Deceived Blind Man A Smith Sound Eskimo folktale containing both the blind dupe motif (K333.1) and the healing water motif (B512). A blind boy's (or youth's) mother helped him aim his arrow at a bear. The arrow hit its mark; the bear was killed. But the woman told the boy that he had missed, and cooked and ate the meat herself. The sister, however, secretly gave half of her share to her brother. Thus he knew how his mother had tricked him. One day a great loon came to him, dived with him into a pond again and again until his sight was not only restored but as keen as the loon's own. After that he was not duped again. This story and *Deceived Blind Men* have about the same distribution.

Deceived Blind Men A Menomini Indian Trickster story in which the Trickster (Raccoon in this instance) comes upon two blind men living together who possess plentiful food. They have a system of lines rigged up by which they are guided back and forth to the edge of the lake. Raccoon is hungry and decides to steal their food. He changes the lines about, so that the next time one of the blind men goes for water, he is led into a tangle of bushes. By the time the other one investigates, the Trickster has changed them back again. Thus the second one brings back the water, and the two sit down to eat, facing each other with a bowl of meat between them. They divide the food evenly; each has six pieces of meat. While each of them is munching his first piece, Raccoon reaches out and takes four pieces from the bowl. Soon one of the blind men discovers there are only two pieces left, and accuses his companion of gobbling more than his share. Thus falsely accused, the other naturally suspects the first, and an angry quarrel ensues. In the midst of the argument Raccoon taps each on the face. Whereupon, each thinking the other has hit him, the two old men fall into a blind scrambling fight and upset the food. Raccoon grabs the last two pieces of meat and runs off. But the two blind men hear him laugh as he runs, stop fighting, and trust each other once more.

This story, containing two of the blind dupe motifs (K1081.2; K1081.3), is known among the Indians of the North Pacific Coast and the Plateau and Central Woodland regions. It is found only occasionally on the Plains and among the Iroquois. There is a California Shoshonean (Paviotso) version in which Eagle as Trickster steals the food from between the pair while they are feeding each other. This story, however, as in many other variants, ends with the Trickster restoring the sight of the blind men (or women).

deception by lousing A folktale motif (K874) very widespread among North American Indians, in which by lousing or pretended lousing of the ogre or other villain of the story, the hero escapes his fate. In a Lummi Indian (Washington) tale, for instance, a woman pretends to louse her cruel husband, then holds him tight by the hair while her relatives kill him to avenge her wrongs. There are many stories in which the lousing is demanded by the ogre (father-in-law, etc.) with the intent that the very large, dangerous vermin in his hair will kill the hero (K611.1). The hero deceives the ogre, however, by cracking berries (usually cranberries) in his teeth, and thus escaping the fate intended for him. Or the lousing is merely required as

a test of courtesy or obedience (G466). Often the lousing is volunteered in order to put the ogre to sleep and effect an escape (D1962.2). This last is a general European, African, and Jamaican Negro, as well as American Indian incident. Many a folktale ogre has happily snoozed off while being deloused and waked to find his captives flown.

There is a seemingly pointless and malicious Indonesian story about an ape who pretends to louse a heron and pulls out all his feathers instead (K874.1) so that the heron cannot fly. Another heron avenges his friend by beguiling the ape to sea in a boat made of leaves, pecks a hole in it, and flies off, leaving the ape to drown.

deceptive bargains The motif of an extensive cycle of world folktales (K100–299) including many clever, dishonest, and tricky transactions: the sale of objects falsely claimed to be magic, for instance, such as the soup stone which needs only meat and vegetables added (K112.2), the gold-dropping horse (K111), the Jamaican soup-making pot (K112.2.1), etc.; the sale of worthless animals and objects—what the seller meant when he said the horse would not walk over trees is revealed to the buyer when the horse refuses to cross a bridge (K134.1); deceptive divisions—A gets the corn, B gets the chaff (K171.2), A shears the sheep, B shears the pigs (K171.5); the deceptive land measure (K185 ff.). Other deceptive bargains involve cheating the Devil out of the soul he has been promised (K210 ff.), withholding sacrifices or offerings promised to gods or saints after the need or danger is over (K231.3 ff.), failing to pay for things ordered, selling stolen property to the owner, exchanging new lamps for old (see *ALADDIN*), counting out pay into a container with a hole in it (K275), etc. See *MASTER THIEF*.

deceptive land measure A motif (K185) belonging to the deceptive bargain cycle (K100–299) of world folktale. The classic example is the story of Dido's arrival on the coast of North Africa (from Tyre) where she bought as much land as the hide of a bull would cover. The thin strips into which she cut and stretched the hide were enough to measure off the circumference of the space on which she built the citadel of Carthage. Deceptive land purchase stories appear everywhere from Turkey, across Europe, and North America, to Indonesia. The deceptive measure, however, varies: the purchaser bargains for as much land as a bull, ox, or horse-hide will measure (Turkish, Finno-Ugric, Greek, general European, Icelandic, North American Indian), as much land as Vishnu can lie on (Hindu), as a shawl will cover (the huge shawl being prepared beforehand in Java, Brigit's miraculous cloak spreading of itself in Ireland), as can be plowed in a certain time (Scandinavian), or as can be shadowed by a certain tree, the piece of land being bought just before sunset (Indonesian).

The North American Wyandot Indians have a story describing the coming of the white man to their neighbors the Delawares on the shores of the Atlantic. The white men needed land and proposed to buy as much as a cow's hide would measure. The Delawares agreed, believing that a people who could live crowded together in a little ship would need only a comparable strip of land. The newcomers, however, cut and stretched

the hide into threadlike strips which measured off a large area. Wyandot comment to the end of this story is: "This is the way the white man does." The Delawares and Shawnee also tell the same story.

Dechtire In Old Irish legend, the sister of Conchobar, king of Ulster; mother of Cuchulain by Lug. In the form of a mayfly Lug fell into her cup of wine on the night of her wedding to Sualtim, an Ulster chieftain, thus causing the supernatural impregnation. Lug whisked her away that night to his own abode and she was not heard of again until she sent for Conchobar to announce the birth of her son.

decoration Usually, that part of an artist's work which embellishes or ornaments, presumably without being essential to the functioning shape of the whole; by connotation we are likely to assume that it is added purely for the sake of beauty or pleasure, that it is not utilitarian. It covers a good deal of the same territory as design, but the existence of a distinction is revealed by the fact that the phrase *decoration and design* is often used. In the case of a chair with a stenciled pattern, for example, the design of the chair includes both the shape of the chair and the added pattern. If the word decoration is used, however, it is clear that one is referring to the stenciled pattern, for decoration conveys the idea of an embellishment that is added to, is an extension of, the basic piece of work.

Thus, it seems useful, in folk art, to refer to decoration as such when one wishes to analyze it as a separate process in the construction of an object, e.g. for the painting as distinct from the folding of a box, the incising as distinct from the coiling of a dish, the carving as distinct from the hewing of a post. But it would not be accurate to assume that its purpose is primarily to embellish, that it is non-utilitarian, for embellishment is seldom the whole purpose in primitive art (or so we believe) and it is a secondary purpose in much of folk decoration. The sampler, while it was hung on the wall as a decoration, was executed to demonstrate or develop the skill of the needleworker. The figurehead is the vessel's presiding spirit. The quilt was a covering designed to utilize scraps. And it is only when these reasons are forgotten that the work can be said to be purely decorative in purpose. The embroidery on the priest's robe conveys the symbols of his office. The flourishes on a birth certificate mark its importance. The ceremonial vessel might be a cooking pot but for the pattern derived from the deity. In short, embellishment and utility develop hand in hand, and the function and quality of the so-called decoration merge with that of the object as a whole.

Any object (art or not) may be said to be "decorative" if it happens to fit in with the beholder's taste as to what is pleasing or ornamental. Any object may be put to a decorative use and decoration may be added to almost anything. This does not mean that it necessarily falls in the category of decoration in the art sense.

Ornament is another word used to mean a decorative pattern, but since it has specific uses of its own, it might as well be reserved for them. It is a term widely used in architecture. It is the word commonly used for objects of personal adornment and for a variety of small objects used to embellish a house, a Christmas tree, a harness or wagon, etc. Compare *DESIGN*. [MH]

Dedari Tundjung Biru Literally, possession by Blue Lotus: a temple dance of Bali. Blue Lotus is a heavenly goddess of Bali impersonated by the child temple-dancers. In a kind of charmed sleep the dancer becomes possessed by this spirit. She trembles all over; she sways from right to left, faster and faster; her head rolls loosely from side to side. At last when the full personality of Blue Lotus is in possession of her, she gathers strength and attacks the forces of evil and illness. At last she falls exhausted and unconscious. This dance borders on the convulsive type; self-will has departed from the body, and the dancer, in profound religious experience, is in the hands of the god.

Deer A popular character in the mythology of many western tribes of native North America, but also not unknown as a character in other parts of the continent. Deer in some tales is referred to as a male being, in others as a mother, sister, or wife of some other animal character. The tale of *Bear Woman and Deer Woman* is widespread in western North America. Another rather widespread tale is that of the marriage of a human being to a deer wife; the wife is finally offended (as animal wives often are in North American Indian tales) by remarks concerning her eating habits. She leaves her human husband after bearing him a son. There are numerous other American Indian tales in which Deer figures as a prominent, if not a leading character. Deer rarely, if ever, appears as a trickster, however. [EWV]

Deer Boy An abandoned baby story of the Tewa (and other Pueblo) Indians. This lacks the heartless parent motif of the typical abandoned children tales. A young girl out hunting rabbits with the boys and girls of her village fell behind and gave birth to a baby. She did not know what to do with it so she left it lying in the grass and went on after the hunters; but she was very unhappy. Nearby lived "a woman who was a deer" who found the infant, took him home, and raised him among her own fawns. The child grew strong and swift playing and racing with the fawns. One day a hunter observed his footprints among the deer tracks, and went home and told his people. The Deer woman prepared the child for being caught, and told him how to recognize his own father and mother and what to say to them. The hunters came; the child was taken with affection and joy. The conditions on which he could return to his human family were that he remain unseen in a room for four days. The conditions were carefully observed. But the mother could not wait; she peeked. The child took on deer-form and ran north to join his Deer mother, who led him with his deer brothers west to Comp'ing or Snow Mountain (now San Francisco Mountain).

deer dance A North American Indian mimetic dance for securing benefits from the spirit of the deer. Among the Papago the powers are thought of as baneful as well as beneficial; in the Southwest, however, they are generally considered benevolent. To obtain power over the animal in the hunt, and to appease its spirit, is the function of the realistic Yaqui Deer Dance, the *Maso*, performed together with the Pascola and Coyote dances at household and church fiestas, throughout Easter Sunday and night. The rebounding footwork, the posture, the nervous turn of the head are expressive of the deer at play and eluding pursuit. Between dances

the *Maso* engages in horseplay with the pascolas. In contrast with this solo dance, the Deer Dance of San Juan and San Felipe pueblos is enacted by 18 men impersonating deer decoyed in from the hills by a virgin. In the end they all run away again, except four, who are symbolically hunted and killed. The Tepehuane of Durango enacted a realistic pursuit of the deer with bows and arrows, for multiplication not only of deer but of crops, particularly corn. The Huichol Deer Dance is identified with the *hikuli* or peyote dance, and with rain and fertility. As part of the Papago harvest festival (*wiikita*) the deer worked magic over the crops. The Hopi Deer Dance is a prayer for rain. The California Yurok White Deer Dance induces bountiful wild crops. The Zuni Deer Dance is performed for cure. The Piegan Blacktailed Deer cult enacted impersonation for curing sickness as well as to facilitate capture.

Head and hide, deer-hoof and claw belts or bells, and tails form common accessories. Costume and motions show every degree of realism: in Taos, among the Yaqui and Tepehuane the dancer wears an actual deer head; in San Ildefonso, only the antlers. Sticks in the hands simulate four-footedness. In San Juan he wears a yucca headgear. Among the Hopi there is complete stylization in mask and costume and loss of mimetic suggestion. In the Yuma Deer Dance men wear deer heads, but they simply stamp in a sidewise circle, around an inner circle of women.

As a rarity in Europe, the Abbots Bromley antler dance blends Morris character with six performers carrying deer heads. [GPK]

deganodq'óenq The Iroquois Indian alligator dance, a social dance still popular among the Cayuga of the Six Nations, but condemned by the Seneca because of the contact between men and women. It is called their swing dance, for, alone among Iroquois dances, the woman dances to the right of the man, elbows linked. With a shuffle of the *ga'dášot* type they progress in this double file around the room, then in the middle of the song they pivot to the right, with the woman as axis. With each new song the woman moves on to a new partner, in the manner of the fickle Iroquois woman in real life. [GPK]

degwiágó'óenq The Iroquois buffalo dance, a round dance performed only by members of a restricted medicine society. The fundamental step is a side stomp, with men in the lead and women in arrears. The individual performers whirl, butt each other, and imitate the buffalo's roar. It is one of the few Iroquois mimetic dances, purely ceremonial in function, and confined to the midwinter ceremonials. The music is as archaic as the choreography; the song, accompanied by the water drum, is confined to short phrases and limited themes. The dance is supposed to cure pains, caused by the buffalo, in the shoulder and neck which make the sufferer hunch up into the semblance of the buffalo. The society must meet at least once a year. [GPK]

Deianira In Greek legend, the wife of Hercules and by him the mother of Ceneus and Althaea, whose jealousy of Iole led to Hercules' death. Deianira had been loved by both Hercules and Achelous, and after a combat in which the river-god assumed many shapes by transformation and in which he was beaten by

Hercules, she married the hero. Some years after this, at the fording of a river, the centaur Nessus attempted to rape Deianira, but was shot by Hercules with a poisoned arrow. As he died, the centaur told Deianira to steep his shirt in the blood and, if ever she feared losing Hercules to another woman, to use the shirt as a charm to retain his love. This she later did, when she suspected Hercules' infatuation for Iole, thus causing his death. When she heard the news, she killed herself. Compare TRANSFORMATION COMBAT.

Deirdre The heroine of the Irish legend, *Longes Mac Nusiú* (*The Exile of the Sons of Usnech*), also known as *The Tragical History of the Sons of Usnech*, and as one of the great Three Sorrows of Storytelling. The story is an *aithid*, or elopement story, a common story type among the Celts. The Deirdre story exists in several versions rather different in detail. The story is found in the *Book of Leinster* and the *Yellow Book of Lecan*. The following outline is largely drawn from the oldest manuscript account, in the *Book of Leinster* (12th century). It is one of the *réim sceala*, or prologs, to the *Táin Bó Cuailgne*.

During a feast which Fedlimid is giving to Conchobar, king of Ulster, Fedlimid's wife gives birth to a girl-child. Cathbad the Druid at once prophesies that the child will be the ruin of Ireland and the destruction of the Red Branch (the king's body of warriors), and adds that she should be called Deirdre (troubler). All the warriors insist that she be put to death but the king intercedes and orders that she be sent to one of his forest strongholds and fostered there away from men by a nurse, a forester, and Levarcham, the king's "confidence woman." And he announces to all that Deirdre shall be his wife.

So she lives until she is grown. One day the forester kills a calf and the red blood runs out on the snow and a raven comes and drinks the blood. Deirdre, seeing this, says to Levarcham that she would have a husband whose hair is black as the raven, whose cheeks are as red as the blood, and whose body is as white as the snow. Levarcham remarks that such a one is Naoise, one of the sons of Usnech, and nephew of Conchobar. At Deirdre's request she invites Naoise to come to the castle. Deirdre tells Naoise that she loves him and persuades him to elope with her to Scotland. Naoise's brothers, Ainle and Ardan, go with them.

For many years they live in the forest completely happy. But Conchobar still covets Deirdre and finally sends Fergus, one of the great heroes of Ireland, to fetch them home under a safe-conduct. Though Deirdre fears treachery, Naoise and his brothers decide to return with Fergus. Sorrowfully Deirdre consents and singing her famous song, *Farewell to Alba*, joins them in the boat. When they land, Conchobar by a ruse separates Fergus from the sons of Usnech, whom he quarters in the house of the Red Branch. There Levarcham warns them of the treachery of the king, and there the king's men attack them. The sons of Usnech and Fergus' sons, who remained with them, fight desperately but are finally conquered by spells cast upon them by Cathbad. The sons of Usnech are taken and beheaded. "Then comes Deirdre to where the children of Usnech lie and Deirdre dishevels her hair and begins to drink Naoise's blood and the color of burning embers comes

into her cheeks." She sings the lament for the death of the brothers and after that she throws herself into Naoise's grave and gives him three kisses and dies.

Other accounts tell the end differently saying that Deirdre is taken by Conchobar and that after a year Conchobar tires of her and gives her to one Eogan, and that Deirdre then jumps from Eogan's chariot and dashes out her brains on the stones. And common is the statement that Conchobar had two yew stakes driven into the graves of Deirdre and Naoise and that the stakes grew into trees which twined themselves together above the graves.

As a result of the king's perfidy many of his best warriors desert him and go over to Ailill and Medb, king and queen of Connacht, and fight against him in the *Táin Bó Cuailgne*, *The Cattle Raid of Cuailgne*, called the War for the Brown Bull, and so help bring about the fulfilment of the prophecy uttered at Deirdre's birth.

In Irish this story is preserved in the *Book of Leinster* and in manuscripts in the Advocates Library in Edinburgh; it is also found in oral tradition in Scotland and in Ireland. English translations were made by O'Flanagan and published in the *Transactions of the Gaelic Society*, and by Eleanor Hull (*Cuchullin Saga*). The most important writers in English who have made use of the story in poem, novel, and drama are James Macpherson, James Stephens, John Millington Synge, George William Russell (AE), Lady Gregory, William Butler Yeats, William Sharp. [MEL]

deiseal Literally (Irish), a turning to the right: a sunwise turn; the ancient Celtic circumambulation or "holy round" around certain sacred stones, wells, trees, fires, etc. It imitates the circuit of the sun and is rooted in the primitive belief that to imitate the sun strengthens the sun's continuance and is beneficial and cathartic to earthly beings. The deiseal brings good luck, wards off evil, and propitiates certain elemental powers. Dancers around the Beltane fires danced deiseal, for instance. Coals from the midsummer fires are carried deiseal three times around the house, or around the sheaf. When Medb set out to war against Ulster her charioteer made one deiseal (or sunwise turn) first to counteract the evil that was prophesied. In modern Ireland certain wells are still approached deiseal or sunwise; boats are turned thus when being maneuvered into the sea; a lighted sod is sometimes carried three times around the churn before churning, for luck with the butter; funerals take care to approach the graveyards deiseal or sunwise; and the grave is thus circled before the dead are buried. As an interjection deiseal means "May it go right!": said in the Aran Islands when one sneezes or chokes on a morsel. See CIRCUMAMBULATION; TUATAL.

Dekanawida An Iroquois Indian hero of the 15th century: one of the founders of the Iroquois confederacy. He possessed great *orenda*, i.e. supernatural powers of wisdom, prophecy, and strength against opposition. His story follows the true mythological hero pattern of miraculous birth and rapid growth. He was born of a virgin mother, who, before his birth, received omens that through him misfortune would come upon her people (the Hurons). Three times therefore she tried to drown the infant through a hole in the ice, and three times woke up the next morning with the child

safe in her arms. Dekanawida attained manhood in a few years and set out on his journey to the south. As life token he left an otter skin hanging by the tail in his mother's lodge, which would vomit blood should he die by violence. Many constitutional principles and laws of the confederation are attributed to Dekanawida. His chieftainship was by merit, not heredity; and he could forbid the appointment of a successor on the grounds that his work was done: no one could follow after to organize the five Iroquois tribes into a confederacy. The name itself means "two river-currents flowing together." (See *BAEB* 30: 383.) See *HIAWATHA*.

Delphic oracle The most famous oracle of the classical world; a shrine of Apollo in Phocis on the southern slope of Mount Parnassus. The Delphic oracle of Apollo was the ultimate authority of ancient Greece. Originally it was called Pytho, and Apollo was said to have slain Python, the dragon guarding a shrine of the Earth Mother there, and to have taken the place for himself. As a dolphin he led a group of sailors to land near the spot and made them his priests. Within the temple precinct was the omphalos, or navel, the center of the earth, where two eagles let loose by Zeus at the ends of the earth met.

The oracle itself was delivered by a priestess, the Pythia or Pythoness, originally a maiden, but in later years a woman of over fifty. After bathing in and drinking the waters of the Castalian spring, she was seated on a tripod over an opening in the ground and was said to become intoxicated by vapors emitted from the earth. There is no basis for believing that these vapors actually existed, nor in the story of the discovery of the spot by goats intoxicated by the vapors. The Pythia in her trancelike state uttered words which were noted and turned into hexameter verses by the priests.

The Delphic oracle is prominent in Greek folktale, mythology, and legend, appearing again and again in such tales as those of Orestes, of the Argonauts, of Hercules, of Codrus.

Delphinus The Dolphin: a small constellation of the northern hemisphere, lying on the edge of the Milky Way just east of Aquila. The four bright stars form a miniature diamond, which is the body of the Dolphin, with a fifth representing the tail. It is often now called Job's Coffin.

The early Greeks regarded this constellation as their Sacred Fish. Ovid named it Amphitrite, on the grounds that the dolphin on which Poseidon rode persuaded her to marry the sea god. Another story tells how Arion, the harpist, returning from Sicily to Corinth, was threatened by the crew of the ship, who desired the treasures on board. Arion promised to throw himself into the sea on condition that he be allowed to play once more. The crew agreed to this; and a school of dolphins beside the ship were so charmed with the power of the music that one of them took Arion upon his back as he fell into the sea, and sped with him to Corinth. For this the gods put the dolphin in the sky.

Early Hindu astronomers had a constellation Simshumāra, later Zizumara, Porpoise, of which there is some confusion between Draco and Delphinus. Arabic astronomy reports several names: Al Ka'ūd, the Riding Camel, Al Salib, the Cross, believed to be the cross of Christ raised into heaven, with the tail star identified as the

pillar of the cross. Later Arabian astronomy took the Greek interpretation and called it Dulfim, Dolphin, an animal which they believed followed ships to rescue drowning sailors.

deluge or flood A world cataclysm during which the earth was inundated or submerged by water: a concept found in almost every mythology in the world. The exceptions are Egypt and Japan; and deluge stories are only occasional in Africa. The fact itself finds no place in the geological history of the earth, neither in the light of the structure of the earth itself, or in that of zoological or botanical evidence.

Early folklorists liked to assume that the world distribution of the myth was evidence either of the flood itself, or of man's descent from a people who experienced it, or of some numerous local catastrophes which gave rise to the story. A local flood would be easily mythicized into a world deluge. The appearance, however, of divergent flood theories sometimes even within the same mythology has given such assumptions pause. Sometimes a flood destroys a world already made and the people in it; sometimes creation itself begins with the primeval water.

The bare bones of the most usual deluge story are as follows: The gods (or a god) decide to send a deluge on the world, usually as punishment for some act, broken tabu, the killing of an animal, etc. (in a Tsimshian myth the deluge comes because the people have mistreated a trout), but sometimes for no reason. Certain human beings are warned, or it comes without warning. If warned, the people construct some kind of vessel (rart, ark, ship, Big Canoe, or the like), or find other means of escape (climbing a mountain or tree, growing tree, floating island, calabash or coconut shell, a turtle's back, crab's cave, etc.). Sometimes they also save certain things essential to a way of life, such as food, rarely domestic animals. The deluge comes (rain, huge wave, a container broken or opened, a monster's belly punctured, etc.). Bird or rodent scouts are often sent out, but this is not universal. When the deluge is over the survivors find themselves on a mountain or an island; sometimes they offer a sacrifice (not universal), and then repeople the earth, recreate animals, etc., by some miraculous means. See *ARK*; *DEUCALION*; *EARTH DIVER*; *FLOOD*; *MANU*; *NOAH*; *PRIMEVAL WATER*; *YIMA*.

Extremely widespread as an incident in North American mythology is the account of the deluge. Hundreds of North American accounts of the origin of the world either picture the world as once covered with primeval waters, or suddenly covered by a flood. Some tribes account for the flood as caused by the tears of a jealous suitor or deserted husband, or from water which escaped from the punctured belly of a large monster. Escape from the flood by certain characters is effected by climbing a tree which grows up and up into the sky, or by clinging to the sky, etc. It seems probable, from its wide distribution, that the deluge tale of the North American Indians is native to the New World and is not an adaptation of the Old World Biblical tale. The latter is also told by many American Indian groups (often the native tale and the Biblical one will be told by the same tribe) but certain incidents (such as Noah and the ark) are nearly always included in the Biblical version and make it easily recognizable. [EWV]

 The myth of the deluge is almost universal in South America. As a rule it is described as a local disaster which overcame the ancestors of the tribe a short time after creation.

Various causes are given for it. In Inca mythology it was provoked by the supreme god, Viracocha, who was dissatisfied with the first men and decided to destroy them. Likewise the god Chibchachum inundated the plain of Bogota to punish the Chibcha Indians for some offense. The primitive Yahgan of Tierra del Fuego say that Moon sent the deluge in revenge for the beating she received when men discovered the secret of the initiation rites. The ancient inhabitants of the region of Quito in Ecuador, the Jivaro and Murato Indians, link the deluge with the killing of a supernatural boa. The Bororo believe that it was brought about by a water spirit who had been wounded.

Various Guiana tribes (Ackawoi, Wapishiana, Taulipang, Taruma, Carib, etc.) explain the deluge or flood as an aftermath of the felling of the Tree of Life. The Cashinawa held the Men-of-the-Sky responsible for the disaster which they unleashed when they cut some huge trees of the upper world. A Caraja tradition reports that the deluge came when a mysterious man from the underworld broke gourds full of water. According to the Ipurina, the deluge was brought about by the overflowing of a kettle located in the sun. The Araucanians say that the deluge resulted from the rivalry of two monstrous serpents, Kaikai and Trentren, who caused the waters to rise in order to show their power. The violation of a menstrual tabu is the reason given by the Toba for the flood which once destroyed their tribe.

The deluge is produced either by excessive rains (Inca, Canari, Yaruro, Tupinamba, Tembe) or by a sudden overflowing of water (Canichana, Yagua, Witoto, Jivaro, Mura, Tupinamba, Bororo), or by the swelling of the sea (Canari, Araucanians).

According to most tribes, the highest summits of their respective countries were the sites to which the people fled when the waters were coming. In the Andean region (Choco, Canari, Jivaro, Guajiro, Araucanians) certain mountains grew higher and higher as the waters rose. In many tropical tribes the survivors climbed tall palm trees.

The ark motif is rare in South America, and where found seems to be of European origin. However, it may be indigenous among the Macushi, the Island Caribs, the Yagua, and the Apinayé. In a version common to the Chiriguano, Guarayu, and Chane, the only survivors of the flood were a little boy and girl who had been placed in a calabash. The Caingang version offers an interesting element because of its North American parallels. When the survivors of the deluge were about to die of starvation, a water bird flew to them with a basket of soil. The birds, with the help of ducks, recreated the earth.

According to the Macushi the only survivor of the flood reseeded the earth by throwing stones behind him. The same motif occurs among the Tamanak. In the Inca, Guanica, and Aymara versions, the survivors found shelter in sealed caves. Later they emerged to spread across the world.

The Taino myth of the origin of the sea may well be interpreted as a deluge story. Four mythical brothers caused a mass of water to fill the earth when they broke a magic calabash. [AM]

Demeter In ancient Greek mythology and religion, an earth goddess; specifically, the goddess of the fruitfulness of the earth, perhaps personified in the seedgrain (as opposed to the new grain which her daughter Persephone symbolized); hence, the goddess of nature, of marriage, of women, of harmony, of health: a chthonic deity in Sparta and Argolis, she may have had some original, but now obscured, connection with the Great Mother fertility goddess of the Near East, or may be a native goddess of Crete. Demeter is most important as one of the central characters in the Eleusinian mysteries and in the myth of Persephone forming their central episode. The worship of Demeter, while best known in the Eleusinian worship, is not by any means limited to that locale but spread all over the ancient world; the rape of Persephone, for example, was reputed to have taken place in the mythical Nysa in Asia and in the equally mythical island west of Spain in the Atlantic. Essentially Demeter and Persephone are two aspects of the corn goddess, and were called in Greece the "Great Goddesses" or simply the "Two Goddesses" as at Eleusis.

Demeter was the daughter of Cronus and Rhea, and thus the sister of Zeus and Poseidon. She was swallowed by her father and later disgorged. By Zeus she became the mother of Persephone (and of Dionysus in some stories); by Poseidon she was mother of the horse Arion and a goddess called at Phigalia Despoena (or the Mistress, seemingly a synonym for Persephone as queen of the underworld) and of hidden name elsewhere.

After the rape of Persephone, Demeter donned black mourning clothes and, taking two torches lit at Mt. Etna, searched nine days for her daughter. On the tenth day she met Hecate who had overheard the cries of the maiden, and together they went to Helios, who had witnessed the abduction and who told the story to the seekers. Angered at the deception of Zeus, who had promised Persephone to Hades without telling Demeter, the goddess avoided Olympus and its companionship, wandering on earth and accepting the position of nurse to the son of Celeus. Crops failed; nothing grew; and the gods were deprived of their sacrifices. Demeter stubbornly refused to listen to representations from the gods unless she were permitted to see Persephone. At last Hermes came to Hades, who agreed to release the maiden. However, before she left, Persephone ate part of a pomegranate in the underworld, and thus was forced to spend a third (or a half) of every year with Hades as his consort. The partaking of the food of the gods or fairies is a familiar one in mythology and folklore: compare the Babylonian myth of Adapa and the more recent tale of Rip Van Winkle.

Demeter then agreed to rejoin the company of the gods, but before leaving earth she instructed her companions among men, Triptolemus, Diocles, Eumolpus, and Celeus, in her mysteries and worship, and left with them the gift of agriculture. This is the underlying story of the Eleusinian mysteries, the climax arriving when the priest and priestess of Demeter descended to an obscure place where the priestess, as the goddess Brimo, brought forth an ear of corn which the priest displayed to the communicants.

Other myths concerning the goddess are those of her union with Iasion in a thrice-plowed field (the *hieros gamos*), and her connection with Poseidon. During her wandering, Poseidon saw her and made advances. She,

Demeter Erinys, the raging Demeter, to avoid him, transformed herself into a mare, whereupon he became a stallion, and as a result of their intercourse the magical horse Arion was born. There was also a daughter, of unknown name. At Phigalia this daughter was called Despoena, and here Demeter was figured as a black, horse-headed goddess. In this, and in Demeter's identification with her symbolic animal, the pig, there is indicated the union of the fertility personifications, Dionysus the horse god and Demeter the corn goddess, in a ceremony which, like the Iasion story, is a dramatization of more ancient fertility ceremonies. Demeter also cursed Erysichthon who cut down trees from a grove sacred to her by making him always hungry. As a result, he was forced to sell his daughter Mestia, in order to obtain food, but she by her ability to shift shapes always returned to him.

Demeter was worshipped from Crete to Attica, from Asia to Italy. Principal among the festivals at which she was honored were the Thesmophoria and the Eleusinia. Pigs, cows, bulls, fruit, and honey cakes were offered to her; she was patroness of all fruits, excepting only beans, which were forbidden the Eleusinians. Demeter is always depicted as being fully dressed, sometimes riding in a chariot drawn by horses or, attesting to her chthonic nature, by dragons. She is not identifiable with Ge, who assisted Hades in the abduction of Persephone, despite the supposed derivation of her name as from Ge Metre, or Earth Mother. More likely the name is derived from *dei*, a form of the Greek word for barley.

The Romans identified Demeter with Ceres, who may have been an Etruscan goddess whose name only remains, or who may have been a form of Cora, the Maiden, Demeter's daughter.

demon An ambiguous term applied to almost any spirit, especially to an evil spirit. See SPIRITS.

demon dances Masked impersonations of supernatural powers, performed to secure their intervention in cures or for their exorcism. Ordinarily the demon is conceived as malignant; but he is not necessarily so, and was not originally so. The Greek *daimones* were intermediary deities responsible for ill or good fate, ill or good health of animal or vegetable life. The spirits of the dead came to join their company. Medieval superstitions came to conceive of the *daimones* as evil beings and to equate them with their ancient pagan deities, in contrast with the beneficent Christian God. They were vague and fearful, whereas the Devil assumed a concrete and largely humorous character.

Demon dances are particularly prominent in primitive puberty ceremonials, as the *Máuari* of the Venezuelan Maipure. In the Chaco, Mataco, and Toba, Choroti, Lengua, and Ashluslay puberty rites for girls, boys impersonate animal and bird demons and the women ward them off. The Iroquois *gagósä*, the Apache *gahe*, and the California *Kuksu* rites impersonate demons, the first two for cure, the last for prosperity, especially of crops. The *Kuksu* animal spirits are not approached with fear, any more than the *daimones* of the Dionysian cult. The Dahomean masked vodun dancers and the self-curative maskless Haitian vodun dancers work themselves into a frenzy of often destructive behavior. Particularly among the Apache and California Indian tribes there is danger attached to the

impersonation, madness or illness resulting from a misstep. But power for himself and the tribe attends a successful impersonation. [CPK]

dentlé A notched stick scraped with a strip of bamboo to provide rhythmic accompaniment to secular dances of Haitian Negroes. It belongs to a class of musical instruments found among primitive peoples from paleolithic times, but has recently been largely replaced in Haiti by the kitchen grater, called *grage*. See SCRAFER.

deo Originally, any one of the 33 great divinities of Hinduism.

Deohako In Seneca Indian mythology, the collective name for the three daughters of the Earth Mother, spirits and guardians of the corn, beans, and squash. Each is conceived of as clad in the leaves of her own special protégée. At first they were all planted together in one hill. One time, however, Onatah (Corn) wandered from her place in search of dew. Hahgwehdaetgah (the evil one) caught her, took her underground, and sent such blighting winds across the fields that Bean and Squash fled also. Finally Sun reached forth to find and bring her back. But now Onatah stands alone in the field, enduring drought or rain, never wandering to seek relief. Now she never leaves the field until the maize is ripe. At planting time she calls her crows to come eat the grubs that would destroy her roots.

Derby Ram An English lying song or "tall tale" about a ram of colossal size, with a refrain devoted to assertions of the truth of the story. A sea-going version sung on American ships equipped the ram with spyglasses, sextant, and all the trappings of a navigator.

descents to underworld The motif of numerous stories occurring in the mythology and folklore of every people in the world, ancient and contemporary: symbolic of the human wish that death can be overcome and that the dead may return. Invariably the descent is made to rescue someone either abducted to the land of the dead, or rightfully dead; to find the answer to a question or discover a secret from the ruler of the afterworld; to ask a favor, or to seize some treasure. Occasionally curiosity only motivates the journey. The success of the quest to the land of the dead is always contingent on the observance of some tabu: not to eat or drink, not to look back, or touch, speak, etc. To partake of the food of the dead (or of fairyland in later folklore) prevents the visitor from ever returning to the land of the living.

Among the most famous descent stories are the Greek myths of Demeter and Persephone, Orpheus and Eurydice, Hercules' labor of bringing Cerberus up from Hades; the Babylonian story of Ishtar's descent to rescue Tammuz; the Norse myth of Hermod's journey to bring back Balder. In North American Indian mythology, there is one interesting and widely distributed parallel to the Orpheus story, occurring in about 40 versions, three of which end with success, and thought to be indigenous. There are similar tales in Hindu, Chinese, and Japanese writings, and in Ainu, Maori, Melanesian, etc. mythology. Descents to Hell are common also in early Christian literature. See *ÆNEAS*; *AFTERWORLDS*; *ASCENTS TO UPPER WORLD*; *FOOD TABU IN LAND OF DEAD*.

design The term *folk design* usually applies to the decorative patterns characteristic of folk arts and crafts, but this is a limited use of a term which, in its general

sense, is almost as broad as art itself. Design in the art field has to do, basically, with plan or arrangement or organization. It overlaps to some extent with *form*, but while form is thought of as the shape or quality of shape that results from the plan, design is the plan itself. It is, in the general sense, the planning aspect of any work of art, involving either the creation or combining of elements; often it signifies creation as opposed to execution, as in the design for a costume or a piece of furniture.

In the more limited sense, designs may retain this idea of plan; the patterns for making lace, the cartoons used as a guide in tapestry are designs. But by extension designs may be thought of as the executed patterns themselves rather than the quality or act of arranging them; the planning or creative aspect may be far in the past or not under consideration.

Such patterns or designs may be classified according to their range from the abstract to the literal. There are:

(1) Completely abstract designs which comprise an arrangement of lines, shapes, colors, not consciously based on an object or concrete idea. This type of design, in folk and primitive art, is prevalently *geometric*—the so-called *free shape*, which is neither geometric nor representational, being less common.

(2) Partially abstract designs in which the subject, while present, is not literally depicted but rearranged, with the natural contours of objects reduced or adjusted to a pattern. Since such patterns tend to crystallize by repetition and are recognized by general agreement (by convention) as a substitute for the thing, the term *conventionalized design* is used. The degree of rearrangement varies from the slightly to the highly conventionalized. In the latter case (as in Arapaho bead embroidery, where a person is represented by a diamond shape, a butterfly by a double triangle) the design might be viewed as completely abstract unless its source or subject happened to be known. In the process of conventionalizing, geometric shapes are frequently but not necessarily used.

(3) Representational designs, in which the subject is depicted, i.e. more or less faithfully copied, rather than conventionalized. When the design is completely representational it becomes like a picture—the literal bunch of grapes on the bottom of a fruit dish, the ship tattooed on a sailor's chest. In such cases, the word *decoration* is to be preferred since the basic meaning of design (plan or arrangement) suggests some degree of abstraction or conventionalizing. However, design and decoration overlap to such extent that they are loosely interchangeable.

Any design (whether conventionalized or purely abstract) is called *geometric* nowadays if it is based on arrangements of straight and curved lines or geometric figures such as the square, circle, triangle, rectangle, etc., and such formal shapes as spiral, cross, radial, arabesque, interlaced lines. However, it is not to be thought of as derived from a knowledge of geometry or mathematics or the use of mechanical tools. The term *geometric* is applied to the ancient Pueblo symbol enclosing a crude rectangle within a crude triangle, as well as to the Chinese yang and yin, which is a mathematically exact division of the circle, and to the Pennsylvania German barn symbols, usually executed with a compass.

The occurrence of geometric design is virtually universal from prehistoric times to the present day. Fa-

miliar examples, the checkerboard, meander, zigzag, arrow, line and dot patterns, and many others, occur in similar form in many parts of the world. It is interesting to speculate why this should be so. Obviously certain techniques result in an emphasis on either straight or curved lines; weaving and folding produce the former, coiling the latter, for example. There is also without doubt a common association of contrasting ideas with these contrasting shapes. The female is associated with the curved or round, male with the square or straight, even in prehistoric cave art. The round of the sun and moon is opposed to the straight line of the horizon, the triangle of tree or mountain or tent. It is also possible that in folk art as well as in sophisticated art, the precision of geometric shapes suggests itself as a way of making order or "art" out of the profuse shapes of nature.

The process of conventionalizing subjects for purposes of design is often thought of as one of simplification and this is often true, for example in the suggestion of a wing by a few parallel lines, as in Nazca pottery, or the depiction of a man in simple cross-stitch or knitting patterns; but sometimes the designs, as in Mayan or Haida or Buddhist art, seem more complex than a literal depiction would be. Convention in design is a matter of rearrangement rather than mere simplification, and the reasons and methods for accomplishing it are innumerable. One can only suggest: the adaptation of the subject to the design area (as in the depiction of the tree of life to a round plate), or to the over-all shape as in scarification which follows body contours; the limitations of the medium (in weaving, all depictions, even that of the sun, must become angular); the exaggeration of certain elements like the beak of Raven, or the teeth of Beaver, and the omission or reduction of others; simplification, as seen in the triangular nose and zigzag teeth of the Halloween pumpkin, or elaboration for its own sake, as in the spirals of New Zealand carving or the finials of medieval illuminated letters; the influence of adjacent elements in the design, as in the zigzag of the border added to an animal motif; development of the counter (negative area of the design) at the expense of the depiction; the effect of prolonged copying, slurring, or speeding-up of execution, change or loss of the original idea; the repeating of elements within the design or the fusing of various elements; the injection of abstract ideas such as fertility in a visual symbol.

Designs may be analyzed, also, with regard to their construction. They may comprise a single figure, a band or bands, repeated figures or over-all patterns. Bands are a common form of decoration for even the simplest objects. They emphasize the rim of vessels (marginal designs), the edges or bulges of innumerable useful objects. Bands may be composed of straight lines, wavy lines (scallop) or repeated rows of dots, parallel lines, arrow points or chevrons, crosses, lozenges, S-shapes, etc. The repeated figures in the band are often linked so as to form such familiar continuous patterns as the zigzag, double zigzag, scroll, meander or key pattern, and stairstep pattern. The figures are multiplied or alternated, like the egg and dart, triangle and dot.

A design element may be repeated, not only to form a band, but in a variety of ways. Often it is doubled, especially with the two sides in reverse, producing the bilateral symmetry common in many art cultures.

(Sometimes only part of the design is doubled, like the Austrian eagle with two heads and a single tail.) It may be repeated in three parts (the trefoil) or in four parts (a Carolingian belt buckle or the mouth of a Congo mask exemplify the circle bisected by a cross, in which the four resulting areas show repeated elements) or as many times as it is desired to subdivide or cover a given area. Often a design is repeated in concentric fashion—a simple rectangle within rectangle or the more complex hawk, holding a hawk, in a Tsimshian headdress.

The more important aspect of design, from a cultural point of view, has to do not so much with its construction as its significance. It is sometimes argued that all folk art, and especially all primitive art, has meaning, that there is no such thing as purely abstract design. Such assumptions present difficulties, for the impulses behind a piece of work and even behind the evolution of complete art forms are not always known. The parallel bars scratched along the sides of a prehistoric arrowhead may have been symbolic of its flight or purely decorative. As designs are repeated thousands of times, like the lotus or tulip, meaning is forgotten and they are used in a completely abstract way, whatever their original purpose. Nevertheless, appropriateness is a factor in any study of design—Mother Goose characters are suitable for the nursery wall, mating birds for the Turkish harem. Much of design is connotative, much definitely symbolic. An excellent example of the latter may be found in the analysis of design in *DRUM*. (See *SYMBOLISM*.)

Motif and pattern, as well as decoration and ornament, are words that are often used interchangeably with design, and since the whole subject covers such a vast range, it would be convenient if these terms could be made to apply to different aspects of it. Actually, there is some basis for such distinctions. *Motif* or *motive* in folklore, outside of art, is used in connection with a concept or an incident. Therefore, it would be logical in folk art to use the word for a design or group of designs in which some meaning or symbolism or prevailing detail is involved. Phoenix, dragon, thunderbird, frog, tulip, acanthus, eye, cloud, sun supply the motif for a number of designs adapted to different shapes, sizes, materials, or objects.

Pattern suggests something that is copied, imitated, or repeated. And since most designs are repeated or made from a pattern, the words have become almost synonymous. But pattern is the suitable word, particularly, for two aspects of design: (1) for the model or sketch which is to be copied, as a dress pattern or a stencil pattern; (2) for the kind of design which is characterized by a repeated element, like lace and weaving patterns. (The individual unit of such a pattern is usually called a *figure*.) Compare *DECORATION*. MAMIE HARMON

despised boy The hero of a number of Apache Indian folktales, who never washed and was so lazy that the people thought he was no good. The Chiricahua version begins with the statement that the boy slept all day. Actually the boy was out all night and came home every morning at daybreak. One day when his people had no food, the boy went out, weaponless, ran down a deer, and brought it home. So at last the people realized that all his life the boy had spent the nights learning to be a swift runner. He was not lazy at all.

The Lipan and Mescalero Apache also tell this story, and there is a Navaho version. Usually the stories begin with the statement that the lazy, dirty, and despised boy lives with his grandmother. He eventually proves his worth to the people by performing marvelous running feats and showing great courage. The Jicarilla Apache version of the story, *Dirty Boy*, is based on this theme, but is a long, elaborate and detailed narrative dealing with the hero's horse-raiding expeditions, encounters with enemies, etc. See *AMALA*; *DIRTY BOY*.

deswadéyó or changing-a-rib The continuation of the *iyondátha*, the Iroquois women's curing rite. The dance and general character of the songs is the same, with a whole series of like tunes and new words. At one point, however, before the dance begins, there is a bantering back and forth between the men and women in song. These refer to the legend of a confirmed bachelor who was fooled into marrying a frog woman and who brought back the songs from her people. [GPK]

detective story A story in which a culprit is detected by some clever means: related to the tales of the clever maiden and the riddles, to tales of clever judicial decisions, etc. The story of Susanna and the Elders, in which Daniel questions Susanna's accusers separately and then refutes the accusation by comparing the contradictory evidence, is paralleled (though in a reverse direction) in the Arabian story of the parrot and the adulterous wife. The parrot's testimony is thoroughly discredited (although it is true) when he describes a storm, faked by the wife, that the husband knows did not occur. Solomon is the hero not only of riddling tales, but of several detective stories too. He decides the famous case of the two mothers by threatening to cut the baby in two: the real mother is at once apparent. He discovers what the Queen of Sheba's legs look like by sitting in a glass house: she thinks he sits in water and raises her skirts as she approaches.

Abhaya, minister to King Śreṇika, in an Indian story, discovers who has stolen the mangoes from the king's garden. He attends a meeting of the lowest characters in the city and tells them a story. A wife must perform an obligation, but is stopped by a gardener, some robbers, and a Rākshasa who wish to lie with her. She promises to return if they permit her to do what she has promised to do first. Her husband lets her go back to them, but each in turn, as he hears the story, leaves her unmolested. Abhaya then asks the group who has been most magnanimous in the story. Only the mango-stealer votes for the robbers, and Abhaya thus recognizes the identity of the culprit.

determination of seasons Tales narrating how the number and length of the seasons were determined are told by nearly all North American Indian tribes. Often such tales are told as a dispute between two characters, one of whom wants summer to be year-long. In other forms of the tale a council of animals decides the number and length of the seasons. The majority of such tales are set in the pre-human animal period when the earth was still being formed and ways of life determined. [EWV]

Deucalion In Greek mythology, the survivor of the flood and ancestor of the human race; son of Prometheus and Clymene (or Pandora); king of Phthia in

Thessaly; husband of Pyrrha. For their piety, Prometheus warned the couple of the flood caused by Zeus to destroy mankind, and on his advice they built a ship with which they rode out the nine days' flood. The ship came to rest on Parnassus (other places mentioned are Athos, Etna, Othrys) where they descended and asked at the sanctuary of Themis how to restore the human race. The answer was, perhaps carried to them by a messenger of Zeus, "Cover your heads and throw the bones of your mother behind you." Taking the latter to mean stones, the bones of the Mother Earth, they did so. From the stones thrown by Deucalion there sprang up men; from those by Pyrrha, women. They descended from the mountain top and Deucalion built a house at Opus where he became the first king of that city. By Pyrrha he was father of Hellen, Amphictyon, Idomeneus, and other children. Compare DELUGE.

dev In Armenian belief, a gigantic male or female spirit, harmful, but also often believed to be foolish and harmless. The dev sometimes has one eye, sometimes more and they are as large as earthen bowls. Devs often possess seven heads and are so strong that they can toss large rocks great distances. They live in caverns and thick forests. Devs can appear as human beings, as serpents, or (in dreams) as wild beasts. Insanity, fainting, itching, sneezing are signs of their presence. Cutting the air with a stick or sword will protect against them.

deva (1) In Hinduism and Buddhism, a god or divine being: literally, a shining one of the Vedas. There are 33 Hindu devas, eleven for each of the three worlds.

(2) In Zoroastrianism, a demon or *daēva*.

dēvadāsi Literally, slaves of the gods: a caste of dancers and courtesans connected with some Hindu temples, especially in the Deccan and Madras. Their duties include fanning the idol, singing and dancing before the god when he is carried in procession, sweeping and purifying the temple floor by washing it with cow-dung and water. They receive a small salary for the religious duties performed and supplement this by selling their favors. They are usually married to the god or to a sword with a special rite. Until recently they were better educated than married women.

devak In Bombay, the Deccan, and the Bombay Presidency, a guardian deity: an animal, tree, or trade implement considered the ancestor or head of the house. The devak is treated with respect and worshipped chiefly at the time of marriage or upon entering a new house. Frequently people with the same devak cannot marry, suggesting a totemistic origin.

Devatā In Hindu mythology, a god: a term generally applied to the inferior gods.

Devī or **Mahādevī** In Hindu mythology and religion, the great goddess, consort of Śiva, and daughter of Himavat: the mother goddess worshipped by the śāktas and the female principle or energy of Śiva. In the latter form she has two aspects: one mild under which she is known as Gaurī (the yellow), Pārvatī (the mountaineer), Umā (light), Jaganmātā (mother of the world); the other, in which she is most frequently worshipped, the terrible. In her terrible aspects she is Chandī (fierce), Bhairavī (terrible), Durgā (inaccessible), and Kālī (the black). On the one hand she is represented as adorned

with jewels, with abundant food, and beautiful; on the other hand she is represented in hideous aspects usually with the symbols of death (the noose, iron hook, rosary, and the textbook of prayer).

The worship of Devī reached its height during the period of the Tantras. Apparently at the end of the Vedic period or later several goddesses were acknowledged as wives of Rudra-Śiva, while other goddesses were worshipped by different classes of people in different parts of India. Gradually these goddesses were coalesced into one great goddess who, however, has never completely superseded the local grāma-devatā or matris. These, in many cases, are considered a manifestation or incarnation of Devī and as such are promoted above the other members of their rank. As śakti she is worshipped by the Vāmāchāris or left-handed śaktis with licentious rites as the active female principle. Modern orthodox Hinduism, however, denies any connection between the grāma-devatā or earth goddesses and the Hindu deities.

As Durgā, the inaccessible, she is a yellow woman riding on a tiger who guards her devotees from distress, is the refuge for the shipwrecked and those lost in the wilds or attacked by evil men. She is worshipped especially in Bengal. As Kālī she is black, dripping blood, adorned with skulls and human heads, and regarded as the protectress against the evil spirits which haunt desolate places, and against wild beasts. In some places she is the goddess of bird-catchers. As Vindhyavāsīnī Devī is worshipped in the Vindhyas with bloody sacrifices. Her other epithets include Mahā-māyā (illusion), Dakshajā (born of Daksha), Ambikā (mother), Anantā (everlasting), Satī (virtuous), Dakṣiṇā (right-handed), Kotarī (naked), Bhūta-nāyikā (spirit leader). Her emblems include the bow and arrow, bowl, goad, hook, ladle, noose, prayer-book, rosary, and the sword.

In Hindu mythology, she is the unconquerable, sublime warrior-maid, produced from the combined wraths of all the gods in council when Mahiṣāsura, the colossal buffalo monster, threatened to undo the world. The indignant divinities poured out their energy as fires which rushed together and assumed the shape of the goddess. Provided with the weapons of the gods, riding on a lion, the goddess roped the monster with a noose. The beast escaped in a lion transformation. This the goddess beheaded but again the asura escaped in the form of a hero, and again as an elephant. The goddess finally killed him after he had returned to his buffalo form.

According to the *Upānishads*, she was the daughter of Himavat. She was sometimes connected with the rishis as the daughter of Daksha (according to the *Purāṇas*) and abandoned her bodily existence when her husband was slighted in Daksha's sacrifice. She was the mother of Skanda and Kumāra.

Devil The archfiend; the evil principle and the enemy of mankind of Judeo-Christian belief. See SATAN.

devil Term frequently used for demon, imp, or other evil spirits. See DEMON; SPIRITS.

devil dance A form of exorcism, said to be allied to the shamanism of northern Asia, prevalent in southern India and appearing also in Ceylon, northern India, Tibet, etc. It is usually employed to entice the demon from the body of a sick person into the body of the

dancer, whose frenzied actions while possessed are said to attenuate and dissipate the power of the infecting demon. Devil dancing is found in the demonic Bon cult of Tibet. Compare POSSESSION.

➤ Devil dances and devil beating ceremonials found in various places in China may be a lamaist importation. Data is incomplete. In lamaist temples priests disguised as gods and devils attack each other in mock combat. The date is variable. [RDJ]

➤ A representation of a malignant supernatural power or devil, usually in a horror-inspiring mask, performed with grotesque and often obscene gestures. As all demon dances, these are intended to propitiate the evil spirits, and to effect cures or good crops. The devil dances of Tibet and Ceylon are curative. Actually, they are demon dances addressed to powers held in fearful veneration. The Apache devil dance, so-called, represents really the Gahe mountain supernaturals and is essentially beneficial.

The classical Devil, that is, he of medieval tale, miracle play, and carnival, the Diablo, Lucifer, Satanas of Spain, by no means inspires unmitigated horror. On the contrary, his character is tinged with considerable humor, even good nature, and he may even be regarded with a certain affection, as shown by the German tales of "gute, dumme Teufel"—good, dumb Devil. His physical attributes are capricious, not only his bounds and capers, but his cloven hoof, tail, horns. He is red, or green, or more often sooty; he is accompanied by fireworks, or manipulates an agricultural tool, a pitchfork. In the Majorcan *Cociés* he plays the part of the fool. In Catalonia he appears in numerous guises in the *ball de diables*. The diablo of the Mexican carnival is certainly borrowed from Spain, an addition to clown figures that represent native deities.

The various attributes of the various devils of the devil dances and particularly the undercurrent of affection he inspires would lend support to the theory of his origin in some agricultural deity, half mischievous and half beneficent. But of course he is evil in the eyes of the clergy. [CPK]

Devil's bedstead The four of clubs, an unlucky card. A bet made on a hand containing the "four-poster" will not win.

Devil's promenade A Comanche Indian festival, July 3–6 inclusive, held jointly with the Kiowa and Creek tribes. It consists of games, game dances, and social dances for men and women. The latter are performed in a circle, first counterclockwise, then, for the walk-off, clockwise. The step is a side progression with a straight-bend motion of the knee. The bear hug is a step for couples performed with a crossing step similar to the *pas de bourrée*. [CPK]

Devil's riddle The theme of a type of folktale especially characteristic of Scandinavian and Baltic peoples, in which a man, promised to the Devil, saves himself by solving either three or seven riddles posed by the Devil. The riddles and answers follow three patterns: identification of the true nature of the Devil's many possessions (i.e. the Devil's horse is a he-goat, his spoon a whale's rib, his wineglass a horse's hoof, etc.), answering unanswerable questions (How far is it from heaven to earth? The Devil knows for he has fallen the distance, or One step, for my grandfather has one foot in

the grave and one in heaven. What is harder than stone? Death), or explaining the symbolic meanings of certain numbers. Many of the stories describe how the man learned the answers: overhearing by some ruse the Devil's conversation with a friend, or being aided by the Devil's grandmother; other tales leave the answers to the man's own unexpected but solid wit.

dewatsihāša'q An Iroquois Indian social dance; the garter dance. Its form is fairly elaborate, combining features of the *ga'dāšot* and *gedjōenq* types. The music shares the tonality and melodic antiphony of the former, in addition to self-accompaniment by two dance leaders with horn rattles. The structure is an extended ternary, with modulation in B, some songs repeating A four times and B three times. This corresponds to the choreographic development, the first part being identical with the *ga'dāšot*. But during the remaining repetitions the dancers, who are arranged in couples, cross over the recross as in the fish dance. This always happens during B to a vibration of the rattles. The step throughout is a stomp. [CPK]

deyodasqdayq The Iroquois Indian dark dance, performed in complete darkness as a curative rite. For hours the dancers stamp in place, the women at times joining the men in the singing, to both drum and rattle. Its legend deals with the little people (*djogāq*) and a good hunter who chased a supernatural beast and slew him, and returned with his flesh as medicine. The ceremony is always private, performed in the home of the patient. [CPK]

deyodanāšqta The Iroquois Indian hand-in-hand dance, performed in an antisunwise round by men and women in alternation, with hands linked among the Cayuga but not among the Seneca. It is a slow processional with the stomp step, accompanied by a horn rattle in the hand of the leader and by well-developed songs in major tonality. The second part develops at length the rhythmic motif of the first. Sometimes there are four repetitions of the entire song. A fast *ga'dāšot* is always appended to the dance proper. Its meaning is enigmatic. Some informants identify this dance with the bean dance, one of the spirits-of-the-food dances. It is part of the regular ceremonial sequence among the Tonawanda Seneca. Other informants trace it back to a dance of victory and unity after the repulsion of an invader. [CPK]

deyōgenyōtges Literally, cousin dance; the Seneca choose-a-partner dance, a social entertainment. It is of the *gedjōenq* or fish dance type in every respect, but has the unique feature of the women leading off with a *ga'dāšot* round and each choosing her partner for the rest of the cycle. [CPK]

Dharma In Hindu mythology and religion, the sage who married 10 (or 13) daughters of Daksha; a personification of law and justice; judge of the dead. His children were personifications of religious rites and virtues. In the *Mahābhārata* he was the father of Yudhishtira, the chief of the Pāṇḍavas. In Bengal, Dharma is worshipped as a supreme god by some lower castes. Compare ADHARMA.

Dharmapālas Literally, Protectors of Religion: in Buddhism, especially that of Tibet, fierce, mispro-

portioned beings with broad heads, huge teeth, protruding tongues, and a third eye in the forehead. In Tibet they are the demon generals who execute the will of the Yi-dam or tutelaries. They are of the fiercest fiend type and the females are metamorphoses of Kālī. The chief Dharmapālas are Hayagrīva and Devī. Their Tibetan name is *Ch'os-skyon*.

Dhartī Māi, Dhartī, Dhartī Mātā, or Bhūdevī In Hinduism, the earth goddess who upholds human, animal, and vegetable life: the "Mother who supports." Dhartī Māi is present everywhere in the ground. She is worshipped by the Bhuiyās with the sacrifice of goats, pigs, and fowls. The Chamārs of Madras Presidency worship her by digging up five spadefuls of earth, taking them home, and placing them in the courtyard before a marriage ceremony takes place. As a village goddess she is often worshipped as a pile of stones or as a pot. Pious Hindus say a prayer to her upon awaking in the morning.

Dhātri In Vedic mythology, a deity, the maker or creator who promotes generation, presides over domestic life, and preserves health. He is an abstract deity usually considered either an agent or an attribute. In later mythology he appears as one of the Ādityas and is identified with Prajāpati or Brahmā as the creator.

Dhol or Dhaul In Indian folktales, the white cow which supports the earth on its horns.

Dhruva In Hindu mythology, the pole star. Dhruva, according to the Pūraṇas, was the son of Uttānapāda by his second wife. His brother, Uttama, received all his father's attention, so Dhruva decided to attain virtue by venerating Viṣṇu. As a reward that god elevated him to the position of pole star.

diamond The adamant of the ancients: highly valued, although many were actually other clear, brilliant stones. It is only within the past century that the full fire and sparkle of the stone has been released by newer types of faceting. It is doubtful if the diamond of the High Priest's breastplate could have been genuine for at that time it was not possible to engrave this hard stone, and the cost of a diamond of that size would have been prohibitive. As is natural for a stone of such beauty and value, the diamond possessed most of the virtues ascribed to all other gems, but while up to the Renaissance most other stones were believed to be beneficial, this was not true of the diamond. In Persia it was considered a source of sin and sorrow and an invention of evil. In the 16th century Jerome Cardan explains that it makes its wearer unhappy because its brilliance irritates the soul as an excess of sun irritates the eye. It was believed that a good diamond could lose its virtue through the sin of the owner. There was also a widespread belief that the spirit of the diamond resented being sold, and it then lost its virtue. It must be given in love and friendship. Among the Hindus, poor diamonds were considered worse than none at all as they caused jaundice, pleurisy, leprosy, lameness, and all manner of misfortunes. It was generally believed that the diamond was poison if swallowed.

There would be many more fine diamonds in the world today, except for the belief that these stones could not be broken by a hammer and anvil, but only

with goats' blood. There were many other superstitions connected with this gem, such as the belief that it could only be found at night, and that it grew a cubit every two or three years when left under the soil. Many believed that diamonds were thunderbolts, and it was said that a magnet would not pick up iron in the presence of a diamond.

In India there were four castes of diamonds: the first gave good fortune, the second, success, the third prevented old age, and the highest gave power, wealth, friends, and luck. To give a diamond to a shrine was to be assured of eternal life. They also made a decoction of diamond which gave longevity, beauty, strength, happiness, and virility.

In the Middle Ages the adamant would make the wearer proof against poison, plague, and pestilence. It cured diseases of the bladder, leprosy, insanity, nightmares, and insomnia, but produced somnambulism. It gave strength, courage and victory and used in the magic arts, it made its possessor indomitable. Many held that it made the wearer invisible. It was emblem of the sun and of innocence, and was capable of producing a state of spiritual ecstasy. It protected ladies from incubi, which has been suggested by some cynics as the origin of the custom of removing rings before retiring.

De Boot, an authority of gems in the middle of the 17th century, was inclined to be skeptical as to some of the properties of the diamond (and other stones) and performed some tests himself. He was willing to believe that diamonds would repel poison, pestilence, witchcraft, madness, and terrors in the night. However, he doubted its efficacy as a test for adultery.

Diana See ARTEMIS; HIPPLYTUS; KING OF THE WOOD; ORESTES.

Diancécht In Old Irish mythology, a clever physician of the Tuatha Dé Danann. He had a powerful healing spring in which he restored every man who was mortally wounded at the Battle of Mag Tured, unless his head was cut off. It was he who made the wonderful silver arm for Nuada, which was so like a living arm that every finger had the gift of motion. Diancécht was invoked in charms even into the 8th Christian century.

didī A gbo or magic charm of the Negroes of Dahomey, used by hunters to protect them against lions: named for the seed of the didī tree, because this seed never bursts. The didī contains a piece of lion's skin which serves the twofold purpose of repelling the lion and imparting lion's strength to the user. (Herskovits *Dahomey* II, 275)

Dido In classical legend, a Phœnician goddess, whose name was taken by Elissa, daughter of Belus of Tyre, and founder of Carthage: the story is told with some changes in Virgil's *Æneid*. She was married to her rich uncle Acerbas (or Sichæus) who was killed by her brother Pygmalion. With the treasures of her husband she fled to Africa where she purchased from Hiarbas, the king of Mauretania, as much land as could be enclosed with the hide of a bull. She cut the hide into the thinnest strips possible and on the land thus bought she built the fortress Byrsa, around which Carthage grew up. Hiarbas, growing fearful of her power, de-

manded that she marry him, threatening war if she did not. Since the Carthaginians wished her to marry, she, who had vowed eternal fidelity to her dead husband, pretended to accede to the demands. But first she built a huge funeral pile, with the excuse that she wanted to make an expiatory sacrifice to the spirit of Acerbas. Then, before the people, she stabbed herself, and was burned on the pyre. She was afterwards considered a divinity at Carthage. In the Vergilian story, she killed herself when Aeneas deserted her to go on to his promised home in Italy.

diffusion theory The theory that similarity of stories and story elements among different countries is due to their spread, i.e. their diffusion, from a common center. It was widely held, for example, that many of the stories, especially the fairy tales of Europe, originated in India and migrated westward from there. The diffusion theory is opposed to the theory of polygenesis which holds that very similar stories may originate independently in different parts of the world since man was often confronted by similar conditions of environment. At present folklorists see truth in both theories and insist that neither can be the sole explanation of story similarity, and that consequently each story must be studied independently.

Certain criteria are important in determining whether a given story is the product of diffusion or has arisen independently. General plot similarity is not an indication of diffusion; on the other hand, irrelevant details in common are. For example, stories of child sacrifice would arise independently, but the child sacrifice stories that tell of the children being restored and found the next day playing with an apple (France and England), an orange (Italy), a round sunbeam (Celtic), etc., must come from a common source, since they have gratuitous and irrelevant details in common. Common stylistic features like the figures of speech in the Deirdre story in which Deirdre describes the man she would have for husband as having hair black as the raven, cheeks as red as the blood the raven is drinking, and body as white as the snow into which the blood is flowing, would indicate diffusion of that incident if not the whole story. There are other stylistic criteria, many of them subjective, like the "Celtic magic" that stamps a Celtic story. The same whimsical or haphazard arrangement of motifs in similar stories from different countries would suggest diffusion. Often historical, topographical, or linguistic data are helpful. Finally, a study of all known variants of a story by the geographical-historical method can fix the place of origin and determine whether the story was a drifting one or one of independent origin.

Stories, like culture in general, are diffused by many different agencies: conquest resulting in prisoners, slaves, hostages; trade; exogamous marriages; migration of peoples; fugitives; shipwrecked sailors; proselyting religions like Mohammedanism and Christianity; itinerant entertainers; seepage across borders. The Gypsies and the Jews have been important in spreading stories from east to west. [MEL]

digging songs Songs sung by Negro field workers in Jamaica. The words are in English or the local dialect, "deep" English, and are somewhat religious in character. They are sung particularly for spring farm work.

dill An old world annual of the parsley family (*genus Anethum*) with pungent seeds: used as a condiment and medicinally. In some parts of the world, it was abhorrent to witches, but elsewhere it was freely used in their own witch-brews. It was in general use to relieve flatulence, colic, and obesity. In Prussia the steam from an infusion of dill was inhaled to stop a toothache. In England, boiled in wine, its fumes were inhaled to halt yexing (hiccup), and the ashes of the seeds were used in cases of scalding and on venereal infections.

Dinewan The personified emu, who plays a leading role as chief of birds in New South Wales mythology, particularly in that of the Eualayhi (Ualayi) tribe, where his loss of wings is attributed to the trick played on him by Goomblegubbon, the Bustard, who was jealous of his speed. In revenge the emu got the bustard to destroy all but two of his twelve youngsters so that they would grow as large as emus. Now emus are wingless and bustards lay only two eggs. [KL]

Dingbelle A female of the gremlin family, operating only on the ground. These creatures, first discovered by the Canadian Wids (Women's Division), fouled up typing, flipped on public-address systems in the middle of personal conversations, and during off-duty hours were apt to toss pictures of handsome Wing Commanders out of the Wid's kit bag while she was entertaining her LAC boy-friend or vice versa. Dingbelle is not to be confused with Fifinella.

Dinnshenchas The *History of Places* (Irish *dinn-seancas*, topography, especially of famous places): a group of Old Irish local legends in prose and verse, explaining the names of famous rivers, fords, lakes, hills, other places, in Ireland. It exists in the 12th century Rawlinson manuscript, now in Bodleian Library, Oxford University, and in the *Book of Leinster*.

Dione In Greek mythology, a vague figure, undoubtedly an earth goddess, the most ancient consort of Zeus: she bears approximately the same relationship in characteristics and etymology to Zeus as Juno does to Jupiter. She is associated with Zeus at Dodona, being seated alongside him, but with the rise of the Delphic oracle and the decline of Dodona, she lost importance and was supplanted by Hera as Zeus' wife. In the *Iliad* she is the mother by Zeus of Aphrodite (who is called Dione herself); as time passed she became a lesser personage, in Hesiod an Oceanid, a nymph of Dodona in Pherecydes, an Atlantid or a Titanid in Hyginus. She was thus in later mythology variously the nurse or the mother of Dionysus or the mother of Pelops and Niobe.

Dionysus The Greek god of the vine; originally a god of vegetation, he kept his office over fruit trees and the grape: because of his prominence in Orphic religion, at one time he was the most popular of the gods. Dionysus is probably Phrygian in origin, the corresponding Phrygian god being Diounsus, although a Thracian origin is often supposed. However, his mother Semele seems obviously to be the Phrygian Zemelo, an earth goddess. His cult observance was one of death and dismemberment and resurrection, which caused identification of the god by the Greeks with the Egyptian Osiris. The Roman Liber or Bacchus was also identified with Dionysus.

In mythology, Dionysus was the son of Zeus and Semele. When Semele died because of her foolhardiness in the sixth or seventh month of her pregnancy, Zeus saved the infant from her ashes and kept him in his thigh until the full nine-month term had expired. The epithet Dithyrambos, derived from the song of the Dionysian followers, was said to have evolved from this "double entrance" into life. When the child was reborn from the thigh, Zeus entrusted him to Hermes, who gave Dionysus to Ino and Athamas to rear. They brought him up as a girl, until the jealous Hera drove them mad, whereupon Zeus transformed Dionysus into a kid. In cult observance, it was often a goat which was rent alive by the followers of the god, either because of this myth or because the goat nibbled at the shoots of the vine. From the chorus of goats voicing the dithyramb in the festivals arose Greek tragedy, such at least being the current belief regarding the derivation of the word *tragedy* from *tragōidia*, goat song.

Ino and Athamas being insane, Hermes escorted Dionysus to the Nysan nymphs, the Hyades, who brought him up. A series of myths exist concerning Dionysus' travels through Asia Minor, Egypt, and India, in which regions he taught the use of the vine and into which his worship spread. These stories tell of the refusal of a ruler or other person to accept Dionysus' divinity, and of the punishment visited on the ruler or his people by the god, for example the tearing to pieces of Pentheus by women. The *Seventh Homeric Hymn* tells of the kidnapping of the god by pirates, and how he covered the decks and masts with ivy, driving the crew mad so that they leaped into the sea to become dolphins. In another myth, Dionysus sought to descend to Hades to bring Semele to the abode of the gods, but he did not know the way. Prosymnus or Polymnus or Hypolipnus offered to point out the route in exchange for a curious gift. When Dionysus returned, he discovered that his guide had died in the meanwhile, but he kept his promise by carving the promised thing from a fig tree and placing it on the grave. Hades would not release Semele unless he also had a gift in exchange from Dionysus, this time the thing he loved best. So Dionysus presented him with the myrtle, because ivy, the grape vine, and myrtle were associated with him. Among the attributes of Dionysus were the thyrsus, a wand tipped with a pine cone (apparently a phallic symbol), the grape vine, myrtle, and ivy, and the panther.

The original general office of Dionysus as a god of fertility, underlying a portion of the myths and remaining to some degree in the observances, did not carry over prominently in Greece, for there were other gods presiding over fertility. However, the rites connected with wine, the riotous singing procession of silenoi, satyrs, bassarides, bacchantes, took root in Greece and became extremely popular. Dionysus was honored at four Attic festivals: the Dionysia, the Lenæa, the Oschophoria, the Anthesteria. He held a position at Delphi perhaps equal to that of Apollo. Thebes was said to be his place of birth. He was a bringer of civilization, a culture hero, in Crete.

Dioscuri Literally, sons of Zeus; Castor and Pollux (Greek Polydeuces), the Spartan twins of Greek mythology and legend; sons of Tyndareus and Leda in

Homer, although other tradition says that the two boys and Helen were born from one egg or that Pollux and Helen were children of Zeus and immortal while Castor was mortal. They figure in three principal adventures:

(1) The rescue of Helen from Athens after Theseus abducted her. While Theseus was away from Attica, the brothers invaded the land. There they were told by Academus, a native of Attica, that Helen was being kept by Theseus' mother, Æthra, at Aphidnæ. They took the town, rescued their sister, and carried off Æthra. Academus thereafter was honored by the Spartans, who refrained from invading his land, outside Athens, whenever they waged war in Attica.

(2) The Argonautic expedition. Pollux, who was a great boxer, killed Amycus of the Bebrycians, a son of Poseidon, with his fists in single combat. The twins are also said to have taken part in the Calydonian boar hunt some time before the voyage of the Argo.

(3) The fight with the Apharetidæ. The Dioscuri had run off with Hilaira and Phœbe, the betrothed of their cousins Idas and Lynceus. According to some, the fight arose directly from this; others say that it began over the division of a herd of cattle. During the fight, Idas killed Castor and Pollux slew Lynceus. Pollux, the immortal twin, begged Zeus, who had slain Idas with a bolt, to be allowed to share his brother's fate. As a result, the brothers, either together or alternately, lived one day in the earth and the next among the gods of Olympus. They are also said to have been placed among the stars, the constellation Gemini, the Twins, being their asterism.

Castor and Pollux were worshipped as divine not only in Sparta but in other parts of Greece, Sicily, and Italy. They were protecting deities of sailors, of travelers, of the laws of hospitality, of oaths. Either as a result of their connection with Zeus, the god of thunder, or through their association with Poseidon, the sea and horse god, they are horsemen, riding on white steeds, presiding over the public games. They were the inventors of the war dance, hence protectors of the dance and likewise of poets.

In Rome, they were worshipped in early times, Castor seemingly first, for the twins were known as the Castores. For their assistance to the Romans at the battle at Lake Regillus, a temple was erected to them in the Forum opposite the temple of Vesta. The equites, whose patrons they were, annually on July 15, the anniversary of the founding of this temple, rode in procession through the streets of the city past the temple. Weights and measures were tested here, in keeping with the role of the twins as guardians of honesty, which is also attested to by the popular oaths, used by women, *mecastor* and *edipol*. In 168 B.C. the Castores announced the capture of the Macedonian King Perseus to Publius Vatinius on the very day that the capture occurred. Vatinius was, however, thrown into jail for announcing this, but was released and given a grant of land when word arrived that the capture was a fact.

The relationship of the Dioscuri to other twins in Indo-European mythology and to heavenly twins the world over has been discussed by A. H. Krappe (*Mythologie universelle*, ch. IV). He traces the development of the investigation since its exposition by Harris early in the 20th century. The springboard for the study has

been the similarities found among the Ásvins of Vedic tradition, the twins of several northern European mythologies, and the Spartan Dioscuri. Some ten general similarities of the heavenly twins are blocked out, and the mass of accumulated information is brought to bear to support these "postulates." In brief, Krappe's premises are: (1) All dioscuric pairs are twins, expressly or otherwise. If specific mention of the facts is omitted in the texts we have, one of three reasons may be the cause: either there has been inadvertent omission, or the facts were too well known to require repetition, or some special reason required that the fact be hidden. (2) The basis of belief in twin gods lies in the ominousness generally given by primitive people to the birth of twins. Such births may be an evil omen, requiring the persecution of one or both of the twins and sometimes the mother as well; or the births may be an omen of fertility and riches. (3) The universality of these beliefs make it impossible to confine them to origin among any one people or in any single culture. (4) Less often but still rather generally, the twins are children of the sky or thunder god. (5) Similarly widespread is the elevation of the twins to the heavens and their identification with the stars, for example with the morning and evening star(s) or with a constellation like Gemini. (6) The persecution of the twins and their mother leads to their being avengers of mother, sister, betrothed, or wife. (7) Such twins are usually indistinguishable one from another because of their physical resemblance. But where it was important to make the distinction, there was a decided lack of resemblance. (8) The twins, following the general human custom in such cases, bear one generic name. (9) Since no other cause seems so obvious, the birth of twins had to be the result of the mother's adultery, a justification of the ill-treatment she underwent. (10) The twins also had animal aspects, generally of horses or birds, especially of sea birds. Hence, they were often believed to have been hatched from an egg.

The conclusions drawn from this series necessarily deny the theory of the Indo-European origin of all cases of heavenly twins: (1) None of the ten "postulates" is peculiar to any linguistic or ethnographic group. (2) The belief is so ancient that the Indo-Europeans knew it both before and after their separation. (3) The Indo-Europeans carried their beliefs concerning dioscuri into lands which also had their own beliefs on the matter, and it is now impossible to say whether or not we are dealing with an Indo-European belief or with an indigenous belief. (4) Every locality had its pair of heavenly twins, making it an absurdity to associate all such pairs with an Indo-European prototype.

The examples cited by Krappe are drawn from the most part from Harris and Frazer and cover all parts of the world from South Africa and Ecuador to Java and North America, and all periods ranging from the ancient Babylonian through the classical Greek and the medieval European (evidencing certain twin pairs of saints) to the modern.

Dipper The popular English name for the northern constellation commonly known as URSA MAJOR or the GREAT BEAR: so called from its shape.

directional spirits Many North American Indian tribes identify their deities and powerful spirits with the directions, but nowhere on the continent is this identification of spirits with directions emphasized quite so strongly as in the American Southwest. Among the Pueblos and other groups in this area, six directions are often recognized: the four cardinal ones and zenith and nadir. With each of these is associated a color, a chief of the direction, and many other spirits. [EWV]

dirge songs Songs sung over dead bears by Indians of the Gitksan and Niskae tribes of the Skeena and Nass rivers. The songs were taught to Peesunt by her husband, Bear, to be sung over his body after his death. Compare MOURNING SONGS.

Dirty Boy A myth-character of the Jicarilla Apache Indians of the American Southwest, whose exploits as a runner, warrior, and leader are told in a Jicarilla Apache myth notable for its great length: one version recorded in English by Morris Edward Opler runs to 40,000 words or 75 printed pages (Morris Edward Opler, *Dirty Boy: A Jicarilla Tale of Raid and War*. MAAA 52, 1938). The story of Dirty Boy is also known to other Apache groups beside the Jicarilla. Briefly, it is concerned with the tale of "a dirty and apparently lazy young man who lives with his grandmother, who trains himself and hunts secretly at night, and who finally becomes a noted runner, warrior, and leader" (Opler, p. 3). The version of the tale published by Opler is particularly rich in cultural details of Jicarilla Apache concepts of raid, war, relationships between human beings, and status. A wealth of factual material concerning Jicarilla dress, dwellings, economy, weapons, hunting, campcraft, and domestic life is introduced. See DESPISED BOY. [EWV]

Dis In Roman mythology, Pluto, the god of the underworld. Dis is probably the same as Dives, the Rich, a translation of the name Pluto. The cult of Dis and Proserpina was established in Rome in 249 B.C. The name was also applied to the underworld itself. See HADES; ORCUS; PLUTO.

Disappointed Fisher Title of a European folktale (Type 832) having the punishment of child murder (plus greed) for its motif (Q553.5). A fisherman and his wife had always caught three fishes every day for themselves and their child; but one day they killed the child in order to have more to eat for themselves. After that they caught only two fishes every day.

disdainful woman or man Tales of the disdainful girl or man who refuses to marry any suitor, and her or his subsequent humbling experiences, are popular among certain North American Indian tribes, namely those of the North Pacific Coast, the interior Plateau region, the western part of the Mackenzie Yukon region, and among some Plains tribes. [EWV]

diseases Plagues were anciently looked upon as visitations of God's wrath upon a people. Syphilis especially, until very recently, was thought to be divine punishment for promiscuity. Cotton Mather of colonial Boston called disease "the whip of God for the sins of man" and held also that the sins of the fathers caused infant ills. Martin Luther made a great advance when he acquitted both God and man as cause and declared

diseases were "naught but the Devil's work." Everywhere before the advance of medical science, and today in many places, diseases are believed to be caused by God, or gods, by demons and evil spirits, by object intrusion and other forms of witchcraft, by the air or other mysterious causes, or to be the consequences of broken tabus. See AIRE; CURES; EPILEPSY; MEDICINE.

☞ One of the main causes of illness in Middle America is believed to be the intrusion of small animate objects, such as spiders, worms, and the like, in the body of a witchcraft victim. Unlike the common pattern in North America, inanimate disease objects are rarely, if ever, used. See MEXICAN AND CENTRAL AMERICAN INDIAN FOLKLORE. [GMF]

☞ Diseases among South American Indians are rarely assigned to natural causes. Most of them are attributed either to a mysterious missile which enters the body of the sick person or to loss of the soul, which has been kidnapped or has left the body for some other reason. The theory of the intrusion of some pathogenic object in the patient's body is by far the most common. The material cause of the illness is described as a dart, or a piece of quartz, shot by a spirit or a sorcerer. The magic virus may also be some nondescript substance; or the pathogenic object may even be a spirit that has taken on material shape after entering the victim's body. The belief in the harmful effects of the loss of the soul is widespread among the Indians of the Andean region, but is also shared by many tropical tribes. Spirits and sorcerers are generally held responsible for the kidnapping of the soul, but the accident may occur as the result of sudden fright.

The ancient Peruvians and some modern tribes of South America, such as the Araucanians and the Chaco Indians, believe that epidemics or misfortune can be driven away like real foes. They perform ceremonies during which, after purifying themselves, they charge their invisible enemies, the evil spirits, and threaten them with their weapons. The great *situa* feast, celebrated in the Inca empire, had as main purpose the cleansing of cities and villages of all ills. [AM]

dittany An herb of the rue family originally found on Mt. Dicte in Crete, hence its name (*Dictamnus origanoides*). The *Encyclopedia of Bartholomew Angelicus* attributes knowledge of this herb to the hind "for she eateth this herb that she may calve easier and sooner; and if she be hurt with an arrow she seeketh this herb and eateth it, which putteth the iron out of the wound." Wild goats also knew of this herb, and it cured Godfrey (in Tasso's *Jerusalem Delivered*). The root applied in salves eased sciatica; the juice in wine cured the bites of snakes and other poisonous animals. It is a hot herb under the sign of Venus and is also sacred to Diana. It is sometimes called gas plant because it exudes a volatile oil in hot weather which is inflammable.

For toothache the Slovaks fumigate with bastard dittany, a species of horehound. The root of this plant is also used for epilepsy, hysteria, and worms. American dittany (*Cunila origanoides*) belongs to the mint family and was employed by the Indians as a stimulant, a nerve tonic, and in intermittent fevers.

dive for the oyster An American square dance figure. The first couple dives under the raised arms of the

second couple; second couple the same; then the first couple dives and passes through and around, all holding hands the while. [CRK]

divide-the-ring An American square dance figure. One couple advances through the center and between the opposite couple, thus dividing the ring. [CRK]

divination The act or art of knowing or foretelling the unknown, whether future or distant in space: a practice of the greatest antiquity, performed everywhere in the world, by peoples in every cultural status, and utilizing almost every conceivable instrument or phenomenon as an indicator. Divination is a form of sympathetic magic; the status or action of the divining medium is determined by the future or far-off event, and vice versa; both the indicator and the event are in some form of logical harmony; each is the cause or the reflection of the other. Thus, dreams, when interpreted correctly, foretell the future, if not by picturing it directly then by symbolic constants. Sometimes the meaning of the dream is clear; sometimes it is obscured by the complexity of the symbolic events which occur in it. Therefore, to interpret dreams, or to read the augury of the flight of birds, or to explain the markings of the shoulderbone or the liver of the sacrifice, or to determine the precise configuration of the stars and planets at a given moment and thus their meaning, a class of diviners (shamans, priests, augurs, astrologers, doctors, bokónōs, lukumans, etc.) has existed from early times. These diviners, as the augurs in Rome, often have been men of great influence in their communities, for an action that the portents show will be of unlucky termination can be stopped by them for the community's welfare. Abuses of this power have been frequent; even the great oracle of Apollo at Delphi was not entirely above suspicion. With the rise of the great religious systems these practices have been condemned as partaking of magic. Nevertheless, they continue: astrology and various forms of marriage divination have flourished under Christianity; geomancy is popular in Arabic Islam; gematria, letter and number symbolism, was significant in Jewish scholasticism. "Superstition" generally concerns itself with omens: the black cat, the twitching eyelid, the dropped spoon—all minor events foretelling some future event, good, bad, or indifferent. Yet even where such practices are recognized as magical relics, few would care to risk a breach of etiquette by refusing to say "God bless you" or "Gesundheit" at a sudden sneeze—formulas that recognize the danger of the soul's escape during a sneeze, or the entrance of a demon—both the sneeze and the saying being symbols of some greater event.

As the word itself indicates, divination is the act of determining the will of the gods, and in several of its forms approaches animistic belief, e.g. the gods as the spirits of the dead, the soul of the sleeper in the land of the dead, etc. Oneiromancy, divination by dreams, presupposes basically the soul's communion with the knowing spirits. Shamanism or other types of possessive divination rely for their effect on the voice of the god or spirit speaking through the human medium. In more direct fashion, necromancy is the conversing of a person in full possession of his conscious faculties (the dreamer is unconscious, the shaman is deliriously or otherwise possessed) with the spirits of the dead. Augury depends

on the widely held belief that birds and animals are closer to the gods than human beings or that they incorporate the departed spirits. Ordeals, lot-casting, and other means of divination are based on the assumption that the gods interfere with the actions of people or objects as indicators of their good or ill will.

The oracle at Delphi, traditionally the great classical oracle, must originally have been a place of augury, connected with serpent-divination. Even when the method changed, and the possessed or intoxicated priestess of Apollo uttered her cryptic phrases, the name of Pythoness was kept. There are, thus, certain places suitable for divination, potent regardless of the means used. High places are such in early Semitic belief, and so are sacred groves and springs. The time of day (e.g. midnight, the break of dawn) or the season of the year (e.g. the solstices) is often important: Halloween and Christmas, times when the spirits have returned to earth, are such days; night is the time when the future husband appears in a dream to the maiden on St. Agnes' Eve.

Most divination is systematized. The Chinese use a complex system of diagrammatic symbols; the Arabs have a standardized method of reading the points marked on the ground; there were regularly recognized meanings for the markings on the liver of the sacrifice in Babylonia; judicial astrology maintained distinct meanings for the various relationships of the stars, planets, signs, etc.; there was system behind the readings of omens by the Roman and Aztec augurs—these are patterns, and are prepared for by the diviner beforehand. But much divination is from accidental signs: if the ear burns, someone is speaking of you (good or evil depending on which ear); if twins are born, some calamity is impending; if a person trips, if he sneezes, if he breaks a mirror, if he meets a priest or an old or cross-eyed woman first thing in the morning, he has an omen of an event to occur. Here, despite the lack of ordered arrangement of omens and signs, the same primitive logic is still at work: a lesser event is connected with a greater, causally. Things happen in chains; deaths follow each other in threes; three-on-a-match is unlucky; what you are doing at midnight on New Year's Eve determines what you will do for the remainder of the year. From such beliefs stems the idea that all signs are indicators of the future, and when the sign is obscure or ambiguous the trained reader of omens, the diviner, is necessary to trace the chain, to tell what indication the peal of thunder, the number on the dice, the figure of the wax in water, gives of the further action of the spirits or gods.

Apart from organized systems and accidental occurrences are the isolated popular forms of personal divination. The petals of the daisy tell if "she loves me" and the florets, tossed into the air and caught on the back of the hand, tell the number of one's children-to-be. The wishbone of the fowl and the candles of the birthday cake, the wedding cake under the pillow and the bride's bouquet are instruments to determine the future course of events. Often a rime is recited as the divining is performed, but in general such incantation is of a lesser, perhaps degenerated ritual than the more formal and priestly kinds of divination. Yet tea-leaf reading and palmistry and cartomancy are but median forms of the reading of omens. On the one hand lie

the "signs and portents," the augurs and the other mighty diviners, priests, and shamans; on the other lie the little "superstitions" that tell of good or bad luck.

➤ A variety of techniques are known in Middle America. The most widespread consists (and consisted before the Conquest) in throwing grains of colored maize or beans on the ground, and interpreting the question from the position in which they fall. Other methods may be used to determine causes of illness. Feeling the pulse for strength indicates whether the soul has left the body, which, if so, results in sickness. An egg may be rubbed over the body of the patient, broken open, and examined, to determine whether the evil eye or some other cause has made the patient ill (see EGG CURING).

The Popoluca of Veracruz (Mexico) divine by throwing small balls of copal incense in a pot of water, and depending on whether they float or sink, the question is answered affirmatively or negatively. The Zapotecs of Mitla, Oaxaca (Mexico), kill a fowl over a cross drawn on the ground to determine whether a sick person will recover. If the fowl expires with its head to the east, the answer is affirmative. The Chorti diviner (Guatemala) asks questions of a spirit which lives in his right calf, first chewing tobacco and rubbing the saliva on his skin. A twitching of the calf muscles means an affirmative answer to direct questions. [CMF]

djāgowa'óenq An Iroquois Indian social dance, the pigeon dance. The choreography could be attributed to the coupling habits of the pigeon, for men and women circle against the sun in pairs. The step is the *ga'dáshot* type. There is no development in the dance formations, yet the songs have a wide range and ingenious treatment of the rhythmic theme. The only accompaniment is provided by the two leaders with horn rattles. [GPK]

Djambu Baros The Batak (Sumatra) tree of life which grows in the topmost heaven. On each leaf of the Djambu Baros is written a word such as wealth, fruitfulness, etc. The tondi (soul) must obtain one of these before it can depart for the earth, since the longevity and fortunes of each unborn child depend upon what the tondi is able to obtain for its future being.

djoéga'óenq The Iroquois coon dance, of the *gedjóenq* or fish dance type. It is somewhat slower than the fish dance, and is preceded by a stomp round dance in moderate tempo. At the end of each song the dancers and singers whoop in imitation of the coon. Otherwise it is like the fish dance. [GPK]

djoged A Balinese dance performed by a professional girl dancer and any man whom she "entices" out of the audience. Steps follow the pattern of the legong, but the djoged is the world-wide courtship dance of flirtation, pursuit, and retreat, ending with the man's attempt to get near enough to the girl to enact the Balinese "kiss." This means getting his face near enough to hers to smell her perfume and feel the warmth from her skin. As the dance proceeds and emotion intensifies, one by one other men from the audience cut in on the performers and continue the eternal pursuit.

Sometimes the djoged is performed by a boy in girl's clothes; when this is the case the dance is called *gandrung*. At a gandrung performance there is even greater

rivalry among the men in the audience, participation becomes intense and violent and fights sometimes occur. The djoged in both its aspects is forbidden in Tenganan.

djówiyai'óenq An Iroquois social dance; the robin dance. It may at one time have been a ritual bird impersonation, but retains only very faint mimetic suggestion in little hops at the end of each musical section. Its choreography is archaic, a circular side-shuffle against the sun, men in the lead, segregated from the women—a procedure typical of animal medicine rites. The songs, to horn rattle accompaniment, have most original syncopated rhythms, which the best dancers follow in variants on the fundamental step, in two-steps and stamps. A threefold cry opens each song, announces its repetition and its end. During the cries in the middle of the dance the rattle vibrates and the dancers face about with small hops, repeat the dance with backs to the center, and face the center again on the terminal cries. [GPK]

Djunkgao The Australian Murngin myth cycle and the rituals associated with the career of the Djunkgao sisters, who on their travels named the clan countries and animals and made totem wells with their yam sticks. After the younger sister had been incestuously raped, they lost their totems to the men so that they became ordinary women. They are associated with movements of ocean tides and rainy season floods. [KL]

Dobrýnja and Aljoša Title of a Russian bylina depicting vividly the Kiev background and narrating several exploits of the hero Dobrýnja: of especial folkloristic interest for its relation to the German Noble Moringer theme. This is the old Odysseus and Penelope story: the story of the hero who departs on the morning after his wedding for distant lands and some great adventure (usually the wars, in this instance the extermination of a great dragon). He bids his newly wedded bride await his return for seven years. She waits the whole appointed time and longer, but Dobrýnja over-stays the tryst, and she is forced into a new and unwelcome marriage with Aljoša Popovič. Dobrýnja returns in disguise, arriving just in time to drop his ring into the cup that traditionally goes the rounds of the wedding feast, and Aljoša is dismissed with dispatch. See NOBLE MORINGER. Compare HIND HORN. [MEL]

Dobrýnja Kikitich or Dobrýnaya Nikitich A Russian historical personage, noted for great courtesy; central figure and hero of several byliny of the cycle of Vladimir; killer of a terrible dragon (or serpent) with twelve tails. He killed the dove of the witch Marina, who in turn transformed him into a bull. He was also the hero of several encounters with the Tatars. Dobrýnja was blood brother of Aljoša Popovič, who tried unsuccessfully to betray him and steal his wife. Legend says that he was eventually conquered by a warrior giantess; historically he was killed at the battle of Kalka in 1224. See DOBRÝNJA AND ALJOŠA. [MEL]

Dóc Cu'ó'c In Annamese belief, the longitudinally half-bodied good spirit who stands on his single leg and brandishes an ax over his head with his single hand. Dóc Cu'ó'c is as swift as lightning and can see evil spirits from afar. He protects the country and its inhabitants, cures diseases, and sends good or bad weather. His ritual contains formulas which are written

on paper or shells and are used as charms against toothache, nightmares, barrenness, and ghosts. Figures of paper, straw, or wood are made by the priests of his temple which are sent to wreak vengeance upon men or animals.

docey-doe The Western square dance form of *dos-à-dos*, back to back. [GPK]

Doctor Knowall A folktale (Type 1641), known in all parts of Europe and Asia, in some parts of Africa and the New World, and most familiar in the Grimm version (#98) from which it is named. Crabb, a peasant, dresses like a doctor and begins to act like a savant. A nobleman, having lost some money, asks Crabb to recover it. Crabb and his wife go to the castle where they sit down to a meal. Crabb, alias Doctor Knowall, nudges his wife as the fine dishes are passed, and says, "That's the first," "That's the second," etc. The guilty servants who carry the dishes are terrified, thinking he means them. So when Crabb, asked to guess what is in a covered dish, cries, "Alas, poor Crabb," they are sure he knows, for crabs are in the dish, and the servants call him out of the room and confess. He reveals the hiding place of the money to the lord, protecting the servants, and is rewarded by both servants and nobleman.

The story of "The Brāhman Hariśarman" in the *Ocean of Story* contains an incident missing in the German tale but found elsewhere in variants often enough to be included in the type tale. Hariśarman steals a horse, hides it, and pretends to hidden knowledge to locate it. Sometimes the missing animal is found inadvertently because the sham doctor gives a laxative to the searcher: when the laxative takes effect the horse (or other animal) is found in the bushes. Often the stolen horse is followed by stolen cow, pig, etc., all to build up the reputation of the "doctor."

The tale is a balancing parallel to the wise maiden-riddle answerer type. The maiden is really clever; Doctor Knowall is an ignoramus who succeeds despite himself, despite his blurting and blundering. There is some indication that the story, known in about 400 versions, is an originally Eastern tale, and spread from the Indian region eastward to the Philippines and westward to Europe and Africa. The two Philippine variants, collected and discussed by Fansler (*MAFLS* 12: 1-10), about Suan and his luck, seem to have been influenced to some degree by European sources, but the tales are basically cognate with, rather than derivatives of, the European tales.

Big John the Conqueror (Kennedy, *Palmetto Country*) is a recent southern U. S. Negro Doctor Knowall. He sees the diamond ring accidentally thrown out by the mistress and swallowed by the turkey. (In most of the tales, the recovered ring is fed to the fowl to cover the identity of the real thieves.) So Big John is able to tell where the ring is and strengthen his reputation as a "fortune teller." Then, as in Oriental versions, his master bets everything he owns on John's being able to tell what is beneath an overturned wash-boiler. John scratches his head and sighs, "You got the old coon." Of course, an old coon is under the boiler. The punning on two meanings of the same word is a theme running through all the incidents of the story. The doctor's name is Crab or Cricket or Rat (and a crab or cricket

or rat is in the jar or covered platter); or he says in disgust, "Oh, filth!" (and filth is the hidden object); or he complains, "O tongue, see what trouble you have caused yourself" (and Tongue is the name of the thief). The basis of the story thus seems to be success through misunderstanding.

Dodona The oak or beech grove in Epirus where the oldest of the oracles of ancient Greece, that of Zeus, was situated. According to the legend, Zeus gave two pigeons to his daughter Thebe, which were endowed with human speech. One flew to Libya where the temple of Amen was founded, and one to Dodona. The oracle was founded by the Pelasgians. From the rustling of the leaves of the trees, or from the sounds of the spring which gushed from the roots of the sacred oak, priests (later priestesses of advanced age) gave the words of the god to men. These priests were called Selli or Helli. The sound of the wind in the oaks was accentuated by the hanging of vessels of brass in the trees. The importance of the oracle of Zeus at Dodona became secondary to that of Apollo at Delphi only within historical times.

dog The dog, the only domesticated animal which the North American Indians possessed prior to the arrival of Europeans, figures as a character in various North American Indian tales. The best known and most widespread American Indian dog tale is that of the *Dog Husband*. A girl has an unknown lover who is a dog by day and a man by night. The girl gives birth to puppies, and is deserted by her tribe. Crow helps her by hiding fire for her. The girl destroys her children's dog skins, thus changing them into human beings; her sons succeed as hunters, and when Crow visits the family, Crow is given meat. The girl's tribesmen are starving; when they discover through Crow that she has meat they gladly return to her. This tale is told, in approximately the above form, by many Eskimo, Mackenzie, Plateau, and Plains tribes; it is also known in Siberia. The incident of a girl's lover being a dog (or other animal) by day, and a man at night, occurs as a part of other stories than that of Dog Husband, in all parts of North America.

Other stories in which the dog figures as a central character are the tale of the talking dog who informs a husband of his wife's infidelity, and the Eastern Woodlands origin account in which the dog pleads that he may be man's companion on this earth. The Shawnee, an Eastern Woodlands tribe, picture their female deity, Our Grandmother, as an old woman who is always accompanied by a small dog. The picture of the old woman bending over a cooking pot, with her dog by her side, is to be seen on the face of the full moon. Among the Southern Utes, a western tribe of the Great Basin, a few stories are told of dogs who, in the pre-human age, "were once people and lived in a village."

The dog was honored by various ceremonies among North American Indians, and dog flesh was eaten by the Iroquois and several Algonquian tribes of the Central and Eastern Woodlands ceremonially. Other tribes on the American continent ate dog as a flesh food, or in times of famine. [ewv]

Dog Hero of a folktale of the Fjort tribes of West Africa (i.e. the coastal provinces north of the Congo River) in which a young man could marry certain beau-

tiful young girls only if he could find out their names.

The parents of two beautiful daughters had decided not to ask for rich presents when their daughters were asked in marriage, but to require the suitors to find out their names. A neighboring prince named Nsassi came and asked for the girls. "Guess their names and you shall have them." Nsassi's little dog was with him, heard everything that was said, and watched his master walk away grieving for the girls. So the little dog hung around, here and there, all day, listening. He heard the father say "Lunga! Lenga! Come here." He ran as fast as he could to tell Nsassi the names, but on his way he forgot them. He went back. "Lunga! Lenga! Give the little dog some food," said the father. The little dog ate and ran as fast as he could to tell his master the names. Again he forgot. He went back. "Lunga! Lenga! Give the little dog food and water." The little dog ate and drank, and ran home and told Nsassi the names.

Nsassi was very happy. He and the little dog set out to go claim the girls. But on the way they both forgot the names. So the little dog went on alone, again heard the names, ran home fast thinking of nothing else, told his master, both ran fast to the village of the girls. Then Nsassi asked for Lunga and Lenga for his wives and received them.

dògai In the western islands of Torres Straits (Melanesia), female mischief-making spirits, easily outwitted. The dògai wear a woman's dress and ornaments, have hideous features, long, skinny legs, and huge ears, one of which is used as a bed and the other to cover the dògai. Dògai are sometimes able to personify beautiful women and in this guise deceive human beings. In folktale they transform themselves into animals, trees, constellations, or rocks, play tricks, and sometimes kill boys or girls. Consequently naughty children are threatened with the dògai.

dogheaded people A group of beast-man beings, the *koerakoonlased* of Estonian folklore, similar to the Centaurs of the Greeks. They were half man and half dog, vertically, with one hand and foot like a man's, the other hand and foot like a dog's, or the whole body was a man's body with the head of a dog, with one big eye in the middle of the forehead. Their reasoning was a mixture of human and dog sense and they could run on all fours. The Dogheads lived on the end of the world and were constantly attacking, murdering, and robbing human beings. The latter were unable to defend their homes. Only the smell of the rhamnus shrub drove the Dogheads away. The Dogheads overpowered people, bit and murdered them, ate them, and feasted their children with human flesh. Women and children were taken as captives, fattened, and later slaughtered for fresh meat.

Similar stories are known to the Latvians, but appear only occasionally among the Lithuanians. The idea of dogheaded beings may have originated from real robbers, using the pelts of dogs for masking. Another explanation suggests that they may be reminiscent of the sanitary personnel during the time of a pest epidemic, who carried out the corpses of the dead, took sick people to quarantine, gathered and destroyed infected clothes, etc., and who wore special clothes and often very dreadful masks. The concept may also be a survival of traditions about cannibals and "savage people," as the dog-

headed beings are called in Lithuania. The Estonians, seeing in 1854 the Bashkirs, Kalmuks, and Cossacks with the Russian army, considered them as the dogheaded people. Byzantine influence (via Russia) is also possible. (M. J. Eisen, *Estonische Mythologie*, pp. 202-06) [JB]

Dog in the Manger Title of one of Æsop's fables (Jacobs #40) in which the dog, lying in a manger full of hay, snarled and bit at the horse (or ox) when he came and tried to eat. This fable comprises the widespread European motif (W156): the common phrase *dog in the manger* having become a by-word for the selfish person who begrudges to others even what he cannot use himself.

dogwood Two types of dogwood have been known since early times. Red dogwood or dogberry, hounds-tree, pricke-timber, gater tree (*Cornus sanguinea*) grew and was named from the practice of bathing dogs in a decoction of the berries or bark to cure them of mange. The berries yielded an oil used in lamps, and the wood made a superior charcoal for the manufacture of gunpowder. Cornel tree or cornelian-cherry (*C. mas*) was cultivated for its highly prized edible berries. Galen, a 2nd century Greek physician, claimed that the leaves, when laid in deep green wounds, were an effective cure, but not for small wounds in tender flesh.

Flowering dogwood (*Cynoxylon florida*), the most common American variety, was used by Indian tribes of the eastern United States as medicine. The Nanticoke Indians tell of a grasping chief with four beautiful daughters. Many braves sought these attractive maidens but the chief said they would go to the braves who brought the richest gifts. Soon his lodge was piled high with furs and other articles of value, but the gods were angered with the chief for his greed, and they turned him into a gnarled tree. His daughters are the four white bracts, and the flowers are the gifts.

The Indians of the eastern United States made a decoction of the bark which they gave to warriors fevered with battle wounds. The colonists used this medicine for malaria with good results, and today we know that it contains the active principle of quinine. This knowledge was particularly valuable to the Confederacy during the Civil War when the blockade cut them off from South American sources of quinine. Today it is used principally as a stimulant to the appetite. The Catawbas say the raw berries are good for chills. In Newfoundland and among some North American Indian tribes children are passed through the limbs of the dogwood to make them immune to children's diseases, and as a cure for rupture. Those cured in this way are supposed to feel acute pain when dogwood sticks are burned in the fire. In Tennessee they say that if you chew dogwood you will lose your sweetheart, but in the southern mountains they make an essence of the bark, a few drops of which in a tumbler of whisky is considered very salubrious. Red osier (*C. stolonifera*), the inner bark of which was used as part of the Indian kinikinnick (tobacco mixture), was very highly thought of. Rough dogwood or real-arrow tree (*C. asperifolia*) was used by the Dakota and Pawnee Indians for the shafts of arrows, and by the Chippewa to lure muskrats and as a remedy for sore eyes.

dokpwe Dahomean term for a cooperative men's work society of the kind widely spread in West Africa and in

the New World. Basically, the principle is that of the American frontier "bee," whereby the beneficiary of group labor pays no money for the services rendered him, but must provide food for the group. New World forms reported are the *combite* in Haiti, and the *gayap* of Trinidad. In Dahomey, the dokpwe also functions importantly in the rites of death, its chief, or *dok-pwegán*, being in charge of funerals in the district where he exercises control over the men in directing their group labor. [MJH]

doll A small figure made from various materials to resemble a baby, boy, girl, man, woman: often for a child to play with, but used in many cultures for various other purposes. The doll for play is known among almost all people and is of great antiquity in its use as child entertainment and companionship. It was known in Egypt as early as 1900 B.C., among the Greeks, Romans, Japanese, and the East Indians. Dolls have been found in graves in Europe and elsewhere, where from various indications they were used as playthings. In ancient times dolls were made of clay, wax, or dough; they are still sometimes made of wood and painted. In America, even a corncob dressed in a bit of cloth often served for a doll for the frontier child. Throughout a succession of periods in which rag dolls, wax dolls, china dolls, were made, to the plastic dolls of today, great ingenuity has been used, even to the making of unique dolls out of shells, nuts, and other unusual things.

Dolls are significant in the folklore of the Chinese as fertility charms: a woman who desires a child carries a doll on her back in the hope of becoming a mother. Similar doll customs obtain in Russia, France, Sweden, and elsewhere. The dolls on our American wedding cakes, ostensibly bride and groom, probably are a carry-over of this symbolism, as is the cake itself.

As a charm, the doll is effective. In general European practice a doll was often given to a sick child to serve as a scapegoat, i.e. for letting the disease go out of the child into the doll. Such uses are known also in Borneo and the Celebes. The doll is used in love oracles. To deceive witches or fairies, a doll is often put in the cradle so that no changeling may be foisted on the parents. In the Middle Ages, dolls were used in the practice of magic, a use later transferred to America wherever the practice of "black magic" occurred. (See ENVOÛTEMENT). As a charm against bombers in Paris, and before that in 1919 as a protection against influenza, people carried about with them dolls representing a man and a woman.

Of great interest is the doll as vegetation *dæmon*. All over the British Isles and on the Continent, it was the custom to make a doll out of the last sheaf harvested. The doll was called the "Old Woman" or the "Maiden," the former referring to the yield just past and the latter to the following hoped-for harvest. In Scotland, this image was called the carline or Old Woman (see CAILLEAC). In Germany it was called variously, Bride, Oats-Bride, or Wheat-Bride; in Bulgaria its name is Corn-Queen or Corn-Mother. In most localities the doll is taken, sometimes with pomp and ceremony, to a certain farmhouse and fastened on the wall. For the Doll Festival of Japan, see JAPANESE FOLKLORE. [GPS]

Dō-mañ or **mDo-mañ** *gzun bsdus* A collection of mystic formulas, culled from the *Dō* of the Tibetan

Kāh-gyur, used as potent charms by laymen, and by the lāmas as incantations in the treatment of disease and ill-fortune. All literate laymen possess pocket editions of this collection, since the mere act of reading it is believed to ward off misfortune and disease.

domare dansen Literally, judgment dance; an ancient Swedish folk dance for men and women circling around a central figure with a lighted candle. The meaning is lost but probably refers to the life inherent in the purifying flame, resurrection symbolism reinterpreted in terms of the Christian Day of Judgment. [CPK]

domovik or domovoj The one in the house: a Russian household spirit, ancestral and usually the founder of the family, who watches over and protects the inhabitants of the house, taking care that all is in order: probably the inheritor of many observances of the early snake-ancestor cults. The domovik lives behind the stove; he likes fire, and one of his punishments when the family displeases him is to burn down the house. When the family moves, brands of the old fire are carried to the new home, and the domovik is welcomed there as the new fire is lit. He is an old, gray-bearded man, looking very much like the living head of the family. His correct name is never used; he is called "he" or "himself" or "grandfather" (Ded). Some of the supper is left out over night for the domovik, who bustles about in the dark, always busy, guarding against the intrusion of strange and hostile spirits. Sometimes someone brushes against the domovik in the dark: if the person is hairy, he will have good luck; if his hands are smooth, the domovik will bring trouble. There are several kinds of domoviks: the chlevnik, or barn spirit; the ovinnik, or kitchen spirit; the bannik, or bathroom spirit. Every house has them.

Dôn In Brythonic mythology, especially in *Math, Son of Mathonwy*, the sister of Math, mother of Gwydion, Gilvaethwy, Govannon, Eneyd, Arianrhod, and in *Kilhwch*, also of Amaethon. The constellation Cassiopeia was called Llys Dôn, Dôn's House. She is interpreted as a goddess of fertility and identified with the Danu of Old Irish mythology.

Donar The old German god of thunder, corresponding to the Norse Thor.

door A hinged or sliding frame used for closing or opening an entrance or an exit, usually made of wood, but frequently of iron, bronze, or other substances. Whether used in houses, temples, churches, or gates, doors play a large part in ritual and belief over a wide area. The door is a protection from everything that threatens from the outside. Not only the door itself partakes of a sacred character, but all the parts of the doorway: lintel, doorposts, and threshold.

Various ritual acts are carried out at the threshold, such as sacrifices to propitiate guardian or household spirits. Charms and prayers are recited at this spot; the reverence paid to it extends from taking off shoes before entering the building (Chinese, Moslem, etc.) to kissing the threshold. The husband carries his new bride over it. It is dangerous to sit or linger on the threshold; stumbling on it is especially dangerous when starting on a journey (Germany, Scottish Highlands); sneezing was an unlucky omen if it happened on the threshold; and such was the importance of the threshold

that it was often forbidden to tread upon it. The threshold was a superior place for sacrifice and occasionally for burial.

Altars were erected near the door in Greece and Rome, as well as in Assyria, Asia Minor, Mexico, and Polynesia (for Hebrew belief compare *Ex.* xxxiii, 9; *Deut.* xxxi, 15; *Ezek.* ix, 3). Souls were believed in ancient India to dwell under the threshold; in general, persons buried there became guardian spirits. In some cases, special deities became protectors; for example, Janus, the Roman god, was guardian of the door and his image was placed there. As protecting devices salt and pebbles were used. Many ideas connected with the door are also pertinent to the gate. Sacrifices were made here also, as was burial.

Gates and doors are mentioned in myth and legend—of the otherworld, of Heaven, Paradise, Hades, Tartarus—and most of these have guardians and special qualifications for entry. The tabooed door is frequent in folktales. Its metaphorical use is common: compare the Biblical, "I am the door" (*John* x, 9). [GPS]

 In rather general European and American folk belief it is unlucky to leave the doors open when going out of a house. One should always leave a house by the same door by which he entered. If a new doorway is cut in a house someone in the family will die; to this southern Negroes add the warning, especially if the old one is closed over.

In Ireland, Scotland, and the north of England especially, all the doors in the house were opened when someone was dying to ease the passage of the soul, and it was wrong to stand or kneel between the dying one and any door. The opening of all doors to ease and quicken childbirth is a common practice among Indonesian peoples.

The power of the door is seen in various southern United States Negro beliefs: A sure way to keep your lover's love is to bury some of his hair under your doorstep. A person's footprint, taken up, tied in a cloth, and put over the door will bring that person to your door. Hair cut from the tip of a dog's (or cat's) tail and buried under the doorstep will keep the animal from straying. The idea of the door as a symbol of entrance to another world is suggested by the Maryland Negro belief that to see a ghost, all you have to do is to look steadily past the edge of a door, or door-frame, in such a way as to see just past the edge. If you persevere in the steady gaze, and keep looking just past the edge, you will see a ghost.

door signs Objects placed on or above a door as the most obvious position to attract attention: used, in general, to ward off danger, to protect from witches and evil spirits, to bring good luck or to avert ill. Such signs have been known from antiquity. In *Exodus*, we read of the blood of the lamb sprinkled upon lintel and door posts to indicate the homes of the Israelites, so the Lord would pass them by when He smote the Egyptians. In Greek mythology, Antenor, the Trojan elder, was advised to hang a panther skin outside on his door to indicate to the Greeks that they were not to sack his house.

The Christian cross has been used on the door in many countries; the swastika is popular in the East as a door sign. Sacred plants and flowers are sometimes placed on the door. The hand, painted in vermilion

with fingers extended, is believed to have repelling qualities, especially against the evil eye. It is used in different forms on doors and walls in Tripoli, Tunis, Algiers, Morocco, Syria, Egypt, and Turkey, often dipped in ox-blood before affixing it into position. The Tower of Justice in the Alhambra is pictured with a hand sculptured on the Tower.

In Scotland, sex symbols appear on doors and in a number of cases, on churches, pictured on the archway of the door. In North Africa, people are more realistic and actually hang up the genitalia of animals over the house door entrance. In this connection, the horseshoe should be mentioned. The horseshoe appears over barn doors in America and occasionally over house doors. Signs made by the hobo on house, doorstep, or fence by various markings designate to the next comer what food homes offer to the knight of the road. [GFS]

dor-je or **rDo-rje** (Sanskrit *vajra*) Tibetan symbol of the thunderbolt, a part of the equipment of every monk: used for exorcising and driving away evil spirits. The original dor-je fell from Indra's heaven to a spot near Lhasa. Imitations are made in bronze or other metals.

dosu In the twin cult of West African and New World Negroes, the dosu is the child born after twins. This was also one of the "strong" names of Akaba, king of Dahomey, who reigned from about 1680 to 1708. [MJH]

double A 15th century dance step: three steps (left, right, left, right closes). [GPK]

dove Any of various birds (family Columbidae) including the domesticated pigeon and especially the wild doves, turtle dove, mourning dove, etc. The dove is said to have originated in Mesopotamia; or, it came out of Noah's Ark. That the dove is of divine origin is an idea popularized in numerous etiological stories about certain animals being created by God, others by the Devil. The Devil can transform himself into any bird except the dove, for instance. God as a dove is mentioned in *Matthew* iii, 16; and His spirit as a Holy Dove descended on the Virgin at her Annunciation. As a symbol of purity, the white dove is used in all Christian art and parable.

The dove was sacred to certain ancient divinities of love and fertility (Ishtar and Aphrodite, for example) and offerings and sacrifices of doves were made to them. In many lands the dove is used in divination and love charms. Even the phrase "billing and cooing," descriptive of lovers, suggests not only the bird's habits but is reminiscent of its early erotic symbolism. Missouri Negroes, for instance, swallow a raw dove's heart, point down, to inspire love in a beloved. A courtship rime is reported, also from Missouri (Puckett, *Folk Beliefs of the Southern Negro*, p. 77) which goes: Is you a flyin' lark or a settin' dove?/ I'se a flyin' lark, my honey love. The settin' dove is a woman already married or permanently attached; the flyin' lark is still free.

That the constant sound of the mourning dove predicts rain is quite general folk belief through the southern United States. A white dove flying over a person means good luck. But Welsh miners fear to see a dove fly over the pithead of a coal mine. It is historical fact that hundreds of miners have refused to enter the pits on a day on which someone has seen a dove fly over the

adits. To dream of doves means happiness. Three wishes made on hearing the first dove of the season will surely come true. The turtle dove protects from death, lightning, and fire. But the constant sound of a mourning dove around the house presages a death in the family within a few days. This omen, say Mississippi Negroes, can be counteracted by tying a knot in each corner of your apron. This not only drives the dove away, but ties the souls of the inmates to the house.

The dead are often reincarnated in the form of a dove. And those about to die sometimes see doves coming to carry their souls to heaven. (See BIRD SOUL.) In fact, the dove is frequently regarded as an omen of coming death. In France, when a sick person craves pigeon to eat, he is considered near death. In England, too, the dove is a death omen, especially if one settles on the roof. Those die a lingering death who die on pillow or bed of dove or pigeon feathers.

Dove's blood has been considered efficacious from antiquity. Blood from the right wing was used for sore eyes, warts, and stomach ills. Its droppings were used for sore eyes, colic, and swellings. Its flesh was eaten raw as a remedy for fevers and epilepsy. The magic power of its blood was seen in the old hunting custom of smearing bullets with it. In France the blood of a dove is used in poultices mixed with wine. For headache and especially for insanity the bird was cut open and applied to the head or side of the patient.

The dove figures in folktale all over the world. Dove is a popular character in Central California and Great Basin American Indian tales of the prehuman era. No particular plot is associated with Dove as a main character, however. (Compare Dzōāvrits.) There are stories explaining why dove lays only two eggs (A2247.4; A2486.3) balanced against her pride and concern for her large brood (U81.1). There is a tale about her proverbial lack of foresight in nest-building (J16) and another about how thrush teaches dove to build a nest (A2271.1). There are tales about doves transformed into people (D354) and of people transformed into doves (D154.1), reincarnation as dove (E613.6), soul as dove (E732.1), revenant as dove (E423.3.1), etc. See ATARGATIS.

"dozens" Songs of derision used extensively by Negro troops of World War II. The allusions of the "dozens" are sexual, using as a theme parents and parentage, and as a vehicle of spoken and sung banter in rimed and unrimed form. A medium of release through abuse, which affords much opportunity for improvisation, and for which there is no retaliation permitted except a response in wittier and more telling form, this song-type is in the direct tradition of the many other kinds of "songs of allusion" found among African and New World Negroes. [MJH]

dracæna A shrub or tree of the lily family (genus *Dracæna* or *Cordylina*) which grows in tropical climates. In the Solomon Islands the first dracæna is said to have grown from the grave of Pau Tangalu, the sea spirit. It is planted around altars and is grown among their magic plants. It is used in many of the ceremonies of these peoples as well as those of Polynesia. Lime and ginger wrapped in a dracæna leaf and laid in the path of an intended victim will cause his sickness and death. A leaf buried in a village will cause the inhabitants to fight among themselves. Spirits causing sickness can be

made to flee with a leaf of this plant. These leaves are used in divination of the weather, of the cause of illness, and for the discovery of the innocence or guilt of those suspected of adultery. In the Celebes the sick are beaten with dracæna leaves, for, since the plant grows readily when cut down, it is considered to have a strong soul.

In the Canary Islands during the past century there was a dracæna tree known to have existed since 1402, and considered one of the oldest inhabitants of the earth. In England the imported resinous gum of the dracæna, dragon's blood (so called for its bright red color), was burned by young girls and estranged wives, while reciting incantations, to restore their loves.

Draco The Dragon: a circumpolar constellation of the northern sky, identified variously with the Babylonian ocean-dragon deity, Tiamat, with the snake hurled by Athena into the sky, whose tail lies coiled between the two Bears, and whose head lies under the foot of Hercules, or with the terrible dragon of Thebes killed by Cadmus, whose teeth he sowed. Later astronomers called it the Old Serpent who tempted Eve. The early Hindu constellation which they called Crocodile or Porpoise may have been Draco, may have been Delphinus. The Persian Azhdehā, Man-eating Serpent, was Draco. And it is probably the "crooked serpent" mentioned by Job. Arabic astronomers named it Al Shujā', the Snake. In Norse mythology it was the Midgard serpent hurled into outer darkness by Odin.

Four thousand years ago the yellow star Thuban, in the tail of Draco, was the pole star, to whose perpetual visibility the slanting shaft in the Great Pyramid of Khufu at Gizeh was oriented. Draco was a much longer and more serpentine constellation in Chaldean configuration than it seems now, encircling both Bears.

dragon A mythical creature found in the lore of all peoples of the Old World and many of the New. All dragons have as an anatomical basis a snake or crocodile body covered with scales, the forelegs and head of a lion, eagle, or hawk. Many have wings. The physical characteristics vary with the location so that almost any combination of animals, such as the elephant-dragon of India, or the stag-dragon of China, may appear. Usually the dragon breathes fire, emits a thunderous sound, guards a treasure, lives in a cave, or in a lake, or in a stream, or in the clouds. Usually he is associated with water in some manner. Compare with this the serpents and chthonic deities in the form of snakes associated with the earth. In later folktales and myth, the distinction between water-dragon (e.g. that of the Andromeda story) and the earth-snake (e.g. the Python of Delphi or the Midgard Serpent) is not clearly made. The dragons of all countries must be propitiated by human sacrifice, commonly of a virgin princess.

The story of the dragon-slayer is, consequently, likewise common. Such stories relate how the hero killed the dragon, cutting off its head or heads and removing the tongues; as a reward he is given the princess as his wife. The sowing of the dragon's teeth, from which spring the founders of the city, occurs in Greek mythology. The famous dragon-slayer of British legend is St. George, though King Arthur, son of Uther Pendragon (dragon's head), is also a dragon-slayer. Dragon tales blend with tales of giants and ogres with several heads

who breathe fire; the same motifs, rescue of a people and a princess, cutting off of heads, cave dwellings, and the like, are common to both types of story. In Christian legend, the dragon is the Devil or the servant of the Devil; the leathery webbed feet and pointed tail are characteristic of both. Apocalyptic literature abounds with symbolic dragons, while the apocryphal *Bel and the Dragon* relates the tale of Daniel's slaying of the dragon.

The dragon is associated with the gods by all people; early in the history of each culture it is identified with a specific god. Tiamat, for example, is the dragon goddess of Babylonia, the antagonist in the first dragon myth in history. Considerable evidence exists to prove that the dragon myth was assembled first in Babylonia of elements from Egyptian mythology and thence spread largely by diffusion eastward through India to China where its development has been manifold, and westward through Greece to the people of Europe. Close relation exists between the dragon myth and the cult of the Mother Goddess; this relationship explains the persistence of stories of human sacrifice, concern with thunder and cloud, and with treasure. It explains, too, the virtue of slaying the dragon, i.e. the slayer is protecting mankind from the malignancy of the god. But not all dragons are malignant; some, especially in China, are beneficent, but even they had to be courted by gifts and petitions. The dragon is a prominent character of the mumming parade on the Chinese New Year; dragon kites are flown. [MEL; JF]

Dragon cult In China, a subject of many studies in which learned people have made fantastic suggestions. In the 4th millennium B.C. a dragon delivered the eight mystic trigrams, the Pa Kua, to a legendary emperor. In the legendary Hsia dynasty (c. 2205 to 1557 B.C.) dragons were associated with ancestor worship and fertility. One of the kings collected foam from the mouths of two ancestors who appeared at his palace in the form of dragons. He put the foam in a box. No one in succeeding generations dared open the box. At the end of the reign of the tenth king of the Chou dynasty (c. 1100 to 221 B.C.) the box was opened. The foam spread through the palace. The king made his wives appear naked before it. It became a black lizard and entered the women's apartments. An extraordinary pregnancy occurred. A dragon was the symbol of the emperor; it appeared on the Chinese flag; it represents the essence of yang, the male element. The scholars of the Chou dynasty who collected dragon lore were impressed by its importance but were vague in their interpretations. A Sung emperor in 1110 A.D. divided all dragons into five families: Blue Spirit Dragons, very compassionate kings; Red Spirit Dragons, kings of lakes; Yellow Spirit Dragons, kings who receive vows favorably; White Spirit Dragons, virtuous pure kings; Black Spirit Dragons, kings of mysterious lakes. Another classification: Spirit Dragons are those which rise to Heaven; Earthly Dragons are those hidden in the earth who protect treasure. A number of other classifications are known. Dragons are associated with pools. Carp may be dragons in disguise. Chinese dragon lore has been modified by the Hindu lore of nagas, rakshas, etc. [RDJ]

dragon-fight or dragon-slaying theme It was inevitable that the concept of the dragon should beget stories

of the slayer of the dragon. Such stories are numerous and widespread. Best known is the dragon sacrifice story known all over the world. The central episode deals with a youth who, when he discovers a maiden (or princess) about to be sacrificed to a dragon, kills the monster, cuts off its heads (usually seven), extracts the tongues, and goes his way, telling the girl that he would see the world before marrying her. He returns (often after seven years) to find the princess about to be married to an imposter who claims that he is the one who killed the dragon. The hero shows up the imposter, proves his own identity by producing the tongues and matching them up with the proper heads, and so marries the princess.

Allied to this story, or to the concept behind it, are the numerous dragon-slayer stories with local heroes as protagonists, heroes usually famous in other legends and myths. It would seem that the slaying of the dragon has been added to their stock of exploits to enhance their stature as heroes. Some of the most famous of these dragon-slayers are: Perseus, Marduk, Hercules, Apollo, Siegfried, St. Michael, St. George, Beowulf, Arthur, and Tristan. See BEAR'S EAR; BEAR'S SON; DRAGON. [MEL]

dragonfly A predatory insect (order *Odonata*) having a slender body, and four finely veined wings, huge eyes, and strong jaws. It feeds on flies and mosquitoes, and for this reason is sometimes called a mosquito hawk. Dragonflies are said to have been sent by Satan to cause mischief in the world. They are often called Devil's-darning-needles. Children are told that if they tell lies the Devil's-darning-needle will sew up their mouths; it is even likely to sew up nose and ears and go right on through the head. It will also sew up the mouths of scolding women and cursing men, and has the whimsical habit of sewing together the toes of anyone it finds sleeping uncovered. It is said that dragonflies can tell good children from bad: when a good boy goes fishing, the dragonfly will settle on the bank of the stream where he is apt to find the best luck. But if it lights on the fishing-pole, the fish will not bite. It is very bad luck to kill one. That dragonflies can sting is a fairly widespread misconception. Dragonflies are sometimes called "snake feeders" and "snake doctors" from the quite general belief that they feed and minister to snakes. In the southern United States the "snake doctor" is even able to revive a dead snake. [CPS]

Among Zuñi Indians the dragonfly is regarded as possessing supernatural powers and it is tabu to kill one. The Somaikoli (Dragonfly) Society of Zuñi cures sore eyes, convulsions, and cramps. The kachina masks have small eyes, and it is dangerous for a pregnant woman to look at one, lest her child have sore eyes. The Zuñi association of awl and moccasin-making with Dragonfly kachina is suggestive of the general sewing superstition connected with the dragonfly.

dragon's blood The blood of a dragon, when obtainable, has many marvelous properties. A bath of dragon's blood restores the petrified to life. Siegfried was made invulnerable by bathing in dragon's blood. Eating a dragon's heart, or drinking its heart-blood, bestows immeasurable courage on the drinker, or else enables him to understand animal languages. In a Danish folktale (Type 305) only the blood from a dragon's heart

can cure a certain king (D1500.1.9.3). The hero obtains the blood, overcomes an imposter, and is rewarded by marrying the king's daughter. See BLOOD; DRACENA.

Draupadī In Hindu mythology, the wife of the five Pāṇdu princes. At the svayamvara, marriage by choice, at which suitors vied with each other, Arjuna outshone the others in archery and received the garland from Draupadī. When the brothers returned home, however, their mother told them to share their acquisition, so Draupadī became their common wife, spending two days at a time in the house of each.

When the oldest brother, Yudhishtira, gambled with his cousins the Kauravas, at Hastināpura, he lost his kingdom, the freedom of the brothers, and that of their wife. She was mistreated by the Kauravas, Duryodhana and Duḥśāsana, the latter tearing off her clothes. Krishna, however, restored the clothes as rapidly as they were torn off. The enraged brothers were restrained by Yudhishtira, but Bhīma vowed that he would drink the blood of Duḥśāsana and smash the thigh of Duryodhana, which vows he finally fulfilled. The Pāṇdus and Draupadī were exiled for 12 years. The 13th year was spent incognito in the service of the king of Virāṭa, where Draupadī's beauty attracted the queen's brother, Kichaka. Bhīma, aroused by Draupadī, fought Kichaka and so mangled him that his bones and flesh were rolled into a ball. The murder was attributed to the Gandharvas who were believed to guard Draupadī and she was condemned to death, but was rescued by Bhīma.

dream books Popular books which interpret all sorts of dreams. A dream treatise published in 1601, *A Treatise of the Interpretation of Sundry Dreams*, may have been a forerunner of various modern dream books much sought after by youngsters, adolescents, and others anxious to know the meaning of their dreams. One extract from its pages reads, "The sick person to dream that he married a maiden, signifieth death to ensue. But good it is unto him which beginneth a new business, for that it shall come into a good purpose." Other items are in the same formal language. The prophecies in modern dream books are quite otherwise—short and snappy: Dream of a cat—bad luck; dream of a neighbor—warning of gossip. [CPS]

dreams Among many peoples, dreams, the mysterious adventures of the soul during sleep, are looked upon as communion with the spirits, both the spirits of the dead and the wandering spirits of other men and women. Hence occurrences in dreams are portentous, for they indicate the will of the powerful dead and may therefore be used to foretell the future. And, since dreams are often not logical in their development, certain standards of interpretation must be placed upon the symbolism of the dream, not only by Freud and his followers, but by the dream interpreters of more primitive civilizations, the shamans and witch doctors, the old wives and the soothsayers. Losing a tooth means a death in the family; the seven fat and the seven lean kine mean seven years of plenty and seven of famine; the river flowing from a king's daughter causes the king to desire his grandson's (Cyrus') death. See DREAM BOOKS; GUARDIAN SPIRITS; INCUBUS; MYSTERIOUS, HOLY, AND POWERFUL; NIGHTMARE; SUCCUBUS.

 A basic theme which appears to spread over all Middle America is that dreams foretell the future, that they are among the most reliable of omens. Impending death or misfortune is the most common sign. To cite a few examples, they are presaged by dreams of meat in abundance, dreams of water or drowning, dreams of fire burning one's body, dreams of lizards and serpents, dreams of being married, dreams of the loss of a hat or other personal property, or of the loss of a tooth. Aside from the content of a dream the mere act of dreaming may be dangerous, since many peoples believe the soul leaves the body during this period and wanders about. If something happens to the soul, the sleeper may not awaken. Conversely, sleepers often are not rudely awakened, for fear they may be dreaming and their souls will not have time to return. See DREAM SOUL; SOUL LOSS. [CMF]

dream soul One of the multiple souls of man: a West African Negro concept, surviving also in the New World. In Dahomey men have four souls, of varying quality, importance, and function; women and children have only three. Among the Ewe and Tshi-speaking peoples of West Africa the dream soul sleeps while a man is awake; when the man sleeps it leaves his body, via the dream, and goes forth to associate with the dream souls of others. As the man wakes, the dream soul returns. The great danger is dream-interruption or sudden awakening, lest the dream soul not have time to return. If it gets shut out the man will sicken, and unless it can be recovered, he will die. Only the sorcerer or witch-doctor knows how to find a lost dream soul or conjure it back into a man's body.

dream time The mythological past of Australian mythology: variously termed by the various tribes. See ALCHERA; AUSTRALIAN ABORIGINAL MYTHOLOGY.

drilbu A Tibetan prayer-bell rung by the lāmas to attract the attention of good spirits and to drive off evil ones.

drinking the moon A folktale motif (J1791.1; Type 1335) in which a numskull sees a cow drinking from a pool in which the moon is reflected. A big cloud drifts across the moon and blots out the reflection. The man, now seeing only darkness in the pool, believes the cow has swallowed the moon, and splits her open in order to save it. This is a very ancient tale, belonging to the great body of noodle stories popular all over the world. One of the most famous uses of the motif is known through an ancient Spanish writer who tells how a group of town worthies once imprisoned an ass for drinking the moon. Observers, who saw the moon in the water disappear when a huge cloud obliterated its reflection, were aghast at the idea of their town having no moon. And the ass was condemned to be cut open that the moon might be restored.

drolls or drolleries Humorous stories of semisophisticated folk type, the humor growing largely out of the antics of dim-witted characters or grotesque and exaggerated situations. Unlike the fable they point no moral; unlike the fabliaux they are seldom satiric or coarse. They resemble the tall tale in humor and exaggeration, but in form are usually shorter, with focus on a single situation, and the main character in the droll story is the butt of the humor. They are

humorously odd, prankish, farcical. Some of the best known in English are: *Mr. Vinegar*, *The History of Tom Thumb*, *The Three Sillies*, *The Wise Fools of Gotham*. See ÆSOP'S FABLES; NOODLES. [MEL]

druid One of a class of priests, teachers, diviners, and magicians of ancient Celtic (perhaps pre-Celtic) religion. They possessed all supernatural and human wisdom. They were physicians, historians, mathematicians, astronomers. Their rank was next to the king, but their decisions were final in all matters. Their enormous learning was never written down and the mysteries of their cult remain mysteries. They functioned at all rituals of naming, burial, and sacrifice. Old Irish texts mention the druids in connection with the terrible human sacrifices associated with Beltane and Cromm Crúac and also Tara.

They could cause illness, sleep, or death, raise storms and mists, and draw the *airbe druad*, druids' hedge or fence, around an army (by simultaneous incantation and circumambulation) which could not be crossed. As healers they are associated especially with mistletoe and the ritual of gathering it. With the persecution and extinction of the druids, the mantle of druid magic fell upon and enhanced the glamour of the Celtic saints. See ACORN; FAET FIADA; MISTLETOE; OAK.

druj (Persian *drauga*) In the Avesta, a female spirit of deceit and treachery; one of a group of demons created by Angra Mainyu to counteract the good created by Ahura Mazda. The druī is the opponent of the Amesha Spenta, Asha Vahishta. In later belief, the term was applied to many demons including the daēvas, kavi, yātus, and the pairikās. Angra Mainyu is also commonly known as Druj, or Deception.

druj Nasu or Nasu In Zoroastrianism, the corpse-demon or spirit of contamination; the best-known of the druīes. Druj Nasu, in the shape of a fly, takes possession of dead bodies and spreads their contagion. It can be expelled from bodies only by means of the gaze of a dog (sagdid). It is removed from those who have contact with the dead by means of the Barashnūm ceremony of purification.

drum The most widespread, sacred, and ritually significant of all musical instruments: a hollow frame or vessel with one or two openings covered by a stretched skin and sounded by beating with the hands or with sticks; also, the slit-drum (a log hollowed through a narrow groove and stamped, rammed or beaten with a stick), and certain other percussion instruments lacking the skin head, such as the water drum and the stamped pit. Drums date from neolithic times and have served all over the world for accompaniment to religious ceremonies, dancing, singing, marching, and communal work, for the exorcism of evil spirits and expulsion of scapegoats and evil-doers, for divination, for the induction of a state of possession suitable for communication with the gods and supernatural forces, as a means of signaling, and especially as a fertility charm. Their absence in a given area, as among some Indian tribes of modern Brazil, the early Greeks and European peoples, is the oddity rather than the rule. As a matter of historical record, works of art in Mesopotamia dating from 3000 B.C. show a wide range of drums in use, and sculptured reliefs of India show their importance there at least 2000 years ago.

The origin of the instrument is unknown, though various cultures have legends of drum creation. The Fjort story credits the invention to a bird, Nchonzonkila, which beat the ground with its drum-shaped tail. Even Nzambi, the Earth Mother, was not allowed to deprive the creator of its ownership. Many Pacific and South American peoples believe that the slit-drum was the invention of a water divinity, whose functions it serves. Whatever the origin, a particular type of frame drum probably spread over Asia and Europe from the Near East, and the slit-drum of many South American tribes extending to its northernmost use in California is of the Pacific type.

The rounded, hollow shape, just as it does in many household vessels, earth pits, etc., carries to the mind of primitive man a female connotation, hence, cohabitation, fertility, water, rain, grain, moon—all closely linked ideas. The original shape was probably cylindrical, the form of a log, and the original material, wood, for these were the earliest manifestations of man's work. In this shape, the slit-drum of Pacific and American cultures, with its hollow body and narrow slit rammed with a pole, is completely mimetic of the sex act. Bulging barrel, kettle, cup, bowl, and goblet shapes, now executed in wood or metal, probably followed the introduction of pottery drums, which evolved in very early times and strengthened the female symbolism of shape, material, and use. Archaic barrel drums of Japan and China were filled with rice or rice hulls, and in other parts of Asia, as well as among North American Ojibwas and Crees, grain-filled drums were used.

The meanings and the sex applications become enormously complicated with acculturation and the multiplication of types of drums, beating instruments, and uses. For example, small frame drums with the skin stretched on a shallow hoop have been almost exclusively the instruments of women in Semitic lands, where they accompany singing and dancing and rites of the moon. Greek and Roman followers of the cults of Dionysus and Cybele used them, as did Egyptian dancing girls of the 18th century B.C. Yet the Egyptian god Bes, attendant at childbirths, is sometimes shown playing this instrument. Furthermore, this drum closely resembles the shaman's drum widespread in Asia. It is differentiated sharply in that, like women's drums generally, it is played with the bare hands, while the shaman's drum is struck with a stick, horn, or bone.

The whole problem of the drumstick has its own symbolism. Probably the most archaic types of drums were all beaten with the bare hands, and many continue to be so played, by both men and women. The use of a stick or tubular implement, which is symbolic of the phallus, contributes the fertilizing agent to the conception of the female instrument, and is consistently reserved for men in most societies. A Koryak rain-making legend tells of attaching a woman's vulva to the frame of a drum and beating with a penis for the stick. East African coronation drums must be beaten only with a human tibia, a phallic symbol. (Today we still refer to the leg bones of fowl as drumsticks.) The large hanging drum of Japan, *tsuri daiko*, is played with two leather-knobbed sticks, the right designated as male, the left, female.

With this double implication of fertility, therefore, the tabus and restrictions on the use of drums vary considerably from place to place. Chaco Indians use their drums, as they do rattles, to help girls through their first menstrual period and to speed the ripening of algarroba pods. In some African tribes, drumming marks the rites of circumcision. In southeastern Asia, they are beaten for the funerals of men only. The entire usefulness of a drum may be destroyed among certain Pacific island peoples if a woman sees it in the process of construction, but in the New Hebrides women play the slit-drum, which is sounded at the rising of the new moon. The Wahinda of East Africa consider it courting death for men to look at a drum. They will carry it only at night, and even the sultan is safe from the danger of the sight of it only at the time of the new moon.

As against the sexual connotation of the drum in primitive usage, Origen, the early Christian Church father of Alexandria, considered the tympanon, drum of his period, a symbol of the destruction of lust and the great Eastern civilizations extend the symbolism to more abstract concepts. Śiva, in his dancing manifestation, has the attribute of a small hourglass-shaped drum which stands for sound, communication, revelation, incantation, and magic. The Chinese system of cosmic coordination matches drums with north, winter, water, and skin.

The making of drums involves numerous magical practices and beliefs. Lapp drums are made of wood selected for the favorable direction of the grain. The Melanesian drum-makers climb the tree selected for the body of the drum and complete the whole drum before descending. The Babylonian *lilis*, worshipped and played in lamentation for the darkness of the moon, was covered with the hide of a special black bull, sacrificed in the temple of Ea, god of music and wisdom. The great honor of his fate was carefully explained in incantations sung to the bull before his ritual slaying.

The earliest membranes for drums were probably the skins of fish, snakes, and lizards (water animals), and only later, possibly when drumsticks began to be used, were game animals, cattle, sheep, and goats used. For the huge log war drums of Africa, some tribes consider skins of wild beasts most suitable. Human skin flayed from their captives or slain enemies was sometimes used for the ancient Peruvian *huancar*, the belief being that the use of a part of his body gave possession of the enemy's strength and vigor and would strike terror to his companions.

Attaching the skin to the frame with nails had a special significance, both for the barrel drums of the Far East and the *huehuatl* of Aztec Mexico, nails bearing a protective virtue then, as today, in many cultures. Also the inclusion of various objects inside the drum has been thought to add to its powers. Small bits of crystal or obsidian from a volcano are used in the shaman's drum of the Araucanians for curing effect, with amulets, skulls, shells, etc., being used elsewhere. Therefore it can be dangerous to take a casual glance into a drum.

The elaborate formula observed in making the trio of Haitian vodun drums of today is characteristic of such activities. The maker, before cutting the selected

tree, offers invocations, lights a candle, and sprinkles cornmeal around the roots. He breaks an egg against the trunk, rubs it well over the bark, and offers a libation of rum. Rum is also poured into the hollow of the drum after it is scraped out. It is also poured at the threshold of his house and out toward his cornfield. The first peg hole for attaching the skin is marked and called the mother (*manman*), and there the first peg must be driven in, the first attachment of the skin must be made, the lacing first knotted, and the tuning begun. Before any skins are put on, all three drums must be aligned in the sun, rum is poured before each, and the maker, calling on the Father, the Son, and the Holy Ghost, lights a candle on each mother peg. The drums are not played until they have been baptized, for which they are dressed in apronlike christening garments by a set of godparents, with prayers and offerings of meal and pouring of water.

The largest of these drums is called the *manman*, the next the *seconde*, and the smallest *bula* or *bebe*, and they are named and endowed with a soul or spirit, the *huntör*. This naming ceremony is paralleled in Sumerian custom thousands of years B.C., in which the balag drum of the god Ea received a proper name and dates were counted from the time of its dedication.

The distinction of size in this vodun practice is paralleled elsewhere. In the New Hebrides, the largest of a group of slit-drums is also called the mother. It is common in primitive societies for the largest drums to have the greatest magical power and to be dedicated to the most important divinities, while smaller ones take on lesser spirits, serve for more ordinary utilitarian purposes, or even descend in time to the level of toys. The two largest drums of the Shango cult of the West Indies speak to St. Michael (Catholic identification of Ogun) and John the Baptist (Shango). Sometimes the original or older type of drum of an area retains its function for solemn ceremonies, while the later importations serve for lighter, secular entertainment. Indians of the Sierra Nevada of South America do their religious dances to a large, single-headed wooden drum, and use a double-headed European type of instrument for secular dancing. The Miskito tribe of the Caribbean lowlands play a goblet-shaped drum for funerals and memorial rites, and use the European type for signaling and less important ceremonies.

Special dress for drums is not unique in Haiti either. Among others, the *huehueltl*, still used by the Huichols of Mexico, has a holiday garb for festivals; the *sahib-nahabat* (master drum) of India, a pair of huge silver kettledrums mounted on an elephant for processions, wears a long drapery; the Japanese *da daiko*, a spool-shaped instrument used for great occasions in the bugaku orchestra, is enthroned on a tasseled and draped platform.

More integral forms of decoration of drums include carving, painting, and the attachment of various objects to the frame, nearly always with the purpose of furthering the powers of the instrument. Some of the most ancient log drums, which stood upright or aslant on the ground for playing, were given feet or toothlike appendages to be driven into the earth. The foot, a phallic symbol in itself, was often carved in Malaya and among the African Bakunda (a Bantu tribe) to resemble human legs and feet. In other areas

the foot was conventionalized into a decorative stand. Many slit-drums, such as the Aztec *teponaxtli*, represent complete human or animal bodies—pumas, jaguars, alligators—with the powers of these creatures. Some, as among the Uitoto of Colombia, have a woman's head at one end, and that of an alligator (creature of water) at the other. The dragon and the phoenix, each with its own life associations, appear often on Japanese and Chinese drums, and tongues of flame may be carved above the frame. The Assiniboin of North America used the drum itself on a painted drumhead, and surrounded it by symbols of the rainbow, clouds, and sunshine, while on the other side appeared a star with colors and symbols for night, twilight, and sunshine.

Signs and figures painted with blood or alder-bark juice on the head of a type of Lapp drum were used for divination. A collection of small rings on the head were kept in motion as the drum was beaten, and according to the signs on which they came to rest the shaman made predictions.

The use of rattles or jingles attached to the drum adds to the special powers of those instruments.

The sound of a drum, and certain drum rhythms have their own meanings. West Indian Negroes believe that the drum will remain voiceless until an invocation calls the spirit into it, and each supernatural being of the vodun group, as in the parent African tradition, appears in answer to his own particular drum beat. The voice of the drum is the speech of the god. Chaco Indians distinguish certain traditional rhythms as "the beat of the jaguar," "the beat of the vulture," etc., and the Sumerian *balag*, mentioned above, spoke with "the bull's voice," and like the Lapp drum, was used for divination. When drums are used for rain-making, the sound is thought of as thunder.

Sometimes the drum is used to modify the human voice, give it a non-human, ventriloquistic sound more suitable to incantation. The Chukchee shamans of northeastern Siberia speak into the drum for this effect, and in the Yaqui Coyote dance of Mexico, an old man drummer sings into a hole in the side of his drum as he beats with muffled stick.

Actual language can be conveyed by drums. The Ashanti and other West African tribes, as well as some American and Oceanic peoples, by the use of definite intervals and rhythms in beating their log drums, can so imitate the speech melody of their languages as to convey messages in words and be understood over long distances. This telegraphic use of drums probably antedates more conventionalized signals for fire, assembly, flood, and the transmission of military orders, just as the huge slit-drums of primitive tribes are earlier than the small portable type now used in Malaya by watchmen.

Many methods are used for tuning and changing the timbre of drums, and for both musical and magic purposes the different tones have been desired. Islamic music distinguishes carefully between muffled beats, achieved by wetting the skin, and clear beats, struck from a heated skin. The Siberian shaman may achieve the same effects by heating his drumhead at his fire or moistening it with urine. Tightening or loosening the lacings of the skin may produce difference of tone. An African side-drum was called "the hypocrite"

because of the many different tones that could be produced by pressure of the arm under which it was held, and its sound is said to have survived in the Negro humming called "moaning."

When the hand is the striking instrument, the tone may be changed by using the flat of the hand, the fingers, or the base of the thumb. African, West Indian, and Asiatic drummers produce intricate variations by the manipulations of their flying hands and fingers.

Some drums are sounded not by beating at all but by friction. Resin or grit is used on the fingers and rubbed over the head, or a vibrating cord or stick on the membrane produces a continuous rumbling sound. This, in a different way from the ramming or beating of drums, also symbolizes cohabitation and is used at initiation ceremonies of both boys and girls in Togoland. Europe also has its friction drums, now chiefly toys, but probably dating back to fertility ceremonies.

One tuning method for drumheads, the application of a paste to the center of the skin, originated in sacrifices and offerings to the drum. Though the primary significance of this practice is now largely forgotten and only the achievement of two different tones from the areas with and without the paste is intended, the custom originated in smearing the blood of enemies or sacrificial animals on war drums to bring strength in battle, good fortune to the armies. Later, any red-colored substance served the same purpose, and still later the offerings changed to agricultural symbols of abundance, such as rice, meal, saffron, etc. In India some barrel drums are treated with a different paste for each head, so that greater tonal range is obtained. However, Chamar women of southern India paint five cinnabar spots on the drumhead before a ceremony for Mother Earth, and the Haitian vodun drums are still treated with alcohol and flour before a service, not so much for the tonal changes as an offering to the spirit of the drum.

A part of the Mexican Coyote dance previously mentioned includes the offering of meat to the drum. Dancers carry it in their teeth from the plates where it is laid out to the drum. An allotment of meal was regularly provided for the Sumerian drum *a-lal*; the Aztec slit-drum was also the recipient of sacrifices and offerings; and novices of the cult of Attis in Rome ate a sacramental meal from a drum in a secret reenacting of the death and resurrection of the god.

Certain drums are assigned special houses, guardians, and properties. The sacred jar drums (*bajbín*) of the Chamulas and Tzotzils of Mexico are brought out only at carnival times, in the interim being cared for by two attendants. Every week or two incense is burned before the drums, which rest on a table in the house of one of the guardians. The day before a carnival they are given a drink of brandy, are washed with hot water and camomile, and fitted with new lacings, while one attendant waves a banner in the four sacred directions, the other, in ceremonial headdress dances through the washing, and fireworks are set off. Only after such attentions can the drums be carried to the church door for the carnival dancing.

The African Bayankole maintain a dome-shaped drum house for their two greatest drums, which are served by a woman known as "the wife of the drums."

Her duties are to attend to the milk and butter-making from the herd of cattle owned by the drums, to offer milk to the drums daily, and to keep house for them. Another woman is charged with keeping the fire in the drum house to the temperature preferred by the drums. At the birth of a son or on any occasion for rejoicing, the prominent men of the tribe bring cattle or beer as offerings to the drums. No one may kill one of the dedicated herd except on order of the chief, and the meat is presented to the drums before it can be eaten by the guardians. Hides from the cattle are used to repair the drums, and the butter made from their milk is smeared on the drumheads.

So powerful and holy are the drums in East African society that the drumyard provides sanctuary for criminals and other fugitives as the church did in European tradition. (See *ASYLUM*.)

In contrast to this idea, drums have also served as the instrument of execution, expulsion, and disgrace. Thieves have been drummed to their hanging; the roll of the military drum in European armies beats a cheat or a disgraced officer out of camp and out of the regiment; and drumfire prefaces the volley of the firing squad when a spy or traitor stands with his back to the wall. In China, human scapegoats, selected as the embodiment of pestilence, have been driven from their villages to the beating of drums that the community might be restored to health. In Burma, cholera epidemics have been broken up by creating a din to frighten away the disease demons, drums adding their sound to the uproar. And on the island of Boru, day-long beating of drums and gongs preceded the departure of a boatload of evil spirits driven out to sea with all the troubles of the community.

Singing, dancing, and drums are almost inseparable in folk customs. Some American Indians have no concept of song without the undercurrent of the drum. Street singers in Egypt today are accompanied only by the drums they carry. The Ethiopian chant is set to drums and hand-clapping. The wedding songs of modern Jews of Yemen are sung to drumming and dancing, much as Jewish singing was done before the Temple at Jerusalem was built. Singhalese, Hausa, and Eskimo—all have their drum songs.

Among the dances dependent on drum rhythm are the healing dances of shamans in Sumatra, in South America, and in Siberia; the whirling dance of dervishes in Cairo; the convulsive dancing of vodun and Shango, and their distant connections in West Africa; the classical bugaku dances and Nō performances in Japan; the prancing of the Morris dancers in England, with their characteristic pipe and tabor accompaniment; the frenzied tarantella of Italy, with its tambourines; the sword dances of medieval Europe, and the jazz of America. Negro slaves, transported from Africa to America without any of the ceremonial objects basic to their lives, improvised drums of barrels, nail kegs, and boxes slapped with the bare hands in order to preserve some vestige of their background. When forbidden to drum, as they were in Louisiana in 1740, they pounded the wooden floors of their shacks with their feet in the intricate drummed and shuffled rhythms essential to their religious ceremonies.

The greatest use of drums for purely musical purposes perhaps is Asiatic. There the drums assume a

melodic as well as rhythmic function in the orchestra in a manner not known in the West until the modern experimental art music of the 1920's. In Burma, where the chief outlet for orchestras is the accompaniment of the *pwe* shadow plays, a full drum chime is characteristic. It consists of as many as twenty-four tuned drums, arranged in a circle around the player who plays with his hands in an extraordinary display of virtuosity. The Javanese and Balinese gamelans also feature drums to guide the changing tempi for the choir of gong instruments, and in India the drums frequently outnumber all the other instruments in an orchestra or band.

On the strictly practical level of everyday use, drums have served to set the pace for communal work groups such as the combite and gayap, and for the strokes of rowers in Egypt. American slang holds an indication of the application of showmanship to business in the term "drummer" for salesman, and the phrase "drumming up business." They bring to mind the picture of the ballyhoo of the medicine-show, the sales-talk from the tailboard of a wagon, and the straggling parade behind one bass drum painted boldly with the name of a nostrum.

Finally, drums have boomed as a battle rally on every continent, and have stood as the talisman of victory and the symbol of royal and military might in many cultures, with the attendant sacrificial and signaling meanings previously discussed. The traditions surrounding the military drums of European and American armies are of comparatively modern origin. The importance of the military drum grew up as the foot-soldier superseded the armored and mounted knight as a tactical element in war. Then the drum and the cross-fife came into their own to set the time for the marching feet of the mercenaries. Kettledrums (English *naker*, French *nacaire*), introduced from Arab countries after the Crusades, joined the armies, and kettle-drummers of the 15th and 16th centuries were trained to perform with affected and exaggerated pomp and gesture, still seen in the antics of present-day drum majors and majorettes. The much-admired clash and clang of Turkish Janizary music set the style for European military bands, and Swiss soldiers marched to the roar of some of the largest drums ever made, copied from Near Eastern models. The drum was paired with fife or bugle as the visual and aural motif of war, of military glitter and discipline. Swift trials on the battlefield were held around a great drum serving as table or desk for the judge, and the term "drum-head court-martial" spoke of summary justice. Heroic drummer-boys, as the youngest lads officially attached to an army, provided appealing figures for tales of defeat turned to victory. While mechanized warfare, vehicle-transported troops, and electrical and radio communication have taken from the drums their serious function in war, their appearance in parades still brings out the motor impulses of marchers and spectators that are the secret of the power of the drums in all societies, perhaps an extension of the same motor impulses displayed in the drumming activities of animals.

THERESA C. BRAKELEY

Drunken Sailor A short-haul chantey of late vintage, called the "runaway song," because the crew ran down

the deck with the rope as they sang in chorus, hauling a light sail aloft. This could have been done only with the greater deck space of the large ships in the late days of sail. The song details the measures used on ships for sobering up a drunken sailor "early in the morning." It is also called *Early in the Morning*, pronounced with a long i sound for early (earl-eye).

Dryad or Hamadryad (plural *Dryads* or *Dryades*) In Greek mythology, a nymph inhabiting a tree, properly an oak tree, who died when the tree died, or, less commonly, moved to another tree. Compare NYMPHS.

drying the candle A European folktale motif (J2122) occurring in the vast cycle of stories known as numskull or noodle tales, in which a candle, having gotten wet, is placed on the stove to dry, with the natural result (unforeseen by the numskull).

dry rod blossoms A well-known European motif (F791.1; Type 756): a dry branch (rod, staff) puts forth flowers, green leaves, or fruit in token of the forgiveness of a sinner, the innocence of someone accused (E131.0.5.1), or as some other sign. Aaron's rod blossomed as a sign of the selection of Aaron and his descendants for the priesthood. Tannhäuser's dry staff blossomed to disprove the judgment that he could no more be forgiven than the dry staff could bloom. Joseph won the Virgin Mary in a suitor-contest in which the reward was given to the one whose staff bloomed (H331.3). The most widespread folktale using the motif, Type 756B (probably of medieval western European origin, but known in some 209 versions in Ireland, Lithuania, Poland, Russia, Siberia, Germany, Bohemia, Spain), tells of a boy sold to the Devil. He starts out for Hell to retrieve the contract, is guided by a robber, in Hell sees the red-hot chair reserved for his guide, and describes it to him. The robber does penance till his dry staff blossoms or bears fruit (Q521.1) in token of his forgiveness. "When a dry branch sprouts" is one of the by-words for the never concept (Z61).

dual creators Twin or elder and younger brother creators: a concept found in many mythologies of the world. The Hindu Āsṛins are probably the most ancient of the world's mythological brother-hero gods. The two-fold creator-transformer-culture-hero is common to all American Indian mythologies. One of the pair is good; one is bad. One is benevolent and constructive; the other either wilfully destroys or stupidly hinders the creative acts of the other, or sometimes clumsily imitates him, bringing forth, however, usually grotesqueries or mistakes. See DIOSCURI; TWINS.

Dúc Bà, Dúc Thánh Bà, or Bà-Dứ'c-Chúa In Annamese belief, the Three Mothers who represent the Spirit of the Forests, the Spirit of the Air, and the Spirit of the Waters. In Tonkinese pagodas the principal room contains the statues of Buddhas, but the second room contains statues of these spirits and their servant tigers, the quan. In legend the Dúc Bà were assigned, one to each region, by the Emperor of Jade, Ngọc Hoàng. The Dúc Bà are worshipped locally as the spirits of feminine trees and in the pagodas on the first and fifteenth of each month, chiefly by women.

duck dance A North American Indian mimetic dance portraying realistically or symbolically the duck, usually to effect their multiplication. The Kutchin wave their arms realistically, the Iroquois merely cry "quack,

quack." The *twé'ónoq*, a double circle, has become a social dance, with women passing under the arches formed by the men's joined arms, and then caught between couples. The duck dance, or *waima*, forms part of the *hesi* cycle of the Patwin and Maidu Indians of California. Men calling "hat-hat" are joined by impersonations of the spirits of plenty. A completely secular boogie-woogie step, the duck walk, suggests the waddling gait in a curious hips-displacement. [GPK]

bDud A Tibetan demon, usually male, black in color, and the malignant ghost of a persecutor of Lāmaism. The bDud is one of a large group of demons which belong to the eight classes of *yul-lha* or indigenous country gods. It can only be appeased by the sacrifice of a pig. In the *Kesar Saga* the bDud possesses great treasure, a girl kept in an iron cage, and lives in a castle in the north near a well of milk and nectar.

Dudugera In a Wagawaga (New Guinea) folktale, the leg-child who became the sun; son of a woman and a fish. A Wagawaga woman, who was weeding her garden near the beach, saw a large fish playing in the surf. She went into the sea and played with the fish each day and, as they played, the fish nuzzled her thigh. Finally her thigh began to swell and ache. When her father cut into it a baby boy burst forth.

Dudugera, as his mother called him, grew up in the village and played with the other boys until one day, while they were throwing spears at trees, he threw his at his companions. Frightened that Dudugera might be punished by the villagers, his mother decided to send him back to his father. They went down to the beach; the big fish came swimming up and carried the child off in his mouth. Before he left, Dudugera told his mother that she and her relatives should move their gardens into the shadow of a great overhanging rock, for he would climb via a pandanus into the sky and all the people, trees, and plants would die.

As Dudugera had prophesied, everything dried up because of the heat from the sun which never ceased during each day to send its merciless heat down to the earth. Finally, Dudugera's mother threw lime into the face of the sun as it came up one morning. Since then clouds appear to relieve the heat and men are able to live.

Dug-from-Ground Title and hero of a California Indian tale of a woman who digs up a root which turns into a child. When grown the child goes on adventures; he climbs a stretching tree and ascends to the sky, where he kills a deer. Other of the child's adventures are in the form of tests: shinny contest, eating test, heat test, shooting contest, etc. [EWV]

dukun An Indonesian (Menangkabau, Sumatra) medium whose duties include soul-catching, the practice of magic, and healing by means of simple remedies. The dukun is either male or female and is respected because of his knowledge of curing and of magic formulas which are chiefly Moslem in origin. He, like the Dayong, frequently cures by bringing back the soul when it wanders.

dulcimer A stringed instrument of the zither family, having a varying number of strings and either struck with two sticks or hammers or plucked. Of Near Eastern

origin, the instrument was carried to Europe through Spain by Arabs, who also passed it along to Jews in Africa; to eastern Europe through Turkey; and later to the Far East. The *cimbalon* of Hungarian Gipsies is the chief remainder in Europe. In the mountains of the southern United States, a three-stringed home-made zither is called a dulcimer. It is plucked or brushed with a turkey feather or goose quill, and a stick or reed called the "noter" is moved across the frets to make the melody. It is used to accompany the singing of lonesome tunes, lullabies, ballads, and hymns.

dumi A type of Ukrainian folksong and ballad, usually with couplet rime in lines of free length. The subject-matter is comparatively modern history, topical to some extent; the style is prosaic, wordy and pedestrian in many cases; the supernatural does not occur. The accompanying music is played on the twenty-stringed lute, the kobza. See BALLAD.

dún A fortified enclosure within which the ancient Irish kings and nobles dwelt. It was encircled by two or more earthen walls or mounds called ráth. Within the enclosure were a number of wooden buildings: the king's or chief's house, the houses of his chiefs, the feast hall, the guest lodges, etc. Before the dún or ráth was the *faité*, or lawn, a wide green field used to practice feats, or in some cases perhaps used for pasture. Emain Macha, the residence of Conchobar, in Ulster, and Ráth Cruachan, the residence of Medb and Ailill in Connacht, were typical of these ancient strongholds. The remains of Cuchulain's dún, Dún Delgan, can still be seen today in County Louth, near Dundalk, to which place it gives its name. See RÁTH.

Dund or Dhündh In popular Indian belief, a headless, handless, footless ghost who rides about with his head tied to the pommel of his saddle. At night he calls outside houses to the people within. It is dangerous to answer; anyone who does will die or go mad.

Durgā In Hindu mythology and religion, a malignant form of Devī, the inaccessible, represented as a yellow woman riding a tiger.

Dvalin (1) In Teutonic mythology, the dwarf who invented runes. When Loki cut off the hair of Sif (Thor's wife) as a prank, all the gods were so exasperated with him that he persuaded Dvalin to make a beautiful golden wig to take its place, and also the spear, Gungnir, for Odin, and the ship, Skidbladnir, for Frey, as peace offerings.

(2) In Teutonic mythology, one of the four stags who grazed on the tree Yggdrasil.

dvergar The dwarfs of Scandinavian mythology: formed by the gods from maggots in the flesh of the giant Ymir. Less powerful than the gods, the dvergar were more intelligent than men. They had dark skin, long beards, green eyes, powerful stocky bodies, short legs, and crow's feet. They possessed caps and cloaks to make them invisible at will. They could not come out in the daylight, lest they be turned to stone by the light. They lived underground, where they mined gold and other metals which they fashioned into beautiful jewelry, wonderful swords, and other magical objects. They were fabulously wealthy, and when captured by mortals, would pay large ransoms for their liberty.

Dvīpa or Dwīpa In Hindu mythology, one of the insular continents, usually seven in number, which stretch out from Mount Meru and which are separated by circumambient oceans. They are Jambu, Plaksha, Śālmala, Kuśa, Krauncha, Sāka, Pushkara. In the *Mahābhārata* four Dvīpas are named: Bhadrāśva, Ketumāla, Jambu-dvīpa, and Uttara Kuru. See *LOKĀLOKA*.

dwarf Dwarfs are renowned in European tradition as members of a separate community, usually a kingdom with a king of its own. They were underground supernatural beings; they lived in the mountains, in hills and caves, sometimes in rivers, or near a spring. Their dwellings were described as splendid palaces. A dwarf was full-grown at three years of age and a graybeard at seven. Some of their characteristics are indicated by the names given to them: Little Gray Man, Flat-foot, Goose-foot, etc.

Dwarfs have faces like men, but with wrinkled, leathery skin, wide mouths, thick heads, long beards. They are either flat-footed, goose- or duck-footed, or have their feet on backwards. Hence their gait is uncertain and wobbly. They dress in gray or green and wear little red caps with a long tapering point. By virtue of either the cloak or the cap, they can become invisible. German folktale especially presents them as ugly, or covered with moss, big-headed, or humpbacked, or stooped over, long-bearded and gray-bearded. Sometimes they nod at people and seem eager to tell something. Sometimes they are toads by day and dwarfs by night. In the *Elder Edda* the dwarf Alvis turned to stone at sunrise.

Dwarfs love feasting and dancing, usually at full moon, to light and joyous music. Otherwise they are busy at their forges in the mountains. If clouds and mists are seen over dwarf holes, people say the dwarfs are cooking or forging. They are marvelous smiths and workers in all kinds of metals; their women excel in weaving and spinning. Traditionally the dwarfs taught men to bake, smith, and tailor.

Dwarfs can see into the future and are good weather prophets. They give good advice, and are helpful both in the house and in the field. Although they often tease both children and adults, they also often give them rich presents. In fact any gift from a dwarf is apt to turn to gold in your hand. Thievery is one of their bad habits; so is the kidnapping of women and children. If they plunder the larder, the housewife marks a cross in her dough or strews salt about. For helping in the field, people reward them with little pieces of cake or tidbits placed on the plow. On the whole dwarfs adjust themselves fairly well to the outside world; but if anyone offends them, they take a rude revenge.

There exists a rich and varied folk literature about dwarfs. Perhaps the most famous dwarfs in European folktale are the seven dwarfs in the story of *Snow White* (Grimm #53), whose popularity has been extended through Walt Disney's animated moving picture. *Bibliography*: Hanns Bächtold-Stäubli, *Handwörterbuch des deutschen Aberglaubens*, Berlin & Leipzig, 1927-42; Alexander H. Krappe, "Antipodes," *MLN* 59 (Nov., 1944), pp. 441-47: a discussion of Celtic and Germanic dwarfs as chthonic beings, divine ancestors, and a new interpretation of the word *Antipodes*; Stith Thompson, *Motif-Index of Folk-Literature*, Helsinki, 1935. [GFS]

 A native belief in dwarfs is practically universal among the North American Indians and the Eskimo. Scattered references to dwarfs occur in American Indian myths and tales, but with no great frequency except among the Eskimo. The existence of dwarfs, however, is taken quite for granted. Among such tribes as the Coeur d'Alene of the Plateau, the Tūbatulabal of east-central California, and the Paiute of the Great Basin, dwarfs are described as small supernatural mischief-makers who frighten people, but rarely do real harm. Some live in springs or rivers, others on land. The Cherokees of North Carolina believe there are four kinds of dwarfs; some are good, some evil. To see them causes, or is a sign of, death. The Cayuga, an Iroquois tribe, believe in twin dwarfs, a male and female, who hunt with slings and stones; the neighboring Seneca also believe in dwarfs or "little people." The Shawnee of the Eastern Woodlands, and the Cherokee refer to the Thunders as powerful male dwarfs. Eskimo tales of dwarfs (*JAFL* 51:149) present them as harmless or benevolent land or water creatures who sometimes help hunters. The Kodiak tell of two hunters in a kayak, caught in thick fog, who met another kayak containing two small men. As soon as they took them into their own kayak the fog cleared. They took the little men home and cared for them secretly and forever after had good luck. The Baffin Land Eskimo believe in a dwarf people who live in the sea; human beings have tried, but unsuccessfully, to fish these dwarfs out of the ocean. See AZIZA; BERRIES IN WINTER; DVERGAR. [EWW]

Dyaus In Vedic religion and mythology, the sky god; the elemental supreme spirit of the primitive Aryans, usually mentioned with Mother Earth as Dyāvāprithivī with whom he shares the offerings of soma in the ritual. He was the sky father whose offspring included Ushās, the Aśvins, Agni, Parjanya, Sūrya, the Ādityas, the Maruts, Indra, and the Angirases.

Dyaus was only slightly anthropomorphized: usually represented as a bull who bellowed downward or as a black horse. His worship was little more than the direct adoration of the sky. In his fatherly aspects he resembled Zeus, but differed from him in that he had no sovereignty over other gods or the world. Varuṇa represents this phase of the Aryan sky god and as his importance in Indian mythology increased, that of Dyaus became evanescent. See DYĀVĀPRITHIVĪ; VARUṆA.

Dyāvāprithivī In Vedic mythology, heaven and earth as one deity, regarded as so closely united that they are more frequently invoked together than as Dyaus (sky) and Prithivī (earth).

The primitive Aryan invaders of India believed that the universe included only the earth and sky and compared the two to two bowls turned toward each other. Dyāvāprithivī, as the union of the male and female principles, was regarded as the universal parents of both gods and men. Sometimes the earth and sky are spoken of as having been themselves created. Speculation on the priority of their creation led to the conclusion, in the *Śatapatha Brāhmaṇa*, that the earth was created first.

Dying Californian An American religious ballad, giving in the first person the dying words and wishes of a 'forty-niner. It has been sung as a hymn among various religious groups all over the United States. It was published in Boston by Ditson in 1855.

Dying Cowboy Variant title for *Bury Me Not on the Lone Prairie*.

Dylan In Brythonic mythology, one of the remarkable twins born to Arianrod after her failure to pass the test of virginity imposed on her by Math, son of Mathonwy; twin brother of Llew Llaw Gyffes: interpreted either as a local sea god or equated with the waves of the sea. The *Mabinogion* states that as soon as he was born, Dylan plunged "and swam as well as the best fish, and for this reason he was called Dylan Eil Ton, Son of the Wave." When he was killed by his uncle, Govannon, the smith, the waves rose to avenge him; and over his grave they "make a sullen sound." The voice of the tide when it turns and roars up into the Conway River is called the dying cry of Dylan. Rhys's interpretation of Dylan as darkness and his brother Llew as light makes of the whole a solar myth that is not substantiated. Dylan's death was loudly lamented, not desired, as would be the case if he represented dark and gloomy winter in contrast to Llew as spring and sun.

Dzelarhons A mythical character of the North Pacific Coast Indians of North America. The niece of Githawn, or Salmon-Eater, she came with six canoe-loads of people out of the sea, and was betrothed to Ka'iti, chief of the Grizzlies. Among the Athabaskan-speaking tribes in the Northwest she is also known as Copper Woman or Volcano Woman, and among the Haida groups as Frog Woman, Copper Frog, or Dzelarhons (Barbeau, *Alaska Beckons*). According to Barbeau, the story of Dzelarhons belongs to the migration tale of the Salmon-Eater tribe to America, via the Aleutian Islands. Boas gives Dzilaogans (Djilaguns) as the name of the Haida for their ancestors. [ewv]

Dzōávits A huge ogre of Shoshonean Indian folktale who stole Dove's two children. With the help of Eagle,

Dove rescued the children, and then Eagle gave Dove some tallow from an animal he had killed, also its paunch and some feathers. Dzōávits began to pursue them. They crossed a river via the crane bridge (i.e. Crane stretched out his leg to make a bridge for them to cross it), but Crane delayed Dzōávits by dumping him in the middle of the river. They were helped again by Chickadee, and again by Weasel, who dug an underground passage for them, but delayed Dzōávits by sending him down the wrong hole. When Dzōávits began to catch up again, Dove threw down the tallow Eagle had given her; it became a deep gulch and delayed the ogre a long time. When he drew close again, Dove threw down the paunch; it became a steep cliff which Dzōávits could not climb. The next time Dzōávits was catching up with them, Dove threw down the feathers; they became a thick and covering fog, and the ogre lost track of them for a long time. But at last they heard him behind them again. Badger saved Dove and her children this time. He dug a hole for them to hide in and another hole nearby. When Dzōávits came he asked where Dove was. Badger said "In the hole"; but when Dzōávits wanted to go in after them, Badger turned him into the wrong hole, threw hot rocks in on him, and plugged up the hole. Then Dove and her children could come out and go home. See OBSTACLE FLIGHT.

Džokhk or Džoxk The underworld of Armenian mythology; an abyss beneath the earth, permeated by the dense smoke from innumerable fires. The souls there wear iron shoes and are tormented by the vermin in their mouths. They are tortured by devils who burn them with red-hot iron staffs. The only exit from Džokhk is the bridge Mazē which joins Paradise and Hell. This, however, breaks easily under the weight of sins, drops the souls into the fiery stream beneath, where their torment is renewed.

E

Ea or Enki The god of the waters of Sumerian and Babylonian mythology; one of the supreme triad with Anu and Enlil. Ea was the creator of mankind; the god who gave man his arts, crafts, and sciences; the protector and healer of men. As the god of the deep and of the waters of the earth, Ea was a fructifying god. He was the lord of wisdom, hence the guardian and aid against demons, and was invoked in exorcisms. In these spells, and in the creation myth, Ea principally appears. He later developed into a fish god, half fish, half goat. See ADAPA; NINKI; OANNES.

eać uisge The water horse of Irish folklore, a water spirit usually regarded as malicious towards men: analogous with the kelpie. It is not to be confused with the beautiful lake-dwelling supernatural horses such as Cuchulain captured and trained and which returned into their mountain pool upon receiving mortal wounds during Cuchulain's last fight. Compare NISSE.

Eabani Companion to the Babylonian Gilgamesh.

Eagentci Old-Woman or the Ancient-Bodied; the first mother of Seneca Indian mythology. See ATAENSIC.

Eagle One of the two chiefs of the animal characters in many Central Californian Indian tales, and a prominent character in tales of neighboring Great Basin tribes. Sometimes Eagle is identified with the Thunderbirds. On the North Pacific Coast the Eagle (Na'as) group of the Tlingit was one of the most powerful Tlingit clans. Eagle as an eponymous clan animal is not limited to this area, however. An Eagle dance, in which the bird's motions are simulated, was probably widespread in eastern North America.

Live eagles were shot or trapped and ceremonially killed in California and on the Plains. Eagle feathers and eagle down were widely used by nearly all American Indian tribes for ceremonial costumes, headdresses, and ceremonial objects, such as prayer sticks, pipes, wands, and so forth. [ewv]

eagle As king of birds, the emblem of royalty. The American eagle (genus *Haliæetus*) is the national emblem of the United States.

In Greek mythology the eagle is associated with Zeus and lightning and hence could not be struck by

lightning. For this reason eagle wings were often buried in the growing fields to protect the crop from destruction by storm. In the *Rig-Veda* the sacred soma was brought to man by an eagle. In the Avesta an eagle lives in the mythical all-healing tree. Everywhere the eagle is noted for swiftness, the marvelous height to which it soars, its inaccessible nests, its keenness of vision, and its longevity. Job mentions the eagle on her crag "and her eyes behold afar off" (*Job* xxxix, 29). In Persian legend the simurg sometimes plays the eagle's role, as does the roc in the *Arabian Nights*.

It is bad luck today to kill an eagle among the Samoyeds, the Bosnians, certain North American Indians (especially the Osage), and in Maine. The first Buriat shaman was the son of an eagle and a Buriat woman, and is regarded as especially powerful against evil spells. The Ostyaks not only revere the eagle, but revere even the tree in which an eagle nests. There is an eagle cult among certain Australian peoples, but in New Guinea the people believe that planting bananas in sight of an eagle-hawk will put a blight on the crop.

In folktale, fable, and ballad the eagle plays a prominent role as helpful or warning bird. Eagle was the warning bird in the Pima Indian deluge story. Well known are the fables in which the eagle saves a man's life by upsetting a cup containing poison which he was about to drink, or snatches the hat off a man's head to lure him away from a wall about to fall (B521.2.1). In the *Kalevala* (Runo 7) Väinämöinen was rescued out of the ocean by an eagle who carried him to the borders of Pohjola. In a Chiricahua Apache Indian folktale (Opler, *MAFLS* 37, p. 91) a young boy climbs to an eagle's nest and brings home one of the young eaglets. He is warned against it by the people, but persists in befriending it. It flies by his side wherever he goes, catches rabbits and other game for him. The warning against it reveals the Chiricahua belief that because eagles eat snakes, mere contact with an eagle will cause sickness.

eagle dance A mimetic dance expressive of the eagle's soaring flight. Because of its disappearance beyond the clouds, North American Indians associate the eagle with powers beyond the clouds, particularly with powers governing thunder and rain—hence often he is identified as Thunderbird. Early in the spring in Tesuque, Jemez, and other pueblos, the eagle dance takes place: two dancers, representing male and female, approach and circle in difficult crouching, hopping, and swaying motions. Their extended arms hold wings of large eagle feathers; a feather cap projects over their faces in a yellow beak. In the Comanche eagle dance (*kanani kiyake*) a special dancer imitates the eagle. This goes back to the legend of the young son of a chieftain, who died and was later turned into the first eagle, as answer to his father's prayers to the Creator. The former Iowa eagle dance was equally mimetic, but the dancers carried an eagle-feather fan in their left hands; they were associated with war societies and interpolated boasting tales between dances. The Iroquois eagle dance or *ganegwa'e* also features a feathered fan and includes anecdotes, but it is mimetic only in a crouching hop. Two lines of dancers lunge face to face vibrating a feathered rattle in their right hands and holding a wand in their left. The dance resembles the Midwest

and Plains calumet dance and Cherokee *tsugi'dali*. It invokes tribal prosperity.

Eagle feathers not only stand for martial success in Sioux war-bonnets. As ornaments, in fans or brushes, in Pawnee, Yuchi, Delaware, Iroquois ceremonies, they exert purificatory and invocative power. [GPK]

Eaglehawk and Crow Names of two moieties in several Southern Australian tribes: subject of J. Mathew's theory (in *Eaglehawk and Crow*) that the ancestors of each moiety were of different racial origin. Bunjil (Pundjel) is an eaglehawk and Waang is a crow (Howitt, *Native Tribes*, p. 126). (Also see Durkheim, *Elementary Forms of the Religious Life*; N. W. Thomas, *Kinship and Marriage in Australia*, p. 53 ff.) [KL]

ear A tingling or throbbing of the right ear in northern Europe is said to be a good sign. Hindu literature has similar references with the addition that among women, the left ear is involved. In the Indian science of physical signs, men with long ears are certain to be licentious. Elsewhere, ears close to the head indicate a stingy nature. Ear ornaments when not for simple decoration are part of the large number of amulets which protect the openings of the body against morbid influences, spirits, powers, etc. When the temple prostitutes of Madras became too old for service they ceremonially unhooked their ear pendants and walked away without looking back. The pendants were later returned to them. In some Hindu stories thieves were punished by having their ears cut off. In others a faithless wife had her ears cut off, though in the Middle and Far East amputation of the nose is the more common punishment for infidelity. [RDJ]

Earl Brand The Scottish-English version (Child #7) of a ballad of general North European distribution: known in Denmark as *Ribold and Guldberg*, in Sweden as *Hillebrand* or *Redevold*, in Norway as *Rikeball* and *Veneros*, in Scotland also as *The Douglas Tragedy*, and in the United States as *The Seven Sleepers*, *The Seven Brothers*, or *Sweet William*. The story seems to derive from the second lay of Helgi in the *Poetic Edda* and has some connection with Hildebrand, of whose name Earl Brand seems to be a modification. The central element of the story is the stealing of a bride, with the subsequent chase by the girl's father, brothers, or servants. Earl Brand fights them off, is wounded (and in bending over a stream he stains the water with his blood), and dies after he reaches his home with his bride. A very essential element of the Continental versions of the story is curiously left out of the English-Scottish and American versions: the motif of the name tabu. As Ribold turns to fight, he warns the girl not to call his name, but she, seeing her brothers dying, calls on him to spare the last, and he is mortally wounded. For some reason, only the barest hint of this appears in one of the versions of *Earl Brand* collected by Child. The American transformations of the story suppose it to have occurred recently.

earth Worship of the earth, typically as the Earth-Mother, is probably as widespread as any kind of worship in the world. Its origins lie perhaps in the magical nature of planting and growth: crops do fail and a ceremonial approach to the placing of seed in the ground is indicated. The earth as receiver of the

seed must be propitiated; hence, Earth becomes personified and deified. Almost universally the earth, as bringer-forth of the fruits, is regarded as female, the mother goddess; and there arises the myth of the Earth-Mother and the Sky-Father. This bountiful female deity also takes into herself the dead, and, as beliefs from North America, West Africa, Mongolia, etc., indicate, this too is a kind of planting ceremony, for the spirit of the dead may enter a woman's body and be reborn. In this aspect, the earth is a rather forbidding deity, and the earth concept includes the idea of an underworld where dead spirits live. (See CHTHONIC DEITIES.)

Of the origin and nature of the earth itself, many and varied myths are told. Earth here is matter and is not personified. It may be made from nothing; it may be fished out from the bottom of the universal waters; it may be the body of a dead god or monster. Earth may rest on an animal or person, or be held up by deities placed at its four corners; thus arise earthquake myths, for when the animal moves or the deities shift position the earth shakes.

 The concept of the earth as personified mother to all mankind is widespread in North American Indian mythology. In certain creation stories, such as that of the Zuni Indians, Earth definitely figures as the mother, and Sky as the father, from whose union man was born. Other American Indian tribes, although lacking such a definite conceptualization of Earth Mother in their myths, refer by allusion in speeches, prayers and formulas to "our mother, the earth." This metaphor is especially common among the agricultural tribes of the eastern United States. The earth as mother is also referred to in the myths of certain Plateau and North Pacific Coast groups. [EWV]

 The earth was regarded as a major deity by the ancient Peruvians who called her Pachamama (Mother Earth). The Jivaro, who have received many Andean influences, also worship an Earth spirit who protects the crops. The earth does not seem to have been deified outside of the Andean region. [AM]

 As part of the ancient imperial cult of China, the Emperor prostrated himself before five mounds of earth, representing the five directions, i.e. four points of the compass and the center. The Emperor sacrificed an ox; tributary chiefs sacrificed sheep. [RDJ]

Earth In the mythology of the Kato Indians of California, the earth is conceived of as a huge horned animal eternally wallowing southward through the primeval waters. Nagaicho, the traveler-creator of the Kato, was standing on its head directing it, until it finally stopped in its present position. In the mythology of the Yurok Indians of California and many other North American Indian tribes, the earth is believed to be floating in water, and is sometimes referred to as Earth-island.

earth diver In North American Indian myths of the origin of the world, the culture hero has a succession of animals dive into the primeval waters, or flood waters, to secure bits of mud or sand from which the earth is to be formed. Various animals, birds, and aquatic creatures are sent down into the waters that cover the earth. One after another animal fails; the last one succeeds, however, and floats to the surface, half dead, with a

little dirt or sand in his claws. Sometimes it is Muskrat, sometimes Beaver, Hell-diver, Crawfish, Mink who succeeds, after various other animals have failed, in bringing up the tiny bit of mud which is then put on the surface of the water and magically expands to become the world of the present time. See CREATION. [EWV]

Earthmaker The supreme deity of the Winnebago Indians of the Great Lakes region; Creator, Great Spirit, and source of all good, who coexists with the evil Herec-gunina. Earthmaker created the earth and human beings, and a specific number (five or eight) "great spirits" to free the world of giants and evil. Among these are Trickster, Turtle, Bladder, Hare, also Sun, Red Horn. Some myths state that the Twins were the last "great spirits" created by Earthmaker. Each one of these spirits was given control over something: life itself, victory in war, other blessings. The Winnebago believe that all who strictly observe the doctrines of their Medicine Dance will go to Earthmaker when they die and be allowed to choose whether or not they wish to return to this life, and if so, in what form.

earthquakes Earthquakes are commonly thought to occur when the god or hero who supports the earth changes his position or his hold on it. In Timor when a giant shifts the earth from shoulder to shoulder the natives shout to him not to drop it. The Manichæans thought that this happened once every thirty years. In the Indian archipelago a grandparent was thought to hold the earth and shake it now and again to see whether his descendants were still alive. The Burmese Shans thought that a great fish slept under the earth with its tail in its mouth. Sometimes it woke, bit the tail, and was in great pain. In eastern Peru the creator came down from heaven to see whether his creatures were still alive and caused an earthquake. The natives then shouted, "Here I am." In Africa an earthquake is the voice of god to which the natives reply or it is the movement of an underground god. In the Celebes the natives pluck handfuls of grass which is the god's hair to make him stop, and in Samoa the god was warned to stop before he shook the earth to pieces. The Fiji Islanders made sacrifices so that the earth god would turn over gently. Elsewhere earthquakes were thought to be portents of coming events or punishments for the wicked actions of men. See AMALA. [RDJ]

earwig In the United States the term earwig is popularly applied to a certain small centipede (not to the true earwig), an insect of the family Forficulidæ. It is the little centipede (genus *Geophilus*) which is said to crawl into people's ears and eat their brains out. If one does get into your ear, lie down on the ground with the ear against some newly turned-up soil, and the earwig will run out again.

Easter The Christian festival commemorating the resurrection of Christ, synchronized with the Jewish Pesach, and blended since the earliest days of Christianity with pagan European rites for the renewed season. In all countries Easter falls on the Sunday after the first full moon on or following March 21. It is preceded by a period of riotous vegetation rites (see CARNIVAL) and by a period of abstinence, Lent (in Spain *cuaresma*, in Germany *Lenz*, in central Italy *Quaresima*), and by the special rites of Holy Week.

In Mexico fiestas never cease. The concheros, moros, and other groups continue their pilgrimages, on the first Thursday to Tecapulco, Guerrero, the third weekend to a great fair in Tepalcingo, Morelos, the fourth Sunday to Acopilco, México.

Palm Sunday is in all Catholic countries an occasion for the blessing of palms. Then festivities cease until Maundy Thursday. The three days before Easter Sunday are given over to processions, masses, and Passion Plays. In Catalonia and central Mexico the figure of death (*la muerte*) looms large in the processions. The Passion Plays of Spain receive original and deeply moving interpretations in Mexico, most impressively so in Ixtapalapa, México; Tzintzuntzan, Michoacán; Oxchuc, Chiapas; and among the Yaqui of Sonora and Arizona. Here the *chapayakas* and *pilatos* dance and join in the processions to the Stations of the Cross. On Easter Saturday through the night all dancers, sacred and pagan—*matachini*, deer dancers, coyotes, *pascolas*—dance till the fiesta de Gloria.

Everywhere Easter Sunday is welcomed with rejoicing, singing, candle processions, flowers in abundance, and ringing of church bells. Many pagan customs survive, such as the lighting of new fires at dawn, among the Maya as well as in Europe, for cure, renewed life, and protection of the crops. The German *Osterwasser* (Easter water) is water dipped against the stream and imbued with curative properties. *Ostermärchen* are told in order to produce laughter (*risus paschalis*). The Easter lamb is perennially sacrificed. Children roll pasch eggs in England. Everywhere they hunt the many-colored Easter eggs, brought by the Easter rabbit. This is not mere child's play, but the vestige of a fertility rite, the eggs and the rabbit both symbolizing fertility. Furthermore, the rabbit was the escort of the Germanic goddess Ostara who gave the name to the festival by way of the German *Ostern*.

Flowers in profusion ornament altars and church façades. This floral association is expressed in the Spanish term *pascua de flores*. [GPK]

☞ That the sun dances as it rises on Easter morning is quite common folk belief in the British Isles, and people rise early and go to the hilltops to see it. Georgia Negroes say "the sun shouts" on Easter morning.

The children's game of "nicking" Easter eggs is common in the world from Egypt to England, and is also fairly general in the United States, especially among southern Negroes. Two children, each with an Easter egg in his hand, will knock the two eggs together; the one whose egg cracks the least under the treatment appropriates the other's egg.

Easter smacks The German *Schmeckostern*: the beatings given to each other on Easter Monday and Tuesday by men and women in parts of Germany and Austria to bring them good luck, protect them from vermin, and keep them young and healthy and "green." The custom is observed, by other names, in most Slavic countries. The men beat the women on Easter Monday, the women beat the men on Easter Tuesday. In Croatia the beatings take place on the way home from church on Good Friday. The beatings are commonly given with birch branches, especially branches just sprouted, or sometimes with cherry, or with a willow switch. The new young life inherent in the sprouting branch is thus be-

stowed upon the one beaten with it. In Bohemia vine branches are used, and the women make presents of red Easter eggs to their beaters. These are saved for afternoon egg-rolling. In some sections these beatings are given on Holy Innocents' Day, December 28. See *RODS OF LIFE*.

eating the god The custom of eating the body of a god is known in many communities although the mystery of the Christian sacrament of communion has made it difficult for ethnographers and theologians to see other customs elsewhere with sufficient objectivity to present satisfactory accounts of the profound human impulses involved in consuming the very body and very blood of God. Frazer's account is elaborate and his parallels are suggestive. The ceremonial eating of the first-fruits, or the ceremonial eating of bread made from the last sheaf, are connected with the belief that the god (often referred to as the "corn god") resides in the first or the last fruits and must be eaten to assure continued crops, that is, his and our immortality. Frazer connects the ceremonial eating of the cereal itself, even when not baked into a loaf or shaped into human form, with the eating of the god. In Yorkshire a clergyman cut the first corn and made it into communion bread. Peasants in the Volga region ate new cornbread handed them by the priest and prayed. In the Celebes the priest collected the first rice, ground it into meal and gave it to the villagers. They harvested the rest of the cereal only after all had partaken. Similar customs have been reported from India and Indochina. Among the Ashanti and the Zulu an orgy followed the celebration.

The North American Creek Indians began such a ceremony by cleaning their houses and clothes. They fasted for two nights and one day and purged themselves so that the old food would not mingle in their stomachs with the new food. They built a new fire with the thought that the new fire would burn out their old sins. They then ate ceremonially the grain and, by it, the corn spirit. Twice a year the pre-Columbian Aztecs ceremonially ate bread which, having been consecrated, became the very body of God, and taught that sacramental food was contaminated when it touched other food. The Ainu of northern Japan and Kamchatka eat the bear god (the bear is either considered as god himself or as a divine messenger to the other gods) in a ceremony which is more striking than Frazer's report of the ceremonial eating of the Ainu millet. Here a bear cub is captured once a year and becomes the pet of the village. As it grows older it is caged beside the house of the chief where it is fed delicacies and is made much of. In the spring the god is murdered with expressions of devotion and great feeling. The blood is drunk and the flesh is eaten.

The ceremonial eating of the very body and blood of Christ, which is essential in the sacrament of the Christian Eucharist, involves theological discussions which lead beyond the scope of this note. In his *First Epistle to the Corinthians*, Paul reminded the congregation of the seriousness of the custom and repeated to them Christ's clear words about it. Tertullian, Cyprian, and Augustine held in effect that the bread and blood as symbols were not the signs of an absent reality but were in some sense what they symbolized and possessed the effect of the reality. In the 8th century, John of

Damascus held that the eucharistic body was identical with that born of Mary. A modern view, summarized in the *Catholic Encyclopedia* is "The Body and Blood of the God-man are truly, really and substantially present for the nourishment of our souls." Obviously the eating of the very body of the very god involves complex human impulses which are no less impressive among pagans than they are among Christians. [RDJ]

eating the heart Eating the heart to endow the consumer with the qualities of the original owner has been reported from many parts of the world. Thus the Ashanti of Africa who killed Sir Charles M'Carthy in 1843 are reported to have eaten his heart to acquire his courage. A similar custom is said to be popular among the Basutos. In West Africa a king's heart was, according to some reports, eaten by his successor. Other peoples believe that eating the heart of a lion, leopard, wolf, or bear gives courage, or that the heart of a jackal or hare induces timidity, or that a snake's heart gives the gift of languages. [RDJ]

eating the sacred animal A custom observed among several ethnic groups, though social attitudes toward this custom show great diversity. Some totemic groups eat their totem animal, considered as a member of the clan or its founder, either customarily or ceremonially. In some cannibal communities the sacrifice to the god, having acquired a degree of sanctity, is eaten, or the sacrifice is considered a representative of the god, as in the Ainu bear ceremony. Other parallels are the eating of the first-fruits and the Christian Eucharist. Thus the phrase "eating the sacred animal" requires careful scrutiny to fix the quality of sacredness attributed to the animal in the community described. Before eating the bear and drinking its raw blood the Ainu reach a state of emotional exaltation not customarily found among Christians who partake of the Holy Communion, yet the position of the bear in the social and religious organization of the Ainu is vastly different from the position of Christ in the Euro-American religious structure. See EATING THE GOD; TOTEMISM. [RDJ]

eating together Although communal eating is a custom followed in many parts of the world, it is subject to innumerable variations and special ceremonies. The sense of well-being and general emotional exhilaration which follows a good meal, and the transformation of inert food into vitality, or conversely the sickness and death which sometimes follow a meal, make the taking of food an important and hazardous custom. Consequently the taking of food, like other actions with which man passes from one state of being to another, is surrounded by large numbers of precautions to protect against possible danger.

Eating together is one of these precautions which is of particular importance on special days: weddings, birthdays, funerals, days of religious ceremony, birth-days or death days of the gods or heroes. On these days the feast is connected with strong emotions produced by the ceremony and is, at times, preceded by a fast. In some communities eating together is prudent protection against an enemy, who is thus restrained from poisoning food which he himself will share, or against working magic on it. The belief that persons become to some extent part of the social unit, as clansmen, brothers, or

allies, after they have shared food or "broken bread" involves a complex etiquette in some parts of the world, particularly the Near East.

In Europe and America a different degree of social acceptance is involved in having a "business lunch with a man" or "having dinner at the house." To eat food at banquets in honor of, or with, local or national heroes is to participate in a magical rite still only vaguely understood. It involves at least temporary membership in the social group, and thus a share not only in the virtue of the group but in the virtue of the person honored. The grace before meat whether in formal or family meals which consecrates the meat "to our use and us to Thy service" is a recognition of the hazards of eating and an attempt to get the beneficent forces on our side. In communities which are generally undernourished or subsist on monotonous diets, the party meal which at times supplies needed and unaccustomed elements of diet, has other functions in addition to those listed here. In some strict communities all food is shared with the entire group and the portion of the hunter and his family limited by custom. In the United States where food is plentiful, and standing in the community is determined in part by the food served and by the way it is served, and where, moreover, people from many parts of the world constitute the acting social units, the amount of time given to the preparation and serving of party food requires special examination. The fact that Thanksgiving and Christmas dinners have in the United States become orgies of communal gluttony is due in part to the fact that food is plentiful and in part to obscure, old rigid, sexual and orgiastic prohibitions.

Yet eating together is subject to many local prohibitions. In some places people surround eating with precautions of secrecy because they fear that evil may enter their mouths as they take food. Elsewhere the taking of food in public is an indecency. Men and women, particularly pregnant or menstruating women, often eat separately. In the Far East, prostitutes and sing-song girls, though they may sit beside their customers at feasts, do not normally eat with them. In some communities men and women have special food prohibitions. Elsewhere children and adults do not eat together; members of different social classes though they occupy the same quarters eat separately, as in the armed forces. Or again, adolescent males and adolescent females eat communally but in separate places and of special foods. [RDJ]

Ebisu One of the Japanese Seven Gods of Luck; the God of Fishing, Food, and Honest Dealing. See JAPANESE FOLKLORE. [JLM]

Echidna In Greek mythology, the monster, half woman, half serpent, daughter of Chrysaor and Calirrhoe and sister of Geryon, who was mother by Typhon of many of the monsters of mythology and legend: the Chimera, Othrus, the Sphinx, Cerberus, Scylla, the Lernean Hydra, the dragons of the Hesperides and of Colchis, the Nemean lion, the eagle which ate Prometheus' liver. She is perhaps of Oriental origin; she dwelt underground beneath Arima. Hercules was bargained into sleeping with her as he returned with the oxen of Geryon, and she bore three sons from the union, one of whom, Scythes, was capable of bending the bow

of Hercules and became king of the Scythians. Echidna was finally slain by Argus Panoptes.

Echo In late Greek and Roman mythology, an oread pursued fruitlessly by Pan. He drove the shepherds in the neighborhood mad and they tore Echo to pieces, scattering her parts, each of which retained the power to speak; or else they tore her until only the voice was left. Another story, told by Ovid, is that Echo was detailed to occupy Hera with chatter while Zeus sported with the nymphs. Annoyed, Hera condemned her to be able to speak only when spoken to. While thus afflicted, she fell in love with Narcissus and faded away to bones and voice, the bones being changed to stones.

Echtrae Conli Literally, the adventure of Conle: the oldest of the adventure stories of ancient Irish tradition. Conle was the son of Conn of the Hundred Battles, king of Ireland in the 3rd century. One day as Conle walked with his father on a hill, he saw a woman in rich garments beside him, who described to him the wonders of the Land of the Living, and promised him beauty and love forever without old age, if he would go with her there. Conn bade the druids sing against the woman's voice, so that Conle would not be tempted. So the woman went away, but she threw an apple to Conle; and Conle ate no food but the apple for a month. At the end of the month the woman returned with more words about the country which delights the mind of anyone who goes there. Conle was torn between love for his own people and longing for the woman and the things she promised. But in the end he leaped into the ship of glass with her, and sailed away in that crystal coracle, never to return. See ECHTRAÍ.

Echtrae Cormaic or the *Adventure of Cormac* Title of an Old Irish story contained in the *Book of Ballymote*, the *Yellow Book of Lecan*, and the *Book of Fermoy*. One day at sunrise when Cormac Mac Airt, king of Ireland, was walking on the rampart at Tara, he saw coming towards him a warrior who carried a branch with three golden apples. The branch, when shaken, made a music so marvelous that even the ill and wounded would sleep when they heard it. After their greeting and words of friendship, Cormac asked for the branch. The strange warrior gave it, asking in return only the promise of three wishes, and Cormac promised. In a year the warrior came and asked for Ailbe, the daughter of Cormac, and Cormac gave her. In a month he came and asked for Cairpre, the son of Cormac, and Cormac let Cairpre go. The third time he asked for Eithne, the wife of Cormac, and Cormac pursued them, but was lost in a magic mist that fell on the plain. After many sights and adventures Cormac came at last to a castle where he was generously entertained by a handsome warrior. Stories were told while the pig for the feast was cooking. It was a pig that would not cook unless a true thing were told for each quarter. It fell to Cormac to tell the fourth story, and he told how first his daughter, then his son, and his wife had been taken from him. Then the host sang a song and Cormac slept. When he woke fifty warriors sat at the feast and also his wife and son and daughter. A gold cup was handed to the host and Cormac was amazed at the beauty of the carving on it. But its greatest wonder was yet to be shown: for it was a cup of truth. The warrior told three

lies and the cup broke in three. Then he told Cormac that Eithne had lain with no man since she left Tara, nor had Ailbe, and Cairpre had lain with no woman. And for these three sayings the cup was whole. Then the warrior made himself known to Cormac: he was Manannán Mac Lir, and he had brought them all into the Land of the Living. He let Cormac keep the branch and the cup for his lifetime, but he said after Cormac they would not be seen in Ireland again. The next morning Cormac and Eithne and Ailbe and Cairpre woke again in Tara. Cormac used the cup to judge false from true in Ireland after that, but when Cormac died it vanished. See ACT OF TRUTH.

echtraí Literally, expeditions, adventures, also stories and wonders: a group of early Irish stories in which a journey to the Otherworld (Land of Promise, Land of the Living, Island of Women, Many-Colored Land, Land of the Young) is the main theme. The echtraí are to be distinguished from the imrama, voyages, in which the wonders of the voyage itself are the main theme. Most of the echtraí follow a traditional pattern of enticement of the hero by a beautiful woman enumerating the marvels of a marvelous land (...a place without grief, without death, without old age,...there are treasures of every color, listening to music, and drinking of wine,...happiness and laughter, pleasant company without strife...) or by a wonderful warrior who either invites or otherwise brings the hero to the Land of the Living.

The Otherworld is usually situated either in the western ocean, or is reached across a plain on which the hero is lost in a magic mist. The wonderful Otherworld warrior usually turns out to be one of the Tuatha Dé Danann, the divine race of ancient Ireland: sometimes Manannán, sometimes Lug, etc. Either the hero never returns, as in the *Echtrae Conli*, or returns bearing magic gifts and greater wisdom, as in the *Echtraí Cormaic*, or he vanishes in a whiff of ashes when his foot touches the earth, in testimony that he has been gone 300 years, as in the case of one of the companions of Bran in the *Voyage and Adventure of Bran, Son of Febal*. Compare IMRAMA.

eclipses Eclipses are misfortunes which must be corrected. Folk explanations of them show a general similarity; methods of correction differ. The account in the Edda that the sun in eclipse is being pursued by a monster which must be driven off is typical. The Lettish peasants believed that the sun and moon were being devoured during an eclipse. The view among the Buriats was that Alka, a monster, swallowed the sun or moon but, because the gods had cut him in two only the head remained and the objects soon reappeared. The Altaic Tatars thought the cause was a vampire who lived on a star. In India, the Asura, Svarbhānu, eclipsed the sun, or Rahu, a demon, swallowed Soma, the moon. Among the Buddhists Sakyamuni is said to have commanded Rahu to leave the moon in peace. The Armenians, in a variant of a Persian belief, explained that two dark bodies, the offspring of a primeval ox, got between the sun and the moon. In northern North American groups, an eclipse occurred when the sun or moon took their child in their arms. On the northwest coast, the eclipse appeared when the sun dropped its torch. The

Alaskan Tlingits thought eclipses occurred when the female moon visited her husband the sun. The Cherokees, however, thought the moon was male and the sun was female. Among the Eskimos the sun and moon are brother and sister who commit incest during an eclipse. The Tahitians also explained that sun and moon had sexual intercourse during an eclipse. The tribes of the Pampas thought that the eclipsed moon was darkened by her own blood drawn by savage dogs. In Yucatan the day of an eclipse, particularly a solar eclipse, was a day of great national peril, and the Orinoco Indians promised to lead better lives. Although Thucydides' account of the lunar eclipse before the battle of Syracuse had a political purpose it is significant that the period of waiting for the evil effects to be dissipated was thrice nine days or a lunar month.

In an attempt to check the misfortune, the Ojibwas shot lighted arrows to keep the sun from being extinguished; but the arrows shot by the Peruvian Indians were to frighten the beast attacking the sun. The Guarayú Indians of Bolivia shoot arrows at the celestial Jaguar attacking the moon, shouting as the burning missiles fly towards the sky. The uproar made by Chinese peasants has a similar purpose. The Orinocans buried fire during a lunar eclipse to keep some fire hidden. The Kamchatkans brought fire from their huts and offered prayers. The Babylonians offered incantations. The Mexicans sacrificed humpbacks and dwarfs. The Chileans of northwest America held sunwise circular processions until the eclipse was over and the kings of Egypt walked ceremonially (and sunwise) around the temple. The nubile girls kept in seclusion in Cambodia, were allowed to emerge only during eclipses when they paid homage to the monster who was eating the sun or moon. The Indians of the lower Yukon believed that an unclean emanation descended during an eclipse and to avoid sickness the women turned their pots and dishes bottoms up. The Swabian peasants would not sow, mow, or gather fruit during an eclipse. The Bavarians and Thuringians shared this belief and added that eclipses on Wednesday were particularly bad. See CIRCUMAMBULATION. [RDJ]

Eclipses of both the sun and the moon occasioned energetic responses among many North American Indian tribes. A popular theory was that some mythological being, such as Coyote, a bird, a dog, Frog, Lizard, Rattlesnake, etc., was eating the sun or moon. In many tribes noise was made to frighten the aggressor and bring back the sun or moon to life; dogs were made to squeal by twisting their ears or beating them; people shouted, struck a plank or canoe, shot arrows into the air, turned over vessels, or threw out food and water. Men who knew how to make certain medicines went to the mountains to do so; babies were taken outside and made to howl, or a formula was recited so that they would grow quickly, as the moon grew coming out of an eclipse. [Ewv]

The general Middle American belief, which is a part of a wider complex found in all the Americas, is that the sun or moon is fighting with the earth, or that one or the other is being devoured by a celestial animal, usually the jaguar. In either case, it is a critical period for mankind, for if light is lost, life is lost. Hence, man does what he can to prevent this tragedy. The Sumu of Nicaragua shoot arrows at the heavenly

body, build great fires, and beat drums in an attempt to frighten off the jaguar. Shouting and otherwise making noise probably is the most widespread activity which accompanies an eclipse. Many groups believe that a pregnant woman who gazes at an eclipse will give birth to a hare-lipped child. This probably is closely related to the ancient Aztec belief that a rabbit is visible on the face of the moon. [GMF]

It is a general belief among South American Indians that eclipses are caused by some supernatural feline, as a rule a jaguar, that attacks the Moon or the Sun (Yuracare, Chiriguano, Mojo, Chiquito, Guarani, Incas, etc.). According to the Vilela, lunar eclipses occurred whenever a gigantic bat (a bird according to the Bakairi) covered the moon with its wings. The Cavina say that partial eclipses are the result of ants gnawing the moon. [AM]

Edward A Scottish-English ballad (Child #13) known also in Swedish and Danish, and in Finnish from the Swedish: probably of Scottish origin. It is regarded by many as the finest of the English ballads. Of the three versions collected by Child, the earliest calls the son Davie, but the ballad is best known in Percy's version, which was at one time suspect because of the antiqued spellings. The tale is barely outlined in a series of related questions: the answers, at first evasive, become at the end precise in a very terrible manner. The dialog is between mother and son. She asks where the blood on his sword comes from, and refuses the answers hawk's blood and steed's blood. He admits he has killed his father. He says he will sail away, leaving his wife and children the world to roam in. "And what wul ye leave to your ain mither deir?" "The curse of hell frae me sall ye beir." The implication of the mother in the killing is sudden and unexpected, and it has been lost from American variants, like *The Cruel Brother*.

eel Much thought seems to have been given to the origin of the eel. Most persistent is the belief that they grow from horsehair in water or that they all spawn in the Mediterranean Sea. The 4th century *Hexameron* of Basil holds that eels are generated by mud alone. Others claim they are generated from their own saliva. Some Philippine tribes believe them to be the souls of the dead, but in Madagascar they are considered the souls of the dregs of the population. A Japanese legend says eels are dragons in disguise, which suck the blood from the legs of horses who enter the water. Many peoples believe that eels, like snakes, do not die until sundown. In the Ozark Mountains they say a fried eel left alone will become raw again. In some parts of the United States eels are believed to have a taste for human flesh and there are tales of fishermen who have caught truckloads of eels with human bait. In many parts of the world eels are tabu, or believed to be poison.

In New Zealand the head of the spiny eel is eaten for toothache. In Bengal, the skin of an eel is wound round the leg to prevent cramp; elsewhere eelskins are wound around affected parts to cure various aches. An eelskin wound around the head will surely make the hair grow. Cherokee Indian ball players anoint themselves with eel fat to make themselves hard to hold. The fat is also used in a healing ointment, and in parts of Europe anointing a person with eel-fat

ointment enables him to see fairies and other supernatural beings. To cure a man of drunkenness, skin a live eel and dip the skin in his drink. Another authority says put a live eel in the drink. This is prescribed on the theory that a man who takes a drink large enough to float a live eel needs to be cured.

Eels are sometimes found as guardian spirits of wells and magic springs. G. L. Gomme, in his *Ethnology in Folklore*, reports a sacred well in County Kerry, Ireland, called Tober Monachan. Those who sought its powers would be given the sight of a salmon and an eel, its guardian spirits, if their petition was to be granted.

The eel figures variously in folktale. There are etiological stories of his origin and why he has no tongue. He figures as paramour (Maori folktale); and men are transformed to eels in Polynesian, Melanesian, and Indonesian story (D173). In the general European story of the fearless hero who went out in the world to learn what fear is (Type 326), nothing frightened him, not sleeping under a gallows nor in a graveyard, not fighting ghostly cats, nor being shaved by a ghost, nor playing cards with the dead. But he was scared out of his wits the night his wife put eels down his back while he was asleep (H1441.1).

eeny, meeny, miny, mo An inquiry conducted among 2000 Massachusetts grammar-school children in 1899 discovered that all but five of them knew one or more counting-out rimes, that the group knew 183 different ones, but that the most popular by far (91%) was:

Eeny, meeny, miny, mo,
Catch a nigger by the toe;
If he hollers let him go,
Eeny, meeny, miny, mo.

There is no doubt that this version was the most frequently used one at that time in New England and up-state New York, or that it was for a time the dominant rendering throughout the northern states, but it is not the oldest, and there are many variants which give us interesting clues to the history of the rime and to the characteristic evolution of counting-out rimes in general.

The writer remembers that in Massachusetts, only a short time before the survey mentioned above, his mother tried to get the children of the neighborhood to substitute the word "feller" for "nigger" in the rime, but it was too early.

During World War II the children of New York City were patriotically shouting:

Eeny, meeny, miny, mo,
Catch old Tojo by the toe;
If he hollers make him say,
I surrender, U. S. A.

When the war ended, however, they quickly went back to former versions, and continued the trend away from "nigger" to such variants as "baby," "rooster," "black cat," and "rabbit." In New York City, at any rate, it is distinctly bad form in juvenile circles nowadays to exhibit any form of race discrimination.

How did the word "nigger" get into eeny, meeny, miny, mo in the first place? We have clues in the variants.

Strangely, most adults who learned the rime in childhood now know only one version and almost resent hearing of others. Deep in their subconscious is the

"correct" one they learned in infancy. In Nebraska, for instance, it usually was:

Eeny, meeny, miny, mo,
Catch a nigger by the toe;
Ev'ry time the nigger hollers,
Make him pay you fifty dollars.

In Iowa and Illinois in the Eighties it ended:

If he hollers, make him pay
Twenty dollars ev'ry day.

At the same period in Connecticut children were chanting a local variant:

Eeny, meeny, miny, mum,
Catch a nigger by the thumb;
If he hollers send him hum,
Eeny, meeny, miny, mum.

It is apparent that these various indicated ways of treating the "nigger" are the children's reaction to or interpretation of their parents' conversation when the Fugitive Slave Law of 1850 was being debated. Negro slaves were escaping by the underground railroad through the northern states to Canada. In northern New England and New York the inhabitants were all for letting him go on his flight north. In Connecticut, some, at least, were for sending him back "hum," but in the Midwest and along the Mason and Dixon line others were for making him pay twenty or even fifty dollars toll.

This theory explains the third and fourth lines of the jingle, but leaves the second, and especially the first, unaccounted for. Here is a suggestion as to the origin of the second line. In French Canada the children are still using an eeny meeny which their parents brought from France long ago. They count out by starting with the rime:

Meeny, meeny, miny, mo,
Cache ton poing derrière ton dos...

Then, having accordingly "hid his hand behind his back," the counter-out demands of the player on whom has fallen the word "dos" that he guess how many fingers are closed in the hidden palm. If the answer is, say, four, then the fourth player counted is "out."

Now, since the French word *cache* (hide) sounds like the English word *catch*, and *dos* (back) is easily heard as *toe*, and since, moreover, it was in the north New England and York states that the first eeny meenies containing the phrase "Catch a nigger by the toe" appeared, it is entirely possible that the Yankee children were simply trying to do their best to make some sense out of the sounds they heard.

We have also to consider the possibility of an Indian or half-breed intermediary, just as the very word Yankee is explained by some folk etymologists as an attempt of the Indians to pronounce the French word for English, *Anglais*.

It is interesting in this connection, and somewhat corroborative of the above suggestion, that the New England oral tradition word for counting-out rime is *rimble*, easily derived from the French word for it, *rimaille*, since the latter has the liquid *l* and the former the short *i*.

As for the origin of the first line, Eeny, meeny, miny, mo, we must go much further back. The early versions

used in the United States had no reference to Negroes and the first line was slightly different:

Eeny, meeny, mony, my,
Huskalony, bony, stry,
Farewell, brown hat,
Kippety, we wah wat.

This version came straight by oral tradition in a family still living near Taunton, Mass., from a Quaker lady ancestress who was born there in 1780. In New York City, the related version in 1815 was:

Ana, mana, mona, Mike;
Barcelona, bona, strike;
Care, ware, frow, frack;
Hallico, wallico, wee wo wack.

Three years later in Philadelphia they used:

Eeny, meeny, mony, Mike,
Butter, lather, bony, strike;
Hair, bit, frost, neck,
Hallico, wallico, we wo wah wum wack!

All three of these, since they are known to have been used at the very time when mothers and nurses were using the dread name of "Bony" (parte) to scare children into obedience, illustrate the propensity of children to weave into their play-rimes references to much-discussed current events. And all three are plainly derived from an older one evidently brought over from Cornwall, England, since English scholars reported it still current there a century ago. Its corresponsion with the American derivatives is more apparent when recited than when read:

Eena, meena, mona, mite,
Basca, lora, hora, bite,
Hugga, bucca, bau;
Eggs, butter, cheese, bread,
Stick, stock, stone dead—O-U-T!

Here is one of the oldest known rimbles—perhaps not as old as Hickory, dickory, dock, but quite respectably ancient—betraying its age by the word-fossils so thickly sprinkled through it. Mixed with the English words are Latin, Cornish, and Cymric (Old Welsh).

We are back in Druid times, about the first century B.C., when we chant some of these words. It was in 61 B.C., so Tacitus tells us, that the Roman conqueror Suetonius commanded the holy Druid groves of the sacred isle of *Mona* (now Anglesea) cut down to end the bloody rites of Druidism. To get to that island, even today, from North Wales, you must cross the *Menai* Strait. *Hora* and *lora* are Latin for hour and binding-straps, and *bucca* was Cornish for hobgoblin or evil spirit.

Julius Caesar tells us that the Druids were much concerned with divination by magic rimes, charms, and spells which were never put in written form.

Of course, we have only etymological evidence coupled with historical coincidence, and we are inferring from a long stretch of oral tradition, but it is certainly possible that our common eeny, meeny, miny, mo is a descendant of an ancient magic rime-charm used in Druid times to choose the human victims to be ferried across the *Menai* Strait to the isle of *Mona* to meet a horrible fate under the Golden Bough of the sacred mistletoe amid the holy oaks.

Since one known method of Druid sacrifice was to

burn victims alive in wicker cages, perhaps the words in our last-quoted counting-out rime reflect the scene when the man chosen by this sacred lot of the magic rime was told his *hora* had come and was bound by the *lora* inside the *stick* and *stock* wicker cage or huge *basca* (basket) and burned until he was *stone dead*.

We still have the *eggs*, *butter*, *cheese*, and *bread* to account for, and might well consider them comparatively modern additions or incorporations by the children from other play-rimes, were it not for the fact known to anthropologists and students of comparative religion that for many centuries (no one really knows how many) these four have been deemed powerful magic foods. Significantly enough, they are still employed in incantations in rural midsummer festivals still celebrated in former Druid regions, according to Sir James Frazer's *Golden Bough*.

The remaining word *eeny* is probably also from the same land and period, for it occurs in the very ancient Anglo-Cymric "shepherd's score" by which West of England shepherds count their sheep and Cornish fishermen their mackerel, even to this day, again illustrating the persistence of oral tradition. This "shepherd's score," taught to the present writer as "Indian Counting" by his mother, was used in Indiana about 1875 as a counting-out rime in a version beginning:

Eeny, teeny, ether, fether, fip.

There are many other variants of *eeny meeny* still used in the United States. One class or type which did not mention the Negro ran:

Eeny, meeny, tipsy, tee,
Delia, dahlia, dominee;
Hatcha, patcha, dominatcha,
Hi, pon, tuss. O-U-T!

Recently movie-wise children have changed the third line to honor their hero thus:

Eechy, peachy Don Ameche.

Somewhat similar is another type often reported from the South and West (Tennessee, Louisiana, Indiana, Missouri, Colorado):

Eeny, meeny, miny, mo,
Cracka, feeny, finy, fo;
Oppa, noocha, poppa, toocha,
Rick, stick, ban, Joe.

In Washington, D.C., and vicinity the children are likely to add to almost any *eeny meeny*:

O-U-T spells
Out goes he . .
Right in the middle of
The dark blue sea.

Regarding this termination, H. C. Bolton of the Smithsonian Institution once wrote, "the significance of the allusion we have not divined." The children knew their Bible, if he didn't, for what could be plainer than the reference to an early counting-out when "the lot fell on Jonah" to be "It" and, according to *Jonah* i, 15, "So they took up Jonah, and cast him forth into the sea." See COUNTING-OUT RIMES; SHEPHERD'S SCORE.

CHARLES FRANCIS POTTER

egbere A category of Yoruban "little people" of the forest. See *APUKU*. [MJH]

egg curing A common medical treatment, probably European in origin though widespread among Middle American Indians. It consists of rubbing the nude body of the patient with an uncooked egg. If the purpose is diagnostic, the egg is broken and its form examined. The shape it assumes, any unusual color, or the form of the fertilized spot will indicate the nature of the illness, and the curer then knows how to proceed. If the purpose is therapeutic, usually to relieve fever, the egg is buried in a stream to dissipate the heat it has drawn from the sufferer's body. This treatment, generally known as *curar con blanquillos*, often is used to treat illness resulting from the evil eye. [GME]

eggs Eggs have long been considered to have symbolic properties, either as representing the earth, life itself, or the seat of the soul. In the folklore of most of Europe, the strength or the life of supernatural beings could be destroyed only if an egg, usually hidden in the body of one or more animals, in some inaccessible place, was broken. Such separable soul tales have been reported from Italy, Iceland, Ireland, Bohemia, Brittany, and Lapland.

Eggs also figure prominently in fertility rites, both human and agricultural. In 17th century France, a bride upon entering her new home had to break an egg to ensure her fecundity. Among the Germans and Slavs, a mixture of eggs, bread, and flour was smeared on the plow on the Thursday before Easter, so that the coming harvest would be rich. In order to protect the poultry from harm, various devices were used: the Mískito Indians of Honduras and Nicaragua saved their egg shells; in Czechoslovakia, on Shrove Tuesday, a man dressed in straw went around the village, and each woman took some of his costume to place in the hens' nests; in Auvergne, on the first Sunday in Lent, fires were kindled in the fields, from which torches were lit, and the ashes from these torches were put into the nests; in Brunswick, eggs were begged on Whitsuntide, and refusal meant that the hens would not lay.

Eggs are also used in sacrifice, particularly to the dead, and as survivals of tree-worship. The Maori buried their dead with a moa's egg held in one hand; the Khassia of Assam placed an egg in the navel of the corpse. The Romans placed eggs in the graves as did many of the Slavic peoples. The Jews of eastern Galicia ate eggs upon returning from a burial.

In the Harz mountains, on Midsummer Eve, fir trees were decorated with flowers and red and yellow eggs, while the people danced around them. In Moravia, on the third Sunday before Easter, a tree decorated with flowers and dyed eggshells was carried from door to door by the girls of the village; and on May Day, in Alsace, trees were carried about, while eggs were collected. In Sweden, they sold in the market place maypoles which were decorated with leaves, flowers, colored paper, and gilt egg shells.

Oomancy (divination by eggs) is widespread. The most common form was to let the albumen drop into water, and from the shapes it assumed the future was foretold. In England this was done on New Year's Eve, in Spain on Midsummer Eve, in Scotland on Halloween.

The use of eggs at Easter is universal in the Western world. In the United States it is common to give children decorated eggs, which may be real or made of

candy. Children are told that they are "brought by the Easter Bunny." In many parts of the world egg-tapping takes place, and the person whose egg cracks first is the loser. (See EASTER.) In Old Russia, eggs were most beautifully decorated, and among the wealthy, eggs of semiprecious stones were prized gifts. Egg-rolling, which survives in the United States as an annual custom on the White House lawn on Easter Monday, has counterparts in the Old World. In northern Bohemia, boys rolled red eggs downhill on Easter Monday, and he whose egg rolled fastest won all the others.

The Romans carefully destroyed the shells of eggs which they had eaten, so that they could not be harmed by magic which might be worked upon them. [NEJ]

☞ Southern United States Negroes have a great stock of egg lore. If you put eggs in your parents' bed, for instance, they will quarrel. To remove a baby's birthmark, rub the mark every morning for nine mornings with a fresh hen's egg and bury the egg under the doorstep. Goiter can be removed the same way. Dreams about eggs have a variety of meanings. To dream of eggs means good luck, or riches, or a wedding. To dream of broken eggs portends a lovers' quarrel, or sometimes that the quarrel itself will "break" and reconciliation follow. To dream of unbroken eggs means a quarrel just as often, in England and the United States. To dream of a lapful of eggs betokens riches.

Marks put on eggs under a setting hen will be seen later on the chicks. Eggs from a guinea nest are taken out with a spoon, because a guinea hen will leave her nest if a human being touches it: a general European as well as southern Negro belief. The old belief, common in the British Isles, that to set a hen in May is useless because all the chicks will die, is also general in the southern United States. Another egg-setting belief is that eggs set in the nest by a woman will hatch out all pullets; to carry them to the nest in a man's hat will result in a hatch of cocks. See WORLD EGG.

Egil (1) In Teutonic mythology, a peasant with whom Thor several times left his goats and chariot. Once seeing that the household had no food, Thor bade them kill his goats and eat the flesh, only to be sure to throw the bones back into the skins. But Loki persuaded Thialfi, son of Egil, to break one of the bones and eat the marrow. Thus when Thor wished to reanimate the goats, struck the skins with his hammer, and the goats sprang into being, one was discovered to be lame. To atone for this, Egil gave to Thor his son, Thialfi, and his daughter, Roskova, for bond-servants.

(2) In the "Song of Volund" of the *Elder Edda*, Egil and his two brothers, Slagfin and Volund, once came upon three Valkyries bathing. They stole the swan garb which the maidens had laid aside, and were thus able to force them to remain in human form and become their wives. At the end of nine years, however, the women regained their swan shifts and departed. Compare BEAST MARRIAGE. See SWAN MAIDEN.

Egun (Egúngún) A Yoruban secret society, based on the cult of the dead. In the New World, the name and the cult have been retained in Brazil and Cuba, though many of the distinctive features that characterize the African secret society, especially in its public rituals, have been lost. [MJH]

Ehlaumel The creator in the mythology of the California Coast Yuki Indians. He is Thunder, and has superseded in importance the "one who travels alone," the traveler-creator of the Kato. See EARTH; NAGAICHO.

Eileithya In Greek mythology, the goddess of childbirth; early either an independent goddess later identified with Hera or an aspect of Hera worshipped independently; she became nearly identical with Artemis in the protection of the very young and of women in childbirth. There seem to have been two Eileithyas originally, one presiding over easy births, one prolonging birth pains, but these functions were later said to be the manifestations of the pleasure or anger of the same goddess. Eileithya was displeased by unchastity and by frequent childbearing. She it was who sat outside Alcmene's chamber with her legs held together delaying the birth of Hercules. Eileithya may have been Cretan in origin.

eingsaung nat The Burman and Talaing house guardian; a benevolent nat; Min Māgayē of the Thirty-seven Nats. The Burman eingsaung nat resides in the south post of the house. This is decorated with leaves and corpses are placed beside it. The Talaings hang a coconut in the southeast corner of the house to obtain the protection of the house nat.

Einheriar or **Einherjar** In Teutonic mythology, the slain warriors who were Odin's guests in Valhalla. They were served by the Valkyries, and feasted on the inexhaustible boar, which came to life again after each meal. They spent their time in fighting, but were healed again by mealtime.

Eira, Eir, or Eyra In Teutonic mythology, the goddess of healing. She was Frigga's attendant and taught healing to women (the only ones to practice medicine among the early nations of the North). She appears relatively late, replacing Thor and Odin as healers.

eisteddfod A periodic assembly of Welsh bards, held to conduct examinations and competitions in poetry, prose compositions, and music, at which qualified candidates were admitted to the highly esteemed and trained bardic profession. Begun probably sometime before the 12th century, recognized in the time of Queen Elizabeth as an institution of authority, the eisteddfod (literally, session) lost its prestige during the 17th century and suffered a lapse of about 150 years until its revival in the early 19th century. Since then it has become once more a national institution in Wales and a center for the revival of Welsh folklore and traditions. Musical and literary competitions are still the order of business. The meetings may be on a national or local scale and some have even been held among people of Welsh descent in the United States. See PENILLION.

exida Literally, exit: a Catalan longways dance for men and women. In spite of the name, the dance does not serve either as exit or finale. The step is a right and left balance. The first couple leads off, then dances face to face with the second couple, then leads off to the foot of the column. The routine repeats for each couple in turn. [GPK]

Ekeko, Eq'eq'o, or Ekako An ancient deity of the Aymara Indians, the good-luck fertility spirit, still

popular with the modern Indian and mestizo population of Bolivia. His feast, the Alasita, formerly celebrated about the time of the summer solstice, now takes place on January 24, and coincides with the mock selling of miniature pots. Ekeko is represented by comic images of a fat little man covered with toy household utensils. These images are kept in houses as good-luck fertility tokens. [AM]

ekerā In the religion of the Gallas of Ethiopia, the afterworld. Life after death is lived there as a shadow-like existence.

elder A shrub (genus *Sambucus*) with white flowers and purple-black or red berries. In Bohemia men tip their hats to the elder, but in some Christian countries this tree has evil associations because it is supposed to be the tree on which Judas hanged himself, and whose wood was used for the Cross. This is also given as the reason why the wood stinks. On the Scottish border and in Wales it is said that the dwarf elder only grows on ground which has been soaked in blood. Elder wood is never used in shipbuilding or in fires. A cradle of this wood would cause a child to pine away and to be pinched by the fairies. In Germany an elder branch brought into the house brings ghosts; in England it brings the Devil; however, in Scotland elder is hung over the doors and windows to keep evil spirits out. In parts of the United States burning an elder stick in the fire on Christmas Eve will reveal all the witches, sorcerers, and practitioners of the evil arts in the neighborhood. In the Tyrol also an elder stick cut on St. John's Eve will detect witchcraft. Lightning will not strike an elder bush.

In one form or another the elder was thought capable of curing most of the ills of mankind. The North American Mohegan Indians made the bark into a tea. When the bark is scraped upward it is an emetic, and when scraped downward, a laxative. The same tribe gave elderflower tea to infants for colic. In other parts of America elder tea is used for headache, a laxative, and a diuretic. Both elderberry and elderflower are used to make a tonic wine. In Bohemia and Denmark the fresh juice is drunk for toothache caused by a cold. A salve made of the flowers and bark is used by southern United States Negroes for the bites of the red bug and harvest tick. Elsewhere this salve is used for gout, burns, swellings, and tumors. The leaves are used to keep flies and ants out of the house, and in poultices for inflammations. The fruit is a good cure for dropsy, rheumatism, and swollen limbs; the seeds are taken for dropsy and to reduce. Two elder sticks carried in the pocket will keep the thighs from chafing while riding a horse. An elderberry in the pocket prevents ivy poisoning. In Ireland a necklace of nine elder twigs or berries is a cure for epilepsy. Southern United States Negroes make an elder necklace for teething babies. Warts rubbed with a green elder stick will disappear if the stick is buried in the mud to rot. In Bavaria if a fever patient sticks an elder twig in the ground in silence the fever will go away; anyone who removes the stick will catch the fever. In the 17th century a piece of elder between two knots was cut from the tree where the sun never shone to cure erysipelas. If a boy is beaten with an elder switch it will stunt his growth. In Massachusetts elder pulp was carried in a

bag around the neck to cure rheumatism. The Slavs cure fever by pulling three elder shoots to the ground while the patient crawls through the arch. Elder was also good for deafness, faintness, strangulation, sore throat, ravings, snake and dog bites, insomnia, melancholy, and hypochondria. See ELLE WOMAN.

Elderberry Bush The cause of mankind's fate to die early, in North American Tsimshian Indian mythology. Stone and Elderberry Bush were quarreling (at a place up Nass River): each wished to be the first to give birth. Stone said if she gave birth first, people would live a long time, but if Elderberry Bush gave birth first, people would have to die soon, as Elderberry Bush herself had to die. Giant came along and heard this, touched Elderberry Bush, and told her to give birth first. So Elderberry Bush gave birth to her child. This is why people do not live very long in this world, and why elderberry bushes grow on graves. Raven (Txämsem) does not enter into this (Nass) variant of the story except as having been there and having heard and seen it happen, but other versions present Raven as the one who bade Elderberry Bush give birth first, and add that if Stone had given birth first, not only would men not have to die, but their skin would have been like their fingernails all over. Tlingit versions of the cause of death story explain that if Raven had made men out of rock instead of leaves (or grass) men would not ever die.

Elfin Knight A Scottish ballad (Child #2) very widespread in Europe and Asia, having for its central theme the motif of the countertask (H591). The knight agrees to be the girl's husband if she will make him a shirt without cut or hem or thread. She in turn says she will deliver the shirt when he delivers grain from an acre plowed with a horn and sacked in a glove. The dénouement of the parting of the lovers seems to be added from some other source than an original form of the ballad. The title too, the elfin-ness of the knight, plays no essential part in the story.

elk Elk as an animal character appears in tales of various North American Indian tribes of the Great Basin, Plains, and elsewhere. One tale is especially notable for its recurrence; it concerns the giant elk which is vanquished by a human hero (often a young boy, sometimes the Twins) with the help of a mouse, rat, mole, or other rodent ally. The Apache, among whom this tale is popular, assign the feat of killing the giant elk to their culture hero, Killer-of-Enemies (or Child-of-the-Water). Tales of Elk husband, or wife, are also of quite frequent occurrence in North America, especially on the Plains. Elk teeth as costume ornaments for women's fancy dresses are highly valued and were much used by Plains Indians. In the origin legends of the Oto, it was Elk who gave the people fire and started them to building villages. [Ewv]

Elle Woman The spirit of the elder tree in Danish folk belief; the *Hyldemoer*, or elder mother. No Danish woman would break off a sprig of elder (whether for brew or other purpose) without first invoking or apologizing to the spirit of the tree. No Danish child would injure the branches in any way. Hans Christian Andersen's story entitled *The Elder Tree Mother*, in which the Elder Mother presides over the lives of the

people in the house, but takes no part in the action of the story, bears out the belief in the spirit of the tree.

elm A shade tree (genus *Ulmus*) of America, Europe, and Asia. According to Teutonic mythology an elm, given soul by Odin, senses by Hoenir, and blood and warmth by Lodur, became the first woman, Embla. In Finno-Ugric mythology the elms were the mothers of Ut, goddess of fire. In England the elm was once known as elven, and was associated with the elves. Formerly it was the custom to deck the cathedral and close at Lichfield with elm boughs on Ascension Day. When the leaves of the elm are as large as a mouse's ear it is time to plant barley; when the leaves begin to fall out of season it is a sign of a murrain among the cattle. In Devon it is said that lightning will not strike an elm.

Elm leaves are used in poultices for swellings, and the leaves tied on a green wound with strips of bark will heal them. The inner bark is used in skin and venereal infections. The wood of the elm was sometimes used for a soft snuff.

Slippery elm (*U. fulva* or *rubra*) is sometimes used in a cough medicine and as a demulcent. The bark when boiled down makes a jelly which is very nutritious where a bland diet is needed. It was also used in the treatment of syphilis.

St. Elmo's fire or light The corposant; a globular or flame-shaped light (an electric brush or glow) sometimes seen at night on the masthead, ends of yard-arms, etc., of ships at sea in stormy or threatening weather. Pliny's *Natural History* describes the phenomenon as appearing not only on masts, spars, etc., but sometimes on men's heads. It is called St. Elmo's fire or light for the patron saint of Mediterranean sailors. This St. Elmo was either the Dominican Pedro Gonzalez of Astorga (1190-1246) who preached to sailors, or the 3rd century St. Erasmus, also patron of sailors. The word corposant is a corruption of Italian or Portuguese *corpo santo*, holy body: early Mediterranean sailors believed it to be the actual presence of their guardian come to warn them. Two of these lights appearing simultaneously are often called Castor and Pollux. Two mean that the ship will have good weather; one alone portends storm.

In Brittany this light is thought to be a lost soul and is prayed for. In Greece it is regarded as an omen of shipwreck and bad luck, and it can only be dispelled by the yells of a pig. German sailors believe it is the soul of a dead comrade with a message: good weather, if the light rises, bad if it lowers.

Elysium In Greek mythology, the fields on the banks of the river Oceanus in the farthest west where the blessed dwell. In Homer, the inhabitants of this fair land without snow or cold or rain are not shades, but heroes like Menelaus, who have been translated without dying. They live there under the rule of Rhadamanthus. In Hesiod, the same land is the Isles of the Blessed and is ruled by Cronus with Rhadamanthus dispensing justice from his side. Roman mythology makes the Elysian Fields part of the underworld, to which the shades are sent by the three judges, Rhadamanthus, Minos, and Æacus. Compare HADES; UNDERWORLD.

Ema Votive offerings in Japan in the shape of a picture of a horse. [JLM]

Emain Macha The capital of ancient Ulster; the seat of Conchobar: now Navan Fort near Armagh. The usual story is that Emain Macha, literally the twins of Macha, was named for the twins borne by Macha at the moment she won the race against the king's horses at that place. Because of her husband's thoughtless boast that his wife was swifter than the horses, she was sent for and made to run, in spite of her plea that she was about to give birth to a child. Because of the king's cruel refusal to wait, and his insistence that she run, she invoked upon the Ulstermen "the weakness of a woman in childbirth" to come upon them in their every hour of peril and need.

Embla, Emla, or Emola In Teutonic mythology, the first woman, who, according to the *Völuspá*, was created from an elm tree. Odin gave her life and a soul, Hœnir, reason and motion, and Lodur gave her warm blood and a fair complexion. In the *Prose Edda* she was created from a block of elm wood by Odin, Vili, and Ve.

emerald A clear bright green variety of beryl which throughout the ages has competed with the diamond both in beauty and value. Like the diamond, not all the emeralds of history have been genuine, and also like the diamond, many fabulously valuable stones have been destroyed by ignorant people who tested them by beating them on anvils and stones. The Bible mentions the emerald as one of the foundation stones of the New Jerusalem and one of the gems in the breastplate of the High Priest. The first Mohammedan heaven was of emerald, and in India, to give an idol one of these stones assured knowledge of the soul and eternal life. In classic legend emeralds were said to have been brought from the nests of griffons.

Engravers kept emeralds on their benches and looked at them to relieve eyestrain. They were of highest importance to early pharmacies: they were suspended over affected parts, held in the mouth, powdered and used internally, or merely worn to secure the desired effect. Like most gems they were effective against snakebite and poisons, and against demoniacal possessions of all kinds. They cured hot pestilence, gastric disorders, and dysentery. They stanch bleeding and were both cure and preventative for epilepsy, leprosy, and the plague. The Hindus prescribed looking at them as a laxative and stimulant for the appetite.

As amulets they were without parallel. An emerald worn on the finger would burn at the approach of poison, and would liquefy the eyes of serpents who merely looked at it. They were carried by travelers for good fortune, and could calm storms at sea. They foreshadowed future events, revealed the truth, and helped men recover what they had lost. They strengthened the memory, quickened the intelligence, and made their possessor an eloquent speaker. They conferred riches, joy, strength, and health. The emerald was an emblem of success in love, and as an emblem of eternal life, it was placed on the limbs of the dead.

emergence myth Among many American Indian tribes of the southwestern and southeastern United States, and among the Huron-Iroquois of the Great Lakes region, the first human beings are believed to have emerged from an underworld, from a hole in the ground (southwest and southeast), or from a cave

(Huron-Iroquois). The myths relating their experiences during and after the emergence into the upper world are often long and detailed. The southwestern tribes (Pueblo, Navaho and several Apache groups) are concerned with what happened during the actual emergence, and locate the spot where this occurred. The southeastern Creeks and other groups are more concerned with the migration account of their wanderings after their emergence. Generally speaking, tribes which tell as their origin story the emergence myth do not account for the origin of the earth by the primeval water (or flood-earth-diving myth), although a few southwestern groups of Apache combine these two origin myths. The Huron-Iroquois myth of the emergence of people from a cave is aberrant to the origin myth common to other Iroquoian tribes of the Great Lakes region. [EWW]

Emma The ruler of the underworld of Japanese Buddhism. [JLM]

Emperor and Abbot Title of a folktale, better known in English through the ballad *King John and the Bishop*. It has been found in every ethnic group of which the collection of folktales has been adequately surveyed. The story belongs to the large cycle in which a person of humble birth saves his life, gets a reward, or saves the life of a superior by answering three or more difficult questions. In this story the king will execute the bishop unless within three days the bishop can answer such questions as the following: How high is heaven? How much is a golden plow worth? How much am I worth? A miller, shepherd, or peasant answers the questions to the king's satisfaction. Other titles in the cycle are *The Clever Peasant Girl*, *The Son of the King and the Smith*, *The King and the Peasant's Son*.

This story is of particular interest to students of the folktale because of extensive and elaborate studies that have been made of it within the last quarter-century. Walter Anderson's *Kaiser und Abt* appeared in *FF Communications* No. 54 in 1924. In 1928 Jan DeVries published in the same series *Die Märchen von klugen Rätsellösern*. In 1929 Albert Wesselski studied *Der Knabenkönig und das kluge Mädchen*. The special importance of Anderson's study is that it applies to the study of the folktale the historic-geographic method which was developed by the Finnish school. By this method scholars attempt to collect all known variants of a tale, and by analyzing places and times of incidence, to formulate conclusions as to the place of origin and the extent and periods of diffusion. Anderson's conclusion is that the story may have originated in some Jewish community, possibly in Egypt, perhaps about the 7th century after Christ. DeVries believes that the cycle belongs to the legend of Solomon; Wesselski attaches it to the legend of Cyrus and thinks it is not connected with the literature of India.

The contribution of these brilliant studies of the Emperor and Abbot formula is to show the extraordinary care with which modern scholars approach the study of folktales. The general weakness of the historic-geographic method is in its use and interpretation of statistics and more seriously in our ignorance of large areas on the folktale map. Thus when several variants of the formula currently told in China have been brought into the picture new conclusions about the

distribution and origin of *The Emperor and the Abbot* may have to be formulated. [RDJ]

Enceladus In Greek mythology, one of the giants who warred against Zeus; son of Uranus and Ge, conceived when the blood of the mutilated Uranus fell upon earth. Enceladus is a partly human figure with serpents in place of feet. During the battle, Athena threw the island of Sicily at him; he was either killed by Zeus or imprisoned under Etna. The earthquakes in the region near Etna are caused by his struggles to free himself. Compare GIGANTES.

endama A type of extra-legal mating found among the Black Caribs of Honduras. See AMASIADO.

endless tale A type of formulistic folktale, especially of eastern Europe, in which a certain incident or set of words is repeated so often as to become unbearable to the listeners. Typical is the story relating how hundreds of sheep were carried across a stream one by one, or how a mountain was moved one grain of sand at a time. It is an endless tale because no listener ever heard the end. One variety of the endless tale is the circular tale or prose round. This is just as often brief as long-winded. It sustains great interest up to a certain point but gets nowhere, the wording being such as to suddenly start over again at the beginning. Typical of these is the tale that begins, "It was a dark and stormy night. The robbers were sitting around the fire"—One of their absent members rides up on horseback, dismounts and joins them at the fire. "Tell us a story," says one of the robbers to the newcomer. And again it begins, "It was a dark and stormy night. The robbers were sitting around their fire"—ad infinitum.

end of world The end of the world is envisaged by some North American Indian tribes as resulting from a world-fire (central Algonquian) or from a huge battle (northeastern Algonquian). Other Algonquians of the Great Lakes region believe that the culture hero and founder of the Grand Medicine Society, Nanabush, will return to this earth from his present abode in the west, before the end of the world. [EWV]

 A favorite theme of South American mythology is the destruction of the world by a great fire, caused by the fall of the sun (Mocovi), by a fragment of the moon when it was attacked by Jaguar (Toba), by a spark fallen from the sky (Cashinawa), by demons (Yuracare), by the trickster (Chiriguano), or by the culture hero. The Mataco blame the cataclysm on the Men of Fire who had been insulted by a bird. In most versions a few persons survived the disaster and repopulated the earth. According to the Mataco of the Gran Chaco, vegetation was restored to the world by a little bird who found ashes of the algarrobo tree and beat her drum until a huge tree grew. The Apapocuva-Guarani regard the great fire as one of the first cataclysms which will take place when the Creator removes one of the props supporting the earth.

The tradition of the destruction of the world by a spell of very cold weather occurs in Tierra del Fuego and in the Chaco. The Yahgan say that an angered bird caused snow to fall and ice to form. The melting of the ice sheet was followed by a big flood. The Toba and Mataco Indians speak of sleet and cold spell sent by the culture hero to exterminate most of mankind. [AM]

Enemy Way A Navaho Indian curing ceremony for victims of witchcraft: also known as the *Square dance*. Like all Navaho chants, the Enemy Way has a long origin legend detailing procedure for the chant; this origin myth has been recorded by Father Berard Haile (*Origin Legend of the Navaho Enemy Way*, Yale University Publications in Anthropology, No. 17, Yale University Press, 1938). [EWV]

Enlil The earth, air, and storm god of Sumerian mythology; one of the prime triad with An and Enki. He was patron of Nippur, where his temple was called E-kur, the mountain house; Enlil himself was known as the Great Mountain. He was lord of the spirits of the earth and of the air, the ghosts and demons. In the original version of the *Enuma Elish*, Enlil may have been the hero; indications in the later Babylonian and Assyrian versions are that a storm god acted such a role, but Enlil is not named. He is thus the original conqueror of Tiamat; later, all Enlil's attributes and deeds were ascribed to Bel and Marduk. See BEL; MARDUK; NINLIL; SEMITIC MYTHOLOGY.

Enuma Elish The creation epic of Babylonia and Assyria: so called from its opening words, meaning "When above," viz. "When a sky above had not been mentioned." See SEMITIC MYTHOLOGY.

envoûtement That form of sympathetic magic working through an image or other representation of the person the magician wishes to influence, usually to injure: a practice as ancient as Egypt and Assyria and still found from Ceylon to the United States, Europe to Africa, South America to Siberia. The word comes from Old French *vout*, image, from Latin *vultus*, face. Commonly an image, often of wax or wood, is made more or less resembling the person to be harmed; the inclusion in the statuette of bits of hair, fingernails, etc., of the intended victim is sometimes considered a necessity. While the proper spells are recited, the operator thrusts pins, nails, or splinters into the image, aiming at the spots where the vital organs might lie, or pinches it or strikes it, melts it in the fire or drowns it in a basin or river, or otherwise works some harm to the image. The human counterpart of the figure will then feel pain in the organs through which the pins have been pushed, or will die suddenly or waste away, become very ill or go insane. This practice, with variations due to time and place (e.g. photographs may be used, as among some southern United States Negroes), is remarkably consistent throughout the world and through the ages. It serves not only as a form of maleficent magic, but is also perhaps the most effective means of counteracting magic; the identity of the sorcerer once determined, his image may be made and treated in a like manner to cause his death or illness, or to paralyze his ability to cause harm.

Eos The Greek winged goddess of dawn: equivalent to the Roman Aurora. She was the daughter of Hyperion and Theia or Euryphassa, or of the Titan Pallas; sister of Helios and Selene; lover of many handsome men, whom she carried off. Because of an affair with Ares, Eos was caused by Aphrodite to be constantly in love with someone, and Orion, Cephalus, Tithonus were some among many. She lived with Tithonus and asked Zeus that he be made immortal, but neglected to ask

for eternal youth for him. After he had shriveled and lost his voice, she transformed him into a cricket. She was mother by Tithonus of Memnon and because of his death at the hands of Achilles she weeps the nightly dew. She rises from Tithonus' bed at the end of night and in her chariot drawn by two horses travels to the heavens from the river Oceanus to announce the arrival of the sun.

epilepsy A chronic nervous affection characterized by sudden loss of consciousness, sometimes accompanied by paroxysmic seizures, or "fits," of varying intensity and duration: often called the falling sickness because the patient usually falls down when seized by an attack. The disease was formerly believed to be the actual seizure of the person by some supernatural agent, demon, or the like; and in classic times epilepsy was universally honored as being "oracle-possession." The Hindus believed epilepsy was the manifestation of possession by demons, and there were certain Vedic rituals for exorcising them. *Ben nefilim* is the common name for the Jewish demon of epilepsy. The New Testament casting out of devils (*Matt.* viii, 16: they brought unto him many that were possessed with devils and he cast out the spirits) is thought to refer to ridding the afflicted of some such being. Among the Berbers the sacrifice of a cock is believed to appease the spirit which has caused the seizure, to ensure riddance of it, and hence the cure. The Aymara Indians of Bolivia today believe that epilepsy is caused by "being looked upon by a spirit."

Among many early and contemporary primitive peoples epilepsy is a welcome visitation. Persons thus seized are revered for their contact with the supernatural, and shamans, priests, diviners, etc., are often chosen from among the epileptics.

Wearing coins of various kinds was considered good against epilepsy in the Middle Ages, especially coins marked with a cross. A ring made of silver from a Communion offertory was particularly effective. In the 14th century shavings of rhinoceros horn mixed with human blood was thought to be good remedy. Salt of coral was almost universally valued. This was prepared by dissolving coral in vinegar and distilling the liquid. Salt of pearl (similarly prepared) was thought highly of in the 16th century. This was recommended as "a most noble cordial for convulsions and falling sickness, for it purifies and keeps the body sound, comforts the brain, memory, and heart."

In Germany the blood of a she-ass will cure epilepsy, or the blood of someone who has been executed, or (in the Tyrol) the hot blood of a weasel is sometimes recommended. The rural English and general Celtic cure for epilepsy is a decoction of mistletoe. The efficacy of mistletoe is also known in Germany, Sweden, and Holland. In Sweden the epileptic carries with him always a knife with a mistletoe handle. In Germany the mistletoe necklace is effective. The great virtue in mistletoe against the falling sickness lies in the fact that mistletoe is not rooted in the earth. It grows high overhead and has therefore the power to keep one from falling to the earth.

One of the Irish names for epilepsy is *galar Poil* or *tinneas Poil*, the disease of Paul, since Paul is known to have been an epileptic. There are various Irish cures.

One is to wear a necklace made of nine cut pieces of an elder twig. Another is to heat a church key red hot and lay it on the patient's head. Water from a holy well is good, or three drops of sow's milk. Another remedy is to cross running water before sunrise and then bathe in it, or to twist a thread around an iron, or an iron nail, and bury it in the earth. See *POSSESSION*.

Epiphany (from Greek *epiphaneia*, apparition) A feast observed January 6th, celebrated in the gnostic Christian church as the date for the baptism, thus rebirth, of Christ. Later it became identified with the coming of the three Wise Men or Kings. Generally it is known as Twelfth Night, because of its dating in relation to Christmas. In Europe in general it is a special occasion for observance of surviving pagan winter solstice celebrations, encouragements to the rebirth of the New Year, the beginning of the carnival season. In Germany and Austria destructive spirits are exorcised by noisy bands masked as Perchten and other fantastic figures. In Portugal it is a special occasion for mouriscadas and stick dances, as the elaborate *paulitos* in Nogueirinha. In England it was originally the date for the appearance of the Abbots Bromley antler dancers. By coincidence, it is also the date for a number of animal dances of the Pueblo Indians, specifically, the Deer dances at Taos and Santa Ana in the natural hunting season. Mexico's greatest pilgrimage, that of the Aztecs and Otomí to the miraculous Christ of Chalma, occurs on this date. Throughout central Mexico fiestas feature the adoration of the Magi, pastorelas with children dressed as shepherds and shepherdesses, concheros troops, and nacimientos of Biblical and historical scenes. See *BEFANA*. [GPK]

Epona A pre-Roman Gaulic divinity, goddess of horses, guardian and protectress of horses, asses, mules, and of all who had to do with them: the only Celtic deity to be included in the Roman pantheon. The fact that the Celtic horse-troops fought with the Roman armies spread and popularized the horse-goddess cult widely over the continent. Widespread monuments depict her as riding on a horse, feeding colts, or surrounded by horses. She is often found on the same monument with the Matres (the Celtic mother-goddesses), a fact which marks her perhaps as also a fertility goddess. There is some conjecture that Epona may have been one of the Matres with the special province of the fecundity of horses, growth and well-being of foals, etc.

erawng môt k'rak or **wang ün kêng** Forked sticks, seven to ten feet high, which are planted in rows in front of the Wild Wa (Burma) houses. Each stick is a record of a buffalo sacrificed to the spirits by the owner of the house. In front of some houses are rows of these representing entire herds of buffalo. The heads and horns are piled at one end of the house as proof of the sacrifices. The sticks are usually weathered but sometimes they are painted black and red.

The Chins erect an upright post on which they record the number of sacrificed buffaloes by means of slanting black lines. The Theinbaws plant posts in slanted fashion forming rows of x's to record the same thing.

Erdélyi, János (1814-1868) Hungarian writer and philosopher famous for his collections of Hungarian folk

songs, folktales, and proverbs. His collection of Magyar poems and folktales, *Magyar Népköltési*, was published in three volumes (1846–1848); his *A Nép Költészete népdalok, népmesék és közmondások*, containing three hundred national songs, 19 folktales, and 7,362 proverbs, was published the year after his death.

eré Of Yoruban derivation, this word in the can-dóblé cults of Bahia, Brazil, and the Shango sect of Trinidad, British West Indies, denotes the childlike beings that take charge of the individual undergoing initiation, and succeed the deity "in the head" of a possessed cult-initiate. In its second role, the *eré* functions as a kind of half-state between full possession and the resumption of customary personality status. It thus constitutes a psychological mechanism for cushioning the shock of passage from the possession experience into normal life. The *eré* are conceived as childlike beings, and, when "in a state of *eré*," as this is termed in Brazil, the devotee behaves like a child-being, usually, though not always, gay and mischievous, playing children's games, eating incessantly, and at times caricaturing the dancing of the gods. Though it is clear that the New World concept is to be related to the broad West African category belief comprised in the "little people," the exact relationship to the various beings found in this category as found among the various West African peoples has not yet been explored. [MJH]

Erebus In Greek mythology, Darkness, a son of Chaos; father of Hemera (Day) and Æther (Upper Air) by Nyx (Night). In Homer, Erebus is the place of darkness under the earth, with its entrance in the farthest west in the land of the Cimmerians, which the shades go through on their way to Hades. In Orphic belief, Erebus existed from the very beginning of things.

Erechtheus A legendary king of Athens: often inextricably confounded with his grandfather or grandson Erichthonius. He is in some way identifiable with Poseidon, one of whose names was Poseidon Erechtheus. In the principal legend concerning Erechtheus, however, Poseidon is his enemy. The oracle at Delphi told Erechtheus that he would not win a war he was fighting against Eumolpus of Thrace and the Eleusinians unless he sacrificed one of his daughters. This Erechtheus did, which act so enraged Poseidon, for by it Erechtheus killed Eumolpus, Poseidon's son, that either he, or Zeus at his request, destroyed Erechtheus and his house. Variants of the legend say that his two elder daughters offered themselves for the sacrifice; that it was his youngest daughter who was killed; that after the sacrifice all his daughters committed suicide.

Erichthonius In Greek legend, an early king of Athens. He was the son of Hephaestus and Ge, somewhat inadvertently, for when Hephaestus struggled with Athena in an attempt to end her maidenhood, she defended herself with her spear, and Hephaestus' seed fell upon Ge, the earth. After Erichthonius was born, Athena put him into a chest and gave Pandrosos, the daughter of Cecrops, charge of it, with instructions not to look in. But Herse and Agraules, her sisters, did, and were driven mad by what they saw there. According to some, a serpent was in the chest, put there by Athena to guard the infant; others say that the child himself, like

Cecrops, was serpent-footed. Athena then took the child under her own care within her precinct at Athens, and in due time he grew up to become king. Erichthonius is credited with introducing the worship of Athena and the Panathenæa, and with building the temple to her on the Acropolis. He, and not Cecrops, is said to have decided in Athena's favor over Poseidon's claims for possession of Athens. He was the inventor of the chariot or of the four-horse chariot, according to some because he wanted to hide his feet; he was placed among the stars as the Charioteer. See AURIGA; PANDION.

Erinyes (singular *Erinyes*) In Greek mythology, the angry and avenging deities who pursued evil-doers and carried out the effects of curses: feared by gods and men, and called in Latin *Furiæ* or *Diræ* (the Avengers). They were perhaps originally ancestral spirits, or angry ghosts of the murdered, who maintained the morality of mankind; or they may have developed from an earth goddess similar to Ge: one of the epithets of Demeter in Arcadia was *Erinyes*. Several genealogies are given, the Hesiodic stating that they were born of Ge from the drops of blood falling on her when Uranus was mutilated. Being older than Zeus, they did not serve him, but acted independently. Later tradition makes them three in number: Alecto (the persevering anger), Tisiphone (the blood avenger), Megæra (the jealous). They dwell in the underworld and return to earth to enforce curses and punish antisocial acts, particularly crimes against relations such as the murder of relatives or disobedience to parents. They are the embodiment of impersonal justice, the reason underlying a crime not coming into account at all, the act alone being their concern. Expiation for the crime causes them to desist from pursuit. Thus, the slaying of his mother, by Orestes, despite the moral duty he had to perform, caused the Erinyes to hound him until he was acquitted by the Areopagus. They were thenceforth known as the Eumenides (the kindly), and had a sanctuary at the foot of the Areopagus in Athens. They were likewise called the *Semnæ* (the venerable ones). Yearly, there was a festival of the Erinyes at which offerings of milk and honey in water were made. Though Æschylus made them appear like Gorgons, their later usual form was that of grave, winged maidens, dressed as huntresses, who could be distinguished by their carrying scourges, sickles, or torches. There seems to be no basis for identifying them with the Indian Saranyu. Compare DEMETER; EUPHEMISM; KERES; MOIRÆ.

Eris In Greek mythology, the goddess of discord, or more properly of emulation: the Roman *Discordia*. The insatiable sister of Ares, she evoked war and disharmony, remaining on the battlefield and gloating over the bodies of the slain after all the other gods had left. Eris threw the apple of discord among the gods at a feast, usually described as the wedding feast of Peleus and Thetis, saying "Let the fairest have it." The ensuing argument was decided by Paris. (See PARIS.) Hesiod mentions also a good Eris, the goddess of honorable competition.

Ériu In Old Irish mythology, a queen of the Tuatha Dé Danann, third of the three met by the Milesians in their invasion of Ireland, and to whom they promised that her name would be the chief name of Ireland for-

ever. The familiar Erin is the dative case of Ériu. The coronation feast of the early Irish kings was called *féil baindsi* (literally wedding feast), because it was believed that the inauguration ceremony symbolized the marriage of the king to this ancient eponymous queen. See BANBA; FODLA; ITH.

Eros In Greek mythology, the god of love: similar in some respects to the Roman Amor or Cupid. Eros, not in Homer, was originally the god of love between friends, a beautiful youth, one of the first of the gods, in Hesiod coming from Chaos with Tartarus and Ge. Various parentages were later assigned to him, especially those making him son of Aphrodite by Zeus, Hermes, or Ares; and with time he degenerated into the wanton and cruel winged boy, armed with arrows, from whom not even the gods were safe. He carried torches which no one could safely touch. Later additions to the myth include also the covering of his eyes; two kinds of arrows, golden ones which brought love, and leaden ones bringing aversion; and the multiplication of the god into a number of Erotes. There was also distinguished a brother of Eros, Anteros, the god of returned love, who punished the refusal to reciprocate on the part of the loved one. Eros was worshipped at Thespiæ in Boeotia and at Parion in Mysia. Compare CUPID AND PSYCHE.

Erymanthian boar In Greek legend, the boar caught by Hercules as the fourth of his labors. He chased it into deep snow and then carried it struggling back to Eurystheus, who, when he saw the pair coming, hid in fear in a bronze jar. During the chase of the boar occurred Hercules' visit to Pholus and its tragic consequences.

eskänye The old-time women's shuffle dance of the Iroquois Indians: a homage to the food spirits, the three life-sustaining sisters. Thus it is one of the bread dances and associated with certain dance sequences (see BREAD DANCE). In the great Seneca festivals, Midwinter and Green Corn, it is inserted between two performances of the great feather dance. The women progress to the right, facing the center of a circle, with a sideward saw step, shuttling the heels and toes alternately in and out. Expert dancers swing their arms from side to side with bent elbows, and execute occasional quarter-turns. The latter songs of the cycle recite the cycle of the germination, growth, and fruition of the crops, and describe the climbing of the beans around the corn stalks. The melodies, to drum and rattle background, have a tremendous range and freedom of thematic treatment which contradict the dance's traditional antiquity. [CFK]

espringale or Springtanz A European round dance for couples, popular, especially at the time of the Minnesingers, in the 14th century. It was a carole with little leaps and hops and, like the carole, was associated with verdure. The verses of the choral leader invoked nature; the chorus responded with a refrain, imitating instruments as the bagpipe, flute, drum, rebec, and psaltery, or yodelling or rolling the tongue. [CFK]

estampie or istampida A European stamping dance for men and women, with an accent on every third beat: a popular round dance from the 12th to the 15th century, in slow 4/4, 3/4, or 6/8 measure, associated in the

14th century with the fast *saltarello*. Of the accompanying songs the 12th century *Kalenda Maya* is the most famous. [CFK]

Estonian folklore The folklore collections of the Estonian people are among the most numerous in the world. The richness of folkloristic records depends on the degree of civilization of the people and on the intensity of the collecting activity, because with the advance of civilization the folk traditions usually disappear. Both conditions were favorable in Estonia from the folkloristic point of view and today the small Estonian people have about 711,000 written pages of folklore material.

The Estonian people were for many centuries enslaved by the German barons and all their cultural life was dominated by Germans. Nevertheless a few educated Germans, so-called Estophiles, showed interest in the common people, their language, history, and culture; and in 1838 was founded the *Estonian Learned Society* (GEG) in Tartu (Dorpat), later, 1842, the *Estonian Literature Society* in Tallinn (Reval). Both societies had their publications, in German of course, in which many important articles on Estonian folklore were printed, especially in *Verhandlungen der GEG*, and in the journal *Inland* (1836-1863). Thus the first works on Estonian folklore were done and published by Germans, mostly pastors, and in the German language.

The first book of great folkloristic importance dealing with the superstitions and customs of the Estonians was *Der einfältigen Esthen abergläubische Gebräuche, Weisen und Gewohnheiten* by J. W. Boecler (Reval, 1685; 2nd edition by F. R. Kreutzwald, St. Petersburg, 1854). The Russian Academy of Sciences also showed interest in Estonian linguistics and F. J. Weidemann (1805-1887), member of the Academy, published not only an Estonian-German Dictionary, but also a large book about the life of the Estonian people, *Aus dem inneren und äusseren Leben der Esthen* (St. Petersburg, 1876). Some material in this work is of doubtful origin and belongs to the numerous falsifications which grew up as the Estonian national awakening was started and as the "young Estonian" movement used folklore as one of their means.

The founder of the Estonian Learned Society, F. R. Faelmann (1798-1850), fabricated some deities and splendid myths (see ESTONIAN MYTHOLOGY). He was eager to furnish a substitute for the national epos. This task was accomplished by F. R. Kreutzwald (1803-1882) and the Estonians were delighted with him (see KALEVIPOEG). Kreutzwald also published a collection of folktales in the literary style of this time, translated into German by F. Löwe (*Esthnische Märchen*, 2 vols., 1869 and 1881). Another similar collection of Estonian tales and legends was published by H. Jannsen (*Märchen und Sagen des estnischen Volkes*, 2 vols., 1881 and 1888). Both editors were greatly influenced by the Grimm brothers and others who stylized folk tradition. A publication of folk songs, *Esthnische Volkslieder* (2 vols., Reval, 1850-1852), was arranged by A. H. Neus (1795-1876) and published by the Estonian Literature Society. The editor used the manuscripts of many earlier and contemporary collectors, and this work was for many years the most important reference book for Estonian folk song, particularly because of German translations. It is regretta-

ble that some songs were stylized too much or were completed by their collectors, and that even more falsifications penetrated into another work, *Mythische und magische Lieder der Esthen* (St. Petersburg, 1854), edited by Neus together with Kreutzwald.

All the above-mentioned works (even if they are not exemplary in the eyes of folklorists of today, in that they contain too many personal supplements made by the collectors), caused a widespread national movement by the Estonians. Estonians were delighted with the traditions of their folk. The gathering of folklore was regarded not as an amusement of rich people, but as a national task in which the whole people took pride. The Estonians themselves came to the work. The Rev. Dr. Jakob Hurt (1839–1907) started a very well organized collecting of folklore throughout the whole country. He had, we can say, a modern conception of the folklore method; he gave good instructions to the collectors and was able to stop the falsifications. The results were astonishing. To his appeal in the press answered hundreds of volunteers from all classes of the people. Practically every house and smallest cabin in the country was visited by a folklore collector, with the result that Hurt's collections reached 124,000 written pages. This period of folklore-gathering activity has been called "the age of folk goods." Hurt also planned the publishing of a big collection of folk songs, a *Monumenta Estoniae antiquae*, but because of lack of money only two volumes appeared: *Vana Kannel* (The Old Harp, 1875 and 1886). At the end of his laborious life he published a very well arranged collection of songs of the Setus (*Setukeste laulud*, 3 vols., 1904–1907), which remains today an unsurpassed work on Estonian folklore. The most important colleague of Hurt was M. Veske (1843–1890), who published a good anthology of Estonian songs (*Eesti rahvalaulud*, 2 vols., 1879–1883).

Another clergyman, M. J. Eisen (1857–1934), started simultaneously with Hurt the gathering of folklore. He obtained 90,000 written pages, mostly tales and legends. He became famous as the author of about 200 popular books, written with the use of narrative folklore. Some of his collaborators, inspired by his example, also imposed a literary style on their collected folktales. One must, therefore, watch for falsifications when using the collection of Eisen. In the free Estonian state, Eisen became professor of folklore, and his studies on Estonian mythology (4 vols., 1919–1926) are of real scientific value. He confessed frankly what were his own creations in his popular editions.

Among the more recent collections a very important one was made by Samuel Sommer who gathered about 124,000 pages from the Setus, mostly folksongs.

The first Estonian holding a Ph.D. in folklore, O. Kallas (1868–1947), organized the recording of folk melodies. His collection contains more than 20,000 pages. A good anthology of the melodies of folk songs with introduction and summary in German, was published by H. Tempere (*Eesti rahvaviiside*, Tartu, 1935).

From the German scholars of the last few decades, those who paid attention to Estonian folklore were very few. The friend of the Estonians, L. von Schroeder, published an important study on Estonian wedding customs (*Die Hochzeitsgebräuche der Esten*, 1888) and another on Estonian gods and elves of German origin (1906).

Another well-known German folklorist, Walter Anderson (born 1885), was for many years acting as professor of folklore at the University of Tartu in independent Estonia. He collected about 59,000 pages, mostly children's songs and verses, and published several important studies.

In 1927 the independent Estonian state founded the Estonian Folklore Archives (*Eesti Rahvaluule Archiiv*), which was directed by Dr. Oskar Loorits. There were placed all the earlier collections of Hurt, Eisen, and others, and the new ones, gathered during a period of 15 years under the skilled guidance of Loorits, reached 252,000 pages. Thus on January 1, 1941, Estonian folklore collections numbered 711,573 pages in all. This is a gigantic monument of culture for a small people. The Archives published many studies in its series *Eesti Rahvaluule Arhiivi Toimetused*, and separately. Folklore publications became so numerous that folklore bibliography each year covered many printed pages, published in *Jahresbericht der estnischen Philologie und Geschichte*, with German translations of the titles. The author of many of the most important works of this period is O. Loorits.

There must be mentioned a giant plan to publish Estonian folk songs along with all the recorded variants for each song. Only two volumes have been published so far, containing 18 epic songs with hundreds of variants (*Eesti rahvalaulud*, 1926 and 1932, with summaries in German). The work ceased because it was going too slowly, was too expensive, and was of real importance for only a small number of specialists, who could easily find the material in the Archives.

The most important part of Estonian folklore is the folk songs. It must be emphasized that the old songs differ from the new ones, which were created at the beginning of the 19th century under the influence of religious hymns. The old songs have neither rime nor stanza, the rhythm is calm and reserved, the verses are mostly trochaic, sometimes with dactylic-trochaic interferences. Alliteration and assonance, and the repetition of the same contents in other words, or parallelism of the thought, are the most typical traits of the old songs. The epic elements are not so developed as in the Finnish runes and the lyrical mood is predominant. The Estonian songs have been referred to as "women's lyrics." O. Kallas gave the following characteristics of Estonian songs: "The majority of the collected runes... treat the manifestations and happenings of peasant-life, and the revelations of the human heart. They lead the listeners through the whole life story of the Estonian, from cradle to funeral bier. Particularly numerous are the wedding-songs; deepest in sentiment the orphan-songs, as in general all songs of elegiac nature. Love-songs... are conspicuous by their relative rarity. In Estonia such songs are overshadowed by the other varieties... The Estonian is sober in this as in other respects—a calm rational reflecting spirit—and thus in the field of lore he is no dreamer, no knight of romance, but a realist and a naturalist. As a result, Estonian songs of this description deal mostly with married love and fidelity or with sensual erotics. Characteristic of the Setus are their dirges, which are entirely missing among the other Estonians" (*Folk-Lore* 34: 111).

For studies on narrative folklore the Estonian ma-

terial is of great importance because in this country the Russian and German waves of folktales come together. A type-index of Estonian tales and legends was published by A. Aarne (*FFC* 25, 1918). The west European repertoire is most important. Animal tales are not numerous. On the other hand, the number of magic tales is very great. A large part of the legends are closely allied to similar products elsewhere of Christian influence from both churches, Roman and Greek. Numerous myths tell about the origin of the world, the creation of man, animals, and plants and their peculiarities (*Ursprungssagen*). Despite the difficult conditions of life a very great number of humorous jokes were created or adopted. The legends, particularly local legends, often have historical reminiscence. Two collections of legends were published in German by F. Bienemann (*Livländisches Sagenbuch*, Reval 1887) and by C. von Stern (*Estnische Volkssagen*, Riga, 1935). Some of them contain valuable mythological data, e.g. about the dead, the Devil, house and water spirits, giants, hidden treasures, etc. A peculiarity of Estonian legend is the half man and half dog people. (See DOGHEADED PEOPLE.)

About other kinds of Estonian folklore O. Kallas says: "Of special interest are the proverbs... They offer a pithy, apt and graphic quintessence of popular wit and wisdom and are a keen character study in animated colours; a complete code of popular ethics and knowledge of life in pocket size... The material collected concerning ceremonies and customs, children's games and popular sports is so comprehensive that a whole gallery of pictures of Estonian popular life could be derived from it." (*Op. cit.*, pp. 112-113.)

Estonian mythology It is a very difficult task to separate genuine Estonian mythological beliefs from the influences and borrowings of all kinds from abroad. The foreign influence, especially from the Germans, is very great. The ideas of the Catholic Church are sometimes closely mixed with earlier traditions. The infiltration from Sweden and Russia is also obvious. Much confusion was made by the Estonian patriots in the time of the national awakening in the first half of the 19th century. They created for themselves an Estonian Olympus with the names of gods borrowed from the Finns. Ganander's *Mythologia Fennica* was translated in 1821 into German and published, and the Estophiles supposed that the same gods were known to the Estonians, but had only been forgotten. In 1841 F. R. Fählmann fabricated the gods Vanemuine, Ilmarine, Lämmeküne, and one year earlier had created the famous myth, "Koit ja Hämarik" (The Dawn and Evening Glow). Other fabrications: the god Turis was created by K. J. Peterson; M. J. Eisen produced "Kõu ja Pikkar" (Thunder and Lightning). It was not correct to graft the Finnish gods on to the Estonian (even though both peoples are near relatives), and it is not justifiable to create a

complicated myth out of a bare name found in the folk traditions.

No wonder that Estonian scholars have different opinions on this complicated matter. Dr. Oskar Loorits made this statement: "I have designated *Animism* and *Manism* as the basic conception of Estonian religious life. Even *Shamanism* is known in a strongly degenerate form, whereas *Polytheism* in the Estonian folk beliefs cannot be seriously mentioned... The modern doctrine about primeval *Monotheism* and the idea about one supreme god cannot be confirmed by Estonian folk tradition... The Estonian folk-religion is rather of *Pantheistic* pattern and it is possible to speak about a kind of *Dynamism*... Thinking in magic terms survives today with great vitality..." (*Grundzüge*, Vol. I, p. 10-11).

We do not have a comprehensive description or presentation of Estonian mythology from some centuries in the past; the best source remains the Estonian folklore of recent days, which, it is true, is often very conservative. The statement of Loorits is based on just this material. It is possible that in older times, as the Estonians were not so much influenced by the religious beliefs of their neighbors and by the Christian doctrine, their mythology had also other traits. Indeed the chroniclers have given us a few statements. For example, in *Chronica Livonica* in 1220 is mentioned the god Tharapita. The philologists explain that probably the heathen warriors yelled "Taara avita!" (Taara help us) before the battle with the Christian knights. The Taara may have been a god of heaven and thunder like Thor of the Scandinavians. The other Finno-Ugric stocks also have gods of heaven called by similar names (cf. Vogulian *Tõrem*, Ostyakian *Türem*, Lappish *Turms*, etc.). However it remains an unsolved problem whether here we have a borrowed Scandinavian Thor or a genuine Estonian deity.

The word *jumal* has many meanings and may be a name for heaven and the gods in general. Names like Vanataat (the old man), Taevataat (the old man of the heaven), or Vanaisa (the old father), occurring in popular sayings, do not sufficiently prove any belief in a personal highest god of heaven. There may also be some influence of the Christian God.

The thunder has many names. Uku (the old man) is a borrowing from the Finns (see UKKO). The common Estonian word for thunder is *pikker* or *pikne* (the long one); it means the lightning also. In the North thunder is called *kõu*, meaning the thunderclap in general, probably an old borrowing from Lithuanian *kaukas* (see *FUF* XII: 186-194 and *ERE* VI:23). In the East thunder is called *äike* (the big or old one, grandfather). So the names are many, but there is lacking any evidence that thunder was imagined as a personal god and not only as a manifestation of nature. Nevertheless, the thunder was an object of worship, and sacrifices were offered to him. A prayer was written down by Gutsleff in 1644 from the "heathen priest" to the Pikker and says: "Dear Pikker! We are offering you a bull, two-horned, four-footed, for the sake of the plowing and the sowing, stalks of brass, ears of gold. Push elsewhere the black clouds, over the great swamp, the high forest, the wide plain; air of mead, rains of honey to our plowmen, sowers! Holy Pikker, look after our fields: fine straw beneath, fine ears above, fine grain within!" Pikker also gives rain and fertility like the thunder god

of other peoples. Prayers for sending the clouds to the forests and deserts during thunderstorms is known also among Lithuanians.

Estonian nature spirits are very numerous. The common name of the spirits is *haldjas* (see *HALTIA* of the Finns). The household spirit is *majahaldjas* or *koduhaldjas*, the protector of the house and court. Such a protecting spirit is probably the soul of the first owner of the house. He takes care of the house for the good inhabitants, but must not be offended, and victuals and drinks must be offered to him (compare Finnish *tonnu*). The worship of house-serpents is also mentioned from the 17th century, and has survived until recently.

The prevalence of numerous water deities shows very great German influence (see *NÄKK*). They are imagined in human shape, male and female, and often the same spirit has many names. Not so much developed is the worship of fire and trees. The sacred oak and linden were mentioned by Russow in 1578. Estonians habitually call the nature spirits "mothers" and "fathers," e.g. mother of the sea, mother of the field, father of the cattle, father of the forest, etc.

Estonians also have various idols formed by the hand of man. Seventeenth century sources frequently mention the *Metsik*, which at the time of New Year and Shrove Tuesday was formed from straw in the shape of a man or woman and put on a tree or fence. The idol was to protect the cattle against wild beasts and also to promote the fertility of the crops. A similar idol is known today to the Setus in the south of Estonia (see *PEKO*). A third idol was *Tõnn* from the west. The name is derived from St. Antony. He was formed as a doll from cloth and wax and preserved in a bushel basket in the corn house. He was offered the first-fruits of all kinds of products. There are also deities of fertility. Common are the maidens of the corn-field, called *viljaneitsi*, and the wolf of the rye.

Very popular in Estonia are the demons of fortune. Such a demon can be bought or made by man and vivified with the help of the Devil. Frequently the man must promise his soul to the Devil, but usually he is able to cheat the Devil and save his soul. The demon brings the owner all kinds of goods, products of milk, grain, and even gold. He has the shape of an animal, usually appearing as a cock, cat, or toad. He is called *kratt* in the west, *tont* in the east, *puuk* in the south and on the Isle of Saaremaa. Another shape of the same demon is like a fiery flying dragon, called in the west *tulihänd* (the tail of fire), and in the south *pisuhänd* (the tail of spark). All the demons of this kind came to Estonia from Germany and Sweden, not only their names but also their shapes, their nature, and their legends (compare L. Shroeder, *Germanische Elben und Götter beim Estenwolke*. Wien, 1906, p. 14-61). A magician can himself fly in the form of a demon to steal goods from his neighbors.

Perhaps the most interesting Estonian beliefs are those concerning the dead. Many of the Estonian beliefs are more or less connected with the dead. The deceased man continues his life as before, except that now he is living in the grave. The word *kalm* means both the grave and the dead. The collective living place of the dead is called *Hiela*, a sacred grove where the dead were buried, and *Toonela* (compare *TUONELA* of the

Finns). The "old Tooni," master of this realm, functions like a father of a numerous family. There are also houses, fields, and roads in the afterworld, as on the earth. Sometimes the name *Manala* (under the earth) is also used. It is populated by the dwarfs. The invisible soul of the man is *mardus* or *marras*. If one sees it, the man will be dead soon. The dead are often helpful to the living, but they must not be offended. They must be offered victuals during the burial and later when they return home on certain days in the autumn. The bathroom was heated for the souls. Food was also laid on the graves. In early times the living relatives feasted together with the departed on the graves. This custom is known today among the Setus, and in 1428 it was mentioned that the Estonians liked to feast in the churchyards together with their dead. There was no fear and hostility between living and dead. On the contrary, they formed together a close family, guided by love and mutual help. As a result of Christian-Germanic influence, the dead later came to be represented by a revengeful demon (*kodukäija*).

The Devil has many names, old and new, of heathen and Christian origin. For example he is called *vanapagan* (the old heathen, a name also used for a giant); *vanapois* (the old boy); *äio* (grandfather); *kurat* (the left or bad side); and *juudas* (dark). The hard struggle between the old and the new religion, between enslaved folk and foreign clergy produced such names for the Devil as *säks* (a German); *poostel* (from apostle); and *kolmik* (from trinity). The beggar is called *sant* (from *sanctus*); *muuk* (from monk) is the name for a robber. The Devil of the legends is often helpful to the poor Estonian farmer in the struggle with his oppressor, the German baron.

The priest or magician is called *nõid*, the old name for shaman (see *NOIDE* of the Lapps). There were good and bad magicians. The good ones, who were helpful to man by protecting him, healing diseases, and forecasting the future, were called *tark* (the wise). Their power depended upon knowledge about the origin and nature of evil spirits, for only when they possessed this power could they control them.

The variety of Estonian folk beliefs is very great, a mixture of mythological ideas of many cultural areas. They come from the old Finno-Ugric background, and there are borrowings from the Goths, Germans, Swedes, Latvians, and Russians. The Catholic period has left more traces than recent Protestantism. The oldest survivals are preserved by the Setus in the southeast of Estonia in so-called *Setumaa*. Folk medicine and the magic practices of daily life are of German origin.

JONAS BALYS

Etsanatilehi The Woman Who Changes: an important female deity of the Navaho Indians of the Southwest. See *CHANGING WOMAN*. [EWV]

ethnocentrism The ethnocentric viewpoint is tellingly illustrated in many North American Indian origin myths. In the Eastern Woodlands each one of many

tribes claims to have been created at "the heart of the world"; each claims to have been created first, with other tribes created as an afterthought, or semiaccidentally, or by less important deities. The Jicarilla Apache of the Southwest say that one tribe only—their own—existed when the world was new. Ethnocentrism is also pronounced in mythical material on the confusion of tongues. In most of this material it is assumed or stated that the language of the tribe to which the narrator of the myth belongs was the language which originally was spoken universally. [EWV]

ethnochoreography The scientific study of ethnic dances in all their choreographic aspects (steps, formations, rhythms) as related to their cultural significance, religious function or symbolism, or social place. Comparative choreography is the juxtaposition and interpretation of salient elements in dance forms. [Word coined and defined by Gertrude Kurath]

Etzel The German name for Attila the Hun who, according to the *Nibelungenlied*, married Kriemhild, sister of Gunther, king of Burgundy, after the death of Siegfried. He took no part in Kriemhild's plots for revenge against her brothers, but treated the Burgundians as noble guests, and tried to reconcile his wife and her brothers until all were slain. Compare ATLI.

Eugamolak Manobo, Manama, or Kalayagan 'The Bagobo (Philippine Islands) chief spirit and creator who lives in the sky and watches the doings of men. He is served by many spirits who exact punishment from the people when they do not make the proper offerings. Eugamolak Manobo is invited to all Bagobo ceremonies, but he refuses bloody sacrifices and does not give favors.

euhemerism The theory that myths are simply explanations of historical events and that the gods were once men who for their deeds became important and after death were worshipped: advanced by Euhemerus, a writer in Macedonia, about 316 B.C., in his *Sacred History* (*Hierā Anagraphē*). The idea does not seem to be entirely original with Euhemerus, it forms a part of the general rationalism of the period, but his statement of it became best known. Zeus, for example, was pictured as a king of Crete whose conquests caused him to be worshipped. Euhemerus was considered an atheist by his contemporaries, and his theories were adopted by Christian writers to prove that the classical gods were not at all divine. The theory has been discarded as a fully explanatory method, but it is still utilized to some extent.

Eumenides See ERINYES.

eunuch A castrated man, often one emasculated before puberty. (The question of female castration is only incidental to the discussion.) The word eunuch may be derived from the Greek words meaning "bed guardian," or, according to Gray, from a Hebrew word meaning "experienced, tried," in reference to the positions of trust they held. Eunuchs were variously classified: those born so, those made so by men, those emasculated by themselves (*Matt.* xix, 12)—this was the distinction later made by the rabbis; also, a distinction was made as between Negro and white eunuchs or between those with no genitals at all and those lacking

the testicles; the Romans distinguished among *castrati* (no genitals), *spadones* (no testicles), and *thlibii* (crushed testicles), and perhaps *thlasia* (spermatic cord cut); in the East the *sandali* had no organs, another class had no penis, and a third class had no testicles, or had bruised, burned, or torn testicles. English still preserves the various concepts among its associated words: capon, from Latin *capo*, strike, crush; castrate, from Latin *castro*, cut; spay, from Greek *spaō*, draw, drag.

The origin of the eunuch is lost in the ages. Probably the custom of castrating men developed from the castration of animals, a usage resorted to to make the animals docile and strong (e.g. horses) or to fatten them for tastier food (e.g. fowl). Human castration seems to have begun in Mesopotamia. Ammianus Marcellinus attributed the practice to the legendary Semiramis, to whose personality almost any kind of sexual legend has been attracted. Castration and the eunuch have been known in Assyria, Israel, Ethiopia, Egypt, Persia, India, China, Greece, Rome, and various parts of the Western world in contact with the East and its peoples. (The African castration customs reported do not seem to be eunuchizing, but have different aims. For example, the former Hottentot custom of cutting off the left testicle was meant to prevent the birth of twins, an event of ill-omen.)

The priests of several ancient Near Eastern goddesses of fertility were eunuchs. The Artemis of Ephesus, the Astarte of Hierapolis in Syria, the Asian Hecate, and Cybele and Attis had an emasculated priesthood. The Galli, priests of Attis, castrated themselves, probably on the third day of their Spring festival, the Day of Blood, March 24. Caught up by the frenzy of the older priests who cut their skins and whirled about splashing blood all over the crowds, the novices slashed off their members and threw them against the image of Cybele. These were later buried in places sacred to the goddess, perhaps as a sacrifice to this goddess of fruitfulness. See, for example, the story of Agdistis, from whose severed organs sprang the fruit that impregnated Nana, and the associated story of Attis who was self-mutilated and bled to death under a pine-tree. Self-mutilation occurred among the Pavayā caste of India who served the goddess Bahucharājī, but the novice had first to prove that he was impotent before he would be considered for admission to the caste: the custom was abolished in 1880, thereby dooming its members, according to them, to future lives of impotence. Castrations such as these have myths to explain them, but in these instances the myths are undoubtedly etiological, *pour-quoi* stories explaining the reason for an established ritual. The sky-earth separation myth, however, seems genuinely cosmogonic; Uranus and Cronus both were castrated in the mythology of Greece; a parallel myth from Polynesia, and the Egyptian myth, of the separation of sky and earth indicates that this is a naturally occurring explanation: the sky-father can be separated from the earth-mother only by severing the connecting member.

Generally in Rome and in Europe, the eunuch could not become a priest, since perfect and unblemished bodies were a requirement for the office. Some early Christians, following Origen, who misinterpreted *Matt.* xix, 12 and castrated himself, believed castration neces-

sary, but the Council of Nicea forbade the priesthood to such persons. The Russian sect of Skoptzy surreptitiously practiced castration.

Like capons, geldings, and oxen, eunuchs have had their special uses. "The barbarians value eunuchs more than others," says Herodotus (VIII: 105), "since they regard them as more trustworthy." As the common derivation indicates, they have been used since ancient times as guards, chamberlains, especially of the women's quarters. The reason is obvious: a eunuch, even if subject to temptation, can do nothing to harm the physical virtue of the inmates of the harem. This is especially true if the castration has occurred before puberty; after puberty, provided that only the testicles are removed or crushed, the erectile power of the penis disappears after a time (a year to 18 months). It is said that Roman matrons used recently castrated youths for sexual gratification in view of the absence of fear of possible pregnancy. Despite the prohibition of Mohammed, the castration of young boys for the slave trade in Moslem countries continued in Africa until recently. It is said that the mortality rate made the price of these eunuchs very high. As chamberlains then, the eunuchs were in important positions of trust, able to become skilled in intrigue and to rise rapidly, given sufficient determination and ambition. Logically, a person with whom the wives of king or noble could be trusted might be entrusted with other confidential matters. Eunuchs became great officers of state in China, Persia, India, and the Byzantine Empire. Narses, for example, was a great general under Justinian, and Agha Mohammed, in 1795-98, overthrew the Zends in Persia, though both were eunuchs, hence popularly incomplete men. Potiphar, the master of the Biblical Joseph, was a eunuch, which perhaps explains his wife's trouble.

In India, eunuchs were the lowest of all classes. Throughout the world that knew them, eunuchs were despised and feared by the people, perhaps with reason, for many tales and much history emphasize the malign nature of the eunuch. There is however no basis of fact in the equally popular belief that eunuchs are devoid of sexual passion. Burton states that almost all eunuchs are married and manage to satisfy their wives, though he indicates that their own gratification is incomplete and must be guarded against by the wife lest it be expended in biting or other physical injury. A medical report cited by Bergen Evans states that 10 of 23 castration cases later acquired gonorrhea—at the very least an indication of willing spirit. The story of Abelard is a further indication that desire does not die with the loss of sexual organs. The castration of females among the Australians is said to be performed to prevent their having children by the men of hostile tribes, but the women act as prostitutes within their own tribes and the statement that they feel no pleasure may be discounted.

Castration as punishment has its most famous example in Abelard. Usually rape, seduction, adultery, and the like crimes are the ones entailing such injury. The Egyptians and the Indians made eunuchs of adulterers; a law of Alfred the Great established castration as the penalty for a servant who raped a female servant. In India, a Brāhman who violated his teacher's

wife was permitted to choose, among other punishments, the right of castrating himself and walking to the southwest (the direction of destruction) carrying his genitals until he fell dead. An ancient Frisian law stated castration as the penalty for a temple robber; in India it was suffered by one urinating on a person of higher caste; in China, whereas all the older male members of the family of a traitor were killed, the young boys were castrated and made servants.

Castration destroys to some extent the secondary sexual characteristics. The beard and body hair tend to disappear, pigmentation of the skin becomes less, fat accumulates, the joints become more apparent. Eunuchs are also taller than average and have a more noticeable bony structure. The voice loses its masculinity and becomes flat. In boys, the voice remains high; for many years sopranos in the Sistine choir were eunuchs, despite edicts of the Church against castration. As late as the 19th century, where women were forbidden the stage, male sopranos for the Italian opera were provided by castration. Compare TRANSVESTITES.

euphemism "Speak of the Devil and he appears," so if you do not wish him to come you must refer to him by another name, a euphemism. If you are in Scotland, you call him Clootie or Auld Hornie; in Germany, Meister Peter; in the Shetlands, da black tief; in England, Old Nick; in New England, the Deuce or The Old Boy Himself.

Theoretically, he will not know you are referring to him. The idea in the use of euphemisms is to flatter and thus propitiate, or speak enigmatically or metaphorically and thus deceive the Devil, or other evil spirits, or powerful animals you wish to avoid or not to offend, or clever ones you wish to trap, or disease and death you desire to overlook you, or kings and even gods with whom you must deal.

Take the lion, for instance. The Algerian Arabs refer to him respectfully as Mr. John Johnson, the Angolans as Sir, and the South African Bechuanas as the boy with the beard. Depending on where you live, the euphemism grandfather may mean the bear, the tiger, the elephant, or the alligator. Don't use his right name, for even if he doesn't catch you, you'll become sick. The Lapps often call the bear the old man with the fur coat, and the Sioux say water-person for beaver.

In Mombasa you must call smallpox grains of corn, but the Dyaks say jungle-leaves. In China a coffin is boards of old age. Death is widely called a sleep. To die in South Africa is to go home; in the United States it may be to go West, cash in, kick the bucket, or pass away.

Formerly in Siam, Burma, China, and Korea, the king or ruling monarch's real name must never be known or mentioned lest harm come to him from an evil person thus getting control or power over him. Only complimentary titles could be used, under threat of severe penalties.

The name of the Hebrew god, supposed to be Yahweh, was prohibited from utterance, but vowels of another name, Adonai, my Lord, were used to make the hybrid word Jehovah, a euphemism which was safe to pronounce.

In the United States in Christian circles you must not

take the name of God or Christ in vain, but you can usually employ without being criticized the popular euphemisms Gad, Gosh, Gee, Cripes, or Christmas. Even pious old ladies ejaculate Laws-a-massy or Oh, Good Lord! without being struck dead. See NAME TABU.

CHARLES FRANCIS POTTER

Europa In Greek mythology, the daughter of Agenor, king of Tyre and Phœnicia, or, in Homer, daughter of Phoenix. With cosmetics belonging to Hera, she made herself pleasing to Zeus. He, hiding among cattle disguised as a bull, acted so gentle that she climbed on his back. Zeus immediately fled to the sea, and swam off to Crete where he took her to the Dictean cave where he had been brought up. There she bore to him Minos and Rhadamanthus (and, some add, Sarpedon). Later, she married Asterius, but there were no children from the union. According to some accounts, she was also the mother of the Minotaur, and of Evander.

European folklore The spiritual development of mankind having been fundamentally uniform, though by no means unilinear, all over the globe, it is largely for practical reasons that the domain of folklore is divided geographically, by continents. Furthermore, when we speak of the folklore of Europe, the latter term must not be understood in an administrative sense. Caucasia belongs administratively, to European Russia; but its folklore (like its languages) is non-European and inseparable from Iran. On the other hand, certain Near-Eastern countries (Anatolia, Armenia, and Syria) are not really Asiatic but Mediterranean, i.e. European. Their folklore must therefore be considered in any comprehensive treatment of European folklore.

Since the fall of the Roman Empire Europe has never been a political entity; but culturally and historically no other continent has shown as much unity, nay uniformity, as Europe. It is therefore to be expected that European folklore should show an analogous picture of great uniformity throughout the continent. The reasons therefor are sufficiently patent. What we call European civilization is merely the result of the radiation of the ancient Mediterranean culture, developed in the Mediterranean basin from 3000 B.C. at the latest. This radiation occurred in a northerly and northeasterly direction, extending beyond the Baltic (Krappe, *Scandinavian Studies*, XVI, 1941, pp. 165-84) and as far east as the Urals. The strength and the effect of this radiation grew weaker with the distance from the radiation center, a fact which alone accounts for the gradation of culture (German *Kulturgefälle*) noticeable as one moves east and northeast from the Atlantic and the Mediterranean (K. Krohn, *Die folkloristische Arbeitsmethode*, Oslo, 1926, p. 13). This gradation largely explains local differences in folklore which, in the outlying posts (Ireland, Iceland, Scandinavia, Finland, Russia), is apt to reveal more archaic features than could be found, for example, in France or Germany.

The most practical mode of approach would therefore be a survey of the field of folklore types, with special mention of local peculiarities. A detailed discussion must naturally be left to the articles dealing with the various folklore types.

Fairy tale There are current, in Europe, about 500 known fairy tale types, each of which has its own indi-

vidual plot and virtually all of which are found not only over the whole continent or over large portions of it, but also in Asia and North Africa. A good number of them have been carried to the New World by European settlers. The origin and the history of the diffusion of most of these types are still unknown, though the researches of Kaarle Krohn and his school have definitely shown the Indian origin of some fifty tale types. (Compare K. Krohn, *FFC* 96, 1931).

The most archaic variants are not found, as has sometimes been supposed, in Russia, but in Ireland and the Western Isles of Scotland (Krappe, *Calif. Folklore Quart.*, V, 1946, p. 216). The explanation for this is that Russia has in all ages been a country traversed by the highroads of commerce from the Black Sea to the Baltic, whereas Ireland, the Hebrides, and Iceland have been largely untouched by the great currents of civilization. As a result, archaic features which were promptly suppressed or replaced by more modern ones elsewhere, were preserved in these outlying regions. Similarly, many types widely current on the continent (including Russia) are absent from these islands, a striking parallel, incidentally, to certain zoogeographical facts: many bird species known all over the continent and even in Britain are not known to exist in Ireland, the Western Isles, and, *a fortiori*, in Iceland.

Variants of individual fairy tale types ordinarily show so few local peculiarities that, were a given variant translated into a "neutral" language, say, Esperanto, only an expert folklorist could detect, and that not always, the country of its origin. By far the best clues are furnished by the prevailing demonology. Thus the troll is peculiar to Scandinavia and Iceland, the Baba Yaga to Russia, the nereid to modern Greece, the Orco to Italy, the vila to Yugoslavia, etc. The supernatural being that has given its name to the tale type (*fairy*) is obviously of French origin (*fée*); so is the German *Fee*, the Spanish *hada*, and, very probably, the Italian *fata*. Since in northwestern France, and there alone, fairies occur commonly in local traditions (in which they can be of either sex) and are part of living belief, it is a fair presumption that the whole fairy mythology (as it has been called) originated in Brittany and western Normandy. Its diffusion over England, western Germany, Italy, and northern Spain is a striking pendant to the diffusion of the Arthurian fairy lore in the Middle Ages. The French *fée*, in spite of the Latin etymology of the name (<L. *fata*, plural of *fatum*), is not Latin at all, but the creation of the Celtic inhabitants of that region of France, the exact equivalent of the Irish *síde* (Paul Sébillot, *Contes populaires de la Haute-Bretagne*, Paris, 1880-81; W. Y. E. Wentz, *The Fairy-Faith in Celtic Countries*, London, 1911).

Tales of vampirism (see *VAMPIRE*) point to Slavonic Europe, at least when we are dealing with modern variants. For medieval texts this conclusion would not be justified, since the belief in the vampire or living corpse was once even more widely spread than it is now (C. N. Gould, *Scand. Studies and Notes*, IX, 1926, pp. 167-201).

Some Irish stories show a strange affinity with archaic Mediterranean traditions. For example the Phineus episode, with the motif of loathsome animals which befoul a king's table at mealtime, appears in several Irish variants of the same *märchen* type on which the

Argonaut story itself is based, but in a form more archaic than is found in any of the extant Greek texts. (Krappe, *Folk-Lore*, XXXVI, 1925, pp. 314 f.) The myth of Adonis must have reached Ireland in pre-Christian times. (Krappe, *Folk-Lore*, XLVII, 1936, pp. 347-61). The whole subject, however, is still very imperfectly known.

In many fairy tale variants an archaic and pagan demonology has been replaced by a medieval Catholic one, the leading characters being Our Lady, the Devil, and some of the Apostles, chiefly St. Peter. These Christian features are most prominent in countries which have remained Catholic to this day (Spain, Italy, Austria, and the Catholic cantons of Switzerland), the only exception being Ireland, where St. Patrick occurs only in tales which betray all too clearly their monkish and bookish origin. The Devil has kept his prominence even in Protestant countries; the Virgin and the saints have not. In Russia it is sometimes possible to follow the different stages of this Christianization process. Thus St. Prascovia in a Christian variant will play the part, which in a more archaic one, falls to St. Pyatnitsa (Yugoslavian St. Petka), "St. Friday," who has taken the place of Siva (Lithuanian Seeva), the pagan Slavonic goddess of love. On the whole, however, the survival of pagan divinities in fairy tales is very rare: the Greek Charos, a very ancient god of death, much older than his literary offshoot, the classical ferryman Charon (A. B. Cook, *Zeus*, II, 641 [exhaustive bibliography]), the Italian Orco (<L. Orcus), and Dame Holle (Grimm #24). The Teutonic Woden [Odin, Othin] appears to have survived, converted, of course, into the Devil, in a story of Anglo-Saxon origin, which was translated into French in the 12th century and subsequently became current on the European continent, reaching even to Spain (Krappe, *Arch. Roman.*, VII, 1924, pp. 470-77).

If traces of pagan mythology are rare in European fairy tales, the witch superstition has left its ugly mark on many of them, chiefly on German and Scottish variants (H. Vordemfelde, *Festschrift f. E. Mogk*, pp. 558 ff.), a fact easily explainable by the virulence of the superstition in the two countries (C. K. Sharpe, *An Historical Account of the Belief of Witchcraft in Scotland*, London, 1884). Witches are least prominent in southern European and Hungarian variants. In the last named country this is doubtless connected with the absence of witch legislation in the national code (King Kalman [1095-1114 A.D.]: *De strigis vero, quæ non sunt, nulla quæstio fiat*).

In certain Mediterranean countries (Greece, Italy, southern France) claims for a survival of ancient myths have sometimes been advanced (B. Schmidt, *Griechische Märchen, Sagen und Volkslieder*, Leipzig, 1877, pp. 6 ff.). The facts themselves are certain; but, whether we are dealing with genuinely popular survivals is another question: in these countries the classical tradition never really died; a fair degree of literacy was maintained even during the Dark Ages, and the role of the Greek schoolmaster must not be underestimated.

The classical tradition is, however, by no means the only tradition known to have affected the folktales of the Balkans and of many other European countries. The *Arabian Nights*, translated into French by Galland, in 1704, and subsequently into all European languages

(V. Chauvin, *Bibliographie*, IV, 1 ff.) soon became widely known throughout the Continent, and two of Grimm's tales (#116 and 142) reveal this Oriental inspiration. How great this influence was in other European countries can only be surmised, since a comprehensive study of this problem is still outstanding.

Unlike the Near East, Europe seems never to have had professional tellers of fairy tales: the professional entertainers of the Middle Ages preferred poetry to prose, and the Icelandic sagamen cultivated genres laying claim to historicity. Thus the 19th-century collectors of fairy tales drew entirely on amateurs, women and men of the country populations. Again, while in other continents, e.g. Africa, the telling of stories is limited to certain times of the day, being forbidden at others, and while in the Near East it is frequently avoided, on the plea that it brings "bad luck," no such tabus are known in Europe; if they once existed there (a thing by no means unlikely) they must have disappeared long ago. The preferred season is, however, winter and the preferred occasion the spinning-party in the village spinning-room. These were suppressed, in Central Europe, by meddlesome authorities, but still continue in Russia (*Mélusine*, III, 1886-87, col. 391 ff. and 445 ff.; D. Zelenin, *Russische (Ostslavische) Volkskunde*, 1927, p. 338).

Merry tale The number of merry tales current in Europe is legion. A number of types have convincingly been shown to be of Oriental origin. (G. Paris, *Les Contes orientaux dans la littérature française*, Paris, 1875, reprinted in *La poésie du moyen âge*, 1885, II, pp. 75-108). Joseph Bédier's objections, in his book *Les Fabliaux* (1st ed., 1893; 3rd ed., 1925) merely prove that the conditions required for a successful tracing of a merry tale type to its origin are not always present. For a list of some merry tales successfully traced, see K. Voretzsch, *Einführung in das Studium der altfranzösischen Literatur*, 3rd ed., 1925, p. 446. Quite a number of merry tales presuppose very elementary human relationships and to that extent are not peculiar to Europe. Other types have died out in countries where the underlying conditions have ceased to exist. Thus medieval Europe delighted in tales showing the *mores* of the dergy in a peculiar light. The advent of Protestantism and the abolition of clerical celibacy put an end to these stories all over northern and the larger part of central Europe. In Russia, where this celibacy never existed, tales of this type are virtually unknown. In Protestant Europe, it is true, the minister promptly took over the role of the priest as the chief butt of popular and jocular tales; but it is usually his deficiency in learning or his avidity for worldly goods that is criticized.

Animal tale The animal tale, virtually always explanatory in character, is probably the most widely spread folktale type and at the same time the most elementary type of fiction known. It is found in the four non-European continents even more commonly than in Europe, where it has lost ground with the spread of scientific knowledge, no doubt because of its lack of sophistication. The country richest in animal tales is Russia and its border lands: Finland, Rumania, Bulgaria, etc. There can, however, be little doubt that the same tales were once known also in the rest of

Europe. They are important because they are one of the sources that fed the medieval beast epic. (Collections of animal tales: O. Dännhardt, *Natursagen*, Leipzig, 1907-12; Moses Gaster, *Rumanian Bird and Beast Stories*, London, 1915; S. F. Marian, *Insectele*, Bucharest, 1903; Adolph Gerber, *Great Russian Animal Tales*, PMLA, VI, Baltimore, 1891.) A famous episode of the beast epic, the story of the wolf being inveigled by the fox to catch a fish by putting its tail into a pond about to freeze and losing it in the process, originated in an animal tale explaining how the bear lost its tail in this manner. As the bear disappeared from central and western Europe much earlier than the wolf, the story, once it reached regions where the bear was no longer known, put the wolf in its place, oblivious of the fact that it was thereby losing its point. (Compare K. Krohn, *Bär (Wolf) und Fuchs*, Helsingfors, 1891.)

Edifying stories and exempla Medieval Catholicism delighted in telling marvelous stories about Our Lady and the saints. Many of them are of clerical, i.e. "learned" origin. Others hark back to paganism, Our Lady having merely taken the place of some pagan goddess. The most famous of the latter is, probably, the story of the *Young Man Betrothed to a Statue* (PMLA, XXXIV, 1919, pp. 523-79; Gédéon Huet, *La légende de la statue de Vénus*, RHR, LXVIII, 1913, pp. 193-217). Most of these stories are now represented only in historical variants (A. Mussafia, *Studien zu den mittelalterlichen Marienlegenden*, in SBWA, vols. 113, 115, 119, 1886-89). Protestantism and the Counter-Reformation were equally hostile to these stories. The only country in which they still enjoy a certain vogue is Spain (Krappe, *Hisp. Rev.*, I, 1933, pp. 340-43; XIV, 1946, pp. 164-67). In Russia, the Byzantine origin and bookish features of this story type are equally striking; the extent of their oral diffusion is still largely unknown (L. Calmann, *Altrussische Heiligenlegenden*, Munich, 1922).

The medieval *exemplum* is not, strictly speaking, a folktale type. A product of medieval Catholicism, these illustrative stories were used to enliven the sermons of priests and friars. Nor were the rabbis slow in recognizing the usefulness of the device (Moses Gaster, *The Exempla of the Rabbis*, London-Leipzig, 1924). After the Reformation, Lutheran ministers kept up the custom, and thus we have some German and Swedish Protestant collections of exempla. Calvinism rejected them from the outset, preferring instead the appointment of special officials armed with pokers to keep the congregation from falling asleep during the sermon. Many of these stories have no folklore status but are tales and anecdotes taken from the classical writers, chiefly Cicero, Seneca, and Valerius Maximus. Others relate historical events culled in chroniclers such as Bede. A considerable number, however, are bits of oral folklore heard and reproduced by priests or wandering friars. (Collections: T. F. Crane, *The Exempla or Illustrative Stories from the sermones vulgares of Jacques de Vitry*, London, 1890; Nicole Bozon, *Les contes moralisés*, ed. L. T. Smith and Paul Meyer, Paris, 1889, SATF. On the type compare T. F. Crane, *Proc. Amer. Philos. Soc.*, XXI, 1883-84, pp. 49-78; LVI, 1917, pp. 369-402; Krappe, *Bul. Hisp.* XXXIX, 1937, pp. 1-54).

Local legend There is a wealth of material available which suffers only from one drawback: while central and western Europe are extremely well represented, there is little printed information on southern and eastern Europe. Spain and Russia have virtually no collections whatever, though from historical texts it is easy to see that both countries are as rich in local legends as any other. The subtypes (historical and pseudo-historical traditions, ghost stories, stories of stone-hurling or stone-carrying giants, the Devil's pact, in which the Evil One is outwitted in the end, traditions about dwarfs, about nixes, dragons, etc.) are virtually ubiquitous. They have obviously a common basis: features of the European landscape (huge boulders scattered over the plain gave rise to stone-hurling giants), the Church's Devil lore (the oldest Devil's pact variant is the clerical tale of Theophilus), a prehistoric ancestor cult, the doctrine of Purgatory, etc. The banshee is by no means peculiar to Ireland and Gaelic Scotland but is found all over France and central Europe, though under different names. The vampire is in the main limited to the Balkans and Slavonic Europe (which includes the part of Germany east of the river Elbe); but it is found also in Iceland. The traditions of the Wild Hunt are current in central Europe, Scandinavia, France, and northern Spain; but they are known to have existed in ancient Greece and even in India (Krappe, *Mitt. d. Schles. Ges. f. Volksk.*, XXX, 1929, pp. 96-100). We are here evidently with a piece of ancient European lore which emigrants carried with them into the Balkans and to India. Much the same seems to be true of the traditions concerning wild animals endowed with supernatural power: the Nemean Lion and the Calydonian Boar are known from antiquity; but they are also found in western and northern Europe, and are known, in Norse, as *stefnisvargar* (compare W. A. Craigie, *Scandinavian Folk-Lore*, London, 1896, pp. 369 ff.). Quite unexplainable is the isolated occurrence of some story type in widely separated countries. Thus we find the story of the knight or soldier who falls into a dragon pit, lives on the moisture oozing out of the walls, and finally saves himself by sitting down on the dragon's tail as the animal leaves the pit, localized in the Alps (Grimm, *Deutsche Sagen*, #217) and in Prussian Poland, but forming part also of a *lygisaga* (Ake Lagerholm, *Drei Lygisögur*, Halle, 1927, pp. lxxiii f., lxxix) and in the Spanish *Crónica general* (compare R. Menéndez Pidal, *Revista de Archivos*, XIV, 1901, p. 880). Since the same tale forms part of the *Gesta Romanorum* (ed. Oesterly, #114), one might be tempted to derive all these variants from a written source. Unfortunately, the theme also occurs in Sajjid Batthāl (*Fahrten*, übers. v. H. Ethé, 1871, II, p. 94) and in China (R. Wilhelm, *Chinesische Volksmärchen*, Jena, 1921, p. 14). And what is one to say of the famous story of a dragon killed by a bull raised expressly for this purpose, a tale found in the Alps (P. Sébillot, *Le Folk-Lore de France*, I, pp. 242 f.) and in Norway (Craigie, *op. cit.*, p. 260). Of special interest are the supernatural beings occurring in local legends. The belief in giants seems to have arisen out of a desire to explain phenomena otherwise unexplainable: large boulders and giant structures such as Roman arenas and aqueducts (cf. the "Cyclopean" walls in Greece). The Irish *side* (pronounced shee), the French *fées* (of either sex), the German dwarfs and "unter-

irdische," the English and Scandinavian elves, Norwegian *huldre*, are the divinized ancestors (Krappe, *Science of Folk-Lore*, pp. 87 ff.) The nixes of northern Europe correspond to the ancient Greek naiads, the various forms of tree spirits to Greek dryads (W. Mannhardt, *Der Baumkultus*, Berlin, 1904). The "Wild Women" of the Tyrolean Alps, like the Yugoslav *vilas* are to all appearances the creations of the ancient pre-Roman (Thracian-Ilyrian?) populations, as are other demonic beings known in this region (Krappe, *Herrig's Archiv.*, 163, 1933, pp. 161-71). The institutions presupposed by the local legends are medieval feudalism and the medieval church: the wicked landlord and the lecherous priest, taken in the end by the Devil, are favorite themes. Even French local legends invariably reflect the state of affairs prior to 1789. Reminiscences of conditions antedating the Christianization of the continent are virtually non-existent, which means that these traditions are in the main medieval products. If the pre-Christian demonology has survived to the extent it has, this merely proves that Christianity merely overlaid, but did not destroy, the older faith.

Migratory legend Strictly speaking every fairy tale and most merry and animal tales are "migratory," nor are local legends necessarily stationary; but for practical reasons we designate as migratory legend (German *Wandersage*) any story not belonging to the above groups but known to have spread from a diffusion center, presumably its origin. Theoretically it might be supposed that such a tale may have sprung up anywhere and spread in any direction. Such is, however, not the case. The diffusion of stories is known to follow certain culture currents (German *Kulturströmungen*), which in Europe have succeeded one another presumably from the beginning of history (H. Schöffler, *Max Foerster Festsch.*, pp. 329-41). The oldest and most important of these currents is the Mediterranean one, emanating from imperial, later from papal, Rome. Its carriers were largely clerics and pilgrims (who were in fact the "tourists" of the Middle Ages). Hence the classical (and pseudo-classical), the "bookish" flavor of virtually all these stories. To them belongs the theme of the *Young Man Betrothed to a Statue* mentioned above, and the tales forming part of the cycle of Vergil the Necromancer (Krappe, *Speculum*, X, 1935, pp. 111-16). Closely connected with this Mediterranean current is the Oriental current, which may be divided into a pre-Islamic and a post-Islamic one. The diffusion centers of the former were Syria and Iran. Christianity having originated in Syria, the propagandists of the early Church carried west a vast amount of legendary material, e.g. the legends of Saint Alexis (A. Amiaud, *La légende syriaque de S. Alexis l'homme de Dieu*, Paris, 1889; Th. Nöldeke, *ZDMG*, LIII, 1899, pp. 256 ff.), of the Seven Sleepers (J. de Goeje, *De legende der Zeven-slapers van Efeze*, Amsterdam, 1900; B. Heller, *REJ*, XLIX, 1904, pp. 190-230; A. Allgeier, *Oriens Christianus*, 1916, pp. 1-43 and 1917-18, pp. 33-87), of St. Gregory (Krappe, *Moyen Age*, XLVI, 1936, pp. 161-77), of the Saints Kosmas and Damien (L. Deubner, *Kosmas und Damien*, 1907), etc. The diffusion of Iranian themes is probably connected with the active intercourse between the Christian clergy of the Sassanid Empire and Byzantium. It is significant that this migration of Iranian stories (except through an Arabic medium)

ceases after the destruction of the Sassanid Empire (compare Krappe, *Moyen Age*, XXXVIII, 1928, pp. 190-207; XLIV, 1934, pp. 252-57). The post-Islamic period begins with the conquest of Syria by the Crusaders (i.e. about 1100 A.D.). It is attributable to the superior art of story-telling peculiar to the Orientals and the rich Iranian and Indian lore which had by that time reached the Near East. Because of the preponderance of French knights in the crusading armies, and the Lorraine origin of the first dynasty of the Kingdom of Jerusalem, most of these Oriental themes were carried to Europe by story-tellers of French or Belgian nationality. There is reason to believe that the tradition of the Knight of the Swan received its present form by the elaboration of a well-known Oriental theme. To the same movement is due the migration west of Byzantine material. The most notable of these themes is probably that of King Solomon and his unfaithful wife which, from Byzantium, radiated in two directions: (1) to France and thence to central Europe (Krappe, *JAF*, LIX, 1946, pp. 309-14), (2) to Russia (A. Wesselojsky, *Salomo i Kitovras* [in Russian], St. Petersburg, 1872).

The founding of the Carolingian Empire (800 A.D.) marks the rise of the second culture current emanating in Belgium, the home of the Carolingian dynasty. Diffused in the forms of French poetic texts (*chansons de geste*) and clerical Latin prose versions, the Carolingian legend reached every part of Europe, including Scandinavia, Spain, and Germany. In Russia the epic cycle of Vladimir the Great of Kiev was modeled after it.

Coeval with the beginning of the post-Islamic Oriental current is that of the third, due largely to the Norman conquest of England (1066). It consists of Celtic (Welsh and Irish) materials and is closely connected with Arthurian legend. Its diffusion centers were Brittany and (subsequently) the British Isles. The whole fairy mythology is due to this current: prior to it the very word *fée* (in the modern sense) was unknown in Europe. An outstanding migratory legend belonging to this current is the story of Tannhäuser (Krappe, *Mitt. d. Schles. Ges. f. Volksk.*, XXXVI, 1937, pp. 106-32; *Mercur de France*, t. 284, 1938, pp. 257-75).

The great Spanish culture current, which set in with the reign of Charles V (1519 A.D.) and the Anglo-American one which starts with the opening of the 18th century, have left no traces in European folklore, not even in Belgium (Spanish until 1714) and Hanover (British until 1837), proof conclusive that the creative period of European folklore properly ends with the Middle Ages: after 1500 Folklore is replaced by Literature.

Prose saga The prose saga, in Europe, is the product of the Norwegian people and reached its apogee in Iceland. There is no trace of its existence anywhere else in Europe: its function is there taken by the Latin (in Spain the Spanish) prose of the chroniclers.

Proverb Proverbs are a spontaneous product of non-literary peoples and classes; they are apt to fall into abeyance with the progress of literacy. This explains why the proverb lore of non-European continents is so much richer than that of Europe, and why countries largely illiterate, such as Spain and (until recently) Russia, abound in proverbs as compared with other regions of the continent.

Folk Song and Ballad At the opening of the Middle Ages and down to about 1100 there existed, in various parts of the continent, isolated forms of epic-lyric poetry, notably in Iceland, Wales, Anglo-Saxon England, and the Teutonic lands of continental Europe. Of these some specimens have come down (Eddic song and epic lay). They disappear about 1100, making room for a wholly different type (with many subtypes), originating in southern France and differing from its predecessors mainly in that (1) it is based on rime, (2) is sung according to a more or less "catchy" tune, and (3) has a dance rhythm. All modern European folk songs, from the Faroe Islands to the Black Sea and from Portugal to Sweden are of this second type. Only sporadically, in relatively isolated corners, do we find older types which have kept alive, though always more or less affected by the second, the "French" type, the best example being the Lithuanian *daina*. The subject can be treated exhaustively only in connection with folk music and folk dance.

The term *ballad* is really a misnomer: the original type denoted by the word *ballata* was a purely lyric song with dance rhythm. The European ballad (Spanish *romance*, Russian *bylina*) appears to have sprung up about 1100 A.D., alike in this to the "French" type of folk song, with which it shares many features. There are, in Europe, four main bodies of ballad themes: (1) the Latin cycle (France, Cataluña, part of Castile, Portugal, and northern Italy); (2) the Teutonic cycle (Britain, Germany, Netherlands, Scandinavia including the Faroe Islands and Iceland, and parts of Bohemia and Poland); (3) Castile; and (4) the Balkans and Russia. The Latin and Teutonic cycles are closely connected, and a number of Scandinavian ballad themes are found in France, particularly in Brittany and Normandy. Within the Teutonic cycle there seems to be a closer connection between the British Isles on the one hand and the Scandinavian countries on the other. Central and southern Italy stand outside the ballad development. (On the whole subject compare W. J. Entwistle, *European Balladry*, Oxford, 1939, and the article BALLAD).

Charms, Nursery Rimes, Riddles Charms are based on the universal, though quite erroneous, belief in the power of the spoken word, a belief which found a forceful expression in as late an author as the English poet Gower (Krappe, *RLC*, XII, 1932, pp. 821-23). This folklore type is therefore one of the oldest mankind has known. A debate has been going on between the school of A. Bastian and the Diffusionists as to whether charms rose spontaneously and independently everywhere, or whether they spread from a common diffusion center, generally identified with Egypt. The difficulty of the problem can best be gauged from the fact that the Old High German *Merseburg charm* has a striking analog in the *Atharvaveda* and thus very probably goes back to the as yet undivided Aryan people. But this would not necessarily refute the diffusionist claims, since the civilization of Egypt is considerably older still. In view of the universality of this type, polygenesis is virtually certain; but this does not preclude the diffusion of certain charms from a radiation center such as Egypt, the less so because more "learned" and hence more "effective" forms are pretty certain to have crowded out, time and again, more rudimentary and unsophisticated ones. (For

bibliography compare Krappe, *The Science of Folk-Lore*, 1930, p. 202.)

The subject of nursery rimes is as yet relatively unexplored: certain areas (Germany, Scotland, Scandinavia, Spain) are unusually well represented by good collections, while others (Russia and the Balkans) are blanks. Certain themes, such as *London Bridge*, are well known on the continent; the "June bug rhyme" (German *Maikäfer, fliege*, French *Hanneton, vole*) are known over a considerable part of the continent. They know linguistic frontiers as little as do other folklore types.

In the case of the riddle a rather large-looming bookish element must be reckoned with: quite a considerable number of these riddles have been preserved in Latin form, the work of medieval clerics. (Compare A. Aarne, *FFC*, 26-28, 1918.)

Custom and belief The distinctive feature of European culture as compared with the native cultures of the other continents is the profound and unparalleled social revolution which the continent has undergone since 1688, which led to the overthrow of a centuries-old feudalism and the end of which is not yet in sight. The study of custom and belief is therefore properly speaking a study of survivals. These may be roughly divided into two groups: (1) the purely indigenous items, i.e. such as go back to the neolithic age. They comprise the great mass of agricultural beliefs and practices which are, of course, as old as agriculture itself; (2) later adjuncts of a learned or bookish character, invariably of Mediterranean or Oriental origin, connected with certain relatively recent branches of agriculture such as bee-keeping, horticulture, the nurture of the silkworm, further, mining and metallurgy, popular medicine, star lore, etc. The line is not always easy to draw. If, for example, most of the famous Pythagorean "tabus" turn up again among the central and north European peasantry (F. Boehm, *De Symbolis Pythagoreis*, diss., Berlin, 1905; Burnet, *Early Greek Philosophy*, 3rd ed., p. 96), we may be quite sure that the reason must not be sought in any familiarity of the peasants with Pythagoras: it was the philosopher who drew on folklore. The same holds true for much that is found in Pliny's *Natural History*. But here the problem becomes more complex: Pliny was widely known throughout the Middle Ages, and the clerics are certain to have spread some of his lore among the people. This is particularly true for items of plant and animal lore. To an even larger extent the bestiaries, all derived, more or less indirectly, from the *Physiologus*, were responsible for the diffusion of a vast amount of animal lore utterly foreign to Europe. Peasants who had never seen a lion, not even in a zoo, knew a good deal (though most of it of doubtful authenticity) of the animal, and the unicorn was as familiar to them as if they could have seen it in a zoo.

Wholly learned, i.e. imported from the Semitic Orient, is the time-reckoning of historical times and the calendar. The ancient Europeans had no calendar properly speaking, and this primitive stage has been preserved, down to modern times, among the Finno-Ugrian peoples (M. P. Nilsson, *Primitive Time-Reckoning*, Lund, 1920 [*Skrifter udgivna av humanistiska Vetenskapssamfundet i Lund*]). The same holds true, to a very large extent, of numerology, in particular the sexagesimal system of counting.

Of the non-bookish survivals, virtually every one of

them can be matched by items still forming part of the *living* belief and practice observed among the semi-civilized of the four non-European continents. This fact explains the inseparability of folklore and ethnography. By the same token it is clear that there is nothing peculiarly European about these items: they are universal in the true sense of the term.

The Meaning of Folklore for European Culture The emphasis laid, in the above account, on the "survival" character of European folklore may lead to the erroneous impression that the social revolution referred to has somehow relegated folklore to a subordinate position. The fact is that European literature, art, and music are alike unthinkable without this folklore base. Without laying undue stress on the fact that the whole of medieval letters from King Alfred to Chaucer and Shakespeare and from Pope Gregory the Great to Boccaccio, Molière, and La Fontaine is essentially folklore, let us remark that the same holds true, to a lesser degree, for modern writers and artists: Walter Scott, Charles Dickens, Thomas Hardy, Pushkin, Ibsen, Hauptmann, Maeterlinck, and E. A. Poe (who was an American only by a freak accident); all have drawn on the vast body of European folklore. Schubert's work is largely based on folk melodies, as is that of Rimsky-Korsakov and Edvard Grieg. Even Richard Wagner appreciated the magic of the old folk themes such as the *Flying Dutchman*, *Lohengrin*, and *Tannhäuser*. Nor have the societies whose program called for the most radical changing of the old order failed in any way to appreciate the true function of folklore. Russia, since 1918, has shown more zeal than many another government in collecting the vast treasures of oral folklore within her borders, and the only criticism that can justly be addressed to her is her failure to make these materials accessible to the outside world.

ALEXANDER H. KRAPPE

European tales in North American Indian mythology Scores of European tales, or incidents from such, have become incorporated in modern folktale and mythology of the North American Indians. Among such tales are those of the Seven-Headed Dragon, John the Bear, Enchanted Horse, Little Poucet, The White Cat, Cinderella, the Treaty of the Oxhide Strip, and many others, as well as the Biblical tales of the flood, tower of Babel, Adam and Eve, and so forth. Sometimes these borrowed tales are told with little change or adaptation; in other instances they are so modified and so recast in native setting that they are scarcely recognizable as importations. References to European articles of dress and food, European-type dwellings and churches, the horse, automobile, and so forth, may be retained in the tales, or native articles substituted for them. Through Spanish and French raconteurs, the tribes of the northeastern United States and eastern Canada, of the western Plateau region, and of the southwest, learned many European tales quite early; also, early missionaries on the eastern Atlantic seaboard narrated Biblical tales which then spread rapidly among the tribes of the eastern United States. [EWV]

Eurystheus In Greek legend, the son of Sthenelus and Menippe; the taskmaster of Hercules in his twelve labors. Zeus having declared that the next child of the line of Perseus to be born on earth would receive the rulership of his fellows, meaning by this his son Her-

cules, Hera circumvented him by causing Alcmena to be delayed in her delivery, with the result that Eurystheus, a descendant of Perseus, became king of Tiryns. After the death of Hercules, Eurystheus was either slain by Hyllus or was captured and put to death on Alcmena's orders. Compare HERCULES.

Evadne (1) In Greek legend, the daughter of Iphis and wife of Capaneus. When her husband was killed at the siege of Thebes, Evadne threw herself on his funeral pyre: the act is unique in Greek legend, and somewhat doubtful, since the bodies of persons slain by lightning were not burned but buried where they fell.

(2) In Greek mythology, a daughter of Poseidon and mother by Apollo of Iamus whom she exposed out of shame. Compare ABANDONED CHILDREN; IAMUS.

Evander In Roman legend, a son of Hermes and a nymph of Arcadia, Themis or Nicostrate (Roman Carmenta or Tiburtis), who came from Arcadia some sixty years before the Trojan War and founded a colony at the foot of the Palatine hill: the name may mean "good man" or "strong man" and seems to be (*Evandros*) a translation of the Italian Faunus. The whole story of Evander may have resulted from an attempt to link the Roman Lupercalia, which Evander was said to have founded, with the Arcadian Lycæa, a festival of Pan as the Lupercalia was of Faunus. Evander was a giver of mild laws, and he taught the arts of peace and social life, especially writing. He sided with Æneas against the Rutuli and the Latins.

evil eye (*mal de ojo* in Spanish) This belief is nearly universal among Middle American Indians. Some persons, unwittingly, may produce malevolent effects by looking fixedly at children, or by admiring them with too much enthusiasm, or by touching them. American ethnologists have found it sound practice not to show too much interest in small children, and above all, not to touch them until they (the ethnologists) are well known to the parents. Because of the similarity to European evil-eye beliefs it seems probable that this is an introduced European trait. See OVERLOOKING. [GMF]

Excalibur or Caliburnus King Arthur's sword: probably from Irish, *Caladbolg*, the famous sword of Fergus in the *Táin bó Cuailgne*, forged in fairyland. Geoffrey of Monmouth says that it was made in Avalon; Malory that the sword was given to Arthur by Vivian of the land of the fairy. The first mention of the sword in the stone motif in connection with Arthur occurs in Robert de Boron's *Merlin* (12th century). Arthur succeeds after other knights have failed in drawing the sword from the anvil (stone) and so establishing his right to the kingdom. The episode that occurs in the story when Arthur is wounded in his battle with Modred, of the sword thrown into the lake and received by a hand appearing above the water, seems to be an invention of the author of *Mort Artu*, where it first appears. [MEL]

excrements swallowed The cause of the death of Kukitát, the malfeasant of Serrano (Shoshonean) Indian mythology. Kukitát was so quarrelsome and obstructive, desiring men to have eyes in the back of their heads, for instance, webbed feet, etc., that Pakrokítat, the creator, finally left this earth and went to dwell in the afterworld. Left to himself, Kukitát made so much trouble in the world that the inhabitants decided to get rid of

him. Frog did this by hiding in the ocean and swallowing Kukitat's excrements. This story is dominant in both Shoshonean and Yuman mythology, whether told of creator, culture hero, or obstructive brother, and embodies both the dying god concept and belief in the power obtained over another by possession or use of his voidings. See DUAL CREATORS.

explanatory elements Explanatory elements in the great corpus of American Indian mythology could probably be numbered by the thousands. Such elements are generally concerned with natural phenomena of every sort: the origin or shape of a lake, the location of a large boulder, the existence of a spring at a certain spot, the markings on the moon; or with the physical characteristics of animals and human beings: the black tip on the coyote's tail, the snub nose of the wildcat, the flat tail of the beaver, the shyness of the fox. These explanations are, however, incidental to the myths rather than integral parts of them, since they are not used consistently as part of particular tales, and are interchangeable in various versions of the same tale, or in different tales. All tribes insert explanatory elements into at least some of their tales, but the Plateau peoples make perhaps the most extensive use of them. Myths of the Coeur d'Alene and the Southern Okanagon, for example, are loaded with explanations for natural features of the landscape and the characteristics of animate and inanimate objects. The Jicarilla Apache and other Southwestern Apache groups insert explanatory elements into their myths, for abstract qualities such as jealousy and curiosity, for ceremonial usages, for social customs, for physical states such as sleepiness, and even for laughter. [EWV]

exposure of famous persons in infancy The exposure of the hero, culture hero, or god in infancy has come to be regarded as one of the identifying marks of the true hero of folktale, myth, and legend (along with supernatural conception, precocious growth, etc.). Whether the infant is exposed for economic reasons, or reasons of illegitimacy, incestuous parentage, supernatural parentage, deformity, or to avoid the fulfilment of a prophecy, he is inevitably saved in some wonderful way, grows to beauty and heroic stature, attains wealth or power, and returns to take his rightful position in the world, to rescue or avenge someone, or fulfil a prophecy.

The Greek Peleas and Neleus, exposed twin sons of Tyro, were saved and suckled, one by a mare, the other by a bitch, and when grown rescued their mother from her cruel stepmother. Ægisthus, child of incest, was exposed by his parents, suckled by a goat, and lived to carry on the feud of his father. The illegitimate Telephus survived exposure twice, first by his mother on

Mt. Parthenion, where he was suckled by a doe, and second being set adrift with her in a chest. The chest stranded in Asia Minor, and Telephus eventually became king of Mysia. The infant Perseus, son of Danac and Zeus in the shower of gold, because of a prophecy that his mother would bear a son who would kill his grandfather, was set adrift with her in a boat. They were rescued and cared for by the king of the island of Seriphos. Later, after many adventures, Perseus killed his grandfather accidentally by a discus throw. Paris was exposed because of a dream of his mother, was suckled by a she-bear, and lived to abduct the fair Helen. The girl Atalanta was exposed because her father wanted a son, was found and nursed by a she-bear. Iamus, son of Evadne and Apollo, was exposed by his mother, nurtured by "two gray-eyed snakes," and was eventually found by his own grandfather.

The Hebrew Moses, set adrift in a rush basket, was found by Pharaoh's daughter and raised at the court of the king. The Japanese Hiruko, first-born of Izanagi and Izanami, was set adrift in a reed basket on the ocean because at the age of three he still could not walk. In later folklore he is identified with Ebisu, god of fishermen, and one of the gods of luck. See ANIMAL NURSE; BIRTH OF CORMAC; FATAL CHILDREN; TWINS.

external soul The concept (among primitive peoples and recurrent in folktale and folklore generally all over the world) that the soul can reside apart from the body, for safekeeping or other reasons. The more usual term is SEPARABLE SOUL. See BIRD SOUL; BUSH SOUL; LIFE TOKEN.

eyebrows meeting Although this is a sign of beauty in some communities, in others it is a sign that the person is a werewolf, vampire, or witch. The belief has been reported from south Russia, Greece, Bohemia, Germany, Denmark, Iceland, and India.

In England and China, the man whose eyebrows meet is lucky; the girl with meeting eyebrows, depending on the country she lives in, will have a happy marriage or none at all, or make a bad wife. [RDJ]

Eye-juggler Among the North American Indians, title of a tale of frequent occurrence in which the trickster is given the power to throw his eyes into the air and replace them; but he must not do this beyond a specified number of times. Being trickster, of course he throws them once too often and loses them; often he obtains animal eyes as substitutes. [EWV]

 The motif of the man or animal who juggles with his eyes and then puts them back in their sockets, which is well known among North American Indians, was recorded only once in South America, among the Taulipang. The jaguar is induced by a crab to project his eyes. A fish swallows them. [AM]

F

Fá (Yoruban Ifa) In Dahomean thought, the personification of "the writings of Mawu" (the creator); hence, the personification of Fate. The term is also applied to the divining system employed by specialists of the Yoruba and adjacent peoples of West Africa, based on the permutations and combinations of double and single marks resulting from manipulating sixteen palm-kernels. Derived from the Yoruban center of Ife, it is the "official" form of divining, used as one of a large number of other types which are like those widely spread in West Africa. It requires many years of intensive training to learn the thousands of tales and verses associated with the various combinations of marks on which the answers to questions brought by clients for solution are based. These specialists, called *bokonon* by the Dahomeans, or *babalawos* by the Yoruba, are important figures in the religious, social, and economic life of these people, and played a great political role in pre-Conquest times. Because of its highly institutionalized character, the Fá cult has survived in simplified form in the New World chiefly among the Negroes of Brazil and Cuba. But other forms of divination are present everywhere. [MJH]

fable An animal tale with a moral; a short tale in which animals appear as characters, talking and acting like human beings, though usually keeping their animal traits, and having as its purpose the pointing of a moral. The fable consequently has two parts: the narrative which exemplifies the moral, and the statement of the moral often appended in the form of a proverb. The fable is a development of the animal tale, one of the earliest forms of the folktale. The animal tale in its general and earliest form is usually an explanatory story (why crows are black; why the rabbit has a short tail). The fable uses the animal tale not to explain animal characteristics, or behavior, but to inculcate a moral lesson for human beings, or to satirize the conduct of human beings. Consequently the fable is not a folk composition, but a product of sophisticated culture, though it may draw freely on folk material for its story element. And once composed a fable may be taken over by the folk and become stock oral tradition.

The oldest fables that have survived in any number are those of Greece and India; at present the best belief is that neither originated the type, but that it was Semitic in origin, spreading from the Semites east to India and west to Greece and Rome. The oldest collections existing today are those connected with the name of Aesop (fl. 600 B.C.). Aesop was a slave in Ionia, perhaps of Semitic ancestry. His fables from the beginning probably circulated orally, for there is no evidence of a written version before the 4th century (Demetrius of Phalerum). From this time many collections have been made with constant shift in the content as new fables have been added, especially from Oriental sources, and others discarded. The oldest Oriental collections are the *Panchatantra*. A portion of the *Panchatantra* in the

Middle Ages became the *Fables of Bidpai*, which from Persian through Arabic came to Latin and thence to the vernacular languages of Europe. In the Middle Ages the fable stories became a part of floating tradition, widely used in sermon stories and in the exempla books. The fable has its place in modern literature. In English Chaucer, Henryson, Lydgate, Dryden, and Gay have all successfully told the old stories. France has the greatest of all modern writers of fable in La Fontaine. Lessing, in Germany, is the author of an excellent collection of fables and also of a valuable monograph on the history and literary value of the fable.

Some of the most famous fables are: The Country Mouse and the City Mouse; Wren Elected as King of the Birds; Crane Pulls Bone from Wolf's Throat; Fox and the Grapes; Chanticleer and the Fox; Mouse Frees Lion by Gnawing Net.

The fable owes more to the animal tale than form and content. Its compression, pithiness, and dramatic nature must likewise be a carry-over from the earlier type. Characterization and character types in the fables are also frequently directly derived from the animal tale. For example, the animal tale had already established the fox as sly, the wolf as greedy, the lion as courageous and dignified. [MEL]

Fables of Bidpai The name under which the collection of beast fables from the *Panchatantra* became known in Europe. The collection was ascribed to Bidpa or Bidbah, a scholar at the court of an Indian prince who produced it in order to reform an evil king. The French *Fables de Pilpay* is a translation of the *Kalilah wa Dimnah*, the Arabic version of the Pahlavi *Panchatantra*.

fabliau A short narrative in verse of a humorous, satiric, or burlesque character, written in a gay and rollicking style. It flourished in France from the 12th to the 14th century. From France the type spread to other parts of Europe. Some few fabliaux, notably *Dame Siriz*, are found in English. Several of Chaucer's *Canterbury Tales* told by the "lewd sots" are fabliaux; some of the fabliau stories are caught up in the English ballads. The satire in the fabliaux is directed mainly against women, the clergy, and marriage. The fabliaux are usually products of sophisticated writers, basing their stories on contemporary life and manners; yet occasionally they rework stories drawn from folklore and floating legend. [MEL]

✍ As a type of song the fabliaux were designed purely for entertainment. They dealt chiefly with the stock situations and characters of the marital triangle—the gullible husband, the scheming, faithless wife, and the popinjay lover. A typical story is that of *The Dog in the Closet*, of Oriental origin, in which the husband is gulled by the substitution of a dog for the lover locked in the closet. [TCB]

Face of Glory The lion face of Kirttimukha, which survived his self-consumption: worshipped in Hindu religion as a symbol of protective wrath.

fado The typical song of Portuguese cities, combining both folk and popular elements, dealing with love, unkind fate, nostalgia, despair, the careers of notorious men and women, and sung to the music of two guitars, one for rhythm and the other for melody and accompanying figures. The origin of the type is unknown, its relationship to the peasant folk song of Portugal unclear. Similarities are pointed out to songs of Moorish origin, to sailor songs, and to certain peasant songs sung on St. John's Eve. Earlier music types, the *lundum* and the *modinha*, both song and dance tunes, are cited as ancestors of the fado. The word fado was first used in Portugal in the 1830's, but was known earlier in Brazil, and the songs show some indications of African derivation, whether directly from the trading areas of the African coast or indirectly from Brazil. The fado singer makes use of certain mannerisms and variations of timbre not unlike those used in the blues—a rough, throaty tone, a free and flexible rhythm above the measured accompaniment, and an intimate, often emotional style. There are fados about fados, as there are blues about the blues. The form is a living one, adding new verses, new stories all the time, even though the tunes are old—older than any of the words. A favorite subject is the loves and scandals of Severa, the most famous of the *fadistas* (fado singers). University students have adopted the songs and made of them a more lyric expression.

faet fiada Literally, the appearance of a wild animal: the magic power or spell used by the ancient Irish Tuatha Dé Danann and the early druids to make themselves invisible. It was given by Manannán to the Tuatha Dé Danann after their defeats by the Milesians. There is a story included in the Old Irish Mythological cycle in which Eithne, a foster daughter of Angus, lost the faet fiada. When one Finnbarr insulted her, an angel suddenly became her guardian spirit, and after that she lost kinship with the Tuatha Dé Danann and the power of the faet fiada, either to become invisible herself or to see others who were.

The mantle of this power later fell upon the early Irish Christian saints, and it is still mentioned as a living thing in the Gaelic West Highlands. Patrick used the power to turn himself and his companion, Benen, into wild deer on their way to Tara to spread the Christian faith. Enemies lay in wait to stop them, but all they saw pass was a deer with a fawn. Patrick's famous hymn, *The Deer's Cry*, sung to effect the safe passing was a survival of the old faet fiada.

Fafnir or Fafner In Teutonic mythology, son of the dwarf king, Hreidmar; brother of Otter and Regin. When Odin, Hœnir, and Loki paid their ransom for killing Otter, Fafnir killed his father for the gold, refusing to share it with Regin. He removed the treasure to Gnitaheld, but it gave him no joy, and he became a wingless dragon from brooding. Regin persuaded Sigurd to slay Fafnir, which he did by digging a trench, and thrusting his sword into the dragon's heart as it passed overhead. But when he learned that Regin intended to kill him, he killed Regin too, and kept the gold, thus

carrying on the curse of Andvari. In Wagner's *Ring of the Nibelung*, Mime and Alberich are the brothers, plotting Fafnir's death.

Fair Annie A Scottish ballad (Child #62), known in Danish, Swedish, Dutch, and German versions, and English: the ballads may come from a Low German original, stemming from the same source as Marie de France's *Lai del Fresne* (*The Lay of the Ash-tree*), all of which tell essentially the same story. The ballad is also known in English as *Burd Helen*, *Lady Jane*, etc. In the Child A text, Fair Annie, the mother of his seven sons, is told by Lord Thomas that he will have another woman as his wife, for Fair Annie has no lands and his bride-to-be is rich. Fair Annie volunteers to be hostess at the reception and feast. She does so well that the new bride takes a liking to her. When the newlyweds retire, Annie lies on her lonely couch weeping, and the bride comes out to speak with her. The two discover that they are sisters; Annie is a long-ago-abducted lady and not a housekeeper as the bride thought her. The bride leaves for home a maiden.

Fair Charlotte The most popular title of the American ballad YOUNG CHARLOTTE.

Fair Flower of Northumberland An English-Scottish border ballad (Child #9), used by Thomas Deloney in his novel, *Jack of Newberie* (1597), and of which portions correspond to portions of other northern European ballads. The story is that of the ungrateful knight. This knight, freed from his prison by the daughter of his jailer, takes her with him through peril and hardship, promising to marry her when they are safe. But once he is assured of his freedom he abandons her, laughing in her face and telling her he already has a wife and family.

Fair Helen of Kirkconnell Title of a ballad collected in Scott's *Border Minstrelsy*, included in Vol. II of the first edition of Child's *English and Scottish Popular Ballads* (1858), but dropped by Child in the third edition (one of 115 ballads so excluded) because he considered it a lyric without narrative content. The ballad is the lament of a lover for his Helen, who died to save him. Though he has hunted down his foe and "hacked him in pieces sma'," still he is unhappy and will be until he rejoins his Helen.

Fair Janet Title of a Scottish popular ballad (Child #64) in which Janet gives birth to her lover's child just preceding the marriage with an old French lord forced upon her by her father. Willie, the lover, hastens to carry his newborn son to his mother, who takes the child from his arms with love and speeds him back to comfort Janet. Janet is rushed into dressing for the wedding despite her pleas of illness and pain. Gowned in red she rides a white horse to the church, having chosen Willie to lead it through the town for her. At the celebration Janet refuses to dance with all who ask her, including the old French lord, until Willie asks "Bride, will ye dance wi me?/ "Aye, by my soth, and that I will/ Gin my back should break in three." Janet danced through the dance with her lover "but thrice" and fell dead at Willie's feet. The next day they were buried, one in Marie's kirk, "The tither in Marie's quire./ Out of the tane there grew a birk,/ And the

tither a bonny brier." Child points to parallels of this ballad in Scandinavian, German, and Breton balladry.

Fair Margaret and Sweet William Title of an English and Scottish popular ballad (Child #74) in which William loves Margaret but marries another. Margaret sees from her window the bridal train en route to the church. "She went out from her bower alive/ But never so more came there." In the dead of night came "Margaret's grimly ghost/ And stood at William's feet." She asks him how he likes his bed and the new brown bride. "Better I like that fair lady/ That stands at my bed feet." In the morning William runs to Margaret's home, kisses the fair corpse in the winding sheet, and dies beside her. "Fair Margaret died for pure true love,/ Sweet William died for sorrow." They were buried in the chancels of the church, Margaret in the lower, William in the higher. "Out of her breast there sprung a rose/ And out of his a brier."

This was an extremely popular broadside ballad in England in the 17th century. It appears also in *Percy's Reliques* in the 18th century, and the famous lines about the grimly ghost were quoted in Beaumont and Fletcher's *Knight of the Burning Pestle*. It is the source of David Mallet's ornate *William and Margaret* (c. 1724).

fairy A term loosely used to denote a type of supernatural being, usually invisible, sometimes benevolent and helpful, sometimes evil and dangerous, sometimes just mischievous and whimsical, dwelling on the earth in close contact with man. The word *fairy* from Late Latin *fata* from Latin *fatum* (fate) meant in Middle English 1) enchantment; 2) a land where enchanted beings dwelt; 3) the collective inhabitants of such a land: these latter should properly be called *fays* (compare French *fée*).

The creatures referred to as fays, fées, fairies in Romance languages and English are by no means confined to West European culture. Under one name or another they are found all over the world; they are more frequently met with in Europe and Asia, less frequently met with in America and Africa. The fairy concept seems to belong to a rather advanced stage of culture.

The fairy has the same general characteristics wherever he is found. He is usually diminutive, often very small but sometimes pygmylike. He can become invisible at will, often by putting on a magical cap. He usually lives underground in a burrow or under a hill, or in a heap of stones. Usually he is clothed in green; sometimes his skin and hair are green. White is also associated with fairies, and frequently solitary fairies are clothed in brown or gray. Fairies are rarely harmful; even when they abduct children they do not harm them. If fairies are mistreated, they retaliate by burning houses, despoiling crops. They delight in playing pranks: milking cows in the fields, soiling clothes on the line, appropriating food, curdling milk. But they are helpful too, for they often take food and money to the poor, give toys to children, work countermagic to break spells laid by witches.

Many theories have been advanced to account for the origin of the concept of the fairy. According to one, the fairy concept grows out of folk memories of the original inhabitants of a country conquered by the present people. Remnants of the conquered people would linger on in mountain and cave preying on their conquerors.

They would necessarily have to operate at night and in a furtive manner, all of which might lead to their being exaggerated into the strange and supernatural. A second theory holds that fairies are discarded gods or heroes reduced in stature and importance as an old set of gods gives way to a new. So Queen Medb, a heroine of Irish epic, in a later age becomes a queen of fairyland. A third theory holds that the fairy are a personification of the old primitive spirits of nature. Primitive man believed that every object was endowed with a spiritual nature as well as a physical. A tree spirit, according to this theory, in a later age would be anthropomorphized into a dryad, a water spirit into an undine, the spirit of a hill into the *side* dwelling in the *sid* or hill. A fourth theory accounts for fairies as spirits of the dead, or as the dead themselves, on the grounds that fairies are commonly found underground, often in a barrow, that they must rush back to their habitations at cockcrow (as must revenants and ghosts), that a mortal eating their food cannot return to the mortal world, that fairylands resemble the abode of the dead as pictured by many people, that to get to the abode of the fairies (and the dead) one must sometimes cross a river. With the probable exception of the first, these theories may explain varying aspects of the fairy and of fairyland. No one of them is sufficient to account for all.

Fairies may be divided into two large groups: 1) Those belonging to the fairy "race" or "nation" living in fairyland in an organized society of their own. Such groups are the people of the *side*, i.e. people of the hills, in Ireland, the dwarfs of the Germanic countries. 2) The individual fairies associated with a place, or occupation, or household, such as the undine, a fairy who lives in a spring or stream, or the leprechaun, who is a shoemaker.

Fairyland, populated in great numbers, is like the land of the dead. It is ruled over by a king and queen, but generally the queen is dominant. In fairyland there is no death, no age, no sickness, no ugliness. Time is, as it is to the dead, non-existent. A mortal in Ireland taken to fairyland passes 900 years thinking it but one night. Frequently the fairy come out of fairyland to wander the earth and mingle in the affairs of men. Their social organization is, of course, like that of man. They live in fairy houses, furnished lavishly with gold and silver. They eat great banquets of rich and delicious food. Much time is spent in music and dancing. Although there is no death in fairyland there is evidently birth, for stories abound of fairy children, of fairy-search for mortal women to nurse them, of abductions of mortal midwives to attend fairy births. The fairies have two domestic animals, the horse and the dog. Often they ride in procession on their white horses, whose manes are braided and hung with silver bells that tinkle as they move. And the fairy dogs run alongside. Fairyland and the life of the fairies is in general an untheological heaven.

The second group of fairies, made up of individuals, is much more varied in nature and behavior. One of the most important of these is the household familiar, such as the Billy Blin of the Scottish ballads. The household familiar (dwarf, kobold, nis, brownie, billy) attaches himself to a human household. He often sleeps on the hearth and comes and goes by way of the chim-

ney. He is generally helpful, though playful and mischievous. He reveals the binding spell and how to break it when the lady of the house cannot deliver her child; he protects the master against deception on the part of his wife; he makes butter come in the churn, and the brew to work, the dough to rise. He also often sweeps the floor, washes the dishes, and lays the fire. But he must be treated kindly, favored with a bowl or cup of milk set out on a stone, and the household must put up with his prankish ways. He is about the size of a year-old child, but often has the face of an old man with a long beard, and usually wears a jaunty little cap. He may well owe his origin to the old belief in ancestral gods.

Other fairies of the second type are associated with particular places. The salamander (fairy) lives in fire, the undine in water, the buccas in mines. Others are associated with trees, air, cairns, shoemaking, tinsmithing, blacksmithing. There is, as one would expect, much more variation in personality and action of the individual fairies. Stories about them are, consequently, varied, ranging from the poetic and dramatic like the story of *Undine* to the slapstick anecdotes of brownies and nixies.

Most fairylore and fairy story has to do with the relations of fairies to mortals. The common types are: 1) Fairies assist mortals; 2) Fairies harm mortals; 3) Fairies abduct mortals for special purposes; 4) Changelings; 5) Mortal visits to fairyland; 6) Fairy mistress or lover.

Among all people accounts abound of fairies assisting human beings in a wide variety of ways. We have seen above that the household familiar is a very helpful fellow in the house. But fairies also help in the field with planting, threshing, wood-cutting, and the like. A Jutland peasant, trying in vain to free his horse stuck in the mud, suddenly is surrounded by fairy folk who easily free the animal. In France a fairy rescues a lady whose jealous husband had imprisoned her. Often fairies give gifts of gold, of vessels that always remain full of food, or of grain, gifts of cheese that never diminishes no matter how much is eaten, or of beautiful finely woven gossamer cloth.

Stories likewise abound of fairies harming man. Constantly they appropriate growing crops: grain, peas, beans (often out of sheer prankishness they shell the beans on the vine leaving the pods intact). They milk animals in the field, ride horses at night in the pasture. In the house they blow out the candles, knock pans off the shelves, roll up the mats on the floor, send gusts of smoke down the chimney, prevent bread from rising. In the mines they pelt workmen with pebbles as they work. Sometimes the antics are just exuberance of spirits, but often they are by way of punishing a mortal for harm done to one of them, or for churlishness. To punish such a one the fairy fastens himself on the household and nothing can dislodge him. There are many stories like the German one in which a man decides to move to free himself from an obnoxious fairy only to discover as he is about to drive away that the little fellow had hidden himself in the churn and so was also blithely on his way to the new dwelling. (See BOGGART'S FLITTING.)

Fairies often abduct mortals, either conveying them bodily to fairyland or by bespelling them and luring

them there. Many believe that the fairies must pay a yearly tribute to the lords of hell by sending some of their number there each year. For this purpose they are thought to abduct mortals, especially children. Tam Lin, a mortal abducted by the fairies in the Scotch ballad, was to be so sacrificed but his sweetheart succeeded in rescuing him. This belief may be due to the legend that fairies are the pre-Adamite inhabitants of the earth or that they are fallen angels. (Compare too the common European story that fairies are the descendants of children of Adam and of Eve by malignant spirits before they cohabited with one another.) Women, too, are abducted, especially mothers with small children, for human milk is much prized by the fairy. Midwives are abducted temporarily to help the fairy mothers at time of childbirth. Sometimes they are blindfolded and led to the fairy realm and after their work is done led blindfolded away. Always they are handsomely rewarded.

There are many dramatic accounts of mortals visiting fairyland by accident or by invitation of the fairy folk. Thomas the Rymer went with the queen of the fairies over the river to fairyland and, abstaining from eating any food, he was able to return again to Huntly Bank. There exist many analogs to the Scotch story of the two boys who one night saw a light shining from a crevice in the rocks. On looking in they saw a large company of fairies dancing. One brother went in and joined the throng. When he had not returned in a year, his brother, placing a cross made of mountain ash in his shirt, went into the hill where he found his brother still dancing away. Protected by the charm he was able to bring his brother safely out; the brother thought that he had been dancing but a few minutes. Frequently found are accounts of mortals lured away by fairy music. Hearing the sweet, insistent music of the fairy musicians, they must follow it even against their wills often to fairyland itself. Occasionally a fairy invites a mortal to visit the land under the hill. A Germanic tale tells of a peasant who was so favored. During the tour of the fairy region, he noticed crocks overturned on the shelves. Asking why they were kept so, he was told that they imprisoned souls of drowned human beings. Usually a mortal going to fairyland had to have his eyes anointed by fairy ointment before he could see anything; occasionally his host forgot to remove the ointment before he returned and so forever after he could see the fairies wherever they might be.

The most dramatic and poetic of all fairy stories are the fairy-mistress or lover stories. Such stories of the union of a mortal and a fairy are part of the general story pattern of the love of a mortal and a supernatural being. These stories follow a fixed pattern: 1) A mortal loves a supernatural being; 2) the supernatural being consents to marry the mortal subject to one condition, for example, he must not see her at certain times; 3) he breaks the tabu and loses her; 4) he then tries to recover her and sometimes succeeds. A Germanic story tells of a young man who fell in love with a water fairy. She agreed to become his wife but told him that should he strike her, she would disappear forever. They lived very happily for many years until one day he threw a clod of earth at the horse and accidentally struck his wife. Instantly she disappeared never to be seen again. The German story of the *Knight*

of *Staufenburg*, the lais of *Launfal* and of *Graelent*, the story of Oisín and the queen of fairyland, *Melusina*, *Sir Orfeo* are a few of the finest of the fairy-mistress stories in European literature.

In the fairy-mistress stories we often meet the complication of the mortal wedded to a fairy, finally wishing to return to earth, being permitted to do so, only to discover that he had been in fairyland a long, long time and that as soon as he returned the weight of his years fell upon him. Such stories usually end with the hero becoming an old man, and disintegrating into a pile of dust. Western Europe saw in the classical Orpheus story a close analog to the fairy-lover theme and made that story over into the charming romance *Sir Orfeo* in which Heurodys is carried away by a fairy lover. Sir Orfeo, the mortal husband, disguised as a harper, penetrates into fairyland and succeeds in securing her return.

Many fairy stories and legends have to do with changelings. Newborn infants are often snatched away and fairy babies left in their places. Several explanations are given: one that the fairy folk want their children suckled by mortal women, another that they are seeking mortal children to sacrifice to the lords of hell. (Such stories are probably nothing other than explanatory stories to account for the abnormal appearance or abnormal behavior of the human child by saying that it was a changeling). Usually the fairy child sooner or later rejoins its own folk in fairyland. A typical tale is the mid-European story of the family who rushed out one night to the stable to see why the animals were making a disturbance. When they returned they found their baby gone and an ill-formed, big-headed, lustily howling brat in its place. The mother tried to care for the changeling but it scratched her and bit her breasts and caused so much confusion that finally the people of the house put it in the oven. Whereupon the fairy mother appeared, put down the mortal child, alive and well, and snatched up her own with the words: "I've treated your child better than you have treated mine." All sorts of methods were used to keep children from being abducted by the fairy. Certain objects, scissors, knives, or nails, plants like rowan and garlic, charms like the cross, the Bible, or holy water placed near the child were believed to be effective. A few stories tell of changelings growing up among mortals; usually they are deformed in some way, but always they are beautiful of face; often they are endowed with some extraordinary ability, such as being able to see in the dark or being able to make the strange, seductive fairy music.

The fairy concept in English comes as a blending of the Germanic dwarf-elf type and the Celtic people of the hills, the *side*. The household familiar in English has a Germanic background; the idea of the communal fairies is Celtic. The fairy tradition in English literature really begins with the translation of the French romance of *Huon of Bordeaux* in late medieval times and with the fairy lore in the Arthurian stories. It was from the romance, however, that the concept of an organized fairy world came in with the introduction of Oberon (Germanic Alberich), Cephalonia of the Isles, and all the magic background of fairyland. From this tradition came the fairies of Spenser and Shakespeare.

MACEDWARD LEACH

fairy food The food of fairyland is usually described as exotic and delicious; wonderful feasts were held there; but the only human foods mentioned in the early descriptions were apples or wine. General is the belief that a mortal who partakes of the food of fairyland can never return to his earthly home. Even today in Celtic countries there are stories of children enticed into the fairy mounds who have been saved just in the nick of time from eating the dainties offered them, by a woman who followed them. But there are also contemporary Irish stories of certain people, who, having partaken of a bit of mouse-soup within the fairy hill, were forever after gifted with the power to see the fairies.

It is now generally conceded that fairies eat and drink much the same as human beings. They are known to eat berries and nuts, known to sow crops, engage in haymaking, plowing, harvesting, etc., known to beg, borrow, or steal milk, butter, flour, meal, corn, and whisky. A little food is often left out in the kitchen for them overnight, and sometimes a little tobacco. But the food must have no salt in it. Fairies hate salt. In Brittany a table is spread in the birthroom for the fairies who always attend a human birth. There are many well-known stories of a fairy woman coming to a human neighbor to borrow butter for a wedding or butter to heal a burned child. Whatever they borrow is always paid back. A refusal is also always paid back with malice and often fatal results.

Fairies are especially fond of milk. In Ireland the first drops of milk from a cow are let fall on the ground for the fairies. Any milk left undrunk outdoors, as by workers in the fields or people picnicking, is also poured on the ground for the fairies; and no milk accidentally spilled should ever be begrudged them. Fairies often milk the farmers' cows, and it is said that the one chosen to be milked by fairies is always free from disease. Some people even leave one cow of a herd unmilked for their use. Others, however, sometimes attribute the sudden death or gradual sickening of a cow to its being milked by the fairies. Fairies have been known to steal cows, or to make off with the best cow at a fair.

fairy rings or circles Dark green circles in the turf of meadow, lawn, or field, caused by a certain fungus (*Marasmius oreades*). Some say they are caused by a foal being born on the spot; but they are popularly believed to be the dancing-places of the fairies. Often they are surrounded by a ring of mushrooms. It is very wrong to interfere with such a place in any way, on pain of being struck blind or lame.

fairy tale When the writer in English attempts to translate the German *Märchen* or the Swedish *saga*, he has usually resorted to the term "fairy tale." In many ways this is an unfortunate word since not more than a small number of such stories have to do with fairies. As a matter of fact, most tales about fairies are actually traditions and relate real beliefs. Nevertheless, the term is well established and widely accepted.

A considerable number of the tales in Grimm's collection are fairy tales of this kind. Such stories as *Snow White*, *Cinderella*, *Cupid and Psyche*, and the *Black and White Bride* illustrate their characteristic qualities. These stories are usually located in a never-

never land where all kinds of supernatural events occur. The characters are usually not named, but are referred to as a certain "king and queen" and "the youngest daughter." Sometimes very common names such as Jack and Mary Ann may be used, but there is no thought of identifying the characters any further. The fairy tale is full of commonplace expressions and motifs which tend to be used in other tales and to be a part of the general style of the story-teller.

There is a difference in the style of fairy tales from country to country even when the same series of motifs is used. But these differences are much less striking than the common style used in tales of this kind everywhere.

Just where and how this peculiar fairy-tale style developed has never been determined. Something of it is found as far back as the Egyptian collection which comes to us from the thirteenth century before Christ, and reflections of this style are found in such literary reworkings of fairy tales as the Apocryphal *Book of Tobit* and the *Cupid and Psyche* of Apuleius. It has been suggested that this style is a part of the Indo-European heritage, but it is found in the tales of many non-European peoples, so that such a position is hard to establish.

Tales in many ways analogous to the European and Asiatic fairy tales are found among primitive peoples, and many of the Western fairy tales have been borrowed by other parts of the world. Comparative study of these tales, therefore, takes the investigator outside the orbit of the particular fairy-tale style and shows that the style is not a necessary part of the tradition.

The European fairy tales have been classified and the collections of them from many countries have been thoroughly listed. It is customary to include not only such fairy tales as several already mentioned, but also anonymous anecdotes, and cumulative tales such as the *House that Jack Built*. The animal tales are also a part of these classifications.

Students of the fairy tale have interested themselves in several aspects: (a) the origin and dissemination of particular tales (see HISTORIC-GEOGRAPHIC METHOD); (b) the style of fairy tales according to the country or state of society where they are told; and (c) the part that fairy tales play among the people where they are told.

In the past many writers have also interested themselves in such questions as what do fairy tales mean, and what is the relation of fairy tales and myths, but these questions seem so intangible that most modern scholars have ceased to attempt an answer.

STITH THOMPSON

fairy wind The *síde gaoile* or *gaot síde* of Irish folklore, or *séideán síde*, the fairy blast: a sudden blast or gust of wind, or whirlwind, believed to be caused by the fairies. Sometimes it is said to be caused by the passing of the fairy host; sometimes they are said to be in it; sometimes it is just the stir caused by fairies at work. A little whirl of wind in the hayfield is often said to be the fairies helping with the work. When this happens the farmers believe it is a sign of good weather for the haying. Sometimes the sudden gust of fairy wind and a darkening of the sky accompanies the passing of a soul out of this world. The fairy wind is often greatly feared, for such winds sometimes cause

harm to people or cattle, such as injuries to the eye, making them fall, etc.; sometimes people say, "Oh, they are coming for me!" People seeking to dig up fairy treasure are often stopped by a terrific gale of wind. There is a famous story about a musician who learned to play the fairy music. Once when he was so bold as to play some of the tunes at a country dance, he was whisked away suddenly by a blast of fairy wind. It is well known that a fairy blast will lift the roof off a house when certain doors are opened, the opening of which is known to inconvenience the fairies.

Faithful John Title and hero of a well known European folktale (Grimm #6), the most familiar usage of the famous Eurasian faithful servitor motif (P361 ff.; Type 615). An old king on his death bed entrusts his young son to a tried and faithful servant, warning him not to let the prince enter a certain locked room or see the portrait therein, lest perils befall. The prince eventually does see the portrait, falls in love with the princess depicted, and despite warning and dissuasion determines to seek her. Faithful John arranges for the journey and embarks with the prince in a fine ship laden with golden objects. In the strange country he beguiles the princess on board with golden trinkets and, while she is admiring the treasure cargo, sets sail for home. The prince declares his love and the girl easily consents to be his bride.

As the ship sails home, Faithful John overhears three ravens discussing the perils to befall the prince: a horse which will fly away with him, a gorgeous (but poisoned) bridal robe, a snake to kill the bride in the bridal bed (or she will swoon and not recover unless three drops of blood are taken from her breast). Moreover, whoever learns these perils and tells them will be turned to stone from head to foot.

All happens as the birds predict: the beautiful horse meets the ship, but Faithful John kills it before the prince can mount; the gorgeous robe is offered, but Faithful John snatches and burns it. These two acts the young prince accepts with blind confidence, but when Faithful John bends over the princess in bed to kill the snake (or endeavors to take three drops of blood from her breast when she swoons) his act is misunderstood, and he is condemned to death for betraying his master. At the moment of execution Faithful John tells the whole story and is turned to stone. The broken-hearted King and Queen keep the statue in the palace for years, until one day they learn that the blood of their two children will restore the faithful servant. Gladly they sacrifice the children, and smear the statue with their blood; Faithful John comes to life, claps the two heads back on the children, who continue their play as if uninterrupted.

The faithful servitor motif is common all over Europe, and is thought to have migrated westward from India some 2000 years ago. It occurs in the *Kathā Sarit Sāgara* in the "Story of the Brāhman Viravara," who sacrificed his son to save the life of his king (P361.3). The motif occurs also in various European stories, including the tale of the devoted Henry who bound his heart with iron bands (F875) to keep it from breaking when his master was bewitched (see FROG PRINCE) and of the servant who sent his own child to the executioner to save the hero (K512.2.2). It is almost always tied up with the belief in the heal-

ing and life-giving powers of blood, and is closely related to the OLD DOG and TWO FRIENDS motifs. See PETRIFICATION; TWO BROTHERS.

faixes Literally, sashes: a Spanish religious dance of Malda, province of Lérida, performed in honor of San Macario on January 2. All the dancers (at least 24 in number) are married men. While executing various longways figures in front of the church, each holds a sash in his right hand. During the processional entry into the church they are joined by these sashes in a long line; during their exit they dip under them one by one. In the plaza they continue their figure dance. [GPK]

Fakir and his Jar of Butter One of the tales of the *Arabian Nights* (Burton ix: 40 f.) illustrating the air-castles motif (J2060 f.) or counting one's chickens before they are hatched (Type 1430). The fakir raises his staff in anger during the dream-story he is inventing and smashes the jar of butter that formed the foundation of his imaginary fortunes. The story is also told in "The Barber's Tale of his Fifth Brother" (*ibid.* i: 335 ff.) where the smashed material is glassware.

fallen angels Both Mohammedan and Hebraic tradition contain certain angels fallen from grace. The Mohammedan angels, Hārūt and Mārūt, were impatient with sinful man, so the Lord placed them on earth in human form for a time. The temptations were too much for them, and they succumbed and were banished from Heaven. They remained on earth and taught man witchcraft and astrology. In *Genesis* vi, 4, the sons of God (angels) lusted after the daughters of man and two hundred of them banded together on Mt. Hermon and descended to earth where they begat giants (demons). Some claim these demons were captured and chained in the bowels of the earth and God sent the Deluge to finish them. Others believe they are still loose in the world. Another story says that some of the angels, through pride, refused to pay honor to Adam who was wrought in the image of God, and were banished.

Much Christian dogma refuses to accept the intermarriage of spirits (angels) and man, but it was often accepted in popular belief. While Hebraic tradition links fallen angels with their demonology, more common Christian belief links them with the fairies, elves, etc. During medieval times it was believed that the angels remained where they fell, some in the upper air, others in the lower air, some on the earth, some in the water, or below the earth, and in caves and catacombs. Or they fell into the sky, the earth, the water, the woods, and Hell. Many claim fallen angels were not entirely evil. The angel Oliver was just in his judgments, and while the majority preferred Hell, some angels would do anything in their power to regain their places in Heaven. They are variously identified as Satan, Lucifer, Belial, the Devil, Semjâzâ, Azâzêl, Samael, and Mastêmâ.

fall from tree toilet The motif of a number of Apache Indian folktales (Chiricahua, Mescalero, and Jicarilla) typical of Apache humor and love of the practical joke. It consists merely of getting the dupe to venture too far out towards the end of a limb so that he falls to the ground. The Chiricahua story of how Goldfinch

gets rid of Coyote is typical. One day Coyote climbs a tree and finds Goldfinch sitting on her nest. He exclaims how beautiful the nest is, but where is the toilet? Goldfinch points out a little branch on the end of a long limb. When Coyote walks out there to see, the branch will not hold and he falls to the ground. Thus Goldfinch is rid of him.

false beauty doctor A world-wide folktale motif, well known in the Baltic countries, in Africa, in Indonesia, and especially common among North American Indians: closely related to the false curing and false strengthening incidents (Types 1134, 1136). The hero or heroine (sometimes the trickster) pretends to make the villain of the story (monster, giant, ogre, witch, etc.) or the dupe beautiful (K1013) or strong (K1012) with the result that the deceived one is injured or killed.

Typical is the North American Kutenai Indian story in which a young girl is about to be killed by a giant. The giant asks how he can become as beautiful as she is. She tells him that to become so he must be baked in an oven. He submits to the treatment and is roasted to death. In a Tsimshian Indian story Mink abducts a woman and takes her to live with him in his den. In the spring he sees the Indians on the river in their canoes and admires the white bone ornaments in their ears and noses. The woman encourages Mink to let her perforate his ears so that he too may wear the ornaments which signify high rank. She drives a spruce branch through his ears into the ground, and while he is thus helplessly pinned she kills him. In an Alaska Eskimo story a jealous wife "beautifies" the three girls whom her husband admires by thrusting their heads in boiling oil.

A Sia Indian folktale tells how Coyote admires the spots on Deer's fawns, and asks how she made her children so beautiful. Deer says she did it with cedar fire: every time a spark struck one of the children it made a spot. Coyote runs home, puts his children in a cave in front of which he builds a cedar fire. The children cry out with the heat, but Coyote tells them to wait a little, they will soon be beautiful. When the fire burns out he finds his children dead. See CHILD ABDUCTED BY CANNIBAL.

False Faces Eastern North American term for (a) Eastern Woodlands Indian carved wooden masks, (b) the performers who wore these masks in a ceremony the function of which was to protect against sickness. Among the Iroquois tribes a definite False Face Society existed; the Shawnee, Delaware, and possibly other Algonquian tribes gave False Face performances, but participants in such were not organized in a society. False Face performers were men who dressed in a bearskin suit, wore wooden masks, used a cane and carried tortoise-shell rattles. They did not speak, and were accompanied on their round of the houses in a village by the Shuck Faces—i.e. male clowns who wore masks made of braided corn husks. These clowns escorted the False Faces, and collected offerings of tobacco for them. The False Face performers, as part of their cleansing observances, smeared dung on their hands and stroked or shook hands with the inmates of the houses they visited. The appearance of False Faces and Shuck Faces in a village, or following a dance, while appreciated by adults as protection of the village against disease, terrified chil-

dren and dogs. The Iroquois, notable for their wooden masks of many varieties, carved their false-face masks from the living tree, roughing out the face and then chopping it in a block from the tree to finish it. Thus the tree was never killed. The masks themselves were oval-shaped with narrow slits for eye-holes. Only men who were ritually clean could perform in the False Face ceremony; if not "clean" at the time a performer would see fully clothed persons as nude. [xwv]

false or substituted bride A very widespread folktale motif (K1911 ff.) in which a beautiful young bride-to-be is ousted by an ugly or treacherous impostor who foists herself off on the unsuspecting husband.

In some versions the servant girl who accompanies the bride gets rid of her en route to the wedding, throws her in a river or pushes her into a well (where she thrives in the care of an underworld queen until the right moment for vindication and retribution arrives). Sometimes a stepsister, often with the connivance of the stepmother, ousts the bride of a prince or king, gets rid of her in some fashion (such as transforming her into an animal, throwing her into a river, or reducing her to menial station), and marries the king herself. Sometimes the substitution is not effected until the girl gives birth to her first child, when both are disposed of, and the ugly stepsister takes on the beautiful wife's role, with no questions asked. The substitution is always eventually revealed, either by an animal, an old woman, frequently by a song, sometimes by the mother's repeated return to suckle her child, or to sleep with her husband. In all cases the true bride (and/or her child) comes into her own and the treacherous impostor is killed.

MacCulloch in his *Childhood of Fiction* cites a Basuto story in which a young girl, en route to her sister's village to become co-wife to her sister's husband, has been warned by her mother not to look back. She cannot resist the temptation, does look back, and sees a witch who effects an exchange of garments with her. When they arrive at the village the witch passes herself off as the girl and marries the husband. The girl is sent daily into the fields where she sings over and over the story of her betrayal and sorrow. An old woman, overhearing, brings the husband to listen. He kills the witch and marries the girl. The witch keeps returning to pester the girl, in the form of a pumpkin, a thistle, a pumpkin seed, etc. Finally the pumpkin seed bites the baby, the husband grinds it to bits, and burns it up.

In a Bushman story the wife of a certain chief is changed into a lioness by Hyena via the medium of poisoned ants' eggs. Hyena then goes into the house in the role of wife. Several times the younger sister takes the woman's child out into the reeds to be suckled by its mother, until at last the mother warns her not to bring the child again, because she feels the lion's nature becoming dominant. The Hyena impostor is recognized but escapes. In leaving, however, she steps in the fire and burns her foot. This is why Hyena limps today.

In a Jamaica Negro story the wife, who is traveling the world seeking a lost husband, reveals to a laundry-woman how to wash out the three indelible drops of blood from his shirt. The man has said that he will

marry the woman who can wash out the stains. The wife is the only one who knows how, or who knows the man's true name. The laundrywoman claims the marriage for washing out the blood. In the night the man hears his true wife singing in the next room, singing "Return to me" and singing the true, unknown name of her husband. The man "jumped right up and married the woman." See Beckwith, *Jamaica Anansi Stories*, MAFLS xvii, pp. 130, 266.

The false or substituted bride is one of the most widespread of all folktale motifs. There are Portuguese, Spanish, Greek, Hebrew, Magyar, Indian, and Indonesian. It is common all over Africa, found in Swahili, Kaffir, Fjort, Basuto, Bushman, and Zulu stories. One of the most famous of the false bride stories is the Norwegian *Bushy Bride*. There are Lappish and North American Indian variants. It occurs in the *Ocean of Story*, in Basile's *Pentamerone*, and is the basic theme in Grimm's *Three Little Men in the Wood* (#13), and *The White Bride and Black* (#135).

familiar Specifically, an animal or bird associated with a witch or wizard as attendant, servant, or messenger; usually believed to embody a spirit (often a demon) and frequently also believed to be, especially in primitive cultures, the soul-animal or double of the witch or wizard. In general European belief, however, the familiar is *not* the witch or wizard, but servant and attendant pure and simple. (See SHAPE-SHIFTING).

In Elizabethan England it was popularly believed that demons, incarnate as certain animals, attended and served witches, and also that witches could and did metamorphose themselves into similar animal forms for depredations upon and persecutions of innocent persons. Inevitably whatever befell the witch-animal (injury or death) befell the witch. The black cat of the English and colonial witch is probably the most famous of popular familiars. In Europe and America dogs, hares, insects, toads, etc., are as commonplace in the role of familiar as cats. Flies are familiars in Lapp, Finnish, and Norwegian folklore. In the New Hebrides the sea snake will be the faithful familiar of one who has intercourse with it. Malay witches have familiars, incarnate as owl or badger, whose injury or death also results in like repercussions on the owner. Zulu sorcerers are said to have familiars (*umkovu*) which are reactivated corpses. To acquire one of these the sorcerer must dig up a dead body, run a hot needle up the forehead, and slit the tongue. The *umkovu* are sent on errands at night. They cause long grass to entangle the feet of night travelers, and "go about shrieking." If they call one's name, it is peril to answer, for this subjugates the answerer to their will and he becomes one of them. To see an *umkovu* pre-sages death. Witches among the Basuto have familiars called *obe* in the shape of tremendous animals.

The familiar is also often conceived of as an attendant spirit instead of an animal. In Arabian folk belief, every magician or wizard has a *tabi* (literally, follower) who reveals to him hidden knowledge. Certain North American Indian medicine-men, in the midst of their mystical religious experiences, hear their familiar spirits speak with actual voice, giving warning or advice. The Malay pawangs, or medicine-men, have hereditary familiar spirits who continue from genera-

tion to generation to act as intermediaries between them and evil spirits.

In many specific instances familiars are called sendings. In Siberia two contending shamans will send forth their familiars, or yekeelas, to vie with each other instead of undertaking combat themselves. If one of the yekeelas is killed, his shaman dies. Among certain Eskimos the shaman is represented by a tupilaq, not a living animal familiar, but an artificial seal which he has made. In southeastern Australia the sorcerer's familiar is apt to be a lizard whom he sends forth to work specific injuries; in New Guinea sorcerers send out snakes and crocodiles on killing missions; among the Yorubas the owl is the sorcerer's familiar, also sent on evil errands. In all these instances, if any hurt befalls the familiar or sending, the same hurt befalls the sender.

The ancient Jewish familiar known as the *ôb*, however, was neither an animal or spirit which represented the witch or soothsayer (i.e. not life token or double) nor an attendant spirit which obeyed his word. The *ôb* was evidently some material object made purely for purposes of divination, or else some natural object which became possessed by a prophetic spirit. The witch of Endor had an *ôb*, for instance. The concept of familiar as attendant spirit came into Jewish belief much later along with the development of demonology and the idea of the subjugation of spirits to human service. See BUSH-SOUL; NAGUAL; SENDING.

fandango A Spanish courtship dance especially of the provinces of Castile and Andalusia. It developed from the gitano, and retains the fiery voluptuousness of the Gipsy dance. The gestures of the dancers reveal every shade of allurement. The dance is performed to the guitar, the music in delirious rhythms, in $\frac{3}{8}$ or $\frac{3}{4}$ time, with the castanets and heels in vibrating counteraccents. The interpolated songs have the minor tonality of Moorish music, but the dance itself is gay. The audience is drawn into enthusiastic participation, among upper classes as well as among the Gypsies. Local variants are *rondeña*, *malagueña*, *granadinas*, *murcianas*. The gestures are less sinuous in other regions—Majorca, Catalonia, and Asturias. The fandango is popular in coastal Colombia, Ecuador, Brazil, and the Philippines as a ballroom dance. The origin is probably not colonial, but Ibero-Moorish. [CPK]

fandanguillo An Andalusian dance for one woman. She hardly moves from the spot, but quivers in her whole body as her heels beat out *tacneos* and her hands manipulate castanets, her face expressionless and eyes fixed and staring. In a dramatic movement she opens her arms wide, takes three large steps, and continues the dance in a kneeling position. Her concluding erect posture and toss of the head are haughty and provocative. The name means small fandango, but its concentrated introversion contrasts with the gay enthusiasm of the typical fandango. The fandanguillo is a subtype of the flamenco dances. [CPK]

fantine A class of well-disposed little people inhabiting the valleys of Vaud province in southeastern Switzerland. When properly treated they bring favorable seasons and good crops. They make little bells so that the cattle will not be lost in the woods.

farandoule An open round dance of Provençal peasants. Its formations suggest origin in a pre-Christian vegetation rite. The leader (often at the same time the flutist) guides a long chain of men and women, linked alternately by their hands, in serpentine courses; then the leading man and woman form an arch and the remaining dancers run through. The step is the buoyant run characteristic of springtime running and leap-frog dances.

The farandola of Catalonia is almost identical with the farandoule. It is often dedicated to saints, being performed on the town's saint's day. Documents prove its existence as far back as the 14th century. In Catalonia it has taken over some sardana characteristics. The various forms of this dance tie up with the Mediterranean series of open rounds, through Tuscany and Sicily, the Balkans and Greece to the Near East. [CPK]

Faroe step A step used in the round dances of the Faroe Islands which are accompanied by sung ballads, and adopted also in Norway and Finland: a survival from the 11th century. It is a reversal of the branle step: double left, simple right. [CPK]

fasting Voluntary abstinence from food, partial or total, or sometimes from specific foods, sometimes also from drink, for religious reasons, penitential self-mortification, or other reasons. Among almost all peoples fasting is one method of making direct contact with the supernatural, by means of the visions and hallucinations which prolonged fasting induces. It has been regarded everywhere as a form of personal sacrifice and propitiation to the gods, or a god, and as a means of purification before (or after) certain important activities, such as warfare, hunting, fishing, initiation rites, and other religious ceremonies. Everywhere fasting is recognized as a door to mystical experience and revelation.

In early Babylonia and Assyria whole communities sometimes fasted to ward off a threatened evil, and individuals among those peoples sought the favor or forgiveness of their gods by fasting. It is the practice among the Maoris of New Zealand for the women, and others who remain at home, to fast for the welfare and success of the warriors while they are away. In Fiji it is customary for a man to fast until a vow of revenge is fulfilled. The severe fasting prescribed by the Hindu Yoga ascetic philosophy secures marvelous powers for its practitioners.

In medieval Europe prolonged fasting was a symbol of sanctity, either sanctity to be acquired by the fasting, or a token of sanctity inherent if one could survive it. There is a famous story about the 13th century Fasting Nun of Leicester who retained health and rosiness in spite of eating nothing for seven years except the communion every Sunday. G. L. Kittredge cites, however, a specific lack of sanctity in the origin of a many-day fast inflicted by a Salem witch on Mercy Short of Boston.

Among the North American Indians fasting was widely practiced, both by individuals alone, or by groups of males. Of all fasts, that by youths (and sometimes also by young girls) at puberty to obtain a vision is the most characteristic, but fasting was by no means limited to this one occasion. Warriors frequently fasted before setting out on raids, hunters likewise. In some ceremonies, such as the Plains Indian Sun Dance, the chief participants in the ceremony fasted for several

days while the dance was being held. Initiation into religious societies also often entailed fasting prior to, or during, the initiation ceremonies.

Fasting often meant abstaining from water as well as food. Continence was observed during fasting periods, and males when fasting often left their homes to escape any possible contamination from menstruating or pregnant women. Reasons assigned for fasting were: 1) to attain ritual cleanliness; this applies especially to fasting prior to or after war activities, religious ceremonies, hunting expeditions; 2) to render oneself pitiful in the eyes of the supernaturals, so that they will give the faster instruction, songs, and some of their own power.

Absolute fasting was in many cases practiced only by men; limited fasting, during which only small quantities of food and water were taken, was practiced by males and females alike; females usually observed such fasting at the time of menstruation, and both men and women observed it after the death of a spouse or child.

[EWV]

fasting against a person A legal procedure practiced in ancient Ireland whereby a person could compel a stronger, or a superior, person to grant a request, yield a point, pay a debt, etc. The petitioner would sit fasting at the house-door of the petitioned, and not eat until that which was required was granted or paid. Continued refusal on the part of the petitioned would bring upon his head guilt for the death by starvation of the petitioner. This kind of fasting was recognized as one of the legal "distresses" of ancient Ireland. Fasting against a person for these reasons was also a common practice in India. The long fasts of Gandhi to gain a point were the same thing. And the fasting of modern prisoners in their cells belongs to the same psychology.

Belief in fasting "upon" a person was strong in England as late as the 16th century. A certain Mabel Briggie was hired by another woman to fast upon a certain man, ostensibly to effect the return of stolen money, but actually to effect his death. Mabel was executed in 1538 for causing the death of a man by fasting. He stumbled and broke his neck before her fast was over. This kind of fasting was called the Black Fast and was believed in as a potent spell. It was abolished by the church before the end of the century.

Fastnacht or Fasenacht In the Germanic countries, the festival just preceding Lent; literally, Fast Eve or Lenten Eve: called Fasching in Bavaria and Austria. The festival is analogous to the Carnival of the Romance countries. Popularly in Germany, the term is believed to derive from *fasen*, *faseln*, to talk nonsense, and the featuring of the Fastnacht plays on this day more or less substantiates the claim. The Fastnacht plays developed out of the burlesque songs and antics of the masqueraders who followed the ancient Teutonic ship-wagon processions, greatly tempered in Christian times to churchly subjects. For a detailed description of the variations in the celebration of Fastnacht throughout the Black Forest, see "Fastnacht in the Black Forest," by Conrad Taeuber, *JAFI* 46: 69-76. See CARNIVAL.

Fastnachtsbär The Fastnacht Bear or Shrovetide Bear: a man or boy clothed in straw and wound with ropes, led from house to house with music on Fastnacht or Shrove Tuesday in parts of Germany, Bohemia, Moravia, etc. In some districts he wears a bear's mask or is clad

in skins to enhance the realism. He enters every dwelling and dances with all the girls and women of the household, and is given food, drink, and money. The money is spent later in the evening by him and his companions for ale and merrymaking. There exists a fairly general belief in central Europe that one must dance on Shrove Tuesday (Fastnacht) to insure fertility and growth of all the crops. In some districts the women pluck bits of straw from the Fastnachtsbär to put in their poultry nests and thus insure a plentiful supply of eggs. Compare OATS-GOAT.

fatal children Those children out of myth and legend of whom it was prophesied either before birth or at the hour of birth that they would kill or overthrow a grandparent, parent, or other relative, or some king. These children were always abandoned as infants to perish, were always saved (by an animal, a supernatural being, a herdsman, fisherman, forester, or other humble person, or by an itinerant king, a maternal-minded queen, etc.), grew up unknown, beautiful, strong, and brave, and always fulfilled the prophecy (which was usually unknown to themselves).

Among the famous fatal children of the world were the Greek Oedipus, of whom the oracle said that he would kill his father. He was disposed of, raised by a shepherd and later by a queen of Corinth, eventually returned to Thebes, and unknowingly killed his father, Laius. In Persian legend Astyages, king of Media, dreamed that his daughter gave birth to a deluge which flooded Asia, and exposed the infant Cyrus at birth. Cyrus was found and cared for by a herdsman (or a bitch), and at the appointed time killed his grandfather, Astyages. The ancient Irish Lug, of whom it was prophesied that he would kill his grandfather, did kill Balor at the battle of Mag Tured. Deirdre, who because of her beauty, was destined to cause the death of heroes, was secluded in a forest hide-out under the care of women, and became the most unwilling cause of the treacherous fight in which were slain the three sons of Usnech, the sons of Fergus, and great numbers of the Red Branch warriors of Ireland. See ABANDONED CHILDREN; EXPOSURE OF FAMOUS PERSONS IN INFANCY.

fatal gifts Gifts sent to enemies who accept them as though they came from friends. This device is so well known to criminologists of all ages and areas that a complete analysis of its place in folk thought would be monotonous and voluminous. Only a few examples can be mentioned. When Hercules and his wife Deianira were fording a stream, Nessus the Centaur offered to carry Deianira while Hercules walked. Nessus then attempted to abduct the woman but was fatally shot by a poisoned arrow from Hercules' bow. Before he died he urged Deianira to take some of his blood, which would be a charm to preserve Hercules' love. Later when Hercules became enamored of another woman, Deianira gave him a shirt steeped in the blood of Nessus which, as soon as it was warmed by Hercules' body, caused his death. Allegorization is seen in the story of one of Vulcan's revenges. In order to punish Venus for infidelity he made a robe dyed in crimes. All who wore it became wicked. Jason, having brought his wife Medea, the barbarian and sorceress, back to civilized Greece, fell in love with Glauce. Medea sent her successful rival a wedding robe which burned her to death. The poi-

soned rings of the Borgias were, according to popular tradition, always fatal. Other gifts do not kill immediately but bring their owners to a bad end. Such are the necklace of Harmonia, the collar of Arsinoe. Opals bring bad luck. Other gifts are benign as gifts, but fatal if sold. The fatal emerald from the forehead of the great Buddha is a favorite theme among readers of the pulp magazines. [RDJ]

fatal imitation A folktale motif (J2401) in which the imitation of some admirable or successful act ends in disaster for the imitator. There is the stupid ogre who stabs himself, for instance, in imitation of the hero who has merely stabbed a concealed bag of blood (G524). There is Aesop's fable (Jacobs #202) about the ass who tried to greet his master with the same jumping and fawning affection he had seen the dog bestow, only to be harshly beaten off (J2413.1). There is the story about the man who could not sell his cow until he said she was with calf, and wondered why the same plan did not work when he tried to marry off his daughter (J2427).

The motif is very common throughout African, Surinam, and United States Negro folktale. Typical are the South Carolina Sea Island stories in which Ber Rabbit, having seen Ber Rooster with only one foot and no head at night, yet walking on two legs and with a head as usual in the morning, asks him why this is. Ber Rooster explains that this is the way he rests. Ber Rabbit decides to try it, tells his wife to cut off his head and three legs, and of course is killed. See BUNGLING HOST; FALSE BEAUTY DOCTOR.

fatalism The feeling that some final pattern determines the occurrence of important human events. In the popular thought of all peoples the feeling tends to be vague. Theologians, fortune-tellers, astrologers in all parts of the world have given it a fictive reality under such terms as destiny, fate, or Fata, to be distinguished abstrusely from fortune, Fortuna, or luck, or karma. The body of knowledge represented by each of these terms has many subdivisions which are accepted or rejected according to the sociotheological traditions of the several communities. The special sciences themselves which involve the books of destiny, the laws of karma, and the conjunction of stellar or other influences at the moment, hour, or day of birth are the property of learned persons, whether clothed in the elaborate robes of the great universities or naked in Africa and the South Sea Islands. While these pursue their occult studies the peoples of the world will continue to believe that you won't die until your time comes, that bomb or arrow didn't have my name on it, I was warned not to take that boat, or it was fated that we should meet. [RDJ]

fatal look A death-dealing glance. The folklore of the fatal look needs to be distinguished from the folklore of the evil eye. Whereas the evil eye brings pain and misfortune with, at times, ultimate death and works over a period of time, the fatal look kills instantly. (Compare the colloquialism "If looks could kill.") A further distinction must be made between creatures like Medusa or a god, who when looked upon, cause death, and creatures who cause death by looking. Classic examples of this motif occur in Indian stories in which a man destroyed a tree with an angry look and restored it

with a kind one, or a beautiful maiden struck the king with a poisonous look from a distance. Isis, in Egypt, embracing the dead body of Osiris, killed a person who spied on her with a look. Snakes are thought to poison the air with their eyes and the snakes of Turkestan are reported by Arabs to have killed with a glance. These views were distributed in Europe through the Alexander Cycle. Shakespeare mentioned the "death darting eye of a cockatrice," which is a serpent hatched by a reptile from a cock's egg. Pliny and Heliodorus reported that a basilisk was a snake with a cock's head and a fatal glance. See ABANDONED CHILDREN. [RDJ]

 Belief in the evil eye, comparable to the European beliefs, apparently did not exist among North American Indians in aboriginal times, nor has it gained much prevalence at present. However, in the mythology of many western North American tribes we do find mention of monsters or other creatures who can kill persons by looking at them. [EWV]

Fata Morgana The fairy Morgan: in Carolingian romance the lake-dwelling enchantress overcome by Orlando; lover of Ogier. See MORGAN LE FAY. The mirages in the Strait of Messina are attributed to her enchantments, and are named for her, Fata Morgana.

Fates The three Roman goddesses who determined the fate of every human: a development of the idea of the *fatum* or spoken word of Jupiter which could not be altered. The Fata Scribendi wrote the destiny of the child at birth: this may be a goddess or goddesses. Since the Fates performed their duties at birth, they were identified with the Parcae. See MOIRE; NORNS.

Father Time The personification of time: an old white-bearded man carrying a scythe and often an hourglass. The figure is probably a descendant of the classical depiction of Cronus (Saturn), also identified with time, who carried a sickle or reaping book. The scythe Father Time bears is the symbol of his power to destroy: all falls like the grain before him. The hourglass is the sign of the constant and unstoppable flow of the years. The wings sometimes seen on Father Time are emblematic of his rapidity. Father Time is the Old Year who passes on the burden to the baby New Year at the stroke of the new year's first minute. He sometimes is also Death, who cuts down those who die.

fatigué Among Negroes of Trinidad, a term applied to songs and the method of singing of calypso style. To "sing on people" in a teasing or derisive way, as was done at carnivals in older times, was "to fatigué."

Fatima (1) In the story of *Bluebeard*, the last of the wives, whose curiosity resulted in the uncovering of Bluebeard's crimes.

(2) In the story of Aladdin, the holy woman slain by the necromancer, brother of the magician, who, dressed in Fatima's clothes, insinuates himself into Aladdin's household. When he asks that an impossible task be performed, the jinni of the lamp discloses the masquerade to Aladdin, who thereupon kills the necromancer.

(3) The daughter of Mohammed (606?-632), one of the four "perfect women." Traditionally she is virginal, one of her titles being the "bright-blooming" or one who has never menstruated; she however actually bore three sons to Ali. Her grave is unknown, mysterious.

faun See FAUNUS; PAN; SATYR.

Faunus In Roman mythology, a woodland deity: one of the most ancient Italic deities, originally probably an agricultural and shepherd god, later identified with the Arcadian Pan and having many of Pan's characteristics. Faunus was an oracular god, sending his prophecies in the sounds of the forests and by dreams to those clothed in the skins of sacrificial lambs and sleeping in his precincts: he was in this aspect known as Fatuus. As the fertility god of shepherds and crops, Faunus was equated with Inuus and Lupercus, the latter identification being made because of the supposed similarity between the Lupercalia and the Lycaea and the identification of Evander and Faunus. There were two Faunalia each year, one on December 15 and one on February 13, at which goats were sacrificed, there were libations of wine and milk, and country games and customs were generally practiced. In legend, Faunus was an early Latin king, the son of Picus and father of Latinus by Marica, who brought to the Latins religion and the arts of agriculture. Numa was supposed to have caught him, as Midas captured Silenus, by getting him and Picus drunk with wine. Like Pan, Faunus had goat's feet and horns, and from his various manifestations became pluralized into the Fauni or fauns, which resemble greatly the Greek Satyrs as spirits of the country. There was also a female counterpart of Faunus, Fauna or Faula. He is also either father or husband of Bona Dea.

Faust The type of the medieval European magician and student of the black arts. The Doctor Faustus we know was undoubtedly drawn originally from the Dr. George—later Johannes—Faust who was born in Swabia about 1480 and died in Syaulen in 1538 or 1539. To the life story of this real Faust there became attached, by popular and literary accretion, stories of the time, often of much earlier origin, about the great traditional magicians—Albertus Magnus, Paracelsus, Simon Magus, and others. Faust thus became the most notorious of those charlatan magicians (*scholastici vagantes*) who traveled from town to town, fair to fair, court to court during the period of the Renaissance's greatest gullibility, and who despite their quackery displayed or stimulated that interest in pseudo-scientific studies which led to the growth of modern science.

As with all such magicians, Faust was thought to be in league with the Devil, who accompanied him, according to Melancthon, as a long-haired dog with red eyes. Faust having turned from the traditional studies of the scholar (medicine, law, philosophy, religion: in Marlowe) in search of something more satisfying to his ambition evoked the Devil by conjuration. In return for the promise of a period, usually 24 years, of free living, he signed a bond with his blood deeding his soul to Satan. This, the devil's pact, is a recurrent theme throughout the period of active belief in witchcraft and devilry. Faust did not, however, derive real satisfaction from this contract; several times he reached almost to honest repentance, but never quite accomplished it; and at the expiration of the term of the bond he was carried off reluctant to Hell. Among the exploits widely attributed to Faust during his career are the fetching of grapes in winter, the ride on an inanimate object (bundle of hay, beer barrel, etc.), the baiting while invisible of the Pope

and his cardinals, and the calling up of various shades of classical antiquity.

Popular belief in devils and the whole atmosphere of the Faust legend was quite real. During a performance of Marlowe's play in the early 17th century, an extra devil, not of the regular stage company and reeking of brimstone (which latter gave him away), was discovered on stage, seemingly called up by Edward Alleyn's incantations in the role of Faust. Tradition (dating from the late 17th century, but based on earlier, similar legend) maintains that Alleyn, the original Faustus of the Elizabethan stage, thereupon quit the acting profession for good and founded Dulwich College on the estate he had bought with money made from acting and managing.

The Faust legend in 400 years has grown in philosophical content and, though the change is principally a literary one, it has echoes in popular tradition. In such popular works as the *Historia von Dr. Johann Fausten*, the first book in which the Faust story is collected, published in Frankfurt a. M. in 1587, and its English version of 1592, Faust is almost wholly the charlatan wonder-worker. With Marlowe's *The Tragical History of Doctor Faustus* (1589–1592), Faust becomes also the seeker after physical and intellectual satisfaction, who fails because his mortal pride is too inbred for him to recant his sins. In Goethe's two-part work (1808 and 1833) Faust the magician is almost entirely replaced by Faust the philosopher and student, and the dominant religious Protestant tone of the earlier story is superseded by one of searching cynicism. Even the "moral" of the story, earlier one of complete retribution for the pact with the Devil, is restated and turned about to the end that good and evil become relative rather than absolute. It is this "literary" Goethean Faust, as opposed to the popular creation, who is alluded to more often in the literature of the 19th and 20th centuries, e.g. Spengler's characterization of Western European civilization as "Faustian." The Gretchen episode of Goethe, absent in the earlier versions, used also by Gounod in his opera, has become, along with the pact with the Devil, the essence of the modern Faust story.

féar gortaí Literally, in Irish, hungry grass: a kind of mountain grass that causes extreme hunger in whoever treads on it. One should carry food—whoever expects to pass over a place where it grows. Even swallowing one oat grain will cure the famishment thus caused. There is a place near Omeath, Ireland, famous for a strong growth of this grass between two cairns. No one from the environs will go near it without bread in the pocket, for if one falls down on the *féar gortaí* he cannot rise until he eats. It is believed to grow where a dead body touches the ground; or some say it springs up where a meal has been eaten and no scrap or crumb left.

fear of the abnormal Any departure from the normal arouses the attention, causes apprehension, and, if not immediately and easily explainable, usually results in fear. Fear of the abnormal, including fear of the novel, the strange, the alien, the queer, the enormous, the monstrous, and the occult, accounts for many social and religious practices and folk customs.

The fear of anything beyond the normal range of day-by-day experience is characteristic of mankind. It

tends to diminish with civilization as objects or conditions formerly not understood, and therefore dreaded or worshipped, come within the scope of expanding scientific knowledge, but the fear lessens only gradually, and superstition, the common term for this fear of the unknown, usually remains.

Children at play resent and persecute the abnormal and the non-conforming child, just as a brood of white chickens will pick to death the lone black one. The newborn child exhibits his first fears at the unfamiliar face and the unexpected sound. He is apt to yell with fright at his own mother the first time he sees her with a hat on. And the nurse who feeds his inherent fears with a diet of bogey and ghost stories, together with primitive dread of hell and the devil, is unwittingly laying a foundation in the child's mind for what psychiatrists will later call phobias and common people "the horrors."

The folk mind automatically associates anything abnormal with the supernatural, from the birth of a child with the amnion (caul) covering its head to an eclipse of the moon, and from phosphorescence (will-o'-the-wisp) in the meadow to hunchbacks and albinos. Sorcerers and shamans capitalize on fear of the abnormal by encouraging and magnifying it. Misshapen demons, so common in old religious literature, are a device to utilize fear of the grotesque to scare the uneducated into being good. Until recently it was easy to persuade a community that disease in cows and pigs was the evil work of some poor old woman crippled with lordosis.

Because bodily deformities, disfigurements, and chronic skin diseases have in primitive societies often been attributed to malign supernatural agencies, persons thus impaired were prohibited from serving in the most sacred rites of religion. An interesting passage in *Leviticus* xxi, 16-24 confirms this:

"For whatsoever man he be that hath a blemish, he shall not approach [the altar]: a blind man, or a lame, or he that hath a flat nose, or anything superfluous, or a man that is brokenfooted, or brokenhanded, or crookbackt, or a dwarf, or that hath a blemish in his eye, or be scurvy, or scabbed, or hath his stones broken...he shall not go in unto the vail, nor come nigh unto the altar, because he hath a blemish; that he profane not my sanctuaries:..."

The fear of enormous and misshapen beings characterizes the folklore of the entire Mediterranean region, including the Hebrew Behemoth, Leviathan, and Rahab, the Babylonian Tiamat, the Phoenician Molech, the Cretan Minotaur, Egyptian and Greek Sphinxes the Gorgons, the animal-headed gods of Egypt and Phæstos, the Armenian-Zoroastrian devs, drufes, jatuks, pairikas, hambarus, visaps, and nhangs, as well as the apocalyptic monstrosities of Ezekiel, Daniel, and the various Christian and Gnostic apocalypses.

Fear of monsters (*dysmorphophobia*) is found also in the old Teutonic legends of Brusi, and Grettir, the female fiend who ate eleven merchants, in the stories of Bunyip of the Australian tribes, of the apelike demons of Tibet, and the dog-tailed devil-men of Fiji.

The origin of belief in monsters has been traced to actual oral tradition from times when now extinct huge animals roamed the earth, to the finding of fossil bones of such enormous and queerly shaped beasts, to night terror dreams, to belief that sexual congress between

human beings and animals or demons or gods would produce monstrosities (for instance, the story in *Gen. vi*, 4 about how "the sons of God came in unto the daughters of men" with gigantic consequences), to deformities assumed by warriors who used masks and horns to terrify their enemies, and to huge stone ruins of former civilizations. Most likely, however, vivid imaginations fed by dreams and shadows account for most such legends.

Quaint lore of a milder sort, but still evidencing fear of the abnormal, persists in the traditional reverence for the hunchbacks who, among the Bolivian Indians, are said to carry "titulos" (important documents) in their humps. People in many lands touch the hump for luck, and Savonarola believed that hunchbacks have higher than average intellects. Idiots, perhaps because they mutter unintelligible sounds, share this reputation for secret wisdom.

Abnormal mental manifestations such as trances, delirium, seerism, and clairvoyance likewise inspired fear and led to such drastic social retaliations as the Mosaic law in *Lev. xx*, 27, commanding the stoning to death of mediums and wizards, and the well-known law in *Ex. xxii*, 18, "Thou shalt not suffer a witch to live." But related mental phenomena, such as prophecy and the gift of tongues (*glossolalia*), are quite inconsistently regarded at times as evidence of the presence of a good or holy spirit (*Acts of the Apostles*, ii).

The persistent and world-wide belief in the power of the evil eye is but another form of the fear of the abnormal. The death-dealing glance was supposedly possessed not only by the hunchbacked and cross-eyed but also by women who alternated abnormal beauty with monstrously horrible appearance, notably the Gorgons, Circe, and the Sirens, and the daughters of Mara in the Buddhistic mythology. Quite logically the protection against the evil eye and the glance of death is almost universally the making of the sign of life, i.e. exposing the genitals, either by wearing amulets displaying the *fascinum* or by making the *fico* (fig) with the thumb between the first and second fingers. The Christian sign of the cross and the Jewish *mezuzah* are popularly believed to ward off the baleful effects of the evil eye.

CHARLES FRANCIS POTTER

fearsome critters Fabulous and mythical animals, birds, reptiles, fish, and insects (more humorous than terrible) of the American frontier, wilderness, and backwoods, figuring in hoaxes and tall tales to prank tenderfeet, from which they have been attracted into the Paul Bunyan saga. "Apocryphal zoology" is a development of 1) the lore of fanciful traits of animals and erroneous nature observations belonging to "unnatural natural history" from Pliny, the *Physiologus*, and the Bestiaries, to myths of the sea serpent and hoop snake; 2) giant, hybrid, and fantastic monsters of mythology, and 3) fictitious and symbolic creatures of art and heraldry.

One of the earliest American contributions to this playful lore of impossible creatures is to be found in Rev. Samuel Peters' *General History of Connecticut*, 1781, with its descriptions of the whappernocker, the cuba, the dew-mink, and the humility. ("The humility is so called because it speaks the word humility, and seldom mounts high in the air...It...has an eye more piercing than the falcon, and the swiftness of an eagle;

hence it can never be shot for it sees the sparks of fire even before it enkindles the powder, and by the extreme rapidity of its flight gets out of reach in an instant.") Another early and widespread fearsome critter is the variously spelled guyascutus, of which two types may be distinguished: 1) the prock, sidehill dodger, or gwinter—an animal with legs on one side of its body shorter than those on the other in order to enable it to keep its balance while feeding on the side of a steep mountain; and 2) a hoax dating from pre-Civil War days, in which country people pay to see a carefully guarded specimen of a much-advertised monster, only to be routed when the manager rushes on stage and yells, "The guyascutus is loose!"

A list of fearsome critters includes: albotritch, argopelter, augerino, axhandle hound, ball-tailed cat, bedcat, billdad, cactus cat, camp chipmunk, Central American whintosser, club-tailed glyptodont, Columbia River sand squink, come-at-a-body, cougar fish, dingball (ding-maul, plunkus), dismal sauger, dungavenhooter, fibbertigibbet, flitterick, Funeral Mountain terrashot, gazerium, giddy (gillygalloo, whiffenpoof) fish, goofang, goofus bird, gumberoo, guyascutus (godaphro, gwinter, lunkus, sidehill dodger, gouger, or sauger, side-swiper, mountain stem-winder, prock, rackabore), hang-down, happy auger, harpy-hag, hidebehind, hodag, hugag, hymapom hog bear, jayhawk, kankagee, kickle (hickle) snifter, leprocaun, log gar, lucive (lucivee, *loup-cervier*), luferlang, milamo bird, moskitto, mountain rabbit, mugwump, philamaloo (filla-ma-loo, phillyloo) bird, pigwigen, pinnacle grouse, ratchet owl, roperite, rum(p)tifusel, rubberado, sandhill perch, santer, screbonil, slide-rock bolter, sliver cat, snipe, snoligoster, snow snake, snow wasset, snydae, splinter cat, squonk, swamp auger, teakettler, tote-road shagamaw, tree-squeak, tripodero, upland trout, wampus cat, wapa-loosie, whangdoodle, whiffenpuff, whifflepoof(fle), whirligig fish, whirling wimpus, wiggle-whiffit, will-am-alone, windigo, and wunk.

Some fearsome critters are designed to scare greenhorns or tourists (e.g. the agropelter, which throws chunks of wood at passing lumbermen). Others are merely preposterous (e.g. the rubberado or bouncing porcupine, which gives resiliency to anything eating its flesh). Still others are horrible examples of creatures adapted to their environment (e.g. the snow snake, a deadly, pink-eyed, white-bodied serpent invisible to its prey) or hostile to it (e.g. the augerino, a malevolent subterranean denizen of Colorado whose sole mission in life is to let water out of irrigation ditches).

The linguistic inventions of this animal mythology are a fascinating study in humorous nomenclature. (William T. Cox, *Fearsome Creatures of the Lumberwoods*, 1910; George Philip Krapp, *The English Language in America*, 1925, Vol. I, pp. 109–113; Charles Brown, *Paul Bunyan Natural History*, 1935; H. H. Tryon, *Fearsome Critters*, 1939; H. L. Mencken, *The American Language: Supplement I*, 1945, pp. 245–252. B. A. BOTKIN

feasting Feasts, ranging from the extremely simple feast of the first game killed by a youth, to the ostentatious, elaborate, and often wasteful potlatch feasts of North Pacific Coast noblemen, were given by the North American Indians as part of almost all gatherings, whether of a religious, social, political, or economic na-

ture. Often a feast concluded a major ceremony, as the Busk or Big House ceremonies, but family and minor ceremonies often consist largely of the feast itself, preceded by a formal or informal prayer. Except in rare instances women prepare the food for feasts; often, however, men serve it. At the present time many tribes attempt to use for their feasts native foods, such as Indian or squaw corn, and wild game (even if only squirrels, where once deer were used), although in daily life non-native foodstuffs are now used more than native ones. See FIRST-FRUIT. [EWV]

Feast of Age or Feast of Goibniu One of the three gifts of Manannán to the Tuatha Dé Danann of Old Irish mythology after their defeat at the hands of the Milesians. When Manannán came to advise them, he sent them into the hills and mounds of Ireland to dwell forever and gave them three wonderful gifts: the faei fiada, which gave them the power to become invisible, the Feast of Age at which Goibniu served his ale that kept old age from touching them, and the Pigs of Manannán, which served them for food and whose hordes were inexhaustible.

Feast of Fools A festival of the Middle Ages and earlier in Europe, in principle related to the Roman Festa Stultorum and Saturnalia, and occurring some time in the period about Christmas and New Year's, in which the classes of the lower clergy and officials each, on its own day, presided in burlesqued ceremonials: a type of clowning holiday in which, because it was a holiday and therefore out of the normal course of things, a reversal of normal procedures occurred. The Feast of Fools is the name applied most often to that festival occurring on January 14, and it has therefore been confused with the Feast of the Ass, also celebrated on that date. January 1, the Circumcision, was the day the priests held sway, as for example the choirboys did on Innocents' Day.

The class to whom the day belonged nominated, in France and Italy, a bishop and archbishop of fools. These officers were "ordained" in a burlesqued ceremony and then presented to the people. During the course of the day, the participants in the revels masked (masks were in common use from 1200 to 1445), dressed in women's clothes, danced in the choir, sang obscene songs. At the altar they played dice, or ate puddings, cakes, and sausages there. They burned old shoes in the censers and censed the holy books and places with the vile smoke. Then, in carts, they went in procession through the streets, singing bawdy verses and indulging in obscene postures and gestures. This revelry eventually died out in the 16th century, after earlier ineffective prohibitions, in the general tightening of the Catholic Church in face of the Reformation.

Some have tried to associate the Feast of Fools with April Fools' Day as a vernal equinox celebration, but the change of the year's beginning from March or April to January occurred long after the Feast of Fools was observed. Compare also the Abbot of Unreason, the Lord of Misrule, and that group of entertaining major domos presiding over the late autumn and early winter festivals.

Febold Feboldson Synthetic and talltale inventor-hero of the Great Plains, in the person of "an indomitable Swedish pioneer who could surmount any difficulty."

In 1927 or 1928 Don Holmes, of the Gothenburg (Nebraska) *Times*, picked up the character from Wayne T. Carroll, a lumber dealer, who wrote a weekly newspaper column under the name of Watt Tell. Another Gothenburg resident and occasional contributor to the *Times*, Paul R. Beath, is responsible for giving Febold wider circulation and more or less definitive form. According to Beath (*Febold Feboldson, Tall Tales from the Great Plains*, Lincoln, 1948, p. viii), the only historical link in the cycle is Febold's great-nephew, Bergstrom Stromberg, probably based on Olof Bergstrom, a Swedish pioneer who is reputed to have founded Stromsburg and Gothenburg, Nebraska, and who was the hero of many local anecdotes and yarns. The emergence of the Febold cycle from local tradition and newspaper humor illustrates the process by which migratory tall tales and jests in the Paul Bunyan tradition become attached to individual heroes and adapted to regional conditions—in this case, those of the treeless prairie and the hardships and hazards of plains pioneering, such as "tornadoes, hostile Indians, drouths, extreme heat and cold, unsavory politicians, and floods." The result is a mingling of familiar tall tale motifs and creatures (e.g. monster mosquitoes that drill through an iron boiler only to have their stingers clinched inside, the health-giving prairie wind that revives a corpse on its way to the graveyard, cutting and selling frozen postholes, the mugwump bird, the hoop snake, the dismal sauger, the snollygoster, the hodag) with some new variations and inventions (e.g. hitching an eagle-bee to a plow and plowing a beeline for a boundary between Kansas and Nebraska and the saga of the Dirtyleg Indians).

[BAB]

feces Concern with excrement is evident in a great many North American Indian tales, and human excrement was used in certain ceremonies by Eastern Woodlands and Southwestern tribes. In trickster tales especially, trickster's excrements often advise him, or warn him of impending danger; in other tales trickster eats certain foods which physic him, or is suddenly frightened and voids. In a Penobscot tale of northeastern North America the culture hero, Gluskabe, does everything a powerful baby he is trying to win over does, but is defeated in his purpose when the baby eats his own excrement. The Southern Okanagon of Washington personalize feces, and in several Northeastern myths a fecal lake is mentioned. In ceremonies human excrement is handled and pretense at least is made of eating it by clowns in Southwestern Pueblo Indian dances. In the False Face and Shuck Face performances of the Eastern Woodlands the performers smeared human or animal excrement over their hands, and then stroked or shook hands with onlookers whom they were protecting from disease. A great many other specific references to excrement in myths, and instances of the actual use of excrement in ceremonies could be cited; the reaction to all of these by Indians themselves is that the mention or use of excrement makes for a humorous situation. [Ewv]

female rain In many Southwestern, Plains, and Eastern Woodlands North American Indian tribes, soft gentle rain is referred to metaphorically in tales and prayers as "female rain"; hard, pelting rain is spoken of as "male rain." [Ewv]

Fenda Maria Literally, Lady Maria: title and heroine of an African Negro (Angola) folktale. Fenda Maria desired greatly to unbewitch and marry the beautiful young Ngana (Lord) Vidiji Milanda, who lay sleeping on the bank of a river far away. To do this she had to walk eight days through the forest "where goes the child of Bird, the child of Man is not to be seen therein," and to waken him she must weep ten plus two jugs full of tears. When Fenda Maria had filled ten plus one jug full of tears, she gave up one jugful in payment for a young slave girl who was being sold by some passers-by. She continued to weep, and when she had filled ten plus one and a half jugs, she told the slave to weep a little, because her eyes were tired and she must sleep. But she told the girl to call her as soon as the jug was nearly full, so that she might waken the beautiful young Vidiji Milanda. The girl disobeyed, however, filled the jug full, and when Vidiji Milanda awoke and said, "Embrace me, my wife," she did not un deceive him. Fenda Maria thus became slave to her own slave, who thenceforth called herself Fenda Maria, and the real Fenda Maria was called Kamaria.

One day before setting out on a journey to Portugal, Vidiji Milanda asked all his slaves to name what presents they wanted him to bring them. Most of them wanted earrings or beads, but Kamaria asked for a self-lighting lamp, a self-sharpening razor, self-cutting scissors, and a truth-telling stone. Vidiji Milanda had to go to many places before he found all these strange gifts. But he did find them and brought them home to the slave-girl Kamaria.

In the night Kamaria struck her magic calabash on the floor, dressed herself in the rich garments that spilled out of it, told her story to these four remarkable gifts, and bade them destroy her if her tale was not the truth. The lamp lighted itself, the razor sharpened itself, the scissors cut, and the stone of truth pounded on the floor, but none of them harmed Kamaria. An old woman saw and overheard this performance for three nights. On the fourth she brought Vidiji Milanda secretly to watch. When he heard the story and saw the acts of truth, he cried out, "Embrace me, my wife." The pair then fainted away out of pure joy. The impostor was put in a barrel of tar which was set on fire. The little white bone that remained was used to make the white smear with which Fenda Maria and Vidiji Milanda smeared themselves. The smearing of the body with the burned flesh or bones of an enemy is a widespread African practice said to prevent the inimical ghost from taking vengeance. The Ki-mbundu text of this story with translation is in Heli Chatelain's *Folktales of Angola*, MAFLS i, pp. 29 ff. See ACT OF TRUTH; FALSE OR SUBSTITUTED BRIDE.

Feng Shui Chinese geomancy.

fennel An herb of the parsley family (*Foeniculum vulgare*). Pliny lists it among the remedies discovered by the animals: the serpent eats it when he sheds his skin to renew his youth and to improve his eyesight. All parts of the plant are used to improve the sight, cure poison, reduce excess flesh, and to increase the milk supply of nursing mothers and wet-nurses. It was used in the rites of Adonis, and is a symbol for flattery. The leaves were used for crowning victors in games. "Sow fennel—sow trouble" is an old saying. See MAYWEED.

Fenris or Fenris wolf In Teutonic mythology, a huge wolf, son of Loki and Angur-boda whom the gods attempted to fetter. He easily broke two strong chains, but mistrusted the magic silken cord, Gleipnir. He insisted that Tyr place a hand in his mouth during the tying, and when he found himself securely bound, he bit the hand off. The cord will hold until Ragnarök, when he will join Loki, devour Odin, and in turn be rent asunder by Vidar.

Fensalir or Fensal In Teutonic mythology, the magnificent mansion of Frigga to which she invited all married couples who had led virtuous lives on earth to enjoy each others' company forever.

Ferdiad In Old Irish legend, friend and sworn brother of Cuchulain, beguiled by Medb to fight against Cuchulain in the War for the Brown Bull. The story of the reluctant three-day combat between the friends, the inevitable, gradual mounting of their anger, the final killing of Ferdiad by Cuchulain, and Cuchulain's immediate grief is one of the most moving and famous stories in the world.

Fergus mac Roich In Old Irish legend, a warrior of the Red Branch, one of the greatest heroes of Ulster in the reign of Conchobar, and one of the tutors of Cuchulain. He left the court of Conchobar and went into exile in Connacht because he could not countenance the treacherous killing of the three sons of Usnech. See *DEIRDRE*.

fern Any of the flowerless, seedless plants (class *Filicineae*) reproducing by spores. In Germany a concoction of the male shield fern cures toothache. The root of this fern, dug when the sun is in the sign Leo and hidden in the room, will cause any sorcerers present to turn pale and leave the room. If dug at the full of the moon, steeped in water, and sprinkled on cattle it will keep them from bewitchment. Royal fern is soothing if laid on wounds, bruises, or rupture. They say in Cornwall that biting off the first fern seen in Spring will keep one free from toothache all year. In Northumberland it is unlucky to bring maidenhair fern into the house. In other parts of the country it is used for colds and lung complaints. The Mohegan Indians steep sweet fern in water and apply it to ivy poisoning and use a jelly from the root as a remedy for lung complaints. Moon fern is believed to be so magnetic that it will pull the shoes off the feet of horses and cattle. In the Vosges Mountains the ashes of ferns cut and burned on July 30 (feast of St. Abdon, patron of hygiene) kept away insects and unwanted guests. In Ireland they say St. Patrick put a curse on the fern, yet it is the emblem of fruitfulness, a substitute for tea, and is used as a remedy for burns and scalding. In Wales wearing a fern will cause one to lose his way and be followed by snakes. A fern growing in a tree is a cure for stomach-ache.

fern seed The reproductive spores of the fern, anciently called seeds, and the subject of varied and widespread magic lore. All beliefs regarding the magical properties of fern seed are rooted in sympathetic magic pure and simple. Those who believed that fern seeds were invisible also believed that fern seed would render invisible anyone who carried or ate them. Those who believed that fern seed bloomed with a rare golden blos-

som only on Midsummer Eve, also believed that they would lead the finder or possessor to golden treasure. As late as 1870 the Lancashire peasantry believed that fern seed "gathered on the Holy Bible" would render invisible anyone courageous enough to swallow it. In Elizabethan England it had to be gathered on Midsummer Eve to be efficacious. Later anyone caught gathering it was suspected of witchcraft.

In Bohemian belief fern seed blooms only on Midsummer (St. John's) Eve with a golden bloom. If the finder will climb a mountain that night with the precious blossom in his hand, he will either find gold or have it revealed to him in a vision. Many Bohemians sprinkle fern seed in with their savings to keep the hoard from decreasing. In Russia also the golden flower must be picked at midnight on Midsummer Eve. Then if it is thrown into the air it will land over buried treasure.

A whole new variety of fern seed superstitions exists among the Georgia Negroes. Some believe that if you walk with it in your shoe the spirits will follow you; others sprinkle it about their homes to keep out ghosts.

Fescennine Pertaining to a kind of verse recited at Roman weddings in ancient times: said to have been originally a form of obscene, ridiculing verse of harvest festivals, and originating at Fescennia in Etruria. Licitious banter of this sort, never taken very seriously by those it is aimed at, is a common occurrence at festal occasions when inducing fertility is desired, and is a world-wide custom.

Festivals of the Dead (Chinese) Ceremonies (having many local variations) whose general function is to show the spirits that their descendants on earth still respect and venerate them, and to supply them with the necessities of life after death, i.e. food, clothes, servants, money. In China responsibility for the welfare of deceased ancestors is the responsibility of the oldest surviving male member of the family, who, as priest, is responsible for the observation of the domestic rites. Major ceremonies are performed in the Spring (Ch'ing Ming), on the 15th of the Seventh Moon, and on the first of the Tenth Moon. Because the dead are buried in the fields, these times, when the families "sweep the graves" and repair the tumuli, are occasions for picnics. In the Tenth Moon winter clothes are sent to the dead together with gifts of symbolic money. The Seventh Moon, the Feast of Hungry Ghosts, is the time when the Buddhist hells also open their gates and ghosts roam through the country. [RBJ]

fetch In Irish and north of England folklore, the apparition of a living person; one's spirit-double, identical in appearance, even to details of dress. A fetch can be seen usually only by persons with second sight. It is most commonly seen, however, by a special friend or near relative just before or at the moment of death of the original. If it is seen in the morning it is thought to presage longevity for the original; its appearance at night means he is about to die or has just died. The fetch usually comes walking along easily and casually and disappears across the fields or through a gap in a hedge. If it seems to be agitated or distressed, a violent death is known to be in store for the original. One's fetch is even occasionally seen by oneself.

fetch-candle or fetch-light In Irish and north of England folklore, a supernatural light like the small flame of a candle seen moving along through the air at night: believed not only to presage the death of the one who sees it, but believed also to pass across his vision between his home and his grave. In some localities it is believed to be accompanying some ghostly funeral, and to be visible only as a death warning to the beholder or as sign of the death of someone he loves. In south Hampshire it is said to go out when the soul of the dying departs. Compare CORPSE CANDLE.

fetish, fetichism These words are derived from the Portuguese *feitiço*, "a thing made," which was applied by the early travelers of this nation to African charms, religious figures, and the like. They are indiscriminately and incorrectly employed by non-scientific writers to denote African religion. Strictly and properly speaking, however, fetish should be used only for a magic charm, and fetichism for the beliefs in magic associated with such charms. They are not to be employed in speaking of entire religious systems, nor of carved or other representations of power sources, such as deities or local spirits. [MJH]

Fialar or Fjalar In Teutonic mythology (1) The dwarf who, with Galar, killed the great teacher, Kvaser. They made a drink from his blood and honey which made anyone who drank it a poet.

(2) A cock who crows to announce Ragnarök. He also signifies fire; hence the Norse expression, "the red cock is crowing over the house," means that it is on fire. Sometimes the phrase is used to mean that the sun is rising.

Fianna The organized band of warriors of Fionn MacCumal, Irish chieftain of the 2nd and 3rd centuries: usually termed Fianna Eireann, the Fenians of Ireland.

fidchell An ancient Irish board game whose rules of play are uncertain: often called chess in translations, but on slim evidence. The fidchell board and pieces, often highly ornamented, are mentioned many times in Old Irish literature. Diarmuid, for example, throws berries from the quicken tree to indicate moves to Oisín. This enables Oisín to beat Fionn, who is the better player, and thus betrays Diarmuid's presence in the tree to Fionn.

fiddlin' tunes The traditional melodies played on the violin by folk musicians of the American frontier and still current in rural and isolated communities, in the hillbilly style, and in the folk dance revival. They are chiefly dance tunes, many of them derived from English, Scottish, and Irish airs, and include reels, jigs, hornpipes, hoedowns, jumps, quadrilles, etc. The repertoire is extensive and the titles are indicative of the background and speech of the people who danced to them. *Cripple Creek, Turkey in the Straw, Fire in the Mountain, Sugar in the Gourd, Hell among the Yearlings, Chicken Reel, Possum up a Gum Stump, Irish Washerwoman, Arkansas Traveler, Buffalo Gals*—these are among the favorites. The instruments on which they have been performed might be "store-bought," mail-order, or home-made. The players, some of whom have achieved amazing virtuosity, are largely self-taught and play only by ear, holding their fiddles in various posi-

tions of their own choice—in the lap, between the knees, against the upper arm, etc. Open strings are sometimes used as drones, producing a sound similar to the bagpipe, and continuous double-stopping is occasionally facilitated by whittling the bridge to a flatter shape. Though most of the tunes are in a major mode, the Dorian and Mixolydian occur with some frequency, and certain habits of raising or lowering the fourth and seventh degrees of the scale show a character of musical archaism.

Field of Reeds In Egyptian Osirian religion, the after-world below the western horizon. This region of perpetual springtime, ruled over by Osiris, was reached by the souls of the dead in a magical boat. Farming the fields was the principal work of the shades, and in the fields grew great harvests, the grain reaching high above the head. Compare AALU; ELYSIUM.

field spirit A spirit of vegetation, seen in grain fields when the wind blows through the stalks; personification of the growing crops: often referred to as *corn spirit*. Field spirits are conceived of in both animal and human form. The field spirit flees from one swathe to another before the mowers or reapers and is believed to be embodied or inherent in the last sheaf cut. He who cuts the last sheaf has captured the spirit. The sheaf then is shaped into a figure representing its inhabitant and presented to the owner of the field, who preserves it carefully until the next spring's planting. Typical of the field spirits of European peasant lore are the German Bullkaters, Haferbocks, Kornwolves, and Roggerhunds. See CAILLEAC; ESTONIAN MYTHOLOGY; HARVEST DOLL.

Fifinella A female of the Gremlin family who tickled fighter pilots and bombardiers just as their sights were lined up for a good run. Compare DINGBELLE.

fig Because Mohammed swore by it, the fig, like the date, is sacred; it is intelligent, is but a step removed from the animal kingdom, and is called the fruit of Heaven. In England Palm Sunday was sometimes called Fig Sunday because of Jesus' desire to eat figs on the way from Bethany. Among the Hebrews the fig tree was associated with the vine as a symbol of peace and plenty. Among the Romans it was sacred and the milk of the wild fig tree was sacrificed to Juno Caprotina. The emperor was associated with Dionysus in the artificial fertilization of the fig tree. In central Africa the Timbukus build little huts for the spirits of their ancestors in the shade of these trees which are sacred. In Italy and parts of Africa, the fig tree is the spiritual husband of barren women. They are anointed with the milky sap and tied to the tree. The fig tree is sacred also to the Buddhists because the Gautama found wisdom under the pipul tree (*F. religiosa*). Among many peoples the fig tree is known as either the tree of life or of knowledge.

Either ripe or dried, the fig is a staple article of diet in many parts of the world. In Greece the non-intoxicating milky juice of the tree is given to babies, and is also widely used as a medicine. In Louisiana this milk is used to cure ringworm and to remove warts; among the Hindus it is given to relieve toothache. The Hindus use the bark for a tonic and as a cure for diabetes. In Franconia a dried fig is kept in the mouth to ease toothache, while in Styria and Swabia figs are

first cooked in milk for the same purpose. In Bavaria the same remedy is used for ulcerated gums. Heated and split open figs are placed on gumboils to draw them. Boiled in barley water they are used in pulmonary complaints. The juice of figs mixed with hog-grease is used to cure the bites of mad dogs. A sirup of the leaves or green fruit is used for hoarseness, coughs, and all diseases of the lungs and chest. A decoction of the leaves is a remedy for scrofula, running sores, and scabs.

In Timor a fig tree is planted at the time of the sealing of a blood covenant. It is dangerous to lie down in the shade of a fig tree as this is a favorite haunt of spirits. The fig leaves worn by Adam and Eve to cover their nakedness were used because they were the largest leaf growing in Palestine rather than for any symbolic reason. However, in legend, the fig tree, because it was the tree from which the pair ate was the only tree which would permit them to use its leaves to cover themselves. Louisiana Negroes say that if you fall out of a fig tree, you will never get well. They also believe that if fig trees are planted on land which has not been paid for, the land will never be paid for.

In folktale there are magic figs which cause a magic sleep (D981.5) or cause horns to grow on people (D1375.1.1.5.). The rain of figs, like the rain of sausages or fishes (J1151.1.3) is the motif for the story in which an old woman convinces her son that it has actually rained figs, so that when he confesses in court that he killed a man on the night it rained figs, he is let off as a nitwit. An Estonian folktale explains that once the fig tree sheltered Jesus from the rain, and has been evergreen ever since (A2711.4).

(2) A gesture of contempt, known in Italy, France, Germany, Holland, England, etc., and consisting of placing the thumb between the index and middle fingers; biting the thumb is likewise often called "making a fig." The first of these gestures is held by some to be a sign-symbol of the vulva, and is used, as for example in Italy, as both an insulting gesture and a counter to the evil eye (a wish for good luck): one etymological theory holds that the expression originated in an Italian word meaning both the fruit and the pudendum muliebre, thus making of the gesture a punning symbol. The more common legend connected with the origin of the expression is however quite different, if less credible. In the 12th century, the Milanese revolted against Frederick Barbarossa, and expelled the empress, his wife, from their city mounted backwards on a mule. When Frederick retook Milan, he assembled its inhabitants and, under threat of instant execution if they refused, made each of them remove with his teeth a fig stuck in the rear end of a mule. According to this theory of its origin, the gesture began as a sign of contempt for the Milanese. See GESTURES.

fighting of the friends In west of Ireland folk belief, the battle, which takes place around the house where a person is dying, between his friends and his enemies among the dead. The enemies are variously the powers of evil, the fallen angels, or the fairies or síde, and are referred to as "they" or the Others. In Irish folklore, as elsewhere, the fairies and the dead are often indistinguishably confused. One's friends and relatives among the dead fight for him against those Others, and the

noise around the house is a great clamor, heard by everyone, but few people are gifted to see it. The battle is either to save the departed soul from the powers of evil, or to save it for this life against the Others who would steal it away.

Lady Augusta Gregory tells the story of a woman who lay ill. Every day for three days she told her child to bake a cake; three times the child baked the cake and three times it vanished. An old man came to the door; it was the child's grandfather (who was dead). He took the three cakes, he said, for he was watching the house for three nights and needed them. There was a terrible fight on the third night, he said, and "they" would have carried the mother away, except that he kept his shoulder to the door and prevented them. After that the mother got well. They say you should not grieve too much if some loved person dies ahead of you. It is a good thing to have some one out there fighting for you when your own hour comes.

This fighting of the friends at the hour of death is found also in the folklore of the Aran Islands.

figona or higona The San Cristoval (Melanesia) name for spirits in female snake form which, unlike the adaro, usually are not thought of as the ghosts of men. Figona do not always have form. Those residing in rocks, trees, and pools are never seen. The figona receiving real worship and sacrifice, however, always have a serpent incarnation but can take the form of a stone. The chief figona is Agunua who is "all of them." The Arosi name is hi'ona and that used on Florida Island is vigona. In Bauro the figona may be a ghost of the dead.

filial piety Filial piety, necessary to preserve order in the community, is the most generally praised of Chinese virtues. Innumerable exempla encourage Chinese in this virtue. For example, a son should cut off part of his body to nourish a starving parent. A daughter should nourish her feeble parents with milk from her breasts. Wife and children should starve rather than deprive parents of a bit of rice. One man had wooden images made of his deceased parents which he visited every day. One day the wife stuck a needle into them. When the filial son returned and found the images in tears, he divorced his wife. [RBJ]

Fimbulwinter or Fimbal winter In Teutonic mythology, the terrible period of cold preceding Ragnarök. There will be three seasons of winter without a break, followed by three more during which the crimes of man will increase.

Findabair In Old Irish legend, daughter of Meðb and Ailill, queen and king of Connacht; beloved of Fraech. Her love and marriage with Fraech was thwarted by her father, who feared the enmity of rival kings. Findabair was extraordinarily beautiful, and was promised in marriage to every hero who would undertake to fight Cuchulain in the War for the Brown Bull. Some say she died of humiliation, and some say she died of heart-break, after Fraech was killed by Cuchulain.

fangernails The folklore of the fingernails covers beliefs and usages as varied as putting them in love charms, or prognosticating the number of one's friends or foes from the white spots on them, to their use in witchcraft and conjure.

In the British Isles and quite generally through the United States, it is said that a baby will become a thief if its nails are cut before it is a year old. For this reason mothers bite their babies' nails off, for the first time at least.

White spots on the thumb nail mean that you will receive a gift; on the forefinger they indicate the number of your friends, on the middle finger the number of your foes. White spots on the ring finger mean you will receive a letter or your lover is coming. White spots on the little finger mean a journey to go.

That cutting the fingernails strengthens eyesight is a common saying. If you cut them during a waning moon they will not grow back too fast. Cutting them on a Friday either cures or causes toothache. Southern U.S. Negroes say that to dream of cutting them portends a disappointment. To cut the nails on Monday brings news, on Tuesday, new shoes. Cutting them on Wednesday compels you to travel, on Thursday, more shoes or an illness. Cutting the fingernails on Friday brings you either money or a toothache. By cutting them on Saturday you will make sure of seeing your lover on Sunday. But if you cut them on Sunday, bad luck will follow you, you will get into a fight, or see blood before morning, and the Devil will get you in the end.

Fingernails comprise potent and compulsive ingredients of various southern United States Negro conjure tricks. Soak your nail parings in wine, for instance, and this wine served to the one you love will win a return of affection. A dead man's fingernails buried in a little bag under your enemy's doorstep will give him the ague until you take the bag away. The parings of a person's nails sprinkled in a path where he is sure to step over them will put that person in your power for either good or ill.

Many peoples in all parts of the world save the parings of fingernails and the clippings of hair lest they fall into the hands of enemies who can work witchcraft with them. The Seneca Indians are said to have thrown them over the cliffs for the Little People. The markings of the fingernails, the half moons at the base, shape, scars, etc., belong to the art of palmistry. The Indian erotologists report that fingernails should be without spots and lines, clean, bright, convex, hard, and unbroken. While making love, lovers use their fingernails to scratch designs on the bodies of their mistresses. These designs are placed on or near the breast, on the waist, or on the sexual parts. [RDJ]

fingers The folklore of the fingers varies from the rather well-known practice of keeping the fingers crossed while passing a graveyard to the reverence of finger bones as sacred relics and the complex practice of finger mutilation among many primitive peoples. Among the Benga of West Africa, for instance, the first joints of the fingers of dead ancestors are kept (along with the fingernails and a wisp of hair) in a little bag; new finger joints and nails are added as more members of a family die off, and the collection is handed down from generation to generation as sacred relics with which the souls of the dead are associated. Finger bones of chiefs and heroes are likewise preserved and venerated in village shrines in the Solomon Islands.

The practice of finger mutilation or amputation for religious or magical reasons, for sacrifice to or propitia-

tion of gods, for the cure, success, or other benefit to near relatives, or for some benefit to the one giving up the finger, or as a symbol of mourning is known among many primitive peoples. Finger mutilation or amputation as a sign of grief or as propitiation to the dead occurs at many mourning ceremonies. In the Fiji Islands, for instance, it is reported that the death of a certain chief called for the sacrifice of 100 fingers. A child's finger, or one joint thereof, was sometimes cut off for a father. Hottentot women are said to give up a finger joint for the death of a husband. In the Tonga Islands the people cut off a little-finger joint as a sacrifice to some deity or to effect the recovery of a sick relation. This practice for these reasons is also known in some of the Fiji Islands and on Futuna of the New Hebrides.

Sir J. G. Frazer in his *Folklore in the Old Testament* cites the testimony of several early scholars that among the Hottentots and Bushmen the little-finger joint of a newborn child is often sacrificed to prolong its life, especially if previous children of the parents have died. Some Australian coastal tribes are said to amputate the finger-joints of female infants and throw them into the sea so that the girls may become successful fishermen.

In European folklore, quite generally in the United States, and commonly among southern U.S. Negroes, to keep the fingers crossed while passing a graveyard protects one from whatever evil might otherwise befall. To keep the fingers crossed while lying is a child's trick. The idea is that to do so "crosses out" the wickedness of lying or protects the soul against the Devil's seizing it in the moment of sin. In England it is said that if you tie a string around your little finger when you go to town, you will receive a gift. Southern Negroes say that pointing your finger at a fruit tree will make the fruit fall to the ground. Locking the fingers together and pulling hard will not only stop an owl from hooting, but will stop your enemy from defecating. Never point at a grave. To do so will either cause your own death to hurry upon you, or the ghost will rise from the grave and chase you, or your finger will rot off. Holding up the hand with fingers spread, and crying "Fingers," or "Fins," is a call for temporary truce or surrender by a player in children's games.

Southern Negroes call the index finger the "dog finger" or the "conjure finger" and say that one must never touch a wound with it or something terrible will happen. This no doubt reflects an old general European belief that the index finger was poisonous and a wound touched with it would never heal. Other fairly general beliefs are that if your joints crack when your fingers are pulled, someone (you know who) dearly loves you. Also to point your finger at a whip-poor-will when you hear him call (a death omen) will counteract that omen. Two fingers spread and pointed up made the magic (i.e. morale-building) V for Victory in World War II.

In folktale and legend the fingers of saints give off light and fire (F552.2), children are sometimes nourished by their own fingers (T611.1), as was Abraham, and an unusual number of fingers (F552.1) is sometimes the mark of the extraordinary hero. Some old accounts of Cuchulain describe him as having seven fingers on each hand. See MNEMONICS.

✍ Although the lore of fingers is properly part of the systematic doctrines of chiromants, fingers enter folklore in other ways. The astrologers describe the fingers as follows: thumb, Venus; index, Jove; middle, Saturn; ring, Sol; little, Mercury. Other names for the fingers are thuma; towcher, foreman, pointer, scite-finger; long-man, long finger; lech-man, medical finger, ring finger, gold finger, digitus annularis; little man, little finger, ear finger. The ring finger is thought to have a direct connection with the heart. If dipped in even a little poison the effect would be felt immediately. This is clearly associated with the folklore of the wedding ring. In India five whorls at the tips of five fingers mean that a man will become a princeling and ten whorls mean he will become a sovereign. Sir George Grierson has reported a general belief from eastern Hindustan that the Water of Life is in the little finger and if we knew how to get it we would become immortal. Grown people in all parts of the world like to play games with the fingers and toes of babies. "This little pig went to market" and "Master thumb is first to come" are well known examples. [RDJ]

Finnbeara King of the fairies of Connacht, Ireland. There are many current stories about him: that he cured a sick woman once, accepted food from her, but refused salt; that he repaid the smith who was not afraid to shoe his three-legged horse with a pound note delivered by a puff of wind. He brings good crops to the region by his presence in Cnoc Meada; but the people expect a lean year if Finnbeara is off somewhere else.

Finn (Fionn) or Fenian cycle A body of Irish heroic and romantic tales, dealing with the exploits of Fionn MacCumal, his warriors, called the Fianna, his son Oisín, and his grandson Oscar. Fionn was in the height of his fame and splendor during the 3rd century A.D. The tales exist in manuscripts dating from the 12th to the 17th century in Middle and Modern Irish; but a few of the texts occur in Old and early Middle Irish. The action takes place mostly in Leinster and Munster. Fionn's greatest rival, Goll Mac Morna, is usually identified with Connacht. The whole flavor of the material is one of splendid pagan valor and generosity—generosity both of hand and temper. The tales appear for the most part in characteristic ballad form, interspersed with a number in prose form, of which *The Pursuit of Diarmuid and Gráinne* is famous.

The parentage of Fionn and his feud with Goll Mac Morna are set forth in an 11th century manuscript describing the battle of Cnucha. *The Boyhood Deeds of Fionn*, extolling the wisdom of Fionn as a young boy, perhaps dates from the 12th century but is most popularly presented in a 15th century text. *Oisín in the Land of Youth*, describing the visit of Fionn's son, Oisín, to the typical Celtic fairyland has captured the imagination of poets from Michael Comyn, whose 18th century version is the most common one presented, to William Butler Yeats's *Wanderings of Oisín*. The most famous of all the stories in the Finn Cycle is the long 8000-line story called *The Colloquy of the Old Men* (*Acallam na Senóire*). This is one of the earlier texts, composed about 1200 A.D., serving as a kind of frame story for a number of heroic tales and place-name explanations. It is the story of the meeting of Oisín and Caoilte, 150 years after the death of Fionn,

with St. Patrick, and the extolling of pagan versus Christian virtues and character.

Finnish folklore The Finnish people possess a great wealth of all kinds of folk literature. Fortunately, this was to a large extent recorded and published rather early. Since the middle of the 19th century the Finns have produced a series of distinguished scholars in the field of folklore, who have materially advanced the science of folklore, and their significance has extended far beyond the boundaries of their country. For the cultivation of the sentiment of nationality of the Finnish people their folk literature has been extraordinarily important, and their whole cultural life up to the present time has been permeated and nourished by their folk traditions.

The First Steps The first folklore book in Finland, a collection of proverbs, was published in the year 1702 by a clergyman, H. Florinus. The first magic song or rune, that for exorcising the bear, had already been published in 1675, and in the year 1733 five other such magic songs were issued by G. Maxenius. Twenty magic runes found in the records of the law courts of the 17th century were published by R. Hertzberg in 1889. H. G. Porthan (1739–1804) issued between 1766 and 1778 five volumes of his work *De Poesi Fennica*, in which he made a thorough study of the meter of the Finnish folk songs. Christian Ganander published in 1789 his *Mythologia Fennica*; it was also he who published the first two Finnish animal tales (1784) and the first collection of Finnish riddles (1783). Z. Topelius (1781–1831), on his trips about the country as physician, had the opportunity of becoming acquainted with the untold wealth of folk songs in Österbotten. During his long illness he prepared and published a collection of folk songs in five parts (1822–1831) which contained 80 old and 20 new folk songs. This was the final result of many years of work and of the great help he had received from a host of friends.

The Finnish Literary Society Founded in the year 1831 by young teachers in the university, the Finnish Literary Society has carried out an extensive program: to spread the knowledge of the native country and its fortunes, to further the development of the Finnish tongue into a cultivated language, and to publish literature in the native speech for the use of both the educated class and the masses of the people. Although their activities had many sides—among other things they issued the translations of Shakespeare's plays—nevertheless it is well known that the principal reason for their foundation was to furnish help to Elias Lönnrot so that he might issue his collection of Finnish folklore. This society thus became the earliest folklore society in the world. The society published as early as 1836 an appeal to the country people, urging them to collect and to send in folklore materials. From year to year it gave scholarships to young students, sending them into all parts of the land to collect folklore, and in this respect achieved great success, especially during the years 1846 to 1849. The society received help from organized student groups and from Finnish nationalists. It became a center for the aspirations for a Finnish national culture. All important works in the fields of Finnish language, literature, and folklore have been prepared under the direction of this society from its

beginning down to the present day. In the year 1840 it began the editing of the Finnish scientific-philological journal, *Suomi*, which is still appearing. In the series of books, *Suomalaisen Kirjallisuuden Seuran Toimituksia* (Publications of the Finnish Literary Society), there have appeared up to the year 1946, 230 volumes among which are found a great many works on folklore. The most significant step made by the society was the publication of the national epic, *Kalevala*, which had been brought together by Lönnrot—1st ed., 1835, new and expanded edition, 1849. This work has had a tremendous influence on the development of Finnish culture. In the year 1850 the Tsarist Russian regime forbade any other books in the Finnish language to be published except those dealing purely with religion and farming. The society was not allowed to accept as members any students, artisans, or farmers. Women were also excluded. Fortunately the publication of folklore collections was permitted to proceed, and the society made use of this right. For example, from 1852 to 1866 they published in four volumes the folktales of the Finnish people, which had been collected by Eero Salmelainen.

In 1878 the society adopted a program worked out by E. Aspelin which had as its purpose the systematic collection of all kinds of folklore materials. In the same year (which also witnessed the founding of the English Folk-Lore Society) the society was given official recognition by the state and was granted yearly subventions. In addition, in the year 1884 a commission from the society was formed for the exclusive purpose of promoting folklore research. A large library was brought together for which Lönnrot alone contributed 2,500 volumes, and a beautiful building for the seat of the society was erected at the expense of the entire nation in 1890. Among those who have assisted with its work and have written down folklore material and presented it to the society, there are numbered many humble officials, teachers in the public schools, educated peasants, and artisans. Their recordings are frequently of very high value. To their efforts should be added the results of trained investigators, scholars supported by the society, and other students. The rich folklore collection of the society, which today numbers about one and a quarter million items, is the work of the entire people and is a sign of their national sentiment. The last great effort, which took place in 1935 on the one hundredth anniversary of the publication of the *Kalevala*, brought into the society 133,000 new folklore records. Work continued, and the society keeps on preparing its books of instruction and questionnaires for the organization of the work of the large number of collaborators throughout the entire country.

The arrangement and the publication of the collected materials has proceeded very far. More than to anything else, attention has been given to the old runes. There now exists a completed work of 33 large volumes with about 85,000 variants under the title *Suomen kansan vanhat runot* (The Old Runes of the Finnish People), 1908–1945. The folk melodies were also published under the title *Suomen kansan sävelmiä*, five volumes, 1896–1945. A significant part of folk beliefs concerning hunting, fishing, farming, and raising live stock was published in a work entitled *Suomen kansan*

muinaisia taikoja (The Old Magic Practices of the Finns), I–II, 1891–1892, by M. Waronen; and III–IV, by A. V. Rantasalo, 1912–1934.

The still unpublished material in the society's collections has been copied carefully from the original onto sheets which have been classified according to subject-matter. The work has progressed; in the year 1947 the society possessed a collection of such sheets extending to 275,000 numbers. Among them were: mythical legends, 75,000; historical and local traditions, 20,000; etiological legends, 10,000; folk music, 20,000; customs, seasonal practices, and proverbs, 100,000. The folk melodies were formerly recorded on cylinders, but now are recorded on phonographic discs.

The material of the society has been made much more useful because of the many extensive catalogs which have been published, such as those of Aarne for folktales and traditions (1911–1920), of S. Haltsonen and E. A. Tunkelo for ethnographical descriptions (1933).

In addition to its collections the society possesses the copies of the extensive collection of Estonian folklore made by Hurt and Eisen, consisting of about 60,000 folklore items.

The Great Collectors and Scholars That Finland became by the end of the 19th century in many respects the center of interest for folklorists of all parts of the world was not only because of its rich heritage of folklore tradition. By the middle of the 19th century, it was also achieving deserved fame for the thorough and stimulating work of its folklore scholars. For a century now investigators in an unbroken series have given leadership in studies of folklore, not only in Finland itself but also in the rest of the world. Whether all scholars agree or not with the conclusions of that school, no one can ignore the remarkable work of international cooperation and the rigorous techniques for folkloristic study which have come from the initiative and efforts of the so-called "Finnish School." Several of the men responsible for this remarkable development deserve special attention.

Lönnrot, Elias (1802–1884) The most important collector and publisher of Finnish folklore, Elias Lönnrot, was author and editor of the national epic, *Kalevala* (first edition 1835). As a student in medicine in the year 1827 he published his study, *De Väinämöine priscorum Fennorum numine* (the second half of which was lost by fire when the Academy of Turku was burned). Thus early he showed his interest in the material of the *Kalevala*. His first collecting trip to Karelia and Savolax was undertaken in 1828. As early as 1829 he began the issue of lyric folk songs in a

collection called *Kantele*, and by 1831 four parts of this collection had appeared. When he published his dissertation on *The Magic Medicine of the Finns* in 1832 he was appointed physician for the community of Kajana. This was a piece of good fortune since the neighborhood was located at the boundary of the government of Archangel at the precise place where the finest and longest of the epic songs were still preserved. His collecting field trips were given financial support by the Finnish Literary Society, already discussed. He became the first secretary of the society.

In arranging his material he grouped the various epic songs in cycles about the chief heroes. By 1833 he had brought together such a cycle consisting of the runes about Väinämöinen (*Runokokous Väinämöisestä*) and containing 16 songs with about 5,000 lines. The next year this collection was expanded and given the name *Kalevala*. In 1835 the work was published by the Finnish Literary Society, but only in an edition of 500 copies. The next year he received from the society 1,000 rubles and made a long journey as far as Lapland. This time in addition to the runes, of which he had already recorded 2,100, he also collected some 5,000 proverbs, 1,200 riddles, and 50 folktales from the tradition of the people. After that he devoted himself to the arranging and editing of the material he had collected.

Soon there followed various extensive works on Finnish folklore: *Kanteletar* (1840), a collection of about 600 old lyric songs (of this a revised edition appeared posthumously in 1887); *The Proverbs of the Finns* (1842) with about 7,000 proverbs; *The Riddles of the Finns* (1844), consisting of 1,648 Finnish and 135 Estonian riddles; the new edition of 1851 was much expanded.

He now set himself to a very great task, to prepare a new edition of the *Kalevala* which would take advantage of all the newly collected material. He found, however, that it was necessary to undertake still further collections in the field. A young student, Daniel Europaeus, spent the entire years 1845–1848 traveling about for this purpose. He recorded some 2,800 variants of runes, most of them hitherto unknown. Lönnrot now began working on the final form of the *Kalevala*. The new edition was not only greater in extent, with 50 songs and 22,800 lines, but from the esthetic point of view was a fully rounded work, essentially a part of popular tradition but nevertheless shaped by a single hand, a work of the man who understood better than anyone else the spirit and creative art of his people. The new or present edition of the *Kalevala* appeared in 1849. It must be recognized that Lönnrot in many places improved the loose structure of the individual runes in unity, and also that in the general frame of the epic he inserted songs omitted by the people. He also brought in a number of interpolations from other songs, so as to make the structure of his poem more complete. Finally he arranged the runes in such an order as to bring out more clearly the inner unity of the epic. In all these respects, however, he was only acting in the same manner as the folk singer himself would do in the same circumstances. Lönnrot himself said, "Because I am sure that not one of the rune-singers could surpass me in the knowledge of the runes, I used my right to put together the songs as it seemed

best." Later the people themselves added some details in the same manner as Lönnrot had, a good indication of his proper feeling for Finnish folk poetry. According to the investigations of A. R. Niemi, only five to six percent of the lines of the *Kalevala* are not taken directly from the lips of the people. It is fortunate also that it can be seen that Lönnrot himself had not the slightest gift as a poet. If he had had, he would have exercised too great a personal influence on the structure of the *Kalevala*. As to his literary taste, it was largely the product of his classical education (on this point see J. Krohn in *Zeitschrift für Völkerpsychologie und Sprachwissenschaft*, v. 18, pp. 67 ff.).

In 1853 he was appointed professor and from then on devoted himself to purely linguistic research. From 1862 to 1880 he worked on a great Finnish-Swedish dictionary. His last contribution to folklore was *The Magic Runes of the Finnish People* (1880).

Among his students Lönnrot produced an able group of young folklorists, among them Julius Krohn, next to be discussed. Seldom has any scholar been so valued and honored by his people as Lönnrot has been by the Finns.

Reference: Anttila, A., *Elias Lönnrot*, Helsinki, 1931. Krohn, Julius (1835–1888) In 1862 Julius Krohn was appointed Docent for Finnish Language and Literature in the University of Helsinki. His fame rests upon his development of the historic-geographic method (see HISTORIC-GEOGRAPHIC METHOD) for the investigation for the songs of the *Kalevala*. He himself wrote in 1884 concerning the special character of his new method: "Before I reach any final conclusions, I arrange the various versions in chronological and geographical order; for I have discovered that it is only in this way that it is possible to distinguish between the original elements and those which have been added later." His son Kaarle remarks, "The fact that the geographic method of folklore investigation arose in Finland is a result of the unusual richness and variety of the materials of folk song, which is found here for the use of the investigator." Julius Krohn's principal works are *The Genetic Explanation of the Kalevala*, 2 vols. 1884–1885, and *Kalevalan toisinnot* (The Variants of the *Kalevala*), 1888, and after his death the following works, edited by his son Kaarle: *The History of Finnish Literature* (1897) and *Investigations concerning the Kanteletar* (1900–1902). The results of his investigation of the *Kalevala* were also introduced to German scholars in Veckenstedt's *Zeitschrift für Volkskunde* v. II (1892) and Steinthal's *Zeitschrift für Völkerpsychologie und Sprachwissenschaft* v. XVIII (1880). At the end he had come to the conclusion that the runes about origins contained legendary material, whereas the hero songs had a historical basis, although earlier both of these types had been considered to be truly mythical.

Reference: Krohn, Kaarle, *Die Folkloristische Arbeitsmethode*, Oslo, 1926, pp. 1–16.

Krohn, Kaarle (1863–1933) Kaarle Krohn was appointed in 1888 as Docent of Finnish and Comparative Folklore in the University of Helsinki. Thus sixty years ago the Finnish University became the first in the world to establish a chair of Folklore. While he was still a student in 1881, he collected folktales and later, from January, 1884, to July, 1885, with subvention from the Finnish Literary Society, he traveled to Olonetz and

Wärmland and brought back with him some 18,000 folklore items, among which were about 8,000 folktales. It was also with the folktales that he began his scholarly productions: *Bär (Wolf) und Fuchs, eine nordische Tiermärchenkette* (1889), and *Mann und Fuchs, drei vergleichende Märchenstudien* (1891). Later he developed and advanced the historic-geographic method of folklore investigation and published his final statement of this in *Die folkloristische Arbeitsmethode* (Oslo, 1926). In the latter part of his life he turned to the investigation of the *Kalevala*, and his principal work is *Kalevalastudien* (1924–28), *FFC* 53, 67, 71–2, 75–6. The results of this work are expressed in the following manner by Uno Harva: "The epic songs collected in the *Kalevala* refer to historical happenings; the figures which played a part were heroes of a past age; the geographical background is a landscape of southwestern Finland with its old population centers. The period of development of these old historical songs goes back into the dawn of Finnish history. Earlier Krohn had held for a mythical or legendary background of the songs, but now he was convinced of their historical nature." (*FFC* 112, p. 15 f.). Kaarle Krohn showed a lively interest in mythology, as evidenced by his *Skandinavisk mytologi* (Uppsala, 1922); his *Magische Ursprungsrunen der Finnen* (*FFC* 52, 1924); and his *Zur finnischen Mythologie* (*FFC* 104, 1932). Along with Axel Olrik he founded in 1907 the Folklore Fellows (Folkloristische Forscherbund, Fédération des Folkloristes, etc.), an international association generally known by the initials FF. The membership of the association consisted of members of folklore societies in various lands, and other folklore scholars who undertook the duty of aiding comparative folklorists throughout the world with the furnishing of material from their own countries which was difficult to obtain. Up to his death he was the editor in chief of the well known series *FF Communications*. Of this series he issued more than 100 numbers, and since his death the work has continued under the auspices of the Finnish Academy of Sciences and with the collaboration of scholars from the Old and New Worlds.

As an original scholar in the fields of the epic song and of the folktale, Kaarle Krohn deserves a very high place. His greatest contributions to folklore study came, however, from his extraordinary ability as an organizer and coordinator of the efforts of other scholars. During an entire generation he conducted an extensive program of study of the folktale and related subjects in which he secured the collaboration of scholars in all parts of the world. Helsinki became the Mecca for young folklorists, who went there to profit by weeks or months of association and stimulus which came from his sympathetic and ever kindly encouragement. By 1890 he had conceived of a large plan of international folklore research, which would be based upon as large a body of material as possible. Such a plan involved classification and cataloging of material from manuscripts, archives, and other sources, the perfection of a method of investigation, and the promotion of as many of these investigations as possible. Finally he hoped to make a synthesis of the results of these investigations. Fortunately, at the end of his life he completed his synthesis and published it as *Uebersicht über einige Resultate der Märchenforschung* (*FFC* 96, 1931).

Aarne, Antti (1867–1925) Of Finnish folklorists it was Aarne who developed furthest the historic-geographic method of folktale investigation. The first works, *Vergleichende Märchenforschungen* (1908) and *Die Zaubergaben* (1911) received prompt recognition. In 1913 he enunciated the theoretical principles underlying this method in his *Leitfaden der vergleichenden Märchenforschung* (*FFC* 13). He then began a series of detailed and thorough studies of individual folktales: *Die Tiere auf der Wanderschaft* (*FFC* 11, 1913); *Der tiersprachkundige Mann und seine neugierige Frau* (*FFC* 15, 1914); *Schwänke über schwerhörige Menschen* (*FFC* 20, 1914); *Der Mann aus dem Paradiese* (*FFC* 22, 1915); *Der reiche Mann und sein Schwiegersohn* (*FFC* 23, 1916); and *Die magische Flucht* (*FFC* 92, 1930). He also investigated two folk songs, *Das estnisch-ingermanländische Maie-Lied* (*FFC* 47) and *Das Lied von Angeln der Jungfrau Vallamos* (*FFC* 48). For these studies Aarne assembled an astonishing amount of material necessitating several extensive foreign trips so that he might visit the most important libraries and archives.

Earlier in his scholarly work he had observed that the proper investigation of a folktale, because of the wealth of material and the difficulty of assembling the necessary literature, was an extremely difficult undertaking. It was his ambition to overcome these difficulties for himself and also to be helpful in this respect to all other scholars. With the collaboration of several other scholars in his field he brought to a successful conclusion a very important idea. He constructed a *Verzeichnis der Märchentypen* (*FFC* 3, 1910) in which he classified all of the well-known folktales in European tradition and gave to each of these types a standard number by which it could always be exactly designated. This type-index proved to be a very great aid to all investigators of the tale, and later it was considerably expanded by Stith Thompson (*FFC* 74, 1928). By this system of type-index, Aarne catalogued all the Finnish folktales (*FFC* 5 and 33) and also the Estonian tales and legends (*FFC* 25). In 1912 he also issued a type-index of Finnish origin legends (*FFC* 8). Since 1910 a large number of folktale catalogs of various people have been issued with arrangement according to Aarne's system.

On the bibliographical side Aarne prepared in 1913 a very valuable *Übersicht der Märchenliteratur* (*FFC* 14).

Aarne was convinced that the folktale as such did not have any value as an aid toward the study of mythology or other subjects outside its own field. He insisted that the folktale could not be of any use for such studies until its own history had been determined through a comparative investigation. Aarne's monographic studies, according to the opinion of Kaarle Krohn (*FFC* 64, pp. 22 ff.) "have shown that the idea that the only permanent parts of a folktale were the separate motifs is an error, and these studies of Aarne have demonstrated that every single folktale has its particular plot and its own unified composition. . . . As far as many of the folktales are concerned he was the first who was able to show in detail that Benfey's theory of their origin in India was correct. But at the same time he showed that there are other tales belonging to the same general group which undoubtedly had their origin in western Europe during the Middle Ages.

He threw much light on the wandering of folktales from the Orient toward the West and on the development of local forms. He moved up the time of origin of the folktales from an indefinite antiquity to a definite historical period." Aarne also used the historic-geographic method for the investigation of riddles in his *Vergleichende Rätselforschungen* (FFC 26-8, 1918-20). In these pioneer riddle studies he was able to demonstrate an Oriental cultural influence extending into the Western countries.

Although Aarne never had good health and although it was not until 1922 that his financial situation improved, when he received his post as extraordinary Professor, and therefore spent much time and strength as a teacher in the lower schools, the amount of his scholarly accomplishments was incredible. The products of his research are outstanding through the remarkable richness of the material which he used, through the clarity of his presentation, and through the great care he took before arriving at conclusions.

Reference: Krohn, Kaarle, *Antti Aarne*, FFC 64, 1926. *Chief Aspects of Finnish Folklore: The Finnish runes* The folk poetry of the Finns is characterized by a great number of epic songs or runes (Finnish *runo*). The Finns used the latter word to include folk songs, heroic poetry, and popular ballads in the ancient Finnish meter. A differentiation is made between the heroic and the magic runes. The former tell about the deeds of legendary heroes, Väinämöinen, Ilmarinen, Lemminkäinen, etc.; the latter are used for cures and other magic. Metrically the Finnish runes are trochaic tetrameter without strophic divisions. The rules for the construction of this verse are complicated and consist of much alliteration and parallelism. Something of the general spirit, though not of the detailed structure, is found in Longfellow's imitation of this verse form in his *Hiawatha*. In that poem he followed the general pattern not only of the Finnish meter but also of the general epic style.

Heroic Poetry and the Kalevala The famous Finnish heroic epic, the *Kalevala*, is the chief product of the folk poetry of the nation. The Finnish heroes have their own peculiar characteristics. Their fighting takes place not so much with swords as with words. Through the singing of magic runes the enemy is placed in all kinds of difficult situations and under enchantments. The latter in turn tries to free himself through his own knowledge of magic runes and to defeat his opponent. It is a conflict of singers and enchanters. The greatest singer of all is the old, wise Väinämöinen.

The Cycle of Väinämöinen A good idea of the nature of the Finnish epic poetry may be obtained from a short review of the songs about *Väinämöinen*. We know that at first Lönnrot intended to speak of his famous work as a collection of runes about Väinämöinen and only later changed the name to *Kalevala*, i.e. the home or country of the hero Kaleva. At any rate Väinämöinen is certainly the chief hero of the poem.

We first hear about the birth of Väinämöinen and the creation of the world from a broken egg which a duck has laid on the knee of Ilmatar, his mother. As a culture hero Väinämöinen fells trees and sows barley (Runes 1 and 2). On a journey Väinämöinen meets another hero, the Lappish singer and magician, Joukahainen. When their sledges meet in the narrow road,

they begin to quarrel and fight with each other, using their knowledge of the magic runes. Finally young Joukahainen is defeated by the old and wise Väinämöinen, and must promise his sister Aino in marriage to Väinämöinen (Rune 3). Väinämöinen meets Aino, the promised maiden, in the wood but he is unsuccessful in his courtship because the young girl rather than marry an old man drowns herself in the sea (Rune 4). Väinämöinen falls to bitter weeping and tries to fish her out of the sea. He catches a fish which is the transformed Aino, but he does not guess what it is and the escaped sea maiden laughs him to scorn. Väinämöinen grieves deeply but his mother from her tomb advises him to go to the Northland and find another daughter of the Suomi, more beautiful and more worthy than Aino (Rune 5).

Väinämöinen mounts a steed and begins his journey northward to Pohjola, but the evil Joukahainen prepares revenge. In spite of the warning of his mother, Joukahainen shoots at Väinämöinen and the third arrow strikes Väinämöinen's steed. Thereupon the hero falls upon the water and a mighty storm wind bears him far away from land, where he is compelled to swim six full years in the ocean (Rune 6). He swims only six days and nights through the waters of the deepest sea. Then there comes a giant bird from far off Pohjola which takes Väinämöinen on its back, and bears him to the distant shores of the Northland where he is left alone. The hero is badly injured and weeps for three days. Louhi, the mistress of Pohjola, recognizes that this is the weeping of a bearded hero. She goes to see Väinämöinen, inquires his name, takes the helpless hero in her boat, and rows to the dwellings of Pohjola. There she gives him warmth, shelter, and food, and he soon recovers.

Väinämöinen is eager to go home. Louhi asks him to forge for her the Sampo, the wonderful thing which produces plenty of all sorts of good things: this to be the reward for her help and hospitality. She also promises to give him her daughter. Väinämöinen answers that he himself cannot forge the Sampo but he will send Ilmarinen, who will forge it. Louhi then replies, "To him alone will I give my daughter." Thereupon Väinämöinen goes home (Rune 7).

The daughter of Pohjola sits upon the rainbow weaving webs of golden texture. On his journey home Väinämöinen sees the charming maiden and invites her to come into his snowledge. The maiden answers that the life of a married woman is very hard. Väinämöinen now performs several difficult tasks imposed upon him by the maiden. The last of these is to make a ship from the splinters of a spindle. Attempting this work he lets the axe fall and cuts his knee. He now begins the magic incantations, such as those about the origin of iron, and thus attempts to stop the bleeding from his wound. His knowledge is insufficient and he must seek the aid of a magician (Runes 8 and 9). Väinämöinen begins to build a vessel. Sampo Pellervoinen goes to find the proper wood for the vessel and chooses an oak tree. Now Väinämöinen begins to build his vessel by means of singing magic songs, but, alas, three words are wanting. Väinämöinen journeys to Tuonela (the home of the dead) in order to find the ancient wisdom, but he does not succeed and escapes from Tuonela only with great difficulty (Rune 15). A shepherd comes to

meet him and says that he can find the words of wisdom in the mouth of the wise giant, Antero Vipunen. Väinämöinen troubles and awakens the giant from the dead; the giant swallows him and finds the morsel the sweetest of all meals. The hero builds a boat through his magic knowledge and establishes a smithy, rows about, and forges inside the body of the giant. The hero says that he is ready to stop the torment if Vipunen will teach him the lost words of wisdom. Old Vipunen opens his store of knowledge and for three days sings the magic songs of wisdom about the origin of things.

Having accomplished his purpose, Väinämöinen leaves the great stomach of the giant and goes home. He finishes the magic-built vessel, and the voyage to Pohjola for the beautiful maiden of the rainbow can be started (Rune 17). On the return from Pohjola the pair come to a waterfall and the boat is caught fast on the back of a great pike. The fish is caught and the front part cooked and eaten. From the jaws of the pike Väinämöinen makes a "kantele," the popular harp-like Finnish instrument. Several of the party attempt in vain to play. Finally Väinämöinen plays on the kantele and all living beings of the earth, the air, and the water hasten to the spot to listen. All of these weep and Väinämöinen also weeps, his tears dropping into the sea and changing into beautiful blue pearls (Rune 41). In a struggle in the lake Väinämöinen loses his kantele and cannot find it. He makes a new one of birchwood and on this he plays and also delights all creatures (Rune 44).

The mistress of Pohjola sends terrible diseases. These Väinämöinen heals by his powerful incantations and magic unguents (Rune 45). The mistress of Pohjola sends a bear to destroy the herds of Kalevala. Väinämöinen kills the bear and a great feast is held (Rune 46). When the moon and the sun descend to listen to the playing, the mistress of Pohjola succeeds in capturing them, hides them in a mountain, and steals fire from the homes of Kalevala (Rune 47). Väinämöinen discovers by divination that the moon and the sun are hidden in the mountain of Pohjola and after heroic adventures he succeeds in releasing them from their prison (Rune 49).

The last rune, 50, gives us a well-built picture of the change from the era of paganism to the era of Christianity. The virgin Marjatta swallows a cranberry and gives birth to a boy. Väinämöinen comes to inquire into the matter and advises that the ill-omened boy should be put to death. But the child reproaches him for his unjust sentence. The boy is baptized as the king of Karelia. At this Väinämöinen is grievously offended and leaves the country, but first he declares that he will come again and will be useful to his people. He sails away in a copper boat to a sphere between earth and heaven, but he leaves behind him as a parting gift his kantele and his powerful songs.

Construction of the Kalevala Although the people like to bring together all kinds of characteristics and deeds around the figure of a beloved hero which originally were entirely foreign to his character, nevertheless they themselves do not construct a fully rounded and unified epic poem. The Finnish heroic songs are grouped around the old, wise Väinämöinen and the principal narrative subject is the stealing of the magic mill, the

"sampo." The hand of Lönnrot, however, was necessary to transform these single songs and their cycles into a *Kalevala*. According to the opinion of Kaarle Krohn, the songs of the *Kalevala* were composed in western Finland, where they were no longer to be found in the end of the last century, but were still preserved in Karelia and among the Orthodox Finns. Karelia and the neighborhood of the governments of Archangel and Olonetz are to be considered as refuges in which the folk tradition was not formed, but rather has only been retained for a long time. Place names, among other things, indicate western Finland as the place of origin of the runes. Moreover, Kaarle Krohn came to the conclusion that the epic runes had been composed in historic times, that they reflect historic occurrences, reworked indeed according to the laws of the structure of the folk epic so that the historic reality remains hardly recognizable. He conjectures for example, that the journey of the Finnish hero to Pohjola after the sampo shows a reminiscence of the crusade of the Finns to the rich island of Gottland. See SAMPO.

As in all folk poetry, we find in the *Kalevala* many motifs which are also known among other people. Especially from three peoples have come many motifs of the Finnish runes: Scandinavians, Russians, and Lithuanians. The Scandinavian and Lithuanian influence took place in heathen times, but the Russian contribution did not begin before the 14th to 16th centuries and was intensified much later, around the year 1700. The Scandinavian current flowed through western Finland and Estonia, and then spread over the whole country. The Lithuanian influence is to be detected in Estonia, Ingermanland, and the whole of eastern Finland. The Russian influence penetrated into Ingermanland, into the eastern part of Karelia, and later into the governments of Olonetz and Archangel.

Although the Finns have borrowed many motifs from their neighbors, and have repaid them with many of their own, it is noteworthy that the Finns have preserved these in much purer and more original form than the folk from whom they have received them. This fact is of great importance for comparative folklore and clears up many obscure points in Scandinavian, Russian, and Lithuanian mythology. Of course, there are also some purely Finnish myths, such as the creation of the world by a bird. The borrowed material likewise has been so reworked and elaborated by the Finns that what they have produced is essentially new.

Magic runes As shown in the studies of Lönnrot (1880) and Kaarle Krohn (1924) the Finnish magic runes were of two kinds. Runes of one of these types depend upon some particular situation or story taken from the Bible. These are the more recent of the two, and have been borrowed from Sweden. The other type of rune gives an account of the origin of sickness or of other things, such as fire, iron, etc., and is used to remove the appropriate evil. This second kind of magic rune is older and is of real Finnish origin. We do not find exact parallels to these anywhere else. The more highly developed magic runes which are mixed with elements taken from the epic songs are to be found in the eastern part of Finland. On the other hand, in the western part of the country magic runes are shorter and more primitive.

Reference: For a discussion in English see J. Aber-

cromby, "The Magic Songs of the Finns," *Folk-Lore*, I, 17-46, 331-48; II 31-49 (London, 1890-1891).

Lyric Songs Of less importance in the history of Finnish tradition than either the epic songs or the magic runes are the folk lyrics which appear in modern metrical form. Among these the marriage songs occupy an especially important place. A selection of lyric songs was early published by Lönnrot under the name, *Kantelatar* (1st ed. 1840; 2nd ed. 1887). A German translation of these were made by H. Paul, the translator of *Kalevala*.

The ballads (see Erich Kunze, *Finnische Volksballaden*, Jena, 1943) belong largely to international tradition. They are mostly borrowed from Sweden from the 17th century onward. Frequently, however, they have retained original traits which are no longer to be found among the Swedes. The ballad of the *Cruel Brother*, for example, displays a more natural and more original form than in England itself (Child, *English and Scottish Ballads*, #13).

Among the original Finnish ballads appears the legend of St. Henry, who converted the Finns to Christianity. The ballad concerning the killing of Elina, one of the longest of the Finnish ballads, extending to more than 400 lines, is based on a historical circumstance. In eastern Finland we find a lengthy song concerning the Creator (*Luoja virsi*). The Orthodox Finns also possess laments which they use both for marriages and for funerals. These apparently were borrowed from the Russians.

Folktales and Legends The Finnish collectors of folklore have been more interested in the epic songs than in folktales and legends. Lönnrot recorded only about 80 folktales. The proper taking down of the tales demands a longer preparation on the part of the collector. It was not possible to make successful recordings of tales until Finnish shorthand had been properly developed. It was also true that folktales were not very much valued since it seemed clear that many of them were no more than free translations from the Russian.

As early as 1838-39 the Finnish Literary Society sent M. A. Castrén on an expedition especially to collect folktales. He hoped that he would find in the tales and legends of the people fragments of ancient myths in prose and that these fragments would clarify many obscure points in the songs of the *Kalevala*. He was soon disillusioned, since almost immediately he recognized the Russian influence and came to believe that there was nothing original to be found. Nevertheless, rather early four volumes of Finnish folktales were issued by E. Salmelainen (*Suomen kansan satuja ja tarinoita*, 1852, 1854, 1863, and 1866). This collection did not contain a single legend or tradition. Another collection of Finnish folktales, *Suomalaisia kansansatuja*, was edited by Kaarle Krohn and appeared in 1866 and 1893.

Important for the progress of collecting folktales in Finland was the expedition of Kaarle Krohn in the year 1884-85. By the use of shorthand he recorded over 8,000 folktales from the people and began his leadership in the scientific investigation of the popular tale. (For some details on this development see discussion of Kaarle Krohn and Antti Aarne in this article.)

The wealth and variety of Finnish folktales is due to the fact that in Finland two quite different cultural influences in the field of folklore came into contact, the

western European and the eastern European. The folktales from the West came from Scandinavia, those from the East from northern Russia. Both streams mingled and also received from the Finns their own characteristic modifications. Moreover, these Finnish folktales have retained many original traits which have long ago disappeared both in Scandinavia and in Russia. In the animal tales, which also appear sometimes in verse, and in the folktales concerning the stupid ogre the Western character is most important. On the other hand, in tales concerning kings and princesses the Eastern influence is predominant. Jest about stupid people and fools are very popular, and many communities use these for making sport of each other. In Österbotten they are particularly fond of telling tales about the foolishness of people from Savolax.

The collecting and publishing of mythical legends was long neglected. Not until 1935 was this area seriously cultivated. But now the Finnish Literary Society has important plans for future investigations. It has transcribed on cards some 75,000 legends and elaborated a classification for legends. This classification is divided into 15 headings and each heading into subdivisions. The work is in the hands of Lauri Simonsurri (see *Studia Fennica*, vol. V, pp. 103-25). As an example of his work, he has just published a collection of about 900 legends, *Myytillisia tarinoita* (Mythical Legends, Helsinki, 1947).

A good monograph concerning house demons of the Finns is the work of the well-known folklorist, Martti Haavio, *Suomalaiset kodinhaltijat* (Finnish Household Fairies), Porvoo, 1942.

Important for the comparative investigation of legends are those collected from the Swedes who are living in Finland, and published as *Finlands svenska folkdiktning* (1931).

It is interesting to note that the Finnish saints' legends which they received from western Europe have now found refuge among the Karelians. The Finns who became Protestant no longer retain an interest in these legends, but the Orthodox Karelians still keep telling and enjoying them. Oriental legends have also found their way to the borders of Finland (see Haavio, "Über orientalische Legenden und Mythen in Grenz-Karelien und Aunus," *Studia Fennica*, vol. II, 1-53, Helsinki, 1936).

Proverbs and Riddles Proverbs, which the Finnish people are very fond of using in daily life, were the earliest form of folklore to receive the attention of the educated classes. The first collection, by H. Florinus, appeared in the year 1701 and was the earliest of all books on folklore in the Finnish language. This was followed after many years by the collections of Judén (1816), Gottlund (1832), and Lönnrot (1842). Even later ones have been issued by E. Aspelin and W. Forsman. Proverbs have likewise been composed in the old Finnish meters and often they have two or more parallel stanzas. In respect to their content, they differ markedly, according to the period of their composition. They express very clearly the ideas and character of the Finnish

people. Especially in Savolax the people like to enrich their daily speech with proverbs.

The riddles likewise are always composed in metrical form and they usually consist of two or more stanzas. The first Finnish riddles were published as examples of the ancient Finnish meter in the first grammar of the Finnish language written by Eskil Peträus (1649). The first actual collections of riddles were those of Ganander (1783) and Lönnrot (1844, 2nd ed. 1851). The most recent collection and the best arranged is that of M. Haavio and J. Hautala, *Suomen kansan arvoituskirja* (The Book of Finnish Popular Riddles, Porvoo, 1946). From the collections of the Finnish Literary Society, which now contain about 50,000 riddles, the authors have chosen and edited 3,500.

Other Kinds of Folk Literature The folk plays of the Finns were first published by Porthan. As for games and dances, A. H. Reinholm (1819–1893) left a large collection at his death. In these the Swedish influence is very strong.

The first scholarly collection of folk melodies, edited by R. Cajanus and A. Borenius, was published in 1888 by the Finnish Literary Society. Recently the great collection, *Suomen kansan sävelmiä* (5 vol., 1896–1945), has been completed. Concerning folk music, Armas Launis and Ilmari Krohn have made very valuable investigations.

The most important collector of superstitions and beliefs was a village blacksmith from Cajana, Heikki Meriläinen. The publication of superstitions which was early begun by Porthan and E. Lencqvist (*De superstitione veterum Fennorum theoretica et practica*, 1782), has been carried on in recent years by M. Waronen (1891–1892) and by A. V. Rantasalo (1912–1934). In their beliefs and superstitions, the Finns have been most influenced by the western Europeans.

Concerning the religious practices of the Finnish peoples, there have appeared several large volumes in the series *Suomen suvun uskonnot* (Religion of the Finnish Tribes) by K. F. Karjalainen, Kaarle Krohn, and Uno Harva-Holmberg. These have appeared also in German in *FFC*. Harva-Holmberg is certainly the best-informed scholar today in the field of folk beliefs for all the Finno-Ugric peoples.

STITH THOMPSON and JONAS BALYS

Finno-Ugric peoples The Finno-Ugric family consists of several groups: 1) The Ugric group consisting of the Magyars, Ostyaks, and the Voguls, the last two peoples forming the Ob-Ugric stock; 2) The Permian group: Votjaks and Ziryens; 3) The Volga group: Cheremis and Mordvins; 4) The Lapps; 5) The Baltic Finns: Vepse, Votic, Livs, Ingrelions, Estonians, and Finns.

The Finno-Ugric peoples belong to the Uralic stock, and their old homeland was in the regions beside the middle of the Volga River. The philologists and ethnologists mention several ages as the Finno-Ugric tribes separated themselves from the common stock. The oldest is the Uralic Age, up to 3000–4000 B.C., when the Finno-Ugric and Samoyede tribes were living together. The following is the Finno-Ugric Age, until the Voguls, Ostyaks, and Magyars were separated. Then followed the Permian Age, until the Votjaks and Ziryens were separated; and finally the Volga Age, as long as the Cheremis and Mordvins were living together with the Baltic Finns. The latter, also the ancestors of the Finns, Estonians, Livs, and other smaller tribes, reached the shore of the Baltic in about 1200 B.C. The Finns went to their modern homeland from Estonia. The Baltic Finns, at first the Livs, came into contact with the later-arriving Indo-European tribes of the Balts, also ancestors of the Lithuanians and Latvians, and many exchanges occurred in the language and other cultural elements, folklore included.

Some of these peoples are very small in number: Livs and Votic, number scarcely 1,000 of each, Ingrelions about 13,000, and Vepse, 26,000. Nevertheless, many of the Finno-Ugric peoples have great riches of folklore and a well-developed mythology. The influence from their neighbors, Scandinavians and Russians, is important. The worship of water deities is well developed among all Finno-Ugric peoples. We find also such interesting religious phenomena as worship of the bear, shamanism, and often a very clear belief in a god of heaven as the supreme deity. The Finno-Ugrians—excepting the Hungarians, Estonians, and Finns—are now living as primitive stocks, mostly as fishers, hunters, reindeer herders, and primitive planters. Their Christianity is only superficial, therefore their indigenous rich folklore and mythology are especially attractive and important for the ethnologist.

fiofio A concept of Surinam Negro belief: an insect engendered by surface friendliness, exchange of gifts, etc., between persons, one or both of whom harbor unspoken enmity or resentment. Fiofio causes illness and eventual death, at least death of the soul, of those who veil their enmity in a show of friendship. An open fight is recommended as a healthful thing. Salvation from the sure death caused by fiofio can be attained with the help of a diviner, who ascertains the hidden cause of the resentment. Then a public ceremony called *puru mofo* (literally, withdraw from the mouth) is performed to purify the minds of those involved and to remove the resentment. (See Herskovits, *Suriname Folklore*, pp. 42, 53, 745; *Man and His Works*, pp. 59-60).

Fionn MacCumail Hero of the Finn or Fenian cycle of Old Irish legend and romance, a chieftain of the 3rd century; leader of the Fianna, and like them noted for enormous stature, extraordinary strength and skill. Fionn himself was famed for generosity and wisdom. Fionn's story begins with his birth and secret nurturing in the forest and his boyhood wonder deeds (once he threw a huge stone over a house, ran through the house and caught it on his finger as it fell). He was named by the poet Finegas in whose service wisdom filled him from eating the salmon that fed on the nuts of the nine hazels of wisdom. He organized the Fianna for the High King at Tara, fought great battles, and had many adventures of the hunt, encounters with giants and hags, and experienced and overcame various enchantments. His first love was Sadb, who was transformed into a deer; their child, Oisín, was discovered in the forest by the dog, Bran.

The story of Fionn's pursuit of his friend and kinsman, Diarmuid, and Gráinne, his promised wife, the final overtaking, and Diarmuid's death in the forest because in the end Fionn could not bring himself to carry water to Diarmuid is one of the most moving and humanizing of the stories about Fionn. The Fianna were finally overcome in the battle of Gabra, in which Oscar, Fionn's grandson, was killed. Fionn never wept tears in his life except for the death of Oscar, and for Bran. Fionn is said to be sleeping now in a cave in the hills of Ireland, surrounded by his big men. When next the Fenian chant is heard, they will all rise again. See **BRAN** (2); **OISÍN**.

fir In ancient Greece the fir was sacred to Artemis; a branch tipped with cones and twined with ivy was carried by some of the Dionysian revelers in her honor. Some say the Trojan Horse was built of silver fir. And this wood was used for symbolic reasons in the ceiling of Solomon's temple. The staff of Bacchus was tipped with a fir cone. Legend says that Attis (Atys) was turned into a fir tree by Cybele as he was about to commit suicide. She sat mourning under the tree until Zeus promised that the tree should be evergreen. The Phrygian myths claim that Attis was metamorphosed by Cybele while dying of a wound inflicted by Zeus's boar, or by a Phrygian king in combat. There are indications that the silver fir is as old a birth tree as the palm, especially in the north of Europe. The *ailm* of the Old Irish tree

alphabet would seem to have been a silver fir, rather than the elm, which it became at a later date. This tree whose day was the first of the new year (the extra day of the winter solstice) was female, the tree of birth, sister to *Idho*, the yew of death. There is an Anglo-Roman altar dedicated to the Mothers which has a representation of the fir on it.

Among the Votjaks of Finland the fir tree is sacred and certain branches are regarded as family gods to which sacrifices are made. These people place a fir branch on a shelf in the house and offer sacrifices of bread, meat, and drink. When a house is being built, a small fir tree is set up under the house and a cloth spread before it on which sacrifices are laid out. After a funeral the Finnish Votjaks beat each other with fir branches while returning from the cemetery, to deter the spirits from following them home.

Among the Ostyaks of Siberia, the fir tree is represented by a fir pole to which sacrifices are made. Fir boughs are also used as flagellants at Christmas among many Northern peoples. One of the probable reasons for the popularity of the fir as a Christmas tree is its association with the winter solstice as well as its ever-green nature. Fir or beech logs are most commonly used for Yule logs. Among the Germans it is unlucky to have an odd number of candles on the Christmas tree and among most peoples it is necessary to remove the tree before Twelfth Night or Epiphany. Decorations must also be removed from the church before Candlemas, or misfortune will follow; any leaf or twig remaining in a pew signifies the death of one of the occupants. Death of the master or mistress will follow where a fir tree has been struck by lightning. Pliny looked on the fir as a funeral tree. In Bavaria, poachers seek out a fir tree before dawn on St. John's morn and eat the seeds of a cone growing straight up to make themselves invisible.

In Germany the fir tree is said to cure gout. In some parts a knot is tied in one of the branches; in others the patient goes to a fir tree after sundown on three successive Fridays and, by reciting a magic rime, transfers his gout to the tree, which will wither and die. Turpentine or balsam from the leaves and tips is used for scurvy and troubles of the lungs and breast. Fir balsam is used on wounds and ulcers, and in Newfoundland, for chapped hands. The inside bark is beaten to a pulp and used as a poultice on boils. The Chippewa Indians use it to cure headache.

Firbolg Literally, men of the bags, from Irish *fir*, men, and *bolg*, bag; a mythical, pre-Celtic people of Ireland, defeated first by the Fomorians and later run out by the Tuatha Dé Danann. They settled in Greece, were enslaved and made to carry earth from the valleys to the bare hills, made leather bags to carry it in, later made boats out of the bags, and escaped to Ireland. After their defeat at the battle of Mag Tured they took refuge in the islands of Aran, Islay, Man, and Rathlin.

fire Fire, one of the "elements" of the ancients, has been called the greatest invention of mankind. There are some who would question the "invention" of fire, claiming that man must have obtained fire from natural conflagrations, from forest or prairie fires, from volcanic eruptions, from lightning-fired trees. But the coincidence of the first evidences of both flint-shaping and

fire-taming is too great to be ignored, and a relationship between the two must be supposed. Man, primitive or late, would obviously notice the resemblance of the flint sparks to the sparks given off by burning logs or to lightning flashes. And then control of this element, as of other things in the world about him, would become man's accomplished goal in a relatively short time.

The mythology of the origin of fire, however, gives no clue to this. From the constant occurrence of wood-friction to produce fire in the myths and in ritual, it might be supposed that this was the original method. Throughout the world, from South America to Australia, Africa to Europe, Asia to North America, the myths indicate that the original fire of mankind, stolen usually from the gods or from some other previous owner, was hidden in the trees or in a specific tree, and that ever since man has had to rub this wood to produce fire. The general Polynesian myth, for example, is typified in the Maori myth of Maui, who went to his grandmother, Mahuika, the goddess of fire, to obtain it. She produced so much fire, from her fingers and toes, that everything began to burn. The rain put out the fires, but still it remained in some of the trees, from which mankind ever since has been able to get fire. The Tembe of Brazil tell how an old man stole the fire from the vultures and put it in the trees. Sometimes, as among the Basongo-Meno of the Congo and some of the Kiwai in New Guinea, there exists a tradition that fire was discovered by accident, while drilling or sawing.

Two other motifs appear in the fire mythology often enough to be of interest. Among certain North American Indian tribes, fire is stolen and passed from animal to animal in a relay that finally outraces the owner of the fire. In the Pacific, e.g. the Wagawaga of New Guinea's Milne Bay area, the owner of fire is an old woman who keeps the flame in her vagina, producing it as she needs it, and hiding it from everyone else. The same concept occurs in the fire myth of the Tarumas of southeast British Guiana. The chain of reasoning that transfers the fire from the slot in the wood rubbed vigorously with a stick to the female genitals is a natural anthropomorphism, and the parallelism is as obvious as in the other etiological tale of the fire in the trees.

It is not surprising either to discover that in Europe the oak and its associated mistletoe are involved in the fire mythology, oak being a hard wood suitable for fire-making. Though later Greek mythology makes Hephæstus the guardian of the fires of the earth, the myth of the culture hero Prometheus indicates that Zeus, god of heaven and of the oak, was the possessor of the first fire. Prometheus stole this fire in a stalk of fennel (*en narthekei krypsas*: Apollodorus) and was punished for his deed by being chained while a vulture ate eternally at his liver. Diodorus Siculus says that Prometheus invented the fire-sticks, an accomplishment elsewhere attributed to Hermes. It is also curious to note that the gods of the smithy-fires, Hephæstus, Wayland, etc., are crippled, Hephæstus for example as the result of a fall from heaven. Perhaps these were originally the fire-bringers, the thieves who took the fire of the sun and brought it to earth. Perhaps they were chased by a bolt of lightning from the sky god, like that of the Andaman Creator who, angered by a bird, threw a burning log at

it and missed, the log falling to earth and bringing fire.

The fire gods are not only gods of the sun fire, lightning, earth (volcanic) fire. There are gods of the hearth fire, of the sacred altar fire, of the forest fire and the wildfire of the prairies. Hestia, Agni, Helios, Girru, Lûg: the list of fire gods might be made interminable, through almost every pantheon in the world.

Fire's use in magic is likewise widespread. Basically, fire is the purifying element (see the fires of Hell, for example), and throughout magical practice and religious usage, fire is ritually used to cleanse persons and animals and things. The Beltane and Midsummer fires of Europe have their purifying uses; need fires are built specifically to burn clean threatened animals and men. Among the Huichol Indians, the men and women, to purify themselves during expeditions to collect the cactus of the god of fire, tied knots in strings, a knot for each lover, and burned the string in a fire, thus purifying themselves. A Tartar khan of the Middle Ages received visitors or gifts only after they had passed between two fires. Demeter burned the mortality from Demophoon in a fire; and similarly the dross is burned from all substances by fires on altars or in alchemists' laboratories.

Among the Armenians, when a member of the family sets up his own household, he takes fire from the old home with which to build his new fire. So among the ancient Greeks: a colony's fire was lighted with fire taken from the public hearth of the mother city. The sacred hearth fires of the homes of Greece and Rome were paralleled by a community hearth fire. The undying fire of Rome was guarded by the Vestal Virgins; and even to this day eternal fires are kept burning to the sacred patriotic dead. The Olympic games of 1948 in London officially began with the lighting of the torch by fire brought from Olympia, Greece, by overland runners and warship. The symbolism of the torch passed "from falling hands" to other stronger hands is familiar. Fire thus becomes a mark of the continuing of civilization, passed on from generation to generation, the living element going on magically though its fuel is eaten up.

This phoenixlike character of fire, reborn anew from its recurring ashes, makes it one of the most mysterious of all substances. Fire glows within jewels of Indian folktale; it dances puzzlingly as the sign of spirits or gods over marshes and from the masts of ships; it glows in the wake of boats in tropic seas; it burns blue in the presence of spirits; it vomits from the mouth of the fire-drake; it burns the bush which is not consumed. The sun burns plants to a crisp, and it brings life; lightning destroys a huge tree in a flash. In Australia and New Britain, among the Telugus and the Arabs, a heavy downpour may be stopped by quenching a fire with water. The sun is swallowed during an eclipse: the Sencis of Peru shot burning arrows into the sky to chase the devouring animal away. The Ojibwas of North America also shot arrows at the eclipsed sun, but their arrows were meant to rekindle the fire.

Brynhild slept within a ring of fire until some hero braved the flames to awaken her. The mistletoe protected homes against fire, especially against lightning, and it had the power of putting out fire. Destruction of towns in war was not complete until fire was applied

and the buildings burned to the ground: God destroyed Sodom and Gomorrah with fire.

Everywhere in the world, when sacred fire is needed, it is made fresh and not taken from existing fires; often the old fires must all have been extinguished before the new fire is built. Nevertheless, as Crawley points out, primitive man seldom makes fire; usually there is some fire nearby from which he can obtain a brand.

It is perhaps in folktale that the myriad uses of, and beliefs about, fire are best illustrated. The hog's snout is rounded and incomplete because God had to go to a fire and interrupt the work of creation (A2286.1.1); passing through fire is used as a chastity test (H412.4) and as a suitor's task (H331.1.5); animals breathe fire (B742) or put out the executioner's fire and save the hero (B526.1). There are mountains, valleys, cities, castles, thrones, trees of fire in Arabian and Hindu tales. In a Sicilian story a swan maiden transforms herself into fire in an attempt to escape capture (D285). Just as Gawain's strength waxed and waned with the height of the sun in the heavens, so in a Spanish folktale the princess becomes more or less mad with the height of the fire (D2065.4), or she becomes sicker as the fire blazes and gets well when it goes out (D2064.2). In Malayan and Indonesian folktale, fire shows that a beautiful woman is present (D1061.1), as in the Philippine story where Ini-init discovered from afar the presence of Aponiboli-nayan in his house because it appeared to be blazing. The many motifs listed in the *Motif-Index* under "fire" serve to emphasize that man's civilization is based on a fire-complex that pervades practically every aspect of his life.

Among American Indian tribes of the eastern United States fire is referred to as "Our Grandfather, Fire." The smoke is believed, by such tribes as the Shawnee, Fox, and other Central Algonquians, to carry the words of prayers up to the supreme deity. Before offering prayers small quantities of tobacco are sprinkled on the fire and the tobacco also ascends in the smoke as an offering to the deity, thus serving to validate the prayer.

How fire was first acquired is accounted for in the mythology of almost every North American Indian tribe. In the western part of the continent fire is usually said to have been stolen, often by an animal or a number of animals; it is said to have been hidden under the thief's wing, or in the tip of his tail, and transported thus, or passed on from one animal to another in a relay race. Other beliefs about fire are that a perpetual fire burns beneath the man-made mounds in the southern United States. The Natchez, a southern tribe, are said to have built their mounds in order to maintain a perpetual fire on them. Many new fire rites are held by tribes in the agricultural areas of native North America. [ewv]

In the mythology of most South American tribes, man owes the possession of fire to some culture hero or to some benevolent animal, who stole it from some other animal or from some monster who refused to part with it. Generally the first attempts to steal the fire were unsuccessful until the hero used some clever stratagem. The acquirer of the fire then gave it to mankind or enclosed it in the wood from which Indians make their fire drill.

Some Tupi-Guarani Indians say that one of the divine Twins stole fire from the vultures, after having lured these elusive birds by pretending to be a rotting corpse. A frog who swallowed some embers is the fire-giver of the Guarayu and Chane Indians. In the Chaco, a small rodent is either the jealous master of the fire or the hero who took it away from Jaguar. This feline is often described as the original owner of fire. In some Guiana tribes fire is said to have been produced by an old woman whenever she spat or defecated. The mythical Twins induced her to relinquish it. [AM]

fire Drake A type of dragon found usually in Germanic and Celtic folklore. It lives in a cave, where it guards a great treasure. It protects itself by exhaling fire. Beowulf's final and fatal exploit was the killing of a fire Drake. [MEL]

fire gods Chinese folklore about fire shows wide regional variations. Ceremonies in Canton on the 22nd of the Sixth Moon were once very elaborate with processions, temporary altars, public prayers. On the Spring festival of Pure Brightness (Ch'ing Ming) ceremonial fires were once rekindled in the courtyard of the Imperial Palace. The Ministry of Fire is composed of a President and five stellar divinities. Chou Yang, a legendary emperor, taught his people to use fire to drive out snakes and wild animals, to keep enemies at a distance, and to forge metals. Huo Sheng, a priest who changed himself into a giant during one of the legendary battles near the beginning of the Chou Dynasty, was also a flame-thrower. Many devices were used to insure houses and shops against fire. Wood-prints of men and women in the act of intercourse pasted on the kitchen wall will prevent fire. One rationalization is that the fire god, being prudish, will avoid houses where such acts are in progress. Another rationalization is that because the yin and yang are at those times in balance, fire, a powerful yang element, cannot gain the ascendancy. Because the householder cannot be assured that the harmonizing act is being perpetually performed, pictures are used. [RJ]

first and last buried In many places it is believed that there is a penalty imposed upon the spirit of the first corpse interred in a new graveyard. It is reported from the Hesse and Westphalia districts of Germany that such a spirit is condemned to wander about eternally, never finding rest. In parts of England and Scotland it is held that the Devil will claim the first body buried in a new cemetery. This belief has been so strongly held that it has proved difficult to get graveyards started. In Scotland the problem was solved in one instance by interring the body of an unidentified tramp, and in Devon the spell was circumvented by the burial of a servant who was a stranger to the district.

In parts of Scotland, Ireland, and Brittany the belief prevails that the last buried in any cemetery must take no rest, guarding all the graves until the next one comes. From County Cork was reported the belief that the last buried has the task of carrying water to wet the lips of souls in purgatory. This may reflect the story in *Luke* xvi, 19-31 where the rich man in hell begs Abraham to send the recently deceased Lazarus "that he may dip the tip of his finger in water, and cool my tongue."

[CFP]

first foot Superstitions connected with the symbolism of the first foot to cross the threshold on New Year's (sometimes Christmas or other days) are known to peoples from China to Ireland and belong to the cycle of beliefs, still imperfectly understood, connected with the significance of emerging from one state of existence into another. Thus in northern England it is unlucky to leave the house on the first day of the New Year until someone has come in. The first foot of the New Year to enter one's house brings either good or bad luck. In Scotland the first person to enter a house on New Year's Day got a kiss from the person who opened the door. In Yorkshire the first foot on Christmas Day was given money, gingerbread, or cheese. Although customs in China differ, the Chinese are in agreement that the first person to enter brings either good or bad luck. In many parts of the world girls perform ceremonies at odd times with the thought that the first person to enter the house or the room, or to be met at church, will show them something about their future husbands: tall, short, wealthy, poor, etc. [RDJ]

first-fruits Specifically, the first of an agricultural crop or vintage, but generally including the firstlings of domestic animals or of animals of the hunt or of fish in a catch; by extension, the feast or ceremony at which the first-fruits were eaten or sacrificed. The concepts underlying first-fruits ceremonies are principally two: 1) The part is representative of the whole; and 2) danger is inherent in new things. Because of this danger, from spirits dwelling in the grain, from the jealous dead, from the gods to whom all belongs, etc., some propitiatory gesture must be made. Therefore, before partaking, the tabu must be removed by giving up a fair share to the gods or spirits, or by indicating to them, by a ceremonial approach, that the food is a necessity and that their gift to man will not be wasted. First-fruits ceremonies thus are of two kinds, sometimes combined: sacrifice or feast. The sacrifice may be by burning, or by offering on an altar, by making formal presentation to the chief or priest, or as a token, offering the spirit of the food to the spirit. Feasts may be approached by a fasting period, by the taking of purgatives, by the use of new fire, etc. Frazer maintained that first-fruit ceremonies were communions, the partaking of the body of the god, a provocative but unnecessary hypothesis.

 Ceremonial preparation and eating of the first fruit or vegetable products gathered, or in the case of some West Coast tribes of the first salmon killed, is a widespread rite among North American Indians. In western North America several tribes prepared the first acorns gathered as a mush which everyone in the tribe tasted; after this was done, all could gather acorns and use them. The same was done for the first salmon, which was prepared and eaten by a priest among certain Northwest California and Oregon tribes. In the Eastern Woodlands strawberries and other wild berries were gathered and eaten after a dance festival; afterwards all persons could gather and eat the various kinds of berries. Corn, among the eastern agricultural tribes, was treated in much the same way. The Green Corn dance, so widespread in the Eastern Woodlands and Southeast, was probably essentially a first-fruits rite. Compare BUSK.

[EJW]

 In Mexico and other parts of Middle America, quite common is the custom of offering first-fruits to deities before partaking. The Huichol of Mexico have one of the most elaborate ceremonies. Both the new corn and the people must be purified and "baptized" before the corn can be eaten. This is done by each family or group of families in front of a home altar on which is placed an image or picture of the Virgin Mary. The Tarahumara have a similar celebration. Several families join together for an all-night fiesta at which they place roasting ears on a family altar, roast them ceremonially, smoke the maize with copal, and then eat it. Among the Popoloca of Veracruz a man and his wife go to the cornfield before sunrise, burn copal incense, cut seven roasting ears, return home and make tamales, and eat them at midnight of the same day. Only then can maize be eaten from that harvest in a profane manner. [GMF]

first is best A motif especially prominent in the chain tale in which the action completes a circle to return to its starting point. In a tale in the *Ocean of Story*, an ascetic transforms a mouse into a maiden. When she grows up he wishes to marry her to a great husband. So he calls the sun, but the cloud can hide the sun. And the wind can drive the cloud, and the mountain can resist the wind, and the mouse can dig holes in the mountain. Therefore, the ascetic changes the girl back into a mouse and gives her to the male mouse. This form must not be confused with the chain tale in which the action begins over and over endlessly when the starting point is again reached; in this type of the tale, the action is completed when the first of the characters reappears on the scene. See CHAIN TALE.

fish Conflicts and confusions in the reports about the fish-lore of various peoples point to the need of a new examination of this and other beliefs in terms of the ethnic atmosphere in which they occur. The Syrians regarded fish as holy, not to be eaten. The Bechuana and certain other Bantu tribes do not eat fish. In parts of India fish are said to be the favorite food of ghosts. Cornish fairies hate the smell of fish. Fish are oracles in Wales, tabu as food among some African tribes, forbidden to pregnant women in Serbia, and recommended in the Talmud. The Tasmanians do not eat fish that have scales.

Attempts to establish the existence of a fish cult in the eastern Mediterranean are inconclusive although the Syrian form of the Semitic goddess Derceto was a fish, and her dying and resurrecting son Tammuz (or Adonis) was associated with the fish, though again the data is inconclusive. The fish early became a Christian symbol: Christ fed the multitude with five loaves and two fishes (*Mark* vi, 38), and He made His disciples "fishers of men" (*Matt.* iv, 19). The Greek word for fish is *ichthos*, and the symbol may have been adopted as a pun on the words *Iesos Christos Theou Uios Soter*, Jesus Christ, Son of God, Saviour, a confessional formula. The Carib view that fish are always young and that men who lived on fish never grew old, together with local legends in many parts of the world about 100-year old fish in temple and other pools are suggestive.

Communities dependent on fish as articles of diet or commerce have special ceremonies. Many western Europeans spit on the hook to ensure a catch. In the south of

France the priest blesses the sea in a ceremony which in one or another form is found in other places. In Alaska the first fish of the season is specially honored. During the fishing season the Queen Charlotte Islanders banish one man of the tribe to the mountains. He may not light a fire or communicate with other members of the tribe. In New Caledonia the fishing season is opened by sacrifices to ancestors. When the men enter the water the women put out all but one of the fires, perform a dance and maintain silence until the men return. Fish totems have been reported from South Africa, Alaska, and North America. The Ottawa Indians believed that the souls of the dead entered fishes.

The orphaned Cinderella in a very early Chinese version of that tale is helped by a fish in much the same way as the northern European girl is helped by a tree growing from her mother's grave and the Anglo-French heroine is helped by a fairy godmother: all probably mother-surrogates. In Greenland the eating of certain fish is said to have made women and even men pregnant. Virgins in Brazil, Samoa, and India have been fertilized by gifts of fishes. If the husband of a childless woman ate a fish from the "Children's Sea" on the south coast of Java he would have offspring. Shape-shifters in the form of fishes have given fabulous gifts to fishermen for setting them free. See ATARGATIS. [RDJ]

fish dance A mimetic dance suggesting the motions of a fish. Menominee and Yuchi Indian fish dancers wave their arms like fins, the former with a dragging forward step simulating the tail. The Iroquois fish dance or *gedjoenq* contains no mimetic gestures. The passing and repassing of partners is claimed to resemble the path of fish in the water, but the resemblance is vague. Only the Yuchi retain any vestige of ceremonial propitiation and thanksgiving to the spirits of this source of food supply. [GPK]

Fisher King In Chrétien de Troyes' *Perceval* and in later Grail stories, the lord of the Grail castle; possessor of the Grail, the bleeding lance, and the silver plate. Wounded by a spear thrust through his thighs, his only solace was in fishing. He can be healed only through the help of the Grail-seeker and when he is healed the waste land which surrounds his castle will become productive again. In Robert de Boron's *Joseph*, Bron is referred to as the Rich Fisher, though there is no account of his fishing literally as there is in *Perceval*. Nor does he possess a bleeding lance or a plate; he is simply the custodian of the Grail. The epithet fisher applied to him may derive from Christ's statement, "I shall make ye fishers of men." [MEL]

Five Brothers In Puget Sound mythology, a Snohomish story of five brothers, four of whom were tricked by the vengeful fifth into following an artificial seal far out through the straits and north through the open sea. It was foggy and the brothers were lost. They drifted to a land where the people were very tiny but powerful men. The brothers grew hungry; they had nothing to eat, so they stole halibut from the canoe of one of the dwarfs while he was diving for more. But the little man discovered the theft and the thieves and was so powerful that he easily threw them into his canoe and took them home. The mouths of these people were so small that they ate only the maggots from the halibut which they allowed to rot. So they permitted the four

Snohomish brothers to camp beside them and cook the halibut for themselves.

On the fifth day occurred the famous battle between the dwarfs and the ducks and cranes who came to attack them annually. The ducks and cranes killed the dwarfs in great numbers. The Snohomish defended the little people, and after they had killed many of the birds one observant duck said, "These are real Indians. Let's get away from here." So the ducks and cranes flew away, and the Snohomish revived the dwarfs by extracting the sharp-pointed feathers which the birds had shot into them.

That evening the dwarfs did not like the idea of the Snohomish eating the dead ducks, so they sent them away. On the way home the four brothers became so tired that they changed themselves into killer-whales in order to travel faster. They did not really want to be killer-whales, but in this condition they found that food was plentiful and travel easy. They returned home, took revenge on the fifth brother who had gotten them into all this, by leading him astray after red salmon-berries until he died. Then they went out to sea and became killer-whales forever.

There are four known versions of this story, all starting with the wooden seal and the compulsory voyage into northern waters of either four or two brothers. All but one deal with the battle with the ducks. In a Puyallup-Klallam version, the brothers are captured by an Eskimo for stealing his fish and taken to Alaska. Ducks descend upon and kill the Eskimos. The brothers rescue them by pulling out the feather-spears and are therefore set free.

Five Gods of the House In Chinese folk belief, the five shên, or spirits of specific objects, who preside in every household. They are popularly known as Mên (or Mên Shên), gods of the door who keep watch and ward against evil spirits; Hu, god of the windows; Ching Chu'an, boy-spirit of the well; Chung Liu, god of the eaves; and Tsao Chün, lord of the kitchen stove, who presides over and observes the welfare and conduct of the whole house. See KITCHEN GODS. [RDJ]

flagellation Ceremonial whipping, whether symbolic or real, used to drive out evil spirits, to test the endurance of the celebrant during puberty or manhood ceremonies, or for the sexual stimulation of either the persons whipping or the persons being whipped. At times all three factors are potent. The lamas of Mongolia, Tibet, and North China, and priests and monks elsewhere, wear masks and engage in symbolic whippings in their devil dances. American Indians used whipping to test the endurance of their adolescent males. Stoicism during whipping is part of the lore of small boys in all parts of the world. Actual flagellation for the purpose of attaining salvation became epidemic in Europe in the 10th and 14th centuries and was associated with the willingness to endure pain for or at the hands of the beloved object. The sexual psychopaths have been subjects of a large body of literature about schoolmasters or schoolmistresses. Flagellation as part of social and religious orgies has been reported in numerous connections and needs further study in folklore. [RDJ]

flamen (plural *flamens* or *flamines*) In ancient Roman religion, one of a group of twelve to fifteen priests each

serving a specific god. The flamen Dialis (Jupiter), flamen Martialis (Mars), flamen Quirinalis (Quirinus) were Majores, and always patricians; the others were Minores chosen from the plebeians. The flamen Dialis was one of the great officials of the state and had many restrictions and privileges attending the office. He married once, could not be divorced, and had to resign if his wife died. He could not touch horse, flour, dog, she-goat, beans, raw meat. He was prohibited from making oaths, wearing any but plain rings, having knots anywhere in his clothing. In public he always had to wear the apex, a special conical headdress wrapped with a strip of white wool; so forceful was this regulation that if the apex fell off during a sacrifice the flamen resigned his office.

flamenco An intensely erotic song and couple or solo dance of Andalusian Gypsies. The word *flamenco* may mean a Spanish soldier returned from Flanders, a vagabond on a par with Gypsies, or it may mean the flame-colored flamingo bird which lives in swamplands of southern Europe, northern Africa, and India. Neither interpretation is entirely plausible. The dance, the *cuadro flamenco*, contrasts with the ceremonial rounds and gay folk contras of northern Spain in its sensuous intoxication of gesture and counterrhythms of music, footbeats, castanets, and hand-clapping. Dancer and spectators are a unit, performers emerging from the crowd spontaneously and amid cheering. The cante flamenco, like the cante jondo (deep song), with guitar, wails in Oriental minor tonalities. Music and dance have local variants: Rondeñas, Malagueñas, Murcianas, Granadinas, Preteneras, Bulerías, Farrucas, Fandangillos, Alegrías, Sevillanas, and others. All of them blend virtuoso footwork with undulating arm and torso motion, Oriental in their sinuousness. [CPK]

flax An annual plant (genus *Linum*) with stems about two feet high and blue flowers, and an inner bark which yields the flax of commerce. The mucilaginous seeds are called flaxseed or linseed. In Teutonic countries Holda is said to have introduced flax. It was in common use during the time of Charlemagne, who gave a subsidy to every farmer planting a certain area in flax. Linen cloth was so highly prized that even the angels of the Old Testament were clothed in it. Among the Hebrews it was unlawful to mix linen with other materials in cloth.

Many rites were performed to make the flax grow long and plentiful: jumping over Midsummer's Night fires, ringing church bells on Ascension Day, and running about in the fields on Senseless Thursday (the last Thursday of Carnival). In Yorkshire a man should sit on the bag three times and then face to the east before sowing to ensure a good crop. A few stolen seeds mixed in the bag was believed to help. In Bohemia, while flax belongs to Holda on six days, it belongs to the Devil on Saturday. Dire consequences befell those who had anything to do with it on Saturday, whether picking a flower or weaving cloth. In Estonia there is a household spirit, flax mother, who lives in the linen press and looks after flax. Witches cannot stand the sight of the flowers which are therefore often grown in door yards to prevent their approach. They were also tied to the horns of cattle for the same reason. But the witches used the seeds in their brews and would make a pact

with a farmer not to molest him for a year in return for a handful of the seeds gathered in the dark of the moon.

From the belief that it represents vigorous growth and life, flax was often used in medicine. In Bavaria sickly children were placed in the fields and flaxseed sprinkled over them so that they too would thrive. In Brandenburg persons afflicted with giddiness were advised to run naked three times around the flax field. This made the flax giddy, thus the patient was cured. The idea of flax absorbing ills was also known in Italy. A man who had a headache from working in the hot sun placed a ball of linen tow on a yellow plate and balanced this on his head. The pain, mistaking the plate for the sun, passed upwards and became caught in the tow which was immediately burned. In Ireland three pieces of tow applied to the skin will cure a stitch in the side. Flaxseed tea is very generally used as a cure for rheumatism and as a purgative. Flaxseed poultices are still recognized as beneficial for inflammation. For toothache, the Swabians sleep on a pillow of flaxseed. In Bohemia a girl wishing to become beautiful dances in flax leaves when she is exactly seventeen years old, unless her birthday falls on a Saturday when the flax belongs to the Devil.

flea According to Danish legend the flea was sent to pester mankind as a punishment for laziness. A Flemish tale claims they were created to give women work. However this may be, they have been living on the blood of mankind for many thousands of years in spite of the best efforts of alchemists, scientists, and exterminators. The ancient Egyptians, in the *Book of Cleopatra*, recommended anointing someone, presumably a slave, with ass's milk and all the fleas in the house would gather on him. This method is used in a modified form today in the United States where a sheep is brought into the house for the same purpose. A soldier from Mississippi told of using a goat in this manner, but his father objected, and made him sell the goat. However, after two days the goat had fulfilled its purpose and he remarked that fleas must have been bringing a good price, as he made three dollars on the transaction. Another ancient remedy appeared in the *Geoponica*, the only formal treatise on Greek agriculture. It advised a person in a flea-infested locality to cry, "ouch! ouch!" and the fleas would not bite. This is no longer effective. The use described in the old animal tale of the fox who backed slowly into the water with a piece of moss in his mouth, sounds more effective. All the fleas walked down his nose onto the moss; then he opened his mouth and said, "ahhh," while the fleas floated down the river. Pliny avers that if, on hearing the first cuckoo of spring, you gather up the earth under your right foot and sprinkle it in the bed and around the house, you will not be troubled with fleas all year. In England they recommend airing the bed before Easter. In other parts of England it is believed that fleas return from winter quarters on the first of March, and if the windows are kept closed and the doorstep swept on that day, you are rid of them for the year. Those who neglect this precaution may rid themselves of fleas by jumping over the Midsummer's Night fire. In the United States, splinters from a tree struck by lightning will drive them out of the house. When snow falls in May, if a little is melted in the fireplace, or if a dirty

dish cloth is burned when you hear the first thunder in March, the fleas will be driven out of the house. The Irish drive fleas out with spearmint or foxglove. Southern U.S. Negroes use chinaberry leaves to get rid of them. In England it is believed that when fleas thirst for blood, it is a sign of rain. In Silesia it is considered good luck to be bitten on the hand, since there is a chance that the flea will go elsewhere, which is not the case if the flea is inside the shirt. In Germany and Austria to be bitten on the hand is a sign that you will be kissed. It is quite general belief that fleas desert one who is about to die. [JWH]

Fleeing Pancake Title and motif (Z31.3.1) of a general European cumulative tale, especially popular in Scandinavia. In America it is a popular nursery story under the title of the **GINGERBREAD BOY**.

Flight of the Chiefs The name of the ancient kingdom where lived the ancestors of the modern inhabitants of Bua province, Vanua Levu, Fiji: a legendary realm during whose existence a Fijian Golden Age held sway. Then, the inhabitants knew everything; they even played the card games that their descendants later learned from the white men; they were able to talk with the ancestral spirits, so good, so accurate were their religious and social usages. But at last Flight of the Chiefs broke up over the ambition of its chiefs, and the various villages with their selfish jealousies grew up. Tip of the Single Feather was the great hero of Flight of the Chiefs, invincible, huge, the son of The Eldest, who was chief of the kingdom. Many great men lived in those days, warriors and magicians: Curve of the Whale Tooth, a great warrior; Fog of the Path, who could bring up a fog to muddle enemies; and other such mighty men.

The Flight of the Chiefs is the title given by B.H. Quain to his collection of Fijian epic poetry, tales, and stories collected in the 1930's at The Place of Pandanus (Namuavoivoi) in Bua province. These traditional poems were composed by Velema, an old man who had heard the stories from his predecessors and who had the gift of composing. These poems, traditional though they are, are recomposed, from what the poet remembers, in each generation. He was a magician, whose war club and ax, passed down through his mother's family, gave him the ability to make these *Sere Dina*, true songs. From Solomoni, less gifted and not as highly regarded as an artist as Velema by his fellow Fijians, Quain obtained some of the epic tales, prose recitals of material originally heard by Solomoni as poetry. And whereas Velema obtained much of his information from the ancestors, Solomoni could not commune with them. The study gives an insight into the transmission of traditional lore in a non-literary society.

flint An opaque quartz, flint was widely used during the Stone Age because the manner in which it chips made it possible to secure a sharper, more permanent edge on the various implements needed by primitive man in his daily tasks. It was one of the first items of commerce. Conversion from the age of stone to the age of metal was a gradual process, accomplished at different times by different peoples. We have been able to observe it in recent times in the case of many of the

tribes of the North American Indians. Even after stone implements ceased to be used in everyday life, they were often preserved in ceremonials because of tabus associated with metals, especially because iron is believed to be abhorrent to various classes of spirits, and because of the general inflexibility of religious practices. For instance, flint knives were used by the Jews for circumcision long after they were not in general use.

Throughout Europe, Asia, Polynesia in fact in almost all parts of the world where their use had been forgotten, the flint arrowheads and axes turned up by the farmer's plow are considered to have fallen from the sky, are often thought to be thunderbolts, and are called thunderstones. It was not until travelers returned from far places where these implements were in actual use that their origin was known. Even then these travelers' tales received little popular credence. In Scandinavia thunderstones were frequently worshipped as family gods who kept off spells and witchcraft. Beer was poured over them as an offering and they were sometimes anointed with butter. In Switzerland the owner of a thunderstone whirls it, on the end of a thong, three times round his head, and throws it at the door of his dwelling at the approach of a storm to prevent lightning from striking the house. In Italy they are hung around children's necks to protect them from illness and to ward off the evil eye. In Roman times they were sewn inside dog-collars along with a little piece of coral to keep the dogs from going mad. In Sweden they are protection from elves. In the French Alps they protect sheep, while elsewhere in France they ease childbirth. In Burma they are used as a cure and preventative for appendicitis. In Japan they cure boils and ulcers. In Malay and Sumatra they are used to sharpen the kris, are considered very lucky objects, and are credited with being touchstones for gold. Among the Slavs they cure warts on man and beast, and during Passion Week they have the property to reveal hidden treasure.

In the British Isles, however, some idea of their original use is retained and they are often referred to as elf-shot, fairy-shot, or elf-arrows, and are said to have been shot by the fairies at a person or animal to bewitch them. On the other hand, they are thought, for the most part, to protect the possessor from these little people. The presence of flint instruments found in British cinerary urns of the Roman era is explained by two theories: 1) they were used by the mourners to lacerate themselves; 2) flints (like all fire-producing stones) are potent magic for preventing the return of the dead. In Ireland flint stones are soaked in water to make a medicine which is good for man or beast. Mounted in silver they are worn as protection against elf-shot. They are sometimes called adder stone, which is probably as much a corruption of arrow stone as from the resemblance to a serpent's tongue. In North Carolina and Alabama there is a belief that flint stones placed in the fire will keep hawks from molesting the chickens, a belief which probably stems from the European idea that elf-shot protect domestic animals. In Brazil flint is used as a divining stone for gold, treasure, and water.

The flint was an object of veneration by most American Indian tribes. According to the Pawnee origin

myth, stone weapons and implements were given to man by the Morning Star. Among the Quiché of Guatemala, there is a myth that a flint fell from the sky and broke into 1,600 pieces, each of which became a god. Tohil, the god who gave them fire, is still represented as a flint. This myth provides a parallel to the almost universal belief in the thunderstone, and reminds us that Jupiter was once worshipped in the form of a flint stone. The Cherokee shaman invokes the flint when he is about to scarify a patient prior to applying his medicine. Among the Pueblos we have the Flint Societies which, in most tribes, were primarily concerned with weather and witchcraft, but sometimes had to do with war and medicine.

Flood The term commonly used for the Biblical deluge (*Gen.* vi-ix): subject of a great body of etiological and humorous folklore. The duration of the rain that caused the Flood was 40 days and 40 nights. Forty is generally used among the peoples of the Near East to indicate some fairly considerable round number. Compare for example the 40 years of wandering in the wilderness, the Koranic statement that a man reaches his maturity at 40, the Persian name "forty-foot" for the animal called by us the centipede, etc. Mt. Ararat in Armenia is the supposed final resting place of the ark; recently, expeditions have been planned to discover its remains on the mountain's slopes. The story of the Flood ends with the beautiful etiological myth of the rainbow: it is God's reminder to Himself of His covenant with living things that no further destruction of all life by water is to occur. Typical motifs attached to the Flood story are the escape from the deluge in the ark (A1021), the saving of the animals in pairs (A1021.1), the griffons balking at entering the ark and now extinct (A2232.4), bird scouts sent out to ascertain the receding of the waters (A1021.2), the ark finally coming to rest on a mountain (A1022). Other folklore incidents include the Devil's entrance into the ark in the form of a mouse, his gnawing a hole in the bottom of the ark, and the lion's sneezing forth a cat to devour the mouse (A1811.2), or Noah's inadvertent curse letting the Devil in (C12.5.1), or the Devil getting in by walking in the shadow of Noah's wife (G303.23.1). The snake on board stops a leak with his tail (A2145.2), or the dog stops the leak with his nose, causing dogs' noses to be foreverafter cold and wet, or Noah's wife stops the leak with her elbow, thus causing women's elbows to be forever cold. Or, Noah himself, when the leak grew still larger, sat on the leak, which explains why a man always stands with his back to the fire. Noah tried to exclude flies from the ark, but admitted them as a lesser evil than the Devil who threatened to come on board if the flies did not (A2031.2). Many local legends all over the world explain exceptionally rocky places as the spots where Noah dumped his ballast. See DELUCE; NOAH.

flute One of the earliest and most widely used of all musical instruments, especially significant in fertility, courtship, and funeral ceremonies; a wind instrument consisting of a tube or pipe in which a column of air vibrates to produce sound when the player blows across the thin edge of a hole at the end or side. This acoustic principle distinguishes flutes from other instruments classified as pipes (oboes, clarinets, etc., which

have vibrating reeds). All, however, by association with their shape and in their use, have a similar symbolism and similar magical properties. Dating from paleolithic times, the earliest flutes were made of bone and had only one tone. The addition of finger holes for playing a melody appears in neolithic flutes.

The flute family includes numerous forms, differentiated by position and construction of the mouth-hole, by method of playing, and by shape. Vertical, or end-blown, flutes have the mouth-hole at the end. Transverse or cross flutes have a side mouth-hole and the upper end is closed. In many flutes of the Orient, South America, Africa, etc., the mouth-hole is notched to a sharper edge. Whistle flutes have the mouth-hole partly blocked to form a very narrow passage through which air is blown over the edge of another hole at the side to set up the necessary vibration. Variations from the common tubular shape include globular flutes (often elaborated into bird, fish, flower, human, and animal forms), an ax-shaped flute used by the Chaké of the northeastern Andes, which has a lateral air duct at right angles to the pipe, and a sausage-shaped instrument found among the Maori and in Peru. A series of one-note flutes played in combination and either tied or molded together constitutes the instrument known as the pan-pipes. Other combinations are double flutes, as used in northern India and among some American Indians, and triple flutes found in Tibet, as well as frequent pairings of separate instruments for certain ceremonies. Such pairs are commonly thought of as male and female wherever they are found—in Melanesia, among the Bantu in Africa, the Sierra Nevada tribes of South America, etc. Variations from the ordinary method of playing include blowing from the nostrils instead of the mouth (nose flutes); using only one hand for the flute while playing another instrument with the other, as with the pipe or galoubet (one-handed flute); and hanging the instrument for the wind to sound (Æolian flute), as is done in parts of Melanesia.

In primitive societies the flute, because of the characteristic tubular shape of the bone, reed, bamboo cane, etc., from which it is so often made, has a phallic symbolism and magic influence over procreation, fertility, and the renewal of life. Hence it is played at initiation and circumcision ceremonies, accompanies dances of courtship and fertility, sounds at funerals and sacrifices, and serenades reluctant maidens. It is also sometimes buried with the dead as a charm for new life, worn or carried as an amulet, and played, as by the shaman of the Chaco Indians, for curing purposes.

The Bukaua and Jabim tribes of northern New Guinea use the flute along with the bull-roarer in connection with circumcision. Boys make flutes of two kinds, called husband and wife, which are played during the rites and for a period of about three months of seclusion afterwards. Women may neither see nor hear the instruments. The ceremony is a dramatization of death and rebirth, the novices supposedly being swallowed and disgorged by a mythical monster. Among the Monumbo people the name of the flute (*murup*) is also borne by a mythical forest monster and by a mask used in the rites of initiation, and the sound of the flute is identified with the monster's cry. The flutes are

carefully concealed in the men's lodges and are played also for the burial of male dead and after the erection of a chief's house. The instruments are credited with having souls and receive prayers, sacrifices, and special consecration. They can bring fair weather, protect travelers, give warnings through dreams. Each clan has its own flutes, and at certain feasts the clan head's wife is admitted to the men's enclosure, where the flutes are kept, for the purpose of cohabitation with each man present.

The Sentani of New Guinea have a story of flute origin directly connected with another symbol of rebirth, the cassowary, which in Melanesian belief is equivalent to the classical phoenix. A man was gathering fruit in a tree and tossing it down for his wife, when a piece fell, splitting a bamboo cane and frightening the wife away with the noise. From the split cane emerged a cassowary, making a buzzing sound. The man hurried to tell his friends of the occurrence and to discuss the usefulness of a noise so frightening to women. They all cut pieces of bamboo and tried to imitate the sound. Thus they invented flutes.

Bone and clay flutes were the only melodic instruments of pre-Cortesian Central America and were especially associated with human sacrifice. Each year a victim was selected for the feast of the Aztec god, Tezcatlipoca, was dressed as the god, honored and worshipped for a whole year, given four consorts named for goddesses, and trained in the art of playing the flute. Wherever he went he played his flutes to the adulation of the populace, and when the day came for his death, he broke a flute at each step of the pyramid on the way to the sacrificial altar. The next victim, chosen for the following year, then took his place as the reborn god.

Flutes are found with the bodies in ancient tombs of many races, placed there as a charm for the resurrection of the dead. The instrument is sacred to the Babylonian Tammuz, husband of Ishtar, who killed him and restored him to life. When Tammuz played on his flute of sacred lapis lazuli, the dead arose. Even among a people such as the Toda of India, who neither make nor play flutes themselves, the dead are given flutes obtained from another tribe to assure them rebirth.

The flute was also used for funeral music by the ancient Hebrews and is still used along the northern coast of Africa by Arab peoples to play a dirge melody originally sung as a death lament. However, the funeral instruments of the Greeks and Romans, the *aulos* and the *tibia*, frequently called flutes in translation, and bearing the same connotations as mortuary flutes of other peoples, were actually oboe-type instruments, having the double-reed construction.

As an accompaniment for dancing, the flute retains its phallic, procreative significance, being used especially for animal, harvest, and love dances. Men of the Siusi of Brazil blow the cross flute while dancing a circle dance of courtship with female partners. Among the Sierra Nevada tribes of South America, the men play the flute for dancing of the women, though the sexes do not dance together. The zarabanda, a small Guatemalan flute, may have given its name to the sarabande, a dance originally of sexual pantomime. The vertical

flute has traveled all over the world in Gipsy caravans. It is paired with the drum for the whirling dances of Mevlevi dervishes. The small, one-handed flute called the pipe, played together with the tabor, furnishes the characteristic music for the English Morris dance; and its Provençal counterpart, the galoubet, plays, with a tambourine, for a religious pageant in which, on Christmas night, a lamb symbolizing the Christ Child is paraded through the village of des Baux and carried to the altar of the church.

North American Indians (Chippewa, Cheyenne, Yuman, others) have used the flute for wooing, believing the sound of the instrument particularly persuasive. Special flutes might be given even greater aphrodisiac charm by the invocation of the medicine-man. The Chippewa warrior might also use the flute to signal the approach of enemies without arousing their suspicions. The flute is the chief accompaniment to the song ceremonials of the Pueblo Indians in connection with rain-making, the manufacture and consecration of sacred objects, communication with spirits of the afterworld, and a dramatization of tribal migrations. As in many other cultures, the flute of various tribes is believed to have been the gift or invention of a god. The Chitimacha of Louisiana tell how the supreme deity, disguised as a traveler, came upon a boy who sat wishing he could draw music from a piece of cane, and the god, pleased by a gift of deer meat, taught the lad to hollow the cane, burn finger holes in it, and play upon it.

The Cuna Indians of Panama still make flutes of bird bones, which are strung in sets and worn as necklaces. Girls of the tribe may be subjected to a test of virginity at the time of initiation by wrapping two cane flutes in a leaf and giving them to the performer. If they have changed position when he unwraps them, she is not a virgin.

The flute is thought to have a special attraction for certain animals and aspects of nature, and is the traditional instrument of shepherds. In Mesopotamia, India, Palestine, Egypt, and Arabia, shepherds have for centuries played a long end-blown flute, sometimes with a whistle mouthpiece. There is a Kurdish story of a poor shepherd who fell in love with the daughter of the wealthy man whose flocks he tended. The father objected to the marriage but said that he would consent if the shepherd could keep his flock of 500 sheep from drinking for three days. The shepherd accepted the condition and sat on the hillside, playing the most enchanting tunes he knew whenever the sheep went toward the spring. Each time, the sheep recognized the music as their call and followed him away from the water. The shepherd won his bride and thereafter he and his descendants were known as the masters of the flute.

In India, the cross flute is associated with the god, Krishna, who, when hidden by shepherds to save his life, assumed the guise of a cowherd and piped in pastoral style to charm the animals and spirits of nature. His instrument is one of those believed suitable for the entertainment of the gods and is thought of as suspended in the celestial regions and played upon by supernatural musicians.

The power of the instrument is related even more

closely to animals in the globular type known almost all over the world. Probably this shape developed originally from coconut shells or other hard fruit shells and was later imitated in clay and modeled like birds and animals whose call resembled the flute notes. These shapes undoubtedly added some of the magical attributes of the various creatures to those of the flute itself. However, even in ancient times such instruments became toys, and today their offspring, a warbling canary with a whistle in its mouth, a water container under its feet, and a mouthpiece in the tail, can often be bought at dime stores and carnivals.

The ancient globular flute of China, the *hsüan*, was said to have been molded on eggs and was equated in the cosmic scheme of equivalents with the southeast direction, the summer-to-autumn season, the earth, and the clay of which it was made.

In general, the material of flutes is less important symbolically than the shape, but the use of some type of bone in flutes on every continent carries with it the phallic implications of the bone—whether it be bird, deer, llama, pig's foot, or human arm or leg. Human bones have been used in New Zealand, in Guiana, in Venezuela, and elsewhere. The victims were generally slain enemies or sacrificed slaves, and the use of a part of their bodies endows the instrument and the player with a part of their strength, virility, or influence. The Ruthenians were said to have used a human leg-bone to make a flute that had the power to reduce all within earshot to somnolence.

Flutes of almost every type have been played with the breath of the nostrils, rather than the mouth, since prehistoric times in various parts of India, Indonesia, Borneo, Polynesia, Melanesia, by the Bechuana in Africa, the Botocudo and Caingang in South America, and even in Europe. An accidental discovery of the method has been suggested for Hindu wearers of the nose-ring, which, if broken, might emit a whistle. Another theory of origin is that it would be tabu for a Brahmin to touch with his lips the instrument made by a low-caste man. Sachs cites the widespread belief that the breath of the nostrils contains the soul and the practices of guarding such breath and utilizing it for magical purposes. (The exclamation, "Gesundheit," when a person sneezes, is a survival of such ideas.) Therefore the powers of the flute may be increased by the particular magic of this breath.

In Europe, where the pipe, the flageolet, the recorder, and other types of vertical flute have been popular in various periods both for folk and art music, the cross flute has been used in much more limited ways. The folk music of Rumania, Yugoslavia, Hungary, etc., where Gipsy transmission and influence has been particularly strong, is often played on the cross flute, and Switzerland and Austria have a tradition of cross flute playing, but otherwise it has appeared chiefly as a military instrument. The fife, from the end of the Crusades to the present, has been paired with the drum for marching.

In America, some folk musicians still play the fife, in the Pennsylvania hills, for example, where its lively tunes are similar to those played by country fiddlers.

As an instrument for the solitary musician, the flute is particularly loved by Indians of South and Central America. Among the Colombia Indians, every man

plays the flute, which he makes of cane, and carries with him as he wanders over the hills, playing mournful airs. The Coras of Mexico, also, all make and play flutes, especially for the annual festivities of Holy Week. See ATHENA.

THERESA C. BRAKELEY

Flying Dutchman The best known of the phantom ships. Similar ships are known in several parts of the world, and the rash oath motif appears not only in these ship tales but in such literary versions of the story of the eternally doomed as Austin's *Peter Rugg*. The *Flying Dutchman* is the name commonly given to the ghostly ship seen in bad weather off the Cape of Good Hope, Africa. The ship is seen beating against the wind, trying to round the Cape; is often hailed, and sometimes boarded. The captain of the ship, a stubborn man, vowed that he would round the Cape during a heavy storm, or be damned (E511.1.3; compare C41: tabu, offending water spirit). Other versions of the legend make the captain guilty of cruelty, or have him thus damned because of a pact with the Devil (E511.1.2 and E511.1.3). Traditionally also, the crew is a crew of dead men, who stand to their tasks unmoving, and will not answer questioning (E511.2.1). (Compare Coleridge's *The Ancient Mariner*.)

The Baltic has its phantom ship, the *Carmilhan*; the legend connected with it is very like the *Flying Dutchman*'s. There is a phantom ship of the Gulf of Finland, mentioned by Frazer in the *Golden Bough*, a Finnish ship, undoubtedly, because it overhauls other ships with sails full set in the teeth of the wind, and notoriously the Finns are wizards. Compare PHANTOM SHIP.

Fodla In Old Irish mythology, one of the three queens of the Tuatha Dé Danann encountered by the Milesians during their advance into Ireland, whose name is used as a poetic name for Ireland. See BANBA.

Foggy, Foggy Dew A plaintive song known to English, Irish, and American singers, telling of the one romantic misstep of a weaver, who began and ended as a bachelor, with a blue-eyed son to help him at his trade and to remind him of the pretty maid he protected from the "foggy, foggy dew." The haunting tune is claimed as an Irish harp melody, the weaver has been identified as both English and Scottish, but the song now knows no nationality, being a favorite wherever English folk songs are sung.

Folia (French *Folies d'Espagne*) An ancient Italian *basso ostinato* melody descended from a large group of such tunes associated with the 14th century *bassadanza*, but applied from the mid-16th century to the frenzied fertility dance, the *folia*, and set to verses. The connection of dance and tune is obscure and controversial, involving the fusing elements of a dissolving courtly tradition and a rising popular movement.

folia Literally, madness: a Portuguese carnival fertility dance which became a couple dance in Spain, France, and Italy. In its original form it owed its name to the insane din, furious tempo, and lunatic actions of the large crowd of participants. Some carried masked boys on their shoulders; others, dressed as women, whirled and played castanets—clearly a vestige of ancient transvestite fertility symbolism. In Spain the *folia* was danced as a solo or couple dance with casta-

nets, to the accompaniment of flutes. The movements had become graceful and changeable, alternately pensive and impassioned, always sensuous. The music, in triple time, has a characteristic *basso ostinato*, or ground bass. The French social dance and stage dance by that name are distorted versions. [GPK]

folk etymology or popular etymology Plausible but usually incorrect analysis by untrained folk of a word whose meaning, or spelling, or sound is not clear, resulting in the transformation of the word into one more intelligible. French *surloin* (*sur*, above) becomes by folk-etymology *sirloin*. Old English *angnail* (*ang*, painful) becomes *hangnail*. *Sweetard* (*ard*, a suffix, meaning having the qualities of) becomes *sweetheart*. Old French *assets*, singular in number, is taken into English as a plural and a new singular *asset* coined. There exists a tendency today to turn *asparagus* into *sparrow grass* and to use *gingerly* as if it meant smartly. [MEL]

folklore Folklore comprises traditional creations of peoples, primitive and civilized. These are achieved by using sounds and words in metric form and prose, and include also folk beliefs or superstitions, customs and performances, dances and plays. Moreover, folklore is not a science about a folk, but the traditional folk-science and folk-poetry. JONAS BALYS

☞ Whenever a lullaby is sung to a child; whenever a ditty, a riddle, a tongue-twister, or a counting-out rime is used in the nursery or at school;

Whenever sayings, proverbs, fables, noodle-stories, folktales, reminiscences of the fireside are retold;

Whenever, out of habit or inclination, the folk indulge in songs and dances, in ancient games, in merry-making, to mark the passing of the year or the usual festivities;

Whenever a mother shows her daughter how to sew, knit, spin, weave, embroider, make a coverlet, braid a sash, bake an old-fashioned pie;

Whenever a farmer on the ancestral plot trains his son in the ways long familiar, or shows him how to read the moon and the winds to forecast the weather at sowing or harvest time;

Whenever a village craftsman—carpenter, carver, shoemaker, cooper, blacksmith, builder of wooden ships—trains his apprentice in the use of tools, shows him how to cut a mortise and peg in a tenon, how to raise a frame house or a barn, how to string a snowshoe, how to carve a shovel, how to shoe a horse or shear a sheep;

Whenever in many callings the knowledge, experience, wisdom, skill, the habits and practices of the past are handed down by example or spoken word, by the older to the new generations, without reference to book, print, or schoolteacher;

Then we have folklore in its own perennial domain, at work as ever, alive and shifting, always apt to grasp and assimilate new elements on its way. It is old-fashioned, gray- or white-headed perhaps, fast receding from its former strongholds under the impact of modern progress and industry; it is the born opponent of the serial number, the stamped product, and the patented standard.

Men of learning have in the last century or so gathered, classified, and studied a vast body of materials appertaining to folk tradition. They are called folk-orists. According to their aptitudes and preferences

they have specialized in various aspects of their chosen field, some in folktales or folk songs, others in handicrafts, others in dances and games, still others in beliefs and customs. Their tendency so far has been to restrict rather than to let their research expand all the way to its natural scope.

Much still remains to be undertaken in the study of our folk arts and crafts. And even our working definition of folklore itself should be broadened to embrace the forms of habitation, carving, statuary, metal work—iron, pewter, brass, silver, gold—weaving customs, and ancient domestic arts. Even written documents and materials from our archives may belong as much to folklore as to history, for instance, those bearing on the activities of the old guilds, on the pursuits of workshops, and on the traditional schools of manual training. And the door remains wide open to the comparative study of the folklore harvest taken as a whole and in its branches, for it all forms part of the culture of man from the remote past to the present.

MARIUS BARBEAU

☞ In anthropological usage, the term folklore has come to mean myths, legends, folktales, proverbs, riddles, verse, and a variety of other forms of artistic expression whose medium is the spoken word. Thus, folklore can be defined as verbal art. Anthropologists recognize that an important group of individuals known as folklorists are interested in customs, beliefs, arts and crafts, dress, house types, and food recipes; but in their own studies of the aboriginal peoples of various parts of the world, these diverse items are treated under the accepted headings of material culture, graphic and plastic arts, technology and economics, social and political organization, and religion, and all are subsumed under the general term culture. There is, however, an important part of culture which does not fall under any of these convenient headings, and which is classed separately as folklore. Folklore in all its forms, thus defined, is obviously related to literature, which is written; but folklore may never be written even in a literate society, and it may exist in societies which have no form of writing. Like literature, folklore is an art form related to music, the dance, and the graphic and plastic arts, but different in the medium of expression which is employed.

WILLIAM R. BASCOM

☞ In a purely oral culture everything is folklore. In modern society what distinguishes folklore from the rest of culture is the preponderance of the handed-down over the learned element and the prepotency that the popular imagination derives from and gives to custom and tradition. The transference of oral tradition to writing and print does not destroy its validity as folklore but rather, while freezing or fixing its form, helps to keep it alive and to diffuse it among those to whom it is not native or fundamental. For the folk memory forgets as much as it retains and restricts and corrupts as much as it transmits and improves. In the reciprocity of oral and written tradition and the flux of cultural change and exchange, revival plays as important a part as survival, popularization is as essential as scholarship, and the final responsibility rests upon the accumulative and collective taste and judgment of the many rather than the few. In this process of creative remembrance, which is tantamount to the genius of a people, the

great collections of folk literature are the product of the collaboration of countless folk singers, folksayers, collectors, scholars, religious teachers, and professional artists and interpreters of the arts with the inarticulate folk—Sandburg's "laboring many"; of the "scholar's learning about the folk" with the folk's own learning.

Within the realm of the handed-down, several classes and levels of folklore and folk idiom may be distinguished, and each species or individual item must be judged in relation to its history and function in its own social and cultural setting, since folklore originates and spreads in many different ways and forms. The great bulk and central core of folklore consists not so much in folk songs and stories (although these are more obvious in their appeal as colorful and characteristic) as in the customs and beliefs attending the "periods of emotional stress in the life of an individual in relation to the group—birth, graduation, coming of age, marriage, burial" (Martha Warren Beckwith, *Folklore in America*, 1931, p. 5), which the educated and sophisticated share with the uneducated and naive. Another considerable and important phase of folklore is made up of the mass delusions and hallucinations of myths, especially in the presence of the "wonders of the invisible world," and the apocrypha of hero-worship, with its legends of doubtful exploits of historical personages and "untrustworthy traditions of doubtful events." Both aspects of folk fantasy have their popular counterpart in the prejudices, stereotypes, irrational beliefs, and day-dreams inspired or encouraged by commercial and academic forms of mass communication and mass organization of thought.

As folklore approaches the level of the literate and artistic, it tends to become more elaborate and self-conscious in expression, to shape about itself a formal tradition with prestige value, and to become absorbed into the main stream of culture. As it approaches the level of the illiterate and subliterary, folklore constitutes a basic part of our oral culture, in the proverbial folk-say and accumulated mother wit of generations that bind man to man and people to people with traditional phrases and symbols. Folklore thus takes root in the "humble influences of place and kinship," of shared experience and wisdom, and has its flower and fruition in those works of art in which the individual artist succeeds in identifying himself with a folk tradition and giving it universal form and significance. On both levels—folk culture or folk art—folklore derives its integrity and survival value from a direct response to and participation in group experience, and the fusion of the individual and the common sense. B. A. BOTKIN

Folklore, or popular knowledge, is the accumulated store of what mankind has experienced, learned, and practiced across the ages as popular and traditional knowledge, as distinguished from so-called scientific knowledge. The distinction between the two is not always definite. The materials of folklore are for the most part the materials of social anthropology that have been collected from the barbarous and "uncivilized" regions of the world, as well as from the rural and illiterate peoples of the "civilized" countries. These materials have been obtained from the anthropological data of history or have been collected by anthropologists and folklorists in modern times. Specifically, folklore consists of the beliefs, customs, superstitions,

proverbs, riddles, songs, myths, legends, tales, ritualistic ceremonies, magic, witchcraft, and all other manifestations and practices of primitive and illiterate peoples and of the "common" people of civilized society. Folklore has very deep roots and its traces are ever present even among peoples that have reached a high state of culture. Folklore may be said to be a true and direct expression of the mind of "primitive" man.

The science of folklore is that branch of human knowledge that collects, classifies, and studies in a scientific manner the materials of folklore in order to interpret the life and culture of peoples across the ages. It is one of the social sciences that studies and interprets the history of civilization. Folklore perpetuates the patterns of culture, and through its study we can often explain the motifs and the meaning of culture. The science of folklore, therefore, contributes in a great measure to the history and interpretation of human life.

AURELIO M. ESPINOSA

A survey of materials published as folklore indicates that the subject is pretty much what one wants to make of it. I favor a conservative definition. Without attempting a formal statement, to me the term "folklore" is most meaningful when applied to the unwritten literary manifestations of all peoples, literate or otherwise. Stories, certainly, whether myths, legends, folktales, or anecdotes, are of primary importance. I would also add riddles, rimes, proverbs, folk songs, as well as folk beliefs and superstitions of almost all kinds. Regardless of how they are presented, these materials are folklore. Beyond this point one finds materials which may be treated in folkloristic fashion—games, cat's-cradle, ceremonies, witchcraft, to illustrate—but which in themselves do not, as I see it, necessarily constitute folklore. Outside the central literary core, folklore is best defined in terms of treatment rather than in terms of inherent nature.

GEORGE M. FOSTER

Folklore is that part of a people's culture which is preserved, consciously or unconsciously, in beliefs and practices, customs and observances of general currency; in myths, legends, and tales of common acceptance; and in arts and crafts which express the temper and genius of a group rather than of an individual. Because it is a repository of popular traditions and an integral element of the popular "climate," folklore serves as a constant source and frame of reference for more formal literature and art; but it is distinct therefrom in that it is essentially of the people, by the people, and for the people.

THEODOR H. GASTER

Folklore might be defined—not as applying to certain branches of lore rather than others, nor to certain kinds of people rather than others—but in terms of the ways in which it is acquired, used, and transmitted.

It is true that certain subjects (like ballad) are more associated in our minds with folklore than others, but there is nothing in the basic meaning of lore which suggests that any subject is excluded.

It is also true that certain cultures or groups have a more prevailing folklore than others. But every group and every member of it is a compound of elements that are folk and not folk; it is the proportion that varies. With sufficient search one could no doubt discover an atomic scientist who would refuse to walk under a ladder. With sufficient acquaintance we detect unique qualities in highly typical examples of folk products.

Folklore then may crop up in any subject, any group or individual, any time, any place. It might be thought of as comprising that information, those skills, concepts, products, etc., which one acquires almost inevitably by *virtue of the circumstances to which he is born*. It is not so much deliberately sought (like learning) as absorbed. It is not deliberately invented; rather it develops. It is present in the environment, is accepted, used, transformed, transmitted, or forgotten, without arbitrary impetus from individual minds. There may be deliberate efforts to combat it, as in the Westernization trends in China, or to revive and preserve it, but these are extraneous to *what it is*.

What was once a branch of learning, like astrology, may become folklore. What was once folklore, like the swastika motif, may be taken over and used or exploited in a non-folk manner. An individual work of art, like the Statue of Liberty, may become a group symbol, or a group symbol, like an African mask, may go into the painting of Picasso. These things are folklore, so long as they are acquired, used, and transmitted *in the manner of folklore*. When they cease to be, or before they are, used in that way they are not.

The nature of its development prevents the setting of any rigid limits to folklore. It is most clearcut where the group is most a unit, with cohesion and continuity. Anything which tends to break down the cohesion of a group—communications, diversity of knowledge, specialization, etc.—tends to scatter its folklore. But we are not justified in thinking, because it then becomes more elusive, that it ceases to exist or evolve. Nor can we think of groups simply in the traditional racial or geographic terms; they may be based on occupation, age, sex, economics, education, interest, etc., and in a complicated society new groupings are constantly presenting themselves.

The "group characteristics" which result from the accumulated nature of folklore, and by which we attempt to recognize and label it, are not to be thought of as opposed to individuality. Folklore is something which the individual has in common with his fellows, just as all have eyes and hands and speech. It is not contrary to himself as an individual but a part of his equipment. It makes possible—perhaps it might be defined as that which constitutes—his rapport with his particular segment of mankind.

M. HARMON

Originally the study of cultural curiosities, and held to be the survivals of an earlier period in the history of "civilized" literate peoples, folklore has come more and more to denote the study of the unwritten literature of any group, whether having writing or being without it. This development followed naturally upon the refinement of ethnographic method, which yielded continuously deeper insights into the nature and functioning of human culture, and revealed the defects of the older comparative approach, on which the concept of cultural survival was based. It became clear that the customs of living "primitive" folk could not properly be equated with those of the actual historic predecessors of Western European nations. In other words, "primitive man," wherever found, is not a contemporary ancestor. In Europe, recognition of this fact resulted in the development of the study of peasant cultures and other manifestations of earlier custom as a

discipline separate from folklore. This newer orientation, by defining more critically its field and approach, has freed folklorists for the study of popular literary forms, among peoples everywhere, whether they have a written language or not. This analysis is to be carried on, moreover, not only in the study of plot and incident, or to recover the place of origin and original form of the tales, but also to the end that these popular forms be considered in terms of the criteria, concepts, and problems of any living literature.

MELVILLE J. HERSKOVITS

Folklore in the specific sense, which is the usual one in the United States, embraces those literary and intellectual phases of culture which are perpetuated primarily by oral tradition: myths, tales, folk song, and other forms of oral traditional literature; folk speech and dialect as the medium of these materials; folk music and folk dancing because of their intimate relation to folk song; also customs, beliefs, and "folk science." Folklore thus exists in the city as well as in the countryside, and within groups that cut across such a division, but by preference it has been that of the countryside.

A wider meaning, of "folk life," more familiar in Europe and Latin America, covers the entire culture of a "folk" group, usually a rural group whose mode of life is rather different from that of its urban counterpart. Such a wide expansion of meaning, stemming from a special "folk" concept, has not been applied in the study of "primitive" or preliterate societies where the anthropologist's background in social science and linguistics appears indispensable for the study of native cultures as a whole, and also for a fruitful evaluation of the function and history of oral folklore.

The division of interest and of labor, suggested by these distinctions, has followed the different inclinations and methods of the student of culture and of society—whether anthropologist, rural sociologist, or social psychologist—and of the folklorist as a literary scholar. No doubt both can only gain by greater familiarity with each other's methods, points of view, knowledge, and insights.

GEORGE HERZOG

Folklore is a branch of cultural ethnology. The data of folklore are the myths, legends, traditions, narratives, superstitions, religions, rituals, customs, dances, and explanations of nature and man, acceptable to individual ethnic groups in each part of the world at any historical moment. Because these are all structures of the human imagination and frequently operate most powerfully when the groups or the individuals who constitute them are experiencing moments of crisis, the data of folklore are immediate and potent evidence of the nature of man when man is defining his fears and aspirations and searching for a security which always eludes him. Folklorists whose business it is to study folklore frequently become infected and find that instead of studying folklore they are in fact making it.

The methods of the study of folklore are: 1) collection of the data as they actually occur without, if possible, the intrusion of the folklorist's own mythopoeia, a primitive impulse which creates folklore; 2) a comparison of the data to determine what are the similarities and differences of these phenomena in the several ethnic groups; 3) an examination of the beliefs implicit in the data; 4) of the social and psychological impulses

which produce them, and 5) the functions folklore performs for the individuals and the social groups through which they operate.

Though persons concerned with folklore in our present period of Occidental culture are known as folklorists, they have been called at other times mountebanks, priests, poets, mystics, medicine-men, scholars. A general purpose of all these people whether they are producing an epic poem or editing the Pentateuch or an encyclopedia of folklore is to put their data together in such a way that they will make sense. The sorts of sense folklorists attempt to derive are various: Many are determined to prove that their social group is superior to others because their superstitions being generally accepted by their group are sound doctrine, whereas superstitions not accepted by the "we-group" are wicked, or at best quaint, heterodoxy. In this way and many others, the pleasure we get for example from the repetition of "family jokes," the folklore of each group tends to strengthen the group and to bring a sense of security and therefore superiority to the members of it.

Modern times have brought a new apology for an old impulse. The "scientific" folklorists search frenetically for origins and fill their pages with discussions of "original" dawn myths, stellar myths, totemism, diffusionism, and other pretentious explanations of an incomplete logic. Instead of having only one meaning, each fact in folklore has many meanings, even for the people of the group who most fanatically accept it. Until this semantic complexity has been grasped and a suitable grammar of discourse has been constructed to accommodate it, folklorists will continue to toy with the skirts of a great mystery. In the meantime the humanists, undismayed by a terminology which implies but does not present a scientific approach, will continue to meditate on the sorts of gaiety and terror which the peoples of all times and places record in the human structures known as folklore.

R. D. JAMESON

Folklore is the science of traditional popular beliefs, tales, superstitions, rimes, all dealing preeminently with the supernatural, and picturization of these beliefs in festive customs, games, mime, song, dance. It is essentially a communal product, handed down from generation to generation, and committed to writing by trained investigators.

The domains of folklore arouse debate. Its narrowest definition confines it to the shadowy remnants of ancient religious rites still incorporated in the lives of illiterates and rustics. More broadly it includes secular legends and songs, tales figmented from fact, superstitions of recent origin, and fragments persisting among sophisticated urban residents.

Folktale is distinguished from mythological tale by attenuation of religious significance, from fairy tale by the still extant (however vague) faith in veracity and efficacy. Likewise, by the current loss of function, folk dance and folk music are distinguished from ritual forms by their anonymous heritage and from revival and individual composition by folk style.

GERTRUDE P. KURATH

Folklore is the generic term to designate the customs, beliefs, traditions, tales, magical practices, proverbs, songs, etc.; in short the accumulated knowledge of a homogeneous unsophisticated people, tied together

not only by common physical bonds, but also by emotional ones which color their every expression, giving it unity and individual distinction. All aspects of folklore, probably originally the product of individuals, are taken by the folk and put through a process of re-creation, which through constant variation and repetition become a group product.

MACEDWARD LEACH

The term *folklore* as used today is ambiguous. The context in which it appears reveals whether the user is referring to all the unwritten narratives of primitive people and thereby drawing a line between the literature of primitive and civilized peoples; or to a poorly defined category of stories vaguely distinguished from mythology (an equally ambiguous term) by being of less serious content and significance to their primitive narrators. A connotation which adds to the confusion is a hang-over from the earlier European use of the word *folklore* to cover peasant customs, beliefs, and narratives—the anthropology of peasants.

KATHARINE LUOMALA

The entire body of ancient popular beliefs, customs, and traditions, which have survived among the less educated elements of civilized societies until today. It thus includes fairy tales, myths, and legends, superstitions, festival rites, traditional games, folk songs, popular sayings, arts, crafts, folk dances, and the like.

JOHN L. MISH

Folklore is a lively fossil which refuses to die.

It is a precipitate of the scientific and cultural lag of centuries and millennia of human experience.

In early times change was slower and less frequent, so earlier customs and beliefs had longer to form and to become deeply entrenched in the racial unconscious. These primitive patterns and mandalas, ripened and mellowed like hand-rubbed woods, have persisted beneath the hasty veneers of later civilizations, to surprise us with their beauty when we chance to uncover them. Beauty they have because they were formed slowly close to nature herself, and reflect her symmetry and simplicity. So, in a sense, folklore is how we used to do it and wish we could now. Hence, folklore is always the delight of children because it is the poetic wisdom of the childhood of the race. It is also the pleasure of the old who are wise enough to renew their youth by rebaptism in the eternal simplicities in completing the circle of life.

There is also, beside the juvenile, a strong feminine element in folklore, because its origin antedates the emergence of reason and belongs in the instinctive and intuitional areas. It is irrational and highly imaginative: much of it truly is termed "old wives' tales." Women have always been the savers and conservators of beliefs, rites, superstitions, rituals, and customs.

So folklore develops as the traditional, and usually oral, explanation of the origins and early history of man, as distinct from history, which is the factual record in writing.

The word folklore is used both for the body of tradition and the science of studying it. Folklore is the survival within a people's later stages of culture of the beliefs, stories, customs, rites and other techniques of adjustment to the world and the supernatural, which were used in previous stages, but the word also designates the scientific study of those survivals by later more

sophisticated persons whose own adjustment patterns make the survivals seem quaint, irrational, and superstitious, but also sometimes fascinating and nostalgically desirable. The experienced folklorist is never patronizing toward primitive patterns of life-adjustment.

CHARLES FRANCIS POTTER

It is usual to define folklore either literally as the lore of the folk or, more descriptively, in terms of an oral literary tradition. The first of these is a good broad definition including belief, superstition, and religious practice, as well as myths and tales. But it suffers from the difficulty which arises whenever any attempt is made to define "the folk." It is doubtful that the uneducated or illiterate can be considered apart from other persons, and the hypothesis which establishes the existence of such a folk identity would be almost impossible to validate. Modern interest in folk music and folk dancing has done much, however, toward perpetuating this definition. The second definition relies upon a distinction between an oral and a truly literary tradition represented in such productions as novels, poetry, and holy books. Many folklore analyses have been dependent upon oral materials gathered in societies with a written literary tradition, but a definition resting upon this contrast between the oral and the written fails utterly to meet conditions found among American Indian and other societies formerly without the art of writing.

In order to avoid the pitfalls into which either of these types of definition carry us, it seems wisest to define folklore simply as the study of verbal materials in all their varieties. Technical linguistics, music, the dance, and the graphic and pictorial arts would thus become closely related but essentially separate fields of investigation.

A brief discussion of the three schools of folklore active at the present time will help to illustrate the kinds of problem to which the folklorist devotes himself.

1) The Indic school has been most strongly influenced by the studies of Maurice Bloomfield. The members of this school began as Sanskrit scholars. They are both linguists and humanists. Their study of Sanskrit sources led directly to consideration of folklore, and some of our most valuable examinations of the continuity of motifs in time and space, and of shifts in meaning of phrase and incident, have come from these men. In addition, their work with native Indian scholars taught an appreciation of oral materials not usually to be found in the approach of the historian. Though relatively few in number and little known by the average folklorist, their work is extremely important to our understanding of folklore.

2) The anthropological school has worked largely, to date, in the American Indian field and owes its major emphases to Franz Boas. Its members are social scientists and are interested as much in linguistics as are the scholars of the Indic school. They, too, have insisted that if language materials are to be fully understood they must be most accurately recorded and most minutely studied. There is no substitute for texts and linguistic analyses. Faced, however, with the American Indian situation the emphasis has somewhat shifted. Whereas the Indic school worked in a continuous tradition of written language, the Americanist had to deal

with unwritten and unrecorded languages which were not only mutually unintelligible but also belonged to entirely different language stocks. Other cultural aspects differed as markedly, and the Americanist was forced to a consideration of basic differences. Upon his recognition of such cultural difference, he developed an approach which has since been fruitfully applied in other world areas as well. His attention has been directed toward an intensive analysis of culture patterns existing contemporaneously in the world today. Folklore has served as an excellent tool in this analysis; it has been used to investigate, and to illustrate, differences more intimate than formal and more psychological than linguistic. In recent years, although the anthropological school has not lost sight of changes occurring in folklore over space and time, it has tended to examine bodies of folklore with an eye for their uniqueness.

3) The Aarne-Thompson school of folklore differs from the other two in that its methods have derived primarily from a study of European folktales. It works in a purely humanistic atmosphere, and is impressed by the existence of an oral tradition which stands apart from the written or sophisticated like a parallel growth. Members of this school have been particularly interested in the collection and classification of folklore materials and have emphasized the importance of obtaining numerous variants of a tale. Their influence has been widely felt in both the United States and abroad, and has today in the United States become associated with the field of intercultural relations. MARIAN W. SMITH

Folklore consists of materials that are handed on traditionally from generation to generation without a reliable ascription to an inventor or author. Although proverbs, ballads, and other items of folklore are often credited to a particular person, this is itself a stylistic peculiarity of the genre, and the individual's claims are ordinarily dubious in the extreme. If they are capable of proof, we find that the material has suffered alteration or adaptation in the process of transmission. This "communal recreation" proceeds characteristically according to associative rather than logical ways of thinking. The materials handed on traditionally may be physical objects, ideas, or words. The folklore of physical objects includes the shapes and uses of tools, costumes, and the forms of villages and houses. The folklore of gestures and games occupies a position intermediate between the folklore of physical objects and the folklore of ideas. Typical ideas transmitted as folklore are manifested in the customs associated with birth, marriage, and death, with the lesser events of life, with remedies for illnesses and wounds, with agriculture, the trades, and the professions, and with religious life, notably with Christmas, Easter, and other holy days or saints' days. Verbal folklore includes words considered for their own sake and words occurring as connected discourse. Typical words that the folklorist studies without special regard for their use in connected discourse are place names, personal names (both family and Christian names), and nicknames. Folklore in the form of connected discourse includes tales of various kinds (märchen, jests, legends, cumulative tales, exempla, fables, etiological tales), ballads, lyric folk song, children's songs, charms, proverbs, and riddles. The study of folklore consists in the collection, classification, and

interpretation of these traditional materials. Classification involves interpretation to some extent. Interpretation seeks to discover the origin, meaning, use, and history of these materials, to state and explain their dissemination, and to describe their stylistic peculiarities.

ARCHER TAYLOR

Although the word folklore is more than a century old, no exact agreement has ever been reached as to its meaning. The common idea present in all folklore is that of tradition, something handed down from one person to another and preserved either by memory or practice rather than written record. It involves the dances, songs, tales, legends, and traditions, the beliefs and superstitions, and the proverbial sayings of peoples everywhere. It also includes studies of customs, of traditional agricultural and domestic practices, types of buildings and utensils, and traditional aspects of social organization; but for these latter aspects there seems to be a general agreement to consider them, when found in a primitive or preliterate society, as a part of ethnology rather than folklore. This latter division of labor is largely a matter of convenience and is not universally accepted. At least among literate peoples all the subjects mentioned above are considered as folklore, since all of them are truly traditional.

SMITH THOMPSON

Among American-trained anthropologists concerned with the cultures of preliterate peoples, the term folklore customarily has been used to refer to the various genres of orally transmitted prose and verse forms existent in primitive groups. Such forms include myths and tales, jests and anecdotes, dramas and dramatic dialogues, prayers and formulas, speeches, puns, riddles, proverbs, and song and chant texts.

This limitation of the term to designate one part only of any preliterate culture contrasts sharply with the customary usage of the same term by students of Euro-American, European, and other folk and peasant cultures. In folk cultures a large part, but only a part, of the total culture is transmitted orally; all such orally transmitted material is generally regarded by humanists as folklore. In this extended sense, then, folklore encompasses not only all traditional prose and verse material, but all traditionally learned arts and handicrafts and a vast body of social and religious beliefs and customs, subsumed by the anthropologists under the general term ethnography.

The educated layman's usage of the word folklore lies between the anthropologist's and the humanist's. This or that fact or theory, transmitted orally or in popular sources, as well as traditional prose and verse material, is folklore. Instead of using the outmoded term superstition, the layman is now more apt to refer to a folkloristic belief.

There is at present a noticeable tendency among cultural anthropologists to use unwritten literature, or primitive literature, or literary forms, to designate material which, even a decade ago, would have been called folklore. With more and more attention being paid by humanists to the study of the traditional in folk cultures, it may well be that the new terms for the anthropologists' relatively restricted materials will gain currency, and ethnography continue in use by anthropologists as practically synonymous with the humanists' use of the term folklore.

ERMINIE W. VOEGELIN

Folklore is that art form, comprising various types of stories, proverbs, sayings, spells, songs, incantations, and other formulas, which employs spoken language as its medium.

RICHARD A. WATERMAN

folklore and mythology The term folklore was coined in 1846 by the English antiquarian William John Thoms to take the place of the awkward term popular antiquities. The word has since been adopted by virtually all continental European languages. As currently used, it has two acceptations, viz. 1) the mass of the unrecorded traditions of the people as they appear in popular (i.e. non-literary) fiction, custom and belief, magic, and ritual, and 2) the science which proposes to study these materials.

The science of folklore is an historical science, historical because it seeks to throw light on man's past; a science because it endeavors to attain this goal, not by speculation or deduction from some *a priori* principle, but by the inductive method used in all scientific research.

The scope of folklore is to reconstruct the spiritual history of man, not as represented by the outstanding works of poets, artists, and thinkers, but as exemplified by the more or less inarticulate voices of the "folk." In this task it draws on documents which are partly historical, i.e. culled from chroniclers, poets, law codes, etc., whenever they reflect folkways as opposed to literary, artistic, and learned modes of thought, and partly oral, i.e. collected, roughly, within the last century and a half by professional or semiprofessional folklorists. In the evaluation and interpretation of these documents our science largely avails itself of the comparative method.

The term folklore and the definition given above clearly imply the coexistence of two traditions, a literary and artistic one on the one hand, and a folk or popular tradition on the other. This condition is fulfilled only among societies of a certain cultural level. Semicivilized people (savages, barbarians) lack the former of the two. In their case it is therefore inadmissible to speak of folklore. The collection and interpretation of their traditions, which are by definition oral, is the task of the sciences of ethnography and ethnology (anthropology) respectively. Since the comparative method must by definition largely draw on ethnographic data, it follows that folklore and ethnology (anthropology) are virtually inseparable.

An analogous connection exists between folklore and ethnology (anthropology) on the one hand and prehistory (archeology) on the other. Since all civilizations are known to have arisen in prehistoric times out of conditions of savagery and barbarism, the documents brought to light by prehistoric science are in many instances elucidated by beliefs and customs which have lingered on among the folk or are still believed in and practiced by semicivilized people. The fire drill is perhaps the most outstanding example of the survival of a primitive mode of fire-making in folk-ritual.

The science of folklore is eminently valuable in the interpretation of historical documents, chiefly those bearing on the ancient Orient, which include, of course, the Old Testament.

The science of folklore is no less valuable in the interpretation of historical documents forming part of the

classical literatures. Many customs and rites described by Homer, Vergil, Theocritus, etc., are elucidated by analogous customs and rites still practiced by the European peasantry. (Compare W. Mannhardt, *Antike Wald- und Feld-kulte*, Berlin, 1905; E. Samter, *Volkskunde im altsprachlichen Unterricht. I. Teil: Homer*, Berlin, 1923.) For the same reason folklore is an auxiliary in textual criticism and text interpretation, whence its usefulness to the various philologies (Classical, Semitic, Vedic, Teutonic, Celtic, etc.).

Certain branches of folklore have repeatedly been claimed as the forerunners of the modern natural sciences, both pure and applied. This has been notably true for magic, viewed in this light by Sir James G. Frazer. The justification of this claim however is rather doubtful. On the other hand, folk medicine or popular medicine is unquestionably a direct forerunner of medical science. While most of the assumptions underlying folk medicine are based on unproven *a priori* hypotheses, and while it frequently sees causal connections where there are none, many house remedies, forming part of the popular pharmacopœia, are ultimately derived from sound observations and, in some cases, from the results of experimentations, however rudimentary. Nor should it be forgotten that scientific, like popular, medicine is still largely empiric.

In many cases folklore materials, chiefly in the field of the local legend, receive significant illustrations from observations in the realm of psychical research and abnormal psychology, two fields the exploration of which is still in its infancy. This is notably true of various forms of divination, dreams, second sight, second hearing, levitation, telepathy, and similar phenomena.

Even more intimate is the connection of folklore and religion, more particularly the so-called natural, i.e. non-dogmatic, non-revealed, and usually but imperfectly organized, religions of the semicivilized and of classical antiquity, but to a certain extent also the great monotheistic religions (Judaism, Christianity, Islam, Hinduism, and Buddhism). This connection may be of either one of two kinds: 1) A religious system, grown out of a set of popular beliefs (folklore materials), gradually sloughed them off, relegating them to the realm of superstition, retaining only its philosophical and, chiefly, ethical content. This is essentially true of Protestantism and the more puritanical sects of Islam, e.g. the Wahabites. 2) A religion, in its origin purely ethical (such as Pauline Christianity) may subsequently absorb a vast amount of folklore material, so as to end up, for example, in medieval Catholicism. In virtually all known religions a constant strife has been known to be going on between those desirous of reducing the folklore element to the very minimum, considering it incompatible with their concept of true religion, and those others claiming that, while a religion thus purged of the popular element may serve well enough the needs of select spirits, the educated, it will never satisfy the people.

In the non-revealed, non-dogmatic religions of the semicivilized and of classical antiquity the folklore materials referred to usually take the form of myths. A myth (from Greek *mythos*, word, speech) is an explanatory or etiological (from Greek *aitia*, cause) tale trying to account for all sorts of phenomena (now explained by

modern science), and, since the agents held responsible for these phenomena are believed to be certain Powers (gods or demons), connected with these Powers. The total of these myths constitute a mythology. Thus we have a Hellenic, a Semitic, an Iranian, nay even an Oceanic mythology. Since these phenomena are not necessarily predicated upon a polytheistic religion, monotheism, too, may have its myths: the Old Testament is full of them. (Compare Sir James G. Frazer, *Folk-lore in the Old Testament*, London, 1918; H. Gunkel, *Das Märchen im Alten Testament*, Tübingen, 1921.) The various mythologies therefore constitute a very important branch of folklore. Since in particular the Hellenic mythology pervades literary works of classical antiquity, a first-hand acquaintance with the classical literatures is an indispensable condition for the student of folklore.

While it is true, as stated above, that all civilized peoples have two traditions, the popular and the literary or learned, it must not be supposed that the two are flowing side by side, as it were in water-tight pipes. The very opposite is true: there is a constant intermingling, and exchanges go on all the time, folklore materials being absorbed by poets and artists, while learned materials, book lore, penetrate to the masses, undergoing various changes and modifications in the process.

This fact has given rise to a controversy of some importance. One school, led by Hans Naumann, proclaims that the people properly speaking never create anything but can only re-create, adopting and modifying materials discarded by their betters. Thus the folk costumes and folk dances of the European peasants are in the main old-fashioned costumes worn by nobles and burghers centuries previously, and society dances once danced by knights and ladies. (Compare H. Naumann, *Primitive Gemeinschaftskultur*, Jena, 1921.) The older school, founded by J. G. Herder and the Brothers Grimm, had claimed that the creative people form the basis, making possible the individualistic art of poets and creative artists.

In the extreme form given it by Naumann the theory is manifestly absurd. On that score, semicivilized classless societies (e.g. most of the Indian tribes of the eastern and central United States and Canada) would be devoid of traditions, a supposition far from true; but it must be admitted that societies with more or less developed class system (e.g. the European, Polynesian, and that of the tribes of Oregon, Washington, and British Columbia) can boast of a considerably richer lore. The presence of social strata would thus seem to enrich the spiritual heritage of a given community, while social equalitarianism is apt to lead to a leveling down and to the production of uniform types.

A class system invariably involves a give and take. Thus the feudal society of southern France merely developed the lyric poetry flourishing among the peasants from pre-Roman times into artistic productions, thus creating the troubadour lyric. These types (*pastourelle*, *aubade*, *sérénade*, *chansons de la mal mariée*, etc.) were in turn transmitted to the masses and can even now be heard in village fairs, barn dances, etc. (Compare A. Jeanroy, *Les origines de la poésie lyrique en France au moyen âge*, Paris, 1925; C. R. Baskerville, "English Songs

on the Night Visit," in *PMLA* XXXVI (1921), pp. 565 ff.; A. H. Krappe, *Science of Folk-Lore*, London, 1930, pp. 153 ff.).

The diffusion of folklore materials is not limited to an exchange between the various social strata of one and the same society; it is known to have traveled and to travel still over vast areas of the globe's surface, thus presenting one of the most difficult but also most fascinating problems of folklore. In this diffusion folklore materials are to all appearances less handicapped by linguistic barriers than is literary material. The common fairy-tale types are known virtually over the whole Eastern hemisphere including Indonesia and parts of Oceania, while the French and Spanish-Portuguese colonists carried them to the New World. The ordinary types of local legends are found over the entire European continent, and the very term migratory tale tells its own story. What is more surprising is the ease with which folk songs and ballads cross linguistic frontiers; ballads known to be of Scandinavian origin are found in France and even in Spain, and virtually all Balkan languages, though differing widely in grammatical structure and prosody, show much the same ballad types. This phenomenon necessarily presupposes the existence of bilingual individuals gifted, in spite of their anonymity, with considerable poetic talent.

In the case of types of folk-literature showing a fairly complex structure or plot (fairy tales, local and animal tales, merry tale, folk song, and ballad) it is clear that the vast majority of them can have arisen only once, in one place, at one time, and it is the task of the folklorist to determine that place and that time for each story type. This is done by a judicious application of the geographic-historical method, first developed by the Finnish scholar Julius Krohn in his *Kalevala* studies and continued and extended by his son Kaarle Krohn. (See FINNISH FOLKLORE.) The dependability of the result largely rests on the number of variants available for a given story type and on their character, i.e. on the fact whether some of these variants are attested at a relatively early time, by historical documents, or whether they are exclusively oral, i.e. collected from the mouth of the peasants in the course of the 19th century or later.

On the respective importance of the historical and the oral variants, a controversy arose between Kaarle Krohn and the Bohemian scholar Albert Wesselski. The former claimed a greater independent value for the oral variants, while the latter was inclined to attribute more importance to the historical ones. For Wesselski's view this much must be admitted: If an historical variant happens to be more widely known, if, for example, it occurs in the Bible (e.g. the story of Joseph and his brothers), or if it is represented by a great play (e.g. *The Merchant of Venice*) or a poem read and memorized in schools, etc., there is a great probability of such an historical variant affecting the oral ones, at least in the regions where the historical ones enjoy popularity or wide currency. Such a literary contamination of oral variants must therefore be taken into consideration in the evaluation of the materials. Thus the stories of Perrault's *Contes de ma Mère l'Oye* have been shown to have influenced the oral folklore of Germany (compare H. V. Velten in *Germanic Review*, V, 1930, pp. 1-18). Oral variants thus affected are then of extremely

doubtful value in the task of tracing the history of a story type. Bearing in mind these reservations, we may claim, however, that by the criteria of internal logic and structural development the archetype reconstructed from a large number of variants stands much closer to the archetype of the story than do the historical variants, no matter how old they may be. (Compare A. H. Krappe in *MLQ* IV, 1943, p. 272.) This means that the pure folklore tradition is more conservative than the literary-artistic tradition. (Wesselski's views are set forth in the preface of his book *Märchen des Mittelalters*, Berlin, 1925, and in *Sudetendeutsche Zeitsch. f. Volksk.*, 1929, 1. Beiheft, pp. 44-5. K. Krohn replied in *FFC* 96 (1931), pp. 9 ff.)

In his emphasis on the historical variants of folktales Wesselski had been preceded by the Orientalist, Th. Benfey, the German translator of the *Panchatantra*, and one of the founders of our science. Benfey paid relatively little attention to the oral variants of folktales but depended on literary texts and internal criteria for tracing the history of a story type. He observed, for example, that the presence, in a tale, of certain Buddhist features, e.g. the peculiar view taken of animals, points to the Indian origin of the type (compare A. Aarne, *Vergleichende Märchenforschungen*, Helsingfors, 1907, pp. 3-82). Benfey was prone to postulate an Indian origin for most fairy tales. This was an exaggeration; but it must be admitted that subsequent research has borne him out in many instances (Krohn, *FFC* 96).

Benfey's school (to which belonged such illustrious scholars as Gaston Paris and Emmanuel Cosquin) was rudely attacked by Joseph Bédier, who in his *Fabliaux* (1st ed., 1893; 3rd ed., 1925) denied the possibility of tracing a folktale to its country of origin and of reconstructing its chronology. He did make out a case for the extreme difficulty of tracing such a history for many merry tales of extremely simple structure and presupposing most elementary human relationships. Such tales may even be supposed to have been invented more than once, independently, in more than one place (polygenesis). But for all stories of more complex structures Bédier's scepticism is to be rejected.

In the same work Bédier made a claim which is no better substantiated by the known facts. He asserted that stories embodying beliefs and practices peculiar to ethnical or religious groups are not readily received by groups to whom such beliefs and practices are foreign. This is not so. We have already seen that tales reflecting a peculiarly Buddhist attitude toward animals have frequently been freely taken over by non-Buddhist groups. Stories based upon the typically Iranian tenet of divine dualism are similarly known as far west as Brittany (Krappe, *MLN* 58 (1943), pp. 515-19) and as far east as the North American Indians of the Pacific Coast (O. Dähnhardt, *Natursagen*, I). For the diffusion of a tale it is sufficient that it be a good story, holding the interest of the listener, and that it be easily understood and reproduced. The fact that it may embody doctrines by no means held by those who take it over is of no importance.

Tales of this character, which are known as migratory tales, properly speaking, and myths are for this reason much easier to trace to their places of origin. Similarly, in the case of animal tales and fables, zoogeographical data frequently furnish a welcome clue. Thus the role

of King Noble, the Lion, in the medieval beast epic and in the fable, militates most strongly against the theory of a European origin of the story types in question.

The possibility of polygenesis must be admitted for many proverbs based on universal or nearly universal institutions, habits, customs, etc., though even here diffusion is by no means excluded. In many cases a closer linguistic analysis will throw light on the subject. Thus the well-known proverb *Ora est labora* cannot go back into Latin antiquity because the verb *orare*, when used in a religious sense (which is by no means always the case), is not used thus absolutely but requires an object and means to entreat, request, pray someone for something, etc. Its absolute use, as in the proverb, is not found until after the Christianization of the Empire. In fact, the proverb originated with the Benedictine monks. This example shows at the same time the utter necessity for a sound linguistic equipment of the folklorist, and it is no accident that most, and the most successful, students of folklore have come from the ranks of the philologists, both classical and modern.

A far more complex problem is presented by the well-nigh universal occurrence of relatively simple, nay rudimentary, folklore materials such as games, dances, rites, beliefs, institutions, etc., such as belief in Powers (the chief root of religion), fear of the dead, rites of aversion, the blood covenant, the awe inspired by multiple births. There are three different explanations available, viz. 1) they may be the common heritage of our species handed down from a time when this species lived in a narrowly circumscribed area and diffused, subsequently, with the diffusion of man over the earth's surface; 2) they may have originated subsequently and independently from a psychological basis common to all mankind; and 3) they may have been diffused from a diffusion-center in a given period more or less recent. The second of these explanations was propounded by a German anthropologist, Adolf Bastian. The third is now preferred by some quite prominent anthropologists: G. Elliot Smith, W. H. R. Rivers, F. Graebner, and others. The first explanation has thus far received least consideration, no doubt because it requires far more data on the mores of the apes, man's nearest relations, than we actually possess. None of the three explanations is, however, ruled out *a priori*, and the main question merely is which one of them is the more likely to explain any given phenomenon.

The answer to this question therefore necessarily depends upon the nature of the material. A good deal of what is now known as moon lore, i.e. beliefs and practices connected with the lunar phases (appearance of the new moon, lunar eclipses, etc.) is probably explainable on the assumption that the nightly star attracted man's attention from the very earliest times.

At the other end of the scale are materials manifestly derived from the one or the other of the great civilizations some of which (e.g. the Egyptian) go back 10,000 years and even more. Egypt and Mesopotamia formed gigantic diffusion-centers for the domestication of plants and animals with the mass of folklore material attached to them.

Explainable by Bastian's *Völkergedanke* are, probably, certain ingrained fears, more particularly the fear

of the abnormal, such as multiple births, albinism, the smith's craft, further certain widely spread institutions such as finger mutilation, the blood covenant, etc. But it cannot be emphasized too strongly that the whole subject is still very much in flux and that all doctrinaire theories such as those defended by the extreme diffusionists are to be rejected.

Man being by definition a gregarious or social animal (this is the correct translation of Aristotle's *zōon politikon*), all folklore materials represent social phenomena. They are the possession of social groups, not of individuals. Whence it follows that a given folklore may die with the death of the social group that has given rise to it and cultivated it. Thus the folklore of the ancient American peoples (Aztecs, Mayas, Peruvians) is as dead as are their languages and cultures. The ruthless destruction of Irish culture by Cromwell's vandals necessarily spelled the loss, largely irretrievable, of vast treasures of Irish folklore (compare Daniel Corkery, *The Hidden Ireland*, Dublin, 1925), and the ill-advised efforts of 19th century missionaries in the South Seas has had similar effects. English folklore is much poorer than Scottish and Irish because the industrial revolution led to the shifting, i.e. the uprooting, of entire populations, which left the land for the big centers of population, and the destruction of social groups thus encompassed resulted in the loss of their traditions.

The same phenomenon, that is, the growing industrialization of continental Europe in the course of the last century and the threatened loss of the traditional lore, led to the efforts put forward by friends of the past to collect these traditions ere it be too late, and this consideration has given our science the fine impetus which made it one of the foremost disciplines in European historical research and in the university curricula. This leads us naturally to present a sketch of the history of the science of folklore.

Like every science, folklore had to begin with the collection and classification of the material, and to do this effectively, it had to gain consciousness of itself. This happened twice in the history of Western civilization, first in Hellenistic times, when after the death of Alexander two or three generations of scholars, mostly connected with the great *Mousaion* of Alexandria, drew up repertoires of Greek and Near Eastern lore as it had been transmitted by poets and chroniclers. Their object was, however, mostly to utilize these materials, not so much for purposes of historical investigation as to clear up and explain allusions in the ancient poets, chiefly Homer and the lyrics, or to work them up in poetic form as fit subjects for literary composition. (Compare E. Rohde, *Der griechische Roman und seine Vorläufer*, 1st ed., 1867; 3rd ed., 1914.) This labor was not wasted, since without it we should not possess the materials stored up in Ovid's *Metamorphoses*, in the compilations of Parthenius of Nicæa and Antoninus Liberalis, to say nothing of the vast literature of the *scholia*.

It was different with the Hellenic mythology. By the time of Alexander's expedition the enlightened classes had completely lost faith in the traditional religion and taken refuge in various philosophical systems. This left open the question of how the traditional religion and the myths told about the gods had arisen in the first place. Two theories were put forward

to account for them, and neither one of the two can be said to be completely dead even now. They are: 1) the euhemerist theory, called after its supposed originator, Euhemerus (flourished about 300 B.C.)—in reality there were euhemerists long before Euhemerus—which sees in the gods dead kings and in their myths the distortion of historical facts. Thus the story of the Phœnician Cadmus, who left his home town, Sidon, to found Thebes in Bœotia and to marry Harmonia, was declared to reflect the flight of one Cadmus, cook of the king of Sidon, with Harmonia, the king's favorite flute girl. Hardly less absurd is the euhemerist interpretation of the rape of Proserpine: Proserpine, a daughter of Ceres, a Sicilian lady, was abducted by Pluto, a rich but somewhat unscrupulous farmer. Punishment overtook him, however, as he tried to cross a bog in his chariot: he was swallowed up with his fair prize. 2) The allegorical method, on the other hand, saw in the high gods personifications of celestial and other phenomena: Poseidon stood for water, Hera for air, Hephaistos-Vulcan for fire, etc. The earliest defenders of this theory were the poet Epicharmus (6th century B.C.) and Theagenus of Rhegium (5th century B.C.). This method was justly ridiculed by Plato (*Phaedrus*, 229 C ff.); but it lived on down into modern times, when Francis Bacon still saw fit to apply it (in his essay *The Wisdom of the Ancients*) and Max Müller merely remodeled it. (On the euhemerist theory see G. Boissier, *La religion romaine d'Auguste aux Antonins*, 1909, pp. 122 ff.; on the allegorical theory see P. Wendland, *Die hellenistisch-römische Kultur*, 1912, p. 112. For a critical evaluation of both see also A. H. Krappe, *Mythologie Universelle*, 1930, pp. 19 ff.)

There is some evidence to show that classical antiquity did evolve a sounder view on the origin of the traditional religion than would appear from this survey. Eusebius of Caesarea (*Praep. evang.*, II. 5), in refuting the allegorical school, drew attention to the fact that myths belong to a period of savagery, when men were as yet devoid of moral ideas and lived like beasts. Subsequently, being loath to give up the heritage of their ancestors, the Greeks retained these stories but reinterpreted them, to remove the stigma of savagery. Eusebius is not likely to have made this discovery by himself. In all probability he drew on some Hellenic philosopher of the school of Epicurus.

Throughout the Middle Ages and even in the Renaissance the euhemerist and allegorical schools reigned supreme. It was only early in the 18th century that the mode of approach adumbrated by Eusebius was rediscovered by the Jesuit father Joseph-François Lafitau (1681–1746), a French missionary in Canada and author of a work entitled *Moeurs des Sauvages Américains comparées aux mœurs des Premiers Temps* (Paris, 1724). In this book the striking similarity between the customs, manners, and religious ceremonies of the Canadian aborigines on the one hand, the Greeks of Homer and the Hebrews of Moses on the other were pointed out. The same reasonings were taken up and continued by Voltaire, in the introduction to his *Essai sur les mœurs*, by Fontenelle in his essay *De l'origine des fables* (see G. Hervé in *Revue de l'Ecole d'Anthropologie de Paris* XIX (1909), pp. 388 ff.), and by the President Charles des Brosses (1709–1777). Des Brosses was the direct source and inspiration of the Scottish

man of letters and scholar, Andrew Lang, the founder of scientific mythology.

Unlike his 18th century precursors, Lang did not have to fall back exclusively on ethnological material, a procedure not free from objections, since to many it seemed incongruous to explain the myths of Hellas and Rome by the lucubrations of savages. For meanwhile the science of folklore had come into being. It began with the collection of folklore materials by scholars, men of letters, and highly intelligent amateurs: Bishop Percy and Sir Walter Scott in Britain, Svend Grundtvig in Denmark, the Brothers Grimm in Germany, Giambattista Basile in Italy, and Charles Perrault in France. The first to use these materials in the manner in which Lafitau and his successors had used anthropological data, namely for purposes of comparison, was the German Mennonite Wilhelm Mannhardt, whose lifework was continued, in Britain, by the Scottish scholar, Sir James Frazer, the leading historical folklorist of the present century. Frazer was not only a brilliant classical philologist, the learned commentator of Pausanias, Apollodorus, and Ovid, but also a highly competent jurist, a fact which accounts for the excellent scholarship shown in his studies of human institutions. If Krohn's historico-geographical method is indispensable in the tracing of the diffusion of folklore material, Mannhardt's and Frazer's comparative method is best adapted for research in origins.

There is one domain which, thus far, has been relatively neglected, namely the psychological side of folklore. It had the misfortune of being discredited, at the outset, by the ill-supported and wholly unsound fancies of Freud and his pseudo-science, represented by the surrealists. But the prejudice thus created, with reason, by their absurdities and aberrations must not blind us to the importance of the psychological processes underlying many of the phenomena and factors of folklore. This is particularly true of folk-memory, which would seem to constitute the very basis of our science, but also for the strange coincidence between certain traditional stories and phenomena brought to light by psychical research. (Compare Alfred Lehmann, *Aberglaube und Zauberei*, übers. v. D. Petersen, Stuttgart, 1925.) This branch of folklore is still in its infancy, and closer cooperation of classical psychology and historical folklore is, at the present time, urgent desideratum.

ALEXANDER H. KRAPPE

Folklore Section of the Library of Congress The Folklore Section of the Library of Congress was established by an administrative order of the Librarian of Congress,

Dr. Luther H. Evans, on August 22, 1946, exactly 100 years after the coinage of the word folklore by William John Thoms, a fitting recognition by the Library of Congress of the broadened activities of folklorists in the United States. The Library of Congress' first interest in the preservation of oral materials in the field of folklore began in 1928 when Robert W. Gordon was appointed as Curator of the Archive of American Folk Song. Gordon's scholarly direction was important in shaping the course of the Archive which was subsequently to be under the administration of John A. Lomax and his son Alan (1933-42), Dr. Benjamin A. Botkin (1942-45), and Dr. Duncan B. M. Emrich (1945-). Through their efforts and those of well-known collectors whose work has been associated with the Archive of American Folk Song, the collections grew until in 1949 individual songs, fiddle tunes, banjo tunes, and other pieces reflecting the music of the people numbered more than 50,000 on more than 10,000 different cylinders, discs, and tape recordings. Initially, both Gordon and the Lomaxes made necessary field trips for the collection of the recordings, but as interest in the subject grew in the United States and as recording machines became readily available, field trips were discontinued by the Library staff. Now the collection of records is made by the Library of Congress in cooperation with universities, colleges, foundations, and other scholarly organizations to which the Library of Congress makes equipment available on loan. The Library of Congress has recently encouraged the establishment of regional archives in each state in order that scholars may have locally available the material in their own region. These archives are normally housed in the collections of the state university and have come into being at such institutions as the University of Arizona, University of California at Los Angeles, Occidental College, Murray State College, University of Utah, University of Wisconsin, Wayne University, and the University of Michigan. Only in very exceptional cases is the recording equipment of the Library loaned to individuals who are not connected with institutions.

From its collections the Library of Congress has published 22 albums containing 107 records representative of the best material from the recordings. These include albums of Anglo-American songs and ballads, Negro work songs, spirituals, Indian ceremonial chants, and albums of folk music from Latin American countries. They are available to the general public and may be purchased from the Recording Laboratory of the Library of Congress. A catalog describing the series is available upon request at a cost of ten cents.

Important collectors who have cooperated with the Library of Congress in increasing its record collections include Helen Creighton, Austin Fife, Wayland D. Hand, Arthur L. Campa, Sidney Robertson Cowell, Frances Densmore, William N. Fenton, Levette J. Davidson, Frances Gillmor, Melville J. Herskovits, Herbert Halpert, Thelma James, Louis C. Jones, George Pullen Jackson, George Korson, Margot Mayo, Alton C. Morris, Artus Moser, Vance Randolph, J. D. Robb, Charles Seeger, and Henrietta Yurchenco.

The Archive has broadened its activities in recent years and effected exchange agreements with comparable institutions throughout the world, including the

Cecil Sharp House in London, the Musée de l'Homme, the Musée des Arts et Traditions Populaires, and the Phonothèque Nationale in Paris, and other institutions in Europe as well as in Latin America and the United States.

The increased interest in the broader aspects of folklore as distinct from folk song are reflected also in exchange agreements which have been realized. These are being effectively carried out through the medium of the International Commission on Folk Arts and Folklore with offices in Paris and the International Folk Music Council with offices in London.

The collections in the field of folklore have also been increased with the addition to the Folklore Section of the WPA manuscript collections.

folk medicine See CURES; DISEASES; EGG CURING; FORMULAS; MEDICINE, and various individual articles on specific diseases, as EPILEPSY, LEPROSY, etc.

folk-say Coined in 1928 as the title of an annual collection (1929-32) of folklore and folk and regional literature by its editor, B. A. Botkin, the term has been defined by him (*American Speech* VI, 1931, pp. 404-06) to mean "folklore as literature," with the emphasis on the "oral, linguistic, and story-telling (whether in tale or ballad) aspects of folklore and its living as well as its anachronistic phases." Thus conceived, "not as a substitute for 'folklore,' but as an extension of it, to supplement the older term with one possessing wider and fresher connotations, not fixed by academic usage," the word has become specialized in three senses: 1) "as told by" accounts, including reminiscences, old-timers' stories, folk history, etc.—what the folk have to say about themselves, in their own words (see B. A. Botkin, "Folklore as a Neglected Source of Social History," *The Cultural Approach to History*, edited by Caroline F. Ware, 1940, pp. 309-15); 2) the creative use of folk materials, especially as developed in the folklore work of the Federal Writers' Project under Botkin's national direction (see Donald Ogden Stewart, *Fighting Words*, 1940, pp. 7-14); and 3) proverbial, colloquial, idiomatic, and figurative phrases, sayings, and bywords (by confusion of folk-say with folk-saying). In his introduction to *The American Imagination at Work* (1947) Ben C. Clough uses folk-say and book-say as antonyms. [BAB]

folk song See SONG; FOLK SONG AND MUSIC OF FOLK SONG.

folktale The term folktale as used in English is very inclusive. No attempt has ever been made to define it exactly, but it has been left as a general word referring to all kinds of traditional narrative. It applies to such diverse forms as the creative myths of primitive peoples, the elaborate frame-stories of the *Arabian Nights*, the adventures of Uncle Remus, Puss in Boots, and Cupid and Psyche. Such a wide definition is a great convenience in English, since it frequently avoids the necessity of making decisions and often of entering into long debates as to the exact narrative *genre* to which a particular story may belong.

It will be seen that the characteristic feature of the folktale is the fact that it is traditional. It is handed down from one person to another, and there is no virtue in originality. This tradition may be purely oral. The tale is heard and is repeated as it is remembered,

with or without additions or changes made by the new teller. Sometimes the tradition may be literary, as when a story keeps being told by one author after another. Many of the tales now current among the peoples of Europe appeared in writing in the collections of exempla used as illustrations by medieval priests. These collections repeated each other through the centuries and may have gone back to oral sources or the inventiveness of some literary author. In any case they became traditional, and the student of folktales is interested in them. Not all scholars would agree to speak of these literary tales as folktales, but the weight of usage tends to include them.

If we use this broad definition for the folktale, we shall find that it is as nearly universal as any form of human literary expression. As more and more of the primitive peoples of the world are studied, we see that men everywhere and in all types of culture have told tales. Though there is a difference in the emphasis and in the proportion of folktales in particular groups, many of the principal forms are practically universal. It is possible with considerable success to make comparative studies not only of the themes of folktales but also of the narrative techniques among peoples of very diverse cultures, from the simple Australian aborigine to the peasant of modern Europe and even the professional story-teller of the bazaars of Cairo.

Forms of the folktale It is convenient to use certain terms in connection with the folktale to differentiate some of the forms in which the tales appear. It must be understood, however, that these differentiations are rather loose and that they vary to some extent from country to country and from one cultural group to another. Usually the teller of tales is not much concerned with such distinctions. Certainly the primitive tale teller would not recognize any such categories as we might set up. On the other hand, folklorists in Europe have come to use such terms as *Märchen*, *Sagen*, legends, traditions, fables, animal tales, myths, and the like, with some degree of definiteness.

Legends and Traditions Some authors have tried to distinguish between the terms legend and tradition, but an examination of the literature shows that usage in English is utterly confused. There is no word corresponding to the German *Sagen*. Writers in English have, therefore, usually resorted to the combined form, legends and traditions. There is some agreement to include under these headings several distinct categories of narrative: a) explanatory legends having to do with creation or with origins; b) stories concerned with supernatural creatures such as fairies, dwarfs, and ghosts; and c) legends about historic or pseudo-historic characters such as the Pied Piper of Hamelin or Lady Godiva. A legend or tradition is always told as a fact and is presumably believed by the teller. But though it may be connected with a definite time and place, it may well change such details and still remain an object of belief.

Fairy Tales The German *Märchen* is frequently translated "fairy tale" in English. It is nearly always fictional in intent and thus differs from the legend or tradition. See FAIRY TALE.

Animal Tales Nearly all peoples tell short anecdotes about the adventures of animals. These are, most of

them, anthropomorphized so that the animal actually has human characteristics. Good examples are the Uncle Remus cycle from Georgia. See ANIMAL TALE.

Fables When the animal tale has a definite moral, usually expressed at the end of the story, it is known as a fable. Most fables belong to the literary tradition, although they frequently become a part of folklore. See FABLE.

Myths There is little agreement in the use of the term myth. But it certainly can be considered as one branch of the folktale. It concerns the world as it was in some past age before the present conditions were established. It treats creations and origins, and therefore may be identical with creation and origin legends. When it handles adventures of the gods, it may well be identical with the fairy tale. Many divergent theories as to the nature of the myth have been held in the past. All of them contain a grain of truth but none give entire satisfaction.

STITH THOMPSON

Fomorí (from Irish *fomór*, giant, pirate) One of a mythical, prehistoric people who raided and pillaged Ireland from the sea: defeated and slaughtered, except for a handful, by the Tuatha Dé Danann at the Battle of Mag Tured. They are sometimes mythologically associated with the powers of nature which challenge man: winter, storm, fog, crop-blight, disease. See FIRBOLG.

fontomfrom drums The talking drums of the Ashanti people of West Africa. They are male and female and are dressed in rich garments. Their specific function is to drum out proverbs: each individual drummer drums a whole saying on his own drum. Seventy-seven of the proverbs are known, drummed, and recognized via the drum medium at Mampon (see R.S. Rattray, *Religion and Art in Ashanti*, London, 1927, pp. 286 ff.).

food superstitions Most widespread in Middle America is the idea of categories of food known as "hot" or "cold," or "fresh" or "irritating," which have nothing to do with the actual temperatures of the foods, or even the presence or absence of spices. To the Maya of Chan Kom, Yucatán, wild turkey, rice, boiled eggs, pork, squash, papaya, and limes are "cold," while coffee, beef, honey, and pinole are "hot." The Tarascans of Tzintzuntzan, Michoacán, in Mexico, consider unboiled atole, pork, bass, milk, tamales, pears, oranges, and peaches to be "fresh," while rice, potatoes, bananas, mangoes, chocolate, wheat, chickens, beef, and boiled atole are "irritating." A third intermediate category is often found. In some cases this is comprised of foods with no distinctive qualities, and in other cases hot and cold foods may be mixed to form an intermediate meal. Among some peoples hot and cold foods must not be eaten at the same meal. [GMF]

food tabu in the land of the dead The proscription against eating or drinking anything in the land of the dead on pain of being detained there forever. By partaking of food or drink in the land of the dead, the

partaker becomes kin to or one with the dwellers in that land and is unable ever to leave them or return to the land of the living. The classical story of Persephone, abducted by Hades and doomed to return to Hades periodically for eating one small pomegranate seed, is perhaps the most famous example of the underworld food tabu motif (C211.2).

This motif is not only of classical antiquity but represents a living and widespread belief among contemporary primitive peoples. It turns up in the ancient epics of the world and has filtered into folk and fairy tales, songs, and ballads all over Europe. There are late Jewish usages of the idea and it is conspicuous also in Danish, Swabian, Lapp, Swedish, Manx, and Scottish tradition.

The *Kalevala* reveals how Väinämöinen journeyed to Tuonela in search of certain magic words but had sense enough to refuse the seething tankard of beer that was urged upon him.

The people of New Caledonia believe that when a man dies and arrives in the spirit land, he is given a great welcome and offered a feast of bananas. If he eats he can never return; if he refuses he stands some chance of getting back to the land of the living. The Melanesians warn any living man who would visit Panoi, their underworld, to touch no food in that place or he will be forced to remain there. There is also a New Zealand Maori story, containing the food tabu in the land of the dead motif, about a young girl who died for love. Her lover begged the gods to let him visit her in Reinga, the underworld. They consented but warned him to eat nothing that might be offered him. The tabu against eating in the other world motif (C211) is common also among the Haida, Tsimshian, Kwakiutl, Pawnee, and Cherokee North American Indians. Analogous are many stories, especially of Tlingit, Tsimshian, and Kwakiutl tribes, about people who have drowned and been carried off by the land otters. Those who eat the food of the otters can never return. Two White Mountain Apache boys out hunting birds came to where the ga'ns were living underground. Food was offered them and they ate. When they returned home food was offered them as usual but they could not eat, because they had eaten where the ga'ns lived.

The same tabu holds in the fairylands of the world (C211.1): one must not eat fairy food or he cannot go home again. The food of the gods in the Celtic otherworld confers immortality, not death, upon the partaker; but the same rule holds that it binds the mortal to the god and he cannot return to his human habitation. Once Conle had tasted the apple thrown to him by the fairy woman, he was irrevocably compelled to follow her to that wonderful otherworld from which he never returned. Apples and rowanberries especially are mentioned as conferring a quality of beauty which old age could not dim. The rule works in reverse also. There is a Scandinavian story about a girl from elfland who had to eat earthly food in order to remain with her earthly lover (C661). And in Tonga (Polynesian) mythology also, the eating of mortal food was fatal to beings from the afterworld. Compare ADAPA.

Fool Plough, Fond Plough, or Fond Pleef In England, especially in the northern and eastern parts, an

agricultural festival (sometimes a pageant), observed usually the Monday after Epiphany (Plough Monday) before plowing is begun, or sometimes observed at the end of Lent to celebrate the termination of plowing. Young farm workers dressed in white shirts or night-shirts drag a decorated plow through the countryside, from village to village. In the north of England the Fool Plough goes about accompanied by a number of sword dancers and musicians. The Bessy, a man in grotesque woman's clothing, and the fool, dressed either in skins or wearing a fur cap and tail, go from door to door soliciting money. At one time the money was collected to buy candles to burn on local altars; now it is openly intended to provide food and drink for celebration and merrymaking. In Northumberland every time the Bessy receives a contribution, a gun is fired; if she is refused, the men plow up the path or dunghill.

In eastern Yorkshire on Plough Monday or Twelfth Day (January 6) the farm youths go from town to town dragging the plow from which the plowshare has been removed. When they stop to solicit they perform an antic dance around the personalized implement. Each group is said to be headed by "Mab and his wife," the usual clown and man in female garb, with blackened faces.

footprint The mark of the foot left in the earth, or in ashes, sand, etc.: widely believed to be one of the body impressions by which magic can be worked on a person. Certain Australian aborigines believe that they can lame an enemy by putting sharp stones or broken glass in his footprints. In Burma and northern India sores on the feet are often attributed to interference with one's footprints on the part of an enemy or witch. Many African peoples take care to obliterate their footprints for this reason; and insects which scurry back and forth and blot out the tracks of hunters and warriors are especially revered by many primitive peoples. Hunters among the Zulus, Hottentots, and some West African tribes put charms in the tracks of their quarry to prevent the animal from getting too far ahead. Some North American Indians also did this. So identified with the personality of man or beast is his footprint in early belief that the Seneca Indians say the bear knows when someone looks at his track.

In Bohemia, to lame a man the earth of his footprint is put in a kettle along with a nail, a needle, and some broken glass and allowed to boil till the kettle cracks. The man will be lame for the rest of his life. In Lithuania it is said that if the dust of your footprint is buried in a graveyard, you will sicken and die. In Estonia merely to measure the track with a stick and to bury that much of the stick has the same results.

Some southern United States Negroes today believe that if you tie up the earth or sand of a person's footprints in a little red flannel bag, and carry the bag with you, that person will be compelled to follow you. This is used especially as a love charm. Zuni Indian women also sometimes keep the soil of their husbands' footprints where they sleep, to keep the husbands faithful.

Many peoples believe they can catch the footprints of supernaturals in strewn ashes. The visitations of the returned dead or the identity of guardian animals or

spirits, or of troublesome demons, are often ascertained and revealed by their footprints left in strewn ashes. On St. Mark's Eve in rural England ashes were formerly sifted on the hearth; whosever footprint was seen in it in the morning would die within the year.

In Ireland if the fairy host rushes past you on All Hallows Eve, take up the dust from under your feet and throw it after them, and they will be compelled to give back any human being they are keeping among them.

In folktale there are magic footprints (D1294), transformations from stepping in footprints (D578), transformations to animal form by drinking from an animal's track (D555.1). Footprint as life token occurs in Icelandic saga (E761.1.3.1): if it filled with earth, the hero was sick, if with water, he was drowned; if it filled with blood, it meant he was killed in battle. Local legend everywhere in the world identifies marks on rocks, cliffs, mountains as the footprints of gods, demons, and other supernaturals. See ADAM'S PEAK.

forbidden fruit or tree A concept known to all Occidental cultures through the passages in *Genesis* which describe the planting of trees of all varieties in the Garden of Eden and the prohibition against eating the fruit of the Tree of Knowledge of Good and Evil. The theological lore about these trees is extensive with a general agreement that Adam was expelled from the Garden lest, having come to a knowledge of good and evil, he might eat of the tree of life also and become, like God, immortal. Theologians are not in agreement as to whether these trees belonged to the apple, the citrus, or to other genera. The symbolism of the forbidden fruit (forbidden tree) has entered extensively into the folklore of Occidental peoples and has become part of the lore of unique forbidden foods, rooms, questions, and general tabu, of which it is undoubtedly a special form. [RDJ]

 There is a Bantu forbidden tree story (known in some six or seven variants from the Basutos to the Begas in the Cameroons) in which the fruit of a certain tree can be eaten only by those who learn the name of the fruit and only with the permission of the owner. The weight of the tabu and the consequences of breaking it do not seem to be pointed up, however. The story begins with messengers being sent to ask the name of the tree. In a Suto version, Lion sends the animals to find out the name of the tree from Koko (literally, Grandmother, and as has been suggested, probably some tribal ancestress). Koko tells them the name and they travel homeward, repeating it lest they forget, fall into an anthill, and do forget. Lion himself goes and asks, also forgets. Tortoise goes, falls into the ant-hill, but remembers anyway. In resentment for Tortoise's success, Lion orders him to be buried. Then the animals proceed to eat and enjoy the fruit, leaving, however, the top branch intact (in some versions evidently a stipulation). In the night, Tortoise digs himself out, eats the fruit on the top branch, and goes back into the hole. The next day Koko comes in anger to the animals, asking who ate the forbidden fruit. Tortoise escapes punishment by reminding one and all that he has been buried.

In some variants the owner of the tree is a god, or the tree is the god incarnate. Some tribal versions give

Tortoise the role of messenger; sometimes it is Hare, sometimes Monkey. In the Benga version Python is in charge of the tree; Rat is the first messenger, Tortoise the last and successful one. In this case Tortoise succeeds where the others have failed because his mother has warned him not to eat or drink en route. So when finally he gets back and his canoe overturns on the beach, he is still saying over and over, "Bojabi, bojabi" (the name of the fruit), when the others pull him ashore.

The folktale motif of the forbidden tree (C621) in which the fruit of any tree but one may be eaten is extremely widespread and turns up variously in general European folklore, in the Eddas, in Semitic, Siberian, Latin-American, and also in Indonesian folktale.

forecastle song A leisure song of sailors, sung in the dog-watches in the evening, often accompanied by mouth organ, jew's harp, fiddle, or accordion, and chosen from ballads, music-hall songs, popular or sentimental songs of home. The chanteys, being work songs, were not heard at ships' concerts. On the clipper ships songs of patriotic exploits and battles at sea were favorites, often rousing considerable partisan spirit when Britishers and Yankees in the crew refought the Wars of the Revolution and 1812 with *The Stately Southerner* (*The Yankee Man of War* or *The Ranger*), *Ye Parliament of England*, and *The Constitution and the Guerrière*. Come-all-ye's of all trades took on sea-going trappings to suit the sailors' interests, cotton-picking, lumbering, railroading, soldiering, prison and mining complaints all adding to the song wealth of whalers, fishermen, and "packet rats." Such songs as *Barnacle Bill the Sailor* (known to forecandle hands as *Abel* or *Abram Brown*) and *Bell-Bottomed Trousers*, which have found a new audience over the radio, were popular long ago with seamen, in versions not acceptable for the air. *The Golden Vanity*, in many of its variants, *High Barbaree*, garbled but still spirited, *Blow Ye Winds of Morning*, as uninhibited as the whalers who sang it, were among the ancient British ballads that went to sea, and *The Little Mohee* (*The Lass of Mohea*), as sung by the Pacific whalers made the "fair Indian lass" a "pretty Kanaka" from Hawaii. Men at sea still sing, and while the radio and the ship's movies provide most of their songs, many of the old airs and verses survive, and the new ones are tailored and trimmed to the taste of the twentieth century mariners. *Venezuela*, sung as a forecandle song in the movie, *The Long Voyage Home*, achieved some degree of popularity on land, being often requested from the shouting audiences at folk song concerts in the 1940's.

forget-me-not A small herb (genus *Myosotis*) with tiny blue, rose, or white flowers, sometimes called mouse-ear because of the shape of the leaves.

Forget-me-nots are said to cure the bites of serpents and mad dogs. They are used as a poultice for sore eyes; boiled in milk and water they are a cure for dysentery. In Siberia they are used in the treatment of syphilis. Steel tempered in the juice of these plants is said to be so hard that it will cut stone without being dulled. At one time it was customary to give forget-me-nots to anyone starting on a journey on Feb. 29, and later they were exchanged among friends on that day.

formulas Among the Cherokee Indians, charms or prayers written by the shamans for their own use, but also sometimes recited by the individual requiring them. The sacred formulas of the Cherokees pertain to every phase of their daily life. There are love formulas, curing formulas, childbirth formulas (i.e. to expedite delivery), formulas for luck in hunting and fishing and with crops, and for finding lost articles. No luck follows the hunter or fisher who forgets the sacred formula. There are weather formulas, formulas for protection against evil, and for killing people. There are even formulas for weakening the other side in a ball game.

Most of the formulas begin with the word "Listen" and are written in two parts: 1) a set of practical directions for the use of herbs or other materials; 2) an invocation to specific supernatural forces to bring the desired result. Very often a formula *states as already true* that which it is designed to bring about. "No one is ever lonely with me. Your soul has come into the very center of my soul, never to turn away," is part of one of the most beautiful and most widely published of the Cherokee love charms. Formulas intended to make a rival unattractive and lonesome sometimes result in a social isolation so great that no one will speak, joke, or dance with him.

The disease formulas are next in importance and number to the love charms. They are not all curing formulas, however. Sometimes a man's parents or his best friend will send a disease to him merely to test his endurance or to teach him counterspells. These are called "ordeal diseases." The childbirth formulas are "to make children jump down."

The Hupa Indians of California also possess a vast number of medicine formulas. To cure the sick the shaman recites a long story of some mythical person who went to the end of the world and found the cure for just such a disease as the patient now suffers. The sacred ceremonial curing chants and dances of the Navaho, which have undergone no alteration or omission of either word or gesture since their beginning, might be classified as sacred formulas, although the word is not currently applied to them.

formula tale Any folktale following a certain traditional pattern and in which the plot is secondary to that pattern. Cumulative tales, catch tales, endless tales, circular tales or prose rounds, and unfinished tales are all formula tales. There is also a type which avoids the use of pronouns, and another type which always ends with a question (usually in regard to the awarding of a prize equally deserved by several contestants). This last is of three kinds: either it ends with an unusually clever and inevitable answer, or the problem is posed and the answer left to the audience, or else it falls into a more purely formulistic class such as the typical cumulative story which also ends with a question, as "Once there was a woman; the woman had a son; the son had red breeches; the breeches had black buttons," etc., etc., ending with "Shall I tell it again?" Most formula tales are told in the spirit of pure fun, and some of them are definitely play-game tales.

Forseti or Forsete In Teutonic mythology, the son of Balder (light) and Nanna (purity). He was the wisest and most eloquent of the *æsir* and was made god of justice. No one ever found fault with his decisions. He

lived in the radiant palace, Glitnir. Helgoland was once known as Forseti's land because he helped a council of Frisians who had met there to codify their laws.

Fortuna The Roman goddess of fortune and good luck: identified with the more obscure Greek Tyche. Most often she is represented standing on a globe or ball (later a wheel), indicating the mutability of her favors, and with a cornucopia in one hand from which she strews luck with the other. However, she had many other aspects and attributes: she appears with a rudder, guiding the world's affairs; as *Fortuna virginensis*, she protected newly married women; as *Fortuna virilis*, she preserved their beauty so that they pleased their husbands; as *Fors Fortuna*, she was the goddess of luck. Fortuna is often veiled or blindfolded. Her shrines at Antium and Præneste were oracular; the latter is one of her more ancient cult centers, where she was worshipped as *Primigenia*, the oldest daughter of Jupiter, the goddess of destiny. The wheel of fortune, symbolizing the precariousness of things in this life, was a favorite classical allusion of writers of the later Middle Ages.

Forty-Seven Ronin The forty-seven retainers or followers of Asano, heroes of *The Loyal League of Forty-Seven Ronin* or *Chushingura*, a famous Japanese puppet play, based on a historical incident, and first presented in 1748. The *daimyo* Asano was insulted in the Shogun's court by Kira, another nobleman, in 1701. Asano drew his sword, an act of impiety within the sacred precinct, for which he had to commit hara-kiri. His fortune was confiscated and his family declared extinct. The forty-seven Ronin, or retainers, were apportioned to other nobles, but swore to avenge their dead master. After two years of adventuring, they caught up with Kira and assassinated him, thus fulfilling the demands of Bushido, the code of honor. But they had transgressed the civil law and so, after placing the enemy's head on Asano's grave, all forty-seven disemboweled themselves. The Buddhist temple in Tokyo where they are buried is still a popular shrine. The story and characters are the subject of many Japanese paintings.

fox The lore of the fox has taken so many different and distinct directions in the folklore of the world that the data is most readily presented as independent streams which can be brought together only after more elaborate discussion than is possible here. The lore of the British Hunt Clubs, for example, is only remotely connected with the medieval beast epic centered about Reynard the Fox. This in turn has slight connections with lycanthropy (woman into fox) and other European shape-shifting. To this must be added the rich and apparently inexhaustible lore of the Chinese and Japanese shape-shifting foxes (usually, fox into woman). Tales of European and Oriental shape-shifting foxes are parallel to tales of other shape-shifters—Krappe suggests weasels, though the list might be considerably enlarged—and these are undoubtedly parallel to the tales of succubi, incubi, and poison damsels.

The British Hunt Clubs have developed a very special vocabulary which describes the etiquette and procedure of the hunt, and they have a large store of tales about the cunning of the fox in flight as well as about the habits of the fox.

The Epic of Reynard is a series of tales and poems which appeared in Europe about the 11th century A.D.

and reached the height of their popularity in the 14th and 15th centuries. This collection, written by unknown authors, was intended largely for the amusement of the middle and lower classes as the courtly epics were written for the chivalric classes. It satirizes the habits, customs, and prejudices of the churchmen, knights, and lawyers. In the early poems of the cycle, Reynard was called into court to defend himself for his several crimes. This cycle is connected with the literary fables about foxes such as *Æsop's Fables* and with the lore of the hunters.

The Europeans as well as the Chinese and Japanese have many stories about human beings who at the full of the moon or under conditions of emotional strain either imagine that they are wolves or foxes or actually become wolves or foxes and run about fields and graves. Robert Burton calls this "Lycanthropia, which Avicenna calls Cucubuth, others Lupinam insaniam or Wolf-madness." A classic parallel to this was the classic Greek cult of Zeus Lykaeos. The assumption in a large number of these European tales is that the normal state of the creature is human and that the shift in shape and nature is a reversion, a curse, or a form of insanity. The preponderance of evidence in the Chinese tales—if preponderance be taken as the number of stories, variety of incident, or frequency of repetition—is that the nature of the creature was originally fox, though similar formulæ are used for cats, dogs, weasels, even trees, and that these creatures by the exercise of discipline acquired the power to assume human form.

Although the disciplines necessary to acquire the power of shifting shape are, in their very generalized form, late formulations, they can be traced back to very ancient sources, the great corpus of Chinese lore. This is still preserved in part in Chinese popular Taoism. The theory was already corrupt in the T'ang dynasty (618–907 A.D.) but can be traced in the writings of the Han scholars (206 B.C.–221 A.D.) as well as in the *Book of Odes* and the *Book of Rites* of the Feudal Age (1100–221 B.C.). Thus the theory of how foxes or other creatures acquire power to shift shape is part of the Chinese ethos.

Two methods of shape-shifting are available: first, by the study of the classics, and second, by sexual trickery. The first, known as the legal method, is open to all, and shape-shifting foxes on interrogation often express amazement that human beings with so many advantages so seldom make use of it, for ultimately the study of the classics leads to immortality. The general view of the Chinese philosophers that the purpose of study is to produce "sageliness within and kingliness without" is, when translated into popular terms, that study produces elevation, saintliness, or power. Thus foxes who study the classics acquire first the power to become human beings, then immortals, finally gods. Many stories are told about human beings who have surprised groups of young foxes in a circle about an old white fox who is expounding the classics. The motif of the "fox school" is also known in European hunting lore. Some of the Chinese stories conclude with the statement that the teacher, when he assumes human form, is a tutor or a well-known scholar in the village. The difficulty about the legal method of acquiring power to shift shape is that it is arduous and requires a long time, as well as more concentration than most foxes are capable of.

Most stories are about foxes who have acquired shape-shifting power by the illegal method. This method is based on an important tenet in Chinese erotology, namely that in sexual intercourse the person who experiences the orgasm first loses a unit of life essence and if the partner can restrain orgasm this unit is absorbed. Thus foxes who can assume human form, if at first only briefly, can by seducing other human beings steal life essence and add it to their own. The formulæ for this sort of tale range from the simple to the complex. Examples are: A student who retired to a tumble-down cottage or deserted temple to prepare for the state examinations was visited at dusk by a beautiful maiden who became his mistress. Her erotic skill was such that the student became consumptive and finally died. Variations include the student who desired a fox mistress and announced his desires at dusk in a graveyard or before a deserted temple. At times the shape-shifters sincerely love their human paramours, help them with their studies, care in filial fashion for their parents after death; but they seldom are reported to return the life essence they have stolen. Occasionally the parents or friends become aware of the situation in time and call in either a shaman or a Taoist official specially trained in fox exorcism and drive the thief away.

Stories of fox reward and fox revenge are numerous, though Chinese authorities are inclined to believe that stories of fox reward are spurious. Inasmuch as foxes can become invisible and hear everything that is said and read everything that is written, the wise scholar will tell only flattering stories about foxes and keep silent about their wickedness. However many stories are told about hunters or farmers who have been rewarded for freeing foxes from traps or saving their lives when they were being hunted. A popular theme is of the fox and the scholar. Foxes who acquire power by sexual trickery are criminals and subject to death by a blast from the Thunder God. Scholars are by definition upright men possessed of great power whom the Thunder God will not harm. Consequently during thunder storms, foxes either in human or in fox form seek the protection of scholars. The rewards are of many varieties: fame, prosperity, success in the examinations. Because foxes are great thieves and can be invisible, they keep the money chests filled and complications ensue when a neighbor having marked his wealth finds it in the possession of a friend. At times this discovery is engineered by the fox who is offended by some careless comment by its patron.

More stories are told about fox revenge than about fox reward. Fox revenge is often carefully fitted to the offense. A hunter was bitten by a fox when taking it out of a trap to kill it. He shouted, "Defile your mother," which is a common Chinese obscenity, but the fox escaped. When the hunter returned home he found his mother in the embraces of a young man who when attacked changed into a fox and escaped, calling back, "I have done to you what you threatened to do to me." A mandarin who was very fond of his wife took a beautiful maiden to bed while he was on an official journey. After a time he became suspicious that his companion was a fox. He drove her away with curses. When he returned he found a hundred women in his Yamen identical with his wife in every respect: speech, bearing, bodily marks. The many ingenious attempts to separate

the true wife from the spurious ones belong in the cycle of the Judgment of Solomon.

Foxes and their numerous families, whether they have acquired power by legal or illegal methods, often take up their residence in deserted buildings, attics, or barns of family compounds. When human children annoy them by being noisy or throwing bricks at them or using impudent language the foxes retaliate by themselves throwing bricks or destroying curios or creating uproar. Other fox families are said to live quietly and respectfully, exchange gifts with their hosts on formal occasions, and, when their children become as obstreperous as human children sometimes do, they offer apologies and make amends.

In general the shape-shifting foxes of China are said to be mischievous, tricky, and libidinous. They are very fond of wine and are often discovered because when drunk they assume their true fox form. They most frequently assume the shape of human females if they use the illegal method, though in some instances they become males and steal the essence of human females. Some of the revenge and reward stories are for harm or kindness done in previous existences. In one instance a fox caught in *flagrante* with a human female justified himself by saying that the woman had been his wife in an earlier existence. They had been killed before their time. She had been incarnated as a woman and he as a fox. Having studied to acquire power he had been permitted to visit the woman a stipulated number of times that their destiny might be fulfilled.

Another cycle of fox tales, not so widespread as the cycle just summarized, is of the poor man living alone who came home at night to find his house in order and his dinner on the fire. He discovered that every morning a fox came to his hut, shed her skin, and became a woman. He stole the skin. They lived happily and prosperously for many years until the woman discovered the skin, put it on, and ran away. Stith Thompson has reported variants of this story from North America, Greenland, Labrador. W. Jochelson has a somewhat corrupt version from among the Koryak on the shores of the Bering Sea. Oral variants have been collected from several parts of China and an early 19th century version was reported by a Chinese official visiting on Okinawa which was at that time part of Chinese territory. This fact again raises the question of the origin and diffusion of Chinese tales, which cannot be answered until the dark spots on the folklorists' map have been filled in by better collections than are now available.

Japan has a rich store of tales about shape-shifting foxes. The lore in Japan has been formalized by the Shinto priests until it is a recognized part of the cult. In China too, many of the stories have been modified by the priestly traditions though Chinese scholars have little respect for the Taoist priests, witches, fortune-tellers, and when they are feeling like scholars keep these stories in their proper place as part of the lore of the folk. Alexander Krappe is undoubtedly right when he asserts in an exploratory article, which is excellent in spite of a number of errors, that many of the Japanese tales came from China ("Far Eastern Fox Lore," *California Folklore Quarterly*, April, 1944). The parallels between these Chinese-Japanese tales and stories about succubi and incubi, fatal brides, other

shape-shifters, and persons suffering from lycanthropy will, when they are straightened out, form a fascinating section in comparative folklore. [RDJ]

✍ Fox in Japanese is *kitsune*; the magical animal par excellence of Japanese folklore, said to be able to bewitch people, and assume human shape. All foxes are believed to be malicious, except the Inari fox, the messenger of the Harvest God. [JLM]

✍ Fox as a male animal character plays a fairly prominent role in trickster and other tales in western North American Indian mythology. In many instances Fox is trickster's companion; at times he deceives Coyote and eats the food which Coyote has procured for himself. Among the Eskimo the most notable tale about Fox is that of Fox-Woman; this tale has Siberian parallels. The story concerns a man who comes home each night to find that his house has been put in order by a mysterious housekeeper. He hides near home one day and sees a fox enter his house; upon going inside he discovers a beautiful woman whom he marries. One day he enquires what causes the musky odor which he notices about the house; his wife admits that she gives forth the odor, immediately takes off her handsome skin clothing and resumes her foxskin, and quietly slips away from the house, never to return. See OFFENDED SUPERNATURAL WIFE (OF HUSBAND). [EWV]

Fox and the Crane The title of one of Æsop's fables in which the Fox invites the Crane to a meal and serves him soup in a flat dish. The Fox laps it up easily but the Crane cannot eat. The Crane then invites the Fox to return the visit and serves him his food in a long-necked bottle. Moral: Turn about is fair play. This is the subject of a widespread European motif, inappropriate entertainment repaid (J1565), fox and crane invite each other (J1565.1; Type 60) of which there are also one African and three North American Indian retellings known.

Fox and the Grapes One of Æsop's fables (Jacobs #31), in which a hungry Fox, after trying in vain to reach some grapes hanging on a vine, walks away saying to himself that they were sour anyway. Moral: It is easy to belittle what you cannot get. The aptness of this fable has caused the expression "sour grapes" to become a by-word reference in colloquial English for anyone trying to rationalize a failure by belittling the end he strove for. The most modern retelling of the fable is the cryptic "The Mookse and The Gripes" episode in James Joyce's *Finnegan's Wake* (1939), p. 152 ff.

Fox and the Raven Title of one of Æsop's fables (Jacobs #8) in which a Raven sitting in a tree with a piece of cheese, is flattered by a Fox who admires her wings and talons. "But," says he, "that such a bird should be lacking a voice!" The Raven, pleased by such flattery, opens her mouth to caw and drops the cheese, which the Fox promptly eats. Moral: A flatterer is no friend. This is a common European folktale motif (K334.1; Type 57).

foxxglove Any plant of a genus (*Digitalis*) of the figwort family: from Old English *foxes-glōfa*, literally foxes' gloves. The term fox-bells is associated with a northern European story telling how at one time foxes' brushes were a potent amulet against the Devil, and the foxes were hunted constantly. They appealed to their

gods for help, who put these bells all through the fields so that they might ring and warn the foxes when the hunters were abroad. When the danger was over, the bells lost their sound. There is another story in which these flowers were given for gloves to the foxes by the fairies, to wear while stalking through bird roosts and chicken coops at night. They would make them less noisy.

There is a folk or popular etymology explaining the word foxglove as folk's glove because they are said to be worn by various classes of the little people commonly called folk. The Irish names, for instance, are *lus na mban síde*, plant of the fairy women, *méiríní púca*, puca or fairy fingers, *méaracán síde*, fairy thimble, etc. Translation of the Welsh term is goblin's gloves; in Yorkshire they are called witches' thimbles. In parts of Scotland they were called dead man's bells. If you heard them ring you were not long for this world. In France they are called *gants de bergère*, shepherdesses' gloves, *gants de Notre Dame*, gloves of Our Lady, *doigt de La Vierge*, Virgin's finger.

In classical Greece and Rome the juice of the foxglove was used to ease the pain of sprains and bruises. In Italy today the leaves are bruised and bound to wounds. It was early known to be a poison, and in Europe it was used only externally until the 18th century, when it began to be recommended for fevers, insanity, and diseases of the heart. It was also found to be "available" for the King's Evil. The Indian tribes of New England knew it as a heart stimulant before this fact was known in Europe. In Ireland foxglove is used to stimulate weak heart, banish fleas, and reduce lumps.

fox persuaded to talk A general European folktale motif (K561.1; Type 6) in which a fox has grabbed a cock and is running off with it, followed by the hue and cry of the people, "The fox has stolen our cock." The cock says to the fox, "Tell them I am yours not theirs." When the fox opens his mouth to speak the cock escapes into a tree. This incident of escape by persuading the captor to talk (K561) is very widespread, with varying details as to captor, captive, and dialog. The fox in the bear's mouth asks the direction of the wind, for instance, and escapes when answered. Jamaica Negroes have an Anansi story called *Grace Before Meat* (see Beckwith *Jamaica Anansi Stories*, MAFLS XVII, 239) in which Anansi and Monkey, traveling together, come upon a tiger in a pit. While Monkey sends his tail down the hole to help Tiger out, Anansi climbs into a tree. When Tiger comes up out of the hole he grabs Monkey and is going to eat him. But Anansi advises him first to clap his hands with joy. Tiger does so and Monkey escapes.

The old woman who is being carried to the sky up a tree in a bag in her husband's teeth, to see the wonders of the upper world foolishly asks if it is much farther. "Not much farther," says the husband; the bag falls to the ground and the old woman is smashed to bits (J2133.5.1). This is in Clouston's *Book of Noodles*.

Fragarach In Old Irish mythology, the terrible and wonderful sword called the Answerer, which Lúg brought with him from the Land of the Living. It could cut through any armor.

frame story A story forming a frame in which other stories are told; a narrative permitting the introduction of several (often many) other stories, unrelated to and having no effect on the frame story itself. The technique is to give a group of unrelated tales an over-all unity and dramatic meaning by making them part of a common situation. Chaucer's *Canterbury Tales* are all related to the frame of the pilgrimage, Boccaccio's *Decameron* to the situation growing out of the plague. The technique is Oriental and probably Indian, where such technique is found from an early period and is developed to fantastic complexities as in the *Panchatantra*.

[MEL]

Frankie and Albert (or **Frankie and Johnnie**) An American popular ballad dealing with a "sporting woman" who shot her man for "doing her wrong." The song dates from the latter half of the 19th century and still has living claimants to the role of Frankie, none of whom can be authenticated. One of these is a Frankie Baker, of Portland, Oregon, who shot Allen Britt under circumstances resembling those of the song in 1899. However, the song is said to have been known many years before that incident. It has hundreds of variants, in blues style, in mountain style, in backwoods and bayou settings, and even in the cante fable manner. The heroine is variously known as Frankie, Sadie, Josie, etc., and the man as Albert, Johnnie, etc. The other woman has more aliases than either of the principals, being Nellie Bly, Alice Fly, Alkali, Ella Fry, etc. It is likely that the story originated on the Atlantic coast and traveled west to develop its many Mississippi versions. It is sung widely by both Negroes and whites and is popular among students, who generally sing it under the title of *Frankie and Johnnie*.

Frau Hütt Subject of a medieval local legend of the Tyrol, built around a certain rock which resembles a woman. The rock is said to be Frau Hütt, a woman of that locality who was turned to stone for wasting food.

Frau Welt The name given to the female supernatural paramour or fairy mistress of general European folk belief by medieval clerics; according to them, the Devil.

fravashi (Pahlavi *fravāhar*; Persian *farvar*) In the Avesta, one of a group of angels with whose aid Ahura Mazda made the plants grow and give offspring; in Zoroastrian belief, one of the guardians of human and divine beings whose name is explained as meaning protection or confession of faith; an ancestral spirit. A fravashi is one of a mighty army of spirits which exists in heaven before the birth of a man, protects him during his life, and is united to his soul at death. The fravashis war against evil and promote the good in the world. According to A. V. Jackson belief in them may date from pre-Zoroastrian times.

Incense is burned in honor of the fravashis and those who fulfill their duties to these guardians will have their houses filled with good things. They are worshipped especially on the 19th of each month and during the last ten days of the year. In the Avesta the *Fravardin Yasht* is devoted to their glorification.

In Armenia the fravashis are also worshipped. They are believed to live near the tombs and houses of their

kinsmen and are commemorated on Saturdays and before the great festivals. Compare MANES; PITRIS.

Frazer, Sir James George (1854–1941) Scottish anthropologist. He was born at Glasgow, educated at Glasgow and Cambridge universities, was elected fellow of Trinity College (Cambridge) in 1879, called to the bar in the same year, and became professor of anthropology at the University of Liverpool in 1907. He was knighted in 1914. His principal work, on which his fame rests, was *The Golden Bough* (1890), reissued in 12 volumes under various titles between 1911 and 1915. An abridgment in one volume appeared in 1922, and a supplement, *Aftermath*, in 1936. *The Golden Bough* is an extensive study of ancient cults and folklore and comprises a vast amount of anthropological research. While remarkable as a collection of data, the work's conclusions are now often considered somewhat dubious, in the light of more recent and more factual investigations. Frazer assumes that all peoples have gone through the same stages of cultural development and that they all react and express themselves similarly; also, that in later stages there may be survivals of earlier stages. Frazer's two theories overlook the consideration that each people has its own historical development and its own culture. Among Frazer's many works are: *Totemism* (1887), *Adonis, Attis, Osiris, Studies in the History of Oriental Religion* (1906, later included in *The Golden Bough*), *Questions on the Customs, Beliefs, and Languages of Savages* (1907), *Totemism and Exogamy* (1910), *The Belief in Immortality and the Worship of the Dead* (three volumes, 1913, 1922, 1924), *Folklore in the Old Testament* (1918), *The Worship of Nature* (1926), *Myths of the Origin of Fire* (1930), and *The Fear of the Dead in Primitive Religion* (three vols., 1933, 1934, 1936).

French folklore Folklore has thrived for countless generations in the rich home soil of France, where immigrant peoples encountered and mingled with the natives of ancient Gaul. Very early it began to find its way abroad, first from the *provinces du Midi* (or *Oc*) to Poitou on the lower Loire river, to the *provinces d'Oil* in the north, and at times the reverse. Then from France it traveled far and wide, across the Pyrenees into Spain, the Alps into Italy, the English Channel into England, and the Atlantic into North America. In almost every century it was enriched with elements brought in by peaceful or warlike invaders: Romans, Goths, Normans, Scandinavians, Saracens, Bretons, Germans, and British. In a rather recent period of expansion, it embarked with fishers, whalers, and adventurers, and landed with them at many ports of call, there to take root and flourish. It also escorted into the New World a horde of colonists, missionaries and teachers, *coureurs-de-bois* and *voyageurs*, and fur traders. Like a tree firmly set in the ground, it spread its branches over a huge field, and shot its winged seeds onto the four winds. Fluid and ethereal, it met with no obstacle across its path, no fast frontier anywhere within reach. On foreign soil, after blending with its like of other extractions, it gave rise to new brands on the borderlands, as it did among the North American Indians.

The legend of Gargantua, the blundering giant of folk extraction immortalized by François Rabelais in his *Pantagruel* (from 1533 on), enjoyed popularity among the people of Poitou and Normandy. So it must

have done, in French America as well, at an early date. For the adventurers of the fur trade carried it to the Great Lakes. Point Gargantua in the neighborhood of Grand Portage, according to Bigsby,¹ was "a prominent ... feature on the east side of Lake Superior..., and the River Gargantua issues at the bottom of a small bay beset with isles contiguous to the point."

Folktales The folktales of the Middle Ages, known in France under the name of *Romans de la Table Ronde*, and in England under that of *Arthurian* or *Round Table legends*, entered America along with the earliest settlers. They have stayed there ever since, and nowadays are retold in the basin of the St. Lawrence, at Old Mines (*Vieilles Mines*), Missouri, and around the *bayous* of Louisiana. Not only do they survive among French Canadians and Americans, but also among the Indians that have come under their sway. This belated growth, two or three centuries old, was exposed by Stith Thompson, in his *European Tales among the North American Indians*.² Here are analyzed a number of such tales as "The Seven-headed Dragon," "John the Bear," "Little Poucet," "The White Cat," "Cinderella," "Jack the Trickster," "The Master Thief." From old France they and a number of others passed on to many North American natives from the Atlantic to the North Pacific Coast and down the Missouri and Mississippi, with the French immigrants, settlers, voyageurs, and half-breeds. "By far the greatest contribution" [of European tales among the American Indians] Thompson writes, "has been made by the French, in Canada, and to some extent, in Louisiana" (p. 456). "The two or three centuries' contact with the French in Canada has been the most powerful influence; it has introduced the largest number of different tales to the natives" (p. 321).

Folk Songs Folk songs, although less ancient than folktales, have come down in part from the late Middle Ages and the Renaissance. Their sources often are much older than their recorded versions. Like folktales but less freely because of their set form, they moved back and forth, up and down rivers, along highways, over hills and across mountains; they sailed across the seas to islands such as Jamaica, San Domingo, to Brazil. Of this there are sundry examples, for instance *Seven Years at Sea*.

No other sailors' chantey compares with it for historical interest. It tells of a sailing ship seven years at sea. Starving, the sailors decide to draw lots and cut a set of straws. Whoever pulled out the shortest would be feasted upon for the relief of the others. The captain drew the shortest, but dodged his fate only because Ti'-Jean, the page boy, climbed the rigging and burst into singing, "Courage, I see land fore, right, and left, resplendent Babylon town, three doves, and the loveliest maidens three. If ever I land, the youngest I'll take home with me."³ Scholars have compiled a number of French and Scandinavian versions. Mila discussed nine Catalan versions for Spain. Puymaigre, in his study "A Nau Cathrinetta," spoke of four distinct Portuguese forms. Doncieux' *Romancéro*, in 1904, contains a survey of its migrations; it lists over 26 French versions, more than 11 for Spain and Portugal, 6 in the Breton language, 4 for Scandinavia. The English *Folk Song Journal* has brought to light some British records. This chantey also exists in Switzerland. Nowhere is it as familiar as in

French Canada, where more than 20 versions have been recorded. Its peregrinations, as summed up by Doncieux, all point to its cradle on the seacoast of Brittany and Anjou; this is still its main center of distribution.

From the coast of western France, the mariners carried *Seven Years at Sea* to the shores of Provence and Gascony, then to Catalonia in Spain. The Catalan version was adapted in Portuguese, in the guise of *A Nau Cathrinetta*. This was the name of a famous 16th century ship, the pride of Portugal in her day. Portuguese writers hailed this chantey as of fantastic import, nothing less than the embryo of the maritime epic of their nation. Thackeray adapted it into an amusing rime entitled "Little Billee," where figure three sailors from Bristol—Jim, Jack and Bill, the cabin-boy. Bill, in the topmost sail, beholds Jerusalem, Madagascar, North and South America, the British fleet at anchor, and Admiral Napier, K.C.B. Another English parody appeared in *The Academy*, XXVI, 1884. And this song has since lapsed into a familiar studio parody in Paris. Under this form a sailor is actually devoured by the captain. In due time a funeral is held, and an inscription is graven on the captain's stomach.

Of a different type is the famous tale of *Pyramus and Thisbe*, well over two thousand years old, and familiar to Shakespeare, who uses it in his *Midsummer Night's Dream*. It was already well known in Europe. We find it in the Roman poet, Ovid, who wrote on the ancient lovers of Babylon. Their misfortunes and suicide, in a desert haunted by a lioness, were recounted just before the Christian era. This tragic tale journeyed to Rome all the way from Asia Minor. Then it started on a new trek through the centuries to France and Great Britain. At one time, in Normandy, it was embodied in a semi-narrative and lyric lay of Anglo-Norman expression.⁴ The producers of broadsheets and imagery, in the 15th century, exhumed it. Very soon they printed it in verse form, along with the legends of *Alexis*, *Le Juif errant*, *Geneviève de Brabant*, *Damon et Henriette*, *Saint Nicolas*, *Julien*. . . The calendars, in the latter part of the 16th century, embodied *Pyramus*. In the form of a song of 250 lines, bearing the imprint of Pellerin (of Epinal) and of other image-makers, it entered the Lower St. Lawrence, during the past two hundred years. Now it is remembered by Canadian folk-singers, one of whom, in 1916, bore the name of Louis L'Aveugle, a blind itinerant of the Saguenay River.⁵

The story of *Saint Alexis* was nearly as old in its inception; it became as widely traveled. A 4th century fiction from Asia Minor, it has retained the name of Edessa as its starting point. From Edessa, Alexis in the end landed at the port of Ostia near Rome, where he died in sanctity. His story started out on a long devious way, in script or verbally, towards France and Canada. Its exotic theme—the desertion of the bride by the bridegroom for mystic reasons, the life of a pauper in strange lands afar, and the final refuge in his father's castle, where he died, unrecognized and despised, under the stairway—retained its appeal on foreign soil during more than a millenium. In France, it was embodied in one of the three earliest scripts in the *lingua vulgaris* of the 11th century. Resurrected later by the broadsheet makers, it awakened to a new life. Now partly lost in France, it is still recited along the St. Lawrence. It was recorded there several times in recent years, particu-

larly from the folk-singer Louis L'Aveugle of the Saguenay.

Another sample from the dim past is the song of *Dame Lombarde*.⁶ As its name indicates, it originated in northern Italy, in the 8th century, and eventually crossed the Alps, northwards. Almost wholly unrecorded in French literature, it followed the 17th century colonists into Canada, and came to light, in no less than 12 versions, all of them recorded at this late day below Quebec city. In a weird affair of poisoning, the tale is told of a Lombard king having incurred the hatred of his wife Rosmonde, who avenged the death of her father. She gave him a wine potion containing venom from a serpent's head crushed between golden plates.

Not quite so ancient, the *complainte* of *La vieille magicienne* (The Old Witch) dates back to 1290.⁷ It tells of the profanation of the Host. At the demand of a Jewish pawnbroker, a woman had redeemed with a sacred wafer her garments and jewels, only to see him led to the scaffold on the heights of Paris. On the way, he was consumed by a stroke of lightning. Confiscated, the pawnbroker's property passed to the hands of the guild of joiners called "La Confrérie des Menuisiers de Madame Sainte Anne," and was placed in the care of the religious order of the Carmes mitigés, and its church, Les Billettes, was maintained until the French Revolution. The episodes of this tradition, during the Middle Ages, were illustrated in famous tapestries, and some of the details came down to us in two folk songs, now apparently forgotten in France, but recovered in French Canada.

Not a few folk songs, in the repertory of both France and French America, go back to the Middle Ages, among them *La Passion de Notre-Seigneur*, *Le petit pauvre et le mauvais riche* or *Dives—the Lazarus parable*, *Le docteur qui vend son âme au Démon* (Dr. Faustus selling his soul to the devil for renewed life and fortunes—the famous Theophilian legend), *Les danseurs châtîés* (The Impious Dancers chastized—their fate was to dance until their death), *Dessus le pont de Londres* or the disobedient young dancers drawn to their death by drowning when London Bridge collapsed—possibly a 13th century event, *Les ecoliers de Pontoise* (the three young Paris scholars hanged at Pontoise during the reign of St. Louis, and whose deaths were wantonly avenged by an elder brother at the Court of France), and a number of others. Some of these ancient songs have been analyzed by the scholars of several countries; they are *Le roi Renaud*, a Breton and French form of the *Elf King* or the *Vise de Sieur Olaf* of Scandinavia; *La porcheronne* or *Germaine*—the Crusader returning home after a prolonged absence, to find his faithful wife persecuted by his own mother; *La marâtre* or the orphan children ill-treated by their stepmother; they went back to the grave of their mother, who nursed them miraculously; *La fille du roi de France* cast into a dungeon to languish, because she refused to renounce her love; *Le flambeau d'amour*, a princess gives a signal from a tower to her lover; he tries to swim a river and dies by drowning. This last tale is an echo of another story of tragic love, of the classical legend of *Héro et Léandre*, and reminds us of an episode in *Tristan et Isolde*.

The wealth of this epic lore is hardly equalled in

other continental countries. The medieval France of the Crusades erected Gothic cathedrals, wove glorious tapestries, and blossomed forth in countless songs and romances. Yet, strange to say, the best field nowadays in which to find whatever is left of the oral literature of the Middle Ages, is no longer France itself, but the colony founded by France in the New World. Huge collections of ancient tales, legends, and songs are now being recorded in Acadia and French Canada. These oral traditions have in the past century fallen into oblivion or decay in their original homeland.

The *littérature courtoise* of medieval France chiefly centers in its Troubadour poems and songs. Thousands of these have been recovered from archives and compiled by the medievalists of European countries. A unique class in this literature consists of pastourelles or shepherd songs, in which the golden age of chivalry excelled. Women enjoyed no social standing in the Orient and in classical antiquity. This attitude was reversed as soon as the northern European countries, France in the lead, spoke for themselves through art and literature. Gallantry became a mark of refinement; a *chevalier* courted a *grande dame* and placed her upon a pedestal, there to burn poetic incense. These effusions might have become stilted, had not the lover strayed away at times from the staid paths of convention. Pining love led to devious adventures, away from castle or mansion, into Arcadian fields or on pastoral hills. Fond of an escapade or seeking relief in lyrical outbursts, courtly seekers of *faciles amours* at times met with shame and rebuke. In the earlier stages of this literature, they were greeted by shepherdesses still unspoilt and happy. But abuse, at the hands of decrepit or trifling philanderers, set the countryside on its guard. Flageolet tunes or lofty echoes changed to the barking of shepherd dogs or the tricks familiar among a rustic folk. The range of this genre encompasses several centuries, mostly from the 12th to the 14th century. After it had seemingly arisen in Provence and Languedoc, in "Le Midi" which had come under the influence of Latin culture, it spread northward across the Loire River, firmly established itself in the whole of France, and spread to the neighboring countries—Britain, Germany, and beyond, as if from a radiating center.

The *littérature courtoise* held the foreground for many a day in the heart of western and northern Europe. Whether the *pastourelle* or shepherd song is at bottom a folk or a literary creation—scholars still disagree about it—matters little. It has furnished the national repertory with a hoard of genuine folk songs. These are matchless for their beauty. Their lyrical derivatives have branched off into wide expanses: love lyrics of all types, in which feathered messengers—the nightingale, the lark—at times are dispatched a long way to deliver a message; or pining lovers vent their chagrin in solace; or surfeited passion turns back and jeers recklessly. There we enter the by-paths of frivolity if not obscenity, and we encounter the *maumariés* or ludicrous pairs in ill-fated wedlock. The pastourelle and love song in the French collections exceed in numbers, if not in quality, all other kinds. In the compilations of the homeland, they are richly represented, although they have suffered, in melodic content, the blight of age and neglect. Canada has saved a good part of this treasure from oblivion. Hun-

dreds of records now preserved at the National Museum of Canada, the Library of Congress, and elsewhere, stand as witnesses of their cultural import and of their unexpected preservation away from the original centers of their diffusion.

Historical songs to which dates and contexts may be attached, are not a few. Among them we find *Le mariage anglais* or the wedding of an unwilling French princess to a young English king (possibly dating back to 1490, if not earlier in the same century); and several songs bearing on a similar subject—a prince of one nation courting or marrying a princess of another, as *Je ne suis pas si vilaine* or *Passant par la Lorraine*; this last seems to go back to Anne de Bretagne, who married the king of France in 1491. In the *Petit tambour* a prince hides his royal identity when asking for the hand of a princess. *Le prince d'Orange* is a mockery on the traditional enemy of France, the prince of this name who died in 1507. *Le roi Eugène*, as a political song, is a *lèse-majesté* against Francis I; it was composed presumably in 1526, during the imprisonment of the king of France at Madrid. In *Les trois roses empoisonnées* or the poisoned bouquet, a jealous queen in reclusion sends to her rival at court the subtle poison that causes her death; it misrepresents an episode (1599) in the lives of Henri IV of France and Gabriel d'Estrées; other episodes in the same lives were illustrated in Gobelins tapestries. In *La trahison du maréchal Biron*, a once valiant marshal of France is shown up as a traitor who has sold his country to the king of Spain; Biron was condemned to death in 1602. And in *Cartouche et Mandrin* (18th century), a debate takes place in the pre-revolution decades in France, between two famous criminals. Most of these historical songs, well known at one time in France, were better preserved in the folklore of North America than in that of the motherland. During the past 30 years, their variants and versions of the same variants in Canada have been recorded in substantial numbers.

Drinking or bacchic songs, mnemonic ditties, rigmaroles (*rengaines* or *randonnées*), often are almost ageless; they are numerous. How many remained in France before they were cast aside, no one can tell for sure. In Canada alone, six or seven hundred drinking songs have already been rescued and classified. They extol the healing virtues of wine, even in a country too cold easily to grow grapes. The rigmaroles count from 60 to 100 in the least; they belong to the type of song illustrated by *Old King Cole* in England. The main titles in this list are *Le premier jour de mai, que donnerai-je à m'amie?* (The first of May, what shall I give to my sweetheart?); *La Perdriole*; *Dis-moi pourquoi un—un seul Dieu* (Who is one?—God), a mnemonic ditty meant to recall the mysteries of religion, once familiar in Celtic lore, where it referred to mystic beliefs; and other rigmaroles enjoying a great vogue, particularly in Canada, such as *Alouette!*, *Mon Merle*, and *Si j'avais les beaux souliers que ma mignonne m'a donnés* (If I still had the fine slippers my sweetheart gave me) . . .

Hundreds, perhaps one or two thousand folk songs, fall into other groups: *complaintes* or come-all-ye's, canticles or *cantilènes*, workaday songs, dances and game tunes, lullabies, ranging from the remote past to the last few hundred years: *A la claire fontaine*;

Vole, mon cœur, vole!; Les trois beaux canards; A Bordeaux, beau port de mer; La courte paille; Derrière chez nous, yat un champ de pois; M'en revenant de la jolie Rochelle; Voici le printemps; Les trois dames de Paris; La fille du roi d'Espagne; Les Prisons de Nantes; J'ai cueilli la belle rose; Bonhomme, que sais-tu donc faire?; Ramenez vos moutons du champ!

Folk Dances The last titles above are of roundelays or "dances rondes". The size of this lot in the French repertory is by no means small. Folklorists are inclined to call dance-songs many compositions that were not necessarily, or may never have been, meant for dancing. In Canada, where singing has continued to this day, some of those songs are considered *chansons de métiers* or workaday songs; or they were canoe or paddling songs of the voyageurs or the lumberjacks.

Folk dances in France and Canada used to lay more emphasis than in English-speaking countries upon dramatic and pantomimic themes; most of them consisted of tunes with refrains; the refrain was usually burdened with meaningless words or syllables accompanying quick dance steps or a pantomime of the type of *Lalipitlou*, or *Folderol domdadl*. Many "rondes" or roundelays belong to the important group of *Le pont d'Avignon*, *Les trois Allemandes*, *Savez-vous planter des choux? Promenons-nous dans le bois* or *Le loup*, *Dans la ville de Rouen*, *Bien travailler, c'est s'amuser* . . . These roundelays follow in the trail of simpler game songs and play-parties for nursery and school, of the type of *The Mulberry Bush* and *London Bridge*. They are *Le lever de la reine*, *Le petit homme dans la lune*, *Le cuisinier*, *Le rat*, and such in great numbers and variety. Even at this late day, the French-speaking folk, young or old, on the lower St. Lawrence, still gambol and frolic to the tunes of *La boulangère*, *Marion danse*, *Laquelle marierons-nous? J'ai tant d'enfants à marier*, *Dans ma main droite je tiens le rosier*, *Si mon moine voulait danser* . . .

A list of 250 titles compiled by Rabelais, in his *Pantagruel*,⁸ confirms the presumption that the prevailing dances in his time—the first part of the 16th century—were of the tune with refrain, and of the pantomime, types. There we read the names, among many others, of dances which even now sound familiar, and probably could be identified, had Rabelais been more explicit, for instance: *Si j'ai mon joli temps perdu*, *La gaillarde*, *La frisque*, *Catherine*, *Curé, venez donc*, *La péronnelle*, *La belle Françoise*, *L'Allemande*, *Frère Pierre*, *La tisserande*, *La pavane* . . . To this information, Rabelais added: "Fut par la reyne commencé ung blansle double, auquel tous et falotz et lanternes ensemble dansèrent" (The queen headed a *branle* or a set wherein merrily joined carriers of torches and lanterns). "Les autres aux divers sons des bouzines dansèrent diversement" (The others stepped forth together to the gay tunes of flutes and rustic oboes). What is more, some revelers were seen dancing "aux chansons de Poitou, dictes par un fallot de Saint-Messant, or ung grand bailant de Partenay le Vieil" (to the tunes of Poitou, as sung by a jester from St. Messant, and a tall sleepy-head from Partenay the Old). This last locality reminds one of another dance song—of later France: *Dans Parthenay*, still familiar in Quebec under the caption of *C'est dans Paris yat une brune* . . . *Maluron malurette* . . .⁹

France and Brittany also possessed dances of the *gigue* or jig and reel varieties, no less than square and round dances, so characteristic across the English Channel, particularly among the folk of Scotland and Ireland, and brought into the New World at an early date, along with fiddle and bagpipes. The frontier between them is as elusive as their genesis. Typical jig and reel tunes are found in the old Mahé collection of Brittany, published by Mlle. E. de Schoultz-Adaievsky, in "Airs de danse du Morbihan" (*Mélusine* vi: 100-105). The *bourrées* and *branles* of provincial France, revived in present-day festivals, belong as group dances to the same class as the square "sets" of England and North America. Their similarities made it easy for the *voyageurs*, *canotiers*, and *habitants* of French Canada, Louisiana, including the *métis* or half-breed population of the Northwest, to exchange or adapt features from their neighbors, who often shared the same revelries. In mixed parties, all would join in dancing Canadian *lanciers*, *cotillons*, *quadrilles*. Some of the dances were called *La belle Catherine*, *Les foins*, *La frégate*, *La plongeuse*, *La bistingue*, *Le salut des dames*. The dancers would also welcome other features from the Orkney Islanders, from Celtic partners in the fur trade, and from later comers in the 1830's. These contributions were Scottish reels and jigs, some of them named *The Moneymusk*, *Turkey in the Straw*, *The Devil's Dream*, *The Brandy* (perhaps from the French dance of the Middle Ages known as *Branle-gai*) . . . From this medley have emerged the famed *Red River jig* of the Northwest, and, in the eastern settlements, *Le mistigri*, *La grondeuse*, *Reel McDonald*, and some *Arlepapes* (Hornpipe tunes).¹⁰

Legends, Rimes, Sayings, Beliefs, Customs, Folk Naming, Observances. Such tales as *Petit Jean*, *Jean de l'Ours*, *Jean Sotte*, developed or flourished. Little Jack's cunning and trickery, in these stories, more than made up for his puny size and the scorn of his elders for him; they were bullies or dullards. From them no doubt issued the forest hero Paul Bunyan and his Blue Ox, of the lumber camps in Wisconsin, Michigan, and Maine. There the Quebec lumberjacks once lavished their youth, industry, and inexhaustible Gallic lore. Folk and fairy tales, legends, rimes and ditties, sayings and proverbs reflecting the wisdom of the past, nicknames or *blasons populaires* embodying the names given by the folk to localities and people, beliefs pejoratively termed superstitions, observances religious or otherwise, practices, devices, folk recipes and medicines, yarns and tall personalities, and customs of all sorts, were too formless and elusive to subsist apart from their social environment. Never fully recorded or encompassed, they none the less were extensively sampled by folklorists as well as by observers, first among them Paul Sébillot, in his voluminous *Folklore de France* (1904-07), which is a misnomer. This monumental work deals chiefly with his own special field—Brittany. His range of observation is plainly circumscribed in his *Coutumes et traditions populaires de la Haute-Bretagne* (1882); it includes folktales, legends, beliefs, superstitions, medicinal and magic practices. A somewhat broader outlook prevails in his *Bibliographie des ouvrages français où se trouvent réunies en quantités notables les principales matières du folklore* (1887). Periodicals in this domain are heavy containers of folklore miscellanea in the proc-

ess of being collected, sifted out, and published. The outstanding among them are *Almanach des Traditions populaires* (3 vols., 1882-84), succeeded by *Annuaire de la Société des Traditions populaires*, under the editorship of Sébillot (1886-94); *Méluſine*, founded by Henri Gaidoz and Eugène Rolland (irregularly published from 1877 to 1912, 11 issues in all); *Revue des Traditions populaires* . . . (32 vols., 1886-1918); *La Tradition* . . . (21 vols., 1887-1907); *Revue du Traditionnisme* . . . , founded by Beaurepaire-Froment (15 vols., 1898-1914); and others.

An aspect of folk traditions in which a few French masters—foremost among them Sébillot and Van Gennep—have excelled is called *folklore calendaire* or folk beliefs and practices that mark the progress of life through its various stages from birth to burial, or the passing of the year with its feasts and celebrations. Arnold Van Gennep has devoted to it the first two volumes of his monumental *Manuel de Folklore français contemporain* (1943); and Soeur Marie-Ursule, under the guidance of Professor Luc Lacourcière, at Université Laval, Quebec, has followed a similar plan in most of her thesis, "Le Folklore des Lavallois" (in a forthcoming number of *Les Archives de Folklore*). Nearly one half of his *Manuel*, consisting of four heavy tomes (1937-43), is the most extensive bibliography (vols. 3 and 4) of the whole subject ever attempted. It is all but final in parts, in its search for every possible written source, but not for raw materials, this only within France.

Van Gennep's estimate of the attainments of his science in so far as he has surveyed them, is worth quoting: "In the past two hundred years," he has written in French, "other sciences have developed to the point where they now can rely not only on *Manuels* and *Précis* (treatises), but also on great encyclopedias, detailed bibliographies, and even on periodicals" (*Manuel* I: lx). But folklore remains puny among established sciences. On this point, he has written further: "Until recently folklorists have experienced the greatest possible difficulties in publishing their materials" (p. viii). "Folklore, in the past hundred years, had no chance of being studied methodically, and of ever being brought to its many culminative points" (p. vi). "Most of the casual collectors have looked down upon their folklore work as a pastime, somewhat ridiculous, inferior in quality, not deserving much consideration. They have accepted the rank of mere subordinates to the hidebound historians, who until recently despised the study of living documents (*mœurs vivantes*)¹¹ (p. vi). "To the present day, not a single university chair of folklore has been established in France. This failure is one of the causes for the scientific weakness of the country in this field" (p. viii). "It is incorrect to state, as is often done, that French folklore is very poor" (p. vii), for "hardly one twentieth of the territory in France has been yet systematically explored for its folklore" (p. v).

The seeming poverty of French traditions, which Van Gennep deplores, is also due to other causes. These are cultural and historical. Cultural they are, in so far as the high or academic learning for many centuries has been imbued with a Latin bias. This bias was the outcome of the conquest of ancient Gaul by Cæsar, which imposed upon France a language at first foreign

to itself, and a drastic change in its culture. The folk vernacular, originally Celtic, was cast away as unworthy of survival. Even the "Bas-Latin" introduced after the 4th century of our era, was branded as *lingua vulgaris*, and *vilain* was the term accepted for it. The sway of the Roman Empire, under ever-changing forms, has remained undiminished. France of all European countries is, historically, the one where aristocracy—class aristocracy, and the aristocracy of art and learning—has reached its peak and maintained its hold longest, after its political symbols had given way to other standards, some of them deceptive.

Folklore is the endowment of the people at large, mostly of the illiterate mass. Like the vernaculars embodying its contents, it was destined to obscurity from the first. Only of late years has it dared to raise its humble head. Immense though its latent powers and diversity, it has not as yet awakened fully to the knowledge of its own stature. For it possesses all the unwritten and uncoded activities and lore of a people within the national borders and from the immemorial past. Its storehouse is human memory, the most retentive of all archives; its shop, that of manual arts and crafts, where masters have trained apprentices at all times; and its momentum covers manners and customs, ingrained habit and behavior, in a vast cultural stream beyond the control of the few that boast of authority and high learning.

Manual Arts Historical causes for the alleged poverty of French folklore as it has been recorded, lie in the restrictions arbitrarily imposed upon its scope. These restrictions in the main have been twofold; they have tended to exclude the traditional arts and crafts, and have almost completely ignored the patrimony of ancient France in the New World. The natural extension of French folklore in America as a whole goes back to the 17th century, when the fleur de lis held sway over vast territories from their starting points on the St. Lawrence almost as far as the Rockies and the Gulf of Mexico.

Antiquarians and curio collectors at first were interested only in the vestiges of classical and medieval archeology within their province. They could not encompass the arts and crafts as a whole. Because of a great bulk and diversity, these cultural activities of the past far surpassed their comprehension. They consisted of building and architecture; metal work including iron, pewter, gold, and silver; weaving, embroidery, lace-work, and tapestry-making; tailoring and costume; pottery, leather-tooling; sculpture, statuary, gilding, the making of stained-glass windows; illumination and engraving; and to some extent mural painting. As for the collection of folk songs, tales, legends, and customs, these traditions called for keen observation and a treatment familiar to trained folklorists. Left to other hands, particularly to professional historians or literary writers, they all fell far short of their deserts. As a rule they were dismissed as trivial or secondary, whereas they had been of prime importance in the existence of the nation, ever since the Gothic period and the northern Renaissance. Because of this oversight, we may look in vain for substantial monographs and manuals on most of the subject of craftsmanship. Valuable, at times noteworthy efforts even at the hands of *historiens de l'art*, have failed to do full justice to a

country where industry and skill for a millennium have often been unsurpassed. Of them all, only architecture, carving, statuary, and iron work have figured prominently in print and in albums. Tapestries, stained-glass windows, which contain much of the oral lore of the land, have enjoyed their share; also cabinet-making, pottery, fashions in costuming. Gold and silver smithing and metal crafts were not entirely overlooked. But a great deal has vanished before it was recorded.

Almost neglected have been the guilds and corporations, which were social bodies of great cultural import, after the 12th century, and have produced an untold harvest of masterpieces. A few amateurish books on "tour de France" for apprentices, bearing on the *Confrérie des maîtres menuisiers de Madame Sainte Anne*, and some technical treatises for the use of schools, are all that come to mind. Countless master craftsmen in architecture, carving, and masonry, for instance, lie forsaken in their nameless graves. Their accomplishments to us remain mostly anonymous within the walls of their sublime Gothic temples which for a time swayed the allegiance of western Europe. The guilds have been well studied, in France, only from the point of view of sociology and institutions (see Martin Saint-Léon's book).

In Van Gennep's *Bibliographie méthodique* they are only in part dealt with, under the caption of "Arts populaires." Reduced to a minimum here, only three subjects are listed. Previously they had been the object of many publications, as on ceramics, paper-making, costume and accessories.¹² The apparent reason for dismissing the major arts is that they have stayed in splendid isolation as if by the common consent. They had withdrawn almost beyond reach, as the medieval guilds or corporations were suppressed by the French Revolution. Yet some of them were later revived; their customs until recently survived, like the "tour de France" for apprentices in joinery and woodwork. Fortunately, as Van Gennep points out, the *Encyclopédie ou Dictionnaire raisonné des sciences, des arts et des métiers* . . . , Paris, 1751-80 (35 vols.), of Diderot and d'Alembert, contains a systematic study of "les techniques manufacturières, les procédés de pêche, les petits métiers, l'organisation artisanale" (the technique of manufactures, the processes of fishery, the small trades, the organization of crafts).¹³ "From that moment," concludes this dean of French folklorists, "the true descriptive method had been found." But unfortunately it was not systematically followed at large.

An unforeseen expansion of the arts and crafts of old France was discovered on the shores of the St. Lawrence River in recent years. These activities had taken root there as early as the second part of the 17th century. An independent guild of joiners and wood carvers was established in Quebec under the same name as of the parent body in Paris (*Confrérie des maîtres menuisiers de Madame Sainte Anne*).¹⁴ A school of arts and crafts was established by Mgr. de Laval, first Bishop of New France, at Cap-Tourmente near Quebec. The cloistered convent of the Ursuline nuns in Quebec, founded in 1639, was devoted to the teaching of French and the practice of "a thousand and one small crafts" (*mille petites adresses*). The *Confrérie de Sainte Anne* of Paris was not the only

one whose representatives migrated very early to the New World. For at the annual procession of Fête-Dieu in Quebec, in the summer of 1646, 6 organized crafts were represented by a delegate bearing a symbolic torch, and two years later, in 1648, their number rose to 12. These delegates were turner, joiner, shoemaker, cooper, locksmith, armorer, carpenter, mason, cutler, baker, wheelwright, and nailer. Craftsmen of various callings, after their settlement in the colony, practiced their art, established families, and in most cases handed down their name, and often their trade, through 11 or 12 generations. The guild of *Sainte Anne* remained in existence for more than 200 years, until 1855 and possibly later, and the training of apprentices by masters survived in many parts of French Canada almost to the present day. The manual arts of later Canada are close derivatives of French fountainheads, with allowances for creative adaptation to new demands, materials, and surroundings.

The flower of feminine crafts entered New France as early as 1639, along with the founders of the Ursulines in Quebec and Three Rivers, and, less than a hundred years later, in Louisiana. Not only did these pioneers contribute much to the evangelization of the natives, but they trained Indian girls in the handicrafts with a great perseverance. Their cultural influence, felt immediately after their landing at Quebec and their establishment down the Mississippi, has since spread from their cloisters to almost every point on the American continent. A few years after their foundation, the number of native seminarists in their care rose to fair numbers; they included Huron-Wyandot, Iroquois, and Algonquian children. Mère Marie de l'Incarnation, the founder, was happy to write home: "They sing with us in unison, they quickly learn all that we want to teach them, and are most supple in our hands. Born though they were in the wilderness, they can easily be cast in the very mold of the daughters of France." Of all the teachings of the Ursulines and other nuns who soon imitated them, the most enduring in their material effects and repercussions were those in the arts and handicrafts—sewing and embroidery in particular. Many women, native or white, over North America still owe a debt of gratitude to those educators who, long ago, initiated their ancestors into what was then called the science of crafts (*la science des ouvrages*), also to read, write, play the viola, and "a thousand other small accomplishments" (*mille autres petites adresses*). The programme of training, as mapped out from the first, included "good French manners, housekeeping, needlework, drawing, painting, music, some notions of architecture and other fine arts" (*arts d'agrément*).

Several minor crafts eventually provided the nuns with a much-needed income, for instance, the making of birch-bark boxes and dishes, fine leather work, book-binding, also the manufacture of artificial flowers, wax fruit, hair pictures, and painting. The making of birch-bark and "incense" boxes became, for the nuns in various centers, quite remunerative at one time. The bark was sewn with *watap* (spruce roots), and the outer surface was decorated with dyed porcupine quills or moose hair, much like the bark work now made in a derivative way by the Micmacs and other Indians in the

Eastern Woodlands and far beyond. Our museums now house abundant collections of Indian decorated garments and utensils; their inception goes back to such early teachings. Of all these collections, the most ancient and significant is that which was made in the 18th century for the Dauphin de France and now belongs to the Musée de l'Homme, in Paris. This set plainly exposes the French origin of native floral and geometrical designs upon garments or leather, or cloth, or upon bark; and evidence of such designs, besides, is entirely wanting in the prehistory of America.¹⁵

The Science of Folklore From Its Beginnings Folklore as a science developed only slowly. Like Cinderella it languished for a long time in obscurity. The activities of the Académie celtique, early in the 19th century, opened a back door to folk traditions. Why a Breton academy should take the lead in this field is easy to surmise. The French Revolution and its deceptive catchwords on the Rights of Man had failed to root out aristocratic prejudices. The *vilain* of old provincial France remained as ever unworthy of attention or scrutiny. But under an exotic Breton caption a lead unwittingly was found. The first "questionnaires" for research began to find their way into the hands of sundry collectors, most of them mere amateurs. The best traditionalists of France for two or three generations were mostly Bretons: de la Villemarqué (c. 1840), Luzel, and later, Gaidoz, Sébillot, Lebray . . .

The romantic conception of folklore in Germany then infiltrated France with the belief that the folk in a crowd can spontaneously do works of art in the form of tales, legends, songs. Napoléon III, emperor of France in the mid-forties of the last century, became acquainted, during a visit across the Rhine, with the achievements of the brothers Grimm. He conceived a plan to be directed by Jean-Jacques Ampère, in 1852, of collecting folk songs through the teachers, *préfets de communes*, and parish priests, in all the schools in the state. This country-wide investigation produced a mass of mixed materials, which puzzled public opinion. The results were eventually cataloged and filed as "Fonds français, Nos 3338-3343," in six large volumes, at the Bibliothèque nationale, Paris.

Later in the last century, the collectors of oral literature reluctantly accepted the term of folklore for their science; it had been invented and first published, in 1846, by William J. Thoms, in England, and was destined to universality. In vain did the French writers try to enforce their preference for *traditions populaires* and hold on to it until after 1900, as they did in such titles as *Revue des Traditions populaires*, and *Congrès des Traditions populaires de 1900*. They called themselves *traditionnistes* instead of folklorists. But folklore as a caption prevailed in the end.

From 1855 on, the stimulus came largely from the medievalists, particularly Gaston Paris, through their *Revue des Langues romanes*, *Romania*, and *Revue celtique*. Folktales and folk songs, during this period, gained much headway; they found capable exponents in E. Cosquin, Eugène Tiersand, Anatole Loquin, George Doncieux, Julien Riessot, and more recently Van Gennep, Patrice Coirault . . .

The *vilain* misconception of aristocratic France is a

diehard. It has persisted to this day, and so far it has blocked official recognition at the university. Not a single chair of folklore exists in all of France, and the chief folklorists are still unsupported free-lance workers. Leadership in this field has been taken in 1944 by Université Laval, Quebec, where a chair of folklore was established, the first of its kind in the French language. This move is significant, as French folklore in its oral forms—folk songs, folktales, and legends—on the whole is better preserved in the New World than in the Old.

Everywhere in French-speaking settlements and colonies, it has thrived undisturbed, comparatively isolated and independent, during the past three centuries. "One feels," a French critic recently has written of Canadian folk songs, "that this music which originated in our land long ago has been saved all the while under a protective blanket of snow." The study of French folklore in Canada and in the United States, in the past thirty years, has brought about the recording of a huge body of materials in a surprisingly good state of preservation. Among them we find nearly 11,000 versions of folk songs; of these 6,000 were recorded on the phonograph or in writing; as well as several hundred folktales and legends. In these island-like survivals, the memory of the illiterate folk often has preserved valuable heirlooms which, through wear and tear, have long since vanished in the motherland.

A significant aspect of the French occupation in North America has taken shape in folk naming (*blason populaire*). This cultural development, partly linguistic and partly folkloric, consists of conferring on people appropriate geographical family and personal names, coined according to obvious features and circumstances. On the maps of our continent, many such names still commemorate the early discoveries or the passage of the *voyageurs* and *coureurs-de-bois*, from the Atlantic to the Pacific, and down the Mississippi. Nicknaming or the giving of new names in order to distinguish the individuals, when family names become useless through multiplicity, has occurred in so many places that it has given rise to folkloric studies that are singularly colorful. They disclose a genius for verbal expression and portraiture that has been lost wherever school standards have established uniformity.

Surveys at first centered in or around the National Museum of Canada, encouraged by the editors of *The Journal of American Folklore*, have recently expanded into the activities of the "Archives de Folklore" at Université Laval, Quebec. These activities have forced open a new phase in French folklore taken as a whole. For this science can no longer, as in the past, confine itself only to the motherland. It must acknowledge its own expansion outside, in the former North American colonies. These colonies have not ceased, after the severance of political ties, to preserve and develop a vital patrimony of cultural traditions.

As initial instalments in the proof of the import of this branch of French folklore stand a series of Canadian numbers in *The Journal of American Folklore* since 1916, and several publications outside, among them: *Tales from the French Folk-lore of Missouri*, by Joseph-Médard Carrière (1937); ¹⁶ *European Tales among the North American Indians* . . . , by Stith

Thompson;¹⁷ the author's *Quebec, where ancient France lingers* (1936), and *Romancero du Canada* (1937); the recently published *Les Archives de Folklore*, I, II, and III; and many other publications: the number of these is now growing at a rapid pace.

The oldest folk songs, in their inception and development, may go back to the 12th or 13th century. But we arrive at their dates of origin only through comparative work. The 15th century yields to us the earliest written records about them. Interesting though they are, these records remain fragmentary; at the time when they were made, they were not meant to be exact transcriptions, but only curiosities which captured the fancy of the readers; they were adapted to current literary mannerisms. Among a few compilations, we find *Vaux de Vire d'Olivier Basselin et de Jean Le Houx* (c. 1670). Of the songs contained there, according to Van Gennep, more than one third are folk songs.¹⁸ Not many songs were picked up until 1828, in an anonymous *Choix de Chansons* (Van Gennep *Manuel* IV: 771). Van Gennep lists, among other items: 1934, *Divers: Musique et chansons populaires* (769); 1843, Dumersan et Colet: *Chants et chansons populaires de France* (771); MSS Bibliothèque nationale, 1852-1876; 1883, Eugène Rolland's outstanding *Recueil de Chansons populaires* in six volumes (773), mostly from the MSS B.N.; and many others, nearly all after 1860.

Better preserved though similar folk songs were in North America, they were not recorded at the time. Yet by a peculiar turn of chance, some of them have come to our knowledge. The *voyageur* and *coureur-de-bois* songs from the St. Lawrence, the Great Lakes, Louisiana, Rivière-Rouge, and the Columbia River, were becoming famous, and so they have remained from the early 19th century.

Thomas Moore, the Irish poet who composed "The Canadian Boat Song," after he had, in 1803, journeyed down the St. Lawrence to Montreal, extolled them in glowing terms: "Our voyageurs had good voices and sang perfectly in tune together . . . I remember when we entered at sunset upon one of the beautiful lakes into which the River so grandly and unexpectedly opens, I heard this simple air with a pleasure which the finest compositions of the finest masters have never given me." Another chronicler later wrote: "There is no wilderness which the little French fiddle has not visited. The Indians recognized it as part of the furniture of every fur trader's camp . . . The gay voyageurs sang to their heart's delight and seemed determined not to give way to care . . . Scottish melodies then alternated with French tunes, and French gaiety would spread as if by magic to robust Highlanders." Baird, in his *Recollections*, adds, "The voyage was enlivened by the merry songs of the light-hearted and ever-happy Canadian crew." M. de la Rochefoucault, a French nobleman visiting Upper Canada early in the same century, was fascinated by the same canoe songs. They gave him "the pleasant illusion of being in Provincial France." And he added, "In all the canoe journeys undertaken by Canadians, songs follow the paddle, beginning as soon as it is picked up and ending when it is dropped." In the remote region of Oregon, a French diplomat—Duflos de Mofras—had a similar experience, in 1844, "Often times, in our journeys

along the Columbia River, our heart was quickened when our canoemen, even under rain and wind, enlivened those distant shores with their chants so reminiscent of old France." 19

Before any folklorist in France had made a complete first-hand record of a set of folk songs, at least two Englishmen in North America tried their hand at the work. Captain George Back, when engaged on an Arctic expedition to the Coppermine River, in 1823, noted down *voyageur* songs among the canoemen employed by the Hudson's Bay Company. These tunes later appeared in London under the title of *Canadian Airs*.²⁰ In his preface, Captain Back explains, "The Airs . . . are sung by the Canadians as they paddle down the Rivers, sotto voce and in a subdued tone as they near the Rapids, but with a burst of Exultation when the Peril is over."

Edward Ermatinger (1797-1876), a few years later—about 1830—wrote down the tunes and words of 11 typical *voyageur* songs, perhaps the earliest unadulterated set of French folk songs recorded anywhere. His manuscript recently came to light at Portland, Oregon, and in 1943 was presented to the Dominion Archives of Canada.

The French folk songs of North America for the first time made their full entry into printed literature only in 1863, through *Les chants populaires du Canada*, by Larue—40 examples with commentary.²¹ Two years later, in 1865, appeared Ernest Gagnon's *Chansons populaires du Canada*, containing about 100 numbers with texts, melodies, and explanations. This last collection, a Canadian classic, until 1916 was supposed to have drained the folk repertory. No other effort was attempted in this field, with the lone exception of Dr. Prevost's, which passed almost unnoticed.

New discoveries on a large scale, in 1916, reopened research in Canadian folk songs. From that moment the work has proceeded in earnest. About 11,000 texts of folk songs and over 6,000 melodies mostly recorded on the phonograph are now embodied in the collections of the National Museum of Canada; a few hundred of them have been duplicated in the Library of Congress. A number of publications,²² in the past 25 years, have inaugurated the immense task of presentation. Here in substance we find what may be the largest body of folk songs, and folktales, not only of France, but of any country. For a very recent review of the work in this field, see Joseph M. Carrière's *The Present State of French Folklore in North America* (1946).²³ The collection of folk songs in Louisiana meanwhile has gone ahead. Their principal exponent is Irene Therese Whitfield, in her *Louisiana French Folk Songs* (Baton Rouge, 1939).

Folktales and legends for many years have been gathered and classified by mythographers in Europe and America. They passed under the ægis of science only after the brothers Grimm, in Germany, gave them a new life, in print. Some of them had been utilized many centuries before. Poets and romancers, during the Middle Ages, often found their inspiration in the living lore of their time, just as their contemporaries the troubadours and minstrels paraphrased in long poems the simplest but pithy songs of the people.

Marie de France, in the 13th century, candidly ad-

mitted at the forefront of her *Chièvre-feuil*, where she gave the story of Tristram de Cornouailles, that: "Plusor le m'ont conté et dict/ Et je l'ai trouvé en escrit/ De Tristram et de la roïne/ De lor amor qui tant fut fine/ Dont ils orent mainte dolor/ Puis en morurent en un jor" (Not a few have told and rehearsed it/ Besides, I have found it in writing/ That Tristan and the queen/ Of their love which was so deep/ That they suffered great pains/ And one day because of it met their fate). (See Joseph Bédier, *Les Fabliaux*, Paris, 1895.)

Folktales once more found their way among the literati when Charles Perrault published *Les Contes de ma Mère l'Oye*, in 1697, under the pen name of Perrault Darmancour. Among these tales are found "Petit Poucet," "Chaperon rouge," "Le chat botté," and "Cendrillon." [Mme. Félix-Faure Goyau, *Choix de Contes de Fées*, introduction. "Il avait peur de ses confrères, les académiciens. Que diraient-ils lorsqu'ils sauraient un des leurs occupé à de pareilles niaiseries" (p. xii).] Imitators, mostly among women, followed his example, the best among them the baronne d'Aulnoy (1698). In all this derivative literature, the traditional stories served as a pretext to "belles-lettres" according to the artificial tastes of the period; they were rearranged, developed, and pampered, yet became household familiars.

Only with Carnoy in *Littérature orale de la Picardie* (1883), and with Cosquin, in *Contes populaires de Lorraine* (1886), did ancient folktales become objectively scientific. Their systematic study, the analysis of their contexts, the classification and arrangement of their episodes, have reached their apex with the mythographers A. Aarne (1908), Bolte and Polivka (1913-) in Europe, and, in the United States, Stith Thompson.²⁴ Folktales and legends in North America, like folk songs, have remained alive to this day, as a folk endowment, whereas in France, both are said to have lapsed into oblivion. In the lumber camps of the North Shore of the Gulf of St. Lawrence, for instance, tellers of folktales are still—or were until very recently—engaged to entertain the workers during the evenings. Their repertory is vast and well preserved as of old.

Alcée Fortier, in his *Louisiana Folk-tales* (1895),²⁵ took the lead in recording Creole tales. The author of this article, at the request of Dr. Franz Boas, in 1915, went extensively into the field of French folktales within Canada. About eight numbers of *The Journal of American Folklore*, since 1916, have included from 150 to 200 texts. As many more are awaiting publication, while others are being gathered and published elsewhere. Joseph-Médard Carrière²⁶ has issued a considerable set from the ancient Canadian colony of Old Mines, Missouri, now on the verge of disappearing; the new generation no longer keeps the language that embodies them. Carrière has recently published an extensive bibliography.²³

The expansion of ancient French lore among the Indians of the North American continent, although fully grasped for many years, has now become the object of a special study. Professor Stith Thompson in several comparative studies from 1919 on, has put down side by side the French folktales of France, of Canada and the United States, and their adaptations by the Indians. Transformed by the natives, they form part of their

own aboriginal traditions. Yet they belong to the borderlands of French folklore as introduced in North America by the fishers, the *voyageurs* and *coureurs-de-bois*, and the colonists of the 17th century.

MARIUS BARBEAU

French harp Term for harmonica in mountain sections of the southern United States.

frevo A Brazilian solo dance performed in the streets during carnival processions, with acrobatic steps and jumps done on one spot when the procession halts. [GPK]

Frey or Freyr In Teutonic mythology, son of Niord and Nerthus (or Skadi); god of sunshine and rain, peace, prosperity, and fruitfulness, and the patron of married couples, horses, and horsemen. He came to Asgard as a hostage after the war between the æsir and the vanir. He was given the realm of Alfheim for his home. The dwarfs gave him the golden bristled boar, Gullin-bursti, to draw his chariot and the ship, Skidbladnir, personification of the clouds, which could travel on land, sea, and air, and could be folded into his pocket when not in use. He also possessed the horse, Blodug-hofi, which would dash through fire and water, and a wonderful sword which would fight by itself, but this he gave to his servant for winning him Gerda's hand. Thus he was weaponless for the last battle.

Once, when looking out over the earth, he saw the lovely Gerda in Jotunheim. He became like a lovesick mortal until his servant, Skirnir, undertook to woo the giantess in his name. At first he had no success, but by threatening to make her an old maid with his spells, he prevailed.

Frey was worshipped extensively by the ancient peo-

ples, and especially on the winter solstice, because thereafter the days become longer and the sun stronger. Boars' flesh was served and a flaming wheel, representing the sun, was rolled down a mountain into the sea. Some customs survived well into the Christian era, such as presenting a ham or flitch of bacon to the most happily married couple in the community. Others, such as the Yule Log and boars' head at Christmas, still survive. Legend says that Frey returned to earth as Fridleef I, king of Denmark (40 B.C.).

Freya, Freia, Freyja, Fri, or Fria In Teutonic mythology, the beautiful, blue-eyed, blond goddess of love, beauty, and fecundity: in Germany identified with Frigga. She is the daughter of the Van or sea goddess, Niord, and Nerthus or Skald, hence as goddess of the Vanas, known as Vanbride or Vanadis. Other epithets of Freya are Gefn, Horn, Mardel, Skialf, Syr, Thrung. She was not always pleasure-loving, but, as Valfreya, led the Valkyries to the battlefields where she claimed half of the slain. These she entertained at Folkvang, the others went to Odin in Valhalla.

She married Odur, the sunshine, and had two beautiful daughters, Hnoss and Gersemi. When Odur wandered she was sorrowful and wept; the tears formed drops of gold in the stones, and drops of amber in the sea. She lived in the mansion Sessrymnir in her realm of Folkvang. She possessed a falcon garb which enabled her to fly, and the beautiful necklace, Brisingamen.

The early Christians declared her a witch and banished her to the mountains where her demon train still dance on Valpurgisnacht.

Friar Rush In medieval German folklore, Brüder Rausch is the Devil dressed as friar. He plays the role of servant in monasteries in order to confuse, tempt, and seduce the monks. He makes them make mistakes and forget the Psalter. Friar Rush as mischief-maker is the subject of motif F470.0.1. He and his pranks became a popular subject for the English chapbooks in the 16th century. He is described in *Gammer Gurton's Needle* as having a cow's tail, cloven feet, and hooked nails. In later English folklore his anticlerical role becomes somewhat dimmed and he is sometimes mentioned simply as "the friar" who is occasionally found in cellars turning on the wine-taps. Sir Walter Scott (in *Marmion*) confused Friar Rush with the friar's lantern, or will-o'-the-wisp.

Friar Tuck In the Robin Hood legend, the jolly priest who proves more than once, to the discomfiture of his victims, that he is as much a manly man as any of the greenwood band. His fat figure and brawny arm are pleasantly alluded to in several of the Robin Hood adventures of balladry.

Friday An unlucky day in general European folk belief. The reason for this is that Christ was crucified on a Friday. It is bad to get born on a Friday or get married on a Friday. It is bad luck to take a new job on a Friday, cut one's nails on a Friday, or visit the sick on a Friday. If you turn your bed on a Friday, you will not sleep. Sailors are loath to begin a voyage on a Friday; and criminals expect a hard sentence if they are unlucky enough to be tried on a Friday. "Wet Friday, wet Sunday," is a common saying in general weather lore. In Irish folk belief it is good to die on a Friday, be buried on Saturday, and get prayed for on Sunday.

 Friday is the day of the Nordic goddess Frigga. For the Moslems, Friday is a holy day when all must attend mosque and hear the address. Early Christians regarded Friday (and Wednesday) as half-fasts but the Syrian Christians fasted from sunrise to sunset and the Nestorians treated it as Sunday. The term "Black Friday" is a late coinage in England. "Friday face" in 17th century English slang was a sad or moody expression.

[RBJ]

Frigga, Frigg, Fria, or Fri In Teutonic mythology, the second and principal wife of Odin; goddess of the clouds and sky, of married love, and housewives. She is variously said to be the daughter of Fiorgyn and Jörd or of Jörd and Odin, whom she later married. She is the mother of Balder and Hoder, Hermod, and usually Tyr. Certain ancient poems state that Frigga and Odin had seven sons who founded the seven Saxon kingdoms in England. Frigga is represented as tall and stately, clad in long white robes, but as sky goddess the robes could change from shining white to dark. A bunch of keys (symbol of housewifery) always hung from her girdle.

Although permitted to share the throne with Odin, Frigga spent most of her time in her own house, Fensalir, spinning golden thread or weaving varicolored clouds. Through her eleven handmaidens or will-doers (Fulla, Hlin, Gna, Lofn, Vjofn, Syn, Gefjon, Snotra, Eira, Vara, Vor) she attended to the well-being of mortals, smoothing the paths of lovers, presiding over married love, spreading knowledge, and administering justice. Fulla may also be Frigga's sister: the Germanic Fria, for instance, had a sister Volla (Fulla in Norse) interpreted as a bringer of wealth. Frigga's name (Frigg, Fri) survives in Friday.

In Germany Frigga was identified with or became confused with Freya, but no such confusion or identity took place in Scandinavian or Icelandic mythology. Freya is one of the vanir, while Frigga is always one of the æsir. In later German folklore Frigga is paralleled by Holde (Hulda, Frau Holle), and others.

Frithiof, Frithjof, or Fridjof Hero of the 14th century Icelandic *Frithiof Saga* and Tegner's beautiful modern Swedish poem. He was the son of Thorsten and Ingeborg and playmate of the kings Halfdan and Helge and their sister, Ingeborg, with whom he later fell in love. Her brothers, however, would not permit her to marry a commoner, and betrothed her to King Sigurd Ring. Frithiof took the dragon ship, Ellida, and the sword, Angurvadel, which he inherited from his father, and set out on a voyage of piracy, eventually arriving at the court of King Sigurd. When the old king died, he betrothed his wife, Ingeborg, to Frithiof and entrusted him with raising his son.

Frodi or Frothi A legendary king of Denmark; son of Fridleif or Frithleif who was believed to be an incarnation of Frey. Frodi's reign was peaceful and prosperous and he is known in legend and saga as Peace Frodi. He possessed the two magic millstones called Grotti, and the two Swedish giant maidens, Menia and Fenia, who ground out gold and peace and prosperity for Frodi. In the *Grottasöng* or Quern Song (in Snorri Sturluson's *Edda*) when Frodi's greed would not let the giant maidens rest, they changed their song and ground out warriors and disasters for Frodi and his kin. The Quern

Song mentions the story of the fratricide, how Frodi killed his own brother Halfdan to secure the kingdom, and prophesies Frodi's death at the hands of "Yrsa's son" (who is Halfdan's grandson) and the extinction of his race because of this child of incest. The invasion of the Viking Myslingr is the result of the grinding out of warriors against Frodi.

In *Beowulf* and in earlier Danish legend it is Halfdan who kills Frodi. In the Quern Song Frodi kills Halfdan. In other Icelandic and in Norwegian saga, Frodi kills his brother Halfdan, whose two sons eventually avenge their father. These two boys (Hroar and Helgi) escape their uncle by feigning madness à la the ancient Jutish Amleth, set fire to the castle, and Frodi is suffocated with smoke in an underground passage. They parallel the numerous other hero brothers of the world, who are exposed or expelled or escape (like Romulus and Remus or the two sons of Duncan murdered by Macbeth) only to return and take back their kingdoms.

The confusion and identification of two Danish kings named Frodi, the mythical Peace Frodi and the medieval Frodi the Peaceful, and the intermingling of their legends is discussed in Axel Olrik's *Heroic Legends of Denmark*, New York, 1919, pp. 446 ff. The legend of the embalming of Frodi's body and the periodic carrying of it through the kingdom to insure the continuance of the prosperity which his presence in life had secured for the people, undoubtedly belongs to the later king.

Frog He Would A-Wooing Go See FROG WENT A-COURTING.

Frog Mourning Song A dirge sung by the descendants of the Githawn or Salmon-Eater tribe of the Alaskan coast, originally sung to destroy the young men of the tribe in punishment for their wilfulness in killing Frog Woman's frogs, as related in the Salmon-Eater epic of migration. The spirit frog of the legend is a cultural heritage from Asia and is the attribute of Dzelarhons, niece of Githawn, head of the clan. Dzelarhons is also known as Copper Woman, Frog Woman, and Volcano Woman, for her gift of metal to the tribe, her spirit frogs, and her personification of fire in the destruction of the people.

Frog Prince or Frog King A folktale (Type 440) belonging to the beast marriage cycle, and with varying details found in India, Hungary, Norway, Germany, and the British Isles: similar tales, of the transformation of a water-guarding reptile or amphibian, are found all over the world (e.g. the Kaffir tale of *The Bird That Made Milk* where the crocodile becomes a man again when the devoted girl licks his face).

The Frog Prince (Grimm #1, subtitled *Iron Henry*) combines this story with the story of the faithful servant. The youngest of three princesses drops her golden ball into a well. The frog retrieves it after she promises to be his companion and playmate, to eat with him and sleep with him. But when she has the ball again, off she runs, ignoring the frog's calls. The next night, as the court is at dinner, a knocking is heard at the door. The princess answers, and when she sees who it is, shuts the door in the frog's face. Her father insists that she let the frog in and live up to her promise. So she sits unwillingly next to the frog, and manages to force herself to eat from the same

plate, and even carries the frog upstairs at arm's length. But when he wants to get into bed with her, she flings him against the wall. Instead of a frog tumbling to the ground, a prince stands there; and then she is glad to keep her promise. In the morning, the prince's carriage arrives with the faithful servant. As they drive away, the three iron bands with which Faithful Henry had had his heart encircled to keep it from breaking at the absence of the prince snap one by one.

Sometimes the youngest princess is instead a stepdaughter, as in the English *The Well at the World's End*. In this tale, the girl must bring water in a sieve; the frog tells her how to smear it with clay. At the climax, she cuts off the frog's head, and it is transformed into a handsome prince. Other means leading to the transformation are: simply sleeping in the girl's bed; being kissed; and (the idea typically appears in swan-maiden stories) burning the frog's skin. See BEAST MARRIAGE; BEAUTY AND THE BEAST.

Frogs Asking for a King One of Æsop's fables. The Frogs prayed to Zeus to appoint a king over them. So Zeus threw a Log into the pond, which made such a great splash that the frogs were overawed at their king and kept a respectful distance. In time, however, they became so bold as even to climb upon his back and bask in the sun. At last they grew dissatisfied with so sluggish and uninteresting a monarch, and besought Zeus for a more active king. So Zeus sent them a Stork, who set about devouring the frogs as fast as he was able. Again they prayed to Zeus. But he was weary with their discontent and refused them, pointing out that their plight was only the result of not letting well enough alone.

Legend has it that Æsop told this story to the mob in Athens who were seeking to dethrone Pisistratus, and thus prevented the act of violence. It comprises the general European folktale motif J643.1.

Frog Went a-Courting The common American title of one of the best-loved and most widely known of all folk songs in English. The first literary mention of the tale of the frog who wooed a mouse occurs in Wedderburn's (or Inglis' or Lyndsay's) *Complaynt of Scotland* (1548). In 1580 it was entered in ballad form in the Register of the London Company of Stationers under the title of *A Moste Strange Weddinge of the Frogge and the Mouse*. The oldest extant musical version is in Ravenscroft's *Melismata* (#20) (1611). Innumerable variants occur in oral tradition all over the United States among both Negro and white singers, and in England, Ireland, Scotland, and Wales. Each region has added local color to its versions, the variation appearing especially in the favorite refrains. Many of the Scottish texts have a "cuddy alone" burden, which in the southern United States has changed to "Kitty alone." Some English texts have a "kimo" burden, which has been picked up in American Negro tradition and found its way into minstrel shows in two burlesques, "Keemo Kimo" and "Kitty Kimo." A humming refrain is also common in American versions. Both Irish and American texts elaborate on the wedding guests; in the Irish, a snail with a bagpipe enters; in the American, a black snake and a Negro man figure. The wedding feast also has its local variations. In some southern American variants "two green beans and a black-eyed pea," are served. In about

1809 an English stage version was created with humorous modern additions, including an opera hat for the gentleman frog, and the burden "Heigh ho, says Rowley" made its appearance. American Negro children have amalgamated the tale with various other game and hand-clapping rimes of the "Hambone" and "Ball the Jack" types and white children have converted it to a Mickey Mouse framework with a trace of Western thriller plot. In earlier days it took its place with the play-party songs. The airs to which it is sung vary widely, and its titles include the usual Mother Goose one, *The Frog He Would a-Wooing Go*, *Mister Frog Went a-Courting*, *The Frog's Courting*, *The Mouse's Courting Song*. The story is typed as an elaboration of the birds' wedding. See BIRDS' WEDDING; MICKEY MOUSE.

Frozen Girl One of the variant titles of the American ballad, *Fair Charlotte*.

Fudo The Japanese God of Wisdom. See JAPANESE FOLKLORE. [JLM]

Fu Hsi, Shên Nung, Huang Ti Three great legendary emperors and culture heroes of China. Fu Hsi instituted marriage rites, because his sister reported to him that men and women were living together indiscriminately without law and that this was degrading to the morals of the people. Fu Hsi then prohibited marriage between persons with the same family name and instituted the system of go-betweens, presents, and ceremonies. His legend is that he was the offspring of a miraculous conception; and he is often referred to as Adam of China. Shên Nung, called the patron of agriculture, succeeded him. He invented the plow, about 2700 B.C., taught the people how to till the soil, discovered how to plant seeds and the medicinal properties of certain herbs. He is still honored twice a year in Chekiang province. Huang Ti was the first uniter of China, and his wife, Lei Tsu, was the first to domesticate wild silkworms. [RDJ]

Fulla In Teutonic mythology, an attendant or sister of Frigga whose beautiful, long, golden hair represented the golden grain. She acted as lady's maid and confidant. She is the same as Volla.

funeral customs and beliefs The idea of defending or protecting the survivors which prevails in and determines the character of burials (see BURIAL) also dominates, in more or less concealed and disguised fashion, the attendant funeral customs and beliefs.

The wearing of black by the mourners, the pallbearers, and the undertaker and his assistants was originally intended to make those nearest the corpse inconspicuous and thereby protect them from the ghost and any other spirits hovering near on this occasion so dangerous to the living. Even when so protected by black garments, the mourners must not let the sun shine on them; window shades must be kept drawn and even the curtains in the funeral carriages are carefully pulled down. In the border counties between England and Scotland it is believed that if the sun shines brightly on the face of a mourner at a funeral, he will be the next to die.

In the ancient funeral ceremonies of the Sacs and Fox (North American Indians) every relative of the deceased was careful to throw into the grave some article of food or clothing. It need not be an article of

much value—even a piece of faded cloth would do. But if anyone failed to throw in something, he was in danger. The ghost of the deceased might return and claim the forgotten gift. If you threw something into the grave, it laid the ghost. The same idea was probably back of the widespread custom of casting soil, clay, dust, or ashes into the grave long before the Christian funeral ceremony included the “ashes to ashes, dust to dust” phrase.

Among southern United States Negroes Dr. Puckett reports that in some localities the body is placed on a cooling-board, under which is carefully put a plateful of salt and ashes. It is supposed that ashes absorb the disease from the body, and at the funeral these ashes are carried to the grave and thrown in at the recital of the committal service. The idea seems to be that even the ashes, in which the disease (or the evil spirit causing it) may have hidden, must be buried with the body.

The Negroes are quite frank about the purpose of wearing black, and are not so apt to use the euphemism common among whites that it is worn “out of respect for the dead.” One Negro said plainly to an investigator that wearing black is intended to keep the ghost from bothering you. In Georgia when deaths are of unusual number in a family, a bit of black ribbon is fastened to everything alive that enters that house, even dogs and chickens. White people in these communities smile at the idea of canines and poultry in mourning, but that is not the idea. The black is not grief for the dead, but protection of all living from the contagion of death.

If you would understand funeral customs, you must know the primitive lore of the folk—the ancient wisdom which is aware that all the dead envy the living. You therefore must not wear anything new to a funeral if you are one of the family, especially not new shoes. It is dangerous to excite the envy of the newly dead. Sack-cloth and ashes were worn of old for the same reason and mourners went barefoot. (See DEAD SHOES.)

It is the same idea of being very careful not to offend the dead in any way nor to put any obstacle in the way of a proper and orderly disposition of the body which leads to the observance of customs otherwise difficult to explain. For instance, it is very bad luck in England, in Africa, or in Georgia, to meet a funeral procession face to face. Southern Negroes, in such a case, turn right about face and look steadily in the direction in which the procession is going. If they are in an automobile, they will stop the car and turn completely about in their seats until the funeral party has passed. On the Scottish border, the person meeting a funeral procession must, unless he wishes to die soon, promptly take off his hat, turn and walk along with the mourners. If the bearers are actually carrying the body, he must take the place of one of them for a short distance. After rendering that assistance, he bows to all the mourners, and is free to resume his own direction.

In parts of England it is believed that there will be another death in the family if a hearse has to be turned in the opposite direction after the coffin is placed in it. The corpse must always be taken from the house feet first; otherwise, looking back, it would beckon one of the family to follow it in death. There must be no stopping of the hearse, once it starts for the cemetery: all gates must be already open. Even in crowded city

traffic, where this funeral custom cannot always be strictly observed, the funeral has the right of way over other traffic.

In all these instances and many other similar ones, the idea appears to be that it is bad luck to have any interruption or delay which would afford a dissatisfied ghost, reluctant to leave this world, an opportunity to work any mischief before the body is safely put in what is hoped will be its last resting place.

The “eulogy” pronounced at the funeral services, usually by the clergyman but occasionally by the “best friend,” is a practice consonant with the underlying principle of the entire proceedings—do nothing to offend the ghost of the deceased, which is popularly supposed to remain in the vicinity until the body is buried, and sometimes for three days thereafter. The overflattering nature of the eulogy, which upon some occasions is carried so far as to bear little resemblance to the actual character of the person, and which therefore gives a flavor of insincerity to the entire obsequies, is a survival in modern funerals of the primitive fear of the displeasure of the ghost. CHARLES FRANCIS POTTER

Funzi or Mfuzi The mythical blacksmith of the Fjort people of Africa. He appears in Fjort mythology subsequent to the stories about the gift of fire which the Fjort received from a river deity. As soon as they had fire Funzi appeared and taught the people how to work in iron and copper. He is credited with making the lightning also. The Funzi marriage rite (one of several marriage rites of the Fjort) is marked by the gift of one of a pair of copper bracelets from the young man to the girl; the other he wears himself.

Furies See ERINYES.

furlana A violent, impassioned couple dance of Venice, performed by one or two couples in 6/8 time: still a living dance well into the 19th century.

Furrina or Furina An ancient Roman goddess, whose festival, the Furrinalia, continued to be observed on July 25 in later Roman times and who had a priest, the flamen Furrinalis, despite the fact that her nature had been forgotten. She was perhaps a spirit of the darkness. In the grove of Furrina, C. Gracchus ordered his slave to kill him.

furze, gorse, or whin A spiny evergreen shrub (*Ulex europæus*). The name derives from “fires” which these bushes resemble when alight with their bright yellow flowers. Because of its almost continuous flowering, the Scotch say: “When the whin gangs out o’bloom, will be the end of Em’burgh toun,” and in Northumberland they say that when the gorse is out of bloom, kissing is out of season. Quite generally in England it is thought that to bring gorse into the house is to invite death. In Ireland furze bushes are burned on May and Midsummer Eve to protect the cattle and crops. The Irish make a wonderful yellow dye from the flowers. They speak of Gaelic furze, a light, tufty variety; they call the coarser, paler-flowered kind “foreign” or French furze. Still another species of the hills called *aiteann Muire*, or blessed furze, is worn on the person to help in finding lost property, and prevent stumbling. The seeds are used medicinally for internal diseases, and for obstructions of the liver and spleen.

Fu Shên The Chinese God of Happiness. He has several legends. One of them states that a 6th century A.D. emperor had a liking for little men, and required that large numbers of them be sent to his court as servants. A certain local judge issued a memorandum stating that little men were also subjects of the Empire and had the same rights and privileges as others. This memorandum so touched the heart of the emperor that he withdrew his levy. The people therefore regarded the now famous judge as the God of Happiness. His image appears frequently on festive occasions. [RDJ]

Gabriel In Hebrew, Christian, and Moslem belief, one of the archangels: in *Daniel* and *Luke*, the messenger of God; in Christian tradition, the angel of mercy, in Jewish the angel of judgment; in Moslem tradition the Holy Spirit and revealer to Mohammed of the Koran. Gabriel was sent to bring the glad news to the Virgin Mary at the Annunciation; he will blow the trumpet at the Last Judgment. The Moslems believe Gabriel to be their national protector, as do the Jews, who place Gabriel, along with Michael, Raphael, and Uriel, the protectors of the Jews, within the veil surrounding God's throne. Gabriel is the angel of truth, punishing all who deviate from righteousness; he is the Divine instrument of punishment, carrying the sword of justice. He is made of fire, and is especially entrusted with the office of angel of death for the Holy Land. Sometimes in medieval Jewish angelology, Gabriel is associated with the moon, less often with the planet Mars.

Gabriel's hounds, Gabriel hounds, Gabblerachet, or Gabbleracket Wild Hunt of England that makes itself known by a noise in the upper air: explained as the honking or whistling of wild geese, swans, or plovers passing in the night. The passage of the hounds, which are thought to be the souls of unbaptized infants wandering between Heaven and earth, is a death omen.

Gad A Semitic (Canaanite, Phœnician, etc.) deity of fortune: the name literally is "fortune" or "luck."

ga'dāšot Literally, standing quiver: the Iroquois Indian stomp or trotting dance, formerly a warriors', now a spirit-of-the-food dance. It opens the evenings of social dances, and regularly constitutes part of the ceremonial cycles—among the Cayuga of Six Nations as the second of four. (See BREAD DANCE.) The step, which is a shuffling forward trot, is used in some dozen dances classified by the Indians as the *ga'dāšot* type. The progression of the *ga'dāšot* is the usual anticlockwise circle, among the Seneca with men and women alternating in a single line, among the Cayuga with men in the lead and women bringing up the rear. The songs are unaccompanied antiphony between the leader and men's chorus. They are in ternary form, with the middle part shifting to a higher key and the dancers simultaneously swinging into a side shuffle, or, toward the end of the series of songs, staggering toward the center and out again. The effect is cumulative, from a unison start with a small

fylgja Literally, following spirit: a tutelary spirit of Norwegian folklore, regarded either as a person's double, his own soul, or interpreted as his guardian spirit. As guardian, the *fylgja* comes to one in his dreams with warnings, advice, or exhortation. As double or soul it is conceived of in animal form, and in this aspect merges with the separable soul concept. *Fylgjas* are hereditary beings; upon his death, a man's *fylgja* passes to another member of his family, generation after generation. To see one's own *fylgja*, except in a dream, means imminent death.

group of men to a large animated mixed line of some hundred dancers. [GPK]

gadjsa' The Husk Face maskers or Bushy Heads of Iroquois Indian curing ceremonials, associated with and following upon the dances of the *gagōsā* or False Faces. They wear masks of braided corn husks which automatically associate them with agricultural supernaturals. Some of them represent women who speak of their crying babies at home. Their leader is called O'nis'desps, long-ears-of-corn; another one, Osaída'waanē's, large-purple-lima-beans; and the "women" also have names of plant association. They dance in a stiff-legged straddle, to monotone syncopated songs. They use a wooden paddle instead of turtle rattle, and in their fast dance, circle around their staves.

The Husk Faces act as heralds and messengers to the False Faces in the rite of house-purging and beg for tobacco. On the fifth night of the midwinter festival among the Coldspring Seneca they cavort simultaneously with the False Faces and with social dances. At one time their men and women execute a social round dance and the Husk Face "women" have an *ēškānye*, or old time women's dance.

The *gadjsa'*, or Husk Faces, have no language. Their legend is that they come from somewhere in the East from a place of many stumps, *'tgahuntgānqoh*, which is a rocky gorge, and must return there. This suggests a memorial of derival of horticulture from another tribe.

[GPK]

Gae Bulg Literally, notched spear: in Old Irish legend, the wonderful spear of Cuchulain. The notches were such as to cause the greatest injury when the spear was being extracted. It was made from the bones of a great sea-monster that died in a fight on shore with another of its kind. It was given to Cuchulain by Aiofe the woman-warrior of Alba, who was the mother of his only son. And it was with the Gae Bulg Cuchulain killed that son, Connla, not knowing it was his own son before him. It was with the Gae Bulg Cuchulain killed his loved friend Ferdiad in the War for the Brown Bull. And in the last fight Cuchulain fought, it was the Gae Bulg he hurled at the satirist who demanded it of him; but Cuchulain got his own death soon after without it.

Ga-gaah The Crow of Iroquoian mythology; one of the most magical and sagacious of all creatures. When

he came from the sunland to earth he brought safely in his ear a grain of corn which Hahgwehdiyu planted in the body of the earth. This was the first corn, which sustained and gave life to the Indian. Thus because corn is the gift of Crow to man, Crow especially has the right to hover over the fields, to eat the young grubs which endanger the tender shoots, and claim the first share.

gagates A mysterious gem known to the ancients: said by Pliny to be indigenous to a river named Gages in Lycia. Galen, however, looked for this river and could not find it. An Old French pick-up of the Latin *gagates* passed over into English as *jet*. R. Holme in 1688, however, said there were two kinds, "one russet in color, the other black." It was later, and erroneously, confused with the word *agate*.

Epiphanius (315–403) ascribed to gagates the power to drive away serpents. By the 12th century the power had become extended to the expulsion of demons. The 11th century Bishop Marbod recommended gagates as an amulet against drowsy, in dilution as a preventive for loose teeth and as a remedy for indigestion and constipation, and as a dispeller of illusions. He also recommended it "in fumigation" for epilepsy and to drive out demons. From the 11th to the 18th centuries it was constantly reported as kindling or burning in water, and olive oil was recommended to stop the burns caused by it.

gagōsā The False Face dancing society of the Iroquois Indians. They wear black or red wooden masks with distorted features, crooked noses. They represent disease, wind, or animal spirits, supernaturals with power for cure. They meet at the longhouse in the fall and the spring and also during the midwinter ceremonials. They march from house to house exorcising disease, and join in the longhouse ceremonials on the third day (Cayuga) or fourth and fifth days and fifth night (Seneca). They are assisted in the treatment of the patients by the *gadjiša'*, or Husk Faces.

There is a definite sequence to their ceremony: 1) The marching song to the homes or to the longhouse, called *ganōhwa'i'wi* or *ganolowi'*, or the distraught mind. This quiets the wind spirits and resembles the ashes-stirring rite of the midwinter festival. 2) The dance of the common faces or hunchbacks, Seneca *hadigōsōska'a* or Cayuga *hadui'gēha'*. They knock at the doors, enter with turtle rattles and staves, and caper about with grotesque flatfooted hops and hip motions. They take hot ashes out of the stove and blow and rub them into the patients' hair and strew them about all over the floor. 3) Picking-out-partners or thumbs-up dance, *dāadinyota'* (they two face each other). The first part is for the doorkeepers, thereupon for two False Faces with two matrons of the society, opposite the patient. 4) The general round dance for all, *deyōsi'dqdihas*, literally, they move one foot after another, similar to the *ga'ddōt*. The two doorkeepers, *hadui'*, clear off the benches with their rattles to make all dance. 5) The conductor of the ceremony addresses the assembly either after the marching song or, among the Onondaga, before the round dance. The *gadjiša'* or Husk Faces herald and join the False Faces in a grand pellmell.

The singers straddle a bench, pounding it with turtle rattles, and sing hoarse dissonant tunes with insistent

beat, interpolated with moans and roars of the animal spirits. It is an amazing and spectacular ceremony. [GPK]

gahe Supernatural beings inhabiting the interiors of mountains, in the mythology of the Chiricahua and Mescalero Apache Indians, and called by them the *Mountain People*: impersonated by the masked dancers, and equatable to the White Mountain Apache *ga'n*, Jicarilla Apache *hactcin*, Lipan Apache *hactci*, and Pueblo *kachinas*. The gahe have great power for driving away disease, and often can be heard dancing and drumming within the mountains. Some of them paint and cover their faces for the dancing, and these are the ones on which the Chiricahuas pattern the masks for their masked dancers. But no one has power to create a mask unless he has actually seen the gahe. Each of the Chiricahua gahe is associated with a different color and symbolizes a different direction. There is the Great Black Gahe of the east, the Great Blue Gahe of the south, the Great Yellow Gahe of the west, the Great White Gahe of the north. Many others follow in the procession of the dance. Last comes the Gray One, the Clown, probably the most beloved of them all, and believed to be the most powerful too when any serious work is involved. They worship the ceremonial fire which they approach from each of the four directions, beginning with the east. The gahe have great curing power. They can give sight to the blind and restore missing arms or legs. And they nearly always answer the prayers of the people.

Once at the foot of the Chuchillo Mountains a band of Chiricahua Apaches were attacked by Mexican cavalry. Many Apache men, women, and children were killed from a distance by the Mexican guns. But one man and one woman got away. They prayed to the gahe in the mountain as they ran. And the gahe came forth and drove the Mexicans into a cave in the rocks with their swords and then closed up the cave. Now there is a pile of Mexican cavalry boots outside the cave, but the soldiers never got out. The Chiricahuas say the gahe always have real swords.

Apache crown dancers, functioning at curing rites and adolescence ceremonies for the White Painted Woman and pubescent girl. They represent mountain spirits associated with the guardianship of game animals. Their only sound is the spirit call, "hoo-hoo-hoo." They represent the cardinal points in the number of four to a set, and in all ritual approaches. Their spectacular costume includes high pointed horns or crowns with face-covering black hoods, skirts with pendants, body-paint in symbolic designs, eagle-feather decorations, and a pointed stick in either hand to impart endurance. It is dangerous for them to make a mistake or to be touched. The shaman sings special songs during the ritual painting and for each type of dance step—the free step, which is rigid and terse, and the high step, the strenuous broad squat with vehement forward leg flings. They dance around the fire in front of the ceremonial puberty structure all night long for four nights. Pay and ceremonial obligation stimulate this endurance test. [GPK]

Galahad In the Vulgate Cycle of the Arthurian story, the son of Lancelot and Elaine. By passing the test of the Perilous Seat and successfully drawing the sword from the floating stone, Galahad qualifies as "the best

knight in the world." Galahad replaces Perceval as the Grail Seeker and is the only one of Arthur's knights who is fully successful in that quest. He is successful because he is a pure and maiden knight. [MEL]

Galatea (1) In Greek mythology, one of the Nereids. Polyphemus loved her, but she in turn loved Acis. Polyphemus caught the lovers together and crushed his rival beneath a rock. Galatea then changed Acis into a river, or, in another version, married Polyphemus. In still another story, she wept so long over the death of Acis that she became a fountain.

(2) In Greek legend, the wife of Lamprus. Her husband ordered her to kill her child if it were a girl, so she brought up her daughter as a son, calling the girl Leucippus. When the deception could no longer be maintained, Galatea and Leucippus fled to the temple of Leto. Galatea prayed to the goddess that the girl might become a boy—and it so occurred. The Phaestians thus worshipped Leto Phytia (the creator) and celebrated, in honor of the event, the ecdysia, or putting off (of female attire by the transformed youth).

(3) In pseudo-classical mythology, the ivory statue created by Pygmalion, with which he fell in love, and which was transformed into a woman. There does not seem to be any basis in classical legend or folktale for ascribing this name to the statue, since it is in extant ancient versions nameless.

Galaxy The Milky Way: so named because it resembles a trail of milk across the sky (from Greek *gala*, milk).

gambling The act of risking or wagering something of value upon a chance. This form of pastime is found all over the world, e.g. among Indians of North and South America, among the Chinese and Siamese, and in India. Finds in excavations testify to the popularity of gambling in games of chance from earliest antiquity. In India, dicing was said to have been carried to an extreme, not merely to divine the future but as part of a ritual. Dicing was a popular pastime in England, indulged in by Queen Elizabeth who, it is recorded, had her dice "treated" that she might always be sure of winning. Slaves in Mexico sold themselves so that they might have money for gambling. Gambling is perhaps an offshoot of divination; it might be called a cousin, in that the will of the gods determines the fortunate winner. Like divining, gambling has utilized every conceivable happening within the human environment; modern Europeans have been known to bet on the color of the next cow appearing to the right of a railroad train; automobile license-plate poker is often played in the United States. Huge wagers, up to and including everything a man owns—wife not excepted—, have been made. There are great national lotteries in many countries; almost every people has its favorite gambling game or situation. The dividing line between gambling and business, the so-called "risk money," is often so important a factor in economy that an unlucky turn of events will bankrupt companies and cause national depressions. The professional gambler, sometimes dishonest, sometimes scrupulously honest but with great knowledge of the game he played and its odds, was (and still is) a familiar figure in frontier life, in the American West, and on the Mississippi packets. Such cosmopolitan centers as Macao in China

or Monte Carlo derive a great part of their income from gambling; fan-tan, roulette, and various banking card games are notorious as gamblers' games. The conquering gambler is a popular motif of many North American Indian myths and folktales. See GAMES.

gamelan Malay word for the characteristic orchestra of Bali, Burma, and Java. The collection of instruments, rather than the performers, constitutes the orchestra, which is owned by a village or a court. The instruments include numerous gongs, gong chimes (see BONANG; REJONG), cymbals, drums and drum chimes, xylophones, wooden clappers, bamboo rattles, and sometimes a flute, the combination differing for the purpose of the performance. The orchestras play for temple feasts, for marionette plays and other dramas, for exhibitions of dancing girls, for marching, for cremations, and for various ritual dances. The music is based on a pentatonic scale, of which there are three distinct types in use, and the rhythm is swift and interwoven on several levels, accented by deep gong tones. The musicians play entirely from memory, experienced players teaching new members of the orchestra.

games Much emphasis is placed in various studies on the games of children, for games play an often predominating role in the budget of time of a child; childhood is game-time *par excellence*. Nevertheless, the games of adults are as important in the over-all study of the subject, and, when correlated with other aspects of the study of human society, more important. Such monumental works as Lady Gomme's investigation of the children's games of Great Britain, Scotland, and Ireland, in two volumes for this small albeit important section of the world, and Newell's *Games and Songs of American Children*, serve only to emphasize the tremendous sweep of the subject, for in neither of these works are the games of grown-ups examined, and in neither is the work complete in regard to variants, the interrelationship of allied games, and foreign forms of the games under discussion. Such a task was of course beyond the resources of either writer, the evidence being incomplete and the space being limited; above all their aims were quite different, collection rather than comparison *per se* being the end in view. However, these works, the chief studies in the folklore of games, may serve the reader as illustrations of the scope of the subject.

It is possible that many other cultures, primitive and complex, have neither the quantity nor intricacy shown by the games of England and the United States. (It should be noted here that this discussion will limit itself primarily to games known to most of its readers. Exotic forms are as a rule the games that we play, played elsewhere with variations and cross-mixtures.)

It is difficult to believe, as investigator after investigator into the way of life of other peoples seem to indicate, that only one or two pastimes of children, often not games at all but simple play, like doll-play, form the extent of the game-life of any group. Even more discouraging are statements like "No games have been recorded" or "The children do not play many games." Conceivably, there is on the face of the globe an occasional, rare culture in which no games are played, in which all the time of all the members of the community from the youngest to the oldest is taken up

with the more vital problems of sustaining life, propitiating the spirits, and such immediate necessities. Admitting this as a possibility, and granting that some primitive groups of men live constantly in the precarious balance between life on a minimum basis and extinction on the morrow, in more than one instance the investigator's lack of interest, because his emphasis is directed elsewhere, results in such a finding, or lack of finding. For, given so simple an instrument as a piece of string, men, Eskimos and Australians, Papuans and North American Indians and Africans, have developed a form of play, or instruction, or art, or religious activity, or game, called by some Cat's Cradle, but more generally called String Figures, which in its complexity and universal interest yields to few other forms of human activity. One field worker, investigating where others had met defeat in trying to approach the members of a group, and who succeeded by trading string-figure information, suggests it as a more efficacious tool than any conceivable Esperanto might be. Games may serve in more ways than one as a convenient key to the way of life of a people.

But it is the doll, or the hopscotch diagram, or the ball, not the casual piece of string or the few odd pebbles, that catches the eye of the field investigator when his attention is centered on other matters. Unless he be definitely attracted to games, it is quite possible that he will overlook games that do not require special materials. Moreover, as sometimes it is true, games are mysterious matters, closely linked with religious beliefs or customs like the sexual distinctions, and may thus be ignored completely in an investigation because glossed over or even avoided by the one being questioned.

The problem is further complicated by a lack of agreement in definition. Generally speaking, any form of amusement or pastime is a game. What is serious and essential activity in one context may in another place and time be nothing more than sport. The hunter on a tiger-shoot in India, to whom the quarry is only a large and dangerous target on which to test his accuracy with a rifle, is indulging in sport; to the inhabitant of the nearby village the killing of the man-eating tiger is something quite different. The fox-hunters in red coats riding to hounds are, by different means and for different ends, doing the same as the chicken farmer who lies in wait with his shotgun for the thieving fox. The same cowboy who ropes a calf and throws and ties it for branding may later perform the same act at an inter-ranch contest of skill or at a large regional rodeo. Thus it is too with fishing and running, with shooting the rifle or the bow and arrow, with horse-racing and corn-shucking: many of the sports and games played by men are simply a change in context of an activity closely concerned with the plain facts of daily living of some other men. And games derive not only from the economic, as they may be called, aspects of life. Many are developments of other things men do in everyday living. For example, religion and religious ceremonies have led to ball games and such games as London Bridge and The Farmer Takes a Wife. Educational activities are paralleled in the simple imitative Play-School of our five- and six-year-olds, and in the pseudo-war games of Chess and

Lead Soldiers. Almost anything that man does he also plays at, and in fact the game is often the training ground where he learns, as child, youth, and adult, to acquire an ease and facility which become useful when he comes to practice the activity itself.

We cannot then define game only as pastime or sport or amusement, for the dividing line between game and serious pursuit must be sharper if it is to be discussed with any degree of ease or profit. To begin with, a game must be a social activity; more than one must play. A baby fingering its toes; a child, all alone, mothering its doll; a boy tossing pebbles at a tree; a huntsman practicing with bow and arrow by shooting at a stick are all engaged in activities which form the basis for games but which of themselves are not games. The extra ingredients in each case are another person and the concept of dramatic struggle and climax. Let a mother play with the baby and have her recite, as she or the baby touches each toe, "This little pig went to market," and the social situation necessary to a game is met. Add another child to be the father of the doll and the universal Play-House game is present. If another boy happens along, the pebble-throwing becomes a contest to see who can score the most hits in a given number of throws. Draw a line, measure a distance, set up a wand, and stand several archers on the mark, and a game, or sport, or contest, exists. In every instance what was energy directed towards performing an action for its own sake becomes energy applied to a dramatic end.

Essentially that is what a game is, a drama. There are games in which no winner or loser emerges. Such are round games like Drop the Handkerchief and Tag and The Old Witch. In the first two, ephemeral contests take place, one of the group against another of the group or against the whole group. In the last, the game is repetition of a formula by each of the participants and includes a mock struggle and what amounts to a plot in which the witch loses the game.

But in most games there are a winner and a loser. The winner may be one of several in a game, as in Marbles; he may be one of the two players in the game, as in Chess; there may be several winners and losers, each playing independently, as in Poker or other similar gambling games; or the winner or loser may be a group, as in Baseball or most team games. But success or failure, and the action that leads up to them, are the essential ingredients of a game as they are of the drama. Vaguely (and almost indefinitely), a game is a plot worked out by the players during its course of action.

Games also have another peculiar set of circumstances attached to them that differentiate them from the "essential" pursuits of life or from practice for those activities. No game is possible without rules, either explicit or tacitly understood by the players. These rules may consist simply of a general understanding of the aims of the game and of an agreement among the players that some arbiter exists to whom appeal may be made in case of disagreement. In this the game differs from the vital pursuits of life.

It does not matter where the hunter stands to shoot his arrow at the deer; his purpose is to kill the deer, to obtain food, and the only rule essential to his being

successful is that the deer not escape alive. The words chosen by the suitor in proposing marriage need be those that obtain the acceptance of the maiden; the exact formula does not exist, really. The thief shot down by the policeman may, if he can, shoot the officer and escape. But, in games, there are rules to prevent such actions. The toe must not cross the line in shooting at the target, and sometimes the winner will not have hit the mark but will have been the one who has come closest. No variation is permissible in the formula used by the suitor in marriage games; the rime to be used is handed down as from Sinai. After the robber is shot by the cop, bang! he cannot get up again unless certain conditions are met; "You can't do that; you're dead" is an inexorable verdict, and until some recognized resuscitating action takes place, the "dead" player's place is on the ground and *hors de combat*.

Rules are of course flexible and subject to amendment at the will of the players—if they agree to the change. A game, with only its general outline the same, will have variants in which, from city to city and from country to country, the specific rules to fit its various complexities will be different enough to make identification by a student of games difficult. But basic to the play of any game is the unexpressed admission that those rules which are accepted will be followed by all the players. "La buona fede è l'onestà sono condizioni necessarie in ogni buon giocatore." (G. Pitré, quoted by F. Rodriguez Marín.) Without these qualities (thus again setting games apart from many other activities where success is more important than morality) most games would be impossible. If Peter decides to lie low after "it" calls "I spy Peter," the game loses its point. If, despite the penalties exacted for the fault, a bridge player persists in reneging through a series of hands, the game becomes so chaotic that play becomes next to impossible. The effect on a quiet afternoon's game of a child who insists on taking the "doctor's" pulse is disruptive. In the drama that is played out in any game, the parts must be kept to; improvisation is admissible where necessary, but the very nature of most games frowns on such anarchic action. Most boys would much prefer playing One or Two O' Cat to participating in a ball game where two or three of the players are common to both sides. The climax is not as clearcut; the sharpness of deciding winners and losers is blunted; the satisfaction derivable from having played through a game is dissipated.

A game then may be defined as a form of play in which two or more participants vie, either as individuals or as groups or teams, under the limitations of rules either tacitly or explicitly understood by the contestants, for the purpose of determining which is the better or best at the particular form of play; a game is a dramatic play contest. This is true whether the game be rope-skipping or baseball, boxing or puss-in-the-corner, charades or "Last one in stinks." The term games, thus, as used here, does not include dances in which everyone performs simply to trace a pattern, or for simple physical action, or the like, because there is no contest involved; social dancing and ritual dancing alike are not included. Nor is drama a game, for the outcome of the contest, while existing in the plot, is not a matter of doubt; it is preordained by the

nature of the activity. It is much to be regretted that such play activity as children's games of the type of The Old Witch and The Farmer in the Dell have traditionally been classified as games. While the transmission of such pastimes, and the situations in which they are played, resemble greatly those of actual games, in truth they are not games but juvenile folk-drama. Certain traditional festival games, ball games between married and unmarried women, in which the married women always win, though forerunners of games, cannot be considered games because of the absence of contest: the fruitful married women must win over the barren single ones. It is to be doubted, also, that many of the field sports, like hunting and fishing, are games; the stake of the loser is much too great, and the understanding of, or adherence to, the rules set up by the hunter on the part of the quarry is not present.

The classification of games has been the subject of many students, and there are almost as many ways of considering the subject as there are writers on the matter. Games may be discussed according to the season in which they are played; according to the places where they are played; according to the number of players involved; according to the sex or age of the participants, etc. The investigations of Stewart Culin into the games of the North American Indians and the peoples of the Orient led him to divide games into two main classes: games of dexterity and games of chance; the latter subdivided into games of pure chance and guessing games. Wood and Goddard define three principal types: showdown games, in which each player performs without interference; playing games, in which interference from others occurs; and a play-then-showdown group. Variations within games and hybrids of games belonging to different groups make necessary such straddling classes as Wood and Goddard's third. A striking example of the mixture of two games is seen in the game of London Bridge. This game, as described by Newell, reaches its climax in a tug-of-war between two teams chosen during the previous course of the game. Lady Gomme, in her discussion of the forms of the game in the British Isles, expresses surprise at his emphasis on the tug-of-war, she finding nowhere in the several variants collected by her any such hauling contest between parties. She concludes that in America the game was consolidated with some form of the arch-tug-of-war game, like Oranges and Lemons, to which London Bridge is very similar, and which does have a choosing of sides and a pulling finale like that of the American London Bridge. Yet, despite what seems a radical difference in the aim of the game, the name is London Bridge on both sides of the Atlantic, and undoubtedly is the same game whichever the variant. While instances like this do not upset larger classes, such as those mentioned above, in the long run an attempt to establish a complete, overall classification must break down. The method is useful in tracing similarities between games, but it must not be taken as an absolute method of studying games.

There are two classes of games, however, which make a helpful dichotomy in a historical study of games. Certain games, such as top-spinning, marbles, dice, chess, must be played with specialized equipment. These

games are quite distinct, though not sharply so, from those which require no special tools but are played either without accessories or with such materials as pebbles, sticks, and the like, obtainable at random from the surroundings. It is obvious that the former class will leave, as relics for the archeologist to discover, its paraphernalia in the remains of its vanished culture. It therefore becomes easier to trace the history of such a game as chess than it is to track down the origins and diffusion trails of games like hopscotch. Sometimes the task of tracing the origins of games is made easier by literary remains, or by works of art, describing or depicting a game so similar to one we know that a connection is facilitated. Thus, we know from a mural painting in the palace at Knossos that bull-baiting was a sport indulged in by the ancient Cretans more than 3,000 years ago, evidence further strengthened by the picturing of the same sport on vases and other remains of the period. Whether a direct link exists with the modern Spanish bullfight with its up-to-date methods of maddening the bull by exploding bits of gunpowder under its skin, or with the modern American rodeo sport of twisting a steer's neck until he falls to the ground, or whether the modern sports are independent developments of a sport occurring in sections of the world where cattle exist and men demand dangerous amusement, the information about the Cretan practice exists and indicates a possible starting point for an investigation. Pieces resembling chessmen found in Mesopotamia, millennia old, dice from ancient Egyptian tombs, help to link, if not the games themselves and their actual play, the men who played and play the games.

The half-dozen games discussed below have been chosen as types, not of kinds or classes of games, but of what might be termed the ways of games. Johnny-on-the-pony, the only not specifically adult game of the group, is a European game that has come down to us through the centuries in a clear line from the classical world. Chess is a game with cousins in all parts of the world, but specifically a single game with its own distinct characteristics and played by many peoples. Mancala is a game so limited in its geographical distribution that one is tempted to call it the racial game of the Negro; it is at any rate a game peculiarly identifiable with the continent of Africa. Playing cards illustrate the use of equipment for several kinds of games, and for purposes allied with a quasi-religious function, i.e. divination; they are a sophisticated form of the use of special, significant, and manufactured material for several purposes. Dice, developing from natural objects, are found in their most essential as well as in artificial forms, and are used in much the same way in every part of the world, and at every epoch.

Among the games of New York City boys played by the light of street lamps is one called Johnny-on-the-pony. Two teams of equal numbers are chosen. One team are the jumpers, the other the ponies. One of the ponies bends his head against the stomach of one of his teammates who stands with his back to a wall; the next teammate bends, placing his head against the buttocks of the first player and grasping his thighs, forming the beginning of a chain which stretches from the wall until the entire team is in line, all bending forward. Then

the other team, one by one, leaps onto the backs of the ponies, jumping high and landing as vigorously as possible in an attempt to break down the line of stooping boys. When all the jumpers are on the backs of the ponies, they chant

Johnny on the pony, one, two, three,
Johnny on the pony, one, two, three,
Johnny on the pony, one, two, three,
All off.

If the line of ponies has not broken and precipitated the entire mass of boys to the ground in screaming confusion, or if the jumpers have piled up so that they form an unstable pyramid that topples as the ponies sway back and forth to the rhythm of the chant, the ponies become the jumpers. If the line of ponies breaks, it must re-form and permit the jumpers to try again until the ponies are successful in withstanding the assault and become jumpers in their turn.

This game, one among many that seem to stem from a youthful exuberance and desire for a rough game involving bodily contact, is a local form of a game known in many parts of Europe. It is played in several other ways and under several other names in Britain. The French game of the Bear (*l'Ours*) combines a form of mimic bull-baiting in the ring with the leaping characteristic of the game in question. Forms of the game in combination with other games are known. It is however best known as How Many Horns Has the Buck? in which the leaper holds up a number of fingers and forces the player he bestrides to guess correctly or undergo another leap. In this form, we are indebted to Petronius Arbiter (*Satyricon*) for the information, the game was played in ancient Rome, with very much the same sort of question as is now used. The Latin question, "Bucca, bucca, quot sunt hic?" is phrased today, "Buck, buck, how many horns do I hold up?" The relationship of this game to the traditional riding of children on their fathers' backs is perhaps more apparent than traceable. It resembles too a form of leapfrog, a game known to have been played in classical Greece.

On the other hand, one of the popular games played in ancient Greece, a game which had houses devoted to its play, and which has now disappeared, was the Cottabus, an adult game imported into Greece from Sicily and originally a method of divination. The object of the game in its various forms was to throw wine from a cup through the air into another container without spilling any during the cast. This game, despite its extreme popularity, which was perhaps as great as that of Bingo in the present-day United States, is no longer played, except perhaps by some few scattered antiquarians in the manner of craftsmen interested in the techniques of making chipped flints like those of the neolithic men. What reason lies behind the survival of the one game and the disappearance of the other? The answer lies perhaps in the seemingly innate conservatism of children. For the one game is a child's game and the other an adult game, and by comparison with what we know of other survivals in children's games where an underlying adult custom or ceremony has long disappeared, a hint perhaps of the nature of the transmission of folklore may be obtained.

The origin of the game of chess seems to be hidden

by the curtain of unmeasurable antiquity. Actually, no definite reference is known before the 7th century A.D., but by then chess had already spread from India to Persia. Chessmen, or pieces that apparently belong to a game like chess, have been found in the ruins of Mesopotamian Tepe Gawra, dating some 4,000 years B.C. But, of course, not all games called chess are the game played today under that name. Checkers or draughts is played with flat pieces of equal value on a checkered board; nine men's morris may be played with flat men or with pegs; the Japanese *go* is played with counters on a surface of intersecting lines; the Irish *fídhell* was some sort of board game; all, under circumstances where the method of play was forgotten and the equipment alone remained, might be called chess by someone unearthing the materials.

Chess, the game as we know it, however, is a highly specialized game, defined as one in which no element of chance exists, in which pieces of various powers move on a checkered board. The object of the game is to attack and immobilize the chief piece of the opponent. In this, combined with its maintaining a theoretical equality of opportunity between the players, skill alone determining the outcome, chess is unique among games. Its origin is obscure and beclouded with folklore, mythology, and nonsense. Solomon, the Greek Palamedes, Hermes are among the many names mentioned as its inventor. It is said to have originated among the Babylonians, the Jews, the Irish, the Chinese, and among others, the Araucanians. It has been identified as being a derivative of games so obviously not chess as the Roman *latrunculi*.

There have been competent and careful scholars, like Murray, who, investigating the history and development of chess, have arrived at more or less definite conclusions based less on theoretical guesswork than on factual resemblances. Chess, which Murray calls "the national game of Asia," seems to have started in India as *chaturanga*, the four angas, or components of the army. From India, it went to Persia, thence to the Arabs as *shatranj*. Among the Arabs, in the 10th century, is found the first book devoted to the game. Its author, Masudi, speaks of it as a game some hundreds of years old. Within the hundred years following the date of Masudi's book, chess came to Europe, in essence the same game as the one played today, but differing almost completely in detail, such as the setting up of the pieces, and their powers and moves. It is only within the past hundred and fifty years that chess has become more or less stabilized in the form we now play.

Chess may be said to have almost world-wide scope. It is played in Mongolia and in Argentina, in the United States and in Russia. It is played not only over-the-board in European coffeehouses and in chess clubs and on park benches, but by mail between continents, and by telegraph and radio. In the United States alone, 4,000-10,000 devotees carry on contests lasting months, and often a year or more, by postal card. The notation of the game, in the several languages and systems, is readable by practically every player.

Chess has its own folklore. There are tales told of every master player, apocryphal and difficult to trace, as are most anecdotes. Alongside the written code of

laws of the game, certain customs have the force of law. For example, the choice of colors by one player from the two hidden pawns in his opponent's fists and the habit of resigning a game, before one is checkmated, by upsetting the king are covered by two widespread but unwritten rules. As with players of many games, chess players have idiosyncrasies approaching superstition.

Another game of skill, known by almost as many names as there are tribes to play it, might well be called the continental game of Africa, although it is played in Arabia, India, Indonesia, and many other places to which Arab traders have carried it. This game, investigated by Culin under its Syrian name of *Mancala*, is called, for example, *Chanka* in Ceylon, *Madji* or *Adji* by the Dahomeans, *Kale* by the Fan, and *Wa-wee* in the West Indies. Generally, the game consists of placing counters in containers or hollows in a board before each of the two players and then moving the counters (pebbles, beans, etc.) in turn about the board, capturing the pieces in the space to which the last piece was played and in those preceding or opposite it whenever the number of pieces in the last-played hole is two (or another arbitrary number). Were dice added to the game, as they sometimes are (e.g. the Egyptian Arabic *Seegà*), it would resemble to some degree backgammon. Primarily it is a game of skill; it is occasionally played according to rules which permit a knowledge of mathematical rules to enable a player to determine in advance whether he will win or lose, as in the puzzle-trick of taking an odd or an even number from a pile of sticks or pebbles; sometimes the toss of dice adds a greater element of chance to the game.

Culin, and Andréé before him, maintained that the game originated in Arabia and was carried through the continent of Africa to the Atlantic. Schweinfurth held that the game was of central African origin, and that it traveled from the interior to the edges of the continent, where the Arabs picked it up and transmitted it further to those places with which they had contact. In the absence of other, definite proof of either theory, the important note to be made is that the game is played all over the African continent, eastward to the Pacific and westward to the New World, carried to the latter probably by Negro slaves, to the former by Arab traders. According to Herskovits, the game is found in the New World from Louisiana to the Guianas, and is, throughout the area, a rather ceremonial game, connected with the idea of death, and as such not a gambling game. He traces the back-country game of Dutch Guiana as perhaps coming from Dahomey; the game played on the coast seems to come from the Gold Coast. Among the customs he records among the Saramacca of the upper Surinam River connected with the game of *Adji* is the belief that a board must be made by a man who has lost a wife or one who is old; the board has a connection with the spirits of the dead, there is something dangerous about it. To be a good board, the *adjiboto*, the *adji* boat, so called from its shape, must be rough-hewn and become smooth and polished by the fingers of the players.

There are two games, or more properly groups of games, played with two specialized kinds of equipment,

which may truly be said to have world-wide distribution: dice and playing cards. Few places on the face of the globe that have been visited by the exploring or colonizing European have not seen the transplanting of both the "Devil's picture-book" and the "galloping dominoes," for dice and cards, by their nature, lend themselves to the kind of games which rely for their thrill on chance and gambling.

The latter concomitant of games has been only lightly touched upon here because it is not essentially an element of games, but so closely is it associated with the subject that something must be said about it. Where the child or the adolescent finds justification in the physical enjoyment or the training, the social or the prestige elements, of playing in games, the adult, in many societies, seeks to place on the firm basis of permanent acquisition some tangible reason for playing. In societies where money or goods is the measure of the stature of the man, he will attempt, even in his play, to make further additions to his store of wealth. With some games, those, like Wari mentioned above, having a more or less ceremonial nature, gambling is not possible, but in most games, whether of chance or of skill, "a leetle side bet" not only adds to the spice of the game, but often becomes the reason for playing it. In many ways, this is a translation into concentrated action of the dramatic element of games as repetition of the serious pursuits of life. To risk wealth representing a month's, a year's, even a lifetime's work on the turn of a card, a throw of the dice, the speed of a horse, or the agility of an athlete, crowds sufficient drama into the moment of decision to repay the risk of property.

Whether it be fanciful or not, whether it be folklore, fiction, or fact, the story of the man who risks all on the chance of a game is well known. The legends of suicides at the gambling houses of Monte Carlo are only one case in point. There are many reports of missionaries, travelers, and others who knew the North American Indian of the desperate passion for gambling that led some men to wager horse and lodge and wife in a game of dice, and, losing, to revenge themselves by war or feud, thus placing in the scales their own and others' lives. Many accounts tell of whole American Indian villages becoming destitute as a result of unfortunate wagers made against another village in some game. State lotteries, organized "bingo" games, manuals on the laws of chance and the odds in roulette and dice, all attest to an almost universal fever among the men of our time to turn to physical use, to goods and money, the tension and the knowledge of a game, to add to the drama by making it real in terms of real living values. Gambling attaches itself to games rather easily because of their high emotional tension, just as it does to commodity and stock markets, elections, and the other more immediate and dramatic concerns of daily life.

As has been said, playing cards and dice are used in the great gamoung games. By their nature they lend themselves to play where the element of chance, the knowledge of the laws of the odds, are paramount. Even in so skilled a card game as bridge, knowledge of the most probable distribution of the cards and of the most probable direction in which to take a successful

finesse distinguishes the better bridge player from the good or the mediocre. Knowing that drawing to two pair leaves the hand less chance of improvement than discarding one pair and drawing to the other in order to make three of a kind is something that many poker players never learn. Whether to bet against or with the thrower in dice depends on knowing the chances of his making a "point": good in the case of 8 or 6, bad if he must throw a 10 or 4. The skilled gambler is, then, as is the skilled player in such games, more or less the mathematician, solving an equation in one unknown on the spur of the moment by assigning an arbitrary and personal value to the chance factor.

The place of origin of our playing cards is open to debate. Some students, e.g. Wilkinson, make a strong argument for their origin in Chinese playing cards, which in turn seem to stem from the divining arrows used by many of the peoples of Asia and North America. Certainly there seems to be a connection between our cards and the Chinese type. However, no direct connection has been shown.

Chinese cards are long and narrow, resembling in many ways the sticks or feathered ends of arrows from which they are believed to derive. The playing sticks, classified by Culin with the playing cards, used by the North American Indians, are of similar shape. The playing cards of India, on the other hand, are round. In both Hindu and Chinese cards, there is division into suits, and into ranked variety within the suits. It has been suggested by Culin that these East Indian cards are derived from play equipment similar to that of the playing disks of the North American Indians. The latter were, however, more akin to dice in their use (they were counted according to the faces turned up in a throw of the series of disks) than they were to cards. A combination of motifs is nevertheless not beyond the bounds of possibility, and some lost game of India may have developed, through an Indian acquaintance with Chinese cards and card games, into a game played with round cards. It might be suggested that tradition holds us to a rectangular card; a round card might be more easily handled and would last longer than the oblong one. But card games are no different from other games, and tradition's weighty hand is turned against change.

At some early point in their history, cards arise from divinatory practices. The idea that they were divided into suits on this divining basis, usually into four suits corresponding to the four directions of the compass, is most appealing. Their use, since their introduction into Europe, has always been, concurrently with their use in competitive games and save for a brief lapse some centuries ago, in fortune-telling, as a means of seeing the future. Cartomancy is an old and well-established study in Europe and in its derivative and allied cultures. On this ground the Gipsies have been "accused" of having imported cards into Europe, since Gipsies are notoriously the palmists and tea-leaf readers, the card readers and phrenologists *sine qua non*. And, working back from this hypothesis, there have been studies tracing the "Book of Thoth" or other such fantastic names for the pack of cards to the Egyptians (which is what the Gipsies' name derives from), whose country, or supposed country, as the most ancient known to Europeans of past centuries, was naturally thought

to be the home of the original, and unhappily lost or hidden, mysteries of the human spirit. But the theory that the Gipsies brought cards to Europe is dubious at best. The first playing cards, it is true, are noted on the continent at about the time that the Gipsies arrived from their Eastern lands. Cards, as a game device, would be among the very first things transmitted from one people to another; if anything were to be handed by the Gipsies to their European neighbors, the most likely of all would be playing cards, if that were one of the Gipsies' peculiar possessions. Nevertheless, contact between the Gipsies and the peoples they lived among, for one reason or another, was never close enough for cards to have passed easily from the one group to the other.

Cards have been known in Europe for at least 500 years, the tarot deck being known in France, the Low Countries, Germany, and Italy in about 1350. Willshire places the earliest definite date at 1392. The very earliest of Italian cards were what are known as tarocchi or tarots, cards including a group called attuti or atouts bearing such names as the Pope, the Lovers, the Sun, the Devil, the Tower. Combined with these in the deck were the suit cards, comprising the numbered cards and court or coat cards. The early games played with the tarot deck were all for two players.

Like chess, playing cards have their invention myth; it is said that they were made to amuse the mad Charles VI of France. There was no early standardization of the number of cards in a deck, nor is there today. Our standard pack contains 52 cards, but various games are played with a 32-card pack, or 48, or 53, etc. Some Mexican decks have 104 cards; it is said that in India a deck of 120 cards is used. Our suits of clubs, spades, hearts, and diamonds were once cups and coins, batons and swords (and still are in some countries like Italy and Spain), but our modern suits have developed a traditional symbolism of their own, especially as used in fortune-telling. Hearts relate to love; clubs to knowledge (or as resembling the clover-leaf, to fertility); diamonds, as is quite natural, to wealth; and spades to death and the grave. The court cards too have their names, and have often been printed with the faces of the persons they are supposed to represent. For example, the French names for the four kings were traditionally Charlemagne (hearts), Alexander (clubs), Cæsar (diamonds), and David (spades). Similarly with the queens, and with the knaves, the latter being called for the great knights of legend, e.g. Hector, Lancelot, Ogier the Dane.

In cards, as in all games, tradition maintains a hold not to be shaken, not even by well-thought-out schemes of persons seeking to improve certain of the games. A fifth suit, often suggested, and which probably would result in the development of new and interesting games, has never been kindly received by card players. The very cards themselves, as printed today, are of traditional design; the costumes worn by the royalty on the court cards is early Tudor, although some of the trappings, e.g. the crowns, are of later date.

The deck of cards, as we know it, and with the evidence of the atouts of the "Egyptian book," is probably a development of two types of cards used in two kinds of games. The numbered cards, aside from their arrangement in suits, may go back to some form of game resembling dominoes, with matching of numbers or building up of a series as its basis. The court cards and

the tarots may be essentially the descendants of instructional material, of pedagogic cards or of cards used in divining what lay in store for the user of the cards. Michelangelo is said to have invented a Florentine form of the game of cards, using a complete deck of tarots, to instruct children in arithmetic. History, traditional belief, and legend may well be the instructional use of the non-series cards in the deck, as evidenced by the names given to the court cards and by the names of the atouts.

Whereas the origin of playing cards is conjectural at best, there is more solid ground for determining the origin of dice. The beginnings are preserved in one of our popular terms for the implements, the "bones," a term used whether the dice be of ivory, plastic compound, or cubes of sugar. More clearly than is the case with cards, dice may be seen to be originally almost universal instruments for divination, by casting the vertebræ or knucklebones of animals. Where this form of divination is practiced, the fall of the bones with the long spur up, or the short spur up, or in any of the other possible ways, or, where more than one bone is thrown, the various casts in combination, is read by the diviner according to a preconceived plan. What more natural than to turn this form of determining the wishes of the deities into a type of gaming, with the lucky person the one who draws the best omen? In time the bone itself had figures drawn on it; instead of the fall of the spines, the appearance of a painted or incised character became the determining factor. The simple dice games of the North American Indians were played for the most part with pebbles having one face painted and the other left natural or plain, or with pieces of wood flat on one side (marked or unmarked) and with the natural curve of the twig on the other. The distinction between "lot" games, represented by these implements, and "dice" games, seems to be an artificial one, because the two forms of casting to determine a number are essentially the same. In a set of such dice there may be several varieties, or one with special marking. Where number divination is a developed study, the faces of the dice, or bones, may be numbered. Thus we have dice from ancient Egypt more closely resembling ours than the almost contemporary American Indian dice.

Dice may further be used in determining which of certain positions in a chart is to be chosen for divining purposes. One may move pieces to different positions in divining, or make a contest of the moves as in the Indian game of pachisi, the Korean nyout, the European backgammon, the Egyptian seegà. Or one may determine what part of a standard chart, such as the Chinese sixty-four hexagrams or the eight diagrams, is to be read against a standard interpretation. Dice thus become a tool for the determining of a further objective, and may be part of, or all of, the equipment necessary for a game.

The usual things that come to mind when games are spoken of in folklore context are the games of children or the play-party games of some of the "backwoods" sections of our country, the rope-skipping and other games and rimes of children or the traditional play songs. For several reasons these categories have been avoided. First, the much-repeated statement that children are the most conservative creatures on earth seems

to be true, and as a truth it leads to a dilemma. Do children play games because the games are traditional or are the games traditional because children play them? And if both, or either, whence the changes that occur in games? This is of course a statement of the chicken-and-egg paradox. Second, there has been overanalysis of children's games. There may be point in proving that London Bridge is an ancient bridge-sacrifice rite, transferred to the child's world by his imitation of his elders, and, upon the disappearance of the rite itself from the adult world, remaining in a vacuum in the play world, and thus changing through the centuries. Interesting, yes; but this is a scholarly hypothesis deriving from what is itself a scholarly game; it has nothing to do with the "why" of the popularity of London Bridge among children. No child plays that particular game today in imitation of his elders' bridge sacrifices; no child makes the connection between the game and bridge sacrifices. No child has heard of bridge sacrifices, unless we subscribe to some theory of a racial consciousness. Though some of the variants of London Bridge do indicate a bridge-sacrifice ceremony as the basis of the game, these are the oldest rimes in theory only. There is no way of dating the comparative age of those particular verses as against the so-called more modern verses of thievery and jail except by deduction, at best a process to be handled charily in the face of inductive evidence. The child of today plays London Bridge because children of the generation preceding his played it, and because he is a Tory. The rope-skipping rimes using the name of Charlie Chaplin are still used in 1949 by six-year-olds who have never seen a Chaplin picture, and who would not recognize the name out of the rime context. The name used in this rime may change with the passing of a few more years; it may change to another popular name, or be garbled into something unrecognizable as a name, or it may remain Charlie Chaplin. But no one will claim, in 200 years, it is to be hoped, that because of historical research it has been decided that the children of that day are reenacting a comedy scene from some early Chaplin picture. They will not be, any more than our children are portraying bridge sacrifice or a Chinvat Bridge ritual. Third, adults have an influence on the games children play. How much of the transmission of the games is through half-forgotten rules and ways of play taught, deliberately fostered in children, by adults long past the games age themselves? How many of the "children's games" are games played in the schools as "quaint survivals" or efficacious methods of keeping a group of children occupied for a half-hour of supervised, recess play? The problem of differentiating between the games taught to children by adults and the games passed on directly from one generation of children to the next is not one to be lightly attempted.

It seems that any of the problems commonly met with in the investigation of children's games may be as easily solved in a sketch of adult games. The principal questions are the two asked in most folklore investigation: what is the significance of variants; and what is the general connection of games to the remainder of the corpus of human activity?

As with belief, folktale, folk song, ballad, or any of the other subject-subdivisions of folklore, games show a related series of variants that study can attempt to map. Similar problems to those found in the other studies

appear here. Which are the lines of transmission? How does a game travel from one country to another, from one century to another, and how does it change in transition? Do games have a geographical starting place; is there one center of diffusion from which a particular game is spread to other places and other times? Do parallel customs give rise to similar games without actual cultural contact transplanting the games? These questions are more or less rhetorical.

Tylor has studied the Indian game of pachisi and compared it with the Aztec patolli, to discover what seems to be a close correlation. This type of lot-game does not seem to have reached Europe, but rather to have spread eastward from India. On the other hand, the later dice-and-board games, related to the "lot" games but specifically using dice rather than lots for determining moves (e.g. backgammon and the various forms of the Game of Goose), spread all over the world, "so that an Iclander could easily play backgammon with a Japanese on an ancient Roman board." Chess, too, and mancala seem to have definite centers of origin, disputed in detail but not in theory. But the more general games, dice and cards, seem to have arisen not in one place or from one source, but in several places, in the presence of certain similar materials and traditions. Given a highly specialized game, therefore, we may perhaps be able to trace its place of origin; even so widespread and common an instrument as the kite has been placed in eastern or central Asia. But to find a place of origin for the top or the ball or the doll, or the general "board game," is something few would dare to attempt. These latter seem to be so related to the universal activities of man that they cannot be limited to one time or culture or place.

Aside from the universals, the problem arises of the means and direction of travel of the remaining games. First appearances of games, where they can be noted, in Europe indicate the lines attaching some games to their place of origin. Chess coming into Europe carried by the Moslems, playing cards being imported by the Gipsies or the home-coming Crusaders, mancala showing an affinity for those countries outside Africa where the Arabs did their trading and to which slaves were brought, demonstrate that games travel the main routes of historical migration of other cultural materials. So likewise does the spread of European colonization bring European games to other peoples.

An instance in point is the spread of the kite. Yrjö Hirn in his study on the instrument has shown that the first mention of the kite in the European area was in England in 1634. The evidence of ancient Greek art, an illustration of what seems to be a kite flying on the end of a string, he shows to be most probably a bull-roarer, because no literary evidence places the kite in Europe after Greek times before the 17th century mention of it. Chadwick shows that, on the other hand, the kite was very popular in Polynesia much earlier than the 17th century, in fact that the art of kite-making and kite-flying began to deteriorate in Polynesia about 750. Taken in conjunction with other evidence of migrations, the conclusion is that the traditional home of the kite in China must be very near to the real one, that the kite was invented somewhere in the territory we now know as China, and went from there eastward to Polynesia during the first millennium of the Christian era,

and, later, with the increased contact between European and Eastern cultures, was carried to Europe from China.

Migration alone, however, does not tell the tale. The process of adaptation of a game, once it has been transplanted, in the new milieu is also important. Just as in folk song, where place names which mean nothing to the singer are changed to some other more meaningful form, games too are given a significance more in keeping with their new homes. The earliest American version of London Bridge, from *Mother Goose's Melodies* about 1786, tells that "Charleston Bridge is broken down." We have already noted the combinations of games, in this same London Bridge, for example, combination in America of the English form of that game with the English game of Oranges and Lemons. In New York City, the adaptation of baseball to the city streets as stickball has made a game almost as distinct as baseball is from one o'cat. The variations of I Spy or Hide and Seek are perhaps as many as the localities in which they are played.

The tendency towards change may be as strong as the conservative tendency in games. Against the traditional nonsense rimes of children, Onery Twoery and Ibbity Bibbity Sibbety San and Eeny Meeny Miny Mo, that seem to go on through the years and from place to place with so little change that they can be recognized quite easily, against the traditionalism of the royalty of the chess pieces and the court cards, must be placed the inventiveness, the desire for new things and thrills, the dramatic instinct that leads people to play games. That is what makes for the invention of a game like cribbage by Sir John Suckling, that is what causes a jaded group of chess players to adopt the Japanese *go* in the United States, that is what starts a mah jong fad or the sudden sweep of gin rummy, that is what causes the adoption of topical characters in children's rimes. The outlines of many games remain the same; the detail varies from place to place, from group to group, from year to year.

The local variations in what apparently is the same game may be due to their basis in what are called vestigials by Corrado Gini. This concept may be contrasted with the theories of diffusion and of autonomous evolution. Gini distinguishes between origin and development. The elements of a game, as of many other customs, the very basis of the activity originates in one place and is diffused. On this small germ, on this vestigial fragment is developed the complex game, by a process resembling autonomous evolution. Thus a game implement, like a top, may be the invention of a specific place or time, and may be carried to other places in the course of time, but the games played with the top will be local developments. As a middle ground combining the other principal theories of the transmission of games, this is a quite satisfactory statement. It permits greatly varying games being recognized as the same game where the diffusion theory fails to account for such variation. It permits resemblances that the universal and parallel development theory does not account for. An index of game elements similar to the Thompson folktale motif-index would be a most helpful adjunct to a systematic study of games.

Games are of course not isolated phenomena. They are conditioned by all the other aspects of the society in which they are played. Just as one cannot study the religious life of a people without knowing something

of its economic life, its political life, and its art forms, so one cannot thoroughly study a game without knowing something of the societies in which its variants are found. The relationship of our modern ball games to early religious customs, to fertility rites, to the priesthood has been brilliantly demonstrated by Henderson. The underlying connection of the baseball game with ceremonies ensuring that a sufficient crop would be obtained is no concern of 80,000 followers of the game crowding into a modern stadium to see a struggle between the representatives of two cities, but there is reason to suspect that the emotions evoked may be essentially the same as those that hailed the victory of light or summer over darkness or winter in the outcome of a primitive form of ball play. The inherent drama of games is thus linked with the kind of activity we set apart as drama, which itself began as an expanded form of liturgical exercise in Europe, and which was a form of religious expression in ancient Greece. Enough has already been said about the connection of children's games with primitive religious customs, with sacrifices, with planting ceremonies, with marriage rites, with belief in witches and supernatural beings.

Games are more than a reflection of other activities of life; they are in their own right a part of the way of life of a people. It might even be said, in view of the great emphasis placed upon games and sports in the United States today, that games form the distinctive feature of modern American life. But it will take time and discerning historians to determine the validity of such a statement. If it be true that a religion cannot be studied by a believer, or that a custom cannot be adequately measured until it is decadent and relegated to the limbo of superstition, then the historian of the games of the United States is yet to be born. There may be good reason for the petering out of the study of games that made so great a part of folklore study in the last decade of the 19th and the first decade of the 20th century.

JEROME FRIED

Gammer Grethel Frau Katherina Viehmännin, a peasant wife in the Hesse-Kassel district, from whose lips the brothers Grimm took down a large number of the *märchen* in their exhaustive collections. Her name is given to certain of the collections, as narrator; her portrait, sketched by M. Ludwig Grimm, appears as frontispiece in one of his brother's later collections of popular tales credited to her telling.

ga'n White Mountain Apache supernatural beings who live in mountains and caves and underground worlds: impersonated by the masked dancers in various religious ceremonials. Long ago the ga'n lived on this earth the same as people. But they did not like sickness and death, so they went off in search of a world where no disease could come and where eternal life was the lot of all. They are especially venerated as being associated with agriculture and crops. Compare GAHE; HACT-CIN; KACHINA.

Gaṇas In Hindu mythology, the servants of the gods; any of the nine classes of inferior deities who are attendant upon Śiva. They are commanded by Gaṇeśa or Nandi and live on Kailāsa. The classes of deities included among the Gaṇas are the Ādityas, Vasus, Viśvedevas, Anilas, Tushitas, Abhāsvaras, Rudras, Sādhyas, and Mahārājikas.

Gandarewa In the Avesta, a monster of the deep; a fiend with golden heels whose body was in the water and whose head was in the sky, unlike his counterpart, the Indian Gandharva, who lived usually in the sky. Gandarewa was the guardian of the haoma and a dragon eager to destroy the good in the world. He was slain by Keresāspa after a battle in the sea which lasted nine days and nights. In the *Shāhnāmah*, Gandarewa appears as Kundrav.

Gandharva (1) In Vedic mythology, originally a solitary being, the measurer of space, the sun steed, sometimes identified with the rainbow, and the guard of the soma, who is mentioned three times in the *Rig-Veda* in the plural. In the *Brāhmanas*, the Gandharvas are a group of beings who, with the Apsarases, preside over fertility. They dwell in the sky or atmosphere, are skilled in medicine, and have a mystic power over women. Accounts of their origin vary. In some they were born from Brahmā, in another they were the offspring of Kaśyapa. Their leaders are Viśvāvasu and Tumburu.

The Gandharvas are described in the *Atharva-veda* as shaggy, half-animal beings. Elsewhere they are called beautiful, wind-haired, with brilliant weapons and fragrant garments. In the epics they play lutes and sing at the banquets of the gods. They are also explained as spirits of the wind, the rainbow, the rising sun, the moon, the clouds, and of the soma. There seems to be no more justification for these views than for their identification, in defiance of philology, with the Greek Centaurs.

(2) In the *Mahābhārata*, a race of hill dwellers.

Gandreid The Wild Hunt of Norwegian folklore: literally, spirits' ride. Belief in it still persists in many sections: the survival of an ancient feast of the dead commemorates all who died during the previous year and comes during the Epiphany. The wilder the rush of spirits, the better the crops in the ensuing year. Whatever fields they fly over will bear especially well.

ganegwa'e The striking-a-fan or eagle dance of the Iroquois Indians. It is unlike the Southwest eagle dance in the virtual lack of mimetic action and in its primarily curative intent. The eagle, *ha'guks*, has power to restore life to wilting things and to charm animals for hunt. During the introductory songs, to water drum and horn rattle, someone presents a drum to the first singer, then a horn rattle to the first singer's helper, then a small rattle and fan to each dancer. Each following dance song is interrupted by a speech and small gift, usually money or cakes. The dancers face the bench of singers (Cayuga) or line up in two lines vis-à-vis (Seneca) and in a lunging position shake their rattles and try to pick up a small object with their teeth. To an interesting strettò drum-beat pattern, they hop forward or backward in a crouching position. The songs, some atonal, some pentatonic, are thus in two contrasting parts, the first rhapsodic, the second clearcut. The *ganegwa'e* is probably related to the calumet dance of the Cherokee and Plains Indians, the grass dance, and the Pawnee Hako. Common features are the give-away and one-time boasting speech, the former bustle or crow-belt and the calumet, now a feathered fan. [GPK]

gane'o The Iroquois Indian drum dance: a dance of thanksgiving to the Creator, Hahgwehdiyu, for crops,

good health, and other benefits. It recurs in all the major seasonal festivals of all longhouses, usually as climax to the several days of ceremonial procedure. The traditional songs, which number over 100, are accompanied by the water drum. The middle section of the ceremonial is chanted solemnly in monotone rhythms, with interpolated prayers by one of the faithkeepers, addressed to all of creation, from inanimate elements and humblest creatures to supernaturals and the Creator himself. The dancers, men in the lead, circle against the sun, the men with a double thump of each heel, the women with the *eskānye* step. The best dancers become inspired to angular gestures with the arms and torso.

[GPK]

Ganeśa, Ganesha, or Ganapati Literally, lord of the hosts: in Hindu mythology and religion, the god of wisdom, prudence, and learning, and the remover of obstacles; leader of the troops of inferior deities; son of Śiva and Pārvatī (Devī) or of the scurf of Pārvatī's body. He is represented as a pot-bellied fat man of yellow or red color, with four hands and a one-tusked elephant head, sometimes riding on a rat or attended by one. He is worshipped in the Deccan and often depicted in Śaivite shrines. The rat vehicle and elephant head symbolize his power to vanquish every obstacle whether it be by tramping the jungle or by entering a granary.

Many of the myths about him account for his head. According to one his proud mother showed him off to Śiva whose glance burnt the child's head to ashes. Brahmā advised her to replace it with the first head she could find. According to another myth, Śiva struck off Ganeśa's head when his son opposed his entrance to Pārvatī's bath and then replaced it with that of an elephant to placate his wife. The loss of one tusk is explained by the legend in which Rāma went to visit Śiva who was sleeping. Ganeśa opposed his entrance and Rāma threw his ax at him. Recognizing his father's ax, Ganeśa permitted it to sever one of his tusks as he waited to receive it.

Ganeśa's importance as a god is first acknowledged in the Purānas. His association with the rat suggests a humble origin, but this has been discounted by some scholars who considered Ganeśa of hieratic origin. As a result of the consequent belief in the sacredness of rats, their extermination became a difficult problem. Compare SARASVATĪ.

Gangā or Gangā Māi In Hindu mythology and religion, the sacred Ganges: personified as a goddess of abundance, health, and prowess. The Ganges is the most holy river in modern Hindu belief. Temples have been raised along the river banks and her water is in demand for sacrifice and as a viaticum. Its full efficacy is obtained by bathing in it during the full moon or eclipses. The ashes of the dead are cast into the river to wash away the sins of the dead one and to secure his rebirth in the celestial realm.

In the *Purānas*, the heavenly Ganges flows from the toe of Viṣṇu. It was brought from heaven, according to a myth told in the epics and in the *Bhāgavata Purāna*, after Agastya swallowed the ocean. King Bhagiratha then devoted himself for a thousand years to fierce penances. Brahmā, pleased with his asceticism, promised to grant him a wish and the king requested that the heavenly river Gangā descend to earth. Brahmā agreed

but advised the saint to win the grace of Śiva, since he alone could prevent the weight of the river from cleaving the earth. After practicing further austerities, he got Śiva to acquiesce and to catch the impact of the torrent on his head, his snarled hair delaying the current which eventually descended to the Himālayas and thence through the plains to the sea.

Gangā as a goddess is the eldest daughter of Himavat, the sister of Umā, and mother of Bhishma and Kartikeya (Skanda). Her vehicle is a sea monster.

ganger The slow, sunwise walking circuit performed by men and women, characteristic of Norwegian folk dancing. See CIRCUMAMBULATION. [GPK]

Ganymede or Ganymedes In classical mythology, the cupbearer of Zeus. Ganymede was originally a mortal, the son of Tros and Callirrhoe, and the most beautiful of boys. He was carried off, by the gods or by Zeus in the form of an eagle or by an eagle sent by Zeus, and in exchange his father was presented with a pair of divine horses or with a golden vine. Later mythology placed him among the stars as Aquarius and made him the presiding spirit of the fertilizing fountains of the Nile. In later mythology, likewise, the story degenerates into a tale of pederasty, and the name Ganymede—usually in the form *catamite*—becomes typical of the boy kept for homosexual purposes. In Crete, where pederasty attained great refinement, Minos replaced Zeus as the ravisher.

Ga-oh The spirit of the winds of Seneca (Iroquois) Indian mythology. He lives in the northern (in some versions, western) sky, and controls the four winds, and therefore the seasons. These are constrained at the entrance to his dwelling: the Bear (Ya-o-gah, the north wind), the Panther (Dajoji, the west wind), the Moose (Oyandone, the east wind), and the Fawn (Ne-a-go, the south wind). Ga-oh is a benevolent spirit, concerned with the welfare of men on earth.

garde or guard The magic charm used by the Negroes of Haiti and Trinidad to ward off evil. In Haiti, it belongs to the same general category as the *arrêt* and *drogue*, employed for similar ends by the Haitians in contrast to the *wanga*. In Haiti, the guard, as the magical device that brings security is called, is contrasted to the "trick," which gives power that enables an individual to pursue ends of personal aggrandizement. [MJH]

Garden of Eden The place of the creation of man (*Gen.* ii, 8), specially planted by God with all the good, food-giving trees and the two trees of life and of the knowledge of good and evil. There Adam lived an idyllic life for the few hours between his creation and the time he ate of the forbidden tree and was expelled. The concept of the earthly Paradise was probably borrowed by the Hebrews from the Persians, with later modification by Greek tradition. The Garden of Eden, in some of the later mystical Jewish writings, is the earthly counterpart of the heavenly Paradise. No living person is permitted to view the Garden (a seraph armed with a flaming sword guards the gate), although it is said the Rabbi Joshua ben Levi tricked the Angel of Death into letting him sit on the wall to see his future place in Paradise, and then leaped into the Garden carrying the Angel's sword. He was permitted to stay after he had surrendered the sword.

Gardsvor Literally, house guardian: in Scandinavian folklore, a household spirit, usually conceived of in the form of a little man, and still believed by many to be a manifestation of the soul of some ancestor.

garlic Sometimes called stinkweed, this species of onion (genus *Allium*) is found in most parts of the world and, because of its pungent odor, is widely credited with antiseptic qualities which scientists say it does not possess. It is especially recommended in time of plague. It is widely credited with the power to drive away evil, whether demons, witches, vampires, or the evil eye, and is hung in houses and around the neck for this purpose. While this holds true in most of India, there are parts of the country where the presence of evil spirits may be detected by the smell of garlic in the air. The idea that a magnet lost its power in the presence of, or when rubbed with, garlic was mentioned by Pliny and was carefully repeated through the ages until Sir Thomas Browne placed it among his *Vulgar Errors*.

Roman soldiers ate garlic in the belief that it gave courage in battle. Bullfighters of the Aymara Indians of Bolivia carry a piece on their persons into the ring, believing that if the bull smells it he will not charge. It was placed at crossroads for Hecate and was also carried by travelers to protect them from her. Besides being universally respected as an antiseptic and preventive of disease, used as an amulet, liniment, salve, philter, or inhalant, it is also considered a potent cure for all diseases of man and beast, except those of the eyes, head, and kidneys. Aristotle mentioned garlic as a cure for hydrophobia and a spring tonic. The Berbers grind garlic and bake it in bread to cure a common cold and use the plant as an aid to conception. It was also recommended for those who had to drink water they suspected of being unsafe to prevent infection.

Garm or Garmr In Teutonic mythology, the blood-stained watchdog who guarded Hel's gate and lived in Gnipa-cave. Anyone who had given bread to the poor could appease him with Hel cake. At Ragnarök he will break loose, slay Tyr, and be killed by Tyr.

Garuḍa In Hindu mythology, folklore, and religion, a form of the sun; the vehicle of Viṣṇu, represented as a supernatural being, half man, half bird, with a golden body, white face, and red wings. He is king of the birds and was born as the son of Kaśyapa and Vinatā or at the beginning of time from the eggshell which, in the hands of Brahmā, then produced the divine elephants.

Garuḍa is the implacable enemy of the serpents. According to the myth in the *Mahābhārata*, his mother quarreled with her co-wife, Kadrū, the mother of the serpents, and was enslaved. To free Vinatā and himself, Garuḍa defeated the gods, extinguished the fire which surrounded the amṛita, penetrated the whirling wheel, slew the snake guards, and carried off the sacred amṛita; then Viṣṇu made Garuḍa immortal and chose him as his vehicle. Indra recovered the amṛita but his thunderbolt was smashed in the fray.

As the relentless annihilator of snakes, Garuḍa possesses magic power against the effects of poison. Persons suffering from snakebite at Puri, Orissa, embrace a Garuḍa pillar in the temple.

Wings are ordinarily not an attribute of Indian celestial beings which either float through space or are carried by vehicles. Garuda's however, were so powerful

that he could stay the rotation of the three worlds with the wind from their motion. See AIRĀVATA; VISHṆU.

gasga'qdadq The Seneca Indian social dance (called *ganusddageka* by the Cayuga) the shake-the-bush or naked dance in English. The reason for the name is unknown. It is unique in that the women start the dance first with a choral song, then with an open round in two columns. Pairs of men then are inserted. The odd couples go backward; at a repetition of the music the even couples pass through between them, thus becoming the backwards dancing leaders. The step is of the *ga'dāšot* type, embellished with low kicks *ad lib.*, but the couple-swapping resembles the *gedjōenq* type. The songs, to drum and horn rattle, are well developed and introduce new thematic materials in the second theme.

[GPK]

gashāqdadq The Seneca term for the Iroquois gourd or squash dance (literally, shake-a-pumpkin or shake-a-jug): a social dance of the *ga'dāšot* type. The corresponding Cayuga *katchātondāto* or *niošawāonq* is regularly the fourth of the ceremonial spirit-of-the-food or bread dances. The choreography and music are of archaic ritual type, in a counterclockwise circle, men in the lead, women at the tail. The songs, to drum and horn rattle, have a limited range and thematic development, and terminate with a long monotone antiphony between the dance leader and men's chorus. The regular *ga'dāšot* is always added to the dance sequence. [GPK]

Gaster, Moses (1856–1939) folklorist, Hebraist, and Rumanian scholar. He was born in Bucharest and received his education there and at Leipzig, Germany. In 1881 he was appointed lecturer in Rumanian literature and language at the University of Bucharest, but four years later was expelled from the country for agitating on behalf of Jews. Proceeding to England, he served in 1886 and again in 1891 as Ilchester lecturer in Græco-Slavonic languages at the University of Oxford. From 1887 until 1919 he was chief rabbi of the Sephardic communities in England. Gaster's published works range over a wide field of interest and include studies on such diversified subjects as Rumanian and Jewish literature, comparative literature and folklore, Bible and Apocrypha, Gypsy lore and the culture of the Samaritans. His *Folk-Literature of Rumania* (*Literatura Populara Romana*), published in 1883, brought him European recognition, and in 1891 there appeared his monumental *Chrestomatie Romana*, still regarded as a classic. He was a pioneer in the comparative study of folktales and a ranking authority on Gipsies. His works include *Græco-Slavonic Literature* (1887), *The Sword of Moses* (1896), *The Chronicles of Jerahmeel* (1899), *Rumanian Bird and Beast Stories* (1915), *The Exemplar of the Rabbis* (1924), *The Samaritans* (1925), a translation of the famous Judæo-German *Maaseh Book* (1934), and *Anton Pann: Povestea Vorbii* (1936). Gaster's collected essays were republished under the title of *Studies and Texts in Magic, Medieval Romance, Hebrew Apocrypha and Samaritan Archaeology* (three volumes, 1925–1928). A bibliography of his writings is contained in *Occident and Orient: Gaster Anniversary Volume* (1936).

gātanān, gātanān Literally, a story, a story; formula with which the Hausa story-teller always begins his tale. His audience always answers "Ta je, ta kōmō"—Let it go, let it come.

gato An Argentine gaucho flirtatious couple dance, known also in Chile, Peru, and Paraguay. It is performed in two styles: one called the *kururu* is a simple walk accompanied by song; the *siriri* is more lively and bouncing. After a particularly arduous and skilful zapateado, the couple pause, turn, and recite verses to each other, typically a proposal on the part of the man and pert refusal on the part of the woman. [GPK]

Gaurī In Hindu mythology and religion, an epithet of Devī in her mild form as the yellow or brilliant one; sometimes an epithet for Varuṇānī, wife of Varuṇa.

Gawain The "perfect knight" of Arthurian legend; nephew of King Arthur. He appears in the earliest sources, and in Malory has certain characteristics of the Celtic solar deity. He is best known in literature through the Middle English *Gawain and the Green Knight*.

It has long been realized that Gawain had mythical antecedents: 1) We are repeatedly told in the romances that his strength waxed till midday and waned thereafter. 2) Several of his adventures are derived from those of the Irish hero Cuchulainn, who possessed marked solar traits, including a diadem of golden hair. 3) Gawain's father Loth has been traced back through Welsh Lluch to the Irish god Lug, Cuchulainn's father, on whom there used to be a red color from sunset till morning—a trait suggested by the sun as it dips to the horizon and rises from it. The Irish prototype of Gawain, then, is the solar Cuchulainn. Since Irish myth did not reach the French except by way of Wales and Brittany, we should expect to find in Welsh literature an intermediate figure between Cuchulainn and Gawain, and this seems to be Gwri Gwallt-euryn, "of the Golden Hair," so called because his hair was yellow as gold. Gwri's history strongly resembles Gawain's. Both were born under circumstances which brought shame to their mothers; both were discovered as foundlings, swaddled in a rich cloth, and their high birth was recognized; both were baptized, one as Gwri Gwallt-euryn, the other as Gauvain or Walwanius; both after a precocious boyhood in care of foster parents were transferred to the charge of a second foster father; both became warriors of Arthur (note that Gware of the Golden Hair is one of Arthur's household in *Kilhwch*). Much other evidence supports the view that Gwri was the immediate original of Gawain. Gwalchmai is simply a name substituted by the Welsh when they became acquainted with a French form of Gawain, Galvain, which itself goes back through the earliest recorded form, Galvagin, to a Welsh epithet Gwallt-advwyn, meaning "of the Splendid Hair." Thus Gawain's name originated in the gleaming rays of the sun.

Gawain and the Green Knight A 14th century English romance by the author of *The Pearl*, the central episode of which is the folklore motif of the exchange of blows. A Green Knight challenges Arthur's knights to a contest in which he will submit to decapitation

provided that he be given the right to deliver a blow in return one year later. Gawain accepts the challenge, and cuts off the Green Knight's head. The Green Knight picks up the head and, bidding Gawain come to his castle in one year to fulfil his part of the compact, rides away. During the course of the year Gawain arrives at the castle of the Green Knight, though he does not recognize his host as the Green Knight. The lady of the castle tests his loyalty and virtue, but Gawain remains true to his knightly vows except that he retains the lady's gift of a magic girdle, which will keep him from harm, instead of delivering it to his host as he had promised. When the Green Knight reveals himself and demands that Gawain fulfil his part of the compact, Gawain submits. The Green Knight gives Gawain a light wound and then explains that the whole plan was a test of Arthur's knights instigated by Morgan le Fay, and that he had given Gawain the wound because he had kept the girdle. [MEL]

Gaya In Hindu mythology, an asura whose accumulated merit as a worshipper of Vishnu alarmed the gods. Granted purity by the deities, he soon cleared the universe of its inhabitants, since everyone touching him was purified and went to Brahmā's heaven. Finally it was agreed by Gaya and the gods that one spot should be set aside as a place (Gayā-pṣetra) in which the sins of any who resorted to it would be washed away. Upon this legend rests the holiness of the town of Gayā in Bihar Province.

Gaya Maretan (Pahlavi *Gayōmarti*) In Iranian cosmological mythology, the first man whose body was born from the sweat of Ahura Mazda. His spirit lived during the same period of 3000 years in which that of the primeval ox lived, then Ahura Mazda made him corporeal. He was tall, white, and radiant. When he appeared the demon-infested earth was dark and the creatures of evil were battling with the stars. The demons attacked Gaya but he withstood them and lived for 30 years. At the end of that time the fiend, Jāhi, persuaded Angra Mainyu to poison the body of Gaya and to inflict him with hunger and disease. When Gaya died his body became brass and his limbs gold, iron, silver, lead, tin, mercury, and adamant. Spentā Armaiti preserved his seed, which was gold, and after 40 years the first human pair came from it. These were Māshya and Māshyoī who grew at first as a stem with fifteen leaves and later were separated.

According to the *Shāhnāmāh* Gaya Maretan was the first king of the Iranians who reigned for 30 years. His son was Siyākmak; his grandson was Hoshang. Siyākmak was slain in a battle with the wicked king, Angra Mainyu, and Hōshang, who then succeeded Gaya Maretan, became the first lawgiver of the Iranians.

gayap songs The equivalent in Trinidad of the combite songs of Haiti. The communal work group, the *gayap*, is spurred on in its efforts by singing, the beat set by a drum. Compare COMBITE.

gbo The Dahomean (Fōn) word for magic charm. In Dahomey, the charm is the objective and operating manifestation of that aspect of the total religious belief system comprised in the category of magic. The power behind the charm is held to derive in part from certain of the gods, in part from other supernatural

beings. Though all priests are practitioners of magic, there are specialists in manipulating these powers that give magic its force. Gbo may be both good and bad, and though the categories of benevolent and malevolent charms are known, this is often a matter of emphasis, since magic that helps the one who controls it may harm another person; or may be used for good in one situation and evil in another. Dahomean gbo are classified as to form and function. Six categories under the former heading have been recorded, and eighteen under the latter. It is to be doubted, however, if this list is complete. See AKONDA; AKPOU; ALIMAGBA; DIDI; NUDIDA; YEGBOGBA. [MJH]

Ge or Gæa In Greek mythology, the earth goddess; the personification of the earth; the goddess of the land and the things produced by it; later supplanted by other, more specifically fertility goddesses. Ge was born of Chaos, and was the first of the heavenly beings. From her came Uranus, the heavens, and Pontus, the sea. Mating with Uranus, she produced many offspring, and, jealous of the rights of these children, made the sickle with which Cronus castrated Uranus. As an earth goddess, Ge was also an underworld deity. The Delphic oracle, at which was located the pit which was the world's navel, first belonged to her; at Olympia in very early times she had another oracle. Her cult was widespread in Greece; in Rome, as Tellus or Terra, she was likewise worshipped as a chthonic deity.

Geb, Keh, Qeb, or Seb In Egyptian mythology, the earth god; son of (or parent of) Shu and Tefnut; husband of Nut and father of Osiris and the other deities of the Osirian group: Horus, Seth, Isis, Nephthys. He is represented as a goose, or as a bearded man with a goose on his head, the goose being the hieroglyphic symbol of the god. In the Egyptian cosmographic myth, Shu, the air, separates Geb and Nut, earth and sky: the personation of the earth as male, the sky as female, is unusual, the reverse being the common case.

gedjōenq The Iroquois Indian fish dance (termed *kaipwa* by the Cayuga of the Six Nations' Reserve). Its typical step is an alternate out-and-in twist of the feet, twice or three times successively with each foot, superficially resembling the Charleston, but certainly not influenced by it. The fish dance is an old and formerly ceremonial dance, though now classified as a social dance. The women sometimes use the same twisting step as in the ritual *eskānye*. The choreography is also distinctive: the progression is generally in an anticlockwise single circle, but danced by couples. Men enter in pairs, then pairs of women are inserted. Each song has a short part A and a longer B. A is a warming-up step-pat; B is the fish step with an even drumbeat. When A returns, the drum vibrates and the partners change places. In B they resume the fish step. The tempo, already vivacious, speeds up in the course of each song. This pattern is characteristic of five dances, grouped by the Indians as *gedjōenqkq*—in the manner of the fish dance. The interchange is said to suggest the passing of couples of fish in the water. [GPK]

gee In American cowboy square dances, the term for right. [GPK]

Gefjon or Gefjun In Teutonic mythology, Frigga's attendant; goddess of agriculture. She presided over all who died virgins, making them happy forever. She married a giant and had four sons. Once she asked King Gylfi for some land of her own. He was amused and granted her all she could plow around in a day and night. Changing her four sons into oxen, she plowed a great area, which her oxen dragged into the sea, where it is now the Danish island of Seeland. Its shape corresponds exactly to the Swedish lake Malar. She later married Odin's son, Skiold, and founded the royal Danish race of Skioldungs.

Gêge One of the three major "orthodox" African cult-groups of Bahia, Brazil. The Gêge are derived from the Dahomey and Mahi peoples of French West Africa, and are known for their intransigence in the maintenance of traditional values, the excellence of the ritual dancing by their cult-members, and the meticulousness with which the African prescriptions of worship are observed. Because of this insistence on orthodoxy, which exacts an initiation of more than a year as against the requirements of four to six months seclusion by the other African cults, the Gêge group has declined in numbers, but continues to hold the deep respect of cult-members of all affiliations. The designation comes from the Yoruban term for the Fõn-speaking (Dahomean) peoples, and means The many, or The numerous ones. [MJH]

Gehenna (Hebrew *Gehinnom*) The valley of Hinnom, near Jerusalem, where the city's refuse was thrown and burned; hence, hell-fire and hell itself; the place of future torment of the wicked. It is said that sacrifices of children to Moloch were performed in the valley, and that therefore the place was later turned into an offal-dump. A later explanation states that one of the gates to Gehenna, the burning afterworld, stood in the valley, and that thus the name of hell was applied to the valley.

Gekka-o The Japanese god of marriage, who binds the feet of lovers with a red silk thread. [JLM]

gematria A cabalistic, cryptographic method of interpreting passages of the Hebrew Scriptures by substituting numerical values for the alphabetic meaning of the letters (each Hebrew letter being also a digit or number). Thus two words whose numbers added to the same sum might be interchanged to give a new reading of a passage. Thus, for example, the angel Metatron was equated with Shaddai the Creator, since both names added to 314. Several methods of determining such numerical values were used besides simple addition, the mathematical process eventually becoming quite complicated. Gematria also partakes of the Pythagorean belief in the virtue and power of certain numbers. The word itself may be a derivative of the Greek *gramma*, letter, by metathesis (compare English *gramarye*, magic).

Gemini A Latin name of the Dioscuri, Castor and Pollux; name given to the constellation including the stars Castor and Pollux, and to the sign of the zodiac entered by the sun on May 21.

The two stars, Castor (alpha Gemini) and Pollux (beta Gemini), have been recognized as a pair since the earliest times, possibly as long ago as 6000 B.C. in

Mesopotamia. In many places they have been identified with the mythical Twins—the younger and the elder Horus in Egypt, Romulus and Remus in Rome, etc.—or with balancing principles, as the yang and yin in China. In Australia they were the Young Men and the Pleiades the Young Girls; in Africa, the Bushmen called them the Young Women, wives of Eland. The two stars form the heads of the Twins (Italian *Gemelli*, German *Zwillinge*, etc.) and their feet bathe in the Milky Way. Gemini is the third sign of the zodiac, immediately preceding Cancer and the summer solstice.

gems or jewels Precious and semiprecious stones. Besides serving as personal adornment or a tangible mark of wealth, at various times among various peoples, gems have served as gods, guardians, healing agents, amulets, talismans, charms, and divining agents. Some beliefs in the magic powers of gems sprang from color affinities, while some peoples believe that there is no inherent virtue in the stones themselves, but rather in the carving or words engraved on them, or in their combination and arrangements. In India gems were most valued in traditional combinations such as the *navaratna* (ruby, pearl, coral, emerald, topaz, diamond, sapphire, cat's eye, and amethyst) or the five-gem *pañcharatna* (gold, amethyst, diamond, emerald, and pearl). The Hindus believe that only perfect gems have virtues and that inferior gems are a source of misfortune and unhappiness. Some students of the attributes of gems say that those from tropical climates are more effective. In 315 B.C. Theophrastus advanced the theory that gems were male and female and reproduced in the ground. If smaller ones were left in the ground they would grow and multiply. In spite of the fact that skepticism began to creep in toward the end of the Middle Ages, as with Pedro Garcia, Bishop of Ussellus, who remarked in 1490 that, "In modern times many gems lack the virtues ascribed to them," many of these same virtues are still currently believed in.

The animal with a luminous jewel in its head (B72.2.3) is a commonplace of folktale, as is the serpent with the jewel in its head (B108.2). Folktale is full of magic jewels (D1071), jewels as recognition tokens (H93), extraordinary jewels formed from tears (D1454.4.2), and jewels containing the separable soul (E711.3). There are also jewel-spitting heroes and heroines, jewel-dropping horses, and jewel-bearing trees. See individual gem-stones; LAPIDARIES.

genius (plural *genii*) In Roman religion, a protecting spirit: essentially an indigenous Roman belief comparable to the late Greek concept of the *dæmon* and to the later Christian belief in the guardian angel. The genius came into existence with the man to whose life he was bound and basically was a spirit of generation: the female counterpart was called a *Juno*. The genius directed a man's life towards good ends; evil actions cheated the genius. There were *genii* of the family, the city, the state, the people, etc. To the public genius of Rome sacrifices were offered on October 8. Place *genii* are usually figured as serpents, although the (personal) *genii* are often winged youths carrying cornucopias and drinking cups. The plural *genii* (singular *genie*) is also applied to the *jinn* of Arabic belief. Compare LARES; NUMINA; PENATES.

genna Literally, forbidden: among the Nāgas of India, communal rites by means of which all events of social importance such as the birth of a child or a domestic animal, name-giving, ear-piercing, hair-cutting, marriage, or death, are celebrated. They are accompanied by special food tabus and characterized by a temporary disturbance of the normal social relationships. The social importance of any event can be judged by the social unit affected and by the intensity and duration of the genna. Birth, hair-cutting, and ear-piercing affect only the household, other events such as an earthquake would involve the entire village. The genna involves a social group such as the household, the clan, the village, an age or sex group, and is characterized by a nervous exaltation. Breaking genna causes disaster or death. Compare TABU.

gentian Any of a large genus (*Gentiana*) of plants. According to Pliny this plant was named for Gentius, king of Illyria (180 B.C.), who was the first to discover its virtues as a simple. A Christian legend tells of Ladislaus, king of Hungary, who shot an arrow into the air with a prayer that it would lead him to a cure for the plague which was raging among his people. When he found the arrow it had lodged in a gentian plant. Gentian is still used as a medicine. The Swiss mix it with wine to relieve the fatigue of travel, and they use the bitter root in making beer and a liqueur. When mixed in wine it removes aches and colds which have lodged in the joints. The Indians of New England used the root for the stomach, both as a stimulant to the appetite and an aid to digestion. It is also used in cases of intermittent fevers and as an antidote for poisons.

geomancy Divining by means of earth or sand: an ancient and widespread custom, still very much alive in China and among the Arabs. The Arabs' method is to read the points made at random in the sand; the joining of these points, or the pattern they form, gives the required meaning or message. Pebbles or grains of sand on paper, hence ink or pencil marks, are read in much the same way.

 Chinese geomancy, or Feng Shui, is the art of locating tombs, cities, and houses auspiciously. In early times the tortoise shell oracles were consulted. During the Tsin Dynasty (265–316 A.D.) however the principles of Feng Shui were collected by Kuo P'o who, after devoting his life to drink and women, composed a magic book with which he was successful in seducing a woman in the service of one of his friends. Two schools developed: the first, which has lost its popularity, deduces the laws of consonance and dissonance from the five great stars and the Eight Trigrams or Pa Kua; the second studies the relations between the tombs, cities, and houses and the surrounding landscape. Mountains, hills, water courses, springs, groves, and neighboring buildings can be useful either in channeling the male yang influences or in deflecting them. The pronouncements of the doctors of Feng Shui are the cause of innumerable unhappy and expensive quarrels. [RdJ]

geranium Any plant of the genera *Geranium* or *Pelargonium*. Geranium comes from the Greek word for crane and the plant is occasionally called crane's bill from the shape of the fruit or seed pod. There is

a Moslem legend that it was once a common mallow, but one day Mohammed hung his shirt on the plant to dry, and when he removed it, the plant had developed gaily colored flowers and a spicy aroma. In Massachusetts it is believed that snakes will not go near places where wild geraniums grow and that a geranium in the window will keep the flies out of the house. The root of the geranium is used by the Romany as a remedy for infant diarrhea, for internal bleeding, and for kidney troubles. It is used by certain North American Indians as a cure for dysentery, cholera, gonorrhea, and as a gargle for sore mouth and throat.

Gerda, Gerdr, Gerth, or Gerthr In Teutonic mythology, one of the jötnar, daughter of the frost giant Gymir and Angurboda, whose beauty attracted Frey from afar. He despaired of winning her, however, as the jötnar (giants) were his enemies. His servant, Skirnir, seeing his master lovesick, offered to plead for him with Gerda, in return for his magic sword. Frey consented to the bargain, so Skirnir borrowed the horse, Blodughofi, and went to seek Gerda in her fire-encircled bower. When he reached her he offered her twelve golden apples and the magic ring, Draupnir, which she refused, saying she had gold enough of her own. Skirnir then threatened her with his sword, but could not influence her at all until he began cutting runes in a stick which would have made her suitorless forever. She then promised to meet Frey in the grove of Buri in nine days. As one of the frost giantesses, Gerda symbolizes the Winter maiden wooed by Spring; the nine days correspond to the nine northern Winter months. Her union with Frey is interpreted as the surrender of frost to Spring.

Germanic folklore Folklore comprises things, acts, beliefs, words, and lyric, didactic, or narrative themes transmitted and shaped by tradition. The investigation of the origin, meaning, dissemination, and form or style of these traditional materials comprises the study of folklore. The extent to which they are the immemorial possession of the folk or have descended from higher levels of culture is often an insoluble question. Germanic folklore is noteworthy for an abundance of carefully recorded facts and for excellent investigations of the problems associated with them.

Specifically Germanic qualities in folklore are very difficult, if not impossible, to isolate. Although traditional materials of all kinds—houses, tales, or riddles—exhibit characteristic varieties that are limited to particular areas, these varieties yield no safe basis for generalizations about racial peculiarities. Concepts like the vampire, which is Slavic in origin; the notion of second sight, which is almost exclusively limited to Scotland, Ireland, Wales, and northwestern Germany; or the swan maiden, an idea which seems to be typically Germanic, can be recognized as regionally limited only after long research. Like all instances of the *argumentum ex silentio*, any definition of a theme that involves the assertion that it does not appear in certain places is very risky. Although some proverbs are no doubt Germanic, such a book as Champion, *Racial Proverbs*, rests upon an unproved and unprovable assumption. Some scholars have maintained that long-suffering heroines are characteristically Germanic, but this would be hard to prove. Nor does it seem to be possible to

show that particular forms of folklore are Germanic, although specific stylistic details may be. Beliefs concerning plants and animals found only in Germanic countries are obviously Germanic folklore. Like the mistletoe and the oak, the rowan or mountain-ash is an object of special interest in Germanic countries. The horse has been associated with ancient practices and superstitions, and these may go back ultimately to the ceremonial eating of horseflesh by heathen Germanic peoples. Although these and other specific beliefs can be identified as Germanic, such endeavors do not lead to useful generalizations. In brief, folklore is international, and with the increasing collection of evidence we see that fact more and more clearly.

Literature: General treatises are available only in German; see W. Pessler, *Handbuch der deutschen Volkskunde* (Potsdam, n.d. [1936-38]); Adolf Spamer, *Die deutsche Volkskunde* (Berlin, 1935).

Records of Germanic folklore The materials of Germanic folklore are of the most varied kinds and extend from the oldest archeological remains of the Germanic peoples down to our own times. The crushed skulls in prehistoric burials may imply fear of the "living corpse," and a small hole found in stone coffins of a later date may imply a belief in an aerial soul. Stonehenge and the ancient carvings on rocks in southern Sweden are yet to be fully interpreted. Split vertebrae in children's graves represent oxen which ancient children, like those in remote Swiss valleys today, used as toys. In the oldest words and the first written records we find folklore. Place names, which often retain ideas older than the use of writing, reveal religious beliefs and cults of varying degrees of antiquity and show what gods were worshipped and where their cults were most popular. They show, for example, that the Scandinavian god Ullr, about whom we can learn very little, was important and that Balder had no cult. Historians, geographers, and travelers—Caesar, Tacitus, Strabo, and early Christian missionaries—record Germanic stories and customs. The *Elder Edda* (a collection of short, highly sophisticated poems composed between the 8th and 11th centuries in Norway, Iceland, and even Greenland) and the more complicated Old Norse scaldic verse from the 9th century on, contain myths and heroic stories. In the *Younger Edda* written in the first half of the 13th century Snorri Sturluson collected and arranged these myths for the use of poets. These literary texts contain much folklore. The *Elder Edda*, for example, tells of the return of the dead from the grave and the raising of a corpse to foretell the future. In all the Germanic lands monks wrote charms and incantations on the margins and flyleaves of manuscripts, jotted down collections of proverbs, and included words with folklore associations in glosses and vocabularies.

Medieval Germanic literature, which is most abundant in England and Germany, contains many bits of folklore. Such poets as Der Stricker, Chaucer, and others retold folktales, and didactic writers collected proverbs as examples of moral advice and for use in schools. The German folk epic (*Volksepos*), with a misleading name that goes too far in suggesting a relationship to the folk and oral tradition, is actually a rewriting of Germanic heroic lore in an intentionally archaic style for a courtly audience. Its themes go back

through a long history of previous literary versions to tales concerning chiefly the kings and heroes of the age of migrations. The story of Siegfried, which we have in the *Elder Edda* and the *Nibelungenlied*, is a typical example of the genre. It preserves a confused mass of heroic traditions dating from the 5th century and earlier about men of such different ages and countries as Siegfried, a hero of the lower Rhine, the Burgundians of the middle Rhine, the Hunnish invader Attila, and the Ostrogothic Dietrich. In Scandinavia the Nibelungen story exists in combination with the Odinic religion and the Viking culture. Such mingling of unrelated materials of different ages and tribes is characteristic of the folk epic. The earliest historical figure in these epics is Ermanarich, king of the Ostrogoths in the 3rd century. Later figures are the Merovingian Wulf Dietrich of the 5th century, the Arian Theodoric, emperor of the Goths in Italy in the 6th century, about whom a large cycle of epics developed, and the medieval dukes, Ernst of Swabia and Henry the Lion of Brunswick. In the 13th century the stories of Theodoric or Dietrich of Bern (Verona), as he was called, were carried to the Tyrol, where they became entangled with local legends of dwarfs and the Rosengarten, which may be connected with pre-Christian ideas of life after death. The authors of folk epics eliminated matters that were too fabulous for courtly ears: the *Nibelungenlied* contains no mention of Siegfried's fight with the dragon and the horny skin that he got from bathing in its blood.

After the Middle Ages we find records of folklore in chapbooks, folk songs, books of charms, dream books, witchcraft trials, and the discussion associated with them, and literary references to stories, proverbs, and customs. A few men collected folklore for its ethnographical value and antiquarian interest, especially at the time of the 17th century revival of the Germanic past, but the quantity of material thus saved is small.

In the second half of the 18th century the discovery of Ossian and the publication of Bishop Percy's *Reliques* drew attention to folklore. Goethe collected folk songs in Alsace and, in *Faust*, described the assembling of witches on the Brocken on Walpurgis Night. Around 1800 the Romantics, who were especially interested in songs and tales, began to collect and interpret folklore. About the middle of the 19th century F. W. L. Schwartz pointed out the important distinction between higher and lower mythology, and thus directed attention to a new class of materials. The higher mythology, which consists in the myths and the cult of the gods, has been destroyed by Christian missionaries. The lower mythology, consisting of stories of dwarfs, kobolds, Tommy Knockers, water, tree, or house spirits, spirits in the growing crops (*Gerstenalte* and *Roggenhund*), and giants, has survived the coming of Christianity and lives on in modern tales and practices. Wilhelm Mannhardt interpreted the dryads, satyrs, and water or field spirits of classical mythology by comparisons with similar creatures in Germanic folklore, and, in his *Golden Bough*, J. G. Frazer extended the comparisons to the folklore of the entire world.

The folklore of former ages survives in modern tradition, and new folklore comes into being. The songs of

Tin-pan Alley gain popular currency and suffer the changes characteristic of oral transmission. "Lili Marlene" sweeps the German armies and crosses the battle lines. Sayings like "Kilroy was here" and the German "Hier wohnt Bertie" become commonplaces.

Folklore of things Museums like the open-air collection of houses and other buildings (even a church), domestic tools, and costumes at Skansen (a park near Stockholm) and the village of Dearborn, Michigan, have assembled the folklore of man-made things. The Bucks County Historical Society at Doylestown, Pa., has a good collection of tools belonging to various trades, many of them no longer practiced. Tradition preserves such curious relics as the barber's pole, the barber's basin in Germany, the ivy wreath used to advertise a wine shop, and the cigar-store Indian.

Except in certain fields, investigations concerned with the folklore of things are rare. Studies in the shapes of German villages have shown that the spiral city-plan of Leipzig is Slavic and the longitudinal plan of northern German villages is Germanic. Regional forms of German houses have been identified. The traditional kinds of fences have been collected. Studies in the history of domestic tools like Nils Lid's history of the ski are rare and often lead over into the history of inventions.

Costume The special dress worn in various regions, by particular groups, or on special occasions belongs to the folklore of things. Folk-costume is usually the survival of an earlier fashion that has been elsewhere discarded, as for example the buttons on the back of a man's dress-coat that are said to be the relics of buttons intended to hold up the tails when riding on horseback.

Literature: J. R. Planché, *A Cyclopaedia or Dictionary of Dress* (London, 1876-79).

Plants and Animals Many traditions about plants and animals reflect imperfect observations like the notion that the mole is blind. Others retain old beliefs like the tradition that a bear-cub is born as a shapeless mass of flesh and is licked into shape by the mother. Some are auguries like the forecasting of weather by a goosebone or from the appearance of the woodchuck's shadow on February 2. More general auguries are drawn from the flight of birds or the behavior of domestic animals. For customs concerned with plants and animals and for explanatory stories about them see below.

Folk medicine Traditional remedies rest on many kinds of observation of nature. Some, like the use of quinine or digitalis, employ essential qualities that were recognized long before being isolated by modern science. Some employ materials conspicuous for their disgusting qualities. Others involve the concept of sympathetic magic: a red string tied about a wound stops the flow of blood; a sickly child passed through a cleft in a tree is born again; a plant with a leaf or root shaped like some part of the human body yields a remedy for ailments of that part. A tradition of Egyptian medicine, which employed such unusual materials as the powder of a unicorn's horn or of mummy, came to the Romans after becoming the property of the folk and survives in some German medical recipes.

Literature: W. G. Black, *Folk-Medicine* (London, 1883); J. G. Bourke, *Scatologic Rites of All Nations*

(Washington, 1891); O. von Hovorka and A. Kronfeld, *Vergleichende Volksmedizin* (Stuttgart, 1908-09); I. Reichborn-Kjennerud, *Vår gamle trolldomsmedisin*, I (Oslo, 1928), II (1933), III (1940), IV (1943).

The folklore of acts, ideas or beliefs, and connected discourse, which are subjects usually treated independently, is surveyed in dictionary form in H. F. Feilberg, *Bidrag til en ordbog over jyske almuesmål* (Copenhagen, 1886-1914), which lists under the appropriate Danish word its occurrence in superstitions, customs, songs, tales, and selected proverbs and riddles in all the Germanic languages.

Our knowledge of traditional acts, which have not been adequately collected or studied, is rather unsatisfactory. Many traditional acts take the form of customs associated with special events like marriage. Gestures often have a symbolic meaning. Crossing the legs is an act that suggests a hindrance or stopping in various symbolic connections. The origin of the Shanghai gesture of thumb to nose is uncertain. The sign of the fig (thumb thrust between the first and second fingers) is not Germanic. In the Middle Ages and the Renaissance men were more demonstrative than today and employed gestures freely. Samuel Butler's *Hudibras* abounds in them. The cinema may encourage the preservation and perhaps also the development of gestures. In Germanic folklore studies like Andrea de Jorio, *La mimica degli antichi nel gestire napoletano* (Naples, 1832), are rare.

Literature: R. S. Boggs, "Gebärde," *Handwörterbuch des deutschen Märchens*, II: 318-22.

Symbolic acts with juridical meaning are often preserved as folklore. The Germanic taking of a person under a cloak is an adoption rite. Various rites are associated with the notion of blood-brotherhood. Symbolic acts are frequently associated with punishment. A criminal is seated on a broad stone before execution or kisses the rod with which he has been whipped. Infidelity is punished by the Skimmington ride. There are excellent investigations of both capital and lesser punishments like exposure in a boat, rolling in a nail-studded barrel, and the cucking stool.

Literature: Jacob Grimm, *Deutsche Rechtsaltertümer* (4th ed., Leipzig, 1899); Karl von Amira, "Die germanischen Todesstrafen," *Abhandlungen der Bayerischen Akademie der Wissenschaften* XXXI (1922); William Andrews, *Bygone Punishments* (London, 1899); John W. Spargo, *Judicial Folklore in England Illustrated by the Cucking-Stool* (Durham, N. C., 1944). Games involve the display of skill, depend upon chance, or dramatize events and ceremonies of adult life. The last category includes possible recollections of ancient rituals like well-worship, divination, marriage ceremonies, or border warfare. Games exist in five forms: the actors may divide into two lines, form a circle, perform individually the parts of a little play, raise an arch through which others pass, or wind and unwind in serpentine fashion.

Literature: Alice B. Gomme, *The Traditional Games of England, Scotland, and Ireland* (London 1894-98); E. L. Rochholz, *Alemannisches Kinderlied und Kinderspiel* (Leipzig, 1857), with mythological interpretations; F. M. Böhme, *Deutsches Kinderlied und Kinderspiel* (Leipzig, 1897), a rich collection with abundant historical and comparative notes; Johann

Lewalter and George Schläger, *Deutsches Kinderlied und Kinderspiel in Kassel* (Kassel, 1911), with exhaustive notes; S. T. Thyregod, *Danmarks sanglege* (Copenhagen, 1931), with musical texts, pictures, and references to English and German parallels. Discussion: Henry Bett, *The Games of Children* (London, 1929); Yrjö Hirn, *Barnlek* (Helsingfors, 1916).

Customs Customs are associated with the course of human life, especially with birth, marriage, and death, with domestic activities, and with seasons and particular days. They take the form of symbolic acts or definite traditional procedures.

Customs associated with birth, marriage, and death often retain traces of pre-Christian thought. After a death in a family, the bees are told of the event or a mirror is turned to the wall. Samter points out a striking similarity in the customs associated with birth, marriage, and death and explains it by the idea of rituals signifying a transition from one status to another. Customs may involve animistic thinking which ascribes life to inanimate objects or human powers to animals. Some trace such ideas to the spirits of the dead who survive near their graves as creatures living in the ground or trees. Other customs and stories are explained by the notion of the living corpse. This idea that a mysterious and terrifying life continues in a dead body expresses itself in breaking the skull or bones of a dead man and in deserting or burning a house where death has occurred. Cremation, which is explained in a later rationalization as setting free an aerial soul, probably also arose from the fear of the living corpse and the need to destroy it. Dwarfs and demons appear in shapes that suggest a corpse: they are silent, shrunken, aged, stiff, and discolored. Sympathetic magic, which uses an analogy between two things or events, is often present in customs. Crops are planted when the moon is waxing in order that they may grow better. Customs and superstitions associated with them have a position intermediate between the folklore of acts and the folklore of words. The words explaining such a symbolic or superstitious act as throwing spilt salt over one's shoulder or knocking on wood are not necessarily traditional, although the idea is. Many customs and superstitions have bases in fact: the discovery of a drowned man's body sunk in a stream by floating a loaf of bread on the water utilizes the fact that the loaf also follows the course of the current.

Special customs and beliefs are connected with the seasons and many individual days. Those associated with the seasons are, for the most part, concerned with planting or harvesting crops. The customs belonging to such days as New Year's Day, Valentine's Day, All Fools' Day, Easter, St. John's Day, Lady Day, Hallowe'en, and Christmas may be either pre-Christian or Christian in origin. They have reference to many affairs of domestic and social life. The groundhog's shadow on Groundhog Day and the weather on St. Swithin's Day forecast the weather to be expected. The old idea that March 25 is the beginning of the year is retained in the customs and stories of St. Mark's Day. The fires of St. John's Day represent partially Christianized ritual, and many practices belonging to the days before and after Christmas mingle heathendom and Christianity inextricably.

Literature: *Handwörterbuch des deutschen Aberglaubens*; John Brand, *Observations on Popular An-*

tiquities, ed. Henry Ellis (London, 1842); Ernst Samter, *Geburt, Hochzeit und Tod* (Leipzig, 1911); T. F. T. Dyer, *British Popular Customs* (London, 1876). Useful miscellaneous material in W. Hone, *Everyday Book, Table Book, Year Book* (London, 1826-27); and R. Chambers, *The Book of Days*: a miscellany of popular antiquities in connection with the calendar (London, 1862-64). Encyclopedic treatment in Paul Sartori, *Sitte und Brauch* (Leipzig, 1910-14).

Folklore of words The folklore of words apart from connected discourse is found chiefly in names. Place names, which are most actively studied, reveal fashions of name-giving that disclose the history of migrations, the making of settlements, and the practice of heathen cults. In Scandinavia, the names of rivers and, in Germany, the names of fields have been separately collected and studied.

Literature: Publications of the English Place-Name Society. Journals: *Namn och Bygd*; *Zeitschrift für Ortsnamensforschung*. Discussion: B. M. Olsen, *Farms and Fanes of Ancient Norway* (Oslo, 1928).

Collections of family names are available for all the Germanic languages. Some are merely lists, others give etymologies or tell when and where the names have been used. Since names are easily borrowed and are not completely subject to the rules of linguistic developments applicable to common nouns, etymologies are very risky unless supported by abundant historical evidence. The use of family names arose in the late Middle Ages, and those now in use show the manner of life prevailing at the time. The so-called imperative names formed like Shakespeare by compounding a verb and a noun abound in Germany and are found in smaller numbers in other Germanic countries. Since they probably contain, in most instances, a sentence like, "I shake a spear," which was characteristically used by the original bearer of the name or was applied to him, they are better known as sentence-names. Collections of family names and treatises on them are too numerous to mention here.

Many Christian names like Grete, Hans, George, and their derivatives like G. I. Joe, have popular associations that belong to folklore. Although the original meaning of Margareta was very honorable, the contraction Grete had unpleasant associations in Reformation Germany that may be connected with the choice of the name Gretchen in Goethe's *Faust*. These associations, which belong to folklore, are more often felt than listed in formal manner. The use of certain Christian names, especially those of saints, reveals cultural and folklore currents. The originally English Oswald was, for example, carried to Germany by early missionaries and spread from the monasteries in western Germany to Austria, where it is perhaps more popular now than in other regions. The Swiss scholar E. A. Stükelberger has studied such dynamic traditions in Christian names.

Adequate collections of nicknames, especially collections giving the necessary historical information about age, use, and connotation, are lacking. Leonard Bloomfield has suggested orally that many nicknames referred originally to instruments having various uses and were not corruptions of the names with which they are now associated. The name of the instrument has been transferred to the person as a nickname. In other words, the *bob* of *plumb-bob* and the *jack* of *bootjack* may be the

original meanings of the nicknames of Robert and John. Many nicknames have become obsolete, and many have special connotations.

Literature: A. R. Frey, *Sobriquets and Nicknames* (London, 1888).

As the lack of a good English equivalent of the French *blason populaire* indicates, this concept, which is allied to the nickname, is not clearly isolated in English use. Examples are nevertheless abundant in Germanic folklore. Certain names or adjectives are traditionally used with particular places or peoples like Merry England, the mad Irish. The origin and history of such phrases are often difficult to discover.

Plant and animal names often preserve superstitious beliefs. The word *bear* is not Indo-European, but is a substitute for the animal's original name, which was akin to the Latin *ursus*. The use of such a substitute probably reflects an ancient hunter's tabu against mentioning the creature. Allusions to heathen gods in plant names (less often in animal names) do not necessarily go back to heathendom. They may be deliberate archaizing: or Christian names and may be derived from a post-Renaissance interest in heathen antiquities.

Literature: Van Wijk, *A Dictionary of Plant Names* (The Hague, 1912-16).

Names of sickness often contain echoes of superstitious ideas or allusions to traditional themes like St. Vitus' Dance for epilepsy.

Literature: Max Höfler, *Deutsches Krankheitsnamenbuch* (Munich, 1889).

Calls to animals Calls to animals are traditional. The words for summoning, frightening away, or guiding animals vary from region to region and according to the kind of animal. Cats, dogs, cows, and chickens are spoken to in different ways. The terms *Gee!*, *Haw!*, and *Whoa!* are not in universal use in English and have different meanings in different places. Every well-behaved parrot knows "Polly wants a cracker."

Literature: H. C. Bolton, "The Language used in talking to Domestic Animals," *American Anthropologist*, X (1897): 65-90; 97-143.

Oaths, greetings, exclamations, toasts, funerary inscriptions, and other conventional formulas have a place between the folklore of individual words and the folklore of connected discourse. Except for collections of epitaphs, which are usually the object of sentimental and curious interest rather than of study as tradition, little has been done to collect or discuss these formulas. Such references to the suffering of Christ on the Cross as *Zounds!* and *Zooks!* belong to a fashion of swearing that became obsolete about the end of the 17th century. B. J. Whiting has collected examples of oaths taken on someone's soul.

Literature: Julian Sharman, *A Cursory History of Swearing* (London, 1884); Robert Graves, *Lars Porsena or the Future of Swearing and Improper Language* (London, rev. ed. 1936); B. J. Whiting, "'By my Fader Soule,'" *Jour. of English and German Philology*, XLIV (1945): 1-8. *Epitaphs:* William Andrews, *Curious Epitaphs* (London, 1899); W. H. Beable, *Epitaphs: Graveyard Humor and Elegy* (London, [1925]).

Folklore in connected discourse can be conveniently divided into verse and prose, and verse in turn, into children's songs and folk songs. Children's songs exist in many imperfectly recognized categories that cannot al-

ways be separated from games. Arranged according to the age of the child, children's songs comprise lullabies, rimes to count the fingers and toes (*This little pig went to market*) or the features of the face (chinchopper rimes), dandling rimes (*Here we go to Banbury Cross*), mocking rimes (*Georgie Porgie, pudding and pie*), counting-out rimes (*Eenie Meenie Minie Mo*), divinations (*One I love, two I love . . .*), skip-rope rimes, rimes for the days of the week or the letters of the alphabet, and many others. The origin and history of these types and of the individual songs are very obscure. A very curious and important feature of Germanic folklore is the development in English of a canon, which is not too strictly defined, of children's rimes in the collection called *Mother Goose*. Although the contents of this collection vary from edition to edition, there is a generally recognized core of texts. With some obvious exceptions, the interpretations of Mother Goose rimes as allusions to events and figures in English history is dubious.

Literature: See *Games* above. *General collections of English children's songs:* J. O. Halliwell, *Nursery Rhymes of England* (5th ed., London, 1886); *Gammer Gurton's Garland* (London, 1810, repr. 1866); G. F. Northall, *English Folk-Rhymes* (London, 1892). *Prayers:* F. Ohrt, *Gamle danske folkebonner* (Copenhagen, 1928), including English parallels. *Counting out rimes:* H. C. Bolton, *The Counting-Out Rhymes of Children* (London, 1888). *General treatises:* Lina Eckenstein, *Comparative Studies in Nursery Rhymes* (London, 1906); Henry Bett, *Nursery Rhymes and Tales* (New York, 1924). *Mother Goose:* W. A. Wheeler, *The Original Mother Goose's Melody* (Boston, 1892); Katherine Thomas, *The Real Personages of Mother Goose* (Boston, 1930); D. E. Marvin, *Historic Child Rhymes* (Norwell, Mass., 1930).

Folk song Folk song falls into the categories of lyric and narrative songs, which are both characterized by traditional words, situations, themes, and music. Comparatively little English lyric song has been collected. The German Schnaderhüpfel, a quatrain consisting of two distichs, of which the first describes a scene in nature and the second a mood, is current in southern Germany and has parallels in Scandinavia and also outside of Germanic territory. Singers often engage in contests of matching these quatrains.

Literature: W. D. Hand, *The Schnaderhüpfel: an Alpine folk lyric* (Diss., Chicago, 1936).

Ballad The ballad, a narrative song in stanzas, often with a refrain, told in an objective, lyrical manner, apparently arose in the late Middle Ages. It is restricted in its currency to western Europe. In form and subject-matter it differs from Spanish romances and eastern European (Greek or Russian) narrative song. Although the earliest recorded ballads deal with religious subjects, this fact does not necessarily demonstrate a clerical origin of genre. Some ballads have Germanic heroic legends as themes, others are related to medieval romances, and others tell of border warfare or other historical events. Scholars have hotly disputed the extent to which the folk has created and shaped the ballad.

Literature: *Collections:* F. J. Child, *English and Scottish Popular Ballads* (Boston, 1882-98); L. Erk and F. M. Böhme, *Deutscher Liederhort* (Leipzig, 1893-94); John Meyer, *Deutsche Volkslieder* (Berlin, 1935-); N. F. S. Grundtvig, *Danmarks gamle Folkeviser* (Copen-

hagen, 1853-). *Journals: Journal of the English Folk-Dance and Folk-Song Society; Das deutsche Volkslied; Jahrbuch des deutschen Volkslieds. Discussion: G. H. Gerould, The Ballad of Tradition; W. J. Entwistle, European Balladry* (Oxford, 1939); Louise Pound, *Poetic Origins and the Ballad* (New York, 1921).

Songs which can be ascribed to known authors and those which exhibit a very humble literary craftsmanship often use the conventions belonging to the ballads. Circulated as broadsides by wandering singers they often give the details of a recent notorious event, especially the execution of a criminal or the circumstances of a disaster. They stand on the fringe of folklore.

Literature: Collections: Publications of the Ballad Society; Hyder E. Rollins, *The Pepys Ballads* (Cambridge, Mass., 1929-32); Rochus von Liliencron, *Die Historischen Lieder der Deutschen* (Leipzig, 1865-69). *Folktales* Folktales are of many kinds and can best be separated according to the intentions of the teller. Tales are told to amuse, to impart moral lessons, to explain the origins and shapes of natural objects including plants and animals, to inform the hearer about a historical or supernatural event. Some minor varieties are told for the sake of their forms rather than their contents.

The fairy tale, which does not necessarily include a fairy among the actors and is therefore better called a *märchen*, is the most important variety of tale told for amusement. It has a conventional form, consisting of introductory and concluding formulas and a biography of the hero that ends with his happy marriage. The incidents often occur in a threefold repetition that exhibits slight variations in the three stages. They usually involve magic or supernatural elements. The examples, like Puss in Boots, Cinderella, The Two Brothers, or Faithful John, often have an international distribution. Berendsohn suggests that there is an older type having two actors in which the threefold repetition is less characteristic.

Jests Jests, which ordinarily consist of a single incident, can be best classified according to their themes. The noodle story (The Wise Men of Gotham, *Schildbürgers*), the stories of the literal execution of commands (*Eulenspiegel*), and tall tales (*Münchhausen*) often group themselves about a single actor. In similar fashion, stories about witchcraft have gathered about Dr. Faustus. Tales about priests and married couples and stories with realistic emphasis are often closely connected with Italian novelle.

Fables Tales conveying a moral lesson are represented by the fable, a form that does not seem to have enjoyed much traditional currency among Germanic peoples.

Etiological tales Etiological tales explain why the bear has no tail or why the aspen continually shakes (Judas hanged himself on it). They apparently belong to a very ancient cultural level, but their number has been increased by narratives based on incidents drawn from Christian history like the story of the baker's daughter who refused to give bread to Christ and hid under a trough, which she must henceforth carry on her back.

Literature: Oskar Dähnhardt, *Natursagen* (Leipzig, 1907-12).

Sagen Tales partaking of the nature of history are called *Sagen* or local and historical legends. They constitute a characteristic and very abundant variety of Germanic

folklore. The subject-matter includes on the one hand stories of the Devil, water sprites, forest women, giants, dwarfs, cobolds, ghosts, and other supernatural creatures in their relations to men, and on the other hand stories about historical figures. The legend of the Wild Hunt, a ghostly company that races across the sky at various seasons in all Germanic countries, is one of the most impressive Germanic legends. It occurs in an ennobled form in the myth of the ride of the Valkyries. The previously mentioned ideas of animism and the living corpses are frequently found in these legends. The stories about historical figures (Charlemagne and the ring of Fastrada, Martin Luther throwing the inkwell at the Devil, Frederick the Great and the miller of Sans Souci) exhibit the alterations of fact and the additions of fancy that characterize folklore.

Saints' legends belong more to international tradition than to Germanic folklore.

Certain folktales are more interesting for their form than for their contents. The cantefable, which mingles verse and narrative, is rather poorly represented in Germanic folklore. Formula tales appear in the cumulative type of The House that Jack Built and The Old Woman and Her Pig, the circular type represented by rounds, and the endless tale.

Literature: Stith Thompson, *The Folktale* (New York, 1946); J. Bolte and G. Polivka, *Anmerkungen zu den Kinder- und Hausmärchen* (Leipzig, 1913-32), especially volumes IV and V.

Riddles The loosely used term riddle includes many varieties of verbal puzzles. In a strict sense, a riddle is a comparison of two unrelated things like the equating of an egg to a man in Humpty-Dumpty. Its wit lies in the aptness of the comparison and the disclosure that the hearer has misapprehended its meaning. Obscene implications are frequent in riddles. Riddles are often in verse. Other varieties of puzzles are the shrewd or witty question, which calls for information about a Biblical figure (Who was not born and yet died?—Adam), the answer to an arithmetical problem (If a hen and a half lays an egg and a half in a day and a half, how many hens will lay a dozen eggs?), and the explanation of a complicated family relationship, or some other fact. There are also whimsical or humorous versions of such questions: "What did Samson die of?—Fallen arches." The conundrum depends upon a pun: "Why is a cherry like a book?—Because it is red." Another variety of puzzle asks, "What is the difference between . . . and . . . ?" A few questions offering a choice between something apparently attractive and something apparently disgusting are reported in English, and more occur in other Germanic languages. The apparently disgusting object turns out to be the better choice. Narrative elements appear in the neck-riddle, which is a puzzle set by a man who gains his freedom or his life by setting an insoluble puzzle. Since he chooses to describe a situation known only to himself, no one can guess his meaning. An example is "On Ilo I walk, on Ilo I stand, Ilo I hold fast in my hand.—The man has made shoes and gloves of the skin of his dog Ilo." The story or puzzle of the burning barn uses incomprehensible words to describe an event, usually the burning of a barn or the driving of a goat from a cabbage patch. It may be ultimately related to tabus on words that a particular person must not utter.

Literature: Archer Taylor, *A Bibliography of Riddles* (Helsinki, 1939). *Discussion:* Robert Petsch, *Das deutsche Volksrätsel* (Strassburg, 1917); Kenneth Jackson and E. Wilson, "The Barn is Burning," *Folk-Lore* XLVII (1936): 190-202.

Charms Charms are formulas used to cure sickness, heal a wound, restore stolen property, or effect other beneficial or harmful results. They consist of an act alone or of an act and traditional formulas. The act may involve the principle of sympathetic magic. The words, which are often in verse, employ various conventions, especially the notion of counting down to zero, whereupon the wirt is commanded to vanish as the numbers have vanished, or the comparison to an event, which is usually chosen from Christian history, as for example the comparison of the stopping of the River Jordan when Christ was baptized to the desired result, the halting of a hemorrhage.

Literature: F. Gredon, "The Anglo-Saxon Charms," *Journal of American Folklore* XXII (1909): 105-237; T. O. Cockayne, *Leechdoms, Wort-Cunning, and Starcraft of Early England* (London, 1864-66); Ferdinand Ohrt, *Danmarks trylleformler* (Copenhagen, 1917-21); Emmanuel Linderholm, *Signelser och besvärjelser från medeltid och nytid* (Stockholm, 1927-40). *Discussion:* Oskar Ebermann, *Blut- und Wundsegen* (Berlin, 1902); F. Ohrt, *Trylleord* (Copenhagen, 1922). For individual charms see the *Handwörterbuch des deutschen Aberglaubens*.

Proverbs Proverbs are aphoristic sayings that enjoy traditional currency. They may be statements of fact like "All's well that ends well" or descriptions of scenes like "New brooms sweep clean" that are used in a transferred moral application to a particular situation. Although proverbs are often credited to a particular inventor like Solomon, their origins are almost always obscure and ascriptions are very unreliable. Some statements of fact that do not involve a moral application have become proverbial, especially forecasts of the weather (Mackerel sky, mackerel sky, never long wet and never long dry) and formulations of the law (Two words to a bargain). A curious proverbial variety called the Wellerism couples an assertion with an identification of the speaker and often adds a suggestion of the scene as in "'Everyone to his taste,' said the farmer and kissed the cow." An investigation of Wellerisms current in southern Sweden has traced many of them to actual recent events, but many Wellerisms must be explained in other ways. Some proverbs are rimed, and many exhibit a characteristic structural parallelism. Proverbial phrases are usually confused with proverbs, but should be regarded as a separate variety of traditional speech. They lack the complete rigidity of a proverb and may vary according to tense and person. They frequently contain a reference to a custom, belief, or the details of a human activity. Examples are "to have an ace in the hole," "to be left at the post," or "to put on the screws."

Literature: *Collections:* G. L. Apperson, *English Proverbs and Proverbial Sayings* (London, 1929); W. G. Smith, *The Oxford Book of English Proverbs* (Oxford, 1935); K. F. W. Wander, *Deutsches Sprichwörter-Lexikon* (Leipzig, 1867-80); Samuel Singer, *Sprichwörter des Mittelalters*, I (Berne, 1944), II (1946), III (1946), with invaluable references to medieval versions. 25), contains abundant English and German comparative material. *Discussion and Bibliography:* Wilfred Bonser and T. A. Stephens, *Proverb Literature* (London, 1930); Friedrich Seiler, *Deutsche Sprichwörterkunde* (Munich, 1922) and *Das deutsche Sprichwort* (Strassburg, 1918); Archer Taylor, *The Proverb* (Cambridge, Mass., 1930).

ARCHER TAYLOR

Geryon's oxen In Greek legend, the superb red cattle of the three-headed (or three-bodied) monster Geryon, which Hercules brought back to Eurystheus from the island of Erytheia in the farthest west as the tenth of his labors. Geryon was king of the island (perhaps the same as Hesperia, and at any rate west of Spain) and herded his cattle with those of Hades. Hercules, building the Pillars of Hercules, became overheated by the sun and, angered, shot arrows at Helios. Amused, or perhaps frightened (for the arrows were poisoned), the sun gave him his golden cup in which he sailed to the island. To take the cattle Hercules had to kill Geryon's dog Orthrus, his herdsman Eurytion, and Geryon himself. Many incidents famous locally in Spain, France, and Italy occurred on his voyage and return in the golden cup of the sun, especially the setting up of the Pillars of Hercules and the slaying of Cacus at Rome. The cattle were finally sacrificed to Hera by Eurystheus.

gestures Folklore is not limited to writing or speech for its transmission or preservation. Since gestures are motions made or positions assumed to convey or emphasize an idea or an emotion, it is natural that certain easily made and useful gestures become stereotyped and are passed down within cultures and from tribe to tribe for many generations.

In gestures particularly, however, the use of identical signs in two or more tribes which have had communication does not necessarily imply borrowing, for the signs which can be made by the human body and its parts are obviously limited, and neural response patterns are bound to be similar among all races.

Moreover, since some primitive gestures probably antedated both writing and speech and were employed when members of different-language tribes first met, they persist as important auxiliary communication devices, especially in such hybrid languages as pidgin English, lingua franca, sabir, beche-de-mer, Yiddish, Canuck, Swahili, and Romany. A similar intermixture of words and gestures is observable in many of the game rimes recited and acted by children—dramatized rimes which form a sort of international language of their own. (See EENY, MEENY, MINY, MO.)

Interesting and ingenious action-languages, composed entirely of gestures, have developed in societies and groups where oral or written communication was tabu, impossible, or unwise.

Among the Warramunga of central Australia, silence is a form of mourning required for a year or two of all female relatives of a deceased male, even to remote collateral degrees of consanguinity, with the result that a majority of the tribal women are usually condemned to keep silent. Consequently, the women have become remarkably proficient in a unique gesture language built upon elbow positions and motions with some assistance from the arms and hands.

Frazer, who cites this (*Folklore in the Old Testament* III: 71 ff.) and other instances of the imposition of silence upon widows in such separated regions as British

Columbia, California, the Congo, and Madagascar, inferences from the fact that the Hebrew word for widow is *almanah*—silent one—that a similar tabu anciently obtained among the Israelites. He has etymology, parallels in comparative folklore, and the frequent use of gesture by Jewish women, to strengthen his theory. But the oldest literary and historical evidence indicates that the "silent ones" did not confine the expression of their grief to sign language, but "lifted up their voices and wept."

The Warramunga widows perfected what was really a parallel system to the wigwagging of Boy Scouts and sailors and the semaphores of railroads, two modern gesture languages.

One thinks immediately, of course, of the sign languages of the American Indians and the several systems used by deaf-mutes. A closer parallel to the Warramunga women's language of silence, because it is also the result of a religious tabu, is the method of gesture communication used by Cistercian and Benedictine monks. (See *The Language of Gesture* by Macdonald Critchley, N.Y., 1939.)

Related to the more developed gesture languages and similarly connected usually with religion either directly or indirectly were the formalized stage gestures of the ancient dramas of India, Greece, Rome, and China. These included postures as well as motional gestures and have their counterpart in the meticulously observed attitudes of worship depicted on Sumerian seals of the 4th millennium B.C., as well as the formalized obeisances of submission on bas-reliefs of ancient Egypt, Babylonia, and Assyria. The many *asanas*, or postures, of Hindu yoga are little known in the Western world, but for the *padmasana*, the Buddha pose of the interlocked feet with soles uppermost, which conveys even to the uninitiated the idea of complete composure.

Parallel are the many postures, gestures, and signs used in the ceremonies and devotions of the various branches of the Christian church, especially the Greek and Roman Catholic divisions. There are several "reverences" of which the best known are the genuflections of the Latins before the Blessed Sacrament and the metanies of the Byzantine Catholics in the same presence.

Genuflections of the ordinary sort are a quick bending of the right knee until it touches the floor, and are made by both laity and clergy upon many stated occasions. The double genuflection consists of kneeling upon both knees, bowing the head, and then rising to one's feet: it is made only before the exposed Blessed Sacrament.

Metanies (from the Greek *metanoia*, repentance) are bowings of three carefully differentiated depths: the "salutation" which simply inclines the head and shoulders, the lesser metany which is a bow low enough to permit the right hand to descend to the level of the knees, and the greater metany which is a complete prostration requiring considerable physical agility and suppleness since the forehead, hands and feet must touch the floor, but no other part of the body. (See *A Catholic Dictionary*, Attwater, 1941, p. 339.)

Ordinands, candidates for ordination as deacons, priests, and bishops, must prostrate themselves until flat on the ground, or kneel with the head touching the ground.

Kissing, as a gesture, has had a long evolution in

Christianity from the early church where it was customary to "greet all the brethren with a holy kiss," through the period when it was correct (as it still is in the Eastern Church) to kiss the newly baptized and the celebrants of the Eucharist, until later when men could kiss only men and women only women, and finally when only the clergy exchange ceremonial kisses and the people are permitted to kiss the osculatorium—a relic or cross carried to them for the purpose. There are many other liturgical and extra-liturgical kisses applied to the altar, the gospels, the paten, the cruets, palms, candles, rings, the hands of celebrants, and the foot and knee of the pope.

Moslems have for centuries kissed the sacred Kaaba stone at Mecca. Idols of the gods were kissed by early Greeks and Romans. The toe of St. Peter's statue has been worn down by Roman Christian kisses.

Baptism has been a practically universal gesture in many religions and throughout human history for the removal of the tabus surrounding birth, including the second birth of conversion or initiation.

Originally a part of baptism, the making of the sign of the cross was intended to seal the Christian in baptism and to protect him from demons and witches. In early Christian times it was simply performed by drawing an imaginary cross on the forehead with the forefinger. It was later varied by using the thumb dipped in oil or holy water. Today the person who "crosses himself" usually does so by holding together the finger tips and thumb of the right hand and with them touching the forehead, breast, left shoulder, and right shoulder in that order while repeating, "In the name of the Father and of the Son and of the Holy Ghost." Eastern Christians use only the thumb and first two fingers and make the sign from right to left.

Less obviously religious but with connotations of protective magic are the other crosses, such as crossing the fingers indicating mental reservations, crossing the Gipsy's palm with silver to learn your future, and the "cross-my-heart-hope-to-die" gesture of the children, a sacred affirmation which may antedate Christianity.

Critchley reports 150 signs and gestures collected from American school children, but few of them have any great significance for students of folklore, such as scratching or shaking the head.

The cocksnook or snook, thumbing the nose in insult, is widespread and has many variations. Sometimes the fingers are vibrated; again, the second hand is added, either side by side or tandem, to double the insult; in rare cases the ears are similarly thumbed. There may easily have originally been an idea of negating or counteracting bad magic.

The fig, or fico, made by putting the thumb between the index and middle fingers, or even by inserting the thumb in the mouth, is closely related to the cocksnook in popular usage as an insult or sign of contempt, and is of undoubted religious origin, for it is still used in some cultures as a means of warding off the evil eye. It has obvious phallic connotations and perhaps phallic origination. It is significant that it is sometimes used to intimate cuckoldry.

The making of the sign of the horns by extending the first and fourth fingers while retaining the second and third in the palm also indicates cuckoldry: yet it, too, is said to counteract the evil eye.

Spitting and pointing are important gestures in primitive and juvenile groups. Puckett reports that some southern U. S. Negroes believe pointing at a grave will result in your getting the finger cut off, or a ghost will chase you, or you will die, but these dire effects can be avoided if you quickly spit on your fingers. In Yorkshire you shouldn't point at the stars.

Scraping the left forefinger with the right is a sign of shame for the person at whom the left one is pointed, and is evidently based on the almost universal idea that the left hand is really "sinister."

The holding aloft of the boxing victor's hand and the "police verso" thumb down for the vanquished gladiator doubtless originally had celestial and infernal significance. See MIME.

CHARLES FRANCIS POTTER

Gēush Urvan, Gōshūrūn, or Gōshūrvan In Iranian cosmological mythology, the soul of the primeval bull which contained the germs of the animal species and of useful plants; the fifth creation and the sole-created animate being. Gēush Urvan is usually described as a bull, sometimes as a female. The bull was slain by Angra Mainyu after living 3,000 years according to the *Būndahishn*. In another legend, it was slain by Mithra who plunged his hunting knife into its flank. From its limbs grew 12 kinds of medicinal plants and 55 species of grain. From the seminal energy of the bull came a cow and a bull followed by 282 pairs of animals. Gēush Urvan, its soul or travashi, went to heaven as the guardian of animals. Compare AUDHUMLA; YMR.

ghost A disembodied spirit. The term is usually applied to the human soul after death, and is used interchangeably with such words as phantom, specter, shade, spook, apparition, revenant. See REVENANT.

ghost dance A dance of communication with the spirits of the dead. As a masked impersonation it is discussed under DEATH DANCE and CLOWNS. As a mystic communion it usually arises in times of stress. This form at times normally develops in ancient tribal ceremonies, as the Bon Odori, the invitation to the dead in a Japanese dance (Shinto), or the Blackfoot Indian dance for the spirits of the dead. But the successive messianic cults of the American West, culminating in the ghost dance religion, were an escape from the intolerable circumstances, cultural disintegration, and starvation due to the avidity of the white man.

Several revivals preceded the great ghost dance: a southern wave about 1800, started by the Shawnee prophet, Tenskwatawa, and adopted by southern tribes, the Cherokee, the Creeks, as well as the Kickapoo and Miami; on Puget Sound, the dream cult of Smohalla, chief of the Wanapûm; and in 1881 the Indian Shaker church started by Squaxin, John Slocum or Squasacht-un, with its admixture of Catholic ritual. Before 1870 Tāvito, a Paiute of Nevada, initiated a ghost dance wave which affected the adjacent tribes of California and filtered into the Hesi cult. Living conditions were at the proper stage of disintegration among the Modoc, Shasta, Karok and Tolowa; less so among the Yurok, Pomo, Wintun, and valley Maidu. The new religion was distinguished (among the Pomo), as *maru he*, from an ancient ghost religion, *hintil he*; *boli* or human spirits, were distinct from *saltu*, the ancient divinities.

About 1889 the son of Tāvito, Jack Wilson or Wovoka (the Cutter), had a revelation during a fever and an

eclipse of the sun. Like his predecessors he foretold a regeneration of the earth, reunion with the beloved dead, a life of aboriginal happiness without disease, misery, or white men. He preached good will, denounced lying, fighting, or destructive mourning customs. What with the virtual extermination of the buffalo and the prevalence of whisky, the prairie tribes sought salvation in this doctrine and in the dance that brought anticipation of the blessed state and visions of the deceased. It spread first to the nearby Bannock and Shoshoni tribes of Nevada and Wyoming, then to the most receptive Arapaho and other Oklahoma tribes, the Kiowa Apache, Cheyenne, and Pawnee, then to the Sioux of Dakota. Less affected were the Ute and Comanche, still less the Walapai, Havasupai, Mohave and Navaho, not at all the stable Pueblo Indians. Woodland tribes were little affected, except indirectly through the grass dance and dream dance.

All ages—men, women and children—joined. After a purificatory sweat bath and ceremonial painting with sacred red ocher, increasingly larger circles sang without drum, and shuffled left with a dragging step. Each song completed a circuit. Fingers were intertwined, and released only in trance. Hypnotists in the center watched for the first trembling; they waved a feather or kerchief before the subject's eyes crying "hu-hu-hu," till she or he staggered into the center. A spasmodic dance ended in rigidity and final collapse. Strictly, four nights every six weeks were devoted to these ceremonies.

In each tribe native mythology and customs varied the pattern. The Yurok removed planking from graves. The Paiute, who called it *nānigükwa* or "dance in a circle," did not practice the trance hypnotism. The Sioux, who called it *wana'ghi wa'chipi* or "spirit dance," wore a special ghost dance shirt. They introduced an element of hostility against white men into this peaceable religion. Ample provocation and interference with the religion led to disasters as the massacre of Wounded Knee. The Sioux were the last tribe to adhere.

Among all tribes except the Sioux the effects were beneficial. Though disappointment followed non-fulfillment, the teachings and the psychotherapy brought temporary improvement. [GPK]

ghoul (Arabic *ghul*; feminine *ghulah*) A demonic being that feeds on human bodies, either corpses stolen from graves or young children. Ghouls inhabit lonely places, especially graveyards: the Arabic ghul of the wasteland seems to be a personification of the terror of the desert. The ghoul may be compared with other cannibalistic vampirelike creatures: the Lilith, Lamia, Yogini, Baba Yaga, etc. Generally the whole of the Moslem world, from India to Africa, knows the ghoul.

giants References to giants are frequent in Eskimo and North American Indian mythologies. Giants may be either human, or animal, or bird in form; usually, but not always, they are males, and almost always they are cannibalistically inclined. The pre-Eskimo Tornit of Central Eskimo mythology were giants; Big Owl of the Southwestern United States is either a huge cannibal bird or a giant humanlike creature. The tale of a giant bird (roc) who carries a boy to a cliff is widespread in North America, as are also the tales of the giant Thunderbirds and of the giant monster who sucks in his victims. Test tales, widespread in native North America, contain references to giants of several

descriptions. In the Eastern Woodlands the Shawnee female deity has four giant "boys" who can smell human beings from afar. On the North Pacific Coast, tales of cannibal giants are especially popular. In one such, a giantess who abducts children is killed, but because her soul is outside her body, she revives; the fugitives however escape. In another cannibal giant tale of the North Pacific Coast and Plains the cannibal is burned; the ashes become mosquitoes. [EWV]

 According to a famous legend heard by the Spaniards in Ecuador, a race of giants landed in a distant past near Santa Elena. These giants bored a deep well into the hard rock. After killing their women and those of the Indians, they resorted to sodomy, thus arousing the wrath of the gods who destroyed them with lightning. Fossil bones abundant in that neighborhood were attributed to them. [AM]

la gielosia An Italian dance for four couples with mime of jealousy. The folk dance goes back to court *ballo* of the 16th century, a lively dance with hops. The first gentleman dances successively with the lady of the other couples in the row; between changes the group dances *tempi di piva tedesca* with parading for the ladies and turns and jumps for the men. The motif of partner change, a commonplace in European folk dances, has its counterpart in aboriginal dances of the Dinka on the Nile and in the North American Iroquois Indian Alligator dance. It may relate to the licentious exchanges during post-ceremonial feasts. [CPK]

Gigantes In Greek mythology, a race of giants sprung from Earth (Ge) when the blood of the mutilated Uranus fell on her: probably a group of early deities or of inhabitants of Greece, like the Cyclopes, of which the myth is a recollection. The Gigantes were monstrous, huge creatures, with serpents for feet: this is post-Homeric, Homer apparently looking on them as a savage race of men. The Gigantes were induced by Ge to attack the Olympians with rocks and brands made of whole trees. According to what the Olympians were told, the Gigantes were invincible so long as they were able to use a certain herb, and even without the herb could not be defeated unless a mortal aided the gods. There were also individual difficulties to overcome, as for example the giant Alcioneus being unslayable on his native land. Ge obtained possession of the herb, but Zeus countered by ordering Eos and Helios not to shine and took the herb in the darkness. Then, with the aid of Hercules, the Olympians defeated the giants, burying them in various places in the earth. Alcioneus was slain by Hercules after the hero dragged him to another land than his own. The Gigantes thus seem to be a sort of earth-spirits, responsible for such phenomena as earthquakes and volcanoes, with which latter they are especially associated. Compare ALOADE; CYCLOPS; GIANTS; MONSTERS; RAKSHASAS; TITANS; TYPHON.

Gilgamesh The great hero of Sumerian and Babylonian epic poetry: precursor of Hercules and other folk heroes. See SEMITIC MYTHOLOGY.

Gilles de Laval, Marshal of Retz (1404-1440) One of the persons thought to have been the "original" villain in Perrault's version of *Bluebeard*. Another candidate is Commore the Cursed, also a Breton chief, in this case of the 6th century. Stories about Gilles de Retz,

who led an adventurous life, was associated with Joan of Arc in her battles and coronation, and got involved with the alchemists, still persist in Brittany. Objections to the identification are that the fantasies of young women who think they are married to cruel monsters with designs on their lives are recorded in hundreds of folktales and in the records of most psychiatrists. Large black men with blue beards are generally thought to be virile, seductive, and dangerous to women. The particular objection to Gilles de Retz as the villain is that he had only one wife who survived him and that he was scandalously fond of torturing young boys. [RDJ]

Gimokodan The Bagobo (Philippine Islands) afterworld which lies below the earth. Gimokodan is divided into two sections, one red for those killed in combat, the other like the upperworld but with everything reversed. At the entrance to Gimokodan is the Black River where the gimokod (spirit) bathes in order to forget its former life. There, also, is a giant female covered with nipples who suckles the spirits of infants. After the spirits have entered Gimokodan they move about as they did on earth, but only during the hours of darkness. When the afterworld grows light, each spirit makes a boat-shaped dish for itself from the leaves of a tree and is dissolved into a liquid in it. When darkness returns the spirit resumes its form and activities. Compare BELET.

Ginem A Bagobo (Philippine Islands) ceremony held in December to thank the spirits for success in domestic affairs and war, to drive off the buso, to ward off illness, and to gratify the spirits so that they will favor the people in the future. Formerly the Bagobo went on a skull raid before the Ginem and the spoils were tied to ceremonial poles and dedicated to Mandarangan and Darago. Today offerings such as clothes and knives are made and the spirits are asked, in return, to grant a good harvest and health. Then the poles, now used without skulls, are decorated, carried into the dau's house, and a chicken is sacrificed. Each maganī (a person who has killed two or more persons) then confesses his warlike deeds. A feast, dancing, and songs follow until dawn. In the areas where this ceremony lasts longer than one day the celebration on the succeeding days consists primarily of feasting.

ginger The pungent, spicy rootstock of a tropical plant (*Zingiber officinale*). This spice has been cultivated in the East since time immemorial and is now also grown in the American tropics. Probably indigenous to China, ginger is used throughout the world as a spice. It is chewed as an aid to digestion and a cure for flatulence, and in many places to relieve toothache. In Russia a little ginger is sprinkled in warm rum and a piece of cotton soaked in the mixture is placed in the tooth. In Melanesia it is used to win the affection of women. In the Philippines it drives out the evil spirits which cause disease. If a fisherman chews ginger and spits on his bait, catfish will flock to his hook.

Wild ginger or Indian ginger (*Asarum canadense*) North American Indians believed would when cooked with spoiled meat prevent ptomaine poisoning. They also used the root to cure sore mouth and earache.

Gingerbread Boy or **Man** The American title of a general European cumulative tale commonly known

as the *Fleeing Pancake* (Z31.3.1; Type 2025). A woman makes a gingerbread boy who springs up and runs away. Various animals, one after the other, try to stop him, until at last the fox catches him and eats him up. The defiance uttered by the Gingerbread Boy to the pursuing animals build up into the cumulative formula. To the dog he says, "I ran away from an old woman, and I can run away from you, I can!" By the time he meets up with the fox, a whole series of pursuers has accumulated: "I ran away from an old woman, a dog, and a cat, and a mouse, and a hen, and I can run away from you, I can!" Whereupon the fox swallows him at one gulp.

Ginnungagap (1) In Teutonic mythology, the fathomless abyss between Niflheim and Muspellheim. The cold winds from the abyss turned the streams into blocks of ice which made an incessant thundering as they fell into the chasm. Sparks from Surtr's sword in Muspellheim fell on the ice and made steam which turned into layer on layer of hoarfrost and in time filled it up. Eventually this mass received life, becoming the giant, Ymir. When Ymir was slain, Odin, Vili, and Ve threw the body into the chasm where his body became the earth and his blood the sea.

(2) The name given to the sea between Greenland and America in the 11th century.

ginseng An herb (genus *Panax*) native to North America and China. This plant is highly valued as medicine in China, Japan, India, and among some tribes of the North American Indians because of the resemblance of its root to the figure of a man. It has sometimes been confused by European writers with the mandrake because of this resemblance, but it has none of the narcotic effect of the mandrake. It is held in highest esteem in China and commands a high price even today. At one time the Chinese and Tartars fought for possession of the countryside where it grew and one Tartar king is said to have erected a wooden palisade around an entire province to protect his supply. This root was the property of the emperor of China. Those engaged in gathering it were required to furnish 2½ pounds to the emperor free, and for all they collected in excess of this amount, he paid them an equal weight in silver, which was about a quarter of its market value.

During the early days of the China Trade in New England, shipmasters did a thriving business in American ginseng. This was considered inferior to the Chinese variety, but still commanded a considerable price. In Korea cultivated ginseng is considered worthless, but it was grown by a government monopoly for export. They prized the wild variety, however, and believed that only those who led a pure life could find it, and even to look on the root gave strength and vigor.

In China ginseng is the elixir of life and a cure for all of the ills of mankind. It is also taken regularly by those in perfect health who can afford it, to give them strength and vigor, long life, and clear judgment. The root is powdered and taken in tea or wine. In Japan it gives longevity. In India it is a cure for malaria. Among the Indians of North America ginseng was prescribed for the stomach, flux, menses, sore gums, and sometimes as a love medicine. Bowker's *The Indian Vegetable Family Instructor* (1836) mentions that the dry root grated in hot water is good for stomach-ache

caused by wind. In some parts of Indiana the leaves are smoked by persons suffering from asthma.

gip An English country dance term. It is an exchange of partners who continually face either toward the center or away from it as they describe a circle. [GPK]

Gipsy folklore There is more folklore about Gipsies than there is Gipsy folklore. For instance, they were formerly believed to be Egyptians, hence the name Gypsy or Gipsy. But because they call themselves Romany, the folklore of the Gipsies is discussed under ROMANY FOLKLORE.

Gírlle Guairle The name of a fairy woman of Irish folklore who took on the task of spinning and weaving some flax for a mortal woman on condition that she remember her name. She told the woman her name was Gírlle Guairle, but the woman forgot it, and was in great dread of the penalty. One day beside a fairy ráth she overheard a voice singing:

If yon woman knew my name to be
Gírlle Guairle
I would have neither frieze nor canvas.

When the time came, and the fairy woman came with the completed work, the woman greeted her with the words, "Welcome and health to Gírlle Guairle." So the fairy had to give her the finished cloth, and then went off in a rage. See NAME TABU; RUMPELTILTSKIN.

girls' puberty rites See ADOLESCENCE CEREMONIES.

Girru The Babylonian fire god; son of Anu and of Ea: the name is a form of the Sumerian *Gibil*. Girru was a god of metalwork, of the purifying element of fire which destroyed evil. He was identified with the fire in heaven, with the fires in the earth, with the sacrificial altar fire: as god of the latter, he became the intermediary between gods and men, hence the messenger of Bel. Compare HEPHESTUS.

gitano Literally, in Spanish, gipsy: an erotic couple dance of the Gipsies of southern Spain. These Gipsies came originally from northern India by way of Egypt and brought with them their heritage of eloquent arm movement and impassioned mournful song. Groups gather spontaneously in the streets of the Gipsy barrios or precincts, or in taverns. As in the flamenco, performer and spectators are drawn into communal enthusiasm, the audience participating with swaying, hand-clapping, and shouts of *olé*. [GPK]

Gizō The Spider of Hausa folklore; trickster-hero of many animal stories. Gizō is said to be the national hero of the Hausas; noted for his bravado and cunning, his sleeplessness, his rapacious appetite, and his ability to escape the consequences of his own tricks by his wits. He can outwit the lion, the hyena, the jackal, hippopotamus, elephant, the snake, and sometimes man. The praying mantis (*kōki*) is considered his wife. See ANANSI.

Glas Gaibleann Literally, a gray, white-loined cow: in Old Irish mythology, the wonderful cow that gave an inexhaustible supply of milk. She was owned by a famous smith of Ireland, some say Goibniu, some say another, and some say Cian owned her. Anyway, the smith was making swords for Cian, who guarded the cow, and Cian was inside watching the making of the swords, that day Balor came off his island to the main-

land and stole the cow. He took her off to Tor Mór, now Tory Island off the coast of Donegal. Cian in disguise went after him to win back the Glas Gaibleann. That night he slept with Ethne, the young daughter of Balor, who loved him and gave him the halter of the cow. And Cian took the Glas Gaibleann back to the smith. Lúg was the child born to Ethne from that night's love.

The Glas Gaibleann still walks in Ireland. *Port na Glaise*, harbor of the Gray Cow, is the name given to any richly fertile pasture, from the belief that if the Gray Cow slept in it, she gave some of her own abundance to the grass. "The Gray Cow slept there," is often said of a fine field. And it is well known that a strange cow often comes to stay with a poor family, giving abundant milk and many calves, until some fool strikes her or milks her into a leaky bucket. Then she disappears as suddenly as she came. Nobody knows for sure if it is the same one, but she is called either Glas Gaibleann, the gray white-loined cow, or sometimes the Cow of the Smith.

glass mountain In folktale, the mountain of glass at the end of the world, near the otherworld: a motif (F751) appearing in tales from eastern and central Europe, the British Isles, and Scandinavia. A. H. Krappe (*MLQ* 8: 139-145) held that the glass mountain, a folktale representation of the land of the dead, was originally the amber mountain, the coincidence of the places of appearance of the motif with the old amber routes, and the apparent identification of the land of the dead with the Frisian archipelago, supporting his argument. In later folktales, the glass mountain is one of the tests a suitor, often the dragon-slayer, must surmount in order to win the princess (Types 425 and 530; H331.1.1; H1114). The glass mountain appears also in tales of the lost wife or husband, and here more nearly is related to the land of the dead (compare the Orpheus story). Witches, ogres, swan maidens, and other supernatural beings live on the mountain in still other tales. Quite clearly, it early was a land of the dead, later transformed by story-tellers into a magical place where the princess, for safety, voluntarily or by her father, was placed, and which the hero, using animal claws or thrusting bones into the glass as a ladder, climbed to win her.

Gluskabe or Glooscap Culture hero of the Abnaki Indians of the Northeastern Woodlands: sometimes identified with Nanabozho, perhaps erroneously so. The consistently altruistic character and human appearance of Gluskabe distinguish him from the culture heroes of other North American Indian groups. None of the crude buffoonery associated with many North American culture heroes attaches to him; in myths where Gluskabe and Turtle appear together it is Turtle who is frequently the butt for humor. One of Gluskabe's first deeds was to avenge the death of his mother, who had been wilfully killed by Wolf, Gluskabe's younger twin brother. Later Gluskabe is abandoned by jealous neighbors, and his housemates are kidnapped; he rides a whale, overcomes difficulties, and rescues his housemates. After overcoming Jug-Woman, and surviving a trip through dangerous underground rapids, he rescues a friend from Snake, chases a giant beaver which gets away, reduces the size of dangerous beasts, breaks the

windbird's wing to regulate the wind, and kills Frog Monster, thereby releasing impounded water. In the end Gluskabe retires from the world, but will return at need like most culture heroes. He answers requests for eternal life by turning suppliants into trees or stones, but grants more moderate requests made of him by human beings. [ewv]

gnome One of a species of deformed and dwarfish underground beings, whose element is the earth itself, and whose function is usually said to be guarding hidden treasure and quarries. Jewish cabalistic tradition locates them in the very center of the earth. The word was popularized by Paracelsus; in his usage it designated a group of beings who could swim through solid earth as fish swim through water.

goat Among the Greeks and Romans the lore of the goat is various. A goat was the prize in the cult of Hera, was prohibited in the cult of Athena, but a goat was sacrificed once a year on the Athenian Acropolis. A worshipper of the Brauronian Artemis called a goat his daughter and sacrificed it once a year. Five hundred goats were sacrificed in thanksgiving for the victory at Marathon. Aphrodite rode a goat and the animal was sacred to her. Goats were sacrificed at the Roman Lupercalia. Dionysus assumed the form of a goat, and Pan, the fauns, and satyrs have goat (or goatlike) bodies.

In Christian Europe goats are thought to have been familiars of witches or of the Devil who comb their beards once a day. The lechery of the goat is part of European proverbial lore. In some places goats are bringers of fertility. They are bride-gifts in Bulgaria and are connected with marriage in South Africa and the Vosges. Ritual intercourse between women and goats is indicated in Semitic and Latin areas. Goats cause eclipses in Burma by eating the sun or moon. Among Jews goats were sacrificial animals. The Americanism, "to get his goat," means to reduce a man to frustration and rage. Goat is a frequent character in Negro folktale. Among the Hausa, for instance, he can outwit both Lion and Hyena. The Yoruba have a legal story in which Goat outwits Leopard. [rdj]

goat dance An impersonation of the he-goat demon, invested with a special repulsive fascination, a predisposition to mischief and licentiousness, and a great phallic potency. This creature evidently originated in Thrace, in the cloven-hoofed Dionysian satyrs and silenoi with attached phalloi. The Greek tragedy developed from the *tragōidia*, or sacrificial goat-song, the lewd, satiric *sikinnis* from satyr-plays. Their violent dances were trotting and brutish rather than insane as those of the *mænads*. Goat impersonations reappear in medieval morality plays as devils, in Carnivals as goat-demons, particularly recognizable in the modern Thracian *kalogheroi*. In the New World goat masks are probably a Catholic remodeling of native woodland deities. But Indian fantasy has re-created unique clown-demons in the black-faced *macho cabrillo* or he-goat of the Yaqui *Pascola* and Guerrero *Tecuanes*. [GPK]

goat that flagged the train Subject of a favorite American barbershop quartet song, entitled *The Goat*, sung to the same tune as the drinking song, *When I Die*, in close harmony and with echo imitation. The text

tells of a goat that ate three red shirts off the clothesline, was tied by his owner to a railroad track, but saved himself as the train came along by coughing up the shirts and flagging the train.

gobadan The little sandpiper of the Irish shores. There is an Irish proverb to the effect that the gobadán cannot attend to the two ebb tides (i.e. cannot work both night and day).

goblin A household spirit who plays the same role in French folklore as the Scotch and English brownies, bogles, and boggarts, the German kobolds, etc. He is very helpful around the house but also of capricious and erratic temper, mischievous and prankish, given to rapping on walls and doors, moving furniture in the night, breaking dishes, banging pots and pans around, snatching bedclothes off sleepers, etc. Food is left out for the goblin, and often doors are left open for him, just as for all household spirits of this kind in other parts of Europe. Goblins frequent homes where the wine is plentiful and the children pretty. They bring the children dainty tidbits but also punish them when they disobey their mothers. They are fond of horses and often ride them in the night, but also often tangle their manes. The recommended way to get rid of a goblin (if he becomes more of a nuisance than a help) is to sprinkle flaxseed on the floor. He is such a good housekeeper that he will be obliged to pick it up, but after a while he will get tired and go away.

God The Supreme Being of monotheistic religion, especially the Creator, the omniscient pervasive Spirit of the universe, and the Ruler of all creation of Hebrew and Christian belief. The use of Elohím (a plural form) in parts of the Old Testament, and Adonai (Lord), suggest a development from polytheism to monotheistic belief among the ancient Hebrews. Yahweh, as the Old Testament deity, was also the God of the New Testament, and Christianity recognized in this Being a triune personality: the Father, the Son, and the Holy Ghost. See ALLAH; YAHWEH; JESUS.

god-eyes The eyes of a god, specifically as depicted in some special way in ritual art representations. The eye of the Egyptian god Horus had a separate existence and bestowed wonderful gifts on mankind, such as oil, milk, wine, honey. The sun and moon comprised the two eyes of the god Rā. But of striking interest are the eyes of certain primitive gods whose whole facial distortions and superlatives of good and evil often reveal what man thinks and expects of his supernaturals. The faces of certain Alaskan Eskimo deities, for instance, and those of most North Pacific Coast Indians betray a concept of the terror-striking supernatural combined with the grotesque, funny, and almost human fellow.

The Huichol Indians of Mexico make symbolic god-eyes by weaving varicolored yarns across small square bamboo frames which are then fastened diagonally on bamboo sticks. These, the eyes of the god, are placed on the altar when a prayer is made, so that the eyes of the god may look on the supplication. They are used especially in prayers for male offspring and good health. The Tepecanos of Mexico have similar prayer sticks called *chimal*. Both are associated with the netted squash-blossom design of the Pueblo Indians which are also associated with male infants. See AI APAEC.

Godiva (Lady Godiva) Wife of Leofric, earl of Mercia, about 1040 A.D., who rode naked through the streets of Coventry. The legend is that her husband, lord of Coventry, had imposed severe taxes which caused great suffering among the people. He promised to repeal the taxes if his wife would exhibit herself. She was protected by her long hair and an edict that all shutters must be closed during the ride. One man who violated this edict became known as Peeping Tom. Between the 13th and the 17th centuries the ride was reenacted several times a decade. The legend is associated with motifs from general folklore. Thus Pliny reported that the druidic priestesses danced naked for religious reasons. In communities where nudity is not the way of life, rituals performed in the nude bring rain, cure sterility, or are part of the tumescent phase of orgiastic practices. A number of Chinese stories report that some devils are so prudish that they are frightened away by an exhibition of the nude body. The modern nudist movement gives expression to obscure folk impulses not unconnected with ceremonial nakedness. Parades of naked men and women, the nudism of several religious sects, as well as individual exhibitions have been reported in recent times as a device to protest against civil or social injustice. A notable example of this is Saint Francis of Assisi, who on being rebuked by the bishop, snatched off his clothes and walked naked into the streets. Godiva's ride would seem to be more closely allied to this pattern than to the druid priestesses. [RJD]

gods The deities, or beings who are worshipped, of the religions of mankind. Gods are of more than human powers, either specifically over one aspect of existence or over a more extensive area. They may rule such provinces as the sky, the earth, the waters, thunder; or such abstractions as luck, fertility, beauty, war; in any case, their power over such phenomena makes it necessary to invoke them and to propitiate, threaten, or to explain matters to them. The gods may be thought of as human in form, or animal in form (partly or wholly)—theriomorphic—, or as trees—dendromorphic—, or simply as invisible powers of no specific form. Some scholars believe that gods were once localized in individual objects or phenomena and later consolidated related areas to develop into high gods and eventually into monotheistic Creators and Fathers; others hold that monotheism was a much earlier stage of religion than this theory would indicate. See ANIMISM; ANTHROPOMORPHISM; MONOTHEISM; POLYTHEISM.

Gog and Magog (1) In *Ezekiel*, Gog is prince of Meshech and Tubal; one of the enemies of Israel. In *Revelation*, and later apocalyptic literature, Gog and Magog are aides of Satan the Antichrist. In both references, Magog seems to be a geographical term, a land taking its name from its prince, Gog. A. H. Sayce identifies Gog with Gyges; hence Magog would be Lydia.

(2) The names given to two 14-foot statues in London's Guildhall. It was said that they were the survivors of a race of giants descended from the daughters of Diocletian, and wiped out by Brut. The two captive giants were carried to the royal palace in chains, the palace standing where the Guildhall was later located. They are known to have been there during the reign

of Henry V, were destroyed in the Great Fire, rebuilt in 1708, and again destroyed in the Blitz in World War II.

Gohei Pieces of paper used as charms in temples and houses (Shinto). [JLM]

Goibniu The divine smith of Old Irish mythology, who with Creidne, the brazier, made spears and arms for the Tuatha Dé Danann. Literally, his name means forger. He was a famous magician, and served the brew of immortality at the feasts. His Brythonic counterpart is Govannon. See FEAST OF AGE.

gold Neolithic remains are rich in golden ornaments. Gold has been consistently the most highly prized of metals through the ages, though others, because of their scarcity, have surpassed it in price. Since gold was so highly valued, it early became associated with religion. It was used to make idols, as tribute, and as offerings to the gods. In India the *Rig-Veda* says the giver of gold receives a life of light and glory; the fifth Mohammedan Heaven was of gold. Vessels of gold are common to all religions. The druids used a golden sickle to gather their sacred mistletoe; in the Middle Ages herbalists emulated them by using golden instruments to gather their herbs.

Aristotle believed gold was to be found principally in rivers which ran to the south, as were also the noblest pearls. Others believed gold was begotten by the sun and that the heat of the underground veins slowly burned everything they came in contact with, turning those substances into gold. In the East Indies and Central America gold is believed to have a soul and many tabus are observed in taking it. In Central America it is gathered after prayer and fasting. In Sumatra, tin, ivory, and other materials may not be carried into a mine, lest the spirit of gold flee. Often mining is done in complete silence. The Dyaks of Borneo believe the soul of the gold seeks revenge on those who mine it. In Malaya they believe a golden roe deer owns the gold and can give or withhold it. They also believe the soul of gold departs when it is taken from the ground. In India it was believed that the griffins mined gold with their beaks and the people fought them to collect the gold.

Fighting with griffins was an easier method of obtaining gold than some dreamed up by the alchemists. Some alchemists, like the 18th century German Semler, believed they had succeeded in transmuting the base metals only to find that some kind-hearted assistant had smuggled a little gold leaf into the crucible to please his master. In spite of their fantastic theories and frantic efforts, the alchemists slowly and laboriously laid the groundwork for present-day chemistry. Any high school boy would laugh at the theory that gold was composed of copper and red sulfur, or quicksilver and sulfur, or that it was really quicksilver under the influence of the sun. Obtaining a golden goose, catching a leprechaun, or finding the pot at the end of the rainbow are as yet more practical means than transmutation for obtaining gold.

In early medical practice, gold was a potent curative force. The Chinese believed gold leaf the most perfect form of matter; an unguent containing it was the most powerful remedy of Chinese medicine as it gave renewed life to the human body. Among Western peoples

potable gold (gold dissolved in acid) was a panacea. Astrological healers claimed that gold fused under certain signs would cure appendicitis. Others believed a suitable verse inscribed on gold would cure the patient. Its freedom from rust was one of the principles on which physicians based their theories of gold as a preservative charm. That rubbing a sty nine times with a golden wedding ring will cure it is a belief which persists. See ALCHEMY.

Golden Bough The title of Sir James G. Frazer's comparative "Study in Magic and Religion," published in two volumes in 1890 and expanded to a monumental 12 volumes in 1911-15. The *Golden Bough* is the mistletoe, connected with Balder, Æneas, etc. Beginning with the ritual surrounding the reign of the priest-king of Diana in the grove near Nemi, Frazer explains many ancient customs and beliefs related to magic, agriculture, kingship, divinity, tree-worship, tabus, totemism, rain, fire, etc., bringing to bear on his argument a tremendous mass of material from ancient and primitive cultures. The titles of the books included in *The Golden Bough* are: *The Magic Art and the Evolution of Kings* (2 vol.); *Taboo and the Perils of the Soul*; *The Dying God*; *Adonis, Attis, Osiris: Studies in Oriental Religion* (2 vol.); *Spirits of the Corn and of the Wild* (2 vol.); *The Scapegoat*; *Balder the Beautiful* (2 vol.); and *The Golden Bough, Bibliography and General Index*. In 1936, *Aftermath, a Supplement to the Golden Bough*, included the results of some of Frazer's study since 1915.

Golden Fleece In Greek legend, the fleece of the ram on which Phrixus and Helle escaped, and which hung in the grove at Colchis. See ARGONAUTS; JASON; MEDEA.

goldenrod A widely distributed North American herb (genus *Solidago*) with erect stalks carrying small heads of yellow flowers, sometimes in clusters. It is the state flower of Alabama, Kentucky, and Nebraska. Some say that where goldenrod grows there is treasure buried, and if it appears near a house where it has not been planted, the inmates will have unexpected good fortune. The stalks are sometimes used in divining water. In New Hampshire they say that if a gall from a goldenrod stalk be carried by a person suffering from rheumatism, he will be free from the pain as long as the grub in the gall is alive. Among the Chippewa Indians it was a cure for pains in the chest, fever, ulcers, boils, convulsions, sore mouth, diseases of the lungs, kidneys, and women's diseases. In Ontario it is used in a cure for hay fever. Elsewhere it is considered good for wounds and bruises, both internal and external. The flowers make a lotion which is soothing for bee stings. In some parts of the United States goldenrod was formerly used as a substitute for tea.

golden rule The rule of life given in *Matt. vii, 12*: Whatsoever ye would that men should do to you, do ye also unto them. Compare SILVER RULE.

Golden Vanity A variant title, from popular tradition, of the broadside ballad *The Sweet Trinity* (Child #286). The title is the name of the British ship whose cabin-boy swims to a French galley and sinks it by drilling holes with an auger. *The Golden Vanity* (Child's B version) varies from *The Sweet Trinity* in that the cabin-bôby, rather than accepting the captain's

refusal to give him a promised reward, threatens to sink the British ship in the same way and is hauled aboard where they "proved unto him far better than their word."

golem Anything incomplete or not fully formed, like an embryo, a needle without an eye, a woman who has not conceived: a Hebrew word used in *Ps.* cxxxix, 16 to mean "embryo." Adam, created from the dust, was thus a golem until the soul was given to him. In medieval Jewish legend, the golem was an automaton servant attributed to the great rabbis and wonder-workers, probably as a development of the stories of magic about Vergil the Necromancer, who had such an unhuman servant.

The most famous of all the golems was that of Rabbi Löw of Prague in the late 16th century. The rabbi used the golem as his weekday servant, but on Friday afternoons he removed the charm motivating it so that it might rest on the Sabbath. Once, when he forgot to do this, he had to chase the golem until he caught it just in front of the synagogue. There he removed the charm and the golem crumbled into dust. A group of tales about this golem exists, some concerned with the golem's championing of wronged Jews. The golem of Elijah of Chelm was the subject of debate by that rabbi's grandson: Was the golem capable of being the tenth and necessary man for a minyan (the quorum needed for prayer)? A golem of Rabbi Jaffe in Russian Poland was created to light fires and perform other duties not permissible to Jews on the Sabbath. But it exceeded its orders one day and burned up practically everything.

The golem was motivated by a charm, a Shem, or paper inscribed with one of the names of God. This charm was placed in the mouth or inserted in the head of the inert mass, which thereafter could move about and obey commands until the Shem was removed.

Goliath A Philistine giant of Gath, six cubits and a span (more than ten feet) tall; the champion of the Philistine army arrayed against Saul (*I Sam.* xvii). Goliath was slain by David, the shepherd lad, who slung a stone against the armored warrior and thus killed him in single combat. According to Jewish tradition, Goliath fell forward on his face, because this made it easier for David to cut off his head, and because thus the image of Dagon on Goliath's breastplate was shamed. With the help of Uriah, David removed the armor of the fallen giant, David promising Uriah, a Hittite, a Hebrew wife. For this rash promise, God made Bathsheba, David's destined wife, the wife of Uriah. Goliath's brothers, when David fled from Saul and sought refuge with the king of the Philistines, tried to have him executed, but King Achish refused on the grounds that the combat had been open and equal.

Gomme, Lady Alice Bertha (1852?-1938) Collector of rimes and games, the wife of George Laurence Gomme, to whom she was married in 1875. She was noted as an able collector of nursery rimes, folk games, and singing games which she brought together in the excellent, annotated *The Traditional Games of England, Scotland, and Ireland* (1894-1898). Other works include *Children's Singing Games* (1894), in collaboration with C. J. Sharp; a collection of *Games for Parlour*

and *Playground* (1898); and with her husband, *British Folklore, Folk Songs, and Singing Games*.

Gomme, Sir (George) Laurence (1853-1916) English archeologist and a founder of the Folklore Society in England. His wife was Lady Alice Bertha (Merck) Gomme. He was knighted in 1911. He was at various times editor of *Archaeological Review*, *Folklore Journal*, and *Antiquary*. In his *Folklore as an Historical Science* (1908) he attempts to prove the theory, originated by the Grimms, that folklore material may be used to establish historical facts, a theory which is no longer held. Gomme had a very profound knowledge of the past and current history of London, and his book, *The Making of London* (1912), is a classic in that field. Among other works are: *Primitive Folk-Moots* (1880), *Folklore Relics of Early Village Life* (1883), *Chapbooks and Folklore Tracts* (1885), and *Ethnology in Folklore* (1892).

gong The chief musical instrument of southeastern Asia; a more or less convex bronze plate, sometimes with a central boss, and with a narrow vertical rim, sounded by striking the center with a stick. While gongs differ from clapperless bells in that the sounding part of the gong is the center, rather than the rim, the uses and magical properties of the instrument are similar to those of bells. Gongs accompany religious ceremonies, drive out evil spirits, rout the demons of disease. In China, when a child had convulsions, a gong was beaten to summon its spirit into one of its garments, which could then be laid beside the child, safe from the demons who had lured it out of the body. Bathing from a gong is also believed to be curative. The winds respond to the voice of the gong and come at its call. Ownership of gongs, because of their magic power and actual cost, enhances social position and influence. Gongs may even serve as a medium of exchange. Drinking from a gong after taking an oath has a binding significance equivalent to swearing upon a sword or upon the Bible. Such is the respect in which certain gongs are held that they may be given names appropriate to their sound and significance.

Gongs are recorded in China from the 6th century and have been known in India and throughout the Malay Archipelago since the 7th and 9th centuries respectively. The oldest type is shallow and without the boss. Male and female distinctions are made in gongs, as in many other instruments, the deep bosses being regarded as male, and shallower ones, female. Sets of gongs played as chimes are characteristic of Javanese and Balinese orchestras which play for dancing, singing, and dramatic performances, and each set has a double range of tones designated as male and female.

As a signaling instrument gongs are played in a system of communication comparable to the African drum language. See BONANG; GEMELAN; REJONG.

goose An important bird in the mythology and folklore of the world from earliest times. The hero of the Finno-Ugric flood is said to have traveled in the form of a goose. The Goose god of the Siberian Ostyaks is one of their three high gods. Geb (Seb), the Egyptian god of the earth, was goose-headed. There were sacred geese in the Greek temples. And the sacred geese in the Roman temple of Juno saved Rome from invasion in the 4th century B.C. Livy tells the story about how the

Gauls sent scouts ahead of them into the city by night. They climbed the Capitol hill in silence but were loudly proclaimed by the cackling of the geese in the temple, were taken and killed, and the citizens were forewarned. Because of this a golden goose was carried annually in procession to the Capitol in honor of the birds.

In China a pair of geese is often given as a wedding present to a newly married couple, because geese are said to be faithful to each other. In the Middle Ages in Europe geese were often thought to be the familiars of witches and to serve as steeds for them to the Sabbath. The North American Mandan Indians formerly performed a goose dance at the time for the southern migration of wild geese. The ceremony was intended to make the geese remember the plentiful food of the region and was a supplication for their return in the Spring.

The medieval belief that the barnacle goose was hatched out of barnacles is a living belief today in Donegal, Ireland, where its flesh is eaten, the same as fish, on Fridays. In the English shires the goose is still a feature of the Michaelmas quarter-rent day, September 29. In Herefordshire "one goose fit for a lord's dinner" was part of every farmer's land rent, due on that day. The "goose with ten toes" as the goose *intentos* claimed by Lancashire landlords on every 16th Sunday after Pentecost or Trinity. This did not always fall on Michaelmas. In Denmark, the similar goose feast comes about St. Martin's Day, November 11.

In Maryland rural people sometimes say that the cackling of geese foretells rain. In New Brunswick and Nova Scotia wild geese flying low are thought to indicate rain. If it thunders on Sunday new-set goose eggs will not hatch. In East Prussia it used to be considered bad for the geese for the housewife to spin on St. Matthew's Day, September 27.

In folktale the goose plays more roles than can be enumerated. The alarm spread by cackling geese is the incident comprising motif B521.3.2. A goose dives for a reflected star in the night, thinking it a shiny fish (J1791.8). Geese proclaim the beauty of the disguised goose-girl (K1816.5.1). A piece of land measured by the flight of a goose (K185.3) in which a man spreads the goose's wings and carries it over a large area (the domestic goose cannot fly far without lighting) is the motif of a French deceptive land measure folktale. See GOOSE GOD; GOOSE THAT LAID THE GOLDEN EGG.

The wild goose is an important symbol in Hindu mythology. Brahmā is depicted as riding on a magnificent gander, which is thus the manifestation on the animal plane of the god's creative principle, and a symbol of freedom through spiritual purity. The epithet "gander" or "highest gander" indicates the rank of Hindu ascetic, monk, teacher and saint.

The cosmic gander (the divine presence in the universe) reveals itself through a song, which is thought of as the breathing of the supreme being, the rhythm of inhaling and exhaling. This song has the sound of the word for gander, *hamsa*, the two syllables of which mean "I" and "this" or, when heard in reverse, "this" and "I". When the Indian yogi controls his breath through exercises, the "inner gander" is manifested through the repetition of its name, *hamsa*, *hamsa*.

A typical Hindu duality of thought, embracing simul-

taneously the earthbound and the divine, is apparently present in the concept. The twofold nature of the gander, at home on water, earth, or in the air, makes it a logical symbol, according to Zimmer, for "the divine essence, which, though embodied in, and abiding with, the individual, yet remains forever free from, and unconcerned with, the events of individual life."

Goose, Game of A dice-and-board game, perhaps as old as ancient Greece, revived in the 17th and 18th centuries in Europe, modifications still remaining among the most popular of games. The board is inscribed or printed with a spiral or oval diagram having a starting point and a goal (marked with a goose in the French game of the 18th century). The players throw dice in turn to determine the number of squares or compartments they may move their counters towards the goal. A number of the compartments are special, requiring the player to go back three spaces, lose a turn with the dice, begin all over again, etc. The Game of Goose is thus similar to pachisi and related four-directions derivatives of divination. Adaptations of the game in the 19th and 20th centuries have been numerous, attempts at pedagogical instruction being superimposed in geographical tours and the like. The basic idea has appeared in game after game capitalizing on the latest fads and heroes. See GAMES.

goose god One of the three great gods of the Ostyaks of northwestern Siberia; protector of birds, especially of the Ob River. He lives in the mountains in a special nest made of furs and skins, which is the charge and care of a particular shaman. His images are made of copper, goose-shaped. Rich garments are sacrificed to him, which he wears. The goose is revered among the Ostyaks as possessing specific supernatural powers. The geese which appear every Spring out of the sky to settle on the rivers are believed to come from the sleeves of Tomam (the Ostyak mother goddess). The feathers which she shakes out of her sleeves every Spring become geese as they settle earthward.

goose that laid the golden egg The stories about the goose that laid the golden egg and was killed by its foolish and avaricious owner (D876), and the golden goose are known in all parts of the world. In western Europe, although the individual feathers of the golden goose bring wealth, greedy persons find that they are unable to pull their hands away from the bird (D2171.3.1), and by further elaboration the owner thus brings all the thieves to the king, makes the sad princess laugh, and is rewarded (H341.1). This is Grimm's story of the *Golden Goose* (#64). In an Indian version, the wife of a Brāhman tears the golden feathers out all at once and they become valueless. By the law of substitution other animals such as an ass, ram, or bull take the place of the goose. In the story of the Golden Fleece, for example, this substitution may be observed. Similarly geese are sometimes substituted in the swan maiden cycle of shapeshifters. [RDJ]

Gordius In Greek legend, the father of Midas, and king of Phrygia. During a period of stress in the country, an oracle foretold that the king who would end the trouble would appear in a wagon. Gordius, a peasant, soon after drove into town and was recognized by the assembly as king. His wagon, with its yoke and pole fastened by a knot of bark, was dedicated by Gordius

to Zeus on the acropolis at Gordium. The oracle stated that he who untied the knot would rule over all Asia. When the conquering Alexander came to Gordium and was told the story, he drew his sword and cut through the knot, himself claiming application of the legend. The whole story is poorly authenticated.

Gorgons In Greek mythology, three hideous maidens, later represented as beautiful, but characteristically terrifying, with serpents in place of hair, golden wings, claws of bronze, and glaring eyes. In Homer, only one Gorgon is spoken of, a monster of the underworld whose head adorned the ægis of Zeus. In Hesiod, these daughters of Phorcys and Ceto were three: Stheno (the Mighty), Euryale (the Wide-springer), Medusa (the Queen), and because of later legend, the latter is meant when Gorgon is used in the singular. These sisters, of whom Medusa alone was mortal, lived in the farthest west, near Night and the Hesperides; later, their residence was located in Libya. In Attic legend, the Gorgon was a monster brought forth by Ge to aid the giants against the gods and slain by Athena, who placed the Gorgon's head beneath the agora. This legend is confused with the one of Perseus, who is said to have performed the burial instead of giving the head to Athena for her shield. A representation of the head of the Gorgon, called Gorgoneion, was placed on city walls and the shields and breastplates of soldiers as protection; when worn as an amulet, it protected against the evil eye. The Gorgons have been considered the personifications of the nightmare; the paralyzing effect of the head and the meaning of the name Euryale contributing to this hypothesis. Compare *ÆGIS*.

Gotham A village in Nottinghamshire, England, whose inhabitants during the later Middle Ages acquired the reputation of being born fools. According to a legend, the people deliberately drew down upon themselves this reputation in the 13th century. King John was to pass through the town, and either because the expense of entertaining him would prove too great or because they feared losing some of their good lands as public roads (a customary procedure where the king's troops had passed), the townsmen began doing foolish things to discourage the king from the visit. They drowned an eel in the pond, trapped a bird by building a hedge about it, and performed similar nonsensicalities, with the result that the king would have none of them. This apocryphal story explains the epithet "wise men (or fools) of Gotham," but is undoubtedly a fabrication. Elsewhere, as in the Chelm of Jewish noodle stories, the traditional fools are facetiously called sages, and this is the case with Gotham.

The earliest extant copy of the *Merie Tales of the Mad Men of Gotam* was printed in 1630, but editions dating to 1560 or earlier are referred to by contemporaries. As with similar chapbooks, this was a storehouse of traditional tales, some traceable to India, about fools, and all attributed to the people of Gotham. For example, the tale of the 12 Gothamites who went fishing and feared that one of them had been drowned because in counting each forgot to count himself, is known in Russia, Scotland, India, and Iceland. See *NOODLES*; *PENT CUCKOO*.

Götterdämmerung The twilight of the gods: German name for Ragnarök, the day of the great battle between

the gods of the Teutonic pantheon and the forces of evil, which will usher in a new regime. In Wagner's opera, *Götterdämmerung*, last in the *Ring of the Nibelung*, it signifies the end of the rule of the gods and the beginning of the rule of love.

gowk storm In Scottish, Irish, and British provincial folksay, a spring storm believed to arrive with the gowk or cuckoo (in April). Consequently, any misfortune, turbulent but brief, is often referred to as a gowk storm. *Cuac* is the Irish word for cuckoo; the Old English is *geac*.

Graces The *Gratiæ* of Roman mythology: identified with the Greek Charites. See *CHARITES*.

Grææ In Greek mythology, the three "old women," sisters of the Gorgons whom they protected. Hesiod names only two, but later a third was added, the names being Pemphredo or Pephredo, Enyo, Deino. The sisters had gray hair from birth, the shape of swans, and one eye and one tooth among them. These latter they borrowed according to need, passing them back and forth. Perseus slipped among them, stole the eye, and thus was able to kill Medusa and escape the eyeless sisters with the cap of darkness. Some versions say that he returned the eye and tooth in exchange for the magic cap, shoes, and wallet.

Grail In medieval legend and romance, the **Holy Grail**, or **Sangreal**, was the dish used by Jesus at the Last Supper; it was preserved by Joseph of Arimathea, who received some of Christ's blood into it at the Crucifixion, and brought it to Britain, after which it disappeared because of the impurity of its guardians. Many knights went in quest of it. Galahad, Perceval, and Bors only were chaste enough in thought, word, and deed, ever to catch sight of it. The story is best known through Malory's *Book of Arthur*, Tennyson's *Idylls of the King*, and Wagner's opera *Parsifal*.

 The legends of the Grail are among the most widespread of the Arthurian cycle, existing in French, English, German, Norse, Dutch, Italian, Spanish, Portuguese, Welsh, and Irish versions. The extant French texts or lost French romances are the sources of all the others, including the Welsh and Irish. The most famous medieval versions are Chrétien de Troyes's *Perceval* or the *Conte del Graal* (c. 1180), which is the earliest extant; Wolfram von Eschenbach's *Parzival* (c. 1205), Wagner's chief source; the *Queste del St. Graal* (c. 1210); and Malory's condensation of the last in his *Book of King Arthur*, erroneously entitled *Morte d'Arthur* (1469).

The Grail legend is extraordinarily confused and perplexing. The French word *grail* means a rather deep platter and is correctly equated with *escuele* and with Welsh *dyscyl*. But Robert de Boron seems to think of it as a chalice and Wolfram as a stone, on which the names of the guardian knights are inscribed. The custodian of the Grail is variously called Bron, Pelles, Amfortas, or Joseph of Arimathea. The hero who achieves the quest may be Perceval, Gawain, or Galahad. He may, like Gawain, be notorious for his amours, or, like Galahad, a virgin. In view of these and other inconsistencies it is not surprising that scholars have spent as many vain years following various clues to the mystery of the Grail as did the knights of the Round Table in the quest of it. Almost every year a new hypothesis is propounded.

Today the most widely held theories of the origin of the legend are three: the Christian, the ritual, and the Celtic. The first, which regards the phantasmagoric narrative as a deliberate concoction by Chrétien or some contemporary cleric about a eucharistic vessel, can be dismissed on the ground that in the earliest and many later versions the vessel is borne by a beautiful maiden, not by a priest, and the question which Perceval is supposed to ask, "Whom does one serve with the Grail?" has no conceivable relation to sacramental mysteries. If this was designed as a holy adventure, nothing could be more uncanonical or fatuous.

Jessie Weston put forward the plausible theory that the basis of the legend was a pagan fertility cult. The Maimed King was a sort of Adonis, whose sterilizing wound brought desolation on the land. The Grail and the bleeding spear were sexual symbols, the question test an initiation rite. As to the Waste Land, the theory is supported by the specific evidence of the texts, but the rest must be abandoned, both because no ritual of the sort can be cited from any country of Western Europe, and because Grail, spear, question, and many other features can be more adequately explained on the Celtic hypothesis.

This third view has the advantage of antecedent probability since the Grail stories form a part of the Arthurian cycle. Once grant that we are dealing with a highly conglomerate body of fiction, the product of generations of Irish, Welsh, and Breton reciters and of later French men of letters, and we can not only understand the gross disharmonies of the tradition, but also account for nearly every feature. It is impossible in limited space to offer proof for the following statements but the evidence may be found in the bibliography.

An Irish tale, *The Prophetic Ecstasy of the Phantom* (before 1056), tells how a king of Ireland met the sun god Lug, was invited to his palace, found Lug already arrived there before him, and was served with huge portions of meat by a crowned damsel, the divine personification of Ireland. She supplied the king with drink, asking Lug, "Whom shall this cup be given to?" Not only is this sequence of events dimly recognizable in Perceval's visit to the Grail castle, not only is the question echoed in the meaningless question test, but also Lug's lightning spear is the prototype of the bleeding lance, and Ireland personified is one of the prototypes of the Grail bearer, for both these stately damsels assume elsewhere a hideous shape. From Irish sagas too we get examples of kings (Nuada; Conn of the Hundred Battles) whose maiming or whose union with an evil woman brought calamity on their realms, as in the case of Wolfram's Amfortas.

In the Welsh stage of the tradition Lug was supplanted as host by the sea god Bran, who like Chrétien's Fisher King was wounded in the foot by a spear in battle; the drinking vessel gave place to a platter of plenty, "the *Dysgl* of Rhydderch; whatever food was wished thereon was instantly obtained." There is every probability that this dish was one of the magic possessions of Bran, who was famous for his hospitality and whose followers, as they feasted for 80 years, never grew older. Certain it is that one French romancer calls the Grail King Bran, three others declare that the Grail supplied whatever viands one desired, and still another describes twelve knights feasting in the Grail castle who,

though over a hundred years old, seemed to be only 40. Wolfram, too, says that whatever a man held his hand out for in front of the Grail, he found ready, warm dishes or cold, flesh of wild or tame; and that if one looked upon the talisman for two hundred years, yet no sign of age but gray hair would appear. Moreover Bran possessed a horn of plenty; "the drink and the food that one asked one received in it when one desired." This reappears in Arthurian romance as a *cor beneit*, blessed horn, and in corrupt form as the name of the Grail castle, Corbenic or Cambenoyt. Mistaken for the *tresbenoit corps* of Christ, the mass wafer, it was also responsible for the many eucharistic associations which gathered about the Grail.

Other Welsh elements contributed to the legend. Kilhwch's arrival and reception at Arthur's court parallels the account of Perceval's at the same court, as narrated by Chrétien de Troyes some 80 years later. Kilhwch's adventures include the quest for several magic vessels—a cup, a dish, a horn, a caldron—and though no precise connection can be made, we seem to have foreshadowed here the quest theme of the French romances.

Essentially, then, the Grail legend represents the interweaving of a score of strands from Irish and Welsh myth and fable. W. P. Ker was right in asserting: "Everything in the poets that is most enthralling through the mere charm of wonder, from the land of the Golden Fleece to that of the Holy Grail, is more or less nearly related to mythology."

ROGER S. LOOMIS

Gráinne In the Finn cycle of Irish heroic story and romance, the daughter of Cormac mac Art, promised wife of Fionn MacCumal. She fell in love with Diarmuid of the love spots. Once she had seen him she could not quench her love, and persuaded him (though he was unwilling) to elope with her. After the famous pursuit and Diarmuid's tragic death, Gráinne loathed the sight of Fionn. But Fionn wooed her with gentleness until finally she became his wife. She was mocked for her "heart of woman that changes like water." Gráinne typifies the glamorous, tragic, passionate, and realistically human Irish heroine. Deirdre and Gráinne are the two contrasting heroines of Old Irish literature.

grāma-devatā The guardian village gods of India. Among the jungle tribes these deities are the tribal gods of mountain or forest. The worship of the grāma-devatā is animistic and dates from pre-Aryan times. Beliefs about them are vague, but generally they are considered spirits of good and bad and the cause of all unusual events. The object of their worship is propitiation, since they are beings of uncertain temper and of various func-

tions. In some places they are the **smallpox** or **cholera** goddesses.

Their shrines are often only a pile of stones under a tree, a boundary stone, or a little brick building containing a rough figure of the deity, or sometimes a rude stone platform under a tree, bearing a pile of stones or an iron spear representing the deity. Frequently there is no permanent shrine and a temporary one is erected for a festival. In this a clay image, stone pillar, or roughly carved figure is placed. A small, portable, metal image or a brass or earthenware pot filled with water and decorated with margosa leaves is sometimes used in festival processions.

The priests or *pūjāris* are usually drawn from the lower castes because the aboriginal inhabitants are believed better able to deal with these godlings. There is no uniformity in their worship. Daily, weekly, or annual offerings are made. These include rice, flowers, fruit, incense, camphor, milk, spirituous liquor, goats, and pigeons.

The *grāma-devatā* are primarily female, and symbolize the facts of village life. They are often identified with the Earth Mother or with the Mothers whose worship prevails in western India. In Mysore they are called *Amma* (plural *Ammanavarū*), *Māmma*, or *Māriamma*. In Orissa they are *gramdevatī* or *thakurānī*. In the north they are also called *gānv-devī*, *gānv-devatā*, *dih*, and *dihwār*.

Local worship includes an enormous miscellany of village deities and *Brāhman* gods. In areas where *Brāhman* influence is strong, an attempt is made to connect these gods with *śiva* and *Vishṇu* as avatars and in many places this absorption is almost complete. The best known among the *grāma-devatā* include *Āiyānar*, *Bhairon*, *Ganśām Deo*, *Hanumān*. *Māriamma*.

Gram In the *Volsunga Saga*, a magic sword which insured victory in battle. Odin thrust it into the Branstock oak in Volsung's hall and Volsung's son Sigmund alone could withdraw it. It never failed Sigmund until Odin broke it during the battle with the Hunding. His wife, Hjordis, saved the pieces and later gave them to their son, Sigurd, who had them reforged by Regin and used it to slay the dragon, Fafnir.

Grandfather The culture hero of the Cariri Indians of eastern Brazil, sent to earth to help the people by Touppart, the Cariri supreme deity. One day Grandfather was taking care of the children while the adults were off hunting. He changed them into peccaries and took them all into the sky with him up a tree, which he bade the ants cut down. The Cariri tried to reerect the tree, but could not; the children tried to descend by means of a rope made of their girdles, but it was too short and they fell. Grandfather remained in the sky, but sent the people the gift of tobacco, to which they still make offerings.

Grandfather is the one who gave the Cariri enough women. In the beginning there was only one woman for the whole lot. The men begged Grandfather for more. He sent them hunting, cut up the one woman into as many pieces as there were men, and gave each man a piece to hang in his hut. The next time the men came home from hunting, each found a fine wife cooking food in his hut. See **WOMEN**.

grandmother's funeral In the United States, the traditional excuse for not going to work in order to attend the baseball game: said to be the standard excuse of the office boy to his employer, especially on the opening day of the baseball season in April.

grand right and left An American square dance term. Partners face each other, join right hands, and walk past each other, thus bringing each face to face with another lady or gentleman with whom each joins left hands in passing. They proceed half way around, giving right and left hands alternately, and then promenade to places. [GPK]

grapevine twist An American square dance figure. The leader guides the whole line of eight dancers in a series of loops between couples and around. [GPK]

grass dance A strenuous social dance performed by men's societies of the North American Plains Indians. It evidently originated in the Pawnee *iruska*, and thus goes back to the Dakota *heyoka* and Omaha-Osage crow-belt. It has lost the fire symbolism of the *iruska*. The Crow Indian hot dance is like the grass dance and has also lost the exhibitions of immunity to fire, characteristic of the Arikara hot dance. The grass dance has retained many elements, such as feasting on dog meat, the crow-belts or bustles, roach headdresses, pipes. There is a whistle-bearer, and a whip-bearer for urging lagging dancers, sometimes a sword-bearer. It added the boasting and the give-away features of the Calumet ceremony, such as giving horses and blankets to the poor and old, formerly also, as bravado, a throwing away of wives.

A bunch of grass at the belt is the special emblem of the grass dancers. Members of the several societies dance in turn, singly or in pairs, exhibiting their full agility in bends and jumps accompanied by cries. The singers in the center beat a large drum. The grass dance became widely adopted, notably by the Sarsi, Blackfoot, Gros Ventre, Assiniboin, Crow, Arikara, Hidatsa, Arapaho, Pawnee, Omaha, Iowa, Ponca, Kansa, Dakota, Menomini, and Potawatomi Indians. Among the Chippewa and Winnebago it is an intrusive dance during the dream dance. Its spread preceded the ghost dance by several decades, and was motivated similarly by economic conditions and as an outlet for energies in times of distress. Its fine songs serve as a further attraction. Among the tribes that have retained it, it has lost its ceremonial features, and is an occasion for display and merriment. [GPK]

grateful dead The motif (E341 ff.; Types 505-508) of a very widespread group of folktales, which typically begin with the hero, as he starts on a journey, coming upon a group of people ill-treating or refusing to bury the corpse of a dead man who had died before paying his debts. The hero gives his last penny, either to pay the man's debts or to give him decent burial, and goes on his way. Within a few hours a traveling companion joins him (occasionally in the form of a horse or other animal, but usually in human form), who aids him in some impossible task (or a series of tasks and adventures), gets him a fortune, saves his life, marries him to a princess, etc. Sometimes the companion helps the hero on the condition that they divide all winnings. Sometimes this proves to be half the princess, or a first-born

child. But he relents and relinquishes his half when the other is about to fulfil the promise. The story ends with the companion's disclosing himself as the man whose corpse the other had befriended. (See Gerould, *Grateful Dead*, Folklore Society, 1908). See **TORR**.

grave and graveyard Primitive peoples are apt to consider the grave as the home of the departed and try to make it comfortable. Huts are often erected above the grave (South America, Philippines, New Guinea, East Central Africa) or underground chambers are provided (West Africa, ancient Crete). To the grave today relatives bring flowers, and in some cultures food and drink (Russia and China).

The shape of the grave and of the mound, barrow, or tomb above it varied. It might be shallow or deep, fenced against wild animals or leveled to hide it from cannibals, ghouls, and marauders. In the grave the body might be left sitting, squatting, or prone on side or back. The direction in which it was faced or headed was important and varied greatly—Moslems toward Mecca, Christian Europeans toward the West, migrant tribes toward the homeland of their ancestors. Solomon Islanders were always buried with their feet turned inland.

Gravestones, earlier considered shrines to the ghost, are now mere markers, but vary from large and elaborate stones to small wooden signs. Inscriptions and epitaphs defy death, hope for immortality, and usually praise the deceased. Graveposts (American Indians) may be upright or prone and are rudely carved and dressed to resemble the dead man.

Urns, now pots for growing plants, once served as burial receptacles for bones and ashes, as in many burials in the very old (900–400 B.C.) Hallstatt, Austria, burying ground. Willow, cypress, and yew trees are thought appropriate for graveyards. The willow's pendent branches express sorrow; the upright conical cypress, hope; the yew's evergreen leaves, eternal life. In China for centuries cypress and pine have been planted on graves to strengthen the souls of the departed.

Graves are sacred ground, not to be carelessly trodden. Graveyards are to be avoided at night when ghosts may stroll.

The word cemetery, now preferred euphemistically to graveyard, means literally sleeping chamber, and was first used of the catacombs of Rome, then of the consecrated ground around a church, now of any graveyard.

Certain sects controlling cemeteries exclude persons of another faith or no faith, also murderers and suicides. Poor persons buried at civil expense are interred in an undesirable section called the potter's field, after the land bought "to bury strangers in" allegedly with the blood money of Judas (*Matt.* xxvii, 7), although some scholars hold that the name of this cemetery, *Aceldama* or Field of Blood (*Acts* i, 19), is a Christian corruption of *Akeldamach*, Field of Sleep. See **BURIAL**; **CAIRN**; **CREMATION**; **FUNERAL**. CHARLES FRANCIS POTTER

Gray Goose An American Negro ballad, probably of pre-Civil War origin, preserved as a work song among convicts of the Texas State Penitentiary. It is one of the few animal ballads of America and shows the West African pattern of the animal that outwits or outlasts

its enemies. The goose survives shooting, cooking, and saving, and finally flaps off honking with a string of goslings behind it. The refrain, "Lawd, Lawd, Lawd," is sung by the chorus when it serves as a gang song.

Great Bear The constellation usually known as *Ursa Major*, the Big Dipper, Charles's Wain, etc.: subject of etiological myth and folktale among almost every people, ancient and contemporary, on whom it shines.

In the cold fierce winter a big bear used to devour the game of the Iroquois Indians. The hunters could not catch it; always, just as they came upon it, it would disappear and leave no track. No one ever got close enough to shoot an arrow. One night three brothers in a certain village dreamed that they found the bear. In the morning they took the three dreams for a sign and set out secretly to search for him with their little dog, Jiyeh. Often they saw the bear, but it always vanished in the snow leaving no trail. They did not stop to rest, either night or day, but always kept following the bear or its shadow through ice and snow and pitiless winds, until they came to the edge of the world where it touches the northern sky. There they stood and looked. They saw the icy mists and white clouds and the bear running through the snow on the mountains. So they climbed the paths into the cold north sky. Finally they saw the bear ahead of them, shouldering his way through the clouds and weaving a great invisible net as he traveled. At last they saw him crawl under the curved arch of a cave to rest. They had him at last, they thought. They meant to capture him asleep in the cave. But the bear heard them. He woke from his sleep, rose up with the net in his paws, gathered the hunters into it, and flung them into the sky. There they are yet with their little dog, forever following the great bear of the north who forever escapes.

The four stars in the bowl of the dipper comprise the bear; the three stars in the handle are the brothers, the perpetual hunters. The Iroquois also see the little dog following them. The arch of *Corona Borealis* shows the mouth of the cave the bear crawled into to rest.

This story of the bear and the hunters is known, with certain definite variations, among North American Indians from the Alaskan Eskimos to the Arizona pueblos, among the Sioux of the Plains, the Nova Scotia Micmacs, and the North Pacific tribes. See **URSA MAJOR**.

Great Mother The fertility goddess of Anatolia, known by various names throughout the region, and best known as *Cybele*. She was the source of life, and as such was identified with the nature, earth, and fertility goddesses of surrounding cultures, e.g. of Crete, Egypt.

Great Spirit The erroneous notion that among the Indians of North America there existed a general belief in an overruling deity, the "Great Spirit," is a popular fallacy of the 19th century which still persists to some degree. Although the concept of a supreme deity, either otiose or active, may have been aboriginal for some tribes, actually all groups recognized a number of supernatural beings and attributed power to a variety of animate and inanimate objects. Supernatural power for success in war, hunting, gambling, curing, witchcraft, oratory, and other pursuits could be obtained from a host of beings. Even though prayers might be addressed to one deity in particular in such major annual ceremonies as the Sun dance, the Big

House, or the busk (and even this was not always the case), no tribe can be said to have concentrated on the worship and propitiation of a single high god. [Ewv]

Great Tellings Long pseudo-historical narratives of the Mohave Indians; specifically, migration myths and war tales. The Mohave word for them is *ich-kanava*. There is no clear central theme; their great emphasis is on geographical detail, place names, the long marches, and the settlements, interwoven with infinite detail of food, itinerary, and the thoughts of the characters. A complete and uninterrupted recital of one of these narratives would take more than 24 hours. They are believed to have been revealed in dreams.

Green Corn dance A corn-ripening celebration held by American Indians at the time of the edibility of the first green corn, thus a specialized form of corn dance. It adds, to the thanksgiving motive of a harvest dance, a supplication for the continued prosperity of the plants. The Cherokee *se'lu* and Iroquois *oneont'oeng* are specific short corn dances that constitute part of the longer all-day sequences of the respective green corn ceremonials, *agohundi* and *ahdake'wäo*. The *agohundi* and Creek busk included the administering of medicine to avoid sickness from the eating of the unripe corn. This curative feature has superseded the original function among these two tribes, though other agricultural tribes, as the Iroquois, Delaware, and Pueblos, have adhered to the original significance. See CORN DANCE. [GPK]

Greensleeves An English love song of the Elizabethan period, mentioned by Shakespeare and by Beaumont and Fletcher; it is in Playford's *The Dancing Master* (1686) and in *The Beggars' Opera*. The bass of the melody is the *Passamezzo antico*, an Italian basso ostinato tune of the 16th and 17th century group of such tunes. The melody has been used for a number of other settings both folk and non-folk. A waits' New Year's carol dating from a black-letter collection of 1642 is among these.

Gregory, Lady Augusta, née Persse (1859–1932) Irish folklore student and playwright, wife of Sir William Gregory. She helped found the Irish National Theatre Society, and became director of the Abbey Theatre at Dublin. Her *Our Irish Theatre* (1914) is the story of this movement and theater. Her somewhat free renderings of the ancient Irish legends are, as a result of her poetic gift and sure choice of language, perhaps the most readable expositions of the stories. Among her works are: *Cuchulain of Muirthemne* (1902), *Gods and Fighting Men* (1904), *A Book of Saints and Wonders* (1907), *The Kiltartan History Book* (1909), *Seven Short Plays* (1909), *Irish Folk History Plays* (1912), *The Kiltartan Poetry Book* (1919), *Visions and Beliefs in the West of Ireland* (1920), *Three Last Plays* (1928), *Coole* (1931).

gremlin Any airborne supernatural being (spirit, demon, imp) whose function is to cause pilots and aircrew (especially military) trouble and inconvenience. So far as is known, these little people first began taking to the air during World War I, particularly among the RAF. However, it was 1922 before anyone dared mention their name. According to a letter to *Time* (Sept. 28, 1943) from a member of the British Air Commission, who prefers to remain anonymous for reasons of per-

sonal security, on a routine RAF flight in that year, the pilot called the weather station at Le Bourget field, Paris, for a weather report and was warned, "Gremlins sur la manche." The warning did not make sense, but when his radio went out shortly thereafter he realized its implications. Some people say that the name derives from Old English *gremlian*, to vex.

There is little agreement as to their description among those who have seen these little people. In *Punch* (Nov. 11, 1942), an article entitled "Gremlins, Aircrews, for the use of" says: "The standard Gremlin stands about twenty inches high and weighs some seventeen pounds in still air. In appearance it is rather like a North American Jack rabbit crossed with a bull terrier ... (has) large ears which are usually covered with a rudimentary growth of hair, the facial expression being reminiscent of an A.C.2 who has just been advised that his 48-hour pass has been cancelled." W. E. Woosnam-Jones's article (*Spectator*, Jan. 1, 1943) says: "They stand about a foot high when in a fully materialized condition, and are usually clad in green breeches and red jackets, ornamented with neat ruffles. They always wear spats and top hats, although the Fleet Air Arm reports a marine species with web feet and fins on their heels. Oddly enough gremlins have no wings and always fly as passengers." *The New York Times Magazine* (Apr. 11, 1943) mentions "The six-inch tall Gremlins with horns and black leather suction boots..."

However, all airmen, both flight and ground personnel, are agreed that the gremlins possess prodigious strength, a high degree of technical proficiency, and a working knowledge of aerodynamics, advanced mechanical engineering, and meteorology of a very high order. Of them, the motto, "The difficult we do immediately, the impossible takes us a little longer," is indeed a reality. For instance, the article from *Punch* mentioned above tells of gremlins having bodily inverted a Sunderland bomber on patrol over the Bay of Biscay, and the navigator's gremlin which "is a mover of mountains, islands, aircraft-carriers (and)... under extreme conditions it will reshuffle all the stars in the heavens." Woosnam-Jones claims that gremlins have placed the runways of every training airport in Britain on hydraulic lifts, and just as the pupil-pilot is about to make a perfect three-point landing, the duty gremlin pulls a lever either raising or lowering the runway as much as ten feet.

Heretofore, the gremlin has been looked on as a new phenomenon, a product of the machine age—the age of the air. This is undoubtedly an error. After three years of experience, observation, study, and thought on the part of the author, it appears that gremlins comprise a rather cosmopolitan citizen army of spirits. Whether banded together by loss of their homes through war damage, or merely from a natural curiosity concerning airplanes, they continue to prod man and keep him alert, as they have done in the past. Some gremlins are technicians who have been imparting knowledge to man since the beginning of the world; these are probably recruited from the ranks of fallen angels who admittedly know more of the workings of the universe than man will ever learn. Others are craftsmen and artisans such as the dwarfs who provided the knights of the Middle Ages with wondrous steel blades, helmets, and weapons. Some have special knowledge of

a particular element, such as the upper and lower air (and here we might mention the spandule which is a gremlin found only above 10,000 ft.). Lastly there is the rank and file of demons and imps who drink up fuel, bore holes in airplane wings and other parts, jab gunners and bombardiers just as they have their sights lined up, and the like. This theory was not arrived at exactly by logic: The author was examining a parted cable which bore obvious tooth marks in spite of the fact that the break occurred in a most inaccessible part of the plane, when he heard a gruff voice inquiring, "How many times must you be told to obey orders and not tackle jobs you aren't qualified for?—This is how it should be done," whereupon another cable parted with a musical twang. The voice was obviously "big brass" and a flashlight beam revealed an awed gremlin surveying the neat new break as a rear-end suggestive of an Inspector-General passed from sight. It was a neater job.

In spite of all that has been written, not all the activities of gremlins are destructive. Many times gremlins have banded together to assist a pilot fly home in a small percentage of the plane he was issued only a few hours before. [JWH]

griffin See GRYPs.

grigri The term for magic charms used by French writers, applied especially to those of West Africa. All reservations entered on the use of the word *fetish* apply in equal measure to employing this term in meaningful description. [MJH]

Grimhild (1) According to the *Sigurd* and *Volsunga Sagas*, the wife of Giuki, king of the Nibelungs and mother of Gunnar, Gudrun, and Hogni. She was an accomplished sorceress and continually brewed potions to make others carry out her wishes, as when she gave Sigurd the drink of forgetfulness, which made him forget Brynhild and marry her daughter, Gudrun.

(2) According to Wagner's *Ring of the Nibelung*, the mother of Gunther and Guttrune by king Giuki, and of Hagen, by the dwarf, Alberich. She was sometimes confused with Kriemhild.

Grimm, Jakob Ludwig Karl (1785–1863) and his brother **Wilhelm Karl** (1786–1859), German philologists and mythologists, the founders of scientific folklore study. The brothers were close companions throughout their lives, living together even after the semi-invalid Wilhelm married in 1825. They collaborated mainly on *Kinder- und Hausmärchen* (vol. I, 1812; vol. II, 1815; translated into English in 1884 as *Household Tales*, but popularly known as "Grimm's Fairy Tales"); *Deutsche Sagen* (1816–1818); and *Deutsches Wörterbuch* (vol. I, 1854); but they published many other works separately or in collaboration. In the *Household Tales*, the Grimms not only produced a remarkable collection of the disappearing folklore of their people, but created a great literary masterpiece, important to the history of the German language and possessing few rivals in other countries.

Jakob Grimm in his *Deutsche Mythologie* (1835) laid the scientific basis for folklore research and won the name of father of folklore science. In his *Rechtsaltertümer* (1828), a study of old Teutonic laws, he discussed a kind of proverb which constitutes the body of popular law in non-literate societies. Jakob Grimm's great and exhaustive work *Deutsche Grammatik* (1819–1837), con-

taining his formulation of Grimm's Law (of the consonant changes in the Indo-European languages evolving to the Germanic languages), is generally considered as having laid the foundation of German philology. The work of Wilhelm Grimm, in revising the tales in the light of a growing knowledge of popular language and of variants of the stories, continued through enlarged and improved editions of the collection until 1857. Wilhelm's essay "On the Nature of Folk Tales" appeared in the second edition in 1819. In 1822 the brothers published a volume of commentary and comparative study of the tales, which formed the third volume of their folktale study.

The final statement of the Grimms' theories of folklore study was made by Wilhelm in 1856. The two chief ideas were: 1) that those tales which closely resemble each other were undoubtedly derived from a common Indo-European ancestry; and 2) the tales are broken-down myths and can be understood only through an understanding of the myths from which they derive. These two main theories are no longer accepted. But two others, made merely as suggestions and not developed further by Wilhelm Grimm, have been worked out and adopted by later scholars. These suggestions were: 1) that situations existed which were "so simple and natural that they reappear everywhere"; and 2) that peoples borrowed folklore materials from one another. These two principles were to become basic in the science of folklore.

Grottasongr The Grotti Song or Quern Song, preserved in the *Prose Edda* of Snorri Sturluson. See FRODI.

groundhog or **woodchuck** A marmot (*Marmota monax*); the American species is known either as groundhog or woodchuck. The animal is associated with Candlemas Day (February 2). On that day, the weather is a most important affair, for on that date depends the good or bad luck for sowing and planting according to omens. If the groundhog comes out of his hole on February 2 and sees his shadow, he will go back in and stay six more weeks. So if the day is sunny, winter will continue and the result will be bad crops; if it is cloudy, the groundhog will see no shadow, and the reverse will be true. These notions prevail on the Continent and in England and are nowhere more popular than in the United States. Here the groundhog or woodchuck is the prognosticating animal; in Germany, it is the badger; previously in Europe and the United States, it was the bear.

In Missouri, Groundhog Day was officially established as February 2 by Act of the Missouri Legislature. However, in Arkansas and in Missouri and elsewhere, a hot controversy arose between individuals and in the press disputing this date. Old-timers cling to February 14 as the proper time for sowing and planting. To them, this date is Groundhog Day and not the usually accepted February 2.

The groundhog appears in some animal tales, for example in the Cherokee story, "Origin of the Groundhog's Dance" (James Mooney, *Myths of the Cherokee*, p. 279). It is essentially a *pourquoi* tale, but suggests the cleverness of the groundhog. In New England very many stories center about the woodchuck. [GFS]

grues Shocking quatrains of a gruesome nature are gleefully recited by adolescents and occasionally used as

fillers by newspapers and cheaper magazines and joke-books. They are concerned with the horrible fate or bloody misadventures of some enfant terrible, and run in popularity cycles with a current juvenile hero, Little Willie or Little Bertie. Robert Louis Stevenson is alleged to have named them "grues" which is credible, since in Scotland the noun "grue" means a fit of shivering. One of many variants widely circulated in the United States runs:

Little Willie on the track
Didn't hear the engine's squeal:
Now the engine's coming back,
Scraping Willie off the wheel.

Another evidently of English origin is:

Prigged her mother's pickled peaches,
Dotty did, and died with screeches:
Heed this touching tale! It teaches
Mothers shouldn't pickle peaches.

Short gruesome anecdotes of a similar character but done in prose have recently had considerable circulation in such cycles as the Little Moron tales and the Little Audrey stories. [CFP]

Grundtvig, Nikolai Frederik Severin (1783–1872) Danish theologian, historian, student of Icelandic and Anglo-Saxon, and poet; father of the folklorist Svend Hersleb Grundtvig. The elder Grundtvig was given the titular rank of bishop in 1861. Grundtvig had some influence on the educational development in his country, establishing schools in which the national poetry and like studies formed a part of the curriculum. He has been called the Danish Carlyle. Among his works are: *On the Songs in the Edda; Northern Mythology* (1808); *Decline of the Heroic Life in the North* (1809–1811); *The Rhyme of Roskilde*; a collection of religious poems called *Songs for the Danish Church* (sic) (1837–1841); and an anthology of early Scandinavian verse (1838).

Grundtvig, Svend Hersleb (1824–1883) Danish philologist and collector of Danish and Scandinavian folklore, was a son of Bishop N. Grundtvig. The son collected seven volumes of old folk songs, published as *Danmarks gamle Folkeviser* (1853–1912), their publication being continued by Axel Olrik after Grundtvig's death. He published a collection of Danish sagas, *Danske Sagn* (1854–1861), and three volumes of folktales, *Danske Folkeeventyr, efter utrykte Kilder* (1876, 1878, and 1884). From 1869 to his death Grundtvig was professor of Scandinavian philology at the University of Copenhagen.

Gryps or Gryphus In Greek mythology, a griffin; a monster with the head and wings of an eagle, the body of a lion, and sometimes the tail of a serpent, dwelling in the country between the Hyperboreans and the one-eyed Arimaspians. The griffins were enemies of horses and were constantly at war with the Arimaspians who tried to capture the gold guarded by the griffins. The chariot of the sun (sometimes that of Zeus and of Nemesis also) was drawn by griffins. The idea of these creatures probably was brought from the East, perhaps from Indo-Iranian mythology. Wherever they appear in legend the griffins are always guardians of mines and treasure, as for example Scythian and Indian gold.

Gu An important god of Dahomey Negro religion; god of metal and war; son of Mawu and Lisa. At birth

his body was solid stone from which projected a sharp metal blade. He was sent into the world to help man cope with his environment. He gave man tools and implements, taught him their uses and manufacture (i.e. iron-working). He is conceived of as a power rather than as an animal or anthropomorphic deity; for instance, Gu was the tool in Mawu's hand when she created man, the sharp tool which shaped him.

guabina A couple dance of the interior of Colombia, characterized by a step-hop in 2/4 time against the 3/4 tempo of the guitars. Holding a kerchief between them, the dancers circle around a hat, advance, recede. [GPK]

guardian spirits Guardian spirits are a projection of the belief that the things people want are hard to get and are protected by a spirit or god or power which will be helpful if approached properly but can become dangerous and is frequently unfriendly. In China each plot of earth has its guardian, sometimes assisted by a wife and now and again by a servant. These are the generalized guardians of place propitiated by peasants in moments of great or small crisis. They are important in getting good crops and they conduct the soul of the farmer within a few hours after death to the next higher official in the divine bureaucracy.

Hidden treasures, like the gold of the Nibelungs, are guarded by dragons, gods, ghosts, spirits, demons, or other powers. Mountains, streams, marshes, forests, and seas have each its own guardian, which must be propitiated before a stranger is permitted to penetrate. Each individual also has his genius or guardian spirit. Some peoples have thought of these as two spirits, a good and a bad, associated with the "spiritual soul" and the "physical soul." When these two are not in accord they lead people to do things which are pleasant but wrong. [RDP]

Throughout North America, Indians of almost every tribe sought to acquire supernatural spirit teachers, or guardian spirits, who through songs and advice, bestowed supernatural gifts for war, hunting, gambling, curing, oratory, and other pursuits upon the human being fortunate enough to establish contact with them. In many Indian tribes young boys nearing puberty were sent out, naked and without food, to fast and try to acquire a guardian spirit who would bestow power upon them through dreams and visions. Vision-questing took different forms among the different tribes; in some, youths were told to spend anywhere from two to four days in the woods, alone, or in a little perch in the trees; in other tribes they were made to dive in bottomless pools to acquire a guardian spirit. Some tribes allowed vision-questing during the winter only, others, at any time of the year. Girls, during their first menses, when they were isolated and semi-fasting in a hut built for that purpose, were also likely to acquire a guardian spirit. Such spirit might also appear to a child or youth or even to adults in dreams; young people, especially, were closely asked about their dreams by older relatives. At times a guardian spirit might appear, even though no fasting had been undertaken; the spirit was quite likely to have the shape of an animal, or snake, or bird, and later change into human form. It might give a song, and later return to see that the human being had learned the song properly, or to teach him or her additional songs. Usually the power

gained through instruction from a guardian spirit was not used until a person was nearing middle age, and often the source of power had to be kept a secret, or the power itself would be invalidated. A person could usually have more than one guardian spirit, if he were so blessed by the supernaturals. In many tribes the shamans, during curing ceremonies, called on their guardian spirits to come and help them; these would appear as animals, advise the shaman of the cause or seat of the illness, and otherwise help him; they would be summoned for this purpose through songs which the shaman had previously learned from them. The acquisition of a guardian spirit or spirits was probably one of the most important of all events in an Indian's life, and until he acquired one through fasting or dreams, he was always constantly urged to try and do so by close relatives. To refuse power from a guardian spirit on the grounds that the spirit knew only evil was extremely dangerous, but was sometimes done.

[EWW]

↪ The concept of the guardian spirit is not as developed among South American Indians as it is in North America. The relationship between a man and a spirit is limited to the shamans. The Guiana and Amazonian *pagé* have at their service one or several spirits who help them in their profession. The ancient Charrua of Uruguay, however, seem to have had toward guardian spirits an attitude very similar to that of the North American Indians. The young men of the Charrua went into the wilderness and exposed themselves to severe hardships until they had a vision of a spirit who became their protector through life. The Island Caribs also established a close association with spirits who were their special guardians. It is still a debatable question whether the *wauki* (*guauqui*) or "mystical brother" of the Inca emperors were guardian spirits or not. [AM]

Guatavita, Lake of A lake in Colombia famous for the ceremonies of the gilded man (El Dorado). Every year the chief of the region, gilded with gold dust, and accompanied by his noblemen, went on a raft to the middle of the lake to make offerings to a snake god.

[AM]

Gudrun (1) In the *Volsunga Saga*, the daughter of Grimhild and Giuki, king of the Nibelungs. She married Sigurd, after her mother had brewed a magic potion for him which made him forget Brynhild, his betrothed. Her brother, Guttorm, killed Sigurd to obtain the Nibelung gold. Later Gudrun married Atli, king of the Huns and Brynhild's brother. He also coveted the gold. He invited her brothers to visit him, and then treacherously attacked them. Gudrun fought with her brothers in the fight, but all of them were killed. In revenge, she slew her two sons by Atli, fed their hearts to him, and then killed him also.

(2) In the *Gudrun Lied*, a 13th century German epic, the daughter of Hilde and Hettel, king of Hegelingen. She was very beautiful and had three suitors: Siegfried, king of the Moorland; Hartmut, a prince of Normandy; and Herwig of Zeeland. Herwig made war against Hettel and won his consent to marry his daughter at the end of a year. Learning of this, Siegfried attacked Herwig's lands, to draw him off. But while Herwig and Hettel joined forces to attack Siegfried, Hartmut kid-

napped Gudrun. Whereupon Herwig, Hettel, and Siegfried were then unified and set off together to rescue her. Gudrun was captive in Hartmut's castle for 13 years, and because of her persistent refusal to marry him, his mother made the most menial of servants of her. She was finally rescued by Herwig and her brother Ortwin.

Guinevere In Arthurian legend, Arthur's queen, lover of Lancelot. She figures variously in medieval romance: Geoffrey of Monmouth presents her as Guenhuvara, ward of Cadur of Cornwall, but of Roman descent; as Wenhaver in Layamon's *Brut* she is blood kin to Cadur; in the 13th century *Arthur and Merlin* she appears as Gvenour, daughter of Leodegran of Carohaise. Geoffrey of Monmouth's Guenhuvara was left in the care of Mordred, Arthur's nephew, while Arthur was warring on the Continent. At Rome Arthur learned that Mordred had taken both the kingdom and the queen. Malory's 15th century *Book of Arthur* develops the love story of Lancelot and Guinevere in fullest detail to the moment of their betrayal to the king. Guinevere was sentenced to be burned at the stake, was rescued by Lancelot, was later restored to Arthur, during his subsequent wars, took the veil, and was eventually buried with him (legend says at Glastonbury).

↪ Guinevere may have been a historical person or a creature of myth. In Welsh literature she is called Gwenhwyvar, which, except for the first element meaning "white," is of uncertain origin. The story of her abduction by Melvas, King of the Summer Land, told by Caradoc of Llanerfan before 1136, and the story of her abduction by Meleagant, told by Chrétien de Troyes about 1170, seem to show that she had inherited the role of a Celtic Persephone. Her rescue by Lancelot and his four combats with Meleagant probably reflect the struggle for the possession of a vegetation maiden by the rival forces of winter and summer.

guitar A flat-bodied stringed instrument plucked with the fingers, descended from the lute, which originated in the Orient and reached Europe with the Moors at about the period of the Crusades. It is the characteristic instrument for accompanying much of the folk song and dance of Spain and Italy, of the Gypsies, of Latin America, and of North American folk singers of the southern mountains and the western plains. Related popular instruments of the lute family include the Russian balalaika, the Hawaiian ukulele, and the Japanese samisen, all used to accompany folk and popular dancing and singing.

A connection between the guitar and witches and devils has been made in many areas. Tuscan witch songs include one about a witch who was changed into a guitar called La Magdalena, which was not restored to human likeness until after the passage of a century, when a wizard musician played upon it. Among American Negroes, playing the guitar is a part of the procedure in making a bargain with the Devil. Preparations include filing the nails, arming oneself with a bone of a black cat, and playing the guitar at the crossroads

at midnight. The approach of the Devil is announced by music which draws near to the player and accompanies his guitar. He must continue playing without looking up while the Satanic visitor exchanges instruments with him, clips his nails to the raw quick, and then withdraws. Thereafter, the Faustlike character has complete mastery of the guitar and is endowed with the gift of invisibility and other supernatural powers, for which he has given his afterlife to the Devil.

The guitar furnishes the chief accompaniment for flamenco music, for the bolero, and the South American *chacarera*, the son of Mexico and South America, the Portuguese *fado*, the cowboy and lumberjack songs of North America, the ballads, lonesome tunes, and country blues of the southern Appalachians, etc.

Gula In Babylonian mythology, the goddess of healing, a creative goddess, and a preserver of life; in later myth, daughter of Anu; consort of Ningirsu (Ninib), and associated with Shamash in invocations. She controlled death, being able to restore life, and diseases; hence, she is sometimes a destroying goddess, using disease to kill. Her feast was late in April. Compare **BAU**.

Gum Baby See **TAR BABY**.

gumbo-ya-ya Literally, everybody talks at once: term (equivalent to contemporary American *yateta-yat-yat*) applied in derision to the traditional "spend-the-day" gatherings of Creole women, where gossip was the main course served. *Gumbo-Ya-Ya* is the title given by the Louisiana WPA Writers' Project to a compilation of Louisiana folklore studies including Creole, Cajun, and Negro material.

Gummere, Francis Barton (1855–1919) American educator and philologist, and a specialist in traditional ballad. Son of Samuel James Gummere, president of Haverford College, he was graduated at Haverford at the age of 17. He tried clerking, then law, but finally settled on teaching, which was the chief profession in his family history. At Harvard he became a pupil of Francis James Child. Later he studied at the universities at Strasbourg, Berlin, Leipzig, and Freiburg. In the field of popular ballad study he is mainly known for a theory of the "communal origin" of the English and Scottish ballads, a theory which goes back to Jakob Grimm, but which Gummere developed further. Among his works are: *Germanic Origins* (1892), *Old English Ballads* (1894), *The Beginnings of Poetry* (1901), *The Popular Ballad* (1907), *The Oldest English Epic* (1909), and the chapter on ballads in the *Cambridge History of English Literature* (volume II, 1908).

Gungnir In Teutonic mythology, Odin's infallible spear, on which oaths were taken.

Gunnar According to the *Volsunga* and *Sigurd Sagas*, the son of Grimhild and Giuki, king of the Nibelungs, and brother of Gudrun, Hogni, and Guttorm. When Sigurd came to live with them, they became fast friends. After Gunnar became king, Grimhild suggested Brynhild as a suitable queen. Because Gunnar could not ride through the ring of fire, however, Sigurd, who had been drugged into forgetfulness of his betrothal to Brynhild, assumed Gunnar's form and wooed her. After their marriage, Brynhild recognized Sigurd, and Gunnar became jealous, but refused to kill him, as they had

sworn brotherhood. After Sigurd's death, all was explained, and when Brynhild killed herself, Gunnar allowed her to be burned on Sigurd's funeral pyre. Atli claimed Gudrun as atonement for the death of his sister, Brynhild. When Atli heard of the Nibelung gold he laid plans to acquire it, and invited Gunnar and his court to visit him. Gunnar accepted, in spite of warnings, but consented to hide the gold in the Rhine. They were treacherously attacked, and after an epic struggle, were all slain, including Gunnar who refused to reveal the hiding place of the gold. Compare **GUNTHER**.

Gunther (1) According to the *Nibelungenlied*, king of Burgundy and brother of Gernot, Geisler, and Kriemhild. He was a noble warrior with whom Siegfried was allied. When Gunther went to woo Brunhild, he was appalled at the feats of strength demanded of him to win her hand, but Siegfried, in his invisible cloak helped him to succeed. On their wedding night, Brunhild, who was beginning to suspect trickery, bound Gunther in her girdle and hung him on a clothes peg for the night. The next night Siegfried again put on his cloak and gave her such a thorough beating that she never regained her great strength, and, believing that it was Gunther, remained a faithful wife until her death. Gunther took no part in the murder of Siegfried, and mourned his loss. After Kriemhild's marriage to Etzel, he went to visit them, was forced to defend himself against her plotting, and was finally beheaded on her order.

(2) According to Wagner's *Ring of the Nibelung*, king of the Gibichungs, brother of Guttrune and half-brother of Hagen. When Siegfried came offering friendship or combat, he welcomed him to the court. Hagen wished Gunther to marry Brunhilde, and to this end, gave Siegfried a potion to make him forget Brunhilde and marry Guttrune. This was so successful that Siegfried offered to assume Gunther's form and woo Brunhilde for him. Gunther became suspicious when Brunhilde recognized Siegfried after their marriage and allowed Hagen to kill him, repenting too late. Gunther was killed by Hagen in combat for the possession of Siegfried's ring. Compare **GUNNAR**.

Gunuko One of the principal deities of the Nype of Northern Nigeria, who has been retained in the New World, where he figures in the African cults of Brazil.

[MJH]

guru or gosāin In India, a spiritual leader or teacher. Among the members of the Vallabhāchārya sect of Vaishnavism, the guru is supremely important, the mediator between God and the sinner. Any who malign a guru are struck dumb and become serpents. The gurus, who are of the line of Vallabha, follow and reenact Krishṇa's early adventures with the gopis.

Gusi cult A religious cult of the Dusun of Borneo, characterized by the worship of Chinese green porcelain jars, regarded as sacred. Old jars (chiefly Chinese) are regarded as valuable by many of the peoples in Borneo and the Philippine Islands, but the Dusun believe that certain of them are inhabited by spirits and are thus sacred. A type of jar called *gusi* is especially revered. These are pot-bellied in shape, greenish-brown in color, and often have a finely crackled glaze. The *gusi* are so highly valued that as much as two to three thousand dollars is paid for a single one. *Gusi* are kept in a

specially enclosed area in Dusun homes and offerings are made to them in cases of illness and annually at the festival of Mengahau. The spirits inhabiting them are those of ancestors: beneficent when well treated, evilly disposed if ignored.

In both Borneo and the Philippine Islands jar burial was apparently common at one time and porcelain jars were imported from China for this purpose. The Spanish cut off the trade in an effort to divert the wealth of the Philippines to their own uses. Consequently jars increased in value until a man's wealth came to be reckoned by the number of jars he owned. These were handed down from one generation to another and tales gathered around them concerning their origins and powers. References to them abound in the folktales of the region. In the interior of Luzon, Mindanao, and Palawan, tribes still reckon the bride price wholly or partly in these jars and one of them is considered payment in full in place of a head when settling feuds.

gusla The characteristic instrument of southern Slavic folk music; a primitive one- or two-stringed fiddle played with a crude, often home-made bow, and held against the thigh. It is played by itinerant musicians called *guslari*, who use it for accompanying long heroic ballads or extemporized songs.

gut bucket The receptacle catching the drip from the cask in a barrel house; term applied to the type of early jazz and to the musical timbre characteristic of music played in saloons of the period during which jazz developed.

Gutrune In Wagner's *Ring of the Nibelung*, Gunther's sister, whom Siegfried is persuaded to marry instead of his betrothed, Brunhilde. This is accomplished by a magic potion of forgetfulness which Hagen gives him. In the main, Wagner's story follows the *Volsunga Saga*, rather than the *Nibelungenlied*. Compare GUDRUN; KRIEMHILD.

Gwau Meo In Mala (Solomon Islands) folklore, the culture hero son of the sun worshipped as a ghost: literally, red-head. Red-haired Gwau Meo arrived as an immigrant at Mala in an outrigger canoe with a group of followers. The band settled inland and populated the island.

Gwydion In Brythonic mythology, a son of Dôn, brother of Amaethon and Govannon, brother and lover of Arianrhod, and by her father of Dylan and Llew Llaw Gyffes. Gwydion is interpreted as a Brythonic culture hero—bringer of gifts from the gods to man. This construction stems from the story of Gwydion's theft of

the swine of Pryderi, who is interpreted as an other-world god of earlier mythology. MacCulloch suggests that Gwydion is a later anthropomorphism of some ancient swine god, all the more so because a swine was one of the temporary shapes into which Math transformed him for helping Gilvaethwy abduct Math's virgin foot-holder, Goewin. Gwydion was a powerful magician, and is credited with originating April Fool's Day, from the fact that it was on April 1 he conjured up the armies to fool Arianrhod into bestowing arms on Llew Llaw Gyffes. It was Gwydion who helped Math create Blodwen, the flower-wife, for Llew. The Milky Way is conceived of as the track made by Gwydion seeking Llew after his treacherous death.

gyertyás tánc The Hungarian candle dance. On the evening following a wedding the guests follow the best man, bride, and groom in a long line, little fingers linked. A candle is held in the remaining fingers of the right hand. With a balancing step the line progresses slowly to the left in circular and serpentine formations. Thus it falls into the tradition of open rounds or link dances (former fertility rites) that extend all along the Mediterranean from Catalonia to Palestine. The symbolism is emphasized by the bearing of the matrimonial candles. See CANDLE DANCE. [GFK]

Gyges (1) or **Gyes** In Greek mythology, one of the Hecatoncheires, the hundred-handed giants.

(2) The first king of the third dynasty of Lydia (reigned 716–678 B.C.) who dethroned Candaules. In Plato (*Rep.* II, 359) the shepherd Gyges discovered a brazen horse in a chasm, and a body within the horse. He took from the body a ring which had the power of making him invisible. With its aid he entered the queen's chamber, there murdered the king, and took the crown for himself. In Herodotus (I, 8–13) is found the better known story. King Candaules induces Gyges despite the latter's reluctance, to enter the bedchamber so that he may appreciate the queen's naked beauty. She spies him and next day offers him the choice of the crown or instant death. Gyges was proverbial for his riches and made many presents to the Delphic oracle.

Gypsy Laddie A Scottish-English ballad (Child #200) telling of the elopement of the lord's wife with the Gipsy Johnny Faa. The spell the Gipsy casts is so strong that she refuses to return to her husband, though with the Gipsy she must sleep in the barn. The ballad reflects some of the feeling against Gipsies in early 17th century Scotland, Gipsies being banned from that kingdom in 1609. Several American versions, often garbled (compare BLACK JACK DAVID), are known.

H

habañera A Cuban dance of African origin, slow and voluptuous and with a characteristic rhythm in 2/4 time. From Cuba it went to Spain, thence to Brazil, Haiti, and all Spanish America. The tango is its offspring. In Brazil it is popular in both forms. As a dance for several couples it is called *contradanza criolla*, of which the music is in 6/8 time, in two parts of eight measures each. [CPK]

Habdalah, Havdalah, Abdalah, or Abdalta Literally, separation, distinction: in Hebrew religion, the prayers and benedictions recited to mark the division of times of different holiness; specifically, the Sabbath-closing ceremony, when benedictions are said over wine, spices, and a freshly kindled light, and a longer benediction is said in order to emphasize the distinction: originally a synagogue ceremony, later performed in the home.

In rabbinical law, no work might be performed after a holy day until Habdalah benedictions had been recited. Such blessings were said over wine or some other beverage, excluding water. The spices (myrtle is prescribed as one) are meant to solace the Sabbath's oversoul, which grieves at the passing of a holy day.

The light, according to some, had to be newly kindled from wood or stone friction. The candle has to have multiple wicks, two as a minimum: this derives from the plural form "lights" in the benediction. According to Jose ben Halafta, by the beginning of the first Sabbath fire was as yet uncreated. Man became wise at the close of the Sabbath, took two stones, and recited the benediction over the fire he thus made. The benediction over fire is not part of Habdalah observance after those festivals when light is permitted, and is thus probably a rekindling ceremony. It is customary to examine the fingernails during the fire benediction, to see the fire reflected in the winecup or on the nails. Among the reasons given are that the nails, constantly growing, symbolize the wish for the growing prosperity of the week to come, and that the blood, emblem of life, may be seen through the fingers. It is also said that one looks at the fingernails for, even should one forget to kindle the post-Sabbath fire, the starlight reflected by the nails would be a reminder. The curing water from Miriam's well may be drawn at the time of Habdalah; at this time Elijah the prophet appears also.

Among the Jews of Russia, Galicia, and Baden, a girl drinking of the Habdalah wine will grow a mustache. Sprinkling the wine on the tablecloth brings good luck. In Kiev, where distilled spirits replaces the wine, the liquor remaining after the service is spilled into a pan and lighted with the Habdalah candle. Good luck ensues if it is burned away completely; some pass their fingers through the flame, putting them into the pockets to bring a full week. If the Habdalah candle burns to the end, one's sons-in-law will be meritorious. Compare FIRE.

Hachiman The Japanese God of War, originally the deified Emperor Ojin (4th century A.D.). [JLM]

hactcin The Apache Indian term for supernatural beings, personifications of the power of objects and natural forces; the creators of Earth and Sky, or the children of the Black Sky and Earth. Among the Jicarilla Apache the term is *hactcin*; Lipan Apache, *hactci*; Navaho, *hactce*; Mescalero Apache, *gahe*; White Mountain Apache, *ga'n*. The *hactcin* or *ga'n* are a class of supernatural beings comparable to the Pueblo *kachinas*, and like the *kachinas* are represented in Apache ceremonies by masked dancers. See GAHE. [EWV]

haddock In Christian legend, the fish of St. Peter, so called because the two black spots near the gills are said to perpetuate the finger and thumb prints of Peter when he took the tribute money out of its mouth. It is also sometimes called the Lord's fish, in the belief that these same two spots are imprints of the thumb and finger of Christ from the moment when he grasped and broke the two fish to feed the multitude. Both stories are common in the British Isles.

New England and Prince Edward Island fishermen, however, claim the spots are the Devil's finger marks, and that the black lines along the haddock's sides were made by the Devil's fingers as the fish slipped away. In Scotland it is thought unlucky to burn haddock bones, because once a haddock warned a fisherman that he would be a stranger to any pot on any hearth where haddock bones were ever burned.

Hades, Aides, Aidoneus, Pluteus, or Pluton In Greek mythology, the god and ruler of the underworld: Hades or Aides being his name (originally poetical) as ruler over the shades; Pluton, the more popular name and the one used in the mysteries and in ordinary reference, indicating his role as the wealth-giving god of the earth. Pluton was the son of Cronus and Rhea, and after his father's overthrow he and his brothers Zeus and Poseidon cast lots for the dominion of the parts of the universe. Zeus won the sky, Poseidon the water, Hades the "darkness of night" of the underworld and the earth; the surface of the earth and Olympus were under the dominion of all three.

The principal myth concerning Hades is the rape of Persephone, though he appears in many other myths and legends, e.g. that of Hercules. As king of the underworld and its ghosts, Pluto is not at all synonymous with the Devil or Satan of Judeo-Christian belief. He is not an enemy of mankind, not a tempter, but rather a neutral, inexorably just ruler, whose realm includes a place of torment (Tartarus) and a paradise (Elysium) as well. He was disliked by mortals, hence the several euphemisms like Polydectes (the gatherer of many) and Pluton (the god of wealth). He had a helmet of invisibility given to him by the Cyclopes. On the island of Erytheia and in the lower world he possessed large herds of oxen. His worship as Hades

existed principally at Elis, where his enclosure and temple were opened once a year; there was minor worship of the god throughout Greece and Italy.

In Rome, Pluto became as well Dis pater (Dis being equivalent to Dives, the rich) or Orcus, the latter being a slaying god or angel of death, Dis the ruler of the dead.

Hades was represented as a more dismal, graver Zeus, carrying the key to the gates of the underworld or the staff with which he drove the shades to his realm, and accompanied by Cerberus. As Pluto, his agricultural aspect, he appears with the pronged fork and cornucopia. Sacrifices to him were black, and were made with faces turned away; the cypress and narcissus were sacred to him; he was invoked by striking the earth with the hands.

The name Pluton or Pluto is of later origin, first being used in the fifth century B.C.; earlier he was nameless; in Homer, he is only Aides. With the popular use of Pluto as his name, Hades became attached to the house and the kingdom over which he ruled. There were two traditions regarding its location: one placed it in the farthest west; one had it underground. A later synthesis made the entrance to the underground Hades in the west, although there were local traditions about other entrances, as for example an entrance near Sparta. At the founding of new cities, the Etruscans would dig a hole, supposed to lead to the underworld, and, at a stated time each year, would remove the covering stone to permit the ghosts to rise. In Hades, later tradition places both Tartarus and the Elysian fields. Hades was surrounded by the five waters or rivers: Styx (the Hateful), Acheron (the Woeful), Pyriphlegethon (the Fiery), Cocytus (the Wailing), and Lethe (Forgetfulness). Across Styx, the shades of the dead (only of those actually buried, however) were ferried by Charon, passed Cerberus at the gate which was opened only to those entering and only in the instance of Eurydice ever opened to permit a ghost to return to the realm of light, were judged by Minos, Rhadamanthus, and Æacus, and sometimes Hades himself, and assigned either to Tartarus or to Elysium. See AFTERWORLD; UNDERWORLD.

Hadhayōsh or Hadhayaōsh (Pahlavi *Sarsaokh*) In Iranian mythology, the ox upon whose back men traversed the sea Vourukasha in primeval times; literally, ever pure. At the resurrection the drink of immortality will be prepared from a mixture of the fat of Hadhayosh and white haoma.

hadi'hi'duus The singing rite of the Iroquois medicine-men's society, corresponding to the Menominee and Chippewa *midewiwin*. Membership is by dream or cure. All meetings are held in secret at the home of the patient. There used to be magic tricks as a feature. Today there are throwing songs, sung during the throwing of sharp points (*gai'dqn*) at the patient, then introductory songs of the medicine-man, then songs by twos for the round dance or *ganpyague*. These refer to the animal tutelaries of the members. The dance is a side shuffle to the right, facing the center of the circle. The songs, many of them captivating, reveal their antiquity in the narrow range of tones and scant melodic material. They are accompanied by squash-shell or large gourd rattles (*onyasa' gasta'wesā*) as is

common among many Indian medicine societies. The *hadi'hi'duus* are associated with the Little Water Medicine society and follow upon the treatment by that group. [GPK]

hadiwanyásoenq The Iroquois marriage dance, one of the few performed in a straight line. With a step-pat the bride and groom progress side by side across the room, then face about and return. It is now known only to older people. [GPK]

hadj or hajj The pilgrimage to Mecca required of every free Moslem at least once in his life; those who have made the journey are called by the title *hadji*. Among the Koranic statutes concerning the pilgrimage are laws describing the pilgrim's habit, the clipping or shaving of his hair, the trip to Mount Arafat near Mecca, and the circumambulation of the Kaaba.

hadudo or xadudo One of the two major categories of Dahomean marriage forms. The meaning of the word "taking a friend into custody" (literally, friend-keep) describes it as one form of those matings wherein the ritualized payments are not made to the family of the girl, and the man's obligation to the woman's parents are at a minimum. In consequence, the children of matches of this type remain under the control of the mother and her family. This dual division of marriage types is of great significance for an understanding of the forms of New World Negro mating, since it gives an institutional basis in aboriginal tradition for the forms of common-law marriage found everywhere among the lower socioeconomic strata of New World Negro societies. See AMASIADO. [MJH]

Haferbock A field spirit of German folklore: literally, the oat goat.

hag An ugly or malicious old woman, believed to be in league with the Devil or the dead; a witch or sorceress; a she-devil. Occasionally a hag is young and beautiful in appearance, but still a witch or she-devil. The "secret, black, and midnight hags" whom Macbeth questioned were ancient females in league with the dead. The word comes from Old English *hægtes*, witch, Middle English *hagge* or *hegge*, akin to German *hexe*, witch.

Hags are said to "ride" people at night; especially do they like to ride handsome young men. They press upon one's stomach or chest, causing great discomfort and nightmares. *Hag-ridden* means distressed by nightmares, or victimized by hallucinations of having been literally ridden. There are countless stories of hags riding people, like horses, in the night, and traveling so far and so fast that the person wakes in the morning not only unrested but exhausted. If this goes on long enough, the victim will weaken and die. Mississippi Negroes prescribe sleeping with a fork under the pillow to keep from being ridden.

In Irish folklore the hags (*cailleacá*) are women ancient, wise, of extraordinary eyesight and supernatural powers. The term for this reason is sometimes also applied to the ancient fairy queens like Aine and Clíodna. The Hag of Beare and the Hag of the Cats (*Cailleac na gCat*), who was fed by her cats, are among the many famous individual Irish hags. Almost all the Celtic hags were mythological cairn and mountain builders.

The extraordinary longevity of hags is attested by an Irish folktale about a hag found sitting by a mountainous pile of bones. They were the bones of animals she had eaten, one of which she had killed each year of her life. Sometimes hags fight each other; at such times the air is full of stones and rocks, and it is wise to stay indoors. The Irish say that sometimes a hag will come into a house where spinning (or some such work) is going on late at night, and will help with the work. Hags are said to be prevalent on the nights of the Beltane and Midsummer bonfires.

For the horrible hag who is transformed into a beautiful woman by the act of love, see *LOATHLY LADY*; for the harvest hag, see *CAILLEAC*; *FIELD SPIRITS*; *HARVEST DOLL*. See also *INCUBUS*; *WITCH*.

Hagbard (or Hagbart) and Signe Title of a Danish ballad recounting the tragic story of the irresistible love of Hagbard and Signe. The legend, based on an epic now lost, is found in Saxo Grammaticus in both prose and verse forms. Hagbard, betrothed to Signe, was hanged by his father (King Siga) before the eyes of his love, and Signe in despair set fire to her bower and followed Hagbard into death. Haki, the Viking king, and brother of Hagbard, "came running up from the sea" and killed Siga in revenge. Hagbard and Signe are sometimes called the Romeo and Juliet of the North, or the Tristan and Iseult of the North. The legend, in both prose and ballad forms, contains the famous motif of the hero disguised as a woman entering the chamber of his beloved, and the symbolic idealization of loyal love in Signe's death.

Hagen (1) According to the *Nibelungenlied*, Gunther's uncle. He urged Gunther to welcome Siegfried, and when war threatened, he persuaded Siegfried to help. When Siegfried's wife, Kriemhild, and Gunther's wife, Brunhild, quarreled, however, he sided with Brunhild, and promised to avenge her. He persuaded Kriemhild to sew a cross over Siegfried's vulnerable spot under pretense of protecting him, and killed him. When Kriemhild began giving away Siegfried's gold, Hagen stole it and hid it in the Rhine. He advised Gunther against allowing her to marry Etzel, as this would give her a means to be revenged, and against visiting Etzel's court after they were married, but she accompanied him and fought valiantly against the treacherous attacks of Kriemhild's followers until only he and Gunther were left. She had her brother, Gunther, beheaded and brought the head to Hagen, demanding that he tell her the hiding-place of the gold, but he only laughed at her, whereupon Kriemhild caught up Siegfried's sword and beheaded Hagen too in front of the court.

(2) According to Wagner's *Ring of the Nibelung* the son of Grimhild and Alberich, and half-brother to Gunther and Guttrune. He was charged by his father with recovering the Ring for the dwarfs. He plotted against Siegfried and finally killed him. He also killed Gunther in a dispute over the Ring and was about to take it from Siegfried's lifeless finger when the arm shot up accusingly and frightened him. When the Rhine Maidens recovered the Ring, he pursued them, and was drowned.

(3) According to the 11th century German poem, *Gudrun*, the son of King Sigeband, who at the age of seven was carried off by a griffon. Hagen escaped and

took refuge in a cave where he found three little girls who had also escaped from the griffons. He provided for them for several years by slipping out while the griffons were away and killing small game with a little bow and arrow he had made. One day the body of a slain warrior was washed ashore, and Hagen took the armor and weapons and slew the griffons. Then the children signaled a passing ship, only to find that it belonged to one of his father's enemies. In a berserker rage Hagen threw thirty of the warriors overboard, and frightened the others into taking them to his home. As his father died, he became king and married Hilde, one of the maidens. They had a daughter, also named Hilde, who was very beautiful, and he was loath to part with her. Hettel carried her off by stealth, but Hagen overtook them and they fought. Both of them were wounded, and in the end he consented to the marriage as Hettel had proved himself a brave warrior.

haggis Sheep's heart, liver, onions, suet, oatmeal, boiled in its stomach: Scots traditional holiday dish.

Hag of Beare (Cailleac Béara) A famous hag of Irish and Scottish folklore. Her name is reported as Dirri or Digdi. She is associated especially with Dingle in West Kerry and is sometimes also called the Old Woman of Dingle. She is called the Hag of Beare because she had fifty foster children on the Island of Beare off the west coast of Ireland in Bantry Bay.

Her many lovers, her great age, and her renewal of youth are the features of her story. There is a West Connacht proverb which says: "Three great ages: the age of the yew tree, the age of the eagle, and the age of the Old Woman of Beare." All the books say "she had her youth seven times over and every man she lived with died of old age." There is a lost story about her great love for Fothad Canainne, one of the Fianna. When questioned about her age she would say she saw yon mountain when it was a lake, or such and such a lake "when it was a small round well." In Donegal there are stories about reckoning her age by counting the bones of the beeves she had killed, one each year of her life. This story is also told in Donegal about Aine.

The great wisdom of the Hag of Beare is pithily summed up in the words: "She never brought mud from this puddle to the other puddle.—She never ate food but when she was hungry." Once in a boat in freezing weather she saved her sons from freezing to death by making them bail water first in then out of the boat to keep warm.

Like the ancient Irish goddess Brigit, who later became identified with the abbess of Kildare, the Hag of Beare too is subject of the transition from goddess or semideity into nun. The word itself, *cailleac*, means veiled woman and lends itself to the double interpretation of hooded hag or veiled nun. For a hundred years the Hag of Beare wore the veil that Cummine (of the monastery of Clonfert) blessed on her head, and after that old age came upon her. Probably she is best known today because of the beautiful poem, *The Lament of the Old Woman of Beare*, translated by Kuno Meyer out of a 10th century manuscript and included in his small volume of *Ancient Irish Poetry* (London, 1911). It begins: "Ebb-tide to me as of the sea." It is a realistic grieving for lost youth and beauty: ". . . Every acorn

has to drop./ After feasting by shining candles/ To be in the gloom of a prayer house./ . . . Gray is the hair that grows through my skin/" are snatches that give the flavor of it.

The Hag of Beare is noted in rural Ireland for participating in farm activities, mowing contests, etc. She is credited with imparting the knowledge that the best flails have a hazel handle (*colpán cuill*) and a holly striker (*buail teán cuilinn*). There are stories about how she used to hire helpers for half a year, stipulating that they would receive no pay unless they could keep up with her in the work. None could ever keep up with the Hag, and many a fine young man she killed with the work, or put to death because he could not keep up. In the story of Big Donag MacManus and the Hag of Beare is mentioned the *darbdaol* (chafer) in the handle of the Hag's reaping hook which enabled her to outdo all others. Big Donag caught onto this, pulled the handle off the tool, the chafer fell out and ran off in the stubble. See BEETLE.

Many place names in Ireland are associated with the Cailleac Béara. She leaped from many a mountain top to another with an apronful of rocks, which would spill and cause some natural formation credited to her. Many a huge rock is her bed or chair; many a cairn is her grave. In Scotland too she figures as legendary place-maker. The Hebrides were formed from loose rocks which fell from her apron. She is also responsible for the Isle of Mull. The whirlpool of the Corry-vrecken between Jura and Scorva is also attributed to her; the one spot especially where the waters "boil up white" is called the Cailleac.

For further lore and legend about the Hag of Beare, see Eleanor Hull, "Legends and Traditions of the Cailleac Béara," *Folk-Lore* 38: 225 ff.

Hahgwehdiyu The Good Creator of Iroquoian mythology; son of Ataensic, or Sky Woman, and twin brother to Hahgwehdaetgah, the spirit of evil. Hahgwehdiyu shaped the sky with the palm of his hand, put his dead mother's face in the sky to be the sun, set the moon and stars in their places, gave to the earth the body of his mother, so that now Mother Earth is the source of all life. He created the rivers and the valleys and put forests upon the hills. He brought the animals and the birds from the land of the sun to inhabit the earth, and he planted the first corn, which was the gift of the crow. But Hahgwehdaetgah, the dark and evil twin, was forever striving to destroy what his brother wrought, brewing earthquakes and hurricanes to beset the world, and ushering in the West to darken the sun. Finally they challenged each other to combat, the winner to rule the earth. Their weapons were the huge thorns of the giant crab-apple tree, sharp as arrows. They fought for many days; but Hahgwehdiyu won, and banished his brother to the pit under the earth, or the underworld. See GA-GAAH; TWINS.

hair gray before beard A folktale motif (H771) classed with the huge group of riddles asked to test cleverness. A man, who is asked why his hair turned gray before his beard, answers that it is twenty years older.

hair of the dog that bit you A folktale motif (D2161.4.10.3), one of a large group dealing with magic cures and magic healing powers, and representing a

general widespread belief that a disease or wound can be cured by the same thing (or person) that caused it (D2161.4.10). The classic example occurs in the story of Telephus whose wound would not heal until the same spear (see ACHILLES' SPEAR) that gave the wound was brought to heal it.

Quite generally throughout the United States and Canada it is said that a hair of the dog that bit you, applied to the wound, will cure it. In Newfoundland it is the liver of the dog that did the biting which must be applied to the bitten place. In some parts of rural England it is believed that fat simmered from the snake that bit you will cure snake-bite.

United States southern Negroes say "it takes dog to cure dog": not only is some of the hair of the dog that bit you taken and tied against the bite, but an oyster is applied to the cut from an oyster shell, and a drink of whisky is given to cure the effects of excessive drinking.

The phrase *a hair of the dog that bit you*, used to mean a small drink of whisky to cure a hangover, has been traced in English as far back as John Heywood's *Proverbes*, first printed in 1546: "I pray thee let me and my fellow have/ A haire of the dog that bit us last night." Compare IPHICLUS.

Haitsi-aibab or **Heitsi-eibib** A culture-hero—transformer of the Hottentots, child of a magical birth and killer of the monster called Thrower-Down (Gā-gorib). Gā-gorib used to sit on the edge of a great pit and dare passers-by to throw stones at him. The stone always flew back and killed the thrower, who then fell into the pit. When Haitsi-aibab heard about his, he went to see. But he refused to throw a stone at Gā-gorib, until he diverted the monster's gaze; then he aimed under the ear, and the stone which hit Gā-gorib under the ear killed him and tumbled him into his own hole. The people lived in safety forever after.

In another version of the story reported by W. H. I. Bleek (*Reynard the Fox in South Africa or Hottentot Fables and Tales*, London, 1864) the two had a prolonged struggle and chase round and round the perilous rim of the pit, striking and shoving and yelling "Push the Haitsi-aibab down!"; "Push the Gā-gorib down!" Haitsi-aibab at last fell into the hole; but he prayed it to hold him up, and the hole pushed him up a little way. The third time he asked to be held up, it ejected him altogether. So the chase began again and the pushing in and getting out were repeated until at last Haitsi-aibab pushed Gā-gorib in, and "he came not out." This same story is also told with the Hottentot deity Tsūi Goab for hero, or with the Hottentot trickster Jackal for hero. The frequency of the cairns in South Africa identified as Haitsi-aibab's graves is explained by stories of his multiple deaths and resurrections. Frazer relates that travelers passing these cairns, in the narrow passes of the mountains, add another stone and say, "Give us plenty of cattle."

hajnaltűz tánc Literally, dawnfire dance: a Hungarian women's dance performed the morning after a wedding. It is still danced at Kazar in Nograd County. The girls and bride dance around a fire of straw and the bride jumps through to be thoroughly smoked, i.e. symbolically purified. A fire jump by any other girl signifies her intended marriage in the course of the year. [GPK]

Hako ceremony An important ceremony of the Pawnee Indians of the eastern Plains region of North America. The ceremony itself is called *skari* (*ska*, hand, and *ri*, many) by the Pawnee; Hako, literally, a breathing mouth of wood, is a comprehensive term used to designate all the articles which belong to the ceremony. The first group of participants, 20–100 people, was called the Fathers. Members of this group were all related to the leader (usually a chief) who had initiated the ceremony, and who was called Father. The second group, called the Children, was composed of relatives of a man whom the Father chose to receive the visiting Children; the leader of the second group was referred to as the Son. A third important person was a man, selected by the Father, who knew all the rites and songs of the Hako, and who took charge of the ceremony from beginning to end. Sacred objects used in the ceremony were two feathered sticks, an ear of white corn (Mother Corn), plum-tree sticks, the feathers, wings, etc., of several species of birds, two wooden bowls, and several other objects. Each article had a general symbolism, as well as a special significance peculiar to the Hako. The Hako could be given at any time of the year except in the winter, when all things are asleep; the rites were a prayer for children to increase the tribe, and also a prayer that the Pawnee as a group might enjoy long life, plenty, and peace.

The Hako consisted of two parts, in some twenty phases. First was the preparation; this included making the ritual objects, invitation to the Son, entrance of the Hako party to the village, consecration of the earth lodge where the rites were held. A delegation from the village of the adoption Fathers traveled to the village of the prospective Children and formally adopted the chosen man in a special ceremonial structure. Rituals preceded the departure, continued during the journey, and climaxed in the adoption, the anointing of a child, and an eagle dance by two expert young men. The rites ended with a dance and reception of gifts and a ceremony of blessing a little child, of presenting all the sacred objects (Hako) to the Son leader, and giving thanks to the Children. Second was the Hako ceremony itself, which lasted six days and consisted of a long round of songs, prayers, and ritual actions. The tobacco invocations and eagle dance focused around two calumet stems with eagle feathers, representing the male and female principles. As in the simpler and earlier Plains calumet ceremonies, these pipes symbolized friendship. Their connection with fertility was emphasized by other paraphernalia—ears of corn, an oriole nest, squash-shell rattles, symbolizing the breast of the Earth Mother. Incidental rituals in a Hako ceremony were comforting the child, prayer to avert storms, prayer for the gift of children, and changing a man's name. The Hako may be considered not the origin but the apex of the calumet dance complex. The corresponding eagle dances, distributed among Eastern tribes, are of brief duration and of limited, partly hazy significance. For a detailed study of the Hako ceremony, see *The Hako: A Pawnee Ceremony*, by Alice C. Fletcher, *RBAE* 22: 5–368. Compare CALUMET DANCE; EAGLE DANCE; GANEGWA'E. [EWV;GPK]

halak, hala, or bëlian The Semang (Malay Negrito) and Sakai name for the shaman: Malayan *orang*. The

halak is an ordinary man who, when not performing cures or conducting special ceremonies, hunts, gathers food, and lives like the others. When he is consulted by the Semang about the illness of a member of the group, he diagnoses the ailment by means of a magic crystal. He treats the patient directly by applying cooling leaves or giving herb tea, or indirectly by sending his assistant to dig up a nearby shrub and disentangle its roots. When this is completed, the trouble will vanish.

When a special ceremony is necessary for a cure, a hut (*panoh*) of palm leaves is erected and the halak, possessed by a *chinoi*, chants inside it, while the people gathered outside repeat the lines of the song. This is followed by sounds of body-slapping, grunting, and wailing from the hut.

Among the Sakai this performance is accompanied by the playing of bamboo stampers and the people outside sing and dance themselves into a frenzy. The affair will last until the patient is better or dies.

The Semang and the Sungkai Sakai also believe the halak, who learns his calling usually from his father, can change into a tiger. See PAWANG.

halcyon days A period of calm weather which exists during the seven days preceding and the seven days following the shortest day of the year: so called from a nautical tradition that the halcyon, or kingfisher, builds her nest on the water and that in spite of the violent weather prevalent at this time, the gods grant a respite from all storms while she hatches and rears her young.

haldā'wit Term for those who practice witchcraft among the North American Tshimshian Indians: distinguished from the shamans. The haldā'wit work their bewitchments by means of a piece of a corpse which they keep hidden in a box. They cause varying degrees of illness and disease by means of this box and its contents, and sometimes the death of their enemies. After a death which he has caused, the haldā'wit must circumambulate the house in which the dead body lies and must crawl sunwise also around the grave, disguised in the skin of some animal. If he does not, he will die soon himself. Sometimes if he does, he dies sooner, because the relatives of the dead keep careful watch over the grave to catch anyone possibly performing this circumambulation. If the haldā'wit is caught he is killed. Anyone caught by a group of haldā'wit spying on their activities is compelled to become one of them or die at once at their hands.

haldde The spirit of nature of the Lapps, derived from Finnish *haltia*. The word is often found in combination, as for example: *māra-halddo*—the spirit of the sea, *ēacce-haldde*—the spirit of the water. (Compare *Ćacce-olmai*—the man of the water, and *saivo-neita*—the sea-maiden.) All the names emphasize the importance of water deities to the Lapps. Compare HALTIA. [JB]

Halfchick The central character of a European folktale (Type 715; K481), known in several variants: the Demi-Coq of French, and the Mediopollo of Spanish folktale. The tale is known in India, Russia, Finland, Estonia, and western Europe, excepting Germany, the British Isles, and Czechoslovakia. The western European versions seem to be of Castilian provenience. In its original form, as reconstructed by R. S. Boggs (*The*

Halfchick Tale in Spain and France; FFC 111), the story is as follows:

Halfchick, a half-grown runt of a chicken, comes across some money while scratching in the manure pile. He starts off to buy some grain from the king. He comes to a river, discusses his errand, and the river decides to accompany Halfchick. The river is hidden in Halfchick's anus. So too with a wolf, and a fox. The king, who wants the money and doesn't want to give grain for it, invites Halfchick to stay overnight, putting him in with his chickens. He thinks the chickens will kill the puny creature. But Halfchick lets the fox out and in the morning all the king's chickens are dead. The next night Halfchick is put in with the horses, and the wolf is let out. On the third night, Halfchick is put in the oven. Out comes the river; out goes the fire. The palace is flooded. The king gives up and sends Halfchick away with the grain and with the money.

The five significant episodes in the tale are the origin of Halfchick, his purpose in making the journey, his helpers (animal and otherwise) and the things they do, the place in which he hides them, and his victory. Though the earliest known reference to the tale is French (1759), it seems to have originated in Castile, spread to the Spanish coast, from there to Brittany and America (Boggs discusses five Spanish American and two American Indian variants), from Brittany eastward and southward in France. Indicative of the change occurring in the variants, and of the essential elements remaining constants, is the Cochiti (New Mexico Indian) tale of Half Rooster (R. Benedict, *Tales of the Cochiti Indians*, BBAE 98, pp. 182-184). Half Rooster complains to the king that his spoon has been stolen. The king is afraid of the big rooster and tries to have him killed. But hidden in Half Rooster's anus are Lion, who kills the wild horses, Bear, who kills the bulls, Wolf, who kills the mules, Grinding Stone, who smashes the santos and pictures in the church, Fire, who melts the ice they pack around Half Rooster to freeze him, and Water, who quenches the fire they build to burn him. The king "took him to his house and he lived with him forever."

Of two literary versions examined by Boggs, that of Fernán Caballero was reprinted by Andrew Lang in *The Green Fairy Book* and became a familiar selection in school readers of the United States. Halfchick here is half a chick who travels, against the advice of his mother, to see the king in hope of finding a court surgeon to cure him. But Halfchick refuses to help river, wind, and fire. At the court, he is thrown into a pot by the cooks and boiled to a worthless lump. He is tossed away. The wind whips him to the top of a tower where he becomes a weathercock, at the mercy of wind, rain, and sun.

half-horse, half-alligator A frontiersman; a Mississippi or Kentucky River boatman; a term braggingly self-imposed to imply strength, bravado, and invincibility. He was a man of marvelous exploits, marvelous strength and spirit, absolutely fearless, full of antics and horseplay, noise, roar, and brag. He could "wade the Mississippi, leap the Ohio," and perform many like feats.

half right and left and half promenade An American square dance term. Two couples cross to each other's

places as in right and left through (8 counts); partners then cross hands with the right above the left, walk back to their own places, each couple keeping to the right in passing. When in their own places, without releasing hands, the gentleman turns his partner round into her place on his right (8 counts). [GPK]

Hallewijn or **Heer Halowyn** The title of a Dutch ballad, deriving from the Apocryphal tale of Judith and Holofernes (whence Hallewijn), known in all parts of Europe from Italy to Scandinavia, Hungary to England: probably composed not earlier than the 15th century. The ballad, as derived from its ancient source, shows the closest correspondence to the original in the Netherlands version, for only in that ballad does the heroine tell Hallewijn's mother that she is carrying the head and then bring the head to her father's hall. All Biblical reference is however lost. In the ballad, the girl is lured from her castle by the music of the knight. He threatens to kill her as he has her sisters. In the various versions, she kills him, or she is killed and avenged by her brothers, or she is rescued by the brothers.

In the German versions, the knight is Ullinger, Ullrich, etc., and the girl is killed and avenged or she escapes. The Hungarian *Molndr Anna* is an offshoot of the German. The English *Lady Isabel and the Elf-Knight* or *May Collin* (Child #4) has preserved in some versions the supernatural character of the knight, a mischievous, malevolent nature added as the ballad migrated through Scandinavia. In France Renaud is the killer; in Italy the ballad is known as *Monferrina*; in Spain and Portugal it is *Rico Franco*. The death of the girl is avenged by her three brothers in the Czech ballad *The Murderer*. The ballad is said to be very popular in Poland. Taken all in all, the *Hallewijn* ballads may be the most widespread in Europe.

Halloween or **Hallowe'en** All Hallows Eve; the eve of All Saints Day. See ALL SAINTS DAY.

haltia The protecting spirit of the Finns. The word is derived from the Gothic *hallita*, to rule over, and is often found in combination, as for example: *kodin-haltia*, a household fairy; *vedenhaltia*, a spirit of the water; and *metsänhaltia*, forest ruler. Every forest possesses such a ruler. Sometimes the *metsänhaltia* is in the form of an old man with gray beard and with a coat of lichens. He can stretch his body so high that his head will reach the level of the highest tree. The *mets-haldijas* is known among the North Estonians. His cry in the forest is an evil omen, perhaps of death. The most important spirit of this kind is the Finnish *talon-haltija*, the guardian of the home, sometimes representing the person who first died in the house. Besides the spirits of the dwelling-house, there are guardian spirits of each kind of house also: guardian spirits of the bathing-house, the granary, the stable, and others. [JB]

hamadryad In Greek mythology, a tree nymph; a dryad; specifically, an oak-tree nymph as contrasted with a fruit-tree nymph. Later, scholarly contrast was made between dryad and hamadryad, the dryad being simply a tree nymph, the hamadryad being one whose life was in the tree and who died with it, but this distinction was not made by the people. Compare NYMPH.

Haman The villain of the Biblical story of Esther; the close adviser of King Ahasuerus, whose machinations against the Jews of Persia led to his downfall. Haman hated the Jews, Mordecai especially, and induced the king to order the slaughter of the Jews of the kingdom. But Queen Esther, Mordecai's cousin, demonstrated to the king the evilness of Haman, who then was hanged on the gallows 50 cubits high that he had ordered prepared especially for Mordecai. The story is elaborated in Jewish tradition; for example, Haman is an ex-barber and not only must lead Mordecai through the streets on the king's horse (he had thought this honor was to be his), but has to trim Mordecai's beard as a further sign of his subservience. At the reading of the *Megillah*, the book of *Esther*, in the synagogues on the festival of Purim, it is customary to drown out the name of Haman when it occurs, with the sound of rattles and other noisemakers.

Ham Bone An American Negro hand-patting rhythm accompanied by a rimed chant which embodies in its several variants a number of children's rimes and scraps of song texts. The rhythm is made by clapping the hands and slapping shoulders, chest, thighs, and buttocks. The words begin with such phrases as: "Ham bone, ham bone, pat 'em on the shoulder. Gimme a pretty gal; show you how to hold her"; or "Ham bone, ham bone, where you been? All around the world and back again." Then bits of the *Frog's Courting Song*, or the lullaby *Hush Little Baby* ("momma's gonna buy you a billy goat") or various game chants are woven into the rhythm. Compare BALL THE JACK; JUBA.

hamsa or **hansa** In Hindu mythology, the cosmic gander; the vehicle of Brahmā, hence also an animal mask of the creative principle, and also an epithet applied to modern ascetics and teacher-saints who have obtained freedom from rebirth through their spirituality. The hamsa symbolizes the divine essence which abides in the individual but remains free, immortal, and omniscient, and which manifests itself to the Indian yogi in the sound of inhaling (*ham*), and of exhaling (*sa*). At the same time, *sa'ham* (literally, this I), the sound in reverse, asserts the divine nature of the man who breathes. See GOOSE.

Hau Chung-li One of the Eight Immortals of Chinese mythology. He was a friend and teacher of Lü Tung-pin and engaged with him in many drunken parties. He has many legends and is sometimes presented as a Taoist priest, as a warrior, or as a beggar taking the pill of immortality. He frequently carries a peach of immortality.

[RDJ]

handfasting or **handfesting** A term used to refer to betrothal ceremonies in some parts of Scotland, Denmark, and elsewhere. In this instance betrothal has most of the sanctions of marriage. The formalization of betrothal by communal celebrations and festivities is known in many parts of the world as one of the steps in the marriage ritual, though the amount of sexual intimacy permitted to betrothed couples varies with the cultural complex of the community. Handfasting refers more particularly to a trial marriage, dissolved at the end of the year if either party is dissatisfied. Granet has shown that the ancient Chinese entered into arrangements of this sort during the Spring festival, and that

if the union was fruitful it remained as a marriage. Similar customs exist in several parts of the world in which marriage as we know it is customary. In India it is known as *gandharva* marriage. Cohabitation without further ceremony is accepted in communities which are visited only rarely by itinerant priests. This custom is also connected with the common-law marriage of English common law. The attempt to explain handfasting by the penetration into England of a Roman custom has little weight. Compare BUNDLING. [RDJ]

hand of glory A charm made from the dried or pickled hand of a dead man, preferably a criminal hanged on the gallows, and conferring invisibility on the owner, or rendering those to whom it is presented motionless: a western European, specifically northern English, belief, but with variants scattered throughout Europe and the Mediterranean lands and in parts of the East and the Americas.

Many of the beliefs about the hand of glory are explained by its etymology. It is undoubtedly a derivative of the French *main de gloire* or *mandragore*, *mandragora*, the mandrake. (Compare MANDRAKE.) This would explain the specific reference to the hanged man, as the mandrake is known to be found under gallows, the growth germinating from the seed of the dead man.

Ordinarily, the hand is used holding a candle made also from the fat of a hanged man, but sometimes the fingers of the hand itself are burned. The flame of these fingers can be extinguished only by milk. The finger of a newborn or unborn child was believed to be a very efficient form of candle, and it is reported that in 17th century Germany pregnant women were sometimes murdered by thieves to obtain these fingers. To be absolutely certain that everyone in the house to be entered is asleep, the thief lights as many fingers as there are inhabitants. If one of the fingers, specifically the thumb, does not light, the indication is that someone has remained awake. The efficacy of the burning finger is so great that the thief can place it on a table and go about his work safe in the certainty that he will not be interfered with by an awakening.

Similar to the practices surrounding the hand of glory is the use for making unconscious of certain other materials connected with the dead. For example, in Mexico, the stolen left forearm of a woman who has died in her first childbed renders the inhabitants of a house unconscious, "as if dead," if it is beaten on the ground before the house. A human shin bone filled with tallow serves the Ruthenian burglar in like manner. All these practices are of course based on the principles of sympathetic magic.

hands Although the general interpretation of hands belongs to the complex science of palmistry, hands appear in folklore and folk custom in other ways. The use of hands in sign language is highly developed in the alphabet of the deaf and dumb. In occupied territories during World War II the extended thumb and first finger meant "V for Victory." The ceremonial clasping of the worshippers' own hands at appropriate moments is important in the rituals of some Buddhist, Lamaist, Christian, and other sects. Placing thumb between the index and middle fingers, probably a phallic gesture, wards off the evil eye in China, Italy, and elsewhere; and

the thumb to the nose is a derisive and insulting gesture in most parts of the known world. When a hand with five fingers extended appeared in the Ganges, it meant, "What cannot five united men effect?" It disappeared when two fingers were displayed meaning, "Two men can accomplish anything." This use of hands and sign language in fraternal or other secret societies requires further study. In an Indian version of the Achilles heel motif, the king's vital spot is in his left hand. In the Orient people dispel evil spirits by waving their hands around their heads. Many peoples cut off the right hands of thieves. The Moslems consider the left hand as unclean, but the Chinese consider that the left hand is on the yang or male side of the body. See FINGERS; GESTURES. [RDJ]

handsel A gift at the beginning of the day, the year, or the enterprise: from Old English *handselen*, hand gift, giving into the hand. It brings luck to a bargain. In some communities the first customer of the day receives a small gift, or the first man at the bar is given a free drink. The gift of a cent thrown into a new purse will insure the purse's owner against the purse's ever being empty. [RDJ]

Hansel Monday The day when gifts are distributed to children and local functionaries in Scotland: corresponding to Boxing Day in England or Christmas Eve in some parts of Germany and the United States. It is a social rather than a religious festival though it may be the occasion of religious ceremonies. [RDJ]

hanging The act of putting a person to death by suspending him by the neck from some support. This punishment seems not to have been used by the Jews, only slightly by the Romans, and infrequently by the Greeks. It was practiced in the steppes on the border of Europe and Asia, in middle and northern Europe, and in North America where it was introduced from England. In the 18th and early 19th centuries, hanging was inflicted even for petty crimes; at best, it did not have the ignominy attached to it that it had later.

It is suggested that hanging was perhaps of ritual origin and that it had on this account sacrificial and religious connotations. As a sacrifice that had been blessed and consecrated and offered to the gods, the clothes of the person hanged, the gallows, rope, nail, and all the paraphernalia used had magical power.

Punishment by hanging is a frequent theme in English and Scottish ballads, and this matter has been intensively studied by scholars. All over central Europe a severe storm meant that someone had hanged himself. It is general European belief that one whose eyebrows meet will die on the gallows. Southern U. S. Negroes say that dogs are afraid to approach a tree on which a man has been hanged. [CRS]

Han Hsiang-tzu One of the Eight Immortals of Chinese folk belief. Han is the immortal youth who loved flowers and produced plants with poems written on their leaves in letters of gold. He is portrayed with a basket of flowers or a jade flute. He is said to have been a pupil of Lü Tung-pin and is the patron of musicians. [RDJ]

Hansel and Gretel A popular German folktale (Type 327A), appearing in the Grimm collection (#15): the

title is sometimes applied inaccurately to *Brother and Sister* (Grimm #11), which has some similar elements but is not an ogre story. *Hansel and Gretel* is known throughout Europe, especially northern Europe, thence eastward to India and Japan, all over Africa, among the West Indian Negroes and the North American Indians, in the islands of the Pacific. It is not clear whether the non-European versions are of independent invention or are derivatives of the European tale.

The story belongs to the children and the ogre type, in which the ogre is burned to death in his own fire. Hansel and Gretel, children of a poor woodcutter, are abandoned in the woods after their stepmother convinces their father that there is not enough food for all. But Hansel has overheard the parents talking and, pretending to look back at the cock on the roof of the hut, has left a trail of pebbles. The moonlight on the pebbles shows the children the way back to the hut. The stepmother locks the door that night and Hansel, unable to get more pebbles, has to leave a trail of breadcrumbs the next day. After night falls, the children discover that their path is gone; the birds have eaten the crumbs. After wandering through the forest, they come across a gingerbread-and-sugar house. They break off bits of the house to eat and out comes an old wicked witch. She locks Hansel in a stable (or cage) and begins to fatten him, for her little house is a trap with which she catches children to eat. Gretel obtains a bone for her brother, and when the nearsighted witch tells him to stick out a finger so that she can tell if he is fat enough to eat, Hansel puts the bone through the bars for her to squeeze. At last, impatient, she tells Gretel to build up the fire; she is going to cook Hansel. But, when the witch tells Gretel to crawl into the oven to see if it is hot enough, Gretel says she doesn't know how. The witch demonstrates, and Gretel slams the oven door on her. Filling their pockets with the jewels within the house, the children travel back through the woods, ride across a wide water on a duck's back, and discover when they reach home that the stepmother has died. Father and children are now in comfortable circumstances because of the jewels.

The essential part of the story is the episode of the child-eating witch. But the cruel stepmother (S31), the abandoned children (S300), the disappearing trail of bread or peas (R135), the gingerbread house (F771.1.10) are characteristic of the Hansel and Gretel story. In a version from Jamaica (Beckwith, *Jamaica Anansi Stories*, MAFLS XVII, pp. 146-147), the stepmother has disappeared from the tale as has the trail of bread. Instead the witch, disguised as a bird, directs the children to the hut. From that point, the story follows the same course as the German tale. The cannibal ogre who falls into his own trap (G512.3.2) is known in Hungarian, Portuguese, Lapp, Norwegian, Indian, Persian, Kaffir stories; this is of course a reflection of the stupid ogre deceived by the hero's supposed ignorance (G526).

Han Shih The Chinese festival of cold food; the day before Ch'ing Ming, the Spring Festival of Pure Brightness, occurring late in the Second or early in the Third Moon. On this festival all fires were extinguished and only cold foods were eaten. The fires were rekindled on Ch'ing Ming. [RDJ]

Hanswurst The vulgar and low-comedy attendant of the smooth hero in folk comedy in Europe is given the name of a popular dish: Dutch, Pickle Herring; Italian, Macaroni; French, Jean Potage; German, Hanswurst; English, Jack Pudding. [RØJ]

hantu Generic name for the ghosts and evil spirits of Malay belief. There are many varieties of *hantu*, among them the storm demon, *hantu ribut*; the deep-forest demon, *hantu rimba*; the grave demon, *hantu kubor*; and the tiger demon, *hantu bēlian*.

Hanukkah The Jewish Feast of the Maccabees or Feast of Dedication, an eight-day festival occurring on the 25th of Kislev (December): known also as the Festival of Lights or Feast of Illumination. According to a Talmudic legend, after the destruction of the Temple by Antiochus Epiphanes, when the priests reentered the sanctuary only one small cruse of unpolluted oil was found, and it lasted the eight days until a new supply of sacred oil could be obtained. The feast was instituted in 165 B.C. by the Maccabees and the elders of Israel to celebrate the dedication of the altar, previously defiled by Antiochus. However, Hanukkah occurs at the time of an ancient pagan festival and of what was a more ancient Jewish winter solstice observance.

The Hanukkah lamp, lit at this season, gives the festival its popular name, the Festival of Lights. The Shammaite or older tradition lit all eight lights on the lamp on the first night and reduced the number by one on each following night; the Hillelites lit one light the first night and increased by one each succeeding night. There are traditionally as many lamps as there are entrances to the house. The light is intended to illuminate the house outside and is not meant for general lighting; reading by this light is forbidden.

Hanumān In Hindu mythology and religion, the monkey god, son of Vāyu and the monkey nymph Añjanā. Hanumān was the ally of Rāma in his battle with Rāvana and helped him regain Sītā whom Rāvana had carried off. During one of the battles with the demon, the Rākshasas greased his tail and set it on fire, but he swung around and burned their capital city, Lankā. He collected medicinal herbs to restore the wounded and killed the demon Kālanemi. Rāma rewarded him with the gift of perpetual life and youth. He is represented in monkey form with a yellow complexion and an endless tail.

In modern Hinduism, Hanumān is worshipped as a village deity. Originally he may have represented the genius of the monsoon. He is worshipped by women who desire children and by wrestlers. Apes are still considered sacred in India and weddings of apes are occasionally performed as a religious service. See GRĀMA-DEVATĀ. Compare BHAIROṆ.

haoma The plant of life and of Indo-Iranian sacrifice; also, the drink prepared from it which gives strength to men and gods: the equivalent of the Indian soma. Haoma gave the gods immortality and men the gift of spiritual life. It gave children to women and husbands to girls. The plant received its healing power from Vohu Manah. When deified, it was the son of Ahura Mazda.

Its supra-terrestrial form, the white haoma, was identified with the gaokerena tree. The actual plant, the

yellow haoma, is said to grow on the summits of mountains from which it is brought by the birds of heaven. A haoma plant contained the fravashi of Zoroaster whose father, a priest, absorbed it and thus produced Zoroaster.

Haoshyangha, Hōshang, or Hūshang According to the *Avesta*, the first ruler and a member of the first royal house of Persia: said to have ruled over the daēvas. According to the *Bundahishn* he was the grandson of Siyākmak and the great grandson of Gaya Maretan. He was the first lawgiver and the culture hero who introduced the use of fire and metals. In early Iranian myths, he performed a sacrifice on the top of the great iron mountain, Hara Berezaiti, and obtained divine protection and the kingly glory (khvarenah). The demons fled to the darkness after he had slain two thirds of their number.

According to the *Shāhnāmāh* he invented blacksmithing and the making of tools such as axes and saws, and taught men how to irrigate land. On a mountain top he struck with a stone a dragon whose smoke was bedimming the world, and thus caused fire (lightning) to appear. That night he held the feast of Sadah. He domesticated animals (sheep, asses, oxen) and ordered the destruction of beasts of prey. He was succeeded by Takhma Urupi (Tahmūrath), the son of Vīvanghvant (according to the *Avesta*), or by his son (according to Firdausi).

Hāp, Hāpi, or Apis Literally, the hidden: in ancient Egyptian religion, the sacred bull of Memphis, symbol and incarnation of Ptah-Osiris. This bull was the offspring of a virgin cow who had been impregnated by lightning or a moonbeam. In death it was known in Ptolemaic times as the powerful god Serapis (Osiris-Apis); in the Memphite Serapeum, uncovered in 1851, 64 mummified bulls were found. The bull was chosen by its special markings, and succeeded to its post of honor after the death of the preceding Hāp. Those who inhaled its breath became thereby able to prophesy. It is conjectured whether the calf worshipped by the Israelites in the desert during the exodus from Egypt was identical with, or an image of, this bull. See BULL.

Hapiñuñu Female spirits of the Quechua and Aymara Indians of South America. They are said to fly about at night and catch people with their long hanging breasts.

[AM]

happy hunting ground A popular term for the hereafter in references by whites to American Indian concepts of life after death. That the Indians believed in a hereafter is well attested, but their own descriptions of the activities which go on in such a land seldom include references to hunting. In the land of the dead all is quiet in the daytime, when the dead are invisible; at night, however, fires are kindled and the dead devote themselves to dancing, gambling, and other social activities. The culture hero, or a notable deity, or a "chief," presides over the land of the dead, and the spirits live under his direction much as people do on earth. The Blackfoot, a northern Plains tribe, believe that the land of the dead is located in some sand dunes to the north of them, and that it is good to die and go there while in the prime of life because the dead are not rejuvenated, but live on in the hereafter at the

same age they were when they died, and subject to the same infirmities. Other tribes also localize their land of the dead: the Valley Maidu of California say that their dead go to the Marysville Buttes, visible in Maidu territory, for example. But for the great majority of tribes the land of the dead is merely "across an ocean" in the West (most frequently) or the South, East, or North. Mortals visit the land of the dead occasionally; the Orpheus tale, which is widespread over North America, recounts the visit of one or more men in search of a dead relative to the land of the dead, and the return of these mortals to earth. Accounts of visits by human beings who "die" temporarily and go to the hereafter, and then return to life, usually with a prophecy of some sort, also often contain descriptions of the land. Among some Eastern Woodlands tribes the path to the land of the dead contains obstacles difficult to negotiate, and some spirits fail to reach the hereafter; this may or may not be a native concept. No idea of punishment after death for misdeeds during life, or any concept of heaven and hell, seems to have existed in native North America, although several Eastern tribes have now taken over the idea of punishment and reward after death. See AFTERWORLD. [EWV]

Hapy or Hapi (1) In Egyptian religion and mythology, one of the four sons of Horus who dwelt in Amenti; a mummiform spirit with the head of a dog or a cynocephalus ape, who protected the embalmed lungs of the dead preserved in the second Canopic jar.

(2) The god of the Nile; an obese bearded man with the breasts of a woman; the Greek Nilus. Both the great stomach and the breasts are symbols of the fertility of this water god; the lotus or the papyrus carried on his head, and the water he poured from vases are likewise fertility symbols. Sometimes the god is dual: as the red god of the lower Nile he wears the papyrus; as the blue god of the upper river, he wears the lotus. Hapy was worshipped especially at the annual inundation; the mysterious resurrection of the life-bringing river caused him to be identified even in early times with Osiris.

Hare The Hare, Great Hare, or White Hare is a character who, among several Algonquian tribes of eastern North America, is credited with forming the earth, and ordering and enlarging it. A curious identification of the Great Hare and a humanlike culture-hero-trickster, Nanabozho, occurs in specific tribes such as the Ojibwa and Menomini. In these groups the culture hero first appears as a hare, and as Hare, is the chief actor in many of the definitely trickster tales. Among the Potawatomi White Hare (Wabosso, Maker of White) is one of four brothers, Nanabozho being the first-born of the four. Wabosso, seeing the sunlight, went north, assumed the form of a White Hare, and became a powerful magician. To Nanabozho, however, and not to White Hare is given the credit by the Potawatomi of instituting the Midewiwin or Grand Medicine Society. The Ojibwa of the present time, in recounting culture-hero and trickster tales, identify Hare with Nanabozho, but can offer no explanation for this identification. [EWV]

Hare and the Tortoise Title of one of Aesop's fables (Jacobs #68) in which the Hare and the Tortoise run a race. Sure of winning, the Hare lies down and takes a nap before he reaches the goal, oversleeps, and is passed

by the persevering Tortoise, who thus wins the race. This incident (and its moral) comprises the motif (K11.3) of the story as it has spread all over Europe. It is known among the Ainu and in other parts of eastern Asia, and is common also throughout Indonesia.

It is a popular story among almost all peoples of Africa, from whom it has passed into the possession of New World Negroes. The Negro versions, almost universally stress the superior wit of the weaker participant; Tortoise is portrayed in the role of Trickster who wins by his wits instead of by plodding. The Ibo people of Nigeria tell how Frog wins the race against Deer; Turtle beats Antelope among the Bulus.

South Carolina Sea Island Negroes tell this story about Hare and Cootah, and have a version also about the race between Race-Horse and Cootah, who wins by planting his relatives, one at every mile along the course and one at the end post, or about Mr. Deer and Mr. Terrapin, who wins by the same ruse and remarks at the end, "I kin head you off with sense." In two Bahama Negro stories the race is between Lobster and Conch, or between Horse and Conch, and the prize is to marry the king's daughter. These stories combine both patterns: Conch is smart enough to plant his relays, but both Lobster and Horse are oversure and foolish enough to stop and feed en route. Thus Conch with his one foot wins over Horse with his four, and Lobster with his ten. There are also Apache, Cherokee, and Ojibwa Indian versions of the tale.

Harmonia's necklace In Greek mythology and legend, the unlucky necklace made by Hephaestus and given to Harmonia by Cadmus of Thebes as a wedding gift. It was inherited by Polynices and given to Eriphyle so that she might persuade her husband Amphiarus to join the expedition against Thebes. After bringing misfortune to other owners, it was dedicated by Amphiaraus and Acarnan to Athena Pronaia at Delphi. Even then the misfortunes did not cease, for it was stolen from the temple by Phayallus for his mistress, whose death occurred when her son went mad and burned the house down with her and her treasures inside.

harp A plucked stringed instrument, the only one in which the strings extend vertically from the soundboard instead of paralleling it; in many civilizations since antiquity the most highly honored of instruments both for religious and secular musical ceremonies. The earliest harps were bow-shaped, the resonator forming a continuation of the arc, and were derived from the primitive musical bow. Such harps were played in Sumer before 3000 B.C., and have been found on an archaic Greek figurine, on relics of ancient Egypt and the earliest known civilization of India, in Africa and Java. Later harps were angular, the resonator set at an angle to the neck. Instruments of this form were seen in Mesopotamia about 2000 B.C., were introduced into Egypt and Greece from Asia and into the Far East from Turkestan in the 4th century. They spread among the Arab peoples from Persia in the Middle Ages. The angular harp known in northern and northwestern Europe before 1000 A.D. is of disputed provenience. All ancient harps lacked the fore-pillar, which forms the third side of the generally triangular frame of most instruments since the Middle Ages. The number of strings varied greatly and may have been more important for

the significance of the number than for musical effect—for example, five, for protection from harm; seven, for sanctification.

In Egypt, as in Sumer, the harp was the chief and most treasured instrument. Numerous forms were played, varying in size from a 7-foot type played standing, to a small portable type carried against the shoulder. Certain examples were provided with a leg or foot to be rested on the ground as the seated player touched the strings. Ornamentation was elaborate and symbolic, with painted and mosaic designs, often involving the lotus, sphinx-head carvings, and shapes associated with Isis or Osiris. That the instrument served a religious function is indicated by the fact that the players depicted in the tomb of Rameses III are priests. In the Old Kingdom, players were always men, to whose use the large standing harp continued to be restricted, but women in later eras played the smaller harps.

In Greece, the harp (*magadis* or *pektis*) was considered a dreamy, intimate instrument suited to women, and the accomplishments of the hetærae included playing it, though other women did not scorn it.

The translation of Hebrew terms for musical instruments has for centuries confused the knowledge of music in Biblical times. Probably the *nevel*, a triangular stringed instrument used for marching, was the harp of the ancient Jews, and the *kinnor*, generally translated as harp, was a lyre, played for light entertainment and pastime by harlots and by shepherds. It was this instrument that was played and, according to legend, invented by David, the shepherd king. However, the so-called harp of David persists in story, in art works, and on down to the Negro spiritual, *Little David, play on your harp*.

In India, the traditional inventor of the harp was Narada, a semi-divine sage and astronomer. The archaic harp of India was probably called *vinā*, though the name is now applied to a type of zither and has been used for other instruments.

The history of the harp in Europe is complicated by the ambiguity among chroniclers of the 8th to 14th centuries in the use of the words *chrotta* (ML), *crot* or *cruit* (Irish), and *rotta* (on the Continent), which are variously interpreted as harp or lyre, and by the difficult evidence of the worn representations of a stringed instrument on Irish stone crosses of the 8th and 9th centuries, also cited as either harp or lyre. The confusion is further confounded by the Welsh term *crwth*, equivalent to Irish *cruit*, which may have been the ancient harp of the bards but in more recent times refers to a bowed instrument influenced by the violin, and by the Scandinavian *harpa*, which was probably a lyre, plucked in its earliest form and later bowed. National pride has occasionally subverted scholarship in the controversy. Regardless of etymology or construction, the instrument is fixed in the mind of the folk as a harp, and is so conceived in their stories and songs.

Gaulish bards chanted to the accompaniment of the plucked strings and their instrument appears on Gaulish coins. The highly trained and revered bards of the Welsh and Irish peoples improvised their lyric, epic, and satirical poetry to its music, long before the Roman Conquest. Psalms and hymns were accompanied by the *cruit* in the hands of early Irish churchmen. In Anglo-Saxon England, scops and gleemen carried their wel-

come in their harps. Thus, in the guise of a harper, Alfred the Great entered the camp of the Danes on the Isle of Athelney. Irish minstrels with their wire-strung harps were famous on the Continent in the early Middle Ages, and Saxon harpers were known in France in the 13th century.

The harp was the favored instrument of royalty and nobility, believed to have strong powers over its listeners, and to dispel the spirits of evil. In Welsh custom there were three types of harp (*telyn*)—the king's, the bard's, and the gentleman's. Every important family owned a fine harp. The *Leges Wallicæ* listed three necessities for a man's home—a virtuous wife, a cushion for his chair, and a well-tuned harp. The harp was sacred to the free and might not be handled by slaves. The well-to-do Anglo-Saxon also owned and played a harp, which could not be taken from him for payment of debt or punishment.

In Ireland, where the festival harp (*cláirseac*) has become the national emblem, harp stories and traditions abound. The legend of the origin of the harp is that a woman walking on the beach came across the skeleton of a whale with the wind singing so sweetly through its sinews that she was lulled to sleep. Her husband, finding her so, observed the principle of the enchanting sound and made a harp to imitate it. It is also an Irish belief that the Milesians brought a harper with them to the island.

In both Ireland and Wales the fairy folk were believed to be expert harpists, and their music, seldom audible to the ears of men, was irresistible but ominous.

Even the tuning key of famous Irish harps was an object of value, often jeweled or otherwise ornamented, and theft or sequestration of the key was almost as strictly condemned as if it were the harp itself.

Like bagpipers, Irish harpers were outlawed as spies and spreaders of sedition in certain periods of history. Queen Elizabeth, while maintaining an Irish harper at court and sanctioning the appearance of Welsh harpers at an Eisteddfod, enacted laws against the passage of such musicians into disturbed areas. The Cromwellians systematically destroyed Irish harps. During the Jacobite period, harpers attended the Stuarts.

In German folktale the harp is one of the instruments connected with the motif of the singing bone and is used in certain versions of *The Two Sisters* (Child #10), in which the harp, strung with the hair of the drowned girl, sings the murderer's guilt. Another story expresses the compulsive power of the harp. Horaut the Dane, a minstrel, could play so that not only the guests in the hall but the furniture and tableware danced madly.

The widespread conception that angels in heaven play the harp may derive from the *Book of Revelation*, which says that harps will sound in the New Jerusalem. Chaucer's Pardoner, however, labelled the instrument as the Devil's.

The collection of Welsh and Irish harp tunes has amassed some thousands of airs, many of them still familiar. Much of this music was saved from extinction by the revival of the Eisteddfod, the Granard Festivals in Ireland in the 18th century, and particularly the great Belfast Harp Meeting of 1792, at which Edward Bunting began to note down the tunes of the aged blind harper Denis Hampson and others. Many of the airs used by Thomas Moore are those collected by Bunting, including *Let Erin Remember* (*The Little*

Bold Fox), *The Harp That Once Through Tara's Halls* (*Molly My Treasure*), and *The Minstrel Boy*. *The Foggy Dew* is believed to have been originally a harp tune, as is *Robin Adair*, said to be composed under the title of *Eileen Aroon* by a famous Irish harper named O'Daly.

The Æolian harp, sounded by the wind, harks back to David's kinnor, which sang over his bed in the night breezes. The 10th century Archbishop of Canterbury, St. Dunstan, who was a harper, experimented with wind-blown harps and found himself under suspicion of practicing magic. However, early in the 19th century romantic spirits found delight in such instruments in their gardens, parks, and homes.

Harps among primitive peoples are either of the musical bow type or European derivatives introduced after contact with conquerors. Bamboo bow-shaped harps are found in Borneo, Malaya, and Africa, and are often associated with women's ceremonies. The Wahehe of Africa have a harp story similar to those of the singing-bone motif. Among the Indians of Central and South America small wooden harps, possibly surviving from a Spanish type, are still in use. The Cáhita call theirs *arpa*; the musical bow is called *arpita*. The Yaqui use harps to accompany pascola and deer dancers. The oldest of the pascolas addresses the harp while he inserts a ceremonial stick into its holes, telling it the names of all the animals in the woods. Masks are not worn when the harp and violin accompany the dancing, as they are for dances to the indigenous drum and flute. Probably the use of harp and violin was begun under missionary influence, and a difference is observed in handling them.

A very primitive form of the harp is used in central Africa, where the sound box is a bark-covered pit, and the frame a limber stick stuck into the ground beside it, with a string bending it toward the bark surface. The string is plucked to sound the instrument. As in the case of most primitive instruments, the cycle of development is from such large, earth-bound forms to smaller and more portable types. Compare LYRE.

TERESA C. BRAKELEY

Harpalyce (1) In Greek legend, the daughter of Harpalyceus, reared on the milk of mares and cows after her mother died and trained by her father in the manly arts. Partaking of the virtue of the milk she drank, she was too swift for horses to overtake. After she turned brigand when her father died, she had to be trapped in a snare by shepherds, who then killed her.

(2) In Greek legend, an Athenian maiden who died for love of Iphicles. In her honor a song contest was held in Athens.

Harpies In Greek mythology, rapacious wind goddesses commonly depicted as repulsively ugly: usually considered to be personifications of the storm winds, but indicating to some degree a possible origin in ghost belief. They are sometimes confused with the Erinyes, and, because of their form, with the Sirens. Homer mentions only one Harpy, Podarge, the mother by Zeus of the magical horses Balios and Xanthos. Hesiod names two, Aello and Ocypete, fair-haired daughters of Thaumias and the Oceanid Electra. Later tradition makes them hideous creatures, birds with hags' faces, clawed talons, hanging breasts, and bears' ears. Poseidon, in some myths, is their father or their lover. They caused the sudden disappearance of the daughters of Pandareus,

and gave them to the Erinyes as servants. The best-known story in which they appear is that of Phineus.

Harpocrates In later Greek and Roman religion, the Egyptian god Horus as a child; the god of silence. In his aspect as an infant, Horus was depicted by the Egyptians with his finger in his mouth, a childish attitude by convention, but mistaken by the Hellenistic Greeks who took the pose to indicate that the god commanded silence, finger to lips. Harpocrates was a very popular god from the XXVI Egyptian Dynasty through the late Roman Empire, and was perhaps figured more often in homes and temples than any other Egyptian god of the period. See HORUS.

Harris, James Rendel (1852–1941) English philologist, paleographer, and Biblical scholar, educated at Cambridge University. Harris was a professor at Johns Hopkins University (1882–85), at Haverford College (1886–92), lecturer at Cambridge University (1893–1903), professor of Theology at the University of Leyden (1903–04), and later lecturer at Oberlin College. He received many honorary degrees from universities in various countries. Harris traveled in the East a great deal, searching for manuscripts. He is important in the field of folklore mainly for calling attention to a great number of significant similarities in the patterns of folktales. Among Harris' writings are: *Picus Who Is Also Zeus* (Cambridge, Bulletin John Rylands Library, 1916), *The Dioscuri in the Christian Legends* (1903), *The Cult of the Heavenly Twins* (1906), *Boanerges* (1913), and *The Ascent of Olympus* (1917).

Harris, Joel Chandler (1848–1908) American writer. He was born in Georgia, practiced law, and later became a journalist. The Uncle Remus stories, on which his fame rests, first appeared in the *Atlanta Constitution*, with which newspaper he was connected from 1876 until 1900. His best-known book, *Uncle Remus, His Songs and His Sayings: the Folklore of the Old Plantation*, was published in 1880. He also wrote *Nights with Uncle Remus* (1883), *Mingo and Other Sketches* (1883), and *Brer Rabbit*. His Atlanta, Ga., home is now an Uncle Remus Memorial.

Hartland, Edwin Sidney (1848–1927) British writer and folklore scholar, son of a Congregational minister. He became a county court registrar in 1859 and rose to a similar position in high court, which he held to 1924. His *The Science of Fairy Tales* (1891) is considered important in the folklore field. It includes an able treatment of the story of Lady Godiva. His great work, *The Legend of Perseus* (3 volumes, 1894–96), is a comparative study of folktales from all over the world, as well as of numerous beliefs and customs. Hartland was chairman of the Folk Tale Section of the International Folklore Congress in London in 1891, president of the British Folklore Society in 1899, Frazer Lecturer at Oxford University in 1922, and received the Huxley Medal in 1923. Among other writings are: *English Fairy and Other Folk Tales* (1890), *Notes on Cinderella* (International Folklore Congress, Chicago, 1893), *Primitive Paternity* (1910), *Ritual and Belief* (1914), *Primitive Society* (1921), *Primitive Law* (1924), and his editing of Walter Map's *De Nugis Curialium*.

Hārūn al-Rashid (c. 765–809) Harun the Orthodox, the famed Caliph of Bagdad of the *Arabian Nights*. His

reign was a brilliant one; his court overflowed with poets, musicians, sages, and practitioners of the arts. Charlemagne and Hārūn made gifts to each other as the respective masters of the Occident and Orient. The nocturnal wanderings of Hārūn and his vizier, incognito in the streets of Bagdad, are a traditional source of tale and anecdote in the Arab world. His reputation as a devout and just ruler is a popular one; history reveals him as a much more petty person.

haruspices In ancient Rome, a class of diviners from omens, specifically from the entrails of slaughtered animals. As a class they did not have the position or dignity of the augurs, who were important officers of the state. The haruspices were said to be practitioners of an Etruscan art, and drew their predictions not only from the sacrificial animals (which had to be of spotless purity) but also from portents of all kinds, as for example lightning. There was in later Roman times a college of haruspices, which had however no official status.

Hārūt and Mārūt In the Koran and in Moslem tradition, two fallen angels. They descended to earth to test their powers to resist temptation and succumbed to the charms of the daughters of men. Given the choice between eternal damnation hereafter and a limited punishment on earth now, they chose the latter. They hang head downward in a well in Babylon, teaching magic and such arts to men, but only after fair warning to the men of the troubles to which they may look forward. Hārūt and Mārūt may have entered Moslem legend from the Iranian Haurvatat and Ameretat, of the Persian Amshaspands, who were probably the successors in Iranian mythology of the Aśvins.

harvest dances Communal dance celebrations of a successful harvest are observed by agricultural peoples the world over, from the Sohorai of the East Indian Mundas to the Ayriwa of the Peruvian Quechua Indians. Often there is a series of festivities, from the first-fruits to the final harvest and storing, which often coincides with the first deer hunt, as in the Papago wíikita.

The nature of the fruits depends upon the climate: the South American Mataco and Chorotí Indians center their rituals around the algarroba harvest, Indians from the Andes to the Iroquois around maize. Mediterranean peoples rejoice over the vintage, Lithuanians over the maturing of the rye. The Iroquois have a typical succession, from June to early November, of feasts for the spirit of the strawberry, raspberry, bean, green corn, and ripe corn, and a final thanksgiving for all crops, with prayer for continued prosperity. This sequence used to be spread throughout the Southeastern tribes.

The date depends not only on the nature of the produce, but on geographical location as well. Maize ripens among the Mexicans in June, among the Iroquois in September; hence, the ancient Aztec festival for Xilónen, goddess of young corn and beans, fell in June; Iroquois Green Corn feasts fall on Labor Day or thereabouts. Similarly, the Peruvian vintage *fiesta de la vendimia* comes in March instead of September.

The dances, usually open to all, take many forms, but two recur with special frequency—the human chain formed by linked hands, following a leader in serpentine formation, as in the Iroquois and Delaware green bean dance, the Venezuelan Cumanagoto harvest dance, and

the ancient Aztec dances for Xilónen and for Cinteotl, god of maize; secondly, actual or symbolic skirmishes, during the Aztec festival for Cinteotl during the 11th month, Ochpaniztli, by priestesses with flowing branches, during the Creek busk by two parties of warriors, in the Meskwakie bean dance as simple opposition (cross-overs) between men and women. Both types are common in vegetation rites.

Ceremonial procedures include, besides invocations, secular and religious dances, also the offering of first-fruits, sometimes human sacrifice, and in some cases the use of emetics and purificatory bathing. They always conclude with a feast on the proffered fruits, in fact to the point of gorging on food and drink while there is plenty.

The religious significance may include propitiation and thanksgiving to all supernatural powers, not only to the food spirits; thus peace between the people and the spirits. In many instances this meaning has been retained. In Europe it has been submerged in an alien religion or has given way to simple merrymaking. Pagan harvest festivals have been identified with church holidays both in Europe and Latin America: Corpus Christi, St. John's Day, St. Matthew's Day, the feast for the dead (Halloween). In the United States Thanksgiving Day is a staid relic of these orgies. See BREAD DANCE; BUSK; CORN DANCE; GREEN CORN DANCE; SERPENTINE; STICK DANCE; SWORD DANCE. [CPE]

harvest doll The last sheaf of the harvest, dressed in a woman's dress and decked with ribbons, regarded as the embodiment of the spirit of the crop: often in northern England called the harvest queen, also kern baby, i.e. "corn doll." In Northumberland this puppet is attached to a long pole and carried home by the harvesters and set up in the barn. In some communities it goes home on the last load. In some communities the harvest queen is a fairly small and carefully fashioned image; in others it is heavy and grotesque. In parts of Germany especially, it is thought the heavier the better.

In Scotland we find the harvest maiden or the hag—the Old Wife or the Old Woman (see CALLEAC). In Wales too she is the Hag or *wrach*. In Brittany she is called the Mother Sheaf.

In Germany it is the Corn Mother or Harvest Mother or Old Woman who inhabits the last sheaf (sometimes even the Old Man). In Holstein the puppet is carried home in the last wagonload of the crop and drenched with water, as often also in England and Scotland. In parts of Prussia the last sheaf is the Grandmother, dressed in a woman's dress and decked with flowers. In Denmark the harvest doll is more specifically named, as Rye Woman, Old Barley Woman, etc. In Poland the last sheaf is made into a puppet called Baba, or Grandmother; and in some localities the woman who binds the last sheaf is herself called the Baba, is dressed in the sheaf, is carried home in the last wagon and drenched with water, and treated as all representations of the grain spirit are treated.

Gradually, almost everywhere, the ancient belief in the last sheaf as the spirit of growing grain incarnate has given way to its use as a mere emblem of abundance. In some places these observances have passed away altogether; in some places they still survive. See KORN-MUTTER; KORNWOLF.

Harvest Home An old harvest celebration still observed in some parts of rural England, participated in by one and all who have helped with the harvest, and observed on the last day of bringing the harvest home. It was frequently also called the Ingathering or Inning, and in Scotland was known as the Kern.

The last load of rye, beans, or other crop is decked with ribbons, flowers, or green boughs, and accompanied by men, women, and children all singing and shouting. The Harvest Home song, sung en route, goes something like this:

Harvest home! Harvest home!
We've plowed, we've sowed,
We've reaped, we've mowed,
And brought safe home
Every load.

The Harvest Queen (see HARVEST DOLL) is either carried home on the wagon or is carried high on a pole by one of the harvesters. The load as it enters the farm gate is often met with a volley of apples, and the Harvest Queen and the reaper carrying her are drenched with buckets of water. At the feast which ends the day the head reaper is crowned with a garland and the evening continues with eating, drinking, and all kinds of merrymaking, dance, and song. This is but one of the harvest thanksgiving celebrations observed all over the world. See CAILLEAC; SAMAIN.

Hasan of Bassorah Title and hero of one of the tales of the *Arabian Nights*; a story belonging to the worldwide swan-maiden cycle and compounded with the quest for the lost bride. The long journey of Hasan to the islands of Wak Wak, during which he overcomes many perils by both his own and his helpers' wisdom and ingenuity, forms the core of the story; but aside from the colorful descriptions of the various lands and the contrived drawing out of the plot, there is little interest or use of folklore materials. In the beginning of the long tale, however, a considerable group of common folktale motifs appears.

Hasan the wastrel is enticed by a Persian alchemist to go to the top of a steep mountain for the purpose of obtaining materials for the touchstone that will change base metal into gold. During their voyage to the land of the mountain a storm at sea is allayed by Bahram's, the alchemist's, ceasing to maltreat Hasan. After an eight days' journey from the coast they come to the mountain. Hasan permits himself to be sewn into a skin and a roc carries him to the peak. But when he throws down the magic wood, Bahram flees.

Hasan throws himself into the sea, the only way to escape from the mountain; he is washed ashore and finds himself at the palace of seven princesses of the Jann, enemies of the alchemist. He is adopted as their brother, and when Bahram returns the following year with another victim Hasan slays the Persian. The princesses leave on a visit, giving Hasan the freedom of the palace and its keys. Of course, there is one door he must not open. Eventually he does open the forbidden door, climbs the stairs, and comes out on the roof. From this height he spies on ten bird-maidens, and falls in love with their chief. The maidens put on their bird-robes again and fly away. Hasan begins to waste away in his helpless love, but on the advice of the youngest of the seven sisters, when they return, he

waits for the new moon, when the bird-maidens come back. He steals the garment of the maiden of his choice, she being left behind when the others fly away. He marries this princess, for she is the daughter of a sovereign of the Jann.

Hasan hides the bird-garment, returns with his wife to visit his mother. After three years, when they have two sons, Hasan leaves his wife to see his "sisters" again, warning his mother not to reveal the hiding-place of the garment or to permit his wife to leave the house. But the princess goes to the bath, seemingly a harmless occupation; there she is admired by all and is called before the caliph's wife, who wishes to see the beauty everyone is talking of. The princess convinces the caliph's wife that she would appear much more beautiful if she had her feather dress. Hasan's mother is ordered to produce the shirt, and the wife flies away with the children as soon as she gets her hands on the garment. As she departs, she tells the mother that she is going to the islands of Wak, where Hasan may come to claim her if he can. With the aid of his "sisters," their uncle, and a chain of friends, Hasan eventually recovers his bride in the Amazonlike land of Wak Wak, stealing to attain his end a cap of invisibility, and a staff to summon the Jinn. These he later gives to his helpers, after he has returned the seven years' distance to his home.

The many motifs in this tale mark it as a late fabrication. The accidental obtaining of the magic cap and rod, although parallels to the duping of original boy-owners of such magical objects exist in other folktales, has no integral connection with the plot. Among the several motifs the following are notable: voyage to inaccessible place carried by huge bird (B31.1) (wrapping in animal's skin or flesh); the forbidden chamber (C611); the swan maidens (D361.1); flight to magic land (D531; Type 400); the island of women (F112); cap of invisibility (D1361.15); magic staff (D1421.1).

Hasapiko A modern Greek folk dance performed by men and women in no set order, holding shoulders in a line moving in anticlockwise circle, as in the *kolo* and the *hora*. The chief step is a hopping double and simple, also a sort of grapevine. The leader often crouches and turns. [CRK]

hashish or **hasheesh** An intoxicating preparation of the tops and sprouts of Indian hemp (*Cannabis sativa*), chewed, smoked, or drunk: known also as *bang* (Persian), *bhang* (Indian), *fasikh* (Moroccan), *dakhá* (South African). The celebrated Assassins of the years of the Crusades were addicted to hashish, from which their name derives. It affects the senses so as to cause delirium: heat is not felt and events are exaggerated. It is used for example by Eastern men to slow the orgasm and thus to prolong coition. Penzer, following a suggestion of Gibb, believed that the magical passage of time in Oriental stories, where a long time seems to have passed in only a few minutes, may be a reflection of the hashish experience.

Hathor Literally, either the house above or the house of Horus: an Egyptian cosmic goddess, often represented as a cow with the solar disk and plumes between her horns, or as a woman with cow's horns between which was the solar disk: identified principally with Isis, but also identified with many other earlier goddesses of

Egypt. As the sky goddess she was queen of heaven, creatrix, a Great Mother. She became identified with Ishtar-Astarte, the cow and moon goddess of fertility of Mesopotamia, and was perhaps originally identical with her. An early version of the Osiris myth equates Isis with Hathor: Horus beheaded Isis and the missing head was replaced by that of a cow. As with all the cosmic-fertility goddesses of the Fertile Crescent, the confusion of the crescent-shaped horns with the moon symbol makes it impossible to say whether the original province of the goddess was cosmic (moon) or fertility (cow's horns).

Hathor, the goddess of fertility, was also the female principle, the patroness of women and of marriage. She was likewise goddess of love and mirth, of social pleasures, of beauty. The moon goddess, she was a deity of death, a tree spirit of the sycamore groves near the necropolises; she gave nourishment to the soul (ba) of the departed. In mythology, she fed Horus, and the pharaoh, who was the embodiment of Horus.

The seven Hathors were deities of fate, appearing at the cradle and casting lots to determine the course of the future life of the infant. In this role they appear, for example, in the folktale of the Egyptian Empire, *The Enchanted Prince*.

Hatim Ta'i A famous and generous Arab chief whose exploits are told and retold in Persia and India, especially in Bengal. [MWS]

Hatto The name of two archbishops of Mainz, Germany (891-913 and 968-970). The legend of the mouse-tower of Bingen, a building standing on an island in the middle of the Rhine, is told of both. During a famine, Hatto's granary was full, but he would not distribute the grain to the people. At last he was forced to take notice of their muttering. He announced that on a given day his barn would be thrown open to all. When the barn was filled, he had the doors locked and set fire to the building, burning the starving crowd inside. Immediately a vast army of mice appeared and began to converge on the bishop, who fled before them to take refuge in the mouse-tower. But to no avail; the mice entered and ate him to death. This is a local form of the widespread northern European tale of the mouse-tower: the mice are apparently the avenging souls of those killed by the bishop; the mouse-tower (*Mäuseturm*), as Krappe points out, is undoubtedly a *Mautturm* (customs tower) to which the legend has been attracted. See MOUSE-TOWER.

Hatuibwari or **Hasibwari** The supreme being of Arosi (Melanesia), represented as a winged serpent with a human head containing four teeth and four eyes. He is male but has breasts from which he feeds all created things. Hatuibwari lives on sacred hills. In legend he came from the sky and created a woman from red clay and the heat of the sun. From her rib he made the first man. According to Fox this legend is not the product of the introduction of Christianity into the area.

Haul on the Bowline The oldest of the short-haul chanteys, going back at least to the time of Henry VIII. After 1500 the bowline was no longer important in working a ship, but the song remained to serve in the hauling of other lines. The title words were always sung uniformly, but the others were varied as the

chanteyman chose, often slyly giving navigation hints to inexperienced officers.

haunted house A house, tenanted or untenanted, which is frequented by ghosts, specters, phantoms, and the like. In the British Isles, haunted houses and castles are common and the "goings on" of their nocturnal company have given rise to many and varied traditional tales. Castles in Scandinavia are likewise haunted. In short, wherever or whenever the dead return, they haunt their former homes. Although Clough says, "America needs more and better haunted houses," there is no dearth of them in the United States from Maine to California and from Texas to Minnesota. [CPS]

Havgan In Brythonic mythology, the opponent of Arawn, king of Annwn, for the sovereignty of that wonderful land. Havgan could be overcome only by a single blow, a second would revive him. Pwyll, fighting in behalf of Arawn, gave him his mortal wound. Havgan begged for another, to end his suffering, but Pwyll refused to give it. Thus Havgan was killed and Annwn was saved for Arawn.

Havmand The merman of Danish folklore, usually bearded and very handsome. He lives in the sea or inhabits rocky cliffs along the shore. He is usually regarded as a friendly being, unlike many other Teutonic water spirits, such as the nix, Hakenmann, the Icelandic Skrimsl, etc. But the *Havfrue*, the mermaid of Danish folklore, has a dual nature. She is very beautiful, sometimes friendly, but sometimes also predatory and seductive. Fishermen who see her through the sea mists expect stormy weather to follow. Sometimes she comes piteously shivering to their fires to seduce them into accompanying her. She takes home the unfound bodies of the drowned.

haw In American cowboy square dances, the term for left. [GPK]

Hawk and the Nightingale A fable ascribed to Æsop, but told by Hesiod in his *Works and Days* in the 8th century B.C.: said to be the earliest known of the Greek fables. A Nightingale, caught by a hungry Hawk, begged to be let go, pleading his tininess. But the Hawk replied that the little bird he had was better for his hunger than a big bird yet to be caught. See BIRD IN THE HAND.

hawthorn A thorny, spring-flowering shrub of the rose family (genus *Crataegus*) with white or pink flowers and small pome fruits or haws, sometimes called white thorn to distinguish it from the blackthorn. In ancient Greece it was used for the marriage torch and girls wore crowns of hawthorn at weddings. In Rome it was a potent charm against witchcraft and sorcery, and the leaves were put in the cradles of newborn babies. In Christian legend it formed the Crown of Thorns and was therefore considered to have many miraculous powers. A sprig of hawthorn was proof against storms at sea, lightning ashore; and in the house it was proof against spirits and ghosts. But in Ireland and parts of England bringing it into the house was considered unlucky, and in some localities it even brought death. The staff of Joseph of Arimathea which sprouted when thrust into the ground was also believed to have been hawthorn. According to Teutonic legend it was believed

to have sprung from lightning and it was often used for funeral pyres.

Among the Celtic peoples it was unlucky, if not fatal, to cut down these shrubs, as in the case of Tim MacDougal who reluctantly accepted some much needed money to cut down a bush. The next morning his baby was stolen and the following day his wife ran off with the money. When the baby's clothes were returned, he knew that the little people were displeased, so he took shoots of the bush he had destroyed and planted them in a circle around a wild thyme bed. The next day he found that they had grown, and in the center he found his baby. In Ireland hawthorns are believed to be frequented by fairies, and are therefore sometimes called "gentle bushes." To cut one down brings death upon the cattle or the children, and loss of memory to the feller. Their scent is sometimes said to have the sweet, enchanting scent of death. The boughs are fastened to the outside of barns on May Day to keep out evil spirits and ensure plenty of milk during the summer.

In England, before the calendar reform, hawthorn was used to decorate the doors on May Day and in Northamptonshire a hawthorn branch was placed in the ground before the house of the prettiest girl of the village. The crown of Richard III was found in a hawthorn bush at Bosworth, and was later placed on the head of Henry VII. Thereafter Henry adopted the thorn as his device.

A distilled water made from the thorns was said to draw out thorns and splinters from the flesh. The flowers steeped in wine and distilled are good for pleurisy, stomach and all internal pains. The powdered berries in wine are a good tonic and a cure for dropsy and the stone. The hawthorn is the state flower of Missouri.

hay (1) In most of Great Britain, France, Germany, Bohemia, Spain, India, and the United States, it is considered good luck to see a load of hay approaching. Many believe that if you make a wish and do not look at the load again, the wish will be granted, but if the hay is baled you may have to wait until the bales are opened. Not to wish on a load of hay is bad luck. However, in some parts of England, it is unlucky to meet a load of hay in a country lane and you must spit on the load to regain your luck. Crossed scythes are frequently left on the top of the rick to prevent spontaneous combustion. In parts of England, feeding cattle a little stolen hay on Christmas Eve will make them prosper during the year. Some Northumberland churches are strewn with hay in the summer. There is a belief that to add hay flowers to your bath will cure toothache.

(2) or **hey** An old English country dance: a serpentine figure performed in a circle (same as grand right and left). The straight hay is the same, executed in a straight line; the straight hay for three is a figure 8 featuring the intertwining of three dancers. [GPK]

Hayagrīva Literally, horse-neck, or great wrath king; in Tibet a Dharmapāla with a horse's head growing from his hair; first of the eight dreadful gods called *Drag-gshhed*. To the Mongols Hayagrīva was the protector of horses. His Tibetan name is *rTa-mgrin*. In Hinduism, Hayagrīva is a Daitya who, according to

one legend, stole the Veda as it slipped out of Brahmā's mouth while he was asleep. In another legend, Viṣṇu assumed this form to recover the Veda which two Daityas had carried off.

Hayicanako The Old Woman Underneath Us; the supporter of the earth in the mythology of the Tlingit Indians and certain Athapascan tribes. Either she supports it herself or tends a post made of a beaver leg, on which the earth is standing. When the earth shakes it is a sign that the old woman is hungry, and the people throw grease in the fire, which melts and runs down to her. See *ATLAS MOTIF*.

Hayk The national epic hero of Armenia; a handsome giant with a strong arm who led his people from the plain of Shinar and the tyranny of Bel to the cold but free mountains of Armenia where he conquered the native Urartians. Later he met the forces of Bel and defeated them by arranging his smaller forces in a triangle. His symbols are the bow and triangular arrow. He is the eponymous hero of the Armenians who call themselves the Hay and their country Hayastan.

hazel A bushy shrub or small tree (genus *Corylus*) yielding an edible nut. In Celtic legend, especially Irish, this is the tree of knowledge. The salmon in Connla's well ate the nuts of this tree and was the wisest of beings. The druid who fostered Fionn MacCumhal told the young Fionn to cook a salmon from a certain deep pool in the River Boyne, but forbade him to taste it. While turning the fish, Fionn burnt his thumb and put it in his mouth. Thus he received the gift of inspiration, for this was the salmon which had eaten the nuts which fell into the pool from the nine hazels of wisdom. The hazel was the ninth tree in the Old Irish tree alphabet and symbol of the ninth month (Aug. 6 to Sept. 2). It represented all knowledge of the arts and sciences; and a hazel wand was carried by the heralds as a badge of office. In Fenian legend the dripping hazel was an evil tree without leaves, dripping poisonous milk, and the home of vultures. This tree represented the evil, destructive uses of knowledge.

Hazel twigs and forks are the most universally popular divining rods. In some localities, however, these rods must be cut on St. John's Eve or Night. In addition to this, in Brandenburg one must approach the tree in darkness, walking backwards, and cut the fork silently, while reaching between the legs. In Berlin they say a divining rod is only good for seven years, and must be cut by an innocent child of the true faith on St. John's Night. Before the 17th century hazel rods were used for discovering thieves and murderers as well as water and treasure. To test a divining rod, hold it in water: it should squeal like a pig.

In Prussia they say that if you cannot catch a thief, beat a piece of his clothing with a hazel switch and he will fall sick. In Wales hazel twigs are woven into a wishing cap which will grant the wearer's desire. Also, a shipmaster who wears such a cap will weather any storm. In France, hazel rods are used for "beating the bounds." A hazel breastband on a harness will protect a horse from fairy bewitchment and evil spirits. In Ireland the cattle are driven through the Beltane and Midsummer fires and their backs singed with hazel

wands to protect them from fairies. These rods are very powerful for driving the cattle during the year.

The hazel is the tree of Thor and in the dominion of Mercury. The kernels of hazel nuts mixed with mead and honied water are good for an old cough; mixed with pepper they clear the head. In England, a double hazel nut carried in the pocket prevents toothache. A cross fashioned from the wood and laid on a snake bite, while reciting a diminishing rime, will draw out the poison. Binding the legs and feet of a horse, who has over-eaten, with hazel rods and reciting a formula in his right ear will relieve him. See WITCH HAZEL.

heart's-ease One or more of the *Persicariae*, some species of which are so called because of heart-shaped markings on the leaves: believed to yield a substance beneficial in heart disorders. See PANSY; PERSICARY; VIOLET.

heart saved from cremation A motif in the mythology of the Yuman and Shoshonean Indians of southern California, in which the death of the creator or culture hero is caused by poisoning or by Frog swallowing his excrements. Great was the mourning for the god; great was the mourning that death had come upon mankind. The people prepared to cremate the body of their god, but Coyote coveted the heart. The people tried to circumvent his plans, but Coyote leapt onto the pyre at the last minute, tore out the heart, and ate it. The Juaneño Indians (Shoshonean) long retained a mourning ceremony which dramatized this myth. When an initiate among the Juaneño died a certain ritual was enacted by one called the *ano* (coyote) or the *takwe* (eater), who cut a piece of flesh from the dead man's shoulder and ate it. The hearts (i.e. souls) of the dead whose flesh was thus ritually eaten by the *ano* or *takwe* were "saved" to fly into the sky and become stars. The Pomo Indians performed a similar ritual.

heaven The afterworld in the sky where the souls of the blessed live in company with divine beings. Heaven is the term applied also to the region of the sky where the afterworld is located; in some cosmographies there are several discrete heavens, varying in excellence or in suitability for the various human occupations. See AFTERWORLD; ASGARD; ELYSIUM; PARADISE; VALHALLA.

heb-sed A jubilee festival of the ancient Egyptian pharaohs, during which the king renewed his vigor by magical means and transferred it to the earth: believed to be a substitute for an earlier ceremony at which the enfeebled king was murdered. During the ceremony, the pharaoh ran a prescribed course while carrying a flail, a doubly meaningful ritual of fertility. The coronation was repeated, and the lotus and papyrus, emblems of the two kingdoms, were entwined about a stake. The existence of two tombs for some of the Egyptian kings has led to the conjecture that a symbolic killing of the pharaoh may have occurred at the heb-sed.

Hecate In Greek mythology, an underworld divinity of triple aspect: perhaps a Thracian goddess, perhaps Hellenic in origin. She is not mentioned in Homer, but in Hesiod her powers are already very great: she bestows wealth and success, good luck and advice, is powerful in earth, sea, and heaven. Apart from her eminence in her own cult, flourishing principally in Asia Minor, she appeared as companion and cousin of

Artemis. The best known of several genealogies made her the daughter of Perses and Asteria; as a Titan, she alone kept her powers under the rule of Zeus, having helped him against the Gigantes.

By a transference common in mythology, she became, as a goddess of plenty, an infernal deity, terrible in aspect and often snakelike, the queen of ghosts and mistress of black magic, the keeper of the keys of Hades. She and Helios alone witnessed the rape of Persephone, and Hecate was sent by Zeus to find her, accompanying Demeter with a torch. When Persephone was found, Hecate remained as her companion. She thus became ruler of the shades of the departed, dispatched phantoms and the like from the underworld at night. Hecate wandered about in the dark, accompanied by the souls of the dead and by her hell-hounds. Dogs howled at night when they heard this company approach.

Hecate was to antiquity the great goddess of magic, more important than her daughter Circe. Second as a magician was the Hermes Chthonius later confused with Hermes Trismegistus. The greatest of the magical incantations of antiquity are connected with Hecate. She haunted the vicinity of crossroads, and became the divinity of roads. Triple statues of Hecate Trioditis (Roman *Trivia*) were set up at places where roads crossed, facing in the several directions. Similar statues were erected before houses to keep out the evil spirits. Such representations were believed to be oracular. Food was set out before them at the end of every month (Hecate's suppers), and at night she appeared to taste of it. Dogs and honey and black ewe-lambs were sacrificed to her.

A further evolution made Hecate, already a goddess of plenty and of the night, become the moon goddess: this is considered by some to have been her original aspect. Hecate was represented as carrying a torch and a scourge; sometimes her three heads would be those of a dog, a horse, and a lion; sometimes the triple aspect would be named for Selene, Artemis, and Hecate. She was identified variously with Demeter, Rhea (or Cybele or Brimo), Artemis, Persephone; her worship was connected with that of the Cabeiri and the Curetes and with Apollo and the Muses, and had as its principal locations Samothrace, Ægina, Argos, and Athens. Compare BERCHTA; HERMES; HOLDE; JANUS; MONSTERS; PADMAPANI; RUDRA; ŚIVA.

hedgehog A small, nocturnal, insectivorous mammal of the Old World (family Erinaceidæ), with back and sides covered with stout spines. An early English writer calls it "hedgidog"; Shakespeare names it "hedge-pig" (*Macbeth*). The peculiar noise this animal makes, something between snoring and breathing hard, has given rise to ominous superstitions regarding it, namely that there might be ghosts or evil spirits about when the uncanny sound is heard.

In Morocco, the pounded and roasted liver of the hedgehog is given to school boys to make them remember their lessons; a jawbone is hung around a child's neck to protect it from the evil eye. Hedgehog blood is good for warts, the gall for deafness, and the fumes of its burnt bristles are good for both man and beast. In England, the left eye of the hedgehog fried in oil was a remedy for insomnia in the 17th century.

Popular belief in England says that the hedgehog

carries off apples on its spines; the same belief, but about grapes, is mentioned in two anonymous epigrams in a Greek anthology. English farmers used to believe that hedgehogs milked the cows at night, and hence used to kill them for no other reason. To eat the flesh of hedgehogs was forbidden among the peoples of Madagascar, especially to their warriors, lest they too curl up in fright when attacked.

In folktales there are helpful hedgehogs (B434), hedgehogs as revenants (E423.2.4) and hedgehogs as animal spouses (B641.4). [cfs]

Hedley kow A supernatural being of British folklore noted for its antics and annoying tricks. Often it assumes the shape of a truss of straw. When someone tries to pick this up, to stow it away, it becomes heavier and heavier and heavier, until the hapless carrier has to lay it down to rest. Then suddenly it shuffles away and a peal of laughter is heard.

heiau Hawaiian temples built of lava. These are rarely dedicated to a particular divinity; any god can be invoked in them. They are usually oblong in shape, formed by walls of rock lava which enclose the altar, the house of the priests, and the *anu* or place of oracles. All *heiau* and sacred groves are protected by *tabu*.

Heimdall or Heimdallr In Teutonic mythology, god of the early sun, hence of dawn and light. In a late Eddaic account he was the son of Odin and nine giant sisters, born on the horizon, nurtured on the strength of the earth, the moisture of the sea, and the warmth of the sun. He was guardian of the heavenly bridge Bifrost. He could see a hundred miles by night as well as day, and his hearing was such that he could hear the grass grow. One night he was disturbed by a stealthy noise, and looking across to Folkvang, he saw Loki in the guise of a fly, tiptoeing in Freya's bedroom to steal her necklace Brisingamen.

Once when Heimdall visited the earth, he entered three homes: a hovel by the seacoast, a thrifty farmhouse, and a castle. In each after his visit, a son was born. The first, named Thrall, was dark-skinned and thickset; the second, Karl, was blue-eyed and sturdy; the third, Jarl, was a slender handsome boy. From these three sons were descended the serfs, husbandmen, and aristocrats of the Northern peoples.

Heimdall lived in a castle, Himinbjorg, at the highest point of Bifrost. He wore shining white armor and carried a flashing sword and the famous horn, Gjallerhorn, with which he will summon all to the last battle of the world at Ragnarök. He also went under the name of Gullintani, Hallinskide, and Riger.

Heinzelmännchen In German folk belief, friendly dwarfs or elves who come in the night to work for people whom they like, or to whom they are indebted.

hei-tiki A grotesque amulet representing a fetus, worn by the Maori to ward off attacks by the envious spirits of stillborn children, who dislike the living because they themselves have never had a chance to live. Literally it means "tied-on tiki." See **TIKI**.

Hel or Hela In Teutonic mythology (1) The grim, fierce goddess, half black and half white, who ruled over all who died of disease or old age. She was the daughter of Loki and Angur-boda, banished by Odin into Niflheim to rule over the worlds of the dead.

(2) Sometimes known as Niflheim, Niflhel: the realm of nine worlds under the roots of Yggdrasil which was reserved for those who died of disease or old age. Not until Christian times did it become the realm of the damned. It was ruled by the goddess Hel and guarded by the dog, Garm. The name is literally "hollow place," and corresponds more to the Greek Hades than to the Christian Hell, in that it is primarily an otherworld rather than a place of punishment and misery.

Helen In Greek legend and mythology, the most beautiful of women; daughter of Zeus and Leda and sister of the Dioscuri. Originally Helen was perhaps a tree goddess; like her brothers, she was a patron of sailors to whom she appeared as St. Elmo's fire, an evil omen. Whether her deification preceded or followed the legend is a matter still debated.

When a young girl, Helen was abducted by Theseus and then rescued by her brothers when Theseus left her to visit the underworld. The Dioscuri also carried off *Æthra*, the mother of Theseus, to be Helen's handmaid. Still later, Helen was wooed by the great kings of Greece, and she chose Menelaus, or was given to him by her putative father Tyndareus. To Menelaus she bore Hermione.

After some years of married life as the wife of the king of Sparta, Helen was induced by Paris (with Aphrodite's help) to flee with him to Troy. One version of the story says that they stopped at Egypt on the way, where Proteus hid the real Helen in a cave and sent a shade in her shape on to Troy with Paris. When Troy fell, she was reunited with Menelaus (who stopped at Egypt on his way back to Sparta, thus permitting the resubstitution to be made). She is said to have survived him, to have been driven out by his sons, and to have been killed by hanging by Polyxo in Rhodes.

In the writings of the Renaissance and after, Helen became the type of classical beauty. Marlowe's Doctor Faustus, thirsting for beauty not of this world, called up the shade of Helen from the underworld; the Faust of Goethe had a son Euphron by Helen.

Helenus In Greek legend, a Trojan soothsayer, son of Priam and Hecuba. He and Cassandra, when children, obtained the gift of prophecy when their ears were licked by serpents. Helenus is a warrior in Homer. He deserted to the Greeks, because of the sacrilegious slaying of Achilles by Paris, or because Odysseus captured him and caused him to foretell the manner of the fall of Troy (by the arrows of Hercules), or because he lost Helen to Deiphobus after Paris died, or simply because he so desired. After the war ended, he became king of Epirus, married Hector's widow, Andromache, and was later buried at Argos.

Heliogabalus or Elagabalus A sun god of Emesa in ancient Syria. According to Herodian, a Syrian historian of the Roman emperors, the god was worshipped in the form of a conical black stone. The Roman emperor who reigned from 218-222 A.D. adopted the name, he having been a priest of the god.

Helios In Greek mythology, the sun or the sun god: often confused in later classical times with Apollo. Helios was the son of Hyperion and Theia or Euryphaessa, the brother of Selene and Eos. His consort was Perse or Perseis, by whom he was father of *Æetes*

and Circe. Among his numerous mistresses were Clymene, Clytie, Leucothoe, and Rhode. Helios was all-seeing as god of the sun, and this faculty causes the confusion with Apollo. Helios saw the rape of Persephone; he knew of the adultery of Aphrodite and Ares.

However, Apollo never is pictured in Greek myth as a charioteer, while Helios usually drives the four-horse team of the chariot of the sun through the heavens. The palace of Helios was in the east, from which he drove the sun westward to dip into the stream of Ocean at night, there to rest and bathe after his day's labor, and to be carried back on the stream through the night to his palace in the cup fashioned by Hephaestus. On the island of Trinacria, Helios had seven herds of oxen and seven of sheep, each a herd of fifty head which never increased or decreased. These herds were kept by his daughter, either Phaetusa or Lampetia. When these cattle were attacked by Ulysses' men, Helios was notified by Lampetia; he complained to Zeus who slew all the crew but Ulysses with a bolt. Later myth gave him flocks on Erytheia as well, and wherever Helios was worshipped flocks were sacred to him.

His principal place of worship was at Rhodes, where the famous Colossus (a representation of him) stood. There was however little established worship, although the god was often invoked as the all-seeing. The cock was especially sacred to him, as was honey, and as were also white boars, bulls, lambs, rams, and horses. He was called Sol by the Romans, and often simply Titan. Compare GERYON'S CATTLE; HERCULES; PHAETHON.

heliotrope (1) An herb (genus *Heliotropium*) with small white or purplish flowers. In Greek times heliotrope denoted any flower which followed the sun. Greek legend says the water nymph Clytie was in love with the sun god, Helios, and she sat on a river bank for nine days and nights without food or water, watching his chariot, until the gods took pity on her and changed her into a heliotrope. That is why it is a symbol of eternal love. The common heliotrope was brought from Peru to France in 1736, where it became known as the love flower. From there it came to the American colonies. Among the Border folk it was said to make invisible anyone who walked with a piece in his shoe; but the magic formula for this has been lost.

According to Pliny the heliotrope is not plucked when used medicinally, but tied in knots with a prayer that the patient might recover to untie them. Pliny also said that a scorpion touched by a sprig of heliotrope would die and would not enter a place which had been circumscribed by a sprig of this plant. This belief was based on the resemblance of heliotrope seeds to a scorpion.

(2) Same as BLOODSTONE.

hell The afterworld, usually underground but often placed on earth in some far-off region to the west or north, and inhabited by the souls of the dead; especially, the place where souls are punished for their transgressions on earth as contrasted with heaven. The Greek Hades included the Elysian Fields, a sort of heaven, and did not encompass the concept of punishment. However, the underworld of Egyptian belief included the court of Osiris where souls found lacking

were swallowed by the infernal hippopotamus. The hells of world-wide belief are peopled not only by the spirits of the departed, but also by demons, ruled over by a god of the underworld, who aid in the punishment of the soul. It is noteworthy that generally the hells of cold lands are regions of eternal ice, and that the hells of more southerly areas are places of everlasting fire. See AFTERWORLD; HADES; HEL; NIFLHEIM.

Helle In Greek legend, the sister of Phrixus; daughter of Athamas and his first wife Nephele. Ino, their step-mother, hated the children and plotted to get rid of them. She induced the women of the country to roast the seed for the next corn-crop and bribed the messenger who was subsequently sent to Delphi to discover the reason for the crop failure. The false message ordered sister and brother sacrificed, but at the last moment a ram with golden fleece, the gift of Hermes, was sent by Nephele to save them. Off they flew on it, but between Sigeum and the Chersonesus Helle fell into the sea. The place where she fell was afterwards called the sea of Helle or Hellespont. A variant of the legend says that Poseidon rescued her and that she later bore him Paion or Edonus.

Hellespont The Sea of Helle; ancient name of the Dardanelles, the strait connecting the Aegean Sea and the Sea of Marmora: so called because Helle fell there while escaping on the ram with the golden fleece.

Helskô Literally, hell shoes: in early Teutonic practice, shoes bound to the feet of the dead to travel Helveg, the long troublesome road to Hel. This custom is still prevalent in parts of Scandinavia. See DEAD SHOES.

hemlock (1) Poison hemlock (*Conium maculatum*), a poisonous biennial of the parsley family with a hollow, spotted stem and white lacy flowers which give off a noxious odor when bruised. It is found in the United States, throughout Europe and temperate Asia. This plant is believed to be identical with the Greek *kôneion* and a decoction of it was used to execute criminals. It may have been the hemlock which Socrates drank. Plants grown in the full sun and in hot climates are considered most virulent. It is poisonous to cows, but it is said that horses, goats, and sheep are not affected. It has been used sparingly as a medicine since early times. Pliny calls it a cure for drunkenness and recommends it for the liver, scrofula, ulcers, and glandular swellings. It has also been used for rheumatism, neuralgia, whooping-cough, syphilis, and tetanus. Given with opium it was used to quiet convulsions. Culpeper recommends that the bruised leaves be laid on the brow for inflamed and swollen eyes and says that pure wine is the best antidote if too much is taken.

(2) Water hemlock or cowbane (genus *Cicuta*) is also poisonous. Some authorities claim this plant, not the above, was used by the Greeks. It was sometimes used to induce temporary paralysis of the hierophant and priestess in Eleusinian rites.

(3) Another plant called hemlock is the ground hemlock, American yew, or moose grass (*Taxus canadensis*). Many Indian tribes of the northern United States and Canada make a tea from the quills of this plant which they drink for colds and rheumatism, but this was never popular with the white settlers. In British Columbia the medicine-man makes a ring of hemlock boughs

and passes the tribe through it when they are threatened by an epidemic. Several tribes use the bark for sore gums, upset stomach, and dysentery.

hen The female of the common domestic fowl, also of any other kind of bird. Like the cock, the hen acts as a weather prophet. It is an earnest of fertility, as it is thrown into the bride's lap among the southern Slavs in marriage or prebridal ceremonies. It has long been closely associated with connubial bliss; the crowing of a hen even in antiquity was ominous of marital quarrels.

Great moment has been attached to the cackling of the hen; with married people, it is a sign of wifely authority. The crowing of a hen has given rise to the famous 'ingles:

Whistling girls and crowing hens,
Always come to some bad end.

Whistling maid and a crowing hen,
Neither fit for God or men.

But the feminist has changed all this and the counter jingle runs:

Whistling girls and hens that crow,
Make their way wherever they go.

If a hen runs into the house, someone is coming visiting. If a red hen crows, there will be a fire; if a black one crows, something will be stolen. If hens go to roost early, there will be good weather. A white hen denotes good luck. Hen's blood is used in charms and a black hen's head with a charm can harm an enemy. The blood, liver, fat, gizzard, and other parts of the hen are used in folk medicine. In some cases, a hen is split open alive and applied to the body (cases of peritonitis in the Middle West in the 1890's and earlier).

The hen appears in many folktales: in formula tales ("The Death of the Little Hen"); in tales of magic ("Jack and the Beanstalk"), and in others of the same or other types. The hen and chickens are emblematic of God's providence. [cfs]

Henry, Mellinger Edward (1873-1946) collector of folk songs. A teacher in New Jersey high schools, Mr. Henry became interested in folk songs while on vacation in the southern mountains in 1925. His subsequent study and collection in the Appalachian highlands brought about a thousand songs and ballads to general knowledge. As a contribution to more formal scholarship Henry published in 1937 the *Bibliography of American Folk-Songs*. His other publications include *Songs Sung in the Southern Appalachians* (1934); *Folk Songs of the Southern Highlands* (1938); and numerous articles on American folk song in the *Journal of American Folklore*.

Henry Martyn An English ballad (Child #250) of a Scots pirate: probably a derivative of *Sir Andrew Barton* (Child #167). In the A version, Martyn is killed, as in #167, but in the E version (*Andrew Martin*), collected in the United States, he remains, after sinking merchantman and warship, master of the seas.

henweh The Kintak Bong and Menek Kaien (Malay Peninsula) name for the dire events following a disastrous storm. The Lenggong Negritos call this *henwoie*. Storms, which are especially severe and frequent in the Malay Peninsula, are accompanied by floods caused by rain and the rising of water from under the earth. The

Negritos believe the storms, and especially their after-effects of putrefaction and rising water, are due to such acts as copying the notes of certain birds or having sexual intercourse in the camp. The rising waters are sent by the grandmothers, Yak Lepeh, Yak Manoid, and Yak Takel, who live under the earth, as punishment for such misdeeds. Compare TERLAIN.

Hephæstus The Greek god of fire, especially of volcanic fire, and specifically god of the fire of the smith's forge: usually considered to be of Oriental origin, coming to Greece through Lycia and Asia Minor as a god of volcanic regions. His cult was observed in Lemnos from Homeric times; it, with rival claims for several other volcanic islands and places, was supposed to be his favorite place, in token of which the Lemnian priests of Hephæstus could cure snakebite. The soil of Lemnos stopped hemorrhage, cured insanity, healed snakebite. In Attica, and in Athens, his worship attained some prominence: Erichthonius was his son; Athenian hearths had statuettes of Hephæstus before them; he and Athena were considered the donors of the arts of civilization. At the Hephæstia there was a race with torches; the Chalceia, honoring jointly Athena and Hephæstus, recorded the invention of bronze-working by the god.

Hephæstus was the son of Hera, but whether of Zeus as well traditions vary. The later legends say Hera produced him from her thigh to equal Zeus' feat in giving birth to Athena, but the contradiction saying Hephæstus cleft the forehead of Zeus that Athena might emerge is not explained. Hephæstus, making inquiries among the gods concerning his mysterious parentage, was put off with vague answers. He therefore built a golden throne for Hera, which trapped her when she sat in it and from which he would not release her until she told him of his parents.

Within the Homeric writings there are two distinct versions of how Hephæstus was thrown from heaven. One says that Zeus threw him when he took Hera's part in a quarrel; the other that Hera herself dropped him in disgust at his congenital lameness. Later legend makes the two falls a sequential part of the story. Thetis and Eurynome rescued him after Hera dropped him because of his delicate health, and they taught him metalwork. He made the magic chair in revenge for Hera's cruelty. Then, when Zeus tossed him to earth, he fell on Lemnos and became lame.

He later returned to Olympus wearing artificial supports and aroused great gusts of laughter from the gods. On Olympus he set up a workshop, fashioning self-pumping bellows, or perhaps automatons which worked the bellows in obedience to his orders. Later, his smithies were said to be beneath volcanoes; the Cyclopes were his assistants. There are several stories of automatic objects made by Hephæstus in which he seems to parallel the wonder-working of Dædalus. Hephæstus is similar too to Prometheus as the bringer of useful fire to man.

His wife was Charis or Aphrodite, or Aglaia. A familiar myth tells how he trapped with a net Aphrodite and Ares in adulterous union and held them up to the scorn of the gods. The union of the god of fire, the fertilizing element carried in the race at the Hephæstia, with the goddess of springtime and love is understandable despite their mythological physical incongruity.

Hephæstus and his mythology find parallels in other

parts of the world. The Romans identified him with Vulcan, though Vulcan is simply the god of volcanic fire and has no connection with the artificer's fire. Wieland the smith, Ilmarinen, and Dædalus all made magical objects at their smithies. Agni was footless and Wieland was lame. Compare MAHIKA; MAUI; PANDORA.

Heqet, Heqt, Hak, or Heka In ancient Egyptian religion and mythology, a frog-headed goddess, associated both with the tomb and with resurrection and birth. She was the consort of Khnum, and in one form of the Horus myth the mother of Horus. The frog symbol of the birth goddess appears elsewhere, e.g. the Aztec goddess Chalchiuhtlicue. The Egyptians believed that the frogs which appeared in the silt after the annual Nile inundation were generated from the mud and the fertilizing river, hence the symbol of the frog for Heqet.

Hera In Greek mythology, the sister and consort of Zeus; later, the queen of heaven, but not queen of the gods; the only married goddess of Olympus, whose marriage to Zeus (*hieros gamos*) formed the important incident of her worship: probably originally a cow goddess of fertility, native to Greece. Hera, as were all the gods, was subordinate to Zeus, whom she had to obey, but she took this with bad grace, being of quarrelsome and stubborn character. Zeus, when he discovered that beating her was of no avail, once chained her and suspended her in the clouds until she agreed to submit. As a result, she turned to intrigue, even borrowing the girdle of Aphrodite to arouse his passion. Hera was by nature (and with sufficient reason) jealous, and had constantly to be on the alert to prevent Zeus' amours, or to punish his accomplices, after the fact. Thus, she was hostile to Hercules; she was an enemy of the Trojans because of the judgment of Paris against her.

Hera was essentially the goddess of women. Her three principal aspects therefore are as maiden (Parthenos), as matron (Teleia), as widow (Chera). The goddess of childbirth, Eileithyia, was identified with her, though usually she is considered to be the mother of Eileithyia. The principal seat of her worship was at Argos; she was prominently worshipped at Mycenæ, Sparta, and Samos. Compare DÆDALA; JUNO.

Herakhty, Harakhte, or Horakhte In Egyptian religion and mythology, Horus of the Horizon; Horus as the rising or setting sun, figured as a falcon: often, as Râ-Herakhty, identified with the sun god Râ. Horakhte was worshipped at Heliopolis alongside Râ-Atum.

herb An aromatic plant used for medicine, seasoning, and for its perfume. Much herb lore lies in the realm of magic and is said to have been originally revealed to some chosen person by one of the gods in ancient times—given to Adam by God in the Garden of Eden, taught to man by the fallen angels of the Mohammedans, shown to a healer by a god or culture hero, revealed in a vision by one of the Christian saints, or revealed through divination as by shooting an arrow into the air as in the case of King Ladislaus of Hungary, who, with a prayer that he might find a cure for the plague which was raging in his country, found the gentian.

Much of this lore was, and still is, handed down by word of mouth from generation to generation. But there is a considerable amount of herb lore which was first set down before the Christian era (as well as some found in

the earliest known inscriptions). This formed the nucleus for scientific medicine. Only a small part of this early written lore is accepted in present-day scientific medicine, but much of it is in current use as folk medicine throughout the world among all classes of people.

This written lore has been modified as it was passed down through the ages, partly through errors in copying old texts, partly through confusion as to the actual plant in question, or to the errors incident to translating their names from one language into another, and partly through observation, although frequently properties of a plant are passed on even though the writer admits that he himself has found them to be ineffective or harmful. Although much of this lore has been passed down through the ages by scholars with little or no understanding of botany or medicine except as expounded in books as fact by the ancients, and by many doctors and practitioners of the healing arts who were little better, there have been periods when a truly critical, scientific attitude has been applied to it.

In Roman times some of the emperors had botanists in all parts of the empire gathering herbs to be sent back to the capital. These men were alert to find new herbs and cures, and for the most part checked these cures against actual cases before passing them on to the emperor. This was also the case with the Spanish explorations in the New World. The king sent out several botanical expeditions which obtained considerable knowledge from the natives. During the later Middle Ages and the Renaissance there was a genuine effort among physicians to check these properties with actual experiments and although they were not entirely successful, they discarded much of the valueless or dangerous.

Herb lore is common to all peoples of the world, but there is little agreement among them as to the properties of the various herbs. Often the powers of a given herb are diametrically opposite in different cultures. An herb which among one people is a sure cure for any and all types of poisoning, among others may be used as a poison, while still a third group believe it to be a cure for poison because it is one itself. Often the properties ascribed to an herb are the result of sympathetic magic. The mandrake and ginseng root are cures for all the ills of mankind among many peoples because of their resemblance to the figure of a man. Color also plays an important role in the ascription of curative properties, yellow being an effective agent in the cure of jaundice, while red is considered a sure cure for diseases of the blood, heart, etc. Some herbals rely heavily on astrology and the plants of various zodiacal signs are supposed to cure ailments of the corresponding parts of the body. Where herbal lore is closely tied up with witchcraft and demonology, evil smell and taste are called into play for the exorcism of the demons which cause disease. In some localities and during some periods of Christianity, each disease was the especial province of a certain saint and the herbs sacred to that saint were, therefore, sovereign remedies for that ailment, mental or physical.

In many widely scattered parts of the world there is definite ritual to be observed in the growing, harvesting, and use of herbs. To be effective an herb must often be grown in a certain location, or in conjunction with other herbs. Certain seasons or days (and nights) were specified for the gathering of herbs: often Midsummer's Eve, Ascension Day, or the dark of the moon. Among the

Mohegan Indians of North America it was expressly forbidden to gather herbs during the Dog Days. Many authorities claim that herbs lose their virtue if touched by iron. The Celtic druids are said to have used a golden sickle in gathering mistletoe. Incantations were frequently used when gathering, preparing, and using these preparations. There was one school of thought that held that the only virtue was in simples, or preparations consisting of a single herb; others believed that it was only in certain combinations that any results could be expected.

Some herbs and herb preparations are taken internally, others are applied externally as lotions and unguents, or in the case of wounds the herb is simply laid on the cut. With other herbs smelling their fragrance is sufficient, and they may be hung around the house or carried about the person. Still others are carried as charms or amulets. [JWH]

Hercules or Herakles (Heracles) [Herakles, the Greek form of the name, is preferred in present-day scholarship. The Latin form Hercules is, however, the usual literary usage and has been adopted here because of its greater familiarity to most readers. The impropriety of the use of the Latin name in discussing the Labors (of Greek tradition) is no greater than that of the use of the Greek form Herakles in speaking of a local Roman myth like that of Cacus; the gain in accuracy that might be made by adopting a shifting spelling, as for instance in the voyage and return on the adventure of Geryon's cattle, would be lost in the confusion of the reader. Here, as throughout the book, the more or most familiar form of the name in English reference has been preferred above the "exact" transcription from other languages and alphabets.] Hercules was the great hero of the Greeks, perhaps, as Rose suggests, a minor lord of Tiryns, subject to the king at Mycenæ, about whose feats a whole cycle of legend was collected. He seems also to have attracted to him some of the mythology of Asia Minor connected with the lion god of the region, as witness his lionskin costume and club. Physically he was very strong, perhaps not large in size, although the large size of the stadium at Olympia, said to have been paced off by Hercules, made some ancient scholars believe him to be quite tall. Some said that another Hercules, one of the Idæan Dactyls, founded the Olympic games. Hercules possessed great powers of endurance, was brave, at times almost to the point of foolhardiness. He was noted for his good humor and, as correlatives, for his tremendous appetite both for food and for women. He was not the comic Hercules some dramatists pictured by magnifying these appetites; nor was he the stoical dare-all dramatized by others. Hercules was the hero *par excellence* not only of Greek legend and folklore, but generally the type of the hero throughout European countries in which classical tradition was strong, the pattern of a man to which many other folk heroes were and are fitted.

Amphitryon, in the course of regaining the favor of Alcmena, his wife, was absent in a war against the Teleboans when Zeus became enamored of Alcmena. On the night that Amphitryon was to return home, Zeus visited Alcmena in the guise of her husband, and by making the night of triple length begot Hercules. Later the same night Amphitryon returned in fact and Her-

cules' twin, Iphicles, was conceived. Hera, of course, was enraged at Zeus' adventure and became the life-long enemy of Hercules. She, by obtaining a promise from Zeus when he was off guard, cheated Hercules of the sovereignty he was to have had, and Eurystheus, born just before Hercules, became king of Tiryns.

While yet in the cradle with his twin, Hercules strangled two serpents, sent either by Hera to kill the child or by Amphitryon to determine which of the infants was his son and which the demigod. The child and youth Hercules had the very best of teachers in the manly arts: Eurytus for archery, Autolycus for wrestling, Pollux (Polydeuces) for boxing and fencing, Linus for music. The latter Hercules killed with his lyre when the teacher tried to punish him. Hercules was then sent to guard the cattle of Amphitryon on Mt. Cithæron where, at the age of 18, he slew his first lion.

On a visit to the court of Thespius, who wished to reward him for killing the lion, Hercules slept, either on successive nights or in one night, with the king's fifty daughters, or with forty-nine of the fifty in seven nights. Each bore a son, the first and the last bearing twins, which offspring of the hero later colonized Sardinia. Hercules returned to Thebes, meeting some messengers from Erginus of Orchomenus coming to collect an annual tribute. He attacked them, tying their noses and ears, which he cut off, about their necks; in the ensuing war, he defeated the army of Orchomenus and made them pay Thebes double the annual tribute they had been collecting. Creon, the Theban king, rewarded Hercules with the hand of Megara, his daughter.

The two lived happily for some years until by Hera's malevolence Hercules went mad and killed Megara, their three sons, and two of Iphicles' children. Hercules exiled himself as punishment and went to Delphi to ask Apollo where to settle. There he was told to serve Eurystheus for twelve years, and was promised that if he performed the tasks set for him he would become immortal. At Delphi also he was for the first time called Hercules, having until that time been known as Alcides, after his grandfather. The twelve labors of Hercules, accomplished on the orders of Eurystheus, were fixed in legend as early as the 5th century B.C. These, known in Greek as *athloi* (contests, prizes, the Labors) and so named by Homer's time, involved: The Nemean lion, the Lernean hydra, the Erymanthian boar, the Arcadian hind, the Stymphalian birds, the Augean stables, the Cretan bull, the horses of Diomedes, Hippolyta's girdle, Geryon's oxen, Cerberus, and the apples of the Hesperides. Authorities differ as to the order in which the labors were performed. See the various entries in alphabetical place for descriptions of the feats.

Hercules, his penance done, married Deianira after a transformation combat with the river god Achelous, in the course of which one of the horns of the god was broken off and, according to Ovid, made into the cornucopia, or, according to Pherecydes, traded back to Achelous for the horn of Amalthea. Hercules and his new wife came to a river in flood where the centaur Nessus offered to help Deianira across. When he was well out in the stream and thought he was safe from Hercules, Nessus tried to violate Deianira, but Hercules killed him with one of his poisoned arrows. See **SHIRT OF NESSUS**.

Among the many campaigns carried on by Hercules

was one against Eurytus of Œthalia, waged that he might carry off Iole. He had won her hand in a contest, but her father and brothers refused to give the girl up to him, remembering the fate of Megara and her children. To make matters worse, Hercules had in a fit of rage thrown one of Iole's brothers, Iphitus, from the walls of Tiryns. It was for this crime that Apollo, through the Delphic oracle, made him serve as a slave for a year at the court of Omphale, queen of Lydia. Hercules did not accept the punishment without a struggle; he seized the tripod and attempted to overthrow the oracle. But Zeus tossed a bolt into the midst of the fight and Hercules submitted. He traded roles with Omphale, she bearing the club and the lionskin, he doing women's work. At last, Deianira, fearing that she had lost Hercules to Iole, and remembering the instructions of Nessus, sent the hero the fatal shirt. The pain of his wounds drove Hercules to Mt. Œta where he was placed on the funeral pyre. He was taken up onto Olympus and there married Hebe after making his peace with Hera.

The Greek Hercules, whose labors and exploits begin in the northern Peloponnesus and then extend to Crete, to the Black Sea, to the ocean in the far west, and even to Hades, was combined in later legend with a local Roman hero of the same name, whose exploits are connected with Italian places. It may however be true that the Greek Hercules drew to him legends at first connected with other names and that thus the saga attained its new growth in Italy. Many of the stories are variants of tales told of other heroes; the nine-headed hydra is for example very similar to the seven-headed dragon of the dragon-slayer cycle, the time-serving Hercules is paralleled by the Biblical Jacob, etc.

Hermæ or **herms** (singular *Herm*) In ancient Greece, squared pillars of stone, narrower at the base than at the top, surmounted by a head of Hermes (or some other deity) and with a phallus on the shaft of the column: a development of the more ancient representation of the gods as a mound of stones or an unhewn monolith. Hermæ stood before houses, where they were worshipped by women as bringing fertility, on street corners and roads, carrying there street directions and moral precepts, in front of temples, in libraries and gymnasia. Probably as a survival of the custom of every passer-by placing another stone on the pile of stones representing the god, the Hermæ were decorated with offerings of dried figs and the like and flower garlands. In Rome, the Hermæ were identified with the termini, or boundary markers, and were utilized in more functional ways, such as supporting the barriers in the Circus Maximus. The mutilation of the Hermæ of Athens during the Peloponnesian Wars just as the expedition to Sicily was about to start threw the city into such an uproar that the commencement of the campaign was almost put off, and the implication of Alcibiades in the mysterious sacrilege eventually caused his removal as leader of the expedition. Compare *CAIRN*.

Hermaphroditus In Greek mythology, a god combining male and female in one body: of Oriental origin. Originally perhaps there was Aphroditus, the male form of Aphrodite, represented as a Herm, or phallic statue. Later, after the common myth developed, Hermaphroditus was depicted as having the upper body of a woman

and the lower parts of a man. He is said to have been the son of Hermes and Aphrodite, a beautiful youth, with whom Salmacis, the nymph of the Carian fountain, fell in love. He refused her but was persuaded to bathe in the spring. She then prayed to the gods to be united with him forever; he prayed that bathers in the spring might become hermaphrodites too. Both prayers were granted.

Hermes The messenger of the Olympian gods in Greek mythology; an Arcadian fertility god who acquired varied functions as his worship spread through Greece: identified by the Romans with Mercury, their god of commerce. The characteristic early representations of Hermes are in the form of herms, simple stone pillars topped by a head and with a phallus extended from the front. These stood as signposts on the roads, before the doors of houses, etc., and were believed to have the power of making women fertile. Hermes, the herald of the gods, was also god of roads, guardian of travelers, god of communication and of commerce. He was a wealth-giving god as a fertility deity, and a luck-dispensing god. Thus he became the god of thieves, in an unmoral paralleling of commerce and thievery as bringing quick riches. In connection with these, Hermes was the god of dice; a shepherd's god; the protector of sacrificial beasts. As the herald and messenger, Hermes was the psychopomp, the conductor of the souls of the dead to Hades; he was as well the bringer of dreams, the donor of restful sleep who could withhold his gift. He was the god of eloquence, of social ease, of cunning, fraud, and perjury. His functions were so varied that some classical writers thought that there were several gods of the name.

Hermes was the son of Zeus and Maia; born in the morning, he wandered from the cave of his birth at noon, discovered a tortoise, killed it, strung the shell with reeds, and invented the lyre. That same evening, he sneaked out to Pieria and stole the cows from Apollo's herd there, making them walk backward and plaiting special shoes for himself to confuse the trail. Then he sacrificed two of the cattle to the 12 gods and crept into his cradle contentedly. Apollo discovered the cattle missing in the morning and, with the aid of the testimony of a shepherd who had seen Hermes with the cattle but who could not quite believe what he had seen, accused the day-old baby of the theft. To which both Hermes and Maia shrugged their shoulders. Apollo appealed to Zeus, who sensed an untruth in the denial of the child and ordered the cattle returned. But Hermes played the lyre for Apollo, who was so enchanted that he let Hermes keep the remainder of the herd. The two became friends, and in many ways the duties and character of each resemble the other's. It was Apollo who gave Hermes the golden shepherd's staff which became the caduceus; from Apollo Hermes learned the art of the dice; through him he became protector of flocks. To the extent only that chance could aid in prophecy did Apollo permit Hermes power in that activity. True prophecy remained Apollo's province.

Hermes performed many useful services for the gods: he tied Ixion to the wheel and Prometheus to Mt. Caucasus; he aided in the rescue of Dionysus from the flames which consumed Semele; he led the three god-

desses to the spot where Paris judged them; he sold Hercules into slavery to Queen Omphale; he slew Argus Panoptes. Hermes wore the broad-brimmed hat of the traveler (sometimes the hat is small and winged); he carried the magic wand that closed the eyes of the dying (later the wand was combined with the herald's staff, the latter being wound with ribbons which became the serpents of the caduceus); his sandals of gold were winged or at least capable of carrying him great distances; sometimes he carried a traveler's purse. The number 4, the palm tree, and the tortoise were sacred to him; sacrifices included honey, cakes, and lambs among other things appropriate to a fertility god of both pasture and underworld.

Hermod In Teutonic mythology, son of Odin and Frigga, swift messenger of the gods who welcomed the heroes to Valhalla. At the time of the tragic death of Balder, Odin sent Hermod to Hel to sue for Balder's release. On Odin's wonderful horse Sleipnir, he rode nine days and nights, until on the tenth he crossed the Giallar-bridge, which trembled under the hoofs of Odin's horse. At last he came to the gates of Hel and made the famous leap over the walls which brought him into the region of the dead. On he traveled to the banquet hall of Hel where he found Balder and Nanna already there before him. Hermod stated the purpose of his coming and plead the whole night through, but Hel said nothing until at last she said Balder might go back if everything in the world shed tears for his return. Hermod went back to the gods with the answer, and all nature wept and every living creature wept save one old hag in a cave, named Thok. She would not shed a tear, saying it was no sorrow to her if Balder stayed with Hel forever. Thok is usually interpreted as Loki in disguise. See DESCENTS TO UNDERWORLD. Compare ADONIS.

Herne, The Hunter mentioned in the *Merry Wives of Windsor* has only a vague legend in England; but obviously belongs to the large community of spectral hunters. Such a hunter was known in the German Black Forest, in the French Fontainebleau (identified with St. Hubert); and in England, Herne the Hunter paced around the old oak in Windsor Forest. [RDJ]

Hero and Leander In a famous tale of classical antiquity, two lovers who lived in towns opposite each other on the Hellespont. Hero was a priestess of Aphrodite at Sestos with whom Leander, an inhabitant of Abydos, fell in love after he saw her at a festival of Aphrodite. Her dedication as priestess made their marriage impossible, but nightly Leander swam the Hellespont to meet her secretly. One night he was drowned in a storm when the lamp she lit to guide him was blown out and he lost his direction. In the morning Hero found his body on the shore and leaped into the sea, drowning herself. The story is told by Musæus (4th or 5th century A.D.) but earlier references are found in the works of Ovid, Statius, and Virgil.

Herodias In the New Testament narrative, the wife of Herod Antipas. As Herodias had formerly been the wife of Philip, the brother of Antipas, John the Baptist rebuked Antipas for his "adultery," and aroused the ire of Herodias. On the birthday of Herod Antipas, Salome (the name is not given in the Biblical story), the daughter of Herodias, danced before the assemblage so well

that Herod promised her, rather without thinking, anything she desired. The girl went to her mother for advice on what to ask, and then demanded the head of John, at that time a prisoner of Herod. Herod, unable to retreat from his promise, had John beheaded, although previously he had feared the consequences of such an act because of John's popularity. The head was then brought in and presented to Salome on a salver. The story has been much used in music, art, and literature. It is an example of the irrevocable king's promise motif (M203) of folktale, bearing some resemblance to the hasty oath theme illustrated in the story of Jephthah.

In the Middle Ages, in Germany, Herodias was one of the women (see Hecate, etc.) who was said to lead the Wild Hunt.

Herus Literally, the name *Jesus*, as understood by the Apache Indians from their first Spanish contacts. According to Chiricahua Apache folktale a man named Herus came among the Apache and gave them a book. He told the people to keep the book forever, but when he died, they burnt it, according to their own ancient and honored custom of burning the belongings of the dead. And after that they had many misfortunes.

Herus was not identified with Jesus, however, whom the Chiricahua identify with their own hero Child-of-the-Water, but merely the man who gave them the book. M. E. Opler points out that the Chiricahua Herus stories are probably residual from the days of misfortune when the Chiricahua suffered captivity at the hands of the white men in the Indian Wars, and the efforts on their part to induce the Indians to revere the Bible. (See M. E. Opler, *Myths and Tales of the Chiricahua Apache Indians*, MAFLS 37: 96-97.)

Heshwash ceremony The "hiding" ceremony of the California Yokuts Indians; a public performance in which large numbers of shamans from the various tribes come together to vie in bewitching one another. They try to inject magic poisons and disease-carrying objects into each other. Rain, bear, and snake shamans do not take part. Suggestion is the power behind the whole performance. The men strike at each other with their baskets. If the one who is struck cannot extract the magic object which has entered into him (sometimes he can) he must pay his opponent to extract it for him. The Heshwash ceremony is a popular "show." It occupies two nights: a short exhibition on the first night, but the performance lasts the whole of the second. Shaman contests are known also among the Yuki and Maidu.

Hesi An important ceremony and dance in the Kuksu secret society of the North American Indian tribes in central California. Among the Valley Maidu, Hesi was the most important of all Kuksu ceremonies, and in the Hesi ceremony certain personages of subsidiary rank wore the "big head" headdress that in other groups is associated with Kuksu impersonators. The Hesi ceremonies are postulated to have been a later development, which was superimposed by the Valley Maidu and the Patwin tribes on the older, more widespread Kuksu base. The Hesi of the Patwin lasts four days; modern "ghost dance" rites have been added to it. These latter observances are connected with worship of the spirits of the dead; the rites center about a pole wrapped with

different colored cloths, which is erected in front of the dance house. [EWV]

Hesiod A Greek (Boeotian) didactic poet of the 8th century B.C. to whom are ascribed the *Works and Days* and the *Theogony* among several other works. He first systematized, in the latter work, the cosmogonic and theogonic myths of the Greeks. The *Works and Days*, which incorporates a religious calendar, has several episodes, e.g. the description of Pandora's creation, which rise above the general prosaic level of the writing. Included also in the work is the earliest known Greek fable, *The Hawk and the Nightingale*. Hesiod's work is an important source for our knowledge of the life and beliefs of the Greeks following the Homeric period.

Hesione In Greek mythology, daughter of Laomedon, king of Troy. Poseidon and Apollo had been enlisted by Laomedon to build the walls of Troy. When Laomedon refused to pay for their help, Poseidon sent a sea monster to ravage the land. To remove this plague on the country, Laomedon had to sacrifice Hesione to the monster: the details of her being chained to a rock, etc., are probably later additions due to confusion of the story with that of Andromeda. Hercules happened along, struck a bargain with Laomedon to rescue the daughter in exchange for Laomedon's horses, was swallowed by the beast and slew him from inside. Again, however, Laomedon backed down on the bargain, and Hercules was forced to raise an army and take the city. Hesione was given as a slave to Telamon, who had fought bravely in the battle. By him she became mother of Teucer. When Priam sent an envoy to obtain her release, the Greeks refused, thus adding fuel to the ill-feeling that was to blaze forth in the Trojan war.

Hesperides In Greek legend and mythology, maidens who guarded the golden apples given by Ge to Hera when she married Zeus. The maidens were seven, or four, or three in number, usually three—Aegle, Erytheia, and Hesperesthusa—daughters of Erebus and Nox (or of Atlas and Hesperis, or Phorcys and Ceto). The tree on which the apples grew was in the western Gardens of Ocean (or where the Hyperboreans dwelt) and was guarded by the dragon Ladon who never slept. Hercules, in the eleventh of his labors, slew the dragon or put it to sleep and so gained the apples. In another version of the story, Hercules assumed the burden of Atlas, who himself got the apples and refused to give them up or to take the skies on his shoulders again. Hercules tricked the giant, however, asking the slow-witted giant to resume the burden for a moment while he got a pad for his shoulders, and returned with the apples to Eurystheus, who gave them to Hercules as a gift. The hero dedicated them to Athena, who returned them to the garden. The apples dropped by Hippomenes in his race with Atalanta were said to have been given to him by Aphrodite who got them from the garden of the Hesperides. Compare TREE OF LIFE.

Hestia In Greek mythology, the goddess of the hearth; one of the twelve great gods: identified by the Romans with Vesta, whose counterpart she was. Hestia was the eldest of the children of Cronus and Rhea, wooed by Poseidon and Apollo but choosing to remain eternally a virgin. As goddess of the hearth and its fire, she partook of all sacrifices and protected domestic life and

virtue. The fires of the public hearths were sacred to her and it was from these fires that colonists carried the flame of the home city to new shores. The first-fruits, year-old cows, oil, and wine were sacred to her.

Hethúska Society A society of the Omaha Indians, organized to perpetuate the memory of brave deeds in the history of the tribe, to stimulate heroism, and to belittle the fear of death. The society acted as arbiter and judge as to whether a warrior and his deed were worthy of perpetuation in song. The warrior songs of this society point to the transience of man on the earth, and emphasize the triviality of personal death in the face of the unchanging earth, mountains, and rivers.

hex Wizard, witch, to bewitch; witchcraft: a term of German origin found in many sections of the United States today especially among the Pennsylvania Dutch. A hex can be either a man or woman, but usually it is a man; and a hex can be either amateur or professional; i.e. anyone can work hex spells but certain individuals are recognized as professionally competent. These are often referred to as hex doctors and their ministrations are usually supposed to result in good. They are visited by their clients to get "medicine" to cure ills, to control the forces of nature, to nullify spells put on them by their enemies, in short, to bring about any desideratum. Some of the hex doctors are famous and are visited yearly by hundreds of people. Two of the most celebrated of the past are Joseph H. Hageman and John G. Hohman. Hageman's libel suit against the *Philadelphia North American* in 1903 resulted in one of the most colorful and dramatic of the many hex trials.

The professional hex doctor works through the use of stock magic formulas, some of which are very ancient, deriving generally from two main sources: Gipsy magic and medieval church formulas and ritual. This material is largely found in two books possessed by all hex doctors, the *Seventh Book of Moses* and *The Long Hidden Friend*. This last is a compilation by Hohman done as early as 1819. It is a practical handbook for the practice of hexerei or witchcraft. It contains 187 recipes, spells, and charms covering every aspect of life. Some idea of its nature can be had from the following:

119. Against witches—for Beasts write it on the stall—for Human Beings Write it on the Bedsteads.

Trotter head I pray thee my house and my Court,
I pray thee my horse-and-cow-stall, I pray thee my
bedstead, that thou shed not thy consolations on
me; be they on another house till thou goest over
all mountains, countest all the sticks in the hedges
and goest over all waters. So come the happy day
again to my house, in the name of the Father and
of the Son and the Holy Ghost.

121. To Quench Fire without Water

Write the following order of letters on the side of
a plate and throw it into the fire:

S A T O R
A R E P O
T E N E T
O P E R A
R O T A S

Hex stories abound among the Pennsylvania Dutch in Pennsylvania and in other parts of the country. They follow the pattern of witch stories in general. Typical is the following from the country north of Reading, Pennsylvania. One summer the horses and cattle be-

longing to the people on a certain farm in the neighborhood began to waste away and to die. The farmer finally consulted a hex doctor in Lancaster, who told him that the animals were bewitched and that to break the spell he should take hair from the manes and tails of the animals, place it in a container filled with the animals' urine and bury the whole under the stable. They did this and the animals recovered. But soon the farmer himself became ill. When they consulted the hex doctor a second time, he described in detail the person who was bewitching the farmer; from the description they recognized him at once as a near neighbor. The hex doctor instructed the wife to make a "doll" and fill it with the sweepings from the house and then to draw on it with charcoal the likeness of the neighbor. When it was completed she was to stick the effigy with pins, calling it by the neighbor's name and wishing that he might die. She did as instructed; the neighbor died the same day, and the husband recovered.

The barn symbols so common still today among the Pennsylvania Dutch are often referred to as "hex signs." They are said to protect the animals from the working of spells and especially from the evil eye.

The belief in hexes and hexerei is still widespread. Many aspects of life are still governed by it. So awesome is it that the word *hex* is generally avoided even by those who disclaim belief in it. Further proof of the wide practice of hexerei and the seriousness with which it is taken is found in the fact that hardly a year goes by without cases of bewitching, of accusation of hex murder and the like being taken to the courts. The latest case to come to the courts in Pennsylvania was in 1949 in Lehigh County. MACEDWARD LEACH

Hexateuch The first six books of the Bible.

hey See HAY (2).

heyoka Ceremonial dancing clowns of the Dakota Sioux. Among the Oglala and Santee in particular the heyoka was a dream cult, in obedience to a vision of lightning or the Thunder-bird. This at times involved fearful obligations, to the point of killing. The actions and dancing emulated "Haoka, the anti-natural god," in backward speech and behavior contrary to usual and expected norms. The clowns were dressed in breechcloths, with white powder and a bladder to simulate baldness; formerly they half-shaved their hair. They carried rattles of dew-claws on a stick.

They were said to represent giants or small men, and in dance they variously rose to full height or crouched. At times, following a vision, they took part in the Santee elk dance.

The *heyoka wozepi* (from *wcze*, dip out) immersed their arms in scalding water and pulled out pieces of dog meat boiled for a ceremonial feast. This "heyoka trick" was shared by the related societies of the Omaha *hethuska*, Iowa and Ponca *helocka*, Kansa *helucka*, Pawnee *iruska*, and the Mandan-Hidatsa-Arikara *hot dance*. All used the same grass to protect their arms from the heat of coals or hot water which they handled. However, the heyoka lacked the ceremonial organization of the other societies, and the grass dance features of the helocka and hot dance. See HOT DANCE. [GPK]

Hiawatha The hereditary name (from *Haionhwa'tha*, he makes rivers) of one of the chieftainships in the Toroise clan of the Mohawk Indians of eastern New York;

also, the actual name of an Iroquois Indian who had much to do with the establishment of the famous League of the Iroquois; also, the title of a well-known poem by Henry Wadsworth Longfellow.

Iroquois tradition makes Hiawatha a prophet who probably lived about 1570 A.D., the disciple and active colleague of Dekanawida, founder of the League. Together Hiawatha and Dekanawida brought about the confederation of the five Iroquois tribes, and introduced major intra-tribal reforms one of which was a stringent regulation against the blood feud. Henry Rowe Schoolcraft confused Hiawatha with the Ojibwa culture hero Nanabozho and in his *Algic Researches* attributed the deeds of the Ojibwa deity to the Iroquois historical figure. Longfellow based his poem on Schoolcraft's material, which of course was purely Algonquian, not Iroquoian. As a result Longfellow's poetic composition, which bears the name of a great Iroquoian reformer and statesman, contains no single fact or fiction relating to him, but is throughout full of Algonquian terms and legendary material. [EWV]

hieros gamos Literally, holy or sacred marriage: the representation, originally perhaps always with human actors, but later sometimes with symbolical substitution for one or both participants, of the marriage of the gods. Specifically the term is best applied to the marriage of Zeus and Hera as symbolized, for example, at the Plataean Dædala. However, marriages between a god or goddess and a human being are likewise sacred unions, the most familiar being that of Demeter and Iasion in the thrice-plowed field. As the term is used by Krappe, the sacred marriage was a fertility ceremony, a fertility-bringing union of an earth-mother, e.g. Semele, Demeter Chthonia, Persephone, Maia, with a sky or rain power. But Farnell (*En. Brit.*, 11th ed., *s.v.* "mystery" and "Zeus") thinks that the ceremony was simply a parallel, auspicious in nature, of marriage among the gods and marriage among human beings. As examples of the more general *theogamy*, Frazer brings in evidence marriage of the gods to their priestesses in Babylonia, Egypt, Athens, Eleusis, Plataea, and Sweden. He describes an annual festival among the Oraons of Bengal in which the fertilizing marriage of the Sun and the Earth goddess is paralleled by human orgiastic ceremonies. The demon lover of folktale may be a development of the belief underlying the sacred marriage.

Highland fling A solo dance or duet of the Scottish Highlanders, characterized by repeated hops and turns on one foot while the free foot beats the ankle. It was originally a dance of victory after a battle. Its distinctive execution calls for sharp crispness coupled with ease. The arms are semi-extended to a precise position at head level; the free toe touches the ankle in a prescribed position. The pivots are clean and swift. [GPK]

Hiisi The evil spirit of the Finns. He lives in the woods, and is an ugly and beardless fellow. He has lop-sided eyes without eyelids and is dressed as a scoundrel. The same name is also used for Devil. Hiisi was probably formerly considered the guardian spirit of the sacrificial grove; he was called the son of Kaleva and believed to be a giant of ancient times. [JB]

Hikuleo In the mythology of the Tonga Islands, god of the afterworld who dwelt in Pulotu, the homeland

of the dead, in the west. In many Tonga myths Hikuleo plays the same role as Tangaloa in other parts of Polynesia. He fishes up islands, specifically Kao and Tufa islands, north of Tonga. Kao and Tufa are said to have risen up from stones thrown down by Hikuleo. In daily life, Hikuleo is thought to be incarnate in many living things. He is represented in Tongan temples by carved wooden images. On Samoa, where his name is Si'uleo, only one carved image has been identified. See Peter H. Buck: *Vikings of the Pacific*, Chicago, 1959, pp. 299, 301.

hikuli (1) The mescal button.

(2) Same as PEYOTE DANCE.

Hilili A scalp-taking or war kachina of Keresan provenience, adopted first by the Hopi Indians and taken over by the Zuñi about 1892. His dance mask is turquoise and white, bearded, with a snake painted over each eye. Originally Hilili had a flint knife on top of his mask, but its significance was never revealed by the first owners of Hilili kachina, and the Zuñi society substituted instead a duck's head plus sun, moon, and star designs. Further acculturation is evidenced by the cartridges, now substituted for arrowpoints, on Hilili's bandoleer, symbolizing the number of scalps taken. Hilili is said to be a very dangerous kachina, and the Zuñi have enhanced his power by giving the dance leader a stuffed snake (a Zuñi symbol of war). See E. C. Parsons: *Pueblo Indian Religion*, Chicago, 1939, 519n, 1105, 1106.

hill-billy A mountaineer, especially of the southern United States. Hill-billy music is a compound of genuine folk elements with some of the more sentimental aspects of popular music and has had considerable acceptance as radio entertainment. It preserves, in somewhat burlesqued style, the ancient, heady vocal production of ballad-singing, the rhythms of the square dance and the hoedown, and the most common folk instruments of America—banjo, fiddle, guitar. The verses stress the vernacular to the point of parody.

Himavat In Hindu mythology, the personification of the Himālaya mountains; father of Gangā and Umā.

Hind Etin The Scottish version (Child #41) of a Germanic ballad in which a king's daughter is periodically beguiled by a dwarf or hill man, Hind Etin, to live with him in secret in a hill or wood. She bears him seven sons, but when she reveals her secret to her parents, she dies. The Scottish ballad is a rationalization of the supernatural story. [MEL]

Hind Horn The title and hero of a Scottish popular ballad (Child #17), related to the *Horn* romances of the 13th century and after. The exact relationship of the ballad to the romances is not clear, since intermediate material probably has been lost, but W. R. Nelles (*JAF* 22: 42–62) surmises a lost ballad as being the common source of both *Hind Horn* and parts of the 14th century romance *Horn Childe and Maiden Rimnild*. So many of the motifs appearing in *Hind Horn* are common apparatus in ballads of the period that *Hind Horn* is often erroneously identified with other ballads having a similar story. For example, the lover returning in the nick of time to regain his mistress as she is about to be married to another is a motif common to several ballads.

In essence, *Hind Horn* is the story of a ring, a type of chastity index given to Hind Horn by his love. "When this ring grows pale and wan,/ You may know by it my love is gane." He returns to his own land from foreign shores when the ring fades, meets an old beggar-man who tells him of the girl's approaching marriage: the festivities are already in progress. Horn and the beggar exchange clothes, and in disguise Horn "When he came to the king's gate,/ He sought a drink for Hind Horn's sake./ The bride came down with a glass of wine,/ When he drank out the glass, and dropt in the ring." She recognizes him and offers to go with him even as the beggar she thinks he is, and all ends happily. See NOBLE MORINGER.

Hinky Dinky Parlez-Vous Alternate title of the World War I soldier song, *Mademoiselle from Armentières*.

Hiordis or Hjordis According to the *Volsunga Saga*, the daughter of Eglimi, King of the Islands, who was Sigmund's third wife. She had also been courted by the Hunding Lygni, who was so enraged at his rejection that he came after her and slew all of the Volsungs including Sigmund. With his dying breath, Sigmund bade her keep the pieces of his sword Gram for their unborn son. She escaped from the battlefield, and was protected by the Viking Elf, who later married her, and raised Sigmund's son Sigurd.

hippocampus A fabled sea-animal of classical myth resembling a horse, but with the hind parts of a fish or dragon. The chariot of Poseidon was drawn by hippocampi.

Hippocrene Literally, the fountain of the horse; a spring on Mt. Helicon, in Boeotia, sacred to the Muses, like its companion spring Aganippe, and supposed to have welled forth from the mark of Pegasus' hoof. The spring and its waters are commonly alluded to as giving poetic inspiration.

Hippolyta's girdle In Greek legend, the girdle of the queen of the Amazons taken by Hercules as the ninth of his labors. Hercules beat the Amazon warriors in battle and either slew Hippolyta, taking the girdle from her body, or captured Melanippa, the Amazon general, and ransomed her for the girdle.

Hippolytus In Greek mythology, the son of Theseus and his Amazon wife, Hippolyta or Antiope. Theseus later married Phædra who made advances to her stepson but was repulsed. According to some versions of the story, Phædra committed suicide, leaving a note accusing Hippolytus of the crime she herself desired. Theseus cursed his son and asked Poseidon, his father, to punish the supposed culprit. One day, as Hippolytus drove his chariot near the water's edge, a bull came out of the sea, sent by Poseidon, and frightened the horses. They bolted and dragged Hippolytus to death. In some variants of the legend, Theseus then discovered the plot; and Phædra committed suicide after the death of Hippolytus. Artemis, whose favorite Hippolytus was, induced Æsculapius, by means of a large fee, to revive the youth, for which presumption Zeus killed Æsculapius. In Italian myth, Diana transported Hippolytus to the grove at Aricia where she (Artemis-Diana) placed him under the protection of Egeria and changed his name to Virbius.

Hiranyagarbha In Hindu cosmogonic mythology, the golden egg from which the universe came. In one variant of the myth, the waters existed first. They produced the golden egg by *tapas* (the process of producing intense physical heat) and from this egg was born the creator Prajāpati who, after a year, spoke three words, "Bhūh," "Bhuvah," and "Svar." These became the earth, the atmosphere, and the sky. The golden egg, in spiritualized form, persists in popular Indian belief. In another myth, Hiranyagarbha was Brahmā, the first male, formed in a golden egg by the supreme first cause. After a year, he divided the egg into two parts by thought and formed the heaven and earth from the two halves, placing the sky between.

Hisagita-imisi Literally, preserver of breath: the supreme deity of the Creek Indians. He is also called Ibofanga, the One Sitting Above. He is closely related to the sun, but he is not the sun. He is represented on earth by the busk ceremonial fire. Compare ABABINILI.

historic-geographic method The historic-geographic, or so-called Finnish method of folklore investigation, was developed during the last half of the 19th century by Julius and Kaarle Krohn (see discussion of these under FINNISH FOLKLORE), father and son, but has received its principal practical applications more recently. In his study of the songs which formed a basis for the *Kulevala*, Julius Krohn analyzed them into their component elements and studied the distribution of these elements. It was Kaarle Krohn who first made systematic use of this method for investigation of the folktales. Since his pioneer studies and formulation of principles in the 1880's, scholars have usually spoken of this kind of analytical study as the Finnish method, although many of the best exemplifications of its use have come from outside that country. It has been applied to various folklore genres—legends, games, riddles, and ballads—but most of all to folktales.

The basic assumption is that each tale (or other folklore item) has had its own history and must be investigated independently. General conclusions as to the origin and migration of all or great groups of tales must await the accumulation of monographic treatments of many story-types. During most of the 19th century various scholars had attempted on theoretical grounds and without a thorough study of the tales themselves to answer at once such questions as "Where did our folktales come from?" or "What do folktales mean?" The historic-geographic method is not at all concerned with the latter question and with the first only as a possible distant goal.

For the individual tale, the investigator using the method is interested in (a) establishing an approximation to an original form which will sufficiently account for all the available variants; (b) determining as nearly as may be the age and place of origin; (c) tracing the vicissitudes of the story through time and place, the course of its wanderings, and the modifications it has undergone.

To use this method it is necessary that one have available a relatively large number of versions of a folklore item and also that the item be susceptible of analysis into a series of details.

Arranging his oral versions in geographical and his written ones in historical order with convenient abbreviations for ready reference, the student establishes an

invariable sequence for his analytical treatment. He next chooses details which he finds have received varied treatment in these versions. He now makes a study of each of these, arranging in order all versions handling the detail in the various ways, as well as those entirely omitting it. He now makes a percentage count of the various treatments.

When all details have thus been studied he may find certain treatments so predominant that he may feel confident of their belonging to the original type. Usually, however, the evidence is more ambiguous. By a careful study of certain handlings of details different from the predominant one he works out local affiliations and may establish regional subtypes (e.g. Mediterranean, Baltic, Scandinavian, Hispanic). It is from these subtypes that he usually proceeds to posit a general archetype, much as the linguist may take a pre-Germanic, pre-Celtic, and pre-Slavic word and establish a theoretical Indo-European form which will explain them all.

These subtypes and the archetype are hypothetical constructions designed to explain the available versions of the folklore item over its whole area of dissemination and within certain regions.

From this point in his study the investigator endeavors to determine how his versions and groups of versions are related to these types he has established. It is in this interpretation of data that he runs his greatest risk, for he must consider all pertinent facts of history and geography, the natural modifications of tradition and the circumstances of these modifications, the mutual relations of written and oral tradition, of slow and almost imperceptible dissemination, and of rapid transmission by emigration or travel.

No reader of the studies accomplished by this school will be entirely satisfied with the results. The complexity of the many problems of interpretation just mentioned presents many pitfalls and some of the investigators have ignored these. Opponents of the method have attacked it primarily on the ground that it undervalues literary treatments; that it disregards the role of the active bearer of tradition; and that it does not give sufficient attention to the relation of linguistic affiliation, especially in the history of tales.

The best practitioners of the method, such as Walter Anderson, have been aware of these problems and have furnished model studies. The method is being continually improved, so as to make use of the undoubtedly valuable analytical procedure, and to meet the just criticisms of those who have felt dubious about the interpretation of data.

Several important questions in folklore are not touched by the historic-geographic method. It does not go behind a theoretically original tale to account for its origin, nor does it attempt stylistic studies or the relation of an individual version to its social background. Within its own field, however—the history of an item of folklore—it has developed a rigorous analytical method which, whatever may be the weakness in a given interpretation, must certainly form the basis for all serious studies of the dissemination of complex items of folklore.

STITH THOMPSON

Hiyoyoa Wagawaga (New Guinea) land of the dead which lies under the sea near Maivara on Milne Bay. Hiyoyoa resembles the upper world. There Tumudurere lives with his wife and children and directs the spirits of the dead, telling them where to make their gardens.

hkaung-beit-set Charmed or consecrated objects inserted under the skin by the Burmese: bits of gold, silver, lead, precious stones, pebbles, and pieces of tortoise shell or horn inscribed with incantations. If they are cut out, the charm is broken. The hkaung-beit-set are inserted in cheeks, chest, arms, and thighs, sometimes in large numbers, to procure invulnerability. Yunnan muleteers also conceal precious stones and coins under the skin as a precaution against robbers.

Hkum Yeng The village guardian of the Wild Wa of Burma. The Wa live in terror of this nat and post the spoils of their head-hunting expeditions in order to propitiate him. See NAT; TAK-KENG.

hlonipa A Zulu term meaning to respect or reverence: applied to the non-use of names of revered people or animals, and also to the avoidance of contact with tabued objects or people. To the Zulu woman, for instance, her husband's name is hlonipa; so are those of his parents. A mother-in-law is hlonipa to a son-in-law; they must avoid each other. The name of the king is sacred and powerful and fraught with danger, and therefore hlonipa to all. See NAME TABU.

hmawsayā The Burmese exorcist who restores bewitched persons to health. The hmawsayā obtains his qualifications by drinking water mixed with the ashes of scrolls containing mystic figures and cabalistic squares, by being tattooed with magic squares, incantations, or the figures of nats, or by taking a special internal medicine. In treating the ill, the hmawsayā commands the offending disease-causing nat to reveal its wishes. Occasionally a threat is sufficient, but frequently stronger measures are necessary and pungent substances are rubbed into the patient's eyes and he is beaten. When the spirit is ousted the patient is cured and feels no ill effects from the treatment.

Hobal, Hubal, or Hobal Hubal The name of a pre-Mohammedan god, patron of Mecca. Hobal was figured in the form of a human image, said to have been brought from Syria, which stood over the hollow in which offerings of precious materials were stored within the Kaaba. Along with the other idols, the image was destroyed by Mohammed in 630, and it is said that when Hobal fell, Mohammed cried, "Truth hath come and falsehood hath vanished." The idol is however not mentioned by name in the Koran. Some say that Hobal was the real name of Al-lahu, the chief of the gods of pre-Islamic times, who became the one god of Islam, and it is also said that weekly sacrifices of children were made to him on the stone in the Kaaba.

Hodening An English Christmas celebration. In Kent a man covered by a horse blanket and masked as a horse was led from house to house followed by other maskers ringing bells and singing carols. The group received small gifts of food, money, or drink. See MARI LWYD. [RDJ]

Hoder or Hodur In Teutonic mythology, one of the æsir, the blind son of Odin and Frigga, twin brother of Balder, and his innocent slayer; god of darkness. One day the gods were amusing themselves throwing weapons at Balder, whom nothing on earth would harm. But Loki had discovered the exception: the mistletoe was the one thing in the world which had not vowed never to harm Balder. So Loki fashioned a dart of mistletoe and wilyly suggested that Hoder throw it. Thus the blind Hoder joined the sport, threw the fatal mistletoe, and killed the beloved Balder. Hoder was killed by Vali. At the rebirth of the world after Ragnarök he and Balder will return, reconciled.

Hodmimir's Forest In Teutonic mythology, the forest which Surtr's flaming sword cannot destroy at Ragnarök. Here Lif and Lifthraser will seek refuge and sleep through the destruction of the earth, only awakening when the earth is green and verdant again to found a new race of man.

Hœnir In Teutonic mythology, one of the æsir, and one of the three creators of Ask and Embla, the first man and woman. Hœnir gave them reason and motion, and, according to some, the senses. After the war between the æsir and the vanir, he was exchanged with Niord and went to live in Vanaheim.

Hogmanay or Cake Day In Scotland and the north of England, the last day of the year, when children, sometimes masked and sometimes singing songs, went about soliciting oat cakes. The day is also known in Old French as *aguillan-neuf* or *au-guy-l'an-neuf*, an occasion for distributing gifts. Cotgrave's suggestion that Hogmanay is a survival from the times when druids on the last day of the year gathered mistletoe attributes to popular custom more historical continuity than one has reason to expect. [RDJ]

Hogni In the *Volsunga* and *Sigurd Sagas*, the brother of Gunnar, Guttorm, and Gudrun. Brynhild asked him to avenge her by killing Sigurd. Hogni refused because he and Sigurd were blood brothers, but he persuaded Guttorm to do the murder. He hid the Nibelung gold in the Rhine, and only he and Gunnar knew its resting place. He advised Gunnar against visiting Atli, but accompanied him, and was killed for refusing to tell the hiding place. Compare HAGEN.

hogs can see the wind A folk belief of southern Ireland, also found among the Negroes of the southern United States, and in the Bahamas. Any human being who will suck milk from a sow will have the gift of seeing the wind forever after.

hohobi (plural *hohovi*) The Dahomean (Fõn) word for twin. In the New World, the designation has been retained by the Negroes of Dutch Guiana. In the twin-cult of Dahomey and Western Nigeria, twins are both prized and feared, since they are believed to represent and control supernatural forces that can work benefit or harm. For this reason, they are treated with special

attention and, where African rituals are followed in the New World, their birth and stages of development are marked by elaborate rites. It should be noted that the attitude toward twins in Dahomey and Western Nigeria contrasts with that held farther east along the Guinea coast, where the power of twins is so feared that they are done away with at birth. This custom has not been retained in New World Negro cultures. See DOSU. [MJH]

Ho Hsien-ku One of the Eight Immortals of Chinese mythology. Ho, the only woman member of the band, attained immortality by eating mother-of-pearl given her by a ghost. Her iconography contains a peach given her by Lü Tung-pin, a lotus blossom, and a reed organ. She is often shown drinking wine or floating on colored clouds. [RDJ]

Holde, Holle, Hulda, Hulle, or Holl A Germanic goddess, especially of the Suevi, Hessians, and Thuringians, appearing in many manifestations. Early she was a sky goddess, often to be seen riding on the wind. Snow was said to be feathers from her bed, detached as she was making it up. Often in her wild rides through the sky she is accompanied by a procession of witchlike creatures. Women suspected of witchcraft were said to "ride with Holde." To her realm in the sky went the souls of unbaptized babies. Holde is also associated with lake and stream. At noon she can often be seen, a beautiful white lady, bathing in the lake, and as she is observed she disappears under the water. To reach her dwelling one must dive down a well. Holde is also a maternal deity and goddess of the hearth. She presides over spinning and especially the cultivation of flax. In this manifestation she is helpful and kind.

Her most common terrestrial manifestation is as the leader of the "furious host" or "furious or wild hunt." The furious host is made up of a group of specters, most of whom are children and babies who died unbaptized. With loud cries and wild rush they tear through the countryside on their uncontrolled rides following Holde like a valkyrie at their head. Wherever this procession passes, the fields will bear double the usual harvest that year. Holde is thus connected by some, as a chthonic deity, with the Greek Persephone, the Roman Bona Dea, etc. Holde as leader of the wild hunt is identified with Dame Gauden and with Perchta, both leaders of the furious host. Stories of Holde as leader of the furious host account for her association with the Venusberg legend. The Hörselberg is said to be Holde's Court and there the wild rides terminate. Characteristic is the story of old man Eckehart who is caught up in the ride of the furious host and carried into Holde's Court, there to abide until the day of judgment. Holle is associated with the legend of Barbarossa, the sleeping king in the mountain, and the Kyffhäuser Mountain.

At present Holde has degenerated into a folk bogey, an ugly old woman with long nose and thick hair, sometimes seen in the forest leading a flock of sheep or goats. Peasant mothers frighten their children into good behavior by telling them Holde will "get" them if they are not good. See WILD HUNT. [MEL]

➤ Grimm's tale, *Mother Holle* (#24), belongs to the world-wide kind and unkind (or courteous and discourteous) motif (Q2; Types 361, 403 II, 431, etc.).

The industrious sister drops her shuttle into the well and is forced by the stepmother to go after it. In the land at the bottom of the well, she prevents the bread from burning and shakes the ripe apples from the tree. Then she becomes a servant of Mother Holle, shaking the beds until the feathers (snow) fly. At last, homesick, she takes her leave of the old lady—who in the story is more a kind witch than the sky and fertility goddess Holde—and is showered with gold as she steps back into the real world. The envious and lazy elder sister quickly goes down the well, passes by the pleading bread in the oven and the apples on the tree, and sleeps in the morning when she should be shaking out the bedclothes. Mother Holle dismisses her, and the lazy girl is showered with pitch which never comes off, instead of the gold she expects.

holding down the hat The motif (K1252; Type 1528) of a general Eurasian folktale in which a man traveling along a road sees another approaching on horseback. Immediately he puts his hat over some horse droppings in the road and holds it down tight by the brim. When the man on horseback arrives and inquires what he is guarding under the hat, the man explains that it is a beautiful rare bird; if the stranger will lend him the horse he will go fetch a cage, that is, if the stranger will hold down the hat until he gets back. The man on the horse agrees, carefully holds down the hat, while the other makes off with the horse (and does not return). After waiting and waiting the stranger finds only dung under the hat.

In Java this story is found with Mouse-deer as trickster, Tiger as dupe. Mouse-deer sees Tiger coming and is afraid, so he begins to fan a pile of steaming dung with a large leaf. Tiger's curiosity is aroused. Mouse-deer explains that he is guarding this food, which belongs to the king, from flies. Tiger is hungry and finally succeeds in persuading Mouse-deer to betray his trust, only to discover how he has been duped when Mouse-deer is out of sight. In Annam, Cambodia, the Kanglean Islands, and Sunda Island tales, Ape is thus duped by Tortoise.

There are various North American Indian tellings of this story, reported especially among the various Apache tribes, and among Mexican Indians, and thought to be of European provenience. The dupe is tricked into holding up the rock, holding up the sky, holding up the cliff, etc., while the trickster escapes. In this form the tale is also well known in Africa among the Kaffirs, Basutos, Hottentots, also in the Cape Verde Islands, and was retold by the Uncle Remuses of Georgia.

Holi, Hoolee, or Hohlee A vernal fire-festival known in northern India as the Holi, Phāg, or Phaguā, in the Deccan and western India as the Shimgā or Hutāshana. The festival is celebrated before the full moon of Phālguna (February-March) when the most important crops of the Spring harvest are almost ripe, and is intended to promote fertility and reinvigorate the year. It lasts from three to twenty days and begins with the lighting of a fire by the individual householder, the village headman, or by a Brāhman. The participants walk around the fire or, in some cases, walk or are driven through the flames. During the second day dust and colored water are flung on the spectators. There are

also characteristic ritual dramas in which the women battle with the men to prevent them from climbing a pole to obtain a sugar ball placed at the top (among the Gonds), or from uprooting a branch (among the Bhils).

The festival varies in length, depending upon the region in which it is celebrated, and in the ceremonies observed, but most Holi celebrations end with a procession in which a man, usually dressed as a bridegroom, is carried or rides through the streets followed by a singing, dancing crowd. In central and southern India a mystery play is performed to commemorate the death of Kāmadeva. Divination is also practiced by observing the direction in which the smoke of the Holi fire blows. The ashes are valued as a charm against ill-luck, evil spirits, and the evil eye, and as a cure for scorpion stings.

The Holi rites have little or no connection with orthodox Hinduism. They have been explained by numerous legends: according to one the Holi fire is lighted on the day Śiva's wrath reduced Kāma to ashes.

holle kreish A naming ceremony for girl babies practiced by certain German Jews: an adaptation of a similar Germanic rite. When the child is a month old, on the Sabbath of the first visit to the synagogue of the mother after the birth (compare CHURCHING OF WOMEN), preadolescent children attend a party at the house. They surround the cradle, raise it three times, and call, "Holle! Holle! What shall the child's name be?" and the girl's name (her vernacular and not her Hebrew name) is cried out. The Holle so invoked is the German Holde who brings babies and snatches unbaptized children. The circle about the child and the naming—a substitute for baptism—protect the girl from Holde's malevolence. At one time boys were thus named, but circumcision and naming of the boy at that time made holle kreish superfluous. (*Jewish Encyclopedia* VI: 443a) See HOLDE.

holler A freely improvised song of the American Negro at work, particularly at a solitary task in the open, often without words, but also embodying the thoughts of the moment in relation to the work, the weather, the mule, or his feelings. The soaring humming or chanted words are broken at random by muttered comment, or commands to the animal. To the singer these hollers are just a way to get on with the work and to keep himself company. Sometimes one man's holler will be taken up by one or more others, fields away, and tossed back and forth with variations. But it is a nonce creation. It has no title, and is probably never repeated, at least not as first sung. The Archive of American Folksong of the Library of Congress has a number of recordings of Negro hollers made on the scene. But this is probably the only way any holler survives its original and unique impulse and expression.

holly An evergreen tree or shrub (genus *Ilex*) with thorny leaves, white flowers, and red berries. The use of holly in religious ceremonies is of considerable antiquity; probably its use as Christmas decoration was adapted by early Roman Christians from the Roman Saturnalia. Christian legend says the Cross was made of holly wood and as punishment it is now a scrub tree

with thorny leaves and berries representing drops of the blood of Christ. Another legend says that holly was used to make the Crown of Thorns, and the berries which were yellow became red from the blood of Christ.

In Wales taking holly into the house before Christmas Eve leads to family quarrels, and it is unlucky to leave the decorations up after New Year's or Twelfth Night. Some say that holly left after Twelfth Night will bring a misfortune for each leaf and branch remaining. But if a piece of holly from the church decorations is kept in the house it will bring good luck throughout the year. In Louisiana berries from the Christmas holly are kept for luck during the year. Domestic animals thrive if a piece of holly is hung where they can see it on Christmas Eve.

In Wales taking holly into a friend's house will cause death, as will picking holly in blossom. In Germany it is unlucky to step on the berries. Holly picked on Christmas is protection against witches and evil spirits. In some localities little lighted candles are placed on holly leaves and floated on water. If they float it is a sign that the project that the person has in mind at the time will prosper, but if they sink it is as well to abandon it. Plentiful holly berries is a sign of a severe winter. In English Shrovetide dances there are often a holly-boy and an ivy-girl among the dancers. Holly is said to be male and to personify the steadfast and holy.

Medicinally the berries are said to be more active than the leaves and are recommended for colic, intermittent fever, rheumatism, smallpox, gout, and asthma. A fomentation of the bark and leaves is good for broken bones and dislocations. Several North American Indian tribes use holly leaf tea for measles. Some tribes use holly as a ceremonial purgative. In Derbyshire holly branches are used as flagellants to cure chilblains. An old English remedy for worms prescribes that a holly leaf and the top of a sage plant be placed in water; when the patient yawns over the dish, the worms drop out of his mouth.

Holly and the Ivy An English traditional carol, sung not only for the Nativity but also during Lent and in the autumn. It is one of a number of carols in which the holly and ivy carry over a pre-Christian symbolism of male and female principles and which were probably first sung to accompany dancing of men and women. The blossom and berry and leaf of the holly are likened to the lily, to the blood of Christ, etc., the thorn to the crown of thorns.

hollyhock A tall biennial herb (*Althaea rosea*) of the mallow family, with large flowers of numerous shades. It was a native of China, Syria, Turkey, and Greece and was growing in England as early as 1573. It is sometimes called the Damascus rose. It was grown in China for the bees. The leaves are sometimes used for a blue dye and children make dolls from its blossoms.

The leaves of the hollyhock are effective against the sting of a scorpion, bee, wasp, and similar insects. If they are bruised in oil and used as an ointment, insects will not bite. The flowers steeped in water are good for weak stomach and women's complaints if drunk in season. When fried in sheep tallow they relieve gout. Culpeper says that this plant is used mostly in gargles for swollen glands but that the root powdered or boiled in wine "prevents miscarriage, helps ruptures, dis-

solves coagulated blood from falls, blows, etc., and kills worms in children."

Holofernes In the apocryphal book of *Judith*, the leader of the forces of Nebuchadnezzar, king of the Assyrians, against the regions west of Assyria. He was slain by Judith, and the Jews were thus able to turn back the Assyrian host. In European balladry Holofernes has become Hallowijn, principal character in a large group of ballads spread throughout Europe.

Homer The ancient Greek poet traditionally credited with composing the *Iliad* and the *Odyssey*: believed to have lived in the 9th century B.C., though some place him as early as the 12th century. The modern concept is that the works of Homer are the result of the accretion of years of various poets' composition, and that instead of one poet, Homer is a name applicable to a group, not necessarily of the same place or time. Among the many theories concerning the poet is one claiming that Homer was a woman, this conclusion arising, as do the others, from textual "evidence."

homiletic ballad A narrative song type of didactic or admonitory character, generally in the first person, relating the sins and repentance of a misspent life, and warning all listeners to avoid the mistakes of the sinner. American examples are numerous, including *Wicked Polly*, the tale of a bad girl who went to hell, and *Awful! Awful! Awful!*, which provides a similar fate for a youth who trifled his time away.

honors right and honors left An American square dance term: each man bows first to the lady on his right (his partner) and then to the lady on his left, the ladies reciprocating. [CPK]

Honsu One of a pair of mythical twins, the other being Honsi, who figure in the twin *enfants terribles* category of Dahomean folktales. In these stories, the magical exploits of these twins is always the point of a given tale. [MJH]

hoodoo A category of magic in the beliefs found among Negroes of southern United States. This is to be differentiated from "medicine," which is the knowledge of herbs, roots, etc. The two forms of manipulation of power are carried on by different persons, distinguishable in dress and manner. The hoodoo-man is thus, in southern United States, the practitioner of magic, like the obia-man of the West Indies. The derivation of the word is a matter of speculation, though most students hold that it comes from the Haitian *vodun*, that in turn comes from the identical Dahomean (Fõn) word that means deity. The meaning found in customary American speech, whereby hoodoo signifies bad luck, is an extension of Negro usage. [MJH]

hoodoo hand A term commonly used by southern United States Negroes for their magic charms, mojos, and tricks or tricken bags. Hoodoo hands have several functions: the love hand will bring your beloved to you; the curing hand will heal disease or unspell evil spells (sometimes the same thing). The killing hand will kill or get rid of your enemy for you. Various hoodoo hands are just luck charms and will "bring things to you" if worn or carried constantly and cared for properly. They not only bring the loved one to you, but hold your possessions and your health close, attract

gifts, and give you good luck in gambling. Typical good luck ingredients are a rabbit's foot, fish scales or a fish eye, a beetle, some snakeskin, or a thumb-size dried-up turtle. A twining herb locally known as the "devil's shoestring" ties things to you. Red flannel is also very potent.

Various hoodoo hands used against enemies do not necessarily kill, but cause pain, illness, or weakness, or bad luck. Such hands contain needles and pins, red pepper, graveyard soil, and usually bits of hair and fingernails or footprint dust of the person to be conjured. Small bits raveled from a rope that has hanged a man are especially prized for inclusion in a hoodoo hand.

hoop-and-pole game A widely distributed game among the North American Indians, existing in a great variety of forms and usually associated with the ideas of fertility and generation. A hoop, often covered with a network, is rolled along the ground and shot at with arrows or lances. The count is determined by the way in which the lances fall with reference to the hoop. The game was played by men and boys, not by women. It was especially popular among the Plains tribes, although by no means limited to these groups, and was often played ceremonially, as well as merely for amusement. [EWV]

hoop dance A dance of skill performed by one man, consisting of complex steps in and out of huge hoops. He dances with from one to four hoops, sometimes passing them over his head and across his body. The dance originated among the Sioux Indians and was adopted by the Pueblo Indians. The most famous are the hoop dance of Standing Rock, North Dakota, of the Umatilla, of Taos, and of Santa Ana, where two hoop dancers in green join the buffalo dancers. As an added flourish the hoops may be on fire. [GPK]

hoopoe A long-billed bird (*Upupa epops*) of Europe, Asia, and Africa, about the size of a thrush, with an erectile crest and russet and black plumage. The hoopoe's habits are said to be filthy: it nests in its own droppings and eats insects and worms from dunghills. A Rumanian story explains that the hoopoe would not be satisfied with the food God originally granted it, demanded and obtained better and better food, until God would put up with its demands no longer and condemned it to live by scavenging in dunghills. It is one of the unclean birds mentioned in *Lev. xi, 19*, and *Deut. xiv, 18* (translated "lapwing" in the Authorized Version). In England, it was formerly a harbinger of evil, but is seldom seen there. In Sweden, it is a bird of war, helmeted and bright with color. The springwort, the magic herb that opens all doors and locks, is said by the Swabians to be brought by the hoopoe. The Arabs call it the doctor bird; the Turks, from its crest resembling that formerly worn by couriers, called it the messenger bird.

Solomon crowned the hoopoe for its wisdom in refusing to pay homage to women. Its walking habit, head down and crest opening and closing as it searches for food, led to the belief, still held by the Arabs, that it is looking for springs and wells: this information it passes on to people. Some hold that the cuckoo and hoopoe are respectively male and female of the same species.

The Bittern and the Hoopoe (Grimm #173) explains the cries of the two birds, formerly herdsmen. The cry of the hoopoe is to its weak, starved cattle: "Up, up, up!" A Rumanian parallel to the story of the greedy fisherman's wife ends with her transformation into a hoopoe. In ancient Greek myth Tereus was transformed into a hoopoe. The original of the Garuda bird of Hindu mythology is said to be the hoopoe.

hoop snake Either of two harmless snakes of the southeastern United States (*Abastor erythrogrammus* or *Farancia abacura*): believed by some to take its tail in its mouth and roll like a hoop. *Farancia abacura*, the red-bellied snake, is also thought to be the stinging snake which stings with its tail because it has a sharp spine there which it sometimes uses as a weapon.

hootchie-kootchie A cheapened version of the North African belly dance, which is already a decadent manifestation of fertility ritualism. At the Chicago World's Fair in 1893 the hootchie-kootchie was introduced to Americans in the Tunisian booths. It touched off the spark of release from the artificial and sentimental social repressions of the late 19th century with its nostalgic naughtiness, and spread to burlesque shows dedicated to these repressions. See ABDOMINAL DANCE.

[GPK]

hops A perennial climbing herb (*Humulus lupulus*) used in making beer. But at the time of Henry VIII in England, petitions were circulated to forbid the use of hops in ale and beers because they spoiled the taste. At one time it was customary in the hopfields of Kent for anyone visiting them for the first time to contribute "foot money" lest the luck should leave the fields. Bergen reports a belief in Chestertown, Maryland, that the hop vines peep out of the ground at midnight on the "old Christmas."

Hops were first used in medicine as a stomatic and to induce sleep. A decoction of the tops of the plants was used as a blood purifier, in venereal diseases, and in all diseases of the skin. Hop blossoms were believed to have a slight narcotic and sedative effect and were used in pillows for mania and restlessness. These pillows are also used for toothache, earache, and neuralgia. The blossoms are brewed in a tea to soothe the nerves and as a cure for neuralgia. The Bohemians fill cavities in their teeth with an oil of hops; the Magyars mix privet and hops in wine for toothache. The Dakota Indians of North America use the lower part of the root as medicine and the Shinnecock Indians used the hop pillow, heated, as an application for pneumonia.

hora A folk dance of Rumania and Palestine, similar to the kolo of Serbia, more languid in Rumania, more incisive and stamping in Palestine. [GPK]

Horaē (singular *Hora*) In Greek mythology, the goddesses of the seasons and the order of nature; later, of justice and order. They are mentioned in Homer, but first named in Hesiod: Eunomia, Dice, Irene. Their original number was two (though later usually there are three), as for example at Athens where Thallo and Carpo were worshipped from earliest times, Thallo being mentioned in the Ephebic oath. They are connected with the Charites, act as the ministers of Zeus or of Hera, are beneficent goddesses of the weather and donors of the good of the Spring and Autumn seasons.

Horatii In Roman legend, three Roman champions who fought the three Curiatii, representing the Latins in the reign of Tullus Hostilius during the war between Rome and Alba. Of the two sets of brothers, only one of the Horatii survived the fight. He, on returning home, was greeted by his sister, who, seeing him wearing the garment of her betrothed, one of the Curiatii, wept. In a fit of patriotism, he killed her and was condemned to death. But he appealed to the people, was acquitted, and purified himself by passing under a beam. All the elements of the story are calculated, each explaining some circumstance in Rome that needed legendary background. For example, a beam, the *tigillum sororium*, and an altar of Juno Sororia (actually the Juno of growth) were both under the care of the Horatia gens, and were easily explainable in terms of the legend and a reading of *soror* as sister.

horehound or hoarhound A whitish, bitter, perennial herb of the mint family (genus *Marrubium*). It is a time-honored remedy for diseases of the chest, and was used in this connection in a tea at least as early as the 9th century. Today it is still widely used either in a tea or in a candy. Horehound coughdrops are considered especially effective. At one time it was also prescribed for cramps in the stomach and for those who had swallowed poison or been bitten by serpents or mad dogs. Mixed with wine and honey, horehound helps to clear the eyesight. In the 18th century it was also used as a snuff. Stinking horehound (*Ballota vulgare*) pounded with salt was especially good for bites of mad dogs.

horn A wind instrument originally made of the curved horn of an animal, later of metal, blown either from the narrow end or from the side, and used by both primitive and more advanced peoples for signaling, for expulsion of witches, ghosts, and the demons of sickness, for new moon and sunset ceremonies, for frightening off the monster that eats the moon at eclipse, etc. It is not always differentiated from the trumpet, and in primitive concepts carries with it many of the same tabus and customs. The sound has magical powers, the crescent shape of certain horns is significant in moon rites, and the attributes of the animal from which the instrument is taken may influence its powers.

In ancient Mesopotamia, ox horns, some richly adorned with gold and jewels, were used in religious observances connected with bull-worship. In Europe, horns were the first musical instruments of the Teutonic tribes and have been especially associated with hunters, warriors, herdsmen, and watchmen. Heimdall, the watchman of the Norse gods, has the Giallarhorn, with which he sounds the alarm for the gods when Surtr attacks. Robin Hood and Roland both used horn signals. In Africa, ivory horns of elephant tusks are the jealously guarded possessions of tribal chiefs. Similar horns, called oliphants, imported into Europe through Byzantium in the Middle Ages, and also respected as princely instruments, may have originated in Africa. The Jewish ram's horn, *shofar*, which serves its religious purpose under conditions of modern civilization in almost its original form and method, preserves much of the primitive lore of the horn, and the alphorn, actually a type of trumpet still heard in the mountains of Switzerland, as its counterparts are in Asia, South

America, and Australia, retains the meaning of the sunset ritual.

horning A serenade of harsh, discordant music; a charivari.

hornpipe An English and Scottish solo dance of the clog and shuffle variety: so called because originally danced to the old hornpipe. It became popular on ship-board because it took so little space. Amusing sailors' pantomime synchronizes with the typical Scotch toeing, hopping, and rocking. For "Haul in the anchor" the arms reach right forward and haul back over the left shoulder. For "Hoist the sail" the right hand pulls up and down, then the left. For "Hitch trousers" the right hand grasps the trousers in front, the left hand in back (but palm out), with an inimitable forward and backward rock. This is then reversed. [CPK]

Horny or Old Horny A provincial English and Scottish euphemism for the Devil.

horse The domesticated horse is probably of Indo-European origin, spreading during the Indo-European invasions of the 2nd millennium B.C. throughout the Near East and Europe. Although only the Celtic Epona and the divine horses of Diomedes in Thracian myth retain the horse form among divinities, many gods and goddesses, demigods and heroes retain a close connection with the animal. As Krappe indicates (*Mythologie universelle*, pp. 67 ff.), the Twins of Indo-European mythologies show a possible origin as caballiform divinities. The Ásvins (literally horse owners) were the offspring of the mare Saranyu, and may originally have been colts. Castor, one of the Dioscuri, was a horse-tamer and, throughout Homeric literature, the Spartan twins were renowned horsemen. The British legendary Hengist and Horsa retain in one of the names a clear reminder of their mythological origin. Demeter, the Greek fertility goddess, sometimes appeared as having a horse's head; among others Poseidon, Athena, Aphrodite, Cronus had horse aspects. In addition, many gods, Helios, Thor, etc., drove chariots drawn by horses. The horse was associated with thunder, which was the sound of the celestial horse's hoofs or the rumbling of the chariot, while the lightning was the whip which sped the horses on their way. Spanish children used to cry at the sound of thunder, "There goes Santiago's horse." Often the Wild Hunt was thought to be the sound of horses in the sky. Pegasus, the winged horse of poetry, originally was the carrier of the thunder and lightning of Zeus. As a result of the connection of the horse with both the thunder (sky) god and fertility, horses, especially white horses, were a favorite and highly acceptable sacrifice.

The horse is one of the principal fertility symbols. As the field spirit he runs across the tops of the grain with the wind. Compare ÁSVAMEDHA; ATHENA; OAT-STALLION; OCTOBER HORSE.

Formerly in Europe a horse was sometimes buried alive to prevent the death or theft of the others. In Yorkshire they say to save the others it is enough to bury a dead horse whole.

It is lucky to dream of horses (India, Great Britain, United States). Almost everywhere it is lucky to see a white horse. If you see a white horse you will soon see a red-headed girl (and vice versa). Wish on the first

white horse you see on New Year's and the wish will come true. But it is considered unlucky for a bridal pair to drive behind two white horses; and in northern Canada you will die within the year if you watch a span of whites out of sight. It is lucky to meet a piebald horse, usually lucky to wish on one.

Horses can see ghosts; sometimes horses are ghosts. These folk concepts turn up in folktale as motifs E421.1.2 and E423.1.3. Horses also occur in folktale as born from eggs (B19.3), as paramours (B611.3). There are magic horses (B181 ff.), speaking horses (B211.3), truth-speaking horses (B133), helpful horses (B401). Horses are tried and executed for crimes (B272.2.1; B275.1.1). The Devil appears in the form of a horse (G303.3.3.5); so do witches (G211.1). That horses know the road in the dark is no fairy tale but the motif occurs as B151.

Horse and the Stag The title of one of Æsop's fables (Jacobs #33) in which a Horse, anxious to punish a Stag who had damaged his pasture, asked a Man to help. The Man said he would if the Horse would agree to be saddled and take the bit in his mouth. The Horse complied, but then the Man would not release him, and the Horse has been subject to man ever since. This incident comprises the general European folktale motif K192.

horse chestnut or buckeye Though the nuts are thought inedible, man has found numerous uses for them. They are carried in the pocket as a preventive for rheumatism, roasted and used as a substitute for coffee, powdered and used for soap; fermented they yield an alcohol and an acetone. Fed to horses they cure coughs and improve shortness of breath, and placed in the water they were used to stupefy fish. The flowers may be dried and used in place of hops for making beer. A decoction of the bark is used as a nerve tonic and as a cure for intermittent fevers. The leaves powdered and made into a snuff are good for catarrh and head colds.

horse dance Ritual riding on a live horse or hobby-horse. Young men ride live horses on the eve of St. Michael on the Isle of Iona around a stone cross, each one with any lass except his wife mounted behind him; at the grave of the goddess Taltiu in Taillten, Ireland, they race to give the chthonic spirits an access of vigor for crop production. The North American Blackfoot Indians for a time gave an equestrian display—a horse dance on symbolically ornamented steeds—to arouse martial courage. The Comanche Indians still perform such a riding dance. The Shoshoni assume the identity of a pony in an entertaining mimetic dance called the *pooke* which expresses the importance of the horse in Plains society, for hunt and for prestige.

More commonly elsewhere the mount is a contraption of wood, cloth, hair, which the rider manipulates in a realistic manner. Either the conception is that of a separate man and beast, as the hobbyhorse of Athens, or of identity of man and beast, as the ghostlike Mari Lwyd (Gray Mare) of Glamorganshire, and the hobby of Padstow, Cornwall. The rider is in a trancelike state in the Balinese *sanghyang djanar* (horse dance). The Balinese horse consists of a head and tail on a bamboo cane and it prances and whinnies like its Spanish, French, and English counterparts—the hobby of the Majorcan

Cosiers, the French Basque *mascaradas* and of the English *morris* and Abbots Bromley Antler dance. In Rumania, the *călușar* recalls the morris horse in its actions and in its association with a pyrrhic dance, a fool and a man-woman. Spain has given Mexico its counterpart in Santiago, who leads the Christians in the battle of the *Moros y Cristianos*. In the valley of Mexico and in the mountains of Puebla and Veracruz the saint gallops on a wooden creature believed to be magically endowed with life. In the New Mexico pueblos, saints' impersonations, called *maiyaní*, always ride a hobby, as Santiago and Boshaiyanyi in Santa Ana. They are "Indian spirits" possessed with *iyanyi*, beneficent supernatural power, communicated by contact and by the act of impersonation. Strangely enough, this last, most hybrid horse ritual, suggests most clearly the aboriginal meaning and harks back to ancient life-giving horse sacrifices. [CPK]

horse learns to live without food A general European folktale motif (J1914) in which, just as a man has habituated his horse to living without food, it dies. This belongs to a group of anecdotes (Type 1682) of which the point is the stupidity of the man who disregards the laws of nature.

horse-radish A coarse, tall, garden herb of the mustard family (*Amoracia lapathifolia*) used as a condiment. At the Jewish Passover Seder, the horse-radish signifies the bitterness of the house of bondage. Medicinally, horse-radish was used in the treatment of paralysis, chronic rheumatism, epilepsy, dropsy, and hoarseness. Scraped it was applied to the tooth in cases of toothache in Russia; in North America, either the scraped horse-radish (as in northern Ohio) or the leaves (as with the Mohegan Indians) was applied to the cheek as a poultice for toothache. The Negroes of some parts of the southern United States rub horse-radish on the forehead for headache.

horseshoe An archlike frame of iron or other metal fitted to a horse's hoof as protection, or a symbol of similar shape. Among the Greeks and Romans, this use was almost unknown, though vase-paintings show some signs of it. About the earliest instance of the iron horseshoe is the one discovered in England in the 17th century in the grave of Childeric (died 491 A.D.).

The origin of the horseshoe-shaped symbol is suggested as being from the rite of the Passover, the blood sprinkled on lintel and doorposts forming the chief points of an arch. Its two-horned shape is related to the shape of the moon, the crescent moon's "horns" (compare the luck-bringing qualities assigned to animal horns in amulets and talismans, to horses' heads or merely to horns placed on a roof as repellent to the evil eye, such customs being prevalent in Germany, Spain, Arabia, and elsewhere); or the horseshoe's possible origin is in serpent-worship and in religious symbolism in Egypt and Assyria pertaining to this reptilian form.

The magic of the horseshoe may be noted obviously in its manufacture from iron, since iron is a repellent to witches, evil spirits, fairies, and other beings which work harm to man. Horseshoes are placed in chimneys, on the doors of stables, dwellings, and churches; and if not on the door, on the threshold. Tylor says in speaking of such use in England, "Half the stable doors in

England still show the horseshoe." In London, many of the West End houses have one on the door and there are plenty of churches which use this talisman or have used it. The Devil cannot enter any building that has a horseshoe over the door. Its use as a good luck charm is common in the United States and luck is enhanced by the chance finding of a horseshoe. In Hungary, it is said that the people mark a horseshoe with black chalk on their stable doors. The horseshoe as a luck bringer is not confined to land, but is efficacious at sea as well. Lord Nelson is said to have had a horseshoe nailed to the mast of his ship *Victory*.

The position of the horseshoe, wherever it may be placed, is important. As a protective charm, it should be placed with the convex side up. As a luck charm the horns should point up so the luck will not "run out." It should always be placed outside, above the door, not inside. A Pennsylvania custom places the horseshoe outside but with the prongs pointing inside so the luck will be spilled inward.

Sexual symbolism is attached to the horseshoe. In Mexico ornate stones in this form have been classed as fertility symbols by their discoverers; in Aztec manuscripts, symbols like the horseshoe relate to agricultural abundance. Similar charms with probable similar meanings have been found in the Cahokia (Illinois) mounds.

The horseshoe is found in popular ballad and often in the folktale in Germany, Lapland, Norway, Bavaria, and elsewhere. In such stories, a smith and the Devil are frequent characters. [CPs]

Horseshoe Nail Title of a cumulative folktale (Z45) characterized by the interdependence of the objects mentioned in the story, and the sequence of disasters which follow on neglect to replace one missing nail from the horse's shoe (N258).

For want of a nail the shoe was lost;
For want of a shoe the horse was lost;
For want of a horse the man was lost;
For want of a man the battle was lost;
And all for the want of a horseshoe nail.

Grimm's version of this story (#184) is longer and more elaborate, starting with the merchant who had only six more miles to go to reach home and thought the nail would not matter for so short a distance, and ending with his struggling home late at night carrying his trunk on his back.

horses of Diomedes In Greek legend, the flesh-eating horses of the king of the Thracian Bistonians taken by Hercules, with or without help, as the eighth of his labors. By feeding Diomedes to the horses, Hercules tamed them and brought them to Argos where they were dedicated to Hera.

Horus, Hor, or Har Literally, he who is above: an ancient Egyptian solar deity who combined two or more originally separate gods, who were sometimes even in later times still recognized as separate personages. The solar Horus, often called the Egyptian Apollo, was a brother of Osiris, Isis, and Set. This was the falcon-headed god, sometimes depicted simply as a falcon, of Upper Egypt, perhaps the most ancient god of the Egyptian pantheon, and identical with Rā. He appeared as Herakhty, Horus of the Horizon, the rising and setting sun; as Horus the Elder, the Greek Haroeris; as the Horus whose representation was the winged solar disk

that protected temples from evil and was carved above their doors.

Horus the Child, or Harpocrates, was the son of Osiris and Isis, the sun reborn each morning from the waters and carried on the lotus flower. Rā was the midday sun and Atum the setting sun, but this is a later attempt to justify the plurality of sun gods, as is the explanation of Osiris as the sun of the underworld and Horus the sun god of the sky. This younger Horus is sometimes figured as a man with a falcon head, but more often he is the child with finger in mouth or suckling and carried by Isis or Hathor. In myth, he was the avenger of his father Osiris, slaying Set. In the struggle he lost an eye which, after he ascended his father's throne and was affirmed in the office by an assemblage of the gods, Thoth replaced. Horus also saw to it that Osiris was properly buried. This Horus was the type of the dutiful son; the eye was the symbol of sacrifice, of duty to the gods and to the ancestors.

The pharaohs always had a Horus name, their first title, written with the falcon symbol. Horus was especially the protector of the Northern Kingdom.

hospitality The folk ceremonies connected with hospitality, though infinitely complex in detail, are connected with the admission of strangers into the we-group and the rights which persons thus admitted may be expected to enjoy. In some communities the stranger at the gate may be accepted or rejected according to local rules. Among the nomadic Arabs and some but not all other nomads, a man who touches the tent rope must be defended to the death. In agrarian cultures groups cut off from all social intercourse except what they themselves can supply offer strangers of appropriate class unlimited food, lodging, drink, and entertainment. The acceptance of the strangers is indicated by the offering and partaking of food in common, though the foods considered appropriate are determined by the traditions of the community and within the community the traditions of the social class involved: bread and salt in some communities, tea in China, cakes or cakes and sherry in some classes in Britain and America. To buy a man a drink in public places in Europe and America involves only limited acceptance, though to refuse to drink with a man in such places indicates definite antagonism.

The simplest form of acceptance is shaking the stranger's hand, though other communities use other gestures. The sharing of communal food involves principles similar to those involved in the ceremony of blood brotherhood, which is sometimes the sign of acceptance. Both ceremonies clearly involve the principle of communion with the idea that "as your blood is in my veins and your food is in my stomach we are therefore united."

Occidental ethnographers devote much space to discussions of "hospitality prostitution," a custom which requires that the host offer his wife, wives, or women to the guest. This custom would be remarkable only in communities where monogamous chastity was a practical ideal. The lavish hospitality usually of a sexual nature offered in the United States to a prospective customer is a parallel custom. The host's women are usually not involved. That sexual hospitality is evidence of the low status of women in communities where it is customary also needs to be questioned. In some parts of Mongolia, for example, it is considered one of the per-

quisites of women to participate if they can in the festivities occasioned by the arrival of a guest. The belief that a stranger may be a god in disguise and that a child resulting from the union of the stranger and the women of the community has been mentioned elsewhere. [RØJ]

hot dance A ceremonial of the Plains Indians, featuring the *heyoka* or hot-water trick: the immersion of the arms in scalding water for purposes of exhibiting anti-natural powers. The participants would pull out and serve pieces of dog meat boiled ceremonially, or just splash each other, claiming that the water was cold. The Arikara hot dancers, *kawen'ho*, wore headdresses of deer tails and turkey feathers, and patterns of body paint. To drum and gourd-rattle accompaniment, they crouched low in their dance, like the *heyoka*. The Mandan and Hidatsa took this society over from the Arikara, and evidently transmitted it to the Crow Indians.

The Crow hot dance, *ba'tawé disúe*, corresponds to the grass dance of the Omaha and other tribes, in the ceremonial array of officers, in the paraphernalia of whips, two pipes, "crows" or feather-bustles, war bonnets, in the give-away and boasting features, and in the strenuous individual dancing. The Crow modified the *heyoka* trick by handling the hot meat with crane-sticks, and turned the whole procedure into a more social occasion than the similar but strictly ritual IRUSKA and HEYOKA. [GPK]

Hotei The most popular of the Japanese Seven Gods of Luck, represented as a very fat man. See JAPANESE FOLKLORE. [JLM]

Hou Chi The Chinese God of Millet. Like other elements in the Imperial Cults he is the subject of much controversy. A battle of footnotes has been waged as to whether the term should be translated "Prince Millet" or "He Who Rules Millet." Ceremonies to Hou Chi were part of the imperial and at times part of the aristocratic cults. [RØJ]

hourglass drum A drum that is sharply narrowed between the two openings. Such drums are generally small, the largest being a Korean type about three feet in length. Some, such as the *damaru* of India, combine with the clapper feature. Others, such as the Japanese *tsuzumi*, make use of the protruding ring under the skin to form a spool shape. See DRUM.

houri or huri or haura In Moslem belief (compare *Sura* IV, 56-78 of the Koran), one of the eternal virgins who live in Paradise with the blessed. They are all of perfect beauty, dark-eyed, and untouched by man or jinn. Every Moslem who attains Heaven is allotted 72 houris. The Persian Magi also peopled their Paradise with *huran*, similar nymph-like companions.

House Carpenter The most common version surviving in America of *James Harris* or *The Daemon Lover* (Child #243). It relates the fate of the wife of a house carpenter who deserts her baby and runs off to sea with a lover, and is an example of the disappearance of supernatural elements in most of the traditional ballads transplanted to the New World.

household spirits Supernatural beings of general European folklore, who frequent homes and farms: often helpful, often mischievous and tricky, sometimes

malicious. See AITVARAS; BANNIK; BILLY BLIN; BOGGART; BOGLE; BROWNIE; DOMOVIC; FAIRY; GOBLIN; KAUKAS; KOBOLD; PARA.

house inscription A legend or record inscribed on a house or building: of wide occurrence in the East. Sacred formulas or texts from various sources are placed usually near the entrance. This custom appears in Egypt, Babylonia, Greece, India, and China.

In the United States, inscriptions are frequently incised on public buildings such as museums, art galleries, and sometimes on homes. This custom, in general, would seem to stem from early ideas of repelling evil and inviting luck. However, at the present day, it appears to be a dedicatory gesture, especially on churches. In the home, the inscription is frequently above the hearth on the fire-board, reminiscent of primitive rites in the household and the sanctity of the hearth-fire. An inscription on a fan-light of the entrance door to a home in the eastern Ozarks has been noted ("God Bless our Home"). There are, no doubt, other examples. [CRS]

house leek or Jove's Beard A garden plant (*Semprevivum tectorum*) with pink flowers and thick fleshy leaves, which grows on walls and roofs. Charlemagne passed a law that these plants should be grown on the roof of every dwelling. Among the Celtic peoples it is considered good luck to have house leeks growing on the roof. They protect the building from fire, lightning, witches, and evil spirits, and the inhabitants from fever. But in some places they are said to attract lightning, unless grown in company with the common leek. The juice of this plant removes warts and corns and soothes skin which has been scalded, burnt, stung by nettles or bees. At one time it was recommended for the hot ague, gout, and sore eyes. Compare LEEK.

house snake The genius of the Roman house who foretold the destiny of the family. Among Teutons the house snakes embodied the souls of the dead ancestors and watched over children. In Greece and Russia a snake coming into the house is regarded as a good omen. The people believe that they have received a guardian spirit who will "watch over his own." In Armenia also the house snake brings good luck and is treated with kindness. If one leaves, it is a sign that trouble and sorrow will fall on the household. If one suddenly arrives in the night he is given the hospitality offered to strangers, and fed immediately lest he depart. Almost everywhere the house snake is fed with milk. Similar practices and beliefs have been reported from among the Letts, White Russians, Poles, Lithuanians, Greeks. See SNAKE. [RDJ]

House that Jack Built The best known of the cumulative stories (Z44, Type 2035). It begins with the statement: "This is the house that Jack built." And the final formula is: "This is the farmer that sowed the corn that fed the cock that crowed in the morn, that waked the priest all shaven and shorn, that married the man all tattered and torn, that kissed the maiden all forlorn, that milked the cow with the crumpled horn, that tossed the dog, that worried the cat, that caught the rat, that ate the malt that lay in the house that Jack built."

Hou T'u The Chinese God of Earth or Soil; Sovereign Earth. Chinese folklorists and ritualists, like many

others, have been confused by the interlocked meanings of "earth," "land," "soil," "fields." The people generally pay honor to the local gods of place whose temples, very simply constructed, are in the fields and whose power extends over small and particular, though not carefully defined, areas. These gods and their consorts are the familiar and intimate gods of the people. Hou T'u was also part of the imperial cult. [RDJ]

hovatu-koiari In Orokaiva (Papua) belief, the spirit of a stillborn or aborted child. It is a foot high with a long tail, which drags as it walks and which is thrown over the shoulder when it sits down. The hovatu-koiari lives in the sago swamps and can be heard sometimes singing a plaintive song while scraping sago.

Hrdlička, Aleš (1869-1943) American anthropologist, who gave his support to the theory that the American Indians are Asiatic by origin. Born in Bohemia, he came to the United States as a young man. He took part in expeditions sponsored by the American Museum of Natural History between 1899 and 1903; was on the staff of the United States National Museum at Washington, D.C., from 1903; and curator of the division of physical anthropology there, 1910-43. He founded the *American Journal of Physical Anthropology* and was its editor from 1918. Besides his work on the origins of the American Indian, he is known also for an anthropological survey of Alaska and for studies in anthropometry and in the evolution of man.

Hrolf Kraki The most famous king of the Danes in the heroic age, called Hrothulf in *Beowulf*; the generous, almost superhuman hero of the *Hrolfssaga*, celebrated also in the *Biarkamal*. His gifts of rings, swords, helmets, estates are made much of; he strewed gold on the plains of Fyfe on the journey to Upsala. Northern legend tells of his berserkers, the twelve warriors pledged to his service; their deeds occupy more of the material than Hrolf's own tragic figure from the first call to battle to his death in the gates of Leire Castle in Zealand, the old seat of the kings. Hrolf had a wonderful hawk, Habrok, who was once caged with thirty Swedish hawks that they might kill him, but killed them all. Hrolf's wonderful dog Garm killed the magic boar sent against him by an enemy. The twelve berserkers and the marvelous sword named Skofnung are other attributes of Hrolf which identify him as the typical folk-hero king.

Hrungnir One of the famous giants of Teutonic mythology. One day on Gullfaxi Hrungnir challenged Odin to a race on Sleipnir. Riding neck and neck, he did not notice the direction Odin had taken until he suddenly found himself entering the gates of the gods. But the Æsir would not take vengeance on their ancient enemy thus tricked in sport. They feasted him instead until the drunken Hrungnir boasted he would return and conquer Asgard and carry off its beautiful women. Still the gods ignored the tipsy braggart, until Thor entered, overheard the boast, and challenged Hrungnir to battle. Three days later Thor and Hrungnir met for combat. Hrungnir caught the blow of Thor's hammer on his stone club, which was shattered into bits, thus supplying the whole earth with flint chips forever. But one piece sank into Thor's forehead, and as he fell, his hammer cracked Hrungnir's head so that he fell dead beside him.

hsien and shên Chinese terms which have been variously translated as referring to gods, immortals, fairies, spirits, saints, genii, heroes, ascetics, powers. Although both Taoists and Christian missionaries have attempted to fix the meanings of these terms, common usage is still uncertain. The unlearned in China frequently meet creatures that behave in extraordinary ways and therefore (whether they be gods, fairies, or spirits), need to be treated with circumspection. Many Christian missionaries use the term *shên* to refer to their God, which they refer to as "the true God." [RDJ]

Hsi Shih In Chinese folk belief, the patroness of merchants of face creams and perfumes. She was the daughter of a butcher and became a royal concubine. When she was presented to the emperor, she smelled so sweet that the odor could be noticed for ten li. [RDJ]

Hsi Wang Mu The consort of Tung Wang Kung, formed from the yin principle of the purely female: object of a widespread cult in China. She is the Lady or Mother of the Western Heaven. Her palace in the K'un Lun mountains of western Turkestan is protected by a wall a thousand li long built of precious stones and protected by jade towers. The right wing, on the shore of the magic brook of the kingfishers, is the residence of the male immortals. The left wing is the residence of the female immortals who are divided into seven categories according to the color of their costumes: red, blue, black, violet, yellow, green, and natural. Insurgent princes have from time to time reestablished the cult of Hsi Wang Mu and given it imperial favor. On her birthday, 1st to 3rd of the Third Moon, all the gods visit her. She gives them a great feast: bear palms, monkey lips, dragon liver, and phoenix marrow. The peaches in her garden, female phallic symbols, confer immortality. Chinese women frequently do honor to Hsi Wang Mu on their 50th birthday.

Hsi Wang Mu is also called Chin Mu. *Chin* may be rendered as Gold or Precious or Excellent, and *Mu* as Mother, Lady, Woman. Other names in the several styles of romanization now current are: Hou, Ho, Yang, Hui, Wang Chin.

Although her consort, Tung Wang Kung, Lord of the West, was formed of the essence of yang (male) as Hsi Wang Mu was formed of the essence of yin (female), he is incidental to the cult. Hsi Wang Mu had many children. The absence of much discussion about their paternity, the fact that all but one of those known to me are female, gives the sense, which is by no means a conclusion, that the cult of Hsi Wang Mu has to do with matriarchy, either the sort of matriarchal culture still extant in parts of China, or the matriarchal fantasies inevitable in such social structures as China where, except along the coast, the women control all domestic affairs within the compound.

The only male child known is the ninth son, Hiuen-sieou, whose title is Chên Jen. The fourth daughter, Hua Lin, is also known as Yong chên, or Nan Chi Fu Jen (Wife of the God of Longevity), or vulgarly, Ch'ou Hsing Lao T'ou Tze (The Old Head of the Star of Longevity). The 13th daughter is Mei Lan or Chung Lin, title, Yu Ying Fu Jen (*Dame de la Beauté droite*) with residence on Mount Tsang Lang. The 20th daughter is Ching Wo or Yu Yin with the honorific, Lady of the Star Tse Wei. Her residence is on Yuen-lung Moun-

tain. The 23rd daughter, Yao Chi, honorific, Lady of the Flowered Clouds, gave the Emperor Yu the formula for evoking demons and spirits. The youngest daughter is Wan, honorific, Lady of the Jade Flower. She was the wife of King Tai Chen. When she plays a stringed instrument the birds gather to listen to her melodies. She rides a white dragon.

The feminine character of the cult is further seen in the gems, jades, and precious woods from which Shên I, a sun god, built her palace, also in the feminine interest in parties, and the collations served to the immortals when they visit her on her birthday, and in the interest in clothes. The kingfisher creek is a pretty touch. The peaches of immortality which grow in her garden and the peach which is part of her iconography are female phallos.

Hsi Wang Mu is first mentioned in *Mu Tien Tzu Chuan* (Eitel, E. J., tr., *China Review* XVII, 1888-89, pp. 223-240, 247-258) a courtly romance of the pre-Christian Chou period which recounts the travels into the west of Prince Mu. The dating of this romance is most uncertain, though some scholars place it in the 10th century B.C. Western sinologues have presented views. Doré (*Variétés*, No. 44, pp. 486 ff.) tentatively suggests Babylon as the place involved. Charles Gardner (*Chinese Traditional Historiography*, Harvard Press, 1938, pp. 45-46) calls the character in the Prince Mu romance a "male chieftain of the western frontier" and is in agreement with W. P. Yetts (*Catalogue of the Eumorphopolous Collection, Bronzes, II*, London, 1930, p. 49). Paul Pelliot attempted to identify Hsi Wang Mu with an ancient female mythological personage (*T'oung Pao, Archives Concernant l'Histoire, les Langues, la Géographie, l'Ethnographie et les Arts de l'Asie Orientale*, Leiden, XXVIII, 1930, p. 392); Henri Maspéro suggested an ancient goddess of epidemics (*La Chine Antique*, Paris, 1927); A. Forke tried the Queen of Sheba ("Mu Wang und die Königen von Saba," *Mitteilungen des Seminars für Orientalische Sprachen*, Berlin, VII, 1904, pp. 117-172, reviewed by Edouard Huber in *Bulletin de l'Ecole Française d'Extrême Orient*, Hanoi, IV, 1904, pp. 1127-1131). H. S. Giles noted parallels with Juno in the palace above the clouds, peaches and apples, phoenix and peacock ("Who was Hsi Wang Mu?" in *Adversaria Sinica*, Shanghai, 1914). Popularizers of Chinese folklore, Bredon and others, have fun with the Gardens of the Hesperides, the Buddhist Heaven in the West, the Celtic Western Isles, etc.

The centers of the cult may be the west of China proper, or among aboriginal tribes still in China which still retain some of the customs from a matriarchal or a sororal-polygynal culture. In the 5th century B.C. the King of Yueh, having been successful in war, built on his return to his capital in modern Chekiang an altar to Hsi Wang Mu to the west of the city, and there offered sacrifices for happiness and long life. In 3 B.C. during the dynasty of the Former Han, and a great famine, rebels in modern Shantung invoked Hsi Wang Mu. An account is in Leon Wieger's *Textes Historiques*, I, p. 695.

Generalizations: Hsi Wang Mu is generally known in China. The centers of the cult may have been in west China or central Asia, though the cult has certainly received further development in China proper. Identifications of Hsi Wang Mu with Juno, the Queen of Sheba,

or various primitive goddesses are scholarly folklore in which similarity of fantasy has been confused with identity of origin. Any one of these identifications may possibly be sound; probability, however, must await further analysis, particularly a study of the folklore of the matriarchal societies in Yunnan and central Asia, and a study of the structure of women's cults in other parts of the world.

R. D. JAMESON

huaca Sacred: among the ancient Incas, a word applied to everything supernatural or sacred. It designated gods, demons, spirits, and also the sites and temples where they were worshipped. Among the modern Quechua and Aymara Indians of Peru, it designates all household fetishes, mummified ancestors and their graves, certain sacred animals, gods, images of gods, and their temples. Anything supernatural or smacking of the supernatural is huaca: an egg with two yolks, or twins, or an albino, crossed eyes, harelip, etc. Unusual and inexplicable objects introduced by the Spaniards were also huaca, like glass goblets, sealing wax, etc.

huakanki The love amulets of Bolivia. They are carved in alabaster and usually represent an embraced couple or sometimes a phallus. [AM]

Huanacauri A rock on a hill near the Cuzco which was the most famous fetish of the Inca family. It represents the petrified brother of the first Inca, Manco Capac. Before he turned to stone he proclaimed himself protector of the dynasty. The puberty rites of the young boys of the Inca family were celebrated around this fetish. [AM]

huapango (from Aztec *cuah-panco*, wood-over-place) A Mexican mestizo couple dance, of the Huasteca region and on the east coast from Tamaulipas to Veracruz. Footwork resounds on a wooden platform, in the typical rhythm of one-two-three-hold, beating once with the heel and twice with the toe. Skilful dancers perform complex *zapateados* and sometimes tie a knot in a kerchief with their feet during the *Bamba*.

The gay *sones*, usually in quadruple time, are played on ensembles of violins, guitars, jaranas, and harps. The characteristic rhythm is produced by striking the hand on the guitar for the last note of each measure.

In San Luis Potosí a special wedding huapango, *Xochipitzahua* (flower sprinkling) is sung, and bride and groom lead the couples in a circle. At the end flowers and incense are offered at an altar.

In the Sierra Norte de Puebla the huapango is an ingenuous couple dance performed in two face-to-face lines. It employs the simplest zapateado of one forward and two back, or a step-step-step-brush from side to side, the girls holding their full skirts and the boys bowing with their hands cupped behind their backs. The changeable rhythms are played on fiddle and guitar and often sung. This may continue all night during a fiesta.

[GPK]

Huasa mallcu The supernatural guardian of the vicuña in Bolivia. He protects his herds by making them invisible to hunters. The Aymara Indians say also that he carries goods on the back of his animals and he may reward men who are friendly to him. He is represented by a small image attached at the end of a pole. He receives offerings during feasts officially celebrated in honor of some Catholic saint. [AM]

Huathicuri A mythical character of the Huarochiri Indians (Peru) who had the power of understanding the language of animals. From a fox he learned the cause of the mysterious illness of a powerful chief, married the chief's daughter, but was compelled to enter into several contests with the girl's sister, who was a powerful magician. One contest was in building a house. Huathicuri won because he was helped by the animals. He finally transformed his undesirable sister-in-law into a deer.

[AM]

Huehuenches (from Aztec, *huehuetl*, old, old) A men's ceremonial dance of Morelos and Oaxaca, Mexico. In Villa Alta, Oaxaca, it is most colorful and humorous. The dancers, in bright costumes and feather-decked hats, play at bullfighting with a papier-mâché bull. This feature, certainly of Spanish provenience, suggests relationship of this dance with other fights between old men as *viejos* or *abuelos*, and *toros*, which are spread as far as the *Matachini* dance of the New Mexico pueblos. The Huehues of the state of Guerrero enact a drama of hunting a tiger, with ingenuous jokes. Other characters include a hunter, a doctor, a he-goat, a deer, and a dog. [GPK]

huehuetl Literally, old-old: an ancient Aztec drum made of a single hollowed-out log, set upright. The top is covered with skin and generally struck with the bare hands; the bottom is either cut to form wide feet or rests on a three-legged stand. The originals were elaborately carved. The same type of drum, though cruder and less finely decorated, is still made and played in the same manner by primitive Mexican tribes such as the Huichols, who use it only to accompany songs to their own gods, their Christian ceremonies being accompanied by stringed instruments. Similar drums are found in Polynesia, Melanesia, and parts of Africa. See DRUM.

Huet, Gédéon Busken (1860-1921) Dutch-French philologist and historian, son of the Dutch writer, Conrad Busken Huet. He went to Batavia with his father and then to Paris in 1880 to go to school. With Emmanuel Cosquin and Gaston Paris he was one of Benfey's literary school of folklorists in France. His chief work was *Les contes populaires* (1922). He edited Doon de la Roche's *Chanson de Geste* (1921), issued various of his father's works, and wrote numerous studies, such as *Légende de Charlemagne bâtard*, *Pèlerinage de Charlemagne*, and *Légende des énérvés de Jumèges*.

Hueyuku The Mansion of the Sun; the afterworld of the Caribs of the Antilles, a paradise of bliss and plenty.

hu hsien The shape-shifting foxes of Chinese folklore. The term is variously translated as fox-spirit, fox-fairy, or divine fox. By various means these creatures attain the power of assuming various forms or of becoming invisible. Although all things, animate and inanimate, can shift shape, foxes have unusual abilities. When they become youths or maidens the hu hsien have remarkable sexual gifts and are able to steal the vital essence of human beings who fall in love with them. In consequence these human beings become tubercular and die while the hu hsien, having increased their own vital essence by theft from their victims, proceed to seduce others. Hu hsien love to drink wine. When intoxicated or frightened they resume their true form.

Because all scholars, being scholars, are virtuous, the

hu hsien frequently seek the protection of scholars when being attacked by the Thunder God who tries to punish them for their wicked tricks. The stories that hu hsien can show gratitude and help scholars, who have protected them, to attain high honor are not to be trusted. The hu hsien, being invisible, know everything that is being written about them and scholars are afraid to write the truth lest the hu hsien take revenge. [RDJ]

Huitzilopochtli The tribal war god of the Aztecs; the most important of all gods of Tenochtitlan, modern Mexico City, and the most important in all Mexico at the time of the Conquest. According to legend he accompanied the Aztecs in their wanderings before the founding of Tenochtitlan, where subsequently his great temple became the chief religious structure of the Aztecs. He was believed to be the sun, the young warrior who was born each day, who won a victory over the stars of night, and who was then carried to the zenith by the souls of dead warriors where he was taken over by the souls of all women who had died in childbirth, to be taken to the west where he fell and died, again to be reborn in the morning. To triumph, the sun had to be strong and vigorous, and if mankind were to continue, the sun's continued victories were essential. Therefore, mankind had to feed the sun which, however, disdained common foods, nourishing itself on the blood of humans. Hence, the bloody human sacrifice of the Aztecs was believed by them to be necessary to continue the world, and each Aztec was, above all, a warrior whose duty it was to take prisoners to be sacrificed to Huitzilopochtli. [GMF]

hula An ancient religious dance of Hawaii and the Easter Islands. The hulas are from the gods—*noke akua mai*—handed down from the beginning of the world. They are graded in sanctity according to profundities. The most holy speak of the depth within ourselves as well as the world and treat of gods and kings. Those of the lesser order deal with love and nature, the play of divine power into our world. Those of the third order are frankly sexual and comic, yet there are divine potencies at play. Ancient hulas are danced out of doors or in *halau*, the hula hall, the temple to Laka, goddess of flowers. The hula priest is called the *kumu*. The company consists of two great groups, the *ho'opa*, literally, the steadfast ones (the mature men and women, marking time on the larger instruments in a seated or kneeling position) and the *olopa*, literally, the agile ones (the younger men and women in a standing position). There are dances performed by either group alone, by men only, women only, or by mixed sexes, and by both groups. There are slow solemn dances and vivid dances with quick transitions from gentle to vigorous.

Though seemingly erotic because of the hip-swaying and sinuous arm movements, the hulas are not couple dances nor primarily erotic, except for those of the third order. The hip-swaying results from the special manner of transferring the weight from one foot to the other in the rather static footwork. The gestures all have a very definite mimetic or symbolic import like the Hindu *mudras*, from which they are descended. The horizontal swaying is enhanced by the typical grass skirts of the women. The ornaments are made of flowers or of dog-teeth which encircle the ankles. The music consists of song, accompanied by large wooden drums,

rattles of half gourds, covered with fishskin, conch-shell trumpets, and wooden whistles. Some hulas keep time to a rhythmic monotone chant.

The purpose is far removed from the vulgarization seen in so-called hulas on American stages. The true hula is not for entertainment, but communicates the god principle. [CPK]

hulk'ilal wok The dance of the dead in the ritual of the California Huchnom Indians. *Hulk'ilal* means spirits of the dead; *wok* means dance. It was given to the people by their creator Taikomol in the beginning of the world, and he admonished them to perpetuate it in order to have health, good living, and long life. The dancers who impersonate the hulk'ilal wear no masks. Their faces and bodies are marked with stripes of black and white paint, and they tie flowers in their hair. No women, children, or uninitiated boys may enter the dance house during the hulk'ilal wok. Uninitiated boys, about 12–13 years old, spend 6–7 months in the dance house (Fall to Spring) undergoing strict discipline, learning the tribal creation myths and songs, and all the sacred mysteries of this ritual before they are permitted to attend. See **TAIKOMOL WOK**.

Hummingbird A minor character in American Indian folktale and mythology. The northern Paiute Indians say that Hummingbird once filled his pants full of seeds and started on a journey to see what was beyond the sun. He ate only one seed a day, but had to turn back because his food gave out. He didn't see anything. In eastern Brazil, Hummingbird is the character who hoarded water so that the people had none at all until the Caingang and Botocudo Indians released it.

 Since pre-Conquest times the hummingbird has been considered by many Middle American peoples to have supernatural powers. Today it is esteemed by many as a love charm. A dead hummingbird may be worn around the neck in a little bag, to give the wearer the power to attract members of the opposite sex, or it may be dried and a little powder dropped into the drink of the person whose love is desired. [GMF]

humor (North American Indian) Popular notions of the Indian as stolid and unsmiling may still have currency, but are far from actuality, as the reports of many ethnographers and travelers attest. That Indians can be dignified and serious when they consider the occasion demands is true, but repartee, jests, and laughter not only have their place in day to day living, but even during the performance of religious ceremonies. In any Indian group, as in any white group, there are likely to be individuals whose reputation for witty remarks, or for the ability to tell humorous stories, is a matter of general recognition throughout the tribe.

Humor in American Indian tales is expressed through situation, by means of linguistic devices, and, less often, by character. Humorous situations result from cultural incongruities, from obscene actions and emphasis on bodily functions, violations of cultural tabus, from the introduction of modern elements in a mythical setting, and other such devices. Linguistic devices for introducing humor in tales include the introduction of foreign words or sentences, often mispronounced, in myths; use of morphological devices, onomatopoeia, etc. In nearly all tribes the attributes of the trickster are such that mere mention of him causes smiles, but other char-

acters, especially small ones, are often also portrayed as humorous beings.

Clowns who amuse onlookers by their backward speech, audacious remarks, and oftentimes obscene behaviour are regular performers in certain Southwestern, Plains, California, and Eastern Woodlands ceremonies. Their antics and untoward remarks excite merriment and laughter which relieves the tensely of dramatic and serious ceremonies. In the Southwestern pueblo of Keres these clowns or "delight-makers" (*Koshare*) are organized into a society which performs comedies in pantomime in the intervals between public dances given to induce rain. [EWV]

hungan Haitian term for priest of the *vodun* cult, derived from the Fõn of Dahomey. Its literal meaning is deity-chief, *hun* in Fõn being a synonym for *vodun*, deity, and *gã* signifying chief. [MJH]

hunsì The northern Dahomean word for cult-initiate, that has been carried over into Haitian usage. Its literal Fõn meaning is deity-wife—*hu*, deity; *si*, wife. In Haiti, the word denotes any devotee of an African deity. [MJH]

hunsì kanzo A term employed in Haiti to denote a *vodun* cult-initiate who has passed through the ordeal of fire, which consists of dipping the bare hand into a cooking-pot containing boiling corn meal. This is the climax of ritual preparation, and is concluded by stepping on burning coals, or into a blazing, open fire. To be *hunsì kanzo* indicates that one has reached a higher rank in the *vodun* cult than the *hunsì*. In Fõn, the word *zo* signifies fire. [MJH]

hunting magic Many of the simpler peoples in Middle America propitiate spirits before setting out upon the chase. This appears to be related to the widespread belief that the more important game animals have their "masters," supernatural beings who usually live under mountains where they gather their animals at night, just as domestic animals are brought into enclosures. Hunters must request permission of these "masters," usually by burning incense and saying prayers, if they wish to have luck in their venture. A moral against wanton destruction of game is associated with this belief. A common story tells of a hunter who wounds but does not kill many animals; he goes into a trance, awakes, and finds himself under the mountains in the abode of the "masters," where he sees all of the animals he has wounded. He is told he may not return home until he has cured them, and that henceforth he must be careful in his hunting, killing only that which is needed for food.

Among some tribes a youth does not eat of the first animal or bird of each species which he kills, believing that if he breaks the tabu he will never again kill members of that species. [GMF]

Hunting of the Cheviot or Chevy Chase An English-Scottish border ballad (Child #162) probably relating the same story as that of *The Battle of Otterburn*, but more romanticized and less accurate, though taking neither side, than the latter. It is a later ballad than *The Battle of Otterburn*, but the A version of *The Hunting of the Cheviot* in Child is earlier than any extant version of *Otterburn*. This is the ballad referred to by Sir Philip Sidney in 1559 in his *Apologie for Poetrie*, and is considered one of the finest ballads in English.

The Percy, Earl of Northumberland, vows to hunt in the Cheviot Hills, country of the Scottish Douglas, for three days. On the first day, he and his 1500 archers kill a hundred harts, but soon after noon they are met by the Douglas, who has promised to drive them out, and 2000 of his men. Douglas, trying to avoid great bloodshed, offers to fight the Percy man to man, and Percy agrees. But an English squire objects to standing by while his chief fights, and the two groups clash. Douglas and Percy meet on the field, battle with each other, and are forced to pause for breath. During the rest, the Douglas is killed by an English arrow; Percy is run through by a Scottish knight. The fight continues until the moon is up: 55 of the Scots and 73 (or 53) of the English alone survive.

hurdy-gurdy (1) A medieval fiddle-like instrument operated mechanically by a crank-turned wheel which rubbed the strings and a set of rods which stopped the strings to play a melody. It originally was very large and required two men to play it. It was used to accompany singing in monasteries and schools. Later made smaller and portable, it became a favorite of the folk and eventually a beggars' instrument played at fairs and markets on the street.

(2) The crank-turned street organ of modern times, so called by association with the medieval instrument. The appearance of the hurdy-gurdy in the streets of New York, London, etc., is one of the first signs of Spring. The sound of the hurdy-gurdy brings children from the tenements pouring out of doorways and alleys to dance around it until the player tires. Two men usually form its crew, one to draw the cart and to crank the instrument, the other to pass up and down the street, hat in hand, collecting pennies from listeners and picking up the newspaper-wrapped coins thrown from apartment windows.

Hwegbadja Second king of the Aladahonu dynasty of Dahomey, who reigned from about 1650 to 1680. He is credited, in Dahomean tradition, wherein he plays mythical role of culture hero, with having consolidated the conquest of the plateau of Abomey, with having instituted the *dokpwe*, and with having instituted the custom of burying the dead, wherefore at every Dahomean funeral a cloth is given in his honor. [MJH]

hyacinth (1) A bulbous plant of the lily family (genus *Hyacinthus*) with a spikelike cluster of flowers. According to one Greek legend Zephyrus and Apollo both loved a youth, Hyacinthus, who cared only for Apollo. One day, Zephyrus killed him out of jealousy, and Apollo turned his blood into a flower, the hyacinth. Another Greek legend says the flower was formed by Apollo from the blood of Ajax when he killed himself. In any event there is a considerable amount of disagreement as to whether the plant the Greeks referred to as hyacinth was an iris, larkspur, gladiolus, turk's-head lily, or hyacinth. The wild hyacinth is a native of the Levant, was first cultivated by the Dutch, and was introduced to England in the 16th century. Culpeper says it is of a styptic nature and its virtues are little known. The English used to mash the roots in white wine to hinder the growth of hair.

(2) A transparent red, brown, or orange variety of zircon, but anciently blue to violet: confused with the jacinth and sapphire. Placed on live coals, it extin-

guishes them without injury to itself. It is an aid to childbirth and drives away phantoms.

Hyde, Douglas (1860–1949) known in Ireland as *An Craoibín Aoibhinn*, the Excellent (or Delightful) Branch: Irish folklorist, poet, and statesman, born in County Roscommon, the youngest son of a clergyman. He was educated at Trinity College, Dublin, where he got his D.Litt. in 1906. He founded the Gaelic League for the preservation of the Irish language and was its first president (1893–1915), was president also of the Irish Texts Society, and became professor of modern Irish at the National University of Ireland (1909–32). He was a member of the Irish Senate (1909–19) and served as president of Ireland (1938–45). His *Mediaeval Tales from the Irish* (1899) was the first collection of folktales in Irish. Among his other works are: *Beside the Fire* (London, 1890), *Love Songs of Connacht* (Dublin, 1893), *Three Sorrows of Story-Telling* (1895), *Story of Early Irish Literature* (1897), *Literary History of Ireland* (1899), *An Sgeuluide Gaođalač* (1898–1901), *Lad of the Ferule*, being volume 1 of the publications of the Irish Texts Society (1899), *Religious Songs of Connacht* (Dublin, 1906), *Legends of Saints and Sinners* (Dublin, 1915).

Hygeia or Hygieia The Greek goddess of health, worshipped in connection with Æsculapius and deemed to be his daughter, or, as in later Orphic writings, his wife. Originally the guardian of physical health, she later became the goddess of mental health, and eventually a protectress against various kinds of danger, a development she shared with Æsculapius. Hygeia was represented as a kind maiden in a long robe feeding a serpent from a dish.

Hyginus, Gaius Julius (died 17 A.D.) Latin author. A Spaniard, he was appointed head of the Palatine Library by Augustus, but is said to have become so poor when old that he was supported by friends. Of his many works, on biography, agriculture, Vergil, etc., only fragments survive. The two works traditionally attributed to him, *Fabularum Liber* and *De Astronomia*, are held to be by other hands. Both works are drawn from Greek sources: the former, about 300 short mythological sketches, contains a genealogy of the gods and makes use of Greek plays now lost; the latter is a compendium of star myths and an astronomical text.

Iacchus The principal god of the Eleusinian mysteries; the third member, with Demeter and Cora (Persephone), of the mystic triad: often called the Phrygian Bacchus to distinguish him from the Theban Bacchus, Dionysus, but nevertheless the two are often confounded. Iacchus was the son of Demeter and Zeus and the brother of Persephone; hence, he is sometimes called Corus, the male Cora. He is also occasionally called the son of Persephone, and confused with Zagreus; or he is the husband of Demeter; or he is the son of Dionysus; or he is equated with Dionysus himself. This confusion of tradition exists because Iacchus had no mythology

Hylas In Greek legend, the page of Hercules on the Argonautic expedition: probably, from the legend and the circumstances it explains, originally a minor vegetation deity. Hercules having broken an oar, the Argo put in on the coast of Mysia, and Hylas was sent to find water. He did locate a spring, but the naiads inhabiting it decided, because of Hylas' beauty, to keep him for themselves and dragged him into the water. When he did not return, Hercules set out to find him, and the Argo sailed without the hero. The angry Hercules enlisted the aid of the inhabitants of the region in the search, and annually thereafter at Prusa a festival took place in which the people patrolled the mountains calling for Hylas by name.

Hymen or Hymenæus In Greek mythology, the personification of the marriage song: the myths all seem to be attempts to explain the use of the name in the refrain. In one story he was a youth who was killed on his wedding day when the house collapsed, and thus he was invoked to appease his ghost. In other stories he rescued a group of women from pirates and was honored by having marriage songs named for him. In Orphic belief, Hymen was one of those brought back to life by Æsculapius.

Hyperboreans In Greek mythology, a race living in the far north "beyond the north wind," who were connected with the worship of Apollo: probably a reminiscence of some tribe or tribes along the amber routes who worshipped one of the gods later developed into Apollo. Herodotus does mention the Hyperboreans sending offerings to Delos.

Hyrieus In Greek mythology, a Boeotian king; father of Orion; son of Poseidon. He was king of Hyria (or Uria), and had no children. Once Zeus, Poseidon, and Hermes visited him, and in return granted him a wish. He of course asked for a son. The three gods then stood around an oxhide and urinated on it and told the king to bury it in the earth for ten months. The child born from the ground at the end of that time was called, after the act which brought him birth, Urion (later changed to Orion). Hyrieus was also possessor of a treasure which was stolen by Agamedes through a hole in the treasury wall: a story similar to that of the treasure of Rhampsinitus.

apart from the mysteries, about which information is often untrustworthy because of the disinclination of the initiates to make knowledge of the cult general.

On the sixth day of the Eleusinian festival, the statue of Iacchus was carried in a riotous procession to Eleusis, the initiates dancing and singing the *Iacchus*, the song named for him. Herodotus reports that just before the battle of Salamis the Greek allies of Xerxes saw a cloud of dust as from thousands of people and heard the chorus of the *Iacchus* swelling from it; they thus sensed their impending defeat. Liber is probably identical with the Eleusinian Iacchus.

Iambe In Greek mythology, a woman of Thrace, daughter of Pan and Echo. A slave maiden in the house of Celeus, she by her obscene jesting and gestures made the grieving Demeter smile when the goddess was on her search for Persephone. It was said that iambic poetry was named for Iambe either because the dances with which she amused Demeter were in iambic meter or because she hanging herself in remorse for the actions. See BAUBO.

Iasion or Iasius In Greek mythology, the father of Pluto or Plutus. He lay with Demeter in a thrice-plowed grain field and begot thereby the son whose name signifies wealth. The myth is probably an explanatory survival of an old Corn-Mother rite practiced in very early times in Greece. The parentage and the later career and death of Iasion vary in the several myths built up around him. He may have been originally a consort of the pre-Hellenic goddess of agriculture; the myth may have been adapted and incorporated when the identification of the Corn-Mother with Demeter was made. See **HIEROS GAMOS**.

Ībáhi "Long nose," "gray one," "white painted": the clown associated with the gahe, or Apache crown dancers. His enactment is purely voluntary and he furnishes his own outfit. He wears a long-eared, long-nosed mask of scraped rawhide, a gee string, and white body paint. He serves as messenger for the gahe and as fun-maker, preserving speechlessness during all absurd actions. Though it is not dangerous to touch him, he has more power than the other masked dancers during curing rites. [GPK]

ibéji The Yoruban term for twins, the equivalent of the Dahomean *hohovi*. The word has survived in the New World, retaining its aboriginal significance in Brazil and Cuba. The *ibéji* figures, carved of wood by the Yorubans and also found in Dahomey, represent the spirits of twins, and are a famous category of African art objects. [MJH]

Ibeorgun The culture hero of the Cuna Indians of Panama. He taught people what to eat, how to prepare it, how to build houses, how to brew maize beer, how to mold gold, how to celebrate girls' puberty, and a number of other things which are part of the modern culture of the Cuna. [GMF]

Iblis or Eblis In Moslem belief, the chief of the spirits of evil; the prince of darkness. Originally he was a great angel, called Azazil or al-Haris. But when God commanded the angels to bow before Adam he refused, arguing that a being made of fire as he was could not prostrate himself before a thing of clay. He was condemned to death, but obtained a stay of sentence until the day of the final judgment. He is called Al-Jann, the father of the Jinn, who commands them; he is the chief of the shaitans, the evil spirits. Each man is born with seven of Iblis' aides, and only two angels: thus the influence held over men by this parallel to the Judeo-Christian Satan. Iblis inhabits waste and unclean places, ruins and tombs. His food is the sacrifices made to idols. Mohammed, according to tradition, said Iblis lived principally at the bath, frequented the market-places and crossroads. His food was everything killed without the blessing of the name of God; his drink was intoxicating liquor of any kind. Musical instruments

were his muezins; poetry was his Koran; the marks made in geomancy were his alphabet. And women were his traps.

Icarius In Greek mythology, a native of Attica who played host to Dionysus. In return for his hospitality, the god taught Icarus the art of the vine. Icarus shared his wine with his neighbors who, getting drunk, thought that they were poisoned and killed Icarus. His daughter Erigone (Spring-born) or Aletis (Wanderer) and his dog Mæra finally found his body where the shepherds had buried it. She hung herself, whereupon the three were placed by Zeus or Poseidon among the stars, he as Arcturus or Boötes, she as the Virgin, and the dog as Canis Minor. A drought or a suicidal mania among young women was sent by Dionysus to afflict the Athenians and was alleviated only by the institution of a festival in honor of the father and daughter.

Icarus In Greek mythology, the son of Dædalus. He was warned by his father not to fly too close to the sun when the two were escaping from Crete with the wings Dædalus had contrived. But Icarus flew too high, the heat of the sun melted the wax which held the wings together, and he fell to his death in the Icarian Sea, called so after him. Hercules was said to have found the body when it was washed ashore and to have buried it.

ich-kanava Literally, great tellings: the long migration myths and war tales of the Mohave Indians.

Idomeneus In Greek legend, the chief of the Cretans before the walls of Troy. On his way back from the siege, his ship was caught in a storm and he made an oath to sacrifice to Poseidon the first thing he encountered on landing safely. As in the case of Jephthah and other makers of hasty oaths, this was his own son. As a result, either because he fulfilled his vow or because he tried to and did not succeed, a plague struck Crete and Idomeneus was exiled.

Idun, Idhunn, Ithunn, or Ithun In Teutonic mythology, the goddess of Spring who possessed the golden apples of eternal youth. She married Bragi, god of poetry, and went to live in Asgard. She kept the gods young with the apples which the dwarfs and giants coveted. The giant Thiassi persuaded Loki to lure her out of Asgard, and carried her off to his realm. When the gods learned of Loki's treachery, they commanded him to get her back. Loki borrowed Freya's falcon garb, changed Idun into a nut, and carried her back in his beak. Another saga says that she fell out of Yggdrasil into Hel.

Ifa The Yoruban term for the divining cult, held to have come from the Nigerian town of Ife. See FA. [MJH]

ifrit (feminine *ifritah*) See AFRIT.

I Gave My Love a Cherry An American love song, a survival of *Captain Wedderburn's Courtship* (Child #46) of which only the riddle and answer part remains in oral tradition.

Igigi In Babylonian mythology, the spirits appearing as the stars of heaven above the horizon: the Anunnaki were the spirits of the stars below the horizon. The Igigi were the assistants of the chief of the gods, Anu, Marduk, etc., invoked before battles, and fighting for Babylon in just causes.

Ikanam The creator of the Chinook Indians of the lower Columbia River region of Oregon and Washington. See ITALAPAS. [EWV]

ik!anam Chinook term for myth, or a story about the early world that was entirely different from today's world. See ADAOX.

Ikxareyavs The *dramatis personæ* of Karok Indian mythology, now existing as animals, birds, plants, rocks, and ceremonies. They were the Indians who inhabited the Karok country along the Klamath River before the Karok came, and are believed to have departed only a very short time ago. Long Snake was once one of them; so was Bluejay, Spring Salmon, Redfish, Coyote, Lizard, and others. The Karok cling faithfully to the laws and precepts of the Ikxareyavs. All their myths are stories about the Ikxareyavs and *pikvdhahirak*, the mythic times, or the days of the Ikxareyavs.

ila The word for dread among the Bechuana peoples of central South Africa: their equivalent for the concept of tabu. The Zulu form *zila* is a verb form meaning to abstain from. For instance, to the Bakatla tribe or clan, i.e. "they of the monkey," the monkey is *ila*; they neither harm nor eat it. Among those whose totem is the crocodile, the crocodile is *ila*. Compare HLONIPA.

Ila or Ida In Vedic mythology, a sacrificial goddess, personification of the oblation of butter and milk as well as praise: sometimes considered a goddess of the earth. According to the *Brāhmaṇas*, after the Deluge Manu went down with Ila from the northern mountains where his ship had come to rest and renewed the human race. According to the *Purāṇas* she was the wife of Buddha and mother of Purūras. In another legend Ila was the son of Manu but incurred the wrath of Pārvatī and was changed into a woman. After listening to the supplications of Ila's friends, Śiva and Pārvatī agreed that Ila should alternate monthly as male and female.

illa The generic name for all kinds of amulets and talismans among the Incas and their modern descendants. These amulets are stones or plants of unusual shape, bezoar stones, or good luck objects. The prosperity of sheep or llama was also associated with one particular animal that was regarded as the illa of the herd. [AM]

illuminating beauty A motif (F574.1) of numerous folktales in which a woman's beauty is luminous or so great as to shine in a dark place. The "Story of Mṛigāṅkadatta" in the *Kathā Sarit Sāgara* tells how that prince on his wedding night discovered that the beauty of his bride lighted up the room so that no lamps were needed. And the "Story of Somaprabhā" from the same source describes how her beauty illuminated the room the minute she was born, and how her face outshone the moon the night her husband discovered she was divine, not human. The motif appears to be especially characteristic of Indian folk-tale, but has numerous other Asiatic (including Siberian) and European parallels. Balder's beauty was said to shine. The luminous face was a sure sign of royalty in ancient Celtic belief.

Ilmarinen (1) God of wind and good weather (*ilma*) of the Finns "giving calm and bad weather, and fur-

thering travelers (sailors)," according to Agricola. (See Harva in *FUF* XXIX, 1946, pp. 89-104).

(2) One of the heroes of the *Kalevala* (see songs 10, 18-19, 37-38, 49), the eternal smith. He forged the sky, Sun and Moon, and the famous Sampo, even a golden wife for himself. He was a good friend to Väinämöinen and they often went on adventures together. [JB]

Ilmatar A Finnish goddess: Daughter of the Air. She is the creator of the world and the mother of Väinämöinen (see *Kalevala*, songs 1-2). Sometimes she is called Luonnotar, Daughter of Creation. See FINNISH FOLK-LORE. [JB]

ilu Literally, drums: term for the praise-name of an African Yoruba chief as drummed out on his drums. See AFRICAN AND NEW WORLD NEGRO FOLKLORE.

Imilozi Literally, whistlers: ancestral spirits of Zulu religion and folklore, who whistle as they speak. That ghosts communicate by whistling is a fairly widespread belief.

immortality Exemption from death or oblivion; eternal life: a widespread belief concerning the human soul which is held to continue for eternity in an after-world (heaven, hell, paradise, etc.) or on earth as another human being or an animal (metempsychosis, etc.). The practice of burial among the prehistoric fore-runners of modern man has led to the conjecture that man's belief in immortality is as old as the species: preservation of the body so that the soul may have a dwelling-place. Egyptian mummification, statues of ancestors or great heroes throughout the world, sacred trees and tombs or other dwelling-places of ancestors all testify to this belief. In Europe, the ancestral spirits developed into gnomes and fairies and eventually into gods; elsewhere in the world the immortal spirits of the ancestors are more obviously apparent. The ancestral spirit never dies as long as descendants live upon earth; so too a god never dies while he has a worshipper. These beliefs vary according to the belief held, in time and place, concerning the soul and the afterworld. See WATER OF LIFE.

 Immortality in China is not attained only after death, in which case death is merely a transition from one phase of being to another. Death can be dispensed with. Immortality can be attained by eating the pill of immortality or the elixir of life or strengthening one's essence by exercises. The Taoist teaching about breathing and other exercises has not been studied. Two of the most common exercises for attaining immortality are the "proper" and the "criminal." The proper method is to observe all the virtues, study the classics, and exercise self-discipline. This is the long and hard way which many people lack the power to follow. The criminal way involves occult erotic practices. In brief the principle assumes that a part of one's life is discharged at the moment of orgasm. If orgasms occur simultaneously between persons of equal strength, neither loses. Shape-shifters however steal vital essence by assuming the shapes of maidens or youths and seducing human beings. They induce a high degree of erotic power, until in the course of time the lover or mistress having exhausted his vital essence becomes tubercular and dies, while the shape-shifter having absorbed his vital essence in addition to his own becomes ever more powerful and lovely. These criminal

practices are frequently punished by the Thunder God, who is more powerful than the Immortals. [RDJ]

Some North American Indian tribes, as for example the Shawnee of the Eastern Woodlands, attribute much longer lives to the first people who lived before the deluge than is now enjoyed by the present inhabitants of the world. Whether or not this is an idea borrowed from Europeans is not clear. To their deities the Indians attribute immortality, and the idea of a life after death for humans, and also for animals, is of course current throughout North America. Very widespread, especially in eastern North America, is the myth in which human beings request eternal, or merely very long, life. Such an immoderate request is usually made to the culture hero, and the latter's answer is to turn the supplicant into a stone or a cedar tree. [EWV]

Imperial Cults of China Rites of worship performed by the Emperor. In his capacity of priest-king, the Emperor of China was charged with maintaining balance among the forces of nature. Not only was it essential for him to perform proper ceremonies at appropriate times according to rituals elaborated by the Board of Rites, but failure in the proper performance of these functions produced national disasters. Conversely national disasters, when they occurred, were immediate proof that Heaven had withdrawn its mandate. Floods, crop failures, military defeat, famines, or high prices proved that the Emperor was no longer acceptable to Heaven and therefore should be put aside. The Great Sacrifices were those to Heaven, Earth, Imperial Ancestors, Gods of Land and Millet, Confucius, and the Protectors of the Dynasty. The Medium and Small Sacrifices were to the Sun and Moon, Agriculture, Silk Weaving, Mountains, Rivers, and Great Men. The Great Sacrifices were performed under the open sky. The relation between the Imperial Cults and Taoism, Confucianism, and the "religious systems of China" raises questions too complicated to be examined here. [RDJ]

impossibilities The theme of a large body of folktales stressing the absurd, impossible, or contrary to nature. Often the victim of the impossible task counters with another impossibility: when told to build a castle between heaven and earth, he asks for the materials; if told to make a rope of sand, asks for the pattern (H1021.1.1); if challenged to hatch boiled eggs (H1023.1.1) counters with the request that the other sow cooked corn and harvest the crop. The story of the mice that ate the iron balance (thought to be of Buddhist origin) appears in its first literary form in the *Jatakas*. The classical Greeks and Romans had a by-word meaning Nowhere: *where mice eat iron*. See ABSURDITY REBUKES ABSURDITY; BERRIES IN WINTER; BUILDING CASTLE BETWEEN HEAVEN AND EARTH; CATCHING A MAN'S BREATH; HORSE LEARNS TO LIVE WITHOUT FOOD; NEVER; NOODLES; QUESTS; TASKS.

imrama Literally, voyages: a class of Old Irish stories in which the voyage itself provides the main interest. Those now extant in manuscripts are *The Voyage of Bran and His Adventure* (about the 8th century), *Imram Curaig Mael Duin* or *Voyage of the Coracle of Maelduin*, (11th, 14th, 16th centuries), *Voyage of the Uí Corra*, *Voyage of the Coracle of Snédgus and Mac Riagla*, and the *Voyage of Brandon*.

The voyages are prompted usually either by revenge, as in the case of Maelduin, or pure love of travel, or desire to find the Happy Isles. The voyagers visit innumerable islands ("thrice fifty isles" in the case of Bran) inhabited by supernatural or otherwise marvelous men, women, birds, or animals. The voyagers land here and there, or are not allowed to land; they see strange things, are told strange things, and inevitably learn new wisdom. They always eventually arrive at an island more beautiful and marvelous than the others, whose description reveals that some Christian concept of heaven has been superimposed on or adapted to the ancient Celtic visualization of the Otherworld. Sometimes the voyagers return home to tell the tale; sometimes they fall away in a whiff of dust the minute a foot is set to shore, as if they had been dead 200 years.

The flavor of the primitive Celtic Otherworld is strong in the Voyages of Bran and Maelduin: the Isle of Laughter or Joy is in both; the Isle (or land) of Women is in both. Music, feasts, drinking, lusty health, splendor are part of the visioned quest, promised, sought, found. "A beautiful game they play, sitting at the luxurious wine, Men and women under a bush, without reproach—" And the distant isle promised to Bran was "without grief, without sorrow, without death, without any sickness or age."

The Christian tone becomes stronger, however, in the Snédgus and Mac Riagla travels. In the *Voyage of Brandon* the final elysian isle is definitely the Christian heaven. Compare ECHTRAI.

Inanna or Nina The Sumerian mother goddess; queen of heaven: later identified with Ishtar. She was the patroness of Nineveh. Her descent to the underworld is the subject of a Sumerian poem. See ISHTAR.

Inapertwa or Inapatua In Australian Aranda (Arunta) mythology, rudimentary creatures from which two Numbakulla, or self-existing sky deities, made animals, plants, and birds, which they then fashioned into human beings. Thus, each individual belongs to the totem the name of which is that of the plant or animal from which he was transformed. The Numbakulla themselves then became lizards. [KL]

Inari The Rice or Harvest God of Japan. [JLM]

Inconstant Lover An American folk song; one of the ancestors of *Old Smoky*. It includes stanzas with the words "meeting's a comfort and parting's a grief,"—etc., recognized in phrases of *The Cuckoo* or *The Wagoner's Lad*, and of some texts of *Old Smoky*.

incremental repetition Term applied by Gummere to one of the narrative techniques of the ballad: that each succeeding stanza is constructed as a substantial repetition of the one before, with the addition of one new element or fact in the plot. This device was of mnemonic importance in the oral transmission of the ballad stories. The question and answer stanzas, as used in *Barbara Allen* and *My Man John* constitute one typical form of incremental repetition, as does also the CLIMAX OF RELATIONS.

incubus (plural *incubi*) The demon lover; in medieval European folk belief, an evil spirit in the shape of a man (more generally either in male or female shape,

though the latter is specifically the *succubus*) who came in the night as a lover to women, and often sired a child. Into this concept of the incubus were poured all the earlier beliefs of supernatural lovers: misshapen children or twins were the offspring of these demons; their human mistresses were witches, or died of exhaustion as the result of their lovers' attentions; the incubi were handsome and virile, with such drawbacks as cloven feet and evil smell, etc. Elves and trolls, ancestral spirits and fauns, *pilosi*, *dusii*, and such wild deities and spirits combined with the tempting, malicious, shape-shifting Devil in popular belief to bring forth the incubus. The witch, of course, desired such a lover; but the innocent maiden, plagued by his advances, could protect herself with St. Johnswort and vervain and dill. The incubus was the nightmare as well, riding his victims in the dark. Merlin was the son of an incubus, and the entire race of Huns was popularly thought to be the offspring of forest spirits and female magicians. The demon lover motif is expressed in innumerable folktales and in such ballads as *Lady Isabel and the Elf-Knight* (Child #4) and *The Daemon Lover* (Child #243). Parallels to the incubi have existed all over the world since ancient times: the Greek *Ephialtes* and *Satyrs*, the Celtic *dusii*, the Hindu *bhūts*, the Arabic *jinn*, the Samoan *hotua poro*, among others.

Indian and Persian folklore and mythology India and Persia are distant lands. According to our notions, they are romantic lands, languorous and mysterious. Unfortunately, much of the mystery rests on lack of knowledge, for the modern folklore of these regions has yet to be collected. Yet some information is available and when all is said and done India and Persia are still lands of wonder. The characters of their folklore inhabit a kind of border land of miraculous reality.

The difficulty in obtaining a true picture of Indian and Persian folklore lies not in eradicating romance and mystery but in expanding our concepts to include so much else beside. The really strange part is the combination of the familiar and the everyday with the wondrous. In this article, therefore, it may be well to give the familiar aspects of Indian and Persian folklore before the wondrous or miraculous aspects, and then to turn to the rich literary tradition and to a consideration of the living folklore, especially of India. **Familiar aspects** Both India and Persia spring from the Indo-European tradition which was also parent to the civilizations of Greece and Rome, Europe, and modern America. Although the archeological and historical record goes back many centuries farther, the Indo-European linguistic tradition is well established for the second millennium before Christ. At that time Sanskrit was being used in India and a closely allied tongue, Avesta, was common in Iran.

The ancient kingdom of Iran covered the modern countries of Iraq and Iran, the territory once included in Media, Bactria, and Persia. It was first conquered by Alexander the Great in the 4th century before Christ and later submerged by wave upon wave of Mohammedan conquerors speaking forms of Arabic. Nevertheless, the Sanskrit roots of the language were retained in Pahlavi which was the precursor of modern Persian.

Sanskrit also remained strong in both the written and spoken languages of India. Hindustani has today

many Sanskrit words and, despite its predominantly Mohammedan and Arabic background, Urdu likewise contains examples of both Persian and Sanskrit. Other languages of India show similar mixture of recent Indo-European tongues with the basic Sanskrit, and even the Dravidian languages, which are not Indo-European in origin, have been widely influenced by this vigorous Indo-European tradition.

Due to this common linguistic heritage the familiarity of Indian and Persian terms in folklore is sometimes startling. *Thag*, a thief and kidnapper, is clearly our *thug*; and the Arabic *ghul* used throughout India appears in Persian as *ghol* and is the same in meaning as our *ghoul*. Sometimes apparently similar words must be used with caution because of changes in meaning. Thus *pari*, *piri*, or *feri* is certainly our *fairy*, but she is no fingerling. She is an enchantress, human in size, in beauty, and in desire.

The familiarity does not rest solely upon language. In contrast with folklores which stem from thoroughly different cultural streams, such as those of the North American Indians, we feel at home in many of the stories of India and Persia because of similarities in our ways of life. There is talk of milk and bread, of gold and jewels, of farmers and wicked stepmothers, of heroines who are both beautiful and good. We, too, feel that the good should be rewarded and the evil punished. Yet we are equally aware that this does not always happen. So, in story, we tell of girls who marry princes, beggars who become kings, fools who have good fortune, and sons of wealth who lose their inheritance.

Many of the familiar aspects in these stories go back to the general stream of Indo-European cultural life. We come from the same historical past and our institutions have developed from the same ancient sources of civilization. It is small wonder that many of the same plots which occur scattered through European folklore collections turn up in both Persia and India. Not only were the sources of Indo-European life the same for us all but within the last millennium there has been frequent contact of one sort or another between the people of the West and these sections of the East.

Miraculous aspects On the other hand, there is a haze of the unreal about the folklore of Persia and India. The staid, talking animals which play such a role in Grimm's tales and in African animal stories have their cycles here too. There are many earthy stories of daily routine told in a simple, sober style. But the favorite tales deal with fabulous beings in a magical world. Ogres and *jinn*, fairies and snake queens abound. Creatures and objects grow small or large, fly through the air, change form or become invisible, in rapid and often bewildering succession.

Two features of this magical myth world call for consideration. First, it is in part a world which goes back to an early religious setting. Both the dominant Hinduism and Mohammedanism of today have retained traces of earlier beliefs and, in spreading over greater areas and over greater numbers of people, have also absorbed local beliefs and deities. Many of these now find expression in folklore. Early magical beliefs are often said to have been similarly absorbed and retained at a folklore level. Some of these simple magical elements are shared by European folklore, but we have

nowhere today the elaborate world of miracle easily accepted in Indian and Persian myth.

Because simple elements of magical belief can be shown to have a long history, it has often been postulated that the magical world of 20th century India represents an early stage in religious development. This postulate has never been satisfactorily demonstrated. On the contrary, non-magical elements of folklore can be shown to have as great antiquity as magical elements. Large blocks of population in India today, blocks numbering millions of persons, use magic and miracle, as we do, only as symbols or literary devices. It is not at all clear that the unreal world referred to in Indian and Persian folklore is due to an early religious setting, or that it exists because of such a setting.

The religious heritage of the Indo-European tradition has always held a strong other-worldly emphasis. All of us who share in that heritage have tended, at times of stress and under certain difficult circumstances, to take refuge in an other-world of happy fulfilment. The thought of such a world has buoyed up our faith in the everyday world and has been incorporated in various of our theologies. But the magic world of Indian and Persian folklore is not an other-world in this sense. It is a this-world. It is a place where people and jinn live together, where things do change form, and men can walk on water.

The second factor of this myth world which calls for consideration, therefore, arises out of the very fact that it is not necessarily tied with the recognized religions. In working with Indian story-tellers, it becomes clear that some among them actually conceive of themselves as living in such a world. The variation from one group to another is great, but in many cases persons do think of the real world as peculiarly insecure and unstable. A dog may be only a dog, but it may also be a transformed human or semihuman being. One can never be positive which it is. Objects can, and do, disappear by magical means. Poisons may be made healthful and the laws of nature may be reversed at any time. Myth elements are readily exchanged from the realm of story to the realm of nature, thus posing for the folklorist an anomalous situation in which some of his richest material comes from accounts of everyday happenings. Reality itself is miraculous.

The literary tradition The exchange which occurs in parts of these regions between narrative elements and interpretations of reality is paralleled by an exchange between the literary and oral traditions. When Sanskrit scholars have distinguished between oral and literary tales in their studies of Indian mythology, the distinction has rested upon form. The substance or content is known to have been indistinguishable. In both India and Persia, written mythological accounts go back in a continuous record for over 3000 years. Both traditions seem to have stemmed from a single source which was probably oral, and both have enjoyed a constant cross-fertilization between oral and written accounts.

The early Sanskrit tradition was formulated largely in terms of a basic conflict between the myriad forces of good and evil. After creation, the holy and the evil ones joined in battle and man shared the conflict or played his part in the final outcome. The core of Iranian religion, and its development in Zoroastrianism,

lay in this conflict and in the colorful mythology which attended it. Perhaps the most typical story, told under various guises, dealt with the hero of light who conquered the monster or dragon of darkness and evil. The Sanskrit tradition also reflects a high degree of organization, with authority resting in the hands of hereditary kings. Courts were sumptuous and shifts in religion and politics were often staged, in both fact and mythology, as rebellions against this kingly authority. Such a schismatic movement, started in Zoroastrianism by Mani in the 3rd century A.D., spread across the known world from China to Britain and was particularly powerful among soldiers of the Roman Empire where it vied with early Christianity. Although the basic conflict between good and evil, light and darkness, is expressed in some form wherever there are Indo-European traditions, the concept reached its full vigor in Iran.

In India, the Vedas and the epics mirrored the same conflict. The earliest record of Indian mythology is contained in the *Rigveda* or "Hymn Veda." This, with the *Samaveda* (Chant Veda), the *Yajurveda* (Formula Veda), the *Atharvaveda* (Veda of the Atharvan priests), and the *Brāhmanas* or explanatory prose texts attached to them, date in the first and second millennium before Christ. The *Upanishads* or philosophical treatises and the *Aranyakas* or sylvan treatises attached to the *Brāhmanas* are somewhat later. The great epics are generally dated in the four centuries bridging the beginning of the Christian era. The *Bhagavadgita* is still probably the best loved portion of the *Mahābhārata* but the tales of the hero Rāma, in the form of the *Rāmāyana* composed by Tulsi Das in the late 16th century, run it a close second. The accounts of Hindu mythology found in the *Purāṇas* do not differ greatly from epic mythology. Although the oldest date from about 600 B.C. they are still an active literary form, thus bringing down to the present day the miraculous deeds of gods and heroes.

The scriptures of religious sects carry variants of the same mythology, and secular or semisecular stories closely paralleling the religious occur in such works as the *Jaimini Bharata*, and the *Gulistan* of Persia. The similarities are marked between these and the popular oral epics of the last century. Some heroes such as Rama of India and Rustam of Persia may be traced directly to their mythological prototypes but other heroes such as Rasalu of the Punjab and Hatim T'ai of Bengal cannot be so derived, despite the fact that so many like adventures are told of them. Indeed, it is fairly certain that the Rasalu tales go back to a Scythian or non-Aryan king of the first centuries A.D. and that Hatim T'ai is an Arab chief whose exploits are told over and over in Persia as well as in India. Real heroes blended into the mythological background, and the epic tradition has been kept constantly alive, fed with fresh materials from historic events.

On the other hand, purely magical elements, many of them secular in tradition, flourished throughout the Mohammedan world. Great encyclopedias of magic were compiled and elements of magic were incorporated in the epic tradition, for instance in the *Bakhtyar Nama*, a Persian romance of the Sinbad type. Their influence has been pervasive. Love stories are as old as mythology in the Sanskrit tradition. They have been

affected by the same forces as the mythology and have been popular in literature and folktale. The great Persian epic, *Shāhnāmah*, by the 11th century poet Firdausi, and *Rasa Lila*, the modern Indian story of Radha's love for Kṛishṇa, are less well known in the West than the more corrupt *Arabian Nights*. In all of them, there has been that constant cross-fertilization between oral and written accounts which makes it so impossible to distinguish between literary and verbal traditions.

The literary traditions of Persia and India are tied to their Indo-European origins. Yet there may also have been cross-fertilization, especially in central and southern India, with Dravidian and other non-Indo-European sources which lacked writing. The pattern of Æsop's animal stories can be found in Sanskrit in both Persian and Indian literature. *Panchatantra* tales are told all over India. Peoples of other languages also tell animal stories. Collections of these must be made by the outsider and their history can only be reconstructed by intricate comparative methods. Most of this work remains to be done. Yet the rich oral traditions of the pre-Aryan-speaking Indians have certainly maintained themselves outside of the Indo-European tradition. The two have been neighbors for centuries. It seems fairly clear that there must also have been an exchange between traditions of Sanskrit origin and traditions from other linguistic and cultural backgrounds.

Folklore of modern India If we are constantly surprised by a strange mixture of the familiar and the miraculous in Indian folklore, we are equally surprised by its vitality. Too often folklore is collected in out of the way corners as a kind of heritage from a dying past. It gains an antiquarian aura which is quite false. Folklore may have its springs in the past. But it may also represent common emotional and intellectual responses on the part of a population which are either so immediate as not yet to have found written expression or so unlike the accepted literary forms as not to be written down. Much of the folklore of India has such a quality.

People who cannot write are not necessarily inarticulate. For many hundreds of years Indians have gathered to listen to holy men and teachers tell the stories of the books. They have learned complex forms of expression. Many, even outside of the groups of professional story-tellers, poets and singers, are highly articulate. If this is true of the past, it is supremely true of India today. In a land where newspapers are scarce, news of economic and political events finds expression in song or story. Old forms and old symbols serve new ends. An animal story or a parable may receive a new twist which reflects a shift in evaluation almost too subtle to be caught. Or a timely expression of public opinion may be repeated and passed from village to village only to disappear completely when its interest is over.

India may be largely illiterate but it is definitely articulate. Love stories, fairy stories, animal stories, parables, and tales of the gods are used as media for expressing new feelings and thoughts which must be assimilated to the old traditions and ways of life. Hero tales may follow an ancient pattern while they tell the trials of real men in a shifting political and economic scene. They are, as always, among the most popular of

oral accounts. Though India is in transition, its long literary and oral heritage shows no signs of abating.

MARIAN W. SMITH

indigestion Disordered digestion; dyspepsia. In general folk belief indigestion can be cured by wearing a piece of red coral. In Newfoundland the plant called Labrador tea (*Ledum latifolium*) is used to quiet the stomach. The Negroes of the southern United States recommend wearing a penny around the neck to stave off indigestion, but offer also a number of very efficacious folk remedies, such as drinking hot water, or hot water containing ten drops of turpentine, taking a hot bath, etc. Vomiting will stop, they say, if the patient's medicine glass is turned upside down under the bed. For dyspepsia they recommend eating a little of the inner lining of the gizzard of a chicken or other domestic fowl, on the grounds that a tissue which can cope so easily with pebbles, sand, and bits of trash will surely aid human digestive inability.

The 11th century Bishop Marbod in his *Liber lapidum* (describing 60 stones) prescribes gagates diluted with water as a remedy for indigestion and constipation (see GAGATES). Tomasso Gianinni, philosopher of the 17th century, ascribed the melancholy of great men to indigestion instead of to the influence of the planets Mercury and Saturn, as then (and sometimes now) thought.

Indigetes (singular *Indiges*) The gods and heroes who had lived as mortals at Rome and were invoked and worshipped as the protectors of the state; especially, the descendants of Æneas. They are often associated with the gods, e.g. Mars, Vesta, Venus, who had a part in founding Rome, and are mentioned in connection with the Lares and Penates. In this respect, such personages as Janus, Evander, Hercules, Romulus were considered aspects of the supreme god.

Indo-European or mythological theory An explanation of the origin and meaning of folktales, first advanced by Jakob Grimm, augmented and amplified by Max Müller, Sir George Cox, Angelo de Gubernatis, and others. According to this theory folktales are the detritus of Indo-European myth and can best be understood by being studied in relation to myth. This theory is now largely discredited through the work of Andrew Lang and others, who have pointed out that many common folktales are by no means the exclusive property of the Indo-Europeans and that folktales generally reflect varying stages of culture and sophistication. See ANTHROPOLOGICAL SCHOOL; COMPARATIVE METHOD; DIFFUSION; FOLKLORE AND MYTHOLOGY; HISTORIC-GEOGRAPHIC METHOD. [MEL]

Indonesian (Malaysian) mythology With the East Indies, Americans, since school days, have a peculiarly sentimental, neighborly bond despite their distance from the Western Hemisphere. To this moist, tropical, and densely populated region Christopher Columbus was en route when he discovered America. He had been inspired by gossip about Marco Polo's stories of gold in abundance "to a degree scarcely credible," sweet-scented trees like sandalwood and camphor, and "pepper, nutmegs, spikenard, galangal, cubebs, cloves, and all other valuable spices and drugs." World War II made names of Indonesian islands, their inhabitants

(over 40 million or 800 per square mile in Java alone), their rubber, spices and sugar, and political upheavals (independence for the Philippines and a United States of Indonesia in the south) familiar even to newspaper headline readers. Additional information increases the fabulous quality of the area. The oral literature of its most primitive tribes fascinates because well-known themes occur in exotic settings. The same tales that Uncle Remus told are among the most popular household stories among Indonesians, including the Borneo "wild men" who tell them in their pile dwellings, which are long enough to house a village and all its human skull trophies. Occasionally the characters are unfamiliar animals like, for example, Cousins Longtailed Monkey and Mouse-deer (an antelope-like creature less than a foot high).

The island area extending across the South Pacific from the Asiatic coast to New Guinea has been variously named and subdivided. Precedent exists, however, for applying the terms Indonesia or Malaysia to the region that encompasses the Philippines, the string of islands from Sumatra to Timor, which often is called the East Indies, to Borneo and Celebes, and, near New Guinea, many small archipelagoes labeled the Moluccas. Because the aboriginal Formosans speak Malayo-Polynesian dialects like nearly all islanders to the south, have a related culture, and belong to the same race, their island is included in Malaysia. Indonesian cultural affiliations with the mainland are indicated by the Southeast Asia Institute listing 16 regions from Assam eastward through Indonesia as constituting the Southeast Asia area (Heine-Geldern). In mythology and folk literature, the continuity between Indonesia and the southeastern part of the mainland is striking. India, because of its size, is a separate culture area, but no sharp break exists between its culture, including mythology, and that of the southeast which for centuries has been the recipient of the cultural richness of its great subcontinental neighbor.

Indonesia is the only South Pacific island area in which written literature has, since at least the beginning of the Christian era, greatly influenced the mythology. To the ancient, oral substratum of myths, folktales, and beliefs often reminiscent of Polynesia, Melanesia, and Micronesia, whose first inhabitants passed through Indonesia, there have been added strata of written literature from Asia and Europe. Cross-fertilization has occurred, so that today, as for a long time in the past, myths of primitive Indonesian tribes, distant from centers of higher culture, have details from the written literature which has diffused to them orally. And, similarly, local beliefs of ancient, primitive origin, have been incorporated into Indonesian versions of stories from the *Kathā Sarit Sāgara*, *Mahābhārata*, *Rāmāyana*, *Panchatantra*, *Jatakas*, and the *Arabian Nights*, to name but a few of the alien literary works. Parts of them had, of course, a folkloristic origin in lands from which traders and colonists introduced them into the South Pacific.

One of the earliest known homelands of the human race, as the bones of *Pithecanthropus erectus* of Java testify, Indonesia has been the crossroads of many different races and cultures. Some of them still persist in modified form. The Negritos, of unknown origin, were perhaps the first among surviving groups to arrive.

Later immigrants forced them into the interior of the Philippines, Malay Peninsula, and New Guinea, but by-passed them in the Andaman Islands, the only place where they have not lost their language and adopted Malayo-Polynesian dialects. Veddoids, related to Caucasians, were in turn pushed back to remote regions and now live in Ceylon, Celebes, and, in mixed form, in other islands. At some time, too, those peoples who settled Australia, Melanesia, Polynesia, and Micronesia, passed through Indonesia. Oceanic Negroid relatives of Melanesians occur, much mixed, in the Moluccas. The first Malays are called Proto-Malays to distinguish them from later relatives, the Deutero-Malays, who like them belong to the Mongoloid race. Proto-Malays clung to homes in islands off the main line of travel while Deutero-Malays claimed the coasts of major islands where, in the historic period, they came into direct contact with Hindus, Arabs, and Europeans.

To some extent, the prehistoric groups—Negritos, Veddoids, Proto-Malays, and Deutero-Malays—are distinguishable as to culture. Except for the hunters and gatherers among non-agricultural Negritos and Veddoids, Indonesians raise rice, for the most part, or maize and sago. Chickens and water buffalos are their principal domesticated animals; pigs are found only in non-Mohammedanized villages. Smaller animals find shelter under grotesque-roofed pile dwellings or village halls often used as men's clubhouses. Bamboo and rattan serve innumerable daily uses. Clothing includes either woven sarongs or tapa wrap-arounds. Whether nominally Mohammedans as very many are, Christians, or members of other alien sects, Indonesians maintain old beliefs in nature spirits, magic, and, most of all, ghosts of ancestors around whom cults with shamanistic practices exist. The amount of Hindu, Arabic, or European influence in mythology and folk literature depends largely on how close a tribe is to coastal areas reached by early foreign arrivals.

The application of Peer Gynt's metaphor of the onion with its many layers to the various racial and cultural strata of Indonesia is a useful academic device, if one remembers that a stew or compote is more descriptive of existing conditions. Certainly that is true of mythology, much as one may, in the present state of research in a complex area, hopefully grasp at what seem distinctive traits of each cultural layer.

The first, outstanding, literary influence of foreign, civilized origin came with Brahman and Buddhist colonizers from India. In the early centuries of the Christian era, they established great, conflicting kingdoms like, for example, Srivijaya, Malayau, Mataram, and Madjapahit, in Sumatra and Java. Often the authority of these kingdoms extended to nearby islands, parts of the Malay Peninsula, and even into Indo-China. This is not surprising since they controlled trade routes connecting the Pacific and Indian Oceans. Science, literature, and art, all frequent servants of religion, flourished, but did not long remain mere copies of Hindu forms. Buddhist-built Borobodur of Java, one of the great religious structures, preserves in statues and bas-reliefs the religious and mythological pantheon of India by depicting scenes from Buddha's incarnations. Kawi, a fusion of Sanskrit and Javanese, became the written medium through which Hindu epics, popularized in puppet shows and dramas with living actors, reached the people. It symbolizes the

union of Hindu and native cultures which, increasingly, acquired an Indonesian coloring. The Malayo-Polynesian dialects were enriched by terms for Hindu spiritual, intellectual, and emotional concepts (Kroeber; Winstedt).

As Hindu control waned, Holy Wars of Mohammedans from southwestern Asia and India won for Allah not only followers but political power that reached a peak in the 15th century. Indonesian language and literature, except in lengthy, sentimental romances, were relatively little affected by Arabs. Bali, which remained Hindu, is today called a "museum piece" because it preserves, with Indonesian interpretations, the religion and culture of the Hindus, especially the Brahmans (Cole, 1945). Local Malayan nature spirits and Hindu deities like Indra, Śiva, and Ganeśa, together with cults for the honored, ancestral dead now unite in the totality of Balinese religion.

Following Mohammedans into Malaysia were Christians from the Netherlands, Spain, England, Portugal, and the United States. Chinese have been in and out of the area as long as any outsiders. Early Europeans exploring interior jungles rarely express surprise in their diaries at meeting, at a remote but strategic confluence of rivers, a solitary Chinese engaged in flourishing trade with head-hunting natives. Porcelain jars that Chinese used in trade became symbols of wealth and as sacred objects, the centers of cults (Cole and Laufer; Rutter; Ling Roth). Myths often mention the magical power of the jars and their ability to speak. Any self-respecting hero of a mythical romance in the Philippine Tinguian tribe can magically increase the number of jars ninefold or eighteenfold to win the girl of his choice (Cole, 1915).

Indonesia, not only in religion and mythology but in the rest of its culture as well, is like a much used blotter on which scrawled lines that criss-cross and often cover each other cannot always be deciphered even when held to the mirror of history. The complexity of the literature often leads scholars to attempt to distinguish the prehistoric, oral lore from introduced elements of the historic period and discuss them separately. For example, Dixon (1916) analyzed the mythology of the primitive tribes after trying to subtract whatever was identifiable as Indian or Islamic in origin. Winstedt (1940) dealt mainly with Hindu and Islamic phases of the written literature of the more advanced Indonesians. He included a chapter on mythology and gave specific examples of alien additions to native riddles, proverbs, fables, farces, and romances which circulate orally. He also described alien sources of themes in Indonesian masked dances, shadow plays, poetry, law codes, histories, and legends.

Dixon found that primitive tribes, predominantly Proto-Malay in type, like, for example, the Igorot, Ifugao, and Tinguian of the Philippines, had almost no real cosmogonic tales, the pre-existence of the world being usually assumed. Many myths tell about floods destroying the world which then was reconstructed. Igorot, for instance, narrate that the principal member of their pantheon, Lumawig, created mankind by laying out reeds in pairs which became human couples, each with a different language. Lumawig's sons caused a flood over the earth, leaving only a brother and sister alive, whom Lumawig ordered to marry though they objected. They repopulated the world, and Lumawig taught them customs and arts still practiced (Jenks, 1905).

A widespread Indonesian concept is that over a primeval sea stretched multiple heavens where lived gods who threw down rocks and other material from which to fashion the earth. Sometimes they went to live on rocks exposed in the sea. Birds commonly are their assistants. Dixon regards the concept as genetically related to western and central Polynesian cosmogonic myths which are later in origin than those of marginal Polynesia. Indonesian relationships with the area immediately to its east are with the Melanesian rather than the Papuan inhabitants. Indonesians generally credit the origin of human beings to creative acts by gods or miraculous origins from plants, trees, and eggs. Formosans, for example, are like the Andamanese, Japanese, and Filipino Tagalog, in narrating that mankind originated from a bamboo joint. Sumatran tribes, like those of other islands affected by Hindu and Arab contact, have themes similar to those in primitive tribes but tell them in far more elaborate style and add motifs of continental origin.

Indonesians tell many heroic romances, some of them in meter which Filipinos call *corridos*, and less sophisticated tales about supernatural heroes and heroines. All have a familiar ring to readers of the *Arabian Nights* and Hindu epics. Greatest of mythical heroes among the Borneo Dyaks is Klieng, who was found in a knot of a tree by his foster parent. Myths tell of Klieng's devotion to war, travel, and pleasure, and of his ability to transform himself into anything in the natural or supernatural world. To chant the story of his greatest deed, a war raid on the skies, requires a whole evening. The *kana*, or chant, of his adventures involves, according to collectors (Ling Roth), a perpetual play of alliteration and rime.

Leading characters in Tinguian tales of "the first times" include the couple Aponitolau and Aponibolinayen and their relatives. The prefix *Aponi-* is a term of address meaning Sir (or Madam) which is followed by the given name. The son of Sir Tolau and Madam Bolinayen was Kanag who had a magical origin similar to that of many heroes in his tribe. He was born when an itching spot on his mother's little finger was pricked. He courted a girl whose mother demanded that a spirit-house be filled nine times with jars, and golden beads be strung on a spider web surrounding the town.

Many popular tales are about the animal kingdom. Mouse-deer, tortoise, ape, tiger, and crocodile are a few of the actors who, dignified by titles and relationship terms from native vocabulary, function in a society and environment patterned after that of the narrator. Basic plots, of which Tar Baby is one, concern the triumph of a slow or weak but clever creature over his strong but slow-witted oppressor. Certain adventures came into Indonesia with the *Panchatantra*, *Jatakas*, and other written Indian collections. Others, according to Dixon, are local inventions, either original or patterned after Hindu models, while some that have diffused eastward may belong to an old stratum between the Negrito and Malay. Many themes in the animal-kingdom fables have spread back and forth over the world both by written and oral transmission. Aarne analyzed a tale, popular in Indonesia, about wandering animals and objects, showing how a simple story (of which the *Bremen Town Musicians* is a familiar European variant) has diffused over the world and assumed various forms.

In addition to cosmogonic myths, heroic romances, fables, and explanatory myths, a type of narrative called *diam* by Tinguians and *pengap* by Dyaks forms part of the mythology. A *diam* or *pengap* is a myth recited as a formula at a ceremony to invoke supernatural beings, who are characters in the myths and perform successfully acts which the human beings hope to imitate.

Among interesting studies of Indonesian lore is that by Fansler who points out world-wide parallels in his collection of Filipino tales. Cole (1915) has shown how Tinguian myths reflect the culture of the people. Radcliffe-Brown has discussed the significance of the myths of the Negrito Andaman Islanders as an expression of Andamanese social values.

KATHARINE LUOMALA

Indra (1) In Vedic mythology, the god of the atmosphere who governs the weather and dispenses rain; son of Dyaus or of Tvashtri and a cow or Nishtigri. His place as one of the greatest of the gods was won by slaying Vritra, the dragon of drought, thus releasing the withheld waters and generating the sun and the dawn. He is also the chief aid of the Aryans in their struggles against the Dasyus. He was feared as the ruler of storms, lightning, and thunder, but revered as the cause of fertility and bestower of rain. See *AHI*.

In later mythology Indra is still god of the atmosphere and the ruler of Svarga (Indra's heaven), but his position is inferior to that in the Vedas. He battled with the Suras against the Asuras after the Churning of the Ocean but only with the aid of Vishnu could he gain victory for the gods. Indra was then given the rule of the three worlds; the golden age followed in which, seated on Airāvata, he gazed over the contented world. But he fell into evil ways and finally slew Viśvarūpa, son of Tvashtri, who created Vritra to avenge his son. The gods tried to make peace and Vritra agreed to a reconciliation if he were promised immunity from Indra in wet and dry, from sword or javelin, wood or stone, during the day and the night. Indra, however, slew the monster despite the promise of the gods, meeting him at

twilight at the junction of wet and dry on the seashore, slaying him with the thunderbolt and the foam of the sea. Then he fled to a remote lake and lived hidden in a lotus stalk. Drought followed and Vishnu finally promised Indra that he could regain his place by performing a horse sacrifice.

Many instances of adultery and incontinence are recorded in the later mythology of Indra. According to the *Mahābhārata* he tried to seduce Ahalyā, wife of Gautama, and as punishment became covered with a thousand marks or eyes. In the *Rāmāyaṇa* Indra was defeated by Rāvaṇa and carried off to Lankā (Ceylon). The gods had to sue for his release and grant Rāvaṇa immortality.

According to the *Brāhmaṇas* he cut off the wings of the mountains because they were troublesome. In the epics he took part in human battles and placed the rainbow in the sky as a sign of his presence.

As a rain god Indra later absorbed the name Parjanya (a Vedic rain god) but in modern Hinduism receives no real worship as such. In Benares he has been superseded by Dalbhyaśvara.

Indra is depicted as red or gold in color with arms of enormous length, riding in a golden car drawn by two (sometimes 1100 or 10,000) ruddy horses. His weapons are the thunderbolt (a hundred-jointed, thousand-pointed instrument), the bow (rainbow) and arrows, a hook, net, and spear. He is a gigantic eater and drinker of soma which he stole from Tvashtri after he and the whole warrior race were excluded from it by the gods. His capital is Amarāvati, his elephant Airāvata, and his horse is Uchchhaiśravas which came forth at the Churning of the Ocean.

Indra is not worshipped directly, although a festival is held in his honor. His fall from first rank is explained as having been caused by priests of the Brāhmaṇa period who were rivals of the warrior class. As the god of conquest, Indra was the special god of this caste and thus undesirable in the eyes of the Brāhmaṇ caste, who were at the moment consolidating their position in Indian society. Indra has been identified with Thor and Tritā.

(2) (Pahlavi *indar* or *andar*, Persian *andar*) In Zoroastrianism, one of the six archfiends; aide of Angra Mainyu. According to the *Dinkart*, the spirit of apostasy who deceives men concerning their mode of life. Indra is the adversary of Asha Vahishta. [SPH]

industrial lore Occupational lore generally, including that of the crafts and trades, but more particularly the lore of manual, mechanized, and organized labor. Industrial lore first entered into the history of American folklore by way of the lore of handskills (folk arts and crafts), cooperative labor (raisings, log-rollings, quiltings), community activities (markets, auctions, fairs), occupational types and traditional callings (miller, cobbler, tailor, tinker, innkeeper, peddler, sailor, fisherman, miner, doctor, lawyer, clergyman), singing at work, street cries, signboards, trade jargon, and slogans. In New England the development of manufactures, commerce, lumbering, fishing, and shipping gave rise to the lore of Yankee peddlers (tin, woodenware, and clock), clockmakers, storekeepers, hucksters, sailors, skippers, fishermen, whalemens, and lumberjacks, and of Yankee inventions and Yankee notions. In the economic development of the South and the West, a rich body of occupational customs, beliefs, songs, stories, and

lingos grew up around the great staples (cotton, tobacco, sugar, corn, wheat, hogs, cattle, sheep, lumber, turpentine, coal, oil, gold, silver, copper and iron ore, steel, furs, fruit) and the epic of freighting, canalling, flatboating, railroading, steamboating, Great Lakes shipping, mining, logging, ranching, and trail-driving.

The great American hero-types of the frontier (the trapper, the fur-trader, the buffalo-hunter, the miner, the logger, and the cowboy) were the product of the pioneering and craft period of industry, just as the so-called industrial heroes (Old Stormalong, Paul Bunyan, Pecos Bill, Gib Morgan) were industrial pioneers rather than industrialists. They belong to the days of wilderness-clearing and land-taking, of wooden ships and iron men, before the timber beast became a timber mechanic and when the boss worked side by side with the hand—the star-performers and hell-raisers who paved the way for the machine but (as in John Henry's contest with the steam-drill) represent man's last stand against it.

In the tightening of class lines and the sharpening of industrial conflict that accompany the mechanization, centralization, and unionization of industry, a new type of hero emerges. He is heralded by Joe Magarac, the Slav hero of the Monongahela Valley steel mills, who made rails by squeezing the hot steel through his fingers—four rails from each hand—and jumped into a furnace to make better steel, recalling memories of foundation sacrifice rites and stories of men who have fallen into vats of molten steel and been buried with the metal. In some versions Joe Magarac is the class-conscious worker who believes that the mills belong to the men rather than the men to the mills.

A typical hero of organized labor is Joe Hill (Joseph Hillstrom), a western migratory worker and I.W.W. organizer of Swedish birth, who wrote some of the most stirring militant workers' songs such as "The Preacher and the Slave," a version of "Hallelujah, I'm a Bum," and a parody of "Casey Jones" (in which Casey is a scab on the S.P. line, who dies and goes to heaven, where he keeps on scabbing until the Angels' Union, Number 23, throws him into hell). He was executed in Salt Lake City, November 19, 1915, on an alleged murder charge, his last words being: "The cause I stand for means more than any human life—much more than mine. Let 'er go!"

The bulk of industrial lore consists of esoteric sayings, jokes, and anecdotes that go the rounds of the workers; initiation ceremonials and practical jokes in which new hands are sent in search of impossible objects; and tall tales of rivalries between old and new hands, piece workers and day workers, hand workers and machine workers, and backward (in the union sense) and advanced workers. A favorite butt of satire in Midwest auto plants is the worker from the sticks (True Blue Highpockets) "who sells his labor at a minimum and sets a pace in getting out the work" (*New Masses*, Vol. LIX, April 23, 1946, p. 14). At the same time there is a survival of the frontier-hero tradition of the hand-craftsman, strong man, or tough customer like the Demon Bricksetter from Williamson County ("I'm a man as is work-brickle. I'm a man as can't say quit. When I lay a-holt, I'm like a turtle and I don't let loose till it thunders") or Slappy Hooper, the world's biggest, fastest, and bestest sign-painter, who feels like giving up because "they don't want big sign-painting

and they don't want true-to-life sign painting, and he has to do one or the other or both or nothing at all" (*A Treasury of American Folklore*, 1944, pp. 532, 550).

A distinctive, if elusive, part of contemporary industrial lore is the metropolitan lore of New York City and Chicago collected by the Federal Writers' Project in 1938 and on file in the Library of Congress—a hard-boiled, hard-hitting lore of gags, wisecracks, and trade jargon with a sharpened sense of economic struggle and competition—of taxi drivers, sandhogs, structural steel workers, plasterers, longshoremen, marine telegraph operators, and workers in the needle trades, packing plants, department stores, restaurants, and hospitals.

B. A. BOTKIN

inexhaustible food, drink, object, etc. A widespread folktale motif (D1652 ff.) in which food, drink, or treasure keeps magically renewing itself, or the object containing it is mysteriously and continuously replenished. The motif is known all over Europe, is especially prominent in Celtic mythology and folktale (the Dagda had one boar always on the spit, and one alive, for instance), is known also in Japan and China, in all the Pacific cultures, and among the North American Indians.

The classical examples are the horn of plenty and the flowing wine and rich viands in the story of Philemon and Baucis and their hospitality to the gods. *Exodus* xvi describes the manna which the Hebrews gathered every morning in the wilderness: "he that gathered much had nothing over, and he that gathered little had no lack" (D1031.1.1). *Mark* vi describes the related miracle of the loaves and fishes (D1032.1).

In folktale the inexhaustible purse, bag, chest furnish money (D1451 ff.), magic tables, pots, caldrons, pitchers, etc., supply food and drink (D1472.1.7 ff.). In Europe we find inexhaustible bread, cake, cheese (D1652.1.1 ff.), in Indonesia inexhaustible rice (D1652.1.3), inexhaustible apples and cows with never-failing milk supply in Irish folklore (D1652.1.7; D1652.3).

 The inexhaustible food supply is an incident in many North American Indian tales, widespread over the entire continent. Sometimes food is contained in a cup or kettle; sometimes it takes the form of a nut or bone that can never be consumed. Oftentimes a small quantity of inexhaustible food is set before a hungry visitor(s); the person thinks to himself that the quantity is minute, but finds to his surprise that he can never finish it. His unspoken thoughts on the matter are frequently divined and answered aloud by his host. See **BERRIES IN WINTER**, [EWV]

infanticide Killing children at or shortly after birth for reasons of convenience, economy, fear, shame, or religion: formerly frequent and lawful, and still obtaining in some primitive cultures. When it occurs, sporadically and abnormally, among the more complex cultures, it is most frequently due to the shame of the unmarried mother.

The economic motivation of infanticide is most clearly seen in the South Sea islands where circumscribed area and limited food supply have for centuries made some method of population control obligatory. Sir James Frazer states that the Polynesians seem regularly to have killed two thirds of their offspring. His figures were corroborated for Tahiti by the Rev.

J. M. Orsmond during the first half of the 19th century. His manuscripts, edited and supplemented by his granddaughter, Miss Teuira Henry, and published by the Bernice P. Bishop Museum (*Ancient Tahiti*, 1928), furnish the best picture we have of this primitive society before it was influenced by contact with continental cultures.

The first missionaries found that more than two thirds of the children were destroyed "generally before seeing the light of day. Sometimes in drawing their first breath they were throttled to death, being called *tamari'i 'u'umi hia* (children throttled)."

While the original reason for infanticide in the islands was primarily economic, certain other reasons were given to the missionaries by the natives, and evidently accepted as true. Mr. Orsmond and his granddaughter give as the chief reasons for infanticide, "to keep the abyss wide between the royal family and commonalty, and for the regulation of the *ariori* society."

The lowest of the eight orders of the *ariori* had only small tatau (tattoo) marks in the hollow of the knees, and their children were not permitted to live. "If any saved their babes they were dismissed in disgrace from the society." But parents of the highest order, covered with tatau marks until they were black from the groin down, must not kill their children, since they were considered descendants of gods, and would inherit the royal titles of their parents. Candidates for admission to the lowest order must have no children and solemnly pledged infanticide if offspring came.

In spite of economic and societal requirements, the Tahitian infant did have a possible chance of escaping annihilation. Since infanticide was a family affair among the lower orders, with near relatives of both sides of the family attending the birth, and since the paternal relatives might urge that the child be killed while the maternal group wished to save it, there might be contention. If the quarrel lasted long enough for the child to draw breath and open its eyes, it was allowed to live, because it had its own *iho* (personality) and could not be doomed to *puaru* (child destruction).

Infanticide in India was likewise due to overpopulation and recurrent famine, but just as the Tahitians rationalized the custom into a support of a caste system so the Hindu people sometimes justified their throwing of infants into rivers as a religious sacrifice to a crocodile god. A more humane Indian infanticide was accomplished by allowing the child to nurse from its mother's breast which had been anointed with datura or opium.

Even more drastic than the Polynesian two-thirds annihilation of the newborn was the practice of the Jagas, a West African Angola tribe, where all children without exception were killed, but for a different reason. The Jagas were always fighters, marauders on the march, and mothers carrying infants were highly undesirable hindrances to speed. One would expect that the tribe itself would soon disappear, but it was kept to full strength by the simple expedient of adopting the adolescent children of the parents whom the Jagas had surprised, overcome, and eaten.

In the Chaco Mbaya women killed all their children except the one they thought would be the last one. If another one came, it was killed. Naturally, since the Mbaya adopted no children, the nation dwindled, and

the branch in which the women were most assiduous in the practice completely disappeared.

In several East African tribes, according to reports from Father Picarda of the Catholic Missions in the 1880's, two thirds of the newborn were killed, since only those born in certain unusual presentations were saved.

There are many tribes where infanticide, although not generally practiced, is permissible in certain instances and under recognized circumstances. Among the Guiana Indians of South America, in one tribe or another, three situations justify killing the child: if it is a female, or a cripple, or one of twins.

On the Orinoco a woman who bears twins is thereby dishonored and is likely to be called a rat by the other women. Among the Salivas on the west bank of the Orinoco if a woman bore a child and was aware that another was about to come, she would conceal the fact in spite of great pain and bury it secretly lest her neighbors torment her and her husband be angry with her. Because he could not possibly believe that more than one of the twins was his own, he would consider her disloyal to him. In many tribes, it is the second twin that is killed, unless one is male and the other female. In that case, the female is doomed. This practice of killing girl babies, which often prevails even where there is no choice of twins, is defended by the mothers themselves who say that they do not wish the girl to grow up and suffer as they have, being women. In those tribes where the husbands treat their wives better, there is less murdering of female infants.

Among these Guiana Indians the methods used are breaking the neck, pressing on the breastbone, cutting the umbilical cord so near the navel that it cannot be tied and the infant bleeds to death, exposure, and a method regarded by the natives as so humane that they call it a word meaning "without hurting it at all." The process is simply burying the child alive. Many South American Indians kill without hesitation children who are born hunchbacked, lame, dwarfed, crippled, malformed, or with a harelip.

Among Chaco groups, twins are usually killed, either buried alive or exposed by the tribal shaman, since their birth is a bad omen. The killing is rationalized on the theory that no woman can possibly nurse two children. An unmarried girl kills her child without hesitation. If a woman has a bad dream just before childbirth, she may kill the child, and if a mother dies in parturition, the child is buried alive with her. Among these seminomads, many children are a burden.

Another and rather unusual cause of infanticide obtains among several Chaco tribes. It is the custom for a woman there to refrain from sexual intercourse with her husband during her nursing period, and since it is also the practice to nurse children for 3 or 4 years, she often chooses to kill the child rather than lose her husband. In 1870 a Jesuit reported of one Chaco tribe that they recognized four reasons for infanticide: scarcity of food, any suspicion of illegitimacy, too many children already, or if the parents were on a journey.

From 19th century Chaco to 6th century Arabia is a long jump, but infanticide is the common link. Mohammed is credited with having abolished the practice in Arabia where female infants were frequently

destroyed before his reforms. In the Koran, *Sura xvii*, 33, we read, "Kill not your children for fear of want." *Sura xvi*, 60, 61 reflects an Arab father's dilemma at the birth of a daughter, describing how "dark shadows settle on his face" as he ponders, "shall he keep it with disgrace or bury it in the dust?" *Sura lxxxi* pictures vividly the day of judgment "when the sun shall be folded up" and many other things happen including "And when the female child that had been buried alive shall be asked for what crime she was put to death."

Mohammed's reform was not completely successful for it is said that the only occasion when his successor Othman, the cruel third caliph, ever shed a tear was when he was burying alive his little daughter and she reached up her tiny hand and brushed the grave dust from his beard. But Zaid, Mohammed's adopted son, who was said to have had Christian parents, is reported to have offered to support any girl children whom their fathers spared.

Among the many reasons not already given alleged for infanticide, whether actual reasons or rationalized, are discovered the following: killing of deformed children among the Salivas and Manaos because deformity was thought to be caused by demons; abandonment or burial alive of one half the children of Paraguay tribes if deformed, posthumous, or if either parent dies at the time of the child's birth. Any of these kinds of bad luck evidently justified or even required the killing of the infant; similarly bad luck would follow the Brazilian Tapirape parents if they kept more than three children or more than two of the same sex; in eastern Bolivia a baby was buried alive with its mother if she died in childbirth because a baby could be nursed only by its own mother; and in some Polynesian tribes if a child resembled its father too much, it was killed because of the belief that whoever the child resembled would die.

Among Chinese who believe in reincarnation, the killing of girl infants is defended on the ground that it gives them a chance to be reborn as males. In Africa and some South Sea islands where babies are suckled for long periods, the second child is sometimes killed if it arrives before the first has been weaned. In a way this practice parallels that in ancient Greece where infants were exposed in order to keep up the living standards for previous children. In Sparta the deformed newborn were exposed for the good of the state, and at one period Roman law, for the same reason, strictly forbade the rearing of deformed children.

However plausible are the alleged economic and other reasons for killing the malformed newborn, it is likely that fear of the abnormal was and is a large part of the motivation. To attribute eugenic policies to primitive societies is to forget how very difficult it is even in advanced cultures to secure recognition of the principles of eugenics.

Exposure or abandonment of infants, callous as it may seem, really presents an advance in the treatment of unwanted children. Instead of killing the infant outright and immediately, the parents gave it a faint chance of survival. It might be picked up by a stranger before it died of hunger, thirst, or cold or was killed by wild animals. The theme runs through many an old folktale and emerges into world literature. See ABANDONED

CHILDREN; EXPOSURE OF FAMOUS PERSONS IN INFANCY. The *Ædipus* legend, minus any Christian accretions, is still a folktale in Greece.

The core of the *Ædipus* exposure story probably goes back to Mycenaean-Minoan times, as recent discoveries indicate, or it may be even earlier. It has been edited and polished by ten thousand tellings until it reflects the deep psychological conflicts felt in families since the family was established. It has lived because it dramatizes man's repugnance at infanticide and the father-hatred thus inspired. And the folktale has rounded out its cycle by becoming in our day appropriated by psychology to denominate a mental complex.

Religious infanticide, especially the killing of the first-born, is apparently in nearly all cases a substitutory human sacrifice. Cases are recorded among the aborigines of Victoria, Australia, the American Indian tribes of northwestern Canada and some parts of the United States, and in China, Africa, and Russia. It is, however, best known historically to have been common among the peoples of the eastern Mediterranean region and particularly among the Canaanites (Phoenicians), the Sepharvites, Moabites, Israelites, and Carthaginians. And in many instances the bodies of the children were burnt as sacrifices to the various tribal gods.

In some cases, as apparently in that of Abraham's interrupted sacrifice of his son Isaac (*Gen. xxii*), the child was killed before the body was burned, but Diodorus Siculus (xx, 14) tells of the Carthaginian custom of placing the child in the huge hands of a great idol from which it slid off into a fire below. The god variously named Melkarth, Milcom, Moloch, and Melech, with combined forms, was widely worshipped, even by the Israelites at times, for Solomon built an altar to Molech (*I Kings xi*, 7) and Manasseh sacrificed his son, by making him "pass through the fire" (*II Kings xxi*, 6), as did King Ahaz (*II Kings xvi*, 3). All through the 7th century B.C. this practice flourished. It was suppressed by Josiah but was revived by Jehoiakim and persisted until the Babylonian captivity. Even in northern Babylonia the burning alive of infants, as a sacrifice to the Melech group of gods, spread, for "the Sepharvites burnt their children in fire to Adrammelech and Anammelech, the gods of Sepharvaim" (*II Kings xvii*, 31).

Excavations in the Canaanite levels of all the mounds explored by archeologists have revealed jars in large numbers containing the bones of newborn infants, buried under house corners and thresholds and beneath the floors of the sacred high places. With them were small jars formerly containing food and drink. The bones were not charred, and so the babes had not been sacrificed to Molech, but probably to the mother goddess, the giver of children.

Sir James Frazer (*Golden Bough*, vol. iv, pp. 168-176) goes so far as to trace the origin of the Hebrew Passover directly to the sacrifice of first-born infants which he considers to have been an article of the ancient Semitic religion, and bases his argument on *Exodus xiii*, 2, 15; *Micah vi*, 7; and *Numbers xviii*, 15. It is evident from those passages that anciently these child sacrifices may have been made to Yahweh before they were, under Phoenician influence, made to Molech.

CHARLES FRANCIS POTTER

Inferi In classical mythology, the beings living in the earth, especially the gods of the lower world, and more often the shades of the departed: distinguished from the Superi or the Olympians living above the earth, and from the mortals living on the earth. The word thus was construed as including all the inhabitants of the underworld.

Ing A mythical Teutonic hero, mentioned as follows in the Anglo-Saxon *Rune Song*:

Ing was first mid the East Danes
seen of men until he fared forth eastward (or thereafter)
over the sea.

He has been interpreted as the historic progenitor of certain tribes along the North Sea known as Ingvæons; the Anglo-Saxon *Beowulf* mentions the Danes as *Ingvine*. These five runic lines are pregnant with legendary implication; they serve as nucleus for the regional legend that a progenitor arrives mysteriously in a ship out of the unknown, tarries to establish a ruling race, and departs just as suddenly and mysteriously over the sea.

There is some dispute regarding the transcription of the word *est*, eastward. Some scholars prefer to interpret it as *eft*, thereafter, assuming that Ing fared forth thereafter over the sea to become the progenitor of the Anglo-Saxons. Nothing like this is mentioned, however, in the *Rune Song*.

The Ing legend is considered by some as the most ancient of all clues to the death-journey or journey to the Otherworld myths, which, spreading among the Danes, was superseded by the famous Scyld legends, and traveling southward along the Rhine, became one with the swan-knight story. Possibility of some relationship with the basic myths behind the Celtic imrama has been considered. See ÆSIR.

initiation The ceremonial transition from one state of being into another; the rites, tests, ordeals, etc., imposed or willingly undergone to effect and symbolize this transition—from puberty to maturity, from non-membership to membership into tribe, religious cult, or secret society, into a priesthood, into the knowledge of magic powers, or into a state of special holiness. The initiation rites which mark the passage from adolescence to maturity are often identical with those of induction into tribe or cult or secret society. The ordeals requiring courage and endurance (fasting, filing or knocking out of teeth, ear-, nose-, or lip-piercing, incisions, scarification, circumcision, subincision, etc.) and the terrorizing test the worthiness of the initiate to partake of the privileges of his new status, and are accompanied by instruction regarding his new responsibilities, disclosure of secrets, tribal lore, and investiture with marks, regalia, and insignia. In most societies initiation precludes further association with non-initiates, often includes the ritual drama of death and rebirth to new status and fuller personality, education in sexual relationships, permission to marry, and to join in warfare. See ADOLESCENCE CEREMONIES; AUSTERITIES; BAPTISM; BAR MITZVAH; BULL-ROARER; CAPAC RAIMI; OVENS OF YOUTH; PUBERTY DANCES; PUBERTY RITES.

 The transition from puberty to adulthood was marked in South America by ceremonies and ordeals which varied considerably in different tribes.

In the Guianas and the Amazon regions, stress was put on the occasion when a boy had his lip or his ears perforated to wear an ornament reserved to adults. The same symbolic significance was attached to the revelation of the secrets known only to males, for instance the true nature of the masked dancers or of the sounds of the sacred trumpets (Cobeuo, Tucano, Mojo, etc.). A boy is considered an adult among the Caribs and Arawaks of the Guiana when he has undergone with firmness the ordeal of the ant bites and of flagellations.

Initiation rites have, among the eastern Ge, a complexity unequalled elsewhere. They last for several years or are repeated at intervals of ten years. Periods of seclusion, relay races, perforation of ears and lips, display of ornaments, ritual meals are among the many salient features of these cycles. The Sherente require the novices to remain three years in the bush without returning to the village. During this period of isolation, it is forbidden to quarrel, to sing, to laugh, or to talk in a loud voice.

Among the Bororo, a boy who reaches puberty receives a penis sheath and is initiated into the secrets of the bull-roarers and other masculine rites.

The initiation rites of the Chamacoco Indians in the Chaco follows a pattern which is found also in Tierra del Fuego among the Ona, Yahgan, and Alakaluf. The boys are taken into the bush, where under the supervision of their elders they prepare themselves for their future responsibilities by hard work and tests of endurance. They must also listen to the old men who teach them the tribal lore. At the end of the initiation they learn that the spirits whom as children they had greatly feared are only masked men. The spirit impersonators perform dances near the camp to terrify the women and remind them of their subjection to men. For similar rites among the Fuegian Indians, see KINA and KLOKETEN.

The *huarachicoy* feast of the Incas of Peru was also an initiation ceremony for the boys of the Inca lineage. It lasted a whole month during which there were pilgrimages to sanctuaries and idols, in particular to the sacred rock, Huanacauri; dances and sacrifices in honor of the gods, and tests of strength and endurance. Finally the boys had their ears pierced for the insertion of special ornaments. Henceforth they were regarded as full-fledged adults.

ALFRED MÉTRAUX

 Boys' initiation ceremonies are very important throughout Melanesia and New Guinea. They often include the belief that the boy is swallowed by a monster and is reborn, and that the bull-roarer is the voice of the spirits. Names of ceremonies and precise practices vary from island to island and from tribe to tribe. See MELANESIAN MYTHOLOGY. [KL]

Innocent's Day or Holy Innocents' Day The day commemorating the slaughter of the innocents (December 28), called Childermas in England. In France and England, the Boy Bishop had charge of the celebrations.

Ino In Greek mythology and legend, the nurse of Dionysus and the cruel stepmother of Phrixus and Helle. Driven mad by Hera for her bringing up of Dionysus, Ino disappeared and was thought dead by her husband Athamas. Athamas remarried and had two children by Themisto, his new wife. But Ino reappeared and aroused Themisto's jealousy. The latter plotted

with the nurse of her two children and the two children of Ino to dress her children in white and Ino's in black, probably in order for murderers to make them out clearly in the dark. But, some say, Ino herself was the nurse and reversed the colors. With her children dead, Themisto committed suicide. Ino, in her turn, plotted against the children of Athamas by his first wife. She bribed the messengers from Delphi to say that the cause of a famine which Ino herself had induced could be removed only by the sacrifice of Phrixus and Helle. The flight of the two children on the golden-fleeced ram led eventually to the expedition of the Argonauts. At last Hera made Athamas and Ino so mad that he killed Learchus and she leaped from a cliff into the sea with Melicertes, her other son. Dionysus however would not let her die, and she was transformed into the sea goddess Leucothea.

insane root A member of the mandragora, mandrake, or "love apple" family and therefore associated with the cult of Aphrodite. The mandrake is greatly prized for medicinal, aphrodisiac, and other purposes. Because of the bifurcated root it is either male or female. One account is that it grows only under a gallows and originates in the juices from a hanged man's body. It will cure barrenness, act as a love charm, make the wearer invisible, or reveal hidden treasures. Although it is grown commercially in Korea, in western Europe it was gathered with stealth and under conditions of considerable hazard. The gatherer circled the plant but did not touch it. The tail of a dog starved for three days was tied to the plant. When the dog was shown food he uprooted the plant which uttered a fatal scream. The dog died and the gatherer would either die or go mad too if he did not cover his ears. The effects of mandragora are mildly narcotic and anesthetic. See MANDRAKE. [RDJ]

Intaphernes' wife In a story told by Herodotus (Book III), the wife of one of the seven conspirators against the usurpers of Cambyse's throne. Darius, the king, ordered that they be admitted to his presence unannounced at any time save when he was in bed with a woman. Intaphernes, on one such occasion, not believing the king's guards, struck off their noses and ears for refusing him admittance. The king heard of his insolence, discovered by interviewing all seven of the privileged ones that the incident was not a result of a conspiratorial collusion, and arrested Intaphernes, his children, and his near family. Intaphernes' wife stood outside the palace gate lamenting, and the king took pity on her. He offered her the life of any one of the family and was astonished when she chose her brother rather than husband or child. Her reasoning, that she might marry again and have children, that her parents were dead, that therefore she could not have another brother, so struck him that he ordered not only her brother but her eldest son saved. But all the rest were killed.

in the way In Irish folk belief, obstructing some passage or violating some place preempted by the síde or fairies. If a farmer builds his byre across a fairy path, the cattle in it die until it is removed. Many is the house, built unwittingly in some such spot, that never has luck. The people in it die, or it burns down, or perhaps the roof won't stay on it, or what's mended in the day gets pulled off at night. Sometimes the síde will

knock on the walls all night. And at last, either because of bad luck or discouragement or specific warning the people abandon it, and the síde have free traffic. Occasionally all goes well if the human inhabitants are willing not to use a certain door in their house. Lady Gregory tells of a family enjoined to keep their back door closed. All human traffic had to go in and out the front. If they tried opening the back, a blast of wind would come in—enough to lift the roof off the house from inside. One woman was warned that her house was in the way, and was politely asked to move. But she did not know what the words *in the way* meant, so she stayed on, and all her seven children died, one by one. Another woman wondered why she could no longer make butter from the milk she set in her milk pans; but later she discovered she had been putting the pans to air and dry across a fairy path.

Getting in the way is a thing that often happens in Ireland, they say. The only way to tell whether a house is going to be in the way or not is to place four sticks upright in the ground where the four corners of the house will be, and the sticks will be knocked down in the night if the fairies object.

Inti raimi The feast of the winter solstice celebrated by the Inca in June. It was characterized by its solemnity and the lavish display of gold and silver paraphernalia. The ceremony opened with an homage to the Sun rendered by the Emperor, his family, and the provincial chiefs. After this the Emperor made a libation to the Sun and drank chicha with his relatives. With the Inca leading the procession, everyone went to the Sun temple where the members of the imperial lineage made offerings of precious vessels and images to the Sun God. Omens were read in the entrails of a black llama which was sacrificed to the Sun. A great holocaust of llamas and banquets ended the feast. [AM]

intitchiuma or intijiuma The Australian Aranda (Arunta) rites performed to increase totemic plants and animals and thus to insure a good food supply. There is ritual eating of the species following the ceremonies, which dramatically depict events which occurred during the dream time. Other tribes have comparable rites under different names. See AUSTRALIAN ABORIGINAL MYTHOLOGY. [KL]

invisibility The state of being unseeable; specifically, the condition of being invisible, not because of being hidden behind something but because of some factor blinding a possible viewer to one's presence; in folklore, a circumstance induced by various magic objects enabling the possessor to overhear, to spy, to win fights, etc., without being seen: a motif (D1361) of folktale found all over the world. Most commonly the magic object rendering the person invisible at will is a cap, a cloak, a ring, a stone, but other more exotic materials, like fern seed, a serpent's crown, the heart of an unborn child, are similarly useful. In the Thompson index of folktale motifs, some 28 magic objects are listed which render persons invisible, not including the chemicals of H. G. Wells' *Invisible Man*. These objects usually are grouped with other magic objects: shoes that enable the wearer to travel great distances instantly, caps of wisdom, inexhaustible purses, unerring swords, rings to summon up the spirits. Some beings, gods and ghosts and angels, need no such paraphernalia to appear and

disappear, but dwarfs and men must have some talisman to do the trick.

The central European story of the Danced-Out Shoes (Type 306), known from the Lapps to the Greeks, is the best-known of the *märchen* employing the motif. The hero dons the cloak of invisibility, follows the princess (or princesses) to where she dances all night, and thus solves the mystery of why the shoes are worn through each morning. In one version of the Slaying of Monsters myth of the Chiricahua Apache, Child-of-the-Water gets a cloak from Lizard which makes him invisible and permits him to approach the monster Buffalo. The ring of Gyges, in the tale told by Plato, permits him to enter unseen into the queen's bedroom. The Welsh Owen Glendower is reputed to have had a stone which could make him invisible; the stone was obtained from a pet raven of the Earl of Arundel. In Eastern stories, an ointment applied to the eyes serves the purpose. In the *Ocean of Story*, Gunaśarman pretends to be a messenger of the gods and by using the magic collyrium to appear and disappear to Vikramaśakti induces the king to make peace. A Finnish-Swedish tale (Type 576) utilizes magic drops of invisibility. King Arthur had a cloak of invisibility, Hades a hat, Discordia a ring. Fern seed is, not only in folktale but also in folk belief, capable of making its owner invisible. So too is heliotrope, but whether this means the plant or the stone is not definite. Spells may be recited to attain invisibility; in an Indian story, reciting the spell forwards makes one invisible, reciting it backwards enables one to take any shape desired. The "black cat bone," in an American Negro belief derived from the European belief in the ominousness of black cats, is useful principally to make its owner invisible, though the charm has other uses. See HAND OF GLORY.

inyana The Zulu diviner, in touch with the *itongo*, or ancestral spirits. From them he learns his magical incantations in couplet form.

Io (1) In Greek mythology, the daughter of Inachus of Argos; a priestess of Hera originally called Callirrhoe or Callithyia. She was loved by Zeus and changed by him into a white heifer to avoid the jealous spying of Hera. Hera nevertheless became suspicious and asked for the animal as a gift, which Zeus was forced to grant. Hera set Argus Panoptes to guard Io in her grove at Mycenæ. Zeus guided Hermes to the spot, and the latter was able to kill Argus by playing his eyes shut one by one. Hera then sent a gadfly to torment Io. The unhappy heifer crossed the Ionian Sea (named for her) and the Bosphorus (literally ox-ford), finally settling in Egypt, where she resumed her human form and gave birth to Epaphus (so called because Io was impregnated by the touch of Zeus' hand, an ancient explanation of the name as meaning "he of the touch"). The later Greeks identified Io with Isis, and Io does seem originally to have been a moon goddess. The various elements of the legend can be explained on this basis, e.g. the eyes of Argus being the stars of the sky, etc.

(2) The Maori supreme deity, probably limited only to one or two North Island tribes and perhaps a post-European development inspired by the Bible: important because of disputes over its age and distribution. There is no evidence of Io's presence in other islands. Stimson's claim that Tuamotuan Kiho was identical with Io was criticized by Emory in bitter battle. [KL]

Iphicles In Greek legend, the twin brother of Hercules; the son of Amphitryon, as Hercules was of Zeus: born the night after Hercules. That Iphicles was not the god's son was determined when Hera, or Amphitryon, put snakes in the cradle; he ran from them, Hercules strangled them. The half-brothers were companions on several occasions, but the chief importance of Iphicles lies in this early distinguishing between the two. The story is an embodiment of the belief that there was something supernatural about twins, that one of them necessarily was not the son of the mother's husband. Compare DIOSCURI; TWINS.

Iphiclus In Greek legend, a son of Phylacus. He was impotent and Phylacus made it a condition of Melampus the seer's obtaining certain of his cattle that the cause be determined. Melampus discovered that Iphiclus had stuck a sacrificial knife in an oak, and prescribed as a cure the drinking for ten days of a potion containing the scrapings of rust from the knife. Like similar sympathetic cures (compare the curing of wounds by touching them with the weapon causing the injury), it worked, and Iphiclus became the father of Podarces and Protesilaus. See ACHILLES' SPEAR.

Iphigenia In Greek legend, the daughter of Agamemnon and Clytemnestra, sacrificed at Aulis to Artemis: probably originally a form of Artemis herself as the name, meaning "mighty born," would indicate, although the name is an appropriate one for a princess. Agamemnon had given offense to the goddess by killing a stag sacred to her and by boasting afterwards that Artemis herself could have done no better, or by failing to fulfil a promised sacrifice. Artemis then caused the Greek fleet, en route to Troy, to be becalmed at Aulis. Calchas the soothsayer proclaimed that only the sacrifice of Iphigenia could lift the calm. The girl was sent for, the pretext being that she would be married to Achilles. When she was about to be sacrificed Artemis substituted for her a hind, a she-bear, a bull, or an old woman. Iphigenia was transported in a cloud by the goddess to Tauris, in the modern Crimea, where she became a priestess of Artemis.

At Tauris it was Iphigenia's duty to assist at the sacrifice to the goddess of all strangers entering the country. Orestes, Iphigenia's brother, came to Tauris to take the image of Artemis from there to Attica and was recognized by Iphigenia. They fled together. In Delphi, Electra encountered Iphigenia, and hearing that her brother had been slain was prepared to avenge this deed on Iphigenia when Orestes arrived and there was mutual recognition. The stolen image was placed in the temple of Artemis at Brauron, where Iphigenia became a priestess and died some years later. Offerings of clothing, specifically of those dying in childbirth, were offered to her there.

There are several local variants of details of the story, principally concerned with observance of the cult of Artemis. For example, in Brauron, near Marathon in Attica, where Orestes and Iphigenia carried the image of Artemis, she is called the daughter of the national hero Theseus. Some versions of the story say that she did not die, but was made immortal and was married to Achilles, was transformed into the goddess Hecate, etc.

Iris In Greek mythology, the goddess of the rainbow, with which she was sometimes identified, but which

more often was her road as she went on an errand. Iris was the daughter of Thaumias and Electra and sister of the Harpies; in the *Iliad* she is the messenger of the gods, much as Hermes is in the *Odyssey*. Specifically, she was Hera's messenger, and carried the herald's staff and a pitcher in which was water with which perjurers were put to sleep. As the rainbow goddess, she was the joiner and conciliator who restored the peace of nature. Compare BIFROST.

Iro A costume representing a five-toed chicken of Yoruba mythology, associated with the creation of the world. The phrase "tying Iro" means that the costumes are "untied" after each festival in which Iro takes part, and have to be sewed together anew every year. "Tying Iro" also means donning this costume and taking part in the Iro ceremony. Iro is "tied" and dances at five different festivals during the year, each time impersonated by a chief's son. For the participation of Iro in these five festivals, see William R. Bascom, *The Sociological Role of the Yoruba Cult-Group*, MAAA 63, p. 30 ff.

iron This metal enters into the folklore of most peoples either in religious tabus or as a charm against supernaturals and sorcery. Since iron is not found in a pure state except in the case of meteorites, it has come into use comparatively recently. The first iron implements come from about the 3rd millennium B.C. in Mesopotamia. Commodore Perry in his explorations among the Eskimos found them using bits of a three-ton meteorite which they called "the woman" and which they had reduced to about half of its original size. Mississippi Indians are also known to have used meteorite. The Spaniards found a few knives of iron among the Aztecs which were prized above gold and which they said came from heaven. The Egyptians called iron the "marvel from heaven," and the Babylonians, "heaven fire." Many Europeans call iron pyrites thunderbolts and say that they protect from lightning.

In most cases the tabu against the use of iron in religious ceremonies springs from the tendency to cling to traditional usages rather than to any conception of iron as a base metal. Tools of iron could not be carried inside Greek temples; they were not used in the construction of Hebrew altars; and the sacred Pons Sublicius in Rome was built without the use of iron or bronze. Roman priests were not permitted to shave with iron razors; iron was not allowed to touch the body of the king of Korea; and the archon of Plataea was forbidden to touch it.

In India, genii and evil spirits fear iron in any form. Hindu women wear iron bracelets as wedding bands regardless of caste. In China, even dragons fear iron and the Chinese sometimes throw a piece of iron into dragon pools to irritate them when they need rain. The power of iron to drive off and keep out evil spirits and supernatural beings of all kinds is almost universal. In some places even the sound of iron puts them to rout. Throughout Europe iron is one of the most potent charms against witchcraft. Sometimes it will even keep a witch out of the neighborhood, yet both witches and sorcerers use iron vessels and instruments in the preparation of their brews. It will also ward off fairies and all manner of little men, except the Teutonic dwarfs who are the finest ironworkers in the world. A sword

or a piece of armor made by them was the prized possession of many a knight. In Scotland a piece of iron is put in all food in a house of death to drive death from the house. In many places it is proof against ghosts, but this is not universal, as a number of hardy ghosts spend their nights dragging heavy chains around old castles in many parts of Europe. In Burma a piece of iron is placed beside the body of a stillborn child with the adjuration that the soul may not return until the iron is as soft as down. In parts of India iron is under the protection of the forest god and it is necessary to keep on the good side of him or he will move the iron ore around. In the Celebes it is necessary to have the image of the god of iron in the smithy or the soul of the iron will depart during the forging and it will become brittle and unworkable.

In parts of Ireland iron is sacred metal and thieves will not steal it. The Dorns, a robber tribe of northern India, will expel any member using an iron instrument in his profession. Hindus believe that the use of iron in buildings is conducive to epidemics. In Burma iron pyrites are a charm against crocodiles. Many people believe that it is bad luck to make a gift of an iron instrument. Some claim it is unlucky to put iron to the ground on Good Friday. Early scientists held that the presence of a magnet robbed iron of its weight and that it lifted itself. When a Scottish fisherman swears, it is customary to call out "Cold iron!" while grasping the nearest piece of iron. Iron is frequently used to protect newborn children in Europe and India. In Scotland it is necessary to remove every piece of iron from the person when kindling a need fire. Iron is generally believed to give a person strength. In Italy pyrites preserve the eyes; in Germany the fumes from hot iron on which oil has been poured is a cure for toothache. In Scotland healing stones are kept in an iron box to keep them from the fairies. It is bad luck to bring old iron into the house. An iron nail is sometimes driven into the ground where an epileptic has fallen in a seizure, thus pinning the demon to the ground.

Iruska A Pawnee Indian religious dance, meaning "the fire is in me": now become a social dance. As fusion of Dakota and Omaha ideas, the Pawnee developed this trick, fire-handling, half-clown cult. It corresponds to the Crazy Dancers of the Arapaho, the Fire Dance of Iowa, Cheyenne, Gros Ventre, and the Arikara Hot Dance. The Omaha developed it into the Grass Dance which spread to Osage, Oto, Dakota, and Iowa and through these to the entire Great Plains. The Potawatomi modified it into the Dream Dance of the Great Lakes tribes. [GPK]

I Saw Three Ships An English traditional carol sung all over England in one version or another and set to various tunes, one being a close relative of *Mulberry Bush*. It tells of the arrival by ship on Christmas morning of Sir Joseph and his lady. Another title is *Sunny Bank*.

Ishtar The great goddess of Babylonian and Assyrian mythology and religion: identified with the Sumerian Inanna or Nina, the Phoenician Astarte, the Ashtoreth of the Bible, etc.: a composite deity including the characteristics of many goddesses of the pantheon, absorbed into the character of Ishtar in the course of the centuries. Ishtar had two principal aspects: she was

the compassionate mother goddess and she was the lustful goddess of sex and war. As the mother goddess, sometimes depicted suckling a child, she ruled over the earth's fertility and was invoked as mankind's helper, the deliverer from sickness and evil. In myth, she consented to the flood and then wished she had not. Her rule over the fertility of the earth is linked also to her role as goddess of sexual passion. The story of Ishtar and Tammuz is essentially one of overpowering desire, desire so great as to send the goddess through great perils and indignities to rescue her lover from the underworld. As in the Greek myth of Persephone, while Ishtar was below the earth, crops failed, nothing grew. To Ishtar also are attached many stories of lovers taken and killed when the goddess was sated. This myth may be an extension of the fertility practice of the sacred marriage (*hieros gamos*) in Mesopotamia. The man mating with the goddess (or her priestess) in the fields may have been killed at the end of each year's ceremony and a new one chosen to take his place at the coming rite. Ishtar was likewise a war deity and a goddess of the hunt. She was associated with the planet Venus. Ishtar was also an underworld deity—in this being somewhat confused with Allatu—and she thus appears, as the merciless evil goddess of hell, in the Gilgamesh epic, in which she gets no more respect from the author than does Aphrodite in the Homeric poems.

In mythology, she is the daughter of Anu, the sky god, or of Sin, the moon god, and appears in the second triad with Inan and Shamash. Her mythology is however confused by her identification with many other female goddesses, such identification causing her name to become a generic term for "goddess."

Her cult observance was connected with the Tammuz myth; it is conjectured that the story of Esther in the Bible may be a reminiscence of this cult. Principal seats of Ishtar-worship were Uruk, Akkad, Nineveh, Arbela, Sippar. At Uruk, the oldest seat of worship of the goddess, temple prostitution occurred. Sacred to Ishtar were the lion and perhaps the dove.

Isis The Mother Goddess of Egyptian religion and mythology: depicted as a woman, often as suckling the child Horus seated on her lap; sometimes represented with the solar disk and cow's horns, and then identified with Hathor; in Ptolemaic times, when equated with Taurt, pictured as a hippopotamus. Isis was the sister and wife of Osiris (originally like all the deities in the Osiris myth an independent goddess). She ruled over Egypt while Osiris traveled abroad as a culture hero, spreading discoveries made by Isis. When Osiris was murdered by Set, she searched the land for the 14 parts into which his body had been cut, collecting those parts she could find and burying them. An earth goddess and a devoted mother and wife, she was the goddess of fertility and the type of the faithful wife. She was the patroness of sailors, Stella Maris, and goddess of medicine. From the hieroglyph of her name, resembling a throne, it is believed that she was originally the personification of the throne, from which arose, "was born," the king.

Isis, the Thousand-Named, was the mother of Horus, who was conceived after the death of Osiris, his father. In addition to her close connection with these two sun

gods, she appears in a myth concerning Rā. Isis, a mortal magician, wished to become a god. To accomplish this, she obtained some of the spittle of Rā and fashioned a snake of earth and spittle, leaving it in his path. Rā was bitten by the snake, and, in agony, called for help. When Isis told him that he must reveal his real name, his secret name, he tried to deceive her with other names, but in vain: the pain continued until he told her his hidden name. With this knowledge, hence power, Isis attained to godhood. In another myth, the head of Isis was cut off by Horus in his struggle with Set and was replaced with a cow's head by Thoth. This seems to be a late rationalizing development, explaining literally the symbolic head and paralleling the myth of Horus' own decapitation.

The chief centers of Isis-worship were Abydos and Busiris. The Greeks identified her with Athena and Demeter, and in later times her worship spread throughout the Greek and Roman worlds. In the period of the Roman Empire, the cult of Isis was one of the more prominent of the important foreign-goddess cults.

Island of the Blest St. Brendan's Island, that island "before the gates of Paradise where is no day or night": sought and found by Brendan on his famous seven-year voyage into the western Atlantic in the 6th century. This was the happy Otherworld of early Celtic belief (land of apples, blossoms, feasts, music and lovely women, where wailing or treachery was unknown) stripped of its pagan delights and practically identical with the Christian Heaven. St. Brendan's Island was literally believed in by Spanish and Portuguese navigators well into the 16th century. The last voyage undertaken in quest of it was in 1721. That the Land of Promise he discovered was America was a legend, long and ardently believed in Clonfert. The island called I Brasil, the lost island of the Arans, is still popularly said in Kerry to have been St. Brendan's Island. See *IMRAMA*.

islands of the blessed In the belief of many peoples of the world, the paradise to which the good are assigned after death: often located in the west near where the sun sets. Specifically, the Islands of the Blessed of Greek mythology lay somewhere in the western Ocean and were ruled over by Cronus. Later the islands were more or less confused with Elysium, which was perhaps a more ancient paradise in Greece. The Isle of Avalon of Arthurian legend is similar in nature, as are many of the Isles of Women of folktale. The mythical island of Atlantis and the various islands discovered in the Atlantic and Pacific and never found again are more recent elaborations of the same theme.

Isolt, Isolde, Yseut, or Essylt Two women bear the name of Isolt in the romance of *Tristan and Isolt*. The most important is Isolt of Ireland, the heroine of the story. She and Tristan drink the love potion and then undergo the terrible vicissitudes of love and separation, until, unable to remain near Isolt, Tristan crosses the sea to France where he meets the second Isolt, Isolt of the White Hands, sister of his best friend. At the friend's suggestion Tristan finally marries Isolt of the White Hands.

Such reduplication of character is common in folklore and in romance. There are numerous examples: typical are those in *The Golden Tree and the Silver Tree*, *King Horn*, *Bevis of Hampton*, *Guy of Warwick*,

Freisne. In the folktale there was nothing incongruous in a hero's being given a woman as a reward at the end of each exploit. In more sophisticated literature such incidents were rationalized in various ways: marrying one of the women to a friend of the hero, causing the hero to refuse the second woman (or repudiate the first), sending one of the women to a nunnery, dropping the incident entirely. In the medieval *Tristan* Tristan's "sin" in marrying Isolt of the White Hands is against courtly love and so the impressive conclusion in which the legal wife confronts the sweetheart is especially dramatic. See *TRISTAN*. [MEL]

Italapas Coyote: culture hero of Chinook mythology and creator of the Chinook world. While waiting in the trees for the waters to subside, Italapas threw some sand into the surf which became land. He helped Ikanam, the Creator, make the first men, and then taught them how to catch salmon, and all their other arts, and told them their tabus. Italapas is radically different from Coyote of California Indian mythology, where he is a more or less obstructive foil for the Creator. Blue-Jay plays this mischievous, clever role in the Chinook story.

itan The name used by the Yoruba people for myths, traditions, or histories. They are regarded as historically true and are often quoted by the old men to settle a difficult point in a discussion of ritual or politics. They are also recited by the diviners as a part of the Ifa verses. See *AFRICAN AND NEW WORLD NEGRO FOLKLORE*.

Ith In Old Irish mythology, son of Bregan of Spain; uncle of Mil, and the first of the Milesians to visit Ireland. One day from Bregan's Tower Ith saw "a lofty island far away" and was filled with a longing to visit it. His brothers tried to hinder him but he was determined and set forth in a ship with his people. The *Book of Invasions* says "their adventures on sea are not related." But Ith's conversation with the three kings of Ireland (Mac Cuill, Mac Cecht, and Mac Greine) is related, and the story of how they killed him in resentment for "the testimony of praise he gave their island." Ith's people took his body back to Spain in the ship, and the sons of Mil saw fit to go to Ireland to avenge him. This is the beginning of the story of the conquest of Ireland by the Milesians.

ithyphallic A term often loosely used to mean "phallic," but specifically meaning "with erect penis": used of certain images and statues connected with phallic worship, in which the sexual organs are extremely prominent or exaggerated. The word is applied to such representations as those of Legba of the Ewe who is depicted squatting and peering at his magnified penis (or vulva, in the rare instances when Legba is conceived of as female). Ithyphallic is used to refer to the phallic staves carried in the processions of Bacchus, and to the meter of the verses recited in those processions. Ithyphallic representations occur all over the world, in amulets, on temples, etc. See *PHALLISM*.

Itiwana Literally, the middle place: the middle of the world in Zuni Indian cosmogony. Itiwana is an underlake town to which the Zuni dead return, instead of having to return all the way to the mythological place of emergence of the Zuni people.

In the Zuni origin myth, as the people journeyed

on the face of the earth looking for a place to settle, they came to a lake and crossed it. The first ones to cross lost all their children in the lake and grieved for them bitterly. A brother and sister, ahead of the group, had indulged in an incestuous mating while waiting for the others to catch up, and were thereby transformed into supernaturals. These two taught the people who followed how to keep from losing their children in the lake; they made singing and dancing for the lost ones, and opened a road to the middle of the lake so that the parents might visit and behold their children. The children told their parents not to grieve for them. They were happy to stay in Itiwana, they said. They would never have to take the long journey back to the place of emergence; and henceforth all the dead would come and stay in Itiwana. (See Parsons, "Origin Myth of Zuni," *JAF* 36: 135 ff.) The kachinas associated with Itiwana visit the villages from time to time. They are impersonated during the masked kachina dances to promote rain and fertility.

Itzamna The chief deity of the Maya pantheon, the Lord of the Heavens and the Lord of Day and of Night. He is represented in codices as an old man with toothless jaws, sunken cheeks, and a Roman nose. He was considered benevolent, always the friend of man, and his aid was invoked throughout the year at ceremonies as the god of medicine, as the sun god, to avert calamities, and so forth. [GMF]

ivy Ivy was sacred to the Egyptians. In Greece it was used to crown victors in sports, although the exact species is in doubt. In Greek it was called *cissos* after a dancing girl who, at a feast of the gods, danced with such joy and abandon before Dionysus that she fell dead at his feet. The god was so moved by her performance that he turned her body into the ivy which entwines and embraces anything near it. Dionysus is said to have developed from the ivy as Zeus from the oak. Because ivy is dedicated to Dionysus, it is said to prevent drunkenness. It is hung over the entrances to English taverns to indicate that good wine is served within. In China ivy is associated with the mother goddess. In Christian lore its evergreen quality symbolizes the immortality of the soul.

If ivy will not grow on a grave it signifies the soul is not happy in the other world. If it grows profusely on the grave of a young maiden it means that she died of love. Its clinging qualities make it a symbol of constancy. Ballad and folktale are full of ivy which grows and intertwines from the graves of two lovers.

Ivy is considered to be female and a symbol of fertility or unpredictability. In the Shrovetide dances in England there are frequently an ivy-girl and a holly-boy among the dancers. In County Leitrim, Ireland, if young lads gathered ten ivy leaves in silence on Halloween, threw one away, and placed the other nine under the pillow, they would dream of love and marriage. In Wales they say when old ivy dies or falls away from the house, the owner will meet with financial reverses and lose the house. Usually it is lucky to have it on the house, but in some places it is unlucky to plant ivy. It is generally unlucky to make a gift of ivy: it will break up friendships. In Maine they say that those who keep it in the house will always be poor. A green ivy leaf placed in water in a covered dish after dark

on New Year's Eve and left until Twelfth Night will tell the future. If the leaf is spotted near the stem, it is a sign of sickness, if spotted all over, of death, but if it is fresh and green it signifies good health throughout the year.

Like most plants used in folk medicine, ivy was an antidote for poison at one time or another. The leaves are used for dressing wounds, burns, ulcers, and to reduce swollen glands. In Ireland they are applied to ease the pain of corns. Water in which the leaves have been steeped is soothing to the eyes. The tender twigs boiled in butter make a good sunburn ointment. The powdered berries are effective against jaundice, the plague, burns, scalds, and will heal green wounds. If children drink from cups of ivy wood they will be cured of whooping cough. Ivy is also useful in curing the itch and in delousing. In some places it is used as a depilatory; in others it is used to dye the hair. For a toothache, take a pomegranate shell, put in some ground ivy berries, on this pour oil of rose, and heat. This should be poured into the ear opposite to the aching tooth.

I'wai The crocodile totemic culture hero of the Koko Ya'o tribe, Cape York Peninsula, Australia. He was the leading figure among the ancestors who lived "in the beginning at first," a phrase often opening a myth about the prehuman period. [KL]

Ixion In Greek mythology, a treacherous Thessalian: his name is derived by A. B. Cook from the Greek word

for mistletoe, and Ixion is made an aspect of the sun moving through the heavens. Ixion married Dia, and when his father-in-law came to collect the promised bride-price, Ixion caused him to fall into a pit of burning coals. For this the gods drove him mad, until Zeus took pity on him, cured and purified him, and invited him to dinner on Olympus. There Ixion tried to violate Hera, but a cloud (Nephele) was substituted for the goddess. From this union the race of Centaurs sprang. As punishment for his crime Ixion was condemned to be bound by Hermes to a winged or fiery wheel which rolls eternally through the air or the lower regions. The punishment of Ixion was, as were those of Tantalus and Sisyphus, famous in the ancient world.

iyondátha An Iroquois women's curing society and dance. Its songs are sung by men with the women an octave higher, to the accompaniment of large gourd rattles. The songs are in defective pentatonic scales, with simple repetitious themes. The women alone shuffle to the right in a centralized round dance. Membership in the society is by dream or cure of some respiratory ailment. Thus the ceremony has many features in common with the men's *hadi'híduus*, though the music is less archaic. At the end of the song cycle the sponsor makes gifts of cloth and is herself wrapped up. Thereupon follows the *deswadéyq'* rite. [CRK]

Izanagi and Izanami The Heavenly Pair who created Japan from drops of brine. [JLM]

Iztat Ix See ALAGHOM NAOM.

jabado A French dance for four couples. The first part, in fast duple time, is a clockwise round like the branle, closed by the linking of little fingers. The step is the variant of the branle used in the Breton gavottes, as the *gavotte de Pont-Avon*, a progression left with three steps and a leg swing, a balance right back and again forward. The second part places the couples in quadrille formation, without, however, the elaborate interchanges. While the men balance toward the center of the circle and out, the women balance out and then turn to the next man on the left, thus gradually moving around the circle in the clockwise direction typical of French round dances. [GPK]

jabme-akka The old woman of the dead in the religion of the Lapps. She rules over *jabme-aimo*, the home or realm of the dead. Among the sacrifices to the *jabme-akka* black animals are mentioned, especially the cat and the cock. Kaarle Krohn compares both *jabme-aimo* and *jabme-akka* to the Scandinavian concept of hell, both in sense of place and in sense of the being who rules the place. In Christian times *jabme-aimo* took on the meaning of a transitional stage whence the souls of the dead were directed to a good or bad future existence, according to each man's merit. Ideas of the *jabme-akka* then become mingled with the concept of the Virgin Mary. See Uno Holmberg, *Lappalaisten Uskonto (The Religion of the Lapps)*, Porvoo, 1915, p. 25 (in Finnish).

The word *jabme* means dead one, corpse; *aimo*, *ajmo*, or *aibmo* means land, place, home, world. The different spellings are dialectical. [JB]

jácara A traditional Spanish couple dance, performed with many turns and half-turns, without actual contact: considered by certain 17th century writers on the dance to be merely another phase of the exotic sara-bande. [GPK]

jacinth A red transparent gem of the zircon family, used by the Italians as the birthstone for January: often confused with red feldspar and carnelian. It may have been one of the stones in the breastplate of the High Priest (*Exodus* xxviii, xxxix). It is a potent amulet and during the Middle Ages it was recommended for every pharmacy. It was much used by travelers, for it protects against the plague, wounds, and injury. It is good for the heart, dispels sadness, induces sleep, and averts lightning. It insures a favorable response to petitions, augments riches, and induces prudence in the conduct of one's affairs.

jack Mississippi Negro term for a conjure or hoodoo hand or trick wrapped in red flannel. Sometimes it consists of a piece of loaded cane wrapped in red flannel and is used for divination. A piece of red cloth shaped like a finger and stuffed with dirt and coal dust and

containing a silver dime will keep the owner from getting lost. Jacks are usually classified among the good or beneficial charms or tricks, and have to be made with the greatest care. Often an incantation invoking the presence and the help of God is recited during the making. (See Puckett, *Folk Beliefs of the Southern Negro*, Chapel Hill, 1926.)

Jack a Kent A character of local renown in the folklore of Herefordshire; a clever trickster who outwits the Devil. J. W. Ashton ("Jack a Kent," *JAF* 47: 362-368) traces the development of this folk figure from a Welsh parish priest in Kentchurch, Hereford, in the early fifteenth century, who wrote poetical and theological works. Because this parson was under the sponsorship of the Scudamores, a principal local family related to Owen Glendower, it was said that John, the priest, was none other than Glendower the great magician himself. Through confusion with John of Kent, the earlier miracle-working abbot, Parson John became another Faustus-like magician in the popular mind. In Anthony Munday's play *John a Kent and John a Cumber* (c. 1595), the priest is a worker of white magic to forward the interests of two pairs of lovers, defeating the efforts of the Scottish magician to keep them apart. In Leather's *Folk-Lore of Herefordshire* (1912), Jack a Kent has been transformed from the poet and the white magician into a wise lad, another of the Jacks of English folklore, who outsmarts the Devil in several episodes. He is the hero of the familiar above-ground and below-ground crops story; he bargains to get the curly-tailed pigs and sees to it that their tails are kinked by feeding them beans and driving them through water; he agrees to leave the Devil his body whether it be buried inside or outside the church, and arranges to be buried in the wall of the church. Ashton's study shows clearly the development of the local legend of the hero from a minor historical character with attraction of the general attributes of the folk type to the real person. Compare DECEPTIVE BARGAINS.

jackal Among the Egyptians the jackal was associated with Anubis and guided the dead to their otherworld destination. In India the howling of jackals is a sign of approaching misfortune; especially is the howling of a jackal heard on the left an evil omen. He has some of the attributes of the western European fox in the animal tales and fables of the Near, Middle, and Far East. [RDJ]

 In Asiatic folktale, jackal provides for the lion; he scares up game, which the lion kills and eats, and receives what is left as reward. In stories from northern India he is sometimes termed "minister to the king," i.e. to the lion. From the legend that he does not kill his own food has arisen the legend of his cowardice. Jackal's

heart must never be eaten, for instance, in the belief of peoples indigenous to the regions where the jackal abounds. To eat jackal's heart will make a child grow up a coward, and cause inordinate timidity even in a grown warrior. In northern Africa jackal's gall is regarded as aphrodisiac and is used in a special love ointment by both sexes. In Hausa Negro folktale Jackal plays the role of sagacious judge and is called "O Learned One of the Forest." The Bushmen say that Jackal goes around behaving the way he does "because he is Jackal." Jackal is the beloved trickster of Hottentot folklore. See AIGAMUXA; ANANSI AND THE GUM DOLL.

Jack and the Beanstalk Title of an English folktale, popular especially in the British Isles and the United States as a nursery story. Jack, the foolish son of a poor widow, was sent to town to sell the cow. He sold her to a butcher for a handful of colored beans which delighted his eye. When he arrived home with the beans, the discouraged mother tossed them into the yard, where by the next morning they had grown into a marvelous tree that reached the sky. Jack climbed it and found himself in a strange land where he was directed to a giant's castle. The giant's tender-hearted wife hid him under a bowl to save him from her husband, who soon came stamping home, crying, Fee-fi-fo-fum/ I smell the blood of an Englishman/ Be he live or be he dead/ I'll grind his bones to make my bread. The giantess pacified the giant, however, by giving him a big supper. The giant then called for his little red hen, who immediately laid a neat golden egg. All this Jack watched from his hiding place, and when the giant was asleep he crept out, stole the hen, slid down the beanstalk, and got safe home. The next day he climbed up again; all happened as before; this time he stole the giant's bags of gold. The third night he stole the giant's golden harp, which, however, cried out to the giant, who heard it, woke up, and chased him. Jack had a good start, slid down the beanstalk, then chopped it down before the giant could get to earth. The giant fell and was killed, and Jack and his mother lived in comfort ever after.

This story belongs to the famous Jack tale cycle, known in Great Britain, Ireland, Western Scottish Highlands, Australia, Canada, etc., in the United States among the whites and Negroes, and existing also in numerous European parallels in Scandinavia, the Baltic countries, Russia, Czechoslovakia, etc. In many European versions the beanstalk does not appear. It is of especial interest for a series of motifs common to folktales almost everywhere: the foolish bargain (J2080 ff.) with which the story opens, the magic object acquired because of the foolish bargain (D837), the plant which grows to the sky (F54.2; Types 852,555), the widespread fee-fi-fo-fum motif (G84), and hero hidden by ogre's wife (G532), the series of thefts from the giant or ogre (G610; Type 328), magic object stolen from the ogre's house (D838.2), the magic speaking object (D1610 ff.) summoning the giant (D1421.4 ff.).

The U.S. southern mountain white (Blue Ridge) version follows this pattern, with the difference that Jack steals successively a rifle-gun, a skinnin' knife, and a coverlet tricked out with golden (or china) bells. After his escape, Jack walks along the felled bean tree to see how far the giant got, and finds him about a half mile away from home. He walks on to where the giant's house

has fallen, finds that the dishes are all broken, but he and his mother save a lot of them. In the Ozark version Jack's granny sweeps up a bean and tells him to plant it. The story is told by Jamaica Negroes (M. W. Beckwith, *Jamaica Anansi Stories*, MAFLS 17: 149) and by Andros Island Negroes under the title *Jack Bean* (E. C. Parsons, *Folk-Tales of Andros Island, Bahamas*, MAFLS 13: 133).

jack bean A climbing bean (genus *Canavalia*) having lilac or purple and white flowers. It is often seen in Negro gardens in the West Indies and parts of the southern United States climbing poles higher than any of the other poles in the garden. It is called the overlook, i.e. it is believed to act as watch and guard for the garden.

Jack Hall An English folk song sung to the air known as *Kidd's Lament* and similar in stanza to that song. According to Cecil Sharp, the Jack Hall ditty must have been written early in the 18th century, since Jack Hall, its hero, who had been sold to a chimneysweep for a guinea, was executed for burglary at Tyburn in 1701. It is, except in detail, the same song as *Samuel Hall*, which purports to be the song sung on the scaffold by Samuel Hall, an 18th century murderer.

Jack in the Green A May Day pageant mummer of medieval England, especially associated with the chimneysweeps' May Day festival. One of the sweeps, encased in a framework about 6-10 feet high made of lath and hoops and entirely covered with green holly boughs and ivy topped with flowers and ribbons, danced at the head of a line of chimneysweeps who advanced and capered and sang through the town, collecting pennies. They were accompanied by a fiddling fool and two other performers in red and yellow, with tin whistle, black-circled eyes, etc.

J. G. Frazer (*Magic Art* ii: 80 ff.) regards Jack in the Green as a relic of European tree worship, along with the Swiss Whitsuntide Basket (another leaf-enclosed boy), the similar Württemberg *Latzman*, the numerous European May kings and queens, the Hanoverian Leaf King, Thüringen Little Leaf Man, etc. The Green George of the Russians, Slovenes, and other eastern European Slavs (a boy decked in branches and flowers who goes about the cornfields on St. George's Day) is perhaps closer to the actual tree-spirit personification. Green George is definitely identified with a birch tree by Carinthian and Transylvanian farmers. Green George, the principal spring observance of Rumanian and Transylvanian Gipsies, is represented by a young willow tree, decked with flowers and set up in the center of the group for one day. The following day Green George is represented by a human double, a boy clad in branches, leaves, and flowers, who is the center of various activities; in the evening Green George is a leaf-clad puppet which is thrown into a running stream. See CLOWNS.

jack-in-the-pulpit An American herb (*Arisaema triphyllum*) of the arum family, growing from a turnip-shaped bulb or corm, with a spike of flowers enclosed in a greenish-purple spathe: often also called *Indian turnip*. It was called Jug Woman's baby by the Penobscot Indians and regarded as poisonous. Jack-in-the-pulpit was used by certain North American Indians, specifically the Fox Indians or Meskwaki of Wisconsin, the Plains Pota-

watomi, etc., as a diagnostic medicine. The inner seed, dropped into a cup of water, would float four times clockwise around the cup as a sign the patient would get well; if it sank before the fourth round, he would die. The Meskwaki used to chop up the root and mix it with meat, and leave it out for their enemies, during their wars with the Sioux. Many a Sioux died in an agony of pain and cramp a few hours after eating the mixture. From this property the Meskwaki called the plant *teika-tape*, bad sick. White settlers of the Middle West adopted the use of the dried corm, in minute doses, as a remedy for bronchitis, asthma, colic, and rheumatism. Powdered and mixed with molasses, it is occasionally still given to children as a vermifuge. The intensely acrid juice of the corm was sometimes mixed with lard and used to treat ringworm.

Jack Ketch The hangman, headsman, or public executioner: called so from John Ketch (died 1686), who executed some prominent prisoners under James II. There were ballads including his name, and by 1702 the hangman in the Punch and Judy shows was called by his name.

jack-o'-lantern The phosphorescent light frequently seen moving in the air over marshy places; the corposant or will-o'-the-wisp that retreats from those who try to reach or follow it. It is the proverbial misleader of belated travelers who fall into swamps and marshes or ponds and are drowned. It is also often called *ignis fatuus*, foolish fire: the implication being that only a fool would follow it, and that the light is foolish to flee from a fool. In Lancashire folk speech, it is called either Jack-o'-lantern or Peg-o'-lantern, according to the local concept of its sex. The jack-o'-lantern of German folklore, especially in Lower Saxony, is the *Dickepoten*. This is often the soul of someone condemned thus to wander for having moved or disregarded a boundary mark. In Ireland the phenomenon is variously known as *teine sionniic*, fox fire; *teine síde*, fairy fire; *Sedn na gealaige*, Jack of the bright light; *Liam na lasóige*, William with the little flame, etc.; it is commonly believed to be the wandering soul of one who has been refused entrance into both heaven and hell. He often terrifies night travelers; sometimes he warns them. He is famous for leading them astray, but has been known to direct those in trouble. See BOUNDARY; CORPSE LIGHT; LIEKKIÖ.

Jack o'Lent A ridiculous figure of a man made of straw and old clothes, drawn through the streets at the beginning of Lent and the object of hilarity and contempt. In the end it was burned or shot. Jack o'Lent belongs among the orgiastic spring festivals. Here the connection between Jack o'Lent and Judas Iscariot is psychological rather than historical. See ASH WEDNESDAY. [RDJ]

Jack tales A cycle of folk tales, found in the British Isles and the United States, taking its name from the hero, Jack: parallels from the European continent use the equivalent name—Juan, Jean, Hans, etc. Jack is not the dull moral prince of the fairy tale, but rather the folk hero, sharp, gaining his ends unscrupulously or even immorally, often through luck rather than virtue, often too lazy to work at ordinary pursuits. He is a trickster, or he is the clever youngest son, or he is the unpromising hero, but always he is destined to turn events to his own account rather than having them

shaped in his favor. The Jack stories of the Upper Thompson Indians (*JAFI* 29: 313) are "white man's stories," and some of the tellers distinguish Jack the trickster, Jack the hero, Jack the bear, etc.

The best known of the Jack tales are *Jack and the Beanstalk* and *Jack the Giant-Killer*; in the first Jack kills the victim of his robberies (though sometimes the giant too is a robber), in the second he plays on his victims' slow-wittedness. Richard Chase, in *The Jack Tales* (1943), retells a group of these stories discovered in North Carolina, still told by the descendants of Council Harmon (1803–1896). Some of the tales had been reported earlier, e.g. a Jack version of Type 130—*The Animals in Night Quarters*; Grimm's *Bremen Town Musicians* (#27)—in *JAFI* 1 from Massachusetts, but Chase demonstrated the existence in the United States of the cycle. Herbert Halpert's notes to these tales indicate their connection with the general European cycle.

Jack the Giant-Killer An English folktale, one of the best known of the Jack tales, in which the hero, in loosely connected episodes, kills a number of giants and is rewarded: the story, Type 328—*The Boy Steals the Giant's Treasure*—in many variants is concerned with the taking of various magical objects from the giants, and makes use of the same motifs as Type 1640—*The Valiant Tailor*. Basically it is the same story as *Jack and the Beanstalk*, belonging to the stupid-ogre group of tales. Though Jack is sometimes associated with the Arthurian story and is given a seat at the Round Table as a reward for his prowess, the common version of the story has him simply a brave youth who digs a pit and then lures the giant Cormoran into it. He chops off the giant's head and is presented with a sword or a belt by the grateful people or the king. Out to kill Blunderbore, Jack is captured by the giant and put in a dungeon. But the window of his cell overlooks the courtyard, so Jack, when Blunderbore and another giant (though sometimes Blunderbore is two-headed) stand beneath the window, drops a noose around their necks and chokes them to death. He visits a Welsh giant who owns a cloak of invisibility, a cap of wisdom, shoes of swiftness (seven-league boots), and an irresistible sword. At night Jack puts a log or some sticks of wood in his bed and the giant clubs to death what he thinks is Jack. At the breakfast table, Jack complains of flea bites during the night; he empties his porridge into a bag concealed beneath his coat. Then he challenges the giant to eat more than he does (Type 1088: *Eating Contest*), slitting the bag open when it is full. The giant tries to relieve the stuffy feeling the same way and kills himself. Using the invisibility coat and the swift shoes, Jack traps another giant onto a drawbridge, raises it, and drowns the giant in the moat. After these principal adventures, Jack encounters other giants, and in this main version, and in the variants, many other incidents occur: Jack squeezes water from a stone that is really a piece of cheese (Type 1060); he blows a trumpet that levels a giant's castle; he locks up the giant for "safety" after frightening him with tales of an approaching army (in Type 328); he throws stones at two giants who first accuse and then kill each other; he challenges the giant to a strength test and avoids his part of the contest by boasting; he tricks the giant's wife into the oven (as Gretel does the witch—Type 1121). The story of *Jack the Giant-Killer* is found

in the New World, where the English brought it. One of the Jack tales of North Carolina, "Jack in the Giants' Newground," puts Jack to work for the king to keep the giants from trespassing. When the king tells Jack to see what he can do about the monsters, Jack tackles the problem by saying modestly, "I may not kill all of 'em today, but I'll get a start anyhow."

Jacob One of the Hebrew patriarchs; under the name given him by God (*Gen.* xxxii) the eponym of Israel; father of the founders of the twelve tribes. Albright suggests that his era was some time about the 18th century B.C. Jacob, grandson of Abraham and son of Isaac and Rebecca, was the twin of Esau. Even in the womb the twins fought: when Rebecca passed a pagan place of worship, Esau moved; when she passed a House of the Lord or a place of learning, Jacob stirred; Esau granted Jacob the afterworld that he might possess the things of this world; Esau would not give way when the twins were to be born, so rather than cause Rebecca's death Jacob permitted Esau to be born first, and Jacob held Esau's heel as they came from the womb. Before their birth God had foretold to Rebecca that the older should serve the younger. Esau was born hairy, with all his teeth, red as blood, and marked with the sign of the serpent; Sammael was his protecting angel. After Esau was born, with all the dirt and blood of labor, Jacob came forth, clean, sweet, marked with the sign of the covenant; Michael was his guardian. Because Esau looked so strange, Isaac put off his circumcision, and in the end Esau was never circumcised. Esau became a hunter; he slew Nimrod and took the magnificent clothing that aided Nimrod in the hunt. Jacob was a shepherd and a student.

On the day that Abraham died, Jacob prepared a mourning dish of lentil pottage. When Esau returned from his hunting—and other evil deeds—he demanded the dish. So, for the pottage, some money, and the marvelous sword of Methuselah, Esau sold to Jacob the birthright that was his as the elder of the brothers. (In this Joseph Jacobs sees a last remaining trace of an ancient custom of ultimogeniture, misunderstood by the editor of the passage.) Helped by Rebecca, Jacob, disguised with the skins of lambs on his hands and forearms so that his blind father might think him the hairy Esau, received Isaac's blessings. Then, fearing the wrath of the warlike Esau, Jacob fled to Haran, to his uncle Laban.

On the journey to Haran, Jacob met with five miracles. At Mount Moriah, the sun set, though it was only mid-day, because there the Temple was to be built and God wanted Jacob to spend the night on the spot. So Jacob gathered twelve stones to rest upon. These twelve stones, symbolizing the twelve tribes, had formed part of the famous altars of the times before Jacob: the altar upon which Adam sacrificed, Abel's altar, Noah's altar, and the altar to which Isaac has been bound by Abraham. The stones became one, as the twelve tribes were to be one, and the stone was a soft pillow. Also, the whole of Palestine folded up during the night and rested beneath Jacob's head. As he slept he dreamed of the ladder ascending to heaven. See JACOB'S LADDER. When he awoke, the stone sank into the earth to be the keystone of the world, the rock on which the Temple was founded, the stone on which is engraved the Ineffable Name.

(Compare OMPHALOS.) Then Jacob once again set foot on the path to Haran, and was there instantly. Before the well at Haran, he met Rachel, his cousin, and in the strength of his instant love for her he rolled the stone from the well, something that had hitherto required the work of all the shepherds of the neighborhood. The fifth miracle of the twenty-four hours occurred when the water in the well rose to the brim and required no hauling up.

Jacob labored for Laban seven years to win Rachel, and Laban tricked him by marrying him to Leah. So Jacob worked seven more years and escaped with Rachel. They took with them Laban's household god, and that part of the flocks, granted to Jacob by Laban, that by the magical use of peeled stakes had become "ring-straked, speckled, and grisdled." Later, as he was about to meet Esau again—a ticklish situation—Jacob wrestled with an angel, some say with Sammael, some say with Michael, some say it was with God himself, but neither could win. At last the adversary touched Jacob in the hollow of the thigh, laming him, and prevailed. Then Jacob's name was changed to Israel, because he "stroved with God." Jacob tried to discover his opponent's name, that he might some time invoke him, but the Being put off the question and gave Jacob his blessing. Jacob lived many years, lived to see his son Joseph regent of Egypt; he went with his sons to live in the land of Goshen in Egypt; he dedicated his son Levi and his descendants to the service of the Lord; and at last he died and was buried beside Leah in the cave of Machpelah. But even here Esau tried to interfere, claiming his own place in the tomb that he had sold to Jacob. Joseph sent for the agreement the twin brothers had made, but one of Jacob's grandsons, the deaf Hushim, son of Dan, mistook the argument and with a club knocked Esau's head from his shoulders. The head rolled into the tomb into the lap of Isaac, and they permitted it to remain. See BLIND DUPE; DIOSCURI; HERCULES; MANDRAKE.

Jacob's ladder The ladder described in *Gen.* xxviii, 12, reaching from earth to heaven, on which Jacob saw in a dream angels ascending and descending. He saw angels in the guise of the princes of Babylon, Media, Greece, and Edom go up a symbolic number of steps and come down, the king of Edom alone not descending. Jacob did not himself aspire to climb the ladder, though a picture of him adorned the Throne of Glory. In Poland and elsewhere in Europe, it is believed that the heavens part on Christmas night to reveal Jacob's ladder with its angels coming and going between earth and heaven. Compare ASCENT TO UPPER WORLD.

Jacques de Vitry (1178–1240) French prelate, preacher, and historian, born at Vitry-sur-Seine. He studied at the University of Paris, was ordained, and about 1210 became a curé. One of the most zealous preachers of the crusade against the Albigenses, he even took part in some crusades and was present at the siege of Damietta in 1218; from then on he took an active part in Eastern affairs. His letters, and, in lesser degree, also his sermons, are important studies of customs and manners (mores). The collection *Sermone Ferales et Communes* (1229–1240) contains 104 exempla which constitute one of the most important collections of the type. He is believed to have originated many of the exempla himself with which he adorned his sermons. The best known of

these is the tale of the Devil and the Lady. His stay in Palestine (1216–1227) is said to have influenced his exemplar, but recent scholarship minimizes this influence. De Vitry's history of the Crusades, *Historia Orientalis*, is valued as a source book, the companion volume, *Historia Occidentalis*, as a criticism of European mores. In 1230 he became cardinal-bishop of Tusculum, later was sent on missions to France and Germany, and in 1239 was named Latin Patriarch of Jerusalem.

jade A tough, durable, siliceous mineral also known as nephrite, jadeite, or chloromelanite, depending on its color and composition. Jade is usually thought of as a deep green, but is common in a wide range of colors from black through brown, red, lavender, blue, green, yellow, and white, and occasionally flecked with gold or vermillion. It is generally associated with China, where it is the most highly prized of minerals, but is found and valued elsewhere. Although very tough, it is readily worked and was used in prehistoric times for the manufacture of weapons, implements, and utensils throughout the Orient, central Europe, Ireland, Mexico, and Alaska.

In Mexico, Egypt, and China, jade was placed in the mouth of the corpse to represent the heart when this organ was buried separately; in China it was sometimes used to cover the eyes, ears, nose, and mouth, and as weights on burial robes. Jade, though a mineral, possesses *yang*, the vital masculine principle, to a great degree; thus it serves to revitalize the spirit of the dead. The blue varieties of jade especially are connected with the heavens, and with the souls of those dwelling there. When struck gently, jade produces a rich resonant lingering tone. Prayer stones or gongs, which were in early use in China, have been found in scattered places throughout Africa and among the Hopi Indians of the United States, being used in a similar manner. In Mexico jade was used principally in religious ceremonies and a jade knife was frequently used for human sacrifice. In New Caledonia a small jade cleaver was used for preparing the meat for cannibal feasts, but is now merely the symbol of the chief's authority. The Maori of New Zealand wear grotesque human figurines of jade (*heikis*) around their necks and these are passed on from generation to generation. Here, no women dare approach the jade-cutters. In the Loyalty Islands it is very highly prized and the people will trade their daughters for objects of jade.

From early times it has been a luck stone in China and its virtues have spread until it is today one of the most universally regarded amulets. Lord Rosebery and Lord Rothschild are both said to have carried jade amulets when their horses won the "Derby." Members of a certain Mohammedan sect carry flat amulets of jade to protect them from annoyance and injury. In China, Burma, and India white jade amulets of various shapes have particular efficacy in specific situations: the Chinese believe any piece of jade rubbed in the hand while making an important decision or embarking on a new venture will impart luck to the undertaking. Chinese emperors communed with Heaven through a pierced disk of white jade.

Its medicinal virtues have been extolled in the Orient from early times, but they seem to have reached Europe principally through the Spanish conquerors of Mexico, who called it the "colic stone." In China they tell of a

fountain of jade wine flowing over jade rocks in the Isles of the Blest, which is a specific against all the ills of the flesh; because of its *yang*, it prolongs life, imparts immortality, and if taken in sufficient quantities prevents the body from decay after death. It brings youth, health, children, victory, power, wisdom, and immortality. If this wine cannot be obtained, however, finely powdered jade in water will serve almost as well. Powdered jade will strengthen the lungs, the heart, and the voice. Jade, rice, and dew boiled in a copper vessel purifies the blood, strengthens the muscles, hardens the bones, and calms the mind. If taken consistently, it makes the person impervious to heat and cold, hunger and thirst. But, while jade brings good health, when it becomes dull and lusterless it is a sign of impending death or misfortune. In Burma, India, and Tibet, jade is a cure for heart palpitations, will deflect lightning, and when thrown into water, will bring mist, rain, or snow. Throughout the Orient, a jade cup will crack in the presence of poison. Among the Indians of Mexico it was considered good for the kidneys and effective in all internal disorders. There also it imparted strength and longevity when taken internally. In Great Britain women wore a jade belt to cure rectal stones, and in Scotland there have been several famous jade curative touchstones. In China jade has been called the solidified essence of pure mountain water. [JWH]

Jade (or Pearly) Emperor Yü Huang Shang Ti, Supreme Ruler of the Taoist Heaven and the universe: chief Taoist deity. His palace is the "fathomless, immaculate jade palace" situated in the constellation Ta Wei (Ursa Major). He is regarded as the giver of life, the vitalizing power of earth, judge, forgiver, and savior of mankind. His birthday festival is observed on the 8th day of the first month, when peasants journey to his temple to present candles and make offerings of fruits and incense. See *General Structure of Chinese Folklore* in CHINESE FOLKLORE; YÜ HUANG.

Jagannātha or Juggernaut In Hindu mythology and religion, a form of Krishna: literally, lord of the world. Krishna was killed by a hunter; when his bones were found and placed in a box, Vishnu directed King Indradyumna to make an image (Jagannātha) and to place the bones inside. A certain Viśvakarman agreed to make the image, but was interrupted by the impatient king after 15 days and refused to finish the hands and feet. Hence Jagannātha has neither.

Jagannātha is worshipped in parts of India, especially at Puri, Orissa, where the two festivals held annually in his honor attract multitudes of pilgrims: he is sometimes called Puri from this, his principal seat of worship. During the first of these (Snānayātra) the image is bathed; during the second (Rathayātra) the image, accompanied by images of Subhadrā and Balarāma, is drawn on a car in a procession, giving rise to the story that devotees cast themselves under the wheels. Actually, however, the spilling of blood is considered a defilement.

jaguar A large leopardlike mammal (*Felis onca*) of wooded regions from Texas to Patagonia, figuring largely in South American Indian mythology, shamanism, and folk belief. The curing shaman of the Cariban Taulipáng invokes the jaguar to cure swellings caused by eating deer meat, because the jaguar himself lives on deer

meat. The jaguar is a favorite familiar of shamans; the shaman can even turn himself into a jaguar; in fact, the were-jaguar belief is common throughout many South American Indian tribes. See JAGUAR-MAN.

Eclipses are caused by a huge supernatural jaguar who attacks the sun and moon (Abipón, Camacan, Chiquito, Chiriguano, Guarani, Incas, Mataco, Mocoví, Mojo, Toba, Vilela, Yuracaré). The Cayapó, Timbira, and Sherente tribes of eastern Brazil have a story about a boy abandoned in a tree who was rescued by a benevolent jaguar and given the gift of fire to take to mankind.

In Caingang mythology, the twin culture heroes, Kamé and Kayurukré, created jaguars out of ashes and coals, but later decided to do away with them. They induced all the jaguars to get on a tree trunk which was lying in a river; Kamé was to push the log off into the swift current, but some of the jaguars grabbed hold of the bank and roared. Kamé was terrified and ran away. Thus the jaguars came ashore and still exist today.

In Bororo Indian mythology (Brazil) Jaguar marries a chief's daughter, warns her against his mother, who is a caterpillar. The old mother finally makes the young wife laugh, however, while Jaguar is away, and she dies laughing. Jaguar returns, removes twin boys from his wife's abdomen, and burns up the caterpillar-hag. See END OF WORLD; EYE-JUGGLER; FIRE.

jaguar dance A dance of the Western Bororo Indians of eastern Brazil; a dance of appeasement and propitiation of the spirit of a slain jaguar, performed by a hunter who has just killed a jaguar. Dressed in the skin of the slain animal and wearing necklaces of jaguar claws and teeth, he dances and leaps in imitation of the animal and is believed to be possessed by its spirit. The dance is accompanied by the wailing of women, lamenting the death of the jaguar.

jaguar-man The South American werewolf. In South America where there are no wolves, the jaguar takes his place. It is a common belief in the Amazon region that sorcerers wander by night as jaguars to attack their victims. It is not always clear, however, whether the belief is that the sorcerer transforms himself into a jaguar or whether he sends forth his soul to incite and lead some actual jaguar against his victims. The belief in jaguar-men was especially strong among the ancient *Ābipón*. In Paraguay this superstition is still shared by Indians and mestizos alike. [AM]

Jahi (Pahlavi *jeħ* or *jah*) The harlot-demon of the *Avesta*, a malicious female fiend: personification of adultery and whoredom. *Eredafedhrī*, the virgin, is invoked to defeat the evil introduced into the world by Jahi. In the *Bundahishn*, Jahi is the personification of sin.

Jalandhara In Hindu mythology, a titan king who, after accumulating great powers as a result of practicing extraordinary austerities, defeated the gods of the created spheres, established a tyrannical, wicked, and selfish government, and then sent Rāhu to challenge Śiva to give up his beautiful bride, Śakti, recently reborn as Pārvaṭī. Śiva countered this incredible challenge by letting fly from between his eyebrows a terrific burst of power which materialized as a lion-headed demon with emaciated, hungry body and irresistible strength (*Kirtimukha*). Rāhu took refuge in the Almighty, Śiva himself, and the monster was then forced to feed upon itself.

Jalang In Semang (Malay Negrito) belief, the wife of Tak Pern, the Supreme Being; daughter of Yak Lepeh, one of the three grandmothers who live under the earth and guard the roots of the stone which supports the heavens. According to the Kintak Bong, Jalang was Tak Pern's sister. See BATU HEREM.

jaljoginī In Indian folk belief, especially in the Punjab, a disease-causing spirit which occupies streams and wells, and casts spells on children and women.

jalparī In Indian folk belief, especially in the Punjab, a water spirit who compels men to cohabit with her, or kills them when she catches them. She can be conciliated by offerings of flowers or a lamb on the banks of the river in which she lives.

Jambū-dvipa or **Jambu-dwīpa** Literally, the rose-apple island: India; in Hindu cosmogonic mythology, one of the seven continents or islands of the world with Mount Meru at its center.

James Harris The title of a ballad (Child #243) of comparatively recent date: known also as *The Daemon Lover* and *The House Carpenter*. The wife of the carpenter, after seven years, is visited by her lost lover, who persuades her to leave husband and children to go with him in his ship. The ship sinks, or she jumps or is thrown overboard, and she drowns. Child gives eight variants of this rather unspectacular (despite its *Daemon Lover* title) ballad, and it has been reported from several localities in the United States.

Jam on Gerry's Rock An American come-all-ye of the northeast woodlands, telling of the death of a young lumberman, Munroe, in a log jam. It is probably based on fact but so far the clues to the actual location and incident have not established whether a Gerry's Rock in the East Branch of the Penobscot River or some other place was the scene of the accident or whether the drowning of two men nearby in the 1860's gave rise to the story. It has been a favorite of woodsmen all over the northern lumbering areas of the United States and Canada, has been found in Wisconsin, Michigan, North Dakota, and has been adopted in Scotland, one of the few songs to reverse the usual direction of transmission. It is generally sung to a set of an Irish air, in rubato-parlando style, without accompaniment, and with the last words spoken.

Jamshīd The Persian name for Yima: in Iranian mythology, the first man, who became sovereign of the abode of the blessed. Jamshīd, as Persian culture hero, appears in the *Shāhnāmah*.

Jan A beneficent nat of the sun of Kachin folklore, worshipped by the chief at a ceremony called *nat sut ai*. Food and drink are offered and the chief begs protection from this nat (and from Shitta, nat of the moon, who is worshipped at the same time) for the whole village.

Janus In Roman mythology, the two-faced god of beginnings, of doorways and entrances: a pre-Latin divinity, who with his feminine counterpart Jana may have been the highest (sun and moon) gods of the pre-Italian inhabitants of the country. When the Latins arrived, with Jupiter and Juno, Janus and Jana (which are variant forms of the names Dianus and Diana) became secondary in importance to them, though Janus

always did keep the preeminence of being first invoked before all other gods in important undertakings. Several theories are argued concerning his origin: as god of light and day; god of doorways; god of the heavenly vault; triple-oak god, etc. Some believe doorways (*janua*) were named for him; some that he took his name from doors. Traditionally, the worship of Janus was begun by Romulus; his temple, by Numa. This temple, in which stood the double-faced statue of Janus, was at the north-east end of the Forum, and was an arch facing east and west. It stood open in war, closed in peace: it was closed only four times before the Christian era.

The Agonia, on January 9, was in Janus' honor, as were also the beginnings of every day, month and year. The New Year's Day presents of the Romans included coppers with two-faced Janus on one side, and a ship on the other. Every action, occupation, undertaking, though sanction came from Jupiter, depended on its beginning being blessed by Janus. As Consivius he presided over the beginning of human life. Here, and at the worship of both at the kalends by their priest and priestess, he seems in some manner connected with Juno. His priest, the Rex Sacrorum, was the religious representative of the king as head of the state. Janus was the inventor of agriculture, of civil laws, of religious worship, of coinage; he was protector of shipping and trade.

Early representations of Janus show him as a two-headed god; later, four-faced statues appeared. He originally carried the porter's staff in his right hand and the key or keys in his left; later representations show him indicating 300 with his right hand and 65 (the remainder of the days of the year) with his left. Offerings to Janus were barley, incense, wine, and cakes called *Januæ*. See CARDEA.

Japanese folklore *I. Mythology—Shinto* a) *Cosmogony* According to the *Kojiki*, the oldest Japanese book, written in 712 A.D., the history of the world begins with the birth of seven deities, who arise and pass away in the "plain of high heaven." After them, five couples of deities were born, the last of whom, Izanagi and Izanami, were ordered by their peers to consolidate the earth, which heretofore had been a chaos of muddy water. Equipped with a jeweled spear, Izanagi and Izanami stood on the "floating bridge of heaven" (probably the rainbow) and dipped the weapon in the brine below. When they drew it up again, a bit of brine which had stuck to the shaft dropped down and congealed, thus forming the island of Onogoro.

The divine couple then descended to this island and built a house, where they begot a child. However, as the first words during their union had been spoken by the Izanami, the woman—which was against the divine ritual—, this child, Hiruko, turned out to be a misfit and was abandoned in a boat of reeds. Their second child, the island of Awa, was not reckoned among their progeny, either. At last, having learnt the cause of these failures from their fellow gods, Izanagi and Izanami amended their words—this time Izanagi speaking first—and thus gave birth to the eight main islands of Japan.

b) *Theogony* Then they proceeded to beget many more deities, until Izanami died during the birth of her last child, the God of Fire. More deities then sprang from her decomposing body, and more again from the unhappy father's tears. Wroth at his consort's death,

Izanagi cut off the head of the God of Fire, and more divine beings were born from the victim's blood and limbs.

Meanwhile, Izanami had gone to the underworld, from where Izanagi wanted her to return. She told him to wait, but his patience gave out, and he entered Hades before being called by his spouse. He found her a hideous, rotten heap, and precipitately fled from the underworld, pursued by the Furies whom the offended Izanami had sent after him. Eventually he managed to escape, and blocked the entrance to the underworld with a huge rock.

Outside again, Izanagi felt compelled to wash off the impurity of the underworld, and more deities were born from his limbs while he bathed in a river, as well as from his clothes. Thus Susa-no-wo, the God of Wind, sprang from his nose: from his right eye came the God of the Moon, and from his left eye, Amaterasu Omikami, the Sun Goddess, the principal deity of Japan and direct ancestor of the Imperial House.

The *Nihongi*, written in 720 in Chinese, gives a slightly different version of these myths; but as it appears to be far more influenced by purely Chinese ideas than the *Kojiki*, only the older version of the story is given here.

c) *The Sun Goddess and her impetuous brother* As Susa-no-wo refused to obey his father Izanagi, he was banished. Before departing, however, he wanted to say farewell to his sister, the Sun Goddess, and therefore ascended to heaven. His sister, distrustful of his intentions, asked Susa-no-wo to prove his good faith to her. He offered to bring forth male deities by a miracle; if they should turn out to be female, he would be insincere. Susa-no-wo then produced five gods from a string of jewels which his sister had given him, while Amaterasu broke her brother's sword in three pieces and, crunching these in her mouth, spat out three goddesses. These eight deities became the ancestors of the highest Japanese nobility.

Exulting over his success, Susa-no-wo then fell to committing various acts of mischief, and finally scared his sister, the Sun Goddess, badly by throwing a flayed horse through the roof of her weaving-hall. Amaterasu thereupon retired to a rock-cave, and thus deprived the whole world of light.

All the gods were in despair. At length they hit upon a stratagem, and, by arousing Amaterasu's curiosity by a comic dance and a mirror, lured her from her cave.

Susa-no-wo was punished with a fine and other penalties, and expelled from heaven. Before he finally left the upper regions, he killed the Goddess of Food, whose limbs turned into the seeds of useful plants.

Then follows a cycle of myths connected with Susa-no-o, which seemed to have originated independently and were subsequently woven into the unified scheme of a national mythology. Suffice it to say here that Susa-no-o's descendants are represented as ruling over the province of Izumo before the reign of Japan's legendary first emperor.

d) *The conquest and organization of the earth by Amaterasu* After the pacification of the celestial realm, the Sun Goddess turned to the earth, i.e. the islands of Japan, and after three abortive attempts to establish her rule there—these failures being due to the messengers chosen—her grandson Ninigi was sent down with eight companions to assume power on earth. The descendants

of Susa-no-wo in Izumo had already consented to recognize Amaterasu's authority. Ninigi descended to Kyushu and married a beautiful girl there. He had with him the three sacred insignia of imperial power, given to him by Amaterasu: the mirror, Kagami, which had lured the young Sun Goddess from her cave, the sword found by Susa-no-wo in a serpent's belly, and the jewel Yasaka.

Ninigi had three sons, one of whom married the daughter of the Sea God and by her became the father of a boy. This boy, when grown up, in his turn married his mother's younger sister, and thus became the father of Prince Toyomikenu, canonized as Jimmu Tenno, the first emperor of Japan, who is said to have ascended the throne in 660 B.C. Before his final triumph, however, he had to fight his way from Kyushu to Yamato, an ancient district on Honshu, the main island; Yamato thus became the first name of the new state.

II. Mythology—Buddhist Buddhism, introduced from Korea in the 5th and 6th centuries, offered the Japanese, among other things, the promise of a future life beyond the grave, together with paradise and hell. Furthermore, it introduced great numbers of new deities, many of whom were soon surrounded with legends of their own. The final triumph of Buddhism came when all Shinto gods were declared to be reincarnations of Buddhist deities.

Among the countless figures of Buddhist mythology in Japan two at least have to be mentioned separately, namely Jizo and Kwannon. Many tales and legends have been woven around the central figures of both Jizo and Kwannon.

Jizo, according to popular belief, is the great protector of all sufferers, and particularly of little children, whom he looks after even in the underworld. Moreover, he has the power of leading sinners from hell to paradise.

Kwannon, originally a Bodhisattva (i.e. a future Buddha), and therefore of male sex, had already become a woman in Chinese popular iconography, and is now generally known as the "Goddess of Mercy." She is extremely popular in Japan, and may be considered, to a certain extent, the emotional equivalent of the Madonna in Catholic countries.

Under the influence of both Indian and Chinese ideas Japan also evolved a rich demonology. These *oni*, as they are called in Japanese, play an important part in fairy tales, in legends, and on the stage.

III. Popular narratives Japan is truly rich in native fairy tales, many of them very beautiful. Among those known to every child are:

1. The story of Urashima Taro, the Japanese Rip van Winkle, who married the Sea King's daughter and stayed away from his home for three hundred years. When he came back and saw that everything had changed, he inadvertently opened a bottle which his wife had forbidden him to open, and while his life-spirit escaped from the bottle, Taro himself shriveled up and died.

2. The story of Momotaro, who was found as a baby sitting in a large peach (*momo*) and adopted by the old couple who had found him. After growing up, he went to Onigashima ("Devils' Island") and forced the demons to hand over their treasures to him. Eventually he returned in triumph, accompanied by his three animal friends, a dog, a monkey, and a pheasant.

3. The story of Kintaro, whose real name was Sakata no Kintoki. He grew up in a forest, and became a boy of

prodigious strength. Ultimately he joined the celebrated warrior Minamoto Yorimitsu (11th century), with whom he performed many memorable exploits, amply embellished by the imagination of later ages.

4. The story of the Mirror of Matsuyama, which tells of a girl who imagined that she saw her dead mother's face in a mirror, without realizing that it was her own countenance, and thus became a model of filial piety. This tale is told during the Girls' Festival.

5. The story of the Bamboo-Cutter and the Moon-Child, which tells of a divine being who was sent down from the moon to earth as a punishment, and grew up in a poor woodcutter's house. After refusing many suitors, even the Emperor himself, she was taken back to the moon again at the appointed time.

In many fairy tales, leading parts are played by animals, as is the case in other cultures, too; but two animals have quite a folklore to themselves in Japan, namely the fox and the badger. Fox stories came to Japan probably from China, and soon became part and parcel of popular beliefs. The fox is a mysterious being, mostly of a malicious nature, lives to a great age, and can assume human shape, particularly that of a beautiful woman. Foxes are dangerous, because they bewitch people, and "fox fire" is the Japanese name of the will-o'-the-wisp. The only kind foxes are the messengers of Inari, the God of Rice, who is himself sometimes confused with a fox.

The badger is credited with similar attributes, and badger stories generally resemble those told of foxes.

IV. Festival lore Apart from her national holidays, established by law, Japan has a number of traditional festivals, which go back to very ancient times, and often originated in China. Those still observed include, first of all, the "Five Festivals" (*gosekku*):

1. *Nanakusa* (Seven Grasses) on January 7th, when a stew made of rice gruel and seven fresh herbs is eaten ceremoniously; the superstitious believe that diseases can thus be warded off during the following year.

2. *Hinamatsuri* (Girls' Festival) on March 3rd. Its main feature is the display of heirloom dolls in the *tokonoma* or alcove of every house where there are daughters in the family. The dolls represent a medieval Japanese emperor and empress with their court. A feast is spread before them on miniature dishes, and the girls are told stories about exemplary Japanese women.

3. *Tango no sekku* (Boys' Festival) on May 5th, celebrated by all families with sons under seven years of age. From a tall pole in the garden a giant paper carp floats in the air—a symbol of strength and virility, since that fish climbs steep waterfalls on its mating journey. The *tokonoma* or alcove is decorated with dolls representing ancient warriors and heroes of popular tales, as well as miniature weapons.

4. *Tanabata* (Weaver's Festival) on July 7th, of ancient Chinese origin, and commemorating the beautiful legend of the star "Weaver" (Vega), who may meet her lover, the star Altair, only once a year in the Milky Way. On this day Japanese doors are decorated with appropriate poems, written on strips of colored paper. Girls' schools hold special exhibitions of their students' handicrafts.

5. *Choyo* (Chrysanthemum Festival) on September 9th, which in modern times is celebrated mostly by staging exhibitions of chrysanthemums.

The most popular festival is New Year, celebrated

for three whole days. As only children observe their individual birthdays, New Year is also the collective birthday of all adults, from which the years of one's age are reckoned. People visit shrines and temples, prepare and eat special food, pay off their debts, and observe the "first dream." This latter custom consists of putting a picture of the *takarabune* under one's pillow before going to bed on January 3; what one dreams that night is deemed prophetic. It is best to see Mount Fuji in one's dream.

The Japanese equivalent of All Souls' Day is *Obon*, celebrated between July 13th and 16th. It is usually called the "Feast of Lanterns" in Western descriptions. The spirits of the dead are believed to come home once a year during these three days, and have to be suitably entertained with food and such other things as they enjoyed while alive. Special lights burn at the gates to point the way to the spirits, and Buddhist bonzes go from house to house to conduct services for the dead.

Another popular festival is *Setsubun* on February 3rd, when the destiny for the next year of one's life is determined. In the evening of this day, people take one bean for each year of their age, and throw these beans all over the floor, shouting: "In with good luck, out with the demons!"

V. Marriage and funeral customs A traditional Japanese marriage requires the services of a matchmaker or go-between, who deals with the parents only. Even today it is still the exception in Japan for two young people to fall in love with each other and get married; as a rule, marriages are arranged by the parents.

The go-between first arranges a meeting of the parties concerned and their parents—called *miai*—usually in a restaurant or similar public place. If this proves successful, the *yuino*, or engagement gifts, are exchanged. These consisted originally of silk, rice wine, cloth, and the like; but nowadays their place is frequently taken by money, which is sent by the bridegroom to the bride. She then returns part of it to him. This concludes the formal betrothal.

The marriage ceremony itself, for which no religious rite is essential or even customary, is very simple. After the bride's trousseau has been sent to the bridegroom's house, the bride herself proceeds there in the evening of the wedding day, dressed in a special kimono and wearing a triangular hood on her hair (called the "horn-cover," to conceal the "horns of jealousy"). The bridal pair then perform the *sansan-kudo* ceremony, which consists in exchanging ceremonial cups of sake (rice wine) nine times. The official introduction of the newly wedded couple to each other's parents concludes the marriage ceremony.

Funerals were the special domain of the Buddhist clergy for many centuries; nowadays Shinto priests conduct funeral services as well. Both cremation and burial are customary. Buddhists, when choosing the latter, usually place the corpse in the coffin in a squatting position. Prayers are said over the grave, and the ancestral tablet of the deceased is added to the family shrine.

The period of mourning varies greatly, according to the degree of relationship—from 30 days to 13 months. The color of mourning is white, as in China.

VI. Various beliefs The belief that certain times, locations, and objects bring good or bad luck may be said to

be the most prevalent superstition among the Japanese. As it exists today, this belief goes back to the Chinese pseudo-science of *fêng-shui*, a mixture of magic, astrology, and geomancy. Thus, for instance, according to one's daily horoscope, one must not move in certain directions—people born under such and such a sign of the zodiac must avoid going south on Thursdays. The same rule applies to whole periods; persons born in the year of the Rabbit (sign of the Chinese zodiac) cannot expect good luck on the day of the Tiger. As the last example shows, the logic behind this reasoning is delightfully simple.

Northeast is always an unlucky direction, because demons are believed to enter from there.

As each individual has his own fortune or destiny, so also buildings. When, therefore, a misfortune befalls a house, it is blamed on the bad luck of the structure, or sometimes on its bad location.

People whose occupations involve great risks are prone to consult fortune-tellers on every occasion. They will also wear talismans or amulets (*ofuda*) usually in the shape of a slip of paper, stamped with the seal of a temple.

The ages of 19, 33, 42, and 47 are believed to be unlucky years, because the pronunciation of these figures in Japanese is open to several interpretations (e.g. 42, if pronounced *shi-ni*, literally "four-two," also means "death").

Fortune-telling is especially important at a betrothal, to ascertain the compatibility of the engaged couple's destinies. Any girl born in a year designated by the zodiacal sign "Fire-Horse" has a poor chance of finding a husband, because she is believed to "burn" her spouse, i.e. to cause his death.

Many Japanese, to counteract these manifold evil influences, have the dates of all important events in their lives fixed by the *ekisha*, the professional astrologer and fortune-teller.

Even ordinary social life has been invaded by such beliefs. When invited to dinner, for instance, a Japanese will always eat at least two bowls of rice, because one bowl would mean an offering to the spirit of a dead person.

Many peculiar customs are connected with illness. When someone suffers from a skin disease, he may put on a large straw hat and then dip into a river, lake, or the sea until the hat floats; the disease will be carried away with the hat.

Under the influence of Shinto, impurity is considered unlucky; this may partially explain the scrupulous cleanliness of the average Japanese. For ritual purification salt is used.

As a parallel to the medieval "abracadabra" the Japanese, too, use magic formulæ which are now meaningless; e.g. the word *aburaunkensowaka*, said when meeting a snake.

VII. Dances The Japanese differentiate between two main kinds of dancing, *mai* or classical dance, and *odori* or popular dance. Classical dancing is characterized by its stately, slow movements, in contrast to the livelier *odori*. A special variety of classical dancing is the *bugaku*, or court dance, introduced originally from China and Korea. There are 160 different *bugaku*, each representing an ancient event in India, China, Korea, or Tibet.

The art of dancing is traditionally derived from the

kagura dance, said to have been performed by the goddess Uzume when she endeavored to lure the Sun Goddess from her cave. The *kagura* dance is still performed at certain temples and shrines.

The *odori* are still a characteristic feature of rural districts. The best known dance of this class is performed during the "Lantern Festival" (*Obon*) in July, when both men and women form a circle and dance on the village common to the accompaniment of flutes and drums, singing ballads or love songs.

VIII. Music and songs The three main instruments in Japan are known as the *sankyoku*; they are the *samisen*, *koto*, and *shakuhachi*. The first is a kind of three-stringed guitar, played with a large plectrum; the *koto* is a more resonant lute with thirteen strings, and the *shakuhachi* is a bamboo flute. Other popular instruments include the drum and *biwa*, a lyre with four strings.

Japanese music owes much to the music of China and Korea, though it has been developed on independent lines, just as everything else the Japanese introduced from abroad.

Space forbids dealing here even cursorily with the vast field of Japanese folk songs. Suffice it to say that the Japanese are exceedingly fond of singing, and have an inexhaustible stock of folk tunes. See MIN-YO.

IX. Proverbs As with all other peoples, the accumulated wisdom of ages is expressed also by the Japanese in the form of terse proverbs. Given the similarity of human nature everywhere, most of these are similar in meaning, even if not always in form, to their Western counterparts.

Here are a few specimens, culled at random: The devil in one's heart reproaches himself (i.e. a guilty conscience needs no accuser). An ill-smelling being does not know its own smell. A bee to a weeping face (i.e. misfortunes never come singly). It is dark at the foot of a lighthouse (i.e. the darkest hour comes before the dawn). Know another's pain by pinching yourself. The man who steals money is hanged; the man who steals a kingdom becomes king.

JOHN L. MISH

jarabe A Mexican mestizo couple dance, also adopted in New Mexico and California. Jarabe means "sweet sirup" and expresses the saccharine, flirtatious quality. Many Mexican states have special jarabes, all using the Spanish *zapateado* as foundation step; but in place of playing castanets the girls manipulate their skirts and the boys cup their hands behind their backs. They smile at each other.

The *jarabe tapatio*, or Mexican Hat Dance, is considered the national dance. *Tapatio* refers especially to Jalisco, but the dance appears on all cabaret programs and is taught in all schools. The Spanish heritage has become well mixed with Polish, Russian, and Austrian traits. The nine melodies with descriptive names are in different rhythms: the jarabe is in 6/8; *El Borrachito* (the little drunk) staggers to a 3/4 mazurka; *La Paloma* (the dove) in 2/4 time gives the dance its turning point, for the girl dances in the brim of the hat, the boy in pursuit. The final triumphant *Diana* uses the vigorous steps and duple rhythm of the *Komarinskaia*.

In the *jarabe de la botella* of Jalisco, the couple take turns dancing over a bottle of tequila. The less ostentatious *jarabe michoacano* features waltz and polka steps, thus a shift from triple to quadruple time. The entertaining *jarabe tlaxcalteco* enacts mime of tortillamaking. There is also a *jarabe mixteco*, *jarabe chiapas*, etc.

Jarabes are sometimes danced ceremoniously at weddings and by children at funerals. Jarabe steps are used in the ceremonial *morisma* or *machetes*, a knife dance of Michoacán, related to Moriscas. In Oaxaca the jarabe tunes or *sones* are termed *fandangos*. The French and Spanish *jota* or the Andalusian *jarabe gitano* sired the Mexican jarabe. [CPK]

jarana Literally, noisy diversion. (1) A mestizo couple dance of Yucatán, also appropriately called *La Mestiza*. The men, in spotless white trousers and shirts, hold their hands cupped behind their backs; the women, in filmy embroidered *huipil*, ribboned headdress, and high-heeled shoes, lightly lift their skirts. The two lines, face to face, execute waltz and *zapateado* steps, with pull backs and foot brushes. As the two lines cross over, all curve their arms upward, snap their fingers in Spanish style. Nonetheless, the downcast eyes and impassive mien retain an Indian reserve. Though the jarana is a secular dance and popular in large cities (even at Riveroll's in Mexico City), it has ritual associations in Yucatán villages. At all religious fiestas, as well as weddings, dedications, and welcomes to guests, it is danced before the chapel, four times during the fiesta, and with the same ceremonials as the *vaquería*. A *torito* concludes it, or witty interpolations, called *bombas*. [CPK]

(2) A small stringed instrument, a form of ukelele, which gives its name to a type of music and to the characteristic folk dance of Yucatán. It is also used by the leader of the Michoacán comic fiesta dance, *Los Viejitos*, and in the *huapangos*.

(3) A gay tune without words played by jaranas, brass instruments, drums, and sometimes gourds, to accompany the folk dances of Yucatán. See VAQUERÍA. [TCB]

los jardineros Literally, the gardeners: a group dance of valley pueblos in Oaxaca, Mexico. The name is justified chiefly by the wreaths of flowers carried aloft by the dancers. With smirking masks and mincing bur-

lesque of polkas, mazurkas, and waltzes, they take off the superficial extravagances of courtly life. The elegant evolutions of European longways are mimicked by a line of men in short trousers and gay silk shirts, and women-disguised men in short dresses, cloth hair, and heavy oxfords. This ridiculous little performance is probably of recent origin, likely from the ephemeral reign of the Austrian Maximilian and Carlotta; yet it may have a vague association with the more serious *arcos* and other arch dances of pagan vegetation rites. [GPK]

jar-drum A pottery vessel, sometimes partly filled with water or grain, made into a drum by stretching a skin across its mouth, and used in the rituals of many peoples. The Mexican *bajbín* of the Chamulas and Tzotzils is reserved exclusively for carnival times and is treated with the respect and ceremony characteristic of drum customs the world over. Two attendants are appointed for the care of the *bajbín* between carnivals, their duties being to guard the drums in one of their homes, to offer incense and veneration before them at regular intervals, and to prepare them for their public appearances. This preparation consists of washing with hot water and camomile, changing the cords of the drumheads, offering ceremonial brandy to the drums, dancing around the drum table and shooting off fireworks. On carnival days the *bajbín* accompanies dancing close to the church doors.

Jason In Greek legend, the hero who led the Argonauts to Colchis and back to Greece. He was the son of Æson, rightful heir to the throne of Iolcos. However, Pelias, the stepbrother of Æson, usurped the throne and Jason was sent by his mother to be brought up in safety by Chiron the Centaur. Pelias was told by an oracle that he would be killed by one of the Æolidæ; his and Jason's family line, and also to beware of a man with one sandal. Leaving Chiron after years of study, Jason came to a swollen stream and there helped an old woman across, losing a sandal in the fording. The woman, when they reached the other side, revealed herself as Hera, and her aid and Athena's were later of great help to Jason. Jason entered Iolcos wearing the one sandal, was recognized by Pelias, and was warmly greeted. But Pelias, fearing for both throne and life, induced Jason to set forth to recover the Golden Fleece carried off by Phrixus. See ARGONAUTS.

On his return from Colchis with Medea, and after Medea had boiled Pelias to death, Jason was driven from Iolcos by Acastus, the son of Pelias. He and Medea went to Corinth where Jason threw over Medea, the barbarian princess, for Glauce, Creon's daughter. After Medea's escape from the Corinthians, Jason remained seeking to avenge the deaths of Creon and Glauce, and childless now lived out his days in that city. One day, seated in the shadow of the *Argo*, he was struck by a piece of the rotting ship that fell and killed him.

jasper An impure opaque variety of red, green, black, or mottled quartz used by the ancients as a gem as well as for vases and statues. The Indians of California picked it up on the beaches and carried it as amulets. It is mentioned as one of the stones of the High Priest's breastplate (*Exodus* xxviii, 20) and some authorities claim as many as three other stones were also different colored jasper. It was highly thought of by medieval physicians

and recommended for every pharmacy. It was said to quicken thought and action, and at the same time to ensure caution and avoidance of needless risk. Hildegard of Bingen (12th-century nun), in her *Subtleties of Diverse Creatures*, advised women to hold a piece of jasper in the hand during childbirth to guard against the evil that could come to mother and child from demons of the air.

Red jasper was sometimes used by the Egyptians in place of carnelian as the "Blood of Isis" and as the "Buckle of Isis" on the throat of the dead. It was especially fine for young girls, giving them grace and beauty and curing their diseases. Medicinally it was used, for the most part because of its color affinity, to stop hemorrhage, strengthen the pulse, and to check the flux. In modern Italy it makes the wearer invisible. It was sometimes used as the birthstone of March.

Green jasper (*jasper viridis*) was often used in place of jade by the Chinese in the mouth of the dead. Medicinally it was very effective, whether used in place of the emerald, or in its own right. It aided the stomach and spleen by contact, and was worn over the kidneys to prevent retention of urine. In Elizabethan England it was called the "spleen-stone." It also drove away evil spirits and cured fevers, dropsy, and epilepsy, and prevented snakebite. A piece of this stone, inserted under the skin of an epileptic by a surgeon, was known to have prevented seizures for three years, after which time it fell out. It was worn by physicians to aid them in their diagnoses.

Black jasper was formerly used as an aid to the capture of cities and fleets, but today is rarely used except by Italian farmers as a protection from lightning. Mottled jasper was used to prevent drowning or death on or near the water.

Jātaka or *Stories of the Buddha's Former Births* One of the oldest and most important collections of folktales extant; a collection of 547 stories, translated from the Pali; see edition of E.B. Cowell, vols. I-VI, Cambridge, 1895-1907. The *Jātaka* consists of a collection of *gāthās* arranged in 22 sections, according to the number of stanzas forming a *jātaka*, the *jātakas* of each section progressively containing an additional *gāthā*. Thus those in the first section contain one stanza, those in the fifth, five, etc. These *gāthās* are embedded in a prose commentary, which consists of a story of the present explaining why the Buddha is telling the tale of the past, followed by the *jātaka* (the *gāthās*) or story of the past, a commentary on the *gāthās*, and an integration of the two parts. All but the *gāthās* are considered the work of one author. It is the *jātakas* which contain the folklore. They include fables, märchen, moral tales, maxims, and legends. More than half the stories are not of Buddhist origin and are found in other Indian collections such as the *Panchatantra* or the *Kathā Sarit Sāgara*; many of the stories, e.g. *The Wolf and the Crane*, *The Ass in the Lion's Skin*, and others appear in Western literature, especially in *Æsop's Fables*. To the orthodox Buddhist, however, the *Jātakas*, which are part of the Buddhist sacred writings, are autobiographical accounts of Gautama Buddha. See FABLE.

Jatayu or *Jatayus* In the *Rāmāyana*, king of the vultures, son of Garuda; an ally of Rāma in his battle against Rāvana to prevent the abduction of Sītā. He

was mortally wounded by Rāvaṇa but was able to tell Rāma what had become of Sītā before dying. In the *Purāṇas* he caught and saved Daśaratha when, searching for Sītā, he was hurled from heaven by Śani.

Javerzaharses In Armenian belief, female spirits, invisible and endowed with certain knowledge: literally, the perpetual brides. They can neither learn anything new nor forget anything. They love weddings and singing, are believed mortal, and are interested in the toilette, marriage, and childbirth.

jawbone Bleached and polished jawbone of horse, mule, etc., rubbed with a key or other metallic scraper to produce a rhythmic click: used by American Negroes in slavery times as a musical instrument and probably derived from the African custom of rubbing a notched stick for rhythmic accompaniment to music and religious rites.

jazz A word of disputed and uncertain etymology applied to the instrumental dance music originated by American Negroes in New Orleans toward the close of the 19th century. A number of later derived music forms such as Tin Pan Alley ballads, swing, "symphonic jazz," etc., have also been called jazz, but being composed on paper, arranged and rehearsed note by note, they have little or no relation to folk music. The original jazz, however, is definitely rooted in folk and primitive music, synthesizing in a new form the inherited musical patterns of the African west coast, the urban and rural Negro folk song of the southern United States, and elements of ragtime and blues, combined with some thematic material of European derivation.

Basically it is a group improvisation integrated by rhythm. The chief characteristics, as they are preserved in phonograph recordings and are still played by the bands devoted to "hot jazz," are a duple meter—2/4 or 4/4 time—rarely giving way to triple meters; syncopation and ostinato figures on the off-beat; the use of "blue notes" (see *BLUES*) and pentatonic or hexatonic scales; the subordination of melody to rhythm; pitch variations similar to those in blues singing; and a vocalized style of instrumental tone production.

The formative period of jazz began when band instruments of European type first became easily available to Negroes. That happened with the breaking up of Confederate military bands after the Civil War and the appearance of drums, cornets, trumpets, trombones, clarinets, and tubas in pawnshops and second-hand stores. Gradually, over a period of 20 years, musical groups of varying size and shifting membership were drawn together around these instruments to practice and eventually play for lodge functions, funerals, parades, Mardi Gras, and dances, and in time to become a feature of New Orleans life. Their repertory included ragtimes, minstrel songs, cakewalks, popular songs, and marches. (*High Society* and *Panama* became marching classics, and the favorite piece for the return from a funeral was *Oh, Didn't He Ramble*.) A band would advertise its skill and the events for which it performed by circulating through the streets in wagons and playing. When rival wagonloads met, a duel of sound took place until one was blasted into defeat. Everywhere the wagons were trailed by an admiring and imitative straggling of small boys serving an apprenticeship that was to produce some of the greatest players of jazz.

The instrument most admired was the cornet, and the cornetist who could blow his rival off the street was accorded the title of "King"—"King" Bolden, "King" Oliver, etc. Among the great New Orleans cornetists and trumpeters are also included Bunk Johnson, Freddie Keppard, and Louis Armstrong.

The early jazz men developed an instrumental technique of their own. Generally self-taught and lacking music-school ideas of purity of tone, they played their instruments as their people had sung, imitating on their horns the wailing, growling, shouting, moaning, laughing, and sobbing tones of the human voice. Their music was closely related to the traditional ways of singing and to the insistent, interweaving rhythms to which Negroes in Africa and in America had danced, worked, and worshipped. Drums and tubas beat out the rhythms formerly carried by stamping feet, clapping hands, and log drums. The trombones, cornets, and trumpets sang out like the voices in the African chant or in the spiritual, in solo statement and chorus response, or in collective improvisation with constant variation on several melodic, rhythmic, and tonal levels. The effect was contrapuntal, rather than harmonic.

Chief patrons of the music makers came to be the "houses" of Storyville, the New Orleans red-light district, where the new music came indoors, changed from a marching to a dancing character, and really crystallized as a music type. More intimate instruments, such as the plucked string bass, banjo, and guitar entered the rhythm section of the band, displacing the tuba. The number of players worked down to a fairly characteristic group of four to seven. And the style of a few Storyville pianists such as Clarence Williams and Jelly Roll Morton made itself felt in the combination. Non-Negro influences included melodic inspiration for theme and variation from current popular song and from French and Italian dances and operas. (*Tiger Rag*, for instance, was evolved by Jelly Roll Morton from a French quadrille.) Clarinet players of Creole background contributed their polished and fluid French-schooled technique to the instrumental complex. And from the Caribbean islands through the port of New Orleans came an already acculturated, secondary African strain with Spanish rhythmic coloration.

At the same time there were jazz bands composed largely of white performers who played in two different ways—the rapid and nervous style of the Original Dixieland Jazz Band and the more even line and tempo of the New Orleans Rhythm Kings.

The legal measures putting Storyville out of business in 1917 provided the impetus for a general northward movement of jazz. From the brothels of New Orleans it went to the speakeasies of Chicago, still sponsored and given a hearing by underworld operators. Nearly all of the Negro virtuosi of jazz were heard there at one time or another, and, though jazz was primarily instrumental music for dancing, the great blues singers sang to their playing. However, the frenetic style which came to be known as Chicago jazz, and the lighter pattern of Kansas City jazz, followed the lines of the New Orleans white bands, even though many of the best-known white players deeply admired and imitated the Negro "kings." The development from there on to the large complement of players, the "name bands" and "symphonic bands" of the 1930's, departed almost completely from

folk paths, except insofar as old themes were echoed and the trance mood was sought. The idea of playing in a state of possession relates back to similar states evoked in Negro dancing for religious rites, but in the late periods of jazz it was sometimes induced by marijuana rather than emotional ecstasy.

The underworld connections of jazz, its association with the drug and liquor traffic, and with a release from inhibitions, made it the center of considerable social controversy in the '20's. Jazz was denounced from the pulpit and deplored in the press. Its musical character was little understood and was largely overlooked in the excitement over its moral implications. However, its idiom was seriously studied by art musicians and is strongly influential in much of the concert-hall music of today. The works of Ravel, Stravinsky, Debussy, Hindemith, Copland, Bernstein, and many others have made use of jazz rhythms and blues themes.

Among the secondary folkloristic products of jazz may be mentioned the development of a jargon, "jive talk," combining hundreds of terms for instruments, playing styles, characteristics of performers, etc., with a semi-secret vocabulary referring to the drugs, the places of entertainment, the dives, jails, purveyors of contraband, etc., and the controversies of race with which so many jazz players became familiar. Much of this vocabulary is the equivalent of earlier thieves' cant. Another product of jazz has been noted just recently—the return to the source, by which music now appearing as urban folk song in cities in Africa shows the influence of American Negro jazz. [TCB]

By its very nature jazz is dance music and is performed by jazz bands as such. Yet it is becoming increasingly popular as concert performance, with the tantalizing and curiously frustrating effect of a passive reaction to its intoxications. Ultimately its origin in Negro rhythms is ritualistic and at its best it retains a frenetic ritualism. Negro slaves brought the intricate and ecstatic rhythms of African tribal cults to the southern plantations and there adjusted them to white religion and harmonies in the spirituals, and in virtuosic individualistic dances, such as *juba*, *cakewalk*, and *clog*. *Buck and wing* has been adopted in sophisticated circles, and tap is almost entirely an exhibition form. The songs accompanying these exuberant outbursts are also highly syncopated, and they have communicated this quality to folk songs of southern whites and inculcated the dancing of the Kentucky running-set with off-beats of instruments and footwork.

The Music. At the turn of the century ragtime appeared in Louisiana as the progenitor of true jazz, the name referring to the torn rhythms. In 1915 it created a sensation in Chicago, and has since then swept not only this continent, but most of the globe. In the hands of Negro musicians it was and still is an improvisatory and ecstatic heterophony of instruments. (Many orchestras play under narcotic influence.) A jazz band consists of a piano, percussion instruments—various drums, tambourines, gongs, lately also Cuban rattles and *guiro* (notched stick)—a large glittering collection of brass winds, notably saxophones, trumpets, trombones; clarinets; fewer strings, such as a bass violin played by plucking and striking, perhaps a steel guitar, banjo, more rarely violins. A full jazz symphony orchestra adds cornets, tubas, euphonium, fiddles, celesta, and other in-

struments. Various gadgets and technical devices eke out every conceivable tone-quality: moans, quavers, screeches. The complex percussion on a strong duple beat sets the pace, and becomes increasingly erratic. The other instruments alternate or synchronize in paroxysms of rhythm and harmony. The early jazz produced amazing cacophony. This became more subdued during the 30's (the "swing" period), but reappears in "re-bop", returning to the harsh, fierce outbursts.

One might speak of four types of jazz composition and performance: 1) Popular dance music for actual execution. This includes the creations of W. C. Handy (*St. Louis Blues*), Duke Ellington (*Black and Tan Fantasy*, etc.) and Harry James (*Trumpet Blues*), and the transitory derivative "jazz classics" of Tommy Dorsey (*Minuet in Jazz*) and Ray Noble (*Comanche War Dance*). W. C. Handy popularized the mournful mood of the blues. 2) Musical comedy music of George Gershwin, Jerome Kern, Irving Berlin, etc. This was of course written for theatrical dance performance. 3) Symphonic jazz, introduced by Paul Whiteman in Gershwin's *Rhapsody in Blue*, Ferde Grofé's *Metropolis*, etc., and Robert Russell Bennett's *Sights and Sounds*; and streamlined in Stan Kenton's strident dissonances. This is intended for listening, but has been utilized by concert dancers. 4) Sophisticated concert jazz, on a level with the best classical music: John Powell's *Negro Rhapsody* and *Jazz Age*, Gershwin's *Concerto in F*, Gruenberg's *Jazzberries*, Leonard Bernstein's *Fancy Free*, J. Alden Carpenter's *Sky-scrapers*, William Grant Still's *Afro-American Symphony*—some composed for ballets, some as instrumental music. Europe has caught the fever, with some fine results in a more serious vein, notably the New Music of Reginald Forsythe, an English Negro (*Lullaby*, *Two Hymns to Darkness*); Stravinsky's Bach-jazz blends (*L'Histoire du Soldat*), Debussy, Tansman, Hindemith, and others.

The Dance. All jazz dancing finds its incipience in the musical beat, sometimes bearing the same name as the music, or—as usually in the ballroom—reacting to the newest tunes with any steps that seem fitting to the dancers. In the ballroom the jazz dance is exceedingly individualistic, and rarely draws several couples into one formation. On the same floor the same tune may accompany the most conservative one-step and the most extreme boogie-woogie. In the half century (1900–1950) these steps have come into being in the following sequence, by decades—

(1) The simple and sedate two-step and one-step, which vary their walking with zigzag, turns, serpentine, etc. The shoulder-opposition of the one-step was in Germany distorted and gave the dance the ill name of *Schieber*. The foxtrot, which varies the walk with *chassé* on turns.

(2) Eight step, Castle Walk, turkey trot, Boston (from waltz), etc., all still proper in manner.

(3) In an outburst of postwar danceomania—the shimmy, bunny hug, grizzly bear (in a dead clinch), Hoosier hop, and the jitterbug or jive variants, which amalgamated into the Lindy, black bottom, Charleston, shag, and Lindy hop. Jitterbugs let their arms and legs fly in angular frenzy; with twisting feet they meet, separate, swing about; they jump, fall, and in Negro Harlem and the West Indies, contort in abandoned acrobatics.

(4) Jitterbugging continues and boogie-woogie arises:

a combination of round dance and individual improvisation incorporated in the Big Apple (now extinct); trucking, Susie-Q, Jersey bounce, etc.

(5) Boogie-woogie and its subvariants, mooch, sand, duck-walk, camel-walk, Rochester, fish-tail, Detroit jump, etc. All of these steps return to deepest Africa in the insistent flat-footed emphasis, the sway-back posture, bent or overstretched knee, the full use of the entire body in motions at one moment barely perceptible, in the next daringly acrobatic. Couples may dance in a trance-like embrace, or at a distance, yet electrically united. The man may *mooch*, jerking his pelvis forward and back, while the woman sinks and rises with flexed, shivering knees. The fundamental boogie step, in ballroom position, is a double side-step (to r.) and toe-heel accent (l., r.) The fast boogie, in promenade position, uses a pat-step, with half and full turns under the arch of joined hands, winding, unwinding, and crossing, all at breakneck speed. These steps follow the main beats of the music, but good dancers may syncopate, or stamp out a veritable counterpoint against the already complex musical rhythms, snapping their fingers in a further complementary rhythm. Boogie and jitterbug, the truest forms of jazz, are here to stay.

Jazz is, first of all, a Negro creation, secondly, an adoption (and frequently virtuosic adoption) by American whites. Born in the rural South, it has grown to maturity in the metropolis of the North, but is returning to metamorphose southern folk music into steel guitar ragtime. In most foreign countries it is ill at ease, stiff, and self-conscious, notably in Europe and Mexico. In the Orient it is still in bad repute, but is making gradual, relentless headway. In Mexico it frequently presents the incongruous picture of expert playing on marimbas and a puppetlike execution of "djeez hawt." Only around Veracruz the admixture of Negro blood has produced the erotic *danzón*. The syncopated, sensuous ballroom contributions by Latin American countries (*rumba*, *samba*, *tango*) are related to jazz, but are not jazz. However, in the West Indies, the Jamaican *jive* and *mento* vie with Harlem boogie in an apotheosis of erotic dance-realization.

Transference to the stage—as often occurs with these—may render them more artistic and may underscore the ritualistic essence; but such crystallization cools the fever of the spontaneous dance possession. [CPK]

jealous craftsman and his apprentice The theme of several folktales, principally European, in which the pupil surpasses his master, who preserves his rank as best of his kind by getting rid of the apprentice. The classical Greek story is of Dædalus and his nephew Perdix (or Talos or Calos). Dædalus, who invented carpentry, taught Perdix what he knew. But one day Perdix picked up a fish's backbone and cut through a sliver of wood, thus inventing the saw. Seeing that his pupil's imagination would lead him to greater things, Dædalus threw Perdix (who is also credited with the chisel and the compasses) from the Athenian Acropolis. Zeus transformed the youth into the partridge (*perdix*) before he was smashed on the rocks below. Similar stories have been told of artists, sculptors, magicians, etc., etc. The pupil whose work is precocious is dismissed by the master. These stories are similar in theme to the story of the death of Æsculapius, killed because he brought

the dead back to life and thus overstepped his bounds. The jinn imprisoned because they give away the secret of what will imprison them, and the ogre who tells where his external soul is, are related in concept. Miach, son of Diancecht, the ancient Irish physician, healed Nuada more quickly than his father thought consonant with good. So Diancecht killed his son, whose curing was evil, and then destroyed knowledge of the properties of the herbs that grew from Miach's body. The theme has its converse too, best exemplified in the story of the master magician Merlin, trapped into eternal imprisonment by his own pupil.

Jean-Jeudi Nickname of the bridegroom of the Beauce region in northern France who has been foolish enough to allow himself to be married on a Thursday. The nickname implies that he has an unfaithful wife. Thursday weddings are avoided for this reason.

Jean Sot or Foolish John The typical numskull of the world-wide noodle stories as found in the French folktales of Louisiana. Calvin Caudel (*SFQ* 12: 151 ff.) has made an analytical study of four Louisiana Jean Sot or Foolish John tales with reference to types and motifs, diffusion, and variants. Foolish John typically misunderstands his instructions (shoots the cow instead of milking her), or takes them literally (throws the dog, named Parsley or Percy, into the soup instead of parsley as his mother told him [J2462.1]; or puts baby clothes on the chickens he was told to dress for dinner). He burns his grandmother up trying to warm her, greases the dry cracked edges of a mud-hole with butter or lard out of pity (J1871), gets his head or hands stuck in the porridge pot, wraps up the stove, or a tree, to warm it (J1873.3), takes with him the door he was told to guard (K1413), and sometimes ends up possessor of a fortune stolen by two robbers whom he has unwittingly put to flight.

Jehovah Lord; God; the God of Jewish and Christian religion: often contrasted with Yahweh, the earlier concept of God among the more primitive Hebrews. See YAHWEH.

Jellon Grame A Scottish ballad (Child #90) of a cruel lover: also known as *Hind Henry*. Child collected four versions and a variant of the story. His A and B versions differ essentially in the original situation, but tell the same story. Jellon Grame sends for Lillie Flower, his mistress. She comes to meet him in the woods and he kills her with his sword. But he saves their child that lays "weltring in her blude," and gives it to three times three nurses to rear. When the child is grown to a boy, Jellon Grame shows him the spot where he killed the mother, and the boy puts an arrow into him. The *Hind Henry* variant contains two incidents missing from the A version which are of general folkloric interest. The child saved from the dead mother, like many a folk hero, is extremely precocious; he grows rapidly and learns quickly. And, when he walks in the forest with his mother's killer (he is the son of May Margerie and Brown Robin, not Hind Henry),

"O how is this," the youth cried out,
 "If it to you is known,
 How all this wood is growing grass
 And on that small spot grows none?"

The infertility of places where a foul and treacherous deed has been done is common in folklore. Compare in the *Kalevala* the barrenness of the spot where Kullervo seduces his sister.

Jenny Jones Most common American title of a children's game song, sung usually to the same melody as *Mulberry Bush*, and preserving vestiges of ancient funeral customs. Players sing, "We've come to see Miss Jenny Jones, and how is she today?" One answers, often in spoken tones, "She's washing (ironing, etc)." Finally the answer is that she is dead. Then the questions deal with colors to be worn for the funeral (blue for constancy, green for grief, yellow for gladness, etc.) until purple is accepted as suitable for mourners. The game becomes a chase when the ghost arises to disperse the visitors. *Jenny Jones* is a corruption of the Scottish *Jenny, My Jo* (jo meaning sweetheart). In France it is *Jeanne, ma joie*.

This song is similar in substance to another singing-game survival of grave rites, *Green Gravel*, in which the washing and burial of the dead are described, and a turning back after the funeral is accompanied by hand-clapping to ward off the spirits of evil. There is also mention of a letter from the dead, symbolizing communication after death. The song survives in England and in the United States. See MOURNING SONGS.

Jephthah In *Judges* xi-xii, the son of Gilead and a harlot. When his father's legitimate sons were grown, they threw Jephthah out; but when the Ammonites invaded their territory, the sons called Jephthah back to lead them. This he did on condition that he should be their chief after the war as well. Jephthah vowed that if he were successful he would sacrifice the first thing that came forth to meet him when he returned home. And it was his only child, his virgin daughter. (See JEPHTHAH'S VOW.) He fulfilled his oath; in the times following, the women of Israel observed four days each year in memory of his daughter. The sacrifice was thought to have taken place at the winter solstice, and in the belief that wells were unfit to use during the solstices and equinoxes, it was said that the blood of Jephthah's daughter poisoned the water at this time. Later the Gileadites fought with and defeated the Ephraimites. Whenever they captured one whom they thought to be an Ephraimite they made him say "Shibboleth," which the Ephraimites could say only as "Sibboleth." Thus friends and enemies were separated, and the enemies were killed.

The Biblical story, according to Pierre Gordon in *Sex and Religion*, reflects several customs in Hebrew context that are found in other Mediterranean cultures. Jephthah, for example, was probably the child of a sacred prostitute, became an outcast and robber chief, and was called upon, as a knowing fighter, in time of need. The two months spent by the daughter in the mountains bewailing her virginity were probably part of the typical seclusion custom of the puberty rite, and the four-day observance by the women were the three days and one more of the initiation ceremony. Parallels to the myth of Persephone are obvious. In Shechem the daughter was actually called Kore, Persephone's name as the maiden. The two traditions, Greek and Hebrew, do not reproduce each other exactly but they show suf-

ficient similarity to indicate similar rites underlying both legends.

Jephthah's vow A folktale motif (S241), found in stories all over the world, in which the fulfillment of the rash promise of the father, "the first thing he meets at home," entails giving up his child: so called from the Biblical story of Jephthah's daughter (*Judges* xi). A whole group of motifs (S240 ff.: children unwittingly promised) utilize a similar idea: what is promised is the first thing over the bridge—evaded by driving the dog over first and so outwitting the Devil (S241.1); or "what you have at home," a child born in the father's absence (S242); the father promises "Nix Naught Nothing," but this synonymic empty promise comes to something when he arrives to find a new child so named (S243). A Fjort (Africa) story embodies S245: what is born on your farm. Two women agree that the owner of the farm owns whatever is born on her land. One gives birth to a child on the farm of the other; the owner of the farm claims, and gets, the child. Similar to the *Frog Prince* story is S247, in which the father promises his daughter to her rescuer, not knowing that the rescuer is a dog: this is in a Chinese tale. The promise made to get out of danger (S222) as in *Beauty and the Beast* and *Hans My Hedgehog*, both transformation stories, often involves giving up a daughter. Also like these are the stories in which a child is promised to a mermaid, a giant, a monster, the Devil, etc., in return for some gift. None of these fairy tales use the motif as pointedly as the Biblical story does, where the daughter is actually sacrificed, but Andrew Lang saw in the Jephthah vow "a moral warning against rash vows, combined with a reminiscence of human sacrifice." Thus, undoubtedly, the appearance in the Middle Ages of the Devil in the story, to whom the child is promised. In a French-Canadian tale, "Le Diable et la Bougie" (*JAFL* 29:110), the fisherman promises a stranger whatever will appear. Since this is always his little black dog, he readily exchanges the promise for the ability to make a good catch of fish. But it is his little son who appears. When the stranger (the Devil, of course) comes for the child, the fisherman's wife bargains. The Devil agrees not to take the boy until the candle goes out. Whereupon the fisherman's wife blows it out: it did not go out, she put it out. A tale of Spanish provenience, reported from Zúñi by Boas, uses the same idea: the woodchopper must sell his son to the catfish; he thought it would be his little dog. Compare HERODIAS; IPHIGENIA.

Jericho The first city conquered by the Israelites under Joshua in the Promised Land. Seven priests bearing seven ram's-horn trumpets preceded the Ark in marching about the wall of the besieged city. On the first day, they circumambulated the city once, on the second day twice, and so on, until on the seventh day they marched around the city seven times. Then, at a blast on the trumpets and a shout from the people, the wall fell flat and the city was taken. See ACHAN.

Jersey Devil A famous phantom of the southern Jersey shore, born variously at Leeds' Point, at Pleasantville, at Estelleville, and other villages: also called *Leeds' Devil*. It was said to be the offspring (sex unknown) of an old woman who had so many children that she said if she had another she hoped it would be a devil—and it

was. The supposition is that the woman actually gave birth to a monstrosity, which she kept out of sight in a shuttered room, and that the mystery of the birth plus her expressed wish gave form to the story. The Jersey Devil was no fiction, however, up and down the shore. Its footprints were often seen, its cries often heard; if shades were left undrawn at night, it would come and look in people's windows; it was seen sporting in the surf with mermaids, or sitting gibbering on chimneys. An old woman in her eighties in 1947 reported that she was once chased by it. The newspapers reported its activities constantly; it is still occasionally mentioned by the press. See H. C. Beck's "Jersey Devil and Other Legends of the Jersey Shore," *NYFQ* 3:202.

Jesha Name of an AfroBrazilian cult group in the city of Bahia. At present it is one of the lesser groupings, being overshadowed by the larger Ketu and Gêge cults. It derives from the Yoruban town of Ilesha, Nigeria, whose people bear the designation Ijesha. [MJH]

Jesse James Most famous of the American "bad-man" ballads, written, according to one of the stanzas, by Billy Gashade, whose identity is unknown, and relating outstanding episodes of the Missouri outlaw's career. Jesse James was born in Clay County, Mo., of a family of Confederate sympathies, fought with Quantrell's guerrillas, and, with his brother Frank and a band of men, committed numerous daring bank robberies and train hold-ups. The stories of his deeds fall into a familiar folk pattern of robbing the rich to give to the poor. His death and betrayal by a member of his own gang completes the legend fittingly. He was shot for a \$10,000 reward by Robert Ford on April 2, 1882, in St. Joseph, Mo., where he was living under the name of Howard. The song was composed shortly thereafter and has taken its place as a favorite all over the United States.

Jessie polka A version of the polka as danced in the Middle Western United States. Partners progress counterclockwise in skating position: left heel forward, tilting body back, right toe back; tilting forward, right heel forward; left heel forward and to ankle; four two-steps.

[CRK]

jestbooks Collections of short, pointed stories, usually noodle stories pointed at a disliked class (e.g. scholars) and often interlarded with indecent jokes. A collection of Greek jests, attributed to Hierocles (5th century A.D.), probably dates from the 9th century. During the later Middle Ages and the Renaissance, many collections of facetiae, Latin and others, were made. Jestbooks were among the first books printed; the famous *Liber Facietiarum* of Poggio Bracciolini of Florence appeared in 1470, from which other collections in Italy, Germany, France, and England drew their inspiration—and material. Aretino in Italy, Rabelais and his followers in France, Bebel and Pauli in Germany follow. In England, Walter Map's *De Nugis Curialium* of the 12th century, though not a jestbook, was filled with anecdotal and sometimes pointed material. The heyday of the jestbook was the period from 1500 to 1700. Collections were attached, for selling purposes, to the names of famous jesters: *Merry Tales of Skelton* (1566?), *The Jestis of Scoggin* (1626), *Tarlton's Jestis*, books purporting to derive from Peele or Hobson or Mother Bunche, tales of Gotham, the Pasquil stories, the *Hundred Merry Tales*,

all fall within the period. Perhaps the best known today, through reputation, is the collection by Mottley made in the 18th century and attributed to Joe Miller. Jest collections continue to be popular today; any news-stand sells jestbooks claiming to contain "1000 New Jokes," or "1000 Jokes about . . ." what have you. Dialect joke books still sell steadily; and in 1949 a book of jokes about doctors and their patients sold at \$2.95. The jokes in the modern jestbook are as old as the stories in Hierocles' *Asteia*. There we find the story of the farmer who complains that just as he has taught his horse to live without food, it died. There too is the story of the sleeper who awoke from a vivid dream that he had stepped on a nail and hurt himself. "Of course," his companion said. "What can you expect when you go to bed without shoes on?" The Little Moron stories current in the United States in the 1940's used these and many other jokes popular in Europe during the past millenium or so.

Jesus Folklore attached to the Jesus story is nearly all explicatory or expatiatory of his precocious infancy or of the dramatic last days of his life. Exceptions are the hog and haddock stories based on motifs (A2287 ff.) that Jesus caused certain characteristics to appear in animals. Finns explain the short snout of the hog, and northwestern Europeans the vestigial toes on the back of the animal's forelegs, as the effects of the presence of the evil spirits driven into the quadruped's ancestors by Jesus (*Matt.* viii, 28-34; *Mark* v, 1-20; *Luke* viii, 26-40). Similarly, the two black spots near the gills of the haddock are said to be marks of the thumb and finger of Jesus as he held and broke the two fishes of the lad's luncheon to feed the 5,000 (*Matt.* xiv, 15-21; *Mark* vi, 35-44; *Luke* ix, 12-17), but other lore attributes the spots variously to St. Peter or the Devil.

The infancy narratives of the apocryphal gospels and other extracanonical books show how soon legend, folklore, and myth began encrusting the story of Jesus. Indeed, radical higher criticism makes the whole story a myth, merely another version of the legend of the sun god, born as a babe at the winter solstice and resurrected at the vernal equinox. Even comparatively conservative Biblical scholars incline to admit that folk beliefs had already been added to historical facts in the Jesus narrative prior to its recording in the accepted gospels.

Particularly the stories of the "wise men from the east" and the marvelous moving star they saw (*Matt.* ii), and of the shepherds and the "heavenly host" of angel singers they heard (*Luke* ii), together with the various visions, dreams, and apparitions of angels, all bear the authentic marks of folklore, paralleling the infancy narratives of the founders of other faiths.

The story of the jealous king (Herod) seeking vainly to kill the child of destiny is, of course, a stock first-act situation in the dramatic folk histories of many others than Sargon, Moses, and Oedipus. Frazer, in *Folklore in the Old Testament*, ii, 437-455, gives ten others. Even the story of the virgin birth of Jesus is by no means unique in the history of religions, for, coupled with the corollary god-father divine parent-concept, virgin mothers are alleged to have given birth to no less than thirty saviors, heroes, or founders of religions from Adonis to Zoroaster.

It is of interest to students of folklore that when the synoptic gospels are arranged chronologically in the

order of their composition, the first, *Mark*, written about a generation (25–30 years) after the death of Jesus, has no infancy narratives, no mention of a virgin birth, and no record of post-resurrection appearances of Jesus. But these stories all appear in *Luke* and *Matthew*, written barely another generation later. It is also of interest to note that some unknown editor later (probably in the 2nd century A.D.) added a typical folklore section at the end of *Mark* (xvi, 9–20) which appears in the King James and Rheims versions, but has been excised from modern versions since it does not appear in the oldest Greek, Syriac, Armenian, or Ethiopic manuscripts.

The accretionary process of constant expansion and addition of legend and lore continues when we pass to the later Christian apocrypha and pseudepigrapha, on through the church fathers, ante-Nicene, Nicene, and post-Nicene. The stories about Jesus and Mary become more and more miraculous and wildly incredible in the apocrypha of the Eastern Church, especially in Ethiopian Ge'ez and Coptic manuscripts. Most of the extant Coptic fragments are of the 5th century or later, but probably contain stories and quotations from earlier books. They are rich in folklore. Collections are available in French by E. Revillout and P. Lacau, and in English by Forbes Robinson, *Coptic Apocryphal Gospels*. Summaries of and quotations from Coptic and many other apocryphal gospels, acts, epistles, and apocalypses are given in M. R. James, *The Apocryphal New Testament*.

The flavor of Coptic folklore about Jesus may be tasted in the following sample, condensing the Ethiopic *Book of the Cock*, which is read on Maundy Thursday in the Abyssinian Church. The wife of Simon the Pharisee (*Luke* vii, 36–50) served Jesus with a cock cut up and placed in a lordly dish. First Jesus blessed bread and gave it to Judas, who went out, Satan having entered into him. Jesus touched the cock to life, endowed it with speech, and bade it follow Judas and return and report. When the cock returned, it wept bitterly and so did the disciples when it told how Judas had gone home first, where his wife urged him to betray Jesus, then to the temple where he arranged with a rough man, "Paul of Tarsus," to deliver Jesus into his hands. When the cock ended his report, Jesus dismissed it to fly into the sky for a thousand years.

The colorful exaggerations of the East were later matched in the West in the medieval sacred legend collections, the tales of the troubadours and jongleurs of Provence, and the mystery and miracle plays of England and the Continent. We can give here but one of the many outflowerings of this rich field of Jesus folklore, an illustration of how great a plant may grow from one tiny seed. The *Harrowing of Hell* appeared about the end of the 13th century in England, the first drama in our tongue, done in dialog form with alliteration and rime. It tells of Jesus going down into hell to rescue the souls of the just, a task rendered easy by the flight of the gatekeeper. Now, this story is taken straight from the apocryphal book known as *Acts of Pilate* or *The Gospel of Nicodemus*, the second part of which, called *The Descent into Hell*, probably dates from the 5th century. This book in turn is obviously based on and is an expansion of the passage in *Matthew* (xxvii, 50–54) which is palpably a late folklore addition unknown to either *Mark* or *Luke*, relating that at the death of Jesus there

was an earthquake, and the graves were opened, "and many bodies of the saints which slept arose, and came out of the graves after his resurrection, and went into the holy city, and appeared unto many." In the *Acts of Pilate* it is related that two of these resurrected saints, Karinus and Leucius, wrote down what Jesus had done when he descended into hell after his crucifixion, then returned to their sepulchers, leaving their manuscripts with Annas and Caiaphas to be read to the people.

Naturally, the accretions of addition and expansion have increased in number and variety whenever zealous missionaries have brought the Jesus story to folk of other cultures. Consequently, since this process has been going on for 19 centuries after Paul began his missionary journeys, and since of late the acculturation has been accelerated by more rapid means of communication and quicker transportation of both missionaries and bibles, the folklore of the Jesus story, if properly collected and classified, would occupy many scholars for decades and fill a score of volumes.

Take for example the simple motif (B250) of the effect of the sacred nativity upon the animal world. In the canonical gospels, no animals are actually mentioned as being present, but their presence was easily inferred—sheep from the mention of shepherds, an ox from mention of a manger, camels which bore the wise men from the east, and an ass which would be the natural means of transportation for Mary "great with child" from Nazareth to Bethlehem and for the new mother and babe on the flight into Egypt.

The ox and the ass were likely to be worked into the nativity story anyway sooner or later to fulfill two ancient Jewish prophecies. *Isaiah* (i, 3) had written "The ox knoweth his owner, and the ass his master's crib," and the Vulgate version by Jerome had a rendering from *Habbakuk*, "He shall lie down between the ox and the ass." So we find a Coptic Life of the Virgin relating that when Joseph returned with a midwife, the child was already born and the ox and the ass were protecting him. The *Gospel of Pseudo-Matthew* has the ox and ass adoring the child. This belief has spread throughout the world and many Christmas crèches show these two animals with their foreknees bowed in reverent worship.

Throughout Europe in general it is avowed that the cows speak to one another at Christmastide; the Breton peasants attribute this miraculous vocal power to all domestic animals at midnight Christmas Eve. In parts of England it is said that on Christmas morn, the rooster's usual "Cock-a-doodle-doo" becomes "Christus natus est!"

The Middle Ages knew another version of the ox and ass legend. The latter was said to have brayed loudly for joy at the birth of the Christchild, while the phlegmatic ox remained silent. The ass, which had come from Nazareth in Galilee of the Gentiles, was considered symbolic of the Gentiles, while the Bethlehem ox represented the Jews. Since, also, the ass was alleged to have borne Jesus as a child into Egypt, and as a man on his triumphal entry into Jerusalem, there arose from all these notions and associations, in the not always logical fashion of folk custom, a very popular, somewhat sacrilegious and somewhat anti-Semitic festival, honoring the ass. See ASS, FEAST OF THE.

Other legends were not so hard on the ox, allowing him also to accompany the Holy Family into Egypt and

picturing him patiently pulling a wagon piled with the baggage of the refugees from Herod's wrath.

By a sort of poetic justice, the relative approbation of the animals is reversed in the acculturized modern version of the nativity reported from Guatemala by Sol Tax (*JAFL* 62, 125 f.). The Chichicastenango Indians have it that Jesus was born in a stable (*un rancho*) on a cold snowy night and the newborn stiffened as if dead. Herdsmen brought in cows and sheep whose breath warmed and revived the child. But the mules and horses coming in did not believe the infant to be God, so instead of breathing on him, they belched in his face. So Jesus blessed the cows and sheep but punished the mules and horses by decreeing that they would always be beasts of burden and never have the privilege of being eaten by man.

At the other end of the Jesus story, attached to various incidents of the passion week, we find such a wealth of folklore, legend, and myth that a few samples must suffice.

There is the Breton story that bees originated from the tears of Christ on the cross, paralleling the old Egyptian legend that they came from the tears of Rā. The carnation pink is said to have sprung from the tears Mother Mary shed on her way to Calvary, but its first appearance is also alleged to have taken place at the time of Jesus' birth, his incarnation.

Many are the examples of the motif (A2721.2.1) that certain trees were cursed for serving as Christ's cross. Crosses on some trees and blood-colored sap in others are thus explained. Throughout northwestern Europe it is said that aspen leaves tremble because all the trees but the aspen refused to be made into the cross. The holly was once a great tree until, say others, it was used to make the cross: since then it has become much stunted and its berries like drops of blood. The crown of thorns was made of holly, which explains why its formerly yellow berries are now red. The birch, too, was a large tree, but is now dwarfed since its birch rods were used to scourge Jesus. But in Ireland it is the bog myrtle or sweet willow that they say was used to beat Christ and must therefore not be used to switch cattle. Yet the English carol *Bitter Withy* has Jesus cursing the willow to be the first tree that shall perish at the heart because his mother used it for his punishment.

The Chichicastenango Indians believe that the Jews made Jesus cut down the tree for his own cross. He struck one blow with the ax and a great chip flew off into the water and became a fish, which is why we eat fish during Holy Week.

One folk belief which is pure poetry will not let the cross of the crucifixion be dead wood. English medieval art of the latter 14th century, in wood and stone carvings, in paintings and stained glass windows, persistently depicts Christ crucified on a huge lily plant. In the Roman catacombs have been found a number of "foliage crosses," which have been interpreted as thus camouflaged to conceal their Christian meaning. But since other symbols plainly indicated that these graves were Christian, the entwined crosses probably thus early proclaimed the faith that the cross signifies not death but eternal life and foretells the lilies of the coming Easter. See ACCULTURATION; ADONIS; AHAYUTA ACHI; CHERRY TREE CAROL; DATE; FIG; HERUS.

CHARLES FRANCIS POTTER

Jesus (in Afroamerican belief) The worship of Jesus Christ is accepted by most New World Negroes (except the non-Christian Bush Negroes of Dutch Guiana), though the reinterpretations of Jesus differ from one region to another, and especially between those countries which are Catholic and Protestant. In Protestant areas, Jesus comes to hold a primary position among the powers of the Universe, as is evident in the character of worship in "shouting" churches of the United States and the West Indies. In Catholic countries Jesus, as one of a large group of spiritual beings, may be identified with an existing cult, as in Brazil, where the syncretism is with *Oshala*. In Haiti, on the other hand, Jesus is differentiated from the saints who are identified with the *loa* of the vodun cult, and is conceived as sharing, with God and the Holy Ghost, the task of ruling the Universe. [MJH]

Jewa-Jewa Among some of the tribes of the Malay Peninsula, a being who lives in heaven and intercedes with the Creator, the One God, on behalf of man: a form of the Malay-Sanskrit *deva-deva*. The magician prays to Jewa-Jewa for aid, and the soul of the magician gets medicine from him. Sometimes Jewa-Jewa is not appeased by the fumes of the incense and the incantations and refuses to intercede with the Creator to give the medicine.

jewel in snake's head A magic object of folk belief, folktale, and mythology; a stone found not only in the heads of serpents, but also in the heads of dragons, toads, dogs, swallows, etc. Sotacus, an early Greek writer, mentions the stone in the dragon's head. Pliny says that while there is a stone in the serpent's head, the serpent must be alive when the head is cut off or the stone will have no virtue. The value of such a stone was great; many charms and much magic could be accomplished through it. The stone in the swallow's head, specifically, was an irresistible love charm. Often the stone is a carbuncle; often it shines by its own light. Many prescriptions are given for obtaining it; Philostratus claims that in India the dragon is put to sleep by incantation and magical golden runes inscribed on a scarlet cloak. But to protect itself, the snake has developed a most efficacious means: it puts one ear to the ground and sticks its tail in the other. The origin of this, as of many other wonder tales, is probably India, from where the idea spread to Europe and to the East. The jewel-bearing snake appears in Malaya and Indonesia. In southeast Borneo, the primeval great serpent is said to have worn a jewel set in a golden crown. See BEZOAR; QUIRIN.

jewels from spittle A folktale motif (D1454.3) probably of Indian origin, very widespread in Europe. It belongs to the larger concept of magic spittle (D1001), i.e. curing spittle, speaking spittle, etc. The gift of spitting gold or jewels is often bestowed on a hero or heroine by some supernatural character or power in reward for kindness or obedience. It is frequent in the kind and unkind cycle of stories.

In the story of "The Cooked Child" in the *Kātha Sarit Sāgara* (see *Ocean of Story* viii:59, 59 n. 3), the narrator unwillingly ate two grains of rice from the pot in which the child of an ascetic had been boiled, and thereafter gold sprang up wherever he spat. In a Tibetan story not only does the hero spit gold but his companion spits turquoises. In a Swedish tale gold rings drop from the heroine's mouth, in its Norwegian variant, gold

coins; in a Portuguese parallel pearls fall from her mouth. In a Finnish story the hero, after eating a certain bird, spits gold. Russian folktale has many jewel-spitting heroes, gold-dropping horses. A silver-dropping horse occurs in Votjak story. Roses also often fall from the mouth of the hero in Indian, Arabian, and eastern European folktale. The hero who "laughs roses" is frequent in German tales.

➤ A good many North American Indian tales from all parts of the continent contain the incident of jewels produced by magical means: from spittle (D1001; D1454.3), from excrements (D1454.5) or, more rarely, from tears (D1004; D1454.4). Often the jewels from spittle motif occurs in the cycle of imposter stories about the man or trickster who boasts of his magic power to spit gold or treasure in order to gain a wife. See BEAD-SPITTER AND THROWN-AWAY. [EWV]

Jew in the Thorns Title of one of Grimms' märchen (#110) and given to tale Type 592. A youth leaves service after three years with three pennies, his total pay. These he gives to a poor man, who grants him three wonderful things: a fiddle that makes everyone dance, a bow that never misses, and the power to make everyone do as he tells them. He meets a Jew on the road who asks him to shoot a bird. When the bird falls in a thornbush, the Jew goes to get it, and the youth begins to play on his fiddle, causing the Jew to be all scratched up. Later, the boy is sentenced to hang for theft, asks permission to play, and forces everyone to dance until he is freed. Sometimes the Jew is replaced by that other traditional butt of humor, the monk; sometimes it is a giant who is forced to dance until he cries quits. Often the central theme of the story appears together with other tale types; some thirteen are mentioned in Aarne-Thompson *The Types of the Folktale*. The story appears throughout northern and central Europe, down to Greece. In a Jamaica version of the tale, it is Anansi whose fiddle makes the irresistible music. The story has the earmarks of being connected with one of the medieval tricksters originally: from all indications, probably it was an Eulenspiegel tale at first, in the course of time exchanging Till's villain, the monk, for the Jew. The compulsive music has its parallels in Oberon's horn and in the pipe of the Pied Piper. Similar magical instruments cause not only people, but tables, chairs, etc., to dance, as Orpheus' music made the trees and mountains move.

Jew's Daughter An alternative title, and perhaps a more common one, for the English ballad *Sir Hugh* (Child #155): Child lists 21 versions and additional fragments of the ballad. The story is the famous tale of Hugh of Lincoln, told by Chaucer in the "Prioress' Tale," referred to by Marlowe, etc. Hugh of Lincoln, like William of Norwich and many other little boys of the Middle Ages, was said to have been killed by a Jew for ritual purposes and his body thrown into a well. In the *Annals of Waverley*, the body was rejected by a running stream and by the earth. The well was filled with light and a sweet odor; the body, when it was drawn out of the well, showed the stigmata. Touching the bier cured a blind woman. Matthew Paris, writing during the same period, says that the body was found by the mother. At any rate, eighteen Jews were hanged for the crime. An Anglo-French ballad of the time tells the story, but the first English ballads date from the 18th century.

Hugh of Lincoln, The Jew's Daughter, The Jew's Daughter (Percy) tell the same story. Hugh, playing ball, kicks the ball into the Jew's garden. He asks the Jew's daughter for the ball, and she entices him into the house with an apple, despite his misgivings. Inside, she stretches him out on a table and cuts his throat, or stabs him to the heart, with a knife. The ballad is detailed about the flowing of the thick blood, then the thin, then the heart's blood. She rolls the body in lead and drops it into the well. All the other children come home, but not Hugh. His mother goes out looking for him, and at last he speaks to her from the well. (Whether the blood was supposed to be used in the preparation of matzos, or used for marking the doorposts on Passover, or formed part of some cabalistic ceremony is not stated, but the coincidence of dropping a bloodless Christian cadaver into the well and the known predilection of Jews for poisoning wells undoubtedly added just that touch necessary for the story to be thoroughly accepted in the later Middle Ages.)

In the United States, where the ballad was carried from England and Ireland, it seems to be most often called *The Jew's Garden*, though Child includes a New York variant *Little Larry Hughes and the Duke's Daughter* (Hugh and the Jook's daughter retaining their identities). Elsewhere they are anonymous; the recurrent motifs of the rainy day and the tempting of the child with apple, gold ring, and red cherry appear in several variants. In Mississippi, an old woman remembered the ballad as one she used to be put to bed with.

There are several versions of the song found in America. The Jewish aspect of the story, however, has been lost in a number of the American texts, which refer to the lady as a "duke's daughter," or by no name or identification at all. The town of Lincoln has, by corruption of the phrase "it doth rain in merry Lincoln," become "Mirry-land toun," "Maidland town," and "American corn." In some of the versions the boy asks that he be buried with a prayer book at his head and a Bible at his feet.

jew's harp Probably a corruption of *jaw's harp*: an ancient musical instrument consisting of a frame in loop, notch, horseshoe, or rod shape, with a free vibrating tongue attached by one end to the frame. It is held in the player's jaws by the frame, the tongue being either plucked with a finger or jerked by a cord. The oval cavity forms the sound box and the tone is varied by changing the shape of the cavity. Originally of bamboo, with the tongue separated partially by slits, the instrument has also been made of metal since the 12th century, when it was mentioned and shown in a Chinese book. It is known in southeastern Asia, in Polynesia, Melanesia, Siberia, northern Europe, etc., occurs in excavations from neolithic times, and has been valued for its intimate quality. Nowadays it can be purchased in dime stores and is most frequently a toy. Since its sound is small, it has seldom accompanied activities of large groups, serving to pass the time for the solitary wanderer or itinerant worker and for the entertainment of small gatherings. In the Alps of Savoy it is played to accompany the dancing of a monkey.

jhoting In Hindu belief, the ghost of a low-caste Hindu who has died dissatisfied. He remains in his own house, or in a well, or river. In the Deccan he is the spirit

of a dead, unmarried youth, who lives in cemeteries or trees and personifies absent husbands. He leads wayfarers astray and waylays postmen who are safe only as long as they hold onto their bags.

Jibona Yoruban term, employed in the AfroBrazilian cults of Bahia, for the sponsor and "tutor" of a cult-member, during her ritual seclusion as a novice. [MJH]

jig 1) An intricate solo dance, with repeated hops on one foot, while the free foot points patterns in the air, heel and toe, front, side, or back. It is most popular in Ireland and Scotland. In England the Morris Jig is a virtuoso solo in contrast with the usual group Morris, as also the Bacca Pipes Jig, performed over two crossed pipes, as in the Scotch sword dance.

2) A figure dance for couples in 6/8 time, performed either in longways or quadrille, as the Irish Harvest Time Jig, with twice as many men lined up as women. In the 17th century Kemp's Jig, a man and two women describe patterns forward, back, and turning, and end with a kiss. The fast and furious rhythm consists of groups of three notes, in 3/8, 6/8, 9/8, or 12/8 time, though English jigs were sometimes in duple time in the 16th and 17th century. It corresponds to the French *gigue*, which features in musical suites, and the Spanish and Italian *giga*. This last is probably the earliest; Italian *giga* means instrument or limb and refers to the instrument of accompaniment. It never was a court dance, and has preserved its vitality to this day. [GPK]

Jiggs strip George McManus's pioneering husband-and-wife comic strip introduced in 1913 and still going strong. *Bringing Up Father* has become proverbial for trying in vain to make a "gentleman" out of a "boor." Maggie and Jiggs are a newly rich working-class couple battling for mastery. Most of the humor concerns Jiggs' attempts to escape from her and her fashionable friends' clutches and remain true to himself and his old cronies. Jiggs reading his newspaper in solid shirt-sleeved, slippered comfort or gloating amidst the stolen pleasures of Dinty Moore's saloon, wearing incongruous silk hat, cane, and spats, has become a familiar symbol of the American lowbrow and philistine. Ugly, brooding Maggie, with her arms akimbo, her fancy clothes and absurd hats, her original topknot now replaced with a marcel, is a horrible example of the embattled social climber and culture vulture. In her machinations and Jiggs' henpecked maneuvers, social comedy and satire are superimposed upon slapstick. A touch of elegance is added when Maggie hurtles expensive vases at Jiggs instead of clouting him with the usual rolling-pin. The minor characters—the husband-hunting daughter Rosie and the fortune-hunting titled fops, Dinty Moore and his gang, Jiggs' pretty secretary—fill in the picture and help to fix the reader's sympathy on the side of honest, if vulgar, humanity, as against shallow vulgarians striving to keep up with the Joneses. Translated into a dozen languages, *Bringing Up Father* has also been a favorite of tent-show audiences (Winifred Johnston, *Folk-Say*, 1930). [BAB]

Jimmu Tenno Legendary first emperor of Japan, 660 B.C. See JAPANESE FOLKLORE.

jimsonweed A tall, coarse, evil-smelling, very poisonous annual weed (*Datura stramonium*) of the nightshade family; also known as *datura*. The American name

is a corruption of Jamestown weed from its first being observed in Jamestown, Va. Beverly in his *History of Virginia* reports that "it was gathered very young for a boiled salad, by some soldiers sent thither to quell the rebellion of Bacon; and some of them ate plentifully of it, the effect of which was very pleasant comedy, for they turned natural fools on it for several days . . ." After eleven days they recovered, however, without any recollection of what had happened. In India *datura* was sometimes given to a rival prince to make him appear inept and unfit to rule; in fact throughout the East it was used to stupefy people in order to rob them. The *Arabian Nights* mentions *datura* as the "insane herb."

Among the Mayan Indians of Mexico it is used externally on wounds and on abscesses to draw out the pus, but the Mayans never used it as an intoxicant. Among the Catawba Indians the leaves are used externally on swellings and internally in fevers and for healing bone fractures. In Ohio it is used in an ointment for horses. Bathing the eyes with an infusion of the weed is said to change their color. In a poultice jimsonweed cures headache and rheumatism, and in fact is used to allay most nagging pains. It is said to be used by the courtesans of India and Turkey as an aphrodisiac, but in the United States its effects are believed to be just the opposite. Smoking the weed is believed to be beneficial to asthma sufferers. [JWH]

 In the boys' initiation rites of various tribes of southern California American Indians, a decoction of the narcotic drug contained in the roots of jimsonweed is drunk to induce a stupor in which visions are obtained. The boys to be initiated are first made to fast, and then, in several tribes, the drink is prepared ritually, to the accompaniment of singing, and given to each boy in a quantity judged suitable for him. As the effects of the drink begin to manifest themselves, each boy is taken in charge by a man, and helped to a ceremonial enclosure, where the boy remains in a stupor for several days or hours. During the period of stupefaction the initiate dreams dreams and sees visions, usually of an animal from whom he learns a song which he keeps as his own. Fasting, first absolute, then modified, is observed by the initiates, who are closely watched by their guardians since the drug is a dangerous one. Compare BLACK DRINK. See CHINGICHNICH. [EWV]

jinni (plural *jinn*; feminine *jinniyah*) In Arabic tradition, a devil or demon with great miraculous power. There are five kinds of jinn: jann, jinn, shaitan, ifrit, and marid, but these are seldom distinguished in translation. [MWS]

 In earliest concept, the jinn were probably malicious nature demons, living in deserted or impure places, often in animal shape. Islam adopted these spirits, admitting a possible dualism in the jinn, some good, some evil. They still retain an animal characteristic, whether paw, or hoof, or tail. Solomon, when he first saw the jinn, was horrified by their appearance; nevertheless, he went on to become their master, and could command them at will. They are usually invisible, but can appear in any shape, human or animal. One favorite form is the snake, but other obnoxious creatures—beetles, toads, scorpions—may be jinn. One family of Mecca were so plagued by the jinn that they went into the desert and began killing all the insects and reptiles

they could find. The jinn were so depleted in number that they eventually called a truce. Often the jinn resemble goats; their relationship in concept to the satyrs is obvious, but not fully explicable as a parallel. Of the five classes, the jann are the least powerful, the jinn are mostly evil but sometimes good, the shaitans are imps or devils, the ifrits are terrible and evil, and the marids the most powerful and most evil. The chief of all the jinn is Iblis, the prince of evil. The good jinn are often in the form of household serpents (still common among the Galla of East Africa and Ethiopia). In form and to some degree in substance, these jinn resemble the Roman *genii*. The spelling *genii* (singular *genie*) for jinni is adopted from the French *génie*. The confusion of the plural form of the Roman word *genius* with the plural *genii* of the French-derived word and the subsequent confounding of both with the singular *jinni* leads to misuse of the various forms. The Persian *devas*, the *divs*, *rakshasas*, *yakshas*, etc., of Hindu lore, all resemble the jinn somewhat. The Moroccan form of the word—*jnun*—applies to a demon usually in the form of a toad. Thus, in Morocco, toads are not killed but requested to leave the house, politely. See QAF.

jitsuki-uta Work songs of Japanese villagers sung at communal labor of pounding the earth to prepare for building foundations. They are lead by a male soloist and have a refrain sung by the chorus of workers, usually women, who pull the ropes that raise and drop a heavy wooden pounder. Some of the songs invoke good luck for the building; some are narrative. They are also called *dotsuki*.

jitterbug A modern dance of free angular style, rhythmically intoxicating; performed to specialized swing music. Partners improvise the succession of toe-heel steps in ballroom position, either with right hands grasped, or without contact. In the fundamental step the man swings the girl out, across, and in pivot turns; but he may, if the pair are expert dancers, throw her over his shoulder or on the ground. Though not entirely African in quality, jitterbug is most skilfully performed in New York's Negro Harlem. [CPK]

jiva In Jainism, the soul or the life principle within matter: innumerable in the universe, indestructible, forever forming matter and working *within* the material form. In Jainism the goal of every religious man is to free the jiva from matter; this is attempted through life-long observance of certain rules and vows—an ideal of inaction to avoid involvement with matter. At the moment of death, the jiva of a devout (i.e. successful) Jain is liberated into *Kaivalya* or perfect isolation, to exist forever, self-contained and aware.

Jizo A Japanese bodhisattva, commonly regarded as the patron of small children, travelers, pregnant women, and persons suffering from toothache. [JLM]

Job's tears A hardy annual tropical grass (*Coix lacrym-jobi*) named for its tear-shaped pearly white seeds, which are often sold for beads and used in necklaces, bracelets, etc. The grass is native to India, is cultivated in China, and serves as a cereal food generally through eastern and southern Asia and the Philippines. Yungayung, one of the deities of the Ifugaos of Luzon, P.I., is noted for giving a charm to the people which consists of Job's tears and a plant called *konûpa* (a wall-covering

plant); this charm makes the living invisible to a group of evil spirits known as *Bumugi*, the Spitters, who plague the souls of the newly dead, trying to trick them into some remark or admission that will endanger their living kin.

Job's tears are included in the bead bracelets worn by Moslem wives, and are believed to keep a husband fond. Powdered and slipped into his drink they will have the same effect. Sometimes also they are stealthily given to a rival, but in vinegar, for this will make her unattractive to the husband. In Persia Job's tears are said to possess a power great enough to offset almost any magic.

In coastal New England, especially Maine and Massachusetts, a necklace made of Job's tears was formerly thought to cure sore throat and diphtheria and to "absorb humors." In northern Ohio such a necklace was said to cure goiter.

Jocasta In Greek legend, the wife of Laius; mother and wife of Œdipus: called Epicaste in Homer. She hanged herself when she learned that Œdipus, to whom she had been married for many years, was her son.

Joe Magarac Steel-mill Paul Bunyan and John Henry. In Hungarian and Slovak *magarac* means jackass, and a "Joe Magarac," translated freely, means one who just "eatit and workit same lak jackass donkey." Joe Magarac first appeared at the big party that Steve Mestrovich gave for his pretty daughter, Mary. Determined that she should marry "only strongest mans what ever lived," Steve announced that the one who could lift the heaviest weight would be the lucky man. The winner was a seven-foot giant who said that his name was Joe Magarac and that he was born inside an ore mountain. When he pulled off his shirt, the people saw that he was a man of steel—"steel hands, steel body, steel everything." But, having no time for marriage, he withdrew in favor of Pete Pussick and went to work both day and night shifts in the steel mill, taking five big meals a day at Mrs. Horkey's boardinghouse.

He made rails by squeezing hot steel through his fingers—four rails from each hand. And he made so many rails that the roller-boss said they would have to shut down from Thursday night till Monday morning. On Monday the melter-boss found Joe sitting in a ladle with the hot steel boiling up around his neck. Sick of shutdowns and having heard the big boss say that he wanted the best steel to build a new mill, Joe had decided to offer himself for that purpose. In the contest between himself and ore, to see which could make the better steel, Joe won.

If Joe's saga recalls memories of foundation sacrifice rites and stories of men who have fallen into vats of molten steel and been buried with the metal, it also suggests to class-conscious steel workers the symbolism that the mills belong to the men who make the steel rather than the men to the mills. [BAB]

Joe Miller An old, worn-out joke. Joseph or Josias Miller (1684–1738) was an actor with the Drury Lane company after 1709 and played such comic roles as Trinculo in *The Tempest* and the First Gravedigger in *Hamlet*. The year after Miller's death, John Mottley (1692–1750), a government clerk who had written some successful plays, published *Joe Miller's Jests, or The Wit's Vade Mecum*, a jestbook containing but three

stories connected with Joe Miller. The Miller name was attached to the book in the same spirit that had led compilers of the 16th century to use the names of such famous wits as Skelton, Scogan, and Tarlton. Since 1739, however, any jestbook, any collection of stale jokes, any over-used story has been known as a Joe Miller.

Joe-pye weed Either of two tall American herbs (*Eupatorium maculatum* and *E. purpureum*) having whorled leaves and pale purple flowers: often called *gravel root* because the root was formerly much used as a remedy for kidney- and gallstones. The Iroquois Indians were familiar with its properties as a remedy for kidney disorders. The Chippewa Indians made a tea from the dried leaves and flowers of *E. maculatum* to produce sweating. They also used a warm decoction of the root as a wash for stiff joints; often some was put in the bath of a fretful child to quiet it. The Meskwaki Indians regarded it as a love medicine. If a young man would hold some in his mouth while talking to a young woman, or while wooing, the success of the conversation would be assured.

John or Old John The clever slave who matches wits with Old Massa and generally wins, though, even when he loses, he has or draws a laugh. The slave's weapon of laughter is symbolized by Old John's tricks, which he shares with Brer Rabbit, and especially the tricks of appeasing or fooling the white man by clever remarks or "bright sayings" and by playing dumb. While the slave found sly humor useful as part of the technique of defense or offense in slavery's "state of perpetual war," John stories are typical trickster and noodle tales, and employ many traditional motifs. Most of them concern the evasions and stratagems by which the slave circumvented the restrictions of plantation etiquette and other social controls, forestalling punishment, gaining small immunities and rewards, and even winning freedom. The pattern is continued in the jokes which Negroes tell "on" whites, disguising the Negro's irony as simplicity, just as in jokes told by southern whites "on" Negroes the "simple" Negro is made to appear "smart" or "uppity." In the best of the John stories John and Massa stand in much the same relation to each other as Brer Rabbit and Brer Fox, each serving as a foil for the other's cunning.

According to Zora Neale Hurston (*The American Mercury* 57:450-458), Old John was originally High John de Conquer, sharing his name and magic with the root of the marsh St. John's-wort, a folk cure-all and charm against rattlesnake bites, ghosts, witches, and nightmares. In his art of "hitting a straight lick with a crooked stick," of "making a way out of no-way," John de Conquer had a weapon more powerful than magic, while he found solace in song and laughter. John sometimes appears as Big John, Jack, and under a variety of common slave names.

Favorite themes of John stories are concealing a stolen pig (variants of the Mak story), telling fortunes (John saves his reputation and life and is rewarded when, in desperation, he says, "Well, you got de ole coon at last," and so inadvertently guesses what is under the pot), swapping dreams or lies, praying under the tree, mistaking voices in the graveyard for those of God and the Devil counting souls. In the comic contest of wits, fooling master alternates with catching John, turning the

tables with the "trickster tricked," while an occasional double ending satisfies both parties.

In "Massa's Gone to Philly-Me-York," Old Massa, pretending to go on a trip, returns suddenly in disguise and interrupts a feast in the Big House, only to be told to go out in the kitchen where he belongs. When John is threatened with hanging as the ringleader, he begs for permission to pray under a tree, where a concealed crony strikes matches at John's petition for lightning to strike Massa. Massa runs and set John free.

The "running" ending seems to have a particular fascination. When Massa, disguised as the Lord, comes to take John to Heaven, in answer to the latter's prayer, John, after putting off the inevitable as long as possible, asks the "Lord" to stand back in order to dim the radiance of his countenance, and rushes past him, while John's wife comforts their weeping children with: "You know de Lawd can't outrun yo' pappy—specially when he's barefooted at dat." In "God an' de Devil in de Cemetery," John pushes Massa to the cemetery gate in his wheel chair to prove that he has overheard God and the Devil dividing up souls (actually two men counting out their shares of corn). At the remark, "Now, we'll go git dem two at de gate," Jack lights for home, only to find that Massa has beaten him there in his wheel chair and is sitting by the fire, smoking a cigar. B. A. BOTKIN

John Barleycorn English and Scottish personification of barley as the grain from which intoxicating liquors are made; hence, personification of intoxicating liquors. Murray's *New English Dictionary* cites in 1620 "a pleasant new ballad about the murther of John Barleycorn."

Sir James Frazer entertains the thought (*Adonis, Attis, Osiris*: p. 189) that John Barleycorn parallels the legion of European vegetation spirits represented by a human victim killed for the sake of fertilization and resurrection of the crops. Burns' poem *John Barleycorn* (1786) could hardly suggest this, since stanza by stanza it merely presents the planting and reaping of the barley, the wagon-loading, threshing, etc., until "a miller used him worst of all / For he crushed him 'tween two stones." The figure continues to the drinking of John Barleycorn's heart's blood, to the mounting joy of all partakers. A. H. Krappe discredits the assumption of human-sacrifice vegetation ritual (*Science of Folklore*: 325), preferring to suppose that if any ritual beyond the natural sequence of reaping, grinding etc., was performed that "the real John Barleycorn perhaps in the shape of the last sheaf" was the only victim. In the United States with the enactment of the prohibition amendment, many brewery or community groups enacted the play of burying John Barleycorn.

John Bull Personification of England, of the English people, and of the typical Englishman, especially with regard to his heaviness and obstinacy: from a character in John Arbuthnot's *History of John Bull* (1712)—"an honest, plain-dealing fellow, choleric, bold, . . . a boon companion, loving his bottle and his diversion." He is depicted as a stout little man in traditional 18th century costume; modern political cartoons, often show a waistcoat made from the British flag.

John Canoe A Christmas dance of the Negroes of the British West Indies. Among these people, the word is usually associated with the name of the buzzard, its derivation most often being indicated as a corruption of

the English "carrion Crow." The probability that this is correct is heightened when one hears the West Indian Negro pronounce this term. There is, however, a woman's dance in the Gold Coast, West Africa, called *nyonkro*, in which there are dancing and sexual extravaganzas in word play, mimicry, and ridicule, this latter being especially characteristic of the John Canoe dances. [MJH]

john-dory A small marine foodfish (*Zeus faber* or *Z. australis*) of the European Atlantic, the Mediterranean, and Australian seas: also called *Peter's fish*, because it is said to be the one from whose mouth Peter took the coin to pay the temple tax, the spots on either side of its mouth being the marks of his thumb and finger. The name is said to come from the yellow color (*dorée*, gilded, or *jaune dorée*, golden yellow) of the fish, or through humorous allusion to a French privateer in a 17th century popular ballad (Child #284). Compare

HADDOCK.

John Hardy An American "bad-man" ballad about the crime and death of John Hardy, a West Virginia Negro employee of the Shawnee Coal Company, who murdered a man in a gambling quarrel, was pursued by the law, and was caught and hanged at Welch, MacDowell County, W. Va., on January 19, 1894.

John Henry Title and hero of an American Negro ballad celebrating the Herculean Negro hero who pitted his strength against a machine and "died with his hammer in his hand." The story originated during the drilling of the Big Bend Tunnel of the Chesapeake and Ohio Railroad through the rough hills of West Virginia about 1873. The hero's description, given by those who claimed to know him, varies from white to black and from average size to giant. He outdrove a steam-drill with his hammer and steel in the story, but actually he died in a cave-in. There were songs about his strength, and about his prowess with the women of the shanty towns, before the contest with the machine. The whole story carries a double symbolism of potency, based on the standard joke of the sweating, half-clad Negro laborers who sat in the tunnel with the steel bit between their legs while the hammer wielders drove it into the rock. The legend of John Henry traveled through all the work camps of the South, gathering new details to make the hero a rival to Paul Bunyan, Pecos Bill, etc. In Kentucky, he became a white man. On the Mississippi, he was the strongest of the roustabouts. The airs to which the song is sung derive probably from a Scotch tune, and are played on the banjo, the guitar, etc., at folk festivals today.

Johnie Armstrong A Scottish ballad (Child #169) of the treachery of James V of Scotland. Johnny Armstrong, who died about 1530, was called before the king in peace, and then executed. "The execution was probably as summary as the arrest was perfidious." The ballad, of which three versions are known, tells how the king writes in his own hand for Johnny Armstrong to come to see him. Johnny is proud of the honor and traps out his eight score followers to fit the occasion. Before the king he asks the usual pardon, but the king refuses to grant the pardon and orders that he be hanged on the morrow. Johnny turns to his men and says over his left shoulder,

"Asking grace of a graceless face—
Why there's none for you nor me."

He whips out his sword and just misses cutting off the nimble king's head. He and his men fight the king's men, but they cannot prevail against the weight of numbers of all of Edinburgh. Johnny is struck from behind, and bids his men go on fighting, saying

"I will lay me down for to bleed a while,
Then I'll rise and fight with you again."

But he and his men die, and only a little messenger gets away to tell the sad story to the lady.

Johnie Cock A Scottish ballad (Child #114) about a poacher, Johnny o Cockslee's Well. Johnie is being looked for by the foresters. His mother tries to keep him home, but he goes out and makes his kill. Then, sated with the blood of the deer, he sleeps. An old palmer sees him sleeping and tells the foresters. They sneak up on him and cut off his leg (or hit him with several arrows). Johnie Cock awakes and reproaches them:

"The wildest wolf in aw this wood
Wad not ha done so by me;
She'd ha wet her foot ith wan water,
And sprinkled it oer my brae,
And if that wad not ha wakend me,
She wad ha gone and let me be."

But Johnie is not beaten and kills all the foresters but one. Child lists thirteen versions of the ballad.

Johnny Appleseed John Chapman (1774-1845), eccentric, itinerant pioneer nurseryman and colporteur, enshrined in historical, literary, and folk tradition as the American St. Francis and "voice in the wilderness." Beginning in the 1790's, he worked his way west from his native Massachusetts to the Pennsylvania-Ohio-Indiana frontier, planting apple nurseries, spreading "news right fresh from heaven," befriending and winning the respect of settlers and Indians alike, as a mediary and "medicine man." His apple seeds and seedlings, exchanged for food, cast-off clothing, and other articles or for frontier currency, took care of his simple needs, while the profits went into copies of Swedenborg's works, which he separated into parts for wider and cheaper distribution.

Generally pictured as a barefoot, bearded, kindly hermit and tramp, with a tin mushpot or pasteboard peaked cap on his head and a tow-linen coffee sack on his back, he left a trail of legends and anecdotes, folk memories and public memorials, orchards and monuments, not only throughout the Middle West but from coast to coast. He has been celebrated in drama, poetry, fiction, and biography as a saint in action, and memorialized by New Church and horticultural societies as a missionary extraordinary and the patron saint of pomology. As a savior among frontier wastrels, the archetype of "endurance that was voluntary, and of action that was creative and not sanguinary," he occupies a unique place in the pantheon of folk heroes—the poetic symbol of spiritual pioneering, of self-abnegation combined with service, of plain living and high thinking.

He is said to have proved his fortitude in enduring pain by sticking pins and needles into his flesh, and his love of every living thing by extinguishing a campfire to keep mosquitoes from burning themselves in it, and by sleeping out in the snow rather than oust a mother

bear and her cubs from the hollow log they had pre-empted. Other typical scenes and exploits in the Appleseed saga include floating down the Ohio River in two canoes lashed together and containing apple seed salvaged from Pittsburgh cider presses, and saving the people of Mansfield from Indian massacre by running 26 miles to Mt. Vernon for help and returning in 24 hours. Among the oddly assorted memorials to his name are a "Johnny Appleseed apple," "Johnny weed" (the annoying dog fennel, which he planted along with other medicinal herbs), and "Johnny Appleseed Week" (the last week in September, celebrated in Ohio since 1941).

B. A. BOTKIN

St. John's Eve Same as MIDSUMMER EVE.

John the Bear The hero of a number of European tales, or tales of European origin, in the Bear's Son cycle; also, a title often applied to several tale types (e.g. Type 301—The Three Stolen Princesses; Type 650—Strong John) in which the hero is a bear's son. The hero's name is always the same: Juan el Oso, Juan del Oso, Ivanko the Bear's Son. Because of the name of the hero, he is often identified with Jack, the central character of the Jack tales. For example, Teit, in "European Tales from the Upper Thompson Indians" (*JAF* 29:313), speaking of stories of Jack, says, "One of these Jacks was also a grizzly bear." See EUROPEAN TALES IN NORTH AMERICAN INDIAN MYTHOLOGY; FRENCH FOLKLORE.

joiku The most ancient folk tunes of Finland, chiefly laments, in recitative, making use of alliteration, repetition, and variable rhythm. They are also found among some Laplanders.

joking relationship and kinship tabus Many primitive peoples observe certain customs which forbid meeting or speaking or other activities between persons of specified relationships, such as parents-in-law, sister-in-law, brother-in-law, sister, first cousin, etc. The extent to which this avoidance is carried varies from never being permitted to be in the presence of specified relatives, even after death, to merely prohibition or tabu against using their personal names or specified words. Customs of avoidance apply primarily to persons of opposite sex who are forbidden to mate by tribal regulations. Sex relations, however, are not the only factor, since kinship tabus are also found between members of the same sex, as wife and mother-in-law, husband and father-in-law.

The commonest kinship tabus are between parents-in-law and sons- and daughters-in-law. That between mother-in-law and son-in-law is found in Africa, the Americas, Australia, Melanesia, Polynesia, and Siberia. This type varies from addressing the mother-in-law with an appropriate term of relationship to the custom among the Lango Negroes of sending word ahead when a man plans to pass through a village in which his mother-in-law lives in order to insure her not getting in his way or sight. In the Banks Islands a man cannot walk along the beach which has been traversed by his mother-in-law until her footprints have been washed away by the tide.

Brother-sister avoidance, frequently explained as a means of preventing incest, feuds, or to preserve status, is found among the Navahos and the Melanesians. Among the Santals (Bengal) the wife of a younger brother can never remain alone with her husband's older brother. On Leper's Island, New Hebrides, boys reach-

ing their teens leave home or move into the men's house. They can visit their mothers, but must never eat with their sisters.

Among many of the North American Indians a so-called joking relationship exists between certain relatives, which is sharply distinguished from the respect or avoidance relationships which exist between other relatives. A man shows respect, usually, to his sister and to his mother; in many tribes he has actually to avoid any speech or contact with his mother-in-law. To his sisters-in-law, however, and in some tribes to his wife's sister's daughters, he can make teasing or even obscene remarks, and it is normally expected that a tease relationship, at least, be maintained between them. The same holds true in many instances for a woman and her brothers-in-law and her brother's brother's sons. The joking relationship has been postulated as having originated between persons of the opposite sex who were potential mates; often a man was obligated to marry his wife's sister, either during the lifetime of the wife or after her death (sororate), and a woman who was widowed was expected to marry her husband's brother, or in some instances, his son. The joking relationship is nearly always to be found between persons of opposite sex who are related in a certain way; however, members of one clan group sometimes indulged in something of a joking or "belittling" relationship with members of other clans. Clan or gens joking relationships have not been so widely noted as the joking relationship between relatives, which is by no means confined to North America; among the Shawnee of the Eastern Woodlands, however, the gens joking relationship is as emphasized at the present time as is the one between relatives. [EWV]

Kinship tabus are rare in Middle America as compared to North and South America. The mother-in-law tabu has been noted among several remote groups. Among the Sumu of Nicaragua, for example, the groom must not speak to, or even look at, his mother-in-law. She must live in a special room in the hut, and when either one approaches home, he or she must give warning to the other. If they accidentally meet on the trail, she covers her head with a cloth. If the son-in-law purposely looks at the woman, or fails to give the proper warning, this is considered a deliberate insult for which she is entitled to receive compensation. Among the Tarahumara of northwest Mexico a man and his wife's sister enjoy a "joking-relationship" which permits a degree of obscene joking, play, and other liberties normally not condoned between members of the opposite sex. [GMF]

Jonah A Hebrew prophet; the same son of the widow of Zarephath who was raised from the dead by Elijah. While fleeing from the injunction of the Lord to preach in Nineveh, on board ship from Joppa to Tarshish, he was the cause of a storm that imperiled the ship. They discovered by lot that Jonah and his disobedience had angered God and, after trying other remedies to still the sea, they cast him into the water. The storm ceased immediately, but Jonah was swallowed by a great fish. This fish was about to die; its destiny was to be swallowed by Leviathan. But Leviathan fled before the sign of the covenant borne by Jonah, and did not eat the fish. In gratitude, the fish swam with Jonah to all the places he had wanted to see: the source of the ocean,

the place where the Israelites had crossed the sea, etc. And Jonah was comfortable within the fish, for its stomach was large and within it there was a huge diamond that gave light. Therefore God sent another fish, whose insides were very uncomfortable with thousands of little fish, and Jonah was transferred. He then agreed to go to Nineveh and the fish vomited him forth to dry land. Jonah preached well in Nineveh and the city repented its evil ways; but soon the city forgot and was swallowed by the earth. Jonah did not die but was taken alive to Paradise. See SWALLOW STORY.

Jonathan Like the word Yankee, which displaced it, "Jonathan" began as the name of the typical New England countryman, a stock comic figure on the stage and in jest books, and became a nickname of the American people and symbol of the typical American. Like Yankee, too (originally a Dutch term for freebooter which the New York Dutch transferred to their shrewd Connecticut neighbors), Jonathan was a term of derision applied by British soldiers and Tories to Americans during the Revolution. By 1787, when Jonathan first became popular on the stage as the humorous or comic Yankee of Royall Tyler's *The Contrast*, the character had acquired overtones of upstanding simplicity and honesty in contrast to European worldliness and in addition to the raw, bumptious, inquisitive greenness of "Yankee Doodle."

Governor Jonathan Trumbull of Connecticut is generally credited with being the original Brother Jonathan and the proverbial embodiment of Jonathan's practical and common-sense virtues. After Washington had taken command of the Continental army, he placed great reliance on Trumbull's judgment and was heard to remark on at least one occasion, "We must consult Brother Jonathan on the subject," the phrase becoming a byword (Bartlett's *Dictionary of Americanisms*, 1859 ed., p. 50).

From Jonathan is also derived Jonathanism, meaning a Yankeeism or Americanism. [BAB]

jongleur A strolling performer of the Middle Ages whose repertoire included juggling, acrobatics, singing, and playing of instruments for casual entertainment. While the troubadour composed and performed in courtly style, the jongleur was the purveyor of popular song, dance, and tale, and may be credited with much of the transmission of such lore throughout Europe, as well as with the composition of some songs, and the reduction of troubadour works to popular form. The jongleurs' function was taken over to some extent by Gipsies who came into Europe, many as itinerant entertainers, as the wandering minstrel was beginning to disappear.

Jörd, Jördh, or Fiorgyn In Teutonic mythology, a giantess, wife of Odin and mother of Thor: personification of the primitive, unpopulated, and uncultivated earth. See FRIGGA.

Jordan flute A type of shepherd's pipe still played in the mountains of Israel. It goes back to the *hâlil* of Biblical times, actually an oboe, which was played at funerals and in Passover and other ceremonies of the Second Temple. During the war for Israel's independence, players of the Jordan flute mingled the new fighting songs of the Jewish armies and guerrilla fighters with the ancient and plaintive folk songs of their hills.

Jormungandr or Iörmungandr In Teutonic mythology, the Midgard Serpent, son of Loki and Angurboda, brother of Fenris and Hel. Odin, fearing that the monster would cause trouble, threw him into the sea while he was young. He grew until he encircled the earth and could bite his own tail. It is his writhing which causes tempests. Thor tried several times to kill him, but will not succeed until Ragnarök.

joropo The Venezuelan national dance; a fast waltz for a couple. The routine consists of four main figures: in ballroom position, an emphatic waltz turn, stamping on the first beat of each measure; a combination of *zapateado* and scissors, face to face; alternate turning under the partner's upraised arms; stamping *zapateado*, holding hands, and in turn thrusting forward the right and the left shoulder on the stamp of the right and left foot. The joropo is entirely an urban, colonial product, Spanish with a strong flavor of Austrian Ländler. [CPK]

José-Lizorio A Mexican "vulgar" ballad of recent origin, making use of bits and scraps of more ancient material. It is the story of a mother's curse which brings death to her son.

Joseph Hero of one of the great Biblical stories; son of Jacob and Rachel; his father's favorite son. Jacob's gift of a coat of many colors to the boy was the last straw to Joseph's jealous brothers, over whom Joseph lorded it, especially repeating to them his dreams of becoming greater than any of them. So they cast him into a pit, sold him to slave traders en route to Egypt, instead of killing him as they had planned, tore and bloodied the coat, and told Jacob they had found it in the desert and feared that Joseph had been killed and eaten by animals. The traders sold Joseph to Potiphar, a great officer of Pharaoh. Joseph became overseer of Potiphar's house, but fell afoul of the lust of Potiphar's wife. For his refusal of her, she accused him of an attempt on her virtue. Joseph was thrown into prison, where his ability to interpret dreams led him to foretell that the king's baker would die and the king's butler would live. And so it happened to these two, his fellow prisoners. Thus, two years later, when Pharaoh dreamed of the seven fat and the seven lean kine, the butler remembered Joseph. Joseph's interpretation of the dream, with its warning of famine, caused the king to make him the second person in the land. When the predicted famine occurred after seven years of plenty, Joseph had stored up enough grain to sell it to those in need. The dearth was widespread, and Jacob's sons, the brothers of Joseph, came to Egypt to buy food. Joseph recognized them and laid a trap. First, he demanded that they return and bring back Benjamin, who had been left behind with Jacob. Then he put the money they had paid him into their sacks. When they returned with Benjamin, Joseph again did the same thing, but in Benjamin's sack he hid his own silver drinking and divining cup, knowing that when he arrested Benjamin for stealing it Jacob would surely come to Egypt. Judah, the eldest of the brothers, pleaded with Joseph, saying that if they returned to their father without the youth—his father's favorite since the loss of Joseph—Jacob would die of grief. Joseph was unable to contain himself and revealed his identity to his brothers. Then Jacob was sent for, and Jacob and all his tribe came to Egypt and settled in Goshen.

This story, told in *Gen.* xxxix to the end of the book, is an illustration of Type 930, the prophecy that the poor boy will become rich or great. It contains, among its familiar folktale motifs: L425, dream of future greatness causes banishment; K1931.4, hero thrown into pit combined with K2211, the treacherous brother; K512.1, the compassionate executioner and the bloody coat (perhaps more familiar in its *Snow White* variant—K512.2—with the substituted heart); K2111, Potiphar's wife; and H151.4, the cup in the sack.

Joseph is the most important Hebrew figure in the Koran. *Sura* xii, the Chapter of Yūsuf, tells much the same story as the Biblical account, and is one of the most popular tales of the East. Especially is the incident of Potiphar's wife prominent in love poetry. It has been retold in several love songs, in Persian, Turki, and other languages of the Near East. It has even been said that Mohammed warned against women reading or hearing the Koranic account, for fear of its effects on their chastity. Here the name of the Egyptian is Kitfeer and the wife is Zuleika. This childless couple adopted Joseph, but his beauty inflamed Zuleika's desire. She laid hands on him and in escaping he left part of his shirt in her hands. She accused him immediately, but an alert relative of hers (tradition says a baby still in the cradle) pointed out that the shirt was torn from behind, proving that he was escaping. (Compare BOY JUDGE; DETECTIVE STORY.) Zuleika, to still the gossip about her, invited all the women of the city to a banquet, gave each of them a knife, and then brought Joseph before them. Every one cut her hand, paying attention to Joseph rather than to the meat she was supposed to be cutting, and Zuleika repeated once more her desire, now understood by all. Joseph was sent to jail, for a time, until the whole incident should be forgotten. The story follows the Biblical outline, with several variations. Joseph, for example, sends his shirt to Jacob, and when the shirt is thrown in the old blind man's face he recovers his sight. The non-Biblical elements of the story in the Koran have been traced to sources in Jewish apocryphal accounts, to Talmudic tradition, and to Jewish Biblical legends told elsewhere.

Joseph Lieber A German Christmas carol of which both words and music have been preserved in a manuscript of about 1500 at Leipzig University. It was first sung as a part of a mystery play performed around a crib in church.

Joseph of Arimathea According to the account in the Gospels, the one who received and buried the body of Christ. The story is more detailed in Biblical tradition. Joseph, after securing permission from Pilate, took down the body of Christ from the cross, prepared it for burial, and placed it in a tomb which he sealed with a stone. Various accounts mention him as a member of the Sanhedrin, as a friend of Pilate, as a soldier in Pilate's employ, as a secret follower of Jesus. The *Evangelium Nicodemi* expands the story telling of Joseph being imprisoned for what he had done, of Jesus appearing before him in prison, and explaining the symbolism of the ritual of the burial. One sentence of this account is interesting in connection with the Grail story: "... the vessel in which you put my blood when you received it from my body will be called the Chalice . . ."

In the Middle Ages the accounts of Joseph of Ari-

mathea become assimilated with other material and expanded into the Grail story and the whole made finally a part of Arthurian legend. Robert de Boron composed in the late 12th century a long romance, *Joseph*, based on the Christian traditions of Joseph of Arimathea and elements from general folklore. This is a detailed account of Joseph, his service to Christ, his wanderings with his relatives and followers, the appearance of the Grail as they reenacted the Last Supper, and finally the transfer of the Grail from Joseph to Bron, referred to as the Rich Fisher. The whole story is distinctly Christian and symbolic. This story combined by subsequent writers with the account of the Grail in Chrétien de Troyes' *Perceval* becomes the source of Grail stories as they appear in the cyclic romances, and in Malory, Wagner, and Tennyson.

The traditions that connect Joseph with Glastonbury, telling of his founding a church there, planting a tree, the hawthorn, which blooms at Christmas, are late, and probably local additions to the legend. See FISHER KING; GRAIL. [MEL]

Joshua The leader of the Israelites in their conquest of Canaan; the *Book of Joshua*, continuing as it does the story of the first five books of the Bible, has sometimes been considered to form, with the Pentateuch, the Hexateuch. Legend had added to the somewhat vague picture of the Hebrew general. He was swallowed by a whale as an infant and spit out on a distant shore. Kind people raised him, and when he grew to somewhat stupid manhood he followed the trade of public hangman. It thus fell to his lot to hang his father and marry his mother, who was part of his hangman's fee. But as he was about to have intercourse with her, her breasts began spouting milk. Joshua realized that this was a sign that something was wrong. He investigated and discovered the story of his parentage. (There may or may not be Greek influence in this extra-Biblical legend; the resemblance to the story of Oedipus is strong; but abandonment, parricide, and incest are often the lot of folk heroes.)

Though considered a fool, Joshua rose to be Moses' lieutenant, following his master closely and learning by heart all his lessons. As Moses lay dying, he asked Joshua if there were anything he could explain. Joshua replied that, since he knew all that Moses had said, there was nothing that could be added. For this proud answer, God immediately made Joshua forget many points of the law. Then, when the people came to him for guidance in interpretation of the Law, Joshua could not answer. God refused to help; He had given the Law to man, and it was man's to interpret: the Torah itself was revealed, not the reading of it. But to still what might be a revolt against the leader, God ordered an immediate entry into Canaan. The waters of Jordan parted, rose to a height of 300 miles, and while the Ark remained in the bed of the river the Israelites crossed on dry land. Jericho, the first city across Jordan, fell after the Ark and the priests had circumambulated its walls on each of seven days. Eventually the Israelites made themselves possessors of the land (see ACHAN; JERICHO). A battle was fought against the Amorites on a Friday. Seeing that the Sabbath would arrive before the battle ended, and knowing that his army would stop fighting at sundown because of the Sabbath, Joshua commanded the sun, moon, and stars to stand still, using

the Name in his invocation. The sun was minded not to do so, being older than man and also fearing that no one would sing the Lord's praises when it was still; but it did, for 36 hours, and the Israelites won the battle. When the fighting was all ended, Joshua divided the land among the tribes by lot. Joshua planted along the boundaries between the portions a plant that could not be eradicated; the furrows of the plow might cross where it was planted, yet the plant would grow amid the grain and still show clearly where the boundary was.

jota A Spanish folk dance, especially of the old region and kingdom of Aragon: believed to have sprung from the *canario*. It is a courtship dance performed by a man and a woman, whose castanets and footwork effect a rapid and complex counterpoint. It is sometimes classified as a lift dance because of the spectacular finish. See DEATH DANCE. [GPK]

jötunn (plural *jötnar*; feminine *gygr*) In Teutonic mythology, a giant. The *jötnar* were personifications of the inimical forces of nature; their home was Jötunheim to the northeast of Asgard. Some of the giants were normal except for size, some were huge demoniacal beings like the eight-headed Starkadr, while others were monsters as the Midgard Serpent, Jörmungandr.

They can be divided roughly into fire, air, water, and earth giants. Among the fire giants was Surtr with his flaming sword, who guarded Muspellheim and will destroy the world at Ragnarök and overcome Frey. The air or frost giants, the *Hrim-thursar* were Kari (tempest) and his three sons, Beli (storm), Thiassi (ice) with his daughter, Skadi (winter), and Thrym (frost), lord of the Thursar, whose children were Johul (glacier), Frosti (cold), Snoer (snow), and Drifta (snowdrift). The water giants were descendants of Ægir or Hler and Rán. Among their children were Mimir, Gymir, Grendel, and the nine wave maidens, the mothers of Heimdall. The earth or mountain giants were *bergbui* (mountain dwellers), *bergjarl* (lord of the mountains) and the *bergriiser* (cliff giants). Others were identified with particular mountains, as Senjemand, who became so irate at the beautiful giant maiden, Juternajesta, for refusing his suit that he shot a great stone arrow at her. Her lover, Torge, threw his hat in the way and started after Senjemand, who mounted his horse to flee, but the rays of the rising sun caught him and he turned to stone. Today on the island of Senjen one can still see the giant on horseback, Torge's hat with the hole in it, and the arrow, a huge stone obelisk.

The giant Ymir was the first being in the universe. His body, rolled into the abyss by the gods, became the earth and his blood the sea. At that time all of the early giants were drowned in his blood except Bergelmir and his wife, who escaped in a boat. Fornjotnr is sometimes identified with Ymir. Of his three sons, Ægir or Hler produced the sea giants, Kari, the storm and frost giants, and Loki fathered Jörmungandr, Fenris, and Hel.

The giants were not always unfriendly to the gods. Ægir, for instance, gave a banquet in his coral palace to cheer them after the death of Balder. It is difficult to establish clearly whether Loki was of the *æsir* or *jötnar*, because he turns up in the company of each group. He is listed with the *æsir*, but he is also a giant. Several of the gods married giantesses and produced beneficial offspring. Thor, the most relentless

destroyer of giants, married the giantess Iarnsaxa (iron-stone) who bore him two sons, Magni (strength) and Modi (courage). See HRUNGR.

journey to otherworld An incident of folktale, myth, and legend (motifs F0-199) found in all parts of the world. The otherworld may be heaven or hell, an extra-terrestrial paradise or a mysterious land at the bottom of a well or of the sea, across the mountains, on a distant island, etc. The incident attaches itself readily to tale cycles involving quests, e.g. the swan maiden tales in which the husband must journey to the otherworld to recover his vanished wife. In several tale types, however, it forms an even more integral part of the pattern. For example, in *Friends in Life and Death* (Type 470), two friends vow never to be parted (compare ORPHEUS). One dies and the living friend invites him to return for a visit on Christmas (or a living man invites a churchyard skull to dinner). Then the living travels to the otherworld with the dead. Wonderful sights are seen on the journey, but the living returns to this world. Here he finds that countless years have passed seemingly overnight: this is often the case with otherworld travelers. Everyone he knew is dead and this world has changed almost as magically as the otherworld. He dies the next day and is reunited with his friend. See AFTERWORLD; A'IKREN; ARROW CHAIN; ASCENT TO SKY ON FEATHER; ASCENT TO UPPER WORLD; DESCENTS TO UNDERWORLD; DIONYSUS; ECHTRAE CORMAIC; ECHTRAI; FOOD TABU IN THE LAND OF THE DEAD; HOLDE; ING; JACK AND THE BEANSTALK; JOURNEY TO THE LAND OF THE GRANDFATHER; OTHERWORLD; UNDERWORLD.

➤ "True" stories of the visits of living persons who have gone into a trance for a few days and visited the afterworld, often obtaining instructions from the deity in charge of this region for the good of their fellow men, are of frequent occurrence in North American Indian mythologies from many different parts of the continent. The experiences of such persons usually take the following form: he or she "dies," seemingly, and is prepared and laid out for burial. Before burial occurs, however, the subject evinces signs of life, and when he awakens, tells the people of his experiences in the afterworld and the new dance, ceremony, or instructions that have been given to him by the deity in the afterworld. Accounts of such visits to the afterworld are not to be confused with the same sort of visit made by mortals in search of a dead spouse, and detailed in the widely distributed North American Orpheus myth. [EWV]

journey to the land of the Grandfather The journey of the soul to the land of the dead in the west, ruled over by Tamoi (Grandfather), culture hero and mythical ancestor of the Guarayú Indians of Bolivia.

After burial the soul was confronted with two paths, one wide and easy, the other narrow, obstructed, and beset with dangers. The hard one was the right one to choose. First, the soul had to cross a wide river; the ferryman was a native cayman who would not carry the soul across unless he could accompany the cayman chant with his bamboo stamping tube (a significant musical instrument of the Guarayú). A stamping tube was always buried with the dead for this usage. Then there was a second river which could be crossed only if the soul succeeded in jumping on a tree trunk which kept rushing violently from bank to bank. If the poor

soul fell off, he was devoured by palometa fish. Next he came to the home of Izoï-tamoi (Grandfather of Worms) who became smaller and smaller if the traveler was a good soul, bigger and bigger, if his life had been evil. Izoï-tamoi split in half the evil ones.

Once past this place, the soul had to walk through a darkened land by the light of a little burning straw, which faithful relatives always placed in the grave with their dead. Then he came to the ceiba tree, full of humming birds; here he gathered feathers to offer to Tamoi for his headdress. The next danger was Itacaru, two rocks which clashed together in the path. If the soul knew what to say, they would hold back and let him pass. Then he was examined by a gallinazo bird for the perforated lips and ears which every Guarayú must possess in order to reach the happy land. Should he lack these, the bird would lead him astray. Then he had to be tickled by a monkey, and not laugh, and pass the magic speaking tree, and not listen. When at last he arrived in a pleasant lane of flowering trees and singing birds, he knew he had reached the land of the Grandfather. Here he was welcomed, washed in a youth-restoring bath, and lived happily ever after, pursuing activities identical with those of this world. (See Métraux, "Native Tribes of Eastern Bolivia and Western Matto Grosso," *BAEB* 134:105 ff.) See AFTERWORLD.

Jove Jupiter: the genitive form of the name, and specifically in this form, the sky god.

Jovo and His Sister A Serbian popular ballad featuring the dead rider motif. It is a descendant of the Greek *Constantine and Arete*.

Joys of Mary An English carol enumerating the joys of the mother of Christ during the life of her child. The number varies—five, seven, twelve, etc.—but all reflect the folk character of the concept, the admiration of a peasant mother for a son who could read, perform miracles, take his place with the mighty. It is typical of the humanization of the saints which took place in the carols. See CAROL.

Juan and Maria A Filipino (Pampangan) tale embodying the abandoned children, animal helper, and reversal of fortune motifs. Two children, Juan and Maria, driven into the forest because there was rice for two in the house, not four, were adopted by a kind old woman in the woods. By the magical help of a black deer and a fighting cock hatched from an egg which Maria found, Juan eventually became king of the country and Maria married a wandering prince. They succored their wretched parents and forgave them their cruelty. This story unquestionably springs from a metrical romance, *The Life of the Brother and Sister, Juan and Maria, in the Kingdom of Spain*, which just as unquestionably springs from European folktale material. But the divergences of this Pampangan story from the metrical romance, which are as striking as the similarities, serve as an excellent example of what happens to folk fiction in the circuit from folktale to literary treatment back to folk adoption and development. See D. S. Fansler, *Filipino Popular Tales*, *MAFLS* 12, pp. 295 ff.

juba A name used by New World Negroes for various types of dance, and for the song, recitative, or hand-clapping setting the rhythm for a dance. 1) The name in

some of the West Indian islands for the *bele* type of dance. See BELE.

2) In Haiti, a dance of African origin, first known as a work dance, accompanied by a single drum (tam-bour), which is straddled by the performer and struck with hands and heel of foot, and by the clicking of sticks on a sounding board wielded by another player. The name is used interchangeably with *Martinique*, however, which is a dance for the dead, like the *bele*.

3) A secular slave dance of Negroes in Louisiana and elsewhere in the southern United States. The hand-clapping rhythms and rigmaroles were developed to furnish accompaniment for this third type. The hands clap together and slap knees and thighs, with rapid crossing and patting. The rhymes are recited to the clapping and are of this order: "Juba dis and Juba dat/ Juba killed de yellow cat/ To make his wife a Sunday hat?/ Juba!" Another one quoted by W. C. Handy says, "Juba jump and Juba sing/ Juba cut dat pigeon's wing/ Juba kick off Juba's shoe/ Juba dance dat Jubal Jew/ Juba whirl dat foot about/ Juba blow dat candle out/ Juba circle, raise de latch/ Juba do dat long dog scratch." See HAM BONE.

Judas The oldest extant English ballad (Child #23): taken from a 13th century manuscript. This ballad, which may have originated in France, is the only evidence before the 14th century of the existence of the English ballad. Its uniqueness is paralleled by the story it tells, for here Judas has an evil sister who causes his downfall. Jesus gives Judas 30 pieces of silver to buy bread. But he meets with his sister and she steals the money. Judas then sells Jesus to "the riche Ieu that heiste Pilatus" for the sum. When Christ tells the "postles" that he has been betrayed, Peter says he will fight though Pilate come with ten thousand knights.

"Still thou be, Peter, wel I the i-cnowe;

Thou wolt fur-sake me thrien ar the coc him crowe."

Judas Iscariot The great traitor of Christian tradition; the disciple of Jesus who betrayed him with a kiss for the price of thirty pieces of silver. Contradictions or silence in the Biblical accounts of Judas have led to varying explanations of his acts. For example, a DeQuincey essay maintains that Judas thus attempted to place Jesus in a situation where his identity as Messiah would be unmistakably shown. The more common idea is that he was under the influence of Satan, or that he was angered by the waste of money on the oil with which Mary Magdalene washed Jesus' feet when the money might have been used by him for other purposes. The usual popular story of Judas holds that before his birth his mother dreamed that he would be a parricide, commit incest, and kill God. The infant, of the tribe of Reuben, was placed in a chest and set adrift. He was cast ashore, was found and brought up by the king of the foreign country. At that court he led an evil life, killed the king's son, and escaped to Judea. There he entered Pilate's service, and, like all fatal children, fulfilled the terrible prophecy. Since the only one who could save him was Jesus Christ, he joined the followers of Christ and became a disciple. He is always the last of the apostles and, his surname indicating "man of Kerioth," the only non-Galilean in the group. Jesus knew Judas' history, yet he made him treasurer of the group. When Judas identified his Master with a kiss, he accepted the thirty

pieces of silver and then hanged himself on a branch of the Judas tree (*Cercis siliquastrum*), perhaps as De-Quincey says because Jesus did not display his powers, perhaps to seek his Master in the afterworld to gain his pardon. Traditionally Judas bought with the money the potter's field, Aceldama, and died there, falling to the ground and bursting open (*Acts* i, 18-19). Elsewhere in the Biblical story, it is said that he cast the blood-money into the Temple treasury, but that the priests took it out and bought the burial ground with it. Some tradition says that Judas did not commit suicide but was later killed horribly by a chariot. Dante places Judas in the deepest, darkest part of Hell, between the teeth of Satan, where he is eternally chewed. An old legend, used by Matthew Arnold in "St. Brandan," has it that because Judas was once kind to a leper in Joppa, he is permitted out of Hell each year for an hour.

In parts of central Europe, particularly Germany, an image of Judas is burned in the Easter bonfire; even though this custom has disappeared in places, Frazer says, the fires are still called "the burning of Judas." The straw effigy of Judas burned on Easter Saturday was consumed in a communal fire; the ashes or remains were planted on May Day as a preventive against blight. In upper Bavaria, to prevent hailstorms, the men and boys (women were excluded) raced to light the "Judas" fire with fire brought from the holy candle in the church. The winner was given Easter eggs by the women on Easter Sunday. In Corfu, on Easter Eve, Judas is stoned symbolically by all the people, who throw crockery from their houses into the streets. In Spain, Portugal, and Latin America, Good Friday or Easter Saturday is a time of execution of Judas. Effigies are burnt or blown up with gunpowder, or, as in Mexico City, they are filled with candies, coins, etc., and torn apart by the crowds when the bells signal noon. The Judas candle of the churches at Easter time is a huge wooden stick shaped like a candle, placed in the middle holder of the seven-branched candelabrum, and on which are hung wax figures of Judas; the Paschal candle is placed at the top of the Judas candle. The coincidence of the "Judas sacrifice" and the lighting of new fires at Easter time leads Frazer to believe that a much older pagan spring fertility rite lies behind these Christian-in-context customs. In keeping with his reputation, Judas is traditionally pictured as a redhead. Among southern U.S. Negroes, the evil eye sometimes is called the Judas eye. See JACK O' LENT.

Judas tree Any of a genus of trees (*Cercis*), as *C. siliquastrum*, a European species, or the redbud (*C. canadensis*) with profuse red-purple flowers, of the middle and western United States. The name is derived from the tradition that Judas Iscariot hanged himself from this tree. This tradition also attaches itself to many dwarf trees which are said to have once been tall and straight, but became stunted and gnarled for allowing their wood to be used for the Cross of Christ. Judas is usually said to have hanged himself from a tree of the same species. The dogwood, the elder, the ash, the dwarf birch, the fig tree which Jesus cursed and made barren, and many others are mentioned locally in this connection.

Judge Lynch Personification of lynch-law, the trial and punishment of individuals outside the process of

the law, whether without trial or by an extemporary, self-appointed group. Severe, often fatal, floggings, tarring and feathering, rail-riding were originally associated with the system. Now the term in the United States is a synonym for mob hysteria resulting in murder, and especially the hanging and burning of the victim by a mob. Compared with this lawless and chaotic method of exacting "justice," the vigilante spirit makes some semblance of adhering to the law, since its enforcers consider themselves as arms of the law (as opposed to lynchers who think that they enforce justice in the face of the law); members of the pick-up posse of the West actually were sworn in as assistant and temporary officers of the peace; organizations like the Ku Klux Klan moved in opposition to the law but formed a sort of legalistic judicial entity within but not part of the state. Rough summary punishment and destruction of individuals, however, is limited to no country and no people, but takes over in any set-up where the law is either too weak or its officers too numerically insufficient to keep control. Compare, for instance, ROY BEAN.

Lynch-law in the United States is usually conceded to be so named from Col. Charles Lynch (1736-1796), a Virginia planter and judge, famous for his prosecution of Tories during the Revolutionary War, though Capt. William Lynch (1742-1820), of Virginia and South Carolina, also has his supporters as the original. Of each of these Virginia Judge Lynches it is said that he found it difficult to punish wrongdoers because rescue parties of Loyalists or British soldiers would free them while they were being sent to Williamsburg, the official judicial center. He therefore set up an illegal court, and by legal methods punished the criminals; after the war, the legislature legalized the proceedings. But in Galway, Ireland, they will point out to you a "writing" on the wall of the old jail, which testifies that in 1493 Judge Lynch tried, condemned, and hanged his own son for murder. Here evidently Judge Lynch personifies not so much extra-legal trial and mob murder as the depersonalization, inexorableness, and inhumanity of the law itself.

Judgment of God In the Middle Ages, the settling of a dispute by single combat or by ordeal. The referral of difficult decisions to ordeals or chance is customary in all parts of the world. [RdJ]

judgment of Paris In Greek legend, the choice made by the shepherd Paris among Aphrodite, Hera, and Athena. His awarding the apple to Aphrodite, thus choosing love, led to his abduction of Helen and the consequent Trojan War.

Juggernaut Same as JAGANNĀTHA.

juju The spirit dwelling within a made object or fetish, in the belief of the Ibo of the lower Niger. The term is applied generically to the ghosts and evil spirits of Southern Nigeria. In English writing juju is interpreted as being identical with the terms *fetish* and *gris-gris*. [MJH]

jujube Any of a genus (*Zizyphus*) of Old World trees or shrubs. *Z. jujuba* may have been the lotus tree of the Lotophagi or lotus eaters (*Odyssey* xi) which made men lose all memory and desire for home, preferring a life of dreamy forgetfulness (D 1365.1.1; F 111.3). Richard Burton, however, prefers to believe that the men of

the *Odyssey* were the victims of *hashish* or *bhang*. *Z. jujuba* is also the *Sidrat* or Tree of Paradise of the Koran which grows on the highest point of the seventh heaven on the right hand of the throne of God. Each leaf is inscribed with the name of a human being. On the 15th day of Ramadan the tree is shaken, and the leaves which fall contain the names of those who will die during the ensuing year. Water in which the leaves have been steeped is used for bathing a corpse. In Chinese mythology, the "Jujube of 1000 (or 10,000) Years," The Tree of Life, is the date palm. See *LOTUS*.

juke or jook Term used among American Negroes of Gullah strain for a house dealing in liquor and frequented by "bad" women. It is current slang for places of entertainment featuring coin-operated music boxes (*juke joints*), for the phonograph machines provided there (*juke boxes*), and for the casual, loose-jointed style of dancing done to such music (*jukeing around*). Conjecture as to the origin of the word ranges through derivations from a West African word *dzug*, meaning to behave improperly; an Old French and falconry term *jouk*, meaning to roost; a Scottish word, meaning to duck or swerve or hide suddenly. The latter word, *jouk*, may, through its suggestion of agile body movement, ultimately describe the dance style.

Jumala The Finnish word for God. It is mentioned for the first time in the year 1026 and is now in use for the Christian God. Jumala may have been an old Finnish god of heaven, but later became the abstract term for God in general.

jumby Generic term, used by the Negroes of the Caribbean islands, for "spirit," usually the ghost of a dead person. In Surinam, the Bush Negroes worship a deity named Dyombi, associated with the silk-cotton tree, and derived from the term for Dahomean spirits who dwell in the forest and, in the folklore, are associated with hunters who conquered the mythical thirty-horned giants. A synonym for *jumby* heard in the British West Indies, is *duppy*; it is also possible that the Haitian word *zombi* is related to it. [MJH]

Jumpers Members of an 18th century Methodist sect in England, and especially in Wales: so called because of the violent contortions to which their religious ecstasy subjected them. Manifestations of this kind which sweep whole groups, communities, or sections, are now classified as "psychological epidemics" and are being studied. The early 19th century "jerkers" of Ohio, Kentucky, and other parts of the southern United States were so named for the same kind of violent and involuntary manifestations. It is still not uncommon to see "jerkers" at revival meetings or among certain sects, especially in the South. Compare *POSSESSION*.

jumping dance English term for one of the two special ceremonial dances of the Yurok and Hupa Indians of northern California. The Yurok *wonikulego* (they leap up) recurs at every festival. It is a simple line dance with the following simple steps: 1) Raise the right hand with a dancing basket, swing down, bending the knees so the fingers touch the ground, then jump half a foot into the air. 2) Stamp as the basket descends on the beat of the music, then jump on the off-beat. The Hupa *tunchitdilya* (autumn dance) is the October performance; the *haichitdilya* (winter dance) is the winter per-

formance, ten days in the hut and ten days outdoors. The costume consists of a buckskin headband with woodpecker scalps and a stick topped with a plume. Each ceremony starts with a long formula, and progresses from village to village. There is an increasing crowd of dancers and of successive leaps, culminating in as many as forty leaps. The display of wealth is reminiscent of the potlatch customs of the northwest coast. The jumping dance is associated with the deerskin dance. Both serve to drive away sickness and to aid in the increase of salmon, the chief source of food. [CPK]

jump-up or calypso jump A social dance of Trinidad: a recent fad. It is equally popular in the orgiastic Carnival celebrations and in more sophisticated gatherings at clubs. Any good calypso song can start the dancers in the canter step which carries them all over the floor. One couple starts in promenade position; one couple after another hitches on till a merry line, dozens wide, may be moving around the room. In the Carnival dances, enthusiastic dancers break away from the line and jump up, often in high leaps. [CPK]

junačke pesme Men's folk songs or ballads of Yugoslavia: heroic and narrative. See *BALLAD*.

juniper Any of the evergreen pinaceous shrubs (genus *Juniperus*) whose berries are used in making gin; also, a leafless shrub (genus *Retama*) mentioned in the Bible; occasionally, the American larch, tamarack, or hackmatack (genus *Larix*). In Iceland it is believed that the juniper and the rowan cannot grow together because they generate too much heat, one or the other will die. If branches of both are taken into a house, the house will burn down. If rowan wood is used in building a boat, it will sink unless a piece of juniper is used also. In Wales one who cuts down a juniper bush will die within the year. In some places a branch of juniper preserves the stables from demons and lightning; elsewhere, especially in Aberdeenshire and among the Czechs, the stables are fumigated with burning juniper.

The oil of the berries is used as a cure for toothache and diseases of the gums. The ashes of the wood cure dropsy, scurvy, palsies, and falling sickness. The Hopi Indians eat the boiled greens for sour stomach, constipation, earache, and sore throat. The berries, leaves, and bark are variously used in Europe and by the Indians of North America to cure snakebite, the plague, colds, shortness of breath, colic in any form, chronic rheumatism, chlorosis, venereal diseases, and to strengthen the optic nerve.

In Newfoundland the larch is called juniper and since its branches are said to always point towards Christ (the East) it guides men in the woods. They say that you will always find water under this tree. Bears and wolves fear it, hence hunters surround their game with it.

Juniper Tree Title of a European folktale (Grimm #47; Type 720) in which a stepmother kills her husband's little son and serves his flesh in meat pie to her husband. The father, unknowing, eats heartily of the dish and throws the bones under the table. The little sister gathers up the bones in a white kerchief and lays them in the juniper tree in the house yard. A beautiful bird rises from the bones and flies away singing. His song tells the story: "My mother killed me/ My father ate me/ My little sister gathered together my bones/ In a

white silk kerchief/ And laid them under the juniper tree." The bird sings this song to a goldsmith and is rewarded with a golden chain; he sings it to a shoemaker and receives a pair of little red shoes; he sings to the miller's men who are hewing a new millstone and receives the great stone as reward. Then he flies home to the juniper tree and sings again his sorrowful story. The father hears it, runs out of the house to listen, and the bird drops the golden chain around his neck. The little girl runs out to listen and receives the pretty red shoes. At last the stepmother alone in the house cannot bear the song any longer and runs out; the bird drops the millstone on her head and that is the end of her. When the father and little sister look to see what has happened, the cruel stepmother is dead and the little boy stands before them safe and well.

In the Magyar version of this story, outlined by MacCulloch in his *Childhood of Fiction*, p. 296, it is a mother who kills her own child, stews him, and sends a portion of the stew to her husband plowing in the field. The little sister hides the bones in a hollow tree. They are transformed into a bird, who sings his telltale song here and there, receives as gifts a cloak, a stick, and a millstone. The little sister receives the cloak; the father gets the stick to support his failing steps; the cruel mother is killed by the millstone. There are Scottish, English, French, Scandinavian versions of this story. See SINGING BONE.

Juno In Roman mythology and religion, the female counterpart of Jupiter; the queen of heaven; the protectress of women: identified with Hera. Juno, under some of her aspects, accompanied every woman throughout life from birth to death; she was thus a kind of ministering spirit, and Junos were spoken of for women as *genii* were for men. One of Juno's especial concerns as a goddess of fertility was childbirth, and *Juno Lucina* (bringer of light) was invoked at that time. For a week after a birth there was a table laid for her in the home. The *Matronalia*, on March 1, was celebrated by matrons in her honor. Juno also protected marriage and its sanctity; hence, a marriage in the month of June (thought to be originally called *Junonis*) was most auspicious. As a result of Juno's hatred for illicit sexual pleasures, a law of Numa decreed that no prostitute might touch her altar under penalty of sacrificing a female lamb to the goddess.

Juno was also a sky goddess, parallel in some ways to Jupiter, although as *Juno Regina* she seldom hurled bolts. She was the goddess of the moon; the *kalends* (time of the new moon) were under her protection, and this seems to link her rather more closely with Janus than with Jupiter.

She presided over all human doings, both private and public. As *Moneta*, she gave counsel; her temple on the Capitol contained the mint. *Juno Sospita* developed from the rescuer of imperiled women to the guardian of the state. The bird of Juno was the peacock. Compare EILEITHYIA; GENIUS; HERA; JUPITER.

juoigen The sacred chant of the Lapps: a magical incantation or prayer used to attract the spirits of dead ancestors, whom the Lapps worship and invoke and propitiate. The spirits ignore the daily speech of men, but they will heed extraordinary sounds or words. For this reason the juoigen is couched in a vocabulary out-

side the scope of normal everyday usage. No translation of it has ever been vouchsafed to an outsider, but it is taught to every male Lapp, almost in infancy. It loses its efficacy if the chanter is not letter-perfect or if he forgets even one word.

Jupiter or Iuppiter In Roman mythology and religion, the sky god; the god of atmospheric and celestial phenomena; hence, the chief god of the pantheon: identified in the later Greco-Roman synthesis with Zeus, and acquiring many of the characteristics and myths of the Greek god. The earliest forms of the name were *Diouis pater*, *Diespiter*, *Diouis*: all the names seem to stem from a root meaning "light." As the god of lightning, he was anciently represented as a flint, which strikes sparks, and which Jupiter is often represented as carrying. The oath *per Jovem lapidem jurare* was used in the making of treaties, grass from the temple precincts and the flint (*lapis silex*) being parts of the equipment. Places struck by lightning were sacred to him and protected by walls. Many of the epithets of Jupiter stem from his activities as causer of the phenomena of the air: *Jupiter Pluvius*, or *Tonans*, or *Fulgurator*, or *Elicius*.

Jupiter was the guardian of honor from the very beginning, being protector of oaths, treaties, marriage: as *Fides* or *Dius Fidius*, he saw to it that these social bonds were kept. The Tarpeian rock, on the Capitol, where his temple stood, was the place from which traitors were flung. *Jupiter Optimus Maximus* protected the city from this pinnacle. The temple to the "best and greatest" of the gods on the Capitol was built towards the end of the monarchy, and Juno and Minerva were associated with him there under the Greco-Etruscan influence. His ties with Juno, apart from this influence, are very slender. The anniversary of the dedication of the temple, September 13, became a date about which the Roman games centered. To the temple generals came in triumph to celebrate with sacrifices. *Jupiter Stator* prevented flight in battle, and Romulus was said to have invoked him successfully in a battle against the Sabines.

Jupiter determined human affairs, and with Janus, the instituter of things, Jupiter was invoked in all undertakings. He sent prodigies and omens, for example the flight of birds which were known as Jupiter's messengers. He was early the protector of the vineyards and the harvest, and as in his celestial aspect presided over seasonal change. The beginnings of periods of time were sacred to him and sacrifices were made at such times in his honor. The *ides* of every month (the time of the full moon) were dedicated to him.

His priest was the *flamen dialis*. Jupiter was identified with Zeus and with Amen as the Romans became acquainted with the religions of other lands. Almost all of the personalized, familial stories of Jupiter are simple transplantations of Greek myths of Zeus. However, the association of *Jupiter Feretrius* with the sacred oak on the Capitol, though resembling the parallel Zeus-oak relationship, is more ancient than Greek influence; the temple of Jupiter Feretrius probably was Rome's most ancient. The name *Jove*, often used synonymously with Jupiter, is the genitive of the name, being perhaps closer to the root-original than is Jupiter, and when used nominatively refers to Jupiter as the sky god.

Juruwin or Jūrua Andaman Islands evil spirit of the sea: one of a group of invisible beings (sometimes de-

scribed as white) which live in the sea with their wives and children. They eat fish, devour the bodies of drowned men, and sometimes attack fishermen with invisible spears which cause cramps or sudden illness. *Juruwin* is the South Andaman term; *Jurua* is used in the northern part of the islands. See LAU.

Juskaha or Djuskaha Seneca Indian culture hero; the second of twin boys, Othagwenda (Flint) and Juskaha (Sapling), born to the young woman magically impregnated by West Wind. Flint was hated by his grandmother and cast out of the lodge soon after birth, but his brother Juskaha found him in a hollow tree and brought him back. After they were grown the boys separated, to increase the size of their earth-island. Later each inspected the other's work. Othagwenda had made a giant mosquito which Juskaha rubbed down to a small size; he also modified other of his brother's troublesome creations so they would not harm man. Othagwenda, on the other hand, spoiled many of the good things Juskaha had made. The inspection of each other's work resulted in the twins' quarreling and the death of Othagwenda. See ATAENSIC; DUAL CREATORS. [EWJ]

jus prima noctis or droit de seigneur The right of the lords of manor to take the virginities of all girls in their territory on the girls' wedding nights. Catholic authorities and some others are vehement in their assertion that this is a fable of modern date "of which not the slightest trace is found in the laws, histories, or literature of any country in Europe." A passage from the Old Irish *Book of Leinster*, however, says that fathers with marriageable daughters took them first to pass the night with King Conchobar, which has led to the report that Conchobar had the virginity of every maid in Ulster. A number of peripheral facts throw light on the subject. The rupture of the hymen marks an important transition

and hymeneal blood is dangerous. The ceremony should therefore be performed only by persons endowed with virtue: priest, noble, stranger. Some peoples are said to regard the children from these unions as their only legitimate offspring and that these children inherit the divinity, magic, or virtue of their fathers. Some peoples require nubile maidens to engage in prostitution and in this way, incidentally, help to pay for the cost of the wedding. In Cambodia the defloration has been compared with the ceremony of confirmation in occidental countries. The folklore of the *jus prima noctis* is clearly a special case of the folklore of virginity. [RDJ]

Just Like Me A catch tale in which the listener is enjoined to say "Just like me" at every pause of the narrator: "I went up one flight of stairs" / "Just like me" / "I went up two flights of stairs" / "Just like me" / . . . / . . . / . . . / "I went into a little room" / "Just like me" / . . . / . . . / "I saw a little monkey" / "Just like me"—or "you" according to the alertness of the listener. See ADAM AND EVE AND PINCH ME.

Juturna or Diuturna In Roman mythology, a nymph, the personification of healing springs and wells; associated with the Lacus Juturnæ near the temple of Vesta in Rome. In Virgil, she is the sister of Turnus, given immortality by Jupiter in return for her virginity. She was also called the wife of Janus and mother of Fontus. On January 11, the Juturnalia was celebrated in her honor by workmen on aqueducts and wells; at the Volcanalia, August 23, she was celebrated, along with Vulcanus and the Nymphs, as a protectress against fire.

Juventas An early Roman goddess of youth: identified with Hebe. The temple of Juventas on the Capitol was more ancient than that of Jupiter; another temple stood in the Circus Maximus.

K

ka In ancient Egyptian religion, an active aspect of the personality; an entity associated with the physical body (born at the same time, as a kind of twin), protecting and motivating the person: somewhat akin to the Roman conception of the genius. The ka dwelt in the body and in images, and survived in its home, the tomb. The ka retained consciousness after death and went before into the afterworld to prepare the way for the dead person. Elaborate funeral offerings were made to it and a kind of deification, an equation with the idea of godship, developed. Certain Egyptian kings had many kas; and in this sense the ka was a double or alter ego or guardian spirit. Animals and objects were also believed to possess this spiritual double; the ka of the person ate the kas of the offerings left in the tomb. In later thought, the ka, though separate, became conceived of also as the human indwelling soul. See BA; WRAITH.

Ka 1) Literally, who: the unknown god of Hinduism; an abstraction and deification of the interrogative pronoun by the authors of the various *Brāhmaṇas*. In the *Kaushitaki*, *Śatapatha*, *Tāndya*, and *Taittiriya Brāhmaṇas*, Ka is identified with Prajāpati. Thus later, in the

Purāṇas, Ka has developed into a supreme deity; and in the *Mahābhārata* he is identified with Dakṣa, the creator.

2) The name of Chinūn Way Shun (primordial creator of all nats, in Kachin [Burmese] belief) in his aspect of the spirit of tilth. He receives special sacrifice and invocation to send a good harvest at the general prayer-place (*natsin*) outside each village before sowing time. The chief, *tumsa* (exorcist), and *kyāng-jong* (butcher) are the only members of the community permitted to be present at this ceremony. Following the sacrifice the *tumsa* determines which household shall sow first. After they have sown, two days must elapse, then offerings of eggs and liquor are made and the community sowing begins. In Karen belief, Ka controls forests, streams, and houses, and causes illness.

Kaaba Literally, the cube or cube building; the sacred shrine of Islam at Mecca, standing in the courtyard of the great mosque, and containing as part of its walls the Hajarū 'l-Aswad, the black stone. The Kaaba, about 30 feet high, was first erected by Adam, destroyed and rebuilt several times, and finally cleared of its idols by

Mohammed when he conquered Mecca. The black stone, probably a meteorite and much older than Islam, is an irregular oval about seven inches in diameter, and set in gold at the southeast corner of the Kaaba. When Abraham and Ishmael, in obedience to God's command, rebuilt the Kaaba, they dug down to the foundation laid by Adam. But only three stones were at hand to mark the corners. Ishmael went off to search for another stone, and met the angel Gabriel, who gave him the black stone. Mohammed said that the stone originally was white, but that pilgrims touching it had turned it black with their sins. When the Kaaba was being built in Mohammed's youth, a dispute arose among the various tribes about who was to put the black stone in place in the wall. They agreed to let the first person to enter the gate arbitrate. Mohammed was the man; he had the stone placed on a cloth and raised to the correct level; then he set it in place himself. The Kaaba and its stone is the focal point of Islamic worship. Towards it Moslems face in prayer; once in his life the Moslem makes his pilgrimage to Mecca. The stone, touched or kissed during the circuit of the Kaaba, will on the Judgment Day have eyes to recognize those who have kissed it, and its tongue will sing Allah's glory. The Kaaba was the place where the Arab tribes kept their idols; Mohammed destroyed the idols, but made the shrine, through the pilgrimage, a point of unity among the tribes. See HADJ; HOBAL.

Kabandha In Hindu mythology, a huge, hairy, headless Rākshasa, with a mouth in the middle of his belly and one big eye in his breast. His terrible deformity was the result of a previous quarrel with Indra, who pushed his head down into his body; another story says it was caused by the curse of a sage. Kabandha was killed and burned by Rāma. From the fire emerged Gandharva (Kabandha's original form before deformity) who advised Rāma in the war against Rāvaṇa.

Kabīr (1450?-1518?) A religious leader of the 15th century in the Punjab: hero of many popular parables and moral tales today. A famous banyan tree near Broach is said to have sprung from the tooth-twig of Kabīr. [MWS]

Kaboniyar or **Kabonian** Tinguian (Philippine Islands) deity or culture hero, sometimes placed above Kadaklan, sometimes identified with him, but holding a much stronger place in the affections of the Tinguian people. He gave the people sugarcane and rice, taught them to plant and reap, showed them their ceremonies, and how to foil the evil spirits. He also taught them the words of the sacred magic formulas (*diams*) used in their rites and ceremonies.

Kaboniyar lives in the sky or in a cave near Patok, from which come the talking jars and the gongs used in dances. In Tinguian mythology he married a Tinguian woman in the first times. He also entered the body of a woman and taught her how to cure illness.

kabuki A form of Japanese drama based on dancing and singing, completely fanciful and decorative in content and presentation. Kabuki was created three and a half centuries ago by an actress-dancer, Okuni Izumo. It was at that time a type of primitive dance, *Nembutsu Odori*, or prayer dance. For a time it was performed entirely by female dancers, or geishas, but has now, together with other features of the great classic Nō drama, adopted the convention of performance entirely by male

actors. Female parts are taken by special actors, called *onnagata*.

The form of the stage and the various techniques are highly conventionalized and peculiar to the kabuki. Many features betray their origin in puppet plays (*mahuronmono*). In fact, many of the best dramas have been taken over from the puppet play, which originated in the 17th century (*ningyō-joruri*, the telling of a story by a chanter).

A characteristic feature of the kabuki stage is the "flower way" (*hanamachi*), a passage leading to the stage through the left section of the theater, an important asset in the creation of the mood. The *kurogo* (prompter) also adds to this unreality. Dressed in black (*kuro* means black) he frequently stands behind the chief actors. He is assisted by a stage helper, or *koken*, who, however, shows his face. Other devices are the revolving stage, the *chobo* (ancient music) played from the *geza* (music box), and the frequent background sound of the *ki* (wooden clappers).

Artistic unreality is emphasized by expressive postures, called *mie*, underscored by the *ki*. Dumb show (*dammari*) also makes extensive use of stylized gesture, in grotesque, colorful, and nonsensical scenes. *Mitiyuki* and *tatimawari* also portray stylized scenes of love and sword play; *monogatari* depends for its effect largely on posturing. All of this dance-type action is performed to musical accompaniment.

Of the original eighteen best kabuki plays ten are still performed; the most famous are *Sukeroku* and *Kanjinchō*. In the first the hero Sukeroku stands for the people's rights against the tyrant samurai, Okyu. The *jidaimono* are plays with historical backgrounds, or puppet-play origin, and *sewamono* and *kizewamono* are genre plays. Many of them contain scenes of violence, of death, of suicide (*seppuku* or *hara-kiri*), of murder, of sword play, of the inspection of a severed head, and of vendetta.

Symbolism is the keynote of kabuki. The scenery, too, contributes to this, and the splendid make-up of the actors. The actor's face, while not masked, is painted with decorative yet expressive patterns. Even scenes of tragedy and horror contribute to the beauty and the esthetic effect of this form of traditional drama. [CPK]

kabyar or **kebiyar** A Balinese sitting dance performed by one man. He never rises from the floor; the legs are not used; the dance involves the use of torso muscles, arms, and hands, and emphasizes facial expression. It is performed to full Balinese orchestra and interprets with utmost sensitivity all the nuances of the moods of the music. This is a modern dance, introduced to Balinese audiences by a young man named Mario, who made it and himself famous. The dancer must have, first of all an expressive face, and sensitivity and intensity of personality, plus superlative technical training. Since Mario's time few dancers have been found equal to the kabyar, but occasionally there is one.

kācā "Kitty": a Bohemian waltz-type couple dance, performed in a double counterclockwise circle. Holding inside hands, the dancers swing their arms freely as they turn from and towards each other. In the second part all circulate in a grand right and left, with a waltz pivot on each meeting of new partners. Finally a double chain weaves in and out, in a grand right and left by couples,

The title refers to the words of the accompanying song: "Red and blue violet, where did you find it? . . ." Refrain: "Run away, Kitty, run away, while the old cat is chasing you." The words do not, however, call forth mimetic actions. [GPK]

Kachawharr A dance-song of the Diegueño Indians of Southern California, performed at Jacumba. It is performed at sunset, accompanied by the rhythmic rubbing of a stick over a basket, and dramatizing a religious story of two gods, brothers, who arose out of the ground near a hot spring at Jacumba. As told in the chant and acted out by the dance, the events include the building of a house, the coming of rain, the harvesting of tobacco, seeking mates, games of forfeit at the end of which one brother is killed, the entrance of Coyote, the departure of the dead brother as a bird and of the other to join the Maricopa Indians.

Kaches Literally, the brave ones: a group of spirits of Armenian belief. The Kaches were incorporeal beings who lived in stony places, waged wars, hunted, stole grain and wine, and tortured men. They have been superseded in modern belief by the devs.

kachina A term applied by the Hopi and other Pueblo Indians of the American Southwest to supernatural beings, the mythical ancestors of the present human beings, who revisit the earth for half of every year during the winter months, and then retire to the spirit world for the rest of the year. The arrival and departure of these beings, of which there are a host, are the cause for dramatic ceremonies among the Pueblo peoples. While on earth the kachinas are impersonated by male dancers wearing masks (these latter are also referred to as kachinas), who perform in many of the Pueblo dances. It is a fundamental Zuni belief that kachinas when killed become deer.

The term *kachina* is also used for the small wooden dolls, painted and decorated to represent individual kachinas, which adults carve and give to children during the season when the kachinas are above ground. In some pueblos the children are led to believe that it is the kachina spirits who will whip boys at the boys' initiation rites—actually, of course, a male impersonator of the kachinas does this.

The literature of the Pueblo kachinas is large. See Elsie Clews Parsons, *Pueblo Indian Religion*, 2 vols. (1939); Jesse Walter Fewkes, *Tusayan Kachinas*, *RBAE* 15 (1897), and *Hopi Kachinas*, *RBAE* 21 (1903). [EWV]

 In ancient times the kachinas used to come to the pueblos in person in the same guise now worn by the dancers. They brought rain, corn, and melons. When they ceased coming they gave the people their masks, so that now men can impersonate them, or be identified with them by wearing the masks. The *koshare* and *kurena* used to accompany them, looking like the dancers of today.

The transforming masks are completely unrealistic. They are made of rawhide, mostly in "inverted bucket" shape, covering the head; a few are dome-shaped or cover only in front of the face. There are dozens of types of designs, each with a specific name and symbolism. Triangular or round eyes predominate, and black and green coloring. Many have horsehair beards, and spruce or wildcat fur collars. Some have snouts and one or two ears. Many are crowned with an arc of eagle feathers, or

with stylized horns (antelope and deer kachinas), or occasionally painted with rainbow symbols. They are in a word, reminiscent of the Navaho *yebechai* masks. This extreme conventionalization is a Hopi characteristic. The rest of the costume also suggests Hopi provenience, the kilts and fringed belts, with accessories of animal fur and spruce. *Manas* or maiden kachinas, impersonated by men, wear white half-masks, hair-whorls in Hopi style, black wool dresses, and goat-hair bangs.

All mature men and boys belong to the kachina societies, which correspond to the two moiety kivas—turquoise and squash. San Felipe alone has a third group, *ya'ctsa*. Initiation is accompanied by ordeals of whipping, etc., at Acoma and Zuni, but not at San Felipe. The initiated are called *si'cti*, "those who know" (i.e. that the kachina are men).

For each dance event there are four preparatory days spent in retreat, preparing initiates and paraphernalia, and painting masks and practicing dances. On the fifth day all emerge into the plaza, the medicine men in the lead. They line up in two groups, the line dancers in a file, and the side dancers attending specific line dancers. The former all wear identical masks, the latter different kinds. Maiden kachinas line up behind the men, near the wall. The leader starts the step, shaking his rattle—a stamp and knee raise, stamp and heel raise, incessantly repeated. Shaking rattles and singing their own accompaniment, the kachinas prance in unison never moving from the spot, except for an about-face on signal. They dance in sunwise circuit at all four walls of the plaza, four times in the morning, four times in the afternoon. They give away corn and melons and seeds to the spectators, and sometimes kachina dolls. They receive aspersions of meal and water from the medicine men. They return to the spirit land and give their masks back to the spirits.

In most pueblos they appear at various times all the year round, to produce rain or snow and insure the growth of crops. At Hopi they go away in July at the Niman ceremony and are replaced during the summer by the Snake-Antelope or Flute societies. They officiate at the February *powamu* ceremony. In Zuni they are prominent in the *kokochi* at summer solstice and in the dance series by the summer and winter kivas. They are most spectacularly welcomed in the advent of the kachina or *shalako* ceremony. Along the Rio Grande they dance sporadically, in the deer dance of Santa Ana for rain, in September or October for harvest.

The masked dances are not open to visitors. But unmasked dances, which can be witnessed, have the same form. These "good" kachina or "dark" kachina dances are commonly held in the early spring. At Taos, Isleta, and the Tewa pueblos, they are termed Turtle Dances. At Isleta they also form part of the Spruce ceremony. They often dance in connection with curing ceremonies. In fact, some of the masks have special curative attributes, particularly the Long Horns with their bearlike tread and call. The *koshare* and *kurena* accompany them in turn. At times the kachinas take part in the horseplay of these clowns. At Zuni during intermission the *koyemshi* clowns hold forth. At Acoma a special drama is enacted, an attack of fructifying blows called *shuracha*, made realistic by the wearing of blood-filled bladders.

The kachina are entirely beneficent spirits and are regarded with affection, in contrast with the much-

feared koshare. The uninitiated, including most women and all children, firmly believe that the dancers are the actual spirits. The impersonators believe in their divine identification, though no element of trance enters into this highly ritualized institution. [GPK]

Kadaklan The greatest of the Tinguian (Philippine Islands) deities. Kadaklan lives in the sky, and created the earth, moon, stars, and sun. By his wife, Agemem, he had two sons, Adám and Balujen, whose duty it is to see that Kadaklan's commands are obeyed. His dog, Kimat, is the lightning, which also sees that his desires are fulfilled, for Kimat will bite a house, tree, or field whenever Kadaklan desires that a special ceremony be performed. During storms Kadaklan amuses himself with his drum, the thunder. He is held in great esteem by the Tinguians, but is not personalized, has little hold on their affections.

Kaddish The Jewish prayer for the dead, recited by male mourners twice a day for a year; also, a male child who will recite the Kaddish for a deceased parent. The prayer, specifically called the Mourner's or Orphan's Kaddish to distinguish it from the use of the prayer at other times, is in Aramaic with the exception of the closing phrase. The Kaddish is said at the burial, and after that for eleven months. This period was originally twelve months, the period traditionally that a soul spent in Gehenna, but it was thought to show a lack of respect for the parent to admit that the full term in Gehenna was necessary, and the period was lessened to eleven months. The Kaddish is also repeated every year on the anniversary of the death of the parent, the *Jahrzeit*.

Kadrū In Hindu mythology, one of the thirteen daughters of Daksha who were married to Kaśyapa; the mother of the 1000 Nāgas (serpents) whom she bore in order to people the valley of the Kashmir. See GARUDA.

kagami The Japanese word for "mirror": an object often mentioned in Japanese mythology and fairy tales; also, one of the "Three Imperial Jewels," the regalia of Japan. See JAPANESE FOLKLORE. [JLM]

kagura An ancient Japanese dance form of the Shinto religion; one of the forms of *mai*, slow dance. At Shinto shrines priests enact the myth of the sun goddess Amaterasu, who was recalled from a cave by the dancing goddess Ume-no-utsume. More commonly the dancers are very young priestesses. They dance sedately in brilliant white to their own accompaniment on a kind of sistrum and to *koto* playing by an elder priestess. *Mikagura* is (or was) the ceremony performed before the Imperial sanctuary at harvest festivals or on accession to the throne. Sometimes the dancers are masked. When not masked they are termed *sumen*. The *kagura* introduced the Japanese custom of manipulating props while dancing. These ritual objects are called *torimono*.

In country festivals a joyous note is introduced in the music of the *daikagura* and *sato kagura*. The instruments are a flute and large drum, perhaps also brass and wooden clappers of the kind used in the *kabuki*. According to the number of musical pieces furnishing the accompaniment, the *kagura* is termed the seven-fold, twelve-fold, twenty-five-fold, and seventy-five-fold *kagura*. [GPK]

Kāh-gyur, Kāng-gyur, or Kanjur The scriptures of Lāmaism. The name means "translated commandment"

and is thus used because the books were translated from Sanskrit or (sometimes) from Chinese. It is divided into three parts (corresponding to the Tripitaka of the southern Buddhists): the *Dul-va* or Discipline, the *Dō* or Sermons, and the *Ch'os-non-pa* or Metaphysics. These are believed to be antidotes for the three original sins: lust, ill-will, stupidity. The *Kāh-gyur*, together with its commentaries, the *Tān-gyur*, is worshipped with incense and the burning of lamps. Even fragments of books or manuscripts containing holy words are treasured and it is profane for anyone to throw on the ground even a fragment of holy writ. See DÖ-MAÑ.

Kaīānians or Kayānians In Iranian mythology, a dynasty of legendary kings, originally not followers of Zoroaster: probably the ruling families of various Iranian tribes. The first king of the dynasty was Kavi Kavāta who is said to have been abandoned on Mount Alburz. There Rustam went to find and make him the Iranian sovereign. His successor was Kavi Usan (Kai Kāūs) to whose wonderful ox disputes over the boundary between Iran and Turan were referred. The greatest of the Kaīānians was Kai Khusrau or Haosravah who waged war on the Turanians. The last of the dynasty was Vishtaspa or Gushtasp who was converted by Zoroaster. The legends of these rulers were coordinated by the poet Firdausī in the epic *Shāhnāmāh*.

kakamora Melanesian supernatural beings of Guadalcanal and San Cristoval. They vary in height from six inches to five feet, have long, sharp nails, straight hair, are as strong as three or four men, wander in the forest, live in holes, caves, and banyan trees. They have a king and queen, are usually harmless, but are fond of deluding children. Sometimes they kill and eat men. They fear anything white. Stories are told of the capture of the *kakamora*, indicative that they are now extinct as far as Melanesian belief is concerned. On San Cristoval they are called *pwaronga* or *kakangora*.

kakko A small cylinder drum of Japan, set on a low stand for playing. It is characteristic of the "left music" of Japan, that derived from Chinese and Indian influences, as differentiated from the "right music" of Manchurian and Korean influences, a distinction dating from the 9th century.

Kāla The Black One: in Hindu mythology, time; male counterpart of Kālī, a form of Śiva as creator of the universe, and also its destroyer (death), for he draws it in and swallows it. The universe is born again after each destruction, but the wise who understand all things attain union with the creator and are not reborn.

kalaḷōa In Kulaman (Philippine Islands) belief, the soul which is the cause of success or failure. The *kalaḷōa* are conceived as two in number, one on the right side and one on the left. At death the right *kalaḷōa* goes to the sky; the left *kalaḷōa* goes to Kilot, the underworld. Illness is due to evil spirits or to the desire of the *kalaḷōa* to leave its abode.

Kālanemi In the *Rāmāyaṇa* a Rākshasa, uncle of Rāvaṇa. He attempted to kill Hanumān. To Hanumān, however, the true nature and purpose of Kālanemi was revealed by a crocodile maiden whom he disenchanted; whereupon he seized Kālanemi by the feet and hurled him to Lankā so that he fell at the feet of his co-conspirator, Rāvaṇa.

kalau (singular *kala*) Generic term for all the evil spirits and powers of Koryak folk belief: among the Paren also termed *kalak* or *kamak*, among the Reindeer Koryak *ñe'nveticñin* or *ñi'nvit*. They are often thought of as terrible cannibals, more often just as supernatural killers. They are sent to this world by the supreme being to torment wrong-doers, or to cause disease and death and thus test the strength of the incantations of the people against disease and death. The underground kalau come out of the earth and cause headaches by knocking people in the head; they bite people and thus cause swellings, or cause sores by pinching pieces of flesh out of them. Earth-dwelling kalau cause diseases by merely breathing among the people with their poisonous breath. Sometimes these kalau are visible in animal shape; sometimes they look like people with pointed heads. Big-Raven is forever at war with them. There are numerous myths relating how Big-Raven gets the best of the kalau. See Waldemar Jochelson, *The Koryak* (vol. vi, part 1, p. 27 ff., *Publications of the Jesup North Pacific Expedition*, Leiden and New York, 1905).

Kaleva The great national hero of Finnish and Estonian folk poetry. Many attempts have been made to explain the origin and meaning of the word. M. A. Castrén considered it as synonymous with "hero" in general. A. Schiefner, and later Julius Krohn, paid attention to the similarity of the Finnish Kaleva with the name of the Russian hero Kolyvan and Kolyvanovitch, son of Kolyvan. The inhabitants of Iceland called the State of Novogrod Kyflingaland and the privileged class of that state were called Kolbjagi. The Finnish philologists, Alqvist and Setälä, derived the name from the Lithuanian word *kalvis*, smith, with evolution to "strong man, giant, hero." Kaarle Krohn, like Schiefner, thought that Kaleva or Kalevi was a proper name of some hero with a real historical background in regard to time and place. The Russian name for Tallinn in about the year 1223 was Kolyvañ and there also were other towns with the same name in Russia. Kaleva is also a culture hero, the cultivator of the ground, but not a giant of the tales. He is the earliest hero of the Finnish and Estonian people; however in the folk poetry of today, it is not Kaleva acting, but his descendants. Therefore, *Kalevala* means the home or land of the hero Kaleva, which is Finland. E. Lönnrot chose this name for the title of his compilation of the old epic songs in 1835. See FINNISH FOLKLORE. [JB]

Kalevipoeg The son of Kalevi, the chief hero of Estonian tradition. He is a very strong man, a giant or culture hero, friendly to man. The epic *Kalevipoeg* is a creation of F. R. Kreutzwald, published in 1857-1861 with a German translation, containing 20 songs with 19,000 verses in all. Kreutzwald followed the example of Lönnrot's compilation of the *Kalevala*. But Kreutzwald did not have enough basic material, since there are few heroic folk songs in Estonia, and he was forced to use many prose legends about a traditional strong youth. His creation is therefore not to be considered as original Estonian folk epic. Nevertheless the influence of his work on Estonian culture has been very great.

References: W. F. Kirby, *The Hero of Estonia*. 2 vols., London, 1895. Aug. Annist, F. R. Kreutzwald's '*Kalevipoeg*,' 2 vols., Tartu, 1934 and 1936 (with summary in German). [JB]

Kālī The Black One (feminine of *Kāla*): the supreme mother goddess of India; consort of Śiva; also known as Chandi, Durgā, Pārvatī, Satī, Umā. As Kālī she is the mother goddess in destructive aspect, devouring the life she has produced. The power of Kālī abides in every woman. She is usually depicted with four arms. As life-giving mother, she is depicted with a golden ladle in her right hand, the bowl of abundant food in her left. In a famous hymn Kālī says "Whosoever eats food, eats food by me" (H. Zimmer, *Myths and Symbols in Indian Art and Civilization*, New York, 1946, p. 212). In her dual aspect she holds the symbols both of death and immortality: the noose to strangle her victims, the iron hook to drag them in, the rosary, and the prayer book. She is sometimes pictured as a horrible, hungry hag who feeds upon the entrails of her victims.

In some Tantra texts she stands in a boat floating on an ocean of blood, drinking from a skull the lifeblood of the children she brings forth and eats back. In another Tantric depiction Kālī is shown black as death with a necklace of heads; in her two right hands she holds the sword and the scissors of physical death; in her two left hands, the food-full bowl and the lotus of generation. She is strangely beloved in India as the beautiful, horrible, wonderful, life-giving, life-taking Mother. For the first European translation of the *Kālikā Purāṇa* containing the life story of Kālī, see H. Zimmer, *The King and the Corpse*, New York, 1948, p. 240 ff. See *Devī*.

Kāliya In Hindu mythology, the five-headed king of the serpents who lived in the river Yamunā (Jumnā) and emerged to lay waste the surrounding country. Kṛishṇa, while a child living with the cowherds, one day climbed a tree and dived into the serpent's pool. The splash from the pool set fire to the tree. Kāliya and his bejeweled serpent army challenged Kṛishṇa, encircled, and almost overcame him. But Kṛishṇa, remembering his own divine essence, loosed himself easily, placed his foot upon Kāliya, and danced on the serpent's head until his power was broken. He banished Kāliya to the ocean, but promised that the Garuḍa bird (enemy of serpents) should not destroy him.

Kalki or Kalkin Literally, the white horse: in Hindu mythology, tenth and last incarnation of Viṣṇu, which will appear at the end of the present age of the world (*kali yuga*). In this avatar Viṣṇu will destroy the wicked and restore purity. See AGES OF THE WORLD; KŪRMA; MATSYA; YUGA.

kalogheroi Phallic dance of Thrace and its two chief characters: performed on the last Monday in Carnival. They wear goatskins as headdresses, the horns removed and stuffed with hay. One of the kalogheroi carries a wooden phallus, the other a toy bow. The one with the phallus chases and is married to a boy impersonating a girl (*koritsi*). He is then shot by the one with the bow; there is mourning over his body; he is buried; and he rises again. Throughout the rite the church procedure is parodied. Associated with this obvious fertility-inducing drama are other customs tending to the same effect: plowing, making a house-to-house collection, etc. See GOAT DANCE.

Kalojan or **Caloian** A clay image of a young man figuring in a Rumanian ceremony occurring on the Monday before Assumption: the name is a corruption of *kalos Joannes* which in turn is a rendering of *kalos Adonis*, beautiful Adonis. The figure is put into a coffin by girls and covered with flowers and sweet-smelling herbs. He is buried ceremonially. At dawn of the third day, the group returns to the grave and digs up the coffin, weeping and calling for rain or singing to him that his mother is weeping for him. The figure is then taken to a running stream or a well and thrown in; sometimes it is broken up before being consigned to the water. The entire company then go to an inn where, over their cups, they tell each other that Kalojan is not dead but is risen from the grave. The ceremony is plainly a fertility and rain-making rite. The throwing of the figure into the water is reminiscent of the flowery Gardens of Adonis, which contained a figure of the god; the breaking of the figure makes the Kalojan resemble a transplanted Osiris; the weeping of the women for rain is paralleled in *Ezekiel* viii, 14: "and, behold, there sat women weeping for Tammuz." See *ADONIS*; *JACK IN THE GREEN*.

Kalou-Vu The "root gods" of Fiji, i.e. the original gods, perhaps originally deified Fijian ancestors, or possibly (as suggested by several scholars) Polynesian gods superimposed on the pantheon of these invaded people. Chief among the Kalou-Vu is Ndengei (definitely pure Fijian), creator in serpent form, whose shiftings and turnings in his mountain cave cause earthquakes. Ndengei was worshipped with enormous quantities of first-fruits, crops, pigs, turtles, etc. The priest went alone into the cave to present the prayer of the people. If the prayer was for abundant crops the priest emerged from the cave with a yam in token of the answer "Yes"; if the prayer was for rain, he came out drenched and dripping; if the people besought victory, Ndengei gave the priest a flaming brand to take out to them. Ndengei's son, Rokomautu, is sometimes interpreted as creator; among other things, he gave the people fire.

The long myth sagas of the Fijians recount the adventures of Ndengei's two grand-nephews, who will some day return and bring the people an era of abundance and all good. The first Europeans to visit Fiji were at first thought to be the descendants of these twin culture heroes. Others among the Kalou-Vu are Ndauthina, fire god, and god of seafarers and fishermen, a malicious, trick-playing god, except towards fishermen, whom he protects and betters. Ratu-mai-mbulu, god of the land of the dead, is also a serpent-shaped, cave-dwelling god. He makes the sap run in the trees and crops to sprout. During his special month, the people are quiet; they do not beat the drums, dance, sing, or fight, in order not to disturb or distract Ratu-mai-mbulu. The shark god, variously named among the various tribes, is conceived as a benevolent god who tows home upset canoes, helps in sea-fights, etc. His flesh is tabu to his worshippers. See *MELANESIAN MYTHOLOGY*.

Kalseru The name, in northwestern Australia, of the rainbow serpent associated with rain and fertility. The rainbow serpent is known over most of Australia, but the name differs from tribe to tribe. See *AUSTRALIAN ABORIGINAL MYTHOLOGY*.

kaluk The generic name for spirits among the Buddhist Talaing people of Burma: same as *NAT*.

Kalu Kumāra Yaka A Sinhalese demon who prevents conception, delays childbirth, and causes puerperal fever. Originally he was a saintly Buddhist sage (*arhat*) with the power of traveling through the air. While traveling he saw and fell in love with a beautiful princess. Immediately he lost his superhuman powers and died, becoming the demon, Kalu Kumāra Yaka.

Kalunga Name of the god of the sea in the pantheon of African deities worshipped in the Congo-Angola cult of Bahia, Brazil. [*MJH*]

kalvelis The Little Smith: a Lithuanian couple dance with bits of occupational mime. Partners may form two lines or a single circle. If danced in a circle, the dance begins with a round to the right, and then to the left with seven polkas and three stamps. The hammer and anvil of the blacksmith are suggested by hand-claps, as in *Peas Porridge Hot*. The phrase is concluded by partners pivoting with hooked elbows. In the second part, performed in a circle, girls move center and out, then boys do likewise, always with the typical polka step. [*CRK*]

Kāma Desire: the god of love of Hindu mythology; in the *Rig-Veda* called the first-born of the Mind. He was a beautiful young god, carrying a flower-bow with flower-string and five flower shafts (Exciter of Desire, Inflamer, Infatuator, Parcher, Carrier of Death); or sometimes he is depicted with a bow of sugarcane, the bowstring of bees, the arrows tipped with flowers, and riding on a parrot. Kāma holds the mastery over every human being and even the gods are "disordered" when the spell of love touches them. Thus is insured the perpetual creation of the world, which is never finished.

The most famous of the myths of Kāma is the one in which Brahmā, the Creator, is himself held in the spell of love at sight of Dawn, the beautiful woman produced also out of his own meditation, and is ridiculed by Śiva. Śiva's laughter at Brahmā's plight, i.e. filled with desire for his own daughter, shocked the Creator out of his passion and he "let the image of the woman go." Although freed of his passion, he was angered by the ridicule, and cursed Kāma, saying on the day Kāma should let loose his shaft at Śiva, he would be reduced to ashes by one glance from Śiva's middle eye.

Later, after Kāma was united in joy with the beautiful Rati, daughter of Daksha, Brahmā induced him to go and "unsettle" Śiva for the good of the universe, to create the mood of love in that solitary god, lest the perpetual creation of the universe cease. This Kāma did; and the woman produced to be the object of Śiva's desire was the great Mother of the World herself. When Brahmā called upon her, she rose from her cosmic dream and consented to enrapture Śiva. Thus the Great Mother (who, incarnate as Lakshmi, was wife of Vishnu) consented to be reborn as daughter to Daksha and was named Satī. When the time came and Satī was presented to Śiva, Kāma let fly his arrow, and Śiva shouted "Be my wife!" In the story in which Brahmā's curse is fulfilled, and Kāma is burned to ashes by the glance of Śiva, the curse is mitigated by Kāma's rebirth.

In various texts Kāma was the son of Dharma and Śradha, the son of Lakshmi, or produced from the urtic meditation of Brahmā, the Creator; born from water; or self-existent, "unborn." In the *Purāṇas*, his wife is Rati, Delight, his son Aniruddha, his daughter Trisha. See *HOLI*.

Kāmadhenu, Kamdhain, Kamdhenu, Nandinī, or Surabhi In Hindu mythology, the cow of plenty produced at the Churning of the Ocean; the fountain of milk which granted its possessor, the sage Vāśiṣṭha, all things he desired. Among the wonders produced by Kāmadhenu was a host of warriors who fought against Arjuna.

Kami In Shinto, a god or similar spiritual being. [JLM]

kampós tánc Literally, shepherd's dance: a Hungarian men's dance performed with a shepherd's hat and the ornate and cherished crook. The dancer manipulates the crook while executing *pas de basque* leaps and leg-swings with upturned toes. During one step the hands are clapped under the raised leg. It may be performed purely for amusement, but is probably an ancient leap dance for the welfare of the flock. [GPK]

Kāmsa In Hindu mythology, an asura and the persecutor of Kṛishṇa. Kāmsa was the king of Mathurā, cousin of Devakī, and thus cousin (often incorrectly called uncle) of Kṛishṇa. It was foretold that a child of Devakī would slay him, so Kāmsa tried to destroy her children. The first six were killed, but the seventh, Balarāma, was smuggled away, and the parents fled when their eighth child, Kṛishṇa, was born. Kāmsa ordered all male infants slain, but he was eventually slain by Kṛishṇa. His name also occurs in the *Purāṇas* as Kāṇṣa. See FATAL CHILDREN; SLAUGHTER OF THE INNOCENTS.

kanafaska A Moravian couple dance in quadrille formation, i.e. with four couples facing center in a circle, man on the left. They are numbered consecutively, counterclockwise. In the first part, couples 1 and 3 slide across past each other, in ballroom position. Then couples 2 and 4 do the same; and in turn all slide back home. In the second part, the first man polkas around the circle clockwise with each woman in turn, and returns her home with a "toss-up," a high lift into the air. See LIFT DANCE. Then the second, third, and fourth man follow suit. This dance is of interest as one of the few Slavic rounds in quadrille formation. [GPK]

kanaima A word of Carib origin which, in the Guianas, is used to cover practically all the forms of black magic. Epidemics, sudden death, or mysterious ailments are generally regarded as the effects of *kanaima*. The Indians call also *kanaima* the real or imaginary avengers who follow relentlessly their victims until they find the opportunity to murder them secretly. Hostile tribes and murderous spirits are also given the name of *kanaima*. The term is also applied to every disgrace and misfortune, and serves to describe the irresistible lust for revenge which may overtake a person and force him to do something terrible. [AM]

kanász tánc Literally, swineherd's dance; a Hungarian dance resembling the Scotch sword dance in form, step, and bagpipe accompaniment. Two sticks are crossed at right angles and the dancer, with a kind of *pas de basque* and quarter turns, leaps from one space to another. Two groups can take turns, or one man can execute the whole routine. Though now danced on saints' days, the *kanász tánc* is obviously one of the large class of sword dances associated with pagan victory and vegetation rites. See STICK DANCES; SWORD DANCES. [GPK]

Kande Yake In Vedda (Ceylon) belief, the deified spirit (*yaka*) of a mighty hunter, called Kande Wanniya, who is invoked for success in hunting. He is invoked with the *yaka* of his brother, Bilindi, at the beginning of a Nae Yaku ceremony, since many Veddas believe that the recent dead go to Kande Yake and become his attendants. They must have his permission to receive the offerings made them by the living and he accompanies or brings them to the Nae Yaku ceremony. See CULT OF THE FRIENDLY DEAD.

Kaniyan A dancing caste of Malabar and Travancore on the southwest coast of India. They perform acrobatic feats. Their chief dances are: 1) *pitichu kali*, a sword and shield dance accompanied by the drum; 2) *parishatalam kali*, a circle dance performed by boys at night to a bell and metal plates struck with sticks; 3) *kolati* or stick dances in circular formation, requiring great skill and precision in striking two sticks, one against another or against a neighbor's, with ever-increasing speed. See KOLATTAM; STICK DANCES. [GPK]

kāṅkāntri Taki-taki term for the silk cotton tree (probably the tropical American *Ceiba pentandra*, also called the god tree): regarded by Surinam Paramaribo Negroes as sacred to Mama fō Gro or Gro Mama, the Earth Mother. Every plantation, every little yard has its tutelary Mother of the Soil, thought of as inhabiting the *kāṅkāntri* there growing. The locale of the *kāṅkāntri* is regarded as sacred. No one must urinate or defecate anywhere near it. Here Mama fō Gro is offered food and drink with annual ceremony, and oftener if specifically supplicated.

k'an-po (feminine *k'an-mo*) The head of a Tibetan monastery who is endowed with three prerogatives transmitted directly by the saints: *dbang*, spiritual power; *lung*, knowledge of the teachings; *k'rid*, the ability to teach.

kantele The traditional instrument of Finnish folk music for over 2000 years; a psaltery, originally having five strings and now having 20 to 30. To its music the ancient epics of the *Kalevala* were chanted. [TCB]

 Väinämöinen made the first kantele from the jaws of a big pike, and all living beings of the air, earth, and water, even the sun and moon, were delighted with the charming playing (see *Kalevala*, songs 40–41, 44). The word *kantele* is probably a borrowing from Lithuanian. The name and form of the instrument are common to many peoples of the Baltic region: Estonian *kannel*, Latvian *kuokle*, Lithuanian *kankles* (see Slaviūnas in *Folklore Studies* III, Kaunas, 1937). See FINNISH FOLKLORE. [JB]

kanteletar Ancient Finnish magic songs and lyrics of the type called *runos*, some of which are preserved in the *Kalevala*.

kapétua Papago warriors' victory dance performed during the Limo Festival. Enemy-killers had to purify themselves in retreat for sixteen days and blacken their faces. Then at the festival they reenacted scenes of the warpath, in turn leaping about with the shield. The other celebrants danced around the pole with scalps and the women seized the scalps. [GPK]

K'apio The ceremonial clown societies of Taos and Isleta Indian pueblos. *K'apio chifunin* are the Black

Eyes, *k'apio shureno* the Red Eyes: so called because of painted rings around their eyes. They correspond in accoutrement and function to the Keresan *koshare*, and are particularly apt at burlesque. They engage in similar stereotyped phallic magic. Their characteristic hair poke may be a phallic symbol, associated with the emergence myth: i.e. with the pokes with which the *k'apio* (and *koshare*) prototypes opened an exit during primal emergence from the earth. They also have other chthonic associations, the Black Eyes with the water turtle and the rain-bringing *kachina*, the Red Eyes with the land turtle. The Black Eyes are the more prominent, and serve as clowns in the Taos Deer Dance and Spruce Dance. In Isleta, at Christmas, the Black and Red moieties both participate in alternate sets. Their dancing, as that of the *koshare*, is not well-ordered like that of the *kachina*, but consists of individual grotesqueries, burlesque, and social comment in groups. [CPK]

Kappa In Japanese folklore, a malicious spirit living in rivers. It has the body of a tortoise, the head of a monkey, and the limbs of a frog. On the top of its head there is a hollow filled with fluid. It devours disobedient little boys in swimming. [JLM]

kapurale or **dugganawa** A Vedda (Ceylon) shaman through whom the Nae Yaku (spirits of the recent dead) speak. The kapurale imparts to his successor, usually his own or his sister's son, the power and knowledge to call the yaku (spirits). The pupil must avoid many types of food and spend time memorizing invocations used in various ceremonies. A yaka is invoked by singing and dancing. The kapurale begins slowly and gradually increases the tempo of the dance and song. As the shaman's voice grows hoarse and he dances faster and faster, he becomes possessed by the yaka who speaks through him, often promising to assist his relatives in hunting and sometimes giving them specific directions.

karawatoniga Harmless supernatural beings of Tubetube (Melanesian) folk belief, who live among the rocks or in the bush near the seashore. They are of human color and form, have long ringlets, indistinguishable features, and perpetuate their kind. The karawatoniga are seen most frequently after death. Compare BARIAUA; KAKAMORA.

Karei or **Kari** The god of thunder of the Semangs, a Negrito people of the Malay Peninsula: invisible, superhuman in size, omnipotent, omniscient, creator of man, soul-giver, recorder and punisher of sins such as familiarity with mother-in-law, mocking tame or helpless animals, killing the sacred black wasp or tabooed birds. Thunder, the sign of Karei's anger, causes guilty persons to make atonement by gashing shins, mixing blood with water and tossing it to the sky and calling, "Stop, stop." Neither Karei nor a companion deity, Ple, have a cult. [KL]

Kari One of the jötnar of Teutonic mythology; a tempest giant and lord of the storm giants. See JÖTUNN.

karma The effect of any act, religious or otherwise; the law of cause and effect regulating one's future life: literally, act.

In Brahmanism, the fate of a soul in its current life is determined by its conduct in its former life. All the sins of its immediately previous life must be expiated in

the present one. This is a common motif in Hindu story. Many an unfortunate character is either forgiven his failures or shunned for his attendant mishaps, because believed to be "working out his karma." This, however, does not imply absolute fatalism, since one's future life is determined by his acts in this one.

The Buddhists made karma the foundation of their ethical theory, but rejected the theory of the soul which was supposed to reside in the cavity of the heart, and which had anger, desire, and quality. The Jains, likewise recognizing karma, made their highest goal freedom from karma. Their entire monastic apparatus is based on a desire to prevent the formation of new karma through the application of strict rules and the practice of austerities.

Karshipta or **Karshiptar** In Iranian mythology, a bird gifted with speech. He was sent to spread the religion of Ahura Mazda among the men assembled by Yima in his vara (enclosure) to protect them from the scourging winter which was to destroy mankind.

karsikko The name given in North Savolax, Finland, to a piece of white paper on which was written the name of one who has just died, with the year of his birth and death. This paper was placed, for the funeral day, on a cloth spread on the back wall of the hut (M. Waronen). [JB]

Kārttikeya The six-faced Hindu god of war; also god of the planet Mars, and as such usually called Skanda. The *Mahābhārata* and *Rāmāyaṇa* identify him as the son of Śiva or Rudra, born of Śiva's seed and the Ganges. He was brought up by the six Pleiades (Krittikās)—hence the six faces. He is often depicted riding on the peacock Parvati, with a bow in one hand and an arrow in the other, or sometimes as tapping a drum with the fingers of his left hand and brandishing a sword in the right.

karyatid In ancient Greece a female dancer who performed annually at the feast of Artemis Karyatis, at Karyai, on the Laconian-Arcadian border. The karyatids glided lightly on tiptoe in short tunics. With upright carriage, they carried flower baskets on their heads, as they progressed in serpentine chains. Because of their burden-bearing upright posture they became the models for the static pillars, as on the "Porch of the Maidens" of the Erechtheum in Athens. [CPK]

Kaśyapa The Old Tortoise Man of Hindu mythology: progenitor of all things living on the earth, and as this progenitor (and tortoise), identified in the *Satapatha Brahmana* with Prajāpati. In some texts, Irā, one of the daughters of Daksha, was his consort and mother of earthly vegetation. See KŪRMA. He was one of the seven great ṛishis of India.

According to the *Atharva-Veda*, he sprang from Time (often identical with Vishṇu); according to the *Mahābhārata* and *Rāmāyaṇa*, he was the grandson of Brahmā and the father of Vivasvat whose son Manu was the progenitor of mankind. He married the 13 daughters of Daksha; by Aditi, he was the father of the Ādityas and Vivasvat. According to the *Vishṇu Purāṇa*, Vishṇu, born as a dwarf, was also their son. By his 12 other wives he begot all kinds of living things including the Nāgas (whose mother was Kadrū), the asuras (whose mother was Diti), Garuḍa (whose mother was Vinatā), also the Piśāchas, Rākshasas, and Yakshas.

Kathā Sarit Sāgara Literally, the ocean of the rivers of stories: a collection of popular medieval Indian fairy tales and romances written in Sanskrit, made by Somadeva of Kashmir about the beginning of the 12th century. The collection was translated by C. H. Tawney and published by the Asiatic Society of Bengal in their *Bibliotheca Indica* series (two volumes, 1880–1884). It was printed with voluminous comparative and analytical notes by N. M. Penzer as *The Ocean of Story* in 1928.

katydid An arboreal, green, long-horned insect related to the grasshoppers and crickets (family *Tettigoniidae*) named for the characteristic note produced by the stridulating organs at the base of the wing-covers of the male: katydid, o-she-did, katydid, did, she-did. In general the katydid's cry is interpreted as a weather oracle. In various sections of the United States, the saying is that when the first katydid is heard it will be six weeks until frost. In Missouri it is time to plant corn when the katydids first are heard; in Kentucky, 90 days after the first katydid is heard there will be frost; in the Kentucky mountains dog days begin with the first katydid. In New England a katydid chirping inside the house is said to be an omen of death. In Maryland they say that the bite of one causes fits. [GPK]

kaukas A dwarfish household spirit of western Lithuanian folklore, having similar characteristics and duties to the *aitvaras* and the northern Lithuanian *pukys*. See LITHUANIAN MYTHOLOGY.

kaukiwawakuwa A Shawnee Indian dance performed one year after the death of a distinguished personage. It is called the turning dance, for men and women intermixed move a short time in one direction and then turn directly about. The feast and dance last for four days, and much time is taken up by the exchange and winning of goods. [GPK]

kauna or kawina A dance of Surinam Negroes, performed especially when a manatee or tapir has been killed, to propitiate its spirit. The music is also called *kauna*; the drum is *kauna dro* (a small drum hung around the player's neck and played at both ends); the songs are *kauna sygi*. The people believe that if the dance and music did not last all night the spirit of the captured animal would burn down the houses of the hunter and the feasters. The *kauna* is basically a fertility dance: the dancers mime the act of copulation. A drink is made for the ceremony from a "seed" in the manatee's belly and is thought to produce virility and great physical strength. It does induce turgidity, but actually long use produces impotence. The *kauna* has also become a social dance, often taking place even when no manatee feast is to be celebrated (See M. J. and F. S. Herskovits, *Suriname Folklore*, p. 10 ff., New York, 1936.)

Kauravas In Hindu mythology, the sons of Dhritarāshṭra and the opponents of the Pāṇḍavas in the battle for the kingdom whose capital was Hastināpura. See ARJUNA; MAHĀBHĀRATA.

káusima The girls' puberty dance of the Choroti, Ashluslay, and Mataco Indians, Gran Chaco. It began at the first new moon after the first signs of puberty and continued every day until the next new moon. The girl had to stand motionless against the wall of a hut. Her mother and a group of older women circled the hut

with slow, regular steps, chanting and striking rattle staffs on the ground. These staffs, *káhuís*, were made of a hollow bamboo rod two or three yards long, and had a bunch of deerhoofs tied to the top. Thus a blend of rustling and hollow pounding marked the rhythm. The deer had supernatural power for fertility and aided in the protection of the girl against evil spirits, *mohsek*, to which she was particularly susceptible at this time. The women were aided in their demon exorcism by four singing medicine men with gourd rattles, and two shamans with drums. The Lengua had a similar ceremony in their *yanmena*. [GPK]

kava or 'ava (from the Maori word meaning bitter) A mildly intoxicating narcotic beverage brewed from the root or leaves of a plant of the pepper family (*Piper methysticum*); used by the Polynesians and some Micronesians and Melanesians in their social, religious, and political life. It is important in Polynesian ceremonies, especially well integrated into western Polynesian life in various aspects. Ceremonial etiquette is observed in kava-drinking as with tea-drinking in China and the betel-nut complex in Malaysia and Indonesia. Kava was formerly prepared by the women, or, in some cases, the chiefs. The root is chewed and placed in water, and then strained. Only the men drank it. But today it is prepared by the children, and women are also permitted to drink. Kava-drinking and betel-chewing do not occur in the same places except where one is in the process of superseding the other. Polynesian migration can be traced by the prevalence of kava-drinking. Medicinally it is used as a cure for chronic rheumatism and venereal diseases.

kavi, kavya, or kavan (Persian *kai*) In Indo-Iranian belief, seers endowed with supernatural prescience. In later Persian legend the title was applied to a line of kings, the Kaiānians.

kawakuku Among Roro-speaking Melanesians and the tribes on the Papuan Gulf, hereditary tabu experts who pronounce and enforce vegetable food tabus. The women and children are told that the kawakuku are spirits from the bush, and they consequently fear them. The kawakuku appear in the village only in masks which extend to the feet; these masks are burned after each appearance. They are directed by the village leaders who determine when such tabus are to be imposed.

Kay In Arthurian legend, a knight of the Round Table, and seneschal of King Arthur. Who or what Kay originally was is impossible to tell. He is a follower of Arthur in the *Black Book of Carmarthen* and *Kilhwch*. In the latter he is credited with supernatural traits. He could be nine days under water without drawing breath; he could go nine nights without sleep; when he wished he could equal the tallest tree in height. Like Cuchulainn, he radiated heat. During the heaviest rain, whatever was a handbreadth above or below his hand remained dry, and when his companions were coldest, he would serve as kindling to light a fire. Of these strange and probably mythical properties none survive in the later romances, where he is noted only for his crabbed tongue and his deserved humiliations in combat. See R. S. Loomis, *Arthurian Tradition and Chrétien de Troyes* (1948), index sub *Keu*. [RSL]

kazila The forbidden thing, tabu, among the Fjort. Like other tabus, it consists in the prohibition to cer-

tain individuals or families of eating certain animals. Those of royal descent may not eat pig, for instance; some may not harm or eat certain other animals because of the debt of gratitude of an ancestor to that animal. Lake Bori and the fish of that lake were *kazila* to women by the order of Nzambi (the Fjort creatress).

kazoo A musical device consisting of a tube, covered at one opening (in the end or middle) by a taut membrane, which vibrates with a buzzing sound when the player sings into the tube. Curt Sachs has suggested the term *voice masks* for instruments of this type which serve chiefly to disguise the natural quality of the singing voice. Primitive peoples have for centuries used such devices as bark trumpets or megaphones, conch shells, and shallow frame drums held before the mouth to impart to the singer's voice some quality deemed more suitable for magical utterances or addresses to supernatural beings and forces. The kazoo, known chiefly nowadays as a toy, a noisemaker for parties and celebrations, is also called *mirliton*, and was formerly called the *eunuch flute*, as such being regarded with some seriousness in art music in 17th century Europe. In construction it is related to a Chinese whistle flute, *t'ai p'ing hsiao*.

K'daai Maqsin In Yakut religion, the chief blacksmith in the underworld, from whom blacksmiths receive their skill. His forehead is covered with dirt nine fingers thick, his cheeks with rust three fingers thick, and his eyes are closed. When he wishes to see, eight men above and eight men below drag his iron lids apart with hooks. He makes iron hard by tempering it with blood of a lion, tears of a seal, blood from the lips of a young man, and blood from the cheeks of a young girl. He caused shamans to be introduced into the world. Compare BALOR.

Kdyš Jsem Jel do Prahy *When I Rode to Prague*: a Czech couple dance. With hands joined the couples circle, the girls backward. Then they turn under the arch of a kerchief. [GPK]

Keb The Egyptian earth god, Geb.

keen The Irish lament for the dead, sung always by women, sometimes professional mourners. Traditional words include eulogies of the dead, his looks, his noble character, and his good life, uttered in prolonged, rhythmic phrases. The keen is a more articulate expression of grief than the death wail, the *ullagone* (Irish *uilleacán*) which consists of high-pitched exclamations of woe and moaning sounds. See MOURNING SONGS.

keepers The Trinidad term for the common-law mating found among New World Negroes of lower socioeconomic strata. See AMASIADO. [MJH]

Kekri All Saints' Day of the Finns, celebrated in two different ways: in the pagan manner in honor of the ancient Finnish god Kekri, and in the Catholic way, in honor of all the saints. Masks were made for the face and the masked people were called Kekritär. Kekri means a ghost or spirit of the dead. The oldest description of the feast is in 1754. [JB]

kelp Any of certain large coarse seaweeds (order Laminariales). On the North Pacific Coast the Kwakiutl Indians use kelp as a charm to summon the wind; the

tubular stem is made into a kind of horn through which the wind is called. The Kwakiutl also use kelp in a dish of welcome served to guests. The Shinnecock Indians of Long Island knew the medicinal value of kelp; they steeped it to bathe open sores, and valued it highly as a remedy for rheumatism. In Newfoundland also the iodine properties of kelp were known to ease lame backs and other aches. In Labrador when the people see ice-coated kelp rising to the surface of the sea, they take it as a sign of mild (or milder) weather to come.

kelpie A water spirit of Scottish folklore, inhabiting every lake and stream in the country. He is a mischievous, usually malevolent, being who appears in the form of a horse, sometimes grazing on the banks of the lakes, sometimes appearing at the fords of streams. He will lure travelers to mount him, then plunge into the waters and drown them. To see him is a sure sign of drowning. Certain 19th century Scottish antiquarians have endeavored to trace the word kelpie to *kelp*, the large fantastic seaweeds common to some coasts, in which this water horse or spirit is said to hide. More recent opinion, however, derives the word from Gaelic *calpach* or *colpach*, meaning steer or colt. Modern Irish retains *colpa*, meaning a full-grown animal, whether cow or horse. The fabulous water horse of Welsh folklore is the *ceffyl dwr*. In Shetland it is called the *shoopiltee*, in the Orkneys, the *tangie* or *tang*. Compare EAC UISGE.

kemoit In the belief of the Menek Kaien (Malay Peninsula), a real ghost in Belet. The soul, which leaves a dead body through the big toe and crosses to Belet, becomes a kemoit when the bones of its limbs are broken and the pupils of its eyes turned inward by those who have preceded it to the land of the dead.

Kemp Owyne A Scottish ballad (Child #34) of the loathly lady type, and hence related to stories of disenchantment by a kiss (D735) like *Beauty and the Beast*. It stems from Scandinavian tradition; very near to it are the Icelandic saga *Hjálmter ok Ölver* and the Danish *Maid in Dragon-form* (DGF 59). *Kemp Owyne* begins with a cruel stepmother who drives the girl unmercifully. Finally she flings her into the sea.

"Lie you there, dove Isabel,
And all my sorrows lie with thee;
Till Kemp Owyne come ower the sea,
And borrow you with kisses three."

The three kisses are a typical ballad ornamentation; in folktales, one kiss is usually sufficient to break the spell, but repetition with variation is part of the charm of the ballad. Isabel becomes a savage sea monster. At last Kemp Owyne comes along and gives her the three kisses in exchange for a belt, a ring, and a sword. He observes the tabu against touching any part of her but her lips, and she is transformed into a beautiful woman, "as fair a woman as fair could be." In *Kempion*, another version, the stepmother is in the end transformed into a monster herself, until "St. Mungo come oer the sea."

Kentucky running set A figure dance of the Appalachian highlands, named by Cecil Sharp for the state of Kentucky, but equally typical of Tennessee and North Carolina. In many communities it replaces any other form of communal dancing. It combines the circular progression of a huge round with the intermingling of quadrille formations. 1) The "large circle figures," to

the right or to the left, involve all couples in unison: the California Fruitbasket with all hands crossed behind backs; the Open Tunnel, where all couples follow the leaders clockwise to form an increasing arch which sucks up the counterclockwise double line of dancers; Wring Out the Dishrag; Wagon Wheel; and the Ball of Yarn which winds the whole line into a snail and unwinds them again. 2) The "odds off to even figures" count off alternate couples. The evens dance in place, while the odds perform the figure with each couple in turn, as they gradually move counterclockwise. Each group of two couples starts each figure with a small clockwise circle. The hundreds of figures have picturesque names—Birdie in the Cage, Ladies Join Your Lily White Hands, Mountaineer Loop, Lady Through the Outside Door, Open and Close the Garden Gate, etc., all involving an interlacing of arms and ingenious changes of position, *dos-a-dos*, etc. They commonly conclude with "swing your corner" and "swing your partner."

The step can be a shuffle such as is used in square-dancing, but the boys usually prefer to let their feet go "whickety-whack" in a kind of clog step. Sometimes as an interlude the boys circle, arms across shoulders, with fancy variants of the clog. The rhythmic sound effect is contagious, and equally effective without any accompaniment except hand-clapping, or with the syncopated accompaniment of bass fiddles, banjos, accordions, etc., playing oldtime tunes—"Old Joe Clark," "Cripple Creek," etc.

The Kentucky Running Set has preserved in the mountain fastnesses a pure form of old English tradition. These round dances are very old and probably go back to ancient ritual circlings and serpentine in vegetation rites. See ROUND DANCES; SERPENTINE. [GPK]

keremet Fenced-in sanctuaries or sacred groves of the Chermis and Mordvins; the living places of the ghosts of heroes. [JB]

Keres (singular *Ker*) In Greek mythology, spiritual beings, the souls of the dead, perhaps ancestral spirits; also, a sort of evil-bearing goddesses of death, later identified with the Furies. The Keres were omnipresent, bringing diseases and ills to mankind. They possessed no power of life and death in themselves, but served to carry out the wishes of the gods, of Ares in particular in whose train they were found. They served to drag off the corpses of the dead. They escaped originally from Pandora's box. The Greek Anthesteria closed with the command: "Out of the house, ye Keres." As tiny, gnatlike human figures, the Keres appear in vase decorations.

Keresāspa or Garshāsp Literally, with slender horses: one of the greatest Iranian heroes; son of Thrīta Athwya (father of Thrāetaona of whom Keresāspa seems to have been a doublet). Keresāspa killed many foes under the protection of a third part of Yima's Glory (*khvarenan*) and he is worshipped by warriors to obtain strength. His greatest feat was the slaying of the dragon Srvara. He sprang on its back, hung on for half a day, and finally killed it with a single blow. He was victorious over Gandarewa after a nine-day battle, purged the land of highwaymen, and slew the gigantic Kamak; but he was conquered himself when he neglected the maintenance of the sacred fire. Ahura Mazda permitted him to be wounded, and he fell into a state of lethargy in which he will remain until the end of the world, when

he will kill the monster Azhi Dahāka, and thus inaugurate the era of happiness. Keresāspa's exploits are told in the *Shāhnāmah*, in which he is called Feridhūn.

kermis or kermess Originally, a religious ceremony for a newly erected church: from Dutch *kerk*, church, and *mis*, mass. It originated in the Jewish Hanukkah and was introduced to Christianity by Constantine the Great. The simple solemn proceedings had by the 9th century already become annual festivities in the Low Countries, often an annual outdoor festival held on the feast day of a local patron saint, but it became more and more associated with secular activities, such as markets, feasts, and dances. These included circling of the *Kirmesbaum*, kermis tree. Particularly in Flanders and northern Germany these festivals fell into the inevitable degeneration of drinking celebrations, and have given the term this connotation. [GPK]

keruk A memorial rite of the Diegueño and Yuma Indians of California and the Yuma of Arizona, corresponding to the *tauchanish* of the Luiseño. It is a great ceremonial observance for the dead of the year. After a night of wailing, there are six nights of marching images of the dead around a fire and dancing and singing until morning. These images are made of mats of grass, the features indicated in haliotis shell. On the last night at daybreak the images are marched in ceremonial array to the keruk, a small semicircular house of brush or willow. They are placed face down on a pyre of arrowweed and with a special song are burned along with quantities of their belongings. The purpose is similar to that of the Chippewa restoration of the mourners and the Sioux releasing of the spirit, namely, to dispatch the dead and keep them content, and to terminate the grief of the survivors. [GPK]

Kesar or Kyesar Saga Title of a story (believed by A. H. Francke to be a myth of the seasons) of great popularity among Tibetans, especially in Ladāhki.

The *Kesar* is related in four parts. The first tells of the creation of the world and the birth of the 18 Agus or heroes of the tale. The second part (called the spring myth by Francke) tells of the birth of Kesar in gLing and his wooing of and marriage to 'aBruguma. The third section (identified as the winter myth) tells of Kesar's journey to the north, the slaying of a giant, marriage to the giant's wife, and the deliverance of 'aBruguma from the hands of her abductor, King Hor. In the fourth part (which parallels the third) Kesar journeys to China and marries the daughter of the king of that land. See GLING-CHÖS.

Kesil The Fool; a giant associated in Semitic lore with the constellation Orion: probably Nimrod, the mighty hunter who rebelled against God. Kesil tried to reach heaven and was seized and bound by God and placed in the sky as a sign to other rebels. But he must serve his term in Sheol too, so every autumn Kesil disappears below the horizon. The word *kesil* in the Bible is modernly translated as the fool, or Orion. It may mean either giant or something thick or large. See ORION.

kesma Literally, cut dance: so called because of sudden breaks in the music with quick reaction into immobility on the part of the dancers. It is a Persian couple dance, face to face but not in embrace. One couple at a time emerges from the crowd and moves about with a

two-step and swaying of the arms. The bystanders clap hands in rhythm. [GPK]

kettledrum A drum constructed of an open vessel of oval or round shape, having a stretched skin covering the mouth. Probably the earliest form of the instrument was a primitive clay bowl, of the type still used by some primitive peoples. Later kettledrums are of metal, and have developed to the complexity and tonal exactness of the modern symphony orchestra instrument. On the primitive level, kettledrums of wood or gourd are still used by such peoples as the Araucanians for magic purposes. See DRUM.

Ketu 1) An AfroBrazilian cult, deriving from the town of the same name (Ketou, Quetou) that lies on the ethnic boundary between the Dahomean and Yoruban peoples of West Africa. Ketu was one of the "kingdoms" conquered by the Dahomeans, in consequence of which many of its inhabitants were sold and transported to the New World. The Ketu cult of Bahia, with the Gêge and 'Jesha, form "orthodox" groupings that worship the African deities in almost unaltered aboriginal form. The Yoruban language is employed in the rituals, and the words of the Ketu songs are in the same tongue. It is the largest of the purely West African cults, and its cult-centers are known for the elaborateness with which the rites are performed. The cult-groups have complex hierarchical organization, and discipline is rigorously exacted. The deities retain their Yoruban names and functions unchanged. Related New World groups are the Lucumí sect of Cuba, and the Shango groups of Trinidad, as well as the many Yoruban-derived cults found elsewhere in Brazil. [MJH]

2) In Hindu cosmogonic mythology, the dragon's tail (the descending node in astronomy), the part of Rāhu which the soma did not reach; also, a comet or meteor. See RĀHU.

key The key was a power to open the heavens and hells of many early religions and an attribute of numerous early deities. Athena, for instance, carried the keys of Athens. Janus is represented with keys in both hands. Hecate was said to carry the keys of the universe; old monuments depict her with the keys of Hades; one of her processions, in Caria, was called the "procession of the key"; and Cassandra bore the keys of Hecate. Priests and priestesses of ancient gods bore their keys in token that the authority and power of the deity was theirs also. Io, priestess of Hera, was key-bearer to that goddess; Iphigenia was key-bearer to Artemis, and her grave-stone also bore the emblem. In Babylonian mythology Marduk made both the gates and keys to heaven. Ishtar opened the seven gates and locks of hell. The keys of earth and heaven belong to the Assyrian deity Ninib. The Egyptian Serapis holds the keys to earth and sea. The Greek Hades had iron bars and keys. The keys of hell and of death are mentioned in *Revelation* i, 18; the key of the bottomless pit was shown in the hand of an angel (*Rev.* ix, 1; xx, 1). Christ descended into hell and broke the locks. The term "power of keys" refers to *Matthew* xvi, 19, and the words of Jesus to Peter, "I will give unto thee the keys of the kingdom of heaven."

In all folklores the key possesses great magic. Throughout the Mediterranean region and in Germany it is an amulet against the evil eye. In Italy tiny keys are put on babies to ward off convulsions. In the Ionian Islands an

iron key is laid on the breast of the dead for a twofold reason: the iron keeps off evil spirits, the key opens the doors to the afterworld. In Norway a big iron key is hung over the stalls of bewitched cattle to cure them; and keys are hung here and there around the fields to lock out hail. In Transylvania a key in the feed bag protects the grain from thieving birds. In France it was said that a werewolf would instantly return to human form if struck between the eyes with a key. In Brittany the menhirs are said to be the keys to the ocean; if they were dug up the sea would pour up through the holes. In China a key is always given to an only son to lock him into life.

In ancient Rome the new bride was given the keys to her new household; divorce was effected by taking or surrendering them. This was the custom also among the early Teutons. In ancient Gaul a widow laid her keys upon the corpse of her husband, in token of relinquishment and in some instances freedom from obligation.

In rabbinical lore three keys are poetically mentioned: the key of the womb, which opens the way to the birth of a child; the keys of the rain; and the key for the resurrection of the dead. The iron keys of a synagogue placed under the pillow of a dying child will release it from the pangs of death. In early Rome also a woman was given a key at the time of delivery to open the way for the birth. In Sweden midwife and mother repeat together a prayer to the Virgin to bring the key to the womb. Anyone who locks a padlock during a wedding ceremony and then throws the lock in water makes that marriage unfruitful. In Serbia to prevent pregnancy a woman would sometimes lay a lock and key on the floor, walk in the space between them, turn around, and turning say, "When I open the lock again I shall conceive a child." Keys have a sympathetic magical effect upon the inmates of a house in almost all folk beliefs; all keys are turned and locks unlocked, for instance, during a birth or a death to open the way into or out of the world.

Bible and key together make very potent magic. To discover the name of a thief or a witch, a key is placed in the Bible, but with the handle out; the handle is then held by one or two people, who say, "Turn Bible/ Turn key/ Turn and show the name to me." Then a series of names are recited and at the right name the key will turn.

Delivering up the keys of a fortress or castle to an enemy was formerly a symbol of surrender; a widow in England burdened with her husband's debts laid the keys on his bier if she wished to withdraw from the home or was unable to assume responsibilities of payment. Welcoming an honored guest is often carried out by presenting him with the keys of the city, thus indicating that everything in it is open for his inspection. Though now merely a gesture, it is a custom widely observed.

If a key is put in a cradle, the child will not be taken by fairies or otherwise (Germany); letting a bunch of keys fall means an unpleasant incident; their loss is fatal. A nail from a coffin will open the doors of Hell. A magic key that would unlock doors and treasure houses was the plant *Spring-wurzel*, or springwort, cultivated by Hecate and Artemis in their gardens.

In folk medicine, a key slipped down the back will stop nosebleed; in Morocco a key is used to cure impotence. The latter cure was performed by taking 7 keys

from 7 houses in 7 towns, and heating them red hot, after which water from 7 wells was poured over the heated keys. The patient was then exposed to the steam.

In folktale there are stories about magic keys (D1176); keys protect against revenants (E434.6); in Indonesian, Japanese, and Micmac Indian folktale, a fish brings back a key lost in the sea (B548.2.2); the bloody key reveals disobedience (C913); there are European task tales about recovering a key lost in the sea (H1132.2; Type 554); and several based on the old proverb that an old key is better than a new key (Z62.1) in which the hero marries his old love instead of the new for this reason. [GPS]

keyhole The keyhole, in common with the door, chimney, or other openings of the house, is a place for the entrance of demons, witches, or the Devil. If the key is left in the keyhole, no evil spirit can enter. On the Continent, the nightmare hag (Alp, Mara) is much feared; to prevent its entrance into a sleeping chamber, the keyhole is stopped up, or, if the hag does slip in, it may be trapped by stuffing the hole. This belief and practice is also reported from Missouri. Sometimes in Germany and elsewhere the keyhole is stuffed with consecrated wax as a preventive measure. Mississippi and Georgia Negroes put a sieve over the keyhole to keep witches out; the witch has to count all the holes before she can leave and many witches are caught in this way.

Fear of the open keyhole is especially great when there is a new-born child in the house on account of the belief in changelings, which prevails in Germany, Hungary, the Philippines, Netherlands Indies, and elsewhere. One can summon the Devil through the keyholes of churches by going around the church three times, then blowing or whistling through the keyhole. A magic view inside the church through this opening is believed in Denmark to reveal persons before the altar who are doomed to die in the next year. This oracular view must be taken on New Year's night. Blowing through the church keyhole on Good Friday before sunrise is recommended for certain urinary disorders common in childhood.

In parts of rural England young girls peek through the keyhole into the farmyard on St. Valentine's morning; if they see a cock and a hen strutting together it is a sign of their own marriage inside a year. [GPS]

Khaldi The Urartian (pre-Armenian) supreme god of heaven; one of the non-Aryan triad, with Theispas (weather god), and Artinis (sun god). The Urartians believed themselves his children and called themselves Khaldians.

Khāṇḍava or Khāṇḍavaprastha In Hindu mythology, the country and forest awarded to the Pāṇḍavas when Dhṛtarāṣṭra divided his kingdom. See AGNI; MAHĀBHĀRATA.

Khara In Iranian mythology, the gigantic three-legged ass which stands in the middle of the sea Vourukasha. Khara has six eyes, nine mouths, and one horn. Two eyes are in the position of eyes, two are on top of its head, and two are in the hump. Khara, with the aid of its sharp eyes, overcomes evil and aids in the management of the world.

khātani The cutting dance of the Hindi of North India. At harvest festivals boys and girls symbolically cut

wheat with sweeping motions. They advance in two parallel lines, with the girls sometimes holding the sheaf and the boy cutting, then with a reversal of roles. The celebration finishes in two concentric circles, girls on the inside. The vigorous natural movement of folk dances such as the khātani are distinguished from the sophisticated gesture code of Indo-Aryan *natya*. [GPK]

Khensu, Khonsu, or Chons In Egyptian mythology, the "sailor," the moon god, son of Amen and Mut, worshipped at Thebes. He is depicted as a young man wearing the lunar disk and crescent, or as a hawk-headed man with the same attributes. As Khensu-Hor or Khensu-Râ, he was a solar god. Sometimes he was equated with Thoth, the god of wisdom and of the moon, but, where Thoth was depicted as an adult man with an ibis head, Khensu was a child or young man without theriomorphic attributes, except for the occasional depiction with the hawk head. Khensu was also, in later belief, a healing god and rid people of evil spirits.

Khentamenti In ancient Egyptian religion, an early jackal-headed god of the dead; later identified with Osiris. Khentamenti is He who is in the West, the god of the cemetery at Abydos, to whom the dead went.

Khepera or Khepri In ancient Egyptian religion, the creator of the gods; the self-created; the resurrected sun of the morning, and thus an aspect of Râ. Khepera, by saying his name, made a solid place to stand; then he masturbated, "copulated with his shadow," and ejaculated Shu, the air god, and Tefnut, the water god: both these names are derived from roots meaning to spit. (A similar pun on the closeness of the words for tears and mankind makes him the creator of man, but the image here too is one of masturbation.) The same myth is related of Atmu, who was the sun at evening; the identity of Râ, Khepera, and Atmu makes the myth applicable to all three, since they are different aspects of the same being, the sun god. Khepera was identified with the dung beetle, his emblem, and sometimes is depicted as the figure of a man with the scarab in place of his head. As the dung beetle was believed to be generated by the heat of the sun from the ball of dung that it rolled, so the force pushing the morning sun across the sky must be self-generated; it was therefore Khepera, He who arrives. The scarab was thus the symbol of the sun and of resurrection. Compare KHNUM.

Khetpal The western Bengal name for the earth deity or guardian. See BHŪMIYA.

Khidr The Green One; a figure of Arabian folklore appearing, but not named, in the Koran. El Khidr is immortal; of all men he is the only one to have tasted of the Fountain of Immortal Youth far in the east. (See ALEXANDER THE GREAT.) He is thoroughly equated, and sometimes identified, with Elijah, the immortal of Jewish tradition. The stories told of the one are told of the other, but there is little doubt that they stem originally from rabbinical lore. El Khidr is a sea spirit; among the Arabs of modern Syria, he is the patron of the sea and is called He who walks in the seas. He has been adopted, as Khidr Khwājā, by the Moslems as a saint; small boats, each provided with a light and an offering, are launched on a river by his worshippers in an attempt to rid themselves of menacing evils or sins. El Khidr, whose name does not suggest of what his greenness consists, is some-

times dressed in green; sometimes he is an eternally young man with white hair and long white beard; certainly green is a color held in esteem by Moslems. The story in the Koran (*Sura xviii*, 59–81) is one told also of Elijah and Rabbi Joshua ben Levi, though the specific incidents vary. As in the tale of El Khidr's gaining immortality, a fish, this time one of Moses', mysteriously disappears. Nearby is found El Khidr's cave, and Moses becomes his follower on the condition that he ask no questions. But questions follow when El Khidr staves a hole in a boat, when he slays a youth, and when he rebuilds a wall in an inhospitable city. Before Moses leaves him, the prophet explains: the boat would have been captured by a pirate king, now the owners will be delayed because of the repair and will keep their boat; the youth would have grown up evil and troubled his pious parents; the wall contained a treasure and was in a house belonging to two orphans; had it fallen the unworthy tenant would have kept the treasure. In a folktale, a dervish plays on the king's desire to see El Khidr. If the king will support him for three years, he will produce the Green Man. At the end of the period, he of course cannot fulfil his promise and runs away. He meets a man dressed in white who comes back with him to the king. The king asks his ministers to pronounce judgment. One says the dervish must be cut into little pieces; the second says boil him in a caldron; the third, throw him into the furnace; the fourth, pardon him. The man in white agrees with all, saying each thus indicates his origin, respectively, son of a butcher, of a cook, of a baker, and of nobility. The king pardons the dervish, not only because that is the noble thing to do, but because the man in white brought before him by the beggar is El Khidr.

Khnum, Khnemu, or Kneph In ancient Egyptian mythology, the ram-headed "fashioner" of mankind; the creator of the universe and of man from the mud of the Nile. Originally a god of the First Cataract (where the Milky Way became the Nile), where he headed the triad including Sati and Anukit, his identification with the Rā complex made this creation myth known all over Egypt and its subject lands. Khnum took mud from the Nile, fashioned it into an egg, and from the cosmic egg formed the universe. On his potter's wheel he fashioned men and gods. He retained this power of creation after the first act; for instance, he was the modeler of the wife of Bata in the old tale of the *Two Brothers*. His consort was Heqet, the frog-headed goddess of resurrection. Khnum was also Lord of the Flood, a water god who was creator, as water was the life-spirit of the land. As such he is sometimes a serpent, and some conceptual connection may exist between the horizontal horns of the ram's head and the depiction of the serpent. See KHEPERA; PTAH.

Khshathra Vairya (Pahlavi *Xšatravēr*, Persian *Šahrēvar*) In Zoroastrianism, one of the six archangels or Amesha Spentas, aid and attribute of Ahura Mazda and the guardian of metals: literally, desirable sovereignty. Khshathra Vairya is the personification of Ahura Mazda's might and sovereignty and the triumph of his power over evil on earth. His special flower is the royal basil, and his antagonist is Sauru. In the court of heaven's his auxiliaries are Mithra, Asmān, and Anīrān.

khvarenanh or khwarenah In Iranian belief, the kingly power substance which belonged to the royal house of Iran: literally, light or luster. The khvarenanh was the glory which made gods and the souls of the dead powerful, gave the sun, moon, stars, and water their benign influences, and endowed men with the power to overcome hostile demons. According to the *Avesta*, the glory swims in the sea or is found in cosmic space, milk, or the reeds. When Yima spoke falsely the khvarenanh deserted him and passed to Mithra, Thrāetaona, and Keresāspa. Finally it sought shelter in the world ocean.

Ki In Sumerian mythology, the earth mother: later identified with her specific divine aspects manifested in other Sumerian earth goddesses—Ninmah, Ninhursag, Nintu. Ki and An, the sky god, were produced by Nammu. Joined physically, they were separated by Enlil, the air god: the myth is similar to earth-sky separation myths found all over the world. From the union of Ki and her son Enlil there arose the living things of earth; though the story of creation does not mention Ki, Ninmah, one of those closely responsible for the creation, is identifiable as one of the aspects of the earth mother.

Kibu The Mabuia (Melanesian) land of the dead; an unknown island lying to the west. According to one legend, when the *mari* (soul of the dead) goes to Kibu he is hit with a stone-headed club; this makes him a *markai* or true ghost of the dead. Then he is taught how to make a waterspout which is used to take turtles and dugongs. When the people of Mabuia see a waterspout they believe that the dead person has become a *markai* and is being taught the details of life in Kibu. Compare BOIGU.

Kidd's Lament Variant title of the fore-castle song, *Captain Kidd*.

Kihunai In California Hupa Indian mythology, the beings who inhabited the world before the Hupa. According to Hodge (*BAEB* 30: i: 583) they are believed to be still living to the east, west, and south of the Hupa, and above them. Yimantuwingyai, Hupa culture hero, is leader of a group of Kihunai to the north across the ocean.

Kilhwch and Olwen See ARTHUR; MABINOIGION.

Killer-of-Enemies The principal culture hero of several southern Athabaskan groups of American Indians (Navaho, Jicarilla, Lipan, and Western Apache). Among other Apache groups Killer-of-Enemies' companion, Child-of-the-Water, assumes the dominant role of the chief culture hero and Killer-of-Enemies plays a subordinate part. As a subordinate deity he is now thought to represent the white man, or to act as a sponsor for the white man. See AHAYUTA ACHI. [EWV]

Kilkenny cats In Irish legend, two cats who fought until only their tails and nails were left: a byword for the ancient enmity between Kilkenny and Irishtown. Legend reports constant fighting between the two groups almost to mutual annihilation. The city of Kilkenny, county seat of county Kilkenny in Leinster, Ireland, was settled by the English who accompanied Richard de Clare, second earl of Pembroke (called Strongbow), in the 12th century. Richard married the king of Leinster's

daughter and eventually succeeded to the kingdom. Irishtown is separated from Kilkenny only by a little stream. In the 14th century the English sought to prevent their own extinction with the Statute of Kilkenny (1367) which attributed all the lawlessness to the Irish, forbade intermarriage between the two communities, forbade the English to entertain Irish minstrels, and even to ride horseback Irish fashion.

Later (18th century) legend associates the phrase *to fight like Kilkenny cats* with a cruel pastime of the Hessian soldiers stationed in Kilkenny during the rebellion of 1798. They would tie two cats together by their tails, hang them over a line, and watch the fight till one or both of the animals died. Once an officer came upon them in this brutal entertainment and cut down the cats with his sword. The soldiers thus explained the presence of the two tails on the line: the cats fought so desperately that they ate each other up except for the tails.

killing by pointing (counting) A folktale motif (D2061.2.3) known to North American Indians all over the continent, but perhaps most often found in stories of the Southwest, California, and of the Plains. The motif is reported to be as frequent among North American Indians as the fatal look or death-dealing glance. The Micmacs (northeastern Algonquians) have a story in which a woman kills a moose by pointing at it with a knife. In Southern Ute mythology Mountain Lion kills deer by counting. If he saw five deer, he would say, "There's one; there's two," etc., and they fell dead. Sünāwavi (creator-trickster-culture-hero) wanted meat and asked Mountain Lion how to kill deer. Mountain Lion told him; Sünāwavi went off, saw three deer, counted "There is one, there is two," etc., and they fell dead. He thought that was too easy, and said so. The minute he said so, the deer came to life and ran off. After that the power of killing by counting was lost in the world. Even Mountain Lion after that had to hunt deer against the wind and shoot them. Curtin (*Creation Myths in Primitive America*, Boston, 1911) reports a California Wintun Indian story about one Katkatchila in the southwest who could kill game by pointing a hollow stick at them. Something came out of the hollow stick and killed them. The Wintun invited Katkatchila to their village and entertained him with dancing and hunting parties in order to find out what came out of the stick. Compare FATAL LOOK.

Kimpurushas A class of spirits of Hindu mythology, servants and followers of Kubera. They have horse's bodies and human heads: often identified with the Kinnaras, who have human bodies and horse-heads, and are also followers and servitors of Kubera.

kina A secret ceremony of the Yahgan Indians of Tierra del Fuego in which masked men impersonating spirits danced in the sight of women and reminded them with terrible threats to be submissive to men. One of their myths tells how in former times the women, led by Moon, ruled over the men and terrified them with the same practices. Sun discovered their secret, killed all the women except the little girls, and adopted the kina feast to insure the supremacy of men henceforth. Only a shaman can lead the kina rite. [AM]

kind and unkind A very frequently occurring motif (Q2) in folktales from Europe, Asia, Africa, and the Americas; a moralizing, didactic motif found in combination with many other motifs in at least 17 tale types. The kind hero or heroine is rewarded; the unkind brother, sister, etc., is punished. Its most familiar exposition is perhaps in *Les Fées* of Perrault, where the kind younger sister is rewarded by the fairy and drops flowers and jewels from her mouth as she speaks. The surly sister is punished by having toads and serpents come from her mouth. The kind girl marries a rather practical young prince; the other is cast out and dies in the forest. The order of incidents is usually reversed, especially in the quest stories; the older brothers fail because they are discourteous or even cruel, then the youngest brother brings home the water of life or other remedy because he is kind to the fruit tree, the old woman, etc. Sometimes it is a stranger who is turned away from all but one house, as in a Fjort (African) story: the town is flooded and the kind hosts are saved—compare the story of Sodom and Gomorrah. Or, from the Fjort again, the women will not give water to an old woman (Nzambi in disguise); the man later goes out of his way to be nice to her. Therefore, only men may fish in the lake she made; it is *kazila* (tabu) to women. The moral idea is clearly expressed in the folktale, so much so that the line between tale and myth, between imaginative fiction and a story of the gods, is not at all clear. In the North American Indian story where Crane forms a bridge over a river, the kind and unkind motif is always present. In the abandoned children story of the Gros Ventre, the old woman is drowned because she is discourteous to the water monster. The motif appears in such tale types as *The White and Black Bride* (Type 403; Grimm #13, *The Three Little Men in the Wood*); *The Presents* (Type 620); *The Grateful Animals* (Type 554); *The Spinning Women by the Spring* (Type 480); *All Stick Together* (Type 571; Grimm #64, *The Golden Goose*), etc. See BERRIES IN WINTER; CRANE; HOLDE; JEWELS FROM SPITTLE.

king The male ruler of a people; a sovereign chief of a nation or tribe. The kingship commonly comprehends both temporal and spiritual powers. The king is ruler in civic matters, a superior kind of noble, and probably originally *primus inter pares*, the first noble among his peers. But the king is also chief priest, possessing great mystical powers of himself, and may as easily have developed from the need to have a potent priest always ready to intercede with the gods, rather than choosing such a priest at occasional times. The acquisition of other than priestly powers by such an individual, with the sanction and assistance of the gods, would be natural. The supernatural power surrounding the king makes his person strongly tabu; in many places even the shadow of a subject may not touch the king's person, or the king's shadow, or any of the king's belongings. The king is thus the representative of the gods on earth; his spiritual power is attached to his temporal power; his word is law; his deeds are beyond judgment; he rules not by election but by divine right. The king as priest is necessary to the flourishing of his land and his subjects and must not only superintend and preside at religious rites but must possess certain attributes to maintain his post, e.g. he must be bodily unblemished

or he must prove his potency by meeting all challengers to his position, he must observe certain tabus. In certain societies, the king was killed ritually after a given time and a new, more powerful king took his place. This custom is mirrored in the temporary kings of some festivals, like the Saturn of the Saturnalia. Compare the ancient Mexican custom of treating a prisoner as a king for a time, giving him every comfort and pleasure, and then sacrificing him alive at the festival. See *HEB-SED*; *LORD OF MISRULE*.

king asleep in the mountain The concept of the king asleep in the mountain (D1960.2) is rooted in the hearts of all proud, defeated peoples, everywhere. Some western European kings are said to be waiting in mountain caves until their people need them, when they will come out with an army and attain victory. One of these legends is of Barbarossa (Frederick I, probably confused with his grandson Frederick II) who waits in a cavern in Kyffhäuser Mountain until his country calls him. Arthur of the Britons and Charlemagne of the Franks will also return when needed. The list could go on and on. The Hindu *Purāṇas* mention an old king Mucukunda asleep in a cave, awakened by Krishna to destroy an enemy king. The Armenian legendary hero, Meher, with his horse is still in the cave of Zympzypms, but he will not be seen again until the end of the world. In Irish legend the prophecy is made of Fionn and his warriors, and of Earl Gerald under the castle of Mullaghnast (see *CELTIC FOLKLORE*). The story was told of the Old Norse Olaf Tryggvason, of Robert Bruce in Scotland, of Don Sebastian in Portugal, of King Wenzel in Bohemia, and of the Carpathian robber king Dobocz. True to promise Drake's drum was heard again in England before World War II; that Hitler will come again is a living belief. See *KRALJ MATJAŽ*; *OGER THE DANE*. [RDJ]

kingfisher Any of numerous birds (family *Alcedinidae*), generally crested, with long, straight, deeply cleft bill. In Ireland he is called the water dipper (*gaba uisce*) from his habit of suddenly diving for his food. The big Australian kingfisher (*Dacelo gigas*) is called the laughing jackass from his dawn and evening call.

There are various etiological stories about how the kingfisher got his beak (A2343.1.1), and how he got his crest (A2321.5), among them an Ojibwa Indian statement that once Nanabozho reached for kingfisher but missed, only ruffling the feathers of his neck. The most familiar of kingfisher stories is Pliny's statement that the halcyon (i.e. the kingfisher) lays its eggs on the sea in midwinter and that the sea is always calm and stormless until they are hatched. See *HALCYON DAYS*. In Bengal it is said that to hear the kingfisher's cry on your right presages success in the day's business, on the left, bad luck. This belief is prevalent also among several West African peoples and survives among southern United States Negroes. Codrington reports that the kingfisher is regarded as a sacred bird among most Melanesian groups.

King Herla A traditional early British king whose story is told by Walter Map (1140–c. 1210) in his *De Nugis Curialium*. One day Herla, riding abroad, met the "king of the Pygmies" (according to Map, a supernatural subterranean king) who invited himself to Herla's wedding and bid Herla come to his one year from the day. The agreement was made; the Pygmy arrived followed by a great train bearing rich gifts. The

following year Herla set out for the other's wedding, also followed by a train of horsemen laden with gifts. They entered the supernatural realm through the mouth of a great cave. When it came time to return home, the Pygmy gave Herla many gifts and a tiny hound which fitted into his hand, warning him to let no man set foot on the ground until the little dog first leapt to earth. Herla, on entering his kingdom, inquired of an old shepherd regarding the welfare of his queen; but the old man did not understand him. Two hundred years had gone by and the Saxon tongue was now spoken in the land. Many of Herla's men who leapt to the ground in alarm or amazement vanished in a puff of dust. The rest, with Herla at their head, are still wandering. Walter Map, however, says they have not been seen since one noonday in Hereford (or Wales) in the reign of Henry II, when they were questioned by a group of local people who saw them, and on not answering, were attacked.

Herlethingi is the term applied in England to the phantom train of soldiers bearing the sumptuous gifts, which traveled, usually slowly and silently, in broad daylight through the countryside. Sometimes a peasant would steal a horse or some of the treasure, and meet with sudden death for his trouble. In later northern European folklore (see F. Liebrecht, *Zur Volkskunde*, Heilbronn, 1879) Herla and his train became interpreted as a manifestation of the Wild Hunt (E501.1.7).

King John and the Bishop An old English riddling ballad (Child #45) still current in England and the United States. The story itself is known throughout the East and the West. The bad King John, jealous of the pomp of the bishop, tells him he must answer three questions or forfeit his head and living. First, he says, "Let me know within one penny what I am worth." Second, "How soone I may goe the whole world about." Third, "What is the thing, bishopp, that I doe thinke." He gives him twenty days to answer. Off goes the bishop to Cambridge and Oxford, but none of the doctors can help him. He returns home, meets his half-brother, a shepherd. This unlearned brother takes the bishop's place before the king, and answers the questions. First, the king is worth 29 pennies, since Christ was worth 30, "But I know Christ was one peny better then you." Second, he can go around the world in 24 hours "if with the sun you gan goe the next way." Third, "You thinke I am the bishopp of Canterburye." The king is delighted with these answers, gives the shepherd 300 pounds a year. The bishop too is happy and gives him another 50 pounds. Says the balladist:

"I never knew shepard that gott such a liuinge
But David, the shepard, that was a king."

King Lear judgment The short-sighted judgment of folktale: subject of motif M21 and closely related to love like salt (H592.1) and the knowing laugh. An old king, constantly flattered by his two elder daughters, finally banishes the third and youngest because she seems to fall short of them in affection. Either, on being questioned, the youngest daughter tells her father that she loves him as much as meat loves salt, and is banished for this answer, which seems to him most inadequate compared with the elders' protestations; or, overhearing flattering courtiers tell her father that all their good fortune springs from him alone, she gives a little

laugh and then is silent. On being questioned about the laugh, she replies that the courtiers do not speak the truth, that each individual inevitably reaps the result of his own acts. The father in a rage marries her to a leper. In both versions of this tale the father eventually learns the deep truth underlying the daughter's words.

The second version is typified by the story of the Princess Madanamanjari as quoted from a Jainist text in the *Ocean of Story* (vii, 254-255). Here the King Lear judgment is tied up with the knowing laugh to point out the inevitable working of the laws of *karma*. For the King Lear judgment involving love like salt, see CAP O' RUSHES.

Shakespeare's famous tragedy, *King Lear*, is the story of an old king of Britain who intends to divide his kingdom among his three daughters in proportion to their devotion. The two elder daughters protest to his satisfaction; the youngest will say no more than that she loves him "according to her duty," and is disinherited. This legend is in Geoffrey of Monmouth's *Historia Regum Britanniae* (12th century), and according to A. H. Krappe (*Mythologie Universelle*, Paris, 1930), Geoffrey euhemerized the Old Irish sea god Lir into this old British King Leir, restored to his throne by the disinherited youngest daughter who defeats the elder sisters.

King of Ireland's Son Title and hero of an Irish folktale based primarily on the grateful dead motif (E341 ff.). One day the King of Ireland's Son shot a raven; the raven fell in the snow. And the young man thought there was nothing redder than raven's blood on white snow or blacker than raven's feather. He vowed he must have for wife some girl with hair as black as the raven's wing, cheeks as red as the blood, and skin as white as the snow. There was such a girl in the east, he was told, so he started out. Before long he met the funeral of a man who was being kept from burial because of his debts. The King of Ireland's son paid the debts, saw the corpse to its burial, and went on his way.

Soon he was joined by a "short green man" who asked where he was going. "To seek a princess in the eastern world." So the stranger joined the King of Ireland's Son as his servant, asking for wages only the first kiss of the princess. The King of Ireland's Son agreed. One after another they were joined by extraordinary companions (F601), five instead of the usual six: 1) the man with remarkable sight (F642) also known in general folklore as the skilful marksman (F661), whom they came upon aiming at a blackbird in the eastern world. His wages were to be a little house and garden if the quest prospered. 2) The remarkable hearer (F641; F641.1) who could hear the grass grow; 3) The marvelous runner (F681.1) who had to keep one leg tied up to keep from going too fast; 4) The mighty blower (F622) who had to hold one finger up his nose to keep from blowing the houses down; 5) The mighty stone-breaker (F625) who broke stones without a hammer lest he make them into powder. So they all went on together, met with many adventures, circumvented all giants, overcame all difficulties, and acquired out of each adventure some magic object which came in handy later: a cap of invisibility, shoes that would go wherever the wearer willed, a magic sword.

When they came at last to the eastern world the princess said she would marry the King of Ireland's Son if he could break her enchantments. The whole castle

was surrounded with a ring of skulls on spikes, heads of suitors who had failed. The princess gave him a pair of scissors, and all she asked was the scissors back in the morning. Then she put a sleep-pin under his pillow, the King of Ireland's Son fell asleep; the princess took up the scissors, left the room, and gave them to the *riġ nime* (literally, king of poison) bidding him keep them until morning. But when the *riġ nime* fell asleep, the short green man came into the room wearing the magic cap and shoes and with the sword in his hand, took the scissors, and gave them back to the King of Ireland's Son. So in the morning when the princess said, "Have you got the scissors?" he said, "I have."

Next she gave him a comb which he was to return to her in the morning. All happened as on the first night, and the short green man got back the comb. The third night's test was to give back to the princess in the morning not only the comb but the "head of him who was combed with the comb"—or he would lose his own head at last. This time the *riġ nime* hid the comb in a great rock, put 60 locks upon it, and sat by the door of the rock to guard it himself.

The short green man again saved the situation: he split the rock with one stroke of the magic sword and took off the *riġ nime's* head with the second stroke. So when the princess came asking for the comb in the morning, the King of Ireland's Son had it and rolled out the *riġ nime's* head also. She was so infuriated at this success that she imposed still another task: to send a runner for three bottles of healing-balm from the well of the western world, and his head would be hers if her runner beat his runner. The King of Ireland's Son's extraordinary runner got to the well and was half-way back when he was tricked into sleep by the princess's runner, a hag. She laid his head on a horse's skull, spilt out his water, and left him asleep.

The man who could hear the grass grow put his ear to the ground and reported that the hag was on her way back but *their* runner was asleep and snoring! The extraordinary marksman looked and shot the horse's skull from under the sleeper's head; the extraordinary blower took his finger out of his nose and blew the hag clear back to the western world; the runner of the King of Ireland's Son ran back to the well, refilled his bottles, and still got home first. After more tests, all nullified by the extraordinary companions, the princess married the King of Ireland's Son. The short green man demanded the first kiss, which he had been promised, took the princess off into another room ("She was full up of serpents"), and killed all the serpents which would have killed the bridegroom. So when all was safe he gave the princess back to his master, revealed himself as the dead man whose debts the hero had magnanimously paid, went away with the extraordinary companions, and was never seen again.

This story is a pile-up of familiar folktale motifs: in addition to those mentioned we find the red as blood, white as snow formula (Z65.1), the green revenant (E422.2.2), the extraordinary companions (F601) who perform the hero's tasks (F601.1), grateful dead helps hero win princess (T66.1), all former bridegrooms have perished on the bridal night (T170), the quest for marvelous water (H1321), bringing water from far away faster than the witch (H1109.1), the serpent damsel (F582.1) full of serpents which crawl out and kill her

bridegrooms, and grateful dead disposes of serpents (F172.2.1). Hans Christian Andersen's story of *The Traveling Companion* is based largely on the same motifs, as is also a Czech story, *George with the Goat*, cited by Douglas Hyde in *Beside the Fire*, London, 1910, p. xxxix. See CEPHALUS; *Kilhwch and Olwen* in MABINOGION.

King of the Bean Formerly in England, France, parts of Germany and Scandinavia, and still in northern France, a mock king chosen for the Twelfth Night (January 6) festivities. His reign sometimes lasted throughout the day, sometimes it was for the duration of the dinner. A special cake was baked in which was placed a bean or coin or small image (if a queen were to be chosen by lot as well, a pea, or another color bean, was also baked into the cake). The cake was cut or broken apart; sometimes the pieces were handed among the company by a young child. Whoever had the piece with the bean in it was King of the Bean, and directed the festivities. Sometimes the king (or queen, if a woman obtained the piece with the token) chose his own partner; sometimes the cake decided. Certain actions by the King of the Bean were believed to ensure fertility during the year to come. The office is the same as the Lord of Misrule, a more general term, and is believed to be derived from the custom of choosing a leader of the revels by lot at the Roman Saturnalia. See LORD OF MISRULE.

king of the cats In Old Irish legend, a huge cat, as big as an ox, named Irusan, who ruled over all the cats; his stronghold was in a cave at Knowth in Meath. In the story of the poets' *Visitation to Guaire*, the poet Senchan at Marbán's feast satirized not only the mice, but all cats, for allowing the mice to get their whiskers in his egg. Irusan in his cave at Knowth heard this, appeared at Cruachan, and carried off Senchan in revenge for the satire. St. Ciaran saw them going as they passed through Clonmacnoise, and hurled a red-hot bar through the cat and killed it. But Senchan was not grateful. He would rather have died and been a reproach to Guaire (a chieftain of Connacht).

Robert Graves in *The White Goddess* posits a cat cult in Ireland from this story of a king of the cats in a cave at Knowth, and from the existence of the figure of a slender black cat on a silver chair found in another cave in Connacht. This one he reports to have been oracular, and the giver of ill-tempered, nasty answers to questioners.

There is an Irish folktale about a man who was killing a cat. The cat said, "Go home and say you have killed the king of the cats." As soon as the man got home he said to his wife, "I have killed the king of the cats." With that the house-cat by the fire leapt up and tore the man to pieces.

King of the Wood Rex Nemorensis; the priest of the sanctuary of Diana Nemorensis at Nemi, Italy (the grove of Aricia); the explanation of the customs connected with this office form the thread binding together J. G. Frazer's *Golden Bough*. The shrine was said to have been founded by Orestes; the first priest-king was Virbius, the reborn Hippolytus. Succession to the priesthood was only by a runaway slave who, after breaking a branch from the sacred tree within the grove, fought with the incumbent. If the slave killed the priest, as might happen at

any time, at any season, day or night, the office passed to him. From an investigation of this unique situation, Frazer, by educing customs from all over the world, decided that the King of the Wood was the mate of Diana, who was embodied in the oak; that he was a form of Jupiter, the oak god, and thus the incarnation of the oak spirit; that he was a king meant to be ritually slain after his period of reign like the kings of the Saturnalia; that his slaying before he became decrepit kept the full power of fertility preserved by passing it from one vigorous king to another.

king's evil A degenerative, tuberculous disease of the lymphatic glands; scrofula. Edward the Confessor in England cured scrofula by touching the sufferer. Charles I cured 100 people on Midsummer Day of 1633. Charles II also had the power. A Tonga in West Africa avoided the effects of having eaten tabu food by pressing the king's foot on his stomach. Others of the tribe thought that the king's touch cured palsy. The belief is reported from other parts of the world from past and present times. The touch of a powerful, exalted, sacred, or virtuous person is thought to bring health. The cure of crippling hysterics by touching the sufferer is well known. [RJD]

Kingu In *Enuma Elish*, the Akkadian-Babylonian creation myth, the second of Tiamat's consorts, her offspring by Apsu, and leader of her host in the battle against Marduk. He was given the tablets of destinies by Tiamat, giving him power over creation, but after Marduk killed Tiamat, Kingu was captured and the tablets appropriated by Marduk. Kingu was tried and condemned by the council of the gods, and from his blood mankind was created. Among the new year ceremonies performed by the king in Babylon, well into the first millennium B.C., the king as Marduk burned a lamb, which was Kingu. See SEMITIC MYTHOLOGY.

King Waldmar Hero of a cycle of Danish ballads of the 14th century dealing with King Waldmar, his queen, Sophie, and Tove, his paramour.

Kinharingan The Dusun (Borneo) creator who made the world and mankind. With his wife, Munsumundok, he killed one of his children, cut it into bits, and planted the pieces in the earth. From these came all the food plants and the animals. The Tempassuk Dusuns consider the lempada tree sacred to Kinharingan who decreed that anyone cutting, climbing into, or picking its fruit would be afflicted with ulcers unless he had performed a special ceremony first. In myth Kinharingan and his wife emerged from a great rock in the middle of the sea. They walked on the surface of the water until they arrived at the house of Bisagit, the spirit of smallpox, from whom they obtained earth. After placing the earth Kinharingan made the Dusuns while Munsumundok made the sky. Together they then created the sun, moon, and constellations. In another legend Bisagit agreed to give Kinharingan the earth only if he could have half of Kinharingan's people. Now Bisagit comes to claim his toll once every forty years. The Dusuns do not try to propitiate Bisagit, since it is useless.

kinkkaliepakko Literally, hooking arms: a Finnish longways for four couples, a prototype of the Virginia Reel. However, only two of the last Virginia Reel formations occur, namely, the sliding down the center

of the leading couple, and their winding in and out through the two lines, hooking arms with the partner, then the other arm with an opposite dancer in the line. This characteristic crotcheting in and out is called "arming" in longways terminology. As in the reel, at the end of the routine, the head couple becomes the foot couple; and the routine is repeated. [GPK]

Kinnaras In Hindu mythology, heavenly musicians; followers of Kubera. The Kinnaras were either the sons of Kaśyapa, or sprang from the toe of Brahmā. They had the bodies of men and the heads of horses. Compare KIMPURUSHAS.

kinnor A type of lyre played in ancient Israel, similar to the Greek *kithara*. It was strung with ten strings of sheep gut and was played with a plectrum to accompany singing. This was the instrument of King David (erroneously translated as harp) and this was the instrument that was hung on the willow trees by the waters of Babylon because the sorrowing Jewish captives could not play the instrument of joy in a strange land. See HARP; LYRE.

Kintaro A Japanese legendary hero who assisted the famous warrior Minamoto Yorimitsu in the 11th century. [JLM]

kipriano Armenian roll of prayers containing magical formulas believed to protect against sorcerers, false love, snakebite, and the evil eye: widely used, especially in eastern Armenia.

Kirttimukha In Hindu mythology, the face of the lion-headed monster embodying the destructive power of the universal god, produced by Śiva when he was challenged by Jalandhara. The ravenous monster, deprived of his legitimate prey, Rāhu, fed (at the suggestion of its creator, Śiva) on the flesh of its own feet and hands; but still ravaged by hunger, ate and ate, devouring its own arms, legs, belly, chest, and neck until only the face remained. Then Śiva declared that henceforth the face would be known as Kirttimukha, the Face of Glory, and would be worshipped. The face was used on the lintels of Śiva temples and as guardian of the threshold. Kirttimukha, however, as a part of the divinity, is a sign of his protective wrath and does not inspire fear in the Hindu devotee. See FACE OF GLORY.

kiss Specialists on the kiss working with both primary and secondary data have concluded that kissing is a culture trait characteristic of European peoples and their racial ancestors, the Teutons, the Greco-Romans, and the Semites, but unknown to the Celts who at an early date seem to have corrected this defect. One specialist has observed "that though the act is very rare among the lower and semi-civilized races, it is fully established as instinctive in the higher societies."

In the Far East kissing is an erotic exercise. Chinese and Japanese are either deeply shocked or hilariously entertained by the shameless exhibitionism of Occidental husbands and wives who kiss in public. In the middle of the last century, when Chinese scholars first began translating Western novels into their own language, they had to invent a new character to describe this act. Freud's contributions to sexual theory and the numerous studies which followed them give, in their discussions of oral erotism, ample justification for the views of the

lower and semicivilized societies, but still leave unanswered the question of why the kiss should have become so heavily encumbered with the folklore of Occidental etiquette, religion, and law.

Students of origins have found the beginnings of the kiss in the playing of animals; that is, in the billing of birds, the biting games of dogs. The "savage" kiss, also referred to as the olfactory or Malay kiss, or rubbing noses, is reported as common among the Maoris, Society and Sandwich Islanders, Tongans, Eskimos. Descriptions are not in complete agreement though generally the kiss involves bringing the noses together and rubbing them. In southeast India the mouth and nose are applied to the cheek and the active partner inhales. Another observer has reported that the Yakuts, various Mongolian peoples, and the Lapps of Europe have a ritual: the nose is pressed against the cheek, a nasal inspiration follows, eyelids are lowered and lips are smacked. The North American Indian women lay the lips softly on the cheek with no other motion or sound.

The kiss has not been reported from ancient Egypt and it may not have been known in India before the Aryan migrations. Arabs kiss their hands to the storm; Turks kiss their own hands, and then place them on their foreheads; and in Morocco, equals salute each other by touching hands and each kissing his own hand. Ceremonial kissing of the sort experts have been pleased to call civilized seems to have been common among the early Semites and Greeks. Esau fell on the neck of Jacob and kissed him. At later times kisses between members of the opposite sex was deplored as conducive to lewdness though exceptions were made there as in the southeastern United States in favor of "kissin' cousins." Herodotus reported that, among the Persians, equals in rank kissed on the mouth, others on the cheek. When Odysseus returned, his friends kissed him on the head, hands, and shoulders. The custom retained its popularity throughout the Greek and Roman period as between parents and children, lovers, married people, and persons of the same sex. In a society in which everybody kissed everybody, perfumed lips were as fashionable as they are today in Euro-American culture.

Saint Paul exhorted the early Christians to salute one another with a holy kiss and Saint Peter referred to the "kiss of love." Saint Cyprian reported that the baptized were kissed by the celebrant and the congregation after the ceremony. In Roman Catholic ritual the bishop kisses the newly ordained priest and is himself kissed when consecrated. Kissing the foot of the pope is part of the ceremonial audiences. This ritual of oral contact seems to be associated with the desire to form an intimate connection with the object, and is similar to kissing the altar, kissing saints, relics, and in some parts of Europe kissing the wounds of Christ on Good Friday. Thus the Greeks and Romans kissed the images of their gods and the early Arabs kissed the household gods both on entering and leaving the house. Sacred objects were kissed at the Eleusinian mysteries and some of the Anglican clergy kiss the cross of the stole before putting it on. The kiss of Judas violated this principle and its still a symbol of hypocrisy.

Knights were kissed after being dubbed, and kissing the bride is still popular.

Some authorities have suggested that the custom of

kissing the dead relatives, as Joseph kissed his dead father, is an attempt to catch the souls of the dying as they are escaping through the mouth (see *SOUL*). The custom though prohibited in the 6th century persisted. To be kissed by a god or a ghost produces death, as is recorded in the Italian proverb "to fall asleep in the Lord's kiss" and in the pious deaths of Abraham, Jacob, and others.

The social kiss has been the subject of some discussion even in societies where it is generally accepted. Many American girls who expect to be kissed after a date have qualms as to whether they are "nice girls." In the Middle Ages English women had a considerable liberty. In France, early and modern, to kiss on the mouth is permitted only among lovers and to use the word kiss without indicating the place to be kissed is to refer to the unspeakable. In medieval law from France to Wales a married woman who kissed a man not her husband was guilty of adultery. The kissing of a lady's hand as a sign of respect is still common among some social strata in Europe and had become part of the language in the Austrian phrase, *Küss d' Hand*.

In folktales a kiss can bring forgetfulness (D2004.2) and a transition into another world, or it can disenchant one who is bewitched (D735). There are stories of resuscitation by a kiss (E65), transformation by a kiss (D565.5), of lover given rump to kiss (K1225), and tales of witches kissing the Devil's tail (G243.1.1), the latter being euphemistically vague about an act of complete and perverted submission during the Sabbath. Children who hurt themselves sometimes have the place kissed to "make it well" and gamblers have been known to kiss the cards for luck. R. D. JAMESON

✍ The practice of kissing farewell to the corpse was frowned upon by the medieval Jews, since the act was thought to bring death by contamination to the kisser. Kissing the Torah, the scroll of the Law, is a reverential act and is surrounded by prohibitions: it must not be done after one has kissed his wife or child, after intercourse, etc. In India, Arabia, and other parts of the world where a literature of love techniques exists, kisses are often classified and subdivided, according to the part of the body kissed, the position or pressure of the lips, the use of the arms, hands, tongue, etc., during the kiss, and the like. See *BEAUTY AND THE BEAST*; *LITTLE BRIAR ROSE*; *LOATHLY LADY*.

kitchen gods Usually, the thousands of *ma-chungs*, or paper images representing Tsao Chün, the Chinese god of the kitchen stove and god of the hearth, worshipped under one or another of his names: Tung Chu, Szu Ming, Tsao Shên, Tsao Chün, P'u Sa, etc. Tsao Chün is represented at his annual festival by a gorgeous *ma-chung* of red cardboard, placed above the kitchen range and before which the New Year's Eve feast is spread. This is carefully put away in the morning and a cheaper paper image is substituted for daily use. There are also variations of the kitchen god and his aspects, bearing different names, as for instance Lu Huo, the benevolent Stove Fire, etc. See *TSAO CHÜN*.

Kitchie Boy A Scottish ballad (Child #252) related to the King Horn cycle. Though sometimes called a modern variant of *Hind Horn* (Child #17), *The Kitchie Boy*, as W. R. Nelles (*JAF* 22: 59 ff.) has demonstrated, is not directly descended from *Hind Horn*. Both

stem from some earlier telling of the tale, and certain elements in the two ballads indicate that they are independent of each other. For example, the Kitchie Boy refuses the lady because he is afraid of her father; Hind Horn, on the other hand, rejects her advances because he owes a duty to his lord. The Kitchie Boy is a kitchen boy, and the lord's daughter falls in love with him. She invites him to her room, where she makes love to him, but he is afraid. Therefore she outfits him with a ship, and gives him a ring to remember her by. He sails to London, where another fine lady offers him a ring and other favors which he turns down out of loyalty to his lady. He sails back as captain; the father decides from afar that this is the husband for his daughter. She does not recognize him until after he has teased her cruelly with the ring, saying he got it from a drowned man's hand. And even at the end

Bat lettel did the old man keen
It was his ain kitchchen-boy.

Kittredge, George Lyman (1860–1941) American educator, philologist, editor, and folklorist; instructor and Professor of English at Harvard University from 1888 until his retirement in 1936; President of the American Folklore Society (1904) and of the Modern Language Association (1904); author of numerous books, monographs, and articles in the fields of English literature and language, the classics, and folklore; editor of several textbooks and grammars; and an authority especially on *Beowulf*, *Gawain and the Green Knight*, Chaucer, and Shakespeare.

As a folklorist, he served for nearly forty years as an assistant or associate editor of the *Journal of American Folklore*, contributing countless articles and notes to it; he arranged and cataloged the Child ballad collections, publishing in 1904 the *English and Scottish Popular Ballads*, which he had edited with Helen Child Sargent. He wrote *The Old Farmer and His Almanack* (1904), *Witchcraft in Old and New England* (1929), as well as much other material dealing with beast-fables, tales, songs, riddles, Americana, etc. As a teacher, he inspired and encouraged the work of several generations of American folklorists, among them John Lomax and John Harrington Cox.

Kittredge was perhaps best known for his textual elucidation of Shakespeare and for the Shakespeare course, English 2, that he gave at Harvard, in which he terrorized his students and became famous as one of the most exacting masters and one of the most colorful personalities of the American academic world. "Kitty's" tall, spare, gray-clad figure, his white beard, his impatience with inexact thinking and language, his rasping and sarcastic rejoinders to the ineptitudes of undergraduates, and his apparent assumption of his own infallibility gave rise to a body of legend among students that was almost as extensive as that of any folk hero he might have studied. Though the present generation of Harvard undergraduates never saw the original of a Kittredge performance, reports indicate that they are occasionally seeing a good imitation put on by instructors who took his mannerisms as "the glass of fashion" for professors, and are now repeating his display of irritation at coughing in class, at tardiness, and at "beautiful thoughts" on literature, as well as his curtain-line delivery of the final remark of a lecture.

kiva Hopi Indian underground circular or rectangular ceremonial assembly and lounging chamber of the ancient and modern Pueblo Indians of the Southwest: first described by Spanish explorers as an *estufa*, "hot room," mistaking its chief use as that of a sweat house. The various male societies in each of the western pueblos are associated with specific kivas in the pueblo; in the eastern pueblos a two-kiva system prevails. Women cannot enter the kiva except to provide food for their husbands or sons, or in rare instances, to witness or participate in certain ceremonies. All esoteric rites pertaining to the numerous pueblo cults or societies, and all boys' initiation rites are performed in the kiva; masks, altars, and other ceremonial paraphernalia are kept in the kiva; males also use the kiva as a place in which to lounge, weave, or do other work, and, if unmarried, as a sleeping place. Entrance to the kiva is up a ladder to the roof and then down another ladder, the top of which projects through a hatch in the roof; this hatchway serves also as a smoke hole for the fire built on the kiva floor. At the end of some kiva chambers, is a small round hole in a stone or slab of cottonwood, facing the bottom of the hatchway ladder, the Shipapu or Shipapulima (see SHIPAP), symbolizing the place of origin and the final place of departure of the Pueblo peoples and the medium of communication with beings of the underworld. When not in use the Shipapu is kept closed. Behind this hole the altars used by the various societies are usually erected, and before it the dry-paintings used sometimes in ceremonies are made. [EWV]

kizewamono A genre play of the Japanese *kabuki* drama: first produced in Edo about 130 years ago. These plays depict love and contemporary life, in a rhythmical manner to musical accompaniment. The most famous writers of these plays are the fourth Nanboku Turuya, Mokuami Kawatake, Mokuami, and others. All are of kabuki origin and unrelated to the puppet plays. [GPK]

klepht One of the Greek (Epirote) nationalists who, under Turkish rule, after the 16th century, lived as brigands in the mountains; the word, meaning "robber," has come to mean "patriot." The doggerel ballads of these klephts, telling of their activities, kept alive resistance of the Greeks to the Turks. They are comparatively contemporary and have little literary value, and so have not maintained the serious attention once paid them. The klephtic serpentine Pyrrhic Dance is one of the open rounds of Europe.

Klieng Greatest of the mythological heroes; warrior and transformer of the Borneo Dyaks: born from a knot in a tree. His greatest exploit was his war on the sky. See INDONESIA MYTHOLOGY.

Kloketen The initiation ceremony of the Ona Indians of South America, the most important rite of their religious life. The young boys were gathered together in a big hut for several months and there instructed in their moral duties and exposed to many ordeals. At night the men, painted and masked, impersonated demons and frightened the women. The secrets of the Kloketen were withheld from the women under threat of dire penalties; and it also served the purpose of keeping them in subjection. [AM]

Kmukamch Literally, Ancient Old Man: creator-trickster-culture-hero of California Modoc Indian mythology, who created mankind.

Knecht Ruprecht Literally, Servant Rupert: the Christmas man in some parts of northern Germany, interpreted as the servant (or knight) of Jesus Christ or of St. Nicholas. It was not until the 17th century that he replaced St. Martin or St. Nicholas as the companion of Christ. He was impersonated by a man of the village in high boots, white robe, blond flax wig, and wearing a mask, to whom the parents of the village had previously sent the presents they wished given to their children. On Christmas Eve (or on Nicholas Night or Day, Dec. 5-6), Knecht Ruprecht went to every house, knocked on the door, said he was Knecht Ruprecht, that his master Jesus Christ had sent him to ask about the children. He questioned the parents about each child by name, usually to the terror of the smaller ones. The parents said whether each child had been good or bad. To the good ones Knecht Ruprecht gave presents "from Jesus Christ"; if anyone had been bad, however, he gave a whip or a rod to the father, saying for Christ's sake to use it. See SAINT NICHOLAS.

knight of St. Crispin A shoemaker.

knives The knife, in folk belief, has two principal distinguishing characteristics: it is a sharp cutting instrument, and it is made of iron. Thus it shares many of the beliefs and practices associated with scissors, swords, needles, etc. Anciently, knives were made of chipped flints, and in many rites among primitive peoples stone knives are still used in such ceremonies as circumcision, although metal knives are in ordinary everyday use. But the sacrificial knife, the special reaping knife, and the like, are still sometimes deliberately anachronistically of stone. The Indonesians use a knife with a specially guarded blade for cutting rice; the hidden blade will not arouse the anger of the rice spirit. The Temne of Africa use a straight knife in sacrificing, since then things dependent on the sacrifice will come out straight.

The sharpness of the knife, like that of the razor and the scissors, leads to its being an ill-omened thing where friendship is concerned. One must never, in English and United States belief, give a knife as a gift; at least some small token payment must be made for it, otherwise the knife will cut the friendship. In Lancashire, a suitor who gives his girl a knife or other pointed instrument will soon lose interest. Finding a knife brings bad luck in its train. In England, India, and elsewhere, knives crossed at table lead to a quarrel. Such crossed utensils may be uncrossed without bringing bad luck by uncrossing them withershins (right to left, against the sun's direction). A knife that falls to the ground means ill luck, but brings good luck to the one who picks it up. Should such a knife stick in the ground in falling, it means good luck, or it may mean that company is coming from the direction in which the knife inclines. If a knife is dropped, a man will call: this is the general British and U.S. belief, but usually, in other parts of the world, a dropped knife means a woman caller. However the beliefs are so mixed that neighbors often believe complete opposites about a dropped knife. According to the rime:

Knife falls, gentleman calls;
Fork falls, lady calls;
Spoon falls, baby calls.

Don't toast bread on a knife, or you'll have no luck at all. If you stir your drink with a knife, in Oldenburg belief, you will get stomach pains. If you eat while a knife is being sharpened, your throat will surely be cut by next morning. Similar to this is the threat behind the humorous U.S. injunction: Don't eat peas with a knife.

The knife, being iron, also protects against evil and witchcraft. In Brittany, if a worker in the fields sees the hay lifted by the wind, he throws a knife or a haying fork at it, otherwise the Devil will make away with it. In the Scottish Highlands, the dust whirls on an otherwise calm day were thought to carry people within them; the Highlander threw a knife or some dust from a molehill at the eddy to make it surrender its victims. In northern Europe, throwing a knife at a dust whirl wounded the spirit in it; the knife would show blood-stains. The jack-o'-lantern can be chased by throwing a knife or a key at it, as people in some parts of Germany believe, or, in the southern U.S., by carrying a new knife never used on wood. In the Scottish Highlands, it may be tempted closer if a knife is stuck in the ground. Among Arkansas Negroes, carrying a knife protects one from ghosts. In Kent, a knife under a window sill keeps the Devil out of the house, and in Tuscany two crossed knives on the window sill keep away hail. In Morocco, a knife is placed under the pillow of a sick man to keep the demons from getting at him. Jewish women, in the latter stages of pregnancy, used to carry a knife when they were alone to protect themselves against demons. Ghosts can be kept away by reading a verse of the Bible backwards, folding the page, putting a knife and fork in the place, and putting the book under the pillow. The hag-ridden may protect themselves by asking aloud for a knife—sometimes this suffices to scare off the witch—or by putting knives or other cutting things around the bed so the nightmare will not be able to resume her human skin when she leaves. The Scotsman entering a place where a fairy lives will stick a knife or a needle or a hook—all iron implements—in the doorpost or door to keep it from closing and imprisoning him. In Transylvania, knives must not be left with the sharp edge raised if a dead body is in the house, otherwise the spirit of the dead will be forced to ride the sharp blade. Among the Eskimo, cutting or doing any work at all on the day a man died would injure his soul, which would then cause illness among the living. Knives are not used at funeral meals in many parts of the world. Injunctions against the use of knives at such times occur in Burma, Transylvania, and parts of northern Europe. In several parts of the world the father observing the couvade must avoid the use of knives: the reasoning is similar to the idea underlying the funeral prohibition. A German saying holds that if a child falls into the fire and one sees at the same time a knife, sharp edge up, he should turn the knife over before rescuing the child. Putting a knife in milk makes the cow go dry, according to southern U.S. Negro belief.

The magician's magic circle is drawn with a knife. A knife with a handle of snake-bone indicates poison when stuck in the table, in medieval belief, by quivering at the presence of malignant drugs. In medieval Jewish belief, a corpse would bleed if approached with a knife to which food particles adhered. Sleeping with salt, bread, and a knife, all of which have been left inadvertently on the table after cleaning up, under one's

pillow brings a vision of one's wife-to-be. In Wales, on Halloween, a girl was to walk backwards to the leeks in the garden and place a knife among them; a vision of her future husband would be seen to pick up the knife and throw it into the garden.

Many proverbs and folk sayings from all over the world use the imagery of the knife. "Often a dexterous smith forges a weak knife" is from the *Ancren Riwle* (c. 1200). The Nupe of Nigeria say, "When they sharpen the knife, the horse is without fear." "The wound from a knife heals; that from a tongue never," according to a Turkish proverb.

The knife is ubiquitous in folktale. Bahman's knife in the *Arabian Nights* was a life token (E761.1.7.2) that became spotted with blood and "thereon then shalt thou know that I am slain" (Burton, *Supplemental Nights* III, 330: "The Two Sisters who Envied Their Cadette"). So too a knife stuck in a tree rusts (E761.4.1) when the life it is a token for is ended. In rabbinical tradition, the knife Abraham held to sacrifice Isaac dripped blood as a warning. In the Master Thief cycle, the child indicates his recognition of his father by his handing a knife to the criminal (H211). A magic knife is often needed to kill the giant. The bridge to the otherworld is often knife-studded or is as sharp as a knife-blade. Folktale thus reflects folk belief in that the knife obtains its virtue from its being of iron and sharp.

knocks Sharp raps or loud knocks of otherwise unexplained origin are frequently attributed to spirits or the supernatural in general. There is widespread belief that three distinct knocks on the headboard of a sick person's bed are sometimes heard and predict his death, but there are many variants, e.g. the knocks might occur at the head of the bed of some relative of the unfortunate. This belief may have evolved from the Roman belief that spirits or genii warned the kin of those about to die. In Ireland the knocks are believed to come on the door of the dwelling of the doomed person for three successive midnights. In England if one hears a knock at the door and finds no one there, it is sometimes said, half-jokingly, that the Devil has evidently just entered the house. Knocks and thuds are frequently reported in records of poltergeist phenomena.

In spiritualistic seances, knocks and raps on tables are a popular means of simple code communication between the spirits and the sitters—one knock for yes, two for no, three for I-don't-know or Please-repeat-the-question. Emerson deplored "this shallow Americanism which hopes to get . . . knowledge by raps on midnight tables."

Knockers are benevolent spirits or gnomes dwelling in mines who helpfully indicate the location of ore by knocking in its vicinity. They are mentioned in Hooson's *Miners' Dictionary* (1747) and in Chambers' *Journal* (1885). Watts-Dunton, an authority on Gypsy lore, wrote in *Aylwin* (1898): "She had not only heard but seen these knockers . . . They were thickset dwarfs." Welsh knockers were alleged to be 18 inches high, while Germans describe them as little old men dressed as miners, about two feet high and of two races, one malevolent, one gentle.

Knocking on wood is one of the commonest superstitions in all lands and cultures and is one of the few retained when others are abandoned by the sophisticated.

Will Rogers, noted for his common sense and practical ideas, nevertheless admitted, "I always knock on wood before I make my entrance," and, during a survey of the Harvard faculty, revealing only a fourth of that body as free of superstition, one professor said, "My one superstitious practice is to knock on wood after boasting of my health or good fortune."

The belief seems very deep-seated that the braggart attitude of boasting, especially about health and next good fortune, is likely to bring retribution, either from the envious evil powers or from the god to whom the boaster should have given thanks and praise. To counteract and nullify the envy or anger, one should immediately knock on wood, preferably three times in quick succession, or at least touch wood.

Whether the touching is a softer substitute for or a declining form of the knocking, or whether, on the other hand, it was the original form of the practice, is difficult to determine. Those who think that the touching came first attribute the origin of the custom to the ancient religious habit of touching a wooden crucifix when taking an oath. Charms or amulets of wood are carried on watch chains or in the pocket that one may have an available bit of wood to touch when so impelled. Sir Walter Scott is alleged to have fingered a wooden button on his coat when reciting as a student and failed miserably when his mischievous fellows cut off the button.

It seems more likely that the knocking on wood is the older custom and is allied with the well-known habit of many primitive peoples, who make all sorts of loud noises to scare off evil spirits when the occasion or the place is dangerous or inauspicious. It may have some connection also with the druid tree or bough worship or the Greek belief in dryads or wood nymphs who would come to man's help when summoned.

CHARLES FRANCIS POTTER

knots The knot has been a thing of significance and power probably ever since the first knot was tied in the world; and it is still prominent today in symbolism, in religious ceremony, magic, and folk medicine, a force to conjure with and to be reckoned against in widespread belief and practice. To tie a knot is to make something fast, to bind, hold, also to hinder or stop. To untie a knot is to loosen, set free, release. The knot unites, therefore, and binds together; it strengthens love and marriage; it also shuts out evil and binds evil-doers into inaction.

The knot without beginning and without end was one of the symbols of the Hindu Vishnu and of life without beginning and without end. It was adopted in this meaning by the Buddhists and is one of the eight sacred symbols of Buddha.

Everywhere in India a knot is tied in the clothes of bride and bridegroom in marriage ceremonies; in some places their garments are knotted together in token of their union; part of the marriage ceremony in southern India is tying a knot in the saffron-colored thread worn for luck around the bride's neck; she wears this thread the rest of her life. In other parts of India the marriage bracelet of *kuśa* grass is tied around the wrist, or the wrists of bride and groom are tied together with it. Roman marriage ceremonies comprised a whole series of knot-tyings and untyings from the first tying on of the bride's girdle, and her tying the woolen strands on her

husband's doorposts, to the final untying of the girdle in the bridal chamber. The love-knot of popular folk practice has an ancient and solemn authority. In Russia a net is thrown over the young couple during a marriage rite, because no evil spirit can get at the susceptible pair without first untying all the knots in the net.

The sacred thread of the high caste Brāhman is tied with the special Brahmā knot at his initiation. In Zoroastrian initiations also the sacred girdle (*kustī*) was symbolically knotted. Among certain Moslems birthdays are marked by the tying of the "year-knot" (*salgirah*). It is first tied on the wrist of a one-year-old child and renewed every birthday. In Roman ceremonies the priest of Jupiter could have no knots in his garment. See FLAMEN. The Biblical "bindings" refer to ceremonies similar to other religious knottings.

Part of the funeral rites performed by Chinese Buddhist and Taoist priests consists of the release of the souls of the dead from pain and difficulty by untying one by one 24 knots in a thread in which 24 coins are tied. In Assyria knots were tied to prevent the dead from annoying the living. It was fairly widespread European belief that knots could prevent the soul from leaving the body. Thus knots were a protection against death on the one hand, but an enemy, by tying knots, could also cause a man to undergo a long and agonized dying.

In medieval Europe whoever tied a knot during a wedding ceremony thus prevented the young couple from ever having children. An ill-wisher could prevent the consummation of a marriage itself by tying a knot (or a certain number of knots) in a cord and throwing the cord into water. Such a spell was practically impossible to undo, since the only way to undo it was to find the cord and untie the knots. Anyone found guilty of tying such knots was punishable by law and excommunicated from the Church. In Scotland as late as the 18th century this was the principal popular belief in regard to knots: the obstruction of the consummation of a marriage. Hence every knot on bride or bridegroom was untied for the duration of the marriage ceremony. Young couples stood up with their shoes untied and garments completely loosened.

Knot-tying as a magic formula to prevent conception has been common everywhere from earliest times. It was a commonplace of the ancient Hebrews. Women of the Yao (a Bantu group of Mozambique) also believe that knot-tying prevents pregnancy; when the Yao woman wants to become pregnant she unties the knots, puts the untied cord in water, and drinks the water. In southern Russia and Galicia the woman who soaks a thread of flax in menstrual blood, then ties ten knots in it, wears it for nine days and nine nights, and buries it in a corner of the room, saying, "I bury you for eternity," will never have children. See N. E. Hines, *Medical History of Contraception* (Baltimore, 1936), p. 9. In Fez, Morocco, a man will obtain the oviduct of a hen, tie a knot in it, boil it, and eat it, to prevent a pregnancy resulting from his next intercourse.

It is a common world practice to untie all knots during childbirth to facilitate the birth. This was done in ancient Persia, was a practice of ancient Semitic peoples, is still widely observed all over rural Europe today, and among peoples of the Pacific. Every knot in the house is untied during a birth, including those in the garments of inmates; and in some localities the magic of

release is enhanced by the freeing of captive birds and animals, untying of domestic animals, etc.

Knots have long been used in the causing and curing of diseases. Seven knots and twice seven knots are especially potent. Nine knots are the worst of evil spells. Once Mohammed was bewitched by a sorcerer who tied nine knots in a string and threw it down a well. Mohammed fell acutely ill and would have died had not the archangel Gabriel revealed where the string was hidden. With difficulty it was gotten out, holy words were said over each knot (which thereupon untied itself), and Mohammed got well. The old Teutonic Salic Law from the 5th century on put a heavy fine on anyone guilty of tying nine knots. Warts are still treated by tying a knot in a string for every wart a person has and burying the string; as the string rots the warts disappear. Or sometimes the string is thrown away and whoever steps over it or picks it up gets the warts.

Tying up the wind in a knot is part of the old wisdom of northern fishing communities, especially in Lapland, Finland, the Shetlands, Isle of Man, etc. Then untying the knot raises enough wind to fill the sails. Tying the wind in three knots is also common; more and stronger winds arise as they are untied one by one. Fishermen have been known to "buy the wind"—in a knotted handkerchief—from some old man or old woman versed in wind lore. This concept is at least as old as Æolus, who gave Odysseus the winds tied up in a bag (*Odyssey* x, 19 f.).

Among various southern U.S. Negroes a woman whose ear itches will tie a knot in her apron to make the gossip's teeth ache. A knot of remembrance is often tied in the fringe of a shawl or scarf in Ireland when lovers or friends must separate. The Irish worm knot (*snaidm na péiste*), that cures worms or gripes in cattle, is tied in a cord with which cattle are beaten.

Tying an invisible knot in an egg (H1021.5) was one of the tasks given to Väinämöinen, old and steadfast, by the hard-to-get maid of Pohjola. This did not phase the hero, for "an egg in knots he twisted/ Yet no knot was seen upon it." The fact that this did not captivate the crafty girl is another story. See DOVE; FIRE; GORDIUS; MNEMONICS.

 Knotting or otherwise tying cord or string has, in West African and New World Negro belief, strong magical implications. Charms with knots retain by this means the power which actuates them, while the act of tying a knot while pronouncing the "real" name of a person is held to be an effective means of obtaining power over him. For a special example of tying, see IRO. [MJH]

kobold The household spirit or familiar of German folklore, helpful but full of pranks and tricks, occasionally malicious. He is the German analog of the English brownie and boggart. He will often hide household or farm implements, but he is also good at finding lost objects. Sometimes when someone stoops to pick up something, the kobold likes to push him over so that he falls. But he will sing to the children, help with the work, curry the horses. He must be properly fed, however, or he will raise a great fuss. Specific household kobolds are often known by the name of Heinze, Chimmeken, or Walther. A number of them have become famous in German legend, among them Hinzemann, to whom a Rev. Feld-

mann devoted a whole volume; Hödeken, named for his hat, who terrified unfaithful wives into fidelity; King Goldemar, who slept with his master, played the harp, and caught the clergy in their secret transgressions.

There is another variety of kobolds who haunt mines and caves. The famous metallurgist, Georg Landmann, made a thorough study of these underground spirits in his *De Animantibus subterraneis*, published at Bâle, 1657. See BIERSEAL; DOMOVIK.

Kodoyanpe Literally, Earth Namer, or Earth Maker: Creator of the Maidu Indians of north-central California. Kodoyanpe and Coyote descend from a clear sky, or are floating in a canoe; they discover the earth together, and prepare it for the first people. The first people are created, and are ultimately transformed into the animals of the present day when the Indians come upon the scene. During the mythical age, Earth Maker tries to destroy Coyote, who epitomizes evil; he is assisted by a culture-hero-like character referred to as the Conqueror. Failing to destroy Coyote, Earth Maker flees to the east at the same time that the Indians come upon the scene. [EWV]

Kohinor, Kohinoor, or Kohinur A famous Indian diamond, weight when cut about 106 carats; one of the British crown jewels since the annexation of Punjab, 1849. According to Hindu legend, it was found in a river in south India nearly five thousand years ago. It is mentioned in the ancient Indian epic *Mahābhārata* as belonging to Karna, king of Anga. Its authentic history dates from 56 B.C. when it was the property of the Rajah of Ujjain. It means "mountain of light."

Koinobori The custom of flying huge paper carps from a pole, during the Japanese Boys' Festival. See JAPANESE FOLKLORE. [JLM]

Kojiki The oldest Japanese chronicle, compiled in 712: main source for the early mythology of Japan. [JLM]

Koki The praying mantis: wife of Spider in Temne and Hausa Negro mythology.

kokkara A primitive musical instrument of India; an iron tube scraped rhythmically by headmen of the Kānika tribesmen of India to accompany prayer and the recitation of the names of divinities. It has the effect of inducing violent excitement.

Kokopelli or Kokopölö An insect kachina of the Pueblo Hopi Indians: possibly to be identified with Dragonfly. He is a "humpbacked" hunter who seduces girls or makes them bridal moccasins; his hump is actually a sack containing gifts. The prototype of Kokopelli may be represented in southwestern pictographs of a human being shooting mountain sheep. While any of the Pueblo kachinas or masked spirits may hunt, specific ones among them, as Coyote kachina at Zuñi, Kokopelli at Hopi, Nepokwa'i at Tewa, are specifically huntsmen. [EWV]

kolattam A festive stick dance of southern India, for opposing groups of men and girls or girls alone. Similar to the hand claps of the *kummis*, the two sticks in the hands of the dancers can be struck near various parts of the body—overhead, at the shoulder, hip, knee, or struck against the partner's stick in various patterns and rhythms. There is considerably more flexibility of the

torso and knees than in stick dances of Europe. In the *pinnal kolattam* the dancers hold a stick in the right hand and a red or white cord in the left. These they interlace maypole fashion, simultaneously executing intricate steps and stick beats. These interweavings are not confined to the circular serpentine of the European and American maypole, but include square or longways formations. Originally they probably had a vegetation symbolism. See KANIYAN; STICK DANCES. [GPK]

kolo or **kollo** Literally, circle: a popular open round dance of Serbia and Dalmatia. Men and women, in no set order, progress slowly to the right and left with balancing grapevine steps and with little jerks of the shoulders. They are joined by their hands, sometimes by a kerchief. The leader often executes acrobatic crouches, jumps, and turns. He may lead the line in a serpentine or spiral course. At times dancers form small circles within a large one. The kolo greatly resembles the open rounds of Greece and, in general, forms part of the sequence of these serpentine dances that winds all the way from the Pyrenees to the Caucasus—ancient vernal rites now performed purely for amusement. [GPK]

kolomaika A Ukrainian peasant dance with vigorous leaps for both men and women. The music, in duple time, is emphatic. The movements are buoyant; the arms swing forward and laterally along with the crouching and leaping and high *pas de basques*. It can be performed by four couples in circular formation, and especially in stage exhibitions. [GPK]

komarinskaia or **kamarinskaia** A Russian national dance for solo or couples, widely taken over from the peasantry for performance in cities and on the stage. The music and movements have all the forceful exuberance generally associated with western Russian dance. Its jumps and stamps have the virility of the true leap dance, and are punctuated by shouts. The arms swing out during leg extensions and during knee bends followed by heel stands. They are folded during a back skip with turned-out knee. During a toe-twist the hands are at the neck and waist. [GPK]

'Komfo The Surinam Negro term for one possessed by the spirit of an African diviner. It is derived from the Gold Coast of Africa, where the Twi word *okomfo* means "priest." [MJH]

komori-uta Japanese lullabies, sung to babies by mothers, grandmothers, older sisters, and nurses: often irregular in rhythm to suit the bobbing of the child as it is carried on the back.

Konyhatánc Literally, kitchen dance: a Hungarian dance performed at weddings by the cooks. [GPK]

kordax Originally, a lively phallic dance performed by youths in the train of the Dionysian *orgia*. They were naked, with tails and horns, similar to the satyrs. The kordax became a theatrical dance and was incorporated in the Greek comedies; in Roman times it became completely lewd. In 16th century court dancing the term kordax included the sprightly but decorous gaillards, tordions, voltas, courantes, and branles. [GPK]

Kore Persephone, the Maiden: a variant of Cora.

körmagyar or **körtánc** A Hungarian dance of the quadrille type, introduced in 1841 by a dancing master,

Lajos Szabo Szöllösi. Its six parts (*andalgó, lelkes, toborzó, ömledező, három a tánc,* and *kézfogó*) are executed in various groupings of four couples, most frequently in crossovers of two opposite lines. In the last part, two concentric circles move in opposite directions, the women on the inside sunwise, the men on the outside counter. The same steps are used as in the citified version of the *czárdás*. [GPK]

Kornmutter Literally, corn-mother: a field spirit of German folk belief: the spirit of the growing grain incarnate in the last sheaf. Compare BULKATER; CAILLEAC; HARVEST DOLL.

Kornwolf Literally, corn-wolf: a field spirit of German, French, and Slavonic folk belief, and often invoked to frighten children. He "sits in the last sheaf" and the reaper who reaps the last sheaf is himself often called the Wolf, and is expected to act the part, howl, bite his fellows, etc. Local practices differ. In some places the wagon that brings home the last sheaf is called the Wolf. The last sheaf is commonly made into the shape of a wolf, kept until the threshing is finished, and then made the center of various festivities. Usually the *old* Wolf is killed at the end of the harvest to make way for the potency of the *new*; but in some places the old Wolf is kept on the farm, in house or barn, to renew his fertility magic in the spring. Compare BULKATER; CAILLEAC; HARVEST DOLL.

korobouchka or **korobotchka** Literally, Little Basket: a modern Russian ballroom dance referring to a peddler selling his wares in his basket. However, occupational mime has been reduced to a bare suggestion in an exchange of places between partners. There are several versions, for a counterclockwise double circle or for two lines; and there are varying combinations of typically Slavic hops and leg swings, one version with a heel click. When danced in a circle, partners hold hands in skating position. In part 1 they move forward and back with three steps and a kick, then two *polkas*; in part 2, hands on hips, each dancer does a *double* to right and left, and with right hand joined to the partner's, crosses over. This gay "mixer" originated among Russian immigrant groups in the United States and found its way back to the homeland. [GPK]

Koshare, Kashare, or Kashale Clowns or "Delight Makers" in Pueblo Indian ceremonies. The Koshare were born, according to Laguna legend, from a ball of skin rubbed off herself by a girl who wished for something to make people laugh. At Keres and Tewa there are two clown groups, Kurena (Qwirana) and Koshare (Kashale) or Kossa. At San Felipe and Santo Domingo, the Town chief is also chief of the Koshare clowns. It is the clowns which furnish the humorous play of all sorts in Pueblo dances, but the members of Koshare groups have other duties beyond the dances. At Cochiti pueblo, for example, the Koshari and Kurena are in alternate years in charge of the rabbit hunts for the Town chief, they plant and harvest for this chief, and are in charge of the kickstick race. [EWV]

 The koshare of the Keresan Pueblo Indians accompany the kachina in alternation with the *kurena*, but in Santo Domingo dance separately in February and engage in original burlesques. They are distinguished

by the body paint in black and white horizontal stripes, with rings around the eyes and mouth, a black cap, or, more usually, a poke-shaped hair-do stiffened with clay (in Santo Domingo two horns), a black ragged breech-clout, a rope of rabbit fur from shoulder to waist, at times in the hands a branch of evergreen or a rattle of deer and calf hoofs. The koshare have the typical behavior pattern of ceremonial clowns: backward action, reverse speech, actual or simulated filth-eating, and obscenity. They may act as police and disciplinarians, and purge with the very ridiculousness of their social comment, their satire on the most sacred institutions, including a Catholic mass, and also on whites and Mexicans. Their most ridiculous posturings and vicious comments are beyond censorship.

Their votive organization is related to the Flint Curing society. They live in the east (reverse of the kachina). They may have some relation to spirits of the ancestors, and are related particularly to the Yaqui *chapayekas*. [GPK]

koto The unfretted long zither of Japan, used to accompany Shinto temple music and secular song. The method of playing involves the use of a small hard plectrum of horn or other material held in the right hand and scratched lightly across all strings during gaps in the rhythm. The strings are damped after this with the left hand, the little finger of which plucks a tinkling melody to support the singing. Koto players belong to the second of three ranks in the social order of musicians. As a special honor they may be given the right to tune the instrument's first string an octave lower. This right is conferred only by the master of a guild. Apart from ceremonial music, the koto is the instrument of women and of blind ballad singers. The koto is the Japanese equivalent of the Chinese *ch'in*.

koto missi The term for the Negro women of Paramaribo, Dutch Guiana, who wear the distinctive costume called koto yaki, of the general type found elsewhere in the New World (as, for example, the *bahiana* of Brazil). The costume consists of skirt and blouse of figured cotton print cloth, or sometimes of silk, with a head kerchief that harmonizes with the color of the other elements. The skirt is full, with a deep ruffle at the waist accentuated in back by a substantial bustlelike pad called the *jamiri* (family). The blouse is often made as a bolero and worn over the white collarless waist so as to accentuate the fullness of the bosom. The kerchief, also heavily starched so that it almost becomes a hat, may be tied in many different ways, each of which indicates the mood of the wearer. Every kerchief design has a specific meaning, also, being designated by a word description of its color or decoration, or by a proverb commenting on some local happening. [MJH]

kotwāl or **cotwāl** In India, an officer of the law, a popular character in many Indian folktales. In Benares a shrine has been erected to Bhaironāth (divine kotwāl of Śiva), who exercises authority over gods and men and keeps the city free from malignant spirits and evil men. The office of kotwāl has been abolished in western, southern, and central India, but the word is still used in the Northwest Frontier Province to designate the chief police officer of one of the larger cities or cantonments.

kowtow In Chinese ceremony, a knocking of one's head on the ground, usually three times or until bidden to rise: an act signifying great respect. This ceremony involves an important principle in Chinese lore at the point where folklore merges with sociology. When a person so abases himself before another as to rub his head in the dust, the person receiving the honor is bound to save the kowtowner's face, i.e. restore his human dignity by showing great favor or kindness. [RDJ]

koyemshi Kachina husbands: dancing clowns of the Pueblo Indians, commonly known as "mudheads," particularly prominent at Zuñi, called *koyimshi* at Hano and *tachuki* at Hopi. They are often called *athlashi*, a name for the dead. They were begotten, according to the origin myth, by Old Woman kachina, Komokyatsiky, when her brother lay with her. She woke up as an old woman after this deed. The impersonators of the koyemshi wear masks of cloth stained pink with sacred kachina clay, or, at Acoma, of leather. They have knobs filled with cottonwool, seeds, and soil taken from under the townspeople's feet—in consequence of which the koyemshi have power over the people and are feared by them. They engage in obscene interludes between kachina dances, and accompany the *shalako* of Zuñi, sometimes serving as chanters. On September 12, they engage in a ceremonial guessing game, before the Red Paint kachina dance at Zuñi. They indulge in jugglery and games of bean bag and leap frog. At summer solstice they dance all night along with the kachinas.

Each koyemshi has his special name and somewhat individualized mask and behavior. Their leader, Molanhakto, is Father Koyemshi. They are considered sexually immature, yet evidently have phallic properties, for they can at any time remove the kilt from their penis, and in their drum they carry the butterfly which makes people go sexually crazy. [GPK]

'kra or **akra** The Gold Coast (Ashanti-Fanti) term for the soul, which is inherited in the paternal line, in contrast to the inheritance of wealth and social position, which passes from maternal uncle to nephew. The word has been retained among New World Negroes in Dutch Guiana and among the Maroons of Jamaica. Among the Saramacca Bush Negroes, the *r* is often elided, making the word *ak'a*. [MJH]

Kraken An enormous sea monster reported often seen off the coast of Norway: also called *sykraken*, sea kraken, or *krabben*, from its round, flat shape and many arms. It is said to be a mile and a half at least in circumference and to cause a major whirlpool when it submerges. It is capable of pulling even the largest ship under water. It was first publicized by the Norwegian Bishop Erik Pontoppidan in his *Natural History of Norway* (1752–53).

Kralj Matjaž King Mathias of the Slovenes, successor to Kresnik, and legendary conqueror of the Turks. Like Kresnik, Matjaž too was married to his sister, Alenčica, whom, in legend, he rescued from the Turks, or in Slovenian traditional ballad, from the underworld. Matjaž is also a king in the mountain, sleeping till the day of Slovenia's utter need, when he will emerge and save everything. He is asleep in Mt. Peca near the Carinthian border, or in the Triglav caves. His ravens keep watch, circling above the entrance to the cave. One of his legends is that on some cold Christmas night a lime tree

(linden) will grow on the mountain, bloom at midnight, and then die; on the following St. George's Day, Kralj Matjaž will come out of the cave and hang his shield on the tree, which will suddenly flower again in promise of a better future for the people. It is said that during World War II the peasants thought King Matjaž would ride again and save Slovenia. See F. S. Copeland, "Some Aspects of Slovene Folklore," *Folk-Lore* 60: 280-281.

Krappe, Alexander Haggerty (1894-1947) International scholar, folklorist, and linguist. He first became interested in folklore about 1919, after reading Sir James G. Frazer's *Golden Bough* and *Pausanias*, but soon felt equally indebted to James Rendel Harris, Salomon Reinach, Moses Gaster, and Gédéon Huet. Apart from these obvious debts, he followed, however, a rather wide eclecticism in method and mode of approach, refusing to be associated with any school or coterie. For bibliography, academic career, etc., see p. ix.

Kratti A supernatural spirit of the Finns, which originated from ancient *skratti*. He took care of property, like the Para or Puuk. [JB]

Kresnik First national hero of the Slovenes; also mythological culture hero, magician, and monster-slayer, son of Svarog, the creator, and commissioned by him to rule over the Slovenes. He was educated in supernatural feats by the *vile*, loved and lived with Mara, the snake queen, married his sister Vesina, the daughter of Mara. His death was caused by the jealousy of one or the other of these two women. He is interpreted as a deity of spring, crops, and cattle. He became syncretized with St. George, and in late popular custom with Green George. (See JACK IN THE GREEN.) Kresnik lived to great age, and dwells now in Svarog's crystal mountain. See F. S. Copeland, "Some Aspects of Slovene Folklore," *Folk-Lore* 60: 277 ff.; J. Kelemina, *Slovene Folk Tales and Myths* (Ljubljana, 1921).

Kreuz König Literally, King of the Cross: a German folk dance for two couples. Its figures depend on interlacing of hands and arms. The first part, in moderate triple time, is a clockwise circling with joined hands and a leaping run; in the second figure, the men cross arms behind the ladies, and all four pivot. In the third and faster figure, the men cross and pivot the opposite lady: a sort of male "ladies chain." In the original tempo, all circle left again with a step-hop, then swing partners. In the climactic fifth figure, the cross, women start back to back, then swing around to the outside by their partners' right hand, finishing with the men back to back in the center. A Lithuanian variant, *Greitz*, is danced in a large circle. [CPK]

Kriemhild In the *Nibelungenlied*, the sister of Gunther, king of Burgundy. She married Siegfried, who gave her the Nibelungen gold as a wedding gift. She quarreled with Brunhild, Gunther's wife, and as a result, Brunhild persuaded Hagen to murder Siegfried and steal the gold. Kriemhild mourned her loss for three years, then married Etzel (Attila the Hun) so as to gain power to be revenged on Hagen and Gunther. Shortly after their marriage Kriemhild persuaded Etzel to invite the Burgundians to visit them, and went about raising men and plotting death for the visitors. In a series of treacherous attacks, all the Burgundians were killed except Gunther and Hagen. Kriemhild then had her

brother Gunther beheaded and carried the head to Hagen, demanding to know where the gold was hidden; but Hagen laughed. In a fury she caught up the sword of Siegfried and beheaded him, whereupon Hildebrand beheaded Kriemhild too, in front of Etzel, for the trouble she had caused the Huns. Compare GUDRUN.

kriksy Same as NOCNITSA, the night hag of Russian folklore.

kris dance A Balinese trance dance performed with a dagger or kris. The male kris dance is part of the witch play or *Tjalon Arang*. The supporters of the dragon or *barong* feign an attack on the witch, who symbolizes a curious mixture of evil and motherhood. They squat as they approach her, then lie powerless on the ground as she waves her white kerchief (an *anteng* or sling which a mother uses for carrying her child). During the attack, she acts limp, but the attackers are the ones to collapse and be revived by the dragon. Then follows a frenzied attack on the self, not only by the group of men but also by women who enter in procession. There is a significant formalized difference which they observe even at the height of frenzy—the men stab upwards, bending back, pubis forward, with pursed lips, or in the climax they lie on their bellies; the women push the dagger down. These gestures are said to have phallic symbolism, and at the same time to release frustrations developed since childhood. The mother-witch, it will be noted, remains unharmed amidst the turmoil. [CPK]

Krishṇa In Hindu religion, the eighth avatar of Viṣṇu, whose cult, popular in modern India, is a bright, cheerful religion, more nearly akin to Christianity than are Buddhism, Jainism, or Śaivism; in Hindu mythology and legend, the most celebrated hero. He is known by the epithets of *Gopāl* the Cowherd, *Gopināth* the Lord of Cowherds, *Mathurānāth* Lord of Muttā. Krishṇa, the Dark One, was the last of the Yādava race. According to the *Mahābhārata*, Viṣṇu plucked out two of his hairs, one black, the other white, which he placed in the wombs of Devakī and Rohinī. The black hair became Krishṇa and the white hair was born to Rohinī as Balarāma.

According to the *Purāṇas*, Kāṇṣa, the uncle of Devakī, was told by the sage Nārada that Devakī's son would destroy him, so Kāṇṣa had her first six children put to death. The seventh, the fair-complexioned Balarāma, was transferred to the womb of Rohinī, the second wife of Vasudeva, and the eighth, Krishṇa, the dark-skinned one, was born at midnight to Devakī. With the intervention of the gods, Krishṇa was carried to the house of the cowherd Nanda and exchanged for his newborn daughter. Kāṇṣa, however, discovered the deception and many of Krishṇa's youthful exploits of valor were directed toward defeating attempts on Kāṇṣa's part to have Krishṇa destroyed.

While he was growing up, Krishṇa gamboled with the *gopīs* (milkmaids), slew the king of the Hayas, the demons Pūtānā and Dhenuka, and the serpent Kāliya, overthrew Kāṇṣa, and killed Kāṇṣa's brother Sunāman and father-in-law, Jarāśandha. He carried off the daughter of the king of the Gāndhārvas; overthrew Saubha, the flying city of the Daityas; overcame Varuṇa; killed Panchajanya and obtained his conch shell, which Krishṇa used afterwards as a trumpet; stole the Pārijāta tree from Indra's heaven; and obtained the fiery discus

(*chakra*) from Agni, the fire god, when he and Arjuna helped that god burn the Khāṇḍava forest. This disc was a powerful weapon, working immediate havoc among those at whom Kṛishṇa threw it. And once, when the jealous Indra tried to destroy mankind because men worshipped Kṛishṇa more than they worshipped him, Kṛishṇa warded off the rain and flood by holding the mountain Govardhana on his little finger for seven days to protect the cattle and their herdsmen. The youthful deeds of Kṛishṇa, especially his association with the milkmaid Rādhā, his mistress, are the central matters of modern popular worship of Viṣṇu as Kṛishṇa. In particular, his life as a cowherd is celebrated at the Holi festival at the first full moon of spring.

Kṛishṇa took part in the council preceding the great war between the Pāṇḍavas and the Kauravas and, when the combat began, because he was related to both parties, he fought with Arjuna while his army sided with Duryodhana. As Arjuna's charioteer, he related to him the *Bhagavad-Gītā*, declaring his identity with the supreme principle of the universe.

According to the *Purāṇas*, after killing Kāṇṣa he went to the lower regions and brought back his six brothers whom the tyrant had killed. As soon as they again tasted their mother's milk, they went to heaven. Later he built and fortified the city of Dwārakā, his jeweled capital, which disappeared into the waters seven days after his death. Dwarka on the Kathiawar peninsula and Muttra on the Jumna river are closely associated with the Kṛishṇa cult and areas around them are today holy ground.

He carried off Rukminī, his legal consort, by whom he had a son, Pradyumna (a rebirth of Kāma). The latter was carried off by the demon Sambara, who was destined to die at Pradyumna's hands, but was swallowed by a fish which was captured and cut up in the presence of Māyādevī, Sambara's queen, who reared the boy. Pradyumna's son Aniruddha, was carried off at the order of the Daitya Ushā, who had fallen in love with him. To his rescue went Kṛishṇa, Balarāma, and Pradyumna, and a great battle with the hosts of Daityas led by Ushā's father Bāna followed. Kṛishṇa was victorious and his grandson was released.

During a drunken brawl in Dwārakā, Pradyumna was slain, Balarāma was left and died under a tree, and Kṛishṇa was accidentally slain by the hunter Jaras (old age) when he was mistaken for a deer and shot in the foot, his vulnerable spot.

Kṛishṇa's character is marked by deceit, dishonesty, and trickery. It was he who suggested the unfair blow which Bhīma gave Duryodhana, and he who suggested unfair dealing in the battle between the Kauravas and the Pāṇḍavas. His origin is obscure and his association with Viṣṇu is recent rather than primitive. He is said, euhemeristically, to have been a real Kshatriya hero who was deified after death; or he was the sun god of a hill tribe who became identified with the Vedic solar deity Viṣṇu; or he was the god of vegetation. He is usually represented with crossed legs, playing the flute. This flute calls its hearers irresistibly. Among the other folkloric elements in the Kṛishṇa myth are the familiar motifs of magical impregnation, slaughter of the innocents, exchange of children between noble and cowherd, precocious *enfant terrible*, Achilles heel. Kṛishṇa shares

many of these incidents of his life with the other true folk heroes of the world.

☞ Folk festivals celebrate him in the *ras*, and the Manipuri and Kathak schools of *natya* enact scenes from his life. These are all pastoral and tender, some dealing with his boyhood, most of them with his courtship of Rādhā. His Butterball Dance depicts the mischievous little god who stole butterballs from the milkmaids' churns and danced eating them. He danced the many-headed serpent Kāliya to death by trampling on its heads till the blood gushed from its mouth. This conquest symbolizes the triumph of the divine spirit over the powers of evil. As a young man, still mischievous, he came upon the milkmaids of Brindāvana bathing in the river Jumna, and he hid their saris. All fled except Rādhā, who begged for her garment and finally became his divine wife. This legend forms the basis for the most popular Hindu dance drama, for all the gestures of the *nautch* dancers, and of the *dēvadāsi*, who climax their performance by dancing the Ras-Mandalay around Kṛishṇa and Rādhā. He is always shown with his transverse flute, traditionally costumed in a bejeweled male sari and high conical crown. [CPK]

Kriss Kringle A corruption of German *Christkindl*, little Christ Child: a figure of German Christmas folklore, now identified with St. Nicholas or Santa Claus. Formerly, however, in some Catholic provinces of Germany and parts of Austria, an impersonator of St. Nicholas used to visit the village homes on St. Nicholas Eve (December 5) and ask the children in each house what they wanted for Christmas. On Christmas Eve there was a candle in every window to light the Christ Child as he walked through the village bearing gifts. The Child was not impersonated, however; the gifts were secretly produced by the parents. The later impersonations and the secrecy about the presents are probably responsible for the identification with St. Nicholas and Santa Claus. In some parts of Scandinavia it was Kristine who walked through the village bearing gifts on Christmas Eve, and for whom a candle was put in every window. See KNECHT RUPRECHT; SAINT NICHOLAS.

Kristensen, Evald Tang (1843–1929) Danish writer and collector of folklore. His great mass of folklore material, not half dealt with in his many books, has been exceedingly useful for international folklore research. Kristensen gave up teaching in 1888 to devote himself completely to collecting folklore. His first book was *Jyske Folkeviser og Toner* (1871), which contained 150 songs and had a conclusion by Svend Grundtvig. Other books were *Æventyr fra Jylland* (four volumes, 1881–1897), *Danske Dyrefabler og Kjæderemser* (1896), *Danske Skæmtesagn, samlede af Folkemunde* (1900), *Fra Mildebo, jyske Folkeæventyr* (1898), *Molbo- og Aggerbohistorier* (two volumes, 1892), *Vore Fædres Kirketjeneste, belyst ved Exempler optegnede efter Folkemunde* (1879), and *Dansk biografisk Haandleksikon* (1923). Kristensen was the editor of *Skattegraveren*, the publication of the Danish Folklore Society (Folkemindesamfundet).

kritikos One of the open rounds or link dances of Greece, specifically stemming from the island of Crete. As in virtually all dances of modern Greece, men and women in arbitrary order hold hands or shoulders and gradually progress right, facing the center of their arc. The step is a combination of left heel brush, grapevine

step, and hop, in a more complicated pattern than that found in the *hasapikos* and *syrtos*. The leader, man or woman, elaborates the fundamental step with turns and crouches. [GPK]

Krittikās or Kṛttikās In Hindu mythology, the six Pleiades; fosterers of the six-headed god of war, Kārttikeya.

Krohn, Julius Leopold Fredrik (1835–1888) Finnish scholar, literary historian, and poet, founder of the “newer Kalevala research,” ablest disciple of Elias Lönnrot, and who spent his life studying the songs of the Kalevala cycle. Julius Krohn developed a method for comparing the various versions of a song so as to determine its history. This technique was based on reducing the folk songs to their elements, or motifs, and then studying the distribution of these elements so as to determine what geographical course they had taken and what changes they had undergone. This technique, enunciated by Kaarle Krohn, Julius’ son, and applied to other aspects of folklore research, is generally known as the Finnish method. Among Julius Krohn’s works are *Finnische Literaturgeschichte* (1883–1885), *Estlandische Sprachlehre* (1872), and *Lappisches Wörterbuch* (1885). See FINNISH FOLKLORE.

Krohn, Kaarle (1863–1933) Student of the folktale. He developed the historical-geographical technique applied by his father, Julius Krohn, to the folk song, and was the first to use it in studying the folktale. Among Kaarle Krohn’s works are a large edition of *Volkssagen* (*Tiersagen*, 1886; and *Königssagen*, 1893); the studies *Bär (Wolf) und Fuchs* (1888); *Mann und Fuchs* (1891); *Die Volkloristische Arbeitsmethode* (1926), in which he stated his and his father’s historical-geographical technique; *Kalevalastudien* (1924–1928); and *Übersicht über einige Resultate der Märchenforschung* (1931). He also published various of his father’s works posthumously. Kaarle Krohn was instrumental in founding Folklore Fellows, an international group for the cooperative study of folklore. He was secretary of the Finnish Academy of Science, and president of the Finnish Literary Society. Kaarle Krohn held that folk poetry, folk beliefs, and superstitions belong in folklore research, but that ethnography and folk song do not. See FINNISH FOLKLORE.

Kromanti A word frequently encountered in the literatures of slaving to designate a category of Africans; it refers actually to the Ashanti-Fanti Negroes of the Gold Coast who were shipped from the slave factories of the towns of Little and Great Coromantyne. The origin of the term is perhaps traceable to the great oath of the Ashanti, which commemorates a battle in which the Ashanti King Osai Tutu was killed. The oath thus served as a battle cry, and came to identify the Ashanti in the minds of their captors. Among the Bush Negroes of Dutch Guiana, *kromanti* (or *k’omanti*) is the word for the powerful magic force believed to protect warriors and to aid them in fighting by rendering them resistant to bullets, and all other objects that lacerate or cut. [MJH]

kru A Cambodian shaman, especially active as a curer. He exorcises the evil spirits of disease and uses vegetable medicines as well as rhinoceros horns and bezoar stones in his cures. Compare ἄρ τιμὸρ.

Kshatriya A member of the ruling or warrior caste in India; the second of the four Hindu castes.

kuala The house-shrine of the Votjaks: sometimes a corner set apart within the dwelling for the house spirit or ancestral god, sometimes a shelf in an outhouse. It is similar to the *kudo* of the Cheremissians.

Kuan Ti The Chinese god of war: said to have been a great scholar. He is honored as the patron of war because he prevents rather than because he makes war. This, and the legend that he was one of three men who swore brotherhood in the Han dynasty, are probably accretions. His festival is May 13. His temples are found throughout China. [RDJ]

Kuan Yin The Chinese Goddess of Mercy; the most universally respected and most generally known of all Chinese divinities. Historically, she is a transformation of Avalokitesvara, the gentle disciple who was born from a tear shed by the Lord Buddha at the spectacle of the suffering of the world. Until the 12th century Kuan Yin was a male figure and modern images sometimes show a faint trace of a mustache. Although Kuan Yin is obviously a Buddhist importation, there is little doubt that, like Avalokitesvara, she is a substitute symbol who has taken on attributes from other gods. Although Hsi Wang Mu, the Goddess of the Western Heavens, is the official Taoist competitor, the peasants of China are indifferent as to whether Kuan Yin is a Taoist or Buddhist divinity and find a place for Kuan Yin in most temples. One version of the incantation of Kuan Yin may be taken as typical: “Great Mercy, Great Mercy, oh! Thou Take-Away-Fear Pusa! Save from terror, save from suffering through thy tender woman’s heart and mighty Buddha’s strength!” Kuan Yin is importantly a protector of women, and one legend is that she fled from her father’s court to preserve her virginity. She is often shown carrying a child in her arms. Embroidered slippers placed before her image, or slippers stolen from the temple and later replaced, induce pregnancy among sterile women. Kuan Yin brings souls to children, rescues shipwrecked sailors, brings rain. Her cult is centered at P’u T’o which at one time was governed by monks independently of civil control. No female creature, human or animal, was allowed on the island between sunset and sunrise. See KWANNON. [RDJ]

Kubera In Hindu mythology and folklore, king of the Yakshas, god of wealth, lord of the treasures of the earth. Kubera and his followers are the patrons or forces of fertility and prosperity, and associated with earth, mountains, and underground metals and treasure. His father was the sage Viśravaś (or Pulastya); his mother was Idāvidā; his half brothers (Rāvaṇa, Kumbhakarna, Vibhishana) figure in the legend of Rāma. According to the *Rāmāyaṇa* and the *Mahābhārata*, he once lived at Lankā (Ceylon) but was driven out by Rāvaṇa. With him went the Gandharvas and Rākshasas, and his subjects the Kimpurushas, Yakshas, etc. to the city of Alakā in the Himālayas, or to a wonderful palace on Mt. Kailāsa, or Mt. Meru. They have been regarded as tutelary household spirits in India from early times.

By thousands of years of austerities he received from Brahmā the gift of immortality, and the huge, self-propelling car, Pushpaka, which housed a whole city. Kubera has also a jar of honey which imparts immortality to all tasters, restores sight to the blind, and rejuvenates the old.

In the *Purāṇas*, Kubera was born into the Sūdra caste,

and once accidentally honored Śiva by lighting lamps while trying to plunder Śiva's treasure.

Kubera is represented as deformed, with three legs and eight teeth; he is distinguished by his man-vehicle, being often depicted standing on a crouching man.

kuei In Chinese folklore, a disembodied spirit; a ghost or demon: either the *p'o*, or physical soul, of a dead person which has escaped and become a demon, or the *hun*, or spirit-soul, of one dead, which for various reasons may be loose in the world. Both are kuei; both are regarded as malicious demons and are greatly feared. See CHINESE FOLKLORE.

Kuei Hsing An ugly dwarf associated, along with Chu Yi, with Wen Ch'ang, the Chinese God of Literature. The legend is that he was a brilliant student and won the first prize in the Imperial examinations. But because of his ugliness the emperor refused to grant him the golden rose that should have been his award. Kuei Hsing threw himself into the ocean, was rescued by a sea monster (a dragon), and ascended into Heaven where he took up his residence on the star *kuei hsing*, now construed as being located in the square part of the constellation Ursa Major. He is popularly represented holding a writing brush in his right hand, a bushel measure in his left, and kicking up one leg behind him. This twisted position is thought to suggest the Chinese ideograph *kuei*. Wen Ch'ang also has his abode in the big square mansion in Ursa Major. [RDJ]

Kuhn, (Franz Felix) Adalbert (1812–1881) German Indo-Germanic philologist and mythologist, one of the founders of comparative mythology. He was one of those 19th century nature mythologists who emphasized thunderstorms and lightning, as compared to the sun mythologists, such as Max Müller. Kuhn was co-founder and editor, beginning in 1851, of *Zeitschrift für vergleichende Sprachforschung*, and the editor of several volumes of Brandenburg, North German, and Westphalian legends, myths, and customs (1843, 1848, 1859). He was also the author of works on Indo-Germanic archaeology and linguistic paleology, and of essays on mythology.

kühreihen Literally, cow song; a song type of the Swiss mountains, of which only a handful of examples are known. The words consist of calls to cows and the listing of cows' names, interspersed with lyric or narrative verses, and the tunes, possibly derived from alphorn notes, may be played on alphorn, bagpipe, or shawm. Now chiefly work songs, used for calling in cattle, the original songs may have been related to a dance with fertility significance. The magic word *lobe*, imitating the alphorn, is sometimes used in the songs. Their nostalgic attraction to soldiers of Swiss nationality is said to have caused widespread desertion, so that in French regiments it was formerly a capital offense to play the *Canilena Helvetica*, a *kühreihen*. The Norwegian *Lok* songs and Belgian *ranz des vaches* are songs of this type. See ALPHORN.

kujawiak A Polish couple dance, which circles continuously around the room counterclockwise. It involves an unusual amount of vigorous bending and arm swinging, though the steps themselves are simple, a walk and a waltz. The most attractive part, the chorus, consists of a forward swing with joined inside arms, then a great

downward swoop to face the opposite direction, then back again, the free hand all the while held high. In another figure, resembling "wringing the dish rag," partners waltz round and round under their upraised joined hands. A smooth and sedate grace permeates this characteristically Polish waltz, similar in steps to the Swiss *Lauterbach* and the *Neubayrische*, but distinct in style. [GPK]

Kūk In ancient Egyptian mythology, Darkness, one of the Ogdoad of Hermopolis said to have existed as part of chaos before the beginning. His consort was Kauket, obscurity. The Ogdoad, four snakes and four frogs, created Atmu.

Kukitat Younger brother and companion of the culture hero Pakrokita of the Serrano Indians of southern California. Whereas Pakrokita created men and was generally constructive, Kukitat caused death and was destructive. After the advent of human beings he influenced men to speak differently, and to war on each other; finally, it was decided to kill him. This was accomplished by Frog hiding in the ocean and swallowing Kukitat's excrements. [EWV]

Kuksu cult A North American Indian secret society cult of the Patwin, Pomo, Maidu, Yuki, Miwok, Costanoan, Esselen, and Salinan tribes of central California. The cult involved the formal initiation of boys: a) when quite young, and b) at puberty. The rites were held in wintertime in a semisubterranean earth-covered dance house and consisted largely of a series of masked dances, the accompaniment for which was provided by a foot drum. There were, apparently, at least two grades or age steps to the society, with indications of further subdivision into 12 successive degrees among the Patwin. Each degree was preceded by initiation and payment and led to knowledge of a new impersonation of the deities connected with the cult. Performances of the series of dances by members of the cult took place from October to May—at these ceremonies major and minor dances were held in the dance house. In the Kuksu performance, which for many of the groups was the most sacred dance, the deity Kuksu, wearing a "big head" or typical headdress of a huge ball formed by innumerable feathered sticks, was impersonated. Among the Pomo, Kuksu was the southern of six deities of the cardinal directions. Among the Valley Maidu, Kuksu was not a ceremony, but was the name of the first man and instructor of the first people; he acted as head of the secret society and the instructor of novices. Other major dances in the round of ceremonies were Hesi, Duck, Aki, Grizzly Bear, Deer, Coyote, Goose, Ghost, Thunder, and Feather-Down. For the Valley Maidu and the Patwin, Hesi was the most sacred of these, and wearers of the big-head headdress in these tribes used names other than Kuksu. The complete cycle of Kuksu ceremonies varied from village to village; the ceremonies in each village were in charge of a priest-shaman, who oftentimes was also the political head of the group. Novices were taught the impersonations by the adult initiates in the society. Among the Maidu the clown held his position for life and designated his own successor, and among the Patwin the singers inherited their office in the male line. The purpose of the cult was to make the boy initiates healthy, long-lived, hardy, swift, strong, and enduring. The specific cycle of dances was thought to bring rains, nourish

the earth so that bountiful crops of acorns, bulbs, and greens would be produced, increase the game supply, and ward off epidemics, floods, and earthquakes. [EWV]

kuksu-hesi The dance cult of an esoteric men's society among tribes of central California: among the Patwin-Wintun and Maidu in its newer elaborate form, among the Pomo and Miwok in its older form as *kuksu* ceremony, and among the Yuki in a modified form. Initiation into the society is in itself a complex procedure in a semisubterranean circular structure, through 12 *yaitu* or stages, each to a new impersonation.

The sacred or *loyeng-kamini* dances consist of impersonations of ancient divinities or spirits called *saltu*, chief among them being *kuksu*, the big-head with his huge feather headdress. The *hesi* spirit impersonation starts the ceremony among the Patwin and Maidu; there follows a succession of impersonations in pseudo-masks of paint, feathers, rushes: all animal spirits predominantly. The *weng-kamini*, or profane dances, use no disguise. The Patwin succession is *hesi*, *waima* or duck, bear, coyote, goose, deer, *aki hesi*. The Maidu include a "woman," *lole*, the Miwok, a clown *wo'ochi*, the coyote, and others. Some of the dances are acrobatic; the Miwok *uzumati* or Grizzly Bear is a realistic waddling and clawing mime. The spirits are expected to have power over crops and animals and over their multiplication, though these are not hunting dances. Complex variants occur between tribes; shamanism and the modern ghost dance have intruded into this ancient cult with its mythological origins. [GPK]

Kukulcan The Mayan storm god and culture hero; the bright- (or green-) feathered serpent who was also man and king. Kukulcan corresponds to the Aztec Quetzalcoatl and the Quiché Gucumat in function and in name—all mean the quetzal-serpent. In general Central and South American myth he can be equated with Votan of the Tzentsals, Itzamna of the Yucatecs, Bochica of Colombia, Viracocha of Peru, and Sumé and Payetome of Brazil. All these culture heroes were white and bearded and brought various elements of civilization to their people. Kukulcan came to the Mayas from the west with nineteen attendants, all wearing long robes and sandals, all bareheaded. He built Chichen-Itza, and he changed the Mayan religious rites. As a deity, Kukulcan lives in the air where he is ruler over the four points of the compass and the four elements of air, fire, earth, and water. He is depicted with a serpent's body, quetzal's plumes, jaguar's teeth, and a human head in his jaws; he is seated on the cross-shaped symbol of the compass. His feast, the Chickaban, in the autumn month of Xul (end of October), took place at Mani. The chiefs of the tribes spent five days in fasting and worshipping the idols, dancing and keeping vigil. Then, at the feast, offerings were made to Kukulcan who descended from the sky to partake of the feast.

Kul The water spirit of the Ziryen; an evil being living in deep waters. He is believed to have a human shape; he also has wife and children. Kul is known in the western districts of the Ostyak and in the northern part of the Vogul territory. Sometimes he is called *vasa* by the Ziryen. [JB]

kula The system of inter-tribal exchange carried on by a group of communities inhabiting the ring of islands

at the easternmost end of New Guinea which includes Murua, the Trobriands, Dobu, and Tubetube: called *hiri* in New Guinea. A hero named Kasabwaibwaileta is associated with the kula myths in Dobu. This is a ceremonial exchange of two items, spondylus shell necklaces and armshells, but along with it ordinary trade is also carried on. The kula is rooted in myth, surrounded with magical rites, transacted in public with special ceremonies according to definite rules, and is based on a partnership which binds thousands of individuals into couples, for each trader has specific partners in his trading area with whom he trades for his lifetime. The number of a man's partners is determined by his rank and importance—the higher the rank, the larger the number of trading partners. No haggling is permitted and much of the trading is done on long or short term credit. The items traded are never directly traded back. According to R. F. Fortune, the armshells go from Murua to the Trobriands, then to Dobu, and finally to Tubetube; while the spondylus shells go in the exactly opposite direction, from Tubetube to Dobu, to the Trobriands, and then to Murua. Since all the products of each place are sent, this trade would result in a famine of armshells in Murua and of spondylus shell necklaces in Tubetube. To prevent this, Murua men take spondylus shell necklaces to Tubetube and Tubetube men carry armshells to Murua, thus making the distribution even around the area. The items traded are never kept for any length of time, but are passed on. Once a man is in the kula he stays in it for life.

Charms, spells, and magic are employed to influence the wind when the kula fleet is becalmed and to make the trading successful. A man's wealth is judged by the quantity of valuables he keeps in the exchange system and his success is usually in direct proportion to his beauty and the magic he employs.

Kullervo One of the heroes of the *Kalevala* (see songs 31–36), the darkest and most tragic person of Finnish poetry. As the last male offspring of the family, after a fratricide between Untamo and Kalervo, he lived as a slave in the house of Ilmarinen and caused the death of Ilmarinen's avaricious wife. Then he fled and met his parents who were then still alive. He took revenge on the adversaries of his family but unknowingly seduced his own sister. Later he committed suicide at the fatal place, and with his death the whole of the Kalervo family was wiped out. One sees in the cycle of Kullervo affinities with the Russian bylini, others with the sagas of Hermanarich and even Hamlet (Amleth) in a version of Saxo (see *FUF* III, VII, X). But it is generally agreed that the runoes about Kullervo are of more recent date than other runoes. [JB]

kummi A festive folk dance type of southern India, for partners (boys and girls, or girls alone). The decorative gestures express a variety of subjects in the different kummis, such as household duties, flower-picking, a milkmaid's activities. The accompanying songs in traditional modes or *ragams* tell the story of each dance. There are well-defined hand claps, by the shoulder, chest, knee, marking a counterpoint with the manifold steps: step-toe, swing-hop, scissors, slide, and others. The ground plans on the other hand are simple, for the most part circular. Kummis may at one time have had a ritual function, but now are purely secular. [GPK]

Kumulipo Hawaiian cosmogonic and genealogical chant consisting of over two thousand lines: composed about 1700 in celebration of the deification of a young chief. It has two divisions, the first dealing with the spirit world and the evolution of the lower forms of plant and animal life, and the second with man's world and the genealogy of the line that produced King Kalakaua and Queen Liliuokalani. The first part, a reworking of old folk beliefs related to those of New Zealand, the Marquesas, and the Tuamotus, has been interpreted as representing either the development of a child from birth to the years of reason or the rise and expansion of the race. Captain Cook heard the chant in 1789. Kalakaua had it printed in 1889, and in 1897 Liliuokalani produced a translation.

Kundrav In the *Shāhnāmāh*, the monster Gandarewa.

Kung Fu Tze or Confucius (551–478 B.C.) In Chinese writings the symbol, as in Chinese history he was the leader, in one of the dominant modalities of Chinese thinking and feeling. He lived at a time when the Chou dynasty had disintegrated into a welter of feudal states which in turn neglected the code of rights, rites and duties which are supposed by some to have been instituted by the Sage Emperors of the remote past and to have been observed by the founders of the Chou dynasty. At this time a number of political consultants, more or less closely associated with the nobility, more or less learned, often shrewd, ambitious and ruthless, wandered from court to court and set up shop as advisers to the government. Among those were many—Confucius was one of them—who were deeply concerned over the moral and political degeneration of their people. This, the period of the “hundred schools,” is one of the most difficult as it is one of the most productive periods in the history of any philosophy. The philosophers of these schools were centrally concerned with views about the nature of man and with the two practical problems of the government of the state by the prince and the government of man by himself. Confucius and his school maintained that man is by nature good and that good government derives from the virtue of the prince as that virtue is projected through the rites. Other schools maintained that man is in part good and in part evil and that good government derives from virtue and law. Still others believed that man is essentially bad and that government is supported by a rigid penal code. Apart from these were, among others, the Taoists, who believed that scholars were pompous fools and that energy diverted to government or observation of the rites could be used better by flowing with the Tao or Way and keeping in balance with the ever-changing forces of nature. The triumph of the group that believed in the essential wickedness of man led, in the Ch'in dynasty, to the burning of the books under the general principle that “. . . a country that loves talking is dismembered. Therefore . . . if there are a thousand people engaged in agriculture and war and only one in clever sophistry, then the thousand will all be remiss in agriculture and war.”

The importance of Confucius and his school in the study of folklore is that they directed attention to the traditions and rituals. Though none of the books ascribed to Confucius was certainly written by him, they

constitute a valuable repository of custom and belief. They are:

1. *Shu Ching*, Book of History, a collection of records, orations, apothegms, and customs taken from histories destroyed in the burning of the books and covering a period from 2000 to 770 B.C.

2. The *Li Chi* and the *Chou Li*, manuals of ritual and etiquette, presumably as practiced in the Chou dynasty.

3. *Ch'un Ch'iu*, history of the State of Lu from 722 to 481 B.C.

4. *Shih Ching*, Book of Odes. Many of the poems are of considerable antiquity and of popular origin.

5. *I Ching*, on divination.

6. *Lün Yü*, Analects of Confucius, a collection of sayings ascribed to Confucius by his followers.

Confucianism in China is the interaction of two important motifs in the Chinese ethos: respect for the past as symbolized by the teachings and aspirations of the Great Master, Confucius himself, and the general conviction that if people behaved properly and observed the essential loyalties and etiquettes life would be much more serene than it is.

Confucius was a political philosopher and moralist, not a religious leader. As he was not concerned with speculation in general, he was indifferent to the supernatural. He taught that if the Chinese would observe the rites and ceremonies established by the Sage Emperors of a happier period, they need not worry about gods, devils, or immortality. The Confucian Cult is the ceremonies performed in the temple of the Great Teacher whose spirit must be honored by traditional rites; it is the large body of traditions and anecdotes about wise men who, attempting to follow the master, have achieved happiness and success; it is the pious saws used to train people in the proper way of living. [RDJ]

kungurus kankusu Literally, off with the rat's head: the traditional closing formula with which all Hausa folktales end. It is supposedly an onomatopoetic word signifying the sound with which a falling object (in this instance, a rat's head) hits the ground. R. S. Rattray says, “The meaning seems to be that the story is ended, the rat's head is off; that is the end of him”—and the story.

Kuntī In Hindu mythology, the wife of Pāṇḍu and mother of Yudhishtira, Bhīma, and Arjuna. As a maiden she showed so much devotion to the sage Duvāsas that he gave her a charm by means of which she could have a child by any god she invoked. Her sons by Pāṇḍu were said to be the sons of Dharma, Vāyu, and Indra. See MAHABHARATA.

Kunu A supernatural force believed by the Negroes of Dutch Guiana to punish transgressions of the social code by action of the ancestors and gods. It operates automatically, and serious offenses, such as incest or murder, are held to result in the extinction of the family of the offender. [MJH]

Kur In Sumerian mythology, the underworld; also, the dragon-serpent, precursor of Tiamat and Leviathan, which dwelt in the space between the earth and the primeval sea. Kur, in Sumerian, means mountain, hence the mountainous foreign regions, hence land generally. Kur embodies the general belief that the underworld

and its powerful spirits lie in or across the mountains to the north, the mountains encircling the world. In the myth of "Inanna and Ebih," Kur is an enemy country northeast of Sumer, but in two other myths dealing with Ninurta and Gilgamesh, Kur is the cosmic dragon. In these, Ninurta and Enki slay Kur and are thus the earliest dragon-slayers we know, perhaps the archetypes of the familiar hero who performs this task. In "Gilgamesh, Enkidu, and the Nether World," Kur is mentioned in a prefatory statement: Enki fights with Kur when trying to rescue Ereshkigal from the dragon (underworld). The story is not completed there, but seemingly has to do with an early Persephone-type myth. In "The Feats and Exploits of Ninurta," the slaying of the dragon brings in its wake a flooding of the earth. Kur had held the primeval waters from rising; now fresh water cannot reach the land. Ninurta builds a stone wall to contain the waters, and all is well again.

Kurena, Kwirana, or Quirina One of two clown groups of the Keres and Tewa Indians: specifically concerned with weather control. At Sia women make bowls full of suds, representing clouds, for the Quirina rain ceremony. The Quirina chief has a special medicine (a mixture of powdered turquoise, shell, and certain plant roots in water) which he sprays to the four directions to induce the Cloud People to send rain. At Sia also the Quirina chief is in charge of the masks and directs the dances; formerly the whipping ritual (now lapsing) was under the control of this society. At Cochiti the Koshare and Kurena clown groups take turns, alternate years, in managing the rabbit hunts and the planting and harvesting for the town chief, and also the kick-stick races. At San Juan membership in the Kurena society is from infancy; all sick babies are dedicated to them. Sparrowhawk is the Kurena society special feather.

Kūrma Literally, tortoise. In the *Mahābhārata* and modern Hinduism, the tortoise, or second avatar of Vishnu, in which shape he helped the gods and asuras recover the amṛta and other precious things lost during the Deluge. He went to the bottom of the Milky Ocean so that his back might serve as base and pivot for Mt. Mandara. See CHURNING OF THE OCEAN.

In the *Satapatha Brāhmaṇa*, Kūrma is one of the transformations of Prajāpati, creator and progenitor, in which form he created tortoises. Herman Jacobi, writing on the subject of "Incarnation (Indian)" in *ERE* vii, points to the fact that in later mythology many of the exploits of Prajāpati, the great progenitor of the *Brāhmaṇas*, were transferred to Vishnu. Compare MATSYA.

Kuru In Hindu mythology, a prince of the Lunar race, ancestor of the Kauravas and the Pāṇḍavas whose battle is the theme of the *Mahābhārata*.

kururu A dance of the Guato Indians of the upper Paraguay Basin: introduced by the Brazilian mestizos. It is a walking dance accompanied by a rhythmic song, which is improvised for the moment, i.e. any special occasion, but usually in honor of a host.

kuśa grass or darbha The most sacred of the grasses of India (*Eragrostis cynosuroides*), growing about two feet tall. The blades are so sharp that they draw blood from the feet and legs of those walking through it. A story in the *Mahābhārata* accounts for the split tongue

of the snake as caused by licking this grass. In Hindu etiological tales it sprang either from the hairs of Vishnu which were shed during his tortoise (Kūrma) incarnation, or from the grass on which some of the sacred amṛta was spilled after the Churning of the Ocean. It is used in nearly all Hindu magic and sacred ceremonies, such as the *upanayana* (sacred thread ceremony), *śrāddha* (rite for the dead), weddings, funerals, and also in menses, initiation, and pregnancy rites. (See *Ocean of Story* I: 55 n. 1.) Rings of kuśa grass are worn on the fingers by supplicants making offerings to the gods. Confectioners and cooks keep some in their jars and other utensils to protect customers from the evils that are likely to infest food during eclipses.

Kuśa was the name of the baby created by the hermit Vālmiki out of pure kuśa grass for Sitā, when he thought her own child, Lava, was lost. The two boys were brought up together and learned all the sciences from Vālmiki. (See *Ocean of Story* IV: 128.)

kusiotem A series of five dances which constitute part of the Bella Coola Midwinter *kusiut* rites. They are feats of juggling by an initiate who professes to have had a supernatural call for the performance of this dance. They include:

(1) Stomach-cutting, by an impersonator of Kuldl-kākmidjut (capable of having his stomach cut). A false stomach is cut, death is simulated, and revival enacted by an impersonator of Snitsmäna, the supernatural woman restorer. The chief deity, Alkuntām, and other supernaturals also feature in the drama; also, Haohao, a long-beaked bird, Thunder, Hermaphrodite, and others.

(2) Beheading dance, similarly simulated with a false head.

(3) Drowning dance, similarly simulated with a special box above a trap door and a dummy.

(4) Burning dance, including the swallowing of hot stones.

(5) Fungus dance, performed by a woman holding a shelf fungus (*kānāni*) which only a *kusiut* can pull from the ground.

As all *kusiut* dances, these involve elaborate masks, contraptions, and much hoodwinking. The *kusiut* are under no illusions and are quite aware of the deception practiced on the uninitiated and awe-stricken members of the audience. [CPK]

kusiut (plural *kukusiut*) A masked dancing society of the Bella Coola, Kimsquit, and neighboring Indian tribes of coastal British Columbia. A member of the society is also *kusiut* as is also "the learned one," a supernatural being, or a person, with power to cure the sick. The society performs dramatic dances during the winter ceremonial season, when initiates are also drawn in.

The name brings with it the prerogative of membership and of executing a certain dance. It might be inherited and have to be validated by gifts; it might be obtained directly from a supernatural patron; it may be altered by a powerful chief. It is supposedly kept in a repository, guarded by the goddess Anō'likwotsaix, who keeps up a running comment during the ceremonies. Initiation is open to all classes, and has in fact become all-inclusive.

The opening rite in November is the coming of Noāknim in his supernatural canoe: a 27-day sequence.

The closing rite, in February, removes the tabu from the houses where the ceremonies have taken place. Ceremonies may overlap. Ordinarily they last four days: 1) The call comes to the initiate. 2) The wood is cut for the masks. 3) Masks are made (anew for each occasion); some are displayed on a pole. 4) *Nebusam*, "that which is opened." Masks are completed and assigned. In the evening the uninitiated assemble for the dramatic performances.

These performances consist of feats of jugglery as well as masked mime. Most terror-inspiring are the enactments of the Cannibal, the Scratcher, the Breaker (who destroys property), and a series of five *kusiote*m dances. A Mystery dance, which includes a guessing game of three supernaturals, may last for months. Other impersonations include Winwina, who brings salmon, Nunuoska, Mother Nature, who in the drama gives birth to all plants and creatures in seasonal order, Thunder, with a beaklike mask and much commotion, the Sun and Moon in a double mask, and numerous birds and animals.

The masks are elaborate and eloquent, some of them are standardized (as Thunder, the *haohao*, the black Qomoqua); others vary with the "call"; others are free inventions. The action at all times suits the character; Cannibal performs with frenzied contortions, Thunder with heavy jumps, Rainwater with a silent tread. The typical styles of men and women are differentiated. Most male dancers rotate sunwise; they vibrate their hands and fingers, arms shoulder high, crouch during fast stick-beating of the orchestra. Women, with arms held close to the body, vibrate so as to let their breasts shake. Supernatural cries of "Xwa, xwa," and a steady droning by the women add to the mystery.

Deterioration of the society is inevitable in the present era, particularly with the initiation of all men and the consequent depletion of the ranks of necessary spectators. [GPK]

kut In Yakut religion, the soul in its physical aspects. There is confusion concerning the identity and number of souls in Yakut religion, but it is believed that the Yakut divide the kut or soul into three elements: the *buor-kut* or earth soul; the *iya kut* or *ya kut*, the mother soul; and *anya kut* or father soul. After death the soul undergoes transformations, is devoured by the abassylar, remains with the corpse, or is transformed into a wandering spirit.

Kuṭnī In Indian folktales, literally, a wise woman: a term of reproach or abuse for an old woman or a witch who does not, however, have supernatural powers.

Kvaser In Teutonic mythology, a being renowned for knowledge and goodness who went about the earth answering all questions and thus teaching mankind.

During the celebration of peace between the æsir and the vanir, both sides solemnly spat into a vase and from this Kvaser was created. The dwarfs, Fialar and Galar, coveted his knowledge and killed him. They made a mead from his blood mixed with honey, which made all who partook of it great poets.

kwakwa A musical instrument of Surinam Negroes: a wooden bench struck with sticks and used with the iron (*felu-ko-felu*, equivalent to the Haitian *ogan*) and the rattle to provide a ground rhythm for religious dances.

Kwaku Ananse The Spider of the Akan-Ashanti folktales, which are known as ANANSESEM.

Kwannon The Japanese name for the Sanskrit Avalokitesvara, the spiritual son of the Buddha Amitābha (Japanese Amida Butsu), now among the most popular deities of Japan. Originally male, Kwannon has now become a woman, the Goddess of Mercy. She is represented in art in eight different forms and postures. See JAPANESE FOLKLORE; KUAN YIN. [JLM]

Kwati or **Kivati** A small person, the transformer-trickster of the Makah Indians of the Puget Sound region of Washington. Kwati is similar to Mink, the transformer-trickster-culture-hero of the tribes of Vancouver Island and the adjacent mainland. A cycle of myths about Kwati's adventures is told by the Makah, similar to those narrated about Mink and other North Pacific coast transformers. See RAVEN. [EWV]

Kwikumat Name of the creator in the mythology of the Yuma Indians of southern California. Like all Yuman creators, he was born from the ocean. See BLIND OLD MAN; CREATOR BORN AT BOTTOM OF OCEAN.

Kwoiam or **Kuiamo** Torres Straits war-hero, around whom a whole mythology and cult has developed (Haddon, *Reports of the Cambridge Anthropol. Exped. to Torres Straits*, vol. 1, Cambridge, 1935; and G. Landtman, *The Kiwai Papuans of British New Guinea*, London, 1927). Other culture heroes of Torres Straits and Papuan New Guinea include Waïet and the Brethren. See BRETHREN; SIVIRRI. [KL]

kyaiya A harvest dance of the Lengua Indians of the Gran Chaco, held three times a year: in the spring in anticipation of new crops and renewed food supply; in the summer to celebrate the algarroba bean harvest; in the fall to celebrate the final harvesting of crops. It is performed by a circle of dancers around one central figure (a man) who continually points to the four cardinal directions.

Kyoi Literally, spirit: the creator in central California Sinkyone Indian mythology: identified with the Kato Nagaicho, and the Yuki Taikomol.

La Belle au Bois Dormant Literally, beauty sleeping in the wood: title of Perrault's version of the sleeping beauty story. See **LITTLE BRIAR ROSE**.

Labyrinth The complex prison built by Dædalus for King Minos of Crete to contain the Minotaur. The name probably is derived from *labrys*, the sacred double ax of the Cretans and may have been the temple of the bull cult in Crete. So complicated was the Labyrinth that none could escape once it was entered, until on Ariadne's advice Theseus tied one end of a thread at the entrance-way and followed it out after killing the Minotaur. The name was applied not only to buildings (a building sunk into a mountainside) but to all kinds of mazes. An ancient Delian dance, performed also at Knossos, in memory of the rescue of the doomed Athenian youths and maidens by Theseus, mimed the intertwinings of the Labyrinth, but it is probable that the maze itself was originally intended, as throughout Europe, to lay out the course of a ritual dance. It is supposed that the story of the Labyrinth grew up about the ruins of the great palace of Knossos, with its murals of bull-baiting, etc. The figure of the Labyrinth appeared on coins and vases of the ancient world, in Knossos developing from the simple fret to the complex maze. In Egypt, the great funeral temple of Amenemhet III, still existing in the time of Pliny, was the most famous labyrinth of ancient times. Herodotus visited the part above ground (half of the 3000 rooms) and was told that the subterranean parts contained the tombs of the kings who built it and those of the sacred crocodiles; he says that the edifice surpassed even the pyramids.

Lachmu or Lahmu In Babylonian mythology, one of twins, with Lachamu, the first gods born. Apsu, Tiamat, and Mummu existed in primeval chaos, and from the union of Apsu and Tiamat issued Lachmu and Lachamu. They in turn, in some readings of the myth, are parents of Anshar and Kishar, but Apsu and Tiamat may have been the parents of this second pair. Various interpretations of the myth have been made: Thorkild Jacobsen equates them with the silt deposited where sea and river meet; Phyllis Ackerman sees in them the Milky Way serpents, and identifies Lachmu with the constellation Orion. Lachmu was worshipped in Canaan as a fertility deity.

ladder Some of the folklore of ladders is connected with the fact that ladders lead up and down. Thus a dream about going up a ladder is a good dream and brings good luck. To dream about going down a ladder means bad luck. According to Sigmund Freud (*The Interpretation of Dreams*), in dreams "Steep inclines, ladders, and stairs, and going up or down them, are symbolic representations of the sexual act." Some Egyptologists have suggested that the early method of building pyramids in steps was to supply the dead kings with stairways to the sky.

The Tamori of the Central Celebes pacify the tree spirit before they cut a tree down. They bait it with a

quid of betel, and set up a small ladder to assist in its descent.

The islanders in the area between western New Guinea and northern Australia believe that the sun fertilizes the earth. This happens once a year. A gaily decorated ladder with pictures of the birds who herald the dawn and seven rungs is put under a fig tree. Great sacrifices are offered and the union of sun and earth is solemnized by orgiastic unions between men and women.

The ladder to the upper world is motif F52. A boy shoots arrows rapidly. They come together, form a ladder, and give him access to the other world where he has a series of adventures similar to those of other other-world travelers. In this the ladder is similar to the beanstalk, tree, rainbow, and other means of ascent.

Anthropological folklorists have striven nobly with the superstition that it is bad luck to walk under a ladder. They note that many peoples have a superstition that it is bad luck to step under anything at all and this, they decide, is "connected in a most direct manner with the menstrual tabu." Australians will not walk under a leaning tree or a fence because a menstruous woman may have left blood on it. In the Solomons a man will not pass under a tree fallen across the road for similar reasons. The Burmese will not step under a house containing women. The Siamese and the Maori will not step under a rope on which women's clothes have been hung. In Rome the priest of Jupiter might not pass under trellised vines because the juice of a grape (blood?) might drop on him. In this connection it is worth noting that the Herskovitses rejected a preliminary Dahomey explanation that one of the reasons for thickening the vaginal labia was to prevent dripping and arrived at the better one that the exercise was for the increase of pleasure. It may be that people all over the world hesitate to walk under ladders because ladders are by nature unstable. A Christian rationalization of the custom of not walking under ladders is that the person doing so breaks the Holy Trinity, symbolized in the triangle of ladder, wall, and ground. Another often heard reason is, So that the paint won't fall on me; but since not all ladders are erected by painters, it is interesting to compare this with the above-mentioned menstrual beliefs. [RDJ]

ladies' chain An American square dance term: two ladies join hands and cross to opposite gentlemen; each joins left hand with opposite gentleman, who turns counterclockwise. The two ladies then join right hands, each passing back to her own partner, who takes her left hand, and turns her into place. [GPK]

Ladon In Greek mythology, the guardian of the apples of the Hesperides: a dragon said variously to be the offspring of Typhon and Echidna, Phorcy and Ceto, or of Ge. Although Ladon never slept, he was killed by Hercules when the hero came to get the apples as one of his labors. Ladon may originally have been a chthonic god of Arcadia, his connection with Ge, the belief that

the Hesperides were originally Arcadian, and the existence of a river and a river god of the same name in Arcadia all being taken in evidence.

Lady Alice An English ballad (Child #85) known also in America under the titles of *George Collins*, *Johnny Collins*, etc. In the Child versions, Lady Alice (Anna, Annis) sits in her window sewing.

And there she saw as fine a corpse
As ever she saw in her life.

She asks the bearers whose body it is.

"We bear the body of Giles Collin,
Who was a true lover of yourn."

Lady Alice is heartbroken:

"Tomorrow before the clock strikes ten (or seven)
My body shall lye by hisn." . . .

Her mother she made her some plum-gruel,
With spices all of the best;
Lady Alice she ate but one spoonful,
And the doctor he ate up the rest.

And so she dies and is buried near his grave. A rose, or a lily, grows from his grave over to hers, but a moral parish priest severs it, or the "cold north-easterly wind" kills it. In other versions, a rose grows from her grave, a briar from his, they entwine in a true-lovers' knot and grow to the top of the church.

The ballad is the counterpart of *Lord Lovel* (Child #75) in which the lover dies out of grief for his mistress, and in some variants of *Lady Alice*, where the man dies for love of the woman, the situation resembles that of *Barbara Allen* (Child #84). S. P. Bayard ("The 'Johnny Collins' Version of *Lady Alice*," *JAF* 58: 73-103) has studied the ballad in America. The common American version is *George Collins*, in which the girl is usually Ellen, Eleanor, Helen, or Mary. In this variation, she does not die, but the ballad closes with her lament. The *Johnny Collins* version, on the other hand, shows definite signs of being rather a version of *Clerk Colvill* (Child #42), a ballad in which the lover dies because his supernatural mistress is angered by his marriage to a human wife.

ladybug or ladybird A small, convex, brightly colored beetle, usually red spotted with black, or black spotted with red, which feeds on aphids. It is termed variously "fly-golding," "God Almighty's cow." Some names connect it with a hen or dove, as the French *poulette à Dieu* and Italian *palomilla*. Its origin is believed to be supernatural and its dedication to the Virgin Mary appears in its German name *Marienkäfer* and the term *ladybird*. Other names in other languages connect this beetle with a horse or sheep.

In common with the stork and the swan, in German folklore the ladybug is a child-bringer. It warns of danger; it tells the time of day, forecasts a long or short life, or the value of the harvest by the number of spots on its shell. It is a death omen (black ladybug in Verona). It will help in finding strayed cattle. If you find one in the house in winter, you will receive as many dollars as spots on its back. It is bad luck to kill a ladybug in general British belief, also in India (because it is the habitat of the souls of the dead), and among South Carolina Negroes.

The ladybug is a common love-oracle: girls in Eng-

land and on the Continent hold the ladybug on their hand or on the tips of their fingers, telling it to "fly away home." Then they note the direction the ladybug takes and believe that from that direction their lovers will come.

British and American children chant: "Ladybug, Ladybug / Fly away home / Your house is on fire / Your children are burning." And the ladybug instantly flies off. In New England and Canada if a ladybug lights on your hand, you will have some new gloves; if it lights on your dress, you will have a new dress. [grs]

Lady Isabel and the Elf-Knight A Scottish-English ballad (Child #4) in which a Scandinavian strain of the supernatural has been added to the murderous lover outwitted theme of the European ballad *Hallewijn*. Lady Isabel hears the elf-horn blow, and wishes that the player were her lover. The elf immediately appears and leads her off with him. When they get to a certain place he tells her that she is about to become his eighth victim. She tells him to rest his head in her lap a while, and when he falls asleep she kills him. In the *May Collin* variant, the elf has become simply Mess (Sir) John, and the supernatural element has again disappeared from the ballad. *Hallewijn* and its family of ballads are the most widespread in all of Europe, and *Lady Isabel and the Elf-Knight* is one of the best examples of this ballad.

Lady Jane Title of one of the variants of the ballad *Fair Annie*.

Lady Maisry Title and heroine of a Scottish ballad (Child #65). Lady Maisry, courted by the north country lords, refuses them all, because she is pledged to the English Lord William. When it is discovered that she is pregnant, her brother, in an outburst of family pride and patriotism, orders her burnt. A messenger goes to Lord William, and he rides to her rescue, but arrives too late, for the fire is already high. He swears revenge. In the B version, the heroine is Janet, and the story of her lover is gotten from her by her sister, brother, mother, father in sequence—the typical ballad climax of relations.

laeteanta na riaiðce Literally, the days of the brindled cow: the last days of March or the first days of April. In Irish story the brindled cow complained on the first day of April of the harsh and bitter cold of March. So March borrowed a few days from April. But during these days the rains poured down and drowned the brindled cow (*bó raiðce*). March still has one more day than April.

La Fontaine, Jean de (1621-1695) French writer who with his *Contes* was the chief exponent of the merry tale in France. His fame rests upon his *Contes*, *Fables*, and *Les amours de Psyché et Cupidon*. La Fontaine was born at Chateau Thierry, in an upper middle-class family. He was educated at the college of Rheims and was destined for the priesthood. However, his worldly tastes caused him to relinquish his studies and to spend the last forty years of his life in Paris. Past the age of thirty before turning to writing, he published his first serious work in 1654. The first volume of his *Contes* appeared in 1664, the first volume of *Fables* in 1668. Both the *Contes* (1664-1674) and the *Fables* (1668-1694) are universally appreciated for their originality, grace, and wit. La Fontaine was elected to the French Academy in 1683.

laica A magician or sorcerer among the Aymara Indians of Bolivia. He bewitches his victims by means of their hair, blood, nail parings, etc., which he manages to get possession of. These he exposes to fire or buries in the earth. He makes images of people or animals he wishes to harm and pricks them with knives. [AM]

Laily Worm and the Mackerel of the Sea A Scottish ballad (Child #36) related to *Kemp Owyne* (#34) and *Allison Gross* (#35) to some degree. The stepmother has supposedly sent the son and daughter to court, but instead has transformed them into the laily worm (loathly worm) and the mackerel of the sea. The son tells his father:

"Seven knights ha I slain
Sann I lay att the fitt of the tree;
An ye war na my ain father,
The eight ye sud be."

The father tells him to repeat the story; then he goes to the stepmother and asks her where the children really are. She tries to keep up the pretense, but is forced to transform them into their proper shapes again, the boy with the magic wand, the girl with the magic horn. The stepmother is burnt.

lair bán Literally, white mare: in Irish folklore, the moon. For **Lair Bhan**, see CELTIC FOLKLORE; SAMAIN.

Laistner, Ludwig (1845–1896) German clergyman, scholar, and writer born in Esslingen, Württemberg. Following a period of preaching he became a private tutor in Munich, and in 1880 turned to writing. In his *Das Rätsel der Sphinx* (1889) he advanced the extreme theory that all folktales and legends could be understood through dreams and their meaning, and that folktale incidents had their origin in dreams. He was most interested in dreams of distress and fear. Together with Heyse he published the twenty-four volume *Novellenschatz* (1884–1888) and other cultural and literary historical works. He also wrote *Nebelsagen* (1879), *Novellen aus alter Zeit* (1882), *Der Archetypus der Nibelungen* (1887), *Germanische Völkernamen* (1892), and the epic poem *Barbarossas Brautwerber* (1875).

Laka A Hawaiian nature goddess, especially goddess of the rainstorm; patroness of hula dancers. She corresponds to the male Rata, the wind god, of other parts of Polynesia. Laka is the daughter of Kapo, Pele's sister, though Laka figures in myth simply as a friend of Pele and not a relation. There are many hymns and prayers to Laka in the repertory of the hula dancers.

Laki Tenangan Kayan (Borneo) chief spirit who presides over the land (*Dali Matei*) of spirits and assigns the souls to their proper places. Laki Tenangan does not figure in Kayan mythology, but he is glorified and sacrificed to and replies through omens.

Lakshmaṇa or Lakshman In Hindu mythology, half brother of Rāma, the son of King Daśaratha and Sumitrā, who had an eighth part of the divinity of Viṣṇu manifest in him. Lakshmaṇa faithfully accompanied Rāma in all his wanderings and fought with him against Rāvaṇa when that demon carried off Sītā. To save Rāma from the curses of the sage Dūrvasas, Lakshmaṇa forfeited his life and was conveyed bodily to heaven by the gods. See DAŚARATHA.

Lakshmī, Lakshmī-śrī, śrī, or Padmā (Lotus) The goddess Lotus of Hindu mythology, spouse of Viṣṇu and symbol of his creative energy. In an apocryphal hymn attached to the *Rig-Veda* she is called both śrī and Lakshmī. She is especially associated with the lotus symbol: lotus-born, lotus-colored, lotus-thighed, lotus-eyed, standing on a lotus, decked with lotus wreaths. Wherever the lotus appears in Hindu art, with or without the depiction of the goddess herself, her immanence is assumed.

In the *Rāmāyaṇa* Lakshmī rose from the Churning of the Ocean bearing a lotus, and Viṣṇu chose her for himself; in another myth, she already existed at the beginning of creation, floating on a lotus; in the *Purāṇas*, she is the daughter of Bhrigu and Khyati.

As goddess of rice-growing and agriculture, she is called Kariṣiṇī, "the one possessing dung": i.e. fertility-giver to soil, crops, animals. She is the bestower of cows, horses, offspring, health, wealth, gold, fame. Early Hindu kings were married to Lakshmī (along with their wives) as espousing fortune and prosperity and good luck. Men desiring sons, all those desiring offspring worship and propitiate her.

Lakshmī is a development of the very early earth-mother goddess of India; the above-mentioned hymn calls her the mother of created beings, and as such Kāmā, Earth. H. Zimmer (*Myths and Symbols in Indian Art and Civilization*, New York 1946, p. 96) says "this mother of the world was actually supreme in India long before the arrival of the conquerors from the north," and adds that still today Lakshmī is "the greatest power in the Orient."

Lakshmī is usually depicted with two arms, although she is said to have four. She holds, or is seated or standing upon a lotus. She is constantly associated with elephants, especially the white elephant of rain, fertility, and civic welfare rituals. This elephant is śrī-gaja, the elephant of śrī, in its rain association called Megha, cloud. In Buddhist art she is shown accompanied by two elephants. In the temple at Deogarh she is depicted as the humble Hindu wife adoring the feet of her lord, Viṣṇu.

lāma (Tibetan bla-ma) Literally, the Superior: a title originally restricted to the head of a Tibetan monastery, now given to most Lāmaist priests and monks in both Tibet and Mongolia. See DALAI LĀMA.

Lāmaism The European term for the Tibetan form of Buddhism which Tibetans themselves call *Sang-sgyaskyi ch'ōs* or *nang-ch'ōs* (Buddha's religion or orthodox religion). This is essentially the same as the Mahāyāna form of Indian Buddhism, introduced in the 7th century A.D. after the conversion of Srong-tsan-gampo. This king had the Tibetan language reduced to writing and built shrines, but left the founding of a sect to a successor, King Thi-srong-de-tsan, who sent to India for a priest to establish a Buddhist order in his kingdom. Guru Padmasambhava (Tibetan Guru Rinpoche or Lō-pōn), a luminary of the Tantrik-Yogacharya school, accepted the invitation and established the order of Lāmas. Lō-pōn was from northwestern Kāshmir, a region famous for the proficiency of its priests in exorcism, sorcery, and magic. He established himself in his new surroundings by vanquishing the chief Tibetan devils, sparing those which consented to become defenders of

his religion, guaranteeing them worship in return. In his battle his chief weapons were the dor-je (thunderbolt) and the mantras (magic formulas). Thus Lāmaism became a mixture of magic, Indo-Tibetan demonology, and Śaktiism venerated with Mahāyāna Buddhism.

King Lang-darma tried to destroy Lāmaism in the 9th century but was murdered by a lāma.

The first of the reformed sects (Kah-dam-pa) of Lāmaism was founded a century and a half later under the influence of Atisha, an Indian Buddhist monk. Those who refused to follow him were called the old ones (*Nying ma-pa*). To strengthen their position, they began to introduce more and more of the rites of the pre-Buddhist Bon religion which still appealed to the people. This was accomplished by the "discovery" of new gospels allegedly hidden by Padmasambhava. As more and more gospels (*Ter-ma*) were discovered, segments of the group broke away, each following a different Ter-ma.

In the 14th century Tsong-kha-pa collected the remnants of the Kah-dam-pa sect and formed from them the Ge-lug-pa, the most important of the present-day sects. The Ge-lug-pa keep the 235 Vinaya rules, carry a begging bowl, the prayer carpet (*gding-wa*), and wear the patched robes of yellow and yellow hat (*pen-sha-sne-ring*) which distinguishes them from the other sects. Their Adibuddha is Vajrasattva; their tutelary is Vajrabhairava, and their guardian demons are the six-armed Gon-po and Tam-chhen. Their temporal power, and the title Dalai Lāma for their chief was bestowed by the Chinese Emperor in 1640 A.D. This gave the fifth of their great Lāmas the opportunity to consolidate his power as priest-king. This he accomplished by appropriating other monasteries and by inventing legends to make himself the incarnation of Avalokita.

Of the other sects the black-hat, wholly unreformed, Nying-ma-pa, which is still tinged with pre-Buddhist aboriginal beliefs and practices, is the most important. They worship Guru Padmasambhava in both divine and demoniacal aspects.

Actually the practices of the Ge-lug-pa monks differ little from those of early Indian Buddhist monks; and the demonistic rites, which were borrowed partly from the earlier Bon and partly from Indian Śaivite sources, are practiced by the unreformed sects which are in the minority.

The pantheon comprises a multitude of deities created by embodying the different aspects of a small number of divinities under different names. The pantheon includes the Buddhas (the historical Sākya, as well as the celestial buddhas, *Dhyānibuddhas*), Bodhisats (chief of which are Maitreya or Byams-pa, Mañjuśrī or 'Jam-pahi dbyans, Vajrapāṇi or P'yag-na-rdo-rje, Avalokita or Spyān-ras-gzigs, Tārā or sgRol-ma, and Marīci or 'Od-zer 'c'an-ma), tutelaries or *Yi-dam* which include Vajrabhairava or rDe-rje-'jigs-byed, defenders of the faith (the Dharmapālas or Ch'os-skyoṅ), the lord-demons or Gön-po, the Dākkinis, and the eight classes of lesser divinities, the eight classes of country-gods, local gods or Sa-bdag, personal gods, saints, and Tantric wizard-priests whose chief is St. Padmasambhava. Compare BON; GLING-CHÖS. [SPH]

lambi Conch-shell horns used with drums as accompaniment to the work of a Haitian combite.

lamia In ancient Greek and later belief, a monster who lived on the flesh and blood of the young; a figure with which children were threatened. In myth, Lamia was a daughter of Belus and Libya, who was loved by Zeus and who therefore was punished by Hera. The goddess took Lamia's children; in revenge, since she had no recourse against the gods, Lamia took and killed the children of men. Because of this activity she became, from a beautiful woman, a hideous creature who in addition obtained from Zeus the power to remove her eyes from her head at will. Later belief made of the lamia, of which there were several, a shape-shifting snake with a woman's head, akin to the succubus and the vampire, who seduced young men and then sucked their blood and ate their flesh. Keats' poem *Lamia* was inspired by a reference to one such story he discovered in Burton's *Anatomy of Melancholy*, the story in turn being from Philostratus. In the Middle Ages, the lamia and the empusa were sometimes linked as enemies of men. Compare BAPTISM; BASQUE FOLKLORE; LILITH.

Lamkin English-Scottish ballad (Child #93), in two main traditions: one is the story of a mason who built a lord's castle, and failing to receive his wages, murdered the lord's wife and child with the connivance of a false nurse; the other tells of a border raider or outlaw who murders the lord's family, sometimes without stated motive and sometimes because he was denied the hand of the lord's daughter. The first is chiefly Scottish; the second, chiefly Northumbrian. (The ballad was localized all over Scotland; Prof. Child gives 26 versions but there are many more.) Both versions have survived in America, often in very garbled form. Variants which survive in the United States remain remarkably true to the originals. An Indiana version, however, does not mention the false nurse who let Lamkin in but personifies her as Falseness. A fragment of the text, the dialog between the lady and the false nurse who lures her down to the murderer's trap, also survives as a lullaby. So popular was the ballad that Lamkin became a word to frighten children with. It is argued that the first-mentioned tradition is the original and the second merely a beheaded version, which by losing the first stanza explaining the mason's motive lost the explanation of the raider's crime, and that the daughter was a later addition. Some texts give the lord revenge on the murderer and the nurse. One Virginia version names the murderer Ward Lamkin, by corruption of the line, "why should I reward Lamkin." Other corruptions of the name include Bulankin, Bolamkin, etc., from Bold Lamkin. Symbolical or derisive explanations of the name have been offered, but it is probably just the common diminutive of the Flemish, Lambert.

Lammas (from Old English *hlaf*, loaf, + *maesse*, mass or feast) August 1; a first-fruit or harvest festival of the early English church, when loaves made from the first ripe grain were blessed in the church. Lammas later became popularly misconstrued as lamb-mass, the lamb-mass being associated with August 1, the feast of St. Peter's Chains, when lambs were taken to church. In England **Lammas wheat** is winter wheat; **Lammas apples** are the first to ripen of the season, i.e. around Lammas-tide. In Scotland, Lammas was one of the old quarter days for paying rents, thus one of the most obvious Christianizings of an old Saxon first-fruit festival, when

tenants also brought in the first new grain to their landlords. **Lammas lands** were lands thrown open to common pasturage on Lammas Day, to be used for common pasturage till spring, having been fenced and privately used preceding Lammas Day. Sir G. L. Gomme identifies this as the survival of a very old village community practice. It was observed in parts of England into the late 19th century.

In the Scottish Highlands on Lammas Day people sprinkled the floors of their houses and their cows with menstrual blood, which was believed to be exceptionally potent against evil on May 1 and August 1.

"At latter Lammas" is an English folk phrase meaning Never (from Lammas being a day of accounts and "latter" meaning "last," à la *Job* xix, 25), the Judgment Day, or day of last accounting, i.e. Never, in this world. Compare LUGNASAD.

Lancelot In Arthurian legend, a knight of the Round Table; lover of Guinevere; father of Galahad by King Pelles' daughter. The 13th century French prose *Lancelot* says that he was the son of Ban, king of Benoic, reared by Vivien, the Lady of the Lake, and brought to Arthur's court by her. Malory's *Book of Arthur* gives in detail the story of the hopeless love of the Maid of Astolat for Lancelot, the betrayal to Arthur of Lancelot's love for the queen, her rescue from the stake by her lover, her return to Arthur, Lancelot's departure to France, the final tragic meeting between the two lovers after Arthur's death, and Lancelot's retirement from the world to lead the life of a hermit. In Malory's version of the Grail quest Lancelot was permitted to see the vessel covered with red samite, but when he approached he was blasted by a fiery wind because of his sin.

The history of Lancelot bears a marked resemblance to that of Gawain in his origin as an Irish solar figure and in the confused transmission of his name through the Welsh. The great Irish sun god Lug bore the epithet *Lamfada*, "Long Hand." Lug was taken over by the Welsh as *Lluch Llaunnauc*, *Lluch* "White Hand." *Lluch*, in the *Black Book of Carmarthen* and *Kilhwch*, has become a warrior of Arthur's, just as the Irish sea god Manannan, in the same texts, is enrolled in Arthur's train as Manawyddan, son of Llyr. Lug turned up in French romance as (at least) two personages. His name was corrupted into Loth; his sobriquet, under the influence of the French name Lancelin, became Lancelot. The accident that *lluch* as a common noun meant "lake" led to the conversion of the name *Lluch* into the title "du Lac," and to Lancelot's acquiring a foster mother, the Lady of the Lake, who seems to be descended from the Welsh fay *Rhiannon*. What is probably an even later addition to Lancelot's history, represented in the High German *Lanzelet* (c. 1200), describes the hero's rearing in an elysian isle by the faery mother of Mabuz, in whom we recognize another Welsh personage, *Modron*, mother of Mabon, the prototype of Morgan le Fay. Thus new elements from the heritage of Welsh mythology were attached, probably by the Breton *conteurs*, to the original story of Lug. The famous amour with Guinevere seems also to be a late addition. Though her infidelity to Arthur seems to be an old Welsh *donnée*, there is no trace of a liaison with Lancelot before Chrétien de Troyes introduced the theme in his *Chevalier de la*

Charrette (c. 1170). The account in this poem of Lancelot's rescue of Guinevere and his four combats with her abductor Meleagant, who is elsewhere called Melvas, king of the Summer Country, reflects the seasonal myth of the abduction of a flower maiden and the annual combats for her possession between the personifications of summer and winter—a myth which is told in *Kilhwch* of Creiddylad and was enacted in the May Day festivals of South Wales in the 19th century. Thus Lancelot's legend is the result of successive accretions made by Welsh and Breton reciters and French romancers to the original Irish myths of the divine Lug.

Ländler An Austrian and Bavarian couple dance, very robust and earthy, with interpolated shouts. The step is a heavy stamping waltz performed to emphatic triple-time music, each couple progressing around the room at will. The theme throughout is overt flirtation, particularly during the later figures. Partners may pivot clockwise by joining forearms, crossing hands, embracing in ballroom position, or with the man's hands on the woman's waist and her hands on the nape of her neck. The turns in their lustiness swing the dancers into backward leans. In the climactic figure, the "window"—a *Schuhplattler* figure—two pivots with clasped hands tangle the arms into a circular opening for a coy glance and perhaps a kiss. Then the man may pursue the eluding woman, and, after the catch, swing her in a final waltz. The traditional *Schuhplattler* may follow. The Ländler, a vigorous peasant dance, has been enthusiastically adopted by urban dance groups, among German Americans as well as native Germans. The name serves as a continuous reminder of its origin "auf dem Lande." [GPK]

Land of the Living or Land of Life One of the designations of the ancient Irish otherworld, located in the unknown western Atlantic; the Elysium of Old Irish mythology; later conceived of as fairyland. See ECHTRAÍ. Compare ANNWN; ISLAND OF THE BLEST.

Landvaettir Scandinavian land spirits or guardians. They remained confined to a single area and did not travel about. When they did leave, trouble was sure to ensue. When Iceland was confederated (930 A.D.) a provision in Ulfjot's Law forbade ships displaying figureheads to approach the coast, lest their forbidding looks should frighten the Landvaettir.

Lang, Andrew (1844–1912) Scottish man of letters, scholar, and founder of scientific mythology. He was born at Selkirk; studied at St. Andrews University and at Balliol College, Oxford; and went to London in 1875 to become a journalist. Lang was one of the first to realize that mythology, anthropology, and ethnography needed to work closely together. He was chiefly instrumental in exploding the brilliant but unscientific ideas of Max Müller and the solar mythology school; and was the most effective opponent of Benfey's Indianist theory. His greatest work in folklore was in the application of Tylor's "survivals" method to folktale investigation. However, he did not believe that all parallels of folktales could be explained by anthropological interpreta-

tion. Among Lang's writings were: *Ballads and Lyrics of Old France* (1872), *Custom and Myth* (1884), *The Blue Fairy Book* (1889), *Perrault's Popular Tales* (1888), *The Red Fairy Book* (1890), and *Magic and Religion*. Interested in the Stuarts and Scottish history he also wrote *The Mystery of Mary Stuart* (1901) and a *History of Scotland* (4 volumes, 1900–1907). Lang was one of the founders of the Psychical Research Society.

langleik A Norwegian folk instrument still played in some sections, but rapidly going out of use. It has a square-bodied soundbox with one string tuned to G for the melody and 7 others for accompaniment. It is plucked with a plectrum. It is classified as a sort of monochord, a one-stringed instrument originally used for tuning others and later played and fitted with extra strings for harmonic or sympathetic accompaniment.

langsuir, langhui, or langsuyar In Malay belief, the malignant spirit of a woman who dies in childbirth. The langsuir is recognized by her long nails, jet-black, ankle-length hair which covers the hole in the back of her neck through which she sucks the blood of children, and her green robe. To prevent a woman from becoming a langsuir, glass beads are placed in the mouth of the corpse, needles are put in her palms, and eggs are inserted under each arm-pit so that she cannot shriek or wave her arms to assist in flight.

The first langsuir was a beautiful woman who, when she heard her stillborn child had become a pontianak, died of the shock and her spirit flew into a tree. Langsuir are fond of fish and sit on the fishing stakes in crowds waiting to steal from the nets. If a langsuir is caught, her nails are cut and her hair is stuffed into the hole in her neck; thus she becomes indistinguishable from an ordinary woman.

Lantern Festival A Chinese festival held from the 13th to the 15th days of the First Moon every year: so called from the practice of hanging elaborate colored lanterns at house doors and on graves. Fireworks are shown; special foods are prepared; and fairs are opened. [RDJ]

Lan Ts'ai-ho One of the Chinese Eight Immortals: said to be a man and yet not a man. As a street singer Lan denounced life and its pleasures. His costume is a tattered gown, wide wooden belt, one shoe, wadded garments in summer, cotton garments in winter when he sleeps on the snow. He rose to heaven on the fumes of wine, and discarded his shoe, belt, and robe on the way. He carries a basket of flowers and is the patron of gardeners. [RDJ]

Laocoön In Greek legend, a Trojan priest of Apollo who attempted to dissuade the Trojans from bringing the wooden horse into the city. Sinon had convinced the Trojans that the Greeks had sailed away leaving the horse as an offering to Athena, but Laocoön disputed this. As he was about to sacrifice to Apollo, two sea serpents emerged on the beach and encircled Laocoön's two sons. The father, too, as he tried to rescue them was gripped in their coils and killed. Taking this as an omen, the Trojans breached the wall and drew the horse into the city.

Lao Tzū A Chinese philosopher, said to have been the founder of Taoism. He may have lived in the first

part of the 6th century B.C. The *Tao Tē Ching*, basic classic of Taoist philosophy, is attributed to him though modern scholars report that he could not have written it and cast doubt on the very historical existence of Lao Tzū. [RDJ]

La Pa Chou In China, a gruel eaten before noon on the eighth day of the Twelfth Moon. Women spend the night preparing it. It contains glutinous millet, white rice, glutinous rice, canary seed, water chestnuts, small chestnuts, red beans, and skinned dates. It is said to have been the food Kuan Yin took with her when she fled from her father's house. [RDJ]

lapêt Burmese tea salad. Eating lapêt seals all bargains and is sometimes the binding part of a marriage ceremony. Sending a package of this tea salad with an announcement is all that is necessary to change one's name.

According to a legend, during the celebration of a feast a drowning youth was rescued by the great lord Yamadi-kyè-thu. In gratitude the boy's mother gave the lord the body of a dead bird which had remained uncorrupted for several years. Yamadi found a seed stuck in its throat. When this was removed the body immediately decayed. Later when Yamadi visited Loi-seng hill, the elephant upon which he was riding knelt down as he reached the foot of the hill, indicating the presence of a relic of Buddha. The area was searched and some bones were found under a ruin. These were buried and a pagoda was built. Then Yamadi called two men and told them to plant the seed. Each, however, held out only one hand to receive the seed and consequently the plant was called *let-tit-pet* (one hand—now shortened to *let-hpet*). He then told them that if they had held out both hands (as etiquette and respect demand) they would have been rich. As it was, they would be poor. Loi-seng hill is held sacred by the Palaungs who hold a feast there in March to worship a tea tree, said to be the one planted there at the command of Yamadi.

lapidaries Treatises on precious stones. Belief in the supernatural properties of precious stones goes back beyond recorded history. An early cuneiform tablet gives a list of stones facilitating conception and birth and inducing love and hate. These ideas of the ancients were woven into the astrological cosmos of the Babylonians, but the early Greek lapidaries were essentially medicinal. However the medical lapidaries of Alexandria derived more from the magic of the East than from the medical science of Greece, and it was not until the later Alexandrian Age that these became combined. The early Christian Church opposed magic and condemned engraved talismans, but tolerated the use of medicinal amulets, and developed a symbolism of its own based on the gems of *Exodus* and the *Apocalypse*. Up to the 13th century the lapidaries of Christian countries, while tinged with magic, are principally medical and scientific, and free from astrology. But this tradition was carried on by the Arabs, and the Spanish under Arabian influence, and by the late Middle Ages it had filtered into Italy, France, and England.

No other literature of the Middle Ages was more purely classical in its derivation than the lapidaries, especially those in the vernacular languages. Because they were a part of the science of the times, rather than magic, they were accepted as fact and where necessary were

bolstered by philosophical explanations. It was not until the later part of the 17th century that some of the more incredible virtues of gems were seriously questioned by the authorities. Even then there was no uniformity of opinion, and what one physician discarded as untenable, another vouched for in good faith from his own experience. Therefore it is not surprising that the medieval use of gems persisted into the 19th century and has continued among the folk of civilized nations up to the present. However, the present tendency to associate luck or misfortune with certain stones which is now met in "sophisticated circles" is not derived from any traditions of the lapidaries, but is often contrary to them. See GEMS.

lapis lazuli A rich blue stone flecked with golden bits of pyrites, sometimes the birthstone of December or Capricorn. It is often confused with sapphire, as in the High Priest's breastplate in *Exodus*. In Egypt it was used for figures of the goddesses, especially the figure of Ma (truth) worn by judges, and it was sometimes placed in embalmed bodies to represent the heart which was removed. It is considered a tonic and a cure for melancholy and intermittent fever. It is an emblem of chastity which counteracts the wiles of the Devil and insures help from the angels. The flute of Tammuz, whose sound resurrected the dead, was made of sacred lapis lazuli.

Lapithæ A mythical race of men of the Thessalian mountains. Perithous, their king, was a half-brother of the Centaurs, and when his marriage feast was held, he invited the horse-men to attend. (In some variants, they were invited to join in celebrating the birth of a child.) Ares, not being invited, stirred up Eurytion the Centaur, who tried to carry off the bride, either Hippodamia or Deidamia. The other Centaurs, by now drunk, seized other women. In the ensuing fight, which seems to have been almost a symbolical fight between men and beasts, the Centaurs were defeated and driven from their homes near Pelion by the Lapithæ aided by Theseus and perhaps Nestor. See CÆNEUS. Compare CENTAURS.

Lapp mythology The Lapps are a Finno-Ugric group, about 30,000, living in the polar regions of Norway, Sweden, Finland, and Russia. The Lapps have a rich folklore and a well-developed mythology, but Scandinavian influence is very strong. The God of Heaven is Jubmel or Ibmel (compare JUMALA). The Lapp Thunder-god, Tiermes, with bow and arrow as arms, was later given the Scandinavian name Torra-Galles, "old Thor-man," and was pictured with one or two hammers in his hand. With his hammer, or with his bow and arrow, he drives away evil spirits who hide themselves everywhere at his approach. At times the Lapps offered him, besides reindeer, large wooden hammers, beautifully carved. The third important god is Valalden-Olmai, "the world man," a god of fertility, borrowed from the Scandinavians. A blood-sprinkled "world's pillar," with which he supported the world, was set up for this god. Other gods are Bicka-Galles, the god of wind; Guuli-Ibmel, the god of fish; and Beiwé, the god of the sun. The sacrifice of the bear and shamanism are very important in the lives of the Lapps (see NOIDE); sacrificial stones are very numerous (see SEIDE); and there are numerous different kinds of spirits and ghosts (see HALDDE, and MSFO 68, pp. 85-117). In the sagas we often meet the *stalo*, who is like a man, but unusually

strong, a giant. The neighboring peoples of Scandinavia have given the Lapps the reputation of being a race of sorcerers. From the great number of publications on Lapp folklore and mythology, the latest ones are:

J. Qvigstad, *Lappiske eventyr och sagn*. 4 vols., Oslo, 1927-29. (Lapp text with Norwegian translation).

P. Ravila, *Reste lappischen Volksglaubens*. Helsinki, 1934. MSFO 68.

T. I. Itkonen, *Heidnische Religion und späterer Aberglaube bei den finnischen Lappen*. Helsinki, 1946. MSFO 87. [JB]

lapwing A crested plover (*Vanellus vanellus*) of Asia, Europe, and northern Africa, with lustrous bronze-green plumage on the upper parts, black throat and breast, white underparts and white-sided head and neck: named for its slow, flapping flight. It is said to be the bird that picks tidbits from the teeth of crocodiles. The lapwing was the marvelous otherworld bird stolen by Amaethon from Arawn, and was therefore one of the causes of the Battle of the Trees. The lapwing is mentioned as the third creature stolen by Amaethon in the ancient Welsh *Triads*.

In the Koran the lapwing is mentioned as one of the prophetic birds of Solomon and knower of his secrets. *Leviticus* xi, 19 lists it as not to be eaten, along with 17 other birds, each of them sacred to some cult or people of the Mediterranean region. Zeus in the guise of a lapwing fathered Herophile, a priestess of Delphi.

In Ireland the term for lapwing is *pilibín*, little Philip. *Cleas na pilibín* is the lapwing trick, i.e. its famous trick of screaming in distress to lure passersby in the opposite direction from its nest (the lapwing nests in open fields); it has even been known to feign disablement in order to mislead nest hunters, only to rise and fly off when about to be taken. Why the lapwing flies in circles is the motif (A2442.2.3) of a north Brittany folktale.

lares (singular *lar*) In Roman religion, beneficent spirits of the household and family, and by extension of the city and state and its various parts: in later times practically identical with the manes or spirits of the dead, but probably originally a special, deified group of those spirits. There were *lares rurales*, *lares viales*, *lares marini*, and in general *lares publici* which were distinguished from the *lares domestici*. Of the latter, the *lar familiaris*, the spirit of the founder of the family, was the most important. The lares, the penates, and the manes were all worshipped privately within the household, originally at the household grave of the departed; portions of food at every meal were offered to them. The lares, as the spirits of the dead, were probably analogous to the *genii*, perhaps identical with them. Their principal public festivals were the Larentalia and the Compitalia. Compare LARVA; LEMUR.

lark Of all the numerous small singing birds (family Alaudidæ) the lark referred to most frequently in folklore is probably the European skylark (*Alauda arvensis*) which sings in flight. The Scottish Highland people say that to know what the lark sings all you have to do is lie in a field and listen. Rural people in Great Britain generally recommend drinking three lark's eggs to acquire a sweet singing voice. Eating a crested lark to cure colic, a remedy proposed by Galen in the 2nd century, was tried by Erastus in the 16th and found "unavailing."

In an Arabian folktale the lark causes an elephant to

fall over a precipice (L315.5). Compare BITER BIT. Æsop has a fable, *The Fowler and the Lark*, in which the lark in the net pleads for her life, that she has stolen only one grain of wheat. For answer the fowler twists her neck (U32).

larkspur or delphinium Any of a genus (*Delphinium*) of tall plants of the crowfoot family with large, irregular flowers, usually blue, having a spurred calyx. The name derives from the resemblance of the blossoms to the claw of a lark; the Greeks called it delphinium from the dolphin-shape of the nectary. In Greek legend it sprang from the blood of Ajax because the letters *ai* appear in the flower. In Roman story a man saved by a dolphin told his friends of his rescue. They set out in pursuit of the dolphin, but the man managed to warn it in time; and Neptune saved it, turning it into a flower, the delphinium. An Italian tale attributes its origin to three warriors who slew a dragon and wiped their swords on the grass; the blue blood of the dragon made the blue flowers and the venom made it a poisonous plant.

The Pawnee Indians have a story of its origin: Dream Woman became curious as to the doings of the earth people, so she cut a hole in the sky and fashioned a stalk from the green material which is the inside color of the sky, with a few flecks of the outside blue adhering to it, and some yellow clay. But when she tried to climb down it, the sun had made it brittle, and it broke into tiny pieces, which are our larkspur.

A tincture of this plant is used for asthma, worms, the itch, vermin, and for poisoning fish. It was considered excellent for the eyes. In Germany young men and women looked at the Midsummer fires through bunches of larkspur, to preserve their eyes for a year. Some tribes of North American Indians called it sleep-root and gave it to their opponents to stupefy them when they were gambling. It was a favorite of English witches because of its poison. In France it would keep away ghosts.

Larminie, William (1849–1900) Irish poet. He is chiefly important in folklore for his *West Irish Folk Tales and Romances* (1893). Larminie was active in the Irish literary revival. He wrote *Glanhua and Other Poems* (1889) and *Fand and Other Poems* (1892).

Lärmumzüge Noisy processions, dating back to pre-Christian German rites of demon exorcism. Avowedly for the dispersal of demons which might harm the life about to return into vegetation, during Advent, New Year, and Carnival, bands of maskers used to (and still do in remote sections of Germany, Austria, and Switzerland) wander about in rowdy circuits, producing a din by every conceivable means. *Perchten*, *Schemen*, and other fantastic personages took part, also beggars who imitated ghostly voices. Exorcism by noise and by identification with the demons was the evident intention. In modern carnival celebrations the din and masquerade persist, but not the ritual purpose. [GPK]

larva (plural *larvæ*) In ancient Roman belief, an evil spirit: often one of the kinds of lemures. The larva frightened people and worked ill against them.

Lass of Roch Royal An English ballad (Child #76), telling the story of Isabel (or Annie) of Roch Royal, who was abandoned by her love, Gregory, and was "banished from kyth and kin" when she bore his child. One dark night she came to Gregory's castle with her

child in her arms, but she was refused admission by his mother. Gregory dreamed that she had come to him, questioned his mother and found the dream true, and dashed after the girl in a passion of remorse. When he found her, she was drowned with the baby still in her arms. The oldest version in the Child collection comes from an 18th century manuscript. Several fragmentary versions have survived in the United States, generally based on a few stanzas of the girl's sorrowful questions to her departing lover, "Who will shoe my bonny foot, or who will glove my hand?" Sometimes these are so turned around that they are asked by the lover who is going away, "Who'll rock the cradle, who'll sing the song, who'll call you Honey when I'm gone?" or "Who's going to kiss your red rosy cheeks, and who's going to be your man?" or, in a Negro echo of the theme, "Who's going to buy your whisky?"

lassu The slow part of certain Hungarian dances, especially of the *czárdás*, the innkeeper's dance. It is a slow encircling movement performed by the men, which is followed by the lively couple dance called the *friss*. [GPK]

last An aura of portentousness hovers over the last of anything. The last belongs to the Devil (G303.19.1) is the motif of a Swiss folktale, stemming from the popular saying *Devil take the hindmost* (G303.19). To take the last piece of bread or cake on a plate, for instance, or the last of anything, means you will be an old maid forever. The person last buried in the churchyard cannot rest; he must stand guard for the others until the next one comes. In some parts of Ireland it is said that the last buried has to carry water for the others. The last breath is said to leave the body as visible vapor from the mouth of the dead about five minutes after death. The last words of the dying are regarded as especially ominous or sacred; the last request must be faithfully fulfilled or ill will befall the person enjoined. In Irish folklore, anyone to be rescued from the fairies must usually be snatched off the last horse to pass in the fairy procession. For the folklore of the last sheaf of the harvest, see *CAILLEAC*; *FIELD SPIRITS*; *HARVEST DOLL*; *KORNMUTTER*; *KORNWOLF*; *OATS GOAT*.

lasya The lyric, feminine mode of Hindu *natya*. It is characterized by amorous glances, gracious, supple movements, a drooping head or playful upward tossing. The *ras-lila* of Krishna and other pastoral themes of gods and goddesses use the lasya style of movement. [GPK]

Latinus In Roman legend, the father-in-law of Æneas. Various genealogies are given for him; he is usually considered the son of Faunus, but in Hesiod, where he first appears, he is the son of Odysseus and Circe; Hercules is also often mentioned as his father. In the several stories, he both sided with and fought against Æneas; he lived through and was killed in the war with Turnus, etc. From other traditions, it has been deduced that Latinus is probably an aspect of Jupiter.

Latona The Latin name of Leto, mother of Apollo and Diana.

latrunculi A game of skill of the ancient Romans, played on a board with men (*latrones*, *latrunculi*, raiders) moving like the men and kings of modern checkers. A piece was captured and removed from the board when

it stood between two opposing pieces. The usual form of the game seems to have been on a 5 x 5 line board, with five men to a side, but a 12 line form (*duodecim scripta*) was also played. Sometimes, as in the Arabic *seegà*, dice were used to determine the moves.

Latura The Nias (Indonesia) god of the dead: brother of Lowalangi, ruler of the sky.

Latvian folklore The first items of Latvian folklore, consisting of ten songs, some proverbs and riddles, and a description of mythological beliefs, were published in *Lettische Grammatik* by G. F. Stender in 1783. The first investigations on Latvian language, ethnography, and folklore were made by a few German clergymen who lived together with the Latvians in their land and were not opposed to the common people. The *Lettische Literaturische Gesellschaft*, founded by Germans in 1828, rightfully named itself the Society of Friends of Latvia, and remained for almost 100 years, until 1913, the center of investigation for Latvian language and literature, including folklore. Its publication, *Magazin der LLG*, contains much material still valuable today. One must mention especially the works of A. Bielenstein. He published two volumes of Latvian folksongs (1874–75); a book of riddles, *1,000 Lettische Rätsel* (Mitau, 1881, with introduction and German translations); a study on *Latvian Archaeology, Ethnology and Mythology* (Riga, 1896), and another on rural buildings and wooden household effects (1907), and numerous articles in magazines.

Certain native Latvians, beginning with Sprogis and Brivzemnieks, also showed interest in their folk traditions, and paid the most attention to the folk poetry. Other kinds of folklore were also collected and published, e.g. Ansis Lerchis Puškaitis (1859–1903) published a big collection of Latvian tales and legends, *Latviešu tautas teikas un pasakas* (7 volumes, 1891–1902). A new, better arranged, and considerably larger collection of folktales, *Latviešu pasakas un teikas* (16 volumes, 1925–38) was edited by P. Šmits (1869–1938), one of the leading folklore workers in independent Latvia and known for his research on Latvian mythology.

The *Latviešu Folkloras Krātuve* (Latvian Folklore Archives) was founded in 1925 and directed by Miss A. Bērzkalne, later by K. Straubergs. In ten years the Archive collected more than one million folklore items, including 406,000 old folk songs, 27,000 new folk songs, 66,000 children's songs, 10,000 melodies, 168,000 folk beliefs, 108,000 riddles, 74,000 proverbs, 54,000 folktales and legends, 41,000 spells and folk remedies, and other items. K. Straubergs published two volumes on Latvian magic practices and formulas (1939), and four volumes of folk beliefs have been published by P. Šmits. In independent Latvia many series of folklore, in emphasized representative form, were published.
