region. It is usually referred to as *The Man Who Acted as the Sun*, and recounts how a youth is permitted to carry the sun by his father, the Sun. The youth almost burns up the earth and has to be rescued. In the adjacent Plateau region the animals hold a contest to determine who shall act as the sun. The results are nearly disastrous for the earth. [EWV]

phallic dances Fertility dances intended specifically for the multiplication of the human race, but indirectly for all increase and productivity. In their most potent manifestations among primitive peoples they serve the earnest purpose of propagation of the race, and in no way consider individual gratification or pleasure. They are essentially ritualistic, and are commonly associated with vegetation and death rites. In some cases the gestures are obvious; in artistic, functional developments they are stylized, whereas in decadent manifestations the reverse is true: the sacred function has lapsed and the crass exterior remains.

Japanese mythology tells of the phallic dance performed by Ume-no-utsume, in order to entice the sun goddess Amaterasu from a cave to which she had retired. The stamping on a bucket and the cries of the dancer recalled her to the earth and thus brought back light and life. The Greek satyrs of the Dionysiac *orgia* stamped and capered with gigantic phalloi and artificial breasts—a symbol of self-fructification. One of the most vivid and earnest fertility dances is the African Thunder dance of Ongaladougou with the realistic imitation of the copulation of beasts.

The implications of the stamp are evident, not only because of the penetration of the earth, but also because of potential identification of the leg with the phallus. A rod may be substituted for the leg, as in the *kūsima* puberty ceremony, or the Morris Bean Setting. Vodun ceremonies show this transition: in Africa Legba manipulates an artificial penis, the *olisbos*; in Haiti this has become the Legba-stick, around which he performs all manner of acrobatics. Perhaps not all staff dances have this connotation; yet in battle dances and *Moriscas* the double significance of the sword as weapon and phallus suggests itself. In fact, the Balinese *kris* or dagger and the spear attain this potency in trance stages of dances as the *tjanolarong*, with downward and flexed motions for women, and backward and upward for men. Propulsive gestures by the arms alone, with projecting thumbs, convey a similar impact.

The leap and high kick have since time immemorial expressed productive and generative energy, and as such appeared in Egyptian funeral dances and modern courtship dances (see LEAP DANCES). These acrobatics have in modern society degenerated to the exhibitionistic cancan and burlesque dances.

More obvious gestures are found in the abdominal dance and the kiss. The former has degenerated into the *danse du ventre* in North Africa and the even more degenerate hootchie-kootchie. The kiss tends to make its appearance in dances in societies with inhibited expressive body movement, as in the court dances of the Middle

Ages and Renaissance (*Reigen*, *Branle-gavotte*, *Courante*, and *Gigue*). It was a natural climax of more vigorous courtship dances of peasant origin, as the *volta* and the *Schuhplattler*. It is possible that white influence has introduced this variation into American Indian dances, as the Blackfoot Kissing dance and the Ute Dog dance.

The kiss involves the element of physical contact, which is foreign to primitive ritual, even of orgiastic content—at least during the dance phases. After the elegant aloofness of the court dance, the volta and waltz called forth vociferous disapproval, but the embrace was here to stay, and remains the *raison d'être* of ballroom dances, particularly those with an erotic undercurrent as the *danzón*. In the case of the American Indian, it is again more than likely that white influence has coupled dancers to the extent of physical contact, the crossing of arms or placing the arm around the waist, as in Sauk social dances and the Iroquois Alligator dance.

Clothes or their absence have also undergone a cycle of significance and usage. In primitive rites disrobing or exposure communicate generative powers not only to humanity but also to fields ready for crops, as in puberty dances of the Bushmen and in central European peasant observances preceding the springtime sowing. In peasant dances such as the *volta*, flying skirts vicariously reproduce this custom, and, in a more elegant form, so does the skirt manipulation of Mexican *bailes* and of the dainty *menuet*.

Thus certain expressions are instinctively retained, whether with ritualistic implications or purely as an evidence of exuberant powers. Naturally, the power and the freshness of the gesture depart with the supernatural motivation—the *orgia* becomes the lewd *sikinnis*. Mistaken morality may condemn beautiful forms and substitute pallid coyness. But instinct will reassert itself. After centuries of repression comes the embrace of the waltz and then the black bottom of the 1920's. Religious symbolism cannot be resurrected in modern society, but the earthy stamping, kicking, leaping, whirling, and embracing of jitterbug and boogie-woogie provide a healthy outlet for irrepressible forces, at least so long as they remain unhindered by censure or another era of Puritanism. [GPK]

phallic foods Foods for religious or ceremonial purposes (usually pastry or fish) in the form of the male and female sex organs. Although relatively little recognized, the custom of partaking of phallic foods has been practiced in many cultures and ethnic groups ranging from ancient India to the Zúñi Indians of New Mexico who incorporate priapic breads in their worship. Goodland's *Bibliography of Sex Rites and Customs* (London, 1931) gives 33 entries under "Phallic Cakes or Bread."

One of the oldest, most popular, and most significant of all food-sex representations is the ichthyphallic design, which has its origin in the extraordinary aphrodisiac powers for centuries attributed to fish in many civilizations. Although the symbol appears in a number of cultures—e.g. in Rome it was sacred to Venus as a sign of fecundity—it was perhaps most important in the Middle East. There it is found in countless different manifestations, particularly among the Semites, including the Babylonians, Assyrians, and ancient Hebrews. An indication of the profoundly intimate connection between food—in this case fish—and sex may be found

in the Hebrew word for fish (*nun*) which also means "to sprout" or "to put forth," referring to the conceiving or bearing of children.

In Greece, pastry was often baked in ktenic form e.g. the *mulloi*—the sesame and honey cakes which were made, according to Athenæus, in honor of Kore and Demeter and carried around during the three-day Thesmophoria. The same author also speaks of the *mas-toeideis*, literally breast-form, a cake fashioned after the shape of the breast which was borne by the chorus during marriage festivals in Sparta. A modern equivalent of the Spartan cakes still exists today in France in the popular French fish dish made in the form of the female breast, *Têtons de Vénus*.

In Rome phallic foods were especially popular, as noted by Lacroix (*History of Prostitution* I: 234–35): The *alicariæ*, or bakers, were women of the street who aited for fortune at the doors of bakeries, especially those which sold certain cakes, made of fine flour, without salt or leaven, and destined for offerings to Venus. The popularity of these phallic breads and cakes in the ancient world was astonishing. These breads, called *alphia* and *siligone*, represented, under the most whimsical forms, the organ of the woman and that of the man. Since there was an enormous demand for these Priapic and venereal breads, especially on the occasion of certain festivals, the master bakers erected tents and opened shops in the public squares and on the street corners; they sold nothing but sacrificial breads, and at the same time they had slave girls or servant maids who prostituted themselves day and night in the bakery."

In the Middle Ages and still today numbers of cakes, breads, and pastries in the form of both male and female organs are produced in Germany and Switzerland. Among the most characteristic are the *Spaltgebäcke*, split-cakes, made in honor of women about to give birth; the *Mandelcher*, almond cookies, eaten in the Rhine area as a symbol of masculine virility in which the almonds represent testicles; the *Liebesknochen*, bone of love, with obvious penile significance, which is a kind of éclair; and the *Vielliebchen*, literally much-little-love, a cake made of two almonds (representing the testicles as above) resting on a pastry base in the form of a shell which also probably has female sexual significance. One of the most famous of all German cakes is the *Stollen* from Saxony, which appears to be modeled after the female organ.

In France phallic foods have likewise survived up to a recent period. Around 1560 Johannes Bruyerinus Campegius reported that the inhabitants of southern France at that time ate *cibi quos cunnos saccharatos appellant*, and phallic cakes have been recorded as late as the 19th century. In Sardinia dough phalloi were made in connection with the midsummer festivals of the Adonis cult, a custom which was still observed through the 19th century. In Italy the tradition seems to have lasted longer than in other countries, i.e. well into the 20th century, as recorded by Elderkin (*Kantharos; Studies in Dionysiac and Kindred Cults*, Princeton, 1924, p. 172): "Ithyphallic bread has survived in Italy to the present day. The writer saw specimens in a Tarentine restaurant and they are still handed about at Easter in some parts of Italy. Phalloi of bread which had been blessed by priests were carried until recently at the *Fête des Epines*, a name for Palm Sunday."

In connection with phallic foods, mention should be made of such related food-sex manifestations as the "nates cakes" made in medieval Germany, described in a questionnaire circulated by Burchardt, a 12th century bishop of Worms, in *De Pœnitentia Decretorum* (Lib. XIX): "Fecisti quod quædam mulieres facere solent? Prosternunt se in faciam et discopertis natibus, jubent ut supra nudas nates conficiatur panis et eo decocto, tradunt maritis suis ad comedendum, hoc ideo faciunt ut plus excalescant in amorem illarum." Other practices based on analogy between food and sex are the eating of fish placed in the vulva, noted on the island of Ponape, and the mingling of semen with the Sacred Host, cited by St. Augustine as common among the Manichæans. DUNCAN MACDOUGALD, JR.

phallism Among some ethnic groups phallism, also often called sex worship, is the worship of the male sexual organ, the *phallus*, or of the male and female organs, *lingam* and *yonis*, *phallus* and *kteis*. Elsewhere the term phallism refers to reverence for or worship of sex, its impulses, rituals, and procedures. Cultures which function through abstractions and generalizations have reverence for the reproductive powers of men, animals, and plants. Because the antics of rational creatures when sexually excited are ludicrous, still other groups derive entertainment from the acts, impulses, or organs of sex, find them interesting, or use them as decorative motifs in their arts. Writers on phallism and the related topics, fertility, primitive religions with phallic components, confuse these sorts of reverence, worship, interest, and because the subject is intricate and generally forbidden, find in obscure and inadequately established theories justification for their own sexual imbalance.

The distinctions thus made imply cultural stratifications which have no geographic termini. The Old Testament oath of hand under the thigh has a phallic implication which has been lost. The secret orgies of the Tantrist ascetics may be to "kill lust with lust" or they may be to exercise a ritual with a complex metaphysical basis. When de Zwaan asked the Nias of the Malay Archipelago the meaning of the crude representations of the male and female sexual organs which they used as decoration, he was told they were for amusement and ridicule, though others have found in them evidences of an older fertility cult. In occidental cultures where all levels of mythopœia are observable, overt interest in the sexual organs, acts, impulses, and the consequences of the impulses takes many forms: chalked representations on walls and sidewalks not greatly different from the designs of savages; technical discussions in dictionaries of religion and folklore; dissertations in handbooks of *Sexualwissenschaft*; and timid euphemisms which attempt to restrict the facts of life to the facts of sex presented in terms which make them pretty but not attractive.

The term phallism in the current tradition of ethnology and folklore is restricted to beliefs and practices which are assumed to have magic or religious significance. Attempts to distinguish between magic and religion, like attempts to distinguish between the sexual organs and the reproductive powers of nature, though useful at times, have frequently been distorted by the powerful impulses which these symbols represent and the polysemantic character of all symbols, pictorial or

linguistic. Thus the loose assertion that church steeples, stupas, and dagobas are phallic has distorted much thinking about other phenomena which are demonstrably and in fact of an immediate sexual nature. Because the emotions of religion and the sexual emotions have qualities which are similar, bitter controversies arise as to whether religion was or is "essentially" sexual. The existence in ancient Greece of sexual ceremonies, the use of phallic symbols and the carrying of phalli in public processions (*phallophoria*) has led to protests that Greek culture was "essentially pure." The assertion that windows with lace curtains are symbols of the female sexual organs must be countered by the fact that windows let in light and curtains moderate it. Cowrie shells, which in the Pacific and elsewhere were used both as money and female decoration, can be shown to have had a phallic significance. Recently this assertion was challenged by British anthropologists on the ground that the modesty which they consider an essential quality of womanhood must be shocked by advertisement of that sort. The logic which interprets the Hebrew Yahweh as a development from an original phallic cult is devious and the evidence upon which it rests is scattered and obscure. Yahweh, like Zeus and Thor, is associated with storms. He is said to have been the "splitter," therefore the phallus. This sort of gobbledegook which confuses collateral with central meanings has distorted much thinking on a subject of considerable importance in all cultures.

Thus students of phallic worship and ritual need to exercise great caution. Though the facts can be established without great difficulty, the significance of the facts is often obscure. With the changing of cultural contours because of foreign influence or the intrusion of new ideas, facts which were once clearly phallic have lost all phallic significance. Though some of them are still retained in modern religions, including Christianity and Buddhism, only their phallic form remains, not their meaning. Attempts of so brilliant a scholar as Hartland to show how an elevated and ethical religious system might have developed from a crude and orgiastic phallism must fail on a number of counts of which the most striking is that so much interpolation is needed that the assumptions obscure the facts. Facts about phallism are distasteful to many occidentals. Attempts of some writers to show how it is possible that other cultures might regard the organs of sex or the reproductive powers of nature with feelings similar to those with which the members of ethical sects regard the symbols of their worship are futile, because it can be shown that some other cultures do in fact so regard them. The facts remain. The purpose of these notes is to summarize them.

1) *Phallic Religions* A complete theory of phallic worship developed among the Tantric sects. The origins, history, and actual practices of these "left-handed Tantrists" are obscure. Tantrism is a form of Hinduism. It is doubtful whether the phallic aspects of the sect are special developments of Saivism or whether they and Saivism have common origins, and it is probable that the worship and orgiastic ceremonies are similar to or derived from the Tibetan Bon cult which, as Waddel has noted, is similar to Chinese cult-Taoism. If, as seems probable, the ceremonies derive from proto-Taoism, we have to deal with a cult which has several million sincere adherents who live in eastern Tibet, are found

in many lamaseries in China, and have beliefs which, though alien in form and structure are not strikingly different from some of the beliefs of some of the Chinese Taoists. Though the lamaism of the Grand Lamasery of Lhasa is said by observers to be a pure and elevated form of Buddhism, the folklore of that lamaism as explained in Chinese monasteries has many Tantrist elements.

The discipline of the left-handed Tantrists is directed toward the attainment of nirvana by meditation and austerities. Important in this attainment is the identification of the adept with some of the many gods accepted by the cult. After severe training which involves exercises in breathing, in the *mudras*, or positions of the hands, and in concentrated meditation, the adept evokes one of the spirits and "identifies" himself. Many of these deities are female and require ceremonies and practices which observers have hesitated to describe.

The principle animating these orgies, however, may be stated crudely. The life force manifests itself in two opposing principles, male and female. Whereas Buddhists teach that serenity is to be attained by the elimination of desire, some Chinese Taoists and Tantrists believe that lust can be destroyed by lust and others devoutly believe that the human being attains his most complete development only when male and female are in sexual union, at which time they interchange forces and man attains the highest degree of manhood and woman the highest degree of womanhood. The representations of this rite, considered sacred by the devotees, show the male standing in the embrace of the female, or *sakti*, whose arms are about his neck and whose legs are about his hips. In this position they enjoy eternal ecstasy. The pictures of this rite give a considerable amount of detail; the statues give more. The figures are usually detachable and in some the lingam and yoni are realistically sculptured.

The ceremonies of the cult are secret. Drinking vessels made of skulls lined with silver are common in the temples. Buddhahood is said to be in the female organ. Semen, which many Chinese believe is a potent tonic for old men, is said by the Tantrists to contain the "five bodies of Buddha." The folklore of the lamaseries tends to support the inference by competent observers that the ceremonies are orgiastic and obscene.

Little is known about this sect, whose adherents are numerous, for several reasons. The Tantrist and Lamaist texts are in an obscure jargon of Tibetan and Sanskrit badly understood by many of the devotees themselves. The texts are cluttered with white and black magic formulae. The ceremonies are secret, open only to adepts. Gruesome stories are told about people who violated their oath of secrecy.

Some of the sexual beliefs of the Chinese Taoists are not dissimilar to those of the Tantrist lamas. These, though preserved in a very corrupt text, were possibly known in the Chou dynasty (1000 B.C.) and seem to have been very popular during the first millennium of the Christian era. These beliefs are built on the assumption that the male and the female principles penetrate all things. South is male, north is female. Heaven is male, earth is female. The several parts of the body are male or female. When these principles come into conflict, when we are subject to excessive male or female influences, serenity is destroyed and illnesses occur. When

these principles are in harmony, the individual enjoys increase of power, longevity, and even the ability to become immortal, to become invisible, or to shift his shape and to assume the shape of any creature he may wish to become. This doctrine also declares that at the moment of sexual climax, a quantity of "life essence" is exchanged. The individual who experiences the climax before his partner loses a quantity of life essence. The disciplines of this cult are directed toward increasing control.

A distinction must be made between philosophical Taoism and cult-Taoism, or popular Taoism, in China. Researches in recent years have given some archeological justification for the view that popular Taoism in China, a mixture of black and white magic, fortune-telling, and the like, is, after many changes, after intrusions of foreign cults and attempts to imitate and compete with Buddhism which many Chinese found attractive, the remnant of an earlier system which flourished in China during the Shang dynasty, 1500 B.C. to 1000 B.C. and earlier. This large, imperfectly understood complex of beliefs, shot through with fertility magic, may have derived from the large reservoir of beliefs in eastern Asia with which are clearly associated the Bon cult of prelamaist Tibet, some of the Tantrist beliefs, parts of Saivism, and some of the early Japanese theology. Karl-gren has demonstrated that the character modern Chinese use to designate the ancestor tablet was, in very early form, obviously a phallus.

Although the Japanese government suppressed phallic ceremonies in 1872, both phallic ceremonies and phallic shrines still persist in Japan. In the Japanese origin myths, Izanagi and Izanami, "the male who invites" and "the female who invites" are the first ancestors and the special deities of sexual reproduction. When ordered by the other gods to create the islands, Izanagi thrust the "jewel spear" into the sea. Then they descended and populated the earth. Ama-tsu-mara, the blacksmith god who made the sun spear, Saruta, the monkey god who was shamelessly approached by Uzume, are said to have phallic significance. In modern times, phallic objects, either realistic representations of *lingam* and *yoni*, at times grotesquely enlarged, or other phallic objects—the peach, the bean, the rice kernel—are used for magic purposes. Phallic ceremonies are thought to protect the rice crop, and to protect against venereal disease. Phallic deities are the patrons of marriage, of barren women and prostitutes, of wayfarers, and of the crossroads, as well as of fertility. Terminal posts on bridges are said to be phallic.

Phallism in India has a number of aspects. Discussions of why the symbols of Śiva should be the *lingam* and *yoni* are not satisfactory. Crooke and other competent scholars assert that some of the great Indian *linga* have no sexual connotation. One at Benares is simply an enormous block of round black stone six feet high and twelve in circumference. Amulets in the form of *linga* and *yoni*, sometimes alone and sometimes united, are worn as ornaments. Followers of Viṣṇu wear a *namam* on their foreheads. This is two diagonal lines with a perpendicular line in the center and is, or once was, a representation of *lingam* in *yoni* or *yoni* alone. Similar doubt attaches to the worship of stone pillars in North India. Some students have suggested that this worship was indigenous and was later absorbed by the cult of Śiva;

others suggest that phallism was imported into India. The female servants of Śiva and Kṛiṣṇa, often referred to as "temple prostitutes," thought generally a part of the folklore of phallism, involve other streams of folk thinking and feeling.

Whatever may be the origin and history of phallism in India, the cults of Śiva and Viṣṇu make ritual use of phallic symbols, though how and why "the great architect of the universe" should be worshipped in the form of *lingam* and *yoni* have been obscured by the disputations of devout theologians and the speculations of folklorists. Apologists of Saivism maintain that "the two great generative principles of the universe, Śiva and Śakti or Puruṣa and Prakṛti, the father and mother of all creations, the energy and matter of the physical scientist, are symbolized briefly in the form of the *lingam* and *yoni*." The Lingayats, whose emblem is a small stone phallus in a box tied around the neck, have been called the Hindu Puritans. Although in these and other sects in India, the symbols remain, the active elements of sex worship have been refined and conjugated into a metaphysical mysticism. Phallic elements in Indian popular lore need to be put together. Examples are: Nathurām, a rogue of the Northwest Provinces, came to Mārawāri and seduced women. He was killed. His ghost which continued to be troublesome is appeased by obscene gestures and songs performed by women. His image with an exaggerated organ is beside the beds of brides. Dhār-wār women of ambiguous caste carry the image of Jaka-mār with an organ three times the size of his body from house to house soliciting presents. In upper Burma obscenities and a figure with a large organ are parts of the New Year celebration.

2) *Phallic Symbols* Great caution is needed in examining this aspect of phallism. A number of writers have described a cannon in Java which barren women straddled in the hope of curing their barrenness. The cannon at those moments was undoubtedly phallic and the magic was homeopathic. Similar conclusions are justified in the case of monoliths in several parts of the world which cured barrenness. However to identify all cannons, guns, and monolithic stones as phalli because they have a resemblance to a penis or to identify all round or oval objects with openings in the center with the female pudenda, is to leave folklore for the subtleties of pathological symbolism. Obviously, once some identification is made, such as "the church steeple is really a phallic symbol," the thought is likely to recur even though there is grave doubt whether the identification has any historic or folkloristic reality. In other cases the relations are less obscure. Some of the designs on gems recovered from the Aegean culture show an upright object impaling a triangle which has suggested the phallus entering the yoni. In triangles the apex of the "female triangle" points downward and the apex of the "male triangle" points upward and thus correspond to the growth of the pubic hair on the male and female. The degree to which this primitive symbol has lost any meaning it once may have had is shown by the fact that the triangle used as a symbol by the Young Men's Christian Association is the so-called "female triangle."

Other common objects thought to be phallic symbols still retain their meaning in some cultures. The peach in China and Japan symbolizes the yoni. Peach sticks are used to beat out barrenness. The fig in Italy and parts

of France is also a symbol of the female organs. The Chinese consider that "apples are good" because they have many seeds. The rice thrown after newly married couples in Euro-American wedding festivities may once have been seeds to induce fertility. The shoes thrown at these same festivities have been discussed by several scholars. Dr. Jones reports the broad jest, "May you fit her as this old shoe fits me." When a Chinese bride dies before marriage, the groom, in some parts of China, is given the shoes she wore last and burns incense before them for some time. The use of the shoe as a recognition test in Cinderella stories in many parts of the world, and the use of shoes in girls' games in France, Germany, and elsewhere to discover whence their husbands will come, leads to the suggestion that shoes are, in some cultures and at some times, of phallic significance.

Phallic cakes are reported from several parts of the world. Panzer reports that cakes of phallic shape were given to any Brāhman thought to be a blockhead. At Saintes in France and at Saintonge near La Rochelle as late as 1825 phallic cakes were carried in Easter processions, blessed and preserved for the rest of the year. Phallic cakes were also served at some of the women's mysteries in ancient Greece.

Because no great amount of skill is required to make fairly realistic representations of the organs of generation, persons who are interested in doing so have no need to revert to obscure symbolisms.

The tendency to exaggerate the size of the organs observed among some African tribes, in the "spring" pictures of Japan, doubtless taken from similar pictures in China, has been interpreted as the attempt to emphasize the idea of reproduction and fertility. The pictures in China and Japan, sometimes realistically and carefully done on silk, portray men and women in the act of copulation. They have been variously interpreted. A tradition from the Ming dynasty in China reports that these are in effect fire insurance. The Thunder God will not strike a house where intercourse is being consummated and the yin-yang or female and male forces are in powerful flow. Inasmuch as the householder cannot be sure that the act is being performed every minute of the 24 hours, he keeps these pictures. They are frequently found pasted on the walls of kitchens in lower class dwellings. Another tradition is that the Thunder God, being prudish, will avoid houses with these pictures. Still another is that young girls are supposed to study them in order to increase their charm. Finally, these albums are sometimes used at dinner parties attended by gentlemen. Each guest is expected to write a formal Chinese poem which contains no indecent word or reference but which nevertheless describes the scene portrayed with great realism. Thus, "Many lotus blossoms have opened their lovely petals to receive the dew tonight" describes an orgiastic scene.

The Nuforese of New Guinea had on the temples of the ancestors and on the dormitories of the unmarried men figures with exaggerated pudenda. The Nias near Sumatra represent spirits by images with large organs and bury such images with the dead. Phallic stones are before the huts of the chiefs. In the Celebes, breasts and phalli are used in the decoration of temples. On the Slave Coast of West Africa, figures of Legba, as male, and female, squat contemplating their own exaggerated

organs. The members of the Ghédé sect of Haitian voodooists perform a dance around a small wooden phallus. Large male and female figures with exaggerated organs are given offerings in secluded huts among the Yoruba. Small phallic (?) figures have been found among the Alaskan tribes.

Figures with obvious phallic significance were frequently used as decorations in Greece and Rome. That they should have been popular in Pompeian and other houses of prostitution and in American beer-halls may have been for entertainment only or they may have had to do with homeopathic magic. The Ephesian or thousand-breasted Artemis represents copious motherhood. Pausanias, whose mind sometimes ran on these matters, reports that Hermes of Mt. Cyllene was a phallus on a pedestal and was greatly revered. The images of Hermes, god of thieves and therefore protector against thieves, used for marking the boundaries of property, were sometimes decorated by a male organ though the rest of the image was a plain stone pillar.

Phallic images are still to be seen in Europe. South of Arles in France a very large monolith is said to be a phallus. Hartland reports that Saint Foutin, the first bishop of Lyons, was among the phallic saints of Gaul. Protestants taking Embrun in 1585 found an object said to have been the saint's penis, reddened by wine which women in need of his help poured over it. At Trendle Hill in Dorset a figure cut in the turf is 180 feet long and has a large penis. Until recently some of the Irish church doors had female figures with exaggerated organs.

An examination of phallic objects from all parts of the world leads to the conclusion—after those are removed which are obviously not phallic and others are set aside that may once have been phallic—that the meanings attributed to them are varied. Amusement and entertainment at the grotesqueness of sexuality is obvious in the history of caricature. Interest in fertility and the use of these objects to induce it are sometimes clearly associated, and the use of these objects to induce sexuality seems to be frequent.

3) *Ritual intercourse, calendrial orgies, ritual promiscuity, etc.* Attempts to distinguish between ritual intercourse, calendrial orgies, and ritual promiscuity are hampered by the facts that members of the same culture give divergent interpretations to the same customs, that customs change within short spaces of time, and the caution not unmixed with prudery with which occidentals approach these matters makes free discussion difficult.

Granet has given good reason to believe that both before and after the Shang dynasty in China the spring and autumn festivals were associated with fertility rituals. During the planting season youths and maidens enjoyed great sexual freedom. At the harvest festival those maidens who had become pregnant celebrated their marriage. In this instance the fertility of mankind and the fertility of the fields seems clearly associated. Libertinage, at times approaching the orgiastic, was permitted in the games of Saint Valentine's Day and the rituals of the Maypole in England, and the customs of Saint John's Eve in the northern countries; but how far these expressions of high spirits were influenced by the somewhat abstract idea of fertility remains to be proved.

The fact that promiscuous orgies occur during the planting and harvest seasons in many parts of the world has led observers to the conclusion that their purpose is to induce fertility and that promiscuous intercourse at these seasons will, by what is called homeopathic magic, produce good crops during the summer and good fortune during the winter. The answers by some of the natives to questions by Occidental observers give some reason for this conclusion, although at times the reports leave the feeling that the natives are trying to give some answers to the foolish question of a silly foreigner. The rituals of some of the peoples of the East Indian Archipelago represent the sun having intercourse with the earth. The Nago tribes have orgies at sowing and harvest times. When the rice blossoms in Java the owner and his wife run naked about the field and have intercourse. The ancient custom in Europe has often been reported that men and women had intercourse after the first furrow was planted. In the Amboyna and Uliase Islands, when the cloves were threatened, a man would go naked into the fields and have symbolic intercourse with a tree. Strangers were excluded from the orgiastic festival of the new moon among the Ekoi of Nigeria, which was supposed to insure good crops and protect them against damage. The sexual organs of the men and, preferably, women sacrificed at these times were used as medicine. The spring rituals in honor of Dionysus, Greek god of vegetation, were introduced by a procession into the fields led by a maiden carrying a phallus and followed, according to Murray, by the farmer, his wife, and daughters, singing bawdy songs. Rituals in honor of Osiris, Egyptian god of vegetation and creative energy, included processions in which women carried his image equipped with an enormous phallus operated by a string. These representative instances of actual or symbolic orgy seem to be associated with fertility magic.

Some cultures use phallic symbols or gestures to ward off evil or to indicate contempt. In Italy, the thumb protruding between the first and middle fingers is a phallic gesture to protect against witchcraft and the evil eye. Biting the thumb or the thumb to the nose are gestures which have lost all but a reminiscent phallic meaning. Phallic objects have been found in graves from Egypt to Norway and the use of phallic objects as good-luck amulets is widespread. The Assinibioian women wear a gold phallus as an amulet around their necks when they are married. The engagement and wedding rings in Euro-American cultures ward off evil. Exposure of the sexual parts before combat is reported from the Celebes, as well as in the Tewa story of the girl warrior from the American Southwest. The Nias set up figures with exaggerated organs before their doorways as defense against epidemics.

Discussions of the orgiastic lore of the witches, which included promiscuous intercourse with the Devil as leader either in the form of a man or a goat, belong elsewhere. In the Paris of the 17th century a renegade priest read the mass backwards. The altar was the naked belly of a woman. Attempts to revive the rituals of Satanism and witchcraft in modern America and Europe are occasionally reported. No objective study of them has yet been made.

Reports of ritual intercourse on special occasions are available from widely separated cultures. In parts of

East Africa the head man and his wife must have intercourse on the second and fourth nights after the village moves and the father and mother must have intercourse the second night after their child has been circumcised. In some places ritual intercourse is part of a purification ceremony. On the Aroe Islands the corpse is exhumed after a fixed period of burial, brought to the beach, and cleaned so that the skeleton can be put into a cave. On this occasion the men carry phalli and the women kteis, sing appropriate songs, and stick the phalli into the kteis. From Brazil a mock or ritual attack of a sexual nature is reported to have been made on the house of the deceased.

Promiscuity is customary among some peoples either at fixed calendric festivals or on special occasions. Thus, the native women of Nicaragua and perhaps those of the Natchez Indians of Louisiana were at certain times permitted to have intercourse with any man they chose. The Sun Dance of the Arapaho, at one time perhaps connected with fertility, was performed in consequence of a vow one of the tribesmen made at a crisis in his life. After the performance of rituals in a decorated lodge a male and a female official each clad in a single garment went outside, removed the garments and the woman lay prone. Similar ceremonies were known to the Cheyenne. In the Buffalo dance of the Mandans a naked figure painted black with an artificial phallus pursued women and made obscene gestures toward the other dancers. He then pretended to be exhausted. The women attacked him in ritual dance and stole his phallus. The functions of the clowns in the dances of the Pueblo Indians sometimes had phallic implications. The women sang songs ridiculing the sexual prowess of the men of the pueblo and the clown retorted, insulting the individual women until in ritual dance they surrounded him and stripped off his clothes.

Orgiastic indulgences at festivals in established religions are reported from many parts of the world. Participants are at times required to observe continence for specified periods before the ceremony. Lumholz reported of the Tarahumara of Chihuahua, Mexico, that their ceremonies included speeches, decorous behavior, and the drinking of corn liquor. After everyone got drunk, intercourse was promiscuous. Although Lumholz's observation that without drunkenness the Tarahumara are too shy to have intercourse may be a broad generalization, it does associate continence with orgy. In Africa women dedicated to Legba are promiscuous on his festivals and are called his wives. The Greek festivals of Dionysus and Demeter, Thesmophoria and Haloa, also ceremonies in honor of the Great Mother or Bona Dea in Rome, were mysteries, and reports about them must be treated with great caution. They were spring or autumn festivals and those folklorists who believe that farmers were in the habit of dealing with such fictions as those concerned with "fertility" classify them as fertility ceremonies. Our earliest accounts of them, however, come from a period in which the Greeks and Romans had attained as high a degree of sophistication as any occidental people has yet reached. Men and women participated in the festivals of Dionysus which became unrestrained orgies in which victims were torn to pieces and devoured raw, men in states of ecstasy emasculated themselves, and intercourse was promiscuous. Only women participated in the autumn festival

of the Haloa celebrated on the threshing floor, and at the banquet which followed cakes in the shape of phalli were served. The participants in the Thesmophoria prepared by fasting and continence and sacrificed snakes and other phallic objects. The ceremonies of the Bona Dea, celebrated in Rome on May 1, were performed by Vestal virgins and a guild of the most respectable matrons who concerned themselves with the proprieties. The ritual contained phallic remnants and the telling of indecencies which must never be repeated to the uninitiated, a custom reported from Africa and from modern secret societies.

R. D. JAMESON

phangra A wedding wine dance of Punjab, India. The two processional groups of the bride's and bridegroom's parties meet, exchange presents of wine, and mingle in an orgiastic dance. This dance, with its origin in ancient fertility motives, is now regarded with disfavor. [GPK]

phantom ships Revenant specter ships which have been lost at sea, or which for some reason are doomed to sail forever, never making port. As many as 15 are known and seen along the northeastern coast of the United States. Phantom ships are always seen sailing against the wind, or sailing at full speed when there is no wind. Often they have no crew, or are manned by a ghostly crew. Sometimes music is heard as they swish by; but they never answer when hailed. Irish folk legend has a phantom ship which is becalmed until the judgment day. Several of them are fire ships. Of these the *Palatine* is famous: lured to destruction on Block Island, R. I., by lights, pillaged, fired, and set adrift. She reappears annually on the date of her burning, or occasionally as a storm warning. The *Titanic* also is sometimes seen on the anniversary of her disaster.

Phantom ships never make port. One, however, the *Alice Marr* of Gloucester, Mass., is seen to make half-way up the harbor on the same day each year, and then disappears. See R. deS. Childs, "Phantom Ships of the Northeastern Coast of North America," *NYFQ* 5: 146 ff.

 The most famous of the phantom ships is the *Flying Dutchman* sighted now and again by unlucky persons around the Cape of Good Hope. The stories are in agreement that the master, Captain Vanderdecken, was condemned to sail those waters forever because of his crimes. In one story, he swore a horrid oath: that he would weather the Cape though he should keep trying until the last day. In another version, a murder was committed aboard the ship. In a German story the captain is condemned to sail the North Sea forever without helm or steersman. He whiles away the time by playing dice with the Devil for his soul.

To see a phantom ship is a bad omen, they say. To see the phantom ship of the Tappan Zee in the Hudson River, for instance, is always interpreted as a storm warning. [RDJ]

Philemon and Baucis In Greek legend (Ovid *Metam.* viii, but probably originating in Phrygia), a poor, old couple who were the only ones in their district to offer hospitality to Zeus and Hermes when the two gods, belated travelers, tried to find shelter for the night. In return for their kindness, the two gods led Philemon and Baucis to the top of a nearby hill and showed them the entire district flooded as punishment for its selfishness. The two mortals were granted a wish, and since

their home had been transformed into a temple they asked to be made priest and priestess, and to die at the same time. The wishes were granted. In later years, the oak which was Philemon and the lime which was Baucis grew together outside the temple in Phrygia. The story combines the motifs of the visit of the gods to mortals (wishes granted in return for hospitality) and the saving of the good from a general catastrophe. The Biblical stories of Abraham and Noah exemplify these motifs; but see *Acts* xiv for what is probably a reference to the Philemon and Baucis story. See MIDAS.

philosopher's stone The discovery of the philosopher's stone was the objective of the alchemical sciences for, when ground down and combined with water, drugs, and other sorts of material, it would produce the "elixir" which could transform "imperfect" to "perfect" metals. Although the search for the philosopher's stone, which in some places is also the pill of immortality, has cost many lives and great fortunes, it has, both in the Far East and in Europe, contributed much, especially during the prescientific period, to man's knowledge of chemistry. [RDJ]

Phineus In Greek legend, a soothsayer and king of Salmydessus in Thrace. He was blinded by the gods, the reason given varying in the several accounts. His second wife, Idæa, accused his sons by his first wife of having insulted her, and Phineus punished them barbarously: by blinding them, by half burying them, etc. The gods then sent the Harpies to make his life miserable. Whenever the blinded king sat at his table the Harpies would snatch the food from before him, flying away with some of it and filthily the remainder. The Argonauts attempted to get direction for their voyage from the soothsaying king, but the Harpies had first to be chased off. It had been foretold that the sons of Boreas would destroy the Harpies or be destroyed in the attempt. These two, Zetes and Calais, members of the *Argo's* crew, set off through the air after the Harpies. One of the monsters fell into the Tigris (after that called Harpys) and one flew as far as the Strophades where, tired out, she fell and was spared by her pursuer only on the promise that Phineus would no longer be bothered. Phineus then gave the requested advice to the travelers, warned them of the Symplegades, and sent them on their way. Compare HARPIES.

Phœbus In Greek mythology and religion, Apollo (Phœbus Apollo) as the sun god; the divinity of light in later classical writers, absorbing the attributes of Helios. The feminine form, Phœbe, is personified as the moon.

Phœnix (1) In Greek mythology, the father (or brother) of Europa and eponym of Phœnicia.

(2) The Greek name for the bennu, the mythical Egyptian bird which was the symbol of the rising, regenerated sun, and the hieroglyphic of the sun in this aspect: both the Egyptian and Greek names also mean palm tree. According to Herodotus, who doubts the story, the Egyptians claimed that the bird lived in Arabia. Every 500 years, the young Phœnix appeared at Heliopolis bearing a ball of myrrh in which he had embalmed the body of his father. This he buried in the temple of the Sun. Pictures, he said, showed a red and golden bird about the size of an eagle. From Pliny we learn that the Phœnix builds a nest of twigs of cassia and frankincense in which to die. Out of the dead Phœnix a worm crawls

from which the new Phoenix grows. The author of *Physiologus* places the home of the bird in India, whence it flies to Heliopolis carrying spices and is burnt on the altar. The new bird departs on the third day following.

Among the Arabs Al-Salmandra, the Salamander (Persian Samandal), is sometimes a four-footed animal, sometimes a bird, living in fire. The Persian simurg, thirty birds in one, lived 1700 years, and when the young was hatched the parent of the opposite sex burnt itself to death. This bird is the same as *'ankā* of Arabic lore, and bears a vague resemblance to the roc or rukh and to the Garuda of Hindu mythology. The Phoenix appears in *Job* xxix, 18: "I shall die in my nest, and I shall multiply my days as the phoenix." (The latter is variously translated: "sand" in the Authorized Version, for example, but "phoenix" seems more accurately to fit the context.) In the apocryphal *Book of Enoch*, the Phoenix appears as a great serpent with a crocodile head. In later Christian symbolism, the Phoenix stood for the Resurrection.

Pholus In Greek mythology, an Arcadian centaur, son of Silenus and a Melian nymph. During the hunt for the Erymanthian boar, Hercules stopped at the cave of Pholus. Pholus was custodian of the wine cask of the centaurs, and when, in hospitality or because the cask had been left by Dionysus to open when Hercules came, Pholus broached it, the smell attracted the other centaurs. They came armed with rocks and tree-trunks, and in the fight that followed Hercules drove them off. One, Elatus, came to Chiron's cave, wounded by one of Hercules' poisoned arrows; and the physician-centaur Chiron accidentally wounded himself in the knee when drawing the arrow. As a result the immortal Chiron gave his immortality to Prometheus that he might die and escape the pain. Pholus too dropped an arrow on his foot and died. Compare *CHIRON*.

phurbu or **p'ur-bu** A nail used by the lāmas and sorcerers of Tibet to drive off or impale demons. The phurbu is triangular and wedge-shaped, from eight to ten inches long, with a head on the broad end and sharp-pointed at the thin end. It is generally made of wood but sometimes is of cardboard and inscribed with mystical sentences.

piai (also spelled *pagé*, *ippaye*, etc.) The term for the shamans among the Tupi-Guarani and Carib tribes of South America. The word has passed into English under the form of *piaiman*. See *SHAMAN*. [AM]

pibgorn or **pibcorn** The hornpipe; a wind instrument of the clarinet family known in its primitive form in Wales as a section of the shinbone of a sheep with a bell of cow's horn. It was played to accompany dancing. From its English name the dance, the hornpipe, was named. It is also called *stockhorn*.

pien chung A Chinese bell chime of sixteen bells suspended in a double row on a stand and tuned to a system of male and female semitones: derived from the older stone chimes of the same arrangement and tuning pattern, called *pien ch'ing*. See *BELL*; *CHIMES*.

Pierlala A Flemish ballad, dating probably from the late 17th century, and dealing with the pranks and escapades of a character, Pierlala, similar to Till Eulenspiegel. At the end he repents and offers a moral for the audience.

pig Folklore about pigs is ambivalent, and the question arises as to whether pork is forbidden because of its actual or ritual uncleanness or because of its sanctity. The Egyptians thought pigs were unclean. Swineherds could not enter temples or marry the daughters of other men, yet once a year pigs were sacrificed to the moon and to Osiris. The Baluba of the Congo have a woman's association known as the Bulendu. Members may not eat pork because "the spirit of the association" lives in its flesh, yet all women must eat it when they are initiated. Women of the Lower Congo are not permitted to plant if they have eaten pork. Greek women sacrificed pork to the female earth deity. The Syrian worshippers of Attis ate no pork but Adonis was in many ways connected with the boar. Some students have maintained that the European corn spirit was in the form of a pig and have associated pig with the cults of Attis, Adonis, Demeter. The Cretans worshipped pigs.

Jewish lore about pigs is much more ancient than the passage in which Christ drove the unclean spirits into a herd of swine. Among the abominations listed by Isaiah is "he that offereth an oblation as if he offered swine's blood." Elsewhere Isaiah says, "They that sanctify themselves and purify themselves in the gardens behind one tree in the midst eating swine's flesh and the abomination and the mouse shall be consumed together." The inference may be that pork was eaten secretly.

The modern Welsh are said to believe that the pig appears on Halloween, and during an eclipse people imitate the grunting of pigs. The squeal of a pig will dissipate St. Elmo's fire. Irish folklore has many references to pigs. *Muic-inis*, or Pig Island, is one of the ancient names for Ireland. A black pig is a bad sign, and illness can be averted by walking three times around a pigsty. Acute hearing is "hearing like a trespassing pig." Some German towns once seem to have regarded the pig as an unlucky animal though the belief has changed. The associations in Germany seem to be with storms and fertility.

Pigs support the earth in the Celebes and cause earthquakes. In India they are sacrificed to the cholera goddess and disease demons, and to propitiate ghosts. The Karens of Burma believe that adultery destroys fertility. When a couple has been detected, they buy a hog and kill it. Each takes one foot and makes a furrow. They fill the furrows with blood and pray that having destroyed productivity they may heal it. Cousin marriages are prohibited among the Borneo Dyaks. The prohibition may be lifted by a rather complicated ceremony. The couple throws their personal ornaments into the water. They then kill a pig, drain its blood, and throw the carcass into the water. Their friends then push them into the water and they bathe together. Finally they fill a joint of bamboo with pig's blood, walk through the neighboring villages, and scatter the blood.

Pig's blood when drunk induces prophetic power. In the northern Celebes a priest is reported to drink blood from the hot carcass. The custom is also reported from southern India. Human blood is said to produce similar power. See *CANNIBALISM*.

Zulu girls will not eat pig "for it is an ugly animal; its mouth is ugly, its snout is long . . . if they eat it a resemblance to a pig will appear among their children."

The Caribs believe that a girl who eats pork will have children with small eyes.

Pigs were sacrificed in the Greek Thesmophoria at the time of the October planting. The pigs were buried in an underground room. Each year the remains of last year's sacrifice were removed and mixed with the seed. See ADONIS; DEMETER. [RDJ]

pigeon dance A social dance for men and women, confined to a few Indian tribes of the eastern United States. In the Cherokee *wai* the counterclockwise file of dancers represents pigeons; one man, as a hawk, swoops down and captures one of the helpless birds. Capture is mimed in a different way by the Onondaga of Six Nations, Ontario. As in the New York Seneca duck dance, *twé'oeno*, a double file of women passes through bridges formed by the raised arms of a double file of men, and is intercepted when the arms are lowered. In the Seneca and Cayuga pigeon dance, *djakowa'oeno*, a double file of alternating men and women trips continually in a counterclockwise circle. All Iroquois tribes use the same well-developed songs, accompanied by the horn rattles of the two dance leaders. In its alternate name of *dove dance*, it is akin to the Mexican *palomo*. [CPK]

Pigtown Fling An Irish reel tune, also known as *Kelton's Reel*, to which the contra dance called the Boston Fancy is done.

pikváhahirak The mythic times, preceding human times, of the Karok Indians of northwestern California. See IKXAREYAVS; MYTHICAL AGE.

pilgrimages The folklore of pilgrimages is associated with the folklore of place. Peoples of all eras and races have found that some places are more suitable than others for the induction of moods thought to be good, or for the ordering of their own thoughts and feelings about themselves and the universe. The Australian aborigines visit regularly their places of "dreaming" where they repeat their legends, myths, and lore, and succeed in a measure in identifying themselves with their heroes and ancestors. Euro-Americans make pilgrimages to the graves of their ancestors and thus strengthen their ethnic ties, and many peoples believe that the ancestral ghosts or spirits will at these times receive reports from the living and give their blessing. Thus the essential part of the Chinese marriage ritual is that the couple kowtow before the husband's ancestral tablets and thus be recognized by the ancestors as a properly constituted unit of the family. Pilgrimages to the homes or graves of national heroes called "national shrines" strengthens the feeling of the pilgrims that they are part of the ethnic complex.

In the mood of heightened sensibility which these visits induce, miracles often occur. This is particularly true when the pilgrimage is to be a place of religious significance, the grave of a saint, or the saint's dwelling place, or place of the saint's death or martyrdom. Many of the obligations and prohibitions associated with pilgrimages seem to be for the purpose of increasing this sense of spiritual power. Prohibition against eating much food or certain foods, against sexual intercourse during the pilgrimage, against wearing shoes, against walking upright, as well as the obligation to wear certain sorts of costume and amulets tend to separate the pilgrim from his usual habits of thinking and feeling and pre-

pare him for the elevated mood he will acquire on arrival. During the *hajj* Moslem pilgrims do not cut their hair or fingernails and leave their bodies uncovered except for two pieces of white cloth. Fires which are lighted at this time have been thought of as a sun ritual and water poured onto the ground has been associated with rain during the next season. Special sanctity is acquired by Moslems who have made pilgrimages to Mecca. The Temple of Buddha's Tooth at Kandy in Ceylon is one of the thousands of places which are associated with the life and miracles of Buddha. Hindus all over India make pilgrimages to the famous temples dedicated to Śiva and other deities. China is dotted with pilgrimage spots: the four sacred mountains and shrines where special sorts of potency can be acquired. In Mexico City the shrine of the Virgin of Guadalupe is very popular. Pilgrimage centers in Europe, in addition to the sacred city of Rome, include Canterbury where Saint Thomas à Becket was martyred, Boulogne, Lourdes, Mont St. Michel in France, Bruges in Belgium, and Compostella in Spain. In Palestine, Jerusalem and Mount Carmel are popular. See ADAM'S PEAK.

Other reasons for making pilgrimages are to fulfill vows made during moments of illness or danger or during the illness of a loved one.

One group of folklorists derive the custom of pilgrimages from early belief in the *deus loci*, god of place, who when worshipped at his own shrine will confer special blessings. This is probably as simple an explanation of the benefits derived from pilgrimages as any, though Chaucer suggested that pilgrimages are most popular in spring when the spirit of wandering seizes people. [RDJ]

Pillan One of the most important deities of the Araucanian Indians, associated with thunder, lightning, earthquakes, and other natural cataclysms. Used in the plural the word designates the souls of the dead and spirits. [AM]

pimpernel A plant of the primrose family (genus *Anagallis*) usually with scarlet, sometimes yellow, flowers. In Ireland scarlet pimpernel is called the herb of Mary, the blessed herb, and sometimes *luib na muc*, herb of the pig. Yellow pimpernel is referred to as *lus Columcille*, the plant of Columcille. Pimpernel is credited with the power of moving against the current if dropped in running water; and it gives second sight to the person holding it. In England and the United States in general scarlet pimpernel is called the poor man's weather-glass, because it closes up before rain and expands fully when fine weather is coming. It also tells time, opening at seven and closing at two. In England it was believed to be effective against spells and to prevent bewitchment. The juice of the leaves cures scalp wounds, draws splinters; the French used it to clear the skin of roughness or discoloration and to promote rosiness. Juice of the leaves and seeds, placed in the nostril opposite to a toothache, will give relief. Because it will grow in cracks on rocks it was believed effective in cases of calculus. The North American Meskwaki Indians use the yellow pimpernel to improve the smell of their medicines. In England pimpernel is still used for kidney and liver diseases.

pine The pine cone is the Semitic symbol of life. In China and Japan, the pine tree is a symbol of life, longevity, and immortality. The Chinese god of longev-

ity is often depicted sitting under a pine tree, with the crane (another longevity symbol) in the branches. In Japan, it is symbolic of the New Year. In China, the juice of the pine, if taken consistently, prevents a man from growing old, lightens the body, and keeps him from feeling hunger. The Greeks say that Cybele, jealous of a shepherd, changed him into a pine and Zeus made the tree an evergreen. A Roman legend tells of a youth and a maid who, thwarted in their love, were changed into a pine and a vine growing together. The pine was sacred to Pan and Sylvanus. In later European lore it was sacred to the sea gods because vessels were made from the wood. The winners of the Greek Isthmian games were awarded a wreath of pine or dried parsley.

In the Tyrol, pine is planted as a marriage tree. In Bohemia, gathering cones on St. John's Day and eating one kernel a day will make one immune to gunshot. This is practiced particularly by thieves and robbers. Roman soldiers ate the nuts for strength. In Silesia, on Mid-Lent Sunday, children used to carry decorated pine boughs through the village before hanging them over the stable doors to protect the cattle. The Navaho Indians of North America smear the bodies of the dead with pitch before burial and mourners smear a little on their foreheads. The boughs are also used in many of their ceremonials. A pine tree in the territory of the Santa Clara Indians is said by them to be the oldest tree on earth and to have been the first food of mankind.

The 4th century botanist Basil said that when a pine forest is cut down or subjected to the action of fire, it will grow up in oak. He also states that the fox cures his wounds with the droppings of the pine tree. Santa Clara Indians also use pine pitch to keep the air out of their wounds. In Bohemia, it cures gout, cataract, and stomach disorders. The gum boiled and drunk as hot as possible is a cure for worms. The boiled leaves in vinegar made a mouth wash for the teeth and gums. The cones boiled were a cure for most of man's ills. Mohegan Indians make a white pine tea for coughs and colds. The Tewa Indians use pine charcoal for biliousness and, wrapped in a cloth around the throat, for laryngitis. The Indians of California use the pitch smoke for coughs, colds, and rheumatism. The Mescalero Apache make a ceremonial drink of the inside bark of the Western yellow pine. See ATTIS.

pioneer and pioneering lore Although the lore of pioneer America properly begins with the colonial period and the Atlantic frontier, it has been more closely identified with Western migration and settlement. From the inner frontier of the trans-Allegheny and Appalachian country to the outer frontier of the trans-Mississippi and trans-Missouri West, pioneer folk culture passed through the several stages of hunting, grazing, trapping, homesteading, ranching, lumbering, mining, and has given us not only the heroic types associated with these occupations but also the characters of the pioneer woman, doctor, preacher, lawyer, judge. Pioneer lore thus shows a division of labor between the nomadic frontiersman who said, "Whenever you see the smoke of your neighbor's chimney, it is time to move," and the settler who had come to stay.

Out of the conflict between the homesteader and the cattleman grew the fence-cutting and cattle-rustling wars and the uncomplimentary names for the farmer and

outlander: nester (Southwest), granger (Northwest), honkyocker (from "hunyak" or Slav immigrant—Montana), squatter, scissorbill, landgrabber, plow-chaser. The need of adapting imported folkways and pioneering techniques to new conditions is symbolized by the trail of furniture and supplies discarded by emigrants crossing the plains in order to lighten their overloaded wagons. The persistence of old beliefs and the mixture of transplanted lore are suggested by the incongruous western Oklahoma garden that boasted of lobelia, saffron, horehound, catnip, pennyroyal, and other strange herbs carefully nurtured in spite of adverse conditions, to the grateful relief of the ailing for miles around.

The lack of rain and the unpredictability of the weather on the arid, windy plains resulted in such adages as "All signs fail in dry weather" and "Only fools and strangers (or newcomers and darn fools) prophesy weather in Oklahoma (or Texas)." The latter saying, in the old saloon days in Texas, was triumphantly cited to any foolhardy tenderfoot who hazarded a weather prediction, and a forfeit was exacted in the form of drinks to the house. On one such occasion a tenderfoot neatly turned the tables by pointing out: "You say there are only two kinds of people who prophesy about Texas weather—newcomers and damn fools. You are right. Those are the only two kinds in Texas."

Pioneer lore is divided between the dream of a land flowing with milk and honey (as the pioneer myth extended to the west the original colonial lure of unlimited natural resources and opportunities) and the harshness of the reality. "It is complained that the 'wind blows,' " solemnly stated a Colorado railroad guide. "As it blows elsewhere, so it blows in Colorado—occasionally." Less solemn and more truthful was the old-timer's reply to the stranger's question, "Does the wind blow this way here all the time?"—"No, it'll maybe blow this way for a week or ten days and then it'll take a change and blow like hell for a while" or "Sometimes it turns around and blows the other way."

Where the pioneer found hell instead of heaven on earth, a favorite gag was: "Except for the climate and the people, ——— (name of town or state) is all right." "Yes, and you could say the same thing about hell." Hence, too, the "hymn of hate" known variously as *Hell in Texas*, *The Birth of New Mexico*, and *Arizona*. Sandstorms and twisters were varied with blizzards and northers. Often told is the story of the Southwest buffalo hunter who in order to keep warm during a norther crawled into a green buffalo hide, which froze stiff, imprisoning him until thawed out by the fire.

Besides howling blizzards and searing hot winds, lack of fuel and water, hostile Indians and hungry coyotes, the pioneer fought insect pests that attacked both men and crops—from fleas and centipedes to potato bugs and boll weevils. In Nebraska invading grasshoppers would eat downward on the potato vines and "when they came to a potato bug would calmly kick it and go on their devastating way." There was also the grasshopper who ate a farmer's team of mules and then pitched the mule-shoes with him for the team. Grasshopper plagues introduced a variant in covered wagon inscriptions. Instead of "Pike's Peak or Bust" (with "Busted, by Thunder" scrawled under it by those returning empty-handed), the legend read; "Hoppers et all but the wagonsheet,"

And whether the enemy was grasshoppers or duststorms, the pioneer farmer stoically proclaimed that he hadn't lost everything: he still had the mortgage.

The grim (if grimly humorous) struggle with a strange and difficult environment found expression in hard-land and hard-times songs like *The Little Old Sod Shanty on the Claim* (a parody of Will S. Hays' *The Little Old Log Cabin in the Lane*), *The Lane County Bachelor* (the county and the claim of authorship varying with the state), and *Dakota Land* (also sung as *Nebraska Land* and *Kansas Land*), and in sayings like "Texas is a good country for men and dogs, but an awfully hard place for oxen (horses) and women."

Man-made complications included land and preemption frauds, "paper cities," booms and busts, town rivalries, county seat wars, outlawry, and vigilantism, as land-hunters gambled with men's lives and fortunes. Pioneers were "luck-hunters" and "half gypsy," in Sandburg's words, and had not only one eye on the "signs" but also one foot in the road. In search of "God's country," they followed each new land opening, only to find that "God's country isn't in the country; it is in the mind." Boomchasers, "movers," drifters, Okies, caught in the backwash of the frontier, in jalopies instead of covered wagons, the migrants still crowd the roads, following cotton, oil, fruit.

In their home-building, home-making, household arts and industries, and social life, the pioneer farmer, his wife and children continued and adapted Yankee, Southern, or European skills and patterns and the rituals of cooperative work and play (log-rollings, raisings, bees, graveyard workings, all-day-dinners-and-singings-on-the-ground, revivals in "laying-by" time, church and school socials, singing schools, literary societies and debates, old settlers' picnics and reunions, play parties, square dances).

As the people of the rifle, ax, plow, Bible, and fiddle came under the influence of big farm machinery, the mail-order catalog, good roads, the automobile, and "town," old folkways survived in new form. They still thought nothing of driving seventy miles to a dance, and they parked their cars on the front lawn where once they tied their horses. The service organizations continued the cult of boosting and booming. There were also changes. According to James West (*Plainville, U.S.A.*, 1945, p. 132) the love of hunting, trapping, shooting, timbering, living without much money or hard farm work, of good dancing and fiddling, a good shot, fighter, or hard drinker, and a good hound dog, like other "pioneer" traits, is associated with the lower element—the "hound-dog people."

In Oklahoma the term "sooner" lost its unfavorable connotation of one who had entered and taken up "unassigned lands" before the legal hour of opening (noon, April 22, 1889) and became a badge of respectability and "first family" status and a synonym for the pioneer spirit of "getting there first." In Oklahoma, too, the pioneer love of improvements and emphasis on material culture survives in a hunger for mechanical devices and novelties, the frontier dream of a paradise on earth having become a "gadgetsellers' paradise." True to the pioneer heritage, finally, is the story told by Debs Myers of the old-timer on his last tour of Oklahoma City with his grandson, who exclaimed: "Well, grandpop, she sure is big and pretty, isn't she?" "Yep," the

old man replied, "big and pretty, but, hot damn, wouldn't it be fun to tear her down and start all over again!"

B. A. BOTKIN

pipul or peepul The sacred fig tree of India (*Ficus religiosa*): often regarded as the reincarnation of a Brāhman. Nearly every village in India has its sacred pipul tree. Vishnu is often pictured seated on its leaves. It is forbidden to cut down one of these trees, and the family of anyone doing so will become extinct. The souls of Brāhman boys who die unmarried reside in them, a fact which may account for its power to fertilize barren women and the custom of marrying girls to the trees. To become fruitful barren women walk naked a prescribed number of times around the local pipul tree. The men of central India circumambulate it to avert evil influences. Sacred fires are fed with pipul wood. The pipul tree embodies the male principal, the acacia the female.

In China it is a symbol of long life; in Tibet it is regarded as the bridge on which the souls of the worthy pass from earth to heaven. See FIG.

Piqued Buffalo Wife Title of a popular Plains Indian tale, also told among a few Eastern Woodlands and Southwestern American Indian groups. A man marries a buffalo who appears as a woman; the couple have a child. A second wife (or sister) of the man refers slightly to the buffalo-wife's origin, or to her eating habits, or the husband himself offends her in some way. The wife thereupon departs and takes the child back with her to the buffalo herd, and both become buffaloes. The husband searches for his wife and child; when he reaches the herd an old buffalo tells him he must pick out his own wife and child if he is to take them back. The child gives his father a sign and the man succeeds in identifying his wife and offspring. [EWV]

Piśācha (feminine *Piśāchī*) In Hindu belief, the vilest and most malevolent of demons, similar to the Rākshasas but far worse: literally, flesh-eater. The Piśāchas are hideous, bloodthirsty monsters who haunt cemeteries, and desert places. They are ghouls originating from the souls of those who have, according to one account, died violent or untimely deaths. According to the *Mahābhārata* they were created from drops of water by Brahmā and inhabit northern India. They have been identified with savage tribes inhabiting the northern frontiers and the name has been applied to a group of languages spoken in that area. The modern term *Piśācha-bhāṣā* which means goblin language, however, refers to gibberish or to English rather than to these languages.

The Piśācha is a ghoulish or demon ghost, a liar, drunkard, or criminal classed as a bhūta, which haunts burial grounds, speaks gibberish, and can cause disease. The *paiśācha* form of marriage, named for the Piśāchas, consists of embracing a woman who is insane, asleep, or drugged, and is called, by Manu, the most condemned form of marriage.

Pisces The Fishes: two widely separated constellations joined together with "ribbons" of stars, situated in the zodiac between Aquarius and Aries, one (the northern) south of Andromeda, the other (the southwestern) east of Aquarius and Pegasus. The Greeks called this constellation the Two Fish or Twin Fish. To the Babylonians it was Nūnu (Fish); to the Arabians

also al Hüt, the Fish. It was associated also with the Phœnician Dagon. In Latin legend this constellation represents the two fish to which Venus and Cupid were transformed in their flight from the monstrous Typhon, or they are the two fish which carried Venus and Cupid to safety in their flight from him. They were therefore referred to by the Latins as Venus et (or cum) Cupido. Christian astronomers identified them as the fish with which Jesus fed the multitude, or as the fish symbol of early Christianity. In the twelve-figure Chinese zodiac this constellation was Tsen Tsze, the Pig, later, following Jesuit influence, Shwang Yu, Two Fishes.

Pisces is a rainy constellation, bringer of storms, and controls the fate of sailors. As a rain-bringer it is a promoter of fertility and plenty in the old Middle Eastern cultures, but in astrology it exerts a malign influence over the affairs of men.

Pitṛis Literally, fathers: the sainted ancestral spirits of Hinduism, divine, powerful, and semi-deified, but not identified with the gods in the Vedic periods. They abide with Yama in his remote and peaceful paradise; they feast with the gods, drink the immortal soma, and are revered by the living with offerings to insure their elevation into this bliss. In the *Purāṇas* they seem to become confused with the gods, but their status still depends on the rites performed by their pious living kin. See **SESAME**; **ŚRĀDDHA**.

pixy One of a class of small spirits or fairies of southwest England (Cornwall and Devonshire, also Dorset, Hampshire, and Wiltshire). Mrs. Bray, a Devonshire woman of the early 19th century, wrote to Southey that "the pixies are certainly a distinct race from the fairies," adding that many people believed them to be the souls of unbaptized infants. The night-flying moths of Cornwall, regarded as souls of the dead, were also called *pisgies*. Pixies typically dance by moonlight to the music of crickets and frogs. They pinch untidy or careless maid servants, blow out candles, tap on walls just to startle people, kiss girls in the dark just to hear them shriek. They love water, and basins of water are often left out for them at night. In Cornwall sometimes a little hole is left in a house wall for the pixies to get in and out. One of their main pranks is to lead people astray. **Pixy-led** means led astray by the pixies; lost, especially on a familiar road; hence also confused and bewildered. Country people in the 17th century sometimes carried bread with them to prevent this. Another preventive was to turn one's coat or other garment inside out. In Hampshire the colt-pixy is a pixy horse that neighs and leads horses astray. **Pixy-ridden** means ridden by pixies; but a horseshoe nailed to a stable door will keep pixies from coming and riding the horses at night. If a young girl is pixy-ridden, she drops the pots and pans, the chairs run after her, and even the loaves and bacon run around the table.

plaçage Haitian term for sociological as against legal marriage; a person participating in such a mating is called a *placée*. The institution is part of a widely spread series of similar New World Negro reinterpretations of an African marriage pattern. See **AMASIADO**. [MJH]

plaksy The night-hag of Russian folklore: same as **NOCNITS**.

planta genista Literally, sprig of broom: the yellow-flowered broom. From his habit of wearing a sprig of this plant in his bonnet, the name of Plantagenet was given to Count Geoffrey of Anjou. His son Henry, who became Henry II of England, adopted the name as a patronymic and it was carried by fourteen English kings (1154-1485), including the six of its two branches, the Houses of Lancaster and York. Another legend is that the first Count of Anjou had himself scourged with the plant for some crime he had committed.

plantain or waybread An herb (genus *Plantago*) of the temperate regions, called white man's foot in Australia and New Zealand, and by the Indians of North America, because it came from Europe with the colonists and sprang up wherever they went. In a German tale retold by Grimm it was once a maiden waiting by the roadside for her lover to return. Once every seven years she turns into a bird and goes in search of him, which is why plantain is found all over the world. Both parts of this tale are found singly and together in various parts of the world.

The medicinal properties of plantain are recognized far and wide. The Greeks use the juice of the leaves for diseases of the gums and chew the root for toothache. The seeds are effective against constipation, and the roots worn about the neck cure hard swellings. In Bavaria the people recommend a piece of plantain in the ear for earache; held in the left hand it will clear the mind and prevent headache. The Saxons bound the plant around the forehead with red wool to cure headaches. The 17th century English herbalist Coles said that a toad poisoned by a spider would eat plantain. It is still the most widely used cure everywhere for bee stings. In Ireland plantain is the leaf of Patrick (*copog Pádraig*) and is used in poultices for cuts. In Arabia it is also widely used medicinally and is called lamb's tongue (*lisan al-hamal*). The narrow-leaved plantain is often called English plantain or chimney-sweep and for the most part its uses are the same as for the broad-leaved variety. In Jamaica the broad-leaved plantain is boiled and used as a wash for sore eyes. The Shinnecock Indians of Long Island also use the juice on sores. The Chippewa Indians use both the leaves and roots in a poultice for sores and inflammations; the powdered root they mix with vermilion and carry on their persons to prevent rattlesnake bites, for the snakes will not even show their heads when it is about. The Iroquois use the leaves in poultices for skin injuries and in a preparation against colds, coughs, and bronchitis. The Meskwaki Indians use the leaves in a tea for intermittent fevers, and the fresh leaves on burns, swellings, ulcers, inflammations, and as a hemostatic.

Mississippi Negroes often designate the white plantain as "rabbit tobacco." The leaves of this steeped with scorched corn meal, strained, and used as a bath will stop menstrual hemorrhage. Green plantain leaves boiled and mixed with lard make a salve that is claimed to be a sure cure for cancer; it must be smeared on with a feather.

plat-eye An evil spirit or ghost of West Indian Negro folk belief, especially dreaded also in some southern U.S. Negro groups, especially in Georgia and among the Gullahs. The plat-eye appears usually on a night along with the new moon, and most often has the shape of a

dog with fiery eyes. The longer you stare at its eyes, the bigger they get. Sometimes the plat-eye just floats along a road with no visible shape except for the glowing eyes and envelops its victims.

play-party A rural gathering of young people for playing singing-games, with skipping, marching, and dancing movements; also, a game played at such parties. The typical play-party game is a "swinging play," in which the players swing one another by the hand instead of by the waist, to the accompaniment of their own singing. In this way the play-party avoided complete ostracism by the church and dispensed with floor-manager, caller, and musicians. In rural and especially frontier communities, where musical instruments were scarce and religious prejudice against dancing was strong, the play-party arose naturally in response to the need for a flexible, vigorously rhythmic amusement that could be "jumped up" on short notice and was open to the entire countryside on a word-of-mouth rather than on an invitation basis.

The play-party went to the traditional game for dramatic devices for choosing or stealing partners, chasing, kissing, etc., as well as for longways, circle, and arch formations. Certain games were taken over directly, generally with the addition of swinging or marching movements (e.g. *Miller Boy*, *Three Dukes*). *Skip to My Lou* and *Pig in the Parlor* are both derived from *Bull in the Park*; *Hog Drovers* or *Swine-Herders* from an Irish game played at wakes.

As the play-party came under the influence of the dance, it substituted the progressive movements of the square dance for the simple repetition of a game formula. Besides the "weaving" movements of the Virginia Reel (as in *Weevily Wheat*), the play-party features the right and left (as in *Old Joe Clark*), in which the boys and girls go in opposite directions, each boy swinging his partner by the right hand, then the next girl by the left hand, and so on until he gets back to his partner, and the longways dance (as in *Old Brass Wagon*), in which the leader and his partner "lead through" or go up and down between the facing rows of boys and girls, swinging first each other, then the next girl and boy in line, each other again, and so on until all have been swung and every couple has had its turn. A favorite closing movement is the promenade, in which the couples, one behind the other, cross hands and march around the room.

The play-party added to its repertoire by borrowing texts and tunes from comic and sentimental minstrel and popular songs (*Buffalo Gals*, *Brown Jug*, *Captain Jinks*, *The Girl I Left Behind Me*, *Nellie Grey*, *Old Dan Tucker*, *Shoo Fly*, *Wait for the Wagon*), an occasional religious song (*Consolation Flowing Free* and *I Want to Be an Angel*), and even a Western emigrant song (*Shoot the Buffalo*). Under the wearing usage of the dance, and in the absence of a game formula, the text becomes fragmentary, and there is much crossing of songs and shifting of individual lines and stanzas, (as in *Old Joe Clark*, *Liza Jane*, and *Cindy*).

Especially typical of the swinging play is the accretionary or enumerative catalog of dance directions, often interspersed with patter and nonsense lines and containing satirical allusions to players, the circumstances of the game or the party, and rural life and backgrounds.

Thus *Old Brass Wagon*, beginning with "Lead her up and down the old brass wagon," follows the successive swinging of players by the lead couple with "One wheel off and the axle dragging," "Two wheels off the old brass wagon," etc., while *Jutang* rings the changes on the word "Jutang" in a rigmorole of dance directions: "Round up four in Jutang, Jutang Ju," "Doce do in Jutang, Jutang Ju," "Change and swing in Jutang, Jutang Ju," etc. *Pig in the Parlor* (perhaps the most popular of all play-party games and the favorite in school and playground usage) compares the extra player, in his attempts, feints, and failures to steal a partner, to familiar creatures and objects: "Flies in the buttermilk, two by two," "Little red wagon painted blue," "Ma made buttermilk in Dad's old shoe," "I can't get a red-bird, a bluebird will do," etc.

From New England, where it was known as the "evening party" to Texas, where "flang-party" is reported, throughout its many local names, like "fuss" and "frolicking" in the southern mountains, "gin-around" in Mississippi, and "bounce-around" or "bounce-about" in Missouri and Nebraska, the play-party has been an integral and colorful part of pioneer life and culture on the "make-it-yourself-or-do-without" and "hand-me-down" level. Essentially, it marks a reversion of the singing game to its original adult level of the "social" or "sociable," the reel and the carol—the level at which "to 'sing a dance' and 'dance a song' were identical expressions."

B. A. BOTKIN

Pleiades Literally, the Weepers: a small but conspicuous cluster of stars in the constellation Taurus. The name refers to the seven daughters of Atlas and Pleione (Electra, Maia, Merope, Alcyone, Taygete, Sterope, Celæno) who became stars after their death, or were metamorphosed into stars in their flight from Orion. They weep for the death of their sisters (the Hyades) or for the plight and burden of their father. Six of them are easily visible; the seventh can be discerned by good eyes; the telescope reveals that they are numerous. The dim one is either Electra, who has wept herself away mourning for Troy, or Merope whose light is dimmed because she married a mortal. They are often also referred to as the Seven Virgins or the Seven Stars. Euripides mentioned them as timekeepers of the night; Hesiod called them the Atlas-Born. To old Greek navigators the heliacal rising of the Pleiades in May was the sign for reopening navigation; the derivation has even been conjectured as from the Greek *plein*, to sail, because of this fact and because Greek sailors steered by them.

The Pleiades has been an important constellation to the peoples of both hemispheres from earliest times. It was well known to the early Hebrews; both Egyptian and Greek temples were oriented to its rising. The ancient Hindus identified it with the six nurses of Kārttikeya, the Krittikās. The Arabs regarded it as a rain-bringing constellation, and as such deified it; it was so vital to their life concept as to be referred to as an Najm, the Constellation.

Almost everywhere in the world the rising of these stars is significant as marking the beginning of a new year and is celebrated with feasts, rejoicings, and special rites. The Kaffirs in South Africa, for instance, date their new year from the date on which the Pleiades are visible for the first time just before sunrise. The Mojo Indians of eastern Bolivia mark the beginning of their year with the appearance of the Pleiades, which they call "the small parrots." Among the Dyaks of Borneo their appearance is a sign to plant. In Hesiod's time the morning rising of the Pleiades occurred about the 9th or 11th of May: the setting of the Pleiades in the morning, at that time about October 26 or very early November, was the time for sowing. In Egypt also the sowing of seeds began with this sign. The ancient Incas regarded the Pleiades as guardians of the weather and growing seeds.

The various Indian peoples of Paraguay and Brazil reverse this constellation and time their various agricultural activities by it. Peruvian Indians call it *Colcha*, the Maize Heap, because it makes the maize grow; its first appearance above the horizon is the time of their greatest festival. The Amazulu Negroes of South Africa call the Pleiades the "digging stars" because they usher in the planting season. The Hottentots also date their year by the heliacal rising and setting of this constellation. Everywhere throughout Polynesia the new year is marked by the Pleiades.

In the myth of the *Wati-Kutjara* or *Two Men* of certain Western Australian tribes the two men save a group of women who are being pursued by Kidilli, the Moon. Moon was making the women bleed. The *Wati-Kutjara* caught Kidilli and told him not to chase the women that way but to marry one of them "properly." These tribes identify the group of women with the Pleiades; the *Wati-Kutjara* are represented by Gemini.

The Lapps also regard the Pleiades as a group of maidens. Finns and Lithuanians call it the Sieve, as do also the Koryak: Ke'tmet, Little Sieve. Various European peasant groups liken these stars to Hen and Chickens.

In contradiction to the reputation of the Pleiades as beneficent rain-bringers in the lore of so many peoples, astrologers assign to them a malign influence, as bringers of blindness to those born under them. It is a quite general folk saying that those who cannot see the Pleiades will shortly die. See AKA-KAMET; QUEEVET.

➤ In North American Indian star lore the Pleiades are nearly always represented as mortals who for various reasons fled this earth and took up a position in the sky, where they have since remained. The Hopi and other Pueblo Indians are exceptional in that they say all the stars, including the Pleiades, were carefully set up in the sky by the people after the Emergence, but that Coyote, despairing of ordering so many items, tore them all out and threw them about the sky in a jumbled fashion. More usual Pleiades myths make them seven sisters, the wives of seven hunter brothers who became disgusted when they discovered their husbands were cheating them of the game they killed and who rose to the sky. The youngest husband, in a California version of this myth, having been good to his wife, was allowed to follow the sisters, and is now in the constellation Taurus. Other versions make the Pleiades dancing women; the Luiseño of California say they are girls,

pursued by Coyote as Aldebaran. Cherokee and Onondaga myths make the Pleiades dancing children. See DANCERS. [EWV]

plum In China it is said a dragon had his ears cut off and the plum tree sprang from his blood. Like the peach, this tree is a symbol of longevity and immortality. Lao Tzu was born under a plum tree. In Chinese symbolism of the seasons, the plum tree indicates winter. The plum, bamboo, and pine are often planted together and referred to as the "Three Friends." In the Japanese Floral Calendar, the pine, bamboo, and plum tree are assigned to the New Year season, January 1-7 (or 15). The plum tree is chosen to herald the new year because it is the first to bloom of all flowering trees. In Japanese folklore, the companion of the plum is the nightingale, which is a joyous bird in Japan and harbringer of spring.

In Wales they say that if a plum tree blooms in December there will be a death in the family. In Texas a plum pit carried in the mouth prevents overheating and sunstroke. Roger Williams of Rhode Island deplored a gambling game of the Pequot Indians played with plum pits. The Meskwaki Indians used the bark of the root to cure canker of the mouth and a bark tea for sick stomach. Formerly the word plum was used as a slang term in England to denote the sum of £100,000; probably the origin of the term political plum.

Pluto The wealth-giver: in late classical times, name of the Greek underworld deity, earlier an epithet of Hades as lord of the riches that grew from within the earth. The god Plutus, son of Demeter and Iasion, is his double. Plutus was the god of agricultural riches, hence of wealth. He was made blind by Zeus so that he might distribute his bounty without prejudice, but (compare Aristophanes' *Plutus*) he recovered his sight and brought wealth to honest men only. Pluto is one of the great gods, is prominent in the literary tradition and as the abductor of Persephone; Plutus is a popular god whose name does not have the same sort of power attached to it as Pluto's.

p'o In Chinese folklore, the animal or physical soul, present in man from the moment of conception.

pocomania (slight frenzy) A Jamaican ritual dance of the *obeah* cult. The drumming and chanting may continue for days or a fortnight, as members and initiates dance themselves into a trance. In turn they fall into a coma in the dance clearing. When they awaken, they are feasted at a "rising table" and relate their experiences in the spirit world. Native dance artists have taken over the pocomania for performance in clubs and on the stage. [GPK]

Pohjola Literally, northern home: a place often mentioned in the Finnish runes. It is a dark and dismal country to the north of Finland, often identified with Lapland. There is the court of Louhi, mistress of Pohjola. The heroes of Kaleva made many adventurous trips to Pohjola (see SAMPO). Kaarle Krohn supposes that Pohjola is identical with Vuojala, the latter meaning the isle Gottland. U. Harva sees a corresponding idea between Pohjola and the home or land of the dead. See FINNISH FOLKLORE. [JB]

point Among Haitian Negroes, a type of derisive song full of oblique or elliptical comment belittling a rival

or an enemy, calling attention to a scandalous or embarrassing situation, or slyly cooking up a rumor. It is a humorous form of social revenge—"needling" in song. See NITH SONGS.

poison damsel The woman of folktale who, bred in poisonous surroundings, kills those with whom she comes in contact: an extension of the idea of the inherent danger of sexual intercourse. According to Penzer (*Ocean of Story* II:275-313), the motif (F582) arose in India, became attached to the Alexander legends, was included in the *Gesta Romanorum* (#11), and spread thence throughout Europe. The poison damsel was sent by an enemy to Alexander, with the hope that he would be attracted to her, would kiss or otherwise come into contact with her, and would die. But the long-laid plot (the maiden was reared from birth for this very purpose) came to naught when Aristotle, Alexander's mentor, enclosed her within a circle of dittany juice and she suffocated in trying to escape. The poison damsel is ordinarily brought up by snakes, is nurtured on poisonous herbs, and eats all manner of poisons as her normal diet. She can kill with a glance or with her breath as well as by closer forms of contact. Penzer hints that venereal disease may underlie the concept, but certainly the belief that intercourse, especially with a maiden, may be fatal is widespread. The *femme fatale* whose husbands die on the wedding night is in Old Testament Apocryphal *Tobit*. King Minos of Crete, whose embraces were loathly with serpents and vile creatures, is the male counterpart of the women of folktale whose vaginas contain poisonous snakes. Compare here the common connection in folk belief between the serpent and the phallus.

poison ivy A poisonous climbing shrub (*Rhus toxicodendron*), with three broadly ovate, variously notched, sinuate or cut-lobed leaflets, native to North America. According to folk belief in the eastern states it can poison even those who look at it, especially in wet, foggy weather. Among the Potawatomi Indians roots of the plant are pounded to make a poultice to open swellings. When working in its vicinity, the Cherokee conciliate it by addressing it as "my friend." If poisoned by it, they rub the affected part with the beaten flesh of a crawfish. In England juice of the leaves is given as a sedative; it is also recommended for incontinence of urine.

polka A ballroom step and couple dance of Polish origin, wholeheartedly adopted throughout central and western Europe, the United States, and Middle America. As a ballroom round, polkas alternate at folk dance and square dance evenings with the more complicated numbers. The step is also used commonly in folk dances and quadrilles, particularly in Poland and Lithuania, also in the Moravian *kanafaska* and Russian *korobouchka*. The fundamental step, following an upbeat of a hop, consists of three steps and a hop, in open or promenade position, or in closed or ballroom position, progressing straight ahead or turning. A well-known variant, in promenade position, is the heel-and-toe polka (heel, toe, one-two-three) which propels partners zestfully across the dance floor. There are many other variants—the butterfly, finger, koketka. In Lithuanian and Finnish versions, three or seven polka steps are followed by stamps as in the *kalvelis* and *mikita*. In the American polka and Finnish *radiko*, slides and running steps com-

bine with the fundamental step. In the Norwegian polka, a gentler leg swing replaces the hop. In New Mexico, the *polquita* is a ballroom round, the *polka cruzada* is a section of the *quadrillas*, with cross-overs and polka. The fad of the *Beer Barrel Polka* penetrated from the United States to the Mexican hinterland. Mexico has also adopted the step in some of its traditional dances, as the *Jarabe Michoacano* and the ritualistic *Sembradoras*. [GPK]

polygenesis In folktale study, the doctrine of independent origin of similar tales, as opposed to diffusionism, which maintains the spread of tales from a point of common origin. Those holding to the theory of polygenesis hold that similar stages in the development of human society, though separated from each other by both time and space, give rise to similar cultural backgrounds and emotional reactions, and that these in turn lead to the evolution of similar tales. However, such distinct parallels of development have not been clearly demonstrated, and the theory of polygenesis is not acceptable as the single explanation of folktale similarities. A position somewhere between polygenesis and diffusionism is taken by many folktale students, holding that the diffusion of such elements as motifs occurs from a common center and that there is subsequent building up of independent tales in the various cultures from these elements.

Polydus In Greek mythology, a soothsayer of Argos. Glaucus, the son of Minos, had fallen into a jar of honey and drowned. No one could find the child and either Apollo or the Curetes had told by an oracle that the first who found an apt comparison with the three colors of a cow would find the boy and bring him back to life. Knowing nothing of this, Polydus made a comparison with the three colors of the mulberry (white, then red, then black), and was ordered by Minos to locate and restore his son. With the aid of the bees and an owl, he found the body in the honey jar, but he could not bring back the child's breath. For his refusal and inability, Minos had Polydus entombed with Glaucus. In the tomb, a serpent approached the body, and Polydus killed it. Soon after another serpent appeared, applied an herb to the dead snake, and both glided away. Glaucus was quickly restored with the aid of the herb and Minos rewarded Polydus lavishly.

Polynesian mythology Polynesia, easternmost of the Pacific culture areas, extends, like a great triangle, from Hawaii to New Zealand and from Easter Island to Samoa and Tonga. Because Polynesians are remarkably homogeneous in culture, including their mythology and Malayo-Polynesian dialects, it is believed that their ancestors, once they had arrived in the area an estimated 2,000 to 2,500 years ago from Indonesia by way of Micronesia, originated a pattern of culture which they carried with them when they later colonized the rest of the area and occupied certain scattered islands in Melanesia.

The Society Archipelago, more specifically Opoa district in Raiatea Island, one of the legendary homelands that Polynesia calls Hawaiki, is perhaps the center where the pattern took shape. Evidence of Raiatean cultural leadership was still discernible at the beginning of the European period (Henry; Ellis). The relation of the Society Islands to the rest of Polynesia has been likened

by Sir Peter H. Buck (Te Rangi Hiroa) to an octopus with eight radiating arms (1938, 1939). The islands along each radiation from the center have developed local variations of the common pattern. Marked differentiation resulted in western Polynesia from such factors as Fijian influence and isolation from the central region. Dr. Edwin G. Burrows (1938, 1941) has defined two divisions of Polynesian culture. One, the western Polynesian, centers in Samoa and Tonga; the other, the central-marginal, which retained, in some measure, much of the old culture once common to all Polynesia, has Opoa of Raiatea as its nucleus.

The basic pattern of pre-European Polynesia involved a material culture of Stone Age level whose relative simplicity was obscured by the elaborate esthetic, religious, and intellectual life. For example, a large, double canoe, hewn with stone and wooden tools, was also ornamented with complicated carvings and other decorations. Religious and magical rites accompanied its production from the period of deciding to build a boat and choosing the trees to the period of launching and traveling. The most famous mythological boat-builder was Rata, known to most Polynesians as the hero who built a boat to take him on a mission of revenge against his father's slayers and other monsters troubling the world. The adventure most widely associated with Rata's name concerns his attempt to cut down a tree without the proper ritual. Each day he returned to work and found the tree that he had cut down the day before upright with every chip and leaf in place. Not until he had made peace with the forest spirits and won them as allies did he progress with building his boat. Rata's name and the tree-chopping episode have diffused into Melanesia but have become separated there from each other and acquired new contexts.

Polynesians used tapa for clothing and other purposes, and the association of the goddess Hina (Sina) with its production provides prestige and sanctions for women tapa-makers. Tahitians (Emory, 1938) even yet tell how Hina performed her duty of beating tapa for the gods so energetically that the greatest god of the pantheon, Ta'aroa, who had been drinking kava (*Piper methysticum*), grumbled to Pani about the noise in the "harbor of the god." He sent him to order Hina to stop. Thrice Pani commanded Hina to be quiet, but she replied, "I will not stop. I will beat out the white tapa here as a wrapping for the gods Ta'aroa, 'Oro, Moe, Ruau'u, Tu, To'a-hiti, Tau-uta, Te Maharo, and Punua-the-thunderbolt." Furious at her stubbornness and defiance of the god's orders, Pani seized the tapa mallet and hit Hina on the head. Her spirit flew to the moon, where, according to most islanders, she still beats tapa proudly for the gods. The name of Hina with various sobriquets is so frequently given to Polynesian heroines that it is often difficult to distinguish one Hina from another.

Like the tapa, the thatched dwellings of the Polynesians and their public houses for entertainment and guests often belie their simple materials by the quality of workmanship and the beliefs relating to their construction. Society Islanders (Emory, 1938) compare the raising of the sky in prehuman times to the building of a house. In the raising, gods worked as expert artisans. After the pillars had been set up, the ridge pole of the sky was propped up, followed by the inner post, the wall-plate, the side post, the rear purlin, and so on

through the thatching of the roof of the sky. By having their gods set examples, earthly artisans dignify their own labor. Samoan carpenters belong to a guild founded in the beginning of the world during a meeting called by Tangaloa (Samoan dialectical equivalent of Ta'aroa) who wanted a house built in his sky. The architecture of his house is still followed by present-day guilds, called Tangaloa's Family, whose members claim descent from founders of the original union. The myth of the origin of the guild is no idle story merely soothing to carpenterial ego, but serves also to justify their demands for special favors and frequent feasts from those who are at their mercy to get houses built.

Pigs, dogs, and fowls, used for food and sacrifices, were by no means present in every Polynesian island. However, successful fishing and agriculture, with taro and coconut in most islands and breadfruit added in volcanic islands as staples, furnished sufficient extra food to free talented individuals for specialization in religion, crafts, and arts, including literature. Schools of various levels of honor and advancement existed in the principal archipelagoes of central-marginal Polynesia, but were not characteristic of the west. The Society Islands, to use this important group as an example (Henry, 1928), had educational institutions, some limited to men, others open to women too, where *tahu'a*, highly revered and paid teachers of priestly status, chanted the lore about such subjects, for example, as literary composition, traditions, astronomy, black magic, medicine, religion, and the construction of canoes, houses, and maraes (temples). Typical of the descriptive quality of Polynesian language is the name, "Cave-of-many outlets," applied to male and female teachers of "original, earthly knowledge." Those destined for the high and sacred ranks of *tahu'a* were able-bodied, attractive, and graceful men, preferably sons of priests. After intensive training in esoteric learning, they underwent a period of retirement and communion with the gods. Then, after passing a final examination before a strict group, they were honored with a feast and permitted to practice. Opoa had a religious seminary whose fame spread throughout Polynesia and won for the district European comparisons with Mecca, Rome, and less sympathetic descriptions as the "metropolis of idolatry." It was here that priests elevated Ta'aroa to the post of supremacy in the Polynesian pantheon, and created the Arioi Society of literary artists with libertine morals to win popularity for the god and his son 'Oro.

New Zealand, Hawaii, and other marginal groups also had special schools and professional experts who gave to Polynesian culture its characteristic aura of intellectual sophistication. Naming, classifying, systematizing, synthesizing, and syncretizing were important mental activities which specialists applied to their learning and laymen used in intellectual games and contests. Hawaii, for example, had literary contests sponsored by royal courts where native ability supported by accoutrements of magic enabled the hero of tradition to triumph over haughty but less capable riddlers, matchers of allusions, and creators of similes (Beckwith, 1941). Everywhere the individual who combined talent in poetry, chanting, stylized oratory, and narration with an extensive command of traditional knowledge won for himself recognition regardless of his origin. Those of high birth were expected to have such talent and knowledge.

Although the feudal type of organization found in the Tongan Islands led to systematization of many traditions about the person of its political and religious head, the Tui Tonga, western Polynesia, in general, did not exhibit the extraordinary love for formal organization of traditions that central-marginal Polynesia did. Nonetheless, the west had much respect for learning, even though learning was more fluid, less crystallized, and more obvious in the expediency of its application for political and religious preferment. Samoan talking chiefs, for instance, specialized in oratory, chants, traditions, and protocol of kava circles in order to manipulate them to win advancement for themselves and the high chiefs they served.

Because status was determined mainly by birth, genealogies (Liliuokalani; Smith, 1921) that frequently reveal many literary devices and a fertile imagination were important throughout Polynesia. High chiefs who traced descent from primal gods inherited great mana (supernatural power), which their accomplishments enhanced. A nice balancing of the tapus could give them extensive authority or hedge them in to prevent their rendering too much of everyday life sacred and inviolate. Though special classes of priests occurred, a chief's descent made him a natural medium between his ancestral gods and his people, who, by genealogy, were relatives of lesser degree. Dead chiefs, like Tangiia of Rarotonga, were deified and thereby claims of a particular line of descent to superiority were reinforced. A genealogy usually followed the male line, but if a female ancestor were of higher birth than a male, her name was used. Social organization emphasized the extended family with the eldest male usually the leader, except in Samoa where the post was filled by election. The three major social classes—chiefs, freemen, and slaves who were war captives—were often subdivided not only on the basis of birth but occupation. Related families were united into clans and tribes tracing descent from a common ancestor. A feudal organization developed in the Society Islands, Tonga, and Hawaii, with many intertribal and interisland wars led by chiefs like Kamehameha I of the Hawaiian Islands and Pomare of the Society Islands intent on establishing island kingdoms.

Much of Polynesian literature relates to the genealogies and traditions of a chiefly or royal line. Because of the island geography, many tribal histories record memories of overseas migration. The Maori of New Zealand felt themselves related to other Maori who claimed descent from a common ancestor who came in one of the great canoes that went from Hawaiki (presumably Raiatea) about 1350 A.D. to settle New Zealand and absorb the older population. Maori traditional history (White; Best) deals in large part with this migration and subsequent events; each tribe expands upon the deeds of the ancestor who led the canoe after which the tribe is named.

Isolation and a temperate climate led to distinct local differences in New Zealand from the rest of Polynesia. A complex magical and religious system developed about the production of *kumara*, the sweet potato staple, and other important food-getting activities like bird-snaring. Woven flax mats, sometimes decorated or entirely overlaid with dog hair or black *kiwi* feathers, replaced tapa. Indicative of the value placed on the mats are incidental references in myths to unusually beautiful mats

together with the names of the dogs furnishing the decoration. Wooden dwellings, beautifully carved with tools of jadeite, a hard stone also used for making weapons and sacred objects, replaced thatched dwellings. The carvings often symbolically portray ancestors, gods, and demigods, sometimes busy at an activity associated with their career.

Unlike other Oceanic areas that also are without writing, Polynesia has innumerable names of gods, heroes, and lesser characters of mythology and religion who are known in more than one archipelago. A body of common tradition and folklore exists which in each island has been elaborately localized and incorporated into local lore. The most widely known of any Oceanic character is Maui, culture hero and trickster of demigod status, who stole fire, fished up islands, snared the sun to lengthen the day, and sometimes helped raise the sky. His name and a few of the thousand tricks Polynesians credit him with have diffused into parts of Micronesia like the Carolines, Polynesian outliers in Melanesia, and their immediate neighbors. Tawhaki, Rata, and Tinirau are other Polynesian mythological characters of extensive distribution. Tangaroa (Ta'aroa, etc.) is the only Polynesian primal deity whose name (but not his role) has diffused outside the area. More common than names are mythological themes shared by Polynesians with other Oceanic peoples. They usually have to do with the origin of fire and food plants, and cosmogonic myths like that of sky-raising and sun-snaring (Dixon, 1916; Luomala, 1940).

Central-marginal Polynesia had the most pronounced form of the Polynesian custom of arranging primary and secondary deities into families whose descendants are the chiefly families of human history. Besides Tangaroa, other prominent gods in this region are Tane, Tu, and Rongo, whose names, in various dialectical forms, are known from Hawaii to New Zealand. New Zealand has a neatly and beautifully organized divine family with accompanying mythology, a variant of that found to the north and east (Grey). The Sky Father and Earth Mother are descended by evolutionary genealogies from an initial void or chaos. Sometimes the genealogies contain names relating to plant development; again, they may include a series of abstractions like Energy, Thought, Mind, and Desire. Earth and Sky bear children, the primal gods, whose departmental duties in the world cannot be carried out because Earth and Sky are unseparated. Tangaroa, for example, is to have charge of the ocean, while Tane will superintend the forests and all life and spirits therein. Finally, the brothers unite and despite the resistance of one brother who sends great storms and starts the first world war, Earth and Sky are separated and the world is put in order. Mankind comes into existence by a special creative act of a deity, usually Tane, or his symbolic virile force called Tiki, who impregnates a female he has made from earth. Islands are fished from the depths of the sea by Maui, according to most eastern Polynesians.

Western Polynesia does not have the Sky Father and Earth Mother concept or the family of divinities with departmental duties. Only Tangaroa of the eastern primal gods persists, and, as in central Polynesia, he inhabits the sky. Mankind originates through a crude form of evolution from rocks, earth, or maggots which form in a vine the sky deity threw down to shade his daughter

or messenger. The islands are either fished up, thrown down from the sky, or built up from sand carried in baskets by voyagers. The latter myth refers to the custom of bringing soil to infertile coral atolls. Puluotu in western Polynesia and Fiji is variously the land of the important dead, an island, and the underworld. In the central-marginal area, Hawaiki has various functions too which are often combined in an island. It may be the ancestral home, the home of the dead, the underworld, and a western island.

In the larger islands of central-marginal Polynesia, specialization in arts, crafts, religion, and literature was possible because of a large population and a plentiful food supply. Specialization led to a distinction between different levels of esoteric knowledge developed by trained experts who often split into sects, and exoteric lore which other people might acquire. "Upper Jaw" knowledge to a limited number of Maori in New Zealand pertained to the period of genesis, to the origins of the world, the gods, and mankind, and the life of the people in their predispersal home in Hawaiki. A small sect, perhaps in European times, revised their esoteric chants to make the god Io the ultimate source of the world and the gods. In the Society Islands, the systematized and reinterpreted cosmogonic chants, rituals, and narratives served in some islands to set Ta'aroa at the head of the pantheon as the uncreated, preexistent spirit whose glances and words were sufficient to bring forth much of the world and the other gods. Neighboring islands clung to their own versions of the cosmogony in which another god, usually Tane, outranked Ta'aroa. Through war and intellectual competition each sect tried to spread its beliefs and gain followers.

The basic concepts upon which the priestly philosophers expended their intellectual energies belonged to the Polynesian culture pattern and stemmed from the cultural heritage which the ancestors of the people brought with them into the area and carried out from central Polynesia.

"Lower Jaw" knowledge among the Maori included traditions about migrations from Hawaiki, the settlement in the new homeland, and the history of individual clans and chiefs from the time of departure from Hawaiki to the present. In isolated atolls settled perhaps by a single family and its retainers, much of the lore consists of this exoteric knowledge about the family's immigration, discovery, and settlement of their new island, and the history of land divisions and wars. The original settlers, if they had no priest with them, knew but fragments of the cosmogony. Usually they knew some of the myths forming part of the great hero cycles and popular romances. These they retold as they remembered them and invented new episodes.

Without question, the literary specialization of Polynesia ranks the area with ancient Greece, India, and Scandinavia in the earliest era of bards, before the introduction of writing. In Polynesian mythology, as in the oral literatures of these classic areas, there is much that is strange and tedious until one knows the cultural background of the narrators and tries to define their literary standards to see how nearly the individual narrators have attained them.

Bibliography—Of books and articles belonging to established scientific series, the selected bibliography below includes only those specifically cited in the text.

Numerous major contributions to Polynesian mythology, which have not been listed separately, have been published in the *Bulletins* and *Memoirs* of the Bernice Pauahi Bishop Museum, Honolulu; the *Journals* and *Memoirs* of the Polynesian Society, Wellington; the *Transactions* of the New Zealand Institute, Wellington; *Monographs* of the Dominion Museum, Wellington; *Folklore Publications* of Vassar College, Poughkeepsie; *Reports and Papers* of the Hawaiian Historical Society, Honolulu; *Hawaiian Almanac and Annual*, Honolulu; *Journals* of the Royal Society of New South Wales, Australia; *Anthropos*; *Globus*; *Zeitschrift für Ethnologie*; *Bulletins* of the Société des études océaniques; *Internationales Archiv für Ethnographie*; *Oceania*; others.

M. W. Beckwith, *Hawaiian Mythology* (New Haven), 1940; "The Hawaiian romance of Laieikawai," *Smithsonian Inst., RBAE* 33, 1911–1912; E. Best, "Tuhoe, children of the mist," *Poly. Soc., Memoirs*, vol. 6, 1925; P. H. Buck (Te Rangi Hiroa), *Vikings of the Sunrise* (New York), 1938; *Anthropology and Religion* (New Haven), 1939; E. G. Burrows, "Western Polynesia, a study in cultural differentiation," *Ethnological Studies*, vol. 7 (Göteborg), 1938; "Culture-areas in Polynesia," in *Polynesian anthropological studies*, *Poly. KATHARINE LUOMALA

Polynices In Greek legend, a son of Oedipus and Jocasta. He and Eteocles agreed that they should reign in alternate years over Thebes, with the other banishing himself for that year. But at the end of his year of reign, Eteocles refused to give up the throne and with the aid of his father-in-law, Adrastus, Polynices, marched in the expedition of the Seven Against Thebes. Eteocles and Polynices slew each other in single combat, Creon becoming king of Thebes when the invading Argives were routed. He ordered Eteocles

burned with full honors, and Polynices left unburied where he fell. See ANTIGONE.

polytheism The belief in and worship of more gods than one, as opposed to monotheism, the belief in one God. Polytheism assigns separate functions and provinces to individual gods, who are worshipped as the occasion and need demands; for example, sea, wind, travelers', and fortune gods may be propitiated and asked for their good graces before a voyage is undertaken. Among the polytheistic deities of the world, the following are found in many areas: sun god, moon god, storm god, rain god, sea god, sky god, thunder god, war god, god of luck, earth god, fire god, gods of birth and fertility, of agriculture, of hunting, of healing, of evil. These various forces, according to the evolutionary theory of the growth of religions, are at first worshipped abstractly, as disembodied and impersonalized principles. Later, they are personified and become, instead of indwelling forces, distinct personages, e.g. the earth god or goddess becomes a personality with a name—*Ge*, which means earth. In the course of myth-making, the relationship of the various forces as personified in these gods is exemplified in stories; the pantheon is interrelated, with necessary additions, as husbands and wives and children, usually on the basis of these relationships as they exist in the society to which the myths belong. Eventually, according to the Grimms, these myths, when the religious system evolves to another state or is superseded by another, become folktales and their mythic explanatory character becomes hidden; the gods who were the central characters in the myths become the heroes and heroines of folktale. Thus the great dragon-slaying myth, the cosmogonic story of the god who slays the dragon of chaos and founds order in the universe from its body (see the myth of Marduk and Tiamat), becomes the märchen of the unpromising hero (youngest son) who kills the dragon that is laying waste the countryside.

Pantheons of polytheistic deities have existed from earliest times, in Sumeria and Egypt for example, down to the present, in Africa, Polynesia, South America, North America, etc. Many critics hold that the monotheistic religions, with their saints, prophets, angels, demons, etc., retain so much of polytheism as to indicate a basic need in mankind for a plurality of gods. They point out that the supreme position of Jehovah or Allah in monotheistic religion over his attendants or opposing principles is matched in kind if not in degree by such admittedly polytheistic gods as Ashur, Rā, and Zeus.

Pombada A Canarese devil-dancing caste of southwest India, resembling the Parava and Nalke, but higher, and non-polluting. All of these castes exorcise demons by means of dancing in fantastic costumes with high towering headdresses, much ornament, and face paint (not masks). They control a hierarchy of demons (*bhuthas*). The Pombada deal only with the higher demons, leaving the lower ones to the lower castes. See PANAN. [GPK]

pomegranate Because of its very numerous seeds, the pomegranate has been, through the ages, a symbol of fertility, in Chinese, Persian, Semitic, Greek, and Roman lore. Chinese women offer it to the goddess of mercy when praying for children, especially sons. The pomegranate is often credited with being the forbidden

fruit of the Garden of Eden, and some say that it contains one seed from the Garden. It was a symbol of wealth. In Greek myth it was called the fruit of Hades because when ordered to give up Persephone, Hades tempted her to eat a pomegranate; she ate only one seed, but because of this he retained a hold on her. This is why she spends part of the year in the underworld, symbolic of the seed germinating in the ground. See FLOOD TABU IN LAND OF THE DEAD.

In Christian art the pomegranate is a symbol of hope. Persian Zoroastrians make a barsom of pomegranate branches against demons and witchcraft. In Turkey the bride throws a pomegranate on the ground and the number of seeds scattered when it breaks indicates the number of children she will have. In Sicily the pomegranate shoot is used as a divining rod. In Italy the leaves are made into a mouthwash which is good against loose teeth. In Texas the blossom tea is used as a tonic. The pomegranate is the national emblem of Spain.

Pop Goes the Weasel An American square dance and tune originating in a longways dance of the same name from Warwickshire, England. The leading lady progresses around the circle from one couple to the other, and after a circling, is "popped" under the arch formed by the upraised arms of the dancers, on the words "pop goes the weasel." At the fourth couple, she is joined in the "popping" by her partner, who then swings her. Each couple in turn becomes active. [GPK]

poplar The poplar was one of three trees mentioned in the *Odyssey* as growing at the mouth of Calypso's cave. Euripides tells the story of the sisters of Phaethon who, while weeping his death, were transformed into a poplar grove (A2181.3).

In Latin legend Hercules made himself a victor's crown of poplar leaves after killing the giant Cacus. This he wore on his journey to the underworld; the tops of the leaves were thus scorched and darkened by the heat, while the undersides were silvered with the hero's own radiance (or sweat). And because Hercules went to Hades and returned, the white poplar came to signify, in many old beliefs, the promise of a life after death. Even today in Ireland the *fé*, the rod for measuring graves, coffins, and dead bodies, is traditionally made of poplar (possibly in now forgotten token to the dead that this is not the end).

The black poplar was associated with early earth-goddess ritual, and was long interpreted as a hopeless omen in Roman divination. In ancient Greek and Roman magic the white poplar was associated with leprosy, and was probably regarded as a preventive against it. Poplar leaves were sometimes used in medieval French witch salves.

The white poplar, or aspen (Old Irish *eada*, modern Irish *eadaḍ* or *eabad*), in the Old Irish Tree Alphabet was the tree of autumn and old age. The ancient Irish made their wooden shields of poplar.

The North American Catawba Indians made a boiled tea of the scrapings of poplar roots, which they gave to children for stomach worms. In Macedonia today the people avoid the shade of poplar trees, in the belief that they are frequented by malicious spirits.

poppy The poppy is the symbol of sleep and death. Ceres searching for Proserpine would not pause in her quest, so the gods, taking pity on her, caused the poppy

to spring up in her footsteps. When she paused to pluck one, it caused her to sleep. In some tales it is dedicated to Ceres because it is found growing among the grain. The poppy was also sacred to Diana. In all parts of the world it is said to spring from the blood of the slain, and it grows especially well on the battlefields of the past. Some early Christian authorities claimed it sprang from Christ's blood on the Cross. In England it is said to have sprung from the blood of a dragon slain by the holy maid Margaret.

The poppy and its derivatives were used mostly for medicinal purposes until the 12th century and were all imported from Asia Minor. It has yielded since early times the opium which induces restful sleep and allays pain. The fact that too much could be administered did not escape the early herbalists, for in 1551 the English physician Turner wrote, "If the patient be too much slepi put stynkynge thynges unto hys nose to waken hym therewith." Another 16th century physician of Padua, Peter A. Matthioli, said if poppy seeds be given to hens they will lay more plentifully.

In Switzerland and parts of the United States a poppy petal is placed on top of the left fist and struck with the right hand. If it pops, your lover is true; if not, you are forgotten. Poppy seeds are sometimes used to determine the sex of an unborn child. Wheat and poppies in a field are symbolic of life and death.

Porcupine An animal character, often the companion of the trickster Coyote, in North American Indian tales. Porcupine is especially popular as a character among tribes in the western half of the continent, where two trickster tales, *Coyote and Porcupine* and *Beaver and Porcupine*, are well known. For the first of these, see COYOTE AND PORCUPINE.

The second, *Beaver and Porcupine*, concerns a trick Beaver played on Porcupine by taking him on his back to a stump in the middle of a lake and leaving him there. Porcupine sings and causes the lake to freeze over; he then walks ashore. Later he retaliates on Beaver by taking him to the top of a very high tree and leaving him there. The idea of Porcupine as a controller of cold is a central one in all stories of Beaver and Porcupine; it also occurs in a Micmac tale about Porcupine in the northeastern United States. [EWV]

 In Hausa Negro folklore both Porcupine and Hedgehog are regarded as having power over men and witches, both in this world and the next. They are always on the side of right in Hausa folktale.

Poseidon The ancient Greek sea god, also god of earthquakes and horses. Many scholars see in Poseidon the lord of the universe who preceded Zeus, perhaps the sky god of an early indigenous tribe. They point to his trident (nominally a fish-spear) as being in other cultures a symbol of the thunderbolt of the sky god. Poseidon-worship in Greece was not widespread; he was said to be overlord of the Corinthian Isthmus, and his temple at Mycale in Asia Minor was the center of Ionian religious worship, but his myths overshadow his cult importance. He was loser to both Hera and Athena in disputes for several parts of Greece; in Athens, as Poseidon-Erechtheus, he is equated with the founder of the city. His wife was Amphitrite, also an ancient sea deity, who bore him Triton. Poseidon's amours, though not as numerous as those of Zeus, were widespread. By Medusa he was

father of Pegasus and Chrysaor; Antæus, slain by Hercules, was the son of Poseidon and Ge. Demeter tried to evade his attentions, but though she transformed herself into a horse, Poseidon became a stallion and sired on her the marvelous horse Arion.

Poseyemu Tewa Pueblo Christlike culture hero, equatable with Poshaiyanki of Zuñi, Pashayan'i of Keres, and Puspuyama of Isleta. At Sia Pueblo he is the brother and deputy of Iyatiku or Corn Mother, and the father of curing societies and giver of raiment and riches at Zuñi; but at Laguna he is a despised little boy, a miracle worker or nothing more than a juggler and deceiver, who has finally to be killed. At Acoma pueblo, which is now Catholicized, he has been assimilated with the serpent in the Garden of Eden. Poseyemu, himself conceived through a piñon nut, is the sender of piñons to the people. Poseyemu or Poshaiyanki once lived on earth; he disappeared into the south, or else traveled through all the pueblos and over all the world before he disappeared into the earth. See Elsie Clews Parsons, *Pueblo Indian Religion* (2 vols., Chicago, Ill., 1939) pp. 179, 196. [EWV]

Poshaiyankya Zuñi Pueblo Indian culture hero, who arose from the farthest sea, and joined living creatures in the underworld. This being first showed human beings the way upward through a narrow passage from the underworld to this world, then an unstable island lying among the waters. The passage was so narrow, however, that Poshaiyankya was forced to plead with Awonawilona, or Sun-father, for the deliverance of men and all other creatures from the underworld to the upper one. See EMERGENCE MYTH. [EWV]

possession The culturally sanctioned displacement of personality occasioned by the presumed entrance of a deity or other supernatural being into the body or head of the worshipper, who thereupon becomes the god or saint and, as such, speaks or dances or otherwise behaves as this being is held to behave, giving instruction, effecting cures, foretelling the future, or in various other ways acting in behalf of its believers. The phenomenon is of world-wide distribution. Where possession occurs, it is the supreme form of religious expression, the outstanding exemplification of the phenomenon called the religious thrill that has been held by some students to represent the quintessence of the religious experience. It is exemplified in the shamanism of the North American Indians and the aborigines of Siberia, in the devotional states of the early European saints, and in the possession dances of African and New World Negro. Its varied forms reflect but different manifestations, however, of the underlying psychological and religious phenomenon whose manifestations are always consistent within a given culture, not only as concerns their outer aspects, but also as to their inner meaning and function. In some cultures the patterns underlying the forms of possession are difficult to discern because of the seemingly idiosyncratic behavior of those possessed. However, on closer acquaintance, the patterned regularities which underlie the individual expression of the phenomenon as found among a given group become apparent and make it possible to subsume variant behavior in terms of the over-all tradition. Though various students have tended to treat of possession as a psychopathological phenomenon, analysis of it in terms of its setting in the

cultures where it is found has shown the essential fallaciousness of this point of view. The person possessed, as in the case of the shaman, is a specialist in the manipulation and comprehension of the supernatural, and there is little or no evidence to show that such individuals are any less stable or less well adjusted than the other members of the societies of which they form a part. Among Africans and New World Negroes, there is evidence that it is those persons who are possessed by their deities who are the best adjusted in their societies, possession here being a mechanism which affords the release of tensions and the resolution of guilt feelings through projection of these onto the god. Possession, that is, is a disciplined, specialized series of reactions to well-established behavior cues. In Haiti, it has been shown that only those among the possessed who are not disciplined and whose gods come to them at any time and in any place are to be considered as psychopathological cases. See DEDARI TUNDJUNG BIRU; DIVINATION; ERÉ.

M. J. HERSKOVITS

 Spiritual possession of the body of a human being, either by evil spirits to cause illness, or by the tutelary spirits of a shaman, while known in Middle America, is relatively rare. [GMF]

potato The edible, farinaceous tuber of a plant (*Solanum tuberosum*) of the nightshade family. This plant, which probably originated in the Andes of South America, gradually spread among the tribes long before the coming of the Europeans. It was probably introduced into Europe by some of Pizarro's priests and was introduced into England by Drake. At first it was valued in Europe as a strengthening and aphrodisiac food, and at one time potatoes sold for as high as \$1,000 a pound. In 1728 they were forbidden by law in Scotland because the potato was an unholy plant of the nightshade family and not mentioned in the Bible.

Some say that the potato should be planted on a starry night to assure plenty of eyes. It is quite general folk belief, however, that potatoes, like other root crops, should be planted in the dark of the moon, if they are to thrive. In coastal communities potatoes planted on a rising tide will swell with the tide. When the first new potatoes are eaten, all the family should partake of them, otherwise the spirits will be offended and the crop will not keep. If they are planted on Good Friday, there will also be a poor crop. The potato is a quite general pocket piece in Europe and America against rheumatism and sciatica. In Holland it was necessary that the potato be stolen to be efficacious as a cure; in Yorkshire it must be dried in the morning sun and protected from the afternoon sun. In parts of the United States it is carried as a cure and protection against warts. Warts, if rubbed with a raw potato which is then buried or hidden, will disappear as the potato rots. In Newfoundland a sliced baked potato is placed in a stocking which is then tied around the neck to cure sore throat. In Texas scraped raw potato is placed on burns and frostbite. In Italy and Sicily if the name of a person is written on a slip of paper and then fastened to a potato by as many pins as possible, the victim will die in great pain within the month. Mississippi Negroes consider a raw potato poultice good for a black eye.

In Ireland the water from boiled potatoes is rubbed on aches, sprains, and broken bones; but to wash in

potato water causes warts. A stone or pebble boiled in the pot with potatoes is believed to have great curative properties. A roasted potato is recommended as a remedy for thrush. A kettle of boiled potatoes dumped in a neighbor's field will keep his crops from doing well. The Irish also have a saying which is the advice of an old man to a young man at table: Be eating one potato, peeling a second, have a third in your fist, and your eye on a fourth.

Potiphar's wife A folktale motif (K2111) taking its name from the incident of Joseph and Zuleika, the wife of Potiphar, in the Bible (*Gen.* xxxix). Joseph, a slave in the house of Potiphar, aroused by his beauty the passion of the woman. She attempted to seduce the youth, but he refused her, at first diplomatically, then, as she grew more importunate, very brusquely. In anger (the motif is sometimes called the woman scorned motif), she tore his clothes, called for help, and accused him of trying to rape her. Joseph was thrown into prison for the supposed crime; in some rabbinical tellings of the story, her deception was exposed and he was imprisoned only until the scandal should have abated. The motif is found in many other folktales throughout the world. In Greek legend, Antea or Sthenobia, wife of Proetus, thus accused Bellerophon: here the motif is associated with the letter of death. The ancient Egyptian story of the *Two Brothers* uses the same motif; Bata is accused by Anpu's wife and escapes being killed through the warning of the friendly animals. The Potiphar's wife motif, sometimes disguised or only hinted at, is found in North American Indian tales all over the continent, but especially in the Plains and Central Woodlands areas. See RONAN.

potlatch An extravagant ceremonial distribution of property by North Pacific Coast chiefs to chiefs and nobles of the moiety opposite to their own, given in order to establish superiority in social and political status, or to assume inherited status. North Pacific Coast potlatches were general practice among the nobility of this region, from the Haida of Queen Charlotte Island to the Kwakiutl and Nootka of Vancouver Island. Potlatches to assume or establish status were given on at least two formal occasions: when a chief's house was to be built or when a mortuary column was to be erected prior to a new chief's assumption of the rank, names, dignity, and social privileges of his deceased predecessor. Potlatches were also given by chiefs as a means of wreaking vengeance on an enemy; a chief "shamed" his enemy by destroying valuable "coppers" (native copper plates), killing slaves, burning great quantities of oil, and giving away large amounts of food, dishes, boxes, blankets, and other goods. The chief's enemy would then either have to give an even greater potlatch in return, or lose the reputation which he had formerly enjoyed. Narratives about famous potlatches and references to this custom are current in North Pacific Coast mythology especially in the pseudo-historic myths of the wanderings of groups in this area; see for example Marius Barbeau, *Alaska Beckons* (Caldwell, Idaho, 1947). A recent account of the day-by-day progress of a potlatch is contained in G. P. Murdock's study of Haida potlatches, *Rank and Potlatch Among the Haida* (Yale University Publications in Anthropology No. 13, 1936). [EWV]

pot of basil A folk motif (T85.3) popularized by Boccaccio's story in the *Decameron* (iv, 5) in which the brothers of Isabella, a young girl of Florence, discover that she and young Lorenzo are lovers. They lure Lorenzo into the forest, murder, and bury him. Isabella discovers the place, secretly takes up the head of her lover, hides it in a flower pot, and plants above it the love-plant, basil. This she cares for tenderly and constantly, often weeping beside it. The brothers, observing her behavior, become suspicious, take the pot and discover the head of Lorenzo; knowing their deed is discovered, they flee from the city. Isabella dies broken-hearted. John Keats further popularized this story in a poem (1820) *Isabella, or the Pot of Basil*.

pototo The Inca war trumpet, which has only one note. The instrument still survives among the modern Quechua, who use it during the ritual of the Mass.

Pot-tilter A terrible old woman of Crow Indian folklore, known also to the Hidatsa and the Gros Ventre. She keeps a big pot always boiling. When she tilts it towards anyone it sucks them in. See MONSTERS; OGRE.

Powamu Hopi Indian 9-day kachina ceremony, held annually in February to prepare the crops. This Hopi ceremony, like that of Niman or the home-going kachina ceremony, includes dramatization, group dancing, and altar ritual. Clowns attend the ceremony, play ball, dance, and indulge in pranks. The corn god or spirit, Mūy'ingwa, is impersonated by the Powamu chief in this ceremony. See BEAN DANCE; BEANS; NIMAN. [EWV]

power in dung Peculiar power is believed to be present in the dung of animals and humans, among many North American Indian tribes—especially among the Eastern Woodlands groups, who believed that dung possessed properties which could ward off disease. The Mohegan-Pequot, for example, used fresh cow dung, bound on the face, to cure toothache; sheep dung, mixed with the urine of the youngest child in the family, was used against measles. The Delaware and Shawnee Shuck Faces smeared their hands and arms with human or cow dung, and shook hands with spectators in their rounds of the villages made to ward off disease. Another use of dung is mentioned for the Mandan-Hidatsa of the Plains: during a famine people scattered buffalo dung (which was often also used for fuel in this region) all over the plateau, repeating as they did so the formula, "This is a young buffalo bull." The next day the plateau was full of buffalo. See LONE MAN. The Shawnee, beside using dung as a curative or preventive agent as mentioned above, tell how the dog, when begging of the Creator to be allowed to live with people, promised that he would eat their dung for his sustenance. Human excrement was also carefully secreted by many tribes all over the continent, so that it could not be secured for purposes of contagious magic. See EXCREMENTS SWALLOWED. [EWV]

practical jokes (North American Indian) Practical jokes serve either as the subject or as incidental elements in several trickster tales; e.g. 1) the short tale of *Wildcat and Coyote*, in which Coyote pushes sleeping Wildcat's nose and tail in, thus making him snub nosed and short tailed—Wildcat retaliates by pulling out sleeping Coyote's nose and tail, making them long; 2) an incident in *Coyote and Porcupine* in which Porcu-

pine kills Coyote's child, sets the child under a tree and stuffs its mouth full of buffalo fat, then goes up in a tree and laughs when Coyote returns to the scene; 3) the tale in which trickster is taught to fish through the ice with his tail—his tail freezes and he is stuck to the ice; 4) the tale of *Raccoon and the Blind Men* in which Raccoon joins two blind men and steals the meat they have cooked—they accuse each other, and when Raccoon hits one, they fight in earnest until he leaves, laughing, and they realize what has happened.

Practical jokes are also part of daily life; see for examples W. W. Hill, *Navaho Indian Humor* (General Series in Anthropology, No. 7, 1938). [EWV]

pradakṣiṇa In India, the circumambulation of a sacred object or place as part of a sacred or secular ritual, especially for purposes of purification. Pradakṣiṇa is performed keeping the right side always towards the sacred object, e.g. a building, shrine, or tomb. The site chosen for a new house must be circumambulated three times while sprinkling the ground with water. In India, China, Tibet, and Japan, galleries and walls are provided around stūpas and shrines for the circumambulation of pilgrims. A funeral pyre is usually circumambulated by the chief mourner in the reverse direction, and four times instead of five (the auspicious number).

prairie-dog A burrowing rodent (*Cynomys ludovicianus*); the most familiar American species is distributed on the Great Plains from Montana to northern Mexico. Prairie-dogs live in large villages which are easily visible by the mound of earth thrown up at the mouth of each burrow. Prairie-dogs occur as friendly animal actors in some Plains and Southwestern Indian tales; in the Plains also occasionally as the Hoodwinked Dancers. Among the Jicarilla Apache Prairie-dog is associated with rain and giving or leading thirsty human beings to water. [EWV]

Prairie Falcon Hero of South Central California Indian hero tales. Prairie Falcon has rather simple adventures such as rescuing his wife and losing his eyes. [EWV]

praise names Term used for designations of deities, royalty, warriors, hunters, and others that permit public recognition of their achievements. These are found in all Africa and are a part of the Old World pattern, being also present in the Mediterranean area, and Europe and Asia. See ILU; also section *Praise names* in AFRICAN AND NEW WORLD NEGRO FOLKLORE. [MJH]

Prajāpati Literally, Lord of Creatures: in Vedic mythology, an epithet applied to several gods, among them Hiraṇyagarbha, Soma, Savitṛi, and Indra; later the name of a distinct creator-deity, recognized as the chief and father of the gods. In the *Sūtras* Prajāpati is identified with Brahmā. The name is also given to the seven (or ten) rishis as the fathers of the human race. According to the *Brāhmaṇas*, Prajāpati created the world by performing austerities. In one myth there was only water and the waters performed austerities until a golden egg came into existence. From this came Prajāpati who uttered the sounds "bhūr" which became the earth, "bhuvah" which became the firmament, and "svark" which became the sky. See AŚVAMEDHA; BHRIGU; DAKṢHA; DHĀTRĪ.

Prakṛiti The primitive matter from which the universe is evolved as opposed to spirit or Puruṣa; the Creative

Force, prototype of the female; also, a Hindu goddess equivalent to Māyā or śākti. In philosophical Brahmanism, the belief in the interworkings of a spiritual force, Puruṣa, with a primordial material force, Prakṛiti, to create the universe is an ancient concept.

prāy Term for the evil spirits of Cambodian folklore. Among them are the spirits of women who have died in childbirth (*khmóc prāy*.) These sit in trees and terrify passersby by laughing at them or throwing stones and killing them. The most feared of all the prāy is the ghost of a woman who has died during pregnancy, accompanied by the ghost of the fetus. These two do not feel kindly toward the living. The sorcerer is always summoned to dispose of all miscarriages. Ostensibly he confines the fetus and its spirit in a jar which he throws into running water. Usually, however, he roasts the fetus, blackens it with soot and varnish, and preserves it in a little bag. Henceforth it is his constant companion and aid, and he feeds it daily. A fetus thus treated is called *kón prāy* (literally, son of the spirit). Its power is so great that the sorcerer is henceforth invulnerable and successful in everything.

prayer An address to a higher power requesting some boon or some guidance. According to Tylor, prayer was at first a personal affair between the supplicant and the deity or power, and it asked for some definite thing. Later prayer developed into the request for ethical guidance known in the modern religions. Also, whereas prayers at first were spontaneous and personal expressions, they developed into set formulas in which a strict accuracy of phrasing, cadence, and the like was necessary to make the prayer efficacious. Here the religious prayer resembles very strongly the magic spell or charm in which any omission or deviation from form is ruinous. Prayers may vary in tenor from the begging to the demanding or threatening or reproachful. Also imperative are the correct gestures and postures—e.g. bowing, genuflection, prostration—and the correct costume—prayer shawls, covered or uncovered head, etc. Prayer when thus rigidly circumscribed becomes a form of magic; such methods of praying as the Tibetan prayer wheel lose the personal element almost completely. Set forms develop into a liturgy, fixed for certain occasions, and to be performed by competent officials. Prayers therefore must often be made through a third party, one who knows the correct forms or possesses the power to speak to the divinity—king, priest, elders of the family, etc. Sometimes the prayer is addressed to an intercessor, a divinity who the supplicant feels will intercede on his behalf with that deity who possesses the power to accomplish the desired end; prayers to an intercessor are known from ancient Hittite texts. Sometimes prayer is to such a sympathetic deity who is thought to have power to cancel or supersede the actions of another. Thus, the patron god of a city may be asked to remove the anger of the plague god. Very often prayer is accompanied by sacrifice, gifts to the deity on the principle *do ut des*, I give that you may give. In such instances great point is made of the offering and a request or demand for reciprocation is made.

➤ Prayers or petitions were universal among American Indians, varying in form all the way from single sentences informally uttered by lone individuals to long discourses delivered for large groups. Interesting differ-

ences in attitude distinguish the prayers of the Eastern and Plains Indians from those of some Southwestern Indians. In the East the person asking for benefits attempts to render himself pitiful in the sight of the supernatural beings or deity, in order to arouse the deity's compassion, and thus be granted what he asks. "For I am a pitiful man" . . . "for we are pitiful people" is a set, ever-recurrent phrase in prayer texts from this region, and ritual crying often accompanies or concludes the prayer. Prayer texts need not be recited letter-perfect, either; the more pitiable a speaker can make himself to the deities the better the prayer, and so priests and others have wide latitude in the delivery of prayers at stated times during sacred ceremonies.

In the Southwest prayer is often not a plea, but "the compulsive word" which gods and supernaturals must obey; this is especially true for the Navaho, and for some, at least, of the Pueblo peoples. Pueblo prayer, it has been said, is petition, "asking for this or that" in the right, or formal, way, but when one comes to examine these so-called petitions one finds they are couched, if not in the imperative, at least as commands. For example, when a Hano farmer puts down prayer-feathers in his field he says, "My field, you will be good all the time," or when a Zuñi hunter finds deer tracks and puts down prayer-meal and shell, he says, "This day, my fathers, my mothers, in some little hollow, in some little thicket, you will reveal yourselves to me."

The above are personal prayers, accompanied by offerings, as are nearly all such, not only in the pueblos but elsewhere on the continent. Far more elaborate prayers are delivered by Pueblo priests, chiefs, and members of the numerous Pueblo societies; these latter are remarkable for their formulaic phraseology, for their use of color and directional symbolism, for patterned repetition, and for the fact that, to be efficacious, they must be delivered letter-perfect. Misplacing or forgetting words invalidates Pueblo Indian prayer or song.

A short example of Zuñi prayer is given by Parsons, in the War chief's prayer over his winter solstice prayer-sticks for the War Brothers:

"To my children long life, old age, all good fortune, whatsoever you will grant;

So that I may raise corn,
So that I may raise beans,
So that I may raise wheat,
So that I may raise squash,

So that with all good fortune I may be blessed."
(Parsons, *Pueblo Indian Religion*, pp. 312–13.)

Contrast this with an Eastern Woodlands type of prayer, offered by the leader of the Delaware Indian Big House ceremony on the ninth evening:

"I am thankful, Oh thou Great Spirit, that we have been spared to live until now to purify with cedar smoke this our House, because that has always been the rule in the ancient world since the beginning of creation. When anyone thinks of his children how fortunate it is to see them enjoying good health. And this is the cause of a feeling of happiness when we consider how greatly we are blessed by the benevolence of our father, the Great Spirit. And we can also feel the great strength of him our grandfather Fire for which we cause him pleasure when we purify and take care with it, and when we feed him this cedar. All of this together we offer in es-

teem to him, our grandfather, because he has compassion when he sees how pitifully we behave while we are pleading with all the spirit-forces above as they were created and with all those here on earth. Give us everything, our father, that we ask of you Great Spirit even the Creator. (Speck, *Delaware Indian Big House Ceremony*, p. 151 and n. 2, 3.)

Discussion, analysis, and examples of American Indian prayer texts are scattered through the large body of ethnographic literature on the North American Indians. A few particularly helpful references are: Gladys A. Reichard, *Prayer; The Compulsive Word*, Monographs of the American Ethnological Society 7, New York, 1944 (Navaho prayers); Elsie Clews Parsons, *Pueblo Indian Religion*, 2 vols., Chicago, 1939, pp. 311 ff., also entries in Index under Prayer(s); Frank G. Speck, *A Study of the Delaware Indian Big House Ceremony* (Publications of the Pennsylvania Historical Commission, vol. II, 1931); Fox Indian texts edited and annotated by Truman Michelson, published in the Reports and Bulletins of the Bureau of American Ethnology; Margot Astrov, ed., *The Winged Serpent*, New York, 1946. [EWV]

 A certain number of the traditional prayers addressed by the Incas to their gods, in particular to the supreme god, Viracocha, have been preserved. They are couched in a solemn and grandiose style reminiscent of that of the psalms. They contain unfortunately many passages which are obscure to us. These prayers recited by priests were repeated by the assembly of the faithful. The Supreme God of the Yahgan Indians was also implored with prayers which were set in a traditional form.

Prayers play an insignificant part in the religion of the primitive tribes of the Chaco and of the Amazon. Spirits are more often coerced than asked for favors. The requests which the Indians make to the sun god (Apinayé) or to the "masters of the game" are generally short sentences stating their wish. [AM]

prehuman race The First People of the Mythical Age, who later changed or were changed into animals, birds, rocks, and other natural phenomena and elements prior to the appearance of human beings on the earth. This is a widespread assumption in North American Indian mythologies in all areas except the Pueblo Southwest, where there are few or no beliefs in a race of people prior to those who emerged. In southern California, the concept of a prehuman race is elaborated on: members of this race are born from the culture hero, Wiyot. They multiplied, and ate soil for food. After Wiyot's death a new deity, Chingichnich, appeared; this being converted the first people into animals and plants, or into spirits having power over animals and plants, and caused them to scatter over the earth. [EWV]

'pren-ba Literally, a string of beads: the Tibetan rosary, an essential part of a lāma's dress. Nearly every layman and woman also owns a 'pren-ba on which he or she stores up merit at every opportunity. The rosary contains 108 beads of uniform size to which three extra beads are added at the end before knotting to indicate to the teller the completion of a cycle. Attached to the rosary are two strings of ten metallic rings, one terminated by a small bell, the other by a miniature dor-je. The metal rings, which act as counters, on the dor-je string register units of bead-cycles while those on the bell string register tens of cycles.

The 'pren-ba are made of gold, precious stones, wood, snake vertebrae, and shells. The type of material is determined by the special deity to whom worship is paid and by the sect to which the lāma belongs. A rosary made from discs of human skull is used for the worship of Vajrabhairava. The patron god of Tibet, Avalokita, is usually depicted with a 'pren-ba in his hand.

Prester John Stories about Prester (Presbyter) John, fabulous king descended from the magi, have become so embroidered by marvels and magic that the authentication of the documents involved has become most uncertain. Generally, Prester John is thought to have been a Nestorian priest-king of the Orient who wrote a letter to the Byzantine Emperor Manuel in the 12th century. Although the letter was forged, it brought together a great many beliefs about the mysterious Orient current at that time. In the 300 odd years that passed between the assumed date of the letter and about 1500 when it was published, new marvels were added or invented by persons whose imagination was stimulated by the legend of Prester John himself or by travelers' tales.

Prester John boasts that in his domains there flows a fountain from Mt. Olympus, not three days' journey from Paradise. Three drafts from it, taken fasting, will preserve the drinker from infirmity, and no matter how long he lives he will always appear to be 30 years old. A sea of sand contains edible fish and a river of stones has salamanders which live only in fire. Prester John's robes were made of them, and these robes, too, could be cleaned only by fire. The country has no crime, poverty, or falsehood. Eagles bring stones which if worn on the finger will restore sight or if lawfully consecrated will make the wearer invisible, dispel envy and hatred, and promote concord. An herb *asidios* drives out impure spirits and forces them to disclose their origin.

John's palace is like the one the Apostle Thomas built for Gundaphorus of India. The gates are of sardonix and because they are mixed with the horn of the horned serpents prevent anyone from bringing poisons into the palace. John is kept chaste by sleeping on a sapphire couch. The court is paved with onyx so that the virtue of the stones will keep the duelers courageous. A magic mirror reveals all plots in John's and his neighbors' domains. Another palace built by John's father has the virtue that no matter how hungry you may be when you enter, you will come out well filled.

Later marvels were man-eating ants which mined gold by night. Men there lived on manna; by magic and incantation they tamed flying dragons and rode them through the air. John had five stones which controlled the temperature for a five mile radius. Other stones turned water to milk or wine. Others caused fish or wild game to assemble for slaughter. Still others would produce a great fire if sprinkled with dragon's blood. A tree bears a healing apple. A chapel is always just big enough for its congregation; it is made of glass. A hollow stone is guarded by two old men. The water in it is four fingers deep. Men who desire to become Christians enter and if they are sincere the water will rise to cover them four times.

Other earlier references to Prester John are a letter from Odo, Abbot of St. Remy, who in the early 12th century reported on a trip to Rome. There he met the Archbishop of India who told the Pope that the body of

the Apostle Thomas was preserved in a rich church. The church was encircled by a river which could be forded only on the feast day of the saint. On that day the saint raised his arm to receive gifts, but he refused gifts from heretics. The Pope forbade the spreading of this nonsense but was later persuaded that the story was true.

One John of India, a patriarch, is said to have visited Calixtus II in the second decade of the 12th century. He told of the river Physon which flows from Paradise bearing gold and gems. He also told of the miraculous body of the apostle. In 1145, Otto of Freising had heard of a king "John Nestorian" whose kingdom was beyond Persia and Armenia. He had enormous wealth and his scepter was an emerald.

Space does not permit the tracing of parallels to these marvels in other countries, though the fact that the sources of the Prester John material cluster the 12th century may be relevant, for it was at this time that the European imagination was constructing the great romantic cycles of Arthur and Charlemagne and was being stimulated by travelers' tales brought back by the young men who had been on the Crusades. [RDJ]

pret or preta In Hindu belief, the spirit, the size of a man's thumb, of the dead which wanders around its old home for a year after the funeral rites; also, the ghost of a crippled person or of a child who dies prematurely. Prets have been supplanted in popular belief by the *vetālas*.

In Buddhist belief, the pretas are ghosts who live at crossroads, congregate at boundaries and outside houses. They are a special class of ghosts who must expiate a type of karma which makes their relatives forget them. The sins for which they have become pretas are niggardliness, envy, and refusal of alms. They are hungry or thirsty, look like burnt trees after a forest fire, or have bellies like mountains and throats the size of a needle. See ANCESTOR WORSHIP. Compare ACHERI; BHŪT; CHUREL; PIŚĀCHA; VAMPIRE; YAKSHA.

Pretos Literally, blacks: a Portuguese men's dance, part of the procession held on the feast of the Assumption of the Virgin, August 15, at Arcozelo da Sierra. The dance has all the attributes of ritual clowning: blackened faces, bells, red costumes, obscene farce. To guitar accompaniment the performers conclude with a fandango. [GPK]

Priapus The garden god; a faunlike creature with a notable erect penis. He ensured the fertility of gardens, crops, animals, women. A son of Aphrodite, he was a late importation into Rome from Lampascus where Pausanias reported he was supreme among all gods. In Rome he became identified with Mutinus, another sexual deity. Stories by Augustine and Lactantius that Roman women embraced him and had sexual orgies on his permanently erect member are obscure, though, in view of the changed sexual mores of our time and the structure of some of the figures that have been preserved, not impossible. As an amulet, the figure of Priapus protects against the evil eye. His sacrifice was the first-fruits of the farm. Priapus belongs to the complex of the earth spirits of whom Pan is the best known. In the Middle Ages he forsook his orgies with the nymphs and became a saint protector of cattle and women in childbirth. Deities with erect or exaggerated members known in all

parts of the world are commonly called Priapic. See PHALLISM. [RDJ]

primeval water In the beginning, water covers the face of the earth. With the exception of Southwestern Pueblo origin myths, all the North American world-origin myths start either with primeval water or a world deluge or flood; sometimes primeval water and deluge myths both occur in the same tribe. In the far west an interesting juxtaposition of primeval water and flood myths occurs. A small group of eight contiguous central California tribes (Tübatulabal, Western Mono, Yokuts, Salinan, Southern Miwok, Patwin, Northwestern Maidu, and Wintu) share the primeval water myth; this small nucleus is completely surrounded by tribes having the deluge incidents of caused, or arriving and receding, floods. The incident which usually follows either primeval water or the deluge is that of earth-diver. See A. H. Gayton, "Areal Affiliations of California Folktales" (*AA* 37: 582-99, 1935). See INDONESIAN MYTHOLOGY. [EWW]

primitive and folk art The entire product that might be considered in this space ranges in time from the Willendorf Venus of at least ten thousand years ago to the (not so different) nude scrawled today on the back fence; in technique from crudely beaten bark cloth to Flemish pillow lace employing as many as 1200 bobbins; in form from an armband to a temple, from a fetish to a scarecrow.

A complete range of expression occurs—as literal in intention as a Koryak carving or a decoy duck; as stylized as an Easter Island statue, the Haida Indian Raven or Chiriquí Alligator, or the lotus and tulip motif; as geometric as Oriental window fretwork, a French-Canadian Assumption sash, or a Peruvian textile; as symbolic as the Gnostic wheel, the evil eye, the Hopi rain sign, the unicorn in a medieval tapestry, or the figure-head on a sailing ship.

Virtually every known material is at some point converted to an art use. Sculpture includes the tiny figurines of Mexican jade, Eskimo bone, Oriental ivory, and the mammoth stone heads of Central America, the colossal tree-trunks of the Pacific Coast Indians. Painted depictions appear, not merely on paper, wood, and cloth, but on hides and pieces of bark, on eggshells and glass, on pebbles or the faces of cliffs, the walls of caves or the sides of houses, on shields and weapons and boats, on bowls, in sand, on the human body.

The title, under which a fragment of this vast material is here assembled, is composed of three words, subject to as many varying interpretations, perhaps, as any three that could be sensibly combined at one time. The question of what is art will no doubt remain unsettled as long as creative activity continues. There are apparently as many definitions of "folk" as there are folklorists. "Primitive" has a number of valid meanings, with the difficulty that anthropologists usually think in terms of one, artists of another, and general readers with a hazy mixture of them all. Each of these terms is construed in a strict sense by some writers and in a general way by others.

Art terminology presents many unsolved problems and their solution will depend, not only on the sorting of innumerable factors and objects, but on an increased comprehension of graphic and plastic communication.

In this respect, a study of the forms and symbols rooted in primitive and folk art is as basic as the study of etymology in a language.

I. Primitive Art

The word primitive, which means first, early, or elementary—a very common and basic group of concepts—is applied to many kinds of art which may have little in common except the label. It designates, among other things: (1) the first known art chronologically, i.e. the prehistoric; (2) the art of an elementary culture; (3) the elementary or early art of any culture; (4) the early art of any period or art movement; (5) any art or art object that is elementary in regard to technique and forms, ergo, any undeveloped or crude art; (6) art which imitates or resembles the style qualities associated with early cultures.

Primitive art, as the term is used here, covers the first three of these meanings—that is, the art of primitive cultures, of groups whose general development is (or while it is) at a primitive stage. The other uses of the word, while they can hardly be called erroneous, cause confusion for they apply to art which may fall into the “sophisticated” category. According to sense (4) for example, an early Renaissance painter like Giotto and the pioneer cubist, Cézanne, are called primitives, but these unique individuals are entirely outside the field of art labeled either primitive or folk. In the same sense, “primitive American” is perhaps the most common designation of the early art of the white settlers in North America, but this art, offshoot of European culture, is better labeled “early American” or “colonial folk art” (see Section II); the truly primitive arts of the Americas are, of course, Indian. Similarly “Early Christian Art” seems preferable to “primitive Christian,” which is applied, especially in French, to that development in areas already civilized.

As for sense (5) it is obvious that crude or undeveloped examples and forms of art may occur at any stage of any culture. One might cite the *sidewalk* or *back-house art* of our own non-primitive society, or the sketch a businessman might make for a house plan or a boat. Crudeness is characteristic of the decay as well as the beginning of art forms, as in the *tourist* or *souvenir art* found in port cities or roadside stands all over the world. Deliberate imitations of primitive art (sense 6) or sophisticated art in a “primitive” vein should always be called “pseudo-” or “neo-primitive.”

The student of the primitive has four great areas of art spread out before him—in the north polar regions, among the native peoples of the Pacific Ocean, the African Negroes, and the Indians of the Western Hemisphere—for in these areas primitive art is still produced or survived recently enough to come under the investigation of scholars of our own time as a living art.

Other parts of the world are dominated or penetrated by one or another of the elaborate art cultures: the Oriental (including Chinese, Japanese, Indonesian, Indian, Persian); those of ancient Asia Minor and the Mediterranean (including Egyptian, Semitic, Byzantine, Mohammedan, Coptic, Hellenistic); the Euro-American, beginning with the spread of classical art in Europe and the Conquest or Columbian era in the Americas, together with Euro-American colonial offshoots in various parts of the world. In such areas the primitive is to

be sought either in isolated tribes (such as the Todas south of Mysore in India and the Naga tribes in the hills of Assam) or as a remote layer buried, sometimes literally, under centuries of an elaborate art.

The oldest known primitive art dates back to paleolithic man. Others are relatively recent; the Polynesian arts, for example, have all arisen since the birth of Christ. Some primitive forms have set off a great tradition in art, as in the case of a carved stone lingam of the third millennium B.C. which is the prototype of thousands in Hindu sanctuaries today. Others, like the art of the Southern Hunters of South America or the Australian aborigines, maintain a simple archaic pattern for centuries. One form, rock pictures of lively hunting scenes, has been produced throughout the entire span from prehistoric to living man.

The layman thinks of primitive art as rudimentary; and it is true that it includes the first dramatic demonstration of man's position as a creative being. But within a primitive pattern of life there is considerable range from elementary to advanced, both in general development and in art development. And there are instances where creativeness or the “art sense” inexplicably outstrips the rest of the development, as with the Bushmen, who express a remarkably vivid concept of movement within the narrow range of a single simple art form, and others where it lags behind as among the Manus Islanders, who, like many civilized people, preferred purchase to creation.

Art which is labeled “advanced primitive” is often of such caliber that it is necessary to lay aside any connotation of crudeness or esthetic incipience that the word may have; for, with the great “re-discovery” of primitive art which began some decades ago, it became recognized as ranking with or beyond much of sophisticated art in esthetic terms. To observers accustomed to thinking of art as Western art, with perhaps a slight bow to Oriental imports, this recognition came as something of a shock. Actually, it was to be expected, for under primitive conditions many of the circumstances which seem to foster artistic creation are automatically present—the close contact with nature, the acute observation required for survival under elemental living conditions, the skill with the hands developed by the necessity for making one's own utensils, weapons, and shelter, the unbroken continuity between the need, creation, and use of an object by each individual, the periods of leisure occupied by resort to one's own skills and imagination.

Some other factors which seem operative in the very powerful impact of primitive art bear analysis because they vary from circumstances with which we are familiar. One is the tremendous demand placed upon the graphic and plastic arts in a non-literate society, as a *means of communication*, record-keeping, and calculating; for as soon as early man desired to communicate to someone not present (beyond the range of gesture and speech), pictures and symbols became necessary and a whole range of art forms sprang into existence. To this demand may be ascribed the evolution of pictographs, hieroglyphs, and the identifying symbols of individuals and clans; wampum, churingas, the carved message sticks of New South Wales; the navigation maps of the Marshall Islands; the buffalo-hide paintings of the Plains Indians, recording encounters or giving direc-

tions. Such art may be conventionalized for decorative purposes, as in the fishing exploits carved on Eskimo horn or tusk, a battle depicted in the design on a Sioux legging.

Not only were art forms forced to develop for such purposes but, with the effort to convey graphically the broader range of speech, they developed along concise, abstract, and symbolic lines closely related to our concept of the esthetic. The Haida Indians were able to depict complete myths in carving: how Raven stole the sun and threw it into the sky; how he drew mankind from a clamshell or stole salmon from Beaver for the common use. One famous example of story-telling art constitutes a sort of illustration, though it is highly symbolic and ritualistic. That is the sand painting executed under the direction of the priest during Navaho ceremonials as he chants his people's stories or rituals. These beautifully stylized pictures depict such elements as the central sky-mountain (a white disk), the water-of-life pool, the plant-of-life (a sort of blossoming pole), the whirling logs (swastika) of the Milky Way. The characters are pole-shaped people with identifying symbols—Cloud People bearing cloud sacks (symbolized by triangles), rising- and setting-sun gods, rain-boy and rain-girl—or the thunder-bird with human arms that give off lightning and bird wings that define the Milky Way. The picture may be encircled by an anthropomorphic rainbow, a horseshoe-shaped band having a head at one end and feet at the other.

A second factor is the use of art by various peoples in the *attempt to control their universe* without the aid of technology or any scientific understanding of natural forces. In our ready-made world it is difficult to envision the problems which thus occupy the primitive and his method of meeting them. He has to evoke the rain, control the flood, carve a guardian spirit to protect his home, so decorate his shield as to terrify his enemy, give his weapon the power to strike and his boat the power to see or walk on water, build a trap for evil spirits, find a charm against disease, attract game, put a spell on beasts of prey, forestall disasters, guarantee his strength, courage, skill, or the fertility of his crops. Such needs find answers in the shape of art: the fetish, which in West Africa is not endowed with power until it is smeared with color; the totem masks, carving, and tattooing by which the individual or group can acquire the qualities of the preferred animal; the designs traced on the skin before going hunting (Jivaro) and the scarification adopted at puberty; the amulet carved like a hand which gives skill to the weaver (Peru); the charm that keeps away disease, like the Bolli Atap or benevolent demon of Borneo; the bull-roarer that summons the god or scares off demons.

The shaman's dress of Siberia offers an example of precisely how the meager materials of primitive art are made to serve such remarkable ends—one which answers its purpose ingeniously though not with notable esthetic quality. The shaman, as the intermediary with the supernatural, is required at times to visit the land of spirits, either above or below the earth. In order to fly there, he puts on a coat representing a bird's skin, on which feathers are represented by fringe, bead tassels, or elliptical metal plates. Hung on the coat are three disks, symbolizing his destination, the sun, the moon, and the icehole through which he descends to the underworld,

together with the symbols of his particular spirits who will protect him. At the same time, to retain his human identity, metal plates of armbones, shoulderblades, etc., are attached to the proper places on the coat. To guarantee his return he wears a bridle which his attendant carefully holds during the ceremony. In this garment, there is created a man-bird fusion, the use of which translates the human to the supernatural or bridges the gap between the known and the unknown.

It is apparent that, in order to control his world, it is necessary for the primitive to evolve some explanation of the forces beyond his control and in some way manage to get them on his side. Therefore, he invents innumerable supernatural beings, half fantastic, half a compound of beast and man, together with the semi-mythical culture heroes of his people, and it is these creatures, far more than actual persons, who populate the world of his art. They appear, not only in statues and pictures, but on vessels, utensils, tools, weapons, housebeams, gables, boats, or garments. To propitiate, worship, or celebrate them, he devises masks, rattles, dancing shields, ritual body painting, ceremonial vessels, musical instruments decorated with magical designs, and other ritual objects. Upon death, human beings are usually thought of as entering the spirit world, and ancestor worship in many cultures accounts for images, memorial slabs, mortuary statues, receptacles for the soul (such as a *zemi* of the West Indies or spirit image of Leti), the ancestor hooks of New Guinea, the *hei-tiki* ornaments of New Zealand, the Indonesian soul-ship for the trip to the other world, token objects for the use of the dead.

These magic-religious motivations, as they are sometimes called, result in some objects which are to the casual observer mere curiosities, but wherever they constitute a strong element in the culture they tend to produce a very intense art, composed of forms which seldom have a literal prototype in nature, but which carry a profound conviction of their own reality and power to anyone who looks with receptive mind. This conviction reflects that of the creator, for to the primitive the art he creates, like his dreams, visions, gods, and myths, is likely to be quite as real as the natural world around him. In the *korwar* (ancestral image) of New Guinea, the actual skull is sometimes embedded. Iroquois Indians carved certain masks only from a living tree (that they might have power). Some images in South America, some heads in Africa require the use of actual skin.

A third factor, though it is one deeply involved in the preceding, is the primitive habit of *thinking in terms of concrete imagery*, as contrasted with the less graphic thinking of peoples at a later stage of development, for this concrete imagery is the mental material of art. For example, the universe is contemplated (and depicted) not from the scientific viewpoint of the telescope, nor as a vague void summarized in an abstract word like "cosmos," but actually as a flat platter with corrugated rim, floating on primordial waters under the inverted platter of the sky (ancient Egypt); as the cosmic ocean or the endless snake on which a giant sleeps (Hindu); as an egg with sky and earth as white and yolk and primal man as the embryo (Chinese); as a mythical mountain rising from a snow-covered plain, where buffaloes were kept at the beginning of time (Plains Indians); as the cosmic bullhide on which Father Sky is

painted with sun, moon, and stars on his body and Mother Earth with the four sacred plants (Navaho).

It is an obvious corollary that, in order to understand primitive art, one must learn to comprehend this concrete imagery. This involves, as anthropologists have so often urged upon artists, a study of the meanings, beliefs, and customs behind the art. But it also involves something that is frequently neglected or distrusted on the scientific level, an ability to read the evidence in the art itself—the cultivation of “graphic thinking,” as distinct from our usual habit of thinking in verbal terms. As the practice of art has become less universal, purely graphic and plastic concepts have become more and more overshadowed (even to an extent among artists) by ideas for which words can be found. Among primitives this is obviously less true. As the slightest gesture can reveal a mood, so what man thinks and feels (his terror, fervor, humor) is often recorded in his simplest scratchings and hewings. The tenuity of a line, the eccentricity of a dot, the teetering of a shape, the piercing magnitude of an eye or a claw are eloquent with a kind of meaning that is beyond words, but graphic preferences of this sort are as much a part of a culture as language, dance, or ritual.

As a simple example of this, the famous female figurines (so-called Venuses) of European cave art might be cited. The scholar wistfully regrets that the significance of these odd, fat little pear-shaped figures is lost among the cultural blanks of prehistory. The artist might wish to know more, but he is not baffled. The simple overall shape, to which the details are subordinated, is a striking solution of a perennial esthetic problem, the relation of the whole and the parts. The rotundity of the female, viewed alongside the characteristic stick-like male figure of the period, reveals the awareness of complementary opposites that is present in yang and yin or the cubist antithesis of straight and curved lines. The placidly pregnant female, again contrasted with the active, obviously potent male, is as explicable as lingam and yoni, sun god and moon goddess, or Adam and Eve.

A fourth factor which distinguishes primitive art has to do with the *conditions in which it is typically created*. The view taken of primitive man and his environment varies between the idea that he is a strange and exotic creature totally unlike ourselves and the thesis that all men are alike under the skin and that primitive life and psychology parallel our own. It is impossible to locate the truth in either extreme; one must consider both the likenesses and the unlikenesses of the ways of thought. No artist will minimize the effect of environment on the character of the art; creation is a subtle process and all sorts of streams feed into it from the exterior world in devious ways. Similar art does not result, even in the same artist, after a day spent catching a whale and a day spent reading Freud. It is easy to imagine ourselves creating similar utensils and methods of decoration, if we were reduced to primitive conditions, but not so easy to imagine searing our flesh with intricate patterns or tattooing a decapitated human head.

Thus, when it is stated that the primitive is “different” in that he characteristically produced the objects he needed with his own hands, one may counter with the fact that he developed many of the special attitudes toward art that we ourselves have. (Art objects were sometimes created for trade, especially in the Pacific. In

New Guinea, artists competed for recognition of quality. In Dahomey there was a highly professional “artist to the king.” Special personages, often the medicine man, might be responsible for the creation of magic objects or the keeping of records. There is a characteristic division of activity by the sexes; the baskets of certain California Indians were made only by women, but women were not even permitted to see the ceremonial carved posts of Melanesia.) But in general art, or at least the art potential of skilled craftsmanship, is most nearly a universal function among primitives, and the patterns (with a few prohibitions and exceptions) are familiar to all. Both the extremes of sophisticated art are lacking: the artist neither diverges widely from the tastes of his group nor is he reduced to mechanical copying. Thus, creative expression is possible within a clearly defined group tradition.

As outside influences penetrate these indigenous patterns, they may prove to be either gradually absorbed or disrupting; when they disrupt, as in the case of the occupation of the Polynesian islands by white people, the primitive pattern comes to an end. Actually, a good deal of outside detail can be absorbed without altering the indigenous art patterns; in certain African bone carvings, the figure of a missionary may be recognized by the addition of a hat, every other element remaining traditional. Acculturation has apparently occurred at all levels of development including the earliest. (The Northern nomads, for example, were an early link between East and West; New Guinea contained different racial strains and a variety of primitive styles; the rudimentary art of the Chaco has elements of the relatively sophisticated Inca style.) But within each group which we call primitive, the art remains homogeneous. It is not only made and used, but also taken for granted by the group as a whole. The creator has no fear that his product will be incommunicable or unacceptable to his audience, however obscure it seems to us.

This homogeneity of thought between the artist and his audience frees the form to a remarkable degree in two directions. Because the content is already familiar, complete details have become unnecessary. The expression may be pared down to a bare suggestion, and symbols may become more generalized, while still retaining their significance, than they can be when the artist is attempting to convey unfamiliar concepts. And since they are unmistakable, they may be distorted to the needs of the design in almost unlimited fashion—as in the compression of animal shapes into a totem pole or the adaptation of the frigate-bird motif (in Oceania) to canoe prow, lime spatula, neck rest, float, or bowl. Since these art forms are commonly used, and ramified, they take on the nature of a collaboration—sometimes to very serious ends, as if the whole race combined to design a face for its god.

So far as *materials and art processes* are concerned they vary considerably among the different primitive areas. Accident plays as large a part in creative production as it does in the rest of life, and certain materials have been discovered and used in certain places while others which were as likely may have been overlooked. However, primitive objects are characteristically made of the few materials which come readily to hand; it is not surprising that fur and fishskin are much used in the Arctic, seashells and rattan in the Pacific, ivory and

gourd in Africa, birchbark among the Indians of the Eastern Woodlands—nor that woodcarving, some sort of stonework, clay pottery, basketry, and either bark cloth or weaving are very widespread. By contrast, when technology advances, there is a tendency to use rarer materials for art; in China, for example, basketwork and matting is for the most part utilitarian, while design is lavished on precious stones and the scarcer woods.

Where technology is limited, it is often possible to trace a very close relation between the nature of the material and the appearance of the product. The Eskimos, for example, use musk-ox horn for vessels and ladles, and the scoop-shape of that horn is felt as a strong design influence in their art. The impossibility of curved lines in basketry designs and textiles transmits an angular quality to decoration where those arts are important. Woodcarving induces a similar angularity. Stone is likely to be carved in the round if it is soft, but only incised if it is hard. Wooden vessels are likely to be shallower than pottery vessels, but wooden handles, because of their greater strength, may be larger and more elaborated than handles in clay. The coiling or turning process used in pottery dictates rounded shapes in early ware, whereas sophisticated ceramics are often square. The original shape of stones, tusks, tree trunks, etc., is often very evident when crude tools are used, because of the labor of cutting away material. The curious long nose, sometimes reaching to the genitals or feet in carvings of the Sepik River area, New Guinea, in addition to its psychological purpose, has the structural effect of maintaining the external shape of the original post.

The availability or absence of certain materials can have a profound effect. With the discovery of pigments (even the limited early range of earth-red and -yellow, white, and black) the concept of mass is added to linear drawing on bark or stone and the art of painting begins. The availability of some kind of manipulable fiber produces weaving, and innumerable derived arts, with far-reaching effects on the habits as well as the art forms of a people. The discovery of bronze gave its name to a new age.

Processes, like materials, are usually simple in primitive art, but this does not mean that they are easy. It is not easy to bore a hole in ivory with a bow-drill held in the teeth or to persuade pigment to adhere to a piece of raw hide. The highest craftsmanship has often developed within the framework of simple tools and crude materials. Nor does simplicity of process have any bearing on art content or meaning. Much primitive art presents a terrific challenge to the comprehension, a fact clearly evident upon the faces of casual spectators in any museum. The truth is, in this respect, that any art is baffling to the uninitiated, clear only to those who participate in it or have studiously explored it.

When it comes to the matter of *style*, it is not easy to generalize, for the art of one primitive culture may differ from another as much as Ming painting differs from impressionism. If we have some impression of what primitive art looks like as a whole, it is probably due to a tendency to lump together all things that are strange to us. Only a close and intimate contact with art, as with peoples, reveals its distinctiveness. An ancestor image of the Ivory Coast may resemble one from Borneo, to people whose forebears are painted in colonial American style. But to the African, an American

portrait and a Ming portrait are probably equally similar.

At the risk of oversimplification, it is possible to name a few of the elements which make us think instinctively of an object that it looks "primitive." Exaggeration, often to an extreme, is almost universal—the enormous mouth, protruding tongue, ferocious teeth, bulging eyes, prominent genitals—and it is sometimes accompanied by the elimination or *reductio ad absurdum* of other physical features.

The occurrence of anthropomorphism accounts for such unexpected combinations as the human figure with bird head (Easter Island) or the human faces with animal elements in many masks. Animal and human features may be combined with symbols of nature, like the rayed sun with human face or the Navaho paintings referred to above; they may be injected or almost lost in abstract decorative design, especially in intricate all-over patterns. There is a similar tendency to fusion of useful objects with human and animal shapes—bowls ending in head and tail, resting on animal feet, pots in the shape of heads or figures, the boat literally conceived as a sea creature. The fact that so much of art concept is attached to useful objects (as in the American Southwest where the pottery is not so much "decorated" as used for a painting ground) is a distinction from the sophisticated where the art object tends to be a separate entity.

The primitive may combine materials in ways that are unfamiliar to us; particularly in masks, he makes a most ingenious combination of paint, shell, feathers, straw, hair, bones, etc., to achieve his mysterious effects. His tools also affect his art; there is much fine and precise work, but the difficulty of the process, especially in large stonework, makes for bold and simplified design.

Perspective, in the modern Western sense of the word (the visual vanishing point) is usually lacking. Elements associated together are usually put together, with what might be called a "mental perspective"; sometimes a map perspective or bird's-eye view is used. There is a common primitive method of combining figures in carving. Instead of being related laterally, as in nature, they are in some art piled one on top of the other, often interwoven, sometimes contained in or held by each other. This occurs in such separated areas as the Pacific Northwest (totem poles), Yoruba (houseposts), or New Zealand (commemorative statues). It is probably associated with the physical nature of the tree or post used for carving, though the concept of the pole itself and its relation to the axis of the universe is one rich in significance. The same device may be used in long handles and stick-shaped implements. The effect is a reduplicative one of design elements, and it occurs in other ways as well. The nostrils of a head may flare into the eyes of a smaller head. A carved club from the Marquesas Islands ends with eyebrows and eyes, the irises of which are separate small heads.

Such means as the few mentioned here are not peculiar to the primitive. Exaggeration is almost unavoidable in art; the enlarged head, in particular, is a prominent characteristic of Semitic painting (the head being the seat of thought) and is a common cartoon technique. We tend to the same exaggeration in depicting a jinni or ghost; the fact that much primitive sculpture is related to the supernatural or dead spirits makes

it a telling device. Anthropomorphism does not play a very large part in our visual concepts (except in juvenile illustration) but we take our winged cherubs and angels, centaurs and mermaids, for granted, and we have our share of fantastic characters from snark to shmoo.

Abstraction and Realism The style quality most commented upon in primitive art—and least understood—is its abstractness. Abstraction, though used as the antonym of realism or naturalism, is not a true opposite; it is broadly used to cover any degree of deviation from nature—from simple exaggeration in which the object depicted is quite recognizable, to “pure abstraction” in which forms are invented presumably without any connection with nature at all. Pure abstraction is not characteristic of primitive art—unless we so consider the geometric elements almost universally used in decoration. But even these elements among primitives (most observers think) are to a great extent either derived from or associated with natural objects. The circle is often the sun, two circles are sun and moon or two eyes, the triangle may be fish or tent, a spiral the womb or snake, a square the four directions, a wavy line water, zigzag lightning, etc. It is generally recognized that all art is abstract to some degree; the attempt to reproduce, for example, a human being in stone or paint or any material other than flesh and bone is obviously somewhat unrealistic. The problem is to ascertain the degree of, the method of, and the reason for the abstraction. It is in the last-named respect that primitive art might be said to differ most from modern sophisticated art. In the primitive, art is closely associated with the entire social pattern, and abstract forms are an evolution within rather than a deviation from the cultural norm. They never lose their group-wide use, recognition, and meaning.

Copying, imitating, or “making a picture” of nature, which was a dominant motive of Western art for some centuries, is seldom if ever an objective in primitive art. Quite often the primitive requires a “substitute” for something that exists or has existed (an image of an ancestor, a funerary object, offerings, pictorial records of a battle, an animal depicted to bring success in hunting much as a decoy duck is literally so used), but he does not require that it be a facsimile of the original. In fact it may be preferably abstracted: simplified as in the case of the battle scene, endowed with prestige or a supernatural quality as in the image, enhanced more than everyday objects as in offerings. In some cases a tabu operates against literal depiction.

There is ample evidence of primitives who have made a distinction between the realistic and the abstract; masks of both types were produced simultaneously on the Northwest Coast of America; among Plains Indians, the women produced a geometric art and the men representative paintings on buffalo hide. There are also primitive styles which are realistic in our own sense of the term: portrait heads of the Ife artist, Africa, Koryak carvings of everyday activities, Mexican figurines which have an exaggerated individuality that is like portraiture. But in primitive art there is no compulsion to reproduce nature exactly, and the motivations have that result rather rarely.

Before analyzing examples of art in terms of abstraction, it is necessary to have a good idea of what the subjects depicted look like. A tremendously elongated

neck, protruding lip, or exaggerated buttocks, for example, are viewed in Western art as unrealistic, but in Africa accentuation of the neck with circular ornaments, the use of labrets, and steatopygia occur as physical habits and characteristics which are naturally reflected in the art. Features which look abstract in a strange art may be recognized as highly expressive representations when the environment is fully known. An Eskimo knife-handle (American Museum of Natural History) offers an example. This handle (viewed with the knife pointed downward) has what looks like a large plus-mark in the middle with a man standing above it and a fish apparently standing on its tail below it. The effect is one of stylized design rather than realism unless the method of fishing through a hole in the ice is familiar. The plus-mark represents the line of the ice under the man's feet with the fishing line passing vertically through it, and the fish is nosed up to the end of the line. However, there are certain abstract elements also. The body of the fish is incised with a large square containing the diagonals (an imposed geometric design). The man is not holding the line but has his arms uplifted (a stylized, pictographic position), and the hands are represented, not literally, but by a pronged design used for the deer horn (an example of fusing different depictions).

It must be noted also that the concept of what is real differs from one culture to another. Realism in Western art is identified with “visual representation,” that is, representation of what the eye sees at a given moment and (except in round sculpture) from a particular view; an animal is commonly represented by an outline from any particular view within which such surface features as fur, eyes, claws, etc., are shown. But in primitive art, especially the prehistoric, an X-ray view may be accepted as realistic; the outline is shown, preferably in profile, but within it are shown internal organs, bones, edible and inedible parts, or even the swallowed fish hook. In North American Haida Indian art, the concept of an animal involves both sides of it, even from the characteristic front view, and it may be depicted as if cut in half and opened out flat. In this case the means is unrealistic (the Haida art is highly abstract on various counts) because the animal is not cut in half and would not be flat if it were, but the concept behind it is based on the two sides which the animal actually has.

Depictions of the open eye in Western art are usually based on the elliptical contours formed by the eyelids around the ball. It is equally reasonable to view the eye as the ball which it is, and to depict it with a circle or with a round hunk of clay set in an indentation. Depictions in this form are not necessarily unrealistic. On the other hand, a high degree of abstraction is present when two circles are used for the eyes, as on a painted vessel from Honduras, but a similar circle is used for the mouth, and the three circles are contained in a clover-leaf shape which is the face. This is true also when another form, like the jingle bell, is substituted for the eye, because an association of shapes takes place, even though the ball seen through the slit of the bell is an ingenious suggestion of the pupil of the eye.

No art encompasses the entire reality of nature. The process of selection and of concentration upon one aspect or another is always present. The aspect which conveys the sense of reality is not the same for all cultures. In most primitive depictions of human beings,

for example, the sex details are highly significant. Clothes may make the man in Western art, but to the primitive it is the penis. Leonhard Adam (*Primitive Art*, Penguin Books, 1949, p. 65) made note of certain South American natives who added their customary sex distinctions even in portrayals of clothed European figures. The aspect upon which the primitive focuses is less often concerned with appearance than it is with power or function. Thus, even when the eyes are very abstractly presented—as a triangle (New Caledonia), semicircle (Solomons, Hawaii, Nazca), as a spiral or series of concentric circles or ellipses, or even with one eye outside the head (Tiahuanaco)—the impression of a penetrating gaze is likely to be overwhelmingly present. The concentration upon a certain aspect does not of itself make the art abstract to a significant degree unless a salient detail takes the place of depiction (as in the use of a wing for a bird) or flouts reality (as in the detached sex organs of New Guinea roof carvings). In Bushman petroglyphs of hunting scenes, movement itself is accurately depicted even though the proportions of the figure are exaggerated (greatly elongated) and other details for the most part ignored. When the sense of movement is conveyed, as in Scythian art, by detached arms and legs, a greater degree of abstraction is present; and if this form was ultimately converted, as has been suggested, to the revolving swastika pattern, complete abstraction results though the original significance may be retained in the symbolism.

Thus, in estimating the degree of abstraction in primitive objects it is important not to exaggerate those apparently unrealistic elements which result from the observer's unfamiliarity with the content or from a different concept of what is real. Furthermore, a completely literal intention does not necessarily result in highly "naturalistic" art. The means at the artist's disposal may force a deviation from actual contours, as in the angularity induced by all weaving techniques and common in primitive carving. The accepted material of any culture—corn husks for hair, a cowrie shell or an elliptical piece of mica for the eye—may appear incongruous to outsiders. In Western art, paper is an accepted material for depictions and the photograph is the "ultimate" in realism, but Herskovits reported (*Man*, N.Y., 1948) that when a photograph was shown to African natives, they did not recognize it as being intended as a depiction at all; it was, presumably, simply a squarish object of unknown material. The conventions of any art must be accepted before any degree of realism is recognized.

Even if literalness of intention were accepted as synonymous with realism, primitive art would remain abstract to a remarkable degree, because it is concerned to so great an extent with attempting to depict something which has no prototype in the visible world (the supernatural) or to endow with supernatural attributes, personality, or power that which exists. To these ends, something more than the actual is required, and the elements of invention, association, and exaggeration are inevitably brought into play. One cannot imitate visually that which cannot be seen.

In analyzing the primitive method of abstracting—or rather the method of creating by which what is called abstraction happens to result—the following elements may be distinguished. They often mingle, and the de-

gree of abstractness may be very slight or very high in each case. (Simplification, often considered one form of abstraction, is not included; it is the natural manifestation of any object in a first or over-all view, and is not unrealistic unless some different element of distortion enters in.)

1) The use of geometric shapes. "Geometrization" takes four major forms which are quite different: (a) The use of geometric shapes in design. These decorative patterns, even though they may be suggested by or associated with actualities, are in form essentially abstractions though they may often be combined with or merge into depictions in decoration. (b) Geometric design applied to depictions, like the convoluted patterns with which Maori carvings of the figure are covered. (c) Reduction of the shape or details of the shape to a geometric pattern. In a Congo mask, for example, the face has an over-all triangular shape, in which the nose is a triangle, accentuated with a row of dots, the mouth a circle, the eyes a banded ellipse. (d) The use of geometric shapes as, or as a basis for, such graphic symbols as triangle, circle, wheel, swastika, spiral, etc. See SYMBOLISM. The wide use of geometric shapes gives primitive art its apparent resemblance to the "cubism" of modern abstract art.

2) The fusion of depictions. This comprises the anthropomorphism referred to above, especially common in depictions of the supernatural, and also the fusion of creatures (human, animal, or god) with objects, as when a pot is made in the shape of a head, the handle is a tail, or a metate is a quite literal jaguar as to head, tail, and feet, but with the pounding stone for the body. Depictions are also extensively fused with the geometric shapes of design. The different parts of these depictions may sometimes be so literal that the result might be called a "fused realism," but, more often, the shapes interplay, especially with repetition, and a high degree of abstraction results.

3) The concentration on an aspect or salient detail, which may sometimes develop into a high degree of exaggeration and abstraction. Animal depictions of the Northwest Coast Indians, in which different species came to be differentiated by one distinguishing feature, such as claw or fin, are an example. Condensation in art is often motivated by the needs of communication; when many buffaloes are to be depicted, the repetition of a single salient line is often resorted to.

4) Standardization of a depiction to a set form. This is a process of conventionalizing which results naturally when particular forms of art are repeated many times. The same details and methods are repeated over and over, becoming more and more stylized in the process, until the realism of individuality is ultimately lost. The alligator in Chiriquí art is a well-known example. This form of abstraction is a generalizing process. It is the particular form of art which corresponds to the use of the word abstraction as applied to language, that is, for a general statement, or a summarizing concept which takes the place of numerous individual examples.

5) The modification of naturalness which results from tools, materials, processes, surfaces, the shape of the design area, etc. Unless some other element enters in, art in this respect may be literal in intent but abstract in apparent result.

Major Areas of Primitive Art. The art of the north

polar regions comprises that of the Eskimos of North America (usually divided into western or Alaskan Eskimo, Central and Greenland Eskimo areas) and the paleo-Asiatic tribes of Siberia. The Siberian tribes were comprehensively studied over a period of years, and the reports in the *Publications of the Jesup North Pacific Expedition* (American Museum of Natural History), which contain many detailed drawings and analyses of objects, offer one of the best published sources for the study of primitive art at an elementary level.

The native arts in the Pacific, on the other hand, are still not adequately known. New Guinea alone, for example, encompasses different racial strains and a number of obviously different and intricate styles, highly developed in a symbolic and magical direction, which have not yet been completely analyzed or clearly distinguished. Pacific art (also called Oceanic or South Seas art) includes four main divisions which follow the usual geographical and cultural lines, though there is argument for including Fiji with Polynesia rather than Melanesia on the basis of art resemblances. These divisions are: (1) Polynesia, including Hawaii, the Marquesas, Samoa, Tonga, the Society Islands, Easter Island, and the native (Maori) art of New Zealand; (2) Micronesia, including the Mariana, Caroline, Marshall, and Gilbert Islands; (3) Melanesia, including New Guinea, New Hebrides, New Caledonia, the Admiralty and Solomon Islands, and (?) Fiji; (4) aboriginal Australia and Tasmania. An over-all survey of these four divisions, particularly valuable for its illustrations, is available in *Arts of the South Seas* by Linton and Wingert (Museum of Modern Art, N.Y., 1946). Other primitive island cultures which, from the art standpoint, may be included with these main divisions are the native arts of the Philippines and of the primitive parts of Indonesia. Indonesia embraces both Java and Bali, with sophisticated arts more closely related to those of the Asiatic mainland, and outlying islands whose still primitive art is more comparable to that of neighboring Melanesia.

In broad terms, the Asiatic area is characterized by the early development of highly sophisticated art styles, which penetrated as far as Japan and parts of Indonesia. (The extent of thorough acceptance of Buddhist styles offers one basis for demarcation.) The Pacific area, on the other hand, is characterized by primitive arts which arose later and remained primitive until recent or present times. However, all the Pacific Island areas were settled by waves of migration stemming from the Asiatic mainland and Indonesia, whose arts therefore exerted an influence. A list gives no impression of these varied and provocative arts. Woodcarving is outstanding, whether connected with architecture or devoted to highly abstracted figures, utensils, carved handles, weapons, or boats; the highly convoluted over-all design of New Guinea and Maori art is conspicuous. Other carving ranges from the large "cubist" sculpture of Easter Island to objects in jade, shell, etc. Tree fern, bamboo, rattan, feathers, shell, and tapa cloth are materials used in unique ways—tapa cloth combined with sculpture, for example. A few of the characteristic Pacific objects are canoe prows, painted paddles and shields, carved gables and spires, dance shields, tikis, ancestral statues, ceremonial or memorial tablets and boards, and masks.

The entire continent of Africa, south of the desert area, is occupied by Negro peoples whose arts are all

classed as primitive, though they exhibit a wide range, from virtual non-existence among the Hottentots to an advanced degree of specialization in West Africa. Well-known styles of Guinea Coast art, represented by examples in various museums, are from: Benin, especially bronzes of the 16th and 17th centuries; Yoruba, masks and polychromed carvings; Ife, terra-cotta figures and bronze heads; Ashanti; Dahomey; and Baulé. The arts of the western Sudan and the Congo are also of high quality. Carving in ivory and wood and metalwork are outstanding African Negro skills, and commemorative statues and masks form notable examples. Except for the decrease of ivory, these are for the most part still living arts. The work of Herskovits on *Dahomey* (New York, 1938) and of R. S. Rattray on *Religion and Art in Ashanti* (London, 1927) offer an exceptional opportunity for study of more advanced primitive arts against the essential cultural background.

The *Handbook of the South American Indians* published as Bureau of American Ethnology Bulletin 143, 7 vols. to the end of 1963, Washington, D.C., made available a wealth of material previously lacking, or covered only in scattered fashion, on the complete area of South America. Only certain sections deal directly with art, but much of the material is pertinent; the aspects of material culture are thoroughly covered and analytically illustrated. Four main culture areas are outlined: the Marginal Tribes, treated in Vol. 1; the Andean Civilizations, Vol. 2; the Tropical Forest Tribes, Vol. 3; and the Circum-Caribbean Tribes, Vol. 4. (Volume 5 deals with Comparative Ethnology.) In this case the classifications, based on sociopolitical, religious, and culture elements, do not (see Vol. 5, p. 671) follow obvious cultural or art divisions. The distribution of artistic activity is indicated by the map (Vol. 5, p. 152) which shows pottery levels as summarized by Gordon R. Willey—since the distribution of this major South American art parallels the general artistic development of each area. The areas which lacked pottery or had only crude or simple ware were occupied from early times by marginal hunting and food-gathering tribes, whose circumstances were not conducive to art.

By far the most developed area in South American art is the Central Andean region of Peru and Chile, whence styles and techniques spread to the northern and southern Andes and beyond. A lesser source of art styles is in the Amazonian basin, the ceramics of Marajó being well known. In ceramic and textile arts, the South American Indians were unexcelled. Also prominent in the most developed styles are massive stone sculpture, in which the shape of the block prevails with intricate, over-all relief carving, metalwork of great technical skill, and a simple massive stone architecture showing skilled masonry. Well-known styles of the Andean area (in Peru and the Bolivian plateau) are: Chavin, characterized particularly by its stone sculpture; Mochica, pottery and ceramic sculpture; Nazca, pottery and textiles; Tiahuanaco, sculpture; Recuay, pottery; and Inca. The Inca style of Cuzco, which spread into Ecuador, Chile, and Argentina, was the latest of the Highland styles prior to the Conquest and is for that reason perhaps the best known; it is characterized by a high degree of skill in various media but is less striking esthetically than some preceding styles. The Isthmian area of Central America falls, in respect to influences,

within the South American range; the Coclé goldwork and Chiriquí pottery of Panama and the Nicoya polychrome ware are interestingly developed.

The Indians of what is now Mexico and Central America were highly advanced in many respects, other than the salient one of written language, and particularly so in the arts. Mayan art is generally considered to represent an esthetic peak. This, and the Middle Civilizations and the Aztecs as well, have been treated in various specialized volumes. Aztec art, which survived at the time of the Conquest, was recognized sooner and more thoroughly known, but technology and organization outweigh the purely creative, as compared with the earlier Mayan.

The native Indian arts and crafts of the United States and Canada—like the baskets, leather, bead and feather work, paintings on hide, woven rugs, pottery, silver, etc.—are thoroughly familiar. Not so well understood but of the greatest esthetic significance is the highly symbolic and more abstract art of two areas, the Northwest Coast (including Haida, Kwakiutl, and Tlingit) and the Southwest. Franz Boas devoted a substantial part of *Primitive Art* (Harvard University Press et al., 1927) to a thoroughgoing analysis of Northwest Coast art. The Southwest includes the ancient Pueblo and cliff-dwelling people, and the Navaho, Apache, Pima, Zuñi, Hopi, etc. The Navajo Ceremonial Museum in Santa Fe, in particular, is devoted to preservation of the art of this area. The pottery of the Southwest is technically very superior. The most interesting art of the eastern United States is prehistoric. Stone images and discs, incised shell gorgets, carved masks and bowls found in the southeastern mounds in particular are of high quality and suggest the possibility of connection with the arts of Middle America. Prehistoric art in North America is simplified by Douglas and D'Harnoncourt (*Indian Art of the United States*, New York, 1941) into the following groups: the carvers of the Far West and the Northwest Coast, the engravers of the Arctic (Eskimo), the sculptors of the East, and the painters (on pottery and canyon walls) of the Southwest.

In the Americas, the term prehistoric is widely applied to Indian art up to the coming of the white man. This is confusing to the amateur, in view of the fact that the prehistoric art of Europe is many thousands of years old and that in other areas, such as Siberia and India, the prehistoric is not clearly dated, nor is it known to what extent the styles carried over into the historic. In the Americas, the native arts which had not already disappeared before the Conquest tended to do so rapidly, without adequate record or preservation of examples.

II. Folk Art

Folk art is often called primitive, or thought of as a broader division of art which includes the primitive. However, this bracketing becomes impractical as one attempts to collect and analyze, because it brings together kinds of art which are quite different in circumstances and results. Folk art alone, with the primitive excluded, is diverse enough to present difficulties. Therefore, the term is used here for a kind of art which occurs after a culture has begun to sophisticate, when the art has become so diversified that various styles, techniques,

and products may be known, or preferable, to one group and not to another.

Many definitions of folk art have been attempted; none has been agreed on, but it appears that whenever one refers to the subject (provided primitive cultures are excluded) he presupposes a distinction from some art in contact with it that is not folk—from what might be called, by analogy with art song, "art art." Just what the distinction is naturally varies widely from one culture to another. To comprehend it, it is necessary to understand why and how some of the art has sophisticated as well as why and how the folk art has developed differently, for these streams are not completely separated. One is constantly reminded that the art of a particular culture, even a vast complex of styles, content, and abilities, is essentially a unit. Folk art can exist with, shoot off or emerge from, survive within, or develop into a sophisticated art, and its identity is often more striking than its differences. European folk art is more like the rest of European art, for example, than it is like the folk art of India.

The common use of the word "peasant" for a good deal of folk art offers a starting point. The peasant art of Europe was produced by a class of agricultural or village workers. Obviously the form of many objects, and the methods by which they were made, were common to all classes, but in others (weapons, hunting equipment) the difference is clear. The distinctive peasant costumes and house furnishings of many localities, together with their particular decorative motifs, survive to the present day.

Thus the existence of class privilege and the accumulation of wealth has an obvious sophisticating effect, and peasant art—where objects are locally made rather than imported, lavish materials are not available, and the extensive accumulation of possessions is not facilitated—remains somewhat outside of it. In particular, wherever rulers have accumulated great wealth, a sophisticated art develops around imperial centers; in Byzantium, the best artists and artisans were attracted from other parts of the world for elaborate projects; in China, objects were specially made, and marked, for palace use. In such cases, the difference between peasant and sophisticated art may reach an extreme. The animal sculpture connected with tombs in China offers an example—the simple little clay figures made by peasants of the west, featuring the homely buffalo and other familiar animals, contrasted with the majestic stone statues at Peking. Yet both are manifestly "oriental" in style, and one has been as greatly admired as the other.

Another strongly sophisticating influence in art has been its production under religious sponsorship. One needs only to recall how many elaborate cultures take their name from the predominant religion—Hindu, Buddhist, Semitic, Mohammedan, East Christian—or the part played by Catholicism in Renaissance art. In India, religious neophytes received a formalized art training in a long and arduous apprenticeship, and symbols and styles for religious art were subjected to elaborate schemes and systems. The folk art produced outside these prescribed styles is in a sense secular in character. It serves practical needs and non-religious customs; and particularly, it is characterized by symbols, motifs, and objects retained from pagan or earlier beliefs or associated with local deities or festivals. The

good-luck charm, the Halloween false face, the Santa Claus costume, and their equivalents all over the world, are never quite abandoned, however incongruous with the organized religion of the day. An interesting example is afforded in the Japanese *netsuké*. These miniature sculptures of wood, ivory, or other material, attached to the costume, the medicine case, etc., were usually related to folklore and legend at times when major art works were produced in the service of Shintoism and Buddhism. And while Japanese Buddhist art is inevitably quite derivative, the style of the *netsuké* is thoroughly indigenous, delicate, skilful, original, and entertaining.

At the same time, as new religious concepts and symbols permeated the thinking of the whole people or supplanted the old even in remote areas, a religious folk art began to develop, produced for the same religious purposes but produced in a different way. The elaborate stūpa, cathedral, mosque, altar-piece, or mosaic had its peasant equivalent in the roadside shrine and Virgin, the village Buddha, local church, or peasant-carved alms-box. Replicas of the images in great temples or cathedrals were made for villages, copied by local craftsmen, and recopied, until characteristic folk styles emerged. Local gods or saints might be added to the accepted iconography, and local decorative motifs and techniques were incorporated. A striking example of religious folk art is the Byzantine family icon, which developed particularly during the iconoclastic period. With images forbidden in the churches, the making of icons, which the people as a whole were unwilling to give up, became a surreptitious art in the hands of local and less professional artisans; the style crystallized noticeably into the repeated, stern, straight-front view and the strong flat decorative colors.

The process of industrialization gives rise to another clear distinction between the folk and the sophisticated product. As an increasing proportion of both useful and decorative objects (whether of art caliber or not) are produced by factory means, a folk art may be recognized among people who do not have access to the industrial product and must therefore go on producing such objects for themselves, or on a local scale. In Austria (as in other European countries), pottery first came into use among the townspeople. Only later did the technique penetrate to rural areas, and it never completely supplanted the beautiful carved wooden jugs or "shepherd's cups" or painted wooden plates. The peasant pottery was ornamented (though often elaborately) by simple methods, such as a slip or indentation with the finger or a rough tool; and it has not been supplanted in turn, as in the cities, by ceramics and glassware. Though the sophisticated wares from Venice, Nuremberg, and other centers circulated and had their influence (a peasant type of majolica developed in Moravia, for example), indigenous motifs were maintained.

The folk art produced in these circumstances (that is, among groups not reached by the industrial product) involves more than the mere continued hand production of utilitarian objects. The more sophisticated, whose practical needs were met by industry, tended rapidly to make a distinction between the so-called "useful arts" and the "fine arts," and the latter became the province of professionals. (In contemporary America, the practice of delegating each function to an "expert" has advanced so far that the average adult will not attempt to

draw at all unless he has had special training; his unwillingness to attempt what is in other cultures a natural activity amounts almost to a tabu.) The peasant, however, had even less access to fine art than to the product of industry; consequently his esthetic needs, too, had to be served by the local product. The result is seen in the beautiful decoration of many handmade objects, and sometimes in an imitation of or substitute for the "fine arts" product, as in folk-painted landscapes. Eventually, however, the industrial product penetrated even to the most remote areas, making the home crafts seem needlessly laborious, and the folk artist came more into contact with a sophisticated art which, technically, he could not hope to equal. His creative self-confidence was no doubt undermined and he became often indifferent to or ashamed of his homemade possessions. The high period of folk art in the United States and most of Europe drew to a close after the middle of the 19th century.

Industry, from the very beginning, adapted itself to substitute for the folk product. The early examples—Staffordshire earthenware, American cast chalkware, early chromos—are often included with folk art, though we do not so label their modern equivalents, such as the comic strip or mass-produced, low-priced religious objects. The ten-cent store of today displays many objects not only designed to meet unsophisticated tastes but conveying traditional shapes or meanings: the Easter bunny originally associated with fertility, the charm bracelet with such ancient symbols as shoe or heart, objects for Christmas or Halloween festivities, the valentine, the rabbit's foot on a key chain, the four-leaf clover enclosed in plastic, the three hear-no-evil, see-no-evil, speak-no-evil monkeys. A great deal of pictorial art on the same level, so-called "calendar art," is also produced both individually and commercially. All such art produced for popular consumption, whatever the period, is called by this writer "popular art," and it is distinguished from folk art, in which sophisticated artists and industrial methods have no part. In the present day when, because of mass production, the people as a whole are not impelled to the production of art, the significance of art in relation to them lies in what they choose, what is produced for them. Popular art, in this sense, might well be a separate and important branch of cultural study.

We tend to think of industrialization as the peculiar *bête noir* of Western art. However, in the Near East, many centuries earlier, rug-making, ceramics, and silk textiles were produced in factories corresponding pretty much to our own concept of the term. Much Aztec pottery was characterized by the slurring of designs and standardizing of shapes which occur in quantity or mass production involving hand skills. In medieval Europe, art tended to become professionalized through the organization of craft guilds, with prescribed standards and techniques quite different from folk circumstances of production. However, not all guilds were of equally professional caliber, nor did they cover all crafts, and as they declined, their product became more folklike.

The guilds, and likewise the factories, were concentrated in urban centers and the folk art outside their sphere was largely rural. (The term "rural art" is often used.) However, the availability of objects depends upon money as well as location, and there was at the same

time an urban folk art of the poor. The folk woodcuts of France (and elsewhere), distinctive in style, color, and subject, were a highly popular example.

When an art culture develops, it does so around hubs, like those mentioned—royal courts, centers of religion, learning, industry, ports of trade—and it spreads along the most accessible trade routes. The more remote areas may be no less active artistically, but the art remains more traditional, less ambulatory, less touched by outside influence. Thus, there is not only a rural peasant art, which can exist just outside the city, but also provincial styles peculiar to specific outlying areas. Provincial art is not necessarily folk. The Anatolian, for example, as an inland art accompanying the Byzantine, was of a different but quite sophisticated style. Within the provincial society, the range from lord to serf, from rich to poor, is likely to be present. But provincial areas are fertile for the production of folk art, and even the wealthier products are likely to exhibit a folk character, since they lack the sophisticating factor of outside contact. Trends penetrate more slowly, vogues change less rapidly, and, particularly, the work of local artisans is depended upon. The Rajput school of painting in northern India (c. 1700) was such a provincial art, and it is significant that the subject matter was based primarily on folklore and the Indian epics, whereas the simultaneous Mongol painting was devoted to portraits and historical subjects. The style, too, is what we think of as folklike. In fact, the landscape details of Rajput paintings suggest a comparison with early American art: a rather stiff quality in highly stylized elements is distinguishable from the fluidity and merging surfaces of the more sophisticated (Mongol or European) painting.

As isolation is vanquished, or when areas develop into artistic self-sufficiency with a sophisticated style of their own, the conquest is not complete. Little "pockets of survival" are left behind where a folk art may retain earlier characteristics and in some cases develop a distinctive regional style of its own. This seems to occur particularly in mountainous regions whether in Transylvania or the Southern Appalachian highlands. Usually a regional group results from geographic isolation. However, psychological factors may be involved, such as the resentment of "furriners" on the part of the Southern mountaineers; the resistance of the inland Chinese to the hybrid East-West culture of the Chinese coast; the religious motive behind segregation of the Pennsylvania Amish Mennonites, which seems to have occasioned a determined resistance to the culture which surrounds them; the desire of French Canadians to preserve their national traditions in contact with their English compatriots; and the desire of Africans to preserve their tribal customs.

In the United States, these pockets of survival have largely broken down, at least in the form in which we recognize them. We now seek for individuals rather than whole communities where old crafts persist in their natural state, and the survival has often become a matter of family rather than group tradition. But in some parts of the world, even though coastal and other accessible areas are industrialized, traditional arts flourish in the interior, and various regional arts are possibly still in process of formation.

Colonial and Native Art Still another force must be reckoned with as making possible a folk art, and that is

the migration or colonizing of people from one area to another. The outstanding example, of course, is the transference of European traditions to colonial America. The early settlers of the Americas emigrated from a highly developed art culture to a wilderness, and a process of simplification took place in the art (the reverse of sophistication) as local craftsmen replaced experts, as skills were lost or changed or became impracticable. The resulting colonial folk art was distinguished from its sophisticated European parent, not simply by remoteness or resistance or poverty, but by its active adaptation to more elemental circumstances. The folk character of this art was prolonged by the fact that imports were available to form an "art of the wealthy," thereby impeding the elaboration of local products in the direction of luxury items or fine arts, and it prevailed long after the colonies were independent.

The products of this adaptation are familiar; they are visible in American homes and antique shops, as well as in centers like Williamsburg, Cooperstown, Sturbridge, or the American sections of museums. A few examples merely suggest the many ways in which it occurred. The sampler, the quilt, the hooked rug, emerged as typical handicrafts of women instead of delicate lace or embroidered costume, and the salvage aspect of these arts reflects the scarcity of materials. The furniture of the homeland formed the desired pattern, but characteristic colonial lines soon appeared, generally sturdy and simple; motifs which had been carved in Europe were produced by the less laborious process of painting in Pennsylvania (this happened in European peasant art also), and the painted style absorbed other motifs as well. The familiar cavalier on European ceramics became a Revolutionary soldier. Oil painting, a highly sophisticated medium, was widely used in American folk art. Limners went about with ready-painted stylized busts, to which the somber faces of the early settlers were added, sometimes with remarkable realism and a remarkably "American" look. (Similarly the Chinese painters of "portraits of the dead" keep on hand a stock with all details painted in except the face, which may not be added while life remains. The Chinese insist on a faithful likeness and, in former times, paid for the often spurious rank which they wished the costume to indicate.)

Usually all early American art is described as folk, but as a whole it is more like the provincial art referred to above, which stands rather on a middle ground with elaborated elements of its own. However, there is an important difference between the colonial and the provincial (as the two terms are here used); in the latter foreign influences are minimized, whereas the colonial "invades" a new area in which an unfamiliar culture may be already entrenched. American colonial art of the eastern seaboard showed relatively little effect from the native Indian art (that art being not highly developed) but in the Southwest and throughout Spanish America the interaction of styles is a definite factor. In Africa and the Far East, European colonizers have tended to remain simply outposts of their home culture, although that culture itself shows the influence of their trade and imports (witness the Chinese effect on English ceramics and furniture).

At the same time the native or "invaded" art is also in process of alteration. The new contact, it should be

pointed out, may result simply from trade as well as from settlers. And the local art may be of any type. The Hellenistic cities of the Mediterranean coast, for example, were in contact with cultures more ancient than their own. But in the period of modern colonial expansion, the pattern is one of European (and later American) settlers moving in on areas with a relatively primitive art. This has brought into the subject of folk art an element which we loosely call "native art." (Native art is strictly the art of any native-born inhabitants; by connotation only, we usually think of it as primitive and as contrasted to a foreign element.)

The virility of indigenous art in the face of new contacts, and the attitude of colonizers and traders toward it, are highly variable elements. In some cases, it drifts out of sight, into the Reservation as in the United States, much of it being progressively lost, some preserved in a traditional way rather apart from the rest of life which conforms to new patterns. In some cases, it disappears; Australia (except for the remnants of aborigines), New Zealand, and parts of Polynesia are by now completely within the Euro-American cultural sphere. Where religious reform is involved, the "heathen" art has been destroyed and repressed. But in other cases, the native has been allowed to fuse naturally with the invading style, and some notable folk art has been the result. In Middle America, there was a background of imaginative art, to which the colonizers brought a religion (Catholicism) deeply involved in art motifs, symbolisms, and imagery. Mendieta commented upon how ready the Indians were to copy and imitate the images brought from Europe. This lively art interest, combined with an elasticity which reconciles old and new, permits a living folk art to flourish.

In the North American Southwest, a folk art resulting from such acculturation and syncretism may still be seen, as in the religious images or *santos* and in silverwork. The distemper paintings on plaster or wood which adorn the ceilings, doorways, altars, or walls of the Franciscan missions in Spanish California were reminiscent naturally of similar religious art in Europe. But the analysis of the *Index of American Design* (a series of WPA regional projects which served to register much United States folk art) called attention to elements derived both from the native art of the California tribes and from the Mexicans brought along by the Spaniards to assist in the training of Indians. Embroidered vestments, printed fabrics, and painted chests were other objects made, and the skills and motifs acquired were applied subsequently to the leather, metal, and needlework executed on the ranchos.

In another case, native art may remain primitive despite culture contact. This may be observed on a very simple level in Greenland, where the Eskimos of the southeast coast retained their culture virtually intact, while those of the west coast showed the effect of several centuries of white contact; yet the art in both cases remained quite primitive. Metalwork, which had been limited to native copper, was augmented by iron, and the shape of tools conformed more to the white man's shapes; but simple, incised depictions in pictographic style and the typical design element of rows of circles with center dots showed little change.

Nearly always, an indigenous art which is reached by colonizers or traders suffers to some degree the effect

of commercialization. In its simplest form, this means merely that local objects are peddled by natives or bought up for export. Actually, a whole group may create objects for sale over a period of time without becoming commercialized. This seems to have been the case among the Indians of the Northwest Coast who during the latter half of the 19th century maintained an indigenous art of high caliber despite encroachment. Commerce (barter and sale) has been a factor in art from earliest times; commercialization takes place when the product is affected.

The demands of trade have often resulted in exploitation of the artists and emasculation of the art. Workmanship tends to become hasty; designs are dictated by the trader or buyer. When this happens there is a clear distinction between folk art and "trade goods," even though the design, material, and technique of the object remain traditional. The distinction might seem academic but for the fact that it is recognized by discriminating purchasers all over the world, the art quality being so unmistakably affected. An importer of Haitian objects in New York, for example, prices a "native drum" several times higher than a similar drum commercially made in Haiti—and the reason is obvious in the appearance and sound as well as the scarcity value of the item. It is often possible to riffle through a collection of imports in an American store—cloisonné ashtrays or Mexican painted boxes—and out of numerous carelessly executed and repetitious examples find one which looks like the work of a folk artist, some elderly craftsman perhaps who knows no way of working except the folk way of his youth. Natives themselves are quick to recognize it. Some American Indians today continue to make objects sacred to themselves which never appear on the roadside stand beside the dolls, beadwork, and leatherwork designed to attract the tourist. It is not possible to define in words the exact point at which native objects have become bowdlerized for the market and cease to be folk art; but in general the effect is apparent in the objects themselves.

When demand for native objects exceeds the local supply, or if cheap native labor attracts enterprise, the process of actual industrialization sets in. However, to the extent that new objects and crafts are adopted by natives for their own use and merged with traditional styles, a native folk art may be stimulated. Philippine embroidery was inculcated by nuns and has become well-known in world markets, but it is an element in the present local costume which has evolved, from a conglomerate of influences, into a native folk style.

Industrialization, it is apparent, affects folk art (either peasant or native) in two ways: it can eliminate crafts by supplying machine-made products and it can convert folk objects for large-scale markets. Several factors deter it: the tendency to prefer the old; the impracticality of factory methods for a few locally desired objects; and the pleasure of creation. Whether folk art can continue for long in a completely industrialized society is not quite clear. We recognize styles of the past for what they are more easily than those of the present, and it is possible that different stylistic concepts will attach themselves to the word folk. For example, the variety of odd and often entertaining eating places along American highways constitute a sort of folk architecture. Because a unique design is required to attract attention,

and may be achieved only by the ingenuity of the owner, the pattern of sophisticated architecture is set aside. Flower arrangement and garden planning present individual problems despite all syndicated advice. The bone-carving resorted to by American prisoners of war, sometimes with beautiful results, is of particular interest because it reveals that art as a resource of interest is not forgotten.

Minorities One other circumstance of folk art results from the migrations of people, and that might be termed a minority folk art. People who compose a racial or social minority are psychologically disposed to the preservation of their traditions and are likely to be underprivileged—both circumstances which make folk art likely. On the other hand, a dispossessed or wandering people are not in a position to accumulate possessions, and art is inevitably wound up in material culture. This last no doubt accounts for the fact that the Negroes in America have produced so notable a folk music and relatively little in art except as they became sophisticated artists. Their eminent skill in woodwork was adapted to the white man's tools, objects, and designs. The slave pottery, with jugs reminiscent of African heads, and some carving with geometric design, seem to be exceptions. The caravans and costumes of Gypsies have formed an occasional picturesque note in countryside the world over. Jewish art has tended to identify with national styles, whether on the sophisticated or the folk level; typically Jewish folk art, therefore, comprises ritual objects used by peasant families or in connection with village synagogues. In the foreign sections of cities like New York and San Francisco, folk craftsmen may still be found; at Italian festivals a hand-carved "triumphal car" may be paraded in the streets in honor of a saint.

The Emergence of a Folk Style It goes without saying that the environmental factors which have been described overlap. Royal and religious patronage, industrialization, and wealth were all combined in Europe to affect the sophisticated art, from which the peasant art was distinct. The early post-Columbian art of the Americas may be viewed as comprising a colonial (white) folk art and a native (Indian) folk art. But in Latin America today, peoples are mixed, and the folk art might be viewed (except in more remote areas) as of a peasant or rural type. When one factor predominates, we may be disposed to give the art a specific name—peasant, rural, regional, provincial, colonial, native, urban, or religious folk art. But generally, in each case, different elements merge. Folk art is not to be viewed as a poor example of sophisticated art—there are many of those from which it can be clearly distinguished. It may occasionally appear to be a simplified version or an anachronistic art, but for the most part it takes on distinctive styles, each with its own range of mediocre or superior examples.

It becomes easy to see why attempts to define folk art as a whole in descriptive terms have failed. Too many different kinds of art produced in too many different circumstances are involved. It is commonly said, for example, that folk art is distinguished by a "love of color" or by the use of bright primary colors; but the somber Puritan costume and the subtle hues of Canadian hooked rugs come to mind. All-over design (the so-called *horror vacui* of art) is thought to be a folk characteristic;

actually it is favored for certain objects rather than in any art as a whole. The colonial American sampler or *fraktur* is usually completely covered (though there are many exceptions), but the Pennsylvania Dutch *poi-schisel* (common pie dish) had a simple slip of one or two wavy lines.

Folk art is often viewed as the quaint and simple output of unlettered, unselfconscious individuals. However, modern attitudes emphasize the range of human nature whatever its living conditions. Simplicity in the art product is at some periods an objective of the highly sophisticated (as in modern *bauhaus* design), whereas folk art may satisfy a craving for the ornate or complex. The Chinese dragon kite represents the ultimate in complexity for that particular item; its numerous decorated segments permit it to undulate through the air with marvelous lifelikeness on those occasions when it is successfully launched—a project which usually enlists the entire population of a village.

Literacy is relative within the locale; folk-decorated documents would naturally be the work of schoolmaster or clerk, while the woodcarver or potter might be less schooled; in the non-verbal arts it may not be significant whether an artist is lettered or not since his mental activity may not require an intervening command of words. As for selfconsciousness, it seems likely that anyone who makes anything is aware of himself as the creator and of the work for its beauty; the proud signature or mark on many an autographed quilt, show towel, dish, or spoon is evidence. Sarah Schupp's wedding chest (Philadelphia Museum of Art) made in 1798 is not only prominently signed "N.S." but carefully marked "Num. 8."

A definition under discussion in recent years describes folk art as "the handwork of an untrained artisan made for his own use." This is a curious anomaly of terms, since the word artisan is defined as one trained to manual skill. Training in the arts has been most often acquired (until recently) by an apprenticeship method. It may be acquired, as some sophisticated artists have demonstrated, purely by practice or imitation without any teaching. But it must be acquired if one is to attain the status of an artisan or artist. To say that the folk artist produces "for his own use" indicates that the product is not commercialized, and it is true of certain objects individually produced in many places, notably the home arts of women. As soon as the pioneer conquered his isolation sufficiently to live in settlements and produce an art, a specialization of crafts and skills began to take place. The boatbuilder, potter, weaver, portrait painter, calligrapher, served the whole neighborhood and often operated as itinerant journeyman.

Such assumptions as these indicate how far we are from understanding the over-all pattern of folk art. However, certain art in many parts of the world is constantly referred to as "folk," and some facts are common to the circumstances in which it seems to occur.

Tradition and Contact It is obvious that tradition plays a prominent part in the circumstances mentioned—the retention of ancient elements that have been for gotten or abandoned (though not completely, even so) in the more sophisticated. This is apparent in the objects that persist—the basket not replaced by paper bag, the lace cap, the embroidered shoe, the carved knife-handle; in materials—homespun flax instead of factory

cotton or local cotton instead of imported silk; in processes—glass that is spun, iron wrought rather than cast; and especially in the content of the art and its motifs. In Austria, bed curtains are specially embroidered for use during confinements, their special designs serving to keep evil spirits away. In China, the countryside is spattered with carved arches erected to the honor of faithful widows. In Bali, the *tjili*, painted on rice cakes for the temple, molded into roof tiles, used as the central motif of *lamaks* (palm leaf ornaments hung on an altar or rice granary at feasts) preserves the shape of the ancient Rice Mother, deity of fertility or goddess of beauty. In India, small figurines are carved as "marriage toys" for the bridegroom. Ancient symbols may be traced endlessly throughout the whole range of art forms—lotus, tulip, vine, the tree of life, cross, swastika, wheel, star, rosette, lion, dragon, peacock, eagle, deer, pomegranate, peach.

However, these ancient elements have changed over the centuries, even though slowly. A striking characteristic of primitive art has been noted as the reality of the symbol (the mask *has* power, the sun *is* a fiery wheel). In sophisticated art, on the other hand, content tends to become personal and a "private symbolism" is injected. In folk art, ancient symbols and motifs are retained, but their intense meaning has been rubbed smooth with use, much of their connotation may have been forgotten, and (particularly if there is a newer religion) much of their ritual use has been abandoned or adjusted. Thus there is a noticeable tendency toward the conversion of once potent symbols into purely decorative motifs. The loss of meaning is often accompanied by changes in form. The designs become more stylized, adapted to more heterogeneous objects and more altered in the process, until sometimes the original shape is as muffled as the original meaning. The lotus used as a shop sign by the dealer in rice cakes is quite different from the lotus held in the hand of the goddess or depicted on the Sacred Lake where it enfolds the souls of the dead. The Pennsylvania barn symbol, while believed in at least partially as a charm against misfortune, has little of the meaning attached to the early cross. Masks may be assumed carelessly for festivals or revels. The tree of life is favored for quilts. These symbols, originally formulated with ritual power and poetic content, now constitute deep roots, entrenched habits, graphic concepts which are accepted rather than understood.

There are many examples of folk art—holy images, memorial portraits, grave carvings, votive banners—of strong emotional power, but it leaves its overwhelming impression in the field of decorative art. The basic motifs may be few but they overflow a variety of objects with fresh, skilful, and spontaneous execution, seldom slavishly copied despite the strong hold of tradition.

This element of retention has given rise to the use of the term *traditional art* as a synonym for folk art. However, the word tradition has to do with the fact of transmission—usually it is thought of as lore handed down from one generation to the next—and it applies equally to the transmitted elements in any art; in static periods a sophisticated art may remain highly traditional. In general, as long as any art is alive, some change occurs, however gradually and unconsciously. Our concept of folk art allows for these adaptations

and changes, but "traditional" is limited to those aspects of the art which are not changed but handed down. Traditions change, of course, but in the process that which is new is an innovation.

However, traditional art is the most appropriate name for revivals of folk or primitive arts and crafts. When craftsmen carefully study and duplicate old processes, implements, and patterns, the results, however fruitful, are not true folk art, for the art is not practiced, motivated, or used in the folk manner. Folk artists do not arbitrarily adopt restrictions not their own; their limitations result from their customs and circumstances. A new folk art can spring up rapidly when new opportunity or need arises. The Mexicans were enchanted by the fireworks of the Spaniards and for village festivals began to construct huge firework castles which exploded into images of saints and other motifs. The popular photography which followed the invention of the camera (before the camera and hobby magazines influenced it) formed a kind of folk art in which the backgrounds and the "wedding pose" soon became traditional.

The element of retention has given rise to another, though less used, term, *derived primitive*. This is appropriate only to certain elements within the art. The folk styles of Europe and Asia maintain motifs drawn not merely from primitive ones, but from centuries of succeeding elaborate styles. The last remnants of the Hellenistic and Byzantine in Italy, for example, are referred to by D. Talbot Rice as "impoverished" and "peasant" art.

When tradition becomes virtually the sole element, as in the case of this late Byzantine, the art is one of decay. This is a phase of folk art just as it is of sophisticated art; it occurs and is replaced in much the same way, unless some factor such as industrialization operates against the replacement. Folk art at its height is more like a lively crossroads where tradition meets with other active forces—the developing local style and the partial infiltration or occasional contact from the developed art center.

This contact, however occasional, has an unmistakable effect. It must be recalled that art is visually communicated. Strange art is not completely unintelligible, like a strange language. That which is seen can register without being fully understood. Thus the statue once seen in Cracow, the sample of foreign lace or tapestry in the manor-house, the passing craftsman from another region could set new elements stirring in the home folk style. In colonial America, the arrival of new settlers who had executed pierced ceramics in Europe contributed a new technique, but the art did not sophisticate overnight, nor become European. The connection was not complete, and as long as that is true the folk style is not swept into the main stream. This limited access to the sophisticated seems to be a salient characteristic.

The Buddhist penetration throughout the East in some respects paralleled the spread of European culture in the Americas, but the Eastern arts were of more uniformly high level, and the aspect of a "missionary" penetration was dominant. Approved designs from India were carefully studied to insure orthodoxy in such matters as the postures and garments of the Buddhas, but lesser beings and scenes of human life overflowed with local color and style. Much of this interaction took place

on a sophisticated level, of course, and filtered into folk art only with time. At that level, the effect of repeated tracing of original designs, as in Turkestan, is noticeable, and also the prominence of motifs reflecting the more popular aspects of the religion.

Once all these inherited ideas, absorbed contacts, and motivations are set in motion in a particular area, the art may develop in a variety of ways. It becomes as difficult to trace the reasons as to account for every quirk or facet of a personality, for the different circumstances and events of each area are involved. In America, for example, it was the environmental factor, rather than the prominence of tradition, that caused the early art to take on so much of a folk character. Whatever levels the immigrating craftsmen may have attained in their homelands, certain arts were set back on their heels by the lack of elaborate facilities which may have been available at home. When new skills or products were necessary, they perforce started on a simple level.

Folk Products Observations about both folk and primitive art usually include the fact that much of it is applied to useful objects rather than created "for itself." This is simply a way of saying that the useful and the esthetic have not undergone the segregation that takes place at certain periods in sophisticated art—that a useful object may be the material for art, the modeling applied to a jug, the painting to a chest. This fact may condition (but not necessarily limit) the art, as in the dictation of a shape that is to be handled as well as looked at, and the selection of designs that are appropriate to the use. It does not prevent elaboration far beyond the demands of utility; one does not spend months embroidering a jacket merely to keep warm, or years carving a bed merely to sleep in it. In the case of images and church or temple decoration, the motivation is religious rather than "useful"; and the sophisticated arts, such as portrait painting, may all be paralleled on the folk level.

However, any list of folk arts might begin with the useful ones. There is the characteristic form of the dwelling and other structures with such particularized details as doorway, weathervane, gate or hitching post, barn symbol; furniture and furnishings—chests, racks, stove tiles, hinges, rugs, hangings, quilts, coverlets, linens; home utensils—dishes, crocks, molds, wooden trenchers, baskets, skimmers; the costume and its adjuncts—belts, clasps, pouches, ornaments—especially as it is elaborated for special occasions, christening robes, bridal costumes, vestments; objects used for farm or hunting—ox-yokes, horse brasses, shepherd's crook or whip, powder horn, wagon; tools and symbols of one's trade—shop sign, cigar-store Indian, ship figurehead, carved spindle, carpenter's bench, fishing gear; objects of amusement—dolls and toys, puppets, miniature models, roundabouts, musical instruments. There are documents, trade cards, valentines, colored prints, even some books called folk; tombstones, tablets, carved crosses, mourning embroideries; images, such as the *santos*, village Buddhas, *tjili*, and icon mentioned; charms, and such religious objects as the phylactery or Bethlehem manger.

The style of these objects (the quality which makes them look folk) is most often described as naive. What the word conveys to various individuals is problematical. It may arise from the technical limitations sometimes apparent in the effort to reproduce more elaborate art.

The fold of a drapery in woodcarving, for example, might become highly simplified, stiff, and angular. The figure or landscape may seem a little odd when executed in a similar style without the same knowledge of anatomy and perspective. More likely the so-called naïveté has to do with the enviable ability of folk artists to create afresh within ancient patterns. Various researchers have reported that the artists at work seem to have the sense of originating the art even though the shape or design may be highly traditional. These artists are concentrated on the example at hand; they cannot trace the long history of the form or motif in examples spread out in the museum case. The manner of working may be sometimes very meticulous as in the painting of every leaf on the tree or brick in the wall, or free and bold as in the effigies carried through the streets or burned at festivals or funerals in many parts of the world; but rigidity is natural rather than schematized or imposed.

The predominance of the decorative is a natural outgrowth of the high percentage of useful objects in the art; it often takes the form of innumerable variations of geometric arrangements or of simplified flowers, birds, animals, and symbols. The effect of tradition on the style is unmistakable. The same motifs, repeated over a long period of time and adapted to many objects and areas, acquire a set shape which is immediately recognized without being any longer realistic, and which is used for design purposes more than for representation. The tulip in Pennsylvania Dutch design, for example, uniformly appears with two bisymmetric outer curved leaves and a center section which may comprise the suggestion of other leaves, a geometric shape (such as a checkered diamond), simply a zigzag or wavy line, or a borrowed device such as the pomegranate. Tulips grow readily from the branches of that other favorite symbol, the tree of life. Thus the abstraction which occurs in folk art is not so much (as in the primitive) a result of different concepts of reality or an effort to depict that which is essentially unreal; for the conventions of reality which prevail in the contiguous sophisticated art are generally accepted, and so are the ancient symbols. Predominantly it takes the form of conventional or stylized abstraction.

Materials and Processes The same factors which give tradition so strong a hold—isolation, lack of education or wealth—tend to keep the materials local and processes mechanically simple. The materials are not necessarily poor, for the folk material of one area (linen in Europe, silk in central China, ivory, jade) might be the treasured rarity of another; but imports are uncommon, and the range within the area is often narrow. Processes may be intricate and laborious, but they are characteristically accomplished unmechanically and by a single craftsman (perhaps with assistants), rather than by a subdividing of skills.

The observable difference between folk and sophisticated art often, sometimes solely, has to do with these two factors. In early Mohammedan pottery (according to M. S. Dimand), luster and enamel painting were used only in the high-grade ware made for the court or wealthy persons, and made for the most part where the court resided; incising and underglaze were used for both wealthy and peasant ware, and both show the great Islamic decorative qualities. The designs carved in a fine piece of European furniture may be repeated in

paint on an American chest. The bridal bedspread, usually of embroidered silk in China, may be produced by a batik process among the poor in certain areas. The handwoven coverlet survived in folk art long after the Jacquard loom had started the industrializing process in the cities.

But in general all the materials of sophisticated art are used, to the extent that they become available. In addition there are a great many inventions and oddities which bespeak the ingenuity of people to whom expensive materials are out of range or who are not inhibited by esthetic canons: "paintings" of fern or cork, figurines of plaited straw, rag dolls, the snow man, the dough man, shapes knotted in rope or chalked on the sidewalk or stenciled with the shadow of the hands, coverlets of scrap, toys of folded paper, lockets of human hair, the broach of pasted shells or kingfisher feathers, sand castles, painted gourds, dyed grasses, the ship in the empty bottle, the mosaic of shards, the welcome spelled in flowers, the scarecrow, carved seeds, pumpkin and coconut faces, the cake pagoda, animals of blown candy, figures of string or of palm leaves, painted eggs. Miguel Covarrubias describes having seen in Bali, among beautiful offerings for the gods, "great pyramids of fruit, flowers, cakes, and even roast chickens, arranged with splendid taste" and "monuments, seven feet in height, made entirely of roasted pig's meat on skewers, decorated into shapes cut out of the waxy fat of the pig and surmounted with banners and little umbrellas of the lacy stomach tissues, the whole relieved by the vivid vermilion of chili-peppers." These are outclassed (if that is possible) only by the Russian gingerbreads weighing more than half a ton. But folk art is not made up of mere decorations and oddities. Like all art, it can serve (and does) the complete range of human needs, from the most festive to the most solemn, the most useful to the most spiritual.

MAMIE HARMON

Princess on the Pea Title of a fairy tale by Hans Christian Andersen which has immortalized and given name to motif H41.1, also known as the bed test or identity through sensitivity test. Andersen's story begins with the wish of a certain king to marry a *real* princess. A princess comes to his door in the night and is given shelter from rain and storm. She says she is a real princess, but to make sure the old queen puts a pea in the bed, piles 20 mattresses upon it, and 20 eiderdowns upon them for the princess to sleep on. When asked in the morning how she slept, the princess complains of lying on something so painful that she could not sleep at all. Thus they know she is a real princess; none but true royalty could be so tender.

Grimm's example of this story is *Die Erbensprobe* (#182a). The Penzer notes to the *Ocean of Story* (vol. VI, p. 288 ff.) state that the oldest known version of this folktale is found in Sweden. In this the princess is put through a number of tests: one of them is being put to bed on seven mattresses with a pea between each. She sleeps soundly and comfortably all night, but her canny little dog advises her to complain. So she complains; and because of her complaints is adjudged a worthy bride for the king. Most of the Scandinavian bed test stories contain also the animal adviser, and the objects placed in the bed vary from peas and beans to stones and knitting needles.

 Other versions of the story are found in Italy, Hungary, Greece, Rumania, Arabia, and India. Super-sensitivity was considered a characteristic of persons of royal or noble lineage. Many stories (jests) are related by ancient writers on the sensitivity of the luxurious Sybarites; for instance, one Smindyrides slept on a couch of rose leaves and, on awakening, found his body covered with weals (Timæus; Ælian). Ancient tales in India and Persia tell of three queens, so sensitive that one who heard a pestle pounding in the distance, fainted from the pain this noise caused her; another was burned by moonbeams; another was wounded by the fall of a lotus flower. A Persian queen could not sleep for a myrtle leaf under her shoulder, and three sensitive brothers were restless and sleepless from a single hair under seven mattresses. For these and other stories of sensitivity, consult Erwin Rohde, *Der Griechische Roman und seine Vorläufer* (3d ed., Leipzig, 1914), pp. 588, 589, nn. 2, 3; C. H. Tawney, ed., *The Ocean of Story* (London, 1924-28) VI: 291; VII: 10-12; 204 ff.; Bolte-Polivka, *Anmerkungen* III: 332. [CFS]

Prisoner's Song A Broadway popular version of an old song of the American southern mountains, *New Jail*, which itself is descended from an English song, *Here's Adieu to All Judges and Juries*. The tune is a folk re-modeling of *The Ship That Never Returned* by Henry C. Work, published in 1865. Another old song, *Moonlight*, or *Meet Me Tonight in the Moonlight*, contributed a stanza. From the various sources stanzas along the lines of the following have been assembled: "I'm going to my new jail tomorrow / A place where I've never been before / With those cold prison bars all around me / And my head on a pillow of stone"; "Meet me tonight in the moonlight / Meet me out in the moonlight alone / For I have a sad secret to tell you / Must be told in the moonlight alone"; "I wish I had someone to love me / Someone to call me their own / I wish I had someone to live with / For I'm tired of living alone." The chorus is often the last of these, but one version, *The Great Ship*, has a chorus "Let her go, let her go, God bless her" like the blues *St. James Infirmary*. Among Negroes as well as whites the song is widely known over the United States.

promenade An American square dance term. When the promenade follows the grand right and left, the gentleman meets his partner half-way around the set, whereupon he takes her on his right, either joins both hands crossed with the right above the left, or gives the lady his right arm, and they walk back to place, continuing in the direction the gentleman was going. There is also a French wedding dance called *promenade*. [CFS]

promised child A theme of folktale, known throughout the world, in which a child is promised to a demon, water spirit, etc., in return for some sort of favor, often the birth of the very child. The promises, knowingly made or unwitting, rash or considered, and the means of evading fulfilment of the promises are embodied in motifs S210-259. The promise is perhaps best known in the *Beauty and the Beast* story: the father, to save his life after trespassing in the beast's garden to pick a rose for his daughter, is forced to promise the beast that he will send his daughter to be the beast's wife. The story of Jephthah's vow illustrates the unwitting promise of the child: the father promises the first thing

that comes to greet him when he returns home. See JEPHTHAH'S VOW. The European tale of Robert the Devil (S223.0.1) explains the deeds of that evil-doer as being caused by the mother's promise of the child to the Devil (Type 756B—The Devil's Contract). This type is exemplified in the eastern European *Legend of the Robber Madej*. The child, promised to the Devil, grows up and decides to go to Hell to obtain and destroy the contract binding him to the Devil. He is helped by the robber Madej, and while in Hell he sees the punishment awaiting the robber when he dies. He warns Madej, who seeks penance. He is assigned the penance by a hermit, which he must continue until, as in the Tannhauser story, the dry rod blossoms and bears fruit. Eventually the staff does this and the robber knows that he is forgiven. Andreyev, who studied this tale (FFC 69), believes it originated in western Europe during the Middle Ages, but that its theme proved more congenial to eastern Europe, where it is best known. The story is, however, told from Ireland and Spain to Siberia; some 60 Russian, 54 Polish, 48 Lithuanian, 25 German variants are known.

proverb A proverb is a terse didactic statement that is current in tradition or, as an epigram says, "the wisdom of many and the wit of one." It ordinarily suggests a course of action or passes a judgment on a situation. A proverb may be merely a statement of fact: /Honesty is the best policy/, /All's well that ends well/; or a metaphor, which one applies to the situation: /Don't change horses when crossing a stream/, /Don't cut off your nose to spite your face/. In many proverbs, and characteristically in those dealing with medical or legal ideas or with the weather, the didactic element is a condensation of experience or a concisely formulated rule: /Rain before seven, fine before eleven/; /Two words to a bargain/; /Silence gives consent/.

Many manners of speaking that are found in tradition and literature are akin to the proverb. A proverbial phrase (/to be left at the post/, /to have an ace up your sleeve/) permits variations in person, number, and tense. A proverbial comparison (/as fresh as a daisy/, /as red as a rose/) has a fixed traditional form, but contains no moral advice. The Wellerism, or quotation proverb like /"Every man to his taste," said the farmer when he kissed the cow/, is a traditional form; it is used to produce a humorous effect and is at most a whimsical or ironic comment on a situation. The traditional estimates of a neighboring village or country are expressed in *blason populaire*. A conventional phrase is a formula used in a situation of frequent occurrence. On seeing one's expectations confirmed, one may say, "Well, what did I tell you?" Expressions used in greeting a friend, taking leave, or drinking a toast are conventional phrases. The closely related cliché is a similar formula which the speaker or hearer feels to be trite and hackneyed. It expresses a trivial judgment (and it may then be a proverb) or may be only a phrase like /When all is said and done/, /All things being considered/, /In any way, shape, or manner/. Mottoes and slogans have, like clichés, somewhat sophisticated associations. They are expressions connected with persons or religious and political movements; they formulate ideals or principles or are calculated to arouse mass emotions for or against a cause. /*Honi soit qui mal y pense*/ is the

motto of the Order of the Garter, and /Rum, Romanism, and Rebellion/ is a slogan. The literary forms most closely akin to the proverb are the apophthegm (a concise statement of a moral judgment) and the epigram. The writer of an epigram endeavors to put a novel idea or a new facet of an old idea into brief and elegant literary form.

The origin of proverbs is obscure.¹ We must suppose that some individual formulated an idea in words or drew a lesson from a scene, but the result was only a sententious remark or an instructive exemplification of a truth until tradition accepted the statement and, while accepting it, adapted it, if necessary, in an inimitable fashion. Both the invention and the acceptance are essential to make a proverb, and both ordinarily escape our observation. The effort to arrive at the origin of proverbs is complicated by the fact that the same theme and even the same formulation of it may occur to more than one person. The witticism, /As Maine goes, so goes Vermont/, which was coined on the occasion of Franklin D. Roosevelt's second election (1936), depends on the older saying, /As Maine goes, so goes the nation/. At that time several persons claimed—and no doubt correctly—to have hit upon it independently. Traditional currency differentiates a proverb from an individual's sententious or epigrammatic remark, and in the absence of traditional parallels only a feeling for the idiomatic use of a language enables us to recognize a proverb.

The ascriptions of proverbs to particular individuals are extremely untrustworthy. Some may be correct, but many ascriptions to Solomon, Socrates, Plato, Cato, Alfred, or some other man famed for wit or learning reflect only the reputation that he enjoyed. Occasionally it may be possible to find in his writings a phrase or an idea that tradition could—and perhaps did—turn into a proverb. For example, the Wellerism or quotation-proverb of the type represented by /"That alters the case," quoth Plowden/ probably derives its material, if not always its form, from a historical incident.

Most of the commonly used proverbs are metaphors drawn from daily life or the observation of nature or are terse summaries of experience. To the first class belong: /New brooms sweep clean/; /No man is a hero to his valet/ (which has been credited to Madame de Sévigné); /It is a long lane that has no turning/; /Still waters run deep/. To the second class belong: /Haste makes waste/; /Set a thief to catch a thief/; /Three generations from shirtsleeves to shirtsleeves/; /Few words are best/; /Experience is a dear school but fools will learn in no other/. Comparatively few proverbs involve an allusion to a particular trade, custom, or belief. /Good wine needs no bush/ refers to the old custom of hanging an ivy branch before a wineshop. /*In vino veritas*/ (There is truth in wine) may be the familiar observation that alcohol makes the tongue wag or, less probably, a reference to some divinatory practice. There are references to the village and household trades, but city or industrial life as we know it in modern times has not given rise to many proverbs. Some proverbs, like /Sour grapes/, are condensations of familiar tales, especially Aesopic fables.

Proverbs are often made on the models of already existing types. /The nearer the church, the farther from God/, an old and widely known proverb, seems to have been the occasion for the invention of /The nearer

Rome, the worse Christian/ or /The nearer the Pope, the worse Christian/, which are much less widely known forms and breathe the hostile spirit of the late Middle Ages. The same formula appears in the medieval Latin /*Tanto plus calidum, quanto vicinius igni*/ (The nearer the fire, the hotter), which Chaucer knew, and the widely used /The nearer the bone, the sweeter the meat/.

Proverbs use the simple stylistic devices of contrast (/Enough is as good as a feast/); alliteration (/Live and learn/; /Look before you leap/); rime (/Man proposes, God disposes/; /There's many a slip between cup and lip/); and repetition (/Live and let live/; /There's no fool like an old fool/; /Love me, love my dog/). Perhaps the most characteristic feature of proverbial style is the use of contrast as in /A good beginning makes a good ending/; /Better late than never/; /Little pitchers have big eais/; /Hindsight is better than foresight/; /When thieves fall out, honest men come into their own/. A contrast is often reinforced by parallel structure as in /Like master, like man/; /Young saint, old devil/; /Out of sight, out of mind/. Proverbs like /Faint heart ne'er won fair lady/ or /Pride will have a fall/ that resemble allegory are rather rare.

Like all folklore materials, a proverb has many traditional variations, which are all of equal authority. The parallels to the English /A bird in the hand is worth two in the bush/ differ in the number of the birds mentioned as we see in the Gaelic /A bird in the hand is worth a dozen on the wing/ or the Spanish /A bird in the hand is better than a hundred (or a thousand) flying/. The speaker may elaborate the proverb by naming particular birds as in the Persian /A sparrow in the hand is better than a hawk in the air/ or the German /A sparrow in the hand is better than a pigeon on the roof/. When a proverb employs completely different means of comparison to express this idea, we cannot easily discover whether we have variations that have arisen in the course of oral transmission or whether we have two proverbs of entirely different origins. Examples are the Turkish /The egg of today is better than the goose of tomorrow/, the Latin /One hour today is worth two tomorrow/, and the Serbian /Oat bread today is better than cake tomorrow/. One proverb often brings another in its train, or suggests an enlargement by the addition of an illustrative parallel, as in /Many talk of Robin Hood that never shot in his bow, and many talk of Little John that never him did know/. Proverbs may also attract to themselves such whimsical additions as we see in /I have other fish to fry and their tails to butter/. Sophisticated epigrams may gain much of their effect by echoing proverbial models: /Marry in haste and repent at leisure/ yields /Marry in haste and repent at Reno/ and /You can't eat your cake and have it/ (i.e., sex appeal) rests on /You can't eat your cake and have it too/.

A proverb usually expresses no high moral ideal difficult of attainment but is the summing up of everyday experience in getting on in the world as it is. The virtues preached by religious masters are not turned into proverbs. /Charity begins at home/ is thoroughly practical. The advice that underlies most proverbs is the counsel to avoid excess. Proverbs seem therefore to advise contradictory actions, and men have amused themselves by making collections like the Elizabethan *A Crossing of Proverbs* by Nicholas Breton.

In literature proverbs are often used to characterize a figure or to summarize neatly a situation. They are often used as titles, as in Shakespeare's *All's Well that Ends Well*. A development of this last use is seen in the *proverbe dramatique*, which is a play that gradually leads the audience to guess the proverb which gives the play its point and title. Such plays were especially popular in 18th century France. At various times and in many countries poets and prose writers have heaped up proverbs to gain a particular effect: François Villon wrote a ballade composed of proverbs, Rabelais made a chapter of them in his *Gargantua*, and Carl Sandburg used them for characterization in "Good Morning, America." Such accumulations of proverbs have pictorial parallels, notably Pieter Breughel's representation of more than a hundred proverbs in a single scene. There are also many pictures depicting a single proverb.²

The *epigram*, and in particular a special variety of the epigram, is closely akin to the proverb. This variety, which is called the *Priamel*, was especially popular in the 15th century at Nuremberg.³ The *Priamel* is an accumulation of unrelated ideas that are united in some unexpected way. The connection may be expressed at the beginning as in /England is the paradise of women, the hell of horses, and the purgatory of servants/, or at the end, as in /The calf (parchment), the goose (the pen), and the bee (wax or seal): the world is ruled by these three/, or /A dog, a woman, and a walnut tree: the more they are beaten, the better they be/. The thought that holds a *Priamel* together may be left to be inferred as in /*Italia para nacer, Francia para vivir, España para morir*/, which praises the climate of Italy, the gaiety of France, and the piety of Spain in the sequence of human life; or /Nature requires five, custom gives seven, laziness takes nine, and wickedness eleven/, which is spoken of the hours of sleep.

Although *medical proverbs* have been collected and studied in many languages, the English examples have received very little attention. They may preserve old rules for health like /After dinner rest a while, after supper walk a mile/, which is ultimately a passage in the *Regimen scholæ Salernitanum*, a medieval handbook of medical advice. Such bits of good counsel as /An apple a day keeps the doctor away/, or /An hour's sleep before midnight is worth three after/, which have less obvious origins, are no doubt summaries of popular experience. The Latin /*Similia similibus curantur*/ (Like cures like) is the basis of homeopathic medicine. The interpretation of medical proverbs often raises difficulties. /Feed a cold and starve a fever/ may be understood literally or as /If you feed a cold, you will have a fever to starve/. The saying /You must eat a peck of dirt before you die/ is probably no more than comment for the overnice.

*Weather proverbs*⁴ are, like medical proverbs, traditional epigrammatic condensations of experience: /April showers bring May flowers/. The value of such assertions is briefly stated in /All signs fail in dry weather/. Many weather proverbs refer to the calendar: /As the days begin to lengthen, the cold begins to strengthen/. Some proverbs like /March comes in like a lion and goes out like a lamb/ are survivals of old rimes that were once printed on calendars. Weather proverbs often give advice about agricultural matters: /Plant corn when the dogwood is in bloom/. Others must have been invented by seafaring men: /A rainbow at night is the

sailor's delight/. A metaphor based on the observation of natural phenomena like /The darkest hour is just before dawn/ or /Every cloud has a silver lining/ is not ordinarily called a weather proverb.

Among peoples without written laws proverbs are often quoted with great effect in disputes. An aptly used proverb may decide a case or support a chief's decision. Laws that have been handed on by word of mouth often have a terse epigrammatic form akin to the proverb. In Iceland, for example, the lawgiver, an official of the All-Thing, recited the code annually at the assembly on Thingvellir. The Frisian laws preserve traces of metrical passages that suggest oral transmission. Mnemotechnic formulas, which are often embellished by alliteration or rime, continue to be used in popular speech: /house and home/, /man and mouse/, /kith and kin/. Periods of time like /a year and a day/, or especially "forever" are often expressed in proverbial formulas: /As long as grass grows and water flows/, /As long as Paul's [i.e., St. Paul's] stands/.

Legal proverbs may contain a concise statement of a legal principle: /Ignorance of the law excuses no man/; /An Englishman's house is his castle/. Their interpretation may require special knowledge of legal and social history, or acquaintance with ideas that are no longer accepted. For example, /A fair exchange is no robbery/ refers to the fact that a forcible exchange of clothing effected by a fugitive is not to be regarded as a theft aggravating his offense.

Especially interesting and curious proverbs express an idea of a legal nature that has not been put into law. /Hands off is fair play/ advises spectators not to take sides in a fight; /Don't kick a man when he is down/ counsels a magnanimous spirit; /A tale-teller is worse than a thief/ compares two kinds of wrongdoing and would probably not be upheld in a court of law.

In the Middle Ages and the Renaissance collections of *brocards* or concise, anonymous, traditional formulations of legal principles served as textbooks and even in recent times teachers of law used such books as Herbert Broom, *Legal Maxims* (1st ed., 1845).⁵ Francis Bacon collected *brocards*, and in 1641 William Noy published a much-used *Treatise of the Principall Grounds and Maxims of the Lawes of this Kingdom*, which was reprinted as late as 1870. The origins of these maxims can often be found in actual laws or commentaries, but their traditional currency (although it is largely restricted to lawyers) entitles them to the name of professional proverbs. Typical examples are /*Ultra posse nemo obligatur*/ (No one is bound beyond his ability), /*De minimis non curat lex*/ (The law does not concern itself with minor matters), and the respect for precedent formulated in /*Stare decisis*/. In any profession that deals with relatively esoteric information similar epigrams or maxims are current. For example, biologists say, /Ontogeny recapitulates phylogeny/.

*Proverbial comparisons*⁶ are usually, although rather incompletely, recorded in collections of proverbs. They deserve separate attention and study, but the examples needed for historical and comparative investigations are not easily assembled. The variations in the means of comparison and in the contexts in which the comparisons are used are often extremely interesting. Some proverbial comparisons like /As white as milk/ have become old-fashioned, and others like /As hot as the hubs

of Hades/ have established themselves in general use. The currency of comparisons and the rise of new forms are ordinarily difficult to discover. It is even more difficult to learn the special contexts in which a comparison is properly used. For example, /As black as the ace of spades/, which seems to be of rather recent origin, refers only to a Negro. Proverbial comparisons may become unpopular and disappear from use. John Ray notes, for example, that /As drunk as a beggar/ was being replaced three centuries ago by /As drunk as a lord/. Like proverbs, proverbial comparisons may allude to unfamiliar or forgotten ideas. /As deaf as an adder/ depends on the very old assumption that snakes cannot hear; /As cross as a bear/ recalls the old sport of bear-baiting. The interpretations of /As mad as a hatter/ or /As mad as a March hare/ are still obscure, and /As pleased as Punch/ is puzzling because Punch is usually associated with domestic strife—but Punch brags and preens himself after beating his wife.

Proverbial comparisons referring to colors constitute a special category. Some like /As black as coal/, /As red as blood/, or /As white as snow/ are immediately intelligible, and others like /As brown as a berry/ are yet to be explained. Others like /As white as milk/ or /As white as chalk/ have ceased to be current, and still others like /As white as a sheet/ have come to be used only in particular contexts. Such references to personal qualities as /As green [inexperienced] as grass/, /As blue [depressed] as indigo/, /As white [pure] as the driven snow/ may preserve recollections of medieval color symbolism or may be of more recent origin.

Except for such comparisons as /As old as Methusalem/, /As poor as Job/, or /As many-eyed as Argus/, which are readily recognized as Biblical or classical in origin, proverbial comparisons containing a proper name defy explanation. /As queer as Dick's hatband, made of a peastraw, that went round nine times and would not meet at last/ may be an allusion to Richard Cromwell; /As lazy as Ludlam's dog that leaned his head against the wall to bark/ remains entirely obscure.

*Clichés*⁷ The cliché, a stereotyped expression so trite and hackneyed that sophisticated writers or speakers avoid it, is ordinarily a phrase rather than a full sentence. Eric Partridge recognizes four varieties: First, idiomatic phrases like the doublets /Dust and ashes/, /Enough and to spare/, /Null and void/, /Ways and means/; the repetitions /Again and again/, /Through and through/; the alliterative phrases /Bag and baggage/, /Safe and sound/, /Slow but sure/; the alternatives /Kill or cure/, /For love or money/, /Neither here nor there/. With these he would group such overworked proverbs, proverbial phrases, and proverbial comparisons as /To step into someone's shoes/, /To steal his thunder/, /As fresh as a daisy/. A second class of clichés consists of hackneyed non-idiomatic phrases: /To add insult to injury/, /A baptism of fire/, /Down to the last detail/, /The picture of health/. A third class includes phrases and quotations from foreign languages like the Latin /*Deo volente* (God willing), /*terra firma* (solid earth); the French /*fait accompli* (accomplished fact); or the Italian /*con amore* (with genuine interest), /*sotto voce* (under one's voice). The fourth class consists of quotations like /Gall and wormwood/, /the laws of the Medes and Persians/. There is necessarily a subjective element in the definition of a cliché, and

many clichés belong also to other proverbial varieties. There is a curious use of the cliché in O. Henry's story "Calloway's Code" in *Whirligigs*. It tells how a newspaper correspondent used clichés as a code. By sending one half of a phrase he led the editor to supply the other half and thus arrive at the intended message.

Conventional Phrases Many locutions are conventionally used in particular situations or are accepted as traditional ways of expressing an idea. Although conventional phrases have the traditional aspect of proverbs, they are ordinarily not didactic in content and do not usually employ a metaphor. Words of greeting or leavetaking are conventional phrases. /I'll be seeing you/, or /I'll see you in church/, or /Good-by now/ are probably rather recent in origin, and /Farewell/ or /God be with you/ are old-fashioned or obsolescent. Encouraging remarks like /Never say die/, or the emphatic rejection expressed by /I'll be hanged if I do/, or summaries of a situation like /That's that/, /That takes the cake/, or /That caps the climax/ resemble proverbs. So, also, do the remarks made when silence falls on a group: /Quaker meeting/ or /It's twenty minutes past the hour/. Colloquial toasts are often curious: /Here's looking at you/ (a reference to draining the glass so that one looks through the bottom), /Here's mud in your eye/, or /Bottoms up/. What does /Over the river/ mean?

Some varieties of conventional phrases have been collected and studied. For example, alliterative formulas like /Neither hide nor hair/, /Without chick or child/, /Kith and kin/, or /House and home/ have been compared to medieval alliterative verse. Some of these formulas that have a juridical flavor are survivals of old legal phraseology, but alliteration is not necessarily a proof of great age. The many periphrastic phrases signifying "never" form a special group.⁸ Some, like /On the 32d of the month/, refer to a non-existent day (examples of this type are characteristically French); others involve the coining of a fantastic name like the amalgam of June or July and November in /Next Juvember/; still others allude in one way or another to Doomsday /Three days after the Last Judgment/. See LAMMAS. Some mingle time and space in a compound that may mean never or nowhere or sometimes both: /I'll meet you between four o'clock and the corner/ seems to mean only never, but /Between Hell and breakfast/ may mean either never or nowhere. The largest category of locutions of never includes references to such obvious impossibilities as /When water runs uphill/, /When roses bloom on apple-trees/, /When two Sundays fall together/. Analogous conventional phrases signifying forever are somewhat less numerous: /As long as grass grows and water flows/. Conventional reinforcements of the word *not* like /Not worth a rap/, /Not a whit/, /Not a straw/ have many parallels in the Romance languages and in the French *ne . . . pas* and *ne . . . point*/ have become the ordinary equivalents of not. They may be called figurative negatives.

Blason populaire The French term *blason populaire* (folk heraldry), for which there is no convenient English equivalent, signifies the names, phrases, and rimes traditionally used to characterize peoples and places.⁹ Such expressions often differ from nicknames in containing an element of appraisal, which is frequently unfavorable. Characteristic examples are Frog (a Frenchman), which

is a shortened form of frog-eater; Squarehead, Boche, or Hun; Merry England, La belle France. A traditional railleury exchanged between villages, districts, or countries may also take shape in these expressions. It is seen also in the conventional conception of the stage Irishman and such personifications as John Bull, Uncle Sam, or Marianne (France).

Collections of Proverbs The old *Bibliographie paremiologique* (Paris, 1847) by P. A. [Gratet-] Duplessis is still valuable for its full descriptions of books. The two largest later bibliographies—*Catalogue de la bibliothèque de Ignace Bernstein* (Warsaw, 1900) with 4761 titles, and Wilfred Bonser and T. A. Stephens, *Proverb Literature* (London, 1930) with 4004 titles—do not cite the collections of non-European tribes with any completeness. (See many such collections in Whiting's article cited in note 1.) For a brief hand-list of the most important European collections see Archer Taylor, "An Introductory Bibliography for the Study of Proverbs," *Modern Philology*, XXX (1932), 195–210. For general treatises see Friedrich Seiler, *Deutsche Sprichwörterkunde* (Munich, 1922); Archer Taylor, *The Proverb* (Cambridge, 1931); and the prefaces to collections, especially that to Giuseppe Pitre, *Proverbi siciliani* (Palermo, 1880).

The best English collections are G. L. Apperson, *English Proverbs and Proverbial Phrases* (London, 1929); W. G. Smith and Janet Heseltine, *The Oxford Book of English Proverbs* (2d ed., London, 1948); and (for the older periods) the works of B. J. Whiting. Much useful information will be found in the *New English Dictionary*; the *Dictionary of American English*; and Burton E. Stevenson, *The Home Book of Proverbs, Maxims and Familiar Phrases* (New York, 1948). See QUOTATIONS AND WINGED WORDS; WELLERISMS.

Footnotes:

1. The best discussion of this difficult problem is B. J. Whiting, "The Origin of the Proverb," *Harvard Studies and Notes*, XIII (1931), 47–80.
2. See, for example, a medieval French manuscript reproduced and annotated by Grace Frank: *Proverbs en rimes* (Baltimore, 1937).

ARCHER TAYLOR

proverbial phrase A traditional manner of expression, closely related to the proverb but differing from it in being capable of change.¹ Thus, the proverb /You can't eat your cake and have it too/ is invariable; such a sentence as /He tried to eat his cake and have it/ is an allusion to the proverb. But the proverbial phrase /To have two strings to his bow/ may be adapted to any person or tense. The vague and shifting difference between a proverbial phrase and an idiom is difficult to define. The use of the Spanish *ser* and *estar* or of the English "to stand" in the meaning "to endure" is idiomatic and not proverbial.

The many allusions in proverbial phrases to beliefs, customs, and practices or tools of various trades are often puzzling and hard to explain. For example, /To kick the bucket/, a proverbial phrase, signifying to die, probably refers to a bucket for catching blood against which a slaughtered animal kicks. Those who use this phrase may be unaware of its origin, but they are conscious of its vulgar associations and do not confuse it with such more elegant synonyms as /To pass on/, /To join the majority/, or /To be called to his fathers/.

Some ideas are expressed by a variety of proverbial phrases. Dismissing a suitor may be paraphrased by /To give him the mitten/, or /To turn him down/. The strange German phrase /*Einen Korb geben*/ (to give a basket) is explained by a medieval story of Vergil, who was left suspended in a basket by the lady of his choice. The even stranger Spanish /*Dar calabazas*/ (to give pumpkins) seems to be unexplained. Although there are collections of phrases meaning "to be pregnant" (/To be expecting/, /To be waiting for the stork/, /To be knitting little things/, /To be in the family way/), scholars have not often attacked the task of collecting or explaining proverbial phrases associated with a particular idea. For example, the numerous paraphrases for drunken (/To be half seas over/, /To be pie-eyed/, /To be pickled/, /To be three sheets in the wind/) have been brought together, but contain many unsolved puzzles. As these examples show, euphemistic proverbial phrases are abundant. Many proverbial phrases can be traced to origins in literature, especially in the Bible; /To strain at a gnat and swallow a camel/ is Biblical; /To eat forbidden fruit/ contains a reminiscence of Adam and Eve in the Garden of Eden, and /To wash one's hands of a thing/ alludes to Pilate's act. Other proverbial phrases are based on fables: /To count your chickens before they are hatched/, /To be a dog in the manger/, and /To be a cat's paw/. Forgotten books may yield explanations: /To curry favor/ refers to Fauvel, a famous horse in a medieval French romance. Traces of old ideas survive in /To be born under a lucky star/ (astrology) or /To be in the seventh heaven/.

Some allusions to practices familiar in various callings are easy to understand: /To put the cart before the horse/, /To make hay while the sun shines/, /To have many irons in the fire/ (blacksmithing), /To give it the acid test/ (a pawnbroker tests gold with acid). Others are less readily understood: /To throw dust in his eyes/ is a gladiator's trick. /To go west/, which was much used during World War I, has its parallel in the 17th century /To go westward/, signifying to go to Tyburn to be hanged, but the two phrases may not be connected. /To mind one's p's and q's/ is plausibly explained by the ease with which a printer confuses these characters, but

some have seen in it an allusion to the pints and quarts of an innkeeper's accounts.

Footnote:

1. Proverbial phrases are usually listed along with proverbs. See also L. V. Berrey and Melvin van den Berk, *The American Thesaurus of Slang* (New York, 1942); Eric Partridge, *A Dictionary of Slang and Unconventional English; Colloquialisms and Catchphrases, Solecisms and Catachreses; Nicknames; Vulgarisms; and such Americanisms as have been naturalized* (3d ed., London, [1949]). [AT]

Proverbial Sayings Committee, American Dialect Society The American Dialect Society, founded in 1889 at Cambridge, Massachusetts, has as its purpose the study of the ways of speech of America. In 1944 the plan to make a thorough study of all American speech resulted in setting up eight research committees, among them: Regional Speech and Localisms (George P. Wilson, chairman), Place-names (Harold W. Bentley, chairman), and Proverbial Sayings (Margaret M. Bryant, chairman).

The long-range plan of the Society is to become a center to which all forms of American speech, both written and spoken, from all sections of the country can be sent. From this material various dictionaries will be compiled so that there will be a reliable record of American English. Such dictionaries will show expressions peculiar to certain sections, the origin of particular expressions (when known), which expressions are common throughout the country, what social levels of speech the expressions belong to, etc. Thus the American Dialect Society in its comprehensive program for the study of all aspects of American speech is sponsoring the project of collecting proverbial sayings in the United States and Canada.

In the United States the significance of the proverb has been recognized by such scholars as Archer Taylor, Richard Jente, B. J. Whiting, F. W. Bradley, M. P. Tilley, and Harold W. Thompson, but no attempt in a comprehensive way has been made to collect the great mass of present-day proverbial lore. One may cite a few sayings from the West, such as "Hit for the high country," "Take to the tall timber," "Gone over the Divide," "Gone over the range," "Hit the trail," "Blaze a trail," and "Camping on his trail."

In order to make a country-wide canvas and to get the largest and most representative collection of proverbial lore from all sections, the chairman of the Committee on Proverbial Sayings organized the project according to states and selected a chairman for each. Later the provinces of Canada were included in the project.

The next step was to formulate and mimeograph *Instructions to Collectors of Proverbial Lore*, later incorporated in Publication No. 4 of the Society, *Proverbs and How to Collect Them* (May, 1945), prepared by the chairman of the Committee. The publication is divided into two parts, the first dealing with theoretical and historical aspects of the subject, and the second with the practical problems of collecting.

The following instructions were given:

Since proverbial lore does play such an important part in our language, the American Dialect Society is beginning a country-wide canvass in order to get a representative collection of these popular folk sayings from every

possible corner. Will you help by sending in any proverb or proverbial saying that you yourself use or hear in your daily conversation?

A. What to collect

Collect any saying in English, in the form of a proverb or idiomatic phrase, which is expressive of wisdom, or descriptive as a metaphor or simile. Many proverbs are figurative, but not all. It is better to err on the side of collecting too many than too few. If in doubt, collect. Specimens are given below to be used as a guide. Sayings may be individual or traditional, handed down from generations past; but no one collector can be sure of their character. It is best to send in anything you hear or find, and the committees of the Dialect Society, by comparing your contributions with others in the district and elsewhere, will be able to decide how widely used the sayings are. Examples:

(1) Folk proverbs appearing as complete sentences.

"Barking dogs never bite."
 "Every rose has its thorn."
 "A task well begun is half done."

(2) Sententious sayings or proverbs of the learned in complete sentences.

"Sweet are the uses of adversity."
 "None but the brave deserves the fair."
 "Distance lends enchantment."

(3) Proverbial rimes.

"Where cobwebs grow
 Beaux never go."
 "Man's work is from sun to sun
 But woman's work is never done."
 "Rain before seven, fair before eleven."

(4) Proverbial sayings, not complete sentences, involving a verb (usually in the infinitive form but with the first noun as the key word).

"To be in hot water."
 "To count chickens before they are hatched." (Such an expression may also appear as a proverb in sentence form: "Don't count your chickens before they are hatched.")
 "To raise the roof."

(5) Proverbial sayings not involving a verb.

"A bed of roses."
 "A fool's paradise."
 "A song and dance."

(6) Proverbial comparisons and similes.

"As greedy as a pig."
 "Blacker than soot."
 "To fight like a tiger."

(7) Wellerisms—comparisons like those made by Sam Weller in Dickens' *Pickwick Papers* (involving a quotation, often a well-known one, with a facetious sequel).

"'Home sweet home!' as the vagrant said when he was sent to prison for the third time."
 "'All's well that ends well,' said the peacock when he looked at his tail."
 "'I punish her with good words,' as the man said when he threw the Bible at his wife."

(8) Modern facetious proverbs and rimes.

"Candy's dandy, but liquor's quicker."
 "Don't tell a woman, telephone or telegraph."
 "A ring on the finger is worth two on the 'phone."

Interesting collections of sayings may be found in Logan Pearsall Smith's *Words and Idioms* (1925), Thomas H. Russell's *The Sayings of Poor Richard: Wit, Wisdom and Humor of Benjamin Franklin in the Prefaces, Proverbs, and Maxims of Poor Richard's Almanacks for 1733 to 1758* (1926), Archer Taylor's *The Proverb* (1931), Emma Louise Snapp's *Proverbial Lore in Nebraska* (1933), Harold W. Thompson's *Body, Boots and Britches* (1940). For a fuller bibliography see "History of the Proverb," Part I [*Proverbs and How to Collect Them*].

B. Where to collect proverbial sayings

Sources may be oral or written. Proverbial lore may be found in travel books, journals, and magazines, where professional writers have made deliberate but authentic use of folk materials; in almanacs, newspapers, and so on, where local and popular tales and anecdotes are recorded. Oral lore is to be found everywhere every day. Rural or secluded districts are especially rich in proverbial lore, lore often peculiar to them. Some proverbs have been translated and adapted from foreign languages into idiomatic English. The various foreign strains blending to furnish our citizenry should be rich sources for this kind of saying.

C. How to record proverbial sayings

- (1) Use 3 x 5 slips. Write in ink, or typewrite.
- (2) Write each saying on a separate slip, exactly as you have heard it. Do not polish it up. If, however, you know any variations of the saying or expression, give these too.
- (3) Add any helpful note as to where, when, and by whom this saying was used. Be sure to record the fact whether it is peculiar to a particular foreign, social, religious, industrial, or other group. If necessary, explain the meaning.
- (4) In the upper left corner, write the key word of the sentence or phrase, usually the most important noun, sometimes a verb or adjective.
- (5) In the upper right corner, write the state from which your contribution originally came.
- (6) On the card give the proverb or saying and its meaning in parentheses, if the meaning is not perfectly obvious. Give also the details about the proverb or saying that are significant, such as the language from which it originally came, the occasion upon which it was heard, or the book or magazine from which it was copied.
- (7) Carefully indicate all written sources. Give author (full name), book or manuscript (full title), year of publication or writing (as nearly as it can be ascertained), page in book or document (if numbered).
- (8) On the back, write your name and address so that you will be credited with your contributions. A rubber stamp will save time in doing this.
 [Examples of specimen cards were inserted here]

D. Who may collect proverbial sayings

Anyone may collect and send in proverbs or proverbial sayings. The more people that can be enlisted in the project, the better. Each collector should send in to his State Chairman a card with biographical data, giving his name, present and permanent address, schooling, profession, or position. This information may be helpful to the editors of the material when it is being prepared for publication. Use a slip 3 x 5 in size. Be sure, in addition, to sign all slips you send in or use a rubber stamp with your name and address.

Enlist the help of others—local historians, folklorists, school superintendents and principals, teachers, rural teachers in particular, alumni of various schools, newspaper editors, elderly people, chairmen of clubs and organizations, grange lecturers. Foreign language groups are particularly important. English teachers can be especially helpful and will in turn find the study of great value in their classes. Travel into districts where old country families have settled will be rewarding. In some states, folklorists connected with Writers' Projects, State Historical Societies, and other groups have begun such collections as the one contemplated. Get in touch with them. Have classes in folklore collect. Local records, histories, etc., often preserve the lore of previous generations. Put notices in folklore journals or other suitable magazines, such as those issued by historical societies. Letters in the name of a department (English, for instance) and the State Chairman, or the State Committee, might be sent to all students in a college or university. Candidates for an M.A. or a Ph.D. degree may be set to work on proverbs. Make sure your community is well represented. Do not worry if various collectors duplicate sayings; repeated occurrence shows the degree to which a saying is accepted, and the different places where it is found.

E. What will be done with the sayings collected

All sayings will be filed in the archives of the Society. From time to time pertinent collections will be printed in order to stimulate interest in further collecting. When an adequate amount of material has been compiled, it will be published in various regional studies and, at last, it is hoped, in a *Dictionary of American and Canadian Proverbs*.
